THE COMPETITION TRIBUNAL

IN THE MATTER OF the *Competition Act*, R.S.C. 1985, c. C-34;

AND IN THE MATTER OF the proposed acquisition by Rogers Communications Inc. of Shaw Communications Inc.; and

AND IN THE MATTER OF an application by the Commissioner of Competition for an order pursuant to section 92 of the *Competition Act*.

BETWEEN:

COMMISSIONER OF COMPETITION

Applicant

- and -

ROGERS COMMUNICATIONS INC. AND SHAW COMMUNICATIONS INC.

Respondents

- and -

ATTORNEY GENERAL OF ALBERTA
VIDEOTRON LTD.

Intervenors

Affidavit of Kenneth Mathieu

I, Kenneth Mathieu, of the City of Downers Grove, in the State of Illinois, in the United States of America, **SOLEMNLY AFFIRM**:

1. I am a Vice President with Charles River Associates Inc. ("**CRAI**") and have held that position since 2019. CRAI is a global consulting firm that offers economic, financial, and strategic expertise to law firms, corporations, accounting firms, and governments around the world.

2. I specialize in the areas of accounting, economics, and finance as they relate to valuation, financial analysis, and security analysis.

3. I am a Certified Public Accountant (CPA), Accredited in Business Valuation (ABV) by the AICPA, and Certified in Financial Forensics (CFF) by the AICPA. I earned a Bachelor's degree in Business Administration from Loyola University New Orleans and a Master's degree in Business Administration from Northwestern University.

4. I have worked as a consultant and/or served as a testifying expert in litigation matters in Canada, the United States, and the International Commerce Commission's International Court of Arbitration. The nature of these engagements are consistent with my skills, experience, education, and training and generally include assessing the historical and expected financial condition of entities for various purposes, including solvency based on the fair value of the firm's assets and debts and its ability to generate cash flow to meet its obligations as they become due, and assessing the financial risks related to transactions pre-deal and calculating damages post-deal in the event of a breach of economic representations or warranties.

5. I make this affidavit in connection with the application by the Commissioner of Competition under section 92 of the *Competition Act* against Rogers Communications Inc. ("**Rogers**") and Shaw Communications Inc. ("**Shaw**") relating to their proposed merger.

6. The following exhibits are true copies of documents retrieved on October 17-18, 2022 from S&P Capital IQ: an aggregator of company financial related data, industry and research reports, and other data used by professionals in finance, economics, and accounting, amongst others, including being used by professionals in the investment community in advising their clients on investment decisions.

Presentation

Operator

Thank you for standing by. Welcome to the Shaw Communications Fiscal 2014 Fourth Quarter Conference Call. Today's call will be hosted by Mr. Brad Shaw, CEO of Shaw Communications. [Operator Instructions]

And the conference is being recorded. [Operator Instructions] Please also note that an investor's slide presentation in relation to the conference call is being displayed on the webcast. It is also posted in the Investor Relations section of the Shaw website under Presentations and Meetings and Press Releases. [Operator Instructions]

Before we begin, management would like to remind listeners that comments made during today's call will include forward-looking information, and there are risks, and actual results could differ materially. Please refer to the company's publicly filed documents for more details on assumptions and risks.

Mr. Shaw, I will now turn the call over to you.

Bradley S. Shaw
CEO & Non-Independent Director

Great. Thank you. Thank you, operator, and thanks to everyone for joining us today to discuss our 2014 fourth quarter and year-end results. With me today are members of our senior management team, including Steve Wilson, Executive Vice President, Corporate Development and CFO; Jay Mehr, Executive Vice President and Chief Operating Officer; Barb Williams, Executive Vice President and President, Shaw Media; Nancy Phillips, co-founder, president and CEO of ViaWest. Unfortunately, our President, Peter Bissonnette, is not with us today as he is flat out under the weather and is unable to join us this afternoon.

Earlier today, we released our Q4 financial and operating results. We are pleased with our performance and remain focused on delivering exceptional customer and viewer experiences, leading technology, operational efficiencies and value for our stakeholders.

Our diligent cost management and disciplined pricing approach to the market continues to resonate in our financial results. In Q4, we delivered consolidated EBITDA growth of 6% compared to a year ago, and our Cable EBITDA margin in the quarter was in excess of 49%. We continue to invest in and leverage our superior network, which now exceeds 850,000 kilometers of fiber throughout North America and over 45,000 WiFi hotspots across Canada.

We continue to balance financial results with maintenance of our overall customer base. We had another quarter of strong broadband additions of approximately 12,000, and we continue to have over 6.1 million RGUs.

In fiscal 2014, we delivered 3% revenue and EBITDA growth. Free cash flow in F '14 was approximately $698 million, which represents a 16% increase over the previous year. Our F '14 results meet our revenue and EBITDA guidance, and we exceeded our increased free cash flow guidance of $650 million, which was actually increased in June from our original guidance released in October.

We expect fiscal 2015 consolidated EBITDA growth to range between 5% and 7%, including our target F '15 ViaWest EBITDA of USD 85 million. Consolidated free cash flow is expected to exceed $650 million after accounting for additional interest expense and investments associated with the ViaWest and increased cash taxes.

Besides our F '15 financial guidance, we are also pleased to confirm some other key metrics, including: F '15 dividend growth target of 5% to 10%; target leverage ratio of 2x to 2.5x; the completion of our ACF program of $150 million in F '15; and long-term annual core Cable CapEx of $750 million.

We continue to provide our customers with innovative products that drive value, and we are focused on strengthening our strategy of being the leading content and network company. This includes our TV Everywhere, OTT and WiFi investments. We remain committed to providing our subscribers with greater choice and flexibility over what they watch, how they watch and when they watch their favorite content. We continue to scale our WiFi network and now have over 45,000 access points and over 1.25 million active registered devices on our network.

Our WiFi network continues to support the value proposition of our products, which is reflected in higher user likelihood to recommend and lower broadband churn. Approximately 75% of surveyed customers have confirmed their likelihood to recommend or move to Shaw due to our WiFi service.

Active internet WiFi customers also have approximately 35% lower churn rate than those internet customers not utilizing our WiFi service. The investment in our WiFi initiatives is supportive of our strategic objective of being our customer's primary network, with a best-in-class in-home WiFi experience that is complemented by our Shaw Go WiFi network outside of the home.

We completed the ViaWest acquisition on September 2. The transaction provides us with a growth platform in the attractive North American data center sector and is another significant step in expanding our technology offerings for mid-market enterprises in Western Canada. We are excited to jointly deliver with Nancy and her entire team on ViaWest's next phase of growth in the U.S., and utilizing the ViaWest experience to accelerate the development of our Canadian data center platform.

Our investments in programming, technology and innovative products, combined with our focus on exceptional customer experience and operational efficiencies continue to drive profitability and long-term growth. We remain focused on driving performance and value for all of our stakeholders through continuous enhancements and improvements in our operations.

Before we open the call for questions, I want to take a few minutes to thank Steve and wish him all the best in his retirement. Steve has been an integral part of our company since joining us over 10 years ago, and we are in a much stronger financial and strategic position because of his contributions. Steve has, obviously, been a key participant in our interactions with investors and the research community over the last decade.

And I know Steve wanted to say a few words before we continue. Steve?

Steve Wilson
Former Chief Financial Officer and Executive Vice President of Corporate Development

Thanks, Brad, for the kind words. 10 years ago, I traveled with my family to Calgary to join Shaw as CFO. Over the last 10 years, I've had the opportunity to work with one of the best teams in this industry. The company has grown substantially from analog TV to phone and now as the leader in high-speed broadband, with a successful Media operation.

Revenue and shareholder value have increased significantly, and along the way we did some important game-changing acquisitions. We were also one of the leading MSOs in North America to introduce a dividend. It's been a great ride for the last 10 years. I will miss the day-to-day excitement of the industry as well as the talented and engaging people at Shaw. The company is in great shape, both strategic and financially, and the foundational investments are in place to continue with a track record of success.

After a decade like that, I've decided to change pace. I'm looking forward to continuing my community work as a member of the Board of Governors of the University of Calgary, doing public and other board work and potentially, some teaching and writing. I'm extremely proud of the finance organization. They are dynamic, capable, strategic thinking and provide the support needed by the business. They also work hard to ensure that there are no miscues and there have been none. I'm happy to be joined on the call by some of them to address questions that may arise today.

This will be my last conference call, and I won't be taking questions, but I do get a parting word. There are many brilliant and thoughtful analysts and investors who have been a pleasure to work with. I leave you with the recommendation that you never underestimate the strength of commitment of the family, the

Board and a great senior leadership team. They are clear thinking in their strategy, prepared to make the investments necessary and forward-looking to navigate the many changes we'll see in this industry in the coming years.

Brad, it's been a pleasure working you, J.R., Jim and the whole team over the last decade. I look forward to tracking your achievements in the years to come.

Bradley S. Shaw
CEO & Non-Independent Director

Thanks, Steve. As Steve mentioned, we're happy to be joined today in the room by other senior members of our finance team, including Rhonda Bashnick, Senior Vice President of Finance; and Trevor English, Senior Vice President of Corporate Development & Capital Markets.

I'd now like to ask Nancy to give some insight on ViaWest. And we recently had our first Board meeting, and I'll ask her to say a few things, and then we'll go from there. Nancy?

Nancy Phillips
Executive Chair of the Board & Co-Founder

Great. Thanks, Brad. We had the pleasure this week of hosting the Shaw Board and many of the Shaw executive team members here in Denver, Colorado. I'm going to designate them as our lucky charm for the Broncos, so let's see if we can win tonight as well. But, obviously, a great week that we were able to engage on many fronts. And I think the theme was really just a lot of excitement about the adjacencies in the products that we're bringing to the market. We continue to see great traction and opportunities emerging not only here in United States, but my team -- and a genuine -- real excitement around the Canadian market opportunity and what we can do.

Clearly, we think that the breadth of services that we have honed over the last several years are really compelling, and very excited to get started here in the summer of 2015 with our flagship Calgary data center that we are working actively on in terms of getting that up and operational. We're starting to see early demand, both coming from the U.S. and Western Canada. And obviously, working very closely with many of the team members to create the right synergies as we move into that marketplace with the Shaw business unit.

So overall, very excited. I think a real positive on the selling front. Excited in terms of the opportunity ahead for the company. And I'm happy to answer any questions that you might have here this afternoon.

Bradley S. Shaw
CEO & Non-Independent Director
Okay. Great. Thanks, Nancy. So thanks, everyone, for joining us today. And operator, we'd now like to open the phones for questions.

Question and Answer

Operator

[Operator Instructions] The first question is from Jeff Fan of Scotiabank.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

My first question is just a clarification on the WiFi. Brad, you talked about, I think, 1.25 million registered devices. Wondering how many households that roughly represents? So I guess, looking at a penetration number in terms of the number of households that are actually using the WiFi. And then the second question is really on internet. I guess, with all the over-the-top news that we've been hearing in the last couple of weeks, one of the things that I'm thinking about is, what is the importance of the Internet-only subscribers, that's in your base? We're seeing some pretty good growth in your disclosure, I think, roughly 20% of your base is now Internet-only. Can you talk a little bit about the profile of these customers? Just give us a sense as what the ARPU and churn in usage may be? Because, I guess, as OTT becomes bigger, this space could become a lot bigger. I'm just wondering how that would impact financially going forward.

Bradley S. Shaw
CEO & Non-Independent Director

Sure. I'll start, and I think Jay will add something, and I might go a little further than you want on WiFi. From a penetration point of view, on a homes passed, it's 28% of actual customers, Shaw customers, home penetration -- not homes passed, sorry. It's interesting, as we look at the WiFi development worldwide and what's going on, the new technologies, this Hotspot 2.0, the roaming relationships happening around the world, the new business models being created, the opportunity when you look at it just from a point of view of our extension of broadband, and how that's resonating with customers, the likelihood to recommend, as I mentioned in my speech. All very important for us and all, I think, tremendous signs that WiFi has a role in mobility, in the wireless world. We certainly think there's many opportunities. We're working closely with Industry Canada and making sure there's more WiFi spectrum coming along the way. And as we look forward, we believe that the WiFi for us will be a fundamental piece in the broadband story. And we couldn't -- when you look at home spots, you look at trying to densify your network, you're looking where the people are, you're looking at the heat maps, you're building things to where customers will get the most benefit. When I look at just the users and the people using it, when you look at video and video streaming, is it portable? Is it mobile? We really think we have an answer for customers, and there's a tremendous value proposition. And as you can see from the device growth, the account growth, we're very excited. We are very focused on continuing to add value right across our markets. And we're continuing to look at what types of roaming things. And I think one thing I'd be able to say is, as we look out over the next few quarters, and you might have to give us a couple, but we'll be able to, I think, give a little more sense of the WiFi roadmap, and you can get a little more understanding of what some of the things we're looking at and timing. And we can -- we'll be able to fill you in a little bit better there. Jay?

Jay Mehr
President

Great. And picking up on your Internet-only question. So, as you've seen, we now have 400,000 or so internet customers without video. And to be clear, we love those customers. They're very profitable, and they're a big part of the future of our company, and we're making investments in things like shomi and to a lesser extent, Rdio, to provide experiences for the segment. And we think of our business as a network and content experience company. And we're going to work hard to deepen our relationship with those customers. And when we talk about deepening that relationship, we're talking about deepening it in a way that provide services that customers -- that, that customer segment values, not trying to take them back to some services that they've left behind. So we're doing lots of things with shomi. I think, as we get to the other side of Optik TV, SR&ED, we're going to continue to try to build the best-in-class video experience that absolutely is going to bring this customer segment back into experiencing Shaw video.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

Okay. Just one clarification. The 28% number, is that percentage of your internet subs?

Bradley S. Shaw
CEO & Non-Independent Director

Yes, yes, that's correct. Yes.

Operator

The next question is from Vince Valentini of TD Securities.

Vince Valentini
TD Securities Equity Research

A couple of free cash flow questions to start. You mentioned that the core CapEx beyond the accelerated CapEx fund is still $750 million. Correct me if I'm wrong, that was the figure prior to acquiring ViaWest. Now you seem to be including ViaWest CapEx and it's still $750 million, so does the number not go up when you add in ViaWest spending?

Bradley S. Shaw
CEO & Non-Independent Director

That's correct. The core Cable CapEx is more on the residential and Shaw business CapEx figures. So you would have a higher CapEx when you include the ViaWest.

Vince Valentini
TD Securities Equity Research

Okay. So when you say it includes consumer and business, that doesn't include ViaWest in the $750 million then?

Steve Wilson
Former Chief Financial Officer and Executive Vice President of Corporate Development

It doesn't include ViaWest, it doesn't include the current Satellite group, it doesn't include the current Media group. And we'll clean up as we report in the new segments for the first time in Q1. So you can get flexibility. I think we're just simply reinforcing that our path hasn't changed from what we talked to you about before.

Bradley S. Shaw
CEO & Non-Independent Director

And similar to what we said on July 31, I mean, we're forecasting ViaWest CapEx to approximate the EBITDA figure that we gave this morning as well.

Vince Valentini
TD Securities Equity Research

Right. And in other free cash flow drivers, cash taxes, you said those will be higher. Can you remind us where we are, I think, it was a 5-year period of accelerated or inflated cash taxes after the deferred or limited partnerships got shut down. Is this -- can you remind us where we are on that, and how much of that is still left to spend in 2015?

Rhonda D. Bashnick
Former Senior Vice President of Finance

It's Rhonda. We're in year 4 of that. So it will be coming off next year. Next year we'll have another year of taxes and then it will roll off. And we're estimating the cash tax number to be approximately $375 million this year.

Vince Valentini
TD Securities Equity Research

When you say next year, Rhonda, you mean it rolls off in 2016?

Rhonda D. Bashnick
Former Senior Vice President of Finance

2016 will be another year of pickup for cash taxes on the partnership. That will be the last year. 2017 rolls off.

Vince Valentini
TD Securities Equity Research

2017 rolls off. Okay, yes. And one last one, if I can switch gears, maybe for Barb. In the immediate sort of environment, you guys seem to have posted reasonable organic growth numbers, because you had a couple of assets that were divested and you still had flat revenue. Can you give us a bit of commentary on what you're seeing in terms of the ad market environment out there, despite things like digital media taking share or the Canadian dollar being weak? I mean, how much pressure are you seeing on traditional advertising spending?

Barbara L. Williams
Former Executive Vice President of Broadcasting and President of Shaw Media

There is some pressure. We're seeing a little bit of softness this quarter, pacing a little bit behind. But we are seeing some catch-up in that. The advertiser is making decisions later and later, but the demand does seem to come. It certainly does put an emphasis for us though on containing costs carefully as we go forward, and being sure that we manage our way through whatever softness might be there.

Operator

The next question is from Glen Campbell of Merrill Lynch.

Glen Campbell
BofA Merrill Lynch, Research Division

So another question for Barb on Media. Could you talk a little bit about shomi from a Shaw perspective? I guess, I understand that this is your project. We see in the press release that Shaw's committed $67 million. How is -- how do you expect the numbers to kind of flow through the financial statements? And how does the partnership between Rogers and Shaw work in terms of, say, the platform as well as the content?

Barbara L. Williams
Former Executive Vice President of Broadcasting and President of Shaw Media

I'll let Rhonda speak to you the financials. It is a 50-50 between Shaw and Rogers in the JV of shomi. From a content perspective, we are leveraging the opportunities that both Shaw and Rogers can bring to the table in terms of dealmaking for the content of service. But as far as the financials, Rhonda, maybe you want to speak about.

Rhonda D. Bashnick
Former Senior Vice President of Finance

Sure. So it is a 50-50 joint venture and we are -- so it won't be proportionately consolidated in our results. It will be equity accounted for.

Glen Campbell
BofA Merrill Lynch, Research Division

Okay. Great. And just to follow-up. There's also the platform development aspect of shomi, with authentication, the menu, the interface and so on. Who's taking responsibility for that?

Barbara L. Williams
Former Executive Vice President of Broadcasting and President of Shaw Media

That process was started by the Rogers team back before we became partners with them. So the outstanding user interface actually, the Rogers team deserves credit for getting that underway. But there is a shomi team, an independent shomi team that has its own technical group, has its own content group. And on a go-forward basis, they will be managing both the upgrades and changes, improvements to the user interface over time, as well as responsible for the ongoing relationship with our customers and with our content suppliers.

Glen Campbell
BofA Merrill Lynch, Research Division

Okay. Great. We'll look forward to that. And then one last one, again on the CapEx. So the $750 million has been identified, I guess, as the core Cable CapEx for fiscal '15. How should we think about the medium term? Is that a maintenance number, and the actual spend's likely to be kind of a little above that? Or should we think of that as being a good run rate for '16 and beyond?

Jay Mehr
President

It's Jay. You should think of that as being a good run rate for '16 and beyond in providing us with enough flexibility to make decisions as we go along and make investments as we go along.

Operator

The next question is from Phillip Huang of Barclays.

Phillip Huang
Barclays Bank PLC, Research Division

Question on ViaWest. I understand it's provided a platform for future growth in a less competitive Tier 2 U.S. market. And you guys currently have a pretty strong presence in the Western U.S. markets. And I think you guys have talked a little bit about looking at potential opportunities in the East Coast over the next 18 months due to demand for -- from customers. I was wondering if you might be able to give us an update on your thinking on this front? And whether you see any attractive expansion opportunities in the near term?

Nancy Phillips
Executive Chair of the Board & Co-Founder

Yes, I think, we have seen some very good customer demand. We have long-tenured customers who, in many cases, like to be in multiple data centers with us. And the East Coast has, obviously, been part of that early demand. So as you know, historically, we've grown in 2 ways, either through greenfield builds, much like our Minneapolis center that we opened this year, and/or through acquisition. And I think the key here is that we want to pick the right way to go-to-market in the East. We've been a very patient expansion company. And I think we are obviously participating in conversations as we see opportunities potentially come to the market. But I think the key is that it -- we really are looking for the enterprise-grade capabilities that our customers have become accustomed to, especially in the mid-sized market. And so I think we're looking at it sort of through that lens of both not only greenfield, but potential opportunistic acquisition. And so that's kind of where we're at today, continuing to take a look at what's going to make sense.

Phillip Huang
Barclays Bank PLC, Research Division

Right. No, that's helpful. In terms of more for modeling for us, you mentioned that it's going to be largely net -- free cash flow neutral over the next couple of years. Beyond that, like, how should we think about the cash flow contribution for ViaWest?

Bradley S. Shaw
CEO & Non-Independent Director

It's Brad. I think, we -- when we came into the business and the diversification is -- we wanted the growth, we certainly see a lot opportunity going forward over the next 18 months and beyond, and we want to continue to maintain that growth focus and that commitment around that. So you're going to continue to see us support that model.

Unknown Executive

Just to add. Of the $85 million roughly of CapEx guidance we're giving for this year for ViaWest, I mean, the lion's share of that is growth capital. The maintenance capital within the business is around...

Nancy Phillips
Executive Chair of the Board & Co-Founder

2% to 3%.

Unknown Executive

2% to 3%.

Nancy Phillips
Executive Chair of the Board & Co-Founder

Yes. I mean, We've been very much on line. So it's -- the lion's share is definitely about success-based capital in terms of our organic growth strategy now.

Phillip Huang
Barclays Bank PLC, Research Division

Got it. Okay. And then, perhaps one final question for you guys, maybe give us an update on the AWS spectrum transfer to Rogers? I believe, September was the last month of the 5-year moratorium. So I was just wondering whether you've started the process of applying to Industry Canada for the spectrum transfer. And should that transfer not be approved, I was wondering if you have some idea in terms of the timeline when you expect to return the $200 million deposit to Rogers.

Bradley S. Shaw
CEO & Non-Independent Director

A couple of things on that. I think -- we have talked to the appropriate parties, and they are awaiting feedback as we go through the fall here. It's something as you look at, we really love where we are in WiFi, and our focus and attention there. We're committed to following through on the deal with Rogers on the AWS spectrum. And even in that deal, there's options for them beyond that to allocate the spectrum. And so for us, and subject to all those things happening and all that coming into place and not happening, you have to consider just where things are at from our point of view. And if you do get the spectrum back, what does that actually mean? And so it's prudent on our part to be having some thoughts around that and going from there. But we still believe the spectrum will get approved.

Phillip Huang
Barclays Bank PLC, Research Division

Right. Is any part of your consideration linked to the upcoming sort of wholesale rulings from the CRTC? Or is that completely sort of irrelevant to the way you guys think about the spectrum, more how it relates your strategy overall?

Bradley S. Shaw
CEO & Non-Independent Director

Oh, yes. It's all relevant. I think, for sure, it's -- as you look at it, you go, okay, what are the things that are going to change, and what's happening, and what's different than 5 years ago, and what's happening around, both in North America and globally. I think, it's prudent on our part to look at all those things. And as you look at it -- but we're -- we love our play in WiFi. We think there are so many opportunities there. We're just starting to crack the egg, and you're going to see us continue to make sure we develop our WiFi and want to extend WiFi wherever possible. Now, how we want to extend it? We're going to continue to build and continue to make sure we create value through partnerships and other ways. And from that -- but I would say, from a point of view of -- incase -- you look at all scenarios. So I can leave it to that.

Operator

The next question is from Drew McReynolds of RBC.

Drew McReynolds
RBC Capital Markets, LLC, Research Division

Most of my questions have been answered. Just I might as well touch on Satellite. Just big picture, just wondering if could give us some granularity just on, obviously, some erosion on the subscriber front. Is that a function of the price increases you put forward? Is it competition? Is it cord cutting, potentially in some of the more urban areas? Just wondering if you can give us some big picture context?

Jay Mehr
President

It's Jay. The -- yes, I mean, clearly the Satellite subscriber loss is a subscriber number that really stands out from our trajectory. It's fair to say that it's in a very competitive triple play environment that we're struggling with our acquisition economics for better net subscriber numbers that -- than you've seen, and getting a return on the capital invested required to get those numbers. So our approach has been clear. It's to maximize free cash flow. And that approach has delivered, I think, this quarter, with 8% year-over-year EBITDA growth, and we had a very nice free cash flow profile in Satellite. But we certainly understand the core question. Q4 is actually seasonally a good quarter for those that follow the Satellite business policy. And we still had a subscriber loss of 6,600. So what does that mean in the medium- and long-term profile of the business? I think we will see some more stability over time. We believe we're in the competitive part of the business cycle in Eastern Canada as the triple play battles heat up. And we believe strongly that we can maintain Satellite EBITDA, including run rate EBITDA. And so shifting dynamics, bigger focus on retention to mitigate the loss over time. To be clear, Q1 is seasonally our toughest quarter because we have our seasonal summer business that we do with cabins. And I think you'll see a Q1 number that's significantly weaker than Q4. But overall, we're going to have solid EBITDA growth both in Satellite and the whole consumer division. We think it's a terrific business. We've got industry-leading customer satisfaction scores. Our core part of the base in rural has a compelling customer experience. And we're just not really chasing new customers aggressively right now to fit in with our strategy of maximizing free cash flow and maintaining EBITDA.

Drew McReynolds
RBC Capital Markets, LLC, Research Division

Okay. And maybe just one last one from me. Just on shomi, and perhaps for you, Barb, interesting development, I think, for the industry and interesting to see Shaw in there, just given kind of where your exposures lie on TV and broadcasting. Just wondering, how you're positioning shomi. Do you view it as a hedge? Do you view it as complementary? Is it really thematically about just serving content up for your best internet customers, knowing that you have a very strong internet offering? Can you just help us strategically put it into context?

Barbara L. Williams
Former Executive Vice President of Broadcasting and President of Shaw Media

Sure. I think generally, we have seen statistically that the initial OTT offerings have been complementary. So we don't see this as a direct hit as much as an opportunity to offer more choice, more place for people to connect with our content. We are more and more able to engage in a larger basket of rights, which allows us to use this content across more platforms, including shomi. So I think this is all about respecting the customer's desire to engage with content where, when and how they want, and being sure that we continue to offer a wider variety of options for them. And shomi is just a great opportunity for us to leverage off the tremendous content success we've had in the traditional media business and extend it into this future platform.

Bradley S. Shaw
CEO & Non-Independent Director

And just to add to that Barb, I think it's also, when you look at it, TV Everywhere meets a certain part of the market when you look at how they want to consume content, where they want. I think OTT plays also a role in there. And ultimately, for us, we're not going to sit here and say, "Oh, potentially we're going to sit here and guard everything, and hold and protect." You have to be able to look around and be able to even somewhat disrupt yourself. I look way back when -- yes, it's a little different scenario, but when we got into Satellite, we said 2 out of 3 customers is fine with us, and we're willing to play in that game. So I see this very similar. I think there's also -- when you look at it, I think there's always -- when you look at Netflix and what they're doing, the pressure on rights and the things that are going on and the volatility of things is also a driver somewhat for us in that regard.

Operator

The next question is from Tim Casey of BMO.

Tim Casey
BMO Capital Markets Equity Research

Just one clarification and then a question. On shomi, I understand that your equity accounting the P&L of shomi itself, but will you still book content sales from your Media group through Shaw consolidated P&L?

Bradley S. Shaw
CEO & Non-Independent Director

I think -- let us -- can we maybe take that offline and we'll get back to you on that?

Tim Casey
BMO Capital Markets Equity Research

No worries, no worries. Just on WiFi, I mean, I -- certainly, obviously, it's being widely accepted by your subscriber base. Are you able to provide any discrete financials on what it's contributing? Or is it still really part of the package so you're not able to draw that out? And secondly, just can you comment on what you're seeing on the voice side. As -- are you able -- are you offsetting what one would think would be erosion of your voice subscribers in an urban environment. Are you offsetting that with gains on the SME side? Or what's happening on the voice part of the bucket?

Bradley S. Shaw
CEO & Non-Independent Director

I'll -- on WiFi, just from the churn benefits, I think it more than pays for the cost of rolling out WiFi. And we -- as I said earlier, we continue to look at the model, continue to make sure we have a great network. We're densifying, we're planning well. And listen, even though we have 45,000 hotspots, we're just starting in a lot of our municipal deals. We have over 60 of them that cover 4 million potential, and continue to build off those. So -- and we're also going to continue to make sure we build where the people are. And so we're constantly looking at that. Not with quite the success rate, but almost similar to that. So -- and we continue to look at the models and the potential for it. And -- but we're very focused on making sure we have a clear roadmap on what we're going to do and how we are going to do it. And making sure we're clear on what's coming at us, because there's a lot there. And we just want to make sure we're prudent on how we manage it.

Jay Mehr
President

Great. And picking up on the voice side. Yes, I mean, I think we're pretty comfortable with sort of maintaining overall lines, as you've seen. I think you've correctly identified that you're seeing some modest declines in the consumer voice base that are being offset by some modest increases in the very small base. The way we sell voice to medium-sized customers and other technologies doesn't really drive RGUs in just the way we recognize things. It drives revenue. So I don't think the business growth line is as big as you might think it is. But for sure, there is some offset there.

Operator

The next question is from Greg MacDonald of Macquarie Capital Markets.

Gregory William MacDonald
Macquarie Research

The question I have is on the internet pricing power. This is one company certainly with the deployment of WiFi that you've got, that probably has a higher-than-average pricing power on the internet side of things. And let's face it, this is an industry that some would argue, I certainly would, is losing pricing power in a number of areas, but this is one that's strong for you guys. Can you comment on what pricing levers you could pull in 2015 to help hit the guidance numbers that you have? And then I've got one definitional question after that.

Jay Mehr
President

It's Jay again. Why don't I just talk about rate adjustments in general terms for us in F '15, and then we can come back to some conversations about potential future pricing power driven by WiFi. So just to level set for everybody, on the Cable side of the business in F '14, we did our annual across-the-board adjustment in September. And as we made plans for F '15, we modeled a number of scenarios, including doing the annual adjustment in September, as has been done in the past. And there were a number of moving pieces in the ecosystem. And we all talked it through and decided that it might be prudent this time around to give the market a little bit of time. So we're going to come with our consumer and business rate adjustments that will now happen on January 1. And so I mean, when you look at it, as a number, the consumer number's a lot more material than the business number, so maybe focus our comment there. We've got 2.8 million consumer households. And our January rate increase is going to net about $9 million a month. So a little bit more than $3 per month per customer. I think if you model that through, I think it's fair to say the 4-month delay probably takes what would have otherwise been a great F '15, when you combine the Cable business with our focus to deliver cost cuts. But now it's just probably going to be a good F '15, with the growth in the second half. First quarter looks -- will look a little tough, just because of the combination of our annual network fee and salary increases, without the offsetting adjustment, which are in a slightly negative base in consumer. But the year turns around nicely and goes to nice growth in the second half. In terms of opportunities for WiFi, I mean, we include WiFi in our internet packaging today. It's certainly, we've got -- a likelihood to recommend on our WiFi product in the -- deep into the 80s. And it's taken likelihood to recommend our internet product overall into the 80s, which is a dramatic increase over where it was a couple of years ago. And so -- I think it's fair to say there will be other ways to monetize that over time, but for F '15, we are really looking at adoption.

Gregory William MacDonald
Macquarie Research

Okay. So no price increases on internet or will there be?

Jay Mehr
President

Yes. The vast majority of that price increase will on internet, January 1.

Gregory William MacDonald
Macquarie Research

January 1, okay. And Jay, just to clarify, is there -- help us with the rationale on waiting. Is there a competitive aspect to that? Or is that literally you've sensed that there's a little higher churn than you want, so you're delaying for that reason?

Jay Mehr
President

Yes. It wasn't...

Gregory William MacDonald
Macquarie Research

Just Telus -- is the reaction to Telus? Or is it sort of internal?

Jay Mehr
President

It wasn't -- it certainly wasn't churn related. We had some momentum in the marketplace, and we wanted the opportunity to bring some additional value to our consumers. Certainly, there was lots of noise around pricing and packaging over that period of time, and we didn't necessarily want to step right into the middle of that. And we weren't sure about signals in the marketplace in terms of what was there, and in the gap, our primary competitor stepped in end of October and did a significant second in the year internet rate increase. And so it's certainly has also provided an umbrella to walk into it a little bit.

Gregory William MacDonald
Macquarie Research

Okay. That make sense. And the definitional question, you could probably help me this also, is in the guidance you talk about "propose including a stable customer base in the assumptions." How does that relate to the PSU assumption? Because I think most of us are probably still modeling a negative PSU overall. Does that mean you're assuming a stable PSU number when you say stable customer base?

Jay Mehr
President

I think our focus in the business, and certainly on the Cable side of the consumer business, we've already talked in detail about the Satellite business. Our focus in the Cable business is absolutely to maintain our number of customers. And when I say customers, I mean, unique billing relationships, and we're certainly driving our messages, you heard us say, "We're happy for our customer to take whatever product from us they see value on." So it's really not about chasing a customer who no longer wants to subscribe to home phone home, or really not about changing a customer who doesn't want to subscribe to a premium video customer, but to maintain that relationship with the customer.

Gregory William MacDonald
Macquarie Research

Right. So we should think of it terms of not necessarily users, which is kind of the PSU definition, but more in terms of accounts. Is that what you're suggesting?

Bradley S. Shaw
CEO & Non-Independent Director

The customer relationship.

Jay Mehr
President

Yes, I think that's helpful. And If think about it in terms of number of accounts using your phrase, the X and Ys being that in our group, we've got a nice package as well as for customers.

Operator

Next question is from Maher Yaghi of Desjardins.

Maher Yaghi
Desjardins Securities Inc., Research Division

I wanted to go back to a question that was asked on wireless. And you mentioned that you're reviewing what's going on worldwide in terms of wireless to guide you into what your next move will be. Can you maybe be more specific on what you referred -- or you meant by looking at what's going on in the world?

Bradley S. Shaw
CEO & Non-Independent Director

I think, you ultimately start with WiFi and certainly everything going on there and the success of it, and the development in the R&D, and the coordination, and the first WiFi, and the variety of different things we continue to look at and continue to have conversations in doing that. I think it's relative when you look at WiFi, you certainly look at the whole mobile space. I think, for us, it's -- as you see certain things happen, you want to have certain data points, you want information, you want to be able to understand what's going on related to different markets and knowing they're all different. But for us, it's research, it's homework, it's all the things we like to do. It's all the patience and the rigorous around what we're doing, and this is no different. And we'll take it as we see it. And I think the more informed you are, the better you are. So it's as simple as that.

Maher Yaghi
Desjardins Securities Inc., Research Division

Do you believe -- I mean, are you referring more specifically to the use of WiFi to deploy wireless services in addition to just the regular internet access?

Bradley S. Shaw
CEO & Non-Independent Director

Well, I think, ultimately, you go -- where will it broaden, where does the technology go, what opportunities are there? You have Hotspot 2.0, your Affinity [ph] things. But ultimately, for us, it's making sure what technology, what roaming, whatever other things we do fits into the model, fits into the business case, gives us opportunities to grow, to increase revenue, to increase that strong link with the broadband home and continue to do that. So that's always core for us and in our core thinking. How it translates and how well things go and develop beyond that, we're certainly interested to see and want to be on top of it.

Jay Mehr
President

Building on Brad's thoughts, our WiFi strategy is to be our customer's primary network. We want to have them on a great WiFi experience in the home, and we want them on Shaw Go WiFi anywhere they go in a day. And so, of course, in that world, where we're trying to create that level of value, we're interested in what else is happening in the ecosystem. And so if there were to be a fourth provider from somebody else on very competitive roaming, that would help shape how we would package our WiFi primary network strategy. And so it's about a primary network, and we're absolutely staying on that path.

Maher Yaghi
Desjardins Securities Inc., Research Division

That make sense. And just on the accelerated CapEx, you've spent $350 million so far, you still have only $150 million to go. Can you talk a little bit about the achievements you had so far in spending those $350 million? And when you look forward, are there any particular additional investments that you feel you need to make above and beyond that $750 million that you talked about as a run rate for the Cable business?

Jay Mehr
President

We're certainly pleased with the progress of our accelerated capital fund. We think it's had an impact in the marketplace. And we think it's allowed us to provide a differentiated internet experience. And to recap for everybody, we're $350 million invested so far. The final $150 million invested in F '15. The investments include, just to revisit our program, completion of our data center, further digitization of our network, we got additional bandwidth upgrades, Shaw business investments for growth and absolutely to expansion and WiFi. And we just went through a process, focused to deliver, as we've talked about before, has 11 work streams to it, and we just went through and completed our capital efficiency work stream, which was up a top to bottom 0 base review of 591 buckets of capital. And so we're very close to our capital spend and can affirm that, that $750 million number going forward gives us lots of room to make choices in the future and give us the opportunities to do the things we want to do. It is a little premature this quarter because we're just in the process of changing segments. So I think as we get into January, there will be a cleaner story to tell as you can see how the capital flows across the consumer business and how it flows across the business-business unit, and it might be a little easier for you to model from there.

Operator

Next question is from Rob Goff of Euro Pac.

Robert Goff
Echelon Wealth Partners Inc., Research Division

In terms of questions, Brad, I would -- I typically ask about the growth in the -- SME marketplace, whether you're there between the 10% and 20% annual growth. My second area of questioning would be on the internet only. With -- when you look at the addition of roughly 72,000 on the year, to what extent would they be new to Shaw? Or would they be those leaving video and just taking it on a streaming basis?

Bradley S. Shaw
CEO & Non-Independent Director

Okay. I'll start with SME and see if I can help you with the Shaw business math, which again gets a little confusing just with a couple of our changes. So as we've talked about in the past, in F '13 and F '14, Shaw business grew at 20% per year, and that included both organic growth and some growth through acquisition. You'll recall we purchased Envision, and Envision happened over 2 years. It was an April closing. And so it was part of that 20% number in each of the 2 years. So if you break that down a bit further, in F '13, Shaw business grew revenue by $48 million, and that was $37 million organic, which was 15%, and $11 million from Envision. In F '14, it was $37 million organic again, and 12% and $21 million from Envision. So we would see a similar level of organic growth in F '15 on that part of the business, which is what has historically been called the Cable Shaw business. We're very pleased with our reorg in that we've put together every experience that a business can choose from Shaw into a single business unit here in Canada. And so added to that is the Satellite B2B businesses. And 2 of those are much lower growth. So we've got our Shaw Tracking business that offers tracking services to the long haul trucking market, and we've got Shaw Broadcast doing Satellite video transport. And those are both very stable businesses and have generated approximately, almost right on, between them, $80 million in revenue each of the last 3 years. So there's not really growth in those businesses, but they're very good free cash flow. And then just closing out the business segment, the B2B Shaw Direct business has had nice growth, just like the Cable B2B space, with mid-teen growth over the last 2 years. And in F '14 contributed $23.5 million in revenue. So hopefully, that lets you sort of build back the equation and have a look at next year.

Operator

Your next question is from Vince Valentini of TD Securities.

Vince Valentini
TD Securities Equity Research

Jay, just on the factors you were going over for delaying the rate increases this year. Was regulatory one of them, given that the Let's Talk TV hearing was in September, and you would have been raising rates right on top of that?

Jay Mehr
President

Yes, I wouldn't overplay that. I thing to be fair, there were a number of factors in the decision. But common sense dictates that would be one.

Vince Valentini
TD Securities Equity Research

Okay. Great. And a totally different question, I don't know, maybe for Trevor, but can you update us on what your company-wide P&L foreign exchange exposure is to the appreciating U.S. dollar? I mean, now that you have ViaWest in there, and I forget if you have any hedging of your sort of U.S. dollar purchases and what the sort of net impact may be if we continue to see this U.S. dollar strength?

Bradley S. Shaw
CEO & Non-Independent Director

Sure. On the core business, we roughly have about a $300 million exposure on the U.S. dollar, related to purchasing equipment with respect to modems and set-top boxes and so on and so forth. I mean, we typically engage in a hedging program where we've -- in the past, we've been around 20% of that exposure hedged. We don't have as much on right now, to be frank. We do, obviously, with that natural short position in the currency, we've got a long equity exposure with the ViaWest entity going forward. We're not doing any hedging with respect to ViaWest's operations, obviously, economically it's matched. Their revenue and EBITDA will be used to fund sort of organic capital in the U.S. But hopefully that clarifies sort of where our U.S. exposure is at right now.

Operator

Mr. Shaw, there are no more questions at this time.

Bradley S. Shaw
CEO & Non-Independent Director

Thank you. Great. Thank you, operator. Thanks, everyone. We'll see you next call.

Operator
This concludes the time allocated for today's conference call. You may disconnect your lines. Thank you for participating, and have a pleasant day.

Presentation

Operator

Thank you for standing by. Welcome to Shaw Communications Fourth Quarter and Fiscal 2015 Year-end Conference Call. Today's call will be hosted by Mr. Brad Shaw, CEO of Shaw Communications. [Operator Instructions] And the conference is being recorded. [Operator Instructions]

Before we begin, management would like to remind listeners that comments made during today's call will include forward-looking information and there are risks that actual results could differ materially. Please refer to the company's publicly filed documents for more details on assumptions and risks.

Mr. Shaw, I will now turn the call over to you.

Bradley S. Shaw
CEO & Non-Independent Director

Thank you, operator, and thanks to everyone for joining us today to discuss our fourth quarter and fiscal 2015 year-end results. With me today are members of our senior management team including Jay Mehr, Executive Vice President and Chief Operating Officer; Vito Culmone, Executive Vice President and Chief Financial Officer; Barb Williams, Executive Vice President and President, Shaw Media; and Nancy Phillips, Co-Founder and CEO of ViaWest.

Our annual and quarterly operating results represent a continuation of our strategic and financial focus, and for the year, we delivered consolidated EBITDA growth of over 5% and free cash flow of $653 million, meeting our 2015 guidance targets. Vito will discuss our financial results in more detail in a moment after I touch on some of the key developments during the quarter.

In Q4, our consolidated business delivered over 6% revenue and 9% EBITDA growth. However, subscriber losses of 74,000 accelerated due to aggressive competitive activity, the impact of the economic downturn in Alberta and the continued phone losses as we maintained our focus on high-value customers and long-term profitable bundling strategies.

Despite the increase in subscriber losses, our Consumer division delivered 3% EBITDA growth in Q4 and maintained a healthy 46% margin.

Business Network Services launched a number of new products during the quarter including SmartVoice. This new phone product provides a unified communication solution to small business to enhance productivity by allowing employees to collaborate seamlessly across their traditional business, desktop phone, mobile devices and computers in or outside of the office. We also launched Manage Hotel WiFi, which provides a cloud-based WiFi product that is a fully managed solution for the hospitality market. Early results from these launches are positive and represent significant progress relating to the strategic initiatives and direction we are taking following the realignment of our Business Network division earlier this year.

Business Infrastructure Services continues to meet our expectations and the fundamentals of the data center business remained strong. We are experiencing an increased number -- sorry, an increase in customer demand, which is a positive indicator of revenue performance as we move into F '16. Over the long term, we continue to believe that revenue and EBITDA growth will be in the low to mid-double digits.

During the quarter, we announced the opening of 2 new facilities including the Hillsboro, Oregon flagship facility with over 50,000 square feet of space and the Calgary facility, which is opening this fall. Our Calgary data center is the state-of-the-art facility and represents the first Canadian offering developed through our partnership with ViaWest. The launch of this new data center will allow Shaw Business to help organizations meet their expanding IT needs by providing a fully configurable hybrid solution backed by a 16-year track record with ViaWest.

As we move into fiscal 2016, we remain committed to our strategic priorities in advancing our technology road map. In Q3, we announced that we are working with Comcast to begin a technical trial of their cloud-based X1 platform and that we'll be the first in Canada to capitalize on their cloud technology. We are confident that our partnership with Comcast on the X1 journey will allow us to reinvigorate our video road map and bring momentum back to our video business.

At the beginning of October, we launched our new Shaw home gateway, the XG1, which is a whole home PVR with our Moxi user experience. This set-top is currently being deployed by Comcast and is a forward compatible with the X1 service. To date, we are pleased with the progress of the trial. However, as it remains ongoing, we are not yet at the point where we'll provide details regarding the partnership and the specific economics related to the long-term arrangement. The X1 platform that is to be deployed is entirely built on Comcast's infrastructure. Commands such channel changes, user interface and video on demand titles will be powered directly by Comcast infrastructure and not processed in Shaw's facilities. So you can appreciate the complexity and the time requirements around the trial to ensure we have a robust service when we officially launch in F '16.

Another strategic priority for us is in the broadband space where there have been a lot of announcements by the industry about gigabyte-speed capability. Our customers will always have access to the best network available, and we are completely aligned with the cable industry approach, DOCSIS 3.1 advantage, and the broad go-to-market differentiated Internet experiences.

Recall that our first digital network upgrade removed the first tier of analog channels. During F '15, we removed all remaining analog signals from Vancouver and the Lower Mainland, and we will continue this as part of our digital network upgrade, which we refer to as Phase 2 in F '16.

At the end of the year, we plan to have over 95% of our customers all-digital. This opens up significant amounts of additional capacity within our network and plans for us to deliver DOCSIS 3.1 in 2016 remain on track.

The customer experience remains front and center for us. Not only are we launching new products and investing in people and technology, we remain focused on capitalizing on additional efficiencies, such as our call center realignment and our commitment to our Focus to Deliver multiyear program.

Concerning, both the opportunities and challenges that we face going into fiscal 2016, we are targeting EBITDA to the range between flat and low single-digit growth over 2015, including the costs associated with the X1 platform. Capital investment is expected to be approximately $850 million in the Consumer, Business Network Services and Media divisions and approximately $130 million in the Business Infrastructure Services division. In fiscal 2016, we anticipate a free cash flow of between $665 million to $680 million, representing year-over-year growth of 2% to 4%.

Now I'd like Vito to provide more detailed overview of the financial results.

Vito Culmone
Former Executive VP & CFO

Thank you, Brad, and hello everyone on the call. It's great to be here and with a full quarter now under my belt, I appreciate the opportunity to get into more detail regarding our financial results. I'd like to take this opportunity to thank all of my colleagues at Shaw for assisting me up the learning curve, and in particular, a shout-out to the finance team for their great work day in and day out and through the reporting cycle.

Let's first start with the fourth quarter where consolidated revenue and EBITDA were up over 6% and 9%, respectively, as Brad mentioned earlier. On an organic basis, i.e., excluding the results of the Business Infrastructure Services division, our year-over-year EBITDA growth in Q4 was 4.5%.

Each business segment delivered year-over-year growth and let me address each one individually. In our Consumer division, revenue was up slightly and EBITDA increased over 3% compared to Q4 2014. Despite the increased subscriber loss, total cable ARPU is up 2% year-over-year with a strong 9% growth in broadband.

Business Network Services delivered revenue and EBITDA growth of over 6% and 7%, respectively. Margins remain healthy at over 50% while we continue to invest in new managed product and service offerings such as SmartVoice and Managed hotel WiFi, while also ramping up our sales force.

Additions to the sales team will continue into F '16, which will have an impact on EBITDA growth in the near term. However, we believe these resources and scaling will support double-digit revenue growth in F '16.

Business Infrastructure Services delivered Q4 revenue of $68 million, which is a 7% increase over Q3 2015. Reported EBITDA of $24 million includes a number of onetime costs related to employees as well as start-up costs from Calgary data center. For informational purposes, the stand-alone U.S. ViaWest business delivered revenue and EBITDA growth of 10% and 11%, respectively, for fiscal 2015. We're extremely pleased with the progress and trajectory in this business.

Our Media business delivered solid year-over-year growth this quarter with EBITDA up by $7 million or 17% due mainly to higher subscriber revenues, combined with lower programming, employee-related and promotional costs. For the year, revenue and EBITDA from our Media assets declined by 1.5% and 3%, respectively, as reduced advertising on specialty channels and the effect of a disposition in the prior year of Historia and Series+ were partially offset by increases in conventional airtime and subscriber revenues.

Net income for the quarter on a consolidated basis was $276 million or $0.57 per share and included a onetime gain of $158 million as we received the final payment from Rogers regarding the wireless spectrum.

Total capital spending in F '15, including the accelerated capital fund, was $1.1 billion. We continue to invest growth capital into Business Network Services and Business Infrastructure Services. Total capital investments in F '16 are expected to decline from F '15 levels, and we remain comfortable with $850 million as the base Consumer, Business Network and Media spend.

Our balance sheet remained strong, with total debt of approximately $5.7 billion and a leverage ratio 2.3x at the end of the fiscal year. We continue to have ample liquidity through both our cash balance of $400 million and available credit facilities.

With that, Brad, I'll turn it back to you.

Bradley S. Shaw
CEO & Non-Independent Director

Thank you, Vito. To conclude, we are excited about the year-end -- sorry, the year ahead, and we have some great new products that will enter the market and we believe we are well positioned to meet the demands of our customers and to deliver value for all of our stakeholders.
Thank you, and we'd now like to open the phones to answer any questions.

Question and Answer

Operator

[Operator Instructions] Our first question today comes from Vince Valentini of TD Securities.

Vince Valentini
TD Securities Equity Research

First off, Vito or somebody else, is it possible to quantify at all those onetime employee and Calgary start-up costs within ViaWest in the fourth quarter?

Vito Culmone
Former Executive VP & CFO

Yes, Vince, it's Vito here. Maybe I'll take it and then ask Nancy to provide some commentary on the business. In the quarter, I'll say we had about $3 billion to $4 billion of onetime-related type expenditures, which when you look at it on an absolute basis, on a percentage basis, it sort of distorts what really the success and the momentum that we're seeing in the business. Just by way of reference, in U.S. dollars, our Q4, both the revenue and EBITDA performance improved 4% versus the prior quarter. So we're really, really happy on the U.S. dollar. There is a little bit of noise when you bring that back into Canadian dollars and some of the consolidation-type entries. Maybe Nancy, I'll ask if you can give a little color on that.

Nancy Phillips
Executive Chair of the Board & Co-Founder

Yes, I mean, as Vito said, it's sort of onetime impact to the business a little bit. There is some start-up costs, obviously, as we start to bring on the Calgary asset, but this was primarily driven by some long-term incentive impact. But listen, fourth quarter, we are very, very pleased with how our fourth quarter came in. We saw our strongest bookings quarter of the year and quite frankly in the history of the company, so the demand for our products and services remains very, very high. We saw our Oregon site come online in July and it had unprecedented early-stage customers coming into that facility. We think it's on track to break even in half the time of our typical modeling that we've seen in historical data centers and our margins have remained very consistent with historical standards. And the fourth quarter really put us in a position to do some small acceleration of capital because of the growth we're seeing and early, early demand in the first quarter of this year. So fourth quarter for ViaWest actually was very, very strong. We had a little bit of a slow start, but as we finished the year, the demand remained strong and high and feel very good going into 2016.

Vince Valentini
TD Securities Equity Research

Great. One other question on -- if the guidance for 2016, maybe Vito again, can you explain a bit the difference between the bottom and the low end of the range that, if I read you correctly, sort of 0% to 3% EBITDA growth is what you're signaling. To get to the low end of that range, is there some uncertainty that you guys might have about how much demand and uptake there'll be from customers for the X1 platform given it's a bit different economics than we have had in the past when you'll have OpEx versus CapEx? So you may be hedging your bets a little bit in case there's huge demand for that? It may be a nice problem to have, but it may cause your EBITDA growth to suffer temporarily. Is that part of the reason why you may have some caution at the low end of the range, only expecting flat?

Vito Culmone
Former Executive VP & CFO

Yes, Vince, I'll start and maybe Jay you can pick it up here. Definitely, at the end of the day, I believe we would be disappointed with fiscal '16 ending up flat, on the low end of the range. There're lots of balls in the air and you described a couple of them, but -- and including obviously economic activity in Alberta, we've got the NGVE [ph] costs that you're describing and the integration of that into the system, probably more back-ended as far as early impact on RGUs. And Jay, any additional color you want to provide?

Jay Mehr
President

Yes, just to reaffirm where you're headed, Vito, that's certainly not the low end of the range. It's certainly not how we're managing the business. There's a lot going on in this fiscal year and most of it is good, but there's a lot of moving pieces and so we've probably gone with a bit of a broader range than in past years. Though if you're trying to rework the math since it's-- there's not a lot of risk in the X1 number, and similar to our previous comments on it this, we don't really see degrading margins. We think the -- well, there's a little shift from CapEx to OpEx. We see this as a business that we're going to make money on and not do harm for the margin. One thing you might not see as clearly in our numbers is, for sure, we've got some pressure on content costs and it'll be -- it's certainly one of our key initiatives this year to try and change that relationship. It's pretty clear there's a relationship between video revenue and content costs. It's clearly asymmetrical today, and I think we'd like to add some symmetry to that relationship.

Vito Culmone
Former Executive VP & CFO

Vince, the only other item I'd add is promotional activity. I mean, we saw some aggressive competitive activity in June and we let it go by the wayside and I think, as we move into F '16, we need to obviously protect our business as well.

Operator

The next question comes from Phillip Huang of Barclays Capital.

Phillip Huang
Barclays Bank PLC, Research Division

Quick question on the guidance as well. It seems like your -- so your guidance implies low single-digit free cash flow growth for fiscal '16. So should we assume that dividend growth will also be consistent with free cash flow growth? And does that sort of imply dividend growth will slow from the high single-digit that we saw this year to low single-digit in fiscal '16?

Vito Culmone
Former Executive VP & CFO

Yes. It's Vito here again. I mean, I think it's too early to make any extrapolations on dividend related to our FCF guidance. There're a lot of things moving through. As you look at FCF, I will guide more directly to cash taxes, and just for modeling purposes, you should use very similar level to our F '15 of $375 million. There're obviously pension-related contributions that move around during the course of the year as we look at interest rates and some of the more macro asset performance. That's a variable that we need to obviously take into account. But as it relates to the dividend, we usually give guidance on dividend to make it [indiscernible] in the January time frame. We're very, very confident in our long-term prospects and the strategies that we're undertaking and feel very, very -- from a dividend perspective obviously very comfortable with where we're at.

Phillip Huang
Barclays Bank PLC, Research Division

Got it. And then just a quick follow-up on the operating environment, particularly as it relates to Alberta. We certainly believe the telecom revenues are quite recession-proof. But as you mentioned, it was a factor in the accelerated subscriber decline. Was wondering if you'd give us some color on the flow-through of your August 1 price increase versus prior price increases? Have you guys observed any resistance to the price increase whether it's in terms of increased cord shaving or churn? Just wondering how does the current environment compare with, say, the prior cycles, say, in 2009? Do you think the [indiscernible] cord shaving is potentially higher this cycle just given the prevalence of over-the-top today?

Jay Mehr
President

Thanks, Phillip, it's Jay. I guess there're a couple elements of that. Certainly, in terms of the Alberta environment, we have seen a disproportionate impact on RGU results in Alberta compared with the other markets that we serve. And certainly, if you go back to the first half of F '14, there actually really weren't material RGU losses in Alberta. The strength of the economy was really driving our results and so we've seen a shift in that and certainly disproportionate. We ran into some incredibly aggressive activity in June competitively, which subsided in July and has returned to sort of the normal intense competition that we face in Western Canada. And there was an overlap with that timing over the notification of our rate increase. And so for sure, for customers who were absolutely price-sensitive and looking for options, we had a little bit of a perfect storm there in June. In general terms, we've seen the rate increase pass-through similar to previous rate increases. We did make some commitments to our customers. This was what happened, of course, as we moved the September rate increase for a variety of reasons and we went back to our normal summer rate increase. We've communicated to our customers that we'll be adjusting rates only on an annual basis in the summertime. And so you'll see that normalize out as we move forward.

Phillip Huang
Barclays Bank PLC, Research Division

Right, okay. And just to clarify then, in terms of the competitive activity that you guys saw in the summer, that has since fully subsided? Or did it sort of resurge in the, I guess, into the back-to-school time frame as well? Did it fully subside at this point?

Jay Mehr
President

It fully subsided in July and August. We had good months given the seasonality of -- July's got a little bit of negative seasonality of it, but year-over-year we're in good shape. And so far in Q1, we're back to just the most competitive environment in North America. We're not on that really deep 1-year price discount on all products.

Operator

Our next question comes from Jeff Fan of Scotiabank.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

Couple of questions more on the cord cable business. When we look at your results, I mean, a lot of it currently being driven by rate increases, but it sounds like you do obviously have a number of product and service enhancements coming with X1 being one and it sounded like there is more on the broadband side. Can you maybe just help walk us through some of these product enhancements. I know timing may be sensitive. But can you give us a feel that over the next 12 or 18 months that these service enhancements on the product will, I guess, support these rate increases so that if your competitors come out with new service enhancements that you're able to compete effectively. So maybe just talk a little bit more about that. And then the second part of the question is more related to '16. A lot of BDUs are now, I guess, looking at how they're going to repackage some of their television channels, preparing for skinny basic and pick-packs. Your competitor, main competitor, Telus, is already very flexible in how they package their television services. Wondering how -- what your thinking is going into that -- going into next year and how some of your channel packaging may or may not change. Wondering if you can talk a little bit about that as well?

Jay Mehr
President

Jeff, Jay again. Sure. We're -- lots of folks have issued press releases about things that are going to happen in F '16 and 2017 and beyond. I think we have -- we're very -- as Brad said, we're very aligned with where the industry is headed and the cable advantage on broadband and DOCSIS 3.1. My sense of it is that you'll see us announce product launches when we launch products, which is more of Shaw's approach to the marketplace as opposed to shadowing that. And those product launches, combined with the X1 platform, will give us a very active next 12 months. And what's exciting about it is we'll be bringing meaningful, new differentiated products to markets really each quarter, and both of those have streams have got stages that we step into the marketplace with some really compelling offerings. So we're going to be very active in the Consumer cable business. In terms of your comments on television channels and packaging for Let's Talk TV, it's fair to say that all of us in Western Canada have offered sort of a greater level of choice for a long time and so we've seen customers repackage. You'll see some changes in March from us to just impact the size of our packaging to make sure that we're staying in touch with where we're headed here. And also the skinny basic, I don't think there is anything scary in that. I think the team's done a terrific job of building an elegant package that it fits beautifully with our current packaging and provides choice for consumers. And then you'll see us as we go throughout the calendar year moving to the full pick-and-pay environment as you can appreciate. And to my comments on symmetrical versus asymmetrical content costs, negotiations with the broadcasters are not simple and so we're working our way through that through the calendar year.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

Is your -- just as a quick follow-up. Is your comment regarding content costs, is that -- you're talking that from the BDU side of the business. Does that, I guess, flipping that onto the Media side, how does that impact maybe Barb's business when we think about content costs or content revenue on that side of the business?

Barbara L. Williams
Former Executive Vice President of Broadcasting and President of Shaw Media

Yes, it's Barb. I think from our side of the business, we obviously have a handful of very significant deals with our various carriers, which are at various stages of their terms. And as those deals come up for renegotiation in a Let's Talk TV environment as we face different packaging options, we'll be looking to be negotiating rates for stand-alone as well as small packages as well as larger bundles. So it certainly does change the environment of the negotiation a bit. We work hard to keep the cost side of content, from our point of view, down as low as possible and provide good value to -- ultimately to our providers and on to our customers. But it is a changing environment and it's still to be worked out as F '16 and '17 happen.

Operator

The next question comes from Drew McReynolds of RBC Capital Markets.

Drew McReynolds
RBC Capital Markets, LLC, Research Division

My questions are on Shaw Media. For you, Barb, just following up on the last question. Just in general, you talked about in your MD&A next generation ad solutions for Media, just wondering if that has to do with addressable advertising. And even if it doesn't, can you to speak to where we are at Shaw in terms of bringing addressable advertising onto the TV platform? And then, secondly, just in terms of the tracking for Q1, obviously a seasonally stronger quarter than Q4. Just wondering if you could talk to those top line trends? And lastly, on the margin front for Media, I know Q4 is a seasonally weaker quarter. Just wondering -- some of the cost efficiencies and rework that you did last quarter, is some of that kind of year-over-year margin improvement sustainable on a go-forward basis?

Barbara L. Williams
Former Executive Vice President of Broadcasting and President of Shaw Media

Sure. All good questions. From the next generation advertising perspective, we do believe in Media that the answer here is to be smarter about using more data more effectively to help advertisers be smarter about reaching the audience that they're interested in reaching. So we do see the power of television in the future being closely aligned with the intelligence of data. And we are working both independently to understand how to move those projects forward as well as working cooperatively with the CRTC's working group because we do believe ultimately there's an industry solution here that can continue to make television a very powerful opportunity for advertisers. So yes, there're efforts in that front and we believe that there can be -- there's strong opportunity on the addressable front as well as putting advertising on to some of the other platforms where our audiences are enjoying our content today like the VOD platform. So some good momentum there that we're keen about. To your other questions, I think the restructure in April absolutely helped to get us on a better path, both in terms of cost base that makes sense to a business that's at the mature stage that ours is, as well as sort of reorganizing the business to be more for future-oriented so that we are expanding the skill base around the products that will move us beyond just being a pure broadcast company, but help us to define product for our other platforms of other lengths to work with advertisers in other ways in branded content, et cetera. So I do believe that we have made an important shift in our opportunity to keep a strong margin in the business with the restructure that we went through. And we saw nice results in Q4 that the team is really pleased with, which were in large part about cost control and that does reflect the restructure that we did. Finally, to your other question about Q1. It is an important quarter to us. We're very, very, very focused on it. The election money has helped support the quarter. We're seeing some upside in that. So, so far, the quarter's looking not too bad actually. We're feeling pretty good.

Operator

The next question comes from Tim Casey of BMO.

Tim Casey
BMO Capital Markets Equity Research

A couple of things. Can you -- and maybe it's for Jay. Can you talk a little bit about some of the dynamics we're seeing in the subscriber trends because I know you've articulated a focus on broadband, but on a net basis, the RGU impact on the quarter seemed a bit negative. And then on ViaWest, you made comments that you were very pleased with the fourth quarter, but I thought I heard you say on an organic basis it grew at 4%. That seems to be below the average growth rates. So just wondering if you're expecting a significant acceleration from that trend? And could you also speak to the free cash flow profile of ViaWest when we just do a very simple analysis of EBITDA trends versus the articulation of the capital you're spending there, do you expect this business to achieve free cash flow -- positive free cash flow anytime soon?

Vito Culmone
Former Executive VP & CFO

Yes, why don't we -- it's Vito here and I'll ask Trevor also and Nancy to chime in on ViaWest as well. Sorry, on the Q4 -- on the 4%, let me just make that clear, that was Q4 over Q3 momentum. So that extrapolates to something much more significant, double digit. So that's not quarter-over-quarter. That's Q4 over Q3 on that.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes, Tim, it's Trevor. Just on the CapEx related to the business, I mean, we've always -- I think, Nancy articulated just the growth in the demand that we're seeing in the U.S. environment. And we did open up a new facility and it's doing extremely well. I mean, we really look at that as -- a lot of that is success-based capital and it's great capital to spend and a high return on that capital. And in the near term, we've always said we're going to invest in our growth businesses and we certainly see this is a very attractive grow business for us in the U.S. I mean, in Q4, you saw capital higher in Business Infrastructure Services, but a lot of that capital again was related to the first data center in the Canadian portfolio and that was roughly $24 million in Q4. So just echoing Nancy's comments, this is exactly why we made the investments just over a year ago. We're really happy with the way things are performing.

Nancy Phillips
Executive Chair of the Board & Co-Founder

Yes, I mean, listen, the fundamentals of the business remain extraordinarily strong. The demand in the market is only increasing. We are very pleased with the acquisition of Applied Trust in July, adding a whole security portfolio of services into our business is only adding additional value to our customers. So I would echo -- I mean, this is a growth business and the capital for high-demand services and products that we are building is really what the focus of the organization is at this point.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

We've always portrayed it as if the maintenance capital within the business is roughly 3% of sales. So if we elected to, we could turn this into a very -- an additive component of our free cash flow profile. But again, we don't think the time is right to do that.

Nancy Phillips
Executive Chair of the Board & Co-Founder

Yes, I think one of the differentiators of ViaWest clearly, I think, we actually believe we're one of the leading companies in terms of capital efficiency because of the way we build the centers. We tend to augment over a period of time based on the capacity arising. So as customers start to install and we see power and cooling requirements change over time, that's when we start to add additional capital into the existing centers. So not only is it a continued growth opportunity, but clearly I think we're actually one of the best in the business in terms of the way we build it on a success-based profile.

Vito Culmone
Former Executive VP & CFO

Tim, it's Vito here. Just maybe before we flip it back to Jay to address the first part of your question, you give me the opportunity to address a couple of other little things. First of all, when you look at F '16 capital versus F '15, although it doesn't come through in our free cash flow as we define it obviously, F '15 represented the last year of our accelerated capital fund. So we'll see those dollars flow through as well -- as far as F '16 from where we currently stand. And as we move into F '17, we pick up another $60 million-or-so related to the cash taxes and that's the impact, everything else being equal, of the F '16 representing the final year of our deferral -- tax deferral pickup. So some nice momentum on FCF as we move forward here.

Jay Mehr
President

Great. And Tim, you asked for some color, this is Jay, on the subscriber trend. So I would say a couple of things to give you a sense of how we're thinking about this. The Q4 results were driven by a very significant spike in competitive losses in June that was driven by deep discounting from our primary competitor and we've seen a return to a more rational pricing environment. And certainly, the subscriber result trajectory from Q4 is not acceptable and is not the way to think about our business going forward. We see a material improvement in consumer RGUs in F '16 over F '15. A couple other things I would say to your comments. One is we've talked before about the bundle change and promotional packaging and the impact on phone. You'll see that the impact of the bundle change lessen in Q1, and then Q2 phone, RGUs will be an organic representative of RGU numbers, so that's just the timing on that. In terms of competitive responses that we had talked to in our response to Jeff, I think our very active plans this year give us a number of levers, both in terms of the X1 platform and broadband that will allow us to not only respond if there's a repeat of this sort of competitive activity and even play a little bit of offense. And then my final point on broadband subs is just to reconnect everybody with the nature of the competitive environment in Alberta and BC. Our primary competitor links Internet and video together into three year contracts and pulls both. And so if you look at our results over the last couple of quarters, the gap between video performance in terms of net gain and Internet performance, you'll see the gap of that is quite similar and it's the pull-through that pulls down Internet. And the way to think about that is we've always been very successful with millennials. We're very successful in the Internet-only base. And so that's the trend that you're seeing on the Internet side. So as we stabilize video subs, you'll be able to start to see the gains in broadband start again.

Operator

The next question comes from Greg MacDonald of Macquarie.

Gregory William MacDonald
Macquarie Research

So guys, I want to go over CapEx just a little bit more. I hate to slug a dead horse, but it's an important horse. In the past, you've indicated that capital intensity -- kind of base case capital intensity on the cable side is around 20% of revenues. I'm wondering if that's still the case? And whether in the guidance for 2016, there's any growth CapEx still in that? Or whether that sort of unusual growth CapEx is already completed? And then maybe Trevor or Vito, whoever wants to address it, a good way of giving us better insight on what the ViaWest CapEx profile and help us get what the free cash profile is on that business. It's really good growth and I'm not going to debate whether spending CapEx on double-digit growth is valid, I think it very much is. But what would help us to understand is when you get a somewhat mature revenue and EBITDA line, let's call it, high single digits, is it safe to say that, that CapEx profile is going to be somewhere in the 10% to 15% or 10% of sales range? That would help us look into 2017 and '18 and try and do some numbers based on the growth profile then. Any insights on that would be helpful.

Vito Culmone
Former Executive VP & CFO

Yes, let me address the second part and then maybe, Jay, you can pick up the consumer piece of it, and Trevor, invite you as well. I think what you're asking for there is a very good suggestion as we move forward, maybe splitting a little bit of our capital profile for ViaWest between growth, and I'll call it maintenance or whatever existing. That's something that's I think we'll put our best foot forward on and give you some color to that.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes, maybe we'll take that away as well about providing a bit more granularity on the U.S. versus the Canadian businesses. We are very excited about the growth within the U.S. business and -- but I don't want to give the impression that it's going to be a 10% or 15% capital intensity business in '17 or '18. I mean, we still see tremendous growth within the business and the dynamics in the U.S. specifically. We'll probably continue to give you -- if you back out the impact of FX, continue to invest capital that sort of approximates the U.S. business EBITDA as long as the return on that capital is still there as we look at new greenfield builds. I mean, we still, this year, we've got a plan to build another new data center and ViaWest has a history of doing 1 to 2 new greenfields a year and I think that'll continue as we really like the industry dynamics.

Gregory William MacDonald
Macquarie Research

Okay. But to the point, right, guys, it's very difficult for us. It's 46% of sales in CapEx this year in ViaWest. In a year where -- to be quite blunt, I think the free cash was a bit of a surprise to the low end to a lot of analysts. So we're having a difficult time understanding. We're prepared to say, great, ROI is high. I'm happy for you to spend that CapEx, but we're having a tough time understanding what that means for '17 and '18. Unfortunately, markets look at kind of 1 to 2 years out.

Vito Culmone
Former Executive VP & CFO

Yes -- no, point noted and we'll take it away and see what we can do going forward. I mean, just to Trevor's point, we're very bullish on this business going forward and I think we're going to stop just shy of committing to what that profile looks like in '17 and '18. But if we can give you additional color to help you understand what a full capacity return is versus the growth, then I think that allows you to get maybe as excited as we are about the business.

Trevor English

Executive VP and Chief Financial & Corporate Development Officer

I'll just to go back when we initially announced the transaction, we always positioned it and maybe it was a bit unclear, on an unlevered basis. It was going to be sort of free cash flow plus or minus 10. And I think that's still the message and when I say unlevered, it's really EBITDA less CapEx and we're still comfortable with that going forward, I would say.

Gregory William MacDonald
Macquarie Research

Got it. And on the cable side, guys, is that a 20% business now?

Jay Mehr
President

Yes, and the way we've talked about it for the last number of years is about Canadian CapEx and we're not talking about Business Infrastructure, we're talking about Shaw Business and Consumer and Media. We've talked about that in the $850 million range and we've guided to that again. I think -- we think that's a great number for this year that's allowing us to invest in what we need to invest. Note that there's been a significant degradation in FX exposure to CapEx and we've been able to absorb that within the $850 million run rate, so we're getting even more bang for our buck, which is the great thing about DOCSIS 3.1 and to see capital, the tremendous things that are happening on the technology side. I don't know that we're really in a position with so many moving pieces to give multiyear capital guidance except to say we have -- the cable industry, in general, has an enormous cost advantage on the capital side compared to our primary competitors. And so we'll sort out the timing on how we exploit that.

Operator

The next question comes from Maher Yaghi of Desjardins Capital Markets.

Maher Yaghi
Desjardins Securities Inc., Research Division

So I just want -- I have 2 questions, the first one is on capital allocation and the second one is on Home Phone. So on the capital allocation side, I wanted to ask you, I mean, you have a relatively low debt level compared to other companies. I wanted to see how do you feel in relation to how you've deployed your capital so far? And if there are ways, you believe, to improve the capital allocation ratios by either using -- doing continuous -- other acquisitions or potential buybacks. The second question -- sorry, I had a second question I wanted to ask you is, this morning, the CRTC said that there are more Canadians who subscribe exclusively to mobile than to wired phones. We've seen company -- cable companies in the U.S. like Comcast join with Verizon, for example, to offer a combined product offering, triple play, quadruple play, to continue to be successful in the marketplace. How do you view your product offering? And is there a way to improve it by offering mobile services somehow, so partnerships with other companies?

Vito Culmone
Former Executive VP & CFO

Maher, it's Vito, I'll maybe -- Trevor and I will address your first part of the question perhaps and then, Jay, you can get the second one. In regards to capital allocation, of course, we're committed to investment grade and we're currently sitting in a 2.2 net debt-to-EBITDA range and we guide to 2 to 2.5 around that. So I'd say we start at that point and then we determine obviously how much money we have available within that. And investment in the business is our primary focus and we're happy to stretch that investment where it's the right thing for our long-term interests and good for our shareholders, all with the envelope of obviously maintaining an investment grade. So I think when we talk about share buybacks and share issuances under the DRIP or whatnot, those are all, I'll call them, quarter-to-quarter type decisions and things that can move around a little bit, but I wouldn't expect any material departure from the EBITA which you've seen from us for the last few years.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes, I would just add that capital allocation and priority is the key for us as a management team and you'll see us -- that's why we are investing in our growth businesses where we see strong return like Business Network Services. You heard Brad mention both the exciting product launches that we announced this quarter. Jay has mentioned DOCSIS 3.1 and we've talked a lot about the capital that we're investing in our ViaWest business as well.

Jay Mehr
President

Great. And then I'll take the Home Phone voice question from you. We were in Denver this weekend, we were in board meetings all day today, so I didn't see the CRTC stats. I won't specifically refer to them. Obviously, I understand the Comcast-Verizon announcement. I think it's fair to say if you'd looked at our product road map and where we're headed as a company, that while we are most bullish on broadband and video, we think there are opportunities in voice and we're exploring industry developments and other developments along with our WiFi strategy and things that we're doing on the Shaw Business side and figuring out what the appropriate go-to-market is to reenergize IP voice product. And so we're -- we share your view that there're opportunities in that space for Shaw.

Maher Yaghi
Desjardins Securities Inc., Research Division

Okay. So just to follow up on that. Maybe you can -- I mean, is your WiFi coverage broad enough to launch something like some of the cable companies in the U.S. where they launch their own exclusive WiFi wireless network? So far it hasn't worked great, but I mean, is that the way you're thinking? Or more offering a combined WiFi plus -- full wireless offering? Because, as I mentioned, the CRTC said that 20% of Canadians have been exclusively relying on wireless this year versus 14% on their landline phones. I mean, do you need to participate in that broad direction to be able to compete in the marketplace?

Jay Mehr
President

Yes, I don't disagree with some of your comments. And we do have an exceptional WiFi network and we're building elements on top of that in terms of our next products and services, which I think make it quite exciting. We think there's -- we don't think you can look at this business through the lens of the legacy products and services. We think you need to look at the business through the lens of cloud-based services and next-generation IP services. But I mean, I really can't go further than that without signaling something that would be -- we're not in a position to signal.

Operator

The next question is from Robert Peters of Credit Suisse.

Robert Peters
Crédit Suisse AG, Research Division

I think -- just touching earlier on your comment around the kind of plus 2, minus 10 on the simple free cash flow for ViaWest. Just kind of looking at the guidance for next year, that implies some healthy growth in that section of the business, which I think has been consistent with your commentary. I was wondering if you can kind of maybe give us an idea how much of that growth is driven from the new facilities that have been opened up this fall versus any kind of future plans or growth that exists in facilities?

Nancy Phillips
Executive Chair of the Board & Co-Founder

Yes, I mean, we are in the process of -- we just opened in July the Oregon facility, and you've seen obviously the strongest booking precommissioning of that facility and obviously very good demand in the very first couple of months of the quarter. So it will be obviously a positive in terms of how we look at our 2016 and beyond. We see continued strong demand within the existing facility. So within that approximately $100 million of U.S. capital that's being spent this year, we are building a new data center in Dallas and we're augmenting additional -- our existing footprint of data centers as we see continued growth. So that's largely where that capital is allocated to in the 2016 forecast.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes, the capital guidance that we gave for Business Infrastructure Services is basically all in the U.S.

Nancy Phillips
Executive Chair of the Board & Co-Founder

Yes.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

The Calgary one data center has essentially been completed.

Nancy Phillips
Executive Chair of the Board & Co-Founder

Yes, it was about $34 million in '15, roughly $24 million of that, I think, was in the fourth quarter of the $70 million that was in the fourth quarter. So that's largely behind us. It will really be some small incremental associated with customer acquisition.

Operator

We have a follow-up question from Drew McReynolds of RBC Capital Markets.

Drew McReynolds
RBC Capital Markets, LLC, Research Division

Nancy, you had talked in previous quarters just about potential M&A within ViaWest down in the U.S. Just wondering if you can update us on just dynamics, M&A dynamics, in that space in the U.S.? Obviously, we'll hear a little bit more in early December on this, but just wanted to get your thoughts.

Nancy Phillips
Executive Chair of the Board & Co-Founder

Yes. No, demand -- it's a busy market. I'm sure you watch some of the transactions that have happened over the last several months. '15 was a busy year. It continues to be. I think we're a very, and always have been, a very disciplined company as we take a look at acquisitions. We did a -- I'm very pleased with the Applied Trust acquisition we did in July. Albeit small, we think it has -- will have a tremendous impact in the service portfolio and we're already seeing very good, early attraction or takedown with our current customer base for those have services. Clearly, security is top of the mind for most companies. And I would say the fact that they're a security assessment and mitigation company, and are an important component in terms of the IT spend today. So we take a look at a multitude of things that happen to be a great tuck-in service that we've been looking at and we continue to take a look on an opportunistic basis for the right type of assets that are going to help us scale the business and continue to expand our footprint.

Operator

Mr. Shaw, there are no more question at this time.

Bradley S. Shaw
CEO & Non-Independent Director

Great. Thank you, operator. Thanks, everyone. Talk to you next time.

Operator

This concludes the time allocated for today's conference call. You may now disconnect your lines. Thank you for participating, and have a pleasant day.

Presentation

Operator

Thank you for standing by. Welcome to Shaw Communications Fourth Quarter and Full Year Fiscal 2016 Conference Call. Today's call will be hosted by Mr. Brad Shaw, CEO of Shaw Communications. [Operator Instructions]

Before we begin, management would like to remind listeners that comments made during today's call will include forward-looking information, and there are risks that actual results could differ materially. Please refer to the company's publicly filed documents for more details on assumptions and risks.

Mr. Shaw, I will now turn the call over to you.

Bradley S. Shaw
CEO & Non-Independent Director

Thank you, operator. Good afternoon, everyone, and thank you for joining us today. With me today are members of our senior management team, including Jay, Vito, Alek and Nancy. 2016 was a transformative year and represents a very deliberate pivot in the strategic direction for Shaw towards long-term sustainable growth. The acquisition of WIND provided a critical piece to our converged network and growth strategy, as customer demand for a truly mobile product continues to increase. We completed this transformational shift with the sale of Shaw Media assets on April 1, crystallizing substantial value creation since initially acquiring the assets in 2010. We believe the strategic realignment of our asset base positions us well to compete and grow in the future. We exit 2016 with a solid foundation in place, necessary to execute on our strategic initiatives in F '17 and beyond.

Key among these initiatives is to increase the revenue and operating growth profile for Shaw. Through investments we've made in F '16, our growth services, comprised of wireless, BNS and BIS, are delivering solid results. And our converged network strategy will position us to provide exceptional customer experiences, alongside strategic partnerships with best-in-class technology providers. We have solidified our partnerships with the likes of Comcast, Cisco, Nokia and BroadSoft, enabling us to introduce unique and compelling platforms to both our consumer and business customers. We are excited about our strategic partnership with Comcast and Cisco. And in F '16, we launched FreeRange, our TV e-application, representing the first milestone in our NGV road map.

We continue to work closely with Comcast on the deployment of the X1 video service, which will be deployed across our footprint throughout fiscal 2017.

Nokia is our single source provider of our wireless network equipment, where we secured a very attractive fixed-rate contract under wireless LTE upgrade that is currently ongoing. And we are partnering with BroadSoft and Meraki to support a new managed business product offerings, such as SmartVoice, SmartWiFi and SmartSecurity. In August, we launched WideOpen Internet 150. This ultra-broadband service is available to over 90% of our footprint and capitalizes on our network competitive advantage. The launch of Internet 150 during the quarter helped contribute to our Q4 Internet results.

Consolidated RGUs, including wireless net adds of approximately 40,000, was positive as we added over 8,000 RGUs in the quarter. Considering the wireless opportunity in front of us, the initial success of WideOpen 150 and excitement and anticipation regarding the introduction of our XFINITY TV product, combined with our growing percentage of customers taking our 2-year Value Plans, we clearly have momentum heading into F '17 with further opportunities to grow RGUs and reduce churn.

I will now turn it over to Vito to go through the financial results and provide more details regarding F '17 guidance.

Vito Culmone
Former Executive VP & CFO

Thank you, Brad. Indeed it's been a very busy and exciting year for us. The reported consolidated results for the quarter include revenue of $1.3 billion, up 15.5%, and EBITDA of $549 million, up 4.6% on a year-over-year basis. Adjusting to exclude wireless results, revenue in the quarter for the combined Consumer, BNS and BIS divisions was up 2.2%, while EBITDA declined 1% compared to a year ago.

Looking at the full year results. Consolidated revenue of $4.9 billion increased 8.9% and EBITDA increased 3.8% to $2.1 billion. Excluding Wireless and Media for the full year, revenue increased 2.6% and EBITDA increased 0.9% compared to fiscal 2015.

Diving into the divisional details. Consumer revenue of $938 million in the quarter was comparable to the prior year, while EBITDA of $418 million declined 3.7%. For the full year, Consumer revenue of $3.75 billion was also comparable to fiscal '15, while EBITDA decreased 1.1% to $1.67 billion.

Flat top line results due to RGUs loss is essentially offsetting the impact of the rate increases combined with increasing -- combined with increased operating expenses associated mainly with the NGV and programming costs as the primary drivers -- are the primary drivers for both the quarter and the full year Consumer results. BNS results for the quarter include revenue and EBITDA of $140 million and $70 million, up 5.3% and 4.5%, respectively, over the prior year. Full year reported revenue and EBITDA grew 5.4% and 3.5% to $548 million and $265 million, due primarily to Consumer growth. Core revenue and EBITDA are both up approximately 7% in fiscal '16, which excludes the tracking and broadcast businesses.

Strong Wireless results in the quarter include revenue of $148 million and EBITDA of $29 million. Compared to Q3, revenue is up 12% and ARPU in the wireless group increased over 3% to $37.40. For the 6-month period included in our fiscal '16 results, Wireless contributed $280 million in revenue and $59 million in EBITDA. And we expect the Wireless division to continue to drive growth in fiscal '17.

BIS continued to deliver healthy and predictable results. Reported revenue and EBITDA for the quarter was $86 million and $32 million. Compared to Q3, revenue was flat while EBITDA declined approximately $1 million or 4.5%, excluding the impact of foreign exchange.

The softness in Q4 compared to Q3 is driven by 2 factors: one, the anticipated departure of a single-tenant data center; and secondly, seasonal increase in utility costs. It's important to note that on a full year basis, Business Infrastructure Services delivered organic revenue and EBITDA growth of approximately 12% as customer demand continues. Consolidated capital expenditures in the quarter and for the full year were $386 million and $1.2 billion. The increase in the current quarter compared to a year ago was due primarily to the addition of wireless investments of approximately $70 million in Q4.

Free cash flow in the quarter was $9 million and $482 million for the 12-month period, which includes approximately $132 million in free cash flow from discontinued operations. We delivered net income in the quarter of $154 million or $0.31 per share, which is a decrease over the prior year due primarily to a nonrecurring gain on the sale of the Spectrum licenses recorded in Q4 2015. Net income for the full year was $1.2 billion or $2.51 per share compared to $1.80 per share in fiscal 2015. The increase in the current year was driven primarily by the gain on the sale of the Media division, partially offset by various other nonoperating losses.

Let me take a moment please and address shomi. As many of you are aware, on September 26, 2016, subsequent to our August 31 year-end, shomi announced that it will be winding down operations effective November 30, 2016. In fiscal '15 and fiscal '16, we have recognized total equity losses of $108 million. Further, in Q3 of fiscal '16, you'll recall we reported an additional $51 million impairment.

In the months to come, we expect to incur additional costs in relation to the wind down of up to $120 million as noted in our subsequent event note. And up-to-date, provision for these costs will be reflected in our Q1 fiscal 2017 results.

Let me now turn to the particulars of our fiscal '17 guidance. Our consolidated capital guidance, as noted in July when we provided our Q3 results, remains unchanged at $1.3 billion. The increase over fiscal '16 represents the impact -- reflects the impact of a full year of wireless investment. We are introducing consolidated EBITDA guidance to range between $2.125 billion and $2.175 billion. This EBITDA guidance reflects the expectation of healthy revenue gains across all of our business units, coupled with required strategic investments with the view to providing long-term benefits. From a free cash flow perspective, our fiscal '17 guidance is to exceed $400 million.

As previously discussed, fiscal '17 is another year where we will continue to make additional investments and focus on execution. However, our long-term strategy to deliver operating earnings, free cash flow and dividend growth remains our guiding principle.

With that, Brad, back to you.

Bradley S. Shaw
CEO & Non-Independent Director

Thanks, Vito. Before we take any questions, I wanted to acknowledge our employees and customers that were impacted by the devastating fires in Fort McMurray earlier this year. We all came together in support of this tragedy and as the city rebuilds and recovers, Shaw is proud to stand with the community, our customers and our families.

In closing, I also want to say a sincere thank you to all Shaw employees for their hard work and devotion over this past year. As we turn the corner and start a new growth chapter here at Shaw, we will continue to work towards many exciting initiatives in F '17 that are geared towards building a stronger Shaw for the future for all of our stakeholders.
Thank you for joining us this afternoon, and we'll now turn it back to the operator to open for Q&A session.

Question and Answer

Operator

[Operator Instructions] The first question comes from Jeff Fan with Scotiabank.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

First, I'll start off with the Consumer margins. This quarter was a little bit weak. And as you guys pointed out, I think there are a couple of cost items. Wondering how you see Consumer margins going into 2017? Because there's a lot of moving parts with, obviously, price increases putting through, you've got the WideOpen 150 new customers coming in, you've got X1 costs, and then you've cost savings and programming. Wondering how all that sort of flows through at the end of the day to Consumer margins in '17.

Bradley S. Shaw
CEO & Non-Independent Director

Yes, Jeff. Maybe I'll start off and Jay can clean up for me, if I missed anything. Clearly, as we head into -- the Consumer component is a key part of our, obviously, consolidated F '17 guidance. And when you look at the margin activity, clearly a year of continued investment for us, content costs and NGV costs, in particular, will weigh heavily into our cost base as we move forward. The business is doing all they can, obviously, from an operational effectiveness perspective and efficiency perspective. But overall, when you look at the cost picture plus the focus really on subscriber and revenue growth, I would say that you can anticipate some pressure on the Consumer margins as we move into fiscal '17.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

Okay. And then the second part of the question -- or second question, really, is around your wireless strategy. There's a couple of different approaches. One, if we look at what T-Mobile with their un-carrier approach in the U.S. is doing, that's certainly one approach. Another approach could be, you could be looking at it as an extension of your cable services into wireless, in which the benefit could come from lower churn of the core business as well as increase in value of the wireless business. Wondering how you can -- how you look at it as you get the upgrade under your belts going through 2017.

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

Jeff, Alek Krstajic here. Look, we're -- we see the Canadian market a little bit different than the U.S. market. And I don't think that there's a need to do quite as aggressive an approach as what T-Mo did down the States with the un-carrier approach. I mean, you're not going to see me growing my hair long and wearing a pink t-shirt and crashing competitors' parties. But in the same way, I don't think there's a need to be as disruptive. We're having some great growth already with the 3G market -- with the 3G network. And I think, you'll see that kind of thing continue in a much more stable approach to how we attack the market.

Operator

The next question is from Vince Valentini with TD Securities.

Vince Valentini
TD Securities Equity Research

Sticking with the Consumer margins from a slightly different angle. You're getting more customers signing up for these 2-year Value Plans. So obviously, in year 1, they get a pretty good discount on their price, but then they jump up. So is that something you'd expect to see, a good snapback in your margins in 2018, if you keep loading a lot of your customers on 2-year deals?

Jay Mehr
President

Thank, Vince. This is Jay. You've correctly identified this -- one of the major shifts in the marketplace. And to be clear, we've moved fairly aggressively with 2-year Value Plans on the 1st of March and then amplified that with the launch of WideOpen in July. So the benefits of that, in terms of creating symmetrical competition with our primary competitor, you'll recall for the last number of years, we've been asymmetrical where a large proportion of their base and almost all of their adds were on contract and ours were on a month-to-month basis. So there's some cost and some discounting at the front end. I can tell you, having already seen the results from October of the original March, sort of 6-month roll-off, we are seeing the churn benefits that we anticipated from that. Over 90% of our WideOpen Internet 150 of launch adds went into a 2-year Value Plan. And so the churn and margin benefits, I think, are easy to model from there.

Vince Valentini
TD Securities Equity Research

Okay, great. And while I got you Jay, X1. Can you just clarify this for me? So, is there going to be some sort of launch by, say, your second quarter of fiscal 2017? Or are we talking about a delay till next summer before any of your customers can start to see the full boxes and platform?

Jay Mehr
President

Yes, Vince. You've heard our full voice around WideOpen Internet 150. Please don't read into that, that we're underemphasizing any of the 3 elements. Recall, as we talked about the $1.2 billion in capital last year and the $1.3 billion this year, that, that was to complete the ultra-broadband upgrades, DOCSIS 3.1 in all markets, X1 in all markets and the LTE build in all major markets and actually most minor markets. All 3 of those programs are on track and on budget. And we're equally committed to all of them. I think you've seen some sequencing. X1 is, certainly, on-time and on budget, and we couldn't be more delighted with our progress. We're in full trial now and initial results installed in homes have been extremely positive. For sure, we will go outside of the trial and into installing into customers' homes in this calendar year. When you talk about the go-to-market launch, I'm not sure how you'll measure our approach. But we'll be in the open market in at least 1 market in calendar 2016. And it's a big part of our fiscal 2017 plan.

Operator

The next question is from Phillip Huang with Barclays.

Phillip Huang
Barclays Bank PLC, Research Division

I have a question on the wireless net adds this quarter. It certainly appears that the market is responding positively to your network upgrade. I was wondering if you could provide a bit of color on where you're seeing the most significant change, if at all, in your wireless subscriber growth momentum. Is it more Western Canada-driven? That's where you started the 3G equipment upgrade and LTE Advanced. Or is it also more Ontario still?

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

It's Alek Krstajic. In absolute terms, the numbers are still -- the majority are coming out of Ontario. If you actually looked at the growth rate, there's a slightly higher growth rate in the West and that you would expect, given the network upgrades by changing out some of the 3G equipment, turning on the extra spectrum we had. It had a pretty profound impact on the performance of the network out West. And I think some of this growth you're seeing is clearly showing that there's a correlation between better network performance and more growth. But for sure, the majority of the subscribers are still coming out of the East.

Phillip Huang
Barclays Bank PLC, Research Division

Right. That's helpful. And is it fair to assume that the number of distribution points for Western Canada isn't where you want it to be? Maybe you can give us an update on your plans to potentially increase your distribution presence out there?

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

I can't give you any details on our distribution strategy. But I can tell you that if you're trying to grow a business, you're always interested in getting more points of distribution. And so we've got some pretty smart folks that are working hard to try to make sure that we are everywhere our customers sort of live, work and play.

Phillip Huang
Barclays Bank PLC, Research Division

Got it. Okay. So I guess, my point, are we -- we shouldn't assume that there's going to be a nice or like a spike in distribution points anytime soon for you guys on the wireless side?

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

I don't -- I think it's -- I mean, distribution, it's a long game. It's hard to build stores, get leases, all that stuff. So I don't think you'll see any kind of spike.

Phillip Huang
Barclays Bank PLC, Research Division

Right, okay. Well, that's helpful. And then last question for me, on ViaWest. Obviously, if we were to step back and look at your overall business segments, you have significant growth opportunity and investments ahead of you for your core cable and wireless businesses. But ViaWest also has a big growth opportunity, and doesn't contribute a lot of cash flow, it's neutral. Just wondering where you rank sort of your priority when you're looking at the different investment options or, potentially, do you look at ViaWest as potentially following the same path as Shaw Media one day?

Vito Culmone
Former Executive VP & CFO

Yes. It's Vito here. Well, we just absolutely love what Nancy and the team are doing south of the border, and as they help us continue to build our Canadian business. We love the returns, and we think the overall -- and I'll, maybe, ask Nancy and Brad to chime in here as well if they like. But the overall market and the demand and the space that we're creating for ourselves is quite unique and continues to return handsomely for us. So we're -- we are prepared, quite frankly, to continue to invest in that business.
I think a way to think about it over the next couple of years is sort of free cash flow neutral. So the investment profile that -- the cash that Nancy and team generate will be reinvested. And maybe, Nancy, you want to elaborate on that a little?

Nancy Phillips
Executive Chair of the Board & Co-Founder

Yes, I think that's right. I think, we feel, obviously, continue to see very high-demand for our hybrid platform of services. And certainly, many of the security services that we've added here over the last 12 to 18 months. And I would agree entirely with Vito in terms of the capital investment. And we're making the right investments in the right markets. We just brought our Plano facility online here in September. So we've got capacity in a very important market amongst [ph] all of the markets that we represent. So again, we feel very good about the growth profile of the business where we're at and the capital intensity that we have applied for both our colocation and cloud-based platform.

Bradley S. Shaw

CEO & Non-Independent Director

Phil, this is Brad. The only thing I would add in there is as you look at our pivot this past year, and long-term growth and what we're doing, we have 3 key buckets here that are the growth profile. And we're going to make sure we've -- we manage those. And listen, as we pivoted -- there's a little bit of work to do on your strat and how you go forward, and everything that has to happen, and so all that part of the planning process. But we feel that the performance of these -- the 3 growth engines are excellent, and we want to continue to support that. And timing, cadence, and how fast and how far we go really depends on a variety of things, the competitive nature of things, our timing to come to market. And so we feel very good, and we feel we can support them all as we go forward.

Operator

The next question is from Tim Casey with BMO.

Tim Casey
BMO Capital Markets Equity Research

A couple for me. One for Vito. Vito, could you give us a little more color on the free cash flow walk down. If we look at the EBITDA and CapEx guidance, I'm wondering if there's any add backs on cash taxes or pension accruals or anything that gives you confidence you can get to the $400 million. And second, just a comment on what you're seeing regionally in Alberta and Vancouver. There's been some noise about the Vancouver housing market and oil prices have recovered a bit. But just wondering, what you're seeing from a macro perspective there?

Vito Culmone
Former Executive VP & CFO

Yes, I'll take the first one and Jay, you can pick up the second one. Our free cash flow below the line actually gets a little clearer here as the years move on. We've got a pretty significant reduction in free cash flow taxes planned for next year. And that emanates from the fact that fiscal '16, Tim, represented the last year of our partnership deferral pickup. Those rules were enacted a few years ago. So I would guide the Street to a free cash flow full year number of $200 million range. So that contributes significantly to it. And then, obviously, the other significant item there, obviously, is your interest number. And I don't see major -- any significant changes here on the interest line through the year. So you can plug in a $300 million range number there, which is very consistent with where we landed. We've got $400 million of bonds coming due in March. And when I look at the fiscal '17 year from where we're standing right now, obviously, it doesn't have any new financings in there other the potentially to refinancing of that. But other than that, of course, it includes a full year of our course dividend. I remember, you heckling me last quarter for why is course dividends in there, but that's in there of course. And we'll take it from there -- those are the only major [ph] key components. And when you do the math on that, obviously, you'll get to your own number on it. And we got the EBITDA, and we got the CapEx, and we're committed to delivering more than $400 million and as the EBITDA progresses through the year, we'll modify. There's obviously, in the CapEx numbers if there is a significant component of success-based capital and that'll move around depending, obviously, our initiatives are proceeding.

Tim Casey
BMO Capital Markets Equity Research

Just to confirm though, Vito, that free cash flow, does it include the Corus dividend as if they were paid in cash?

Vito Culmone
Former Executive VP & CFO

That's correct.

Jay Mehr
President

And then picking up on the macroeconomic question, I think, Tim. I mean, I think it's clear and those of us who live in and work and raise families in Calgary understand the economic environment. It is, as you can imagine, tough particularly in the small business segment, but throughout the entire economy. And obviously, no business, including ours, is immune to that. Clearly, Fort McMurray is going through a normal period, although tremendous results in that community to rebuild. There are parts of Alberta that are similarly struggling. We're holding up fine in Edmonton and Edmonton seems to be holding up well. The British Columbia market is very strong from a macroeconomic point of view. Of course, in our business, it's a very monthly bill price-sensitive market in Vancouver, which is just a reflection of the nature of Greater Vancouver and the relationship between incomes and housing costs. So while the overall economy is performing very well, I think it's -- lots of attention to monthly bills and a very strong response to WideOpen Internet 150 in Vancouver, I think, for those reasons.

Operator

The next question is from Aravinda Galappatthige with Canaccord Genuity.

Aravinda Suranimala Galappatthige
Canaccord Genuity Limited, Research Division

With respect to the LTE rollout, obviously, you're targeting year-end 2017. It's a fairly rapid rollout when you think of some of your peers in the past. So I was wondering if you could touch on some of the main sort of challenges in terms of -- logistically, in terms of achieving that time line. And also I was wondering related to that, if you can sort of touch on your level of satisfaction with handset availability for AWS-3.

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

So on the first question. Look, the team that's rolling this LTE network out has done this. We've done this a whole bunch of times. I mean, Brian O'Shaughnessy was the Head of Technology at Bell Mobility back in the day. And then, we did this again at public mobile, and now we're doing here at WIND. And so we're very confident with the time lines that we've outlined that will bring this network build in on-time and on budget. Otherwise, Brad will be very mad at me. So we're very confident about that. And again, there's -- none of this is rocket science. As -- with respect to your question on handsets, look, we're seeing -- we've got visibility on a number of handsets that are going to be available by the time LTE launches. The chipset, that same question is the band 66 chipset from Qualcomm and a number of the handset manufacturers are incorporating that into their roadmap. So we're quite confident that by the time we turn on the first LTE locations, that we'll have handsets available.

Aravinda Suranimala Galappatthige
Canaccord Genuity Limited, Research Division

Great. And just with respect to the CapEx side, obviously, you're having elevated -- somewhat of an elevated here in terms of CapEx for obvious reasons. But as we think beyond 2017, I know that you can't discuss numbers, but very generally directionally, how should we think about the post '17 CapEx levels? Obviously, on one hand you have the LTE rollout concluding and there are some savings there. And then you're, obviously, stepping up in terms of your broadband upgrades. Should we expect the moderation there as well as we think beyond '17?

Vito Culmone
Former Executive VP & CFO

Yes. I'll start it off and open it up to the team, obviously. Clearly F '17 reflects a bit of a spike related to the wireless and incorporating, obviously, the LTE in our wireless numbers. So as we move forward into F '18, I think, you can expect the wireless group to come off a little bit, still fair bit of bill to do there, but probably a peak there for wireless. Overall, I think -- again, I think you see the theme here, for us, which is all about revenue and growth and investing in key initiatives and ensuring that all of our customers are getting great value and just a great service across the board. We clearly understand and are committed to free cash flow growth and free cash flow growth comes with, obviously, revenue and operational EBITDA growth primarily. So I think it's early to call it a peak necessarily. But clearly, committed to free cash flow growth here as we move forward into F '18, F '19, beyond the F '17 guidance we provided.

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

And maybe building on what Vito just said. To be clear, we've been very transparent that the $1.3 billion that we released for this year will complete virtually all elements in all of the major and medium-sized communities for LTE, the rollout of X1. And not just the ultra-broadband rollout of Shaw Internet WideOpen, but the DOCSIS 3.1 rollout that makes the gigabit future possible in all of our major markets. So we certainly disclosed that so that you can see that the money is going towards significant transformational investments. Throughout, if you look at both F '17, including X1 rollout, and F '18, the role of success-based capital is something that's really hard to predict over many years. Obviously, we were planning on -- I think, you've heard loud and clear, that we're planning on growing the business and growing the business comes with success-based capital. So I think it's that, that is preventing us from giving multiyear information is what happens with success-base over time.

Aravinda Suranimala Galappatthige
Canaccord Genuity Limited, Research Division

And just to follow-up across the line, quick question. Vito, did you -- on the cash tax guidance, do you mind repeating that, please? Did you say a $200 million pickup year-over-year?

Vito Culmone
Former Executive VP & CFO

No, absolute number of $200 million for F '17.

Operator

Your next question comes from Greg MacDonald with Macquarie.

Gregory William MacDonald
Macquarie Research

Just a clarification question. The CapEx for wireless that's embedded in the $1.3 billion, is that -- can we just deduct that, that's $150 million or it just speaks about what's left in the original guidance on what's being spent on wireless to do the build out? Or is there possibly more than that?

Vito Culmone
Former Executive VP & CFO

It's a little higher than that, Greg. But there's normal capital in the business that runs through, but you're not too far off the range.

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

The math on the build capital is right. Of course, what you're missing in that is there's wireless maintenance and other wireless capital, which is a massive number, but you've to net that up, which is a regular ongoing piece, right?

Gregory William MacDonald
Macquarie Research

Right, I got that. But there's no expansion beyond the original intended?

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

That's right.

Gregory William MacDonald
Macquarie Research

Okay. A question on DOCSIS 3.1, because it was mentioned in the press release, not sure if I missed something because, I have to admit, I didn't get the chance to read through the release fully. But timing, could you comment on timing? When you're going to be 3.1-ready? And on marginal investment that's necessary for that. I know, Rogers has made a big deal, but it's only $50 a home pass. But I think, we all know that there is some spending on the network component to get to a point where you can actually say $50 a home on the device. Can you give some color around that?

Jay Mehr
President

Yes, I mean, my suspicion, and we haven't had a discussion on this particular point, is that I think you're correct. I'm assuming that $50 is the incremental cost on the Gateway in the home for DOCSIS 3.1. And I think that math suggests that your network upgrades, node splits, CMTS conversions to CCAP are kind of table stakes in the conversation because we'd do that anyway. If that's how you calculate it, then we think that's right. For sure, and if you look at our converged network strategy, our converged network fiber deep strategy is in service of the DOCSIS 3.1 and Gigabit Internet and all the things that come with that. So all that is built into our long-term plans. So I'm not sure we can give you too much, except to say that DOCSIS 3.1 will be available to the vast majority of customer homes by the end of F '17.

Gregory William MacDonald
Macquarie Research

I guess, Jay, the way I'd ask it is, is there any outsized spending on the node splitting, et cetera, component of it to be DOCSIS 3.1-ready? Or has that -- is that sort of just a normal course, and we're not seeing a spike this year for that?

Jay Mehr
President

Yes, I don't mind being transparent because I don't think it's about storage. To be clear, we're doing about 25% more node splits than we would've done on average in the last 5 years. I don't think that's a particularly material number that shifts much in the model and node splits are only one small piece of the converged network that we're building. But there is increased activity of an extra 25% fiber nodes is increased activity.

Gregory William MacDonald
Macquarie Research

Okay. And is there anything to say on continuation of that spend through '18 and '19? Or are you just not going willing to talk about those years? I guess, what I'm asking overall is where are we in the CapEx cycle on cable network spending? Are we at the peak in 2017 or not?

Jay Mehr
President

The total network spend in terms of the cable network upgrades. I mean, you're looking at the $1.3 billion, right? And there's an awful lot on that on CCAP space. The total network spend is a 1/6 or 1/7 of that total number. And there are ups and downs. I would think if you took a 5-year rolling average, I don't think you see -- you'll see material shift against the 5-year rolling average.

Vito Culmone
Former Executive VP & CFO

Yes, I think you'll see consistent spending on the network side of things there. They're sort of reflected in our F '17 base, plus or minus 10% on it. But as Jay said, overall, relatively -- I wouldn't say small, but is significant in absolute dollars, but relative to our overall capital guidance, probably third, fourth, fifth largest single bucket.

Gregory William MacDonald
Macquarie Research

Okay. That's helpful. And on timing on sort of ready to go with DOCSIS 3.1?

Vito Culmone
Former Executive VP & CFO

You said in the fiscal, right?

Jay Mehr
President

Yes, I said everywhere that matters in the fiscal surmise from that. And I think you've read from other players when they're going to be ready, we're going to be right there. So you'll certainly see some product offerings next spring.

Operator

The next question comes from Maher Yaghi with Desjardins Securities.

Maher Yaghi
Desjardins Securities Inc., Research Division

So can you help us understand the way you're looking at your handset subsidy model for wireless? When we look for the end of your upgrade cycle for LTE, and given that handsets that -- the handset cycle that was launched this year did not include Band 66. I'm trying to understand, most, if not all customers, who want to benefit from your LTE customers will require a new handset. I'm trying to figure out -- I'm trying to wrap my head around your handset subsidy and what is that going to imply in terms of CapEx allocation?

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

Thanks for the question. Look, I think it's too early to get into discussing what -- in fact, I wouldn't discuss what the subsidy strategy will be around handsets. What I will say is that, I don't think this is any different than what every other carrier has gone through in the past when they've upgraded to LTE. And if people want to take advantage of the benefits of a new network, they have to get a handset. What we've seen happen though is the cost of handsets is continually decreased. And I think the availability in calendar 2017 of low-priced Band 66 handsets will make it very simple so that I don't think there's any major hurdles to overcome on this issue.

Vito Culmone
Former Executive VP & CFO

Yes, I would agree, Alek. I mean, as we do our sort of longer term projection, it's not capital, Maher, but it's working capital. If you think about the cash that you'll obviously the pay for the equipment and then whatever whether the customer is on a tab [ph] or a tab boost [ph] program, but not overly significant if we proceed with the existing sort of model.

Maher Yaghi
Desjardins Securities Inc., Research Division

Right. So I don't want to, I mean, I know this is something we'll probably be talking about next year. But just in terms of the model itself that we -- we're seeing more and more handset lifecycle being extended. So in order to get a customer to switch, it's going to be requiring more upfront payments. When you look at your cash flow programs for beyond 2017 in addition to the CapEx cycle for network upgrade on cable and ViaWest growth, et cetera. When you look at your capital allocation, it all is within the free cash flow metrics that you're producing? Or I mean, maybe trying to understand long term, how did that structure -- is going to look like in maybe 2018, 2019?

Vito Culmone
Former Executive VP & CFO

Yes. And maybe we're ahead of ourselves and happy to take it off-line. Maher, it does start with what's our customer proposition and how do we want to position ourselves in the marketplace. Is it something different than today? Or what does that like and as you said, there's a lot moving pieces. So I think as the commercial team works through that, we'll obviously be part and parcel of what's the potential implication or consequence of that. But we'll let the commercial guys sort of lean in and develop their strategy and do their work.

Maher Yaghi
Desjardins Securities Inc., Research Division

Okay. That's fair. And just my last question is on your guidance. As I look at your consolidated guidance, and I know you have not broken up the guidance by segments. But are there any segments that will show trends in terms of growth that is different -- materially different in 2017 versus what you saw in 2016, when I look at Consumer Business Network Services or Business Infrastructure Services?

Vito Culmone
Former Executive VP & CFO

That a tricky question. Listen, we're -- when it comes to BNS, BIS and wireless, we really like what we're seeing. Obviously, with Business Infrastructure Services, F '16 over F '15 had the impact of INetU. Those growth rates will moderate as we move through F '17 over F '16 and obviously F '16 also reflected the favorable foreign exchange. But double-digit revenue EBITDA we're very, very comfortable there. We like what's happening in Business Network Services. Wireless, we're going to obviously fall -- we're not going to give you guidance on what we see the wireless business doing. But we like what we see there. So to answer your question, no fundamental changes in the health and if anything, on the front foot across those 3 business units and the investment on the Consumer side, as we said.

Operator

The next question comes from Rob Goff with Echelon Wealth Partners.

Robert Goff
Echelon Wealth Partners Inc., Research Division

Actually 2 questions. The first one will be a little backward looking. Could you address the level of price increases that you took in August? And then the second question would be, you had talked to the take-up rates on the 2-year packages. Could you repeat what that level was and whether or not you sort of have a steady-state percentage that you would like that to be at?

Vito Culmone
Former Executive VP & CFO

You want me start with what driven [ph]? Yes, August, about 95% of all our Consumer cable experienced an increase that I -- you don't -- I'd say that Internet increased $2 to $3 and video increased $3 to $5. So when you look across our customer base, maybe a rule of thumb would be 3/4 of our customer base will experience a bill increase of $3- to $5-ish cover that -- I mean, you're good with that, right?

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

Yes.

Vito Culmone
Former Executive VP & CFO

$3 to $5. That's sort of the range of what we did in August. Obviously, all of that is public information. Any additional color on that, Jay?

Jay Mehr
President

No, just to say that the response has been consistent with previous years. Conversation rate, consistent with previous years.

Vito Culmone
Former Executive VP & CFO

And sorry, the second question was around 2-year plan?

Robert Goff
Echelon Wealth Partners Inc., Research Division

Yes, what the -- I just didn't quite get what the current take-up rates were and then the follow-on there was, is there a level that you would like to see in the marketplace taking the 2-year take-ups?

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

Yes. So I mean, I think what we wanted to do was create an environment with symmetrical competition and where they need to pivot the growth by reducing our churn. And I would say, we're achieving both those objectives and like the results so far. As a design principle, we would like to have more than half of our customers overall, of our gross adds to join us on Value Plans. I think it's fair to say we've been achieving that numbers. From a competitive perspective, I mean, we're happy to play. It's clear that the shift in the competitive trajectory was not understandably being well received by some of our competition. And they've got more aggressive outside of service agreements and so that's okay too. We're trying to create symmetrical competition, and we're happy to play in whatever space makes sense. So I think those are sort of high-level design principles that can help you, Rob. But they're certainly not guiding and that we're married to them. We're pretty excited about what's made possible with the combination of ultra-broadband powered by DOCSIS 3.1, with the launch of X1 and the arrival of wireless. And so we're prepared to play in the competitive environment in order to change the competitive trajectory from the historical levels.

Operator

Your next question comes from Robert Peters with Crédit Suisse.

Robert Peters
Crédit Suisse AG, Research Division

Just wondering, when we look at the cable side of things and the costs associated with the current ramp up of FreeRange TV, just wondering if you can kind of quantify or give us maybe some idea of how much of those kind of directly overlap with the X1 spending.

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

Yes, in terms of costs, to be clear, when we talk about next-generation video or X1 costs, we're talking about the whole program. And regardless of whether or not it's paid on an operating maintenance spaces or license fee or whatever the piece of that is, so we conclude -- we consider free range in X1 that will be one bundle [ph]. We disclosed that in fiscal 2017 that was roughly $75 million, which broke down $25 million in OpEx and $50 million in CapEx.

Vito Culmone
Former Executive VP & CFO

That was F '16.

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

That's F '16.

Vito Culmone
Former Executive VP & CFO

Yes.

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

And then in F '17, the total amount is about the same, $75 million, with the numbers reversed $50 million going into OpEx and $25 million in CapEx. We said that a quarter or 2 ago, and we got cost certainty. So that's how things are unfolding.

Vito Culmone
Former Executive VP & CFO

That's great.

Robert Peters
Crédit Suisse AG, Research Division

Perfect. And maybe just a question maybe on satellite. When you look at the satellite business, I know as you guys are investing to convert some of the channels from I think the MPEG-2 encoding to the MPEG-4 encoding. And so clearly, there's investment being made there. I was just wondering when we think about sort of longer term I was wondering have you ever disclosed the mix between kind of the rural and the urban subscribers or kind of provide any kind of outside of your footprint subscriber base?

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

Yes, I don't know that we've done sort of by province disclosure. We've certainly disclosed that we would consider 2/3 of our base to be rural and that's consistent and very much how we think about the business. The business is performing well and has had some general stability. A reminder to everybody that we have the cabin and camp disconnects that happened in Q1, and that's roughly about 10,000 and you'll probably see them again in Q1, and you'll see a strong spring as cabin and camp connects come on. I think the math of that MPEG-2, MPEG-4 conversion, you'll like in terms of what it means for long-term transponder cost savings and what it does to Consumer margins in sort of years 3, 4, 5. It also brings a modern and significantly improved experience in a number of customers' homes. So I think that's pretty much a no-regrets investment as you see us roll through that.

Robert Peters
Crédit Suisse AG, Research Division

Does the conversion to MPEG-4 open up the ability to do 4K on the satellite? Or is that something where you need a new one launched?

Aleksander Krstajic
Former Chief Executive Officer of Freedom Mobile, President of Wind

Yes, I don't think we're speaking about 4K satellite. I think you're correct in suggesting the capacity available creates optionality and flexibility, and it's something what we've got there.

Operator

Mr. Shaw, there are no more questions at this time.

Bradley S. Shaw
CEO & Non-Independent Director

Thank you, operator, and thanks, for everyone for joining us. And enjoy the election next week.

Operator
This concludes the time allocated to today's conference call. You may disconnect your lines. Thank you for participating and have a pleasant day.

Presentation

Operator

Thank you for standing by. Welcome to the Shaw Communications Fourth Quarter Fiscal 2017 Conference Call. Today's call will be hosted by Mr. Brad Shaw, CEO of Shaw Communications. [Operator Instructions] The conference is being recorded. [Operator Instructions]

Before we begin, management would like to remind listeners that comments made during today's call will include forward-looking information, and there are risks that actual results could differ materially. Please refer to the companies publicly filed documents for more details on assumptions and risks.

Mr. Shaw, I'll now turn the call over to you.

Bradley S. Shaw
CEO & Non-Independent Director

Thank you, operator, and good morning, everyone, and thank you for joining us today. With me this morning are members of our senior management team, including Jay Mehr and Vito Culmone.

Our asset-based strategic partnerships and long-term outlook have never been stronger. We believe our focus in 2017 has enabled the significant progress we have made on our key strategic initiatives. We're excited about the growth opportunities in both our wireless and wireline businesses. We will continue to make the necessary investments to bring both businesses together into a single experience for Canadians, as our converged network becomes a reality over the coming years.

During fiscal 2017, we monetized our U.S. data center business at an attractive valuation and bought additional spectrum from Quebecor. While the spectrum will significantly enhance our current network capabilities, the addition of future low band spectrum remains critical to level the playing field and for Shaw to be a viable long-term competitor in the wireless space. Considering the realities of our spectrum position and how the incumbents have historically secured this key asset required to compete in the wireless business, particularly the low-frequency spectrum, we strongly support the government's proposed approach to the 600-megahertz auction. The framework will help ensure that Canadians have affordable and competitive choices for years to come. While we are proud of the improvements we have made to the Freedom network, a substantial set aside in upcoming 600 auction is required for Canadians to truly enjoy choice in their wireless experience. Almost a year ago, we rebranded WIND with a launch of Freedom Mobile, and today more than 1.1 million Canadians choose Freedom as their wireless carrier.

In fiscal 2017, we completed the rollout of our LTE network and made Shaw Go WiFi available to Freedom customers, creating immediate and tangible improvements to their wireless experience. This investment created a powerful LTE advanced data only network that we are now offering to Canadians in the way that they have not experienced before.

Our approach to the growth of our wireless business has been thoughtful and patient. A highlight of this strategy is that in the near term we will deploy some of our recently acquired spectrum to enable hundreds of thousands of existing Freedom Mobile customers to move from their current 3G data experience to our fast LTE network. This innovative approach to spectrum management will also technically enable millions of Canadians to bring their own devices to Freedom and enjoy the full benefit of our LTE network. And in addition, take advantage of our new Big Gig rate plans. These plans lead the Canadian market in terms of included data value and are perfectly suited for the data-savvy modern wireless customer. Furthering our appeal to this important market segment, we're also excited to confirm that we have finalized the agreement with Apple to bring the iPhone to our wireless customers and we look forward to future announcements on Apple iPhone availability and pricing.

Considering these recent announcements, we believe we are significantly expanding our addressable market and, going forward, there will be continued network and product improvements, including the launch of voice-over-LTE by the end of this fiscal year. In 2017, we set out to successfully change the trajectory of our wireline subscriber trends. We delivered positive consumer RGU growth of 25,000 compared to a loss of 170,000 in the previous year. We believe our strength in broadband will continue to grow as our customers see tremendous value in products such as WideOpen 150 and unlimited data. We also delivered positive consumer video adds in F '17, another significant improvement over the loss of approximately 93,000 last year. In April, we launched BlueSky TV, adding a premium TV experience to our video portfolio. The road map that we have in front of us with respect to technology in the home continues to be very exciting and supportive of our strategy to provide an exceptional customer experience. In F '17, we pushed the boundaries with launch of BlueSky TV and WideOpen 150 with unlimited data to grow our wireline business.

In order to effect this change, we purposely spent on marketing, the customer premise equipment and we drove promotional activity, all of which we can see in the results, both subscriber and financial.

Vito will provide you more details regarding our F '18 guidance, but you can expect a profitable and value-accretive focus regarding our growth initiatives as we continue to make investments to improve both our wireline and wireless businesses.

Maintaining investment-grade ratings remains a priority for us. And our ability to fund investments and continue to pay a healthy dividend is supported by our strong balance sheet -- the strongest balance sheet we have ever had, with leverage under 2x and over $500 million in cash available, our financial strength was enhanced through the strategic investments and divestitures over recent years. This purposely designed has enabled us to fund growth initiatives, including wireless infrastructure and spectrum. That allows us to target a wide variety of segments and respond to competitive market dynamics.

Fiscal 2017 was another year of significant milestones and achievements. Our strategy and focus on execution has never been clearer, and I'm very confident that we are making the appropriate investment decisions to deliver long-term growth and value for all stakeholders, and I'm excited about the opportunities that lie ahead.

I'll now turn the call over to Vito to review the Q4 and fiscal 2017 financial results, as well as discuss our 2018 guidance. Vito?

Vito Culmone
Former Executive VP & CFO

Thank you, Brad. And Good morning, everyone. Before I get into the detailed financial results, I would like to remind everyone that Q4 and full year 2017 results have been segmented into continuing operations, comprised of Consumer, BNS and Wireless, as well as discontinued operations, which would include ViaWest, Shaw Tracking and Shaw Media in some of the year-over-year comparisons.

Our fiscal 2017 reported revenue and EBITDA from continuing operations in the amount of $4.882 billion and $1.997 billion respectively, represented an increase of 8.1% and 1% versus fiscal 2016. As it relates to Q4, year-over-year consolidated revenue and EBITDA from continuing operations was $1.24 billion and $479 million, respectively. Revenue increased 2.6% and EBITDA decreased 6.8%, as growth in Wireless and BNS were more than offset by higher planned costs in the Consumer division.

Let's start with Consumer, as it had the largest impact on this quarter's results. Revenue and EBITDA in Q4 was approximately $937 million and $374 million, respectively. The lower year-over-year EBITDA reflects elevated levels of promotional activity, higher network programming fees, along with increased operational and marketing costs as we continue to create awareness for BlueSky TV. For the full year Consumer revenue of $3.7 billion was down 0.1% from fiscal '16, and EBITDA declined 5% to $1.58 billion as the Consumer segment carried most of the increased cost to launch and service new products, create customer awareness, grow the subscriber base and absorb increases such as programming costs.

We are pleased with the subscriber results in F '17, and we've been very thoughtful and deliberate in our promotional strategies, notwithstanding RGU growth came at a cost. We made the necessary investments to reverse the subscriber trends and launch new products and services that we expect will deliver growth over the long term.

Business Network Services revenue and EBITDA increased 6.8% and 7.5%, respectively, in the fourth quarter. For the full year, revenue -- reported revenue of $554 million and EBITDA of $281 million, increased to 7.6% and 11.5%, respectively, as customer demand for the smart product suite remained strong.

Wireless revenue increased 16.2% to $172 million in the quarter, while EBITDA increased 13.8% to $33 million compared to fiscal '16 Q4. For the year, Wireless generated $605 million in revenue and $133 million in EBITDA. Continued growth in this segment is due primarily to subscriber and ARPU growth as we continue to load customers on our LTE-Advanced network. We're pleased with the growth that Wireless delivered in fiscal '17, and we will continue to build upon this momentum in fiscal '18 and beyond.

Turning to capital spending in the quarter, it increased to $398 million or $61 million higher than Q4 fiscal '16, bringing the full-year investment to $1.225 billion for continuing operations. Fiscal 2017 investments were focused around continued improvements to our network to drive growth, including completion of the LTE rollout, integrating Shaw Go WiFi services and launching voice-over-WiFi. We continued to push fiber deeper into their network, invest in DOCSIS 3.1 and maintain the lowest network congestion in our history as we support a significant number of Internet subscribers taking faster speeds.

Free cash flow, which includes continuing and discontinuing operations for the year was $438 million, down 9.1% compared to fiscal '16, due mainly to higher capital expenditures in fiscal '17, coupled with free cash flow contribution from Shaw Media in the previous year. Net income in Q4 and for the full year was $481 million and $851 million, respectively. The increase in the quarter reflects a $330 million gain on the sale of ViaWest. On the full year basis, net income was lower primarily due to net income from discontinued operations in fiscal '16, partially offset by higher non-operating gains in fiscal 2017.

To sum up the F '17 discussion, let me look back for a moment and touch briefly on our 2017 guidance. As you recall, we provided refined guidance last quarter, which included fiscal '17 EBITDA to range between $2.135 billion and $2.160 billion, capital of $1.35 billion and free cash flow greater than $400 million. By removing the full year impact of ViaWest and Shaw Tracking, which equates to EBITDA of approximately $146 million and capital of approximately $114 million, we delivered reported results in line with the revised 2017 guidance when adjusting for these divestitures.

As we look ahead to another year, we will continue to execute on our strategic initiatives and build a best-in-class converged network. We will invest in enabling the newly acquired 725 megahertz spectrum. We will focus on profitable subscriber growth, and we will continue to introduce compelling products and services through our excellent product road map. As always, we will continue the pursuit of operational efficiencies. With that as a backdrop, we're pleased to introduce fiscal '18 guidance as follows.

We expect consolidated operating income before restructuring costs and amortization growing to approximately $2.1 billion, a year-over-year projected increase of approximately 5%. Capital investments of approximately $1.38 billion, and free cash flow of approximately $375 million. We expect most of the growth in consolidated operating income before restructuring costs and amortization to occur in the back half of fiscal 2018.

I also want to discuss a change in the basis of presentation for fiscal 2018 results. Effective for Q1 fiscal '18, we will be combining the Consumer and BNS divisions, and reporting them as Wireline. Our org design has evolved, and we have integrated the management structures for Consumer in BNS. These changes were made to increase agility and have sufficiencies. As a result, costs, be them operating or network related, are increasingly inseparable between Consumer and BNS. We will, of course, continue to report revenue RGUs and other KPIs for Consumer in BNS. Wireline will remain a separate reporting unit.

Finally as Brad mentioned earlier, our balance sheet metrics are strong and we exited fiscal '17 with net debt-to-EBITDA under 2x and over $500 million in cash. Our overall financial position is more than capable of supporting the required strategic investment and support our dividend payments for years to come. With that, Brad, I'll turn the call back for you for closing remarks.

Bradley S. Shaw
CEO & Non-Independent Director

Great. Thanks, Vito. Before we turn to questions, we are excited to announce the addition of Mike Sievert, Chief Operating Officer of T-Mobile, who will be joining our Board of Directors at our Annual General Meeting in January. Mike brings a wealth of wireless experience to our board with a strong background in operations and marketing through senior roles in several organizations, including T-Mobile, Clearwire, Microsoft, AT&T and E*TRADE Financial. While Shaw will continue to chart our unique path in offering a differentiated mobile experience for our customers, Mike's breadth and depth of hands-on experience will be an asset to us.

We appreciate all of our stakeholders' support as we execute our strategic plan. Our long-term growth orientated strategy is built with our customers' needs at the heart of every decision. We have the financial resources and balance sheet strength to continue to purposefully invest with the view of delighting our customers and delivering value to our shareholders.
Thank you, and we turn it over to -- back to you operator for questions.

Question and Answer

Operator

[Operator Instructions] The first question is from Vince Valentini of TD Securities.

Vince Valentini
TD Securities Equity Research

One question on cable, and one on wireless, if I could. So on the cable side, your guidance for 2018 clearly implies that things will bounce back. I'm wondering if you can flush that out a little bit more. Is that mostly just the increased subscriber volumes you have flowing through or do you anticipate a deliberate move back to more a, what I'd call normal, promotional behavior with less than 12 months at the discounted price and perhaps more normal advertising budget at some point? And would you care to comment on approximately when you think you'd make that shift? And on wireless, congrats on the Apple deal, and your release -- your separate release today says you'll have the vast majority of existing LTE devices compatible with your network. Can you give us a little more color there on exactly when that happens and what devices you were talking about? Is that sort of all the -- the old iPhones, the 7s, the 6s, the SE, and then the old Galaxy devices? Are those all compatible with your network? And if so, when?

Jay Mehr
President

Great, thanks, Vince. It's Jay, and I'll start with the wireless, and a little bit of color on cable, and then Vito can help with some more detail on guidance. Yes, in terms of wireless, we're excited about the next steps. To your specific question, as we reallocate our spectrum from markets launching near the end of this calendar year and some early next calendar year for Bring Your Own Device, we are going to support successfully all of the Apple devices you listed, the Samsung Galaxy you listed, and the vast majority of LTE devices. In simple terms, an LTE device that works in AWS-1 will be a Bring Your Own Device opportunity for Freedom. And I think you can appreciate that's a major shift for us since we build out our LTE network. So your assumption is right. All those phones will work, which is great news. In terms of cable, yes, I think you -- look, we decided that we are going to purposefully shift the RGU environment after many, many years of not having success in the marketplace. And we're clear that we did what was required, including investments in marketing and cost of goods sold and some discounting. I think if you looked at our approach this year, it's going to be a more balanced approach as we kind of pivot from share to share of wallet. And you'll see that throughout the year. You'll see Q1 will look not all that dissimilar to Q4, and then as the year unfolds, we'll see significant improvement. Some of the moves you are anticipating in the marketplace, you'll probably see, but I don't know that it's helpful for us to give you specific timing. Do you want to add?

Vito Culmone
Former Executive VP & CFO

Yes, thanks, Jay. I think, Vince, the way you've characterized and the way Jay characterized is accurate. When you look at the back half of 2017, you see an increased cost profile. And I think the 2018, you will see sequential improvement in bottom line results and year-over-year comparison. And that's driven by the timing of the cost both in 2017 and as we head into 2018. And the effect of the revenue base. The revenue, you talk about the RGUs and how they flow through, the pricing opportunities and also the promotional plans. I mean, I think the only thing outside that is when you look at our Internet, in particular, we really see a continued opportunity to migrate customers and people love the value of our packaging and the [congestion] of the network is amazing. It's a real strong opportunity for us to expand that revenue pool as we move through.

Operator

Our next question comes from Drew McReynolds of RBC.

Drew McReynolds

RBC Capital Markets, LLC, Research Division

Maybe one for you, Vito. Just on the CapEx guidance, just to break kind of the bucket down a little bit. Can you give us some color just in and around what's going on with the cable CapEx side, just as you had continued to deploy X1? And just on the wireless side, I think you alluded to -- or for spending $350 million to deploy that Quebecor spectrum in the market. Can you kind of quantify how much of that is included in the fiscal '18 guidance?

Vito Culmone
Former Executive VP & CFO

Yes. Maybe I'll start and then, Jay, you can pick up as well. I mean, when you look at the increase year-over-year, the $1,225 million to the $1,380 million that we're projecting, that increase clearly leans on wireless. We're clearly focused on prudent and efficient spend with a view to significantly advancing our converged network platform and really enabling us to profitably offer value-enhancing products as we move forward. Specifically, on the wireline side, the spend will reflect, I'll say, consistent levels of aggregate spend as in F '17 and focused on -- remains on really maintaining our broadband leadership in key markets, and managing both growth and future-proofing our network with fiber deeper. On the wireless side, clearly the F '18 spend reflects investments in both our new and refarming the existing spectrum, but pursuant to the release this morning. And in addition, we will have -- we don't want to -- more macro and small cells and a whole bunch of other components, but we're taking a bit of incremental approach. Don't want to leave the community with a view that the 13 75 necessarily reflects the full deployment of 700 MHz and 2500 MHz, but we think that's the best use of our capital as we move forward. Jay, anything else you want to add? Are you good with that?

Drew McReynolds
RBC Capital Markets, LLC, Research Division

Thanks, Vito. If I can just kind of squeeze one additional one in here. On the wireless strategy. Interesting announcement this morning in terms of Mike Sievert joining the board. You are couple of years into the wireless process. Can you just kind of comment relative to when you started down wireless, has your kind of strategy changed materially? Do you think with Mike coming on board that from a strategic standpoint that, that changes at all going forward?

Bradley S. Shaw
CEO & Non-Independent Director

Drew, it's Brad. No, I don't think so. I think, Mike certainly brings a wealth of wireless knowledge, operations, marketing. And as I said earlier, Canada is a bit different than U.S. and it has different dynamics and a different type of market. And so we need to be responsible into that and make sure we're sensitive to that. But he is going to be a great asset for the board and the family, and we're very privileged to have him. But we wouldn't see anything changing in the strategy.

Operator

Our next question comes from Jeff Fan of Scotiabank.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

Just a couple of follow-ups. One, regarding the device lineup. So will you have deployed the low band spectrum as you launch these devices with the iPhone. So I guess, the question is, is it just going to work on the 2500 MHz and some of the refarmed AWS-1? Or there will be low band that's compatible with some of the older devices, older Apple devices? And then the second question is related to just the CapEx. It's great that you guys gave some guidance for '18, but if we look out -- how much do you think the network will be at a place that will allow you to rebrand wireless in [the West] with Shaw after '18 CapEx is done? And can you give us some direction as to what maybe F '19 may look like, given your plans?

Jay Mehr
President

Great. Thanks, Jeff. Let me start in and then Vito can help with some comments on F '19 CapEx. Maybe I'll start with just refreshing our wireless strategy, so that we have clarity and then I'll deal with your specific questions about it. We're taking a step-by-step approach to our wireless business. The first step is, as you are well aware, is we needed to build a LTE-A data-only network, and we've done that and it's working great. The next step was to make it available for Canadians. We're competing with the big 3 who've had the benefit of voice networks that they've built over a 25-year head start. And if we were going to compete as the junior member of the big 4 with the same pricing and packaging as the big 3, I don't think we would have been successful. Quite frankly, our LTE network works great for data and [license] of Big Gig is our way of offering that network to Canadians. So that's Step 2. Step 3 is really creating a handset ecosystem that's available to our customers, which the addition of the iPhone helps a lot and Pixel 2 and now Samsung. We've come a long way and as we launch all those products, I think we'll have handset ecosystem parity. Step 4 is the ability to open up our LTE network, which is a fantastic network to the vast majority of LTE devices, which we're doing through the spectrum refarming, some markets this year -- this calendar year, some markets next. Step 5 is to complete the new spectrum, which will include meaningfully investments in 2500 MHz and 700 MHz this year and certainly some investments as Vito will talk about in F '19. Step 6 is voice-over-LTE and really then bringing that data network to voice. We haven't done anything to improve our 3G voice network. And that's it. And then Step 7 is likely 600 MHz. So while I think -- as you think through the model, I hope you see us taking a very methodical approach to adding value to Canadians and stepping into our lineup. I'll let Vito talk about capital in '19.

Vito Culmone
Former Executive VP & CFO

Yes, Jeff, thanks for the question. I don't know that we really want to get into F '19 capital and give too much guidance around that at this point, because obviously our plans are fluid. I think what Jay's outlined is very, very clear as far as how we're thinking about the steps. I think, Jay, fair to say that's probably an 18- to 24-month path that you just charted there. And we really believe we have a bit of once-in-a-lifetime opportunity here as we step into the wireless side of things, which will -- obviously continuing to support our wireline, but expand the addressable market. Capital decisions, Jeff, aren't necessarily made in isolation. Obviously, we will be looking for EBITDA growth as we move forward here and keeping an eye on the free cash flow. But I think what I can say about F '19 is, as you look at F '18, probably reasonable to assume that we don't have a significant differential as far as on the upside. While at the same time, I don't think there is a step-down coming off of our F '18 projected levels.

Operator

Our next question comes from Phillip Huang from Barclays.

Phillip Huang
Barclays Bank PLC, Research Division

Maybe just go back to device one last time. Just to clarify with the refarming of your AWS-1 by early 2018 across your entire footprint, does that mean the older iPhones such as the 6s and 7 will also work on LTE across your footprint?

Bradley S. Shaw
CEO & Non-Independent Director

Yes.

Phillip Huang
Barclays Bank PLC, Research Division

Okay, that's great. And then quick follow-up on the cable side. Very strong Internet this quarter. TV growth appears to have slowed a bit from last quarter despite some of the marketing and increased consumer awareness of BlueSky TV. Just trying to better understand the difference there, do you typically get more Internet-only subscribers in your fiscal Q4? Are you seeing a little bit more seasonality to the TV growth than Internet?

Jay Mehr
President

Yes, great, thank you. Look, we're excited by the RGU turnaround we had in our wireline business and very, very pleased with our results. That having been said, I think a number of quarters ago we talked about sort of positive video, plus-one video being what winning looks like. And I think we achieved that for the fiscal year. I don't know that there is a lot of advantage driving beyond that, and I'm not sure that we're going to necessarily have a video gain every single quarter. If you look at the big 3 opportunities for our business, by far, the biggest growth opportunity as we've become an EBITDA growth story is wireless. The second biggest opportunity is probably small and medium business. And the third biggest opportunity is broadband and driving broadband revenues. And recognizing the math on 2 and 3 are probably are about the same. So where they fit in the weighting. We think we are super excited about where we are in the video space, and we've got a great offering. As we pivot to a more profitable approach, you might see us -- even give us a few video subs back, potentially in Q1. And I think that we should be able to grow video in the long run. To be clear, video is a tough business and there isn't simple answers to what's happening in the video space today. And you won't see us over chase RGUs at the expense of profitability.

Operator

Our next question comes from Greg MacDonald of Macquarie.

Gregory William MacDonald
Macquarie Research

The question is on wireless subs and mostly I'm looking for a description of the profile, the new subs being added on. It was a decent number, 41,000k (sic) [41,000]. Can you talk little bit about to post-pre -- sorry the post and prepaid mix and the ARPU, more importantly the ARPU mix in the quarter?

Vito Culmone
Former Executive VP & CFO

Fairly consistent, Greg, I mean, we were pleased with the mix of -- maybe just give us a couple of seconds here and I can grab the number for you. ARPU, obviously, we like where people are coming on as we look at our Big Gig plan. I mean we had a, obviously, a sequential quarter-over-quarter improvement and a year-over-year improvement. And the early take on the Big Data, very, very early, we like what's happening. So as we look into F '18, the -- everybody is contributing to our 5% guidance, right. When we look at the businesses, Wireless, Wireline, BNS, Consumer, everybody is participating in the year-over-year EBITDA growth and Wireless is leading again heavily with ARPU improvement being a component of that. Anything else?

Jay Mehr
President

Yes, we can build on that a bit for sure, Q4 is a post-paid story and the vast majority of those adds were in post-paid with nice ARPU gains. If you look at the last 6 days, we've had a really exciting last 6 days in our business, not that volume has sky-rocketed, although volumes are healthy. Since we launched our new pricing, we've had thousands of our customers migrate upward, coming in at the $6 to $7 a month range. And of course, our adds are now coming in above $50 a month in terms of pricing, which is a major step forward for us. So we're really excited about life as a Big Gig and what it means for our revenue mix.

Gregory William MacDonald
Macquarie Research

Great, that's helpful. Then a quick follow-on, if I could. The addition of Mike Sievert on the board is obviously good news. Wonder what this might mean for strategic opportunities for the company. And I'm thinking, specifically, on roaming agreements. Shaw -- T-Mobile has a very high -- well, unlimited. So a very high data cap strategy and it's pretty similar to Shaw, and Shaw has got lots of spectrum and, therefore, the ability to maybe a beneficial roamer for a company like that. Should -- are we getting -- am

I getting too fast forward on something like that? Or is that something that you see as an opportunity vis-a-vis the addition to the board?

Bradley S. Shaw
CEO & Non-Independent Director

Yes, I think we'll always look at opportunities of relationship and when I think -- with T-Mobile, if it works for both companies, that makes good sense. I can't say that there is anything -- a big, long list here of anything that would be significant or things we need to do. But it's early stages and we will see how the opportunities arise as we go forward.

Gregory William MacDonald
Macquarie Research

Are there roaming announcements to be made in 2018?

Bradley S. Shaw
CEO & Non-Independent Director

I don't think so.

Operator

Our next question comes from Aravinda Galappatthige of Canaccord Genuity.

Aravinda Suranimala Galappatthige
Canaccord Genuity Limited, Research Division

Just a couple from me. First of all, X1, early days, I know, but I was wondering if you share a bit more of your early learnings there. I know that initially you've talked about that as kind of a very good retention rule -- retention kind of a tool. But I also wanted to see what your thoughts are in terms of actually winning subs from competitors with X1. What sort of the profile you see from the new X1 customers? And then secondly, on the wireless side, you laid out a lot of your priorities, very helpful. Just wondering what your thoughts are on the distribution aspect? Are you satisfied with the distribution that you have? Or is that something that you would look to ramp up in the near term as well?

Jay Mehr
President

Great. Thank you, very much. We're excited by what we have seen in terms of BlueSky and the rollout of the X1 platform. I mean, if you think about video subscribers kind of in 3 particular segments, the majority of the market, probably about 60%, is still TV lovers. These are folks that have a TV in a main room in the house, watch a couple of hours TV at night, and are consuming TV in kind of the traditional way you consume TV. TV lovers love BlueSky, and it's created tremendous value in terms of now the integration on Netflix and other services being aggregated. And it's a fantastic product for that customer base and it is driving usage and on-demand and ARPU as you can expect. The other 2 segments are -- increasingly there's much more of a value-conscious video space, that are interested in video at sort of a $20 price point and those kinds of things. And we play a little bit in that space, but that is not really where BlueSky is. And then, of course, there's a streaming space that's dealing with over-the-top services and other services. And there is probably an opportunity for us to move that technology into that space, but we really wanted to launch it, target it clearly at TV lovers and it's getting the -- all of the right metrics and similar experiences to what Comcast and Cox and others have [experienced]. So we are super excited to have it. On distribution, we need to amp up distribution in wireless. We clearly need national distribution with some of the big players and be able -- people have the choice of freedom if they're shopping at the household main retailers. If you think about -- which is certainly going to be a focus and we'll continue to -- in our budget and in our plans continue to ramp up on the distribution model. To be clear, there is also a pivot as we change our pricing and commission, and all of things that happened with the retail model when you do a major shift like the Big Gig. So we're working hard on the implementation of that downstream into our distribution channel. I'm excited about what that makes possible.

Operator

Our next question comes from Tim Casey of BMO.

Tim Casey
BMO Capital Markets Equity Research

Just a question on X1. Can you talk a little bit about your transition from the current deployment to an all IP environment? Is that -- I'm assuming that's in your comments with respect to guidance and whatnot, but just wondering if you could talk -- flesh that out a little bit more, [indiscernible] the actual platforms you will be deploying.

Jay Mehr
President

Great. Thanks, Tim. We're super excited about our X1 road map and very happy with where we are in the road map where we're in full deployment, hundreds of thousands of TVs enjoying X1 today. We also have a step-by-step approach here. So you've seen the integration of Netflix, which is happening with fantastic results in terms of the way customers are using Netflix. You'll see other aggregation launches on that stream. Today, we're doing a hybrid QAM/IP with basically all of your on-demand services being done on an IP and all of your livestreams -- I mean, yes, all of your on-demand services on IP and all your livestreams on QAM -- will launch before the end of this calendar year, likely or beginning of next calendar year. A series of new channels on a linear basis on IP, which will be our first step into IP linear. And then as you walk through calendar 2018, we will be able to move to the full IP architecture. For us, that won't necessarily change the customer experience initially, all that dramatically. The huge advantage, of course, is in success-based capital and self-install, and all of things that, that makes possible in terms of transforming our business. So I think we're on a similar time line to others for [IP] in terms of mass deployment, and that's likely in the second half of next calendar year.

Operator

The next question comes from Maher Yaghi of Desjardins.

Maher Yaghi
Desjardins Securities Inc., Research Division

Jay, thanks for telling us about your wireless plans a bit more and the steps that you mentioned, the 1 to 6, but in those steps, I didn't hear about the timing or the plans about becoming more in line with what's driving consumer behavior in terms of choosing the partner or the supplier of services with a subsidy model? I mean, you guys have -- you can call it a subsidy model, but you have to spend $90 to start getting real savings on handsets with your plans. Can you talk about what you're thinking about implementing, a real subsidy model? And if you do, in which of those steps that you mentioned it would be introduced?

Jay Mehr
President

Yes. Certainly, part of the customer value equation, I hear are comments that we're coming at the market slightly different than others have come on the market. There's -- I didn't call that out as a major shift, because I see that as degrees that we're adjusting as we move into the marketplace. I don't know that you'll see us vary all that materially from what you describe, although it's clearly part of customers making choices. We're clearly super excited about enabling the Bring Your Own Device market, which is getting more and more significant and the opportunity to just move over to our network, enjoy tremendous buckets of data with phones that you already have. So I don't think you'll see us double down on the subsidy model, although you'll probably see greater investments than what you have seen so far.

Maher Yaghi
Desjardins Securities Inc., Research Division

So maybe bring down the level of ARPU that a customer needs to pay to get more savings, is that what you're referring to?

Vito Culmone
Former Executive VP & CFO

Well, Yaghi, I'll kick in here. Obviously, there is a connection between the subsidy and the overall ARPU profile and overall economics, right. So as I think we move through the next 24 months, you will see us continue to tweak and evolve as Jay has described.

Maher Yaghi
Desjardins Securities Inc., Research Division

Do you accept the hypothesis or the theory that the ARPU that you have, which is low compared to other companies out there is due to this specific issue that you're not subsidizing customers in order to get them to spend more with you?

Jay Mehr
President

Yes. Your questions seem to be related. Look, our overall customer ARPU is low today, because we're primarily on a 3G network, competing on the spectrum that was available to us. And there is no question, if we -- to our previous comments, if you look at our business through the lens of the big 3 with all of their free spectrum and their 25 years of sensational operation -- operating margins that they have invested back into their network, there is no question that we have to play the game differently. And you're going to see us play the game differently than the big 3 are playing the game. And I would make the argument that Canadians don't need to me-too. I would make the argument that Canadians need a differentiated wireless service. So I mean, the moves that we're making on our LTE ARPU are very encouraging, and I'm not totally fussed about the 3G base and where that ARPU moves. Those are customers that have made a good choice in terms of where they want to be and the price value relationship they want to play. We're really about building ARPUs for the future.

Maher Yaghi
Desjardins Securities Inc., Research Division

Okay. And just my last question on the video side. You are looking for TV subs to, you said, decline in the next quarter? Did I hear you correctly?

Jay Mehr
President

Yes. No, what I was refreshing for people that we believe maintaining and growing the video base is what winning looks like, and that's what we said a number of quarters ago and we are not changing that position. I also was saying that we're not going to drive video subs at the expense of profitability, now that we've shifted the market. And I was signaling that as you make pivots in the marketplace, that it takes a period of time for those pivots to flow through to numbers. So we're certainly signaling that we weren't necessarily be up every quarter in video in this fiscal year. And our comments on Q1 -- I mean, we're only halfway through Q1, and we will see where we land. But I don't want people to think that we are driving hundreds of thousands of video subs through this model. This was about creating a fantastic video experience for Canadians and increasing our video subs in a profitable way.

Maher Yaghi
Desjardins Securities Inc., Research Division

So in order to drive growth in your subscriber base on TV, are you looking forward into the IP platform to drive that growth versus just going up and down every quarter, is the IP version, the one that you think will get you to grow that business, the subsidies -- the subscriber base on a sustainable basis?

Jay Mehr
President

Yes. I mean, I certainly understand the question, I would like to reset it with -- to be clear, Shaw is an EBITDA growth story and we're starting this year with EBITDA growth of 5%, which is probably a good start and we're going to get moving. The 3 biggest opportunities are wireless first, absolutely, and then 2 and 3 are probably a tie, small and medium business and the opportunity to grow broadband revenue. We're excited about video because it's a super important part of our business. Do we see dramatic increases in video revenue and video profitability over the next couple of years? I'm not sure that we do. I think that we see some challenges in the economics of video going forward. And it's a part of the story. We're going to look to maintain and, perhaps, slightly grow our video market share. And what happens on ARPU in video is really consumers being in control. And consumers will make the choices they make, and we are in a great position to offer them whatever they want to aggregate with us. So, we're excited about where we are. I think the IP store will not only deliver new experiences to Canadians, including cloud DVR, which is significant breakthrough from any ability to take your content with you, some integration on the wireless side. So there's certainly some upside in that space, but I don't think video makes the big 3 growth opportunities.

Operator

Our next question comes from Rob Goff of Echelon.

Robert Goff
Echelon Wealth Partners Inc., Research Division

My question would be related to the disciplined growth on the cable side. Could you talk to the impacts you've seen from rate increases that were implemented this summer on existing contracts?

Jay Mehr
President

Yes. So Rob, the pricing that we do on existing service agreements is fixed within the service agreement. So to the extent that we make changes on month-to-month pricing, it doesn't apply to customers who are in a service agreement. So, as you can well appreciate, the changes in annual pricing probably has much less of an impact than you would have traditionally seen in the cable business some time ago.

Vito Culmone
Former Executive VP & CFO

Rob, I can add. When you think about the 2-year plans and the flip from year 1 to year 2, we have actually been pleased with the transition and customer behavior as they move from that year 1 price to year 2 price.

Operator

Our next question comes from David McFadgen of Cormark Securities.

David John McFadgen
Cormark Securities Inc., Research Division

I just have a question following up on a comment Vito made about CapEx in 2019 versus 2018. So given the cost to deploy that Quebecor spectrum is onetime in nature, I would have thought that the CapEx profile would go down in 2019 versus 2018. So given you've signaled that it's probably going to be somewhat similar, does that entail some geographical expansion of your wireless network in 2019 to rely less and less on others for roaming or [if] you just provide context as to why they wouldn't be going down a fair bit.

Vito Culmone
Former Executive VP & CFO

Yes, [indiscernible], just to repeat -- is that $350 million number that we quoted, we still feel decent about that, obviously, and probably should at some point not get too specific about certain components and stay at a bit of a macro level. But they're going to -- that spectrum cost and that activation cost, as Jay alluded to, is really over a 2-year period. So F '19 will also reflect a significant amount of spend related to spectrum light-up of that $350 million original estimate.

David John McFadgen
Cormark Securities Inc., Research Division

Will there be some geographic expansion in wireless network? Or you don't really envision that?

Jay Mehr
President

I would -- I mean, as you talk about our multi-year horizon, I think it's premature to announce [indiscernible] various markets. I think you'll see our wireless growth strategy and our EBITDA growth focus on existing markets in F '18.

Bradley S. Shaw
CEO & Non-Independent Director

Thank you, operator. And thank you, everyone. Go ahead, operator.

Operator

There are no more questions at this time. I would now like to turn the call over to Mr. Brad Shaw for any closing remarks.

Bradley S. Shaw
CEO & Non-Independent Director

Sorry about that, jumped the gun. Thank you, everyone, and we appreciate your time. And we're looking forward to getting -- continuing to give you some great updates. So talk soon.

Operator
This concludes today's conference call. You may disconnect your lines. Thank you for participating. And have a pleasant day.

Presentation

Operator

Welcome to the Shaw Communications Fourth Quarter Fiscal 2018 Conference Call and Webcast. Today's call will be hosted by Mr. Bradshaw, CEO of Shaw Communications. [Operator Instructions] The conference is being recorded. [Operator Instructions]

Before we begin, management would like to remind listeners that comments made during today's call will include forward-looking information and there are risks that actual results could differ materially. Please refer to the company's publicly filed documents for more details on assumptions and risks.

Mr. Shaw, I will now turn the conference over to you.

Bradley S. Shaw
CEO & Non-Independent Director

Thank you, operator, and good morning, everyone. With me today are members of our senior management team, including Jay, Trevor and Paul.

I am pleased with the progress we have made throughout 2018 towards our overarching goal of delivering long-term and sustainable growth. Wireless had an exceptional year, with all of our key performance metrics moving in the right direction, including postpaid additions of 85,000 customers in Q4. In 2018, we grew our subscriber base by over 255,000, or 22% compared to F '17, to end the year at just over 1.4 million customers.

Our big data plans, combined with our latest devices available in the market, continue to drive higher quality and higher lifetime value customers to Freedom Mobile. Our wireless service is now even more accessible to Canadians through the addition of 240 locations launched with our national retail partners, Loblaws and Walmart.

As we grow our subscriber base in F '18, we also increased ARPU, particularly in the last half of the year as our Big Gig plan gained momentum, leading to strong ARPU growth of 9% in Q4. Through these results, it is evident that we are delivering a differentiated and sustainable value proposition, and we expect to gain additional wireless market share and continue to grow ARPU throughout F '19. Supporting our wireless strategy is the significant ongoing network improvements that are quickly creating a strong, high-quality network and clearly benefiting our customers. The team has done a terrific job of managing and deploying spectrum in the most efficient way, including the initial launch of our extended-range LTE in Calgary, Edmonton, Vancouver and Southern Ontario.

The extended-range LTE utilizes the 700 spectrum that we acquired last year, and we will further deploy this spectrum throughout our network over the course of F '19. We also launched VoLTE over a wide range of devices, and we'll continue to roll this out to all eligible phones and customers over the coming months, including the iPhone, bringing the total customer base to approximately 800,000 that will be using VoLTE by the end of 2018.

Wireless investments remain a priority as we head into F '19 and continue to grow our subscriber base. In addition to the spectrum deployment, we will also expand our wireless network into new markets this year, with a focus on Western Canada. By the end of fiscal '19, our network will cover an additional population of approximately 1.3 million, and we will start to explore cross-selling opportunities with Freedom Mobile and Shaw wireline customers, using our various touch points to discuss their wireless products and needs.

While we are excited to develop this opportunity, we will focus this year on learning from small-scale trials and taking a thoughtful end-to-end approach.

In our Wireline business, we delivered F '18 results that are consistent with our strategy to focus on profitable growth and stabilize results, and I'm pleased with the significant cost savings that we have achieved during the year. However, I believe we can execute better, particularly with the Internet results for the last 2 quarters have not been representative of the subscriber opportunity through our differentiated broadband experience.

Significant investments and best-in-class technology partners have created a strong and ubiquitous wireline network. DOCSIS 3.1 has been clearly deployed throughout our network, and we are capable of delivering gigabyte Internet speeds.

As we anchor the home with the XB6 modems, we will enable additional IP services such as xFi and the extenders that will differentiate our broadband service from the competition.

In F '19, we will begin deploying a full IPTV experience to our customers, starting in the second half of the year. With this service, we will simplify the installation process, reduce the amount of equipment needed in the home and enhance the ability for customers to self-install. All these initiatives lead to a lower capital intensity in our Wireline business that we believe is sustainable going forward. And our Wireline capital provide -- plan provides the necessary resources to make investments to future-proof our network in the coming years.

Our Business division contributed solid results in F '18, via the growth of our smart products and recent success in the enterprise and wholesale markets. We expect this momentum to continue as we focus on delivering our managed services and targeted strategic verticals.

As I stated earlier, I'm pleased with our fiscal 2018 results, and looking forward, we are focused on the key areas of our business that will drive growth as well as areas that need improvement. We expect that in F '19, our wireless momentum will continue as we execute on our step-by-step operating initiatives.

In Wireline, we will have an internal focus that enables us to transition into a digital-first company and modernize how we work and connect with our customers.

Now, I'll turn the call over to Trevor to go through the Q4 and F '18 results and review our fiscal 2019 guidance in more detail. Trevor?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Thank you, Brad, and good morning, everyone. We finished fiscal 2018 on a strong note from a financial perspective, with all business units contributing to Q4 consolidated revenue growth of 7.4% to $1.3 billion and EBITDA growth of almost 17% to $560 million compared to the prior year.

Q4 Wireless revenue grew 45% year-over-year, to $250 million. On a run rate basis, this represents a Wireless business generating $1 billion in revenue, a significant achievement considering our starting point 2.5 years ago since we -- since the acquisition of WIND closed. Strong Wireless service revenue growth of 32% to $167 million in Q4 was driven by ARPU increasing by 9% to $41, compared to a year ago. For the year, Wireless revenue and EBITDA increased 57% and 32% to $951 million and $176 million, respectively, as we continue to attract and retain customers with our data-centered plans and continuous improving network.

In Wireline, Q4 Consumer revenue was essentially flat at $942 million compared to the prior year, while Business revenue increased over 6%, to $145 million. Consolidated Wireline EBITDA growth of 16%, to $516 million, was a significant improvement compared to Q4 fiscal '17 and includes approximately $23 million in VDP-related cost reductions as well as lower marketing and other corporate costs. These results reflect our focus and discipline regarding expenditures throughout the entire organization. For the full year, Wireline revenue was essentially flat, as the marginal decline in Consumer revenue was offset by Business growth. However, year-over-year Wireline EBITDA did increase 2.6% during the year, to $1.9 billion.

As it relates to our total business transformation initiatives, the fourth quarter includes an additional restructuring charge of $16 million, bringing the total provision to $446 million, of which approximately $170 million has been paid to date.

While the employee exits will continue throughout F '19 and into F '20, the restructuring program is substantially done. And in fiscal 2018, we realized combined operating capital savings of $47 million, which was as expected and communicated earlier this year.

In summary, our fiscal 2018 results were largely in line with our expectations and reflect our focus on Wireless growth and profitability and stable financial results within our Wireline business.

Consolidated EBITDA growth of 4.6% and capital spending of approximately $1.37 billion materially met our guidance, while we delivered free cash flow of $411 million that was slightly ahead of expectations.

As we carry this momentum into next year, we're introducing our fiscal 2019 guidance, which includes EBITDA growth to range between 4% to 6% versus F '18, capital spending of approximately $1.2 billion and free cash flow in excess of $500 million. Our guidance in growth range includes the expected impact of IFRS 15, which we'll adopt on a retrospective basis beginning in Q1 F '19. The fiscal 2018 and expected fiscal 2019 results under IFRS do not have any material impact on the guidance we released this morning. However, for the benefit of the investors comparing our F '18 reported results and adjusting for the change in accounting policy, our reported 2018 Wireless revenue will decrease under IFRS due to the fact that we'll be allocating a portion of the subsidy to service revenue, which is amortized over the term of the contract, and we'll also be allocating a portion of the subsidy against equipment revenue, which has an impact at the time of sale, as opposed to today, where we actually amortize the entire subsidy over the term of the contract against only equipment revenue.

The decrease in Wireless revenue will flow through to EBITDA. However, we do gain the benefit of capitalizing and amortizing the commission expense related to Wireless sales under IFRS 15, versus today, where we expense commissions on the date of sale. Despite the changes in accounting, it's important to remind everyone that there's no change to overall revenue and cash -- cash flow under the new accounting policy. We will provide additional details with respect to the impact of IFRS on 2018 reported results when we file our 2018 annual in November and with the release of our first quarter results in January.

Our guidance includes assumptions related to cost reductions that we'll achieve through TVt initiatives, specifically the Voluntary Departure Program. Total savings are expected to amount to $140 million of OpEx and CapEx in fiscal 2019.

As Brad discussed in his earlier remarks, we have a strong wireline network that has the capacity to meet the increasing demands of our customers, combined with lower equipment requirements and higher self-install, we can moderate our wireline capital intensity. However, we will increase investments in Wireless compared to F '18 as we continue to deploy the 700 spectrum and expand our network into new communities, as Brad mentioned. We expect Wireless CapEx to be approximately $400 million in F '19, or up approximately 15% versus F '18.

Considering our EBITDA and capital expenditure guidance, we expect to drive material free cash flow in F '19 in excess of $500 million. Note, we will continue to include the Corus dividend in our free cash flow metric, which is expected to be approximately $20 million in F '19 versus the $92 million that we received in F '18. However, it's clear that we are growing our operating free cash flow in fiscal '19 regardless of the treatment of Corus' dividend contribution. Our balance sheet remains strong, and our leverage of approximately 2x is at the low end of our target range, providing us additional flexibility as we continue to make the appropriate investments to grow our business.

Brad, I'll now turn the call back over to you for closing remarks.

Bradley S. Shaw
CEO & Non-Independent Director

Thank you, Trevor. We have a strong operating plan in place and expect to deliver continued Wireless growth and stable, consistent Wireline results. This is the year that we turn a very significant corner in terms of our free cash flow profile for F '19 and beyond, and our focus remains on successfully executing our strategy. Recently, there's been speculation regarding our investment in Corus, and we want to clarify that we remain supportive of Corus and their management team. While it remains a challenging structural environment, we think their stock is undervalued and not reflective of the EBITDA and free cash flow profile of the company.

We will not look to sell our stake at this current levels, and we do not need additional liquidity from Corus to fund any of our operating or strategic initiatives, now or in the future.
Before we turn over to questions, I wanted to acknowledge the tremendous dedication and hard work by all of the Shaw employees over the last year. We have been through a lot of change, which is exciting but not always easy. It is through your passion to continuously improve and collaborate across the organization that drives great results. Thank you for everything that you do, and I look forward to an exciting and successful year ahead. Thank you, everyone, and we'll turn it back to you, operator, for questions.

Question and Answer

Operator

[Operator Instructions] The first question is from Vince Valentini of TD Securities.

Vince Valentini
TD Securities Equity Research

Two questions, or 2 lines of questions. The first, just on market conditions and competition versus Telus. It sounds like Telus was pretty effective, or maybe you want to use the word aggressive, with their back-to-school promotions, and that may have impacted some of your cable subscriber numbers this quarter. Can you give us any sense of how that looks through September and October? Or do you see any stabilization there in promotional activity? Or is it still a pretty heated battle? And, given last quarter's communication, I'm not sure you want to answer this, but do you have any thoughts about what your subs may look like in Q1? So that's question one. I'll let you think about that for a second. On the second one, maybe for Trevor. I'm not sure I understand the composition of the EBITDA guidance and what you're saying about IFRS 15. So if I can try to characterize it this way, you did 32% EBITDA growth in Wireless in 2018. If you were to just do that again in 2019, that would contribute 3% consolidated EBITDA growth, and then you'd have a very small amount of growth necessary on the cable side to get into that 4% to 6% guidance range. Is that how we should think about it? Or is this IFRS 15 stuff or perhaps some extra marketing and distribution costs going to make it a bit more of a J-curve on Wireless, so that you'll see much less than 32% growth, and perhaps a bit more contribution from the cable side in order to get into that guidance range? If you can give any color there, because I really don't understand what the mix is of Wireless versus Wireline in that guidance.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Thanks, Vince. And maybe I'll start. I think -- I don't think we're going to get into too much granularity on the breakdown of EBITDA growth within Wireless versus Wireline, but directionally, you're sort of in the ballpark, I would say.

Vince Valentini
TD Securities Equity Research

I'm sorry, I'm in the ballpark thinking another 30% -- so you're -- on wireless? Or is -- the whole thing will slow down because of marketing costs and IFRS 15.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

There'll be a little bit of a slowdown due to IFRS 15 when we look at the reported results in F '18 and, later on, the impact of IFRS 15 in '19, but it sort of doesn't have that big of an impact, whether it's pre-IFRS or post-IFRS.

Bradley S. Shaw
CEO & Non-Independent Director

I think if you look at the Wireline results, we've got, obviously, some really nice moves on the cost structures and really nice moves on the capital cost structure. I think what teams have probably missed is a bunch of our automation, both recurring and one-time investment, with Software-as-a-Service and a partner model, bunch of that hits OpEx in this fiscal year. So where you see a mitigation of CapEx to 19% Wireline CapEx intensity, you're probably seeing a little more OpEx onetime and ongoing investments in automation in this year than you were maybe suspecting, so that might be something that trends forward.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

It's a good point. I mean, just on the VDP savings too, Vince, we always articulate VDP savings as net savings. Frankly, in F '18, the VDP savings, there wasn't a lot of net investments in those numbers. It was really sort of gross savings, where in F '19, we are starting to make some of those net investments to deliver the business with roughly 25% less people in the future.

Jay Mehr
President

And then to the first part of your question, Vince, I don't mind you characterizing our primary competitor's back-to-school efforts as effective. I think it's clear, in the competitive marketplace, when you win a cycle and when you don't win a cycle, and they absolutely won a cycle, so no excuses from our end. I mean, we have the benefit that, when we talked last time, we were still at the end of June, in the first month of the quarter. Obviously, we're a couple of months into a quarter now. We have tremendous confidence about our F '19 plan in Consumer, our F '19 team -- our team is in great shape going into F '19, we certainly hit all of our September numbers, we're doing fine in October. The business changes in F '19 for us; it becomes much more about monthly recurring revenue times our number of accounts times our average revenue per account. Obviously, broadband and satellite are what drives our Consumer account numbers, so primarily broadband. So we're focused on that, lots of focus on churn and customer lifetime value and segmentation. So some of the yardsticks move a little bit, but we're very excited, and, to Brad's comments, we couldn't be more pleased with how our team is coming out of this cycle and tackling F '19 in Consumer with a commitment for us to be effective.

Operator

The next question is from Drew McReynolds with RBC.

Drew McReynolds
RBC Capital Markets, LLC, Research Division

Maybe a follow up here, just to Vince's questions on the Wireline net losses. Appreciate your comments, Jay, on that. Can we just maybe drill down a little bit more? You obviously had some price increases in the quarter, you're staying price disciplined. Brad, you talked about kind of the execution, kind of challenges here. Was it solely competition? Or are there these other things here that are well in your control that you can certainly sequentially improve going forward? And just secondly, on the free cash flow guidance here, maybe for you, Trevor, just what kind of cash tax assumption we should be assuming?

Jay Mehr
President

Drew, we very much feel in control of our destiny and that we can improve sequentially going forward. We -- there's no question, we just did not get our share of gross adds. We had lots of capacity, we had the capacity to install, we had the capacity to answer our phone, we have the capacity to digitally serve our customers -- we're doing 28% of our installs on a self-installed basis now -- so we've opened up a tremendous amount of capacity. So the engine's ready to go, and I think we control the levers. In hindsight, obviously, if I had it to do over, we did our mass marketing spend around the 300 launch in September, which I think was effective. It's pretty clear, based on the results we got, we probably should have -- if I had that to do over, I'd have spent a couple million dollars more on marketing in August. And we would would've been -- we would've gone at different outcomes. Our whole plan is around growing monthly recurring revenue, and you can't do that without growing Internet subs. You know, if you think about our Consumer business, we had a little over $300 million rounding the bases September 1st, the monthly recurring revenue. We're going to use that number, the entire team, every single day, and the path to success in F '19 includes growing broadband customers every quarter. In the medium term, we're about 2 quarters behind Comcast's roadmap, and we think they're cutting a nice path for us to follow, and we love the work that they're doing on their strategy and excited to bring those innovations to the Canadian market place.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

And Drew, it's Trevor. Just on the cash tax assumption. Yes, I know it's difficult this year. Obviously, our effective tax rate showed quite high because of some things that weren't tax deductible, like the Corus write-down. But our statutory tax rate is about 27%, and for cash tax purposes, it's roughly 300 basis points, around 24%, that you can model for going forward.

Operator

The next question is from Jeffrey Fan with Scotiabank.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

Going to ask a question about Wireless and, more specifically, in terms of the contribution to your nets this quarter, whether you're seeing an equal distribution from churn reduction and gross adds? Or was there any kind of skew towards one over the other? And then, the second part to the wireless is just whether you guys are happy with the pace of loading that you guys are seeing on gross. And maybe comment a little bit about -- I know you don't disclose churn yet, but wondering if you can comment a little bit on churn and the outlook there. And then the second question is on cable. And I guess if we sit back, right now, you're getting pretty decent financial performance in cable, but the RGUs are obviously not coming through. If we look back a little over a year ago, you were kind of the opposite. When do you think we could get to a point where we've got some balance between those 2? Because I think, really, what the market is truly looking for is just some balance, and to avoid sort of going back and forth between RGUs and financial performance, which we've kind of done over the last couple of years. Wondering if you can kind of comment on the timing, when we can get back to that kind of level place.

Paul McAleese
President of Wireless

It's Paul, I'll take the first series of questions on wireless. On the contribution to the nets, I think I characterized this, the figure, as -- about as a split a couple of calls ago. I think in Q4, we saw probably slightly higher bias towards contribution from gross, where we were very strong. But as I'll come on to in a minute, we did continue to see a very, very positive churn profile for our base. So I would have the contribution slightly higher on gross than on net in terms of the lift over last year. Pace of loading, we're very pleased with, and a couple of observations there. For the entire quarter, for all working purposes, the flanker brands all had a double data promo, which is really thoughtfully designed to sort of camp into our space of data-centric subscriber acquisition. And we competed very strongly against that through the course of the quarter. As you can see from the metrics, we're very, very pleased with where we got to on gross. We also had an opportunity for the first time in Q4, to look in earnest at how we competed in a multi-carrier retail environment, with Loblaws having been in play for most of the quarter, and then, just as we've rounded in Q1, with Walmart. And while we'll get into the detail more, probably on the next call, we were very pleased with our share of gross in that multicarrier setting. So we think, sitting side-by-side on a shelf with all of the other brands in the wireless market place in the markets we compete, we performed very strongly. We will disclose churn on the January call, but I'm pleased to say that we continue to see record levels of retention performance across our wireless business, largely fueled by the fantastic work we're seeing from our network team. Can't say enough about the improvements I've seen in my 18 months here. This is a completely different product experience than it was even a year ago, and it just goes from strength to strength. In recent weeks, as you know, Jeff, we've introduced the 700 spectrum across most of our Western markets and part of the Southern Ontario market, and the consumer response to that was immediate and strong, so we're continuing to invest in that customer experience, and it is flowing through to our churn results. So not specific guidance, but I expect to see that metric come in on a good plane in January.

Jay Mehr
President

And then, Jeff, to your comments -- and thank you for your comments on the wireline side of the business. I don't disagree with your characterization of the past couple of years. I -- we're feeling great about how we have entered F '19. We're really -- it might sound funny to say, we really feel like a new company as we round the bases in September 1. We've got a new super lean structure. It's just me and 4 executives in the Consumer business, one who leads growth sales, one who leads base management retention, one who leads marketing, and pricing and packaging, and one does the important job of managing all of our programming costs. Super flat organization, almost no other leaders in Calgary, everybody's embedded with every channel, doing their job, making a lot of headway on base management and segmentation. I think -- I believe our objective on the Consumer side of the business is deliver a boring and financially strong year that is also strong in terms of our long-term number of customers, but -- think you'll see that from us starting in Q1. When you talk about RGUs, we don't really think of the business that way anymore. We think about the business in terms of how many customers we have, what they pay us on a monthly basis, what's happening to our subscription revenue base of monthly recurring revenue, what's happening to the churn, how do we manage our base on a daily basis, a lot more segmentation. So I think, certainly, in terms of broadband customers, you'll see a much more balanced approach to our result. And look, our path here isn't that hard. We don't need to shoot the lights out on revenue growth. There's things happening in the Home Phone business, there's things happening in the television business. The small revenue growth on the Consumer side, steady, works with improving margins and the opportunity to realize all the cost structure that we've got, a much, much tighter and more effective capital structure, and we've got a real nice business here that's a lot simpler than it used to be, and we're very proud of what the team is executing.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

If I could just follow up quickly. I don't know if you have this number handy or if you track it, but some of your peers, particularly in the U.S., tracks the customer relationship number, which kind of, as you alluded to, kind of takes away from the RGU. I don't know if you have that kind of, directionally, whether you're seeing stable in customer relationship growth or decline. I'm wondering if you can share, I don't know, if you track that at this point?

Bradley S. Shaw
CEO & Non-Independent Director

Yes, we do. Our Consumer business was up slightly in terms of customer relationships, F '18 over F '17. We have just over 2.8 million customer relationships, and our average number of accounts over the year was 10,000 higher in '19 than it was in '18. And I think on the cable side, when I say cable and broadband, that's very much our plan going forward. And if you think about customer relationships, we have a seasonality to our satellite business, you'll see that in Q1. We were seasonal as ever in Q1, so you'll see that in the numbers. And satellite customer relationships might drop, say, 35,000 for the year. But our satellite business is fine and stable and profitable, actually. ARPU was great, so I wouldn't -- I don't think that's a big issue. On the broadband cable side of the house, we maintained our customer relationships this year and certainly plan to do the same in F '19.

Operator

The next question is from Phillip Huang with Barclays.

Phillip Huang
Barclays Bank PLC, Research Division

Also a couple of questions on the wireless side. I was wondering if you could give us some color on your, perhaps, performances in different regions. I suspect Ontario is still generating most of your volumes, given the market size, but could you call some comment on the pace of the growth in Alberta and B.C. relative to Ontario? And then, another question I had was on the demographics of customers you guys have been able to attract. Have you noticed any sort of change or expansion in the types of customers been able to kind of reach, just given the network improvements. Any sort of addition of business customers, et cetera, that you have noticed?

Paul McAleese
President of Wireless

Phillip, Paul. So starting on the regional performance, we've seen a relatively static sort of split between the East and the West, which is characterized, about 70% of our volume coming from the East and 30% from the West. I will say, having spent some time over the last sort of while, improving a number of things in the West. We've turned on, as you know, the 700 spectrum most pointedly in the West. That's the vast majority of the investment we've made in network on 700 is coming in the Western part of the country. We've also got a significant advantage in our WiFi footprint in the West. So while the bias hasn't changed very much over the course of the last year, expect to see additional strength in the West as we look to deploy and leverage some of those assets into our proposition. It has been -- we've been waiting for 700 to roll out, but you'll start to see some changes in that split over the course of the next couple of quarters. On the characteristic of our base, I think a couple of data points are worth pointing out here as we look across the changing nature of our base. So, probably the first thing I'd point to is the average selling price of our devices. So, if you go back a year, we have doubled the average selling price of a phone, so we're a little north of $800 now. A year ago that number was about $400. Just a dramatic change in the characteristics of that. As you can imagine, that is largely driven by the iPhone influence, but these are customers that a year ago, we simply weren't appealing to, and now find the appeal in Freedom significantly greater than they did 12 months ago.

I'd also point out that, while it's not in the release, our porting ratios, while they have long been in our favor, really changed significantly. When I look at -- I'll pick on the fourth quarter of F '18. In F '17, we did about 7,000 net ports, so -- the people porting to us in excess of those porting out. In F '18, we did 36,000 net ports, so a 500% increase on the behavior we're seeing, and that's reflective of 2 important things: one is, the confidence of competitive customers to make a change and bring their number to Freedom, a huge change in the business; and the other is -- again, that, too, is the work our base management team and our network team are doing -- a greater confidence of people to stay. So we love -- we watch our porting ratio very closely, it's widely available industry data, and we love where that's taking us, but it broadly suggests that we're seeing a different characteristic of customer. And again, I'd just point to the -- as a final thing, the onboarding value. In the fourth quarter of this past year, we set yet another record for the value of the recurring MRC that customers were committing to, and that figure was up about $1.50 over the prior quarter. So, we're doing all the right things on directing our investments in subsidy and in commissioning and in effort to rate plans and structures that provide us with better economic result.

Phillip Huang
Barclays Bank PLC, Research Division

That's very helpful. If I could, just one more follow-up. I mean it seems like the natural question to ask at this point, given your -- you also mentioned WiFi in your response. When is the right time to launch a premium brand? It seems like all the ingredients are kind of in place and your network is rapidly improving. Just wondering if -- I know you don't want to dilute Freedom's momentum that's been sort of gaining over the past year. I'm just wondering if you could comment on when would be the right time to start introducing a brand that you could -- that you feel comfortable bundling with your fixed line base.

Paul McAleese
President of Wireless

Yes, Phillip, I think I'd characterize this still -- and I'll use the same line I've used for a part of the last 2 calls -- it's dry powder for us. We love what we're seeing from the Freedom brand and how we're penetrating across all of our points of distribution today. We clearly understand that there's an opportunity for us to introduce, perhaps, some new branding into the marketplace at a time that suits us, but at this point, nothing to disclose on that.

Operator

The next question is from Sanford Lee with Macquarie Capital.

Sanford Lee
Macquarie Research

I had a question for you guys just on the sustainability of the ARPU growth. Obviously, a lot of stuff is coming in at the $50 and above. Is there any of the ARPU benefits coming from the customers that are migrating up from lower-tier plans?

Paul McAleese
President of Wireless

They are indeed. We -- I think we announced previously that our migrations were coming in at around the $7 mark. Over the last quarter, that number has moved up favorably to about $8 and change, so it takes, obviously, a lot to move that base significantly, but we love what we're seeing on that front. So the -- both the number and the value of migrations are increasing. And as many of you may have noted, in July, we had the opportunity to make some changes in our Big Gig rate plans. We introduced a $5 charge, incremental charge, to the rate plan levels that were set back in October. We then gave customers the opportunity to discount that back by taking advantage of our digital discount and moving to pre-authorized payment. We love the characteristics of customers that are on PAP, and we'll continue to incent that. But that series of rate plan changes has produced a number of favorable impacts for us in terms of -- really, it's both wins. Whether a customer takes it or they choose not to take it is kind of a win. So where you're seeing a slight rate increase, we're seeing a longer-term digital relationship with us that we think has other benefits. So overall, migrations are a very positive part of our story.

Sanford Lee
Macquarie Research

Right, and then kind of related to that, I know you recently launched a lower-cost -- $25 and $15 -- ARPU plans. Can you give us a sense of the uptake of that, and, again, looking to potentially migrate them up the chain at some point as well?

Paul McAleese
President of Wireless

Yes, and thank you for bringing that up. One of the things that's important that isn't lost in our very strong Q4 results, the 9% ARPU lift that we were able to present to the market included the launch -- although it's a relatively small numerator, but it included the launch of rate plans that were significantly below our base average, so in some sense, pushing in the opposite direction. But we have a very, very clear direction from leadership here that we want to make wireless available to all Canadians and to do so in a way that is consistent with both our objectives of reaching lower-income Canadians and, certainly, with what I believe to be the government's view of trying to make wireless and data-only plans available on a more broad basis. You'll have seen that we launched those plans directly into a time when the big 3 were less enthusiastic about that market. We are enthusiastic about bringing all Canadians to Freedom, so we took the opportunity to do that. I think we helped maybe change that, the view of that marketplace. And, while the loads are relatively a small percentage, a sort of a single-digit effective gross for us on the quarter, they are an important part of telling our story across the broader segment of the population.

Operator

The next question is from Aravinda Galappatthige with Canaccord Genuity.

Aravinda Suranimala Galappatthige
Canaccord Genuity Limited, Research Division

Two for me. Number one, just wondering if you can just touch on sort of the operational sort of impact of the VDP plan. Obviously, you're sort of getting to that midpoint in terms of employee exits and sort of transition. Can you just talk about how you've been able to sort of manage the operational disruption? And should we think as though -- that the higher-risk component of it being behind us? Is there sort of more to go? And I'm trying to sort of connect that with, maybe, some of the, I guess, the relative underperformance on the cable gross adds side. To what extent did the size of the program perhaps affect the sales aspect of -- on the cable side?

Jay Mehr

President

Yes, great. Thank you. Brad talked about, in his comments, just how amazing our people are and the work that's been done in changing the company. Where we are today -- not to minimize what the organization's been through over the last 6 months, our people are amazing, they're the source of everything good at Shaw, I love where our team's at. I can't remember a time, certainly in the last 10 years, where our team has been in better shape. The team's embraced this troupe of 10,000 call to action. We're a smaller organization now. And when we talk about a troupe, we're not talking about a military troop, we're talking about it like a traveling performing troupe where one week you're on lights, and another week you're the star, and crates lift themselves because everybody helps. It's right consistent with the Shaw culture and how we were built. Our organization is doing tremendous work. In the process that has been so energizing for our team because decision-making has all moved to cross-functional squads with agile 2-week sprints. And I spent a few days in Edmonton last week -- the turnaround with our teams in Edmonton -- about our ability to just get things done effectively because our teams that are doing the work are changing the way we work. So I couldn't be more happy with how we're coming out of the, as you described, the higher-risk area. The plan's going forward. We've still got some work to do, but I would actually characterize us as being slightly ahead of where I thought we would be at this moment; self-installs of 28%, headed to 50%, all of our digital initiatives are going well. I think if you look at our underperformance over the last couple of quarters, some of that may well have been all of this adjustment. I suspect more of it was all of the changes in management and leadership and restructuring and streamlining. I'm sure some of that had an impact. Most of the heavy lifting is behind us. We've certainly got some automation investments this year, and as you -- we've got a clear line of sight to our VDP exits, certainly for, at least, the first 9 or 10 months of this year. We've got a little bit of work to do as we do the final sort of departures into 2020. But we're super pleased, and we will -- as difficult as this process has been, it has not only enabled a fundamentally new cost structure for our Wireline business but it really has enabled a new Shaw in the way -- in the modernization of how we do business.

Aravinda Suranimala Galappatthige
Canaccord Genuity Limited, Research Division

And just a quick follow-up or second question for me. I think I may have not heard correctly, but I think you, in your prepared remarks, you talked about, I think, about 28% of your installs now being self-installs, which sounded like -- which, certainly, to me appears to be a good number. Can you just talk about sort of the potential to sort of increase that over the near term? And is there a component -- is there a prospect of maybe the X1 installs also becoming self-installs in the near term?

Jay Mehr
President

Yes, for sure. I mean, the whole spirit of the Voluntary Departure Program was because of this fundamental change in the business where the only thing plugged into the wall will be an XB6, and everybody -- everything else is IP-based experiences connected wirelessly. And you can start to see the beginnings of that in Comcast's results and what they're doing. And that's actually behind the whole direction that we're going as the company. That 28% is the right number in terms of self-install. In May, it was 17%, so we're directionally headed in the right direction. That probably looks like 50% at the end of the 2020 program. The number of truck rolls that are being avoided by that are -- will be in the hundreds of thousands. It's super material of a plan, and it just gets easier as we launch our IP-based experiences, and you've certainly seen, I mean, the road map is clear. You can see Comcast doing it. You can see Rogers doing it. You can see Cox doing it. We're on the right track here.

Operator

The next question is from Tim Casey with BMO.

Tim Casey
BMO Capital Markets Equity Research

A couple for me. Just -- you mentioned, Brad, in your opening comments about how you're going to start doing cross promotion. Just wondering if you'd comment on how you're going to approach that, given your other comments with respect to recurring monthly revenues because, obviously, cross promotion can often include bundling discounts. And second, just a comment on your spectrum road map. I know you can't comment on 600, but how are you thinking about mid and higher bands, given that's clearly where the focus of the incumbents are? Just how are you thinking about that going forward?

Bradley S. Shaw
CEO & Non-Independent Director

Tim, I'll start here, and I'll take your last question on the 600. We're extremely excited about the 600 and the auction coming up, and we really applaud the government for stepping up with a pro-competitive spectrum plan and policy. So we're excited about what that brings, and as you know from our spectrum holdings, low, medium, high, very important as we go forward. And hopefully, as we step into the next couple of years, that the government still has that pro competition, and then we really believe that spectrum is critical as we compete with the big 3, and we're going to be very focused on that going forward.

Jay Mehr
President

Great. It's Jay. In terms of the cross promotion side, I think, as you heard in Brad's comments and you can see with the increasing wireless capital that we're investing this year, we've got some really interesting things happening in Alberta and B.C. One is significant network improvements. And so we're really getting there with the launch of our additional spectrum. We're also launching a significant number of new markets in this fiscal year, which really will cover our footprint much more dramatically. I think the West is going to matter more to Freedom in this fiscal year than it has in the last number of fiscal years. We're going to step into this. I don't know that -- to Paul's comments about dry powder, I don't think you'll see massive bundling opportunities in F '19. I think you'll see us try and have conversations with customers about what they're spending on a monthly basis and how they can bring Freedom and Shaw together to help them save money. I don't think you'll find anything scary in that, and really excited about what happens this year for us, Wireless, in the West.

Tim Casey
BMO Capital Markets Equity Research

Just a follow-up if I could on another road map, that being your all-IP experience. I think in your opening comments you talked about it in the second half. Can you give a little bit more color on how that's going to roll in?

Jay Mehr
President

I think I previously said we're about 2 quarters behind Comcast on their technology road map. And in general terms, if you think of it that way, you'll -- you're in pretty good shape. Just -- it's actually quite easy to see what's coming in terms of our product offering. I think it's fair to say in terms of the -- both the operational and market impact, that the bulk of our all-IP experience will impact the second half of F '19, but we certainly are very pleased with how things are developing and are in testing. And we're certainly technologically ready. Speaking plainly, we've been helped by the aggressiveness of Rogers and their rollout in driving IP, that just makes it easier for us. And it's nice on some of these things to be quick second. The first go-around, we were leading into Canada and having to sort all that stuff out ourselves. So we benefit from this expanded syndication in Canada from Comcast and are excited about what the second half brings.

Operator

The next question is from Maher Yaghi with Desjardins.

Maher Yaghi
Desjardins Securities Inc., Research Division

Jay, I wanted to just -- can you -- you were talking about your marketing spend in the quarter that you could have pushed up a bit more in order to alleviate some of the losses you had on Wireline. How much did you say you could've spent more in order to prevent these losses?

Jay Mehr
President

Thank you for the question. I was -- clearly, we believe that we had a go-to-market that would enable us to get our share of gross adds and not to have a decrease in broadband customers. And so what I did say is our mass sort of campaign -- and mass isn't as important as it used to be -- our mass launch of Internet 300 we did in September, because it's a great opportunity to sell and set up things for F '19. My comment of -- and that campaign was about $2 million that we spent in September -- my comment was: you learn from your mistakes. Clearly, we should've put more in market in August. We lost August. And so if I had it to do over, would I had moved that $2 million into August? Yes, I think that's self-evident now. In the medium term, it's timing, and we're pleased with our mix of 300, and we think both the pricing parity that we've got through Internet pricing and the launch of 300 and the mix of the buy-in of 300 is all going well. So I think it, in the long term, will come out in the wash. But it's clear we had a light marketing spend in Q4, and you'll see some of that, timing-wise, impact Q1.

Maher Yaghi
Desjardins Securities Inc., Research Division

And so why didn't you spend the money? Is it because you were trying to meet some object -- financial objective for the year?

Jay Mehr
President

Yes. No, we didn't spend the money because we think the best time to launch 300 and our new way of being is in September, and we've got good market impact from that. We certainly had room, in terms of spending the money, it wasn't that we were up against a particular number. We're delighted with the financial result that we've taken. We believe, as you heard from our comments in June, and this is the nature of a very competitive environment, we believe we had a plan to deliver our share of gross adds, and it didn't turn out that way. So we're committed to achieving better results in the future, Maher.

Maher Yaghi
Desjardins Securities Inc., Research Division

Okay, so that's on Internet. How about TV, because I guess both go hand in hand? But there's an abnormal decline in TV that happened in the quarter, and it's hard to call it just on back to school, because a lot of these subs that go in and out on the back-to-school period are mainly Internet and not heavy on TV, from what I understand, if it's -- we're talking about students and universities. So how -- what's the strategy to turn around the TV portion?

Jay Mehr
President

Yes, and thank you for question. And actually, I agree with where you're heading as a hypothesis. I don't see the change in TV -- in video RGUs. And I think we're talking about cable here, so let's...

Maher Yaghi
Desjardins Securities Inc., Research Division

Yes.

Jay Mehr
President

...as opposed to satellite. I think you're right that, that's not a change in back to school. I think you and I may have different expectations for where we're heading with video RGUs. Obviously, the biggest challenge that we had in F '18 financially was a degradation of our video gross margin, primarily on the cable side. We've said, clearly, we're going to manage video for profitability. We've got a cost structure that, the way channels are packaged, suggests a certain way to market video. We're going to have a much healthier margin story in video in F '19, and that will be part of our total customer story. I would hesitate to -- if you're trying to work a model -- to suggest that we're going to have a major bounce back on how we characterize video RGUs, because I think if you follow the map of managing video for profitability, total number of customer relationships or accounts, our monthly recurring revenue model, it doesn't necessarily take you to quickly improving RGU numbers in video.

Maher Yaghi
Desjardins Securities Inc., Research Division

Okay. And you know the general expectation was that X1 was going to help you in some way improve your video situation, and that's not happening. So that -- I guess you're saying that the market misunderstood where RGUs were going on the TV side. Can you maybe help us understand what your view is for 2019 on that, because I think the general understanding is that you were not going to lose more than what you lost in the past?

Jay Mehr
President

Yes, I wouldn't use all the same words that you just used there, but the way we think about the business as we move into F '19 is, our Wireline business, we're looking in that 1% to 2% revenue growth. We got 1% revenue growth in Q4. This is what winning looks like. We do that by managing our monthly recurring revenue. So our monthly recurring revenue is just, when we entered the year, just a hair over $300 million. And monthly recurring revenue, every single day, we're looking to grow monthly recurring revenue by $1. And we do that by growing our broadband customers, becoming more profitable, reducing our churn, a much more sophisticated base management and segmentation. That strategy will work. It will deliver the long-term revenue of the company. The monthly recurring subscription revenue is what the Wireline business is. Is that a shift in our management approach from sort of the historical cable RGU approach to the business? Of course it's a shift. It's part of how we've reengineered the whole company in the next 6 months -- I mean in the last 6 months, and so you'll see that throughout F '19. To my comments to Jeff, I think you'll see a very balanced approach to the marketplace. I think you'll see us grow revenue by small amounts at a steady basis with decent improvement in gross margin and significant improvement in overall Consumer profitability, and I think that bodes well for the future of our company.

Maher Yaghi
Desjardins Securities Inc., Research Division

Okay, and one last question on this topic, and I'll move on. What's the marginal contribution? Can you help us understand how much is TV RGU losses affecting EBITDA in marginal -- the marginal impact? Because when you're looking at the mix, so with a minus 30,000-something TV, it's hard to see how that can be made up with mid-single-digit Internet growth unless the mix is really lopsided on the margin side.

Jay Mehr
President

Yes. And I mean, I think it's a helpful question. And you can see we're making lots of changes in mix to the marketplace. We, in F '18, saw a material degradation of our cable video margin, and we saw a significant increase, obviously, in our Internet revenue, all of which drives the margin in F '18. That ended up being a degradation of overall gross margin, and the offset in F '19, we plan on improving gross margin. I think you can do the math. I'm not sure it's totally helpful for you -- me to give you the actual gross margin numbers, but they are significant. We saw a slight decline in satellite video margin, but it really wasn't the problem. The problem was, overwhelmingly, cable margins. There's no question, we didn't help ourselves. We drove to choice packaging in the world where our cost structure really doesn't facilitate gross -- choice packaging with penetration base-rate parts and so forth. So I mean we got squeezed badly F '18 in video, both on loss of customers and loss of margin. And when...

Trevor English

Executive VP and Chief Financial & Corporate Development Officer

And loss of ARPU.

Jay Mehr
President

And loss of ARPU. And when all those are headed in the same direction, you can appreciate the magnitude. And as you can see, Internet didn't fully offset it -- offset that.

Maher Yaghi
Desjardins Securities Inc., Research Division

Okay, that's -- and sorry, just one last question. On your guidance for '19, how should we look at the growth year-on-year, the 4% to 6%? How is it split, let's say, first half versus second half. Is? Is it early? Is it back-end loaded, front-end loaded? How can -- just helpful on that. That would be good.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

There's -- it's a little bit more back-end loaded, Maher, but not to the extent like it was in F '18. We do have some of the investments -- timing related to those investments of both the VDP, sort of net investments in technology and automation and things that Jay said. A lot of those are coming in, in the first half of '19, so you will see a little bit of additional operating costs in the Wireline business in Q1 versus the run rate in Q4, but not to the extent that's -- that this year was, in terms of '18, in that volatility in the quarterly split.

Maher Yaghi
Desjardins Securities Inc., Research Division

Okay. And this guidance of 4% to 6% is based on the current accounting standard, or on IFRS 15?

Bradley S. Shaw
CEO & Non-Independent Director

It's the same under both.

Maher Yaghi
Desjardins Securities Inc., Research Division

Okay, so no change. Even though subsidies on handsets is quite high on -- in your current situation, it won't affect the growth percentages?

Bradley S. Shaw
CEO & Non-Independent Director

Correct.

Operator

The next question is from Rob Goff with Echelon Partners.

Robert Goff
Echelon Wealth Partners Inc., Research Division

It would be on the recurring revenue side of things. Could you give us a bit more perspective in terms of the Consumer rate increases? I think you noted that it added an incremental $4 million during the quarter. What was the timing of that perhaps and the component mix of that? Second question would be on the Business revenues. Ahead 6.6% on the quarter, you attributed that to the SmartSuite. Could we look forward to greater momentum behind that product suite?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes, Rob. It's Trevor. Just on the rate adjustments that were implemented June 1, they were about $21 million in the quarter, sort of Q4 versus Q3. And just for benefit, it was about $12 million on Internet, $6.5 million on video and roughly $2.5 million on Home Phone. So that was the rate adjustments, and you saw that really flow through the quarterly Q4 revenue versus Q3 revenue. Most of that was driven by those rate adjustments. I think we delivered $19 million in total, but it was $21 million offset with a little bit of migration from customers.

Jay Mehr
President

And Rob, this is -- we've got real nice momentum, Rob. We've got a SmartSuite of services and greater opportunities in enterprise. In our maths, though, it's a little offset by our one legacy business, Shaw Broadcast Services, that relays satellite services for broadcasters. That is obviously in structural decline. So if you look at the rest of the business, we're looking much more like high single-digit increases. I can't tell you how I love the energy of the Shaw business teams, and we had a record sales month in August. Of course, that leads us a couple months down the road on revenue, but we've got rate momentum on Business. And when we talk about our lowering Wireline to 19% capital intensity, we're certainly still continuing to increase our success-based spend on Business, so that mitigation is on the -- becoming way more effective in our capital intensity on the Consumer side. Super excited about the story in Business. I mean, things are going so well on Wireless. We don't talk about Business very much, but we are committed in F '19 to have all 3 business units contribute positively to our operating plan and have all 3 business units be very successful.

Operator

The next question is from David McFadgen with Cormark Securities.

David John McFadgen
Cormark Securities Inc., Research Division

So first of all, just on Wireless, when you talk about expanding into new markets in Western Canada to capture an additional 1.3 million customers, are you moving into rural areas? And what is the ultimate ambition here in terms of your footprint in Western Canada? And then secondly, on Wireless, could you tell us about what are the gross adds ARPU is? Just wondering where that's tracking because, obviously, it has implications for Wireless ARPU growth.

Paul McAleese
President of Wireless

Dave, it's Paul. Thank you. Your -- I wouldn't characterize our ambitions as rural in Western Canada. The markets that you'll see us move into this -- in this coming year are places like Victoria and Red Deer and Lethbridge, some major markets that we're not currently covered. So we're very excited to be able to bring Freedom service to those markets and think that we'll very quickly achieve a good share of gross adds in each of those places. On gross adds RPU, yes, our inbound subscriber cohort is coming in -- as I said, in the last couple months, it's come up by about $1.50, so it's in the low 50s, and that's on MRC, so I'll be careful on characterizing that between -- in ARPU. There are some discounts that sometimes apply, and then there's also things like roaming and other charges that will -- could kind of push in the other direction, so characterize that as probably MRC equating to about ARPU. But we're very pleased with the numbers we've seen, particularly since the July rate changes.

David John McFadgen
Cormark Securities Inc., Research Division

Okay, and if I just have a follow-up, just on the cable video ARPU. Like if you look at Comcast, they've characterized their video sub losses as traditionally lower ARPU. Would you say that as well for you, that any cable video losses you're experiencing are more on the lower end of the ARPU range?

Jay Mehr
President

There lots of moving pieces in terms of our video ARPU. I'm not I would say it in exactly that way. I think there is no question that the future of our business and our whole F '19 strategy is that we're going to lower our cable video churn and add a lower number of gross sales but much higher value customers in video. So I would certainly say it that way. Maybe that's a little bit of a spin of what you just said, David, but I wouldn't characterize it quite the way you said it out loud.

Operator

Mr. Shaw, there are no questions at this time. This concludes the time allocated for today's conference call.

Bradley S. Shaw
CEO & Non-Independent Director

Great. Thank you, operator. Thanks, everyone, and we'll talk to you in January.

Operator
Ladies and gentlemen, you may disconnect your lines. Thank you for participating, and have a pleasant day.

Presentation

Operator

Thank you for standing by. Welcome to Shaw Communications Fourth Quarter 2019 Conference Call and Webcast. Today's call will be hosted by Mr. Brad Shaw, CEO of Shaw Communications. [Operator Instructions] And the conference is being recorded. [Operator Instructions]

Before we begin, management would like to remind listeners that comments made during today's call will include forward-looking information, and there are risks that actual results could differ materially. Please refer to the company's publicly filed documents for more details on assumptions and risks.

Mr. Shaw, I will now turn the call over to you.

Bradley S. Shaw
CEO & Non-Independent Director

Thank you, operator, and good morning, everyone. With me today are members of our senior management team including Jay Mehr, Trevor English and Paul McAleese.

Our strategy in 2019 was clear: we were focused on growing Wireless and Broadband customers, improving execution and delivering stable Wireline results as well as managing through a critical year in respect to VDP departures. The industry shift to unlimited plans did not impede our ability to grow our Wireless customer base. During the all-important back-to-school season, we delivered the best quarterly subscriber results in the company history with approximately 91,000 customers added in the fourth quarter. Our success in attracting and growing the subscriber base is a product of our innovation, our improving and expanding network and our effective advertising and messaging to consumers.

In July, we continued to expand our service offering with the launch of the Big Gig Unlimited and Absolute Zero plans anchored around device pricing as our advantage. The results of this strategy have been positive as not only did we achieve our new subscriber record in the quarter, approximately 30% of all postpaid activations in the month of August were on a $75 or higher service plan. Due to the success in our subscriber growth, which included postpaid additions of 280,000 in the year, our Wireless business surpassed $1 billion in annual revenues in fiscal 2019. We delivered strong service revenue growth of 24% and our Wireless operating margin improved to approximately 20%, both of which supported significant EBIT growth of 45% to over $200 million.

The Wireless network team has done an incredible job as we continue to strengthen and expand the network. An enhanced network experience is a key driver of the material trend reduction that Freedom delivered in F '19. We are approximately 70% complete with our 700-megahertz spectrum deployment in the Western markets and this will continue to roll out as part of our F '20 plan.

In addition, we launched Freedom Mobile in 19 new communities, the majority of which happened in Q4, and we now have wireless service available to over 18 million Canadians.

In Wireline, we grew Broadband subscribers throughout F '19 including over 11,000 in the fourth quarter. We exceeded our targets with respect to self-install, which was above 45% of total activations in the quarter, and launched Shaw BlueCurve, regaining our position as a technology leader.

Beginning in March, we launched our IPTV service, which is now available to approximately 70% of our video footprint. This is a key transition of our legacy video platform that supports our digital transformation and lowers our cost to serve customers.

Our Business division delivered another year of strong revenue growth, fueled by additional product launches, including gigabyte Internet speeds and the continued success of our SmartSuite products with small and medium business customers.

In F '19, Shaw Business was also successful in winning some key enterprise accounts, which is attributable to the strength of our product offerings, network and our focus on this segment.

Our strong operational and financial results were accomplished whilst also managing through the significant change in our business via our digital transformation where we ended the year with approximately 70% of our VDP program complete. As a result of our focus on improving execution and delivering VDP savings, our Wireline margin improved 90 basis points to over 45% in F '19.

We believe we are taking the right steps to grow and transform our business, to enhance our customer experience and improve our day-to-day operation for employees. This focus is driving significant operating capital efficiencies, and in F '19, we delivered adjusted free cash flow of $570 million. This is a remarkable 9% increase over F '18 when removing the impact of the Corus dividends.

Both the asset realignment and the internal transformation in our business over the last several years has positioned us well, and we're entering a key inflection point with respect to our free cash flow generation. This is evident in our F '20 free cash flow expectation of approximately $700 million, enabling us to implement some enhanced capital return initiatives, which I will now turn it over to Trevor to discuss along with our F '19 results and F '20 guidance.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Thank you, Brad, and good morning, everyone. As Brad articulated, we've had a busy and successful year while making significant progress on several fronts. Full year consolidated revenue increased 3% to $5.35 billion and EBITDA of $2.16 billion grew 5% year-over-year. However, adjusting for both $15 million onetime IP licensing payment in Q3 as well as a $10 million charge related to CRTC regulatory matters in the quarter, our adjusted F '19 EBITDA increased 6.3% over F '18, which met our commitments and guidance.

Growth in F '19 is driven by combination of continued strength in the Wireless business, stable Wireline results and the delivery of $135 million of total operating and capital savings under our VDP program.

With lower capital requirements, particularly in our Wireline business, we delivered free cash flow of $545 million or approximately $570 million when considering the onetime impacts previously mentioned. This is a significant improvement over recent years, which saw us invest substantial capital to improve the wireless experience for our customers and to support the wireline networks to deliver faster speeds and new technologies. Our wireline network is stronger than ever with record-low congestion and is supplemented by state-of-the-art customer premise equipment that both improve the customer experience and reduces overall cost to serve.

As we enter our F '20, our strategy remains centered around Wireless, Broadband and Business as the growth drivers and a relentless focus on delivering efficiencies through a more agile operating model.

We're pleased to introduce F '20 guidance including EBITDA growth that is expected to range between 11% and 12% versus F '19 reported results. Our guidance reflects the adoption of IFRS 16, which, for us, commenced on September 1. We will apply the new accounting standard on a prospective basis, and therefore, we will not be restating F '19 results. However, we estimate the impacts from IFRS 16 on fiscal '19 is approximately $155 million, of which 55% is attributable to Wireline and 45% to Wireless.

Removing these accounting impacts, EBITDA growth in F '20 is expected to range between 4% and 5%, capital investments are expected to be $1.1 billion and free cash flow is expected to approximate $700 million. Please note that both CapEx and free cash flow are not impacted by the IFRS 16 accounting policy change.

Through the VDP program, we expect to deliver a total of $200 million in savings or an incremental $65 million over F '19 with the majority of the incremental savings this year arising from reduced capital expenditures. All VDP-related efficiencies are embedded within our F '20 guidance, and we remain confident in our ability to manage through the remaining departures of approximately 850 employees.

We believe that F '20 marks a significant inflection point, and the strengthening free cash flow profile is concrete evidence that our asset realignment and evolution of our operating model are both yielding positive and meaningful results that are flowing to the bottom line.

As we've gone through our significant transformation over the last several years, we've maintained financial strength and flexibility throughout. At the end of F '19, our leverage ratio stood at 1.9x and is the lowest among North American peers. On October 1, we repaid $1.25 billion of maturing notes through balance sheet cash, which, of course, had no impact on our leverage metrics.

Considering our sound business fundamentals, strategy and focus on execution going forward, current leverage and strengthening free cash flow profile, we're pleased to announce some enhancements with respect to our capital return initiatives. Subject to TSX approvals, we will implement an NCIB program to purchase up to approximately $25 million Class B shares, which represents 5% of all issued and outstanding Class B shares. Through recent years where we made significant investments to drive our growth -- our long-term growth strategy, we maintained a healthy dividend, and we believe that an NCIB program is a flexible and efficient alternative to return additional capital to shareholders.

With [F' 23] cash flow expected to be in excess of our total dividend, we also plan to satisfy our share delivery obligations under our DRIP program by purchasing Class B shares in the open market, thus avoiding additional future equity dilution and creating synergies with the contemplated NCIB program.

In addition to this change, we've also announced that we're eliminating the DRIP discount, which is currently at 2%, and we expect this will lead to a significant reduction in DRIP participation.

We remain committed to the long-term dividend growth and are confident in our ability to generate sustainable free cash flow. However, we believe that the enhanced capital allocation initiatives announced this morning provide us with a more balanced and flexible approach to return additional capital to shareholders.

I'll now turn it back to Brad before we open the line for questions.

Bradley S. Shaw
CEO & Non-Independent Director

Thank you, Trevor. I am very proud to say that we have built our company on the foundation of being a strong facilities-based service provider. Just earlier this week, Ookla released their latest Canadian speed test report where Shaw ranks as fastest ISP in all the cities listed within our footprint. In a separate monthly index compiled by Ookla, Canada ranks as 11th in the world for download speeds. Results like this speak to Canada's position as a technology leader creating consumer choice and effective sustainable competition while providing employment and advancing infrastructure and possibilities in our communities.

Facilities-based competition from Shaw and Freedom is working and will continue to work for Canada. As an industry, we are all expanding and improving our networks. Consumers want more from their providers, not less. We can offer these services and introduce new ones because we have invested significantly in the breadth and quality of our networks on which these services so heavily rely upon.

The recent regulatory environment creates unnecessary uncertainty that has the potential to do more harm over the long term. If companies can no longer have the opportunity to earn an appropriate return, they will change their investment profile, and therefore, innovation, services and technologies such as 5G, Internet of Things and the fundamentals of artificial intelligence will diminish, along with the service levels that Canadians have been accustomed to. Canada requires strong facilities-based investment to compete on the global stage.

Since the announcement of the wireless MVNO hearings and the reduced TPIA rates, we have already altered our plans with respect to launching new higher-speed Internet tiers and additional wireless expansion beyond our current footprint. Throughout the regulatory process, we are hopeful that the government will recognize the critical role that facilities-based companies play in the ability to usher in new technologies and deliver better and faster services for all Canadians.

Despite the recent regulatory uncertainty, we couldn't be more pleased with our strategy and execution. To the entire Shaw team, the progress we have made over the past number of years is absolutely remarkable, and it could not have been done without you. We have challenged each and every one of you in your day-to-day roles, and response has been overwhelmingly positive. Let's continue to build on our success and carry this great momentum in F '20.

Thank you, operator. We're now opening up for questions.

Question and Answer

Operator

[Operator Instructions] Our first question comes from Vince Valentini of TD Securities.

Vince Valentini
TD Securities Equity Research

First off, can you just clarify, Trevor, the $10 million charge for the CRTC decision, that should be a hit to revenue, I believe, in your Consumer division? Or did you just book it as an expense?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

No, it's an impact to revenue as well. It's actually split between Consumer and Business a bit. And just to be clear, Vince, it's about $6.5 million or so on revenue. In EBITDA, there was also another regulatory provision that we took as well to aggregate to $10 million. But it does impact revenue as well.

Vince Valentini
TD Securities Equity Research

On the free cash flow, guys, congrats, $700 million is a great target to go for. Can you just clarify a couple of things for us? So you'll save about $70 million in interest costs from that bond you just paid off with cash. Did your guidance embed that you will refinance with some longer-term debt and incur other interest costs to replace some of that $70 million? Or is it full $70 million you expected to flow through?

Second, can you just level-set us on restructuring costs and contract assets? Is there anything that we should expect to be materially different in those 2 lines in 2020 versus 2019?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes. Vince, I'm not sure if it's the full $70 million. We do expect some financing in here, so I don't -- there's not a $70 million decline in interest to get to -- that's driving the free cash flow growth. I think the driver of the free cash flow growth really is EBITDA growth of 4% to 5%, which is roughly $85 million to $110 million, and then of course, on capital. And the capital moderation, frankly, is about $100 million lower than reported F '19 results. That moderation is sort of split equally between Wireline and Wireless. On the Wireline side, some VDP-related savings and efficiency there. And our partnership with Comcast, I think, historically, maybe we haven't articulated the strategy well as we could have, but there's been some OpEx trade-off for significant CapEx efficiency through the technology road map and partnership that we've embarked on with Comcast and other global scale providers. Self-install is really working for us. It's about 45%, as Brad mentioned in his remarks, and we continue to see it accelerate. So there's real Wireline moderation.

On the Wireless side, Brad mentioned in his opening remarks, it was a busy year on the Wireless side of things, expansion into 19 new communities, expansion into retail -- significant retail and that's sort of behind us. We're going to continue to plow through the $700 million, where about 70% is in Western Canada that will be done by the end of calendar year. And then in the East, it will be substantially complete or fundamentally complete by the end of F '20 as well.

So there really is a moderation of capital, like Brad said. Maybe some of the capital within Wireless is a little bit -- holding a bit back considering some of the regulatory uncertainty that's in the market right now. But the free cash flow profile we're very proud of, and we continue to see that strengthen going forward.

Vince Valentini
TD Securities Equity Research

And if I could throw one in for Paul, I'm sure there'll be lots of questions on Wireless, but I just want to ask you how are you thinking about competitive intensity right now. It certainly seems from the Rogers results earlier this week that they're hurting a little bit. If you look at your blended sort of lifetime value of customers over the past 3 months, let's say, I mean, if you factor in the ARPU you're getting, the likely increase in equipment subsidies given the Absolute Zero program and then the superior volume of subs you're adding, are you happy with where all those vectors line up? Or do you think yourself and the industry could be doing a little bit better if somebody got more disciplined and others followed?

Paul McAleese
Former President

Well, it's hard not to argue with you -- or not to agree with the last point. So I think by any objective measures, it's fair to describe Q4 as one of the most competitively intense periods the Canadian wireless industry has ever seen. You've got all of the incumbents launching unlimited, 2 of those guys being the largest media owners in the country. So we certainly saw some significant pressure over the course of the 90-day period. I would argue and I think you saw earlier this week that there is something on the lack of pricing discipline in the market really across-the-board. My perspective is unlimited [gave out] below the rate that they probably should have done, and certainly, the results you saw here this week probably support that.

So overall, just in broad summary of your question, we still love what we're getting here. Absolute Zero for us was an absolute home run. We've been able to move 30% of our postpaid adds to a rate plan of $75 and above. We're including moving into the neighborhood of the premium brands and we saw that in our quarterly numbers. It was certainly an expensive quarter from a subsidy standpoint. But what we got in exchange for that trade was something we would take again and we'll do again.

So we like where we are. There's probably 10 to 15 basis points of churn that I would put in the seasonal category and attributable to that intensity, but we expect that to moderate over the course of the next year and still see the churn for us is somewhere in that range of 1.3% to 1.35% over the course of the next 12 months.

Operator

Our next question comes from Drew McReynolds of RBC.

Drew McReynolds
RBC Capital Markets, Research Division

Starting with -- back to the Wireline side, maybe for you, Jay or Trevor. When you look at the trajectory of that business in fiscal 2020, obviously, a lot of recalibration and focus on base management over the past couple of years. Can you refresh us on what your assumptions are for the top line and the extent to which potentially you can get EBITDA margin improvement over the medium term?

And then, secondly, a couple of housekeeping items. Just to confirm, Trevor, the growth guidance excluding IFRS 16 for fiscal 2020, that's off the $2.161 billion number? And then, secondly, just comment on the cash tax rate year-over-year, if there's any really major move there.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Okay. So there's lots there, Drew. I'll take the easy ones first. Yes, it is off. Just to be clear, the growth guidance that we gave is off reported results. And cash taxes, we expected -- sort of the last couple of years, it's approximated at around $160 million, we expect that to be about the same for F '20 as well.

Maybe I'll start then on the Wireline, the first question on Wireline trends. I think F '20 is really going to be a continuation of our overall strategy to deliver growth through Wireless, but then also Broadband business while managing through the VDP exits in F '20. On Wireline, in F '19, we certainly delivered improved Broadband growth of around 35,000 subscribers. We expect this trend to continue, offset by clients in some other categories, in more maturing products like TV and the Home Phone.

Overall, Drew, on the top line, if you look at Consumer revenue, it has been decreasing over the last 7 years at a rate of about 50 basis points. And frankly, we expect that trend to continue and maybe modestly accelerate a little bit as we -- there's additional OTT competition with Disney coming into the fall. Does that accelerate cord cutting or cord shaving a little bit? We're cautious on the Video business and then what it does from a revenue perspective.

Traditional Home Phone is going to continue at its current pace of decline just due to Wireless substitution.

And then on Internet revenue side, continued growth there. There's no doubt about it. But perhaps we're just going to really monitor the competitive dynamics that's happening out there specifically within the TPIA space as well considering a lot of the uncertainty there. That's all going to be offset by continued growth obviously in Business as well. We're targeting 5% again. And combining those two, really, F '20 looks a lot like F '19, which is sort of flat to maybe down a little bit on Consumer revenue is the way that we're running the business.

And then from an EBITDA perspective, there's some VDP savings incremental $25 million of OpEx that we're going to deliver to the bottom line, but there are some incremental costs coming with our strategy, which is significant capital efficiencies. Again, just want to highlight the free cash flow and the simple free cash flow that's been generated out of the Wireline business, it's very impressive. But from a margin perspective, we continue to see opportunities, but there is going to be some offsets through VDP, through higher syndication costs with our partners, some of the outsourcing costs as we move to the cloud.

That being said, if you look at sort of reported EBITDA growth rates at 2.1% on Wireline, 3.3% for the year, adjusted when you take out some of those onetimes, we continue to see Wireline growth this year and maybe a bit of Wireline margin expansion, but we do think that it's fairly modest. And it really is about stability and profitability again of the Wireline business is really the focus. And hopefully, everyone saw last year quarter-over-quarter, it was sort of anywhere between $490 million and $500 million, it was, really, in a quarter very consistent, stable Wireline EBITDA results and that's what we're focused as a management team again to deliver this year.

Jay Mehr
President

It's Jay, Drew, building on Trevor's remarks kind of qualitatively [with some of the improvements of the] F '19 process about focus on the monthly recurring revenue, focus on churn, growing our customers every quarter and some part of the team that did all through the things we set out to do. I think as we stand on that foundation F '20, it's all about customer data segmentation and selling the right product to the right customer. Our systems, our teams have become so much more advanced in this area. And you can see it in our strategy and in our CapEx, and you can see it in everything we do. And really driving that in of pursuit of customer value in F '20 and tremendous opportunity there makes matters a lot. So more of the same base management focus that you talked about, and we're going to continue to work hard on that point.

Operator

Our next question comes from Jeff Fan of Scotiabank.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

Just a quick housekeeping before we get into the questions. On the CRTC $10 million charge, the revenue impact sounded like it was 6.5. What was the split between Business and Consumers? Can you just help us with that because it looks like Business revenue...

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

It's about -- sorry, Jeff, it's about $2 million in Business and the rest in Consumer.

Jeffrey Fan

Scotiabank Global Banking and Markets, Research Division

$2 million?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

Okay. Got it. And then my question is one for Paul on the Wireless side. I think given what we saw with some of the incumbents' move in the quarter, you guys did a great job in attacking the handset pricing and you continued to leverage subsidies to get your old customers in. Sounds like you're quite happy with the results that you've got. And am I my right in reading that subsidies will continue to be an important part of your customer loading and retention?

And then the second wireless question is around ARPU. 0.5% growth, that's great that it's still positive considering what we're seeing in the industry. But can you talk a little bit about the mix impact because of your strong prepaid and maybe even the loading in Absolute Zero and how subsidies may have impacted your service revenue? And how do we think about ARPU growth in 2020?

And then my last question is for Trevor on the CapEx, $1.1 billion for next year. Do you think this is sustainable both on the Wireless and the Wireline side? Just want to make sure that this is not a 1-year kind of dip before we go back up.

Paul McAleese
Former President

All right. Jeff, it's Paul. Thank you. I'll take the first couple. On your question about the subsidy in EIPs, we have a very different view of the EIPs than some of our peers. I think it's worth spending a minute on kind of highlighting these extensions. First, I think other operators have described EIPs like they sort of magically removed hundreds of dollars of subsidy investment without any customer impact, and that's a remarkable oversimplification from our perspective. Simply put, EIPs, the way that they've been characterized in the Canadian market of late are really just a massive price increase wrapped up in a fancy financing bow. We, Canadians, are smart enough to do the math on that. It's painful. And when the incumbents launched their unlimited plans over the summer, they [collapsed] much of the rate plan umbrella that we saw. But their ambition to coincidently introduce EIP is to pay for those rate reductions has clearly not come to fruition. You saw it [Exo and ASH data] earlier this week. And I want to be clear about our strategy on subsidy. We're going to continue to use the best pricing to distinguish Freedom from our competition and we don't take direction from the competition on phone pricing. So the promise of the $75 unlimited plan and the subsidy-free EIP isn't the one that we plan on adhering to. We didn't make that promise, we're not going to keep it.

Secondly, on point of ARPU, there's been a lot of interest and I understand that over the course of the last number of days. However, I want to be clear that for us, we continue to see ARPU as a growth metric in F '20. Our expectations are meet or exceed F '19 performance of this 3.2%. This is, of course, subject to continued rational competitive activity.

But we're confident in that outlook because we don't really share the same ARPU risk profile that some of our peers do and specifically in 2 key areas: one is we don't have the exposure of overage revenue to lose that you see in kind of glaring terms this week, how gravity ultimately affects talks of revenue. And then early in 2020, we finally begin to reap the ARPU-accretive impacts of the 2-year iPhone cohort rollout of the subsidy amortization schedule. So it means that our ARPU gains for this year are very much second half F '20 story, Jeff, but we feel confident we can deliver that one through the course of the year.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

And on the sustainability of the CapEx, Jeff, let me break into the 2 components. On Wireline, you saw we went from 24% CapEx intensity in F '18 to around 19% this year. And we continue to see that moderating, hence, sustainable moderation going forward. We don't see a step-down as much as we did obviously from F '18 to F '19, but we continue to see that more in that 18%.

And some of the drivers there, Jeff, again is just our network is in fabulous shape to handle the loads in the traffic on our Wireline network. We've got IPTV now rolled out to 70% of our footprint, and that will continue throughout the year. There's significant capital savings related to that, not just on CPE, but more so, frankly, on our cost to serve and just our self-install. We weren't able to self-install the TV customer last year with the technology that we have out there. With IPTV, we can. And that's just, again, the benefit of -- the holistic benefit of the partnership with our technology providers being Comcast, so that's very sustainable.

On the Wireless side, just in moderation this year as well. I think I talked about it with my previous response to Drew just on the overall free cash flow guidance. It's coming down a little bit this year. Some of that is because the activity we've done. Some of it is because we're a bit concerned with the regulatory environment. When Brad mentioned in his remarks we have some plans maybe on some corridors between some of the cities in light of some of the hearings kicking off in January, we just want to make sure that when we're spending capital within all of our businesses including Wireless, that we're going to get an appropriate return on that capital. So we have dialed that back a little bit and that's something that may, depending on the outcome and the environment, that may be something that there is some additional capital that goes into Wireless versus -- if we think about F '21 versus F '20 looking forward, but we don't see it being materially higher than probably the F '19 total capital that we spend of $385 million.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

Great. If I could just ask one quick follow-up, Paul, on the ARPU. On the Absolute Zero customers that are coming in or migrating, what kind of ARPU are you getting, if you can share that?

Paul McAleese
Former President

Yes. I mean Absolute Zero is a little bit of a tricky way to keep track of because it has pretty significant accounting implications the way that we've got it structured, but the quick math on it, Jeff, is that just we bring those customers in on the $75 rate plan or above. Something around 40% of that gets booked in the month, so we hit consensus of EBITDA in the quarter, but that means we've done about 40% of the cost of that subsidy already in the books and behind us. Prospectively, it means that we'll then amortize the remaining 60-odd percent over the course of the next 24 months. So the ARPU coming in on those plans today is kind of in the high 40s. But important to remember that, that's over the first 24 months. When we roll into the 25th month and beyond for those subscribers, that ARPU reverts back to $75. So a lot of the benefit that we're seeing in our growth story really doesn't start to work into our math until a couple of years out. But we really like what we're getting on those subscribers, and that's the story we're going to continue to press into.

Operator

Our next question comes from Aravinda Galappatthige of Canaccord Genuity.

Aravinda Suranimala Galappatthige
Canaccord Genuity Corp., Research Division

First question is on obviously your expansion on the Wireless side to a lot of the communities in the West, I think the total population is sort of close to 1.5 million. I wanted to get a sense of the different dynamics within those territories versus the areas you've been competing in. I mean would you characterize that as -- I know it's always competitive, but would you, relatively speaking, characterize that as more sort of a low-hanging fruit that could help sort of potentially ramp-up your net adds going forward?

And then, secondly, with respect to the capital efficiencies that you talked about. Obviously, the 45% self-install numbers sort of jumps out as a key positive. I was wondering if you could give a little bit more color on that. Are you talking about all installs whether it's Internet TV or on a bundled basis, 45% being self-installed? And the proportion of savings that actually emulating from that?

Jay Mehr
President

Yes. 45% is of our total number of installs, and it's a fantastic result ahead of our target. We had a terrific back-to-school period. We were busy with back-to-school this week -- this year. And I got a text every single day from our VP of Operations wondering when the installs are going to come through, and I've not seen that in 23 years of back-to-school here. Self-install changes and everything.

I think if you look at our success in terms of truck rolls and operational savings, it's easy for you to figure out the math. Important to note with IPTV, there's no in-home wiring as well and so there's real simplicity that comes with getting rid -- not using the cable in your house the whole [plan has bought]. The promise that we talked about through the transformation is absolutely being delivered. And we're going to build off 45% this year and look at a much bigger number for that in FY '20. So you're seeing that in the free cash flow characteristics of our company now.

Paul McAleese
Former President

Aravinda, it's Paul. On the first question regarding the new markets in the West, just 1 million of the 1.4 million subscribers we added this year in terms of coverage were in the West. Great work from the engineering network team to build that out in such rapid fashion. I don't know if I'd characterize it as low-hanging fruit. You've sort of got 2 dynamics occurring at the same time. There's certainly pent-up demand and a lot of customer anticipation as we go into those markets. So we're met with open arms and we see some good early volume there. But the other side of it is that those -- the network and the brand are new in those markets, so they are subject to probably to some bedding in and we have to build each of those out in a way that makes them familiar in those markets. So I think that's probably about to push over the course of the first year that they're in the market. We love growth in the West in Wireless because it ultimately set us up when we bring the 2 businesses closer together, Wireline and Wireless, we love the opportunity that those markets bring us. So I think that story gets written a little more over time, but we're still happy with the initial results in those new markets.

Aravinda Suranimala Galappatthige
Canaccord Genuity Corp., Research Division

And just a quick follow-up to that point. Are you still sort of in that, roughly speaking, 60-40 split with respect to east-west in terms of gross add?

Paul McAleese
Former President

So it's 70-30, Aravinda, which is in its historical level.

Operator

Our next question comes from Tim Casey of BMO.

Tim Casey
BMO Capital Markets Equity Research

A couple for me. But Paul, just on the subsidies again. I clearly get where you're coming from, but one of the pushbacks or the thrust the other operators are making that with the high cost of handsets is the subsidy model is punitive over the long term. I'm just wondering how you think about balance sheet management in that as high-end handsets are obviously quite expensive?

And just one spectrum question. Any chance you could talk about how your plans are coming to deploy the 600-megahertz spectrum?

Paul McAleese
Former President

Thanks, Tim. We've used subsidy not in isolation. So if our perspective from reading from the customer outwards is more of total cost of ownership structure, so I understand the commentary around the price increases that we've seen in the market on devices, although that has moderated significantly with the launch of the iPhone 11 over in September. We've seen a pretty significant reduction in those entry-level prices, so there has been a bit of shift in the other direction.

I'd perhaps provocatively argue that the significant decline we saw in the price of unlimited from the big 3 might have been prejudged to be perhaps a little too aggressive and a bit too early. That's going to be one of the things that factors into their overall cost of ownership as well. So we just don't look at devices in isolation.

So from our perspective, we are very comfortable with the level of subsidy we're putting in the market. It has been coming down. It will continue to decline over the course of the year. And in the overall mix, we're happy with the blend that we're getting here. So I don't think there's much of a story there. EIPs that we discussed earlier on are not a magic cure to anything. It just all it has go into the math. And what we saw in August and continue to see is very strong consumer response. So we like our model and we're going to continue to press into it.

On 600, I think it's early for that. As I think we mentioned on the last call, we'll continue to make sure that our infrastructure is ready for 600 when it gets unpacked from the broadcasters. So we'll be reporting more on that in subsequent calls as we get closer to the date.

Operator

Our next question comes from Maher Yaghi of Desjardin.

Maher Yaghi
Desjardins Securities Inc., Research Division

My first question is on the guidance. Looking at your 4% to 5% growth organic here, well, apples-to-apples, the range is quite tight, $20 million buffers on a total base of 2.2 approximately. What gives you this kind of level of granularity in terms of giving this outlook with such a small bracket?

And I have a question on the initial cohort -- or I'll wait for your answer before I ask the question on...

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Thanks, Maher. I mean hopefully, you saw it last year, live within our commitments. Even last October when we came up 2019 guidance of 4% to 6%, there was a lot of questions about that and whether that range was too tight or too conservative. And clearly, we had some onetime impacts that impacted the guidance, but we really delivered it. The management team here is laser-focused on execution and running the business on a daily basis looking at key metrics and KPIs and feel very, very comfortable about the budgeting process and the planning process that we went through in excruciating detail this year.

So you're right, it's a fairly narrow range when you look at a company of our size, but we're very comfortable with the range. And we're going to go and deliver this year just like we did last year.

Maher Yaghi
Desjardins Securities Inc., Research Division

I'll pick up another way. It seems like you're so confident that you're giving this small range. So I'm trying to figure out what made you, let's say, not go to 6% if you had this kind of confidence in giving this range like not quite...

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes. I think that's sort of the competitive environment. I mean we know where consensus estimates were at, they were above 5%, [indiscernible] didn't want consensus to stay where they're at. I think I walked through and articulated the realities of the Wireline business. But listen, we're very comfortable with the Wireline business and the free cash flow generation of the business. So I think -- I hope investors are really not just looking at EBITDA and EBITDA guidance range, but really focusing on free cash flow generation of the business.

And yes, competitive dynamics in the Wireless business are intense. We just went through probably one of the more intense back-to-school periods, and so we do want to get over too much on Wireless as well whether it's growth in service revenue and flow through to EBITDA margins and margin expansion. So we're very comfortable, Maher, with the guidance range that we have out.

Maher Yaghi
Desjardins Securities Inc., Research Division

Okay. That gets me into free cash flow because I wanted to ask you a question on that, $700 million, and you said in your prepared remarks that you're embarking on a improving trend in free cash flow. And because of that, you started with NCIB and the DRIP change. What do we have -- if we look further out, what are the things that you like to see the company perform in terms of free cash flow growth rate beyond the $700 million in 2020? How should we look at 2021, 2022? Is that a continuous improvement in free cash flow that you're expecting longer term? Or is there something in 2020 with the CapEx being reduced like that, that is a onetime in nature?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

No, I think I talked about it early on the Wireline capital side, again specifically with the strategy that we embarked on a number of years ago in the transformation. The CapEx savings are real, sustainable and we continue to focus on other efficiency opportunities in front of us well and a lot of those are on the capital side of things, so we feel very, very comfortable about the right level of investment in the Wireline business. And it's moderating, and we continue to see opportunities going forward. So we don't foresee any big CapEx spike.

We did talk a little bit already about Wireless. Maybe we're holding a little bit back this year, but it's not that much. And we don't see any significant spikes in Wireless capital from, for example, the run rate that we delivered in F '19 of $385 million. So we continue to see EBITDA growth rates beyond F '20 and we continue to see all of that flowing to the bottom line in that combination of things that continue to generate strong free cash flow above our $700 million in future years.

Maher Yaghi
Desjardins Securities Inc., Research Division

Is it fair to say that you're holding back a little bit on Wireless because of what the upcoming hearing is going to bring out in terms of change or not in terms of policy in Canada?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes, a little bit. If i wasn't clear with my previous remarks, that's what we're trying to imply.

Maher Yaghi
Desjardins Securities Inc., Research Division

Okay. And my last question is on iPhone and I'm trying to figure out what you kind of implied in your guidance when it comes to the cohort of iPhone customers that you loaded closing in on 2 years now in end of November, early December? What kind of churn rate implied in that cohort versus the churn rate you're currently having in your base and the type of subsidy that you are implying to repaying those customers?

Paul McAleese
Former President

Thanks, Maher. It's Paul. I looked into the specific levels of that, but I will just give you a couple of guiding principles. First, anytime we have a customer in a 2-year device financing plan, we see a significant improvement in their churn profile, looking more in the sort of 1% range than in the 1.3% range. So when we report postpaid churn that, of course, includes BYOD, which has a higher churn profile. So you can always assume that we're looking up on people into a device financing plan because it has great characteristics on all fronts.

When we launched the iPhone in December of 2017, of course, every month, we've been taking essentially another cohort of finance subscribers into our amortization schedule and have not had the benefit of customers rolling off that 24-month schedule. And if you just think about the life -- the average life of an iOS subscriber in Canada, it's 2.9 years according to Apple, which means that once they roll off the amortization schedule month 25 through, say, 35 -- 34, 35, they pop back up to their complete ARPU, so there's no longer an accounting impact to that.

So it means that in December, January of this coming year, you'll start to see that first cohort roll off, that will be accretive to ARPU. It's not a big pop right out of the block because, of course, we're also adding people then behind it. But it means that our ARPU story starts to get incrementally better over the course of the last half of the year. And that's a benefit that we have that we're looking forward to. The other operators, of course, have already had that 24-month rule and we've still been filling up that bucket. So we have 3 or 4 more months left of filling it up and then we get to sort of start to take withdrawals from it, which is positive to our story.

Operator

Our next question comes from David McFadgen of Cormark Securities.

David John McFadgen
Cormark Securities Inc., Research Division

Yes. A couple of questions. Maybe I'll start the first one on clarification. Just on the 700-megahertz spectrum, did you say that as far as Western Canada goes, you'll be deploying that in calendar 2020? But Eastern Canada, you'll be done fiscal 2020? Can you clarify that?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

I told you, David, with that -- Paul, just correct me, we meant calendar 2020 it'll be done by in Western Canada. And substantially complete in Eastern Canada by the end of F '20.

David John McFadgen
Cormark Securities Inc., Research Division

Okay. Okay. So calendar 2020 first one, F 2020 after. So just a question on Wireless. Post -- now we're in the Q1, have you seen any impact on your loading from the incumbent's unlimited plans?

Paul McAleese
Former President

Thanks, David. It's Paul. Probably the most significant impact we saw would have been in the early days of it as you had kind of an initial rush in that, that certainly impacted us as I indicated from a churn basis 10 to 15 basis points. So we saw an initial bit of activity there. We continue to like what we see for loading, both the quality and quantity. We've been very clear in kind of telegraphing that we look to have a balanced scorecard the way we manage the Wireless business, which means we're looking to do something in the area of 250,000 net adds over the course of each year and continue to have a strong revenue and EBITDA growth story, and we continue to be tracking nicely on that front. So I think for all the energy and initiatives that we face from the victory, we weathered that storm brilliantly through the course of the summer and continue to do so now.

David John McFadgen
Cormark Securities Inc., Research Division

Okay. And then a question just on the Wireline side of the business. When you look at the Video, the cable video losses, they seem to just kind of be hanging in at this rate. Is there anything in your mind coming on the horizon that could actually potentially lower them?

Jay Mehr
President

Yes. This is Jay again. I mean first of all, we were very pleased with our Internet loads and the right-on strategy for the quarter. We took a significant -- and we're very comfortable with what's happening in the satellite video space, and there's the natural seasonality, which you'll see in Q1. We've got ARPU of $84 in that right now and our business is very profitable, and that'll be a continuation of trend.

But I think your question specifically about the broadband and cable video of significant loss 32,000 in the quarter and that really reflects when we launched our IPTV platform in 70% of our customers in the last 5 weeks of the quarter with some of them being launched with 2 weeks left in the quarter. So we're in a little bit of a technology change that we're holding our powder a little dry and also a little bit more focused on [student]. You probably have seen this week that we've launched our next-generation packaging called BlueCurve Total that really brings all of the advantages of the Comcast program, the very best of the Comcast road map to consumers. And so we're already seeing a significant uptake in that percentage of double-play installs this quarter as opposed to Q4. So we won't get ahead of ourselves. I mean the Video business is the Video business steady and we're steady as she goes in terms of how we're pursuing it. But we'd certainly be disappointed if we haven't another number like Q4 and Q1.

Bradley S. Shaw
CEO & Non-Independent Director

Great. Thanks, everyone, and we're really looking forward to FY '20, and we'll see you at the next call or talk to you in the next call.

Operator
This concludes today's conference call. You may disconnect your lines. Thank you for participating, and have a pleasant day.

Operator

Thank you for standing by. Welcome to Shaw Communications Fourth Quarter 2020 Conference Call and Webcast. Today's call will be hosted by Mr. Brad Shaw, Executive Chair and Chief Executive Officer of Shaw Communications. [Operator Instructions] The conference is being recorded. [Operator Instructions] Before we begin, management would like to remind listeners that comments made during today's call will include forward-looking information, and there are risks that actual results could differ materially. Please refer to the company's publicly filed documents for more details on assumptions and risks. Mr. Shaw, I will now turn the call over to you.

Bradley S. Shaw
Executive Chairman & CEO

Thank you, operator. Good morning, everyone, and thanks for taking the time to join us to discuss our results for Q4 and fiscal 2020. With me today are members of our senior management team, including our President, Paul McAleese; and our Chief Financial and Corporate Development Officer, Trevor English. As we close in on almost 8 months since COVID-19 was declared a pandemic, it has undoubtedly altered many of the everyday tasks in our lives and injected a new level of uncertainty across all industries and businesses. We have also been impacted at Shaw, however, throughout this crisis, we have demonstrated the strength and resilience of our business and strong execution and engagement from all of our Shaw employees throughout a time of significant change.

With the health and safety of our employees as the priority, we shifted to work from home, effectively managed the significant increased traffic on our networks, accelerated digital programs, including self-install and supported our communities. In fiscal '20, our critical high-quality connectivity services have never been more essential to the lives of our customers, as usage soared and remains materially above pre COVID levels today. During the pandemic, we launched new broadband services, including our Fiber+ Gig Internet service to virtually all customers in our operating footprint.

Importantly, our Gig Internet service is now available to over 1 million more customers than our main competitor, showcasing our leadership position with respect to the breadth and capability of our robust Fiber+ network, the direct results of years of facilities-based investments. As further validation, just last week, Ookla named Shaw the fastest and most consistent Internet provider in Western Canada. Our digital initiatives are being embraced by our customers in this environment. In Q4, 79% elected to self-install a broadband service compared to 45% a year ago. The result of which is an improved customer experience and cost-effective solution that has proven valuable as social distancing remains a priority.

Our focus on profitable customer interactions and cost management resulted in an improved Wireline margin for both the quarter and the year. Changes in our broadband pricing and disciplined promotional investments impacted subscriber activity in addition to COVID. However, we believe our focus on customer profitability is a prudent and effective approach, considering the maturity of our Wireline products and services. Shaw business delivered approximately 2% revenue growth in F '20 as the COVID impacts were more pronounced in the small and medium-sized business sector. However, the team did an excellent job of proactively working with our customers to find unique and personalized solutions that continue to support them through this difficult period.

Small businesses are at the heart of our economy and we are proud to serve and support them, particularly through these hard and difficult times. More recently, Shaw business added to its unique line of smart products, providing customers with additional tools and solutions that support a robust and secure work from home environment. Earlier this week, we announced our partnership with Teck resources and Nokia to launch Western Canada's first dedicated 5G ready private LTE network for mining projects. Just another example of how our business unit is adapting to and embracing the evolving needs of our business customers with new services and technology.

In our Wireless business, Q4 marked an important milestone for our company with the introduction of Shaw Mobile on July 30. The customer demand for this innovative service has outpaced our expectations and has remained strong. The launch was supported with new Shaw branded stores as well as additional sales channels through our national retail partners, including the expansion of our partnership with the mobile shop, who now offers both Internet and wireless services.

Although COVID-19 had an impact on wireless customer loading and the competitive environment continues to intensify, we delivered strong wireless net additions of approximately 60,000, 15% growth in service revenue and 25% EBITDA growth in the quarter. We were also one of the only wireless providers in Canada with ABPU and ARPU growth for the year, including our strong Q4 performance that saw these metrics increase approximately 7% and 4%, respectively.

We believe we are well positioned with our 2 wireless brands to drive continued subscriber growth, increase retention through our funneling initiatives and improved customer account profitability. Our significant accomplishments in fiscal 2020 were achieved while managing through a pandemic and simultaneously growing our business. As Trevor will discuss in a moment, we are very pleased with our financial performance in 2020, delivering consolidated EBITDA growth of 3.7% and an increase in free cash flow by nearly 40% to approximately $750 million.

These results are a culmination of our robust facilities-based networks, our focused strategy and our strong execution by the team. I want to thank our employees for going above and beyond every single day. And particularly those on the front lines that continue to serve our customers. Now I'll turn it over to Trevor to discuss the financial results in more detail, including our expectations for F '21.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Thank you, Brad, and good morning, everyone. Considering the unique and challenging environment that emerged throughout the year, we are very pleased with our Q4 results and our overall fiscal 2020 performance, which deliver growth that was largely in line with our original guidance that we issued last October. We are proud of our results and the execution by the team considering the amount of uncertainty that we faced as the virus spread, commodity prices collapsed and parts of the economy shut down.

Our consolidated Q4 performance continue to deliver stable results, with adjusted EBITDA growth of 3.7% due primarily to strong Wireless performance in the quarter. Our Wireline segment has been resilient throughout the COVID pandemic, including business revenue that has stabilized. However, uncertainty does remain. While Wireline RGUs were soft in Q4, the broadband pricing that was implemented at the end of May, alongside reduced promotional investments have supported ARPU growth across all products.

Combined with the overall effective cost management, we grew adjusted EBITDA by approximately 1.4% on a pre-IFRS 16 basis and improved our Wireline operating margin in both the quarter and year to over 48% on a reported basis. Wireless service revenue increased approximately 15% in the quarter on the back of continued subscriber additions as well as ABPU and ARPU growth of 6.6% and 4.2%, respectively. On a pre-IFRS 16 basis, Q4 wireless adjusted EBITDA growth was approximately 25% over the prior year.

Turning our attention to F '20 annual results, while customer activity was impacted by the pandemic, our Wireless business -- or pardon, our Wireline business remains stable throughout the year. Adjusted EBITDA grew approximately 1% and profitability improved. Our Wireless segment, which continues to face an intense competitive environment added over 160,000 new subscribers, and we delivered service revenue growth of over 17% in F '20 to $815 million and adjusted EBITDA growth for the year at over 30%.

Consolidated capital investments of approximately $1.1 billion were largely as planned. There were no material changes in our capital projects for F '20, considering our business performance. Wireline spending continues to decline even with record usage on our network. This reflects decades of significant facilities-based investments. Wireless capital spending in 2020 supported the deployment of spectrum additional retail locations related to Shaw Mobile and preparations for the delivery of a 5G wireless service.

Our focus this year resulted in substantial free cash flow of almost $750 million. This represents significant growth over prior years and is a direct result of our focused strategy to enhance our connectivity business and the transformation of our organization become more agile and capitalized on efficiencies. With a strong free cash flow in F '20, we returned approximately $610 million to shareholders in the form of dividend payments and an additional $140 million from the repurchase of 5.6 million Class B shares through our NCIB program.

As we look forward to fiscal 2021, we maintain a great deal of confidence in the strong fundamentals of our business as well as we're excited about the new initiatives that will support our growth and strategic focus going forward. In F '21, we expect to generate continued positive EBITDA growth, capital investments of approximately $1 billion and free cash flow of approximately $800 million. While historically we've provided an EBITDA growth range with our outlook, we continue to be faced with ongoing uncertainty related to COVID and the unknown impact key areas of our organization, including Shaw Business and overall sales activity within our Wireless and Wireline segments.

However, we remain focused on delivering stable Wireline results and growing our Wireless business, supported by our robust facilities-based networks and a continuous focus on capturing efficiency opportunities. Our consolidated capital investment profile is moderating, and we're generating more than double the free cash flow compared to just 3 years ago. Yesterday, our Board approved the renewal of our NCIB program, which enables us to repurchase up to 5% or approximately 25 million Class B shares.

While our NCIB activity was paused in April, as COVID was unfolding and we elected to preserve liquidity, we continue to have considerable balance sheet strength with leverage of 2.3x, which is again below our target range and significant liquidity, including a cash balance of $760 million with no near-term debt maturities. With stable performance of our business and improving and strengthening free cash flow profile and an attractive dividend, we continue to believe that an NCIB program is a flexible and efficient means to return additional capital to shareholders. Brad, back to you for closing remarks.

Bradley S. Shaw
Executive Chairman & CEO

Thank you, Trevor. I am so proud of our performance and our team over this past year. We are moving forward with our strategy on our front foot and remain committed to enhancing the customer experience while providing additional value to Canadians. Fiscal 2021 will bring new and enhanced services to both Wireline and Wireless customers. We will focus on bundling opportunities with Shaw Mobile, to deepen existing relationships and build new ones.

We will continue to enhance our wireless network with the deployment of critical spectrum to enable 5G service this year. And we will further advance our digital initiatives to improve the customer experience and reduce the overall cost to serve. While we have accepted that our new environment is different, we are excited to continue playing a critical role in the lives of our customers. In closing, I'm very pleased to announce the nomination of Steve White to our Board of Directors. Steve has an extensive background in operations and deep knowledge of the cable industry.
For the past 11 years, he has served as President of Comcast Cable Division in the Western United States and has held senior positions at AT&T broadband and telecommunications. We look forward to Steve's contributions beginning in January. Thank you. Operator, we will now take on some questions.

Question and Answer

Operator

[Operator Instructions] The first question is from Vince Valentini with TD Securities.

Vince Valentini
TD Securities Equity Research

Three questions. I'll throw them all at you. So you can think about them and decide how to order -- how to answer them in order. One is on dividends. So if we look at your $800 million in free cash flow target for this upcoming year, that would mean dividend payments of about $605 million would be 76% payout ratio. If you increase the dividend 5%, that would take the payout ratio up to 79%. It's not a meaningful difference, still well covered. And as you know, your balance sheet is very strong. So your perspective on if and when we can get back to dividend growth would be very helpful. Number 2 would be on Internet, probably for Paul.

Q4 obviously wasn't very pretty in terms of Internet sub adds, but you didn't launch Shaw Mobile until August. And I think there was a lot of distortion in June and July from consumer activity and pricing changes you did relative to TELUS. So if you can give us any context on how maybe September and October look relative to the weaker Q4, I think that would help people a lot.

And last, maybe for you as well, Paul, on Wireless churn being up 10 basis points. Can you talk about what's going on there? And specifically, I'm not sure how you -- how you treat it when you have these bounty offers from the incumbents trying to steal your customers. If somebody just wants to sign up for Freedom for 2 or 3 days and then switch to an incumbent to get one of their discounted offers, would you treat that as a gross add and then churn? Or does that not impact the higher churn that we're seeing?

Bradley S. Shaw
Executive Chairman & CEO

Great. Vince, it's Brad. I just -- I'll talk about the dividend, McAleese will take the other 2 questions. As we know at a macro level, it's the dividend increase from a Board decision and both management and the Board are committed to long-term sustainable dividend growth. I would say right now, today, we pay a very healthy 5% yield. And that being said, we certainly are confident about the long-term free cash flow profile of the company. But I'd say in these uncertain times in this environment, we really prefer the flexibility of share repurchase to return excess capital to shareholders.

And I would also say that just looking year-to-date at the Class B shares are down 14%, which creates an attractive price to do the buybacks. And I would just say that we have a great -- significant cash balance, which we can deploy $760 million, which I think is very good use. And we continue to -- well I would just say we continue to make sure we, in this environment, you want to have sustainable dividend growth over the longer term and it's something we feel that we'll continue to address as we go forward and leave that with the Board to make the right decision.

Paul McAleese
President

Vince, Paul. If you're good on that, I'll pick up on the other 2. On Internet subs, you're right to comment that we had during the early part of the quarter a significant price disadvantage relative to TELUS. You'll recall that we moved to the launch of our Fiber+ Gig program in late May, May 27. And TELUS didn't respond in any way until the first week of July on pricing and not -- and didn't at that point come all the way, so we maintain a price premium through the course of the quarter. So we had a relatively slow start to the quarter.

And of course, we didn't launch Shaw Mobile until the very end of July. So the things that we expect will over time help improve are Wireline market share, Internet market share. I describe them as a process. We've been very clear about what our objective is here, and that starts with returning our Internet base to positive subscriber growth. But it's a process with a very deliberate set of moves, not dissimilar to what we did in the Wireless business over the last 2 or 3 years.

And while I'm impatient, these are all things that are now underway. So the first thing we did during the quarter [you would have] seen is make sure that we improve the product foundation for Internet. And that began with the launch of those 2 new high-speed tiers, getting Gig into the market to make sure that we were there to address the emerging needs of work from home and the other pressures that we're seeing at the residential Internet level.

But overall, we felt that through the course of the quarter, we made and continue to make -- and will continue to make in this quarter significant product enhancements for the customer experience. Those product changes are not going to be supported by a broadened and improved distribution model for Internet. You'll have seen and Brad commented that this week we brought Loblaws mobile shop, they've been a fantastic partner for us on our Wireless business in recent years. They've been a fantastic supporter of Shaw Mobile since its launch in late July.

And you can expect to see us continue to build on our third-party distribution capability for Internet this quarter as well as continuing to open more of our very effective and stunning new corporate stores, Shaw branded corporate stores in B.C. and Alberta, where we frankly lapped an appropriate retail presence in a lot of markets. We just haven't had been where people wanted to buy us. So those are all things that happen over time.

Finally, we see the bundle here, Vince, as a really important part of our growth strategy. It has enormous potential to complement our Wireline profitable Internet business. But we face a competitor in TELUS, a very, very well-managed competitor, who continue to spend very aggressively to acquire customers in a mature market. You don't have to look too far to look to find a $500 Visa gift card for signing up to TELUS Internet bundle. You've heard me in the past, be very plain about our view on the level of swapping between the 2 companies in a mature market and we continue to think that that's unnecessary and lost economic rent.

So we -- as long as we face that economic pressure, those sort of acquisition pressures, we now have a tool in Shaw Mobile that we will deploy as necessary to meet our business objectives. You will have seen earlier this week we launched $25 unlimited plan. And we'll see how that goes. But know that we have our hands kind of firmly on the throttle. And as necessary, if we continue to see hundreds of dollars of investment from the other side of the house, we'll use those tools accordingly to make sure that we reach our numbers.

So look, we have -- we operate in a market where our competitor has their bundle and we have ours. We prefer ours. We think mobile is a more compelling proposition from the consumer standpoint. And we'll see how it plays out over the next little while. I would not expect to see a dramatic turnaround in our numbers over the course of this quarter. It is a process and it's going to take some time. It doesn't -- these things don't happen overnight. But I like the plan that we have. And we've been able to execute similarly in the Wireless business before.

So I think there's some good lessons that we can bring from Wireless to Wireline here and that process is underway. On your Wireless question, yes, we continue to see kind of a disappointing lack of discipline on Wireless competitive -- the Wireless competitive front. It feels like the market is chasing, frankly, at a pretty considerable expense, a very small pool of available growth.

With less integration and the financial pressures in the economy right now, I think real growth is at a very, very modest level. And the promotional pricing you're seeing out there is intense. You'll have seen this week, that all 3 competitors now have what I'll loosely call an EPP, but I think we all know is broadly just an available plan that has 20 gigabytes out at $50, that was $180 18 months ago. We are the fourth player in the market. We have less than 20% of the subs of the big 3 each. We do not drive this ship. And if we're going to see that lack of discipline, it's -- I think any casual observer would come to the conclusion that you can't solve the service revenue problem, an ARPU problem by discounting at this level. Particularly when there's not a lot of market growth.

So in the end, if we're going to see these bounties back and forth, as a new entrant with a smaller, less mature network, we're going to need to be priced below the incumbent. So there is a real risk that if this continues, it will drive us to price lower. I'm an optimist.

So I'd like to think that the market pressure on service revenue growth will ultimately prevail here, but we'll have to see. In answer to your specific question, if a customer get back and forth to take advantage of a bounty, we count that as a negative gross add. It doesn't affect our overall churn. So the 10 basis point inflation in churn was related to the impact of this kind of activity and just the general macro competitive pressure.

Operator

The next question comes from Drew McReynolds with RBC.

Drew McReynolds
RBC Capital Markets, Research Division

Vince covered off a lot of my questions, maybe 2 or 3 follow-ups here. I think, first, from a CapEx standpoint, Trevor, you alluded to, obviously, a nice reduction in overall CapEx. I think it was $1.4 billion a few years ago, now $1 billion guided for this fiscal. Just can you comment on kind of the degree of sustainability of that level of CapEx, given both of your Wireless and Wireline segments.

The second, maybe to you, Paul, on 5G. I think Brad just mentioned that, that will be kind of launched in market, I think it was said this year, I'm assuming that this fiscal year. Maybe comment on where Shaw is currently on that build-out? Are you still intending to be a fast follower as more and more 5G developments play out over the next few years.

Lastly, on the operating environment, more on the B2B side, you do sound cautious. I think everybody is cautious out there. Maybe Trevor, could you provide what you're seeing as of today in terms of the trend from businesses, that would be helpful.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes. Sure, Drew, thanks for the questions, and I'll start on the CapEx sustainability. Obviously, you've seen our CapEx intensity moderate over the last few years, as you correctly point out. And again, most of that is frankly within Wireline. And I'd say a big part of that is just related to our transformation that we embarked on a number of years ago and we see that as being very sustainable. I would say, the continued sort of slight decline this year versus F '20 in terms of what we guided towards, the majority of that is within Wireline again and again, self-install supports that. Our networks are in fabulous shape, our Wireline network.

And I'd say, again, that is due to the significant investments that we've done over numerous years. We're going to continue to invest in the Wireline network as we need to. But again, that is moderating. We're sort of looking at more of 17%, 18% CapEx intensity going forward. On Wireless, we continue to make the right investments to improve the network and the customer experience in general. We look at that sort of bucket as being very stable this year versus last year, around the $300 million mark.

And we don't see significant sort of forklift capital required in the future. I think we can really live within the roughly $1 billion sort of CapEx envelope to fund the investments that we need to drive this business going forward. So we're pretty confident, Drew, in that CapEx and that profile that we've got going forward, that of course, really supports a very, very attractive free cash flow profile as well.

So we have a lot of conviction as a management team and the Board about the free cash flow profile of the company, which reflects a moderating capital intensity in the consolidated business. That being said, we're not starving the business of capital either. We're still spending roughly $1 billion. And we think that's the right envelope now and into the future.

Paul McAleese
President

Yes, Drew, on the 5G question, following on Brad's comments, we'll -- you can expect to see us live in the market in early calendar '21, so kind of in calendar early -- kind of mid-calendar Q1. And we're hugely optimistic and bullish on 5G's potential. I think you've seen from other operators and globally just the potential that this has.

That said, in the short term, while we are essentially a fast follow simply because of the way that the spectrum auctions work and the fact that 600 hasn't been unpacked yet. We're excited about this, but I think in the short term, the voice of the customer is kind of what's really important here. We do extensive research, as you can imagine, about this. And while the industry is talking up 5G, I think, in a quite sensible way right now, there isn't really a compelling use case.

Even -- we've done some research in the last number of weeks against in tenders for the Apple 5G iPhone. The people that are buying it from us tell us they want the new iPhone, but they're not really that interested in the 5G part of it because there's not a use case that's really driving that at this point. So that will happen and it will happen in time and we will take advantage of that. I think the industry may want to reconsider how it monetizes that over time. We're kind of a little bit disappointed that at this point, the signal from the Canadian industry is that it will be not directly monetized, but sort of just moved up into specific rate card -- rate tiers. That's a strategy, I suppose. I'm not sure it's necessarily the best one.

But over the early part of F '21, you'll see us fairly prominently in the 5G game. And until that time, we'll be able to service our customers with a fast LTE network, that is more than capable for the vast, vast mass majority of the uses that consumers are applying it to today. So excited about it long term. I think it's got great potential. We continue to believe it's going to open up all kinds of new doors for Shaw, particularly given some of our other relationships in Western Canada and what it might do for businesses. But at this point, we will be slightly behind the market in terms of timing, but not concerned about that delay.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

And Drew, I think your third one was just on the overall sort of environment with respect to the SME and the business market here in Western Canada. And clearly, it's something that we're extremely proud of in terms of still delivering 2% growth during the last year. I think the teams led by Katherine Emberly did a fantastic job working individually with each one of our customers.

We had a lot of customers in the spring that went on temporary. Suspension of services, a lot of those have come back. However, I'd say they've come back at reduced services, specifically within hospitality and the restaurant industry. They lit up their Internet service again, but their TV services and some of the others were maybe not to the same levels.

Really, you can see from the revenue trajectory, it really has stabilized over the last couple of quarters. And there's still some uncertainty going forward through. It's -- the Western Canadian environment is -- still continues to be challenging. You've started to see some consolidation within the energy landscape recently. And I think most are anticipating that, that will increase. That being said, the teams have actually done a great job in terms of some additional sort of enterprise wins, new business.

And the announcement yesterday, I think, around the tech deal is, again, another example of sort of these innovative solutions that we're providing to the business market. And also I'd just say, generally speaking, the disruptor, the value proposition that we're providing to small and medium businesses, we're pretty encouraged by the product suite that we have in front of us.

We've launched some additional products that's really focused on helping businesses and their employees work from home. So there's puts and takes, but it's clearly something that we're very cautious on, Drew. It's one of those things, like, one of the reasons why we're not necessarily prepared to come up with more of a -- as prescriptive as guidance from an EBITDA perspective as we historically have.

We've been generally growing that revenue on our business segment around 5% a year over the last number of years. This year was 2% because of the pandemic, and it's really tough to see where that's at, but we think we're doing the right thing for our business customers and it has stabilized. So I don't want to scale investors, but it's really tough in terms of immediate line of sight on where things are going here.

Operator

The next question comes from Jeff Fan with Scotiabank.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

A bigger picture question for Brad, perhaps to start and then I'll ask the others as well. The big picture question is, I guess, over the last few months since we spoke last quarter, there's been more news about the potential for cable consolidation here in Canada. So, Brad, wondering if you have any kind of high-level comments that you want to make about cable M&As in Canada and what role potentially Shaw will play in that.

And then the other question is just on the Wireless growth as we look out to '21 and perhaps even beyond. And this is probably a question for Paul. In light of the competitive landscape that you talked about in light of the Shaw Mobile launch, do you see a bit of a shift in terms of how service revenue growth, Wireless service revenue growth looks and the contributors to that, i.e., like subscriber growth versus ARPU growth?

You guys have done a good job of growing ARPU in the last couple of years. Wondering if there's a shift there in terms of a greater focus on driving subscriber growth, especially if this environment kind of continues? And also, like in light of that, can you still grow EBITDA and margin if ARPU growth slows down?

Bradley S. Shaw
Executive Chairman & CEO

Jeff, it's Brad. Thanks for the question. I kind of expected something like that would come on this call. Just a couple of things. Certainly, as a family, we're very committed to the long-term strategy at Shaw. We have a solid strategic plan. We're delivering on our commitments. We have substantial and growing free cash flow. And I think when you look at the balance sheet and be a financial position, right, with strong liquidity tied to that. And I just -- when I look kind of going where we're going from here, and we just launched Shaw Mobile and truly believe we have some untapped growth opportunity realized both on the consumer side and then eventually on the business side, which also includes, of course, a 5G service.

And then I just -- I think about just the technology and the partnerships we have with Comcast and which really allows an enhanced video and broadband services. And finally, I would just say, 50 years in business as a company, we're very proud of our legacy of serving our customers and our communities over that period of time. And we're pretty comfortable where we stand now with where Shaw looks and are comfortable in that position.

Paul McAleese
President

Jeff, on your Wireless question, which was quite broad. So if you just indulge in a moment. We've been clear for my time here over the last 3 years that we look to grow our Wireless subscriber base by something in the range of 0.25 million subscribers a year. And we will continue to reiterate our expectation that we will grow our Wireless subscriber base by 0.25 million subscribers a year. So just in case that's unclear to anybody on the call. The means by which we'll get that may change over time.

And you'll certainly see, for example, the stronger bias to Western Canada than we would have had in the past. And we signal that some time ago, historically, Western Canada has been about 1/3 -- 30% to 33% of our gross adds. That number is clearly shifting upwards with our new priority on Shaw Mobile. And ARPU, and this is probably a longer conversation for another day, but ARPU will, of course, start to moderate as a result of lower revenue Shaw Mobile customers, but of course, there's a value trade there with the Wireline side.

So even if you look at the move we made earlier this week, it's $140 plus for our customers to buy that $25 plan on our Gig. So it's going to -- that will have a dilutive effect on ARPU, but it will have a materially positive effect at the residential level for Shaw. So we may be prepared or are prepared to trade some of those traditional metrics in a way that enhances value for the organization. So I think there's going to be some kind of reporting things. We'll have to get to probably next fiscal, then may change that.

But just as you start to watch our metrics, know that there's going to be some impact from that over the next little while. I'm thrilled with how well ARPU performed. I think we were nicely above consensus on the [beat] this quarter. And certainly, the more successful we are on -- in kind of Western Canada, you'll start to see those numbers moderate. We are definitely seeing impairment, not to the same extent of the big 3, but we're seeing impairment that looks semipermanent on roaming. [indiscernible] was a larger -- rather a smaller percentage of our overall ARPU, but that's difficult to replace.

And it's certainly difficult to replace against the backdrop of the Wireless intensity that we're seeing. So my earlier comment about my optimism was driven by the fact that I think it's hurting the other guys worse than us. And if you are a believer in how well managed this category has been and I am over the years, you'd like to think that kind of greater sense prevails. Maybe it's worth observing that for a long time, these have been growth businesses for the big 3 and right now, they're just not growth businesses, not really on a net basis. There's a lot of stuff kind of buried in the numbers as we all know in terms of new subscribers.

And maybe they need to be managed more like a mature business than a growth business. And if that was the case, then I think we probably stopped doing stuff like 20 Gig for $50 and chasing the other around -- around the market. So I'd like to think that MRC is going to be a bigger contributor to ARPU than it has been in the past. It's going to need to be if overages are gone, if roaming is impaired, and those look like, unfortunately, longer-term propositions at this point.

So we remain enormously bullish on our Wireless business. We continue to believe that our growth aspirations are manageable and achievable. But we are at the whip end of the market on a lot of things here, right? We're a small player and we don't dictate the terms of market conditions. So maybe a question you need to ask some other folks over the coming weeks.

Operator

The next question comes from Aravinda Galappatthige with Canaccord.

Aravinda Suranimala Galappatthige
Canaccord Genuity Corp., Research Division

A couple from me. First of all, I think you alluded to sort of the Teck deal that you announced, I think, yesterday. I wanted to kind of build a little bit on that and get your thoughts on that sort of product line, particularly in terms of economics as well as sort of the runway to kind of expand in that particular area, private networks is getting more and more popular. So wanted to get your thoughts on that and perhaps any kind of capital commitments that you'd have to employ to further that area.

And secondly, on bad debt provisioning, I wanted to get a sense of what you're seeing in terms of collections? Is there any sort of variances that should be highlighted? And a quick follow-up on the Internet net adds. I was wondering if you can talk a little bit more about the retention aspect. I mean it sounds like it's mostly gross adds, but just on the retention aspect at the high end where there was, there continues to be sort of a more meaningful differential in pricing. I'll leave it there.

Paul McAleese
President

Thanks, Aravinda. It's Paul. I'll take the first one and the third one, and Trevor will take the second one. Yes, I'm thrilled with the Teck deal, and Katherine and the team, I think, did a great job of bringing up to market, really a first of its kind private LTE deal in this country. And we think the first of a number that we'll look to announce over the course of the coming quarters. This is a decent-sized opportunity and really a great spark. It's a great indication of the fact that there's still life in the resource sector in Western Canada in a lot of regards.

We are seeing a lot of interest on deals like this, there's been inbound even since the release. And the team continue to work that file. It is very efficient for us. It's one of those sort of wonderful opportunities of -- that's not spectrum that would have typically been deployed in any residential or consumer way. The fact that we're able to deploy it in a manner that is so useful for those companies is really, really exciting, and it does kind of signal a new opportunity just broadly for our Wireless business.

The CapEx side of it is actually quite efficient. Oftentimes, we're able to work the cost of that right into the deal. And this is typically equipment that is owned and operated by the company themselves or third parties that they brought in on their behalf. So it's quite efficient from a CapEx standpoint, and we are expecting to see more progress here over the coming quarters, but great work from the team there.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes. Let's say they're sort of -- generally speaking, there have been a long-tenured deals as well. So there's -- but to Paul's point, each deal is somewhat unique from a capital perspective, but most of that is generally covered by the customer. From a bad debt perspective and just collections in general, I'd say we continue to be extremely pleased from the payment history, both on the Wireline and the Wireless customers over the last number of months or 8 months since COVID-19 came about.

There hasn't been any significant material issues that we've had to deal with. We're watching it on a daily basis. If you remember, Aravinda, we took about a $5 million charge last quarter related to bad debt across the enterprise. We did take some incremental expense related to bad debt in Q4. However, I would say it was fairly immaterial and was less than the charge that we took in Q3. So overall, we think we've provisioned it appropriately. It's less than about $10 million, just around $10 million, a little bit less for the year.

And again, we're very, very, very pleased with the payment of all of our customers. And I think it goes to value proposition, specifically on the Wireless side in terms of the average ARPU, just over $40 and the utility that we're providing to customers in their home and to businesses, they are paying their bills and we're watching it closely. But it's clearly a risk going forward, Aravinda, and we'll update you and the entire Street if there's material changes. But as we sit right now, here at October 30, we feel like we're in good shape.

Paul McAleese
President

And Aravinda, back to me on your question about retention on Internet, and I'll maybe answer it a couple of different ways. We -- for a number of years, we were, frankly, losing ground to tell us in terms of the way the customers perceived our Wireline network, specifically the Internet product, and the launch of Fiber+ and our new rate plans back in May has very quickly started to turn that around.

So while I acknowledge the softness in Internet net adds in the quarter, I would draw your attention to the fact that we also had significantly better than expected contribution from that line of business as well. So we focused a little more on quality during the quarter while we were rebuilding that game plan that I spoke to earlier. And one of the things that has been a nice outcome is that we have started our 715 gig speed tiers, have started to appeal to part of the market that we were previously losing on a pretty much exclusive basis to TELUS. Those more affluent families, those folks that are looking to just simply improve and harden the network quality within their residents really are now provided with a choice in the market where previously there wasn't one.

And we're seeing a nice uptick in our shift in demographics in terms of who's now buying that product. So encouraging signs on that front as we kind of move up into the right on the speed tiers. And then just on a separate related comment on retention, I'd also tell you that while it's early, Shaw Mobile is, by definition, a tool designed to secure and entrench our relationship with our existing Wireline subscribers. So by definition, to be a Shaw Mobile customer, you need to be a Shaw Internet -- qualifying Shaw Internet customer.

So as we grow that market over the course of the coming quarters, we will essentially introduce into the math a cohort of subscribers who are essentially very, very well secured and very well protected from competitive offers, and we essentially fall out of the denominator of potential churners. So while it's early, we're starting to see some nice security on that front. And again, as designed, Shaw Mobile is there to protect and cover our Internet base higher-margin product side.

Operator

Your next question comes from Tim Casey with BMO.

Tim Casey
BMO Capital Markets Equity Research

A couple for me. Paul, I'm wondering if you could expand upon your comments about your concern regarding the monetization model for 5G that you see out there. What kind of model would you be supportive of or aspire to with respect to that? And maybe if you can talk about how you're monetizing the private network model with Teck as [indiscernible] foray into that?

And the other question was, could you talk a little bit about your digital onboarding ability in Wireless? Reduced foot traffic, those type of things, obviously, would hinder a traditional retail distribution model. Just wondering if you can give any stats on how you're progressing with respect to onboarding people without the traditional model, be it a hybrid model or a pure online onboarding model?

Paul McAleese
President

Yes, certainly. Thanks, Tim. Thanks for those. Yes, the comment about 5G monetization was more a reflection that I was hoping that the industry didn't simply absorb the cost -- the incremental costs of that 5G spectrum and build out into a declining pricing environment. And I appreciate that initially there was a signal from the market that it would be temporarily suspended and then monetized to some incremental degree, perhaps $10 or $15 more for those faster rate plans.

And it looks like the market's kind of come off that. And now we're simply saying we're just going to -- as long as you're on a certain level of plan, we will include 5G. It's -- I would have liked to have seen a little more of a consumer test there and to see whether or not there was a capacity and willingness to pay for that. Anybody that operates in Toronto and drives along the toll road, that is the 407, knows that sometimes you pay for faster lanes and you're willing to do so.

There would have been nice if there was an opportunity to kind of test that and I'm not sure that we're going to get that opportunity. So the risk here is that we spend billions of dollars on spectrum and build-out and simply just absorb it all. So from my standpoint, I would have preferred to see something that maybe look a little bit like the 3G LTE pricing back in the day where it was bit of a step-up to the higher speed.

But again, we're not the driver of that particular pricing strategy. So we will probably be the kind of the price taker on that front once the market decides where it's going to net out. On the private LTE deal, where the terms of those deals are, as you imagine, are confidential, but suffice it to say that we, as Trevor pointed out, these are long-term deals that are -- because they're built into these facilities are very, very secure, essentially no churn and very, very encouraging kind of from a pricing standpoint.

So we like the partnerships there. Digital onboarding, I would characterize us as being somewhat behind the industry, but I'll kind of charter -- we will fill in the blanks on the why. When we look at our Wireless business today, which has been historically 70% in Ontario, we compete against operators there, specifically Rogers and Bell, who have had the opportunity to curate their residential partners or residential customers for credit. So really, a lot of what they -- when they talk about kind of clicks and bricks, I think they're often talking about really hybrid of recognizing that they know the creditworthiness of a lot of these households because of their Wireline relationship and then able to sort of manage them accordingly.

So today, in Ontario, for example, if someone wanted to buy a new iPhone 12 and gave me their address in Oshawa, we would have a really difficult time determining whether that household was sufficiently creditworthy and kind of trustworthy from a fraud risk standpoint, because I think we don't have any other relationship with them. Rogers or Bell, if they have a payment history with them on that home for the last 3 or 5 or 10 years, is in a much better position to establish whether or not that's a risk they can take. We -- so I think on Wireless in Ontario, they have an advantage there that is probably structurally permanent relative to us.

In the western part of the country, we've been busy working with our finance colleagues to develop exactly the same capabilities. And to make sure that our data analytics and our digital capabilities are one of our top development priorities. I'd say we're rapidly closing the gaps that exist between ourselves and the incumbents, but I'm quite comfortable saying that this is an area where we have lagged.

Frankly, having been the owner of this Wireless business for 4 years now, most of our priority early on, Tim, was making sure that we brought our network quality and distribution up to speed. And these are some of the things that lapped. It would have been nice to have been more on top of the digital capabilities and I'll take responsibility for not having done that over the last couple of years because I was in the seat.

But it is something that we're now quickly bringing things up to speed on. One of the reasons I'm so excited about having partnerships for Wireless in the West that look like Walmart and Loblaws is because regardless of what might happen in traditional malls, a good friend of mine says people still need to eat.

So we will continue to see traffic, considerable traffic in Loblaws and Walmart's retail footprint here in Western Canada. And because of the strength of our partnership with them on the Wireless front, we'll continue to have opportunities there as well. So expect us to get better at digital, recognize that we probably have a structural disadvantage in Ontario and in the West, we will then have a structural advantage.

Tim Casey
BMO Capital Markets Equity Research

If I could just squeeze one follow-up in. Regarding Internet loading, and the aspiration you had set out earlier this year to get more of your fair share of net loading in Western Canada, do you think that's an achievable target for fiscal '21? Or are we more likely to see something trending to that in '22 or '23?

Paul McAleese
President

Yes. There's nothing like someone bringing back your first comment from being in the new job. Thanks for that, Tim. We -- I have enormous aspiration and confidence in our team that we'll be able to get our fair share. Let me maybe take this opportunity to redefine fair share. It's a tricky piece of evaluation, and we had this conversation yesterday with our Board around what is actually in the denominator for ourselves and tell us when we report.

And without trying to sound like I'm hedging on this, one of the things we struggled with here is the lack of transparency, probably from both organizations on what's in Internet net adds, is difficult to make an apples-to-apples comparison. So I don't think there's any debate that we have been in a losing position on market share over the course of the last number of years. But what I want to make sure we do as accurately as possible is not over or underreact to competitive moves that we may not necessarily have even an opportunity of sharing.

So I'll use, for example, the market of [golden out] here where a large ski community that is covered by TELUS' wireless network but not really doesn't have much of a wireline presence for anybody. And TELUS have a very strong presence for their wireless hub product, which I believe gets reported as an Internet

net add in which we have absolutely no ability to have any market share there because we don't have deployed spectrum in that market.

So that likely counts in their net adds. There is the Internet for Good program, which they've been very aggressive with during COVID, which is obviously a very low revenue piece of the pie. Our aspiration here, Tim, to be clear, is to ensure that we get our fair share where we compete. And I should have been more specific about that when I talked about it in April. So I'll clean that up now. But where we have facilities and where we compete against tell us, that's what we're looking to get our fair share of.

Tim Casey
BMO Capital Markets Equity Research

Can you put a parameter on that? How much of your footprint would you say you have the ability to compete?

Paul McAleese
President

Well honestly, Tim, we're doing that analysis now. Our -- and when you think about fixed wireless, for example, that's an example -- we have probably somewhere between 200,300 thousand households in Western Canada where we have wireless coverage but not wireline coverage. I suspect that number is significantly higher for TELUS. That's where we're doing that math now. But it's probably going to have to wait for the next call for me to give you a more thorough answer on that one.

Operator

The next question comes from David McFadgen with Cormark Securities.

David John McFadgen
Cormark Securities Inc., Research Division

A couple of questions on Shaw Mobile. I don't know if you can provide us with these data points, but that would be helpful. I was wondering if you could tell us what percentage of your net adds were actually Shaw Mobile in the quarter. And then of those Shaw Mobile net adds, what percent are taking the bundle? I would imagine, it's probably 100% or close to 100%.

And then lastly, when you look at the Internet performance in the quarter, has Shaw Mobile delivered any brand-new Internet customers for you? Or is it just too early because it just launched and all the Shaw Mobile customers are pre-existing Shaw Internet customers?

Paul McAleese
President

Good question. Thanks, David. Yes, in order consistent with what the treatment that the incumbents used for delineating between brands, we won't be breaking out Shaw Mobile versus Freedom brand at any more than the others do between their flanker/fighter and primary brands. So that -- just going forward, you won't see us break that out at any point. It is, if you'll recall, we launched on July 30.

So we only had a month of that activity within the year's numbers. So [indiscernible] quarter's number, so you can kind of get a sense of how that may have impacted the quarter. You're correct, 100% of the people that are on Shaw Mobile are in the bundle. So again, today, a qualifying event for Shaw Mobile is that you need to be within one of the applicable Internet plans. And to be clear, if you were to remove yourself from that Internet plan, your pricing changes on Shaw Mobile. So there is essentially a reward for staying within that bundle.

And so far, we've seen essentially everybody stay within it. So the churn on that group is exceedingly low during the quarter. And then -- sorry, the third question was on new subscribers, new Internet subscribers. Yes, fundamentally, the early appeal of this, which you won't be surprised that reward disproportionately people that take our higher-value plans, that will have a higher pull-through of competitive users, I suspect.

David William Barden
BofA Merrill Lynch, Research Division

Okay. And then maybe if I can just have one follow-up. Did you see any discernible negative impact of Freedom from the [wins] of Shaw Mobile in the marketplace?

Paul McAleese
President

I wouldn't call any of it negative. There is certainly a small degree of brand migrations, which we are very comfortable with. So we do have people that are on Freedom who may also be a Shaw customer, and we were very prepared and quite happy with them coming over locking -- moving from Freedom mobile over to Shaw and locking into the bundle. We love that value trade. And if we can secure that, we'll take that all day long. It's a relatively small percentage, though, David. So I wouldn't characterize it as something that's going to have an impact on any of the Freedom metrics.

Operator

This concludes the question-and-answer session. I would like to hand the call back over to Mr. Shaw for his closing remarks.

Bradley S. Shaw
Executive Chairman & CEO

Great. Thank you, operator, and our best wishes for everyone to stay safe, and we'll talk to you in the new year. Thank you.

Operator
This concludes the time allocated to today's conference call. You may disconnect your lines. Thank you for participating, and have a pleasant day.

Presentation

Operator

Thank you for standing by. Welcome to Shaw Communications First Quarter 2020 Conference Call and Webcast. Today's call will be hosted by Mr. Brad Shaw, CEO of Shaw Communications. [Operator Instructions] The conference is being recorded [Operator Instructions]

Before we begin, management would like to remind listeners that comments made during today's call will include forward-looking information, and there are risks that actual results could differ materially. Please refer to the company's publicly filed documents for more details on assumptions and risks.

Mr. Shaw, I will now turn the call over to you.

Bradley S. Shaw
CEO & Non-Independent Director

Thank you, operator. Good morning, and happy new year, everyone. With me today are members of our senior management team, including Jay Mehr, Trevor English and Paul McAleese.

As we embark on another year, the execution of our overall strategy remains the focus. We have delivered another quarter of stable Wireline results, and we continue to grow our Wireless and Shaw business divisions. We have also commenced some of our previously announced capital return initiatives as our consolidated Q1 results are in line with our expectations, including significant free cash flow in the quarter.

In Wireless, we delivered both robust subscriber growth and strong financial results. We added almost 67,000 postpaid customers during a quarter when the pricing environment was extremely aggressive as it has been since the incumbent's launch of the unlimited plans last summer. The intensity of this dynamic drove both our gross additions and churn up over the prior year. Though, overall, we continue to be pleased with the quality and quantity of our subscriber growth, including increased ABPU and ARPU of both 4.1% -- 4.5% and 1% year-over-year, respectively, driving Wireless service revenue and EBITDA growth in the quarter.

In Q1, we also began successively renewing subscribers from our initial December 2017 iPhone cohort. Despite these customers graduating during a period of intense promotional activity, we are pleased with the early results of our renewal programs. We continue to invest in improving our network for the benefit of our Wireless customers. The deployment of 700-megahertz spectrum is substantially complete in Western Canada, and we plan to be fully deployed in the east by the end of fiscal 2020.

Within our consumer operations, we are steadily growing broadband RGUs, and we're delivering a better customer experience. In late October, we launched Shaw BlueCurve Total, which bundles our fastest internet speeds and IP video with a straightforward approach to rich content at an all-in price point that is attractive to the traditional or family-orientated consumer segments. This clearly had an impact in our subscribers in the quarter as the pace of video losses slowed considerably to our best result in over 2 years. As our IPTV availability continues to grow, now at close to 80%, so too does a number of customers choosing to self-install, which has increased to 48% in the quarter. Our premium Shaw BlueCurve services appeal to the family segment, while our newly launched Freedom Home Internet targets the younger, city-living and heavy data users. With our dual-brand approach, we have established distinct value propositions to meet the needs of different customers -- different customer segments, and we will continue to build upon this strategy in fiscal 2020.

Overall, Wireline results in the first quarter were solid and in line with our commitments, which reinforces our free cash flow growth profile in fiscal 2020 and beyond.

I'll now turn it over to Trevor to discuss the Q1 financial results in more detail.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Thank you, Brad, and good morning, everyone. With some changes to the way we present our reported results, including the adoption and implementation of IFRS 16, let me walk through the numbers in a bit more detail.

Consolidated revenue increased 2.1% to $1.3 billion, and EBITDA increased over 8% to $588 million. This includes a $38 million impact from IFRS 16. Excluding this new accounting standard, EBITDA increased 1.1% over the previous year, and as Brad mentioned, this was in line with our expectations.

Wireline revenue in the first quarter declined by approximately 1.5%. The decline was due primarily to continued losses in the mature Consumer Wireline products, partially offset by growth in Consumer Internet and business. Note that for Q1 business results, the comparable year includes revenue from our Calgary1 data center, which was sold effective August 1, 2019, and if we adjust for the disposition, business revenue was up approximately 5% in the quarter versus a year ago.

As we previously disclosed in our F '19 annual report, we have also made some minor reporting changes within our Wireline segment. Effective this quarter, revenue from our Broadcast Services and wholesale TPIA that was previously reported under the Business segment is now included in Consumer revenue. However, the prior period has also been adjusted so the figures are comparable. And we note that this change is only between segments, therefore, there's no change to overall Wireline revenue or EBITDA in F '19. The combined impact on revenue is approximately $36 million in F '19 that moved to consumer, which was previously reported under Business.

Wireline EBITDA increased 3.4% this quarter, which includes $21 million related to IFRS 16. Excluding the accounting impact, Wireline EBITDA was in line with the previous year, and our margin remains strong at 46.5%. This reflects our continued focus on capturing operating efficiencies.

First quarter Wireless service revenue increased over 18% year-over-year to almost $200 million, and EBITDA increased over 60% to $77 million, of which, $21 million was related to IFRS 16. Excluding the accounting impact, Wireless EBITDA was up 23%, and our Wireless margin improved over the prior year as we continue to scale the business.

In terms of free cash flow, and as we have previously discussed, we have made some adjustments to management's definition to account for lease payments that are no longer classified as operating expenses under IFRS 16 as well as interest on lease liabilities recorded in the quarter. By making these adjustments, our Q1 and ongoing free cash flow will be comparable to historical results.

In the quarter, we delivered free cash flow growth of 12% year-over-year to $183 million. As we near the end of VDP, approximately 370 employees exited in the quarter, and the program is now 85% complete. We remain focused on the execution of our strategic priorities, and we are on track to deliver both the VDP savings in the year and to achieve our stated fiscal 2020 commitments.

Subsequent to quarter end, we were active in the debt capital markets. On December 9, we raised $800 million of senior notes comprised of $500 million 10-year notes at 3.3% and $300 million of 30-year notes at 4.25%. Following this successful offering, we completed the early redemption of a total of $800 million worth of bonds that were maturing in 2020 and 2021. Post our financing activities, our next significant maturity is not until November 2023.

Our balance sheet and liquidity position continues to be strong. However, due to the implementation of IFRS 16, effective September 1, we were required to recognize approximately $1.3 billion of lease liabilities on our balance sheet to existing -- related to existing lease obligations. As a result, we updated our target net debt leverage range by 0.5 turn to 2.5 to 3x. And as at the end of Q1, our leverage ratio was 2.5x, which is at the low end of our revised target range.

We've -- we also continue to have a fully undrawn 5-year $1.5 billion committed credit facility. And as part of our capital return initiatives that were announced in conjunction with our Q4 results and F '20 guidance, we repurchased and canceled approximately $25 million worth of Class B shares during the quarter.

Brad, back over to you.

Bradley S. Shaw
CEO & Non-Independent Director

Thank you, Trevor. In summary, we are pleased with our overall performance in the quarter. We continue to make investments in our networks, including preparation for the deployment of 600-megahertz spectrum and small cells for an eventual 5G launch. We look forward to more clarity from the regulatory bodies as to how the future of the Canadian facilities-based wireless and wireline landscape will unfold. As our results continue to demonstrate, facilities-based operators provide the most effective, sustainable competition in the market and offer Canadian's innovation and real choice for their connectivity services. Operator, we will now take questions.

Question and Answer

Operator

[Operator Instructions] Our first question comes from Vince Valentini of TD Securities.

Vince Valentini
TD Securities Equity Research

Can I ask 2 questions on Wireless and 2 on Cable? The Wireless first. You don't disclose COA, nobody does anymore, but can you directionally give us any sense as to how much may have increased in Q1 versus Q4 or Q3 given all the competitive offers out there and given your Absolute Zero plan? I'd just like to get some sort of handle on how much equipment subsidies and other promotional costs are going up.

The second question would be, in December, you finally will be lapping 2 years of having the iPhone, which has lots of positives for ARPU in future quarters, but is there a negative in terms of churn? We already saw churn up in Q1. Is that going to be a little bit tougher when those contracts expire in December? Given all the offers from competitors, should we expect churn to go even higher than 1.5% for December and for all of Q2?

And then the 2 Cable ones, I'll just throw out there, so Jay can think about them while Paul is answering. One is Home Phone. The decline here surprised me a little bit because it's already declined so much in recent years. Correct me if I'm wrong, but it looks like about 17% penetration of your total households now is the number of people who -- on the Consumer side, who take Home Phone, and it's only like 39% of your broadband customers. Are we starting to reach a floor level here? Or do you expect Home Phone to continue to fall at this kind of pace?

And then lastly just Business. Is 5% adjusted kind of what you expect now, obviously, adjusting for the data center divestiture? Or is 5% a bit on the low end of what your target range would be for future quarters?

Paul McAleese
President of Wireless

Vince, it's Paul. Thanks for those 2 questions. I'll take them in order. On your first question about COA. Yes, there's short-term competitive dynamic that we've seen, which has relented a little bit in the last week or so but certainly was well in place through the course of the Black Friday through early January period, probably put about 10% to 15% on the cost of acquisition during that period. I just can -- I kind of classify that as a short-term inflationary dynamic that we expect to and hope to see move back to normalized levels over the course of the next few weeks.

On the iPhone cohort. Yes, I mean, we're -- as Brad said, we're really, really pleased with how positively that initial class of iPhone customers have responded to our renewal efforts, which, of course, as you'd imagine, had been about 2 years in the making as we build up that team. The sheer scale and compressed timing of that renewal cohort was really unlike anything we've ever had to deal with before. So I want to -- just before I answer the question, I want to recognize the efforts of the fantastic work that the base management and the retail sales and our customer care teams have done in building the infrastructure and the capability to make sure that we're ready for success here.

And I won't get too deep into the math on competitive -- for competitive reasons. But I will say that the cohort is largely tracking as expected. December, if you could dream, you certainly wouldn't graduate your first-ever iPhone cohort into the busiest competitive kind of quarter, really, that I can recall in the Canadian market. So we have seen, as Brad indicated, both increased gross adds as well as increased churn. And I would expect that as long as we're seeing the pressure that we're seeing in the marketplace today that the levels we saw in December will probably continue through January. A little bit early to call the Q2 number, but I would say it's probably in or around that range again.

But I don't want to confuse the renewal of the iPhone cohort with just the general competitive dynamic. I'm more concerned about the overall intensity of the market right now and the value that's being put into that market. That and about the renewal, I think we've done just a great job on the renewal, and we've learned a lot. We've industrialized our behavior behind that, and this is something that we're good at now. It's really the overall market that's driving churn.

Bradley S. Shaw
CEO & Non-Independent Director

Great. Thanks. Vince, we'll keep going. Your question on Home Phone, we -- we're happy with where we are in our Home Phone business. I think as you look at the calendar year, you'll likely see maybe a slight decline in losses in Q2 and then a better result in Q3. The base is getting smaller. These are extremely high-value customers. One of the things you see in Q1 is our snowbird customers overwhelmingly skewed a Home Phone and come back up on in Q3. So there's -- just the base is small enough now, and it's enough within a sort of booming bundle segment that you see a slightly weaker result in Q1 than in subsequent quarters.

I think to be clear, though, we're talking about very small changes, the trends that you're seeing are the trends in the business. Notably, as we continue to drive segment to the high-value subs, our BlueCurve Total package, which is a super-rich video package with Internet at $169, and you can add Home Phone for $10. A decent portion of our customers are adding Home Phone for $10, but the $10 and the $169 million is not really the strategic thing that we're driving after. So we're comfortable with where the business is, maybe just a slight improvement.

On Business, I think in the medium term, we're right on top of 5%. I know there's a bunch of noise with stuff moving around and the sale of the data center and revenue comp. I think it's important to note the data center really wasn't -- doesn't have any impact on EBITDA comp so probably doesn't have as much impact as you might think. I think in the medium term, we're at the low end of what that possibility looks like. I think that when you think through what's happening in Business, we've got really stable SMB growth that we're very happy with, and it's offset against price competition. And we've got pockets where the economy is impacting our legacy service and large enterprise segments. So lots of moving pieces there. We think in the medium term, an opportunity to tip up above 5%, but I think 5% is kind of in the general range of what we're looking for, for the next couple of quarters.

Operator

So our next question comes from Jeff Fan of Scotiabank.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

I've got a couple on Wireless and a quick one, hopefully, for Cable as well. Just on Wireless, Paul. Can you maybe help us kind of dissect the specific competitive behaviors that were in the market during your quarter or through December that may have caused the higher gross adds and higher churn? I know Vince alluded to subsidies, but there was probably some on pricing as well, so maybe you can just help us dissect what was happening, and whether you've seen any kind of let up since the holiday period has ended into January.

The second part on Wireless is just on your comment regarding the 2-year cohort that it's somewhat in line with your expectations. Wondering if you can give a little bit of color regarding maybe what those expectations are regarding those that would hang on to the device versus upgrading versus perhaps incumbent win-back activities. And then as we look out the rest of the year -- that's kind of the third question, whether you continue to believe that 2020 ARPU growth for this fiscal year will be greater than 2019.

And then the question on Cable for Jay is, it sounds like the BlueCurve Total really had an impact on Video adds. I'm curious why Internet adds didn't quite see the same kind of lift as Video either sequentially or year-over-year. Maybe talk a little bit about the drivers that caused the Video adds to improve so much better than last year and last quarter?

Paul McAleese
President of Wireless

Great. Jeff, thank you, it's Paul. I'll take the first 3 in quick order. On the competitive dynamic over the course of the last -- I'll kind of characterize it from Black Friday through to last week, I think many of you already noted that the incumbents haven't exactly been paragons of pricing discipline during this period. Really, since the launch of unlimited plans last summer, they've been fairly erratic. And that Black Friday through Christmas period was really no different than that.

It's important to kind of observe here. We've seen a significant break with convention from the incumbents in the last sort of while. And in the last number of months, it's been them that kind of led the market down with pretty significant first mover and very expensive spending programs. And it's a long list.

So you asked for some specifics. I'll just call out a few things that I think are notable. During this time, we've seen much larger handset subsidies. We've seen massively discounted second lines as low as sort of $50 for 10-gig for unlimited. Many of you will have seen over holidays some pretty expensive gift with purchase bonuses like Sonos speakers and Apple Watches and AirPods. Gift cards in national retail got up to as high as $400 for some relatively modest MRC plans. We saw a $400 airtime credits of, again, similarly kind of mid-market plans. On prepay, which is an area that we didn't spend a lot of energy on in the last quarter, primarily because we saw pretty significant promotions like first month free, we chose to pursue quality rather than quantity on that front.

And the incumbents even did things operationally that I was, frankly, a little disappointed in like turning a blind eye to whether a customer was really a business or not and giving them sort of business pricing to consumer level subscribers. There were -- I guess, at the end, the thing that was maybe most compelling were the very, I'd call them, fairly desperate win-back programs that we saw with some really extraordinarily discounted offers over the course of the holiday period.

You put all that into the kettle, and I think the sheer scale of that spending in recent months suggests that some of the calculus involved in moving to unlimited so aggressively might have been miscalculated, but it certainly wasn't, at least, mistimed. It is as competitively intense right now and has been for the last 2 months as I've ever seen it. And only really in the last week, Jeff, to the second part of your question, have we seen any relief at all. Some more discipline coming into the market, but I'd still characterize it as early.

Throughout that, our strategy hasn't changed. We are continuing to balance growth and profitability. We're not moving off our expectations for this year in terms of 0.25 million net adds. And in response to the last part of your question, we do anticipate that our F '20 ARPU will exceed F '19 ARPU, and we're still confident on that front. So overall, we have a very confident view of this. We love where the market is. From our standpoint, certainly, it was a -- has been a sort of tricky 60, 90 days. It's inflated GAs, it's inflated churn, but we're still executing exactly as we hoped to.

Jay Mehr
President

Awesome. And Jeff, on your Cable BlueCurve question, just sort of level-setting because you probably don't see in Western Canada all of the marketing that exists. At its highest level, BlueCurve enables customer control of the modern smart home, and we're with our customers every step of the way as that smart home evolves. Great start and a bump in our brand after repositioning Shaw as a technology leader. So happy with where we are. What's driven in terms of Video losses is mitigation of BlueCurve Total losses since -- our mitigation of Video losses since October 22. It surpassed our expectations a bit, and it's really combining our bundling content, fast Internet, all-IP experience and our customers love to self-install it, so we've got a -- we've hit a little seam here, and we have some momentum.

We love the outcome that we're getting on Video subs, but that's actually not really what we're chasing. We're chasing our segmentation strategy and adding high customer lifetime value subs. And by doing so, when changing all of our sales and churn channels to high-value segments, you can see a pretty material shift in mix in our Consumer business today. So subscribers matter a lot, but anchoring them in segmentation and customer lifetime value is really what winning looks like in our modern Shaw.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

Maybe just a couple of very quick follow-ups. One on Wireless, Paul. On the ARPU greater than '20 versus '19, are you referring to the actual dollar or the growth -- the ARPU growth being higher than 2019?

Paul McAleese
President of Wireless

The ARPU growth percentage being higher than 2019.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

Okay. And just one follow-up for Jay. So the -- is it fair to say then the -- whether it's gross adds improvement or lower churn, you're seeing the Video base that you're keeping, I guess, higher quality than you would have seen pre BlueCurve Total launch?

Jay Mehr
President

Yes, for sure. And entirely in different segments, you've seen a shift away from -- sort of within the Shaw brand, away from simply driving kind of mobile millennials. And really, BlueCurve is focused on families. It's focused on booming bundles. So Internet and Video churn are both down, which is, of course, what you would expect, and we continue to drive how we plan the 57% of Internet, Internet customers, all that works. What you can't see is Video ARPU is up and it's up over budget as well. So we're ahead of our plans. And that's really because what we've done is we've put the scale of our Video business, quite frankly, leveraging the scale we get also from Satellite, we have scale in our Video business to negotiate better programming agreements that have allowed us do a high-content rich TV package for our customers. And that's enabled us to compete more effectively in segments. You'll see as we move forward, we've fairly dramatically changed all of our sales and churn strategy around those segments. And you'll continue to see those results in families and booming bundles and other segments that drive customer lifetime value significantly lower churn than some of the spaces our gross adds were coming from in the past.

Operator

Our next question comes from Maher Yaghi of Desjardins.

Maher Yaghi
Desjardins Securities Inc., Research Division

I'll start with a question for Jay. Just on the BlueCurve plans, I noticed some more aggressive, I would say, pricing structure for these plans with prices around $90 versus a run rate price of $189, $190. Just trying to figure out -- we've had, in the past, some periods where the these plans -- these kind of significant first year prices below the second year price helped on the subscriber front but later on caused some issues on the profitability or the revenue that flows into the second year. What's -- do you -- are you finding that you need to offer these significant discounts to get adoption for BlueCurve? Or what's the strategy behind that -- those significant discounts? And the second question is more related to the overall guidance for the year. With the first quarter at 1%, approximately, growth in EBITDA corrected for IFRS and your guidance of -- for the year, can you maybe just talk through how we should look at the rest of the year, improvements in EBITDA, where they're going to come from and just kind of splitting this between Wireless and Wireline?

Jay Mehr
President

Great. I'll start with your questions, and thanks for that. I think I understand your thinking and how you're thinking about our pricing and packaging. And the challenge with the thinking is you -- it's not with the lens that you can think across the board. We're clearly targeting BlueCurve Total, and it's working at completely different segments than we're, for example, targeting Freedom Home Internet. And so our dual-brand strategy allows us to focus on those segments. Our 2-year value plan customers have a significant reduction in churn over our month-to-month customers. And so the customer lifetime value of customers that are being added on the current model are -- is significantly higher than the customer lifetime value we were adding this time last year.

Now recognize, if you compare what our stand-alone month-to-month internet pricing looks like and what our offer is for Canadians to sign up on a 2-year value plan, it looks like it's a deep discount, the math on it, it absolutely works. I think one of the things our competitors are probably struggling with as well is we've got a cost structure now around all of our programming agreements that enables this and, I think, on big packages, gives us a definitive cost advantage vis-à-vis our competitor, and we're clearly going after that as well. So what may look like discounting to you, we're making great money on BlueCurve Total, and it's a great product for us. Again, Video ARPU is up, Internet churn and Video churn are down. I think you'd like the dynamics of what's happening with this space.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

And just on guidance, Maher, we -- I think we spent quite a bit of time on last quarter's call talking about how we're running the business, and it really is about delivery stability within the Wireline side of things. And frankly, Brad's comments and in my comments, Q1 was right on track. We're sort of targeting that $490 million to $500 million of EBITDA on a quarterly basis within Wireline. And we feel confident on delivering on that. On Wireless, we continue to see us being able to scale the business and deliver operating leverage. And I think we talked about it last quarter. Again, that will continue to scale during the year. It really is more in Q3, Q4 where you'll see some -- if you look at sort of sequential quarter-over-quarter growth rates within Wireless EBITDA, that's where you start to see the operating leverage within the business really kick in, and it has to do with some of those ARPU and ABPU growth metrics that Paul mentioned earlier in his remarks.

So we feel like we're right on track in terms of the quarterly splits, in the delivery of Q1. And again, I would reinforce just the free cash flow, really excited about the delivery of the cash flow this quarter and continue to have a strong conviction in the free cash flow profile of the company going forward, including the approximately $700 million that we're targeting for this year.

Maher Yaghi
Desjardins Securities Inc., Research Division

Okay. And my last question on Wireless. I'm trying to figure out, it's very hard to understand who is -- who is beginning -- or who is continuing to be the aggressor in the market in the whole scheme of things. When you look at the market in Q4 and how it evolved, some could say it was a reaction to your significant subsidies in the market for iPhones. You say it's the incumbents who are being overly aggressive on the subsidy model. I guess the question is, now that we have seen first move by some of the incumbents to remove those subsidies on iPhone, are -- is that a positive for you to remove some subsidies or you -- your plans and your subsidy model is continuing as is and that's the plan that you're committed to or you hope to remove some subsidies to improve the profitability of the market -- of the business that you're running?

Paul McAleese
President of Wireless

Maher, it's Paul. You won't be surprised to know that I don't think it's us that's agitating the market right now. If you go back to June 12 of last year, I think you'll get a pretty clear signal on where the market's catalyst was. On the EIP announcement that we've made in recent days, we're going to watch that closely over the coming weeks as it's anticipated to roll out and see what the competition do there. But I think we're probably a few weeks early on a -- for a comment on that.

Operator

Our next question comes from Drew McReynolds of RBC Capital Markets.

Drew McReynolds
RBC Capital Markets, Research Division

Two for me. First, Paul, on the Wireless side, could you comment on what you see maybe over the next year or so in terms of your retail distribution footprint? And can you comment at all with your footprint expansion? I guess looking back, let's say, the last 3 or 4 quarters, how much of your kind of incremental loading is attributed to expansion? Or are you, certainly, satisfied with where you're getting that loading across your total footprint?

And then second question, I guess, maybe for you, Jay. On the base management side, it certainly looks to me when you drill into your Wireline results versus maybe a year or 2 years ago, the base management is certainly improving -- the execution is improving. Where are you from your perspective in terms of that improvement and where you ultimately want to be?

Paul McAleese
President of Wireless

Drew, it's Paul. On retail footprint over the course of the next year, we've been really, really pleased with the growth over the course of the last 2 years. There's probably 1 or 2 more named retailers that we'll look to bring on over the course of the next 6 months or so, and I think they're a nice positive complement to what we're doing. So you'll continue to see growth on that front. Of course, we continue to focus much of our effort in the major malls in Canada. So you'll have seen us building a number of new corporate stores and renovating those out over the course of last year. And the team has done a great job of really just improving the quality and delivery of our retail experience over the last year. So I'm pleased with where we are there. It's a good positive outcome.

On geography, yes, we're starting to see the early contributions from those new markets that we opened over the course of F '19. We saw something like 1% or 2% increase in terms of our gross adds sliding, principally, to the west, that I indicated, I think in the last couple of calls that we would start to see a subtle shift over time as we add markets like Victoria into the mix. So we are starting to see a stronger contribution from the west, which we're pleased to see those have been great markets for us as we start them up.

Jay Mehr
President

And Drew, you're correct, everything's about base management in consumer and so proud of the work that the team is doing, both on revenue and through MRR and also to your value plan now at 57% of internet subs and continuing to grow and continuing to also lower churn in our key categories. Where we are in terms of the industry is we're certainly, with Internet churn, beneath a number of our North American peers. But within the Canadian context and as we continue to drive, we've got some room for improvement here. I think the F '20 story is largely about churn improvement in Consumer. And there's room in F '21 and maybe opportunities with new products in the future, as you can well imagine. So this is our total focus. Love the work the team is doing. We've made good headway, but lots of head -- lots of upside still ahead here.

Operator

Our next question comes from David McFadgen of Cormark Securities.

David John McFadgen
Cormark Securities Inc., Research Division

Two questions. First of all, just on the Video, Cable subs. Obviously, you've made some big improvements there on the losses this quarter sequentially. And I was just wondering if you think you can continue to make improvements like that or you've done a good job and it's probably going to continue to track at this level. And then secondly, given that you've finished deploying the 700-megahertz spectrum in Western Canada, if we were to think just hypothetically, if you wanted to launch Shaw Mobile in DC, in Alberta, like how much would be required in terms of your systems to be able to do that, like billing systems and other systems? Is it quite a bit to do, or it's not really that much and you could go pretty quickly if you decided to do that?

Jay Mehr
President

Great. We'll certainly start with Video, Cable. We continue to be very pleased with how the BlueCurve targeting, which is our focus this year, it's working. It's clear to us that Video losses will improve over F '19. You're seeing extremely strong marketing campaigns that balance results through a pretty solid launch, repositioning Shaw as a technology leader in the consumer space. So whether or not you'll see numbers that look exactly like Q1 numbers, it's really not about us driving a lower Video loss, it's about focusing churn and all of our sales channel on our higher-value segments and our higher-value connected, high-value family customers, our booming bundles, being maximized their lifetime value, bring remarkably low customer churn when you bundle fast home internet with a rich video package. So we're just going to keep doing that, and we're confident we're going to see Cable, Video improvements over F '19, but results of -- probably got a result in Q1 that reflects the strength of the marketing campaign around our launch and some of the excitement around the packaging.

Paul McAleese
President of Wireless

David, it's Paul. Thanks for the question on 700 and deployment in the west. You're right to point out, we've been thrilled with the work the engineering and IT teams have done in order to get that up and running. So we're in a great shape. That is largely complete now in the west. In terms of system requirements and the potential launch of a second brand, nothing to really report on that today. You're going to see us maybe talk about that or get into some customer-facing things in the next number of quarters, but nothing of significance to report today.

David John McFadgen
Cormark Securities Inc., Research Division

Okay. But I mean, would there be a big upgrade required in the systems at Shaw to be able to launch Shaw Mobile and using Freedom's assets?

Paul McAleese
President of Wireless

Well, just sort of at the hypothetical level, your -- if you launch any additional brand on our platform, I think our systems are well capable of dealing with that just as the incumbents have multiple brands hanging off similar systems. So I don't think that's a huge lift. Bigger question is as and when the market might be ready for that, and we're not really going to get into that too much today.

Operator

This concludes the question-and-answer session. I would like to hand the call back over to Mr. Shaw for his closing remarks.

Bradley S. Shaw
CEO & Non-Independent Director

Great. Thank you, operator, and thanks, everyone. Have a great day, and we'll be talking to you in April.

Operator
This concludes today's conference call. You may disconnect your lines. Thank you for participating, and have a pleasant day.

Presentation

Operator

Welcome to the Shaw Communications conference call regarding the acquisition of WIND Mobile, which was announced yesterday after market closed today. Today's call will be hosted by Mr. Brad Shaw, CEO of Shaw Communications. Please also note that an investor slide presentation in relation to the conference call is posted in the Investor Relations section of the Shaw website, under Presentations & Meetings.

[Operator Instructions] Before we begin, management would like to remind listeners that comments made during today's call will include forward-looking information that is based on certain assumptions, and there are risks that actual results, including those in respect of the business plans and expected results for WIND and Shaw, could differ materially. Please refer to the company's publicly filed documents and the cautionary on the first page of the investor presentation for a discussion on these assumptions and risks. Mr. Shaw, I will now turn the call over to you.

Bradley S. Shaw
CEO & Non-Independent Director

Thank you, operator, and thanks to everyone for joining us this morning to discuss the acquisition of WIND. This combination represents an important and transformative transaction for Shaw and all of our stakeholders. We are excited about Shaw's future with mobility as a key asset to drive growth and exceptional customer experiences, and accordingly, we are pleased that we could come to an agreement with the shareholders and the management of WIND.

With me today are members of our senior management team, including Jay Mehr, Executive Vice President and Chief Operating Officer; Vito Culmone, Executive Vice President and Chief Financial Officer; Trevor English, Senior Vice President of Corporate Development and Business Planning. And we're also pleased to introduce Alek Krstajic, Chief Executive Officer for WIND Shaw; and Glen Campbell, Chief, Commercial Officer of WIND.

After the market closed yesterday, we announced that we have agreed to acquire WIND Mobile for a total consideration of $1.6 billion. This truly is an exciting transaction for Shaw, as it enables us to develop a best-in-class converge wireline and wireless network. Mobility is increasingly important as consumers demand for ubiquitous connectivity grows. We believe that the combination of our significant fiber infrastructure, WiFi network, and now wireless, will offer an exceptional customer experience.

WIND began operation as one of the new entrants in 2008, and has successfully emerged as Canada's fourth major wireless player that is well positioned for future growth. WIND has reached a critical mass with approximately 940,000 subscribers and an attractive portfolio of spectrum assets, which makes this a very compelling acquisition and allows Shaw to enter the wireless industry immediately.

By acquiring a company that already has a solid foundation, including spectrum, management expertise and scale, we have significantly lowered our risk of entry and have done so in a disciplined and prudent manner. While we have a plenty of opportunities to drive growth by leveraging our existing customer relations in Western Canada, we are also excited about our new presence in the Ontario market, which adds scale and geographic diversification.

WIND has strong financial results with expected total revenue and EBITDA of approximately $485 million and $65 million, respectively, for the 2015 calendar year. As the network is upgraded to LTE and the business is integrated with our complementary Shaw Go WiFi and wireline network, we believe there is a significant opportunity for growth.

Turning to Slide 5. The timeline provides an overview of our decisions regarding the evolution of Shaw's wireless strategy. We recall that Shaw purchased 20 megahertz of AWS-1 spectrum in Alberta and B.C. in 2008, and initiated the build-out of a wireless infrastructure. However, the fundamental economics and environment, including access to spectrum, roaming agreements, challenges with respect to tower sharing, evolving wireless technologies and overall market dynamics did not result in a compelling business case that would drive long-term value for our shareholders.

Following a detailed strategic review with the board, we made a decision to pivot our wireless strategy from a traditional facilities-based infrastructure to a carrier-grade WiFi service. In 2011, we began aggressively deploying access points and building scale in the network. We believe this was a disciplined and prudent move on behalf -- on our behalf that allowed us to extend our broadband service outside of the home.

As the global telecom landscape quickly evolved to become mobile first, data has emerged as the key driver for future growth, and there is a strong convergence between fixed and mobile data consumption. It's clear that we need to be in the wireless space.

In early 2015, we began exploring multiple scenarios, which included everything from a greenfield build approach to an MVNO offering. After careful consideration, the best option for Shaw, both from an operational and financial perspective, was to acquire an already proven business, allowing us to participate in the significant upside potential. By announcing this acquisition, Shaw's WiFi strategy also creates significant flexibility in our overall wireless platform.

WIND, our broadband advantage, including Shaw Go WiFi and our X1 video platform, are extremely complementary services. Our WiFi network has extensive coverage in Western Canada with over 75,000 hotspots and approximately 90 municipal deals. Daily usage is increasing for both new and existing customers, and WiFi technology continues to evolve to provide even better customer service. Adding a truly mobile component with wireless will allow Shaw customers to remain on our network 100% of the time due to the complementary nature of the WiFi and wireless networks. There's also the potential to lower wireless operating costs as we leverage our WiFi and fiber infrastructure.

On Slide 7, you can see how WIND complements the entire Shaw platform. We have a terrific set of assets that provides ultimate flexibility to our customers, significant growth opportunities, and the ability to generate significant long-term shareholder value.

I will now turn the presentation over to Trevor English, who will take you through more details of the transaction.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Thanks, Brad. On Slide 8, we've included a transaction summary and metrics. As Brad mentioned earlier, the enterprise value is approximately $1.6 billion, which represents approximately $1.06 per megahertz per POP. We expect to close the transaction during the third quarter of fiscal '16. And the transaction is subject to customary approvals, including the Competition Bureau and the Ministry of Innovation, Science & Economic Development, which of course is formerly known as Industry Canada, as well as court approval of the plan of arrangement.

With a fully committed bridge facility for 100% of the transaction, we're committed to a financing plan that maintains our investment-grade status. And accordingly, we'll optimize the significant flexibility available to us, including potential debt issuance, asset sales, the issuance of preferred or common equity or any combination thereof, and will be provided with additional details regarding the longer-term financing of the transaction prior to close. We're also confirming our current dividend of $1.185 per Class B share.

I'll now ask Alek to walk us through some of the key highlights of WIND.

Alek Krstajic

Thanks, Trevor, and thank you, Brad. I'm equally excited to be here today as a part of the Shaw team, and appreciate the opportunity to talk more about WIND and the success we've had to date. What I'm going to speak to is cover the -- over the next few slides, but first I want to back up and give everyone a quick overview of where we have come from.

WIND has experienced tremendous growth since our ownership change in September 2014. Prior to that, we did not have a clear path to LTE and we not have sufficient funding to be able to participate in the 700 megahertz auction. Following our change of ownership and the recapitalization transaction completed late 2014, we've been able to acquire 30 megahertz of AWS-3 spectrum across our core operating regions. We've installed a new management team and have also received significant additional spectrum from the Rogers-Mobilicity transaction this past summer.

Most recently and just last week, we've announced that we've received a commitment for $425 million in financing from a syndicate of banks, and have also entered into a 5-year network agreement with Nokia, which provides us our key path towards an LTE upgrade. As of September 30, 2015, WIND had approximately 940,000 wireless subscribers, and we've captured over 300,000 net adds over the last 2 years, representing almost 50% growth. Our current subscriber mix is just over 60% postpaid, and we have over 300 retail points of distribution.

We have a strong management team in place to run the WIND business going forward. Bob Boron and Bruce Kirby, who are taking care of regulatory and strategy, respectively, have been in this business for a very long time and know what they're doing. Brian O'Shaughnessy is one of the top technical people in wireless. Glen Campbell, who spent a significant time covering the telecom industry, is a former Head of Canadian Equity Research and Global Coordinator for the Telecom Services Research at Bank of America Merrill Lynch, has also joined the team this year as Chief Commercial Officer.

In 2015, we expect to generate total revenue of approximately $485 million and EBITDA of approximately $65 million. Blended ARPU has grown to $35.81, up 18% over the last 2 years. A big milestone for us is that EBITDA has now been positive for 5 consecutive quarters despite significant subscriber loading, and we continue to build off this momentum.

We have a strong spectrum position with a total of 50 megahertz in key operating areas, and our current network covers a population of over 15 million. WIND has a clear path to upgrade to an LTE network by 2017, a process that is already underway and expected to significantly enhance network quality and capacity. We've just signed a contract with Nokia to complete this upgrade at a total estimated cost of $250 million. In addition, we believe we have sufficient spectrum depth today to manage the transition to 4G LTE.

The value proposition that WIND provides is quite simple: Consumers want transparency, the best value for their dollar and roaming capability without the unexpected high cost. Customers want options when it comes to their wireless provider and we think there is a lot of runway to continue growing both the subscriber base and profitability of the business, particularly as we upgrade to an even faster and more efficient LTE network, enhance the handset lineup and leverage the power of Shaw.

Bradley S. Shaw
CEO & Non-Independent Director

Great. Thank you, Alek. WIND will operate as a standalone entity, with its existing and proven management team remaining in place. However, where applicable, and over time, there are many opportunities to leverage the WIND wireless platform for the benefit of Shaw's Western Canadian focus, consumer and business segments. Providing wireless to our consumer segment strengthens our current competitive position and will increase customer stickiness and retention.

For business customers, wireless is a great addition to the new suite of managed products that we are currently rolling out. For WIND, the partnership with Shaw will provide their customers with converged network opportunities and our commitment to exceptional customer experience.

With the addition of WIND to our platform, we have a tremendous opportunity in both our current cable footprint as well as extending our reach further East. Shaw remains committed to providing our customers with more choice, flexibility and opportunities to stay connected. We believe we have taken a disciplined approach into the growing wireless landscape, which not only enhances our competitive position -- posture, but adds another growth engine to our consolidated business.
Thank you, and we'd now like to open the phones to answer any questions.

Question and Answer

Operator

[Operator Instructions] The first question comes from Phillip Huang with Barclays Capital.

Phillip Huang
Barclays Bank PLC, Research Division

Just a couple of sort of quick ones, I think. I wanted to ask, was there an auction process during -- for the WIND transaction? Were there other interested parties? Is there something that you guys could maybe talk about there?

Bradley S. Shaw
CEO & Non-Independent Director

I'll just say a couple of things. I think we saw the opportunity with WIND, and through our process had done a lot of work and we're ready to approach. And I think from -- once we got -- once the Mobilicity spectrum and our spectrum was all settled out, I think that gave us an opportunity to engage WIND, and we were proactive in that.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes, like Brad said in some of his earlier comments, it was a pretty comprehensive exercise that we went through throughout '15, including looking at all different options to enter into the wireless space, and we proactively reached out to WIND during that process as well.

Phillip Huang
Barclays Bank PLC, Research Division

I got it. And I know I'm probably looking at this a little too simplistically, but obviously you guys only transferred as part of the deal with Rogers earlier this year or this summer, 16 of your AWS-1 licenses to WIND. And so now when you're acquiring WIND, it just seems like it's -- it certainly comes as a surprise for me, and I believe others on The Street as well. I guess, maybe better -- wanted to better understand what's changed from your perspective that -- what's changed, because I guess earlier in the year, there were also 3 spectrum auctions that I assume you guys would have been able to also benefit from very favorable conditions that you guys chose not to participate. And I'm just wondering what have changed in the last several months to, I guess, your approach on wireless versus earlier in the year?

Bradley S. Shaw
CEO & Non-Independent Director

Well, I'll add a couple of things and maybe Trevor can edit. I think one of the things we looked at which was very important to us was to accelerate our opportunity in wireless and derisk it, and we felt WIND was the best way forth in that regard. And listen, we had -- that time Trevor said, we had spent the last 18 months looking at this. We had kind of known that we didn't want to go greenfield, so that kind of told you where you needed to be. And then plus the fact that some of those conditions on the auction we wouldn't have qualified for, for bidding. So we were limited a little bit in that regard. Trevor, you want to add anything?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes. Obviously, Phil, it's been a long industry with Shaw and wireless. And back in 2008, we bought spectrum for $189 million or roughly $1 per megahertz per POP. We went through the greenfield exercise. And the industry was very different back then. I think Brad mentioned some of that in his remarks. And we decided to put shovels down in 2010 and pivot to WiFi and entered into an agreement to sell our spectrum to Rogers through an auction agreement that was entered into in 2013, but that was a long process that, ultimately, was exercised in 2015, in June. So a lot's changed within the wireless industry, the dynamics, the regulatory environment, to make it a lot more compelling, business case to enter the business. And like Brad said, AWS-3 auction, that was a different set of rules where you actually had to -- needed to be an existing wireless operator, actually, to purchase spectrum through that. So a lot's changed, but we feel very, very good about the entry point. And sort of this is the right entry point for Shaw and all of our stakeholders, and really has the derisked our entry into wireless, considering the scale, 940,000 subscribers, the network that they have, a clear path to LTE, and of course, a very deep spectrum position of 50 megahertz across some of the -- we think the most attractive markets in Canada.

Bradley S. Shaw
CEO & Non-Independent Director

Yes, and an incredible team.

Phillip Huang
Barclays Bank PLC, Research Division

Right. Right. I think -- I mean, I think the strategy makes a lot of sense. And I think that in terms of the -- when you look at the spectrum holding, obviously WIND has gotten a lot of spectrum over the last -- over this past year. But nonetheless, it is largely -- it is all mid-band spectrum. Do see opportunities? Or do you see any sort of urgency to acquire more spectrum? Obviously, Quebecor has a bunch of spectrum outside of its territory, and I was wondering if there was any sort of interest in spectrum on the -- especially on the lower-band side?

Bradley S. Shaw
CEO & Non-Independent Director

I -- Phil, I think we'll always -- as spectrum comes available and opportunities, we'll look to see where it's important for us to be able to add that. I think when you look at down the road, when we look at our business plan, we're comfortable with what spectrum holdings we have now to be able to support the business plan. But like always, you're always wanting to make sure from a customer experience and what you're driving in wireless, that you have to right spectrum. So we're going to be always looking to make sure if we can add to that, that makes -- that would make sense to us.

Phillip Huang
Barclays Bank PLC, Research Division

Got it. And last one from me. Operating tax losses and also synergies on the SG&A side. Any comments you guys can make on that side?

Vito Culmone
Former Executive VP & CFO

Phil, it's Vito here. In regarding to the tax losses, there are several hundred million of dollars of tax losses carried forward, and obviously we expect to avail ourselves with those losses as the mobile platform enters profitability in the years to come. In regards to the synergies, we do is think there's opportunities there across many platforms -- revenue, capital and operating, you heard us reference that in the script part of the call here this morning. In regards to the operating G&A side of things, consistent with the commentary you heard this morning, we'll just play it real nice and slow here, and let WIND obviously do what it's doing really well in the marketplace and in the back office. And as we move post close, we'll look at those opportunities as they come up.

Bradley S. Shaw
CEO & Non-Independent Director

I just want to comment -- the tax losses, Phil, just as a background. We're not in sort of a transaction. We're not ascribing any specific value to those tax losses, so we're not looking at accelerating those tax losses and being to use those within our existing businesses. So when you're looking at precedent, multiples and things, I think that's important to understand.

Operator

The next question comes from Jeff Fan with Scotiabank.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

I think what's unique about Shaw getting into wireless is you guys have a very significant WiFi footprint in Western Canada. So I want to just hear you guys maybe talk about how you think you guys can differentiate that service relative to, I guess, the wireless incumbents, players out there that obviously don't have WiFi, and whether this -- the fact that you have WiFi accelerates the timing that you get to the point where a customer really see that differentiation. And then on the second question is really just, how do you guys -- because on the West you have the cable business and obviously you have the brand, but in Ontario, there's no cable business. Just wondering, how you guys think about competing in those 2 different footprints, whether there's a different tactic that we should expect to see in the marketplace?

Jay Mehr
President

Jeff, it's Jay. I'll take the first one and then maybe, Alek, if you could take the second piece. As you think about Alberta and British Columbia, we're really excited about our network of network strategies. And it's fundamentally a fiber network with the appropriate electronics at the end of that network in order to enable customers in the richest way possible. So it's a fiber network that may be connected to coax to connect to a modem in your home, maybe connect the fiber to the premise, maybe connect to a WiFi access point, it may connect to a 3G LTE wireless network. And it really brings together all of the attributes of all of those networks in order to serve the customer. So absolutely anchored with our differentiated broadband experience in the home, DOCSIS 3.1 super high-speed Internet, the X1 platform, and when it's possible, inside and outside of the home, on TVs and devices. And in 75,000 access points, which are incredibly efficient in giving you a rich, multi-hundred-gig data plans per month to be able to enjoy your service, augmented then by ubiquitous wireless coverage in 3G and LTE. So I think it's a really unique package that we can bring to market as a differentiated experience. And I'll let Alek talk about Ontario.

Alek Krstajic

Thanks, Jay. Look, I'll just add one other thing on the WiFi, that WIND mobile chose Nokia as its sole source vendor to not only swap out all of the Alcatel-Lucent equipment, but rollout LTE is the new LTE gear that's coming from Nokia has a seamless interphase between our mobile network and Shaw's WiFi network. Nokia is the world's leader in this area, and ultimately, what it means is the customer can drive up -- drive from work to their home, roam onto their WiFi network and continue to call with a seamless handoff. So we're very, very excited about how the investment in the WIND mobile network is going to dovetail very, very nicely with investments that have been made in Shaw WiFi network. Jeff, as it relates to your question on Ontario versus out West. I mean clearly, out West, Shaw now has the opportunity to offer a quad play and to do full bundling with wireless. In the East, I think there's still a lot of synergies. I think there's a number of things that we can sell in terms of Shaw products to our stores. There's going to be, I think, a lot of things evolving over the course of the next year, and so we still believe there's a ton of synergies from distribution to other service offerings that we can do in Ontario.

Operator

The next question is from Vince Valentini with TD Securities.

Vince Valentini
TD Securities Equity Research

So keying on the ARPU there of $35.81, the incumbents I think in -- across those 3 provinces will be sort of $65 to $67 on average for their ARPU. Can you give us any thoughts as to how you see your ARPU evolving over time? Do you think you can take a lot of share keeping ARPU closer to these levels? Or would you hope to enhance profitability, closing that significant gap over time once you network is up to proper quality?

Glen Campbell
Chief Commercial Officer

Vince, it's Glen. Thanks for the question. So there's clearly a significant gap between our ARPU and the incumbents. To your point, we see a big opportunity to narrow that gap over time. What drives that reduction in the gap will be upgrade of our network to LTE. So it's pretty straightforward. And you stand back and think about the wireless business in the long term, there's a lot of operating leverage from that expansion in ARPU continuing non-disruptive competition and subscriber acquisition, and then a reduction in the churn rate as again the network quality gap reduces. And keep in mind, we're already starting from a point where with less than 1 million customers, we're EBITDA positive, so it creates a really nice runway for the future.

Operator

The next question is from Drew McReynolds for RBC.

Drew McReynolds
RBC Capital Markets, LLC, Research Division

A couple of questions from me. First, just can you talk a little bit about how you looked at valuation for WIND, just what kind of a process you went through? Also just for clarification, is there an opportunity here for a potential competing bid for WIND? And lastly, is there anything you can say just with respect to your free cash flow objectives for WIND going forward?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Sure, Drew. It's Trevor, maybe I'll start on the first 2 and then get Vito to talk about the free cash flow impact. So on valuation, we obviously, through the diligence process, we got really comfortable with the existing operating business and the 940,000 subscribers and the revenue projections and EBITDA. We also went back to just fundamental asset value. So if we apply a, we think, a somewhat conservative multiple of 8x for the business, the operating business, it works out to about $1.06 per megahertz per POP. So compared that to other spectrum transactions. We looked at it from spectrum auctions. We spent a $1 per megahertz per POP in 2008. Recent transactions, even with WIND on the sale to MTS. We looked at the Rogers-Mobilicity of $2.35 roughly per megahertz per POP. So we think that, fundamentally, we got really nice asset here with spectrum, and then with an operating business with tremendous operating leverage going forward, like Glen said. So we feel pretty comfortable with the valuation that we were able to agree to with WIND shareholders. And in terms of competing bids, listen, we've got -- we're going through a plan of arrangement structure. We've got all shareholders signed up to the transaction, so we feel pretty comfortable from that perspective.

Vito Culmone
Former Executive VP & CFO

I mean, given the high-growth trajectory of WIND, we expect of course the transaction to provide compelling value creation for our shareholders over the long term. As the business continues to grow, we expect to generate enhanced margins as the business continues to gain scale. At this time, we're not prepared to obviously provide financial guidance on WIND; however, as I said, we expect the [indiscernible] to continue and internal improvements are made to its 3G -- as incremental improvements are made both to its 3G network and of course, the transition to an LTE network by 2017. In regards to your free cash flow commentary, I mean, we clearly do expect that WIND will be FCF positive after it upgrades to an LTE network in 2017. And over the next couple of years, particularly in regards to the capital expenditure regarded -- estimated to be about $250 million, we expect WIND in itself to be free cash flow negative until the LTE network expansion is completed.

Drew McReynolds

RBC Capital Markets, LLC, Research Division

Okay, Vito. If I can squeeze 2 quick ones in. Can you just remind us, in Western Canada, what Shaw's retail points of presence is? And does this wireless transaction change any strategic priorities with respect to looking at the data-hosting market and of course the ViaWest asset?

Jay Mehr
President

Can I talk about retail?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes.

Jay Mehr
President

Great. I'll start on retail and will let Trevor go on data hosting. We have the -- we have a retail presence in Western Canada that is very complementary to WIND's retail presence. We don't have a large number of stores. We have about 50 locations and the majority of them are flagship customer experience locations. So it's being promoted in a hub-and-spoke kind of way. We actually think the combination fits like a glove and gives us lots of opportunity in the retail space.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Well, on -- Drew, I mean, the date center side, I mean obviously, our ViaWest coloc. We just completed an acquisition recently out of Pennsylvania being -- you, I know you were down in Denver recently for the investor meetings there, still continue to support the business. They financed it mainly with their own -- the balance sheet at the ViaWest subsidiary. And also, they continue to invest capital in sort of greenfield builds, on average, a couple of years that they've been building. So we continue to see further investments in the data center business, to simulate the growth there.

Operator

The next question comes from Tim Casey with BMO.

Tim Casey
BMO Capital Markets Equity Research

Could you talk a little bit about -- you've identified it's an enterprise value of $1.6 billion from the transaction. Can you give us a little more clarity on what the mix of debt you're assuming and cash that's being paid to WIND's shareholders is? And two, can talk a little bit about the financing plans you have in place? And specifically, any asset sales you may be contemplating, or your feelings with respect to potential issuing equity?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

I'll handle the first one and then Vito on the financing. So Tim, just -- the total enterprise value is about $1.6 billion, and it included the equity and debt and nets off the cash. So it's somewhat of a net debt figure that goes in there as of September 30. So we've got 100% sort of debts finance -- or cash financed that consideration of the debt and net equity for WIND. So I'm not sure it's that relevant, frankly, above the mix of consideration between the split between equity value and debt at WIND. But the total enterprise value is the way that we looked at the transaction, which is about $1.6 billion.

Vito Culmone
Former Executive VP & CFO

Thanks, Trevor. And Tim, in regards to financing, I mean, we've obviously arranged for a fully committed bridge for up to 100% of the purchase price, so we're all set there. We are committed to financing the plan. That maintains our investment-grade rating. We've had several discussions with the rating agencies, thus far, and I think those are being constructive and positive, and I obviously expect the rating agencies to issue a report this morning. As we move forward, we'll optimize the significant flexibility available to us. In regards to assets, we have a rich portfolio of assets, including real estate assets and whatnot that we'll look at through the process here. We're obviously in no rush here. We've got several months pre-close -- or several weeks pre-close. We feel really good about our options. And it'll be -- and we'll give more clarity to the financing plan as we get little closer to the close period.

Tim Casey
BMO Capital Markets Equity Research

Okay. And how are you approaching potential equity?

Vito Culmone
Former Executive VP & CFO

I think equity is in the mix. We don't like diluting, obviously, and we'll balance equity against our leverage. If you even -- just from a pro forma perspective, if you assume a 100% debt on this transaction, it still keeps us below 3 on the net debt to EBITDA. And when you look at that across our peer group, we think that's a very manageable situation. A lot of considerations at play there when you're thinking about optimization of capital structure, so for the point being, we'll just maintain our flexibility and take it from there.

Tim Casey
BMO Capital Markets Equity Research

And just as a follow-up, Vito, can you talk a little bit more about the cash that you expect to have to outlay to reach free cash flow positive? What is the cash burn rate, perhaps on a quarterly basis, of WIND now? And that $250 million, is that all that you expect to have to spend? Or is there more on top of that before we start thinking about potential spectrum acquisitions?

Vito Culmone
Former Executive VP & CFO

Yes. Maybe I'll start and, Trevor, you can round it out if you've got any additional information to add. We really do believe the $250 million takes us to free cash flow positive over the next few years. When you look at the business today, it's in a real good steady state. In addition of $250 million, of course there's other additional capital inherent in the business from a maintenance perspective. But from an incremental perspective, we really do believe the $250 million through the next 2 calendar years, 2016/2017, is what's required to get us into a free cash flow positive positon. And the end of that point or during that point, obviously we'll consider other strategic investments as they come up. But the focus and the business plan and the valuation is predicated primarily on that $250 million, and it gives us a real solid foundation to move forward.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes. And Tim, just through diligence through the -- the quarterly cash burn rate was -- it was pretty small, actually. You can see, like Glen said and Alek talked about, I mean, 6 of the last 7 quarters it's been EBITDA positive. And with a nice ramp going forward. So when we looked at it, absent the LTE upgrade, which we fully support 100% obviously, the funding requirements for the existing business was not that significant, it was sort of breaking even.

Operator

The next question is from Aravinda Galappatthige of Canaccord Capital.

Aravinda Suranimala Galappatthige

Canaccord Genuity Limited, Research Division

Think about the history of WIND, obviously WIND has had operate within some of its financial limitations. But obviously, going forward, there's more resources available. I wanted to ask, how aggressive would you be going forward in areas like device subsidies, marketing and promotions and investments in customer service, et cetera? And would you be willing to sort of maybe take the EBITDA down in the near term to sort of drive a bigger benefit down the road? And then 2 quick smaller questions, are you able to disclose what CapEx and churn was for WIND in 2015?

Bradley S. Shaw
CEO & Non-Independent Director

I'll maybe start, and maybe Alek can add something there. I think we're very pleased with how WIND's operating right now. And they're -- we're gaining the right amount of market share, and they've been able to, I think, do an excellent job as we've looked at the business very closely, and we don't expect that to change. And we do expect whatever you can say to be rational competition, we do expect that. But we really expect that the products and services, over time, to differentiate that in the network.

Alek Krstajic

Alek here, I'll just add. I mean, look we've -- we've seen some very steady growth from the numbers at WIND over the last couple of years, and that's been despite some challenges on the network and some uncertainty prior to this last syndicate taking over the asset. And despite all of that, I think the growth has been great. So I think when you look at one of the other questions that Vince Valentini asked about the current ARPU of about $35 and the incumbent ARPU of $65, I think there's a lot of headroom between where we are today and where the incumbents are. And that headroom gives me the confidence that we can still grow the ARPU tremendously and continue to grow the subscriber base. I don't think we need to do anything aggressive when it comes to hardware subsidies, beyond what we're already doing. I think the TAB [ph] program that we've got, we've been tweaking it. I think Glen and his team have done a great job of really thinking through what the levers are and having a real cause-and-effect on how to drive sales when we want to drive them. So I think we're in a very, very good spot, as Brad said, to continue the momentum that we've got. I think the fact that Shaw now owns WIND just gives us a real confidence that we have a shareholder that is patient, strategic and long-run focused. So I think that you're going see us do a number of things that are all aimed at creating long-term probability and shareholder value.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Aravinda, just on CapEx, we'll obviously disclosing more of about the business and just looking at our disclosure policy generally about wireless post close. But for CapEx, for '15, for the year, through the diligence of the company, it's south of $100 million.

Aravinda Suranimala Galappatthige
Canaccord Genuity Limited, Research Division

Okay, great. And just a quick additional question on dividend policy. Any comment around -- I mean, you've been growing your dividend 7%, any thoughts around dividend policy that you can share going forward?

Vito Culmone
Former Executive VP & CFO

I mean obviously, you heard us confirm that we're committed to maintaining our dividend at levels during investment phase. As we've already mentioned, achieving WIND's full growth potential will require us to invest in our wireless network over the next couple of years. Ultimately, dividend and dividend policy is subject to the discretion of the board. And the management's recommendations to the board reflects various inputs, one of which is our projected consolidated EBITDA, CapEx and free cash flow, which has obviously been a subject of discussion here this morning. So in our view, we'll balance the need to invest to future growth with our free cash flow profile, and we'll consider appropriative measures to increase our dividend as we make -- as we move forward.

Operator

The next question is from Greg MacDonald with Macquarie.

Gregory William MacDonald
Macquarie Research

Listen, congratulations on the deal. A couple of questions I'll have. First, let me start off with the synergies. Vito, I'm curious as to why you're not commenting on at least some ranges. There has to be some OpEx synergies here that would be kind of new opportunities. And I guess, on the CapEx, Brad made mention of potential wireless infrastructure synergies. I think we can all kind of see what those are. I'm curious, is the $250 million in CapEx over the next 2 years net of any synergies that you'd have by integrating with the Shaw Network? Or are there extra synergies on top of that? And then I have a strategy question after.

Vito Culmone
Former Executive VP & CFO

Maybe I'll start off and Jay and the team can chime in here. I mean, in regards to the synergies, frankly, we believe probably more significant synergies around the revenue side when we think about ARPU improvement add-ons, the retention programs and the like. The -- I think it would be somewhat really ignorant of us at this point to speak about operational synergies without having the input of the WIND team in that discussion. So we're going to just, as I said earlier, talk to that as we move forward. That's really not what this is about, quite frankly, and we'll continue to invest in the business as we think necessary. In regards to the capital, the capital, the $250 million is WIND's capital plan for the LTE network expansion. So as we move forward and talk about synergies, that those are not net of any synergies. We'll take synergies on top of that as we move forward and think about that in the context of SCI's consolidated capital plan.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes. And Greg, maybe I'll just add. It's Trevor, before Jay on the CapEx. Through diligence, I mean, one of the things that we really liked about WIND was just their approach to how they are running the business and their focus on profitability. So we were very impressed with the management team and how they were running the business and ramping up the business to take advantage of that operating leverage that Glen mentioned. So they're a pretty lean company already in terms of their approach to things. So clearly, there are some synergies. But that's not the story here, I think, like Vito said, it's more about what can the 2 companies do together and accelerate the growth profile of the 2 companies.

Gregory William MacDonald
Macquarie Research

Right. I got it. So too early to tell is essentially the message, but WIND is a leanly run company?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes.

Gregory William MacDonald
Macquarie Research

Okay. On the strategic side, there's been made mention of kind of why now and it would've been cheaper to try and execute earlier. I guess, one of the things that I would mention or note that's changed in the last year is the company's focus on business services, particularly SME, and the evolution of that SME product. It's pretty obvious that adding wireless would be a big benefit to that. I guess, the one question

I do have is have you spoken to business customers? Did you have insight on business customers as to how confident they would be with the WIND network? I know there's a 4G upgrade coming, that's would be material to the issue. But I'm more curious as to -- and I think the market will be as to the post-2016 or '17 CapEx profile. Is the company planning to expand the footprint of the network in the Ontario and Western markets? Is that part of the longer-term consideration?

Jay Mehr
President

Greg, this is Jay. There was a lot there, so let me sort of unbundle it into...

Gregory William MacDonald
Macquarie Research

Focus on that last point, the expansion.

Jay Mehr
President

All right. I will. But just because you asked it, I'm going to focus on first one just really quickly, which is if you do the actual math, I don't know that you can get there less expensive any other way. Had we entered the market in 2011 under the rules that existed in the place, under the spectrum that was available, with what it would've cost us to construct, with what the roaming regime looked like without ability to access power, there's no way that math gets you to today, better than today. And if you try and put together other spectrums and construct a new network over a number of years from scratch, you're going to be way north of our numbers. So just sharing our thoughts there. That said, on the SME side, we see tremendous opportunity. Probably more post-LTE upgrade, as you suggest, than pre-LTE upgrade. Although we think really unique combinations with the smart WiFi product that you've seen and even the 3G network to fill in on a ubiquitous nature. We hear about it in every customer conversation about folks wanting to talk to Shaw about their wireless needs. And certainly, our response to even personally in the hundreds of e-mails we've got from the last 24 hours, lots of businesses in Calgary interested in switching to our wireless products as quickly as possible. So I think we're targeted again at that 10 to 100 employee focus in our SME market, and we think wireless would be great for that.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

And maybe I'll just add one thing, Greg, on the expansion of the network. I mean clearly, WIND has a deep spectrum position across a lot of our operating areas and they may not have operations right now, we're working closely with the WIND management team to see where the return on that capital makes sense. Should we be looking at interior B.C. or Vancouver Island and things like that, in terms of extending that WIND footprint to our line up with some of our consumer footprint in Western Canada.

Gregory William MacDonald
Macquarie Research

So I guess as a rule of thumb, should we think typical capital intensity ratios for this asset going forward? Or should we be thinking slightly higher than typical? Typical being something in the 15%, 16% range?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

We were looking at typical, Greg.

Operator

The next question is from Maher Yaghi with Desjardins.

Maher Yaghi
Desjardins Securities Inc., Research Division

I'll add my voice to Greg's voice, it's never too late to do the right thing. In terms of...

Bradley S. Shaw
CEO & Non-Independent Director

So okay, really good [ph].

Maher Yaghi
Desjardins Securities Inc., Research Division

Okay. So I'm just -- when we look at this potential high-grading the ARPU to what we're seeing with, let's say, if we take Vidéotron as an example and their strategy to increase ARPU at their customer base, and which is something that they have shown that it can be done. They built up quite a sizable network in Québec. And when you look at the coverage area that WIND has, definitely there's a gap between where WIND is currently covering with their spectrum versus what Quebecor has decided to do in Québec. So again, I'm just trying to figure out, how can you migrate customers up the value chain longer term to make this investment as profitable as you can without building and beefing up your network to be as -- covering similar areas that your -- with your competition? Because at the end of the day, your customer is on your partners' network, the current regulation can still allow for drop calls, et cetera.

Bradley S. Shaw
CEO & Non-Independent Director

True. Maybe I'll ask Alek, do you want to start and then maybe Glen can take part of it? Did we lose Alek?

Alek Krstajic

Oh, sorry, guys. I'm here, I was just on mute there. I apologize. I'm new to this whole conference call thing. Look, the long-term sort of strategy with WIND mobile and our network is really one of continuing to aim at the right customer base and making sure that the value proposition is always one that is competitive. And so it's not about being everything to everybody. And so when we look at our network, we're actually very, very excited about where the network is going. The 50 megahertz of spectrum that we now have is really put us in a position to be able to roll out an LTE network that's going to have 30 megahertz of unused spectrum. So when that network turns on, I think we're going to have something that customers really, really are saying is a great value proposition at the prices that we're selling it at. I think when you look at the other spectrum, it's going to be made available like 600 and supplementing the spectrum that we already have, that low-band spectrum is actually going to give us a propagation. For in-building coverage, it's I think going to be superb. So not sure if that covers every part of that question, but we're very bullish on where this is going.

Maher Yaghi
Desjardins Securities Inc., Research Division

I guess, I -- yes. Sorry, Vito.

Glen Campbell
Chief Commercial Officer

It's Glen. So I just wanted to add to what Alek is saying. I mean, when you look at what Vidéotron has managed to achieve in Québec, they've done it in a market that had much lower ARPU to begin with, so this is something to take into account when you look at where we are today. Secondly, when you look at the regulatory environment that they built out in, they were not able to count on affordable out-of-footprint roaming. We've already got cost. We've already got a regime now that calls for cost base roaming rights. So the result of that is we can focus our network investment where our customers are in urban areas. So now that significantly improves the economics and makes it a lot easier to deliver the kind of network upgrades that we're talking about.

Maher Yaghi
Desjardins Securities Inc., Research Division

Okay, that's fair. And in terms of the branding, I recognize that probably in Ontario you don't want to mess too much with how it's positioned right now. But when you look at Western Canada and the potential for bundling products like your competitor is doing, are you looking to rebrand the product, put a Shaw sticker on it, change the way it's sold in the marketplace to be somewhat -- more aggressive in order for you to keep and gain customers? Maybe just talk a little bit about differentiation on how you're positioning and maybe the point-of-sale disadvantage that you have in Western Canada versus your competitor who -- competitors who have a lot more distribution network there.

Bradley S. Shaw
CEO & Non-Independent Director

Maher, this is Brad. I'll start. And we -- I don't think we've really landed on the decision of where once we build the LTE network and the WIND brand and where we land with that, but we'll be doing that work over the next 6 to 12 months, and determining how we come to market, how we price the product and where we need to come in. I think points of presence are important. I think we get 300 points of presence, which is pretty exciting for us. I think when you look at the Shaw brand and the media assets and everything we bring, we really can take this to a whole different level from awareness point of view. And so, it becomes a little different for WIND, I think. Other than that points of presence, it's just awareness we bring. And even in the Ontario market, I think it's going to be much different. I think we really enjoy with how WIND is being operated now. We like how they're managing into the market and how they're growing. And we're comfortable with the continued pace. And as we bring in the LTE, we'll see where, as Alek said, where pricing is and where the value equation is and the opportunity for us.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

And maybe I'll just add, through our diligence, we spent a lot of time on the distribution points of presence. I think maybe on paper, it looks like not as many points of distribution as some of the other wireless providers in Canada. But I think when you look at product offerings and there's maybe not as much differentiation between some of those other providers where retail presence is obviously a big part of that. When you -- we've got a true value differentiator equation, we think the number of the points of presence that WIND actually has is really hitting the mark, frankly.

Operator

The next question is from Rob Goff with Euro Pacific.

Robert Goff
Echelon Wealth Partners Inc., Research Division

Congratulations on the deal. I would have 3 questions, if I might. Could you give us any additional perspectives in terms of the bank financing terms that WIND recently negotiated? Could you also talk to the potential or what needs to be accomplished in terms of integrating the billing platforms of the 2 entities, recognizing it's early days?

Bradley S. Shaw
CEO & Non-Independent Director

So maybe I'll just start on the bank financing and then ask Alek to talk about -- or Glen to talk about that. Listen, we're assuming that the existing bank deal, we think it's a good deal, but don't necessarily mean to keep it in place. But I've -- as far as specific terms, we don't know if we need to disclose that, frankly. But Vito, I don't know if you want to say anything about...

Vito Culmone
Former Executive VP & CFO

No. I mean, I think you saw the press release from WIND a few days ago, those are -- they've moved from obviously high yield to something much more attractive in the marketplace. And I think the big point there for me, quite frankly, is the great testament to the growth prospects and the health of the business going forward. And as Trevor said, we'll obviously, post close, evaluate what's the right thing to do from a consolidated business. But it's a wonderful asset, effectively, to have in the full from that perspective.

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

I think you're correct in -- I'd say, I think you're correct in saying that it's a little early to fully scope integrated it, although we will say this, that we have moved and are moving to our next-generation billing system on the Shaw platform. When that billing system was initially scoped and built, it was initially scoped and built with the wireless build in mind, and so we have tremendous flexibility in terms of integrated billing going forward. That being said, lots of work to be done and you can imagine time frames involved.

Operator

There is time for one last question. Next question is from Robert Peters from Crédit Suisse.

Robert Peters
Crédit Suisse AG, Research Division

Congratulations on the deal. Just when we think about WIND's handset offering, I mean, I think there's kind of one thing that people have been looking for in terms of -- we've seen it in Québec when Vidéotron got the iPhone. I'm just wondering if you guys have had any discussions to that extent. And when we -- if we could kind of think about something like that happening?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Alek, maybe I can ask you to comment on the handset lineup.

Alek Krstajic

Sure. Thanks, Trevor. I mean, look guys, there's no question that when you add the iPhone, you get a whole bunch of new customers who find your offering attractive. I think without the iPhone, we have a very, very solid lineup as evidenced by the growth that we've been able to generate. That having been said, we have somewhere slightly in excess of 50,000 users that are actually using iPhone. So what we're seeing is people buying iPhones and saying, the iPhone is great with unlimited data, and so they see the value proposition is good. So we've got a lot of customers that are -- we refer to as SIM-only customers, they bring their own handsets. We have, in the last 6 months, had a program where we've been selling, in some cases, new old stock and factory-refurbished iPhones. We've started some conversations with Apple. I think Apple looked at WIND, quite frankly, the way a lot of people did a year ago. And that is a little bit of a question mark. Where is WIND going to end up? What's the status of its network? And what's the network plan? I think the fact -- and building on what Vito said, I mean, look, Shaw buying WIND is a huge event. I think the endorsement prior to that was the fact that 3 Canadian Schedule A banks decided to step up and endorse WIND by lending us money. The Canadian Schedule A banks lends only to solid credit. So I think Apple will be looking at us and saying, we've got Shaw backing, we have a path to LTE with an incredible network partner like Nokia. And probably around the time we launch LTE, we'll be launching the iPhone with Apple, is my hope and expectation.

Robert Peters
Crédit Suisse AG, Research Division

Got you. And if I could just squeeze one last one in. Just a clarification, when speaking on the CapEx and talking about a typical ratio of 15% to 16%, I assume that excludes the $250 million for the LTE expansion?

Trevor English
Executive VP and Chief Financial & Corporate Development Officer

Yes. That's correct, Rob.

Operator

This concludes the time allocated for questions and for today's conference call.

Bradley S. Shaw
CEO & Non-Independent Director

Thank you, operator. And thanks to everyone for joining us today. And we're very excited about the future at Shaw. So enjoy your weekend and Merry Christmas to everybody.

Operator

Thank you. This concludes today's conference call. You may disconnect your lines. Thank you for participating, and have a pleasant day.

Bradley S. Shaw
CEO & Non-Independent Director
Thank you. Thanks, Alek.

This is Exhibit 10 to the affidavit of Kenneth Mathieu, affirmed remotely by Jonathan Bitran stated as being located in the city of Toronto in the province of Ontario, on the 20th day of October, 2022, in accordance with O.Reg431/20, Administering Oath or Declaration Remotely.

Acquisition of WIND

Investor Conference Call

Shaw) WIND

Forward Looking Information Disclaimer

Statements in this presentation relating to the acquisition of WIND; the related financing; Shaw's credit ratings; Shaw's dividend rate; operational, growth and capital spend plans and expected business and financial results for Shaw and WIND; customer retention; and plans for enhanced service offerings to customers constitute "forward-looking statements" within the meaning of applicable securities laws. These statements are based on assumptions made by Shaw that it believes are appropriate in the circumstances, including without limit, that: regulatory and court approvals will be received and the other conditions to closing of the transaction will be satisfied; financial markets will be receptive to Shaw's future financing on acceptable terms; expected business and financial results for Shaw and WIND will be realized; the pricing environment for WIND is stable relative to current rates; there is no significant market disruption or other significant changes in economic conditions, competition or regulation; the upgrade to 4G LTE and, other plans for growth, enhancing service offerings and the converged network solution can be executed in a timely and cost effective manner to yield the results expected for Shaw and WIND; and WIND will provide expected benefits to Shaw and for the service offerings to its customers. There is the risk that one or more of these assumptions will not prove to be accurate and this may affect closing of the transaction and/or the business, operational and financial expectations for Shaw. Undue reliance should not be placed on any forward-looking statement. Except as required by law, Shaw disclaims any obligation to update any forward-looking statement.

Shaw & WIND: Power of the Combined Platform

- Shaw's acquisition of WIND represents a transformative transaction that enhances Shaw's position as the network of choice for our customers now and in the future

Wired Home Connectivity	WiFi Mobile Connectivity	Wireless Connectivity
Fibre Network	WiFi Network	Wireless Network

Converged Network Will Allow Us to Deliver an Exceptional Customer Experience

WIND: High Growth Potential Based on Proven Results

- WIND has emerged as Canada's 4th largest wireless provider and is well positioned for future growth

Significantly Accelerates and De-Risks Shaw's Entrance into Wireless

Strong and Growing Financial Profile with Expected 2015 Revenue of $485 million and EBITDA of $65 million

Provides Immediate Scale with ~940K Customers and +300 Points Of Distribution

WIND

Proven Management Team with Significant Experience in Wireless

50 MHz of Spectrum Holdings across Key Operating Footprint

Wireless Network with Immediate Path to LTE that Complements Shaw's Existing WiFi and Wireline Network

Shaw)

Taking a Disciplined Approach to Wireless Entry

- Shaw has taken a disciplined approach with respect to our mobile strategy, and believe that the timing is right to enter the wireless market

2008

- In 2008, Shaw participated in the AWS-1 spectrum auction and commenced an initial build-out of wireless infrastructure in 2010
- We subsequently conducted a strategic review in 2011 and determined that the total potential build (Alberta and BC only) and operating losses to break-even could exceed $2 billion – accordingly, Shaw decided not to proceed with a greenfield wireless build-out at that time
- Pursuing a greenfield wireless build-out in 2008 would have likely resulted in significant build and operating losses and would not have created long-term value for Shaw's shareholders

2011 – 2015

- In 2011, Shaw unveiled that it would pursue the launch of a WiFi network that would provide free mobile connectivity to Shaw's wireline customers
- Since its formal launch in 2012, Shaw Go WiFi has grown to a network of over 75K hotspots and +2 million registered devices

Right Time to Enter WiFi

- Identified opportunity to deliver significant value-add to consumers via a WiFi-based mobile offering at much lower cost than proposed wireless build-out
  - WiFi provided a differentiated service that would position Shaw well for future growth

- Shaw's acquisition of WIND represents an evolutionary step in our mobile strategy which will allow us to meet customers' demands for ubiquitous connectivity
- Evolving consumer demands for ubiquitous connectivity yields importance of 'mobile-first' offering

Right Time to Enter Wireless

- WIND has emerged as Canada's 4th largest wireless provider and is well positioned as a high growth wireless business with spectrum depth to transition to 4G LTE
- Greater regulatory certainty (roaming rates, tower sharing, etc.)
- Favorable industry structure

Shaw)

WIND: Complementing the Shaw Go WiFi Offering

- WIND provides a mobile platform that will complement Shaw Go WiFi's success

	Shaw Go WiFi	WIND
Build Long-Term Shareholder Value by Maximizing Returns on Capital Deployed	✓ • Achieved extensive coverage of Shaw's major wireline markets with minimal capital spend (~$135 million life-to-date) • No spectrum license acquisition costs	✓ • Acquisition of operating business, wireless network and spectrum portfolio significantly de-risks entry into wireless • Nokia network agreement for future LTE upgrade in place • WiFi and wireless capex/network efficiencies • Supportive regulatory regime
Use Mobile to Deliver Maximum Value Add to Our Customers	✓ • Canada's largest WiFi network with nearly 75K access points and +2 million registered devices • Increases value proposition of broadband and improves retention (~25% lower churn)	✓ • Canada's largest non-incumbent wireless carrier • Completes Shaw product portfolio and enables us to deliver ubiquitous connectivity for our customers
Well Positioned for Future Growth	✓ • On track to achieve continued coverage growth, with ~90 municipal deals signed (4 million population potential) • Significant innovation potential (Hotspot 2.0) and faster speeds (current speed of up to 30 Mbps)	✓ • High growth trajectory supported by proven business plan • Well defined path to achieving increased coverage and upgrade of network to LTE by 2017

Shaw

Acquisition of Wireless will Allow Shaw to Provide the Ubiquitous Connectivity Demanded by Our Customers

Shaw)

Business Infrastructure Services

- Providing North American enterprise colocation, cloud and managed services through ViaWest

Media

- One of Canada's largest conventional TV networks
- Leading portfolio of 19 of Canada's most popular specialty properties
- Partner in shomi, an OTT service provider in Canada

Consumer

- Provider of best-in-class residential cable (Internet, WiFi, Video and Phone) and Direct-to-Home services to 3.2 million customers across the country

WIND

Wireless

- One of Canada's leading wireless carriers, providing services to ~940K subscribers in Ontario, British Columbia and Alberta

Business Network Services

- Provides data networking, video, voice & internet services through a national fibre-optic backbone network

Acquisition of WIND Complements the Entire Shaw Platform

Shaw)

Transaction Summary

Highlights	• On December 16, 2015 Shaw entered into an agreement to acquire WIND by plan of arrangement • WIND is Canada's largest non-incumbent wireless services provider, with ~940K subscribers located across Ontario, British Columbia and Alberta • Proven business model with demonstrated financial results and a strong growth profile • Significant spectrum holdings across the country providing broad coverage and capacity to upgrade network to LTE by 2017
Transaction Value	• Enterprise value of C$1.6 billion(1)
Transaction Metrics(2)	• $1.57 / MHz-POP • $1.06 / MHz-POP, net of assumed value of operating business(3)
Closing Conditions	• Competition Bureau, Ministry of Innovation, Science & Economic Development (formerly Industry Canada) approval and Court approval of plan of arrangement
Anticipated Closing	• Third quarter of fiscal 2016(4)
Financing / Other Considerations	• Transaction is 100% financed at announcement with fully committed bridge facility • Shaw is committed to maintaining its investment grade rating • We are also confirming our current dividend(5)

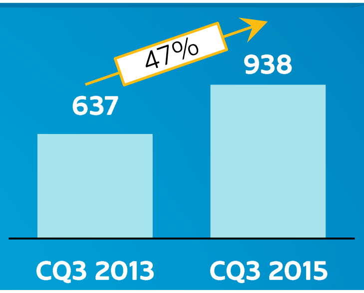
(1) Based on quarterly financial statements as of September 30, 2015.
(2) Multiples not specifically adjusted for value associated with tax pools and excludes any potential synergies.
(3) Net of assumed value of operating business at 8x EBITDA of $65 million and excluding one time-items relating to the transaction.
(4) Shaw Communications has an August 31 year-end.
(5) Any changes in dividend policy are subject to Board approval.

Shaw)

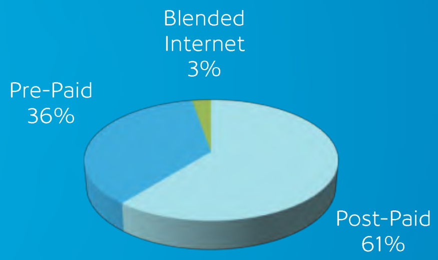
WIND Highlights

- **Strong operating performance and footprint in key Canadian markets**
  - WIND has ~940K subscribers today and over the past two years has captured ~300K net adds
  - Established market position in Ontario, British Columbia and Alberta wireless markets
  - +300 points of retail distribution
- **Existing network and spectrum position supports enhancement of service offering**
  - Strong spectrum portfolio (50 MHz of spectrum in key operating areas) with clear, well-defined plan to achieve roll-out of LTE network by 2017 will meaningfully increase network capacity and quality at an estimated cost of $250 million
- **Demonstrated financial performance with significant growth opportunity**
  - Business expected to generate ~$485 million in revenue and ~$65 million of EBITDA[(1)] in calendar year 2015
  - Strong growth trajectory as WIND continues to benefit from its compelling value proposition in the Canadian wireless market
- **Experienced management team that can execute on the vision**
  - Senior management team with decades of collective wireless experience will remain in place post-acquisition and is aligned to achieve shared goals
  - Led by Alek Krstajic, who has 20+ years of telecom expertise

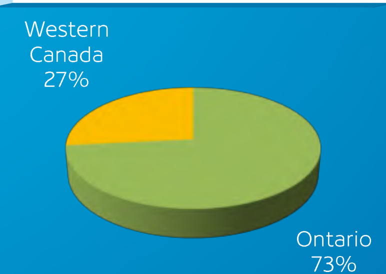
Two-Year Sub Growth *(000)*



Subscribers by Plan Type



Points of Distribution by Geography



(1) Excluding one time-items relating to the transaction.

WIND Management Team

- Shaw is partnering with WIND's senior management team to leverage their expertise and accelerate growth across the business

Alek Krstajic

Chief Executive Officer

- Established leader in Canadian telecommunications, bringing over 20 years of experience
- Prior to joining WIND in 2015, Alek was Founder and CEO at Public Mobile and has served in senior executive roles in some of Canada's largest telecommunications companies

Glen Campbell

Chief Commercial Officer

- Joined WIND from Bank of America Merrill Lynch where he served as Head of Canadian Equity Research and Global Coordinator for Telecom Services Research, in addition to covering Canadian telecom services stocks for almost 20 years
- Familiarity with every aspect of the wireless industry serves to strengthen WIND's position as a leader in the Canadian marketplace

Bruce Kirby

Chief Strategy Officer

- Brings over 15 years of experience in the sector, including time with a large Canadian incumbent telecom provider through to his time with Public Mobile
- Holds a well-rounded understanding of all aspects of the industry adding value on matters of finance, strategy and technology

Brian O'Shaughnessy

EVP, Technology Services

- Previously the CTO of Public Mobile, where Brian established the network organization from scratch and successfully launched its wireless service in 2010
- Also held numerous senior positions with a Canadian incumbent telecom provider, including VP, Wireless Technology Development (providing technology leadership for a business that grew rapidly from 0.8M to 4.5M subscribers) and VP, Video and Access Network Technology Development (driving the development of IPTV, DSL, FTTH and home networking technologies)

Substantial and Growing Subscriber Base

WIND

- WIND has ~940K subscribers today and over the past two years, the Company has captured ~300K net subscriber additions (note: represents subscriber growth of almost 50% over the last two years)
- ~3/4 of WIND's subscribers are located in Ontario, with the balance in British Columbia and Alberta
- +60% of WIND's subscribers are post-paid subscribers
- Strong subscriber additions and ARPU expansion has led to over 80% quarterly revenue growth over the last two years

WIND Subscriber Base *(000s)*

Shaw)

Proven Business Model with Significant Growth Opportunity

WIND

Proven Business Model

- Unique customer value proposition that continues to gain traction in the market
- Subscriber base continues to grow rapidly
- Deployed network covering a population of 15 million people in Ontario, Alberta and British Columbia by the end of 2015
- +300 points of retail distribution, including exclusive corporate and dealer locations

Stage is Set for Rapid Growth and Expansion

- Proven business model which will continue to scale
- Spectrum depth adequate to manage transition to 4G LTE
- Substantially de-risked business model, operating in stable market
- Capitalize on the strength of the Shaw brand as well as cross-selling wireless to existing Shaw customers
- Large existing Shaw WiFi and wireline infrastructure

Attractive stage in growth cycle and well positioned for continued growth

Shaw)

WIND Customer Value Proposition

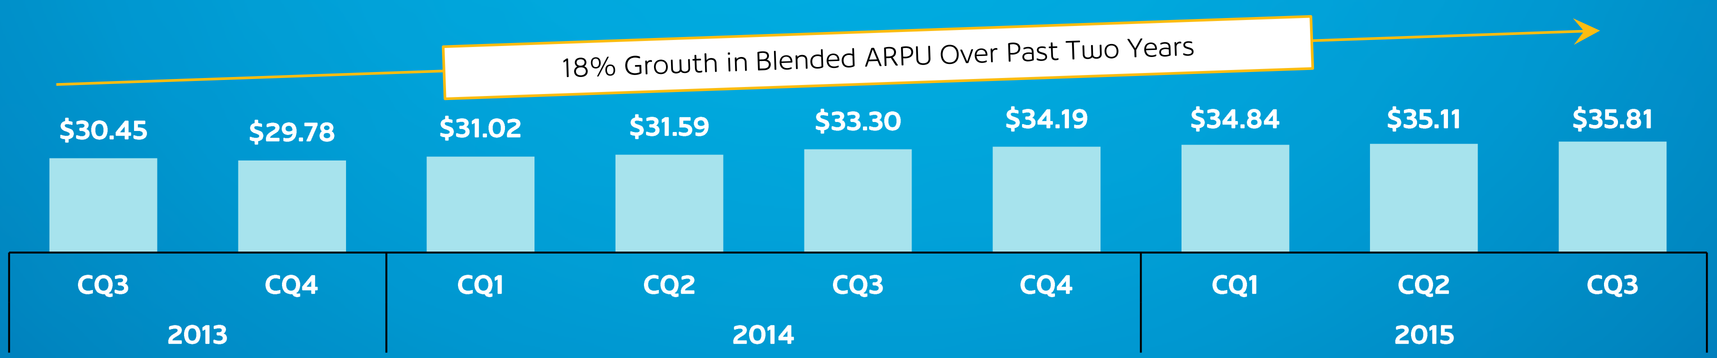
Fairness and Transparency
No hidden fees
No contract

Best Value
Unlimited Plans

Attractive
Low international and roaming rates

- WIND targets the value conscious segment with its easy to understand tariff plan and no-term contracts
- WIND will continue to focus on post-paid subscribers which now account for over 60% of its total subscriber base
- To further differentiate its customer value proposition, WIND continues to:
  - Enhance customer service
  - Improve network quality
  - Broaden handset lineup, including higher-end devices

WIND Blended ARPU[1] *(C$/month)*



[1] Reflects average monthly revenue per user based on service revenues from all post-paid, pre-paid and internet subscribers.

WIND Spectrum Position

Represents areas with current WIND operations

Region	NW Territories	British Columbia	Alberta	S. Ontario	E. Ontario	N. Ontario	N. Quebec	New Brunswick	Nova Scotia	Nfld & Labrador
AWS-3 Spectrum										
MHz Block(s)		30 MHz G,H,I	30 MHz G,H,I	30 MHz G,H,I						
AWS-1 Spectrum										
MHz Block(s)	50 MHz B,C,D,G	10 MHz C	10 MHz C	20 MHz B	10 MHz D	15 MHz C,I	15 MHz G,I	10 MHz C	10 MHz D	20 MHz D,G
MHz[1] Block(s)[1]		10 MHz D	10 MHz D	~2 MHz C/D	10 MHz C	10 MHz D				

WIND's spectrum provides 50 MHz of coverage across its core operating footprint

(1) Reflects spectrum acquired in transactions announced mid-2015.

WIND Network Infrastructure and Upgrade Path

- WIND has a clear plan to upgrade to an LTE network by 2017, a process that is currently underway
- Contract signed with Nokia to complete this upgrade at a total estimated cost of $250 million(1)

	2015 – 2017	2018 – 2020
	3G	**4G / LTE**
Network Capability	**Basic Data Services**  • Previous generation technology • Improving network capacity and functionality	**Advanced Data Services**  • Next generation technology • High network capacity and functionality
Network	• Enhanced 3G network enabled by increased AWS-1 spectrum position and Western Canadian network hardware upgrade • LTE build-out on the AWS-3 spectrum (15+15 MHz)	• Migrate existing subscribers to LTE network to allow for 50 MHz of total AWS spectrum to be dedicated to LTE • Add VoWiFi and VoLTE capabilities

Benefits of Nokia Contract

- **Strategic technology partnership with Nokia**
- **Network hardware upgrade will result in a significant improvement for customers and enable a seamless transition to LTE in 2017**
- **Terms of the contract include 5 year fixed price certainty and additional technical support from Nokia experts**
- **Upgrade to latest network technology provides compatibility and integration opportunities with Shaw's wireline and WiFi platforms**

(1) Includes capex and opex related to the LTE transition over the entire length of the contract.

Synergy Potential of the Combined Platform

- Bringing Shaw's current businesses and WIND together will yield exciting opportunities for growth across the combined platform

Consumer

- ✓ Combination of wireless with our extensive fibre network and Shaw Go WiFi will provide ubiquitous connectivity for our customers
- ✓ Strengthen wireline competitive position with potential for increased customer stickiness and retention
- ✓ Additional connectivity complements TV Everywhere and X1 initiatives

WIND

- ✓ Benefit from Shaw's commitment to customer service and operating excellence
- ✓ Opportunity to offer a differentiated, converged network to current WIND customers located within Shaw's wireline footprint

Business

- ✓ Ability to cross-sell WIND services to Shaw Business customers
- ✓ Complements new suite of managed products, such as SmartVoice and SmartWiFi

Both Shaw's Current Businesses and WIND will Benefit from the Combined Platform

Pro Forma Operational Structure

Shaw

Pro Forma

Consumer
- Residential Cable (Internet, WiFi, Video and Phone)
- Direct-to-Home

Wireless
WIND
- Consumer wireless
- Business wireless

Business Network Services
- Connectivity and Managed Services
- Hospitality
- Tracking
- Broadcast

Business Infrastructure Services
- ViaWest
- Canadian data centre initiatives

Media
- Conventional Network
- 19 Specialty Channels

- **WIND will be managed as a standalone entity by its existing leadership team, but offering will be integrated into Shaw's current platform to offer converged services to all customers in Western Canada**
  - Shared entrepreneurial culture
  - Significant expertise and deep experience in the international and Canadian wireless and telecom industries

Conclusion: Shaw + WIND = Compelling Strategic Rationale

- The acquisition of WIND provides Shaw a unique opportunity to enter the wireless market and deliver a truly differentiated and fully converged offering for our customers

Enhances Shaw Product Offering

Solidifies Shaw's Western Canadian Market Position with Upside Potential in East

Unique Transaction Opportunity

Highly Complementary with Shaw's Existing WiFi and Wireline Network

Experienced Management Team with a Proven Business Model

High Growth Wireless Business

Thank you.

Operator

Thank you for standing by. This is the conference operator. Welcome to the Rogers & Shaw Analyst Call. [Operator Instructions].

I would now like to turn the conference over to Paul Carpino, Vice President of Investor Relations with Rogers Communications. Please go ahead.

Paul Carpino
Vice President of Investor Relations

Great. Thanks, Ariel. Good morning, everyone, and thank you for joining us. Today, I'm here with our President and Chief -- President; Joe Natale; our Chief Financial Officer, Tony Staffieri; and Executive Chairman and CEO of Shaw, Brad Shaw.

Today's discussion will include estimates and other forward-looking statements with the meaning of applicable securities laws. These statements speak only as of today's date and are subject to uncertainties and risks that may cause actual results to differ materially from these forward-looking statements.

Accordingly, investors are cautioned to not place undue reliance on these forward-looking statements and to carefully review the disclaimer contained in today's news release regarding forward-looking statements.

The forward-looking statements made during today's call are qualified in their entirety by the information contained in today's news release and in Rogers' and Shaw's other publicly available filings.

With that, let me turn it over to Joe to begin.

Joseph M. Natale
President, CEO & Director

Thanks, Paul, and good morning, everyone. Thank you for joining us. I'm very excited to be here with Brad Shaw, Executive Chair and Chief Executive Officer of Shaw Communications to announce the proposed coming together of Rogers Communications & Shaw Communications. Both companies were founded and built more than a half century ago by 2 of Canada's greatest entrepreneurs, Ted Rogers and JR Shaw. They were both risk takers that shared a relentless pursuit to innovate, grow their companies and connect Canadians. They weren't afraid to take bold steps needed to ultimately transform the way we communicate and the way we connect to our world. Without a question, they were the founding fathers of our industry.

We also shared a deep respect for one another, for each other's families and from what they were each building for Canadians on different sides of the country. Both companies helped usher in the era of video and data services into the living rooms, the small businesses and the boardrooms across the nation. They became integral parts of their communities. They invested billions of dollars to connect Canadian families, help business grow and help industries transform.

Today's announcement builds on that strong legacy of 2 great family-founded Canadian companies and their shared history of service, innovation, customer commitment and community support.

Canada's networks are amongst the very best in the world, a fact that has served us well during the pandemic as Canadians and businesses were able to quickly pivot to an online world. But we didn't get there by accident. We've been pouring billions of dollars into Canada in its innovation and networks for the last many generations. Rogers and Shaw are preparing to make the next-generation of unprecedented levels of investments to provide consumers and businesses more choice in broadband and wireless capabilities to help grow our economy to ensure that all Canadians and all businesses have the essential technology to unlock growth, boost our productivity and set the table for the future and all that it holds for us.

Both Boards and the controlling shareholders of Rogers and Shaw have unanimously and enthusiastically voted in favor of this transaction, where Rogers will acquire all of Shaw's issued and outstanding shares in a transaction valued at approximately $26.2 billion, including acquired debt. Brad Shaw, and another director to be nominated by the Shaw family, will join the Rogers Board when the transaction closes to help us drive the future success of our combined companies.

The offer price of $40.50 per share represents a significant premium to Shaw's shareholders, reflecting the value that the Shaw team has built over the past 5 decades.

Rogers and Shaw's networks are complementary, highlighting the extraordinary synergy opportunities to be unlocked through investment and integration. The combined company will be a reflection of the best global technology with national scale to benefit all Canadians, but never, never strain from its roots of operating on a local community level in communities and neighborhoods across the country.

The transaction will combine Rogers and Shaw's operational expertise and quality assets, and great talent pool will bring together Shaw's existing cable, fiber-to-the-home, satellite and wireless networks with Rogers' robust national wireless and extension and extensive 5G capabilities. The combined company will accelerate the delivery of critical 5G services from coast to coast, including across the West, from rural areas to dense cities, more quickly, more widely, more effectively than either company could achieve on its own.

Importantly, the transaction will create a coast-to-coast Internet provider with coast-to-coast fiber network. This will enable stronger competition and greater scale for large enterprise and government customers, which is needed for Canada's competitive position. Without question, the deal will accelerate deployment of 5G around the country and will assure competition and capital continue to be prioritized and reinvested in new technologies at home here in Canada and especially in Western Canada.

And what better way to attract new investment and research opportunities into our colleges and universities by highlighting that Canada has amongst the most vibrant and advanced nationwide 5G broadband infrastructure in the world.

Upgrading our digital infrastructure and accelerating digitization is critical for us to remain competitive as a nation. It will create jobs, will diversify our economy and will strengthen the innovation sector and fuel Canada's economic recovery.

Investment in Canada will increase through this combination. It has to, in order to keep pace with the consumer, with education, with business and the demand for speed and capacity. The pace for investment is accelerating. Today, both companies invest $3.7 billion annually in CapEx. And the underlying investment in 5G inherent in this total will only go up as 5G technologies continue to roll out across the country. This is a big task for both companies. And when combined, both companies are up for the challenge.

As part of the transaction, Rogers has committed to investing $2.5 billion to build 5G networks in Western Canada, which will enhance western competitiveness, offer consumers and businesses more choice and improve services and help to close the digital divide between urban and rural communities faster. 5G technology is the great enabler to deliver a timely, cost-effective, capability-rich Internet solution to rural Canada. As a result of this transaction, the companies will have the combined resources and expertise to deliver on this critical issue.

In addition to these growing investments, Rogers will commit an additional $1 billion to create the new Rogers Rural and Indigenous Connectivity Fund, dedicated to connecting rural, remote and indigenous communities across Western Canada to high-speed Internet, to broadband services. As part of this fund, we intend to consult with indigenous communities to create indigenous-owned and operated Internet service providers. These will be created within the communities. We'll leverage our expanded networks and capabilities to create sustainable local connectivity solutions.

Overall, these investments will create up to 3,000 net new jobs across Western Canada and deliver major long-term benefits for Western businesses and consumers. In addition to help all individuals and families connect to affordable Internet, Rogers will expand its Connected for Success program nationally, delivering high speed, low-cost broadband to every eligible low-income Canadian, including seniors receiving guaranteed income supplements, residents and rent geared to income housing or individuals receiving disability benefits, anywhere, our combined networks and a combined company offers internet services.

The transaction is subject to the Competition Bureau, ISED and CRTC approval. We look forward to working with them to ensure a successful completion of this transaction. With those approvals, this transaction will generate significant synergy opportunities to support the accelerated investment into 5G capabilities and the expanded high-speed rural connectivity throughout Western Canada. These benefits will also include access to new capabilities for Shaw customers, savings opportunities in media and network costs associated with greater scale, as well as other savings and growth opportunities.

The Rogers team is proud. We're proud to be joining portion with the Shaw team. We can't imagine a better partner to take on the significant technology challenges and opportunities ahead of us and to build an even stronger western presence together. Our combined Western Canadian teams will be over 10,000 people strong. And we'll bring together the best of the 2 corporate cultures that are both passionate, that are both focused on growth, that are both focused on serving customers and both focused on giving back to local communities. It's part of who we are, part of the culture of both companies.

The Western head office of the combined company will be located in the Shaw Court building in Calgary. The President of Western operations and other senior roles will be based locally, leading the combined company's western operations.

Both Ted Rogers and JR Shaw were passionate about investing in their communities, and this will only increase going forward. As part of this transaction, Rogers will build on Shaw's legacy of giving back to western communities. We're committed to working with the Shaw golf Charity Classic partners to extend this important event and the communities it supports over the next 10 years, as well as maintaining and growing local charitable giving and adding new youth scholarships to support the future talent pipeline in emerging technologies.

Western Canada is a major driver of our national economy. This combination of Rogers and Shaw will accelerate growth in the region and provide tremendous economic benefits and diversification to the West economy. The companies will have scale, expertise and commitment to deliver the technology and infrastructure needed, to keep western communities connected, businesses competitive and to attract new investment.

In summary, this transaction will happen at an important time for our industry, an important time for our country to enable the generational investments needed to make Canada-wide 5G a reality, to close the connectivity gap in rural, remote and indigenous communities much faster. So together then the next chapter for Rogers and Shaw is fundamentally about closing the digital divide, providing increased competition and choice for consumers and businesses and delivering best-in-class services and infrastructure to Canadians when it's needed most.

And with that, let me now turn the call over to Brad to provide his comments. Brad, over to you.

Bradley S. Shaw
Executive Chairman & CEO

Great. Thank you, Joe, for your kind words about JR, our family and for all our employees, who, for decades, have worked passionately to build resilient and successful companies that have always focused on serving our customers.

This is an exciting day as we celebrate the coming together of 2 great organizations built by thousands of great people. As many of you know, our families and our companies have known each other for many years, and we hold similar values and philosophies, including honesty, integrity, and a commitment to serving the needs of our customers and communities and treating our valued employees with care and respect.

For decades, Rogers and Shaw have been friendly but intense competitors. But all the while, we have respected each other, admired each other and learned from each other's actions. I would say that next to

Shaw's employees, we've learned to expect the best from our counterparts at Rogers, and I suspect they would say the same.

Since our first customer signed on in Sherwood Park, Alberta, Shaw has connected Canadians to their entertainment, their families and their businesses. For 50 years, my family has proudly worked alongside thousands of valued employees to build a Canadian success story.

Led by JR, we have always been builders of businesses and of networks. We've been successful because we have made generational investments whenever we took on a new challenge, whether it was to create a new cable plant, acquire other companies, or to leverage the latest technology to launch the Internet or a disruptive wireless business.

As we look to the future, there is unlimited potential. Connectivity and leading 5G technology will enable so much more than we can even imagine today. My family and I agree, the best way for us to serve our customers to deliver them the next-generation of network technology and services is to be a part of a strong national network.

The combination of Rogers and Shaw builds on the strong legacy of 2 families, founded Canadian companies and will create Canada's most robust, wholly-owned national network. By coming together, we will enable the scale, assets and capabilities to accelerate unprecedented investment, deliver new technology and more choice for Canadian consumers and businesses. Together, the new company will expedite the delivery of critical 5G service to customers across Western Canada from rural areas to dense cities, more quickly than either company could achieve on its own. This will be accomplished by bringing together the expertise and assets of both companies, including spectrum, Shaw's existing fiber plus network, WiFi and the wireless networks and Rogers' robust national wireless network and extensive 5G capabilities.

Today, we are taking the next step toward my father's dream of providing more Canadians with more world-class connectivity and better choices. My family and I fully support this transaction, and we look forward to being a part of the future success of the combined company. We truly are brighter together.

A big thank you to Edward, Joe and the entire Rogers team for their collaboration to make this possible. We are heartened by their commitment to our employees and our customers, and for stewarding the shared values that have made Shaw and Rogers so successful for decades.

I will now let Tony speak to the details of the transaction.

Anthony Staffieri
Chief Financial Officer

Thank you, Brad, and good morning, everyone. Let me start by reiterating Joe's and Brad's excitement for this transaction. This deal brings us immediate national scale and the opportunity to leverage wireless and wireline integration at a pace far exceeding what either of us could have done alone. And in particular, the financial benefits of the transaction to all shareholders are compelling.

Shaw's shareholders will benefit from a significant 70% premium on the transaction, and Rogers will be able to realize synergies that go well beyond the premium paid in the transaction and deliver meaningful growth in earnings, cash flow and share value. And in a record low interest rate environment, provide meaningful leverage upside in a primarily cash consideration transaction financed through debt.

Let me start by recapping the terms of the transaction. Rogers will be acquiring all of Shaw's Class A and Class B shares for a purchase price of $40.50 per share. This purchase price represents a 69% premium to Shaw's closing price of $23.90 per Class B share on the Toronto Stock Exchange on March 12, 2021, and a premium of 78% to the 20-day volume weighted average trading price on the TSX up to March 12. This price per share reflects total consideration of $20.4 billion for all shares outstanding or a transaction valued at $26.2 billion, inclusive of $5.8 billion of Shaw's net debt.

The offer is a 100% cash deal, except for approximately 60% of the shares held by the Shaw family, which will be exchanged for Class B shares of Rogers. The exchange ratio for these shares is based on the last

10-day weighted average trading value of Rogers' Class B shares and amounts to a conversion rate of 0.70 for each Class A or Class B share of Shaw that is tendered. This results in an estimated total 23.6 million shares of Class B shares issued by Rogers on closing.

The cash component of this transaction is estimated at $19 billion on closing, and we have secured all necessary short-term financing required to close this transaction. We do not foresee any requirement to issue equity or divest of any of Rogers' assets to fund this transaction.

On closing, our leverage ratio is expected to be just over 5x debt to EBITDA. However, we expect our leverage to quickly move to under 3.5x within 36 months of close, and we expect to retain our investment-grade credit rating throughout this period.

The transaction value reflects a valuation multiple of approximately 10.7x analyst's latest calendar year 2021 EBITDA estimates and a multiple consistent with recent telecom industry transactions. Importantly, we expect the transaction to yield substantial synergy benefits to the combined company in excess of $1 billion realized within the first 2 years of close. This reflects a post-synergy valuation multiple of 7.6x. We expect the transaction to be immediately accretive to earnings and cash flow per share. Our dividend payout ratio will fall to less than 30% within 24 months of close at current dividend levels.

Transaction has the irrevocable support of the Shaw family shareholders, and with that, a high degree of deal certainty. The transaction is being structured through a plan of arrangement in order to allow the Shaw family to receive a portion of their proceeds in RCI shares. As a result, a majority of the non Shaw family shareholders of the Class A and Class B shares is needed to support the plan of arrangement.

Mr. Brad Shaw will join the Board of RCI and the Shaw Family Trust will be entitled to appoint an additional member to the RCI Board. The transaction requires the approval of the Competition Bureau, the CRTC and ISED and is expected to close in the first half of 2022. A reverse break fee of $1.2 billion would be payable by Rogers to Shaw if the transaction does not close in certain circumstances.

The economic benefits of this transaction are sound and will add to Rogers' revenue and EBITDA by more than 40%. Additionally, the combination of the 2 companies will also diversify Rogers Cable/Wireless EBITDA mix to almost 50-50.

We are confident about our ability to execute on our synergies with most being cost and capital avoidance, which are within our control to realize. We have a proven history of delevering following periods of major investments and investors should feel comfortable, they will see a very timely return to our current leverage levels while providing the near and long-term value creation this transaction should generate. This transaction will create long-term value for both companies' shareholders. And just as important, this transaction will assure Canada's cable and wireless industry can support the significant capital requirements needed for 5G networks and the essential connectivity that rural Canadians desperately need.
Let me now turn the call back to the operator to commence with Q&A.

Question and Answer

Operator

[Operator Instructions]

Our next question comes from Drew McReynolds of RBC.

Drew McReynolds
RBC Capital Markets, Research Division

Congrats, Brad and Joe on this announced transaction. Guess I'll just start with 2 and then pass things along. First, on the regulatory approvals and specifically on the wireless side, clearly, there will be a fewer number of players in various markets. Can you provide kind of your view on that position and likelihood of approval? And can you also in that -- just talk to any discussions you've had on the regulatory side just for us to be able to gauge how far things are along?

Secondly, Tony, you said just with respect to leverage, no need for equity or asset sales. Maybe you could kind of drill down into that a little bit and just talk to the Cogeco stake talk to your non-telecom assets, Rogers Media and MLSE stake. Is there any kind of different view in terms of the strategic value of those assets, given some would argue a transformational acquisition here and really truly a focus on 5G?

Joseph M. Natale
President, CEO & Director

Let me start. Thanks, Drew, for the question. First of all, it's really too early to speculate on the regulatory outcome overall. But we feel confident this transaction will be approved. We expect the review to take between 9 and 12 months, think back to Bell, MTS took about 11 months or so.

It's important to bear in mind that 80% of Shaw's revenues and 97% of its free cash flow are earned from the wireline business, which does not compete directly with rum -- with Rogers, sorry. I'm saying rum for a long time with Rogers. It doesn't compete directly with Rogers.

We're going to work collaboratively with the regulators. They've got a set of procedures that we're going to work through. We've started engaging with them. We'll be constructive in that engagement. You know us to be always looking through the eyes and the lens of the government and the regulators and trying to figure out what is the smart solution, what is a smart outcome that makes sense for Canada, makes sense for consumers and makes sense for the combined company, and that's sort of what we're trying to solve for.

Some good conversations with some of the key people already. And we're going to be working this for the next many months. And we think we've got good set of things that we're putting out there. I mean there are 2 million homes in Canada that are underserved, either have no internet or have insufficient Internet based on the government's definition of underserved. And our $1 billion commitment goes a long way to closing that gap in addition to the universal broadband fund and other services in Western Canada. And our commitment to rural and remote communities, indigenous communities is -- it's an important part of what we're putting on the table here.

And looking forward, connectivity between urban and rural Canadians is the forefront of what's important to Canada. And 5G offers the ability to do that like never before. I mean 5G really is an amalgamation of wireline and wireless coming together to offer capabilities and connectivity that wasn't possible, given the economics of traditional landline, traditional 4G capabilities. So we believe that's an important factor in this discussion. And as well as having a national network is critical to being able to compete head on in all the different markets and segments of this business, especially in the business sector, but also in the consumer sector. More than ever, this is becoming a game and a market of working within both the wireline and wireless assets to drive opportunity and value and affordability to Canadians.

So we think we've got a good set of principles in place, and we've got a good relationship with the regulators, and we're just going to work it over next many months from the same side of the table.

Anthony Staffieri
Chief Financial Officer

With respect to the second part of your question, Drew, on leverage. As I said in my notes, on transaction close, our leverage will be just over 5x. We spent quite a bit of time in looking at our financial models and spent quite a bit of time with the credit rating agencies last week, walking them through those models and getting them comfortable and frankly, us comfortable, with what it -- those mean for our investment-grade rating. And as we go through those, we have a high degree of confidence that we can aggressively work down that debt to leverage ratio.

As I said in our notes, within a short period of time, we can get that leveraged under 3.5x, and that's really going to be on the back of executing the underlying business of Rogers, executing on the underlying business of Shaw and executing on the synergy benefits that we've identified as real intangible and can come quickly after the transaction close. So on that basis, we're comfortable that we will maintain our investment-grade rating throughout that period of time.

And so there's no need for us to look at selling any of our assets. Any decision with respect to Cogeco or other assets would be completely independent of this. And there's no decision to sell any of those assets.

Operator

Our next question comes from Jeff Fan of Scotiabank.

Jeffrey Fan
Scotiabank Global Banking and Markets, Research Division

I just want to congratulate both families, Brad and Joe for doing this deal. We've been waiting a long time for this. I'll start with a couple of housekeeping questions. Just regarding the synergies and what level of accretion that you guys are expecting on the back of this deal and particularly on the synergies, the breakdown, perhaps, between OpEx and CapEx?

And then just follow-on to Drew's regulatory question. Is regulatory approval, a condition of this transaction? And what level of divestitures, if any, are you willing to live with to get this deal done? And then finally, just on the operational side, it's a long closing. So what steps have both companies taken to ensure that there are no disruptions or distractions between now and close?

Anthony Staffieri
Chief Financial Officer

Jeff, thanks for your comments and questions. In terms of your first question on synergies, as we indicated in the comments, we see synergies in the realm of about $1 billion. And as I said, we see those as being very tangible. Most of that $1 billion relates to cost synergies. But we also see revenue synergies as well. We factored in less of those just because of the timing on them. But certainly, a quad play initiative is going to be an important upside for us. And as we think about having a national network for enterprise, we see opportunity there as well. But focusing on the cost side, that's where we see the majority of real tangible benefits.

We'll not get into the details of those. The transaction is quite a ways from closing. But you can expect them to be thoughtful, sustainable and balanced as we think about now being a national company with national presence.

In terms of CapEx savings, the opportunity for duplication is large, as you would expect. Our intent is to put much of that money saved into the investments that Joe spoke about earlier in terms of more fiber, more connectivity, more rural connectivity and a few other programs related to the network. So net-net, we do expect a net savings on CapEx, but it'll be -- our expectation, relatively mild compared to the OpEx synergies.

Joseph M. Natale
President, CEO & Director

And Jeff, on the regulatory side, I won't repeat what I said to Drew a few minutes ago, but I'll just reiterate one point that we feel confident in our ability to strike a good and balanced regulatory outcome. It's going to mean sitting down and just working through the pieces. We think as it relates to the cable business, it's complementary. There's virtually no overlap et cetera, and we've talked about that. So this comes down to discussions on the wireless business.

And I won't get into sort of what is our thinking on that for obvious reasons. But I would tell you that we're committed to getting this transaction done. This transaction does not get done without regulatory approval, and it's our responsibility to make that happen. And we're going to sit down with regulators and just work through the pieces. We're taking ideas and instruction from other transactions that have been done in Canada, in other parts of the world in terms of what is the best way to kind of strike that balance. But I would say, broadly, we're committed to 2 important planks: one is bridging the digital divide and providing connectivity for rural Canadians that have been left behind for far too long; and number two, continue to drive the affordability equation.

And that's why you've read in the announcement, a whole bunch of comments around affordability. And from the very beginning, Rogers has been focused on affordability, whether it's the launch of Unlimited, whether it's Connected for Success, and Shaw has been very much on that same page. So we share that ethos and that value set. So between driving the close of digital divide and driving affordability options, while maintaining some of the best networks in the world, the one thing we're all proud of as Canadians is that we have some of the very best networks in the world. We always rank #1 and #2 globally.

The challenge now is on for 5G. We have to maintain that crown in the 5G world. And 5G, more than ever, will infuse capabilities and opportunities for consumers and businesses, especially small and large businesses and some critical sectors in Canada that will rely on 5G technology. So this is about nation building, and the conversation is really about nation building that we plan to have with the government.

Regulatory environments are set for the time and for the future. And regulatory policies are set for the time and for the future. And the discussions that we've started having are that we need to have a regulatory environment and principles and support for the future of Canada. We can't take the policies and the environment from the past and apply them to the future. And that future focus, I think, is what's going to help us do these great things that I've been talking about.

And I think the regulators would agree that we ought to sit on the same side of the table, look to the future and say, what are the right principles and policies here that make sense for Canada, that make sense for rural Canadians, that make sense for small and large businesses so that we can come out of this recovery strong and we can set the table for the next generation. This is a legacy item for me, for Brad, for both management teams. And it's a legacy item, frankly, for our government as well in terms of the future focus for Canada. So -- and we're going to work through it over the next many months and do so thoughtfully. We've got a number of really good ideas around that, and we'll promise we'll keep you up to speed as it evolves.

In terms of the closing period being long, I mean, I'll speak to the Rogers' side of things, and then I'll ask Brad to speak to the Shaw's side of things. I mean, frankly, over the close period, it's business as usual at Rogers. We've got lots of great opportunities as we come out of COVID. The economic recovery will bolster opportunities and outcomes for us as travel returns and roaming resumes, as restrictions are lifted, and we see more and more traffic in our stores, like this is about the slingshot coming out of COVID.

The team is squarely focused on that, squarely focused on all of our businesses, Wireless, Cable, the enterprise business in Rogers for Business and the Media side, all of them have a trajectory that we're very proud of. And we're going to continue doubling down on that. We've got a strong management team, and it's business as usual, frankly, from our perspective. Brad, over to you.

Bradley S. Shaw
Executive Chairman & CEO

Great. Thanks, Joe. I guess a couple of things there, Jeff. I think, first of all, we got an excellent retention plan for all our key executives as we go through this regulatory approval. And I'd also just add that we have the interim operating covenants that gives us all the flexibility we need to compete and to make sure we deliver the business to Rogers. So we're feeling really good about the next year or so.

Operator

Our next question comes from Tim Casey of BMO Capital Markets.

Tim Casey
BMO Capital Markets Equity Research

Could you talk a little bit, Brad, about -- it's business as usual, but we have upcoming spectrum auctions, and there is spectrum that is set aside for Shaw. How can we reconcile that with respect to the regulatory review? Can you, I guess, one, confirm, Brad, that Shaw -- it will be business as usual, so to speak, with respect to spectrum? And does that complicate things on the regulatory side?

And then just back to synergies. Tony, can you talk a little bit about, on the cost side, how you're going to get there from the OpEx perspective? What -- is there major areas of low-hanging fruit beyond the obvious cost of operating a public company at Shaw? Where is the easy money to be found on the synergy side?

Bradley S. Shaw
Executive Chairman & CEO

Great. Well, I can start. Tim, it's going to be quick. But due to the auction rules, I'm unable to comment on the 3500 auction coming up. So unfortunately, I can't give you any color there.

Anthony Staffieri
Chief Financial Officer

And Tim, on the synergies, let me provide just a little bit of color. I mean, as you work through it, I'll say that the number we've put forward is, as you'll know, consistent with what you would have seen announced and realized on other deals in the telecom sector, not only in Canada, about south of the border. And in particular, as you look to European deals where there are many more wireline and wireless deals and have synergies. And so the number we're quoting is very much in the realm of, I would say, the average or median of those deals. And so you should take that as a proof point in terms of credibility.

The specific areas, we really don't want to get into. They'd be -- the deal is still a year out; and two, the pieces of the deal are still moving around as we work through the regulatory approval processes. And so it's still -- it's way premature to start divulging some of the specific areas. And so we'll leave you with the view that based on the work we've done, the due diligence. We are confident on our ability to execute on those synergies, and we'll leave it at that.

Tim Casey
BMO Capital Markets Equity Research

I understand. Are you able to provide any clarity on -- with respect to the set aside spectrum and how that would be viewed within the regulatory review process?

Anthony Staffieri
Chief Financial Officer

No, we can't provide any clarity, Tim. We're in a quiet period around spectrum, and it's -- we're unable to comment whatsoever.

Operator

Our next question comes from Aravinda Galappatthige of Canaccord.

Aravinda Suranimala Galappatthige
Canaccord Genuity Corp., Research Division

Congratulations to both companies and the families on the deal. 2 questions from me. number one, thinking beyond the cost synergies, the OpEx synergies, I should say, when you think of 5G, obviously, and Joe, you alluded to this quite a bit during your prepared remarks. When you think of the infrastructure that Shaw brings in the West, it's conceivable that there is far more significant CapEx savings as we go several years down the road when you think of the infrastructure and the backhaul needed for 5G. I was wondering if you can talk a little bit about that?

And secondly, I'm not -- I guess, based on the comments you made, you may not be able to break this down, but I was curious as to sort of the wireless/wireline OpEx synergy breakdown, if Tony can provide that at all. If not, that's fine, it's understandable. I'll leave it there.

Joseph M. Natale
President, CEO & Director

Thanks, Aravinda. I mean one thing to bear in mind is that 2 things are happening. One is 5G comes with a bunch of technologies that are game-changing around spectral efficiency, around the promise to fixed wireless, around the opportunity with respect to small cells. Like as we've talked in the past, 5G isn't just another G. 5G has a bunch of technologies that will further change how the networks are built and how we connect Canadians. And it's not just about wireless, 5G and the wireline fiber networks work together very closely.

I mean, the magic of 5G is as much about the wireless capability as it is about the wireline capability behind it. And gone will be the day soon where we talk about a network versus another network, it's just a network. It's just a network. And not to diminish the complexity and the skill in the art of it. There's a lot of skill behind it. But it's a network that uses all the modes of communications, whether it's glass, copper, coax, to transport signals through wireline networks and then uses the power of 5G and eventually 6G to kind of deliver that in different ways across different parts of the country.

And I think that synergy would just get stronger over time, and that opportunity gets stronger with time. And that's why scale is important. Scale is important. And we'll get to a place even with consumers where we offer them bandwidth, whether it's at home or on the go, right? It'll be sort of indifferent to whatever device they're on. It's just connectivity period.

So this is all coming together. If I can put you in a time machine, we get to a place where there's one network and one access to it that's delivered through all kinds of capabilities in the background. And therefore, you take a look at Shaw's extensive fiber network, you take a look at our extensive wireless network, you take a look at our strength and if both companies in cable and the connected home and both on the Comcast platform that we spent the last few years, delivering and deploying, it really is all coming together to create one capability that's virtually nationwide and will enable the future in a substantial way.

And there'll be synergies that go far beyond the near-term with respect to what that means as this industry evolves and develops. So I think we'll look back at this in 10 years' time and say, what a game changer that was for the combined organizations, and well look what it meant to Canada.

So we're very bullish on that. We haven't included any of that math in our models. Our models are kind of boring. Our models are very much like where are the synergy savings based on the year and now. And this deal stands up and makes sense just on that alone. So that's our mindset as a whole.

Anthony Staffieri
Chief Financial Officer

Aravinda, on the second part of your question, in terms of the split between wireline and wireless. We see the opportunities in both. But from a pragmatic perspective, when we talk about the net $1 billion synergy, let me put it in the context of when you look at Shaw's cash flow, over 90% of the cash -- free cash flow comes from the cable business. And so accordingly, when we talk about net benefits it is predominantly focused on the cable side of the business. Both of them long-term for sure, but pragmatically, just given the relative sizes, that's where we see it.

Operator

Our next question comes from Adam Shine of National Bank.

Adam Shine
National Bank Financial, Inc., Research Division

Congratulations to all parties. Maybe a few for Tony and then one for you, Joe. Just Tony, in terms of the $1 billion, obviously, over the course of the next 2 years, you've had a few questions on this from different angles. Maybe one more. Just in terms of how it might skew over that 24-month time frame? I mean, are we looking like 30-70 or some other sort of variation? With respect to accretion levels, I mean, it looks like the deal is, as has been alluded to, is rather material. I don't know if you can put any numbers around it. But are we talking potentially 30% EPS free cash flow accretion ex synergies?

And then maybe for you Joe, just in terms of timing, I understand the rationale for the deal from a timing perspective. I mean it does come just before the conclusion of the wireless review. It's been alluded to earlier that it does come also ahead of the spectrum auction, maybe neither of which had any particular issue in regards to how the parties negotiated and acknowledging the long lead time here. But just curious in regards to your thoughts as to timing. And then I don't think it was asked, but who came first? Did you approach Shaw or did Brad come forward to you?

Anthony Staffieri
Chief Financial Officer

Adam, I'll start with the first part of your question. In terms of the synergies, as we modeled out the various years, in the first 2 years, we see it roughly in the range of 55-45. And so it's almost split between the 2 years for practical purposes.

In terms of the second question, not to get too deep into some of the modeling stuff, but the accretion on various metrics, in particular, EPS that you mentioned, but also I urge you to look at and consider free cash flow per share, it's substantial. And it's reflective of the benefit we get with the leverage structure we're putting into the transaction.

You had quoted a number of, I think, 30% on EPS. And without getting into specifics, that certainly is in the realm of how we think about the potential upside.

Joseph M. Natale
President, CEO & Director

And Adam, in terms of timing. I'll let Brad talk to the history of this conversation. But in terms of timing, I would say the timing is -- from a macro perspective, I think it's very good timing. We're on the doorstep of 5G. I won't go over that again, but time is now around that. Rural connectivity is important as we come out of COVID. The time is now around that and big government support from things that are happening, both federally and provincially and through the CRTC on that side. And the capital markets are supportive. I mean, capital markets in terms of the debt markets and the support financially for this transaction has been terrific.

So I mean, those are the things that really are kind of front and center for us. It's sort of what does it mean for Canadians? What does it mean for the future in terms of our industry and infrastructure? And what does it mean for the capital markets? And those are the 3 things that kind of came together at this point in time, fueled by the desire of both organizations to make it happen. I don't think it's more complicated than that.

And no matter when you do it, there are things to navigate with respect to what's happening around it. And we're fully prepared to do exactly that. Brad, any thoughts or comments?

Bradley S. Shaw
Executive Chairman & CEO

Yes, sure. Thanks, Adam. And I would just -- as you -- as you know, the families have had a long relationship, and we've had ongoing conversations. And Joe and I are always talking about the industry or where things are going from a variety of angles. And I can tell you that probably late in the fall and even late in the summer under COVID, we've had to do a little bit of dance and tried to do things. But we've -- we're -- we've explored where things might go and opportunities. And I think as we look at that and looked at what Shaw was facing from investment cycle and scale and a variety of other conditions, we decided to take a deeper look. And I think Joe was able to come out.

We met at a Calgary airport and [indiscernible] and everything else, and it kind of took off from there. And I think this is the conclusion of that over the last couple of months. And I think we've -- we're very pleased how it kind of came together, and we took our time to make sure we did all the right things as we looked where Shaw had the future and the opportunity and believe this is the best course going forward for our company to go together with Rogers.

Operator

Our next question comes from Batya Levi of UBS.

Batya Levi
UBS Investment Bank, Research Division

Congratulations. I just wanted to ask 2 quick questions. One, if you could provide some color on how you would approach your cable strategy going forward? Would it be an integration of licensing the Comcast platform or any color would be great?

Second is, I noticed that you had given some commitments to maybe Freedom customers, I saw for no change of pricing for at least 3 years after the close. Can you talk a little bit about maybe other commitments that you have made? And maybe the $1 billion rural CapEx commitment, how many homes would that be and how long it would take?

Joseph M. Natale
President, CEO & Director

Thank you, Batya. First of all, we're both on the Comcast platform. We're both on the same version of the Comcast platform. We've been sitting across the table from each other in Comcast meetings and discussions around the nature of the technology and the road map. So we're well-versed, both organizations and the synergy is there, both in terms of the video platform, but also the design and construction of the network and the way the network has been thought through is very complementary.

And the history of cable has been about cable companies coming together. And the synergies are born out of the fact that the technology is similar, the technology and the platforms are similar, and therefore, the synergies are very, very strong from that perspective. We've got the added benefit of being on very much the same video platform as we do this. And I think that's a strong opportunity for us.

On the rural side, it's $1 billion of net new investment. There are 600,000 homes in Western Canada that are underserved by the definition of underserved, either they have no internet or they fall below the 5010-meg service level that's been articulated by the government. The federal government has a $1.75 billion Universal Broadband Fund. So $1 billion in the West is substantial. I'm not going to get into the number of homes exactly that we will cover, et cetera, but it's substantial.

And it's a combination of fiber, coax and fixed wireless. And fixed wireless will allow us to stretch network capability and footprint capability like never before, into less densely populated areas. So we think we get a lot of bang for our buck with respect to 5G and fixed wireless and where that takes us as well as the traditional sort of trenching and extending the fiber networks. And we think this is a very important initiative, not just for our business as we grow our network and grow our business and grow our customer base, but also from a nation-building Canadian policy point of view.

Operator

This concludes the question-and-answer session. I will now turn the conference back over to Joe Natale for any closing remarks.

Joseph M. Natale

President, CEO & Director

Thanks, Ariel. Let me just say, on behalf of the Rogers team and the Shaw team, we're really excited about what we do together, stronger together is sort of the theme and the anthem for this entire combination. We think we've got a great set of combined assets. We've got 2 great management teams, great capabilities that give us the right scale and the right opportunity to deliver more for Canadians and to deliver capability that's future proofed. Capability that will be there for generations to come, and that we'll continue to put Canada on the top of the map with respect to the capabilities that have built this great country around telecommunications.

Really in the spirit of our founders of JR Shaw and Ted Rogers, we're just picking up where they left off from that perspective and setting the table for the next generation. And our goal overall is to have that team down the road, and look back and say, thank goodness that this team made those investments and built up this capability.

We feel confident in the synergies. We've been through them. As you would imagine, expect us to do exhaustively, looking at all the comparables that Tony -- as Tony mentioned, doing bottoms-up in all the various synergy cases. We feel confident in our ability to drive down our leverage and deliver the cash benefit. And so it's great opportunity. These are scaled businesses. These are scaled businesses with high fixed costs. And therefore, economies of scale and scope really matter. And we've got the opportunity to do just that.

And then the last thing I would say is that we've got a great talent pool in both organizations. And whenever you take 2 great talent pools and bring them together, wonderful things happen. So we're very pleased -- we're very confident in getting to a good regulatory outcome. I know there's a lot of questions around that point today, but we've got some good thinking on that front, some great advisers. And we have -- we're very confident in where we'll land. Overall, that will be beneficial, make this deal work and lay the foundation for the future I've described.

So thank you for your time and attention, and we'll -- sure we'll be speaking to each other very soon.

Operator
This concludes today's conference call. You may disconnect your lines. Thank you for participating, and have a pleasant day.

ROGERS Shaw

Safe Harbor

This presentation includes “forward-looking information” within the meaning of applicable securities laws relating to, among other things, the anticipated benefits of the transaction, the anticipated timing for the special meeting to approve the transaction, the timing and anticipated receipt of required regulatory approvals and the anticipating timing for closing the transaction. Forward-looking information may in some cases be identified by words such as “will”, “anticipates”, “expects”, “intends” and similar expressions suggesting future events or future performance.

We caution that all forward-looking information is inherently subject to change and uncertainty and that actual results may differ materially from those expressed or implied by the forward-looking information. A number of risks, uncertainties and other factors could cause actual results and events to differ materially from those expressed or implied in the forward-looking information or could cause our current objectives, strategies and intentions to change. Accordingly, we warn investors to exercise caution when considering statements containing forward-looking information and that it would be unreasonable to rely on such statements as creating legal rights regarding our future results or plans. We cannot guarantee that any forward-looking information will materialize and you are cautioned not to place undue reliance on this forward-looking information. Any forward-looking information contained in this news release represent expectations as of the date of this news release and are subject to change after such date. However, we are under no obligation (and we expressly disclaim any such obligation) to update or alter any statements containing forward-looking information, the factors or assumptions underlying them, whether as a result of new information, future events or otherwise, except as required by law. All of the forward-looking information in this news release is qualified by the cautionary statements herein.

Forward-looking information is provided herein for the purpose of giving information about the proposed transaction referred to above and its expected impact. Readers are cautioned that such information may not be appropriate for other purposes. The completion of the above-mentioned proposed transaction is subject to customary closing conditions, termination rights and other risks and uncertainties including, without limitation, court, shareholder and regulatory approvals. Accordingly, there can be no assurance that the proposed transaction will occur, or that it will occur on the terms and conditions contemplated in this news release. The proposed transaction could be modified, restructured or terminated. There can also be no assurance that the strategic benefits and competitive, operational and cost efficiencies expected to result from the transaction will be fully realized.

A comprehensive discussion of other risks that impact Rogers and Shaw can also be found in their public reports and filings which are available under their respective profiles at www.sedar.com..

Strong Legacy and Shared History

Ted Rogers JR Shaw

Strategic Rationale

Enhanced Scale	• Combination creates a coast-to-coast wireline network and wholly-owned national wireless network with spectrum capacity needed to serve next generation technologies
Wireline Network Expansion	• Access to a high-quality, deep fibre network across western Canada to support consumer and enterprise offerings
Near-National Consumer Offering	• Ability to offer bundled wireline and wireless across a larger footprint • Reduction in churn expected from increased bundling potential
Rural Expansion	• Offers opportunity to provide rural expansion through 5G & fixed wireless access technology
Synergistic Benefits	• Provides new cable and wireless technologies for Shaw consumers • New offerings for enterprise customers • Cost savings with a larger customer base, reduced real estate, and leveraging best practice

Strength of Rogers + Shaw

Delivering Connectivity and Investment Across Canada

Combined company will help Rogers close the digital divide, deliver best-in-class-services and infrastructure, and provide increased competition and choice for Canadian consumers and businesses

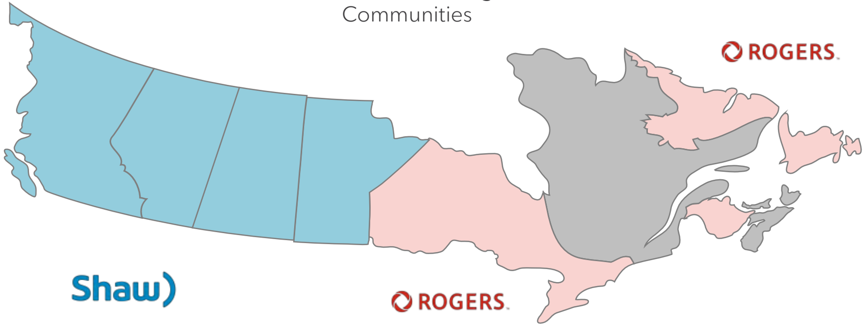
Combined Footprint

$3.7B
Annual Capex

$2.5B
Commitment to 5G Investment for the West

10,000
Combined Western Canada Team Members

$1B
Dedicated Investment to Connect Rural, Remote and Indigenous Communities



Benefits to Customers and Communities

- Brings together Shaw's fibre-to-home, WiFi and wireless networks with Rogers' robust national wireless network and 5G capabilities
- Will continue offering affordable wireless plans including no price increases for Freedom Mobile customers for at least three years following the close of the transaction
- Doubles number of Rogers wireline subscribers, creating a coast-to-coast internet provider that can bring healthy competition to large enterprise and government customers
- Accelerates deployment of 5G across the country, including Western Canada
- Committed to investing in our communities and increasing charitable giving
- Combination will accelerate growth in the region and provide tremendous economic benefits and diversification to the West's economy

Commitment to Western Canada

- Committed to accelerate deployment of 5G and new technologies in Western Canada through significant investment
  - $2.5 billion investment in 5G networks in Western Canada, driving economic growth and strengthening innovation sector
  - Creation of $1 billion Rogers Rural and Indigenous Connectivity Fund dedicated to connecting rural, remote and Indigenous communities to high-speed Internet
  - Additional $3 billion to support additional network, services, and technology investments
- Investments to create up to 3,000 net new jobs and deliver major long-term benefits for Western businesses and consumers
- Western head office of the combined company to remain in Shaw Court in Calgary; President of Western operations and other senior roles to be based in new HQ
- Committed to working with the Shaw Charity Classic partners to extend for the next ten years as well as continuing local charitable giving and adding new youth scholarships to support the future talent pipeline in emerging technologies

Brad Shaw
Executive Chair and Chief Executive Officer

Shaw Communications Inc.

Transaction Details

Key Offer Details

- Rogers to acquire all of Shaw's Class A and Class B shares for $40.50 per share
  - Reflecting a ~70% premium to Shaw's Class B share price
- Shaw Family fully committed to transaction
  - Rolling 60% of their ownership
  - Will be a ~4.5% shareholder in Rogers
  - Agreed to a 15 month hard lock-up to vote in support of the transaction
  - Brad Shaw, and another Director to be nominated by the Shaw Family, will join the Board of Rogers
- 100% cash consideration for shares not held by the Shaw Family
- Transaction to be effected through a Plan of Arrangement

Financial Highlights

- Significantly accretive to free cash flow per share
- Reduces dividend payout ratio to below 30% within 24 months of close
- Maintains investment grade credit profile
- Expected net leverage at close of just above 5.0x
  - Deleveraging to ~3.5x within 36 months of close

Financial Overview

($B)	
Total Equity Value of Offer	$20.4
Net Debt (incl. preferred shares)	$5.8
Enterprise Value	**$26.2**
Transaction Multiple EV/CY21E EBITDA[1]	**10.7x**
Transaction Multiple (post synergies) [2]	**7.6x**

Financing Structure

- Cash component of this transaction is estimated at $19 billion on closing
- Required financing in place
- Shaw's existing debt to roll into the combined Company

1. Based on Factset consensus estimates
2. Assumes $1.0 billion of annual synergies

Next Steps

April	• File all regulatory approvals • Mailing of proxy circular to Shaw shareholders
Early May	• Shaw shareholder meeting to vote on Plan of Arrangement
Q1 2022	• Regulatory approval • Transaction closing

Significant Value Creation Opportunity for Rogers

Transaction is expected to generate significant revenue and efficiency opportunities

Revenue Growth	• Bundle opportunity • Improve customer service and reduce churn • Coast-to-coast fibre network
Operational Efficiencies	• Network and IT • Procurement • Distribution and Marketing • SG&A
Capital Efficiencies	• Network infrastructure • IT and back office • Fibre build

Shaw Communications Inc.
REPORT TO SHAREHOLDERS
August 31, 2014

Dear Fellow Shareholders:

Our performance in fiscal 2014 reflects our continued focus on the delivery of exceptional experiences and leading technology to our customers and viewers, a disciplined focus on operational efficiencies, and sound capital management creating value for all stakeholders.

We believe our past and future success has been, and will continue to be, a direct result of our commitment to understand and meet the needs of our customers and viewers. During fiscal 2014 we have continued to take steps to evolve our business as we seize the opportunities and address the challenges of today's environment. The shift over the last several years in how Canadians connect with one another and consume entertainment and other content continues to change our business and the telecommunication landscape. To remain competitive, we have chosen to become a network and content experience company.

We have leveraged the strength of our leading network infrastructure and our access to great content to launch services that Canadians can enjoy on any device they choose. During the past year we partnered to expand our offerings to include a music streaming service from Rdio and online shopping through shop.ca, and we also launched several apps for mobile devices that expanded our robust suite of TV Everywhere offerings. Most recently we launched video streaming from shomi – a made-in-Canada on-line content experience service with cutting-edge customization and an impressive depth of programming choice.

We are a leader in customer-friendly innovation. Shaw Go WiFi has brought an entirely new connectivity experience to Western Canadians. As Canada's largest WiFi network, Shaw Go WiFi brings our customers seamless coverage through more than 45,000 access points. Our customers have registered more than 1.25 million devices for use on Shaw Go WiFi.

We are identifying areas for growth that are meaningful for our customers today and in years to come. In September 2014, we closed the acquisition of ViaWest, Inc., which provides us with a growth platform in the attractive North American data centre sector and is a significant step in expanding our technology offerings for mid-market businesses in Western Canada. The experience and expertise of the ViaWest management team will drive the next phase of that business' growth in the U.S. while accelerating the development of our domestic data centre platform.

Shaw reaches virtually all Canadians through our business. We serve over three million Canadian households with broadband Internet, WiFi, digital phone and video services, and we deliver Global Television to almost all Canadian homes, along with the 19 specialty networks of Shaw Media. We take seriously our responsibility to earn the trust and business of each of these customers and viewers and know their loyalties are constantly tested in today's dynamic environment through fierce competition from an increasing number of networks, content and service providers. We thrive on this rivalry, challenging ourselves everyday to better serve our customers.

FINANCIAL AND OPERATIONAL PERFORMANCE

Our diligent cost management and disciplined pricing approach to the market continues to resonate in our financial results.

In fiscal 2014, we delivered revenue and operating income before restructuring and amortization growth of 2%. After considering the impact of acquisitions and dispositions, operating income before restructuring and amortization growth was 3%. Free cash flow for the

Shaw Communications Inc.
REPORT TO SHAREHOLDERS
August 31, 2014

year rose to $698 million, an improvement of 15% over the prior year. In fiscal 2014, we also increased our dividend by 8%, returning $485 million to shareholders.

During fiscal 2014 we continued to make the necessary capital investments, spending over $1 billion as we maintain, grow, and enhance our infrastructure, which includes one of North America's most extensive and advanced fibre networks.

Our capital structure and healthy liquidity position support investment grade ratings. We enter 2015 with solid cash flows and a strong balance sheet providing the financial flexibility to capitalize on opportunities as they arise.

During fiscal 2014 we reorganized our management and implemented various initiatives designed to improve our overall performance, enabling us to enhance efficiencies, standardize best practices and drive accountability. We filled gaps in our leadership team with high caliber talent from outside the Company, and most importantly, ended the year with a renewed customer centric focus.

We are entering fiscal 2015 with a solid foundation across our business. We know that we cannot afford to preserve the past. If we are to serve the growing and changing needs of our customers and remain competitive with the proliferation of alternatives available, we need products, services and solutions that look forward, that promote choice, and that go where the consumer is going and not where that consumer has been. Whether it be on traditional linear TV or new streaming technologies enabled by the Internet, Canadians want access to content anytime they want, anywhere they are, and on the device that most suits their needs.

At Shaw, every decision we make, and every initiative we launch, is driven by customer choice and the imperative to bring quality, reliability, innovation and value to the customer and viewer experience.

OUR COMMUNITIES

We are proud to give back in the communities we serve. In fiscal 2014, Shaw contributed approximately $60 million in cash and in-kind contributions to charitable and community organizations working to make our neighbourhoods and cities better places for everyone.

We are also proud to be the founding title sponsor of the Shaw Charity Classic. In two short years, this event has become the best on the Champions Tour showcasing golf's greatest players. This tournament has donated more than $4.5 million toward children's charities in Southern Alberta while giving thousands of people the chance to see world class golf in Calgary.

CONCLUSION AND OUTLOOK

The past year has been filled with change and opportunity for our business and our employees. We expect nothing less as we look forward to fiscal 2015 and beyond.

The rapid changes in our industry have attracted the attention of regulators and policymakers in Canada, and we are pleased to continue to work with them to identify and develop policies that are in the best interests of Canadians. We appreciate the opportunity to participate in a variety of forums, including the Let's Talk TV proceedings launched by the Canadian Radio-television and Telecommunications Commission, to provide our views and to emphasize our commitment to our customers and viewers.

Shaw Communications Inc.
REPORT TO SHAREHOLDERS
August 31, 2014

Our 14,000 employees have proven they are among the best in our industry. Their commitment to our customers and our viewers is unparalleled and we thank them for all that they have done to create value and pride in our Company.

We are excited by the potential of our business in the future, and we are grateful for the continued confidence and support of our fellow shareholders in Shaw Communications Inc.

In closing, we would like to acknowledge the significant contribution made by Paul Robertson, who passed away September 2, 2014 after a courageous battle with cancer. Paul was an inspiring leader, generously sharing his insight and wisdom with all around him. Paul's passion for the Canadian media industry, his warm personal leadership style and infectious sense of humour made him truly one of a kind and we are honoured to have had him as part of our Shaw Leadership Team.

CAUTION CONCERNING FORWARD LOOKING STATEMENTS

Statements included in this Management's Discussion and Analysis that are not historic constitute "forward-looking statements" within the meaning of applicable securities laws. Such statements include, but are not limited to, statements about future capital expenditures, asset dispositions, financial guidance for future performance, business strategies and measures to implement strategies, competitive strengths, expansion and growth of Shaw's business and operations and other goals and plans. They can generally be identified by words such as "anticipate", "believe", "expect", "plan", "intend", "target", "goal" and similar expressions (although not all forward-looking statements contain such words). All of the forward-looking statements made in this report are qualified by these cautionary statements.

Forward-looking statements are based on assumptions and analyses made by Shaw in light of its experience and its perception of historical trends, current conditions and expected future developments as well as other factors it believes are appropriate in the circumstances as of the current date. These assumptions include, but are not limited to, general economic conditions, interest and exchange rates, technology deployment, content and equipment costs, industry structure, conditions and stability, government regulation and the integration of recent acquisitions. Many of these assumptions are confidential.

You should not place undue reliance on any forward-looking statements. Many factors, including those not within Shaw's control, may cause Shaw's actual results to be materially different from the views expressed or implied by such forward-looking statements, including, but not limited to, general economic, market and business conditions; changes in the competitive environment in the markets in which Shaw operates and from the development of new markets for emerging technologies; industry trends and other changing conditions in the entertainment, information and communications industries; Shaw's ability to execute its strategic plans; opportunities that may be presented to and pursued by Shaw; changes in laws, regulations and decisions by regulators that affect Shaw or the markets in which it operates; Shaw's status as a holding company with separate operating subsidiaries; and other factors described in this report under the heading "Known events, trends, risks and uncertainties". The foregoing is not an exhaustive list of all possible factors. Should one or more of these risks materialize, or should assumptions underlying the forward-looking statements prove incorrect, actual results may vary materially from those described herein.

The Corporation provides certain financial guidance for future performance as the Corporation believes that certain investors, analysts and others utilize this and other forward-looking information in order to assess the Company's expected operational and financial performance and as an indicator of its ability to service debt and return cash to shareholders. The Company's financial guidance may not be appropriate for this or other purposes.

Any forward-looking statement speaks only as of the date on which it was originally made and, except as required by law, Shaw expressly disclaims any obligation or undertaking to disseminate any updates or revisions to any forward-looking statement to reflect any change in related assumptions, events, conditions or circumstances.

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

I. INTRODUCTION TO THE BUSINESS

A. Company overview – core business and strategies

Shaw Communications Inc. ("Shaw" or the "Company" or "Corporation") is a diversified communications and media company. Shaw serves 3.2 million consumers and businesses through a reliable and extensive fibre network. Shaw provides consumers with broadband Internet, WiFi, Digital Phone, and cable and satellite television. Shaw Business, provides businesses with Internet, data, telephony, television and fleet tracking services, and ViaWest provides collocation, cloud and managed services. Shaw Media provides Canadians with engaging programming content through one of Canada's largest conventional television networks, Global Television, and numerous specialty networks. Shaw provides customers with high-quality entertainment, information and communications services, utilizing a variety of distribution technologies.

Shaw's business is encapsulated within its vision statement: "We, the leading entertainment and communications company, deliver exceptional customer experience through outstanding people sharing Shaw values."

Shaw's strategy is to maximize shareholder value through the generation of free cash flow.[1] The key elements of this strategy include: leveraging its network infrastructure and programming assets to offer customers a wider variety of products and services; enhancing existing products to provide greater value to customers; providing exceptional customer service; bundling product offerings to provide value to both Shaw and the customer; and focusing on sound capital management and operational efficiencies to maintain a competitive edge.

The strategy also includes promoting brand awareness, strengthening the Shaw name from coast to coast. The Shaw brand is synonymous with diverse product offerings and high-quality customer service.

During 2014 the Company operated three principal business segments: (1) Cable – comprised of cable television, Internet, Digital Phone and Shaw Business operations; (2) Satellite – comprised of direct-to-home ("DTH") and Satellite Services; and (3) Media – comprised of television broadcasting. As a percentage of Shaw's consolidated revenues for the year ended August 31, 2014, the Cable, Satellite and Media divisions represented approximately 63%, 16% and 21% of Shaw's business, respectively. During 2014 Shaw's businesses generated consolidated revenues of $5.2 billion.

A fourth business segment, Wireless, was in the development/construction stage during 2010 and 2011. During 2008 the Company participated in the Canadian Advanced Wireless Spectrum ("AWS") auction and was successful in acquiring 20 megahertz of spectrum across most of its cable footprint. In March 2010 the Company commenced activities on a traditional wireless infrastructure build and late in 2011, after completing a strategic review of this initiative, decided to not pursue a traditional wireless business. During 2013 the Company entered into an agreement with Rogers Communications Inc. ("Rogers") to grant Rogers an option to acquire its wireless spectrum licenses. The potential option exercise for the sale of the wireless spectrum licenses is subject to various regulatory approvals.

[1] See definitions under key performance drivers on page 21.

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

During 2014, Shaw announced changes to the structure of its operating divisions to improve overall efficiency while enhancing its ability to grow as the leading network and content experience company. Shaw's existing residential and enterprise services will be reorganized into new Consumer and Business units, respectively, with no changes to the Media division. In addition, in September 2014 the Company closed the acquisition of ViaWest, Inc. ("ViaWest"), a US-based provider of data centre infrastructure, cloud technology and managed IT solutions. ViaWest will continue to operate as a standalone unit. The Company expects to commence reporting on the new divisions of Consumer, Shaw Business, ViaWest and Media in fiscal 2015.

The description of the Company's operating business segments, including more specific details for the last two fiscal years follows.

B. Description of the business

(i) Cable

Shaw's Cable operations provide Cable television, Internet, and Digital Phone services to residential and business customers. These services are delivered through an extensive fibre optic and co-axial cable distribution network.

Shaw's strategy is to leverage its network by providing products and services beyond traditional cable television. In past years, it enhanced the quality, depth and capacity of its plant and network infrastructure through significant capital investments, and the plant and network is essentially fully digital and two-way capable. These investments have enabled Shaw to expand its service offerings to include digital programming, On Demand programming, High Definition ("HD") television, Internet, WiFi, various on-line or over-the-top ("OTT") offerings, and Digital Phone. In 2013 Shaw substantially completed a major upgrade of its co-axial cable network to convert analog television tier services to digital and reuse the spectrum on the cable plant for other purposes. The reclamation initiative was referred to as the Digital Network Upgrade ("DNU").

This upgrade significantly increased the capacity of the Shaw network and allows the Company to expand its Internet, HD and On Demand offerings. Shaw's investments in plant infrastructure will also accommodate further growth opportunities. Shaw continues to invest in technology initiatives to reclaim bandwidth and optimize the capacity and efficiency of its network, including increasing the number of nodes in the network and using advanced encoding and digital compression technologies such as MPEG-4.

To take advantage of potential administrative, operating and marketing synergies that arise from larger, focused operations, Shaw has consolidated its position as the dominant provider of cable services in Western Canada. Approximately 70% of the Company's cable television subscribers are clustered in and around five major urban markets in Western Canada: Vancouver and Victoria, British Columbia; Calgary and Edmonton, Alberta; and Winnipeg, Manitoba. The balance of Shaw's subscribers are mainly in smaller regional clusters, linked via fibre either to each other or to larger markets. These markets include the Okanagan region, British Columbia (Kamloops, Kelowna, Penticton, Vernon); Saskatoon/Prince Albert/Moose Jaw/Swift Current, Saskatchewan; and Thunder Bay/Sault Ste. Marie, Ontario.

In 2013, Shaw completed the disposition of Mountain Cablevision Limited ("Mountain Cable"), a cable system located in Hamilton, Ontario.

Shaw has a customer-centric strategy designed to deliver high-quality customer service, simplicity and value to its customers through various bundled service offerings for its Cable television, Internet and Digital Phone services. The benefits of bundling to customers include the convenience of "one-stop shopping" and value pricing. The benefits to Shaw include retention of existing customers (churn reduction); attraction of new customers; incremental penetration as customers upgrade to additional services offered in a bundle; and operational efficiencies through centralized billing and customer care.

A more detailed description of each of the principal operations comprising the Company's Cable segment is set forth below.

Cable Television

The Company's initial core business was cable television services, which today continues to provide the customer base and physical infrastructure for much of the Company's distribution service businesses. The Company is one of the largest cable television providers in Canada. As at August 31, 2014, Shaw served approximately 2.0 million cable television customers in five provinces (British Columbia, Alberta, Saskatchewan, Manitoba and certain portions of Ontario).

The Company's cable television business is operated through its extensive fibre optic and co-axial cable distribution network. Shaw's long haul fibre backbone and regional and metro interconnect networks link its cable systems and subscribers together. Shaw receives originating television signals at its various signal acquisition sites, then processes and distributes these signals via its networks to customers' homes in its cable serving areas. Digital cable customers receive additional services via digital cable terminals ("DCTs") which translate encrypted signals delivered to customers' homes over Shaw's network. With the substantial completion of the DNU, only legacy basic cable service is delivered via analog signals. Currently, approximately 95% of Shaw's cable customers are Digital cable customers.

Digital cable significantly expands the range of services that may be offered to a subscriber and extends programming capacity. Digital cable also enhances picture and sound quality and provides the platform from which Shaw has launched, and expects to continue to launch, new revenue-generating video and interactive services. Shaw offers customers a variety of DCTs for purchase or rent.

For its Digital subscribers, Shaw offers On Demand viewing options, including Pay-Per-View ("PPV"), Video-on-Demand ("VOD"), and Subscription VOD ("SVOD") services. The PPV service allows customers to select and pay for specific programs which are available on various channels with set start times. The VOD and SVOD services enable customers to select programming from a library of titles through an on-line ordering system or directly through the set-top interactive program guide, and to view the programming on their television or on-line at a time of their choosing, with pause, skip backward and skip forward functionality. On Demand programming includes movies, sports, concerts and other special events, with prices dependent on the nature of the programming. Shaw also offers a wide variety of free On Demand programming including hit TV series, movies, events, music videos and more.

Of the Company's cable television customers, over 1.3 million have HD capabilities. Shaw continues to launch HD channels which offer superior picture detail and sound quality in a format that fully utilizes the capabilities of wide screen, HD ready televisions. In support of HD, Shaw offers for purchase or rent DCTs which support the decoding and processing of HD content, as well as DCTs which incorporate HD and Personal Video Recorder ("PVR") features including the Gateway whole home HDPVR solution that connects to up to six TVs in a home.

In 2012, Shaw launched the first phase of its TV Everywhere service, Shaw Go, which allows customers streaming access to TV shows, sporting events and movies on popular mobile devices, including WiFi enabled tablets and smartphones. The Company now has more than 10 services available through Shaw Go, including Global Go, HISTORY Go, CTV Go and various childrens, sports, movie and other entertainment programming. In 2014, Shaw also launched its Gateway Go app, which allows customers to search, record and manage shows on their Gateway whole home HDPVR from a range of popular mobile devices.

Internet

Leveraging its cable television infrastructure, Shaw provides high-speed Internet access services to residential and business subscribers in almost all of its operating areas. The Company currently offers a wide variety of residential Internet service levels to match the data speed, usage and budget requirements of its subscribers. Similar to its residential Internet service, Shaw also offers a variety of Internet services for small and medium business customers. As at August 31, 2014, there were over 1.9 million subscribers to Shaw's Internet access services.

In providing its Internet access services, Shaw leverages DOCSIS 3.0, a data over cable technology, which has enabled the Company to increase the capabilities and reliability of its network by increasing the capacity and throughput of both the upstream and downstream portions of Shaw's co-axial cable infrastructure. Upgrades and enhancements of its capital infrastructure are ongoing, improving the capacity and reliability of the Company's Internet backbone and decreasing the average node size to reduce network congestion.

During 2014, Shaw continued the build out of its managed carrier-grade WiFi network, Shaw Go WiFi, which extends a customer's broadband experience beyond their home. The service was launched in 2012 on a trial basis in select cities, and is now available in most areas served by Shaw. In addition in 2014, Shaw reached agreements with a number of cities to expand Shaw Go WiFi service to public areas within those cities. WiFi is in virtually all portable consumer communication devices and customers are actively seeking WiFi hotspots to reduce wireless data costs and improve their wireless broadband experience.

Shaw operates two internal Internet data centres in Calgary, Alberta and several smaller regional centres. The data centres allow the Company to manage its Internet services exclusively, providing e-mail service directly to its customers using "@shaw.ca" e-mail addresses, provisioning web space, and managing backbone connectivity and peering arrangements with other telecom providers. The data centres also host Shaw customers' most popular web content locally.

During 2014 the Company continued construction of a new internal data centre in Calgary that will allow it to stay ahead of the technology curve by being able to handle new innovations as they are adopted, such as the WiFi network initiative or new IP video technologies. The new data centre will incorporate energy efficient cooling systems allowing Shaw to reduce the environmental impact of this facility. The data centre is planned to be complete in fiscal 2015.

Digital Phone

Shaw Digital Phone, a reliable, fully featured and affordable residential telephone service, is currently offered in approximately 95% of homes passed. As at August 31, 2014, Shaw had over 1.3 million Digital Phone lines (primary and secondary lines on billing).

Shaw Digital Phone offers packages tailored to meet the needs of residential subscribers with varying levels of included long distance and calling features. Similar to the residential packages, Shaw offers a variety of Shaw Business products for home based or smaller businesses including managed and hosted private branch exchanges ("PBX") and a primary rate interface ("PRI") service for medium and larger businesses.

Shaw Digital Phone utilizes DOCSIS technology similar to the Company's Internet service. Customers' existing phone lines are connected into modems usually installed at the location of the central wiring in the customers' premises. The modem converts the voice conversation into digital IP packets that are carried to an IP-based telephone switch. At this point, the packets are transformed again into traditional telephone signals for connection to the public switched telephone network or may be routed through the IP network to the called party.

Shaw Business

Using the Company's national and regional fibre network, Shaw Business provides services to small and medium size business, Internet Service Providers ("ISPs"), cable companies, broadcasters, governments and other organizations that require end-to-end Internet, data and voice connectivity. Shaw Business is also a major account and wholesale provider offering third parties advanced high speed data connectivity and Internet services in Canada and the United States. Its offerings currently include data, voice and video transport and Internet connectivity services. It also continues to establish public and private peering arrangements with high speed connections to major North American, European and Asian network access points and other tier-one backbone carriers.

In 2013, Shaw completed the acquisition of ENMAX Envision Inc. ("Envision"), a company providing leading telecommunication services to Calgary business customers, for approximately $225 million, excluding working capital adjustments. The transaction expanded Shaw's Business initiatives in Calgary and significantly enhanced the profile of Shaw Business in the competitive Calgary marketplace.

The Shaw Business network includes multiple fibre capacity on two diverse cross-North America routes. The Company's southern route principally consists of approximately 6,400 route kilometres (4,000 miles) of fibre located on routes between Vancouver (via Calgary, Winnipeg, Chicago, Toronto and Buffalo) and New York City. The northern route consists of approximately 4,000 route kilometres (2,500 miles) of fibre between Edmonton (via Saskatoon, Winnipeg and Thunder Bay) and Toronto. These routes, along with a number of secured capacity routes, provide redundancy for the network. Shaw Business also utilizes a marine route consisting of approximately 330 route kilometres (200 miles) located on two fibres from Seattle to Vancouver (via Victoria), and has secured additional capacity on routes between a number of cities, including Vancouver and Calgary, Vancouver and San Jose, Toronto and New York City, Seattle and Vancouver and Edmonton and Toronto.

(ii) *Satellite*

Shaw's Satellite operations own and lease, directly and indirectly, satellite transponders that receive and amplify digital signals and transmit them to receiving dishes located within the footprint covered by the satellite. Shaw Direct and Satellite Services businesses share the satellite infrastructure distributing digital video and audio signals to different markets (residential and business), thereby allowing the Company to derive distinct revenue streams from different customers using a common platform.

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

Satellite's interest in these transponders is set forth in the table below.

Satellite	Transponders	Nature of Satellite Interest
Anik G1	16 xKu-band	Leased
Anik F2	16 Ku-band	Owned
	6 Ku-band	Leased
	2 Ku-band (partial)	Leased
Anik F1R	28 Ku-band	Leased
	1 C-band	Leased
Intelsat Galaxy 16	1 Ku-band (partial)	Leased

A more detailed description of each of the principal operations comprising the Company's Satellite segment is set forth below.

Shaw Direct

Shaw Direct is one of three DTH satellite operators licensed by the Canadian Radio-television Telecommunications Commission (the "CRTC" or "Commission") to deliver digital subscription video and audio programming services from satellites directly to subscribers' homes and businesses. Shaw Direct began its national roll-out of digital DTH services in 1997 and as at August 31, 2014 had approximately 880,000 subscribers.

The market for Shaw Direct's digital DTH services can be divided into three principal categories: households not served by cable and typically having access to a limited number of broadcast services; households underserved by cable (i.e. served by cable systems that offer fewer than 80 channels); and households that receive full service cable (80 or more channels), primarily in urban areas. Other potential customers include commercial, institutional and recreational facilities interested in video and audio programming. Shaw Direct subscribers have the option of choosing from a menu of programming packages designed to target and accommodate subscriber interests, primary language, income level and type of household. Such packages are marketed through Shaw Direct and a nation-wide distribution network of third party retail locations.

With the launch of Anik G1 in 2013, Shaw Direct's satellite television services capacity expanded by approximately 30 percent through the long term lease of 16 national transponders. The new transponders provide bandwidth for expanded subscriber choice, including new HD channels and other advanced services. The additional transponders also provide enhanced service quality, acting as important in-orbit back-up capacity. Shaw Direct continues to transition to advanced modulation and encoding technology, including MPEG-4, for its programming allowing it to increase its channel capacity.

With three satellites (Anik F2, Anik F1R and Anik G1) whose signals are received by subscribers through an elliptical dish, Shaw Direct offers over 650 digital video and audio channels, including over 220 HD channels. Shaw Direct's programming line-up offers the majority of television services that are available in Canada, including local over-the-air broadcasters, national networks, specialty channels, U.S. and foreign channels, adult programming and ethnic services. In addition, Shaw Direct offers a streaming VOD service through the satellite receiver. Shaw Direct's VOD service provides customers with access to over 10,000 movie and TV titles and series. Shaw Go services are also available to Shaw Direct subscribers, which allows customers streaming access to TV shows, sporting events and movies on popular mobile devices, including WiFi enabled tablets and smartphones, and currently offers more than 10 services including Global Go, HISTORY Go, CTV Go and various childrens, sports, movie and other entertainment programming.

Satellite Services

Satellite Services operations include two primary businesses, Shaw Broadcast Services and Shaw Tracking.

Shaw Broadcast Services redistributes television and radio signals via satellite to cable operators and other multi-channel system operators in Canada and the U.S., referred to as a satellite relay distribution undertaking ("SRDU"), and provides uplink and network management services for conventional and specialty broadcasters on a contract basis.

Shaw Broadcast Services currently provides SRDU and signal transport services to over 350 distribution undertakings, primarily cable operators, and redistributes approximately 500 television signals and over 100 audio signals in both English and French to multi-channel system operators. Shaw Broadcast Services also offers HITS/QT and QT Plus (Headend In the Sky/Quick Take), which allow small and medium size cable companies to offer digital signals to subscribers with a substantially reduced capital outlay. HITS/QT and QT Plus facilitate increased availability and penetration of digital services in Canada and add incremental revenues to Shaw Broadcast Services from the additional services provided to smaller cable companies.

Shaw Broadcast Services' uplink and network management services include backhaul (transport of signals to the uplink site), uplink (delivery of signal to the satellite so that it can be distributed to cable operators and other distributors), bandwidth, authorization and signal monitoring. Shaw Broadcast Services currently provides such services to over 130 specialty and pay broadcasters across Canada, as well as to Canadian pay audio providers.

Shaw Tracking provides asset tracking and communication services to approximately 600 companies in the transportation industry in Canada, with approximately 45,000 vehicles using its services. Shaw Tracking's services capture all related information pertaining to an asset (i.e. location, performance and productivity measures) and effectively integrate into a carrier's fleet management system. Via satellite, cellular, WiFi and Bluetooth networks, Shaw Tracking provides immediate real time visibility to a company's fleet and freight. Shaw's services and solutions target a wide variety of segments of transportation across Canada.

(iii) *Media*

Through a series of transactions in 2010 and 2011, Shaw acquired 100% of the broadcasting business of Canwest Global Communications Corp. ("Canwest") including CW Investments Co., the company that owned the specialty channels acquired from Alliance Atlantis Communications Inc. in 2007. The acquisition of Shaw's Media business included the Global Television Network ("Global") and a leading portfolio of Specialty services. Technology is driving change in the Canadian Broadcasting system, transforming content distribution and viewership. This strategic acquisition allows Shaw to unite broadcasting services and content with its advanced distribution platforms to offer customers strong choices in this rapidly evolving landscape.

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

The Canadian television broadcasting market is comprised of a number of English, French, and third language stations and services that operate in different segments of the market. The "Conventional" broadcast sector includes government owned public networks, such as the Canadian Broadcasting Corporation ("CBC"), as well as privately owned station groups and networks, such as Global and the CTV Television Network ("CTV" owned by BCE Inc.). The "Specialty and Pay" sector includes Specialty television services, such as Showcase, History, and HGTV Canada (all owned by Shaw), TSN (owned by BCE Inc.), and Sportsnet (owned by Rogers), which provide special interest programming including news, sports, arts, lifestyle and entertainment programming.

Global reaches approximately 95% of Canada's population through 12 over-the-air ("OTA") conventional television stations. Global offers a programming mix of entertainment programs and news that includes hit programs such as The Blacklist, Sleepy Hollow, Bones, NCIS, NCIS:LA, Hawaii Five-O, Rookie Blue, Elementary and the reality series Survivor, Big Brother and Big Brother Canada. Global offers news through its early-evening network newscast Global National and delivers local news programs to a number of markets. Global expanded its news line-up in 2012 and 2013 with the launch of morning news programming in Toronto, Regina, Saskatoon, Winnipeg, Montreal and Halifax, and continues to focus on on-line and mobile platforms to reach its audiences.

The Specialty television services owned and operated by the Media division comprise 19 channels, including History, Food Network Canada, Showcase, HGTV Canada, Slice and National Geographic Canada. In 2014 Media announced the rebranding of two existing channels to FYI and Crime + Investigation which took place early in fiscal 2015. In 2013 Media launched Global News: BC1, a dedicated 24 hour all news Specialty channel in the province of British Columbia and acquired the remaining equity interest in TVtropolis (subsequently rebranded DTOUR). During 2013 Media also entered into a number of transactions with Corus Entertainment Inc. ("Corus") to optimize its portfolio of specialty channels, agreeing to sell its interests in ABC Spark and Historia and Series+ and to acquire an additional 20% interest in Food Network Canada. The ABC Spark and Food Network Canada transactions were completed during 2013 and the Historia and Series+ transaction closed in 2014.

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

The following table sets forth all of the Specialty services in which the Company holds an interest:

Specialty Services Operated	% Equity Interest
Showcase	100%
Slice	100%
History	100%
H2	100%
HGTV Canada(1)	67%
Food Network Canada(1)	71%
Action	100%
Lifetime	100%
National Geographic Canada(2)	50%
National Geographic Canada Wild(2)	50%
BBC Canada(2)	50%
FYI	100%
IFC Canada	100%
DIY(1)	67%
DTOUR	100%
MovieTime	100%
DejaView	100%
Crime + Investigation	100%
Global News: BC1	100%

(1) Voting interest is 80.2%
(2) Voting interest is 80%

To meet the changing needs of its Conventional and Specialty viewing audiences, Media also commenced the roll out of its TV Everywhere strategy in 2014 with the launch of Global Go and HISTORY Go apps. These apps allow viewers to watch live TV, full episodes of select shows, clips and video exclusives on popular mobile devices, including WiFi enabled tablets and smartphones.

Late in fiscal 2014, Shaw Media partnered with Rogers to form shomi, a new SVOD/OTT service having the latest most exclusive programming and selections personalized for viewers. The service launched in beta in early November 2014.

C. Seasonality and other additional information concerning the business

(a) Seasonality and customer dependency

Although financial results of the Cable and Satellite business segments are generally not subject to significant seasonal fluctuations, subscriber activity may fluctuate from one quarter to another. Subscriber activity may also be affected by competition and varying levels of promotional activity undertaken by the Company. Shaw's Cable and Satellite businesses generally are not dependent upon any single customer or upon a few customers.

The Media business segment financial results are subject to fluctuations throughout the year due to, among other things, seasonal advertising and viewing patterns. In general, advertising revenues are higher during the fall, the first quarter, and lower during the summer months, the fourth quarter. Expenses are incurred more evenly throughout the year. The Specialty services are dependent on a small number of broadcast distribution undertakings ("BDUs") for distribution of the services.

(b) Environmental matters

Shaw's operations are subject to environmental regulations, including those related to electronic waste, printed paper and packaging. A number of provinces have enacted regulations providing for the diversion of certain types of electronic and other waste through product stewardship programs ("PSP"). Under a PSP, companies who supply designated products in or into a province are required to participate in or develop an approved program for the collection and recycling of designated materials and, in some cases, pay a per-item fee. Such regulations have not had, and are not expected to have, a material effect on the Company's earnings or competitive position.

(c) Foreign operations

Shaw Business U.S. Inc., a wholly-owned subsidiary of the Company, has entered into an indefeasible right of use ("IRU") with respect to a portion of a United States fibre network and owns certain other fibre and facilities in the United States. Shaw Business U.S. Inc. commenced revenue-generating operations in the United States in 2002. Its revenues for the year ended August 31, 2014 were not material.

In September 2014, the Company closed the acquisition of 100% of the shares of ViaWest, a US-based provider of data centre infrastructure, cloud technology and managed IT solutions, for an enterprise value of US $1.2 billion which was funded through a combination of cash on hand, assumption of ViaWest debt, and a drawdown of US $330 million on the Company's credit facility. The ViaWest acquisition provides the Company with a growth platform in the North American data centre sector and is another step in expanding technology offerings for mid-market enterprises in Western Canada. ViaWest is headquartered in Denver, Colorado and has 27 data centres in 8 key Western US markets.

(d) Employees

As at August 31, 2014, the Company employed approximately 14,000 people.

D. Government regulations and regulatory developments

Substantially all of the Corporation's business activities are subject to regulations and policies established under various Acts (*Broadcasting Act (Canada)* ("Broadcasting Act"), *Telecommunications Act (Canada)* ("Telecommunications Act"), *Radiocommunication Act (Canada)* ("Radiocommunication Act") and *Copyright Act (Canada)* ("Copyright Act")). Broadcasting and telecommunications are generally administered by the CRTC under the supervision of the Department of Canadian Heritage ("Canadian Heritage") and Department of Industry ("Industry Canada"), respectively.

Pursuant to the Broadcasting Act, the CRTC is mandated to supervise and regulate all aspects of the broadcasting system in a flexible manner. The Broadcasting Act requires BDUs to give priority to the carriage of Canadian services and to provide efficient delivery of programming services. The Broadcasting Act also sets out requirements for television broadcasters with respect to Canadian content. Shaw's businesses are dependent upon licenses (or operate pursuant to an exemption order) granted and issued by the CRTC and Industry Canada.

Under the Telecommunications Act, the CRTC is responsible for ensuring that Canadians in all regions of Canada have access to reliable and affordable telecommunication services of high-quality. The CRTC has the authority to forbear from regulating certain services or classes of services provided by a carrier if the CRTC finds that there is sufficient competition for that service to protect the interests of users. All of Shaw's telecommunication retail services have been forborne from regulation and are not subject to price regulation. However, regulations do impact certain terms and conditions under which these services are provided. On October 23, 2014, the Government tabled Bill C-43 which amends the Telecommunications Act to grant the CRTC powers to impose administrative monetary penalties of up to $10 million for each contravention of the Telecommunications Act or any regulation or CRTC decision pursuant to the Telecommunications Act, and up to $15 million for each subsequent contravention.

The technical operating aspects of the Corporation's businesses are also regulated by technical requirements and performance standards established by Industry Canada, primarily under the Telecommunications Act and the Radiocommunication Act.

Pursuant to the Copyright Act, the Copyright Board of Canada oversees the collective administration of copyright royalties in Canada, including the review and approval of copyright tariff royalties payable to copyright collectives by BDUs, television broadcasters and online content services.

The sections below include a more detailed discussion of various regulatory matters and recent developments specific to Shaw's businesses.

Licensing and ownership

For each of its cable, DTH and SRDU undertakings, the Corporation holds a separate broadcasting license or is exempt from licensing. In November 2010, the majority of cable undertakings owned and operated by the Corporation were renewed by the CRTC for a five-year period ending August 31, 2015. Shaw's cable licenses for its undertakings serving British Columbia, Alberta, Saskatchewan and Manitoba are scheduled for renewal in 2015. The licenses of the Corporation's DTH and SRDU undertakings were renewed in 2013 by the CRTC for a seven year period ending August 31, 2019. Shaw has never failed to obtain a license renewal for its cable, DTH or SRDU undertakings.

The Company also holds a separate license for each of its conventional OTA television stations and each specialty service. These CRTC broadcasting licenses must be renewed from time to time and cannot be transferred without regulatory approval. The majority of the Corporation's licenses for its OTA television stations and specialty services were renewed for a five-year term ending August 31, 2016. The renewal decision implemented an expenditure-based regulatory regime, whereby the Corporation must expend a certain percentage of its prior-year revenues from its conventional OTA and specialty services on Canadian content, and also on specific categories of Canadian programs defined as "programs of national interest". These obligations are imposed on an individual license basis. With certain restrictions, the Corporation may share these regulatory obligations between and among its various conventional OTA and specialty licenses.

The potential for new or increased fees through regulation

Effective September 1, 2009, each licensed BDU was required to contribute 1.5% of its gross revenues derived from broadcasting to the Local Programming Improvement Fund ("LPIF") to support local television stations operating in non-metropolitan markets. Exempt systems were not required to contribute to the LPIF. In July 2012, the Commission determined that it was inappropriate to maintain the LPIF in the long term and that it would phase out the LPIF over the two subsequent broadcast years. Accordingly, for the 2012-2013 broadcast year, the LPIF contribution rate was reduced from 1.5% to 1.0%. For the 2013-2014 broadcast year, the LPIF contribution rate was further reduced to 0.5%. As of September 2014, the LPIF was discontinued.

In 2011, pursuant to a change in its policy regarding the delivery of distant signals by licensed BDUs, the CRTC introduced new Regulations requiring licensed cable BDUs to obtain the consent of an OTA broadcaster to deliver its signal in a distant market. Pursuant to the Regulations, DTH distribution undertakings may distribute a local over-the-air television signal without consent within the province of origin, but must obtain permission to deliver the over-the-air television signal beyond the province of origin unless the DTH distribution undertaking is required to carry the signal on its basic service. Broadcasters may assert a right to remuneration for the distribution of their signals in distant markets on the basis of these Regulations.

Throne Speech and Government Direction

The Speech from the Throne, delivered on October 16, 2013 included a statement indicating that the Government believes Canadians should have more ability to choose unbundled television channels, while protecting Canadian jobs. On November 14, the Minister of Canadian Heritage released an Order-in-Council ("OIC") requiring the CRTC to report to the Government by April 30, 2014 on how the ability of Canadian consumers to subscribe to pay and specialty television services on a service-by-service basis can be maximized, having regard to the broadcasting and regulatory objectives of the Broadcasting Act as well as specific issues including the effect of any proposed measures on: consumers with respect to their affordable access to a variety of services, distribution undertakings, Canadian pay and specialty services and Canadian independent producers. In addition, the OIC made it clear that any proposed measures to maximize consumers' ability to subscribe service-by-service ensure that the majority of programming services received by subscribers remain Canadian and that Canadian programming services, particularly local Canadian stations, continue to be given priority. The CRTC responded to the OIC by reporting that it would reach conclusions on the Government's questions in the decision rendered pursuant to a proceeding initially referred to as "a conversation with Canadians" and later commonly referred to as "Let's Talk TV". This proceeding is described below in more detail. Together, the Government's articulated position and the CRTC decision pursuant to the "Let's Talk TV" hearing could lead to changes in the regulatory requirements applicable to television programming and broadcasting distribution undertakings and, in particular, those pertaining to the manner in which the basic service, as well as packaging and standalone programming service options, are offered to customers.

CRTC Hearing on the Future of Television – Let's Talk TV

As noted above, on October 24, 2013, the Commission initiated a "conversation with Canadians about the future of television", which led to a major review of the regulatory and policy framework for the Canadian television broadcasting system, during the course of calendar 2014. This proceeding became commonly known as the "Let's Talk TV" proceeding. The Commission's proposals include: a mandatory all-Canadian small basic service; a requirement to allow subscribers to select all discretionary services on a standalone (pick-and-pay) basis and build their own custom packages of discretionary programming services (BDUs could still offer pre-assembled packages); elimination of simultaneous substitution; expansion of the *Code of conduct for commercial arrangements and interactions* to prohibit unreasonable penetration-based rate cards, requirements to distribute a service on the same terms as at a prior date, and most favored nation provisions; access provisions for non-vertically integrated programming services; redefining broadcasting revenues of licensees to include revenues from programming offered online or on other exempt platforms; modifying expenditure and exhibition requirements for licensed television stations and specialty and pay services; eliminating genre exclusivity and access rights for Category A pay and specialty services; and, introducing a BDU Code that would govern the relationship between BDUs and their subscribers, consistent with applicable provisions of the Wireless Code such as contract clarity, notice of changes to contract terms, and cancellation fees. The proposed regulatory framework would come into force on December 15, 2015. The Commission's decision is expected late in calendar 2014. While the outcome of the hearing (including the scope and implementation period for each proposal) is uncertain, this review could lead to changes in the regulatory requirements applicable to television programming and broadcasting distribution undertakings.

Access rights

Shaw's cable systems require access to support structures, such as poles, strand and conduits of telecommunication carriers and electric utilities, in order to deploy cable facilities. Under the Telecommunications Act the CRTC has jurisdiction over support structures of telecommunication carriers, including rates for third party use. The CRTC's jurisdiction does not extend to electrical utility support structures, which are regulated by provincial utility authorities. Following a 2010 decision by the CRTC to significantly increase certain support structure rental rates, the CRTC approved in July 2011 a new charge for the Corporation's attachments to the service poles of telecommunications carriers equal to the normal pole charge.

Under the Telecommunications Act, the Corporation may construct facilities in roadways and other public places with the consent of the municipality. In 2011, the CRTC initiated a process whereby a working group of industry and municipal representatives developed a non-binding model municipal access agreement. In November 2013, the CRTC approved the consensus recommendations of the working group for the model agreement and determined that certain non-consensus items, including indemnification, fees, and relocation costs, are to be negotiated between a carrier and a municipality.

New media and Internet

In June 2009 the CRTC issued its decision on "new media" by extending its exemption of new media broadcasting undertakings for another five years. This exemption order was amended in 2012 and renamed the *Exemption Order for Digital Media Broadcasting Undertakings*. The amended exemption order includes, *inter alia*, a reverse onus of proof in cases where it is alleged that an exempt undertaking has conferred an undue preference or disadvantage, and a prohibition on exempt undertakings offering television programming on an exclusive or preferential basis in a manner that depends upon the subscription to a specific mobile or retail internet access service.

Pursuant to the above-noted exemption order, the CRTC also decided against imposing any regulatory measures, including financial contribution requirements on ISPs, to support Canadian new media content through a levy on the revenue of exempt digital media undertakings. The CRTC is now considering, in the context of the Let's Talk TV proceeding, whether to redefine the broadcasting revenues of licensees to include revenues from programming offered online or on other exempt platform. A decision in the Let's Talk TV proceeding is expected late in calendar 2014.

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

Shaw is mandated by the CRTC to provide Third Party Internet Access ("TPIA") service, which enables independent ISPs to provide Internet services at premises served by Shaw's network. In 2011, the CRTC reviewed the billing model for TPIA services, TPIA rates and whether usage based billing may be applied to TPIA services. In the decision that followed its review (the "Wholesale Internet Access Decision"), the CRTC approved two billing models, a flat-rate model in which the TPIA rate includes access and usage and a capacity-based model in which access and capacity usage are billed separately. Shaw is currently approved to provide TPIA service under the flat-rate model although Shaw may elect to move to a capacity-based model in the future. The CRTC is currently reviewing the regulatory regime for several wholesale competitor services, including TPIA, through a public consultation that launched in October 2013 and will culminate in a public hearing starting in late November 2014.

In September 2013, a consortium of independent ISPs filed an application with the CRTC requesting changes to the TPIA service. If the CRTC mandates the changes to TPIA as requested in the application, this would require Shaw to dedicate additional resources to address specific service order processing, IT system and billing system changes.

In late 2010 Parliament passed Canada's anti-spam legislation ("CASL"), which, together with regulations passed pursuant to CASL, sets out a comprehensive regulatory regime regarding on-line commerce, including requirements to obtain consent prior to sending commercial electronic messages and installing computer programs. CASL is administered primarily by the CRTC, and non-compliance may result in fines of up to $10 million. The first phase of CASL, pertaining to the sending of commercial electronic messages, came into force in July 2014. To ensure compliance with CASL, Shaw reviewed and updated its current practices with respect to marketing and other communications with customers. Computer program installation provisions of CASL will come into effect on January 15, 2015. Shaw is reviewing and updating its practices regarding computer program installations in order to comply.

Shaw and other telecommunications providers had expected that they would need to review and potentially upgrade their interception and other systems to comply with anticipated lawful access requirements. In February 2013, the Government announced that it would not be proceeding with its planned lawful access legislation, Bill C-30, *An Act to enact the Investigating and Preventing Criminal Electronic Communications Act* (the "Bill") and related plan to amend the *Criminal Code* and other Acts. The Government indicated that its decision not to proceed was in response to the expressed concerns of Canadians regarding the Bill. The legislation would have required telecommunications service providers to provide subscriber information without a warrant and for ISPs to establish and maintain capabilities to facilitate the lawful interception of information transmitted by telecommunications and to provide information about subscribers to law enforcement agencies.

In November 2013 the Government introduced Bill C-13, *An Act to amend the Criminal Code, the Canada Evidence Act, the Competition Act and the Mutual Legal Assistance in Criminal Matters Act* (the "Bill C-13") which would, if passed, expand the lawful access powers of the Government and introduce new requirements for telecommunications providers to preserve and produce subscriber information. Consistent with the Government's decision not to proceed with Bill C-30, almost all of the newly proposed measures under Bill C-13 are subject to judicial oversight and do not require the provision of information without a warrant or discharge of a burden of proof. However, should the requirements of Bill C-13 become law, Shaw and other telecommunications providers will need to review and potentially upgrade their interception and other systems to comply with new lawful access requirements.

In its 3 Year Work Plan, the CRTC has scheduled reviews of Competitor Quality of Service and Basic Telecommunications Services, each of which may have a direct impact on Shaw's operations. With respect to Competitor Quality of Service, the CRTC will undertake a process to review the competitor quality of service indicators and the rate rebate plan for competitors to ensure alignment with the overall wholesale services framework which is currently under review. With respect to Basic Telecommunication Services, the CRTC will initiate a comprehensive review to determine what services (e.g. voice and broadband) are required by all Canadians to fully participate in the digital economy and whether there should be changes to the subsidy regime and national contribution mechanism.

Digital transition

In July 2009 the CRTC identified the major markets where it expected conventional television broadcasters to convert their full-power OTA analog transmitters to digital transmitters by August 31, 2011. The conversion from analog to digital freed up spectrum for government auction.

The Corporation completed the digital transition in all mandatory markets as of August 31, 2011. Since then, the Corporation has been converting transmitters in non-mandatory markets and expects to complete these conversions in 2016.

Vertical integration

The Commission recognizes that vertical integration can be beneficial and that it also has potential to enable preferential treatment. In view of increasing industry consolidation and vertical integration, the CRTC issued a vertical integration policy in September 2011. The policy introduced new safeguards in addition to various regulatory mechanisms that already exist, including a prohibition on vertically integrated undertakings from offering television programming on an exclusive or otherwise preferential basis in a manner that is dependent on the subscription to a specific mobile or retail Internet access service, and a reverse onus of proof in cases where undue preference is alleged in connection with the terms of distribution of any programming service. Measures also include a code of conduct governing commercial relations and interactions between and among broadcast distributors, programmers and new media undertakings, and a standstill requirement prohibiting a distribution undertaking from changing the terms of distribution or carriage pending the resolution of a dispute.

The CRTC imposed certain parts of the code as conditions of license upon BCE in its recent acquisition of Astral Media Inc. Uncertainty remains as to the extent to which the CRTC will seek to impose such conditions of licence and the ultimate impact of the CRTC decision introducing the new safeguards and to formalize code of conduct requirements as conditions of license. The code of conduct is applied on a case-by-case basis when disputes arise and may be revised pursuant to the Let's Talk TV proceeding discussed above. Existing or new safeguards could have an impact on the Corporation.

Limits on non-Canadian ownership and control for broadcasting undertakings

Non-Canadians are permitted to own and control, directly or indirectly, up to 33.3% of the voting shares and 33.3% of the votes of a holding company that has a subsidiary operating company licensed under the Broadcasting Act. In addition, up to 20% of the voting shares and 20% of the votes of the licensee may be owned and controlled, directly or indirectly, by non-Canadians. As well, the chief executive officer (CEO) and not less than 80% of the board of directors of the licensee must be resident Canadians. There are no restrictions on the number of non-voting shares that may be held by non-Canadians at either the holding company or licensee level. Neither the holding company nor the licensee may be controlled in fact by non-Canadians, the determination of which is a question of fact within the jurisdiction of the CRTC.

The same restrictions apply to certain Canadian carriers pursuant to the Telecommunications Act and associated regulations and the Radiocommunication Act and associated regulations, except that there is no requirement that the CEO be a resident Canadian. In March 2012, the government announced its intention to amend the Telecommunications Act to remove Canadian ownership requirements for wire-line and wireless telecommunications carriers with annual revenues from the provision of telecommunications services in Canada that represent less than 10% of the total annual revenues, as determined by the CRTC. These amendments were passed as part of the federal budget bill in June 2012 and may lead to greater levels of competition in the Canadian telecommunications market.

The Corporation's Articles contain measures to ensure the Corporation is able to remain compliant with applicable Canadian ownership requirements and its ability to obtain, amend or renew a license to carry on any business. Shaw must file a compliance report annually with the CRTC confirming that it is eligible to operate in Canada as a telecommunications common carrier.

AWS spectrum transfers

On June 28, 2013 the Minister of Industry announced a new framework for the review of spectrum license transfers. Under the new framework, all spectrum transfer reviews, including the review of the proposed transfer of Shaw's AWS spectrum to Rogers, will include consideration of a number of factors, including the overall distribution of license holdings in the licensed spectrum band and other commercial mobile spectrum bands in the licensed area, the relative utility and substitutability of the licensed spectrum and the change in spectrum concentration levels that would result from the transfer. The reviews by Industry Canada and the Competition Bureau of the proposed transfer of Shaw's AWS spectrum to Rogers are ongoing.

E. Key performance drivers

Shaw measures the success of its strategies using a number of key performance drivers which are outlined below, including a discussion as to their relevance, definitions, calculation methods and underlying assumptions.

FINANCIAL MEASURES:

i) Revenue

Revenue is a measurement determined in accordance with International Financial Reporting Standards ("IFRS"). It represents the inflow of cash, receivables or other consideration arising from the sale of products and services. Revenue is net of items such as trade or volume discounts, agency commissions and certain excise and sales taxes. It is the base on which free cash flow, a key performance driver, is determined; therefore, it measures the potential to deliver free cash flow as well as indicating growth in a competitive market place.

The Company's continuous disclosure documents may provide discussion and analysis of non-IFRS financial measures. These financial measures do not have standard definitions prescribed by IFRS and therefore may not be comparable to similar measures disclosed by other companies. The Company's continuous disclosure requirements may also provide discussion and analysis of additional GAAP measures. Additional GAAP measures include line items, headings and sub-totals included in financial statements. The Company utilizes these measures

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

in making operating decisions and assessing its performance. Certain investors, analysts and others utilize these measures in assessing the Company's operational and financial performance and as an indicator of its ability to service debt and return cash to shareholders. These non-IFRS measures and additional GAAP measures have not been presented as an alternative to net income or any other measure of performance or liquidity prescribed by IFRS. The following contains a description of the Company's use of non-IFRS financial measures and additional GAAP measures and provides a reconciliation to the nearest IFRS measure or provides a reference to such reconciliation.

ii) Operating income before restructuring costs and amortization

Operating income before restructuring costs and amortization is calculated as revenue less operating, general and administrative expenses. It is intended to indicate the Company's ability to service and/or incur debt, and therefore it is calculated before one-time items like restructuring costs, amortization (a non-cash expense) and interest. Operating income before restructuring costs and amortization is also one of the measures used by the investing community to value the business.

Relative increases period-over-period in operating income before restructuring costs and amortization and in operating margin are indicative of the Company's success in delivering valued products and services, and engaging programming content to its customers in a cost-effective manner.

	Year ended August 31,	
($ millions Cdn)	**2014**	**2013**
Operating income	**1,439**	1,366
Add back (deduct):		
Restructuring costs	**58**	–
Amortization:		
Deferred equipment revenue	**(69)**	(121)
Deferred equipment costs	**142**	257
Property, plant and equipment, intangibles and other	**692**	718
Operating income before restructuring costs and amortization	**2,262**	2,220

iii) Operating margin

Operating margin is calculated by dividing operating income before restructuring costs and amortization by revenue.

iv) Free cash flow

The Company uses free cash flow as a measure of the Company's ability to repay debt and return cash to shareholders. Consolidated free cash flow is calculated as follows:

($millions Cdn)	Year ended August 31, 2014	2013	Change %
Revenue			
Cable	**3,365**	3,266	3.0
Satellite	**878**	860	2.1

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

Free cash flow is calculated as operating income before restructuring costs and amortization, less interest, cash taxes paid or payable, capital expenditures (on an accrual basis and net of proceeds on capital dispositions and adjusted to exclude amounts funded through the accelerated capital fund) and equipment costs (net), adjusted to exclude share-based compensation expense, less cash amounts associated with funding the new and assumed CRTC benefit obligations related to the acquisition of Shaw Media as well as excluding non-controlling interest amounts that are consolidated in the operating income before restructuring costs and amortization, capital expenditure and cash tax amounts. Free cash flow also includes changes in receivable related balances with respect to customer equipment financing transactions as a cash item, and is adjusted for recurring cash funding of pension amounts net of pension expense. Dividends paid on the Company's Cumulative Redeemable Rate Reset Preferred Shares are also deducted.

Free cash flow has not been reported on a segmented basis. Certain components of free cash flow including operating income before restructuring costs and amortization, capital expenditures (on an accrual basis net of proceeds on capital dispositions) and equipment costs (net), CRTC benefit obligation funding, and non-controlling interest amounts continue to be reported on a segmented basis. Other items, including interest and cash taxes, are not generally directly attributable to a segment, and are reported on a consolidated basis.

For free cash flow purposes the Company considers the initial $300 million supplemental executive retirement plan funding in the prior year to be a financing transaction and has not included the amount funded or the related cash tax recovery in the free cash flow calculation.

v) Accelerated capital fund

During 2013, the Company established a notional fund, the accelerated capital fund, of up to $500 million with proceeds received, and to be received, from several strategic transactions. The accelerated capital initiatives are being funded through this fund and not cash generated from operations. Key investments include the completion of the Calgary internal data centre, further digitization of the network and additional bandwidth upgrades, development of IP delivery of video, expansion of the WiFi network, and additional innovative product offerings related to Shaw Go and other applications to provide an enhanced customer experience. Details on the accelerated capital fund and investment are as follows:

Estimated year of spend ($millions Cdn)	2013	2014	2015	Total
Fund Opening Balance	**110**	**240**	**150**	**500**
Accelerated capital investment	**110**	**240**	**–**	**350**
Fund Closing Balance, August 31, 2014	**–**	**–**	**150**	**150**

STATISTICAL MEASURES:

Subscriber counts (or Revenue Generating Units ("RGUs")), including penetration and bundled customers

The Company measures the count of its customers in Cable and DTH (Shaw Direct). Video cable subscribers include residential customers, multiple dwelling units ("MDUs") and commercial customers. A residential subscriber who receives at a minimum, basic cable service, is counted as one subscriber. In the case of MDUs, such as apartment buildings, each tenant with a minimum of basic cable service is counted as one subscriber, regardless of whether invoiced individually or having services included in his or her rent. Each building site of a commercial customer (e.g., hospitals, hotels or retail franchises) that is receiving at a minimum, basic cable service, is counted as one subscriber. Internet customers include all modems on billing and Digital Phone lines includes all phone lines on billing. All subscriber counts exclude complimentary accounts but include promotional accounts.

Shaw Direct measures its count of subscribers in the same manner as Cable counts its Video customers, except that it also includes seasonal customers who have indicated their intention to reconnect within 180 days of disconnection.

RGUs represent the number of products sold to customers and includes Video (Cable and DTH subscribers), Internet customers, and Digital Phone lines. As at August 31, 2014 the Company had approximately 6.1 million RGUs.

Subscriber counts, or RGUs, and penetration statistics measure market share and also indicate the success of bundling and pricing strategies.

F. Critical accounting policies and estimates

The Company prepared its Consolidated Financial Statements in accordance with IFRS as issued by the International Accounting Standards Board ("IASB"). An understanding of the Company's accounting policies is necessary for a complete analysis of results, financial position, liquidity and trends. Refer to Note 2 to the Consolidated Financial Statements for additional information on accounting policies. The following section discusses key estimates and assumptions that management has made under IFRS and how they affect the amounts reported in the Consolidated Financial Statements and notes. Following is a discussion of the Company's critical accounting policies:

i) Revenue and expense recognition

Revenue is considered earned as services are performed, provided that at the time of performance, ultimate collection is reasonably assured. Such performance is regarded as having been achieved when reasonable assurance exists regarding the measurement of the consideration that will be derived from rendering the service. Revenue from cable, Internet, Digital Phone and DTH customers includes subscriber service revenue when earned. The revenue is considered earned as the period of service relating to the customer billing elapses.

The Company has multiple deliverable arrangements comprised of upfront fees (subscriber connection fee revenue and/or customer premise equipment revenue) and related subscription revenue. The Company determined that the upfront fees charged to customers do not constitute separate units of accounting; therefore, these revenue streams are assessed as an integrated package.

With Shaw Media, subscriber revenue is recognized monthly based on subscriber levels. Advertising revenues are recognized in the period in which the advertisements are aired or displayed on the Company's digital properties and recorded net of agency commissions as these amounts are paid directly to the agency or advertiser. When a sales arrangement includes multiple advertising spots, the proceeds are allocated to individual advertising spots under the arrangement based on relative fair values.

Subscriber connection fee revenue
Connection fees have no stand alone value to the customer separate and independent of the Company providing additional subscription services, therefore the connection fee revenue must be deferred and recognized systematically over the periods that the subscription services are

earned. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered its customer churn rate and other factors, such as competition from new entrants, to determine the deferral period of three years.

Subscriber connection and installation costs
The costs of physically connecting a new home are capitalized as part of the Company's distribution system as the service potential of the distribution system is enhanced by the ability to generate future subscriber revenue. Costs of disconnections are expensed as incurred as the activity does not generate future revenue.

Customer premise equipment revenue and costs
Customer premise equipment available for sale, which generally includes DCT and DTH equipment, has no stand alone value to the customer separate and independent of the Company providing additional subscription services. Therefore the equipment revenue is deferred and recognized systematically over the periods that the subscription services are earned. As the equipment sales and the related subscription revenue are considered one transaction, recognition of the equipment revenue commences once the subscriber service is activated. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered various factors including customer churn, competition from new entrants, and technology changes to determine the deferral period of three years.

In conjunction with equipment revenue, the Company also incurs incremental direct costs which include equipment and related installation costs. These direct costs cannot be separated from the undelivered subscription service included in the multiple deliverable arrangement. Under IAS 2 "Inventories", these costs represent inventoriable costs and are deferred and amortized over the period of three years, consistent with the recognition of the related equipment revenue. The equipment and installation costs generally exceed the amounts received from customers on the sale of equipment (the equipment is sold to the customer at a subsidized price). The Company defers the entire cost of the equipment, including the subsidy portion, as it has determined that this excess cost will be recovered from future subscription revenues and that the investment by the customer in the equipment creates value through increased retention.

Shaw Tracking equipment revenue and costs
Shaw Tracking equipment revenue is recognized over the period of the related service contract for airtime, which is generally five years.

In conjunction with Shaw Tracking equipment revenue, the Company incurs incremental direct costs including equipment costs. These direct costs cannot be separated from the undelivered tracking service included in the multiple deliverable arrangement. Under IAS 2 "Inventories", these costs represent inventoriable costs and are deferred and amortized over the period of five years, consistent with the recognition of the related tracking equipment revenue.

Shaw Business installation revenue and expenses
The Company also receives installation revenues in its Shaw Business operation on contracts with commercial customers which are deferred and recognized as revenue on a straight-line basis over the related service contract, generally spanning two to ten years. Direct and incremental costs associated with the service contract, in an amount not exceeding the upfront installation revenue, are deferred and recognized as an operating expense on a straight-line basis over the same period.

Income statement classification
The Company distinguishes amortization of deferred equipment revenue and deferred equipment costs from the revenue and expenses recognized from ongoing service activities on its income statement. Equipment revenue and costs are deferred and recognized over the anticipated term of the related future revenue (i.e., the monthly service revenue) with the period of recognition spanning three to five years. As a result, the amortization of deferred equipment revenue and deferred equipment costs are non-cash items on the income statement, similar to the Company's amortization of deferred IRU revenue, which the Company also segregates from ongoing revenue. Further, within the lifecycle of a customer relationship, the customer generally purchases customer premise equipment at the commencement of the customer relationship, whereas the subscription revenue represents a continuous revenue stream throughout that customer relationship. Therefore, the segregated presentation provides a clearer distinction within the income statement between cash and non-cash activities and between up-front and continuous revenue streams, which assists financial statement readers to predict future cash flows from operations.

ii) Allowance for doubtful accounts
The majority of the Company's revenues are earned from selling on credit to individual subscribers. Because there are some customers who do not pay their debts, selling on credit necessarily involves credit losses. The Company is required to make an estimate of an appropriate allowance for doubtful accounts on its receivables. In determining its estimate, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. The estimated allowance required is a matter of judgement and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foretold, such as future business, personal and economic conditions. Conditions causing deterioration or improvement in the aging of accounts receivable and collections will increase or decrease bad debt expense.

iii) Property, plant and equipment and other intangibles – capitalization of direct labour and overhead
The cost of property, plant and equipment and other intangibles includes direct construction or development costs (such as materials and labour) and overhead costs directly attributable to the construction or development activity. The Company capitalizes direct labour and direct overhead incurred to construct new assets, upgrade existing assets and connect new subscribers. These costs are capitalized as they are directly attributable to the acquisition, construction, development or betterment of the networks or other intangibles. Repairs and maintenance expenditures are charged to operating expenses as incurred.

Direct labour and overhead costs are capitalized in three principal areas:

1. Corporate departments such as engineering and information technology ("IT"): Engineering is primarily involved in overall planning and development of the cable/ Internet/Digital Phone infrastructure. Labour and overhead costs directly related to these activities are capitalized as the activities directly relate to the planning and design of the construction of the distribution system. The IT department devotes considerable efforts towards the development of systems to support Digital Phone, WiFi, and projects related to new customer management, billing and operating support systems. Labour costs directly related to these and other projects are capitalized.

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

2. Cable regional construction departments, which are principally involved in constructing, rebuilding and upgrading the cable/Internet/Digital Phone infrastructure: Labour and overhead costs directly related to the construction activity are capitalized as the activities directly relate to the construction or upgrade of the distribution system. Capital projects include, but are not limited to, projects such as the new subdivision builds, increasing network capacity for Internet, Digital Phone and VOD by reducing the number of homes fed from each node, and upgrades of plant capacity, including the DNU project, and the WiFi build.
3. Subscriber-related activities such as installation of new drops and Internet and Digital Phone services: The labour and overhead directly related to the installation of new services are capitalized as the activity involves the installation of capital assets (i.e., wiring, software, etc.) which enhance the service potential of the distribution system through the ability to earn future revenues. Costs associated with service calls, collections, disconnects and reconnects that do not involve the installation of a capital asset are expensed.

Amounts of direct labour and direct overhead capitalized fluctuate from year to year depending on the level of customer growth and plant upgrades for new services. In addition, the level of capitalization fluctuates depending on the proportion of internal labour versus external contractors used in construction projects.

The percentage of direct labour capitalized in many cases is determined by the nature of employment in a specific department. For example, a significant portion of labour and direct overhead of the cable regional construction departments is capitalized as a result of the nature of the activity performed by those departments. Capitalization is also based on piece rate work performed by unit-based employees which is tracked directly. In some cases, the amount of capitalization depends on the level of maintenance versus capital activity that a department performs. In these cases, an analysis of work activity is applied to determine this percentage split.

iv) Amortization policies and useful lives
The Company amortizes the cost of property, plant and equipment and other intangibles over the estimated useful service lives of the items. These estimates of useful lives involve considerable judgment. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. On an annual basis, the Company reassesses its existing estimates of useful lives to ensure they match the anticipated life of the technology from a revenue-producing perspective. If technological change happens more quickly or in a different way than the Company has anticipated, the Company may have to shorten the estimated life of certain property, plant and equipment or other intangibles which could result in higher amortization expense in future periods or an impairment charge to write down the value of property, plant and equipment or other intangibles.

v) Intangibles
The excess of the cost of acquiring cable and satellite and media businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist primarily of amounts allocated to broadcast rights and licenses which represent identifiable assets with indefinite useful lives.

Broadcast rights and licenses in the cable and satellite businesses are comprised of broadcast authorities including licenses and exemptions from licensing that allow access to homes and subscribers in a specific area that are identified on a business combination with respect to the acquisition of shares or assets of a BDU.

Broadcast licenses in the media business are licenses to operate conventional and specialty services that are identified on a business combination with respect to the acquisition of shares or assets of a broadcasting undertaking.

The Company has concluded that the broadcast rights and licenses have indefinite useful lives since there are no legal, regulatory, contractual, economic or other factors that would prevent the Company's license renewals or limit the period over which these assets will contribute to the Company's cash flows. Goodwill and broadcast rights and licenses are not amortized but are assessed for impairment on an annual basis in accordance with IAS 36 "Impairment".

The Company also owns AWS licenses that are required to operate a wireless system in Canada. The AWS licenses have indefinite lives and are subject to an annual review for impairment by comparing the estimated fair value to the carrying amount. In late 2011 Shaw decided not to pursue a conventional wireless build. In 2013 the Company entered into an agreement with Rogers granting Rogers an option to acquire its wireless spectrum licenses. The potential option exercise for the sale of the wireless spectrum licenses is subject to various regulatory approvals.

Program rights represent licensed rights acquired to broadcast television programs on the Company's conventional and specialty television channels and program advances are in respect of payments for programming prior to the window license start date. For licensed rights, the Company records a liability for program rights and corresponding asset when the license period has commenced and all of the following conditions have been met: (i) the cost of the program is known or reasonably determinable, (ii) the program material has been accepted by the Company in accordance with the license agreement and (iii) the material is available to the Company for telecast. Program rights are expensed on a systematic basis generally over the estimated exhibition period as the programs are aired and are included in operating, general and administrative expenses.

Other intangibles include software that is not an integral part of the related hardware, customer relationships as well as a trademark and brands. Software is amortized on a straight-line basis over their estimated useful lives ranging from three to ten years. Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over the estimated useful life of 15 years.

vi) Asset impairment

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at March 1) and when events or changes in circumstances indicate that the carrying value may be impaired. The recoverable amount of each cash-generating unit ("CGU") is determined based on the higher of the CGU's fair value less costs to sell and its value in use. A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are consistent with its reporting segments, Cable, Satellite and Media. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods. The results of the impairment tests are provided in Note 10 to the Consolidated Financial Statements.

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

vii) Employee benefit plans

As at August 31, 2014, Shaw had non-registered defined benefit pension plans for key senior executives and designated executives and various registered defined benefit plans for certain unionized and non-unionized employees. The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The differences between actual and assumed results are immediately recognized in other comprehensive income/loss. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected will be needed to settle employee benefit obligations and is also used to calculate the interest income on plan assets. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes required. The following table illustrates the increase on the accrued benefit obligation and pension expense of a 1% decrease in the discount rate:

	Accrued Benefit Obligation at End of Fiscal 2014	Pension Expense Fiscal 2014
Weighted Average Discount Rate – Non-registered Plans	4.00%	4.75%
Weighted Average Discount Rate – Registered Plans	4.09%	4.84%
Impact of: 1% decrease *($millions)* – Non-registered Plans	$ 85	$ 4
Impact of: 1% decrease *($millions)* – Registered Plans	$ 31	$ 2

viii) Deferred income taxes

The Company has recognized deferred income tax assets and liabilities for the future income tax consequences attributable to differences between the financial statement carrying amounts of assets and liabilities and their respective tax bases. Deferred tax assets are also recognized in respect of losses of certain of the Company's subsidiaries. The deferred income tax assets and liabilities are measured using enacted or substantially enacted tax rates expected to apply to taxable income in the years in which the temporary differences are expected to reverse or the tax losses are expected to be utilized. Realization of deferred income tax assets is dependent upon generating sufficient taxable income during the period in which the temporary differences are deductible. The Company has evaluated the likelihood of realization of deferred income tax assets based on forecasts of taxable income of future years, existing tax laws and tax planning strategies. Significant changes in assumptions with respect to internal forecasts or the inability to implement tax planning strategies could result in future impairment of these assets.

ix) Commitments and contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Contractual and other commercial obligations primarily relate to network fees, program rights and operating lease agreements for use of transmission facilities, including maintenance of satellite transponders and lease of premises in the normal course of business. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities.

G. Related party transactions

Related party transactions are reviewed by Shaw's Corporate Governance and Nominating Committee, comprised of independent directors. The following sets forth certain transactions in which the Company is involved.

Corus

The Company and Corus are subject to common voting control. During the year, network, advertising and programming fees were paid to various Corus subsidiaries. The Company provided uplink of television signals, programming content, Internet services and lease of circuits to various Corus subsidiaries. In addition, the Company provided Corus with television advertising spots in return for radio and television advertising.

During 2013, the Company entered into a number of transactions with Corus to optimize its portfolio of specialty channels. Shaw agreed to sell to Corus its 49% interest in ABC Spark and 50% interest in its two French-language channels, Historia and Series+. In addition, Corus agreed to sell to Shaw its 20% interest in Food Network Canada. The ABC Spark and Food Network Canada transactions closed during 2013 while Historia and Series+ closed in fiscal 2014.

Burrard Landing Lot 2 Holdings Partnership

The Company has a 33.33% interest in the Partnership. During the current year, the Company paid the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, BC, is the Company's headquarters for its lower mainland operations.

Specialty channels

The Company previously held interests in a number of specialty television channels which were either subject to joint control or significant influence, including Historia and Series+. During the current year the Company paid network fees to these channels.

Key management personnel and Board of Directors

Key management personnel consist of the most senior executive team and along with the Board of Directors have the authority and responsibility for directing and controlling the activities of the Company. In addition to compensation provided to key management personnel and the Board of Directors for services rendered, the Company transacts with companies related to certain Board members primarily for the purchase of remote control units, network programming and installation of equipment.

H. New accounting standards

Shaw has adopted or will adopt a number of new accounting policies as a result of recent changes in IFRS as issued by the IASB. The ensuing discussion provides additional information as to the date that Shaw is or was required to adopt the new standards, the methods of adoption permitted by the standards, the method chosen by Shaw, and the effect on the financial statements as a result of adopting the new policies. The adoption or future adoption of these accounting policies has not and is not expected to result in changes to the Company's current business practices.

The Company adopted the following standards and amendments effective September 1, 2013:

Adoption of recent accounting pronouncements

The adoption of the following standards and amendments effective September 1, 2013 had no impact on the Company's consolidated financial statements other than additional disclosure requirements.

- IFRS 10 *Consolidated Financial Statements* replaces previous consolidation guidance and outlines a single consolidation model that identifies control as the basis for consolidation of all types of entities.
- IFRS 11 *Joint Arrangements* replaces IAS 31 *Interests in Joint Ventures* and SIC 13 *Jointly Controlled Entities – Non-Monetary Contributions by Venturers*. The new standard classifies joint arrangements as either joint operations or joint ventures.
- IFRS 12 *Disclosure of Interests in Other Entities* sets out required disclosures on application of IFRS 10, IFRS 11 and IAS 28 (amended 2011).
- IAS 27 *Separate Financial Statements* was amended in 2011 for the issuance of IFRS 10 and retains the same guidance for separate financial statements.
- IAS 28 *Investments in Associates* was amended in 2011 for changes based on issuance of IFRS 10 and IFRS 11 and provides guidance on accounting for joint ventures, as defined by IFRS 11, using the equity method.
- IFRS 13 *Fair Value Measurement* defines fair value, provides guidance on its determination and introduces consistent requirements for disclosure of fair value measurements.

The Company has elected to early adopt the amendments to IAS 36 *Impairment of Assets* for the year ended August 31, 2014. The amendments limit the requirement to disclose the recoverable amount to assets (including goodwill) for which an impairment loss was recognized or reversed in the period, instead of the recoverable amount for each CGU to which significant goodwill or indefinite-life intangible assets have been allocated. Under the amendments, recoverable amount is required to be disclosed only when an impairment loss has been recognized or reversed.

Standards, interpretations and amendments to standards issued but not yet effective

The Company has not yet adopted certain standards, interpretations and amendments that have been issued but are not yet effective. The following pronouncements are being assessed to determine their impact on the Company's results and financial position.

- IFRIC 21 *Levies* provides guidance on when to recognize a financial liability imposed by a government, if the levy is accounted for in accordance with IAS 37 *Provisions, Contingent Liabilities and Contingent Assets*, or where the timing and amount of the levy is certain. This interpretation is effective for the annual period commencing September 1, 2014 and is not expected to have an impact on the Company's financial statements.
- *Clarification of Acceptable Methods of Depreciation and Amortization* (Amendments to IAS 16 *Property, Plant and Equipment* and IAS 38 *Intangible Assets)* prohibits revenue from being used as a basis to depreciate property, plant and equipment and significantly limits use of revenue-based amortization for intangible assets. The amendments are to be applied prospectively for the annual period commencing September 1, 2016.

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

- IFRS 15 *Revenue from Contracts with Customers,* was issued in May 2014 and replaces IAS 11 *Construction Contracts,* IAS 18 *Revenue,* IFRIC 13 *Customer Loyalty Programs,* IFRIC 15 *Agreements for the Construction of Real Estate*, IFRIC 18 *Transfers of Assets from Customers* and SIC-31 *Revenue – Barter Transactions Involving Advertising Services*. The new standard requires revenue to be recognized to depict the transfer of promised goods or services to customers in an amount that reflects the consideration expected to be received in exchange for those goods or services. The principles are to be applied in the following five steps: (1) identify the contract(s) with a customer, (2) identify the performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the performance obligations in the contract, and (5) recognize revenue when (or as) the entity satisfies a performance obligation. The new standard is to be applied either retrospectively or on a modified retrospective basis and is effective for the annual period commencing September 1, 2017.
- IFRS 9 *Financial Instruments: Classification and Measurement* replaces IAS 39 *Financial Instruments* and applies a principal-based approach to the classification and measurement of financial assets and financial liabilities, including an expected credit loss model for calculating impairment, and includes new requirements for hedge accounting. The standard is required to be applied retrospectively for the annual period commencing September 1, 2018.

Change in accounting estimates

During the current year, the Company reviewed the useful lives of its property, plant and equipment as well as the amortization period for amounts deferred under multiple element arrangements, including equipment revenue and associated equipment costs and connection fees. The review resulted in changes in the amortization period for amounts deferred under multiple element arrangements and estimated useful lives of certain assets effective September 1, 2013. As a result, cable and telecommunication distribution system assets are amortized on a straight-line basis over 5 to 20 years, and digital cable terminals and modems on a straight-line basis over 2 to 5 years. The amortization period for amounts deferred and amortized on a straight-line basis under multiple element arrangements is 3 years. The impact of the changes has been accounted for prospectively. The changes in estimates in respect of unamortized balances at August 31, 2013 resulted in decreases to revenue and amortization as summarized below.

($millions Cdn)	Year ended August 31, 2014
Revenue	3
Amortization	
Deferred equipment revenue	29
Deferred equipment costs	66
Property, plant and equipment, intangibles and other	63

I. Known events, trends, risks and uncertainties

The Company is subject to a number of risks and uncertainties which could have a material adverse effect on its future profitability. Included herein is a "Caution Concerning Forward-Looking Statements" section which should be read in conjunction with this report.

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

The risks and uncertainties discussed below highlight the more important and relevant factors that could significantly affect the Company's operations. They do not represent an exhaustive list of all potential issues that could affect the financial results of the Company. The principal risks relate to:

- Competition, technological change and regulatory regime
- Economic conditions
- Interest rates, foreign exchange rates, and capital markets
- Litigation
- Uninsured risks of loss
- Reliance on suppliers
- Programming expenses
- Unionized labour
- Holding company structure
- Control of the Company by the Shaw family
- Information systems and internal business processes
- Dividend payments
- Acquisitions and other strategic transactions

i) Competition, technological change and regulatory regime

Cable and satellite providers and television broadcasters operate in an open and competitive marketplace. Shaw's businesses face competition from regulated and unregulated entities utilizing existing or new communications technologies and from illegal services. In addition, the rapid deployment of new technologies, services and products has reduced the traditional lines between telecommunications, Internet and broadcasting services and expands further the competitive landscape. Shaw may face competition in the future from other technologies being developed or yet to be developed. While Shaw continually seeks to strengthen its competitive position through investments in infrastructure, technology, programming and customer service, there can be no assurance that these investments will be sufficient to maintain Shaw's market share or performance in the future.

CABLE TELEVISION AND DTH

Shaw's cable television and DTH systems currently compete or may in the future compete with other distributors of video and audio signals, including other DTH satellite services, satellite master antenna systems, multipoint distribution systems ("MDS"), other competitive cable television undertakings and telephone companies offering video service. As noted above, Shaw also competes with unregulated internet services, illegal satellite services including grey and black market offerings, unregulated video services and offerings available over high-speed internet connections. Continued improvements in the quality of streaming video over the internet and the availability of television shows and movies online increases competition to Shaw's cable television and DTH businesses.

The Company expects that competition will continue to increase and there can be no assurance that such increased competition will not have a material adverse effect on Shaw's results of operations. The Company also expects increased IPTV competition across Canada with respect to its DTH Satellite services.

INTERNET

There are a number of different types of ISPs offering residential and business Internet services that compete or may compete in the future with Shaw's Internet services. These include independent service providers, ILECs, wireless providers, and electricity transmission and distribution companies.

High-speed Internet access services are principally provided through cable modem and digital subscriber line ("DSL") technology. Internet services through cable modem technology are primarily provided by cable companies, although the CRTC has also authorized third-party ISPs to access cable companies' facilities, such as Shaw's, to deliver high-speed Internet services.

Although operating in a competitive environment, Shaw expects that consumer demand for Internet access services and for bandwidth-intensive applications on the Internet (including streaming video, digital downloading and interactive gaming) will lead to continued demand for high-speed Internet services. Shaw continues to expand the capacity of its network to handle the anticipated increases in demand, however there can be no assurance that network capacity will continue to meet the increasing demand of its customers.

DIGITAL PHONE

The competitors of Shaw Digital Phone include ILECs, Competitive Local Exchange Carriers ("CLECs"), non-facilities-based Voice over Internet Protocol ("VoIP") providers and wireless providers. Several of such competitors have larger operational and financial resources than the Corporation and are well established with residential customers in their respective markets. In addition, there is a continuing trend toward households opting to rely on wireless voice services in place of landline services such as Digital Phone. These developments may negatively affect the business and prospects of Shaw's Digital Phone.

INTERNET INFRASTRUCTURE

Through Shaw Business, Shaw competes with other telecommunications carriers in providing high-speed broadband communications services (data and video transport and Internet connectivity services) to businesses, ISPs and other telecommunications providers. The telecommunications services industry in Canada is highly competitive, rapidly evolving and subject to constant change. Competitors of Shaw Business include ILECs, competitive access providers, CLECs, ISPs, private networks built by large end users and other telecommunications companies. In addition, the development and implementation of new technologies by others could give rise to significant competition.

SATELLITE SERVICES

In its Canadian SRDU business, Satellite Services faces competition principally from one other operating SRDU operator in Canada. In February 2010, another company was licensed by the CRTC to provide both DTH and SRDU services in Canada, but has not yet commenced service. Satellite Services also faces competition from the expansion of fibre distribution systems delivering distant US and Canadian conventional television signals into territories previously served only by SRDU operators.

MEDIA

The OTA and Specialty television business and the advertising markets in which they operate are highly competitive. Numerous broadcast and specialty television networks, as well as online advertising platforms and websites, compete for advertising revenues. The Company's ability to compete successfully depends on a number of factors, including its ability to secure popular

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

television programming rights for all platforms, including non-linear rights in addition to traditional linear broadcast rights, and achieve high distribution levels. The Company expects that competition will continue to increase and there can be no assurance that increased competition will not have a material adverse effect on Shaw's results of operations.

IMPACT OF REGULATION
As more fully discussed under Government regulations and regulatory developments, a majority of the Corporation's business activities are subject to regulations and policies administered by Industry Canada and/or the CRTC. The Corporation's operations and results are affected by changes in regulations, policies and decisions, including changes in interpretation of existing regulations by courts, the government or the regulators, in particular the CRTC, Industry Canada, the Competition Bureau and the Copyright Board. This regulation relates to, and may have an impact on, among other things, licensing, competition, programming carriage and terms of carriage, strategic transactions and the potential for new or increased fees. Changes in the regulatory regime may adversely affect the operations and performance of the Company.

ii) Economic conditions
Canada's economy is affected by uncertainty in global financial and equity markets and slowdowns in global economic growth. Advertising revenues are affected by prevailing economic conditions. Changes in economic conditions may affect discretionary consumer spending, resulting in increased or decreased demand for Shaw's product offerings as well as advertising airtime and rates. There can be no assurance that current or future events caused by volatility in domestic or international economic conditions or a decline in economic growth will not have an adverse effect on the Company's business and operating results.

iii) Interest rates, foreign exchange rates and capital markets
Shaw has the following financial risks in its day-to-day operations:

(a) Interest rates: Due to the capital-intensive nature of Shaw's operations, the Company utilizes long-term financing extensively in its capital structure. The primary components of this structure include:

1. Banking facilities as more fully described in Note 13 to the Consolidated Financial Statements.
2. Various Canadian denominated senior notes and debentures with varying maturities issued in the public markets as more fully described in Note 13 to the Consolidated Financial Statements.

Interest on bank indebtedness is based on floating rates while the senior notes are primarily fixed-rate obligations. If required, Shaw utilizes its credit facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. Increases in interest rates could have a material adverse effect on the Company's cash flows.

As at August 31, 2014, 94% of Shaw's consolidated long-term debt was fixed with respect to interest rates.

(b) Foreign exchange: In September 2014, the Company closed the acquisition of 100% of the shares of US-based ViaWest for an enterprise value of US $1.2 billion which was funded through a combination of cash on hand, assumption of ViaWest debt, and a drawdown of US $330 million on the Company's credit facility. Shaw's net investment in ViaWest is exposed to foreign exchange risk related to fluctuations in exchange rates between the Canadian and US dollar. This risk is mitigated by the US dollar denominated debt which is designated as a hedge of the net investment.

Upon completion of the ViaWest acquisition in September 2014, a portion of the Company's revenues and operating expenses are incurred in US dollars. In addition certain of the Company's capital expenditures are incurred in US dollars. Fluctuations in the value of the Canadian dollar relative to the US dollar could have a material effect on the Company's business and operating results.

(c) Capital markets: The Company requires ongoing access to capital markets to support its operations. Changes in capital market conditions, including significant changes in market interest rates or lending practices, or changes in Shaw's credit ratings, may have a material adverse effect on the Company's ability to raise or refinance short-term or long-term debt, and thus on its financial position and ability to operate.

Shaw manages its exposure to floating interest rates through maintaining a balance of fixed and floating rate debt. To mitigate some of the foreign exchange uncertainty with respect to capital expenditures, the Company regularly enters into forward contracts in respect of US dollar commitments. In order to minimize the risk of counterparty default under its swap agreements, Shaw assesses the creditworthiness of its swap counterparties. Further information concerning the policy and use of derivative financial instruments is contained in Notes 2 and 28 to the Consolidated Financial Statements.

iv) Litigation

The Company and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business. Although management does not expect that the outcome of these matters will have a material adverse effect on the Corporation, there can be no assurance that these matters, or other matters that arise in the future, will not have an adverse effect on the Corporation's business and operating results.

v) Uninsured risks of loss

The Company relies on three satellites (Anik F2, Anik F1R and Anik G1) owned by Telesat Canada ("Telesat") to conduct its Satellite business. The Company owns certain transponders on Anik F2 and has long-term capacity service agreements in place in respect of transponders on Anik F1R, Anik F2 and Anik G1. The Company's interests in these transponders are only insurable indirectly through the satellite owner. In the case of transponders on Anik F1R and Anik F2, the Company does not maintain any indirect insurance coverage as it believes the costs are uneconomic relative to the benefit which could otherwise be derived through an arrangement with Telesat. In the case of Anik G1, Telesat is committed to maintaining insurance on the satellite for five years from its April 2013 launch. As collateral for the transponder capacity pre-payments that were made by the Company to facilitate the construction of the satellite, the Company maintains a security interest in the transponder capacity and any related insurance proceeds that Telesat recovers in connection with an insured loss event.

The Company does not maintain business interruption insurance covering damage or loss to one or more of the satellites as it believes the premium costs are uneconomic relative to the risk of satellite failure. Transponder capacity is available to the Company on an unprotected, non-preemptible basis, in both the case of the Anik F2 transponders that are owned by Shaw and the Anik F1R, Anik F2 and Anik G1 transponders that are secured through capacity service agreements. The Company has priority access to spare transponders on Anik F1R, Anik F2 and Anik G1 in the case of interruption, subject to availability. In the event of satellite failure, service will only be restored as capacity becomes available. Restoration of satellite service on another satellite may require repositioning or re-pointing of customers' receiving dishes, an upgrade of their set-top box or customers may require a larger dish. The Anik G1 satellite has a switch feature that allows whole channel services (transponders and available spares) to be switched from extended Ku-band to Ku-band, which provides the Company with limited back-up to restore failed whole channel services on Anik F1R. Satellite failure could negatively affect levels of customer service and customer relationships and may result in a material adverse effect on the Company's business and results of operations.

The Company's business may be interrupted by network failures, including those caused by fire damage, natural disaster, power loss, hacking, computer viruses, disabling devices, acts of war or terrorism and other events. This could negatively affect levels of customer service and customer relationships and may result in a material adverse effect on the Company's business and operating results. The Company protects its network through a number of measures including physical and information technology security, ongoing maintenance and placement of insurance on its network equipment and data centers. The Company self-insures the plant in the cable distribution system as it believes the premium costs are uneconomic relative to the risk of failure of the plant in the cable distribution system. The risk of loss is mitigated as most of the cable plant is located underground. In addition, it is likely that network damage caused by any one incident would be limited by geographic area and therefore resulting business interruption and financial damages would be limited. Further, the Company has back-up disaster recovery plans in the event of network failure and redundant capacity for certain portions of the system. In the past, the Company has successfully recovered from network damage caused by natural disasters without significant cost or disruption of service. Although the Company has taken steps to reduce this risk, there can be no assurance that major network disruptions will not occur.

vi) Reliance on suppliers

Shaw's business is connected to or relies on other telecommunication carriers and certain other utilities. Any of the events described in the preceding paragraph, as well as labour strikes and other work disruptions, bankruptcies, technical difficulties or other events affecting the business operations of these carriers or utilities may have an adverse effect on the Company's business and operating results.

The Company sources its customer premise and capital equipment and capital builds from certain key suppliers. While the Company has alternate sources for most of its purchases, the loss of a key supplier could adversely affect the Company in the short term.

vii) Programming expenses

Shaw's programming expenses for cable and DTH continue to be one of the most significant single expense items. Costs continue to increase, particularly for sports programming. In addition, as the Company adds programming or distributes existing programming to more of the subscriber base, programming expenses increase. Although the Company has been successful at reducing the impact of these increases through sale of additional services or increasing subscriber rates, there can be no assurance that the Company will continue to be able to do so and operating results may be impacted.

In Media one of the most significant expenses is also programming costs. Increased competition in the television broadcasting industry, developments affecting producers and distributors of programming content, changes in viewer preferences and other developments could impact both the availability and cost of programming content. Although the Corporation has processes to effectively manage these costs, programming content may be purchased for broadcasting one to two years in advance, making it more difficult to predict how such content will perform.

viii) Unionized labour

Approximately 50% of the Media division employees are employed under one of five collective agreements represented by three unions. If labour disruptions occur, it is possible large numbers of employees may be involved and that the Media business may be disrupted. Shaw is currently negotiating one collective agreement and the remaining four agreements have been renewed and are in effect for the next one to three years.

ix) Holding company structure

Substantially all of Shaw's business activities are operated by its subsidiaries. As a holding company, the Company's ability to meet its financial obligations is dependent primarily upon the receipt of interest and principal payments on intercompany advances, management fees, cash dividends and other payments from its subsidiaries together with proceeds raised by the Company through the issuance of equity and the incurrence of debt, and from proceeds received on the sale of assets. The payment of dividends and the making of loans, advances and other payments to the Company by its subsidiaries may be subject to statutory or contractual restrictions, are contingent upon the earnings of those subsidiaries and are subject to various business and other considerations.

x) Control of the Company by the Shaw family

As at October 31, 2014, JR Shaw and members of his family and the corporations owned and/or controlled by JR Shaw and members of his family (the "Shaw Family Group") own approximately 79% of the outstanding Class A Shares of the Company. The Class A Shares are the only shares entitled to vote in all shareholder matters. All of the Class A Shares held by the Shaw Family Group are subject to a voting trust agreement entered into by such persons. The voting rights with respect to such Class A Shares are exercised by the representative of a committee of five trustees. Accordingly, the Shaw Family Group is, and as long as it owns a majority of the Class A Shares will continue to be, able to elect a majority of the Board of Directors of the Company and to control the vote on matters submitted to a vote of the Company's Class A shareholders.

xi) Information systems and internal business processes

Many aspects of the Company's business depend to a large extent on various IT systems and software and internal business processes. Shaw also undertakes ongoing initiatives to update and improve these systems and processes. Although the Company has taken steps to reduce these risks, there can be no assurance that potential failures of, or deficiencies in, these systems, processes or change initiatives will not have an adverse effect on the Corporation's business and operating results.

xii) Dividend payments

The Company currently pays monthly common share dividends in amounts approved on a quarterly basis by the Board of Directors. At the current approved dividend amount, the

Company would pay approximately $510 million in common share dividends during 2015 (before taking into account the Company's dividend reinvestment plan ("DRIP"), see further details on page 54). While the Company expects to generate sufficient free cash flow in 2015 to fund these dividend payments, if actual results are different from expectations there can be no assurance that the Company will continue common share dividend payments at the current level.

xiii) Acquisitions and other strategic transactions

The Company may from time to time make acquisitions and enter into other strategic transactions. In connection with these acquisitions and strategic transactions, Shaw may fail to realize the anticipated benefits, incur unanticipated expenses and/or have difficulty incorporating or integrating the acquired business, the occurrence of which could have a material adverse effect on the Company.

II. SUMMARY OF QUARTERLY RESULTS

Quarter	Revenue	Operating income before restructuring costs and amortization(1)	Net income attributable to equity shareholders	Net income(2)	Basic earnings per share	Diluted earnings per share
($millions Cdn except per share amounts)						
2014						
Fourth	1,263	525	187	192	0.40	0.40
Third	1,342	601	219	228	0.47	0.47
Second	1,274	528	215	222	0.46	0.46
First	1,362	608	236	245	0.51	0.51
Total	5,241	2,262	857	887	1.84	1.84
2013						
Fourth	1,246	496	111	117	0.24	0.24
Third	1,326	585	239	250	0.52	0.52
Second	1,251	538	172	182	0.38	0.38
First	1,319	601	224	235	0.50	0.49
Total	5,142	2,220	746	784	1.64	1.63

(1) See key performance drivers on page 21.
(2) Net income attributable to both equity shareholders and non-controlling interests.

Quarterly revenue and operating income before restructuring costs and amortization are primarily impacted by the seasonality of the Media division and fluctuate throughout the year due to a number of factors including seasonal advertising and viewing patterns. Typically, the Media business has higher revenue in the first quarter driven by the fall launch of season premieres and high demand and the third quarter which is impacted by season finales and mid season launches. Advertising revenue typically declines in the summer months of the fourth quarter when viewership is generally lower.

Net income has fluctuated quarter-over-quarter primarily as a result of the changes in operating income before restructuring costs and amortization described above and the impact of the net change in non-operating items. In the fourth quarter of 2014, net income decreased by $36 million primarily due to lower operating income before restructuring costs and amortization of

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

$76 million partially offset by the impact of the restructuring announced during the previous quarter. In the third quarter of 2014, net income increased $6 million due to higher operating income before restructuring costs and amortization of $73 million and lower interest and amortization expense totaling $25 million partially offset by restructuring expenses of $53 million and reduction in net other revenue items of $41 million. The reduction in net other revenue items was primarily due to the gain on sale of media assets of $49 million net of the $8 million of debt retirement costs recorded in the second quarter. In the second quarter of 2014, net income decreased $23 million due to lower operating income before restructuring costs and amortization of $80 million and increased amortization of $8 million partially offset by an improvement in net other non-operating items of $36 million and lower income tax expense of $24 million. In the first quarter of 2014, net income increased $128 million due to increased operating income before restructuring costs and amortization of $112 million, a reduction in net non-operating items of $21 million and lower amortization of $29 million partially offset by higher income taxes of $36 million. The reduction in amortization is due to changes in estimated useful lives of certain property, plant and equipment as well as a change in the amortization period for deferred equipment revenue and the associated deferred equipment costs. Net other non-operating items decreased due to a refund of $5 million in respect of excess money from the Canwest CCAA plan implementation fund received in the first quarter and the write-down of a real estate property of $14 million in the fourth quarter. In the fourth quarter of 2013, net income decreased $133 million due to lower operating income before restructuring costs and amortization of $89 million and reduction in net other revenue items of $67 million partially offset by lower income taxes of $34 million. The reduction in net other revenue items was mainly due to the gain on sale of Mountain Cable of $50 million recorded in the third quarter and write-down of a real estate property of $14 million in the fourth quarter. In the third quarter of 2013, net income increased $68 million due to increased operating income before restructuring costs and amortization of $47 million, the aforementioned gain on sale of Mountain Cable and the gain on sale of the specialty channel ABC Spark partially offset by higher income taxes of $30 million and acquisition and divestment costs in respect of the transactions with Rogers and the acquisition of Envision. In the second quarter of 2013, net income decreased $53 million primarily due to lower operating income before restructuring costs and amortization of $63 million partially offset by lower income taxes of $5 million. As a result of the aforementioned changes in net income, basic and diluted earnings per share have trended accordingly.

The following further assists in explaining the trend of quarterly revenue and operating income before restructuring costs and amortization:

Growth in subscriber statistics as follows:

	2014				2013			
Subscriber Statistics	**First**	**Second**	**Third**	**Fourth**	**First**	**Second**	**Third**	**Fourth**
Video customers	**(29,619)**	**(20,758)**	**(12,075)**	**(20,166)**	(23,877)	(29,525)	(26,578)	(29,522)

(2) Funds flow from operations is presented before changes in non-cash working capital as presented in the Consolidated Statements of Cash Flows.

Highlights

- Net income was $887 million for the year compared to $784 million in 2013.
- Earnings per share were $1.84 compared to $1.64 in 2013.
- Revenue for the year improved 1.9% to $5.24 billion from $5.14 billion last year.
- Operating income before restructuring costs and amortization of $2.26 billion was up 1.9% over last year's amount of $2.22 billion.
- Consolidated free cash flow was $698 million compared to $604 million in 2013.
- During 2014 the Company increased the dividend rate on Shaw's Class A Participating Shares and Class B Non-Voting Participating Shares to an equivalent dividend rate of $1.0975 and $1.10 respectively. Dividends paid in 2014 were $485 million.

- On January 28, 2014 the Company issued $500 million senior unsecured notes at a rate of 4.35% due January 31, 2024 and $300 million floating rate senior unsecured notes due February 1, 2016. The floating rate senior notes bear interest at an annual rate equal to three month CDOR plus 0.69%. The net proceeds from the issuances were used to redeem the $600 million senior unsecured notes due June 2, 2014 and for working capital and general corporate purposes.
- In April 2014 the Company announced changes to the structure of its operating divisions to improve overall efficiency while enhancing its ability to grow as the leading network and content experience company. Commencing in fiscal 2015, Shaw's residential and enterprise services are reorganized into new Consumer and Business units, respectively, with no changes to the Media division. In connection with the restructuring of its operations, the Company recorded $58 million primarily in respect of the approximate 400 management and non-customer facing roles which were affected by the organizational changes. The anticipated annual savings, net of hires to support the new structure, is approximately $50 million.
- During 2014 Shaw entered into a marketing, content and promotion partnership with Rdio, Inc. ("Rdio") a leading digital music service with a catalog of over 20 million songs. The service allows users to listen anywhere – the web, phone, or offline – and complements Shaw's broadband and Shaw Go WiFi services. As part of the arrangement Shaw made a financial investment in Rdio's holding company, Pulser Media Inc. ("Pulser"). In addition, Shaw also made a minority investment in SHOP.CA, one of Canada's leading on-line ecommerce destinations.
- During fiscal 2014 and 2013, the Company entered into a number of transactions as follows:
  - In late fiscal 2014, the Company announced it had entered into agreements to acquire 100% of the shares of ViaWest for an enterprise value of US $1.2 billion. ViaWest is headquartered in Denver, Colorado and has 27 data centres in 8 key Western U.S. markets providing collocation, cloud and managed services. On September 2, 2014, the Company closed the acquisition which was funded through a combination of cash on hand, assumption of ViaWest debt and a drawdown of US $330 million on the Company's credit facility. The ViaWest acquisition provides the Company with a growth platform in the North American data centre sector and is another step in expanding technology offerings for mid-market enterprises in Western Canada.
  - During the current year, the Company partnered with Rogers to form shomi, a new subscription video-on-demand service having the latest most exclusive shows and selections personalized for viewers. The service was launched in beta in early November 2014.
  - During 2013, the Company entered into agreements with Rogers to sell to Rogers its shares in Mountain Cable and grant to Rogers an option to acquire its wireless spectrum licenses; and, to purchase from Rogers its 33.3% interest in TVtropolis General Partnership ("TVtropolis"). The sale of Mountain Cable and the purchase of TVtropolis closed during 2013, after the respective regulatory approvals were received. The potential option exercise for the sale of the wireless spectrum licenses is still subject to various regulatory approvals. The net proceeds of these transactions approximates $700 million.

- During 2013, the Company entered into a number of transactions with Corus, a related party subject to common voting control. In a series of agreements to optimize its portfolio of specialty channels, Shaw agreed to sell to Corus its 49% interest in ABC Spark and 50% interest in its two French-language channels, Historia and Series+. In addition, Corus agreed to sell to Shaw its 20% interest in Food Network Canada. Shaw received net proceeds of $93 million from these transactions. The ABC Spark and Food Network Canada transactions closed during 2013 while Historia and Series+ closed in 2014.
- In 2013, the Company acquired Envision, a company providing leading telecommunication services to Calgary business customers, for approximately $225 million.

- During 2013, the Company established a notional fund, the accelerated capital fund, of up to $500 million with proceeds received, and to be received, from the aforementioned strategic transactions with each of Rogers and Corus. Accelerated capital initiatives are being funded through this fund and not cash generated from operations. Key investments include the completion of the Calgary internal data centre, further digitization of the network and additional bandwidth upgrades, development of IP delivery of video, expansion of the WiFi network, and additional innovative product offerings related to Shaw Go and other applications to provide an enhanced customer experience. Approximately $110 million was invested in fiscal 2013, $240 million in fiscal 2014, and $150 million is expected to be invested in fiscal 2015.
- The Company continued to expand on its TV Everywhere content strategy launching Global Go and a number of Shaw Go apps during fiscal 2014, giving subscribers on-the-go access to their favorite programming. Shaw also continued to invest in and build awareness of Shaw Go WiFi and as at August 31, 2014 had over 45,000 hotspots and 1.25 million devices registered on the network, reflecting the value of the service to customers.

Revenue and operating expenses

Consolidated revenue of $5.24 billion and operating income before restructuring costs and amortization of $2.26 billion both improved 1.9% over 2013. Revenue growth in the Cable division, primarily driven by pricing adjustments and growth in Business, was partially reduced by lower video subscribers, increased programming costs and higher employee related amounts. The marginal revenue decline in the Media division, primarily due to reduced advertising revenues partially offset by increased subscriber revenues as well as the favorable impact of a retroactive adjustment related to distant signal retransmission royalties, was offset through various expense reductions. Revenue growth in the satellite division, primarily due to pricing adjustments, was more than offset by higher programming expenses and increased operating costs related to the new Anik G1 satellite which launched in the third quarter of fiscal 2013. Within all segments, the prior year benefited from a one-time adjustment to align certain broadcast license fees with the CRTC billing period totaling approximately $14 million.

Amortization

($millions Cdn)	2014	2013	Change %
Amortization revenue (expense) –			
Deferred equipment revenue	**69**	121	(43.0)
Deferred equipment costs	**(142)**	(257)	(44.7)
Property, plant and equipment, intangibles and other	**(692)**	(718)	(3.6)

Amortization of deferred equipment revenue and deferred equipment costs decreased over the comparable year primarily due to the impact of the change in the amortization period for amounts in respect of customer premise equipment from two to three years.

Amortization of property, plant and equipment, intangibles and other decreased over the comparable year as the amortization of new expenditures was more than offset by the impact of assets that became fully depreciated and the effect of changes in useful lives of certain assets.

Amortization of financing costs and Interest expense

($millions Cdn)	2014	2013	Change %
Amortization of financing costs – long-term debt	**3**	4	(25.0)
Interest expense	**266**	309	(13.9)

Interest expense decreased over the comparable year primarily due to the combined impact of a lower average debt level and reduced average cost of borrowing.

Other income and expenses

($millions Cdn)	2014	2013	Increase (decrease) in income
Gain on sale of media assets	**49**	–	49
Gain on sale of cablesystem	**–**	50	(50)
Acquisition and divestment costs	**(4)**	(8)	4
Gain on sale of associate	**–**	7	(7)
Accretion of long-term liabilities and provisions	**(6)**	(9)	3
Debt retirement costs	**(8)**	–	(8)
Other losses	**(6)**	(26)	20

During 2013, the Company agreed to sell its 50% interest in its two French-language channels, Historia and Series+, to Corus, a related party subject to common voting control. The sale of Historia and Series+ closed on January 1, 2014 and the company recorded proceeds of $141 million and a gain of $49 million.

During 2013, the Company closed the sale of Mountain Cable in Hamilton, Ontario to Rogers. The Company received proceeds, after working capital adjustments, of $398 million and recorded a gain of $50 million.

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

The Company incurred $4 million of acquisition related costs in fiscal 2014 for professional fees paid to lawyers, consultants and advisors in respect of the acquisition of ViaWest which closed subsequent to year end.

In 2013, the Company incurred $8 million of costs in respect of the acquisition of Envision and the transactions with Rogers related to the sale of Mountain Cable, grant of an option to acquire the wireless spectrum licenses and purchase from Rogers its interest in TVtropolis.

During 2013, the Company recorded a gain of $7 million on the sale of its interest in ABC Spark to Corus.

The Company records accretion expense in respect of the discounting of certain long-term liabilities and provisions which are accreted to their estimated value over their respective terms. The expense is primarily in respect of CRTC benefit obligations.

On February 18, 2014, the Company redeemed the $600 million 6.50% senior notes due June 2, 2014. In connection with the early redemption, the Company incurred costs of $7 million and wrote-off the remaining finance costs of $1 million.

Other losses generally includes realized and unrealized foreign exchange gains and losses on US dollar denominated current assets and liabilities, gains and losses on disposal of property, plant and equipment and minor investments, and the Company's share of the operations of Burrard Landing Lot 2 Holdings Partnership. During the prior year, the category included amounts related to the electrical fire and resulting water damage to Shaw Court that occurred during the fourth quarter of 2012. In fiscal 2013, the Company received insurance advances of $5 million related to its insurance claim and incurred costs of $13 million in respect of ongoing recovery activities. In addition, during the fourth quarter of the prior year, the Company decided to discontinue further construction of a real estate project which resulted in a write-down of $14 million. During the current year, the category includes additional proceeds of $6 million related to the aforementioned insurance claim and also includes a refund of $5 million in respect of excess money from the Canwest CCAA plan implementation fund and a write-down of $6 million in respect of discontinued capital projects.

Income tax expense

The income tax expense was calculated using current statutory income tax rates of 26.0% for 2014 and 25.9% for 2013 and was adjusted for the reconciling items identified in Note 23 to the Consolidated Financial Statements.

Earnings per share

($millions Cdn except per share amounts)	2014	2013	Change %

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

Net income

Net income was $887 million in 2014 compared to $784 million in 2013. The year-over-year changes are summarized in the table below.

Net income increased $103 million over the prior year. The current year benefitted from higher operating income before restructuring costs and amortization, lower amortization and interest expense and improved net other costs and revenue, partially offset by higher income taxes and restructuring costs. Net other costs and revenue in both years was impacted by various items including gains on sales of media and cable assets as well as write-downs of assets while the prior year also included amounts in respect of recovery activities related to damage at Shaw Court.

($millions Cdn)	
Increased operating income before restructuring costs and amortization	**42**
Restructuring costs	**(58)**
Decreased amortization	**90**
Decreased interest expense	**43**
Change in other net costs and revenue(1)	**11**
Increased income taxes	**(25)**
	103

(1) Net other costs and revenue includes gains on sales of media assets and cablesystem, acquisition and divestment costs, gain on sale of associate, accretion of long-term liabilities and provisions, debt retirement costs and other losses as detailed in the Consolidated Statements of Income.

Success-based(3)	**234**	203	15.3
Upgrades and enhancement(4)	**364**	380	(4.2)
Replacement(5)	**49**	46	6.5
Buildings and other	**247**	144	71.5
	988	867	14.0
Operating margin(1)	**48.5%**	48.4%	0.1

(1) See key performance drivers on page 21.

(2) Build out of mainline cable and the addition of drops in new subdivisions.
(3) Capital and equipment costs (net) related to the acquisition of new customers, including installation of internet and digital phone modems, DCTs and commercial drops for Shaw Business customers.
(4) Upgrades to the plant and build out of the fibre backbone.
(5) Normal replacement of aged assets such as drops, vehicles and other equipment.
(6) Amounts in 2014 and 2013 include $240 million and $110 million, respectively, related to certain capital investments that are being funded from the accelerated capital fund.

OPERATING HIGHLIGHTS

- Revenue and operating income before restructuring costs and amortization improved 3.0% and 3.2%, respectively, over last year.
- Internet customers were up 39,895 to 1,930,401 and Digital Phone lines increased 15,374 totaling 1,375,334 as at August 31, 2014. Video subscribers decreased 82,618.

Cable revenue of $3.36 billion improved 3.0% over last year. Price adjustments along with growth in Business, including the Envision acquisition, and Internet were partially offset by lower Video subscribers and the impact of the divestiture of Mountain Cable in the prior year.

Operating income before restructuring costs and amortization of $1.63 billion improved 3.2% over the prior year. The net revenue improvement, along with lower marketing expenses and the reduction in the LPIF from 1.0% to 0.5%, were partially offset by increased programming costs and higher employee related expenses. The prior year also benefitted from a favorable adjustment of approximately $7 million to align certain broadcast license fees with the CRTC billing period.

Capital investment of $988 million increased $121 million over the prior year. The current year included $240 million of investment funded through the accelerated capital fund while the prior year spend was $110 million. The accelerated capital fund initiatives included continued investment on the new data centre, network capacity, next generation delivery systems, and expediting the WiFi infrastructure build.

Success-based spend was $31 million higher than the prior year due to Video equipment included offers and higher WiFi modem purchases, partially reduced by lower Digital Phone modem purchases.

Investment in Upgrades and enhancement and Replacement categories combined of $413 million was lower by $13 million due to prior year investment in the DNU project. Significant investment continued in upgrades to improve internet bandwidth capacity and congestion, WiFi network build, business customer growth and IPTV video systems.

Investment in Buildings and other was up $103 million compared to last year due to higher spending on the new internal data centre and Shaw Court refurbishment.

Shaw continues to invest in the largest WiFi network in Canada, now with over 45,000 hotspots located in businesses and municipalities from Victoria, British Columbia to Sault Ste. Marie, Ontario. Shaw's carrier-grade network allows Shaw Internet customers, while on the go, to access and stream internet content, including Shaw Go Apps.

(2) Net of the profit on the sale of satellite equipment as it is viewed as a recovery of expenditures on customer premise equipment.

OPERATING HIGHLIGHTS

- Revenue improved 2.1% over the prior year to $878 million while operating income before restructuring costs and amortization declined 2.8% to $277 million.
- Shaw Direct subscribers decreased 22,942 to 880,623 at August 31, 2014.

Revenue of $878 million was up 2.1% over last year primarily due to rate adjustments partially offset by customer declines. Operating income before restructuring costs and amortization of $277 million decreased from $285 million last year primarily due revenue related improvements offset by higher fees related to programming services and operating costs related to the Anik G1 transponders launched in the third quarter last year. The prior year also benefitted from a favorable adjustment of approximately $4 million to align certain broadcast license fees with the CRTC billing period.

Total capital investment of $89 million for the current year declined from $123 million last year. Success based capital was down primarily due to lower customer growth. The decrease in Transponders reflects the final payment related to Anik G1 in the prior year while the decline in Buildings and other relates to higher investment last year in various uplink equipment.

During the year, Shaw Direct launched a number of new HD and SD channels and currently offers over 650 channels of which more than 220 are HD.

OPERATING HIGHLIGHTS

2014 revenue of $1.10 billion and operating income before restructuring costs and amortization of $353 million compared to $1.11 billion and $353 million, respectively, for the prior year. Revenues declined due to reduced advertising revenues and the impact of the disposition of Historia and Series+. This was partially offset by increased subscriber and other revenues that included a retroactive adjustment of $6 million related to Global's share of royalties for distant signal transmission for the years 2009 through 2013. Operating income before restructuring costs and amortization was unchanged year-over-year as the current year revenue decline was offset through various lower expenses including employee related and marketing. The prior year also benefitted from a favorable adjustment of approximately $3 million to align certain broadcast license fees with the CRTC billing period.

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

Global delivered solid programming results throughout the year with new programs such as The Blacklist and returning favourites including the NCIS franchise, Bones and Survivor. The conventional fall programming premiered through the month of September and into October with a solid returning line-up combined with new drama programming.

Throughout the year, Media's specialty portfolio held solid positions in the channel rankers in the Adult 25-54 category and closed out the year with 3 of the Top 10 analog channels and 5 of the Top 10 digital channels. In late fiscal 2014, Shaw Media announced the rebranding of two existing channels to FYI and Crime + Investigation which took place early in fiscal 2015.

During 2014, Global News retained the number one position in the Vancouver, Calgary and Edmonton markets, while continued focus on on-line and mobile audiences has maintained Globalnews.ca as Canada's fastest growing major news site. Global News continues to receive recognition for the quality of its journalism and public service and was honoured during the current year with numerous awards from various organizations, including Global Calgary receiving the prestigious "Best Local Newscast in Canada" award. In addition, Globalnews.ca won the 2013 Eppy Award for the best overall news website design, surpassing major Canadian and US news sites. In August 2014 Shaw filed an application with the CRTC for a new Category C hybrid national and local all news channel.

Higher capital investment was incurred in fiscal 2013 to support various initiatives including the launch of BC1 Regional News Channel, completion of the DTV transition in mandated markets, and various facility investments.

IV. FINANCIAL POSITION

Total assets were $13.2 billion at August 31, 2014 compared to $12.7 billion at August 31, 2013. Following is a discussion of significant changes in the consolidated statement of financial position since August 31, 2013.

Current assets increased $138 million primarily due to increases in cash, accounts receivable and inventories of $215 million, $7 million and $23 million, respectively partially offset by a decrease in assets held for sale of $105 million upon closing the sale of Historia and Series+ in the second quarter. Cash increased as funds provided by operations exceeded cash outlays for investing and financing activities. Accounts receivable increased due to timing of collection of advertising and other receivables while inventories were higher due to timing of equipment purchases.

Investments and other assets increased $50 million due to various financial investments including the investments in Pulser and SHOP.CA.

Property, plant and equipment increased $282 million primarily as a result of current year capital investment exceeding amortization.

Other long-term assets decreased $23 million primarily due to lower deferred equipment costs and related customer equipment financing receivables.

Intangibles increased $45 million mainly due to additional investments in software intangibles and acquired program rights and advances exceeding the amortization for the current year.

Current liabilities decreased $809 million due to the repayment of the promissory note of $48 million, a decline in the current portion of long-term debt of $950 million, a decrease in liabilities associated with assets held for sale of $14 million and lower accounts payable and accrued liabilities of $31 million which were partially offset by increases in provisions of $18 million, income taxes payable of $205 million and unearned revenue of $11 million. The current portion of long-term debt decreased due to the repayment of the 7.5% $350 million senior notes which were due in November 2013 and early redemption of the 6.5% $600 million senior notes which were due June 2014. Liabilities associated with assets held for sale decreased as the sale of Historia and Series+ closed during the second quarter at which time the Company settled the promissory note that had been owing to Corus. Accounts payable and accruals declined due to a decrease in CRTC benefit obligations as well as timing of payment and fluctuations in various payables. During the current year, the Company funded the remaining expenditure commitments in respect of the fiscal 2007 CRTC benefit obligation which the Company had assumed as part of the media acquisition in 2010. Provisions increased primarily due to the restructuring while income taxes payable increased due to the current year expense partially offset by net tax installment payments. Unearned revenue was higher primarily due to an increase in advance bill payments.

Long-term debt increased $822 million due to the issuance of 4.35% $500 million senior notes and $300 million floating rate senior notes and the refinancing of the Partnership's mortgage debt.

Other long-term liabilities increased $28 million due to an increase in employee benefit plans, primarily as a result of actuarial losses, partially offset by a decrease in CRTC benefit obligations.

Deferred credits decreased $10 million due to amortization of deferred IRU revenue.

Deferred income tax liabilities, net of deferred income tax assets, decreased $63 million due to the current year income tax recovery.

Shareholders' equity increased $524 million primarily due to increases in share capital of $227 million and retained earnings of $347 million partially offset by an increase in accumulated other comprehensive loss of $46 million. Share capital increased due to the issuance of 9,199,784 Class B Non-Voting Shares under the Company's option plan and DRIP. As of November 15, 2014, share capital is as reported at August 31, 2014 with the exception of the issuance of a total of 1,951,937 Class B Non-Voting Shares under the DRIP and upon exercise of options under the Company's option plan. Retained earnings increased due to current year earnings of $857 million partially offset by dividends of $510 million. Accumulated other comprehensive loss increased due to the remeasurements recorded on employee benefit plans.

V. CONSOLIDATED CASH FLOW ANALYSIS

Operating activities

($millions Cdn)	2014	2013	Change %
Funds flow from operations	**1,524**	1,380	10.4
Net change in non-cash working capital balances	**216**	(11)	>100.0
	1,740	1,369	27.1

Funds flow from operations increased over the comparative year due to improved operating income before restructuring costs and amortization, lower interest expense and a decrease in program rights purchases in the current year as well as the initial $300 million supplemental executive retirement plan funding in the prior year, all of which were partially offset by the restructuring amounts and higher current income tax expense in the current year. The net change in non-cash working capital balances related to operations fluctuated over the comparative year due to the timing of payment of current income taxes payable and accounts payable and accrued liabilities as well as fluctuations in accounts receivable.

Investing activities

($millions Cdn)	2014	2013	Increase
Cash flow used in investing activities	**(1,029)**	(642)	387

The cash used in investing activities increased over last year primarily due to the net cash receipt in respect of the transactions with Rogers partially offset by the acquisition of Envision in the comparative period and higher cash outlays for capital expenditures in the current year partially offset by the proceeds on the sale of Historia and Series+ which closed on January 1, 2014.

Financing activities

The changes in financing activities during 2014 and 2013 were as follows:

	Year ended August 31,	
($millions Cdn)	2014	2013
Issuance of 4.35% senior unsecured notes	**500**	–
Issuance of floating rate senior unsecured notes	**300**	–

Repay 6.1% senior unsecured notes	**–**	(450)
Repay promissory note	**(48)**	–
Prepay Partnership mortgage	**(19)**	–
Partnership mortgage loan proceeds	**40**	–
Senior notes issuance costs	**(4)**	–
Debt retirement costs	**(7)**	–
Dividends	**(352)**	(332)
Issuance of Class B Non-Voting Shares	**70**	69
Distributions paid to non-controlling interests	**(26)**	(19)
Contributions received from non-controlling interests	**–**	1
Repayment Partnership debt	**–**	(1)
	(496)	(732)

VI. LIQUIDITY AND CAPITAL RESOURCES

In the current year, the Company generated $698 million of free cash flow. Shaw used its free cash flow along with $800 million of proceeds from the two senior unsecured note issuances, net proceeds from the transactions with Corus of $93 million, proceeds on issuance of Class B Non-Voting Shares of $70 million and the net working capital and inventory reduction of $180 million to repay the 7.5% $350 million senior notes, redeem the 6.5% $600 million senior notes, pay common share dividends of $339 million, fund $240 million of accelerated capital spend, pay $45 million of restructuring costs, make $52 million in financial investments and increase cash balances $215 million.

To allow for timely access to capital markets, the Company filed a short form base shelf prospectus with securities regulators in Canada and the U.S. on May 13, 2013. The shelf prospectus allows for the issue up to an aggregate $4 billion of debt and equity securities over a 25 month period. Pursuant to the shelf prospectus, on January 31, 2014 the Company issued $500 million senior notes at a rate of 4.35% due January 31, 2024 and $300 million floating rate senior notes due February 1, 2016. The floating rate senior notes bear interest at an annual rate equal to three month CDOR plus 0.69%. The net proceeds from the issuances were used to redeem the $600 million senior notes due June 2, 2014 and for working capital and general corporate purposes.

On December 5, 2013 Shaw received the approval of the TSX to renew its normal course issuer bid to purchase its Class B Non-Voting Shares for a further one year period. The Company is authorized to acquire up to 20,000,000 Class B Non-Voting Shares during the period from December 9, 2013 to December 8, 2014. No shares have been repurchased during the current year.

The Company's DRIP allows holders of Class A Shares and Class B Non-Voting Shares who are residents of Canada to automatically reinvest monthly cash dividends to acquire additional Class B Non-Voting Shares. Class B Non-Voting Shares distributed under the Company's DRIP are new shares issued from treasury at a 2% discount from the 5 day weighted average market price immediately preceding the applicable dividend payment date. The DRIP has resulted in cash savings and incremental Class B Non-Voting Shares of $146 million during fiscal 2014.

Subsequent to year end, the Company used a combination of cash on hand, assumption of ViaWest debt and US $330 million of credit facility borrowings to finance the acquisition of ViaWest.

Based on available credit facilities and forecasted free cash flow, the Company expects to have sufficient liquidity to fund operations and obligations during the upcoming fiscal year. On a longer-term basis, Shaw expects to generate free cash flow and have borrowing capacity sufficient to finance foreseeable future business plans and refinance maturing debt.

Debt structure and financial policy

Shaw structures its borrowings generally on a stand-alone basis. The borrowings of Shaw are unsecured. While certain non-wholly owned subsidiaries are subject to contractual restrictions which may prevent the transfer of funds to Shaw, there are no similar restrictions with respect to wholly-owned subsidiaries of the Company.

Shaw's borrowings are subject to covenants which include maintaining minimum or maximum financial ratios. At August 31, 2014, Shaw is in compliance with these covenants and based on current business plans, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants over the life of the borrowings. As at August 31, 2014, the ratio of debt to operating income before restructuring costs and amortization for the Corporation is 1.9 times.

Having regard to prevailing competitive, operational and capital market conditions, the Board of Directors has determined that having this ratio in the range of 2.0 to 2.5 times would be optimal leverage for the Corporation in the current environment. Should the ratio fall below this, on an other than temporary basis, the Board may choose to recapitalize back into this optimal range. The Board may also determine to increase the Corporation's debt above these levels to finance specific strategic opportunities such as a significant acquisition or repurchase of Class B Non-Voting Participating Shares in the event that pricing levels were to drop precipitously.

Off-balance sheet arrangement and guarantees

Guarantees

Generally it is not the Company's policy to issue guarantees to non-controlled affiliates or third parties; however, it has entered into certain agreements as more fully described in Note 25 to the Consolidated Financial Statements. As disclosed thereto, Shaw believes it is remote that these agreements would require any cash payment.

Contractual obligations

The amounts of estimated future payments under the Company's contractual obligations at August 31, 2014 are detailed in the following table.

CONTRACTUAL OBLIGATIONS

	Payments due by period				
($millions Cdn)	**Total**	**Within 1 year**	**2 – 3 years**	**4 – 5 years**	**More than 5 years**
Long-term debt(1)	8,142	267	1,506	439	5,930
Operating obligations(2)	1,899	737	482	319	361
Purchase obligations(3)	75	59	14	2	–
Other obligations(4)	5	–	5	–	–
	10,121	1,063	2,007	760	6,291

(1) Includes principal repayments and interest payments.
(2) Includes maintenance and lease of satellite transponders, program related agreements, lease of transmission facilities and premises and exclusive rights to use intellectual property in Canada.
(3) Includes capital expenditure and inventory purchase commitments.
(4) Includes other non-current financial liabilities and is in respect of program rights.

VII. ADDITIONAL INFORMATION

Additional information relating to Shaw, including the Company's Annual Information Form dated November 28, 2014, can be found on SEDAR at www.sedar.com.

VIII. COMPLIANCE WITH NYSE CORPORATE GOVERNANCE LISTING STANDARDS

Disclosure of the Company's corporate governance practices which differ from the New York Stock Exchange ("NYSE") corporate governance listing standards are posted on Shaw's website, www.shaw.ca (under Investors/Corporate Governance/Compliance with NYSE Corporate Governance Listing Standards).

Shaw Communications Inc.
MANAGEMENT'S DISCUSSION AND ANALYSIS
August 31, 2014

IX. CERTIFICATION

The Company's Chief Executive Officer and Senior Vice President, Finance have filed certifications regarding Shaw's disclosure controls and procedures and internal control over financial reporting.

As at August 31, 2014, the Company's management, together with its Chief Executive Officer and Senior Vice President, Finance, has evaluated the effectiveness of the design and operation of each of the Company's disclosure controls and procedures and internal control over financial reporting. Based on these evaluations, the Chief Executive Officer and Senior Vice President, Finance have concluded that the Company's disclosure controls and procedures and the Company's internal control over financial reporting are effective.

There were no changes in the Company's internal controls over financial reporting during the fiscal year that have materially affected or are reasonably likely to materially affect Shaw's internal controls over financial reporting.

The design of any system of controls and procedures is based in part upon certain assumptions about the likelihood of certain events. There can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions, regardless of how remote.

Shaw Communications Inc.
MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL STATEMENTS AND REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

November 28, 2014

MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL REPORTING

The accompanying consolidated financial statements of Shaw Communications Inc. and all the information in this annual report are the responsibility of management and have been approved by the Board of Directors.

The financial statements have been prepared by management in accordance with International Financial Reporting Standards. When alternative accounting methods exist, management has chosen those it deems most appropriate in the circumstances. Financial statements are not precise since they include certain amounts based on estimates and judgments. Management has determined such amounts on a reasonable basis in order to ensure that the financial statements are presented fairly, in all material respects. Management has prepared the financial information presented elsewhere in the annual report and has ensured that it is consistent with the financial statements.

Management has a system of internal controls designed to provide reasonable assurance that the financial statements are accurate and complete in all material respects. The internal control system includes an internal audit function and an established business conduct policy that applies to all employees. Management believes that the systems provide reasonable assurance that transactions are properly authorized and recorded, financial information is relevant, reliable and accurate and that the Company's assets are appropriately accounted for and adequately safeguarded.

The Board of Directors is responsible for ensuring management fulfils its responsibilities for financial reporting and is ultimately responsible for reviewing and approving the financial statements. The Board carries out this responsibility through its Audit Committee.

The Audit Committee is appointed by the Board and its directors are unrelated and independent. The Committee meets periodically with management, as well as the external auditors, to discuss internal controls over the financial reporting process, auditing matters and financial reporting issues; to satisfy itself that each party is properly discharging its responsibilities; and, to review the annual report, the financial statements and the external auditors' report. The Audit Committee reports its findings to the Board for consideration when approving the financial statements for issuance to the shareholders. The Committee also considers, for review by the Board and approval by the shareholders, the engagement or re-appointment of the external auditors.

The financial statements have been audited by Ernst & Young LLP, the external auditors, in accordance with Canadian generally accepted auditing standards on behalf of the shareholders. Ernst & Young LLP has full and free access to the Audit Committee.

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

Management is responsible for establishing and maintaining an adequate system of internal control over financial reporting. Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the financial statements for external purposes in accordance with generally accepted accounting principles.

Due to its inherent limitations, internal control over financial reporting may not prevent or detect misstatements on a timely basis. Also, projections of any of the effectiveness of internal

Shaw Communications Inc.
MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL STATEMENTS AND REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

control are subject to the risk that the controls may become inadequate because of changes in conditions or that the degree of compliance with the policies and procedures may deteriorate. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to the financial statement preparation and presentation.

Management conducted an evaluation of the effectiveness of the system of internal control over financial reporting based on the framework in "Internal Control – Integrated Framework" issued by the Committee of Sponsoring Organizations of the Treadway Commission 1992 framework. Based on this evaluation, management concluded that the Company's system of internal control over financial reporting was effective as at August 31, 2014.

Shaw Communications Inc.
INDEPENDENT AUDITORS' REPORT OF REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders of
Shaw Communications Inc.

We have audited the accompanying consolidated financial statements of Shaw Communications Inc., which comprise the consolidated statements of financial position as at August 31, 2014 and 2013, and the consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years ended August 31, 2014 and 2013, and a summary of significant accounting policies and other explanatory information.

Management's responsibility for the consolidated financial statements

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditors' responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards and the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditors' judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditors consider internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the consolidated financial statements, evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of Shaw Communications Inc. as at August 31, 2014 and 2013, and its financial performance and its cash flows for the years ended August 31, 2014 and 2013 in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board.

Other matter

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Shaw Communication Inc.'s internal control over financial reporting as of August 31, 2014, based on the criteria established in Internal Control – Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission 1992 framework and our report dated November 28, 2014 expressed an unqualified opinion on Shaw Communications Inc.'s internal control over financial reporting.

Shaw Communications Inc.
INDEPENDENT AUDITORS' REPORT ON INTERNAL CONTROLS UNDER STANDARDS OF THE PUBLIC COMPANY ACCOUNTING OVERSIGHT BOARD (UNITED STATES)

To the Shareholders of
Shaw Communications Inc.

We have audited Shaw Communications Inc.'s internal control over financial reporting as at August 31, 2014, based on the criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission 1992 framework (the COSO criteria). Shaw Communications Inc.'s management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board (IFRS). A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with IFRS, and that receipts and expenditures of the company are being made only in accordance with authorization of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Shaw Communications Inc. maintained, in all material respects, effective internal control over financial reporting as at August 31, 2014, based on the COSO criteria.

We have also audited, in accordance with Canadian generally accepted auditing standards and the standards of the Public Accounting Oversight Board (United States), the consolidated statements of financial position of Shaw Communications Inc. as at August 31, 2014 and 2013, and the consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years ended August 31, 2014 and 2013, and our report dated November 28, 2014 expressed an unqualified opinion thereon.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

1. CORPORATE INFORMATION

Shaw Communications Inc. (the "Company") is a diversified Canadian communications company whose core operating business is providing broadband cable television services, Internet, Digital Phone and telecommunications services ("Cable"); Direct-to-home (DTH) satellite services and satellite distribution services ("Satellite"); and programming content ("Media").

The Company was incorporated under the laws of the Province of Alberta on December 9, 1966 under the name Capital Cable Television Co. Ltd. and was subsequently continued under the Business Corporations Act (Alberta) on March 1, 1984 under the name Shaw Cablesystems Ltd. Its name was changed to Shaw Communications Inc. on May 12, 1993. The Company's shares are listed on the Toronto and New York Stock Exchanges. The registered office of the Company is located at Suite 900, 630 – 3rd Avenue S.W., Calgary, Alberta, Canada T2P 4L4.

2. BASIS OF PRESENTATION AND ACCOUNTING POLICIES

Statement of compliance

These consolidated financial statements of the Company have been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB").

The consolidated financial statements of the Company for the years ended August 31, 2014 and 2013, were approved by the Board of Directors and authorized for issue on November 28, 2014.

Basis of presentation

These consolidated financial statements have been prepared primarily under the historical cost convention and are expressed in millions of Canadian dollars unless otherwise indicated. Other measurement bases used are outlined below and in the applicable notes. The consolidated statements of income are presented using the nature classification for expenses.

Basis of consolidation

(i) Subsidiaries

The consolidated financial statements include the accounts of the Company and those of its subsidiaries, which are entities over which the Company has control. Control exists when the Company has power over an investee, is exposed to or has rights to variable returns from its involvement and has the ability to affect those returns. Intercompany transactions and balances are eliminated on consolidation. The results of operations of subsidiaries acquired during the period are included from their respective dates of acquisition, being the time at which the Company obtains control. Consolidation of a subsidiary ceases when the Company loses control. A change in ownership interests of a subsidiary, without a loss of control, is accounted for as an equity transaction. The Company assesses control through share ownership and voting rights.

Non-controlling interests arise from business combinations in which the Company acquires less than 100% ownership interest. At the time of acquisition, non-controlling interests are measured at either fair value or their proportionate share of the fair value of acquiree's identifiable assets. The Company determines the measurement basis on a transaction by transaction basis. Subsequent to acquisition, the carrying amount of non-controlling interests is increased or decreased for their share of changes in equity.

(ii) Joint operations

A joint operation is a type of joint arrangement whereby the parties that have joint control of the arrangement have rights to the assets and obligations for the liabilities, relating to the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control. The consolidated financial statements include the Company's proportionate share of the assets, liabilities, revenues, and expenses of its interests in joint operations.

The Company's joint operations include a 33.33% interest in the Burrard Landing Lot 2 Holdings Partnership (the "Partnership") and until January 1, 2014, 50% interest in Historia and Series+ s.e.nc ("Historia and Series+").

The Partnership owns and leases commercial space in Shaw Tower in Vancouver, BC, which is the Company's headquarters for its lower mainland operations. In classifying its 33.33% interest in the Partnership as a joint operation, the Company considered the terms and conditions of the partnership agreement and other facts and circumstances including the primary purpose of Shaw Tower which is to provide lease space to the partners.

Historia and Series+ are two Canadian French-language specialty television channels. The Company classified its 50% interest as a joint operation after considering the terms and conditions of the partnership agreement and other facts and circumstances including the significant obligations that arise with respect to the CRTC broadcasting licenses which are required to operate the channels and which are held at the partner level.

Investments in associates and joint ventures

Associates are entities over which the Company has significant influence. Significant influence is the power to participate in the operating and financial policies of the investee, but is not control or joint control.

A joint venture is a type of joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control.

Investments in associates and joint ventures are accounted for using the equity method. Investments of this nature are recorded at original cost and adjusted periodically to recognize the Company's proportionate share of the associate's or joint venture's net income/loss and other comprehensive income/loss after the date of investment, additional contributions made and dividends received.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Revenue and expenses

The Company has multiple deliverable arrangements comprised of upfront fees (subscriber connection and installation fee revenue and/or customer premise equipment revenue) and related subscription revenue. Upfront fees charged to customers do not constitute separate units of accounting, therefore these revenue streams are assessed as an integrated package.

(i) Revenue

Revenue from cable, Internet, Digital Phone and DTH customers includes subscriber revenue earned as services are provided. Satellite distribution services and telecommunications service revenue is recognized in the period in which the services are rendered to customers. Affiliate subscriber revenue is recognized monthly based on subscriber levels. Advertising revenues are recognized in the period in which the advertisements are broadcast and recorded net of agency commissions as these amounts are paid directly to the agency or advertiser. When a sales arrangement includes multiple advertising spots, the proceeds are allocated to individual advertising spots under the arrangement based on relative fair values.

Subscriber connection fees received from customers are deferred and recognized as revenue on a straight-line basis over three years. Direct and incremental initial selling, administrative and connection costs related to subscriber acquisitions are recognized as an operating expense as incurred. The costs of physically connecting a new home are capitalized as part of the distribution system and costs of disconnections are expensed as incurred.

Installation revenue received on contracts with commercial business customers is deferred and recognized as revenue on a straight-line basis over the related service contract, which generally span two to ten years. Direct and incremental costs associated with the service contract, in an amount not exceeding the upfront installation revenue, are deferred and recognized as an operating expense on a straight-line basis over the same period.

(ii) Deferred equipment revenue and deferred equipment costs

Revenue from sales of DTH equipment and DCTs is deferred and recognized on a straight-line basis over three years commencing when subscriber service is activated. The total cost of the equipment, including installation, represents an inventoriable cost which is deferred and recognized on a straight-line basis over the same period. The DCT and DTH equipment is generally sold to customers at cost or a subsidized price in order to expand the Company's customer base.

Revenue from sales of satellite tracking hardware and costs of goods sold is deferred and recognized on a straight-line basis over the related service contract for monthly service charges for air time, which is generally five years. The amortization of the revenue and cost of sale of satellite service equipment commences when goods are shipped.

Recognition of deferred equipment revenue and deferred equipment costs is recorded as deferred equipment revenue amortization and deferred equipment costs amortization, respectively.

(iii) Deferred IRU revenue

Prepayments received under indefeasible right to use ("IRU") agreements are amortized on a straight-line basis into income over the term of the agreement and included in amortization of property, plant and equipment, intangibles and other in the consolidated statements of income.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Cash

Cash is presented net of outstanding cheques. When the amount of outstanding cheques and the amount drawn under the Company's revolving term facility are greater than the amount of cash, the net amount is presented as bank indebtedness.

Allowance for doubtful accounts

The Company maintains an allowance for doubtful accounts for the estimated losses resulting from the inability of its customers to make required payments. In determining the allowance, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances.

Inventories

Inventories include subscriber equipment such as DCTs and DTH receivers, which are held pending rental or sale at cost or at a subsidized price. When subscriber equipment is sold, the equipment revenue and equipment costs are deferred and amortized over three years. When the subscriber equipment is rented, it is transferred to property, plant and equipment and amortized over its useful life. Inventories are determined on a first-in, first-out basis, and are stated at cost due to the eventual capital nature as either an addition to property, plant and equipment or deferred equipment costs.

Property, plant and equipment

Property, plant and equipment are recorded at purchase cost. Direct labour and other directly attributable costs incurred to construct new assets, upgrade existing assets and connect new subscribers are capitalized as well as borrowing costs on qualifying assets. In addition, any asset removal and site restoration costs in connection with the retirement of assets are capitalized. Repairs and maintenance expenditures are charged to operating expense as incurred. Amortization is recorded on a straight-line basis over the estimated useful lives of assets as follows:

Asset	Estimated useful life
Cable and telecommunications distribution system	5-20 years
Digital cable terminals and modems	2-5 years
Satellite audio, video and data network equipment and DTH receiving equipment	3-15 years
Transmitters, broadcasting and communication equipment	5-15 years
Buildings	15-40 years
Data processing	3-4 years
Other	3-20 years

The Company reviews the estimates of lives and useful lives on a regular basis.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Assets held for sale

Non-current assets and disposal groups are classified as held for sale when specific criteria are met and are measured at the lower of carrying amount and estimated fair value less costs to sell. Assets held for sale are not amortized and are reported separately on the statement of financial position.

Other long-term assets

Other long-term assets primarily include (i) equipment costs, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over three to five years, (ii) credit facility arrangement fees amortized on a straight-line basis over the term of the facility, (iii) long-term receivables, (iv) network capacity leases, and (v) the non-current portion of prepaid maintenance and support contracts.

Intangibles

The excess of the cost of acquiring cable, satellite and media businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist of amounts allocated to broadcast rights and licenses, trademarks, brands, program rights, customer relationships and software assets. Broadcast rights and licenses, trademarks and brands represent identifiable assets with indefinite useful lives. Spectrum licenses were acquired in Industry Canada's auction of licenses for advanced wireless services and have an indefinite life.

Program rights represent licensed rights acquired to broadcast television programs on the Company's conventional and specialty television channels and program advances are in respect of payments for programming prior to the window license start date. For licensed rights, the Company records a liability for program rights and corresponding asset when the license period has commenced and all of the following conditions have been met: (i) the cost of the program is known or reasonably determinable, (ii) the program material has been accepted by the Company in accordance with the license agreement and (iii) the material is available to the Company for telecast. Program rights are expensed on a systematic basis generally over the estimated exhibition period as the programs are aired and are included in operating, general and administrative expenses. Program rights are segregated on the statement of financial position between current and noncurrent based on expected life at time of acquisition.

Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over the estimated useful life of 15 years.

Software that is not an integral part of the related hardware is classified as an intangible asset. Internally developed software assets are recorded at historical cost and include direct material and labour costs as well as borrowing costs on qualifying assets. Software assets are amortized on a straight-line basis over estimated useful lives ranging from three to ten years. The Company reviews the estimates of lives and useful lives on a regular basis.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Borrowing costs

The Company capitalizes borrowing costs on qualifying assets, for which the commencement date is on or after September 1, 2010, that take more than one year to construct or develop using the Company's weighted average cost of borrowing which approximated 6.25% (2013 – 6.5%).

Impairment

(i) Goodwill and indefinite-life intangibles

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at March 1) and when events or changes in circumstances indicate that the carrying value may be impaired. The recoverable amount of each cash-generating unit ("CGU") is determined based on the higher of the CGU's fair value less costs to sell ("FVLCS") and its value in use ("VIU"). A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are consistent with its reporting segments, Cable, Satellite and Media. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods.

(ii) Non-financial assets with finite useful lives

For non-financial assets, such as property, plant and equipment and finite-life intangible assets, an assessment is made at each reporting date as to whether there is an indication that an asset may be impaired. If any indication exists, the recoverable amount of the asset is determined based on the higher of FVLCS and VIU. Where the carrying amount of the asset exceeds its recoverable amount, the asset is considered impaired and written down to its recoverable amount. Previously recognized impairment losses are reviewed for possible reversal at each reporting date and all or a portion of the impairment is reversed if the asset's value has increased.

CRTC benefit obligations

The fair value of CRTC benefit obligations committed as part of business acquisitions are initially recorded at the present value of amounts to be paid net of any expected incremental cash inflows. The obligation is subsequently adjusted for the incurrence of related expenditures, the passage of time and for revisions to the timing of the cash flows. Changes in the obligation due to the passage of time are recorded as accretion of long-term liabilities and provisions in the income statement.

Provisions

Provisions are recognized when the Company has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. The timing or amount of the outflow may still be uncertain. Provisions are measured using the best estimate of the expenditure required to settle the present obligation at the end of the reporting period, taking into account risks and uncertainties associated with the obligation. Provisions are discounted where the time value of money is considered material.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

(i) Asset retirement obligations

The Company recognizes the fair value of a liability for an asset retirement obligation in the period in which it is incurred, on a discounted basis, with a corresponding increase to the carrying amount of property and equipment, primarily in respect of transmitter sites. This cost is amortized on the same basis as the related asset. The liability is subsequently increased for the passage of time and the accretion is recorded in the income statement as accretion of long-term liabilities and provisions. The discount rates applied are subsequently adjusted to current rates as required at the end of reporting periods. Revisions due to the estimated timing of cash flows or the amount required to settle the obligation may result in an increase or decrease in the liability. Actual costs incurred upon settlement of the obligation are charged against the liability to the extent recorded.

(ii) Restructuring provisions

Restructuring provisions, primarily in respect of employee termination benefits, are recognized when a detailed plan for the restructuring exists and a valid expectation has been raised to those affected that the plan will be carried out.

(iii) Other provisions

Provisions for disputes, legal claims and contingencies are recognized when warranted. The Company establishes provisions after taking into consideration legal assessments (if applicable), expected availability of insurance or other recourse and other available information.

Deferred credits

Deferred credits primarily include: (i) prepayments received under IRU agreements amortized on a straight-line basis into income over the term of the agreement, (ii) equipment revenue, as described in the revenue and expenses accounting policy, deferred and amortized over three years to five years, (iii) connection fee revenue and upfront installation revenue, as described in the revenue and expenses accounting policy, deferred and amortized over two to ten years, (iv) a deposit on a future fibre sale, and (v) amounts received in respect of granting an option to acquire its wireless spectrum licenses.

Income taxes

The Company accounts for income taxes using the liability method, whereby deferred income tax assets and liabilities are determined based on differences between the financial reporting and tax bases of assets and liabilities measured using substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse. Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset and they relate to income taxes levied by the same authority in the same taxable entity. Income tax expense for the period is the tax payable for the period using tax rates substantively enacted at the reporting date, any adjustments to taxes payable in respect of previous years and any change during the period in deferred income tax assets and liabilities, except to the extent that they relate to a business combination or divestment, items recognized directly in equity or in other comprehensive income. The Company records interest and penalties related to income taxes in income tax expense.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Tax credits and government grants

The Company has access to a government program which supports local programming produced by conventional television stations. In addition, the Company receives tax credits primarily related to its research and development activities. Government financial assistance is recognized when management has reasonable assurance that the conditions of the government programs are met and accounted for as a reduction of related costs, whether capitalized and amortized or expensed in the period the costs are incurred.

Foreign currency translation

Transactions originating in foreign currencies are translated into Canadian dollars at the exchange rate at the date of the transaction. Monetary assets and liabilities are translated at the period-end rate of exchange and non-monetary items are translated at historic exchange rates. The net foreign exchange loss recognized on the translation and settlement of current monetary assets and liabilities was $8 (2013 – $3) and is included in other losses.

Financial instruments other than derivatives

Financial instruments have been classified as loans and receivables, assets available-for-sale, assets held-for-trading or financial liabilities. Cash has been classified as held-for-trading and is recorded at fair value with any change in fair value immediately recognized in income (loss). Other financial assets are classified as available-for-sale or as loans and receivables. Available-for-sale assets are carried at fair value with changes in fair value recorded in other comprehensive income (loss) until realized. Available-for-sale equity instruments not quoted in an active market and where fair value cannot be reliably measured are recorded at cost less impairment. Loans and receivables and financial liabilities are carried at amortized cost. None of the Company's financial assets are classified as held-to-maturity and none of its financial liabilities are classified as held-for-trading.

Finance costs and discounts associated with the issuance of debt securities are netted against the related debt instrument and amortized to income using the effective interest rate method. Accordingly, long-term debt accretes over time to the principal amount that will be owing at maturity.

Derivative financial instruments

The Company uses derivative financial instruments, such as foreign currency forward purchase contracts, to manage risks from fluctuations in foreign exchange rates. All derivative financial instruments are recorded at fair value in the statement of financial position. Where permissible, the Company accounts for these financial instruments as hedges which ensures that counterbalancing gains and losses are recognized in income in the same period. With hedge accounting, changes in the fair value of derivative financial instruments designated as cash flow hedges are recorded in other comprehensive income (loss) until the variability of cash flows relating to the hedged asset or liability is recognized in income (loss). When an anticipated transaction is subsequently recorded as a non-financial asset, the amounts recognized in other comprehensive income (loss) are reclassified to the initial carrying amount of the related asset. Where hedge accounting is not permissible or derivatives are not designated in a hedging relationship, they are classified as held-for-trading and the changes in fair value are immediately recognized in income (loss).

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Instruments that have been entered into by the Company to hedge exposure to foreign currency risk are reviewed on a regular basis to ensure the hedges are still effective and that hedge accounting continues to be appropriate.

Fair value measurements

Fair value estimates are made at a specific point in time, based on relevant market information and information about the financial instrument. These estimates are subjective in nature and involve uncertainties and matters of significant judgement and, therefore, cannot be determined with precision. Changes in assumptions could significantly affect the estimates.

The fair value hierarchy is based on inputs to valuation techniques that are used to measure fair value that are either observable or unobservable. Observable inputs reflect assumptions market participants would use in pricing an asset or liability based on market data obtained from independent sources while unobservable inputs reflect a reporting entity's pricing based upon their own market assumptions.

The fair value hierarchy consists of the following three levels:

Level 1 Inputs are quoted prices in active markets for identical assets or liabilities.

Level 2 Inputs for the asset or liability are based on observable market data, either directly or indirectly, other than quoted prices.

Level 3 Inputs for the asset or liability are not based on observable market data.

The Company determines whether transfers have occurred between levels in the fair value hierarchy by assessing the impact of events and changes in circumstances that could result in a transfer at the end of each reporting period.

Employee benefits

The Company accrues its obligations under its employee benefit plans, net of plan assets. The cost of pensions and other retirement benefits earned by certain employees is actuarially determined using the projected benefit method pro-rated on service and management's best estimate of salary escalation and retirement ages of employees. Past service costs from plan initiation and amendments are recognized immediately in the income statement. Remeasurements include actuarial gains or losses and the return on plan assets (excluding interest income). Actuarial gains and losses occur because assumptions about benefit plans relate to a long time frame and differ from actual experiences. These assumptions are revised based on actual experience of the plans such as changes in discount rates, expected retirement ages and projected salary increases. Remeasurements are recognized in other comprehensive income (loss) on an annual basis, at a minimum, and on an interim basis when there are significant changes in assumptions.

August 31 is the measurement date for the Company's employee benefit plans. The last actuarial valuations for funding purposes for the various plans were performed effective December 31, 2013 and the next actuarial valuations for funding purposes are effective December 31, 2014.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Share-based compensation

The Company has a stock option plan for directors, officers, employees and consultants to the Company. The options to purchase shares must be issued at not less than the fair value at the date of grant. Any consideration paid on the exercise of stock options, together with any contributed surplus recorded at the date the options vested, is credited to share capital. The Company calculates the fair value of share-based compensation awarded to employees using the Black-Scholes option pricing model. The fair value of options are expensed and credited to contributed surplus over the vesting period of the options using the graded vesting method.

The Company has a restricted share unit ("RSU") plan for officers and employees of the Company. RSUs vest on the second anniversary of the grant date and compensation is recognized on a straight-line basis over the two year vesting period. RSUs will be settled in cash and the obligation for RSUs is measured at the end of each period at fair value using the Black-Scholes option pricing model and the number of outstanding RSUs.

The Company has a deferred share unit ("DSU") plan for its Board of Directors. Compensation cost is recognized immediately as DSUs vest when granted. DSUs will be settled in cash and the obligation is measured at the end of each period at fair value using the Black-Scholes option pricing model and the number of outstanding DSUs.

The Company has an employee share purchase plan (the "ESPP") under which eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the participant's contributions.

Earnings per share

Basic earnings per share is based on net income attributable to equity shareholders adjusted for dividends on preferred shares and is calculated using the weighted average number of Class A Shares and Class B Non-Voting Shares outstanding during the period. Diluted earnings per share is calculated by considering the effect of all potentially dilutive instruments. In calculating diluted earnings per share, any proceeds from the exercise of stock options and other dilutive instruments are assumed to be used to purchase Class B Non-Voting Shares at the average market price during the period.

Guarantees

The Company discloses information about certain types of guarantees that it has provided, including certain types of indemnities, without regard to whether it will have to make any payments under the guarantees.

Estimation uncertainty and critical judgements

The preparation of consolidated financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the period. Actual results could differ from those estimates and significant changes in assumptions could cause an impairment in assets. The following require the most difficult, complex or subjective judgements which result from the need to make estimates about the effects of matters that are inherently uncertain.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Estimation uncertainty

The following are key assumptions concerning the future and other key sources of estimation uncertainty that could impact the carrying amount of assets and liabilities and results of operations in future periods:

(i) Allowance for doubtful accounts

The Company is required to make an estimate of an appropriate allowance for doubtful accounts on its receivables. The estimated allowance required is a matter of judgement and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foretold, such as future business, personal and economic conditions.

(ii) Property, plant and equipment

The Company is required to estimate the expected useful lives of its property, plant and equipment. These estimates of useful lives involve significant judgement. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. Management's judgement is also required in determination of the amortization method, the residual value of assets and the capitalization of labour and overhead.

(iii) Business combinations – purchase price allocation

Purchase price allocations involve uncertainty because management is required to make assumptions and judgements to estimate the fair value of the identifiable assets acquired and liabilities assumed in business combinations. Fair value estimates are based on quoted market prices and widely accepted valuation techniques, including discounted cash flow ("DCF") analysis. Such estimates include assumptions about inputs to the valuation techniques, industry economic factors and business strategies.

(iv) Impairment

The Company estimates the recoverable amount of its CGUs using a FVLCS calculation based on a DCF analysis. Significant judgements are inherent in this analysis including estimating the amount and timing of the cash flows attributable to the broadcast rights and licenses, the selection of an appropriate discount rate, and the identification of appropriate terminal growth rate assumptions. In this analysis the Company estimates the discrete future cash flows associated with the intangible asset for five years and determines a terminal value. The future cash flows are based on the Company's estimates of future operating results, economic conditions and the competitive environment. The terminal value is estimated using both a perpetuity growth assumption and a multiple of operating income before restructuring costs and amortization. The discount rates used in the analysis are based on the Company's weighted average cost of capital and an assessment of the risk inherent in the projected cash flows. In analyzing the FVLCS determined by the DCF analysis, the Company also considers a market approach determining a recoverable amount for each unit and total entity value determined using a market capitalization approach. Recent market transactions are taken into account, when available. The key assumptions used to determine the recoverable amounts, including a sensitivity analysis, are included in note 10. The DCF analysis uses significant unobservable inputs and is therefore considered a level 3 fair value measurement.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

(v) Employee benefit plans

The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected will be needed to settle employee benefit obligations. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes required.

(vi) Income taxes

The Company is required to estimate income taxes using substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse. In determining the measurement of tax uncertainties, the Company applies a probable weighted average methodology. Realization of deferred income tax assets is dependent on generating sufficient taxable income during the period in which the temporary differences are deductible. Although realization is not assured, management believes it is more likely than not that all recognized deferred income tax assets will be realized based on reversals of deferred income tax liabilities, projected operating results and tax planning strategies available to the Company and its subsidiaries.

(vii) Contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities.

Critical judgements

The following are critical judgements apart from those involving estimation:

(i) Determination of a CGU

Management's judgement is required in determining the Company's cash generating units for the impairment assessment of its indefinite-life intangible assets. The CGUs have been determined considering operating activities and asset management and are consistent with the Company's reporting segments, Cable, Satellite and Media.

(ii) Broadcast rights and licenses and spectrum licenses – indefinite-life assessment

The Company's businesses are dependent upon broadcast licenses (or operate pursuant to an exemption order) granted and issued by the CRTC. In addition, the Company holds AWS licenses to operate a wireless system in Canada. While these licenses must be renewed from time to time, the Company has never failed to do so. In addition, there are currently no legal, regulatory or competitive factors that limit the useful lives of these assets.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Adoption of recent accounting pronouncements

The adoption of the following standards and amendments effective September 1, 2013 had no impact on the Company's consolidated financial statements other than additional disclosure requirements.

- IFRS 10 *Consolidated Financial Statements* replaces previous consolidation guidance and outlines a single consolidation model that identifies control as the basis for consolidation of all types of entities.
- IFRS 11 *Joint Arrangements* replaces IAS 31 *Interests in Joint Ventures* and SIC 13 *Jointly Controlled Entities – Non-Monetary Contributions by Venturers*. The new standard classifies joint arrangements as either joint operations or joint ventures.
- IFRS 12 *Disclosure of Interests in Other Entities* sets out required disclosures on application of IFRS 10, IFRS 11 and IAS 28 (amended 2011).
- IAS 27 *Separate Financial Statements* was amended in 2011 for the issuance of IFRS 10 and retains the same guidance for separate financial statements.
- IAS 28 *Investments in Associates* was amended in 2011 for changes based on issuance of IFRS 10 and IFRS 11 and provides guidance on accounting for joint ventures, as defined by IFRS 11, using the equity method.
- IFRS 13 *Fair Value Measurement* defines fair value, provides guidance on its determination and introduces consistent requirements for disclosure of fair value measurements.

The Company has elected to early adopt the amendments to IAS 36 *Impairment of Assets* for the year ended August 31, 2014. The amendments limit the requirement to disclose the recoverable amount to assets (including goodwill) for which an impairment loss was recognized or reversed in the period, instead of the recoverable amount for each CGU to which significant goodwill or indefinite-life intangible assets have been allocated. Under the amendments, recoverable amount is required to be disclosed only when an impairment loss has been recognized or reversed.

Standards, interpretations and amendments to standards issued but not yet effect

The Company has not yet adopted certain standards and interpretations that have been issued but are not yet effective. The following pronouncements are being assessed to determine the impact on the Company's results and financial position.

- IFRIC 21 *Levies* provides guidance on when to recognize a financial liability imposed by a government, if the levy is accounted for in accordance with IAS 37 *Provisions, Contingent Liabilities and Contingent Assets*, or where the timing and amount of the levy is certain. This interpretation is effective for the annual period commencing September 1, 2014 and is not expected to have an impact on the Company's financial statements.
- *Clarification of Acceptable Methods of Depreciation and Amortization* (Amendments to IAS 16 *Property, Plant and Equipment* and IAS 38 *Intangible Assets)* prohibits revenue from being used as a basis to depreciate property, plant and equipment and significantly

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

limits use of revenue-based amortization for intangible assets. The amendments are to be applied prospectively for the annual period commencing September 1, 2016.

- IFRS 15 *Revenue from Contracts with Customers,* was issued in May 2014 and replaces IAS 11 *Construction Contracts,* IAS 18 *Revenue,* IFRIC 13 *Customer Loyalty Programs,* IFRIC 15 *Agreements for the Construction of Real Estate*, IFRIC 18 *Transfers of Assets from Customers* and SIC-31 *Revenue – Barter Transactions Involving Advertising Services*. The new standard requires revenue to be recognized to depict the transfer of promised goods or services to customers in an amount that reflects the consideration expected to be received in exchange for those goods or services. The principles are to be applied in the following five steps: (1) identify the contract(s) with a customer, (2) identify the performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the performance obligations in the contract, and (5) recognize revenue when (or as) the entity satisfies a performance obligation. The new standard is to be applied either retrospectively or on a modified retrospective basis and is effective for the annual period commencing September 1, 2017.
- IFRS 9 *Financial Instruments: Classification and Measurement* replaces IAS 39 *Financial Instruments* and applies a principal-based approach to the classification and measurement of financial assets and financial liabilities, including an expected credit loss model for calculating impairment, and includes new requirements for hedge accounting. The standard is required to be applied retrospectively for the annual period commencing September 1, 2018.

Change in accounting estimates

During the current year, the Company reviewed the useful lives of its property, plant and equipment as well as the amortization period for amounts deferred under multiple element arrangements, including equipment revenue and associated equipment costs and connection fees. The review resulted in changes in the amortization period for amounts deferred under multiple element arrangements and estimated useful lives of certain assets effective September 1, 2013. As a result, cable and telecommunication distribution system assets are amortized on a straight-line basis over 5 to 20 years, and digital cable terminals and modems on a straight-line basis over 2 to 5 years. The amortization period for amounts deferred and amortized on a straight-line basis under multiple element arrangements is 3 years. The impact of the changes has been accounted for prospectively. The changes in estimates in respect of unamortized balances at August 31, 2013 resulted in decreases to revenue and amortization as summarized below.

($millions Cdn)	Year ended August 31, 2014
Revenue	3
Amortization	
Deferred equipment revenue	29
Deferred equipment costs	66
Property, plant and equipment, intangibles and other	63

3. PURCHASE AND SALE OF ASSETS, BUSINESS ACQUISITION, AND ASSETS HELD FOR SALE

Purchase and sale of assets

Transactions with Corus Entertainment Inc. ("Corus")

During 2013 the Company entered into a series of agreements with Corus (see note 27) to optimize its portfolio of specialty channels. Effective April 30, 2013, the Company sold to Corus its 49% interest in ABC Spark and acquired from Corus its 20% interest in Food Network Canada. In addition, the Company agreed to sell to Corus its 50% interest in its two French-language channels, Historia and Series+. The sale of Historia and Series+ closed on January 1, 2014.

Historia and Series+

Historia and Series+ represented a disposal group within the media segment and accordingly, were not presented as discontinued operations in the statement of income. Sale proceeds of $141 included $2 in respect of working capital adjustments. The Historia and Series+ assets and liabilities disposed of in fiscal 2014 and classified as held for sale in the statement of financial position at August 31, 2013 are as follows:

	2014 $	2013 $
Accounts receivable	**5**	4
Other current assets	**4**	5
Intangibles	**93**	92
Goodwill	**4**	4
	106	105
Accounts payable and accrued liabilities	**2**	2
Deferred income tax liability	**12**	12
	14	14

Food Network Canada and ABC Spark

In 2013 the acquisition of an additional 20% interest in Food Network Canada increased the Company's ownership to 71%. The difference between the consideration of $67 and carrying value of the interest acquired of $47 has been charged to retained earnings.

The Company recorded proceeds, including working capital adjustments, of $19 and gain on sale of associate of $7 on the disposition of its 49% interest in ABC Spark.

The Company issued a non-interest bearing promissory note of $48 to satisfy the net consideration in respect of these transactions. The promissory note was settled in fiscal 2014 in connection with the closing of the sale of Historia and Series+ to Corus.

Transactions with Rogers Communications Inc. ("Rogers")

During 2013, the Company entered into agreements with Rogers to sell to Rogers its shares in Mountain Cablevision Limited ("Mountain Cable") and grant to Rogers an option to acquire its

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

wireless spectrum licenses as well as to purchase from Rogers its 33.3% interest in TVtropolis General Partnership (“TVtropolis”). The sale of Mountain Cable closed on April 30, 2013 and the acquisition of the additional interest in TVtropolis closed on June 30, 2013. The exercise of the option and the sale of the wireless spectrum licenses is still subject to various regulatory approvals. The transactions are strategic in nature allowing the Company to use a portion of the net proceeds to accelerate various capital investments to improve and strengthen its network advantage.

The Company incurred costs of $5 in respect of the transactions with Rogers. These costs have been expensed and are included in acquisition and divestment costs in the statement of income.

Mountain Cable

Mountain Cable had approximately 40,000 video customers in its operations based in Hamilton, Ontario. It represented a disposal group within the cable operating segment and accordingly, was not presented as discontinued operations in the statement of income.

The Company received proceeds of $398 in cash on the sale of the Mountain Cable and recorded a gain of $50. The assets and liabilities disposed of were as follows:

	$
Accounts receivable	2
Property, plant and equipment	65
Other long-term assets	3
Intangibles	245
Goodwill	81
	396
Accounts payable and accrued liabilities	1
Income tax payable	1
Unearned revenue	2
Deferred credits	2
Deferred income taxes	42
	48

Wireless spectrum licenses

The wireless spectrum licenses are not classified as assets held for sale as the exercise of the option and the sale of the wireless spectrum licenses is subject to various regulatory approvals. The Company received $50 in respect of the purchase price of the option to acquire the wireless spectrum licenses. The amount is recorded in deferred credits and will be included as part of the proceeds received on exercise of the option and sale of the wireless spectrum licenses, or alternatively as a gain if the option is not exercised and expires. In addition, the Company received a $200 refundable deposit in respect of the option exercise price. The deposit has been recorded in deferred credits and will be included as part of the proceeds received on exercise of the option and sale of the wireless spectrum licenses or refunded to Rogers if the option is not exercised and expires.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

TVtropolis

The acquisition of Rogers' 33.3% interest in TVtropolis increased the Company's ownership to 100%. The difference between the consideration of $59, which was initially paid as a deposit pending regulatory approval of the transaction, and the carrying value of the interest acquired of $23 has been charged to retained earnings.

Business acquisition

On April 30, 2013, the Company acquired Enmax Envision Inc. ("Envision"), a wholly-owned subsidiary of ENMAX Corporation, for $222 in cash. Envision provides telecommunication services to business customers in Calgary. The purpose of the transaction is to expand on the Company's business initiatives and enhance the profile of its telecommunications services in the competitive Calgary business marketplace.

Envision contributed approximately $12 of revenue and $1 of net income for the four month period in fiscal 2013. If the acquisition had occurred on September 1, 2012, revenue and net income would have been approximately $33 and $4, respectively. Acquisition related costs of $3 to effect the transaction have been incurred and are included in acquisition and divestment costs in the statement of income.

A summary of net assets and allocation of consideration is as follows:

	$
Accounts receivable	3
Other current assets	1
Property, plant and equipment	73
Intangibles(1)	87
Goodwill(2)	68
	232
Accounts payable and accrued liabilities	1
Unearned revenue	2
Deferred credits	5
Deferred income tax liability	2
	222

(1) Intangibles is comprised of customer relationships and are being amortized over 15 years.

(2) Goodwill represents the combined value of growth expectations, an assembled workforce and expected synergies and efficiencies from integrating the operations with the Company's existing business. Goodwill of $66 is deductible for income tax purposes.

Assets held for sale

A real estate property of $11, being the estimated fair value less costs to sell, has been classified as held for sale in the statement of financial position at August 31, 2014 and 2013. The estimated fair value has been determined by a commercial real estate service by means of

[all amounts in millions of Canadian dollars except share and per share amounts]

an income capitalization approach using the market rental rate for the area and an appropriate capitalization rate range net of estimated costs of $8 to complete the property to base building specifications and is considered a level 3 valuation. The income capitalization approach has been used as it's an accepted approach used by real estate investors to value income producing properties when income is not expected to vary significantly over time.

Impairment testing of indefinite-life intangibles and goodwill

The Company conducted its annual impairment test on goodwill and indefinite-life intangibles as at March 1, 2014 and the recoverable amount of each of the cash generating units exceeded their carrying value by a significant amount.

In August 2011 the Company discontinued construction of a traditional wireless network and during fiscal 2013, granted an option to Rogers to acquire the AWS licenses for $350 (see note 3). As the price exceeds the carrying value of the AWS licenses and considering recent spectrum transactions in North America, the carrying value of the licenses continues to be appropriate.

A hypothetical decline of 10% and 20% in the recoverable amount of the broadcast rights and licenses for each cash generating unit as at March 1, 2014 would not result in any impairment loss. Further, any changes in economic conditions since the impairment testing conducted as at March 1, 2014 do not represent events or changes in circumstance that would be indicative of impairment at August 31, 2014.

Significant estimates inherent to this analysis include discount rates and the terminal value. At March 1, 2014, the estimates that have been utilized in the impairment tests reflect any changes in market conditions and are as follows:

		Terminal value	
	Post-tax discount rate	Terminal growth rate	Terminal operating income before restructuring costs and amortization multiple
Cable	8.0%	1.0%	6.00X
Satellite	9.5%	0.0%	4.50X
Media	8.5%	0.0%	6.50X

A sensitivity analysis of significant estimates is conducted as part of every impairment test. With respect to the impairment tests performed in the third quarter, the estimated decline in recoverable amount for the sensitivity of significant estimates is as follows:

	Estimated decline in recoverable amount		
		Terminal value	
	1% increase in discount rate	1% decrease in terminal growth rate	0.5 times decrease in terminal operating income before restructuring costs and amortization multiple
Cable	9.0%	5.0%	3.0%
Satellite	7.0%	n/a	3.0%
Media	8.0%	n/a	2.0%

(1) During the current year, the Company announced changes to the structure of its operating units to improve overall efficiency while enhancing its ability to grow as the leading network and content experience company. In connection with the restructuring of its operations, the Company recorded $58 primarily in respect of the approximate 400 management and non-customer facing roles which were affected by the organizational changes. The majority of the $13 of remaining costs are expected to be paid within the next six months.

(2) Current portion of long-term debt at August 31, 2013 included the 7.50% senior notes, the 6.50% senior notes and the amount due within one year on the Partnership's mortgage bonds.

Corporate

Bank loans

During 2012, a syndicate of banks provided the Company with an unsecured $1 billion credit facility which includes a maximum revolving term or swingline facility of $50 and matures in January 2017. The credit facility has a feature whereby the Company may request an additional $500 of borrowing capacity so long as no event of default or pending event of default has occurred and is continuing or would occur as a result of the increased borrowings. No lender has any obligation to participate in the requested increase unless it agrees to do so at its sole discretion. Funds are available to the Company in both Canadian and US dollars. At August 31, 2014, $1 has been drawn as committed letters of credit against the revolving term facility. Interest rates fluctuate with Canadian prime and bankers' acceptance rates, US bank base rates and LIBOR rates. Excluding the revolving term facility, the effective interest rate on actual borrowings under the credit facility during 2013 was 3.49%. No amounts were drawn under the credit facility during 2014. The effective interest rate on the revolving term facility for 2014 was 3% (2013 – 3%).

Subsequent to year end, the Company borrowed US $330 under its credit facility (see note 31).

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Senior notes

The senior notes are unsecured obligations and rank equally and ratably with all existing and future senior indebtedness. The fixed rate notes are redeemable at the Company's option at any time, in whole or in part, prior to maturity at 100% of the principal amount plus a make-whole premium.

On January 31, 2014, the Company issued $500 senior notes at a rate of 4.35% due January 31, 2024 and $300 floating rate senior rates due February 1, 2016. The $300 senior notes bear interest at an annual rate equal to three month CDOR plus 0.69%.

Other

Burrard Landing Lot 2 Holdings Partnership (the "Partnership")

The Company has a 33.33% interest in the Partnership which built the Shaw Tower project with office/retail space and living/working space in Vancouver, BC. In the fall of 2004, the commercial construction of the building was completed and at that time, the Partnership issued ten year 6.31% secured mortgage bonds in respect of the commercial component of the Shaw Tower. In February 2014, the Partnership refinanced its debt. The Partnership received a mortgage loan and used the proceeds to prepay the outstanding balance of the previous mortgage and loan excess funds to each of its partners. The mortgage loan matures on November 1, 2024 and bears interest at 4.683% compounded semi-annually with interest only payable for the first five years. The mortgage loan is collateralized by the property and the commercial rental income from the building with no recourse to the Company.

Debt retirement costs

On February 18, 2014, the Company redeemed the 6.50% senior notes. In connection with the early redemption, the Company incurred costs of $7 and wrote-off the remaining finance costs of $1.

Debt covenants

The Company and its subsidiaries have undertaken to maintain certain covenants in respect of the credit agreements and trust indentures described above. The Company and its subsidiaries were in compliance with these covenants at August 31, 2014.

Long-term debt repayments

Mandatory principal repayments on all long-term debt in each of the next five years and thereafter are as follows:

16. SHARE CAPITAL

Authorized

The Company is authorized to issue a limited number of Class A voting participating shares ("Class A Shares") of no par value, as described below, and an unlimited number of Class B non-voting participating shares ("Class B Non-Voting Shares") of no par value, Class 1 preferred shares, Class 2 preferred shares, Class A preferred shares and Class B preferred shares.

The authorized number of Class A Shares is limited, subject to certain exceptions, to the lesser of that number of shares (i) currently issued and outstanding and (ii) that may be outstanding after any conversion of Class A Shares into Class B Non-Voting Shares.

2014	2013		2014	2013

474,026,390	464,826,606		**3,182**	2,955

Class A Shares and Class B Non-Voting Shares

Class A Shares are convertible at any time into an equivalent number of Class B Non-Voting Shares. In the event that a take-over bid is made for Class A Shares, in certain circumstances, the Class B Non-Voting Shares are convertible into an equivalent number of Class A Shares.

Changes in Class A Share capital and Class B Non-Voting Share capital in 2014 and 2013 are as follows:

	Class A Shares		Class B Non-Voting Shares	
	Number	$	Number	$
September 1, 2012	22,520,064	2	421,188,697	2,455

August 31, 2014	22,420,064	2	439,606,326	2,887

Series A Preferred Shares

The Cumulative Redeemable Rate Reset Preferred Shares, Series A ("Series A Preferred Shares") represent a series of class 2 preferred shares and are classified as equity since redemption, at $25.00 per Series A Preferred Share, is at the Company's option and payment of dividends is at the Company's discretion.

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Share transfer restriction

The Articles of the Company empower the directors to refuse to issue or transfer any share of the Company that would jeopardize or adversely affect the right of Shaw Communications Inc. or any subsidiary to obtain, maintain, amend or renew a license to operate a broadcasting undertaking pursuant to the Broadcasting Act (Canada).

17. SHARE-BASED COMPENSATION

Stock option plan

Under a stock option plan, directors, officers, employees and consultants of the Company are eligible to receive stock options to acquire Class B Non-Voting Shares with terms not to exceed ten years from the date of grant. Options granted up to August 31, 2014 vest evenly on the anniversary dates from the original grant date at either 25% per year over four years or 20% per year over five years. The options must be issued at not less than the fair market value of the Class B Non-Voting Shares at the date of grant. The maximum number of Class B Non-Voting Shares issuable under the plan may not exceed 52,000,000. As at August 31, 2014, 24,760,910 Class B Non-Voting Shares have been issued under the plan.

The changes in options are as follows:

	2014		2013	
	Number	Weighted average exercise price $	Number	Weighted average exercise price $

Outstanding, end of year	**16,477,563**	**22.34**	19,555,441	21.71

(1) The weighted average Class B Non-Voting Share price for the options exercised was $26.12.

The following table summarizes information about the options outstanding at August 31, 2014:

	Options outstanding			Options exerciseable	
Range of prices	Number outstanding	Weighted average remaining contractual life	Weighted average exercise price	Number exercisable	Weighted average exercise price
$16.30 – $22.27	7,700,283	5.13	19.74	6,177,783	19.54
$22.28 – $26.99	8,777,280	5.04	24.62	6,095,280	24.54

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

The weighted average estimated fair value at the date of the grant for common share options granted for the year ended August 31, 2014 was $2.61 (2013 – $2.53) per option. The fair value of each option granted was estimated on the date of the grant using the Black-Scholes option pricing model with the following weighted-average assumptions:

	2014	2013
Dividend yield	**4.18%**	4.37%
Risk-free interest rate	**1.61%**	1.37%
Expected life of options	**5 years**	5 years
Expected volatility factor of the future expected market price of Class B Non-Voting Shares	**19.6%**	21.7%

Expected volatility has been estimated based on the historical share price volatility of the Company's Class B Non-Voting Shares.

Restricted share unit plan

The Company has an RSU plan whereby RSUs are granted to eligible employees and officers of the Company. An RSU is a right that tracks the value of one Class B Non-Voting Share and permits the holder to receive a cash payment equal to the market value once RSUs are vested. Market value is determined by the average of the closing prices of the Class B Non-Voting Shares on the Toronto Stock Exchange for the five trading days preceding the applicable payment date as determined by the Company. When cash dividends are paid on Class B Non-Voting Shares, holders are credited with RSUs equal to the dividend. RSUs do not have voting rights as there are no shares underlying the plan.

The RSUs granted during 2011 vested during 2013 and the Company paid $6 to settle the obligation. During 2013, $3 was recorded as compensation expense.

Deferred share unit plan

The Company has a DSU plan for its Board of Directors whereby directors can elect to receive their annual cash compensation, or a portion thereof, in DSUs. In addition, the Company may adjust and/or supplement directors' compensation with periodic grants of DSUs. A DSU is a right that tracks the value of one Class B Non-Voting Share. Holders will be entitled to a cash payout when they cease to be a director. The cash payout will be based on market value of a Class B Non-Voting Share at the time of payout. When cash dividends are paid on Class B Non-Voting Shares, holders are credited with DSUs equal to the dividend. DSUs do not have voting rights as there are no shares underlying the plan.

During 2014, $3 was recognized as compensation expense (2013 – $4). The carrying value and intrinsic value of DSUs at August 31, 2014 was $13 and $11, respectively (August 31, 2013 – $10 and $8, respectively).

Employee share purchase plan

The Company's ESPP provides employees with an incentive to increase the profitability of the Company and a means to participate in that increased profitability. Generally, all non-unionized full time or part time employees of the Company are eligible to enroll in the ESPP. Under the

[all amounts in millions of Canadian dollars except share and per share amounts]

ESPP, eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the employee's contributions.

During 2014, $5 was recorded as compensation expense (2013 – $5).

18. EARNINGS PER SHARE

Earnings per share calculations are as follows:

	2014	2013
Numerator for basic and diluted earnings per share ($)		
Net income	**887**	784
Deduct: net income attributable to non-controlling interests in subsidiaries	**(30)**	(38)
Deduct: dividends on Series A Preferred Shares	**(14)**	(13)
Net income attributable to common shareholders	**843**	733
Denominator (millions of shares)		
Weighted average number of Class A Shares and Class B Non-Voting Shares for basic earnings per share	**457**	448
Effect of potentially dilutive securities(1)	**2**	2
Weighted average number of Class A Shares and Class B Non-Voting Shares for diluted earnings per share	**459**	450
Earnings per share		
Basic	**1.84**	1.64
Diluted	**1.84**	1.63

(1) The earnings per share calculation does not take into consideration the potential dilutive effect of certain stock options since their impact is anti-dilutive. For the year ended August 31, 2014, 1,729,227 options were excluded from the diluted earnings per share calculation (2013 – 8,201,720).

19. DIVIDENDS

Common share dividends

The holders of Class A Shares and Class B Non-Voting Shares are entitled to receive such dividends as the Board of Directors determines to declare on a share-for-share basis, as and when any such dividends are declared or paid. The holders of Class B Non-Voting Shares are entitled to receive during each dividend period, in priority to the payment of dividends on the Class A Shares, an additional dividend at a rate of $0.0025 per share per annum. This additional dividend is subject to proportionate adjustment in the event of future consolidations or subdivisions of shares and in the event of any issue of shares by way of stock dividend. After payment or setting aside for payment of the additional non-cumulative dividends on the Class B Non-Voting Shares, holders of Class A Shares and Class B Non-Voting Shares participate equally, share for share, as to all subsequent dividends declared.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Preferred share dividends

Holders of the Series A Preferred Shares are entitled to receive, as and when declared by the Company's Board of Directors, a cumulative quarterly fixed dividend yielding 4.50% annually for the initial period ending June 30, 2016. Thereafter, the dividend rate will be reset every five years at a rate equal to the then current 5-year Government of Canada bond yield plus 2.00%. Holders of Series A Preferred Shares will have the right, at their option, to convert their shares into Cumulative Redeemable Floating Rate Preferred Shares, Series B (the "Series B Preferred Shares"), subject to certain conditions, on June 30, 2016 and on June 30 every five years thereafter. The Series B Preferred Shares also represent a series of Class 2 preferred shares and holders will be entitled to receive cumulative quarterly dividends, as and when declared by the Company's Board of Directors, at a rate set quarterly equal to the then current three-month Government of Canada Treasury Bill yield plus 2.00%.

Dividend reinvestment plan

The Company has a Dividend Reinvestment Plan ("DRIP") that allows holders of Class A Shares and Class B Non-Voting Shares who are residents of Canada to automatically reinvest monthly cash dividends to acquire additional Class B Non-Voting Shares. Class B Non-Voting Shares distributed under the Company's DRIP are new shares issued from treasury at a 2% discount from the 5 day weighted average market price immediately preceding the applicable dividend payment date.

Dividends declared

The dividends per share recognized as distributions to common shareholders for dividends declared during the year ended August 31, 2014 and 2013 are as follows:

2014		2013	
Class A Voting Share	Class B Non-Voting Share	Class A Voting Share	Class B Non-Voting Share
1.0775	1.0800	$1.0050	$1.0075

The dividends per share recognized as distributions to holders of Series A Preferred Shares was $1.125 during each of the years ended August 31, 2014 and 2013.

On June 26, 2014, the Company declared dividends of $0.28125 per Series A Preferred Share which were paid on September 30, 2014. The total amount paid was $3 of which $1 was not recognized as at August 31, 2014.

On October 23, 2014, the Company declared dividends of $0.091458 per Class A Voting Share and $0.091667 per Class B Non-Voting Share payable on each of December 30, 2014, January 29, 2015 and February 26, 2015 to shareholders of record at the close of business on December 15, 2014, January 15, 2015 and February 13, 2015, respectively.

On October 23, 2014, the Company declared dividends of $0.28125 per Series A Preferred Share payable on December 31, 2014 to holders of record at the close of business on December 15, 2014.

Items that will not be subsequently reclassified to income			
Remeasurements on employee benefit plans	4	(1)	3
	8	(2)	6

Accumulated other comprehensive loss is comprised of the following:

	2014 $	2013 $
Items that may subsequently be reclassified to income		
Fair value of derivatives	**–**	2
Unrealized loss on available-for-sale investment	**(2)**	–
Items that will not be subsequently reclassified to income		
Remeasurements on employee benefit plans	**(131)**	(89)
	(133)	(87)

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

21. OPERATING, GENERAL AND ADMINISTRATIVE EXPENSES AND RESTRUCTURING COSTS

	2014 $	2013 $
Employee salaries and benefits	**945**	900
Purchases of goods and services	**2,092**	2,022
	3,037	2,922

22. OTHER LOSSES

Other losses generally includes realized and unrealized foreign exchange gains and losses on US dollar denominated current assets and liabilities, gains and losses on disposal of property, plant and equipment and minor investments, and the Company's share of the operations of Burrard Landing Lot 2 Holdings Partnership. During the prior year, the category included amounts related to the electrical fire and resulting water damage to the Company's head office in Calgary, Alberta that occurred during the fourth quarter of 2012. In fiscal 2013, the Company received insurance advances of $5 related to its claim and incurred costs of $13 in respect of ongoing recovery activities. In addition, during the prior year, the Company decided to discontinue further construction of a real estate project which resulted in a write-down of $14. During the current year, the category includes additional proceeds of $6 related to the aforementioned insurance claim and also includes a refund of $5 from the Canwest CCAA plan implementation fund and a write-down of $6 in respect of discontinued capital projects.

23. INCOME TAXES

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes. The Company's net deferred tax liability consists of the following:

	2014 $	2013 $
Deferred tax assets	**26**	–
Deferred tax liabilities	**(1,105)**	(1,142)
Net deferred tax liability	**(1,079)**	(1,142)

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Significant changes recognized to deferred income tax assets (liabilities) are as follows:

	Property, plant and equipment and software assets $	Broadcast rights, licenses, trademark and brands $	Partnership income $	Non-capital loss carry-forwards $	Accrued charges $	Foreign exchange on long-term debt and fair value of derivative instruments $	Total $
Balance at September 1, 2012	(133)	(840)	(271)	33	137	3	(1,071)
Recognized in statement of income	(18)	(14)	4	(27)	(63)	(3)	(121)
Recognized in other comprehensive loss	–	–	–	–	(1)	(1)	(2)
Recognized on business disposition and other	11	41	–	–	–	–	52
Balance at August 31, 2013	(140)	(813)	(267)	6	73	(1)	(1,142)

Balance at August 31, 2014	**(177)**	**(818)**	**(160)**	**6**	**70**	**–**	**(1,079)**

The Company has capital loss carryforwards of approximately $61 for which no deferred income tax asset has been recognized in the accounts. These capital losses can be carried forward indefinitely.

The Company has taxable temporary differences associated with its investment in its subsidiaries. No deferred tax liabilities have been provided with respect to such temporary differences as the Company is able to control the timing of the reversal and such reversal is not probable in the foreseeable future.

The income tax expense differs from the amount computed by applying Canadian statutory rates to income before income taxes for the following reasons:

	2014 $	2013 $
Current statutory income tax rate	**26.0%**	25.9%
Income tax expense at current statutory rates	**311**	276
Net increase (decrease) in taxes resulting from:		
Non-taxable portion of capital gains	**(8)**	–
Effect of tax rate changes	**–**	10
Recognition of previously unrecognized tax losses	**(1)**	(12)
Other	**6**	9
Income tax expense	**308**	283

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Due to Canadian provincial enacted corporate income tax rate changes, the statutory income tax rate for the Company increased from 25.9% in 2013 to 26.0% in 2014.

The components of income tax expense are as follows:

	2014 $	2013 $
Current income tax expense	**355**	174
Current income tax recovery from recognition of previously unrecognized tax losses	**(1)**	(12)
	354	162

24. BUSINESS SEGMENT INFORMATION

The Company's operating segments are Cable, Media and Satellite, all of which are substantially located in Canada. The accounting policies of the segments are the same as those described in the summary of significant accounting policies. Management evaluates divisional performance based on revenue and operating income before charges such as restructuring costs and amortization. During 2014, the Company announced that its residential and enterprise services currently included in the Cable and Satellite segments will be realigned into new Consumer and Business segments. The Company expects to commence reporting under the operating segments of Consumer, Business and Media in fiscal 2015.

	2014

Total capital expenditures of equipment costs (net) reported by segments					1,021

(1) The Company does not report restructuring costs, amortization, interest or cash taxes on a segmented basis.

(2) The profit from the sale of satellite equipment is subtracted from the calculation of segmented capital expenditures and equipment costs (net) as the Company views the profit on sale as a recovery of expenditures on customer premise equipment.

25. COMMITMENTS AND CONTINGENCIES

Commitments

(i) The Company owns and leases Ku-band and C-band transponders on the Anik F1R, Anik F2 and Anik G1 satellites. As part of the Ku-band transponder agreements with Telesat Canada, the Company is committed to paying annual transponder maintenance and license fees for each transponder from the time the satellite becomes operational for a period of 15 years.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

(ii) The Company has various long-term operating commitments as follows:

	$
2015	737
2016 – 2019	801
Thereafter	361
	1,899

Comprised of:	$
Program related agreements	771
Lease of transmission facilities, circuits and premises	452
Lease and maintenance of transponders	571
Exclusive rights to use intellectual property	71
Other (primarily maintenance and support contracts)	34
	1,899

Included in operating, general and administrative expenses are transponder maintenance expenses of $80 (2013 – $66) and rental expenses of $107 (2013 – $99).

(iii) At August 31, 2014, the Company had capital expenditure commitments in the normal course of business of $45. The commitments are primarily in respect of 2015 and 2016.

(iv) As part of the CRTC decisions approving the acquisition of the broadcasting businesses in 2012 and 2011, the Company is required to contribute approximately $182 in new benefits to the Canadian broadcasting system over seven years. The obligations have been recorded in the income statement at fair value, being the sum of the discounted future net cash flows using appropriate discount rates. At August 31, 2014, the remaining expenditure commitments in respect of these obligations is $88 which will be funded over future years through fiscal 2019.

(v) In late fiscal 2014, the Company partnered with Rogers to form shomi, a new subscription video-on-demand service which launched in beta in early November 2014. The Company's initial capital commitment is $67 of which, $29 was funded subsequent to year end.

Contingencies

The Company and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business. Although resolution of such matters cannot be predicted with certainty, management does not consider the Company's exposure to litigation to be material to these consolidated financial statements.

Guarantees

In the normal course of business the Company enters into indemnification agreements and has issued irrevocable standby letters of credit and commercial surety bonds with and to third parties.

Indemnities

Many agreements related to acquisitions and dispositions of business assets include indemnification provisions where the Company may be required to make payment to a vendor or purchaser for breach of contractual terms of the agreement with respect to matters such as litigation, income taxes payable or refundable or other ongoing disputes. The indemnification period usually covers a period of two to four years. Also, in the normal course of business, the Company has provided indemnifications in various commercial agreements, customary for the telecommunications industry, which may require payment by the Company for breach of contractual terms of the agreement. Counterparties to these agreements provide the Company with comparable indemnifications. The indemnification period generally covers, at maximum, the period of the applicable agreement plus the applicable limitations period under law.

The maximum potential amount of future payments that the Company would be required to make under these indemnification agreements is not reasonably quantifiable as certain indemnifications are not subject to limitation. However, the Company enters into indemnification agreements only when an assessment of the business circumstances would indicate that the risk of loss is remote. At August 31, 2014, management believes it is remote that the indemnification provisions would require any material cash payment.

The Company indemnifies its directors and officers against any and all claims or losses reasonably incurred in the performance of their service to the Company to the extent permitted by law.

Irrevocable standby letters of credit and commercial surety bonds

The Company and certain of its subsidiaries have granted irrevocable standby letters of credit and commercial surety bonds, issued by high rated financial institutions, to third parties to indemnify them in the event the Company does not perform its contractual obligations. As of August 31, 2014, the guarantee instruments amounted to $4. The Company has not recorded any additional liability with respect to these guarantees, as the Company does not expect to make any payments in excess of what is recorded on the Company's consolidated financial statements. The guarantee instruments mature at various dates during fiscal 2015.

26. EMPLOYEE BENEFIT PLANS

Defined contribution pension plans

The Company has defined contribution pension plans for its non-union employees and, for the majority of these employees, contributes 5% of eligible earnings to the maximum amount deductible under the Income Tax Act. For union employees, the Company contributes amounts up to 9.8% of earnings to the individuals' registered retirement savings plans. Total pension costs in respect of these plans were $37 (2013 – $35) of which $24 (2013 – $23) was expensed and the remainder capitalized.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Defined benefit pension plans

The Company has two non-registered retirement plans for designated executives and senior executives and several registered pension plans for certain employees in the media business. The following is a summary of the accrued benefit liabilities recognized in the statement of financial position.

	2014 $	2013 $
Unregistered plans		
Accrued benefit obligation	**493**	406
Fair value of plan assets	**330**	302
	163	104
Registered plans		
Accrued benefit obligation	**171**	152
Fair value of plan assets	**160**	133
	11	19
Accrued benefit liabilities and deficit	**174**	123

The plans expose the Company to a number of risks, of which the most significant are as follows:

(i) Volatility in market conditions: The accrued benefit obligations are calculated using discount rates with reference to bond yields closely matching the term of the estimated cash flows while many of the assets are invested in other types of assets. If plan assets underperform these yields, this will result in a deficit. Changing market conditions in conjunction with discount rate volatility will result in volatility of the accrued benefit liabilities. To minimize some of the investment risk, the Company has established long-term funding targets where the time horizon and risk tolerance are specified.

(ii) Selection of accounting assumptions: The calculation of the accrued benefit obligations involves projecting future cash flows of the plans over a long time frame. This means that assumptions used can have a material impact on the statements of financial position and comprehensive income because in practice, future experience of the plans may not be in line with the selected assumptions.

Non-registered pension plans

The Company provides a supplemental executive retirement plan ("SERP") for certain of its senior executives. Benefits under this plan are based on the employees' length of service and their highest three-year average rate of eligible pensionable earnings during their years of service. In 2012, the Company closed the plan to new participants and amended the plan to freeze base salary levels at August 31, 2012 for purposes of determining eligible pensionable earnings. The plan was also amended to provide funding of up to 90% of the accrued benefit obligation over a period of six years. Employees are not required to contribute to this plan. Subsequent to year end, the Company made contributions of $25 to a Retirement Compensation Arrangement Trust ("RCA").

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

During fiscal 2013, the Company established an executive retirement plan ("ERP") for certain executives not covered by the SERP. Benefits under this plan are comprised of defined contribution and defined benefit components and are based on the employees' length of service as well as final average earnings during their years of service. Employees are not required to contribute to this plan. Annually the employer is to fund 90% of the accrued benefit obligation. Subsequent to year end, the Company made contributions of $2 to an RCA.

The table below shows the change in benefit obligation and funding status and the fair value of plan assets.

	SERP $	ERP $	2014 Total $	SERP $	ERP $	2013 Total $

Return on plan assets, excluding interest income	**8**	**–**	**8**	(2)	–	(2)
Fair value of plan assets, end of year	**328**	**2**	**330**	302	–	302
Accrued benefit liability and plan deficit, end of year	**159**	**4**	**163**	102	2	104

The weighted average duration of the defined benefit obligation of the SERP and ERP at August 31, 2014 is 15.9 years and 23.4 years, respectively.

The underlying plan assets of the SERP and ERP at August 31, 2014 are invested in the following:

	SERP $	ERP $
Cash and cash equivalents	**163**	**1**
Fixed income securities	**90**	**–**
Equity securities – Canadian	**24**	**–**
Equity securities – Foreign	**51**	**1**
	328	**2**

All fixed income and equity securities have a quoted price in active market.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

The tables below show the significant weighted-average assumptions used to measure the pension obligation and cost for the plans.

Accrued benefit obligation	2014 SERP %	2014 ERP %	2013 SERP %	2013 ERP %
Discount rate	**4.00**	**4.00**	4.75	4.75
Rate of compensation increase	**5.00**(1)	**3.00**	5.00(1)	3.00

Benefit cost for the year	2014 SERP %	2014 ERP %	2013 SERP %	2013 ERP %
Discount rate	**4.75**	**4.75**	4.50	4.20
Rate of compensation increase	**5.00**(1)	**3.00**	5.00(1)	3.00

(1) Applies only to incentive compensation component of eligible pensionable earnings.

The calculation of the accrued benefit obligation is sensitive to the assumptions above. A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2014 by $85. A one percentage point increase in the rate of compensation increase would have increased the accrued benefit obligation by $16.

When calculating the sensitivity of the defined benefit obligation to significant actuarial assumptions, the present value of the defined benefit obligation has been calculated using the projected benefit method which is the same method that is applied in calculating the defined benefit liability recognized in the statement of financial position. The sensitivity analysis presented above may not be representative of the actual change in the accrued benefit obligation as it is unlikely that the change in assumptions would occur in isolation of one another as some assumptions may be correlated.

The net pension benefit plan expense, which is included in employee salaries and benefits expense, is comprised of the following components:

	SERP $	ERP $	2014 Total $	SERP $	ERP $	2013 Total $
Current service cost	**9**	**3**	**12**	8	2	10
Past service cost	**–**	**–**	**–**	4	–	4
Interest cost	**19**	**–**	**19**	17	–	17
Interest income	**(15)**	**–**	**(15)**	(13)	–	(13)
Pension expense	**13**	**3**	**16**	16	2	18

Registered pension plans

The Company has a number of funded defined benefit pension plans which provide pension benefits to certain unionized and non-unionized employees in the media business. Benefits under these plans are based on the employees' length of service and final average salary. These plans are regulated by the Office of the Superintendent of Financial Institutions, Canada in accordance with the provisions of the Pension Benefits Standards Act and Regulations. The regulations set out minimum standards for funding the plans.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

The table below shows the change in the benefit obligations, change in fair value of plan assets and the funded status of these defined benefit plans.

	2014 $	2013 $
Accrued benefit obligation, beginning of year	**152**	149
Current service cost	**5**	5
Interest cost	**7**	7
Employee contributions	**1**	1
Payment of benefits to employees	**(10)**	(7)
Remeasurements:		
Effect of changes in demographic assumptions	**1**	5
Effect of changes in financial assumptions	**15**	(4)
Effect of experience adjustments	**–**	(4)
Accrued benefit obligation, end of year	**171**	152
Fair value of plan assets, beginning of year	**133**	116
Employer contributions	**12**	13
Employee contributions	**1**	1
Interest income	**7**	6
Payment of benefit	**(10)**	(7)
Administrative expenses paid from plan assets	**(1)**	(1)
Return on plan assets, excluding interest income	**18**	5
Fair value of plan assets, end of year	**160**	133
Accrued benefit liability and plan deficit, end of year	**11**	19

The weighted average duration of the defined benefit obligation at August 31, 2014 is 16.7 years.

The plan assets at August 31, 2014 are comprised of investments in pooled funds as follows:

	$
Equity – Canadian	**40**
Equity – Foreign	**21**
Fixed income – Canadian	**99**
	160

The underlying securities in the pooled funds have quoted prices in an active market.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

The tables below show the significant weighted-average assumptions used to measure the pension obligation and cost for these plans.

Accrued benefit obligation	2014 %	2013 %
Discount rate	**4.09**	4.84
Rate of compensation increase	**3.00**	3.50

Benefit cost for the year	2014 %	2013 %
Discount rate	**4.84**	4.67
Rate of compensation increase	**3.50**	3.50

The calculation of the accrued benefit obligation is sensitive to the assumptions above. A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2014 by $31. A one percentage point increase in the rate of compensation increase would have increased the accrued benefit obligation by $6.

When calculating the sensitivity of the defined benefit obligation to significant actuarial assumptions, the present value of the defined benefit obligation has been calculated using the projected benefit method which is the same method that is applied in calculating the defined benefit liability recognized in the statement of financial position. The sensitivity analysis presented above may not be representative of the actual change in the accrued benefit obligation as it is unlikely that the change in assumptions would occur in isolation of one another as some assumptions may be correlated.

The net pension benefit plan expense, which is included in employee salaries and benefits expense, is comprised of the following components:

	2014 $	2013 $
Current service cost	**5**	5
Interest cost	**7**	7
Interest income	**(7)**	(6)
Administrative expenses	**1**	1
Pension expense	**6**	7

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Other benefit plans

The Company has post employment benefits plans that provide post retirement health and life insurance coverage to certain retirees in the media business and are funded on a pay-as-you-go basis. The table below shows the change in the accrued post-retirement obligation which is recognized in the statement of financial position.

	2014 $	2013 $
Accrued benefit obligation and plan deficit, beginning of year	**15**	19
Current service cost	**1**	–
Interest cost	**1**	1
Payment of benefits to employees	**(1)**	(1)
Remeasurements:		
Effect of changes in demographic assumptions	**–**	(4)
Effect of changes in financial assumptions	**2**	–
Accrued benefit obligation and plan deficit, end of year	**18**	15

The weighted average duration of the benefit obligation at August 31, 2014 is 18.0 years.

The post-retirement benefit plan expense, which is included in employee salaries and benefits expense, is $2 (2013 – $1) and is comprised of current service and interest cost.

The discount rates used to measure the post-retirement benefit cost for the year and the accrued benefit obligation as at August 31, 2014 were 4.75% and 4.00%, respectively (2013 – 4.50% and 4.75%, respectively). A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2014 by $4.

Employer contributions

The Company's estimated contributions to the defined benefit plans in fiscal 2015 are $38.

27. RELATED PARTY TRANSACTIONS

Controlling shareholder

The majority of the Class A Shares are held by JR Shaw, members of his family and the companies owned and/or controlled by them (the "Shaw Family Group"). All of the Class A Shares held by the Shaw Family Group are subject to a voting trust agreement entered into by such persons. The Shaw Family Group is represented as Directors, Senior Executive and Corporate Officers of the Company.

During the prior year, the Company and the Shaw Family Group formed a partnership to make equity investments in companies with new and emerging technologies that have the potential to provide future benefit to the Company. The Shaw Family Group contributed $1 for its 20% interest in the partnership.

Key management personnel and Board of Directors

Key management personnel consist of the most senior executive team and along with the Board of Directors have the authority and responsibility for planning, directing and controlling the activities of the Company.

Compensation

The compensation expense of key management personnel and Board of Directors is as follows:

	2014 $	**2013 $**
Short-term employee benefits	**42**	39
Post-employment pension benefits	**17**	17
Share-based compensation	**3**	6
	62	62

Transactions

The Company paid $2 (2013 – $3) for direct sales agent, collection, marketing, installation and maintenance services to a company controlled by a Director of the Company.

During the year, the Company paid $7 (2013 – $7) for remote control units to a supplier where Directors of the Company hold positions on the supplier's board of directors.

During the year, network fees of $12 (2013 – $nil) were paid to a programmer where a Director of the Company holds a position on the programmer's board of directors.

At August 31, 2013, the Company had $3 owing in respect of these transactions (2013 – $1).

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

Other related parties

The Company has entered into certain transactions and agreements in the normal course of business with certain of its related parties. These transactions are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties.

Corus

The Company and Corus are subject to common voting control. During the year, network fees of $120 (2013 – $125), advertising fees of $1 (2013 – $1) and programming fees of $1 (2013 – $1) were paid to various Corus subsidiaries and entities subject to significant influence. In addition, the Company provided administrative, advertising and other services for $1 (2013 – $nil), uplink of television signals for $5 (2013 – $5), Internet services and lease of circuits for $1 (2013 – $1) and programming content of $1 (2013 – $1). At August 31, 2014, the Company had a net of $20 owing in respect of these transactions (2013 – $21) and commitments in respect of network program agreements of $15 which are included in the amounts disclosed in note 25.

During 2013 the Company sold to Corus its 49% interest in ABC Spark and acquired from Corus its 20% interest in Food Network Canada. The Company had a non-interest bearing promissory note of $48 owing to Corus at August 31, 2013 in respect of these transactions. In addition, the Company agreed to sell to Corus its 50% interest in its two French-language channels, Historia and Series+. The sale of Historia and Series+ closed in 2014 (see note 3) at which time the Company settled the aforementioned promissory note.

The Company provided Corus with television advertising spots in return for radio and television advertising. No monetary consideration was exchanged for these transactions and no amounts were recorded in the accounts.

Burrard Landing Lot 2 Holdings Partnership

During the year, the Company paid $10 (2013 – $10) to the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, BC, is the Company's headquarters for its lower mainland operations. At August 31, 2014, the Company had a remaining commitment of $101 in respect of the office space lease which is included in the amounts disclosed in note 25.

Specialty Channels

The Company previously held interests in a number of specialty television channels which were subject to either joint control or significant influence. The Company paid network fees of $1 (2013 – $2) and provided uplink of television signals of $nil (2013 – $1) to these channels during the year.

28. FINANCIAL INSTRUMENTS

Fair values

The fair value of financial instruments has been determined as follows:

(i) Current assets and current liabilities

The fair value of financial instruments included in current assets and current liabilities approximates their carrying value due to their short-term nature.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

(ii) Investments and other assets and Other long-term assets

The fair value of publicly traded investments is determined by quoted market prices. Investments in private entities which do not have quoted market prices in an active market and whose fair value cannot be readily measured are carried at cost. No published market exists for such investments. These equity investments have been made as they are considered to have the potential to provide future benefit to the Company and accordingly, the Company has no current intention to dispose of these investments in the near term. The fair value of long-term receivables approximates their carrying value as they are recorded at the net present values of their future cash flows, using an appropriate discount rate.

(iii) Long-term debt

The carrying value of long-term debt is at amortized cost based on the initial fair value as determined at the time of issuance. The fair value of publicly traded notes is based upon current trading values. Other notes and debentures are valued based upon current trading values for similar instruments.

(vi) Other long-term liabilities

The fair value of program rights payable, estimated by discounting future cash flows, approximates their carrying value.

(v) Derivative financial instruments

The fair value of US currency forward purchase contracts is determined using an estimated credit-adjusted mark-to-market valuation.

The carrying values and estimated fair values of derivative financial instruments, an investment in a publicly traded company and long-term debt are as follows:

	August 31, 2014		August 31, 2013	
	Carrying value $	Estimated fair value $	Carrying value $	Estimated fair value $
Assets				
Derivative financial instruments(2)	–	–	3	3
Investment in publicly traded company(1)	**7**	**7**	–	–
Liabilities				
Long-term debt(1)	**4,690**	**5,390**	4,818	5,275

(1) Level 1 fair value – determined by quoted market prices.

(2) Level 2 fair value – determined by valuation techniques using inputs based on observable market data, either directly or indirectly, other than quoted prices.

As at August 31, 2013, US currency forward purchase contracts qualified as hedging instruments and were designated as cash flow hedges.

Risk management

The Company is exposed to various market risks including currency risk and interest rate risk, as well as credit risk and liquidity risk associated with financial assets and liabilities. The Company has designed and implemented various risk management strategies, discussed further below, to ensure the exposure to these risks is consistent with its risk tolerance and business objectives.

Market risk

Market risk is the risk that the fair value or cash flows of a financial instrument will fluctuate as a result of changes in market prices, including foreign exchange and interest rates, the Company's share price and market price of publicly traded investments.

Currency risk

Certain of the Company's capital expenditures and equipment costs are incurred in US dollars, while its revenue is primarily denominated in Canadian dollars. Decreases in the value of the Canadian dollar relative to the US dollar could have an adverse effect on the Company's cash flows. To mitigate some of the uncertainty in respect to capital expenditures and equipment costs, the Company regularly enters into forward contracts in respect of US dollar commitments. With respect to 2014, the Company entered into forward contracts to purchase US $135 over a period of 12 months commencing in September 2013 at an average exchange rate of 1.0403 Cdn. At August 31, 2014 the Company had no forward contracts in respect of US dollar commitments.

Interest rate risk

Due to the capital-intensive nature of its operations, the Company utilizes long-term financing extensively in its capital structure. The primary components of this structure are a banking facility and various Canadian senior notes with varying maturities issued in the public markets as more fully described in note 13.

Interest on the Company's banking facility is based on floating rates, while the senior notes are primarily fixed-rate obligations. The Company utilizes its credit facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. As at August 31, 2014, 94% of the Company's consolidated long-term debt was fixed with respect to interest rates.

Sensitivity analysis

The Company held no foreign exchange forward contracts at August 31, 2014. A portion of the Company's accounts receivables and accounts payable and accrued liabilities is denominated in US dollars; however, due to their short-term nature, there is no significant market risk arising from fluctuations in foreign exchange rates.

Interest on the Company's banking facility is based on floating rates and the variable rate senior notes are based on CDOR. There is no significant market risk arising from interest rates fluctuating by reasonably possible amounts from their actual values at August 31, 2014.

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

A change of one dollar in the market price per share of the Company's publicly traded investment would change other comprehensive loss by $1 at August 31, 2014.

At August 31, 2014, a one dollar change in the Company's Class B Non-Voting Shares would not have had an impact on net income in respect of the Company's DSU plan.

Credit risk

Accounts receivable in respect of Cable and Satellite divisions are not subject to any significant concentrations of credit risk due to the Company's large and diverse customer base. For the Media division, a significant portion of sales are made to advertising agencies which results in some concentration of credit risk. At August 31, 2014, approximately 61% (2013 – 59%) of the $201 (2013 – $196) of advertising receivables is due from the ten largest accounts. The largest amount due from an advertising agency is $20 (2013 – $19) which is approximately 10% (2013 – 10%) of advertising receivables. As at August 31, 2014, the Company had accounts receivable of $493 (August 31, 2013 – $486), net of the allowance for doubtful accounts of $32 (August 31, 2013 – $27). The Company maintains an allowance for doubtful accounts for the estimated losses resulting from the inability of its customers to make required payments. In determining the allowance, the Company considers factors such as the number of days the subscriber account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. As at August 31, 2014, $129 (August 31, 2013 – $135) of accounts receivable is considered to be past due, defined as amounts outstanding past normal credit terms and conditions. Uncollectible accounts receivable are charged against the allowance account based on the age of the account and payment history. The Company believes that its allowance for doubtful accounts is sufficient to reflect the related credit risk.

The Company mitigates the credit risk of advertising receivables by performing initial and ongoing credit evaluations of advertising customers. Credit is extended and credit limits are determined based on credit assessment criteria and credit quality. In addition, the Company mitigates credit risk of subscriber receivables through advance billing and procedures to downgrade or suspend services on accounts that have exceeded agreed credit terms.

Credit risks associated with US currency contracts arise from the inability of counterparties to meet the terms of the contracts. In the event of non-performance by the counterparties, the Company's accounting loss would be limited to the net amount that it would be entitled to receive under the contracts and agreements. In order to minimize the risk of counterparty default under its swap agreements, the Company assesses the creditworthiness of its swap counterparties.

Liquidity risk

Liquidity risk is the risk that the Company will experience difficulty in meeting obligations associated with financial liabilities. The Company manages its liquidity risk by monitoring cash flow generated from operations, available borrowing capacity, and by managing the maturity profiles of its long-term debt.

[all amounts in millions of Canadian dollars except share and per share amounts]

The Company's undiscounted contractual maturities as at August 31, 2014 are as follows:

	Accounts payable and accrued liabilities[(1)] $	Other long-term liabilities $	Long-term debt repayable at maturity $	Interest payments $
Within one year	828	–	–	267
1 to 3 years	–	5	1,000	506
3 to 5 years	–	–	–	439
Over 5 years	–	–	3,740	2,190
	828	5	4,740	3,402

(1) Includes accrued interest and dividends of $215.

29. CONSOLIDATED STATEMENTS OF CASH FLOWS

Lease transaction:		
Capitalization of transponders under lease renewal	**5**	–
Issuance of promissory note:		
Transactions with a related party *[notes 3 and 27]*	**–**	48

30. CAPITAL STRUCTURE MANAGEMENT

The Company's objectives when managing capital are:

(i) to maintain a capital structure which optimizes the cost of capital, provides flexibility and diversity of funding sources and timing of debt maturities, and adequate anticipated liquidity for organic growth and strategic acquisitions;

(ii) to maintain compliance with debt covenants; and

(iii) to manage a strong and efficient capital base to maintain investor, creditor and market confidence.

The Company defines capital as comprising all components of shareholders' equity (other than non-controlling interests and amounts in accumulated other comprehensive income/loss), long-term debt (including the current portion thereof), and bank indebtedness less cash and cash equivalents.

	August 31, 2014 $	August 31, 2013 $

	8,938	8,716

Shaw Communications Inc.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

August 31, 2014 and 2013
[all amounts in millions of Canadian dollars except share and per share amounts]

The Company manages its capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of underlying assets. The Company may also from time to time change or adjust its objectives when managing capital in light of the Company's business circumstances, strategic opportunities, or the relative importance of competing objectives as determined by the Company. There is no assurance that the Company will be able to meet or maintain its currently stated objectives.

On December 5, 2013 Shaw received the approval of the TSX to renew its normal course issuer bid to purchase its Class B Non-Voting Shares for a further one year period. The Company is authorized to acquire up to 20,000,000 Class B Non-Voting Shares during the period December 9, 2013 to December 8, 2014.

The Company's banking facility is subject to covenants which include maintaining minimum or maximum financial ratios, including total debt to operating cash flow and operating cash flow to fixed charges. At August 31, 2014, the Company is in compliance with these covenants and based on current business plans and economic conditions, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants.

The Company's overall capital structure management strategy remains unchanged from the prior year.

31. SUBSEQUENT EVENT

On September 2, 2014, the Company closed the acquisition of 100% of the shares of ViaWest, Inc, ("ViaWest") for an enterprise value of US $1.2 billion which was funded through a combination of cash on hand, assumption of ViaWest debt and a drawdown of US $330 on the Company's credit facility. The ViaWest acquisition provides the Company with a growth platform in the North American data centre sector and is another step in expanding technology offerings for mid-market enterprises in Western Canada. The Company is currently in the process of completing the purchase price allocation which it expects to include in its interim financial statements for the first quarter of fiscal 2015. The operating results of ViaWest will be included in the Company's consolidated financial statements from the date of acquisition. In connection with the transaction, the Company incurred $4 of acquisition related costs in fiscal 2014 for professional fees paid to lawyers, consultants and advisors and had a contingent liability of $6 at August 31, 2014 in respect of such fees.

August 31, 2014

Share Capital and Listings

The Company is authorized to issue a limited number of Class A participating and an unlimited number of Class B Non-Voting participating shares. The authorized number of Class A Shares is limited, subject to certain exceptions, to the lesser of that number of such shares (i) currently issued and outstanding; and (ii) that may be outstanding after any conversion of Class A Shares into Class B Non-Voting Shares. At August 31, 2014, the Company had 22,420,064 Class A Shares and 439,606,326 Class B Non-Voting Shares outstanding. The Class A Shares are listed on the TSX Venture Stock Exchange under the symbol SJR.A. The Class B Non-Voting Shares are listed on the Toronto Stock Exchange under SJR.B and on the New York Stock Exchange under the symbol SJR. The Series A Preferred Shares are listed on the Toronto Stock Exchange under the symbol SJR.PR.A.

Trading Range of Class B Non-Voting Shares on the Toronto Stock Exchange

Quarter	High Close	Low Close	Total Volume
September 1, 2013 to August 31, 2014			
First	25.49	23.92	46,219,235
Second	26.03	24.41	64,436,621
Third	27.34	25.48	43,542,516
Fourth	27.95	26.25	41,824,057
Closing price, August 31, 2014	27.39		

Share Splits

There have been four splits of the Company's shares; July 30, 2007 (2 for 1), February 7, 2000 (2 for 1), May 18, 1994 (2 for 1), and September 23, 1987 (3 for 1). In addition, as a result of the Arrangement referred to in the Management Information Circular dated July 22, 1999, a Shareholder's Adjusted Cost Base (ACB) was reduced for tax purposes.

Shaw Communications Inc.
Report to Shareholders
August 31, 2015

Dear Fellow Shareholders,

We are pleased to report solid fiscal 2015 results, a reflection of our commitment to customer service, focus on operational excellence and sound financial management for our shareholders.

Transformation in the Canadian communications sector continued through fiscal 2015 and we embrace the challenges and opportunities presented by evolving consumer preferences, regulatory change, technological advances and adjustments in the Canadian economy. We are genuinely excited about the possibilities for our customers and our business for many years to come.

From Shaw's earliest days, we understood that delivering excellent products and customer service is fundamental to our growth and success. We are proud of the progress we have made to drive excellence in the ways we organize, plan and execute our strategy to achieve our corporate and operational goals. Guiding our operations and all of our decisions is our commitment to delivering exceptional experiences to our customers and viewers.

Operations

In 2015, our Consumer division took a major step forward by reorganizing our customer care operations into seven national centres of expertise – in Victoria, Nanaimo, Vancouver, Kelowna, Winnipeg, Mississauga and Montreal. This realignment adopts global best practices and enables us to specialize our knowledge, expertise, training, management and other processes to better serve our customers.

Our *shomi* joint venture with Rogers Communications to provide subscription based streaming video on demand was made available to all Canadians in 2015. Our work to provide more entertainment choices for customers continues in 2016 as we work closely with partners at Comcast to be the first to bring their market leading cloud-based X1 platform to Canadian viewers. X1 offers a seamless viewing experience across multiple screens and devices – both in and out of the home. We are planning to roll out X1 to our customers through 2016.

We are constantly investing in our network. As people embrace the power of new technology – whether through personal devices, smart home features or new gadgets and tools still on the horizon – the demands on our hybrid fibre-coax network increase. We are committed to enhancing our broadband performance in 2016 through the technology provided by the DOCSIS 3.1 protocol – known as Gigasphere. We know that we are now just scratching the surface of what our network is capable of and we have a plan that will continue to deliver the speed and capacity that our customers want today and into the future. Our promise is simple: our customers will always be ready and always be connected so they never miss a thing.

Shaw Go WiFi is a valued extension of our network that now has nearly 75,000 access points across western Canada and more than two million devices registered. We are committed to further extending the reach of our network so our customers can connect outside the home.

We also made changes in 2015 to improve the performance of our Media division and transform it from a traditional broadcaster to a broader media company. In the shifting global media landscape, success is defined by the ability to engage in and monetize content across all platforms. Our Media team is exploring a number of next generation advertising solutions to ensure that our offering evolves with the expectations of our advertising clients.

Growth

Our plans for growth are robust, yet disciplined. They are designed to ensure that we are making prudent moves and investments to ensure we retain our leadership in the marketplace and create value for our shareholders.

Business Infrastructure Services continues to capitalize on opportunities in its sector. ViaWest extended its reach with the recent opening of new facilities in Oregon and Calgary, and its recently announced move into the eastern U.S. with the acquisition of INetU and its facility in Pennsylvania.

We continue to address significant opportunities that we see in Business Network Services by strengthening our position as a valued advisor to small and medium sized businesses, and promoting our value proposition to "Grow your business with Shaw Business." Notably, in 2015 we worked with a number of global vendor partners to launch our "Smart" suite of flexible and easy to use managed business communications solutions.

Shaw Communications Inc.
Report to Shareholders
August 31, 2015

People

We are proud to support organizations that promote the communities where we work and live. In fiscal 2015, Shaw contributed approximately $60 million in cash and in-kind contributions to charitable and community organizations that work to make our neighbourhoods and cities better. Approximately 80% of this amount went to our multiple partnerships that benefit kids and youth-focused charities under the Shaw Kids Investment Program (SKIP).

Every day, our more than 14,000 employees come to work and serve our customers, viewers and our communities the very best way they can. They deliver time and time again, and we thank them for contributing to the success of our Company. We would also like to commend our management team for their commitment to our customers and their ongoing leadership and thank the members of our Board of Directors for their valued guidance, wisdom and insight.

Finally, we acknowledge the steady hand, sage counsel and unwavering support of Louis A. Desrochers, who passed away peacefully September 28, 2015. Louis was appointed Honourary Corporate Secretary for life in 1998, following decades of providing Shaw with excellent advice, including navigating our first licence application to the CRTC in 1970. We are lucky to have worked so closely with him and to have gained so much from his friendship.

[Signed]

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2015

November 23, 2015

Forward

Tabular dollar amounts are in millions of Canadian dollars, except per share amounts or unless otherwise indicated. This Management's Discussion and Analysis should be read in conjunction with the Consolidated Financial Statements. The terms "we," "us," "our," "Shaw" and "the Company" refer to Shaw Communications Inc. and, as applicable, Shaw Communications Inc. and its direct and indirect subsidiaries as a group.

Caution Concerning Forward Looking Statements

Statements included in this Management's Discussion and Analysis that are not historic constitute "forward-looking statements" within the meaning of applicable securities laws. Such statements include, but are not limited to, statements about future capital expenditures, acquisitions and dispositions, financial guidance for future performance, business strategies and measures to implement strategies, competitive strengths, expansion and growth of Shaw's business and operations and other goals and plans. They can generally be identified by words such as "anticipate", "believe", "expect", "plan", "intend", "target", "goal" and similar expressions (although not all forward-looking statements contain such words). All of the forward-looking statements made in this report are qualified by these cautionary statements.

Forward-looking statements are based on assumptions and analyses made by Shaw in light of its experience and its perception of historical trends, current conditions and expected future developments as well as other factors it believes are appropriate in the circumstances as of the current date. These assumptions include, but are not limited to, general economic conditions, interest, income tax and exchange rates, technology deployment, content and equipment costs, industry structure, conditions and stability, government regulation and the integration of recent acquisitions. Many of these assumptions are confidential.

You should not place undue reliance on any forward-looking statements. Many factors, including those not within Shaw's control, may cause Shaw's actual results to be materially different from the views expressed or implied by such forward-looking statements, including, but not limited to, general economic, market and business conditions; changes in the competitive environment in the markets in which Shaw operates and from the development of new markets for emerging technologies; industry trends and other changing conditions in the entertainment, information and communications industries; Shaw's ability to execute its strategic plans; opportunities that may be presented to and pursued by Shaw; changes in laws, regulations and decisions by regulators that affect Shaw or the markets in which it operates; Shaw's status as a holding company with separate operating subsidiaries; and other factors described in this report under the heading "Known events, trends, risks and uncertainties". The foregoing is not an exhaustive list of all possible factors. Should one or more of these risks materialize, or should assumptions underlying the forward-looking statements prove incorrect, actual results may vary materially from those described herein.

The Company provides certain financial guidance for future performance as the Company believes that certain investors, analysts and others utilize this and other forward-looking information in order to assess the Company's expected operational and financial performance and as an indicator of its ability to service debt and return cash to shareholders. The Company's financial guidance may not be appropriate for this or other purposes.

Any forward-looking statement speaks only as of the date on which it was originally made and, except as required by law, Shaw expressly disclaims any obligation or undertaking to disseminate any updates or revisions to any forward-looking statement to reflect any change in related assumptions, events, conditions or circumstances.

ABOUT OUR BUSINESS

At Shaw, we are focused to deliver leading network and content experiences for our highly valued customers and viewers.

- our Consumer team connects consumers in their homes and on the go with broadband Internet, Shaw Go WiFi, video and phone
- our Business Network Services team enables businesses to focus on their core strategies with a full suite of connectivity and managed services
- our Business Infrastructure Services team provides hybrid IT solutions, including colocation, managed services, cloud computing and security and compliance for North American enterprises
- our Media team delivers engaging programming to Canadians through dynamic conventional and specialty television channels along with online and over-the-top video platforms

In the following sections we provide select financial highlights and review our strategy, our four divisions, our network and our presence in the communities in which we operate.

Shaw is traded on the Toronto Stock Exchange (SJR.B) and the New York Stock Exchange (SJR) and is included in the S&P/TSX 60 Index.

Our Strategy

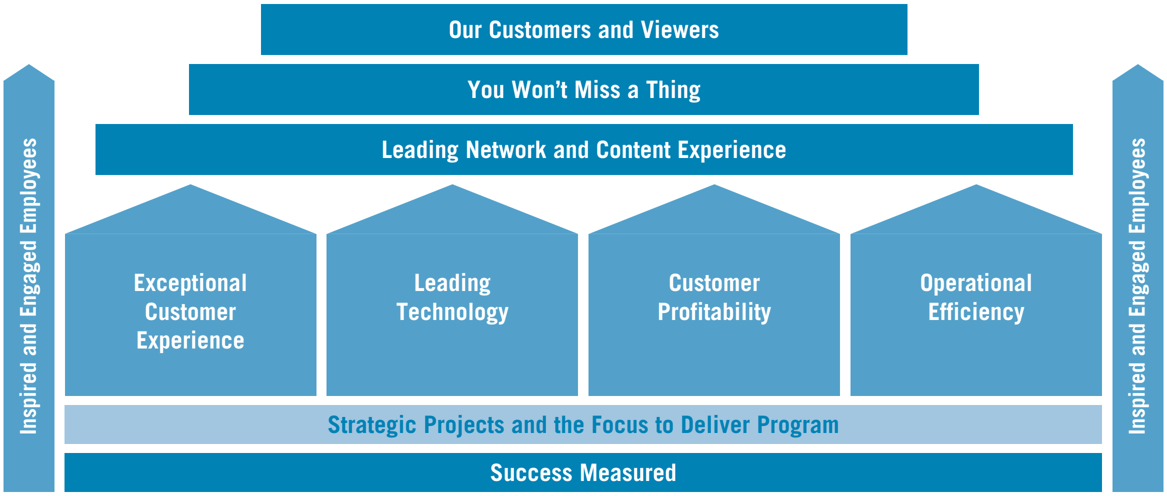
Shaw's corporate strategy places the highest priority on our valued customers and viewers. We have committed to deliver them a leading network and content experience, all centred on our brand promise "Our customers will always be ready and always be connected so they never miss a thing."

Our strategy stands on four strategic pillars which we have identified as the foundation for the decisions we make and the actions we take.

1. Exceptional Customer Experience – we continue to invest in our superior service, advanced user-based product and service design and monitor our performance with daily measurement
2. Leading Technology – we invest in and leverage our network advantage to support emerging technology shifts and add value to our core services in order to ensure alignment of our technology platforms with our technology roadmap
3. Customer Profitability – we focus on disciplined pricing strategies, high value customers and retention to drive improved customer outcomes and profit realization
4. Operational Efficiency – we manage our operating expenses and capital investments in order to drive best-in-class benchmarks for cost structure

Focus to Deliver

With the adoption in 2014 of a program we call "Focus to Deliver" we transformed the way we organize, plan and execute our business to achieve our corporate and operational strategy. The program is designed to enhance our efficiency and growth potential by ensuring business decisions are made in accordance with disciplined customer-centric criteria. As a result, all aspects of our operations, including resource allocation, are prioritized for their impact on our valued customers and viewers.



Adopting Focus to Deliver has driven significant changes at Shaw. In 2014 we:

- realigned our cable and satellite operations to our current Consumer and Business Network Services divisions to improve overall efficiency and enhance our ability to grow as the leading network and content experience company
- combined our Information Technology ("IT") and Engineering teams to form a single Technology and Network Operations team – this new powerful technology team ensures we deliver with greater efficiency and effectiveness in adapting leading technology to better future proof our network and product offering, all in service of continuing to provide our customers and viewers with leading technology
- restructured to better align our organization to best serve our corporate strategy, with investments in procurement, supply chain, marketing, pricing, network architecture and next generation products and, as a result, we eliminated approximately 400 management and non-customer facing roles

and in 2015 we:

- announced a realignment of customer care operations to centralize the Consumer division's knowledge, expertise, training, management and other processes around seven Canadian centres of expertise
- reorganized our Media operations in order to accelerate our evolution from a traditional broadcaster to a multi-platform media business that includes both long and short-form video, branded content, instructional videos, behind-the-scenes content, web content and social media

People

Focus to Deliver has also driven our ongoing progress to better align compensation of our teams with both corporate performance relative to our strategic and operational objectives and individual performance. We are enabling this performance by enhancing training and development for our teams and leadership effectiveness programs for our current and future leaders. Inspiring and engaging our employees to align with our strategy is the cornerstone of our success. We are grateful to have approximately 14,000 employees who are committed to delivering an exceptional network and content experience for our customers, viewers and the communities we serve.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2015

Global Technology Leaders

In order to efficiently secure and deliver leading technology for our customers – both for today and tomorrow – we recognize that we must join global scale initiatives. This ensures that the technology we adopt and invest in is, and continues to be, a standard for the communications industry globally. This approach serves all of our strategic pillars.

This new approach allows us to leverage our current assets where we have strength and expertise, while also ensuring our capital investments are aligned with industry leaders to support the development, maintenance and advancement of new technology where it is impractical for us to do so on a standalone basis. This ensures that there is sufficient capital, resources and commitment to continue advances in innovation, performance and reliability of our services and products. In addition, this strategic approach to our business gives us the opportunity to better manage costs by participating in purchasing opportunities on a global scale.

We are pleased to have collaborated this year with global leaders on two significant service offerings:

- our planned rollout of the TV Everywhere X1 video platform developed by Comcast (see discussion under "Consumer")
- our "Smart" suite of business services that includes SmartWiFi in collaboration with Cisco's Meraki and SmartVoice with Broadsoft (see discussion under "Business Network Services")

Operating income before restructuring costs and amortization(2)	**1,686**	**71%**	1,669	74%

(1) Before intersegment eliminations.
(2) Refer to Key performance drivers.

Canadians trust Shaw to connect them to excellent network and content experiences. Our Consumer division was formed in 2014 by bringing together all of our operations that serve residential customers. These customers are served on two platforms.

- Network-Connected – we provide broadband Internet, Shaw Go WiFi, video and phone to customers that are connected to our local and regional hybrid fibre-coax network
- Satellite – we provide video by satellite to customers across Canada

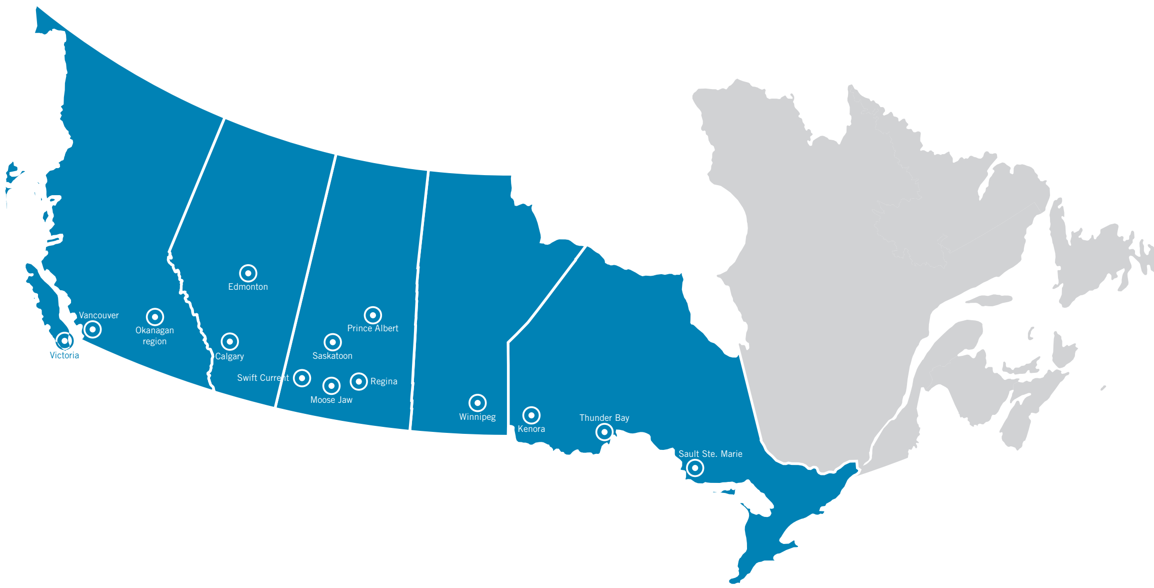
Network-Connected Services

As one of the largest providers of residential communications in Canada, Consumer connects families in British Columbia, Alberta, Saskatchewan, Manitoba and Northern Ontario on our hybrid fibre–coax network with broadband Internet, Shaw Go WiFi, video and home phone services to meet their needs at home and on the go.

As our customer needs evolve, we continue to be more flexible with our service offerings. Our customer-centric strategy is designed to deliver high-quality customer service, simplicity, value and choice for our customers.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2015

Network-Connected Service Areas



Internet

Every day, the Internet influences the way we live and connect with local and global communities. Homes have more connected devices with each device using ever greater bandwidth. Our advanced hybrid fibre-coax network offers our residential customers reliable broadband Internet service at levels matched to the data speed, usage and budget that they choose.

In addition, our customers want to be able to experience their Shaw Internet service in the home and on the go. Nearly all current portable consumer communication devices are WiFi enabled. That is why, with Shaw Go WiFi, we have extended the reach and value for our customers of our hybrid fibre-coax network beyond the home and into the communities where we work and play. WiFi is a valued addition for our customer experience that enables our customers to have access to carrier-grade WiFi on the go and as an alternative to mobile service.

To date, we have over two million devices authenticated to Shaw Go WiFi and almost 75,000 access points with coverage in many high traffic public spaces. We are committed to continuing to make Shaw Go WiFi a meaningful extension of the Shaw network for our consumers on the go. See "Shaw's Network" for more information on Shaw Go WiFi.

We are executing on our plan to ensure that our network keeps pace with the expectations for bandwidth, speed and reliability that our customers expect today and will expect in the future. See "Shaw's Network" for a description of our network and some of the advances that we are undertaking.

Video

Our network-connected video services continue to offer a wide selection of television channels (including over 120 high definition ("HD") channels) and over 10,000 on-demand, pay-per-view and subscription movie and television programming titles.

Customers can now choose from a selection of primary channel packages and may add from a variety of sports, family and other theme specialty packages and a number of individual channels that we offer on a channel-by-channel basis. In March 2016 we will expand choice with a new small basic service and smaller theme packages and by December 2016 consumers will have the choice to subscribe for the new small basic service and add, on a channel-by-channel basis, any of the channels that we offer.

Our network-connected customers access our television offerings through an interactive, on-screen program guide which includes access to on-demand movies and television programming and pay-per-view content, including scheduled sporting, concerts and other special events. With an enabled video terminal, customers can record and store programs for later viewing and pause and rewind live and recorded programs.

X1 for Network-Connected Consumers

We recognize that, in order to ensure that we can deliver best in class customer experiences, we need to join with global scale initiatives and work with recognized industry leaders. In June 2015 we announced that we have partnered with Comcast to make its market-leading cloud-based X1 video platform available to our customers. The X1 platform offers a seamless viewing experience across multiple screens and devices both in and out of the home.

As a result of our collaboration with Comcast and Cisco, as integrator, we have aligned on the X1 technology roadmap and will be the first in Canada to capitalize on this cloud technology.

We are in the late stages of our successful technical trial of this cloud-based platform and we are progressing on our plan to roll out this new technology through 2016.

In October 2015 we began deployment of the whole home video terminal used by Comcast in place of our current gateway and HD PVR terminals. This terminal operates on our current video platform and is future compatible for the rollout of the X1 in-home experience for network-connected customers.

Phone

Shaw's phone service offers a full-featured residential digital telephone service available in our network-connected homes as a complement to our broadband Internet and video services.

Satellite

Through Shaw Direct, our Consumer team connects families across Canada with video and audio programming by satellite. Shaw Direct customers have access to over 550 digital video channels (including over 220 HD channels) and over 10,000 on-demand, pay-per-view and subscription movie and television programming titles.

Similar to our network-connected video service, satellite subscribers can now choose from a selection of primary channel packages and may add from a variety of sports, family and other theme specialty packages and a number of individual channels that we offer on a channel-by-channel basis. In March 2016 we will expand choice with a new small basic service and smaller theme packages and by December 2016 consumers will have the choice to subscribe for the new small basic service and add, on a channel-by-channel basis, any of channels that we offer.

Shaw Direct is one of two satellite video services that are currently available across Canada. While Shaw Direct has many subscribers in urban centres, market penetration for satellite video is stronger in areas having no or limited (generally fewer than 80 channels) cable television coverage. The service is marketed through Shaw Direct and a nation-wide distribution network of third party retailers.

Shaw's commitment to leading technology for Shaw Direct is evidenced on several fronts. With the 2013 launch of Anik G1, Shaw Direct added a third satellite to its platform. This third satellite increased Shaw Direct's capacity by approximately 30%, enabling us to enhance our offerings, improve service quality and provide in-orbit back-up capacity. In addition, Shaw Direct continues to transition to advanced modulation and encoding technology, including MPEG-4, for its programming which allows us to increase channel capacity.

Shaw Direct Satellite Transponders

Satellite	Transponders	Nature of Interest
Anik G1	16 xKu-band	Leased
Anik F2	16Ku-band	Owned
	6 Ku-band	Leased
	2 Ku-band (partial)	Leased
Anik F1R	28 Ku-band	Leased
	1 C-band	Leased
Intelsat Galaxy 16	1 Ku-band (partial)	Leased

Video – over-the-top at home and on the go

In addition to television viewing, we know that our customers want to experience our video programming online and on mobile devices at home and on the go. That is why we have expanded our over-the-top offering so that our network-connected and satellite customers can stream live television and a selection of on-demand programming directly to a mobile device through a selection of entertainment, children and sports focused applications, including those within our Media division.

Seasonality

While financial results for Consumer are generally not subject to significant seasonal fluctuations, subscriber activity may fluctuate from one quarter to another. Subscriber activity may also be affected by competition and Shaw's promotional activity. Further, satellite subscriber activity is modestly higher around the summer time when more subscribers have second homes in use. Shaw's network-connected and satellite Consumer business does not depend on any single customer or concentration of customers.

Business Network Services

	2015		2014	
(millions of Canadian dollars)	$	share of consolidated	$	share of consolidated
Revenue	**520**	**9%[1]**	484	9%[1]
Operating income before restructuring costs and amortization[2]	**256**	**11%**	240	11%

(1) Before intersegment eliminations.
(2) Refer to Key performance drivers.

Our Business Network Services division was formed in 2014 by bringing together all of our operations that serve business and public sector customers – whether connected by our network and/or our satellite services. This reorganization allowed us to better focus on the needs of our business customers and offer a more integrated and consistent customer experience.

Shaw Business

Shaw Business connects customers of all sizes to our network or by satellite with a range of communications services – from home offices and regional businesses to large scale enterprises. While we provide business grade network access to smaller clients on our local and regional hybrid fibre-coax network, our larger enterprise customers are generally connected by fibre to the premise. This is particularly true in Calgary where, with our 2013 acquisition of ENMAX Envision Inc., we significantly increased our fibre footprint and profile in the competitive Calgary marketplace.

The range of services offered by Shaw Business includes:

- Fibre Internet – scalable, symmetrical fibre Internet solutions from 10 Mbps to more than 10Gbps
- Data Connectivity – secure private connectivity for multiple locations

- Voice Solutions – from services that connect customer premise equipment to the phone network and single voice line solutions to robust fully managed hosted unified communications functionality
- Broadcast Video – high-quality video streaming across North America in real time

Business customers are looking for a communications partner that takes care of their communication infrastructure – a partner that will relieve them of the chore and complexity of managing communications so that they can focus on growing their businesses. That is why we collaborated with global scale technology leaders to launch our "Smart" suite of easy to use and flexible managed business communications solutions:

- SmartVoice is a unified communications solution that integrates instant messaging, presence, email, video conferencing and a mobile application – it is built on Broadsoft's BroadWorks platform
- SmartWiFi is a fully-managed internet solution designed to offer seamless secure wireless connectivity for employees and guests in the office and on the go with Shaw Go WiFi – it is deployed over Cisco's Meraki platform

In order to continue to meet our customer needs in the future, we are executing our plan to ensure that our network keeps pace with the expectations for bandwidth, speed and reliability that our customers expect today and will expect in the future. See "Shaw's Network" for a description of our network and the advances that we are undertaking.

Shaw Business is also leading the rollout to customers in western Canada of hybrid IT services available from our recently opened Calgary1 data centre. These services complement the current Shaw Business offering and leverage ViaWest's 16 years of experience as a hybrid IT solutions provider. See discussion under "Business Infrastructure Services."

Wholesale Network Services

Using our national and regional fibre network, we provide services to internet service providers ("ISPs"), other communications companies, broadcasters, governments and other businesses and organizations that require end-to-end Internet and data connectivity in Canada and the United States. We also engage in public and private peering arrangements with high speed connections to major North American, European and Asian networks and other tier-one backbone carriers.

Broadcast Services

Shaw Broadcast Services uses our substantial fibre backbone network to manage one of North America's largest full-service commercial signal distribution networks, delivering more television and radio signals by satellite to cable operators and other multi-channel system operators in Canada and the U.S. than any other single-source satellite supplier. This business is referred to as a "satellite relay distribution undertaking" or "SRDU". Shaw Broadcast Services currently provides SRDU and advanced signal transport services to approximately 350 distribution undertakings and redistributes approximately 500 television signals and over 100 audio signals in both English and French to multi-channel system operators.

Tracking

Shaw Tracking provides asset tracking and communication services primarily in Canada to approximately 600 customers in the transportation industry that have an aggregate of approximately 45,000 vehicles. By satellite, cellular, WiFi and Bluetooth, Shaw Tracking provides immediate real-time visibility to a customer's fleet and freight. Specifically, Shaw Tracking's services integrate with a carrier's fleet management system and capture location, performance, productivity and other measures pertaining to a customer's assets.

Business Infrastructure Services

	2015(1)	
(millions of Canadian dollars)	$	share of consolidated
Revenue	246	4%(2)
Operating income before restructuring costs and amortization(3)	95	4%

(1) Fiscal 2014 numbers are not applicable prior to acquisition in September 2014.
(2) Before intersegment eliminations.
(3) Refer to Key performance drivers.

Our Business Infrastructure Services business unit was formed with the acquisition of Denver, Colorado based ViaWest in September 2014 for US$1.2 billion. We acquired ViaWest as a growth platform in the attractive North American data centre sector and to support the expansion of our business offerings in western Canada.

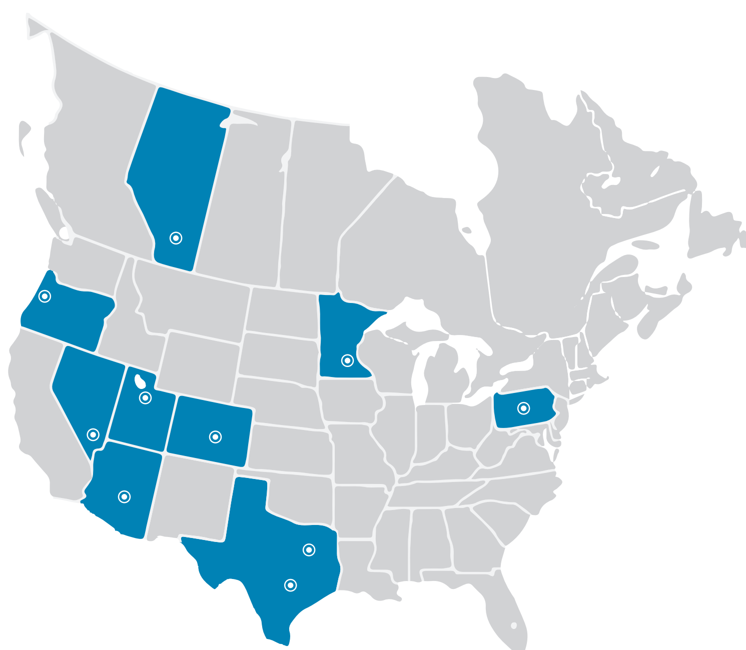
ViaWest is a leading hybrid IT solutions provider, including colocation, managed services, cloud computing, and security and compliance services. It enables businesses to leverage both their existing IT infrastructure and emerging cloud resources to deliver the right balance of cost, scalability and security.

ViaWest has grown from five data centres in two markets in 2004 to 28 data centres (with over 680,000 square feet of usable raised floor space) in eight key western U.S. markets, including Denver, Dallas, Austin, Salt Lake City, Las Vegas, Minneapolis, Phoenix and our recently opened facility in Portland.

ViaWest has the capacity to support further U.S. growth with 75% utilization in its current facilities and substantial expansion capacity at its Denver, Las Vegas, Minneapolis and Portland properties.

Business Infrastructure Services continues to execute on its plans for continued growth. In the fall of 2015 we expanded operations into Canada with the opening of the new Calgary data centre under our Canadian brand "Shaw Data Centre & Cloud Solutions, Powered by ViaWest", where customers will benefit from ViaWest's leading expertise and 16-year track record. ViaWest will also extend its reach into the eastern U.S. with the acquisition of INetU and its facility in Pennsylvania that was announced in November 2015.

Business Infrastructure Services - Cities where Facilities are Located



We also offer expanded security offerings through our recent acquisition of AppliedTrust to offer leading security, compliance, development operations ("DevOps") and infrastructure consulting services that address pressing security and compliance needs of our customers.

Over 1,600 businesses trust their infrastructure and mission critical data to our Business Infrastructure Services team because of the dedicated personnel who provide local, personalized, flexible and tailored solutions to meet the unique business needs of our customers. With our team-based account management approach and 100% uptime commitment, we offer tailored solutions designed for maximum reliability and flexibility.

Media

(millions of Canadian dollars)	2015 $	2015 share of consolidated	2014 $	2014 share of consolidated

Our Media team provides Canadians with engaging programming content through one of Canada's largest conventional television networks, Global Television, 19 specialty networks and digital properties.

Shaw acquired its Media operations from Canwest Global Communications Corp. through a series of transactions that concluded in October 2010.

Media derives revenues from two principal sources: advertising revenue and revenue from consumers subscribing to our specialty channels. For both, it is critical that we offer Canadians entertaining content that engages them. Our content is available to Canadians through a variety of dynamic channels, whether conventional or specialty television, online websites or over-the-top platforms. Catering to consumer demand for quality and choice, we strive to offer the best content available to Canadians when and where they choose to consume it.

Conventional Television

Global Television, reaches virtually all English-speaking Canadians through 12 over-the-air conventional television stations. Global Television offers a programming mix of entertainment and news programs aimed primarily at viewers aged 18 to 49. Global Television's line-up includes hit programs such as Bones, The Blacklist, the NCIS franchise, Hawaii Five-O, SuperGirl, Limitless, Rookie Blue, Elementary, The Late Show with Stephen Colbert and three reality series, Survivor, Big Brother and Big Brother Canada.

News

The Global News team produces the news and current affairs content for Global Television. Global News has successful local news programs in every major market, including the only major daily supper hour national news show originating from Vancouver, and is the dominant local news organization in western Canada. Global National, the network's early-evening newscast garners almost a million viewers every weekday.

GlobalNews.ca is Global's online platform that enables Canadians to access Global News coverage wherever and whenever they want, through the web, mobile devices, email alerts, RSS feeds and social media. It features user friendly technology, which automatically scales content to fit any screen size or resolution to create a seamless experience on all browsers and platforms, including tablets and smart phones. New native content advertising opportunities have been incorporated into the site giving advertisers exciting new ways to engage with the Global News audience.

Specialty Channels

Shaw Media operates 19 of Canada's most popular specialty channels, including HGTV Canada, Food Network Canada, Showcase, HISTORY, Slice and National Geographic.

All of our specialty channels are wholly-owned by Shaw with the exception of channels for which we have partnered with global leaders: Food Network Canada, HGTV Canada, DIY Canada (each of the foregoing with Scripps Networks), National Geographic Canada, National Geographic Canada Wild and BBC Canada. Our equity interests in these channels ranges between 50% and 71%, with voting control of 80% or more.

Over-the-top

To meet the changing needs of our conventional and specialty viewing audiences, Media rolled out Global Go and HISTORY Go apps in 2014. These apps allow viewers to watch live TV, full episodes of select shows, clips and video exclusives on popular mobile devices, including WiFi enabled devices.

In November 2014, in partnership with Rogers Communications we launched shomi on a test basis to Shaw and Rogers customers. In August 2015, the service was made available to all Canadians. With a current library of approximately 1,200 films and 15,000 individual episodes in categories curated by experts, shomi offers its subscribers some of the best entertainment available – whenever and wherever they want. shomi may be accessed over-the-top through the service's website and the shomi app and on television through the on-demand libraries of participating television providers.

Advertising

Our Media team is exploring a number of next generation advertising solutions that combine the intelligence of data with the power of television to maintain and grow our advertising business.

We are part of an industry working group that is looking at the development of a common video terminal based measurement system. We are also exploring new ways for advertisers to focus on optimal advertising placement on our programming by identifying generic audience profiles and aggregate lifestyle demographics that can be used to identify relevant "audiences". This allows advertisers to make decisions based on identified demographics to purchase "audiences" rather than shows and time slots. All data collection, analysis and use is designed for compliance with applicable privacy protection laws.

The Media team is also continuing to create opportunities for branded content and product integrations within our shows and brands. As one of the leading lifestyle content providers in Canada, we have a strong slate of context-relevant, original productions into which advertisers can integrate their products. This type of integration yields positive results for the advertisers, generating a positive impact on brand perception, likelihood to purchase and consumer trust in the product.

Through these next generation advertising solutions Shaw is working to ensure that our advertising opportunities evolve with the expectations of our advertising clients to position our Media team as the most innovative media partner for advertisers in our space.

We are also building revenues from our increasingly popular digital platforms along with further syndication opportunities around our strong content.

Through these initiatives and advances in the way we create content, produce and deliver news and develop business, we have moved Media beyond the traditional broadcast model to become a driven media company.

Seasonality

The Media financial results are subject to fluctuations throughout the year due to, among other things, seasonal advertising and viewing patterns. In general, advertising revenues are higher during the fall, the first quarter, and lower during the summer months, the fourth quarter, whereas expenses are incurred more evenly throughout the year. The specialty services depend on a small number of broadcast distribution undertakings ("BDUs") for distribution of their services.

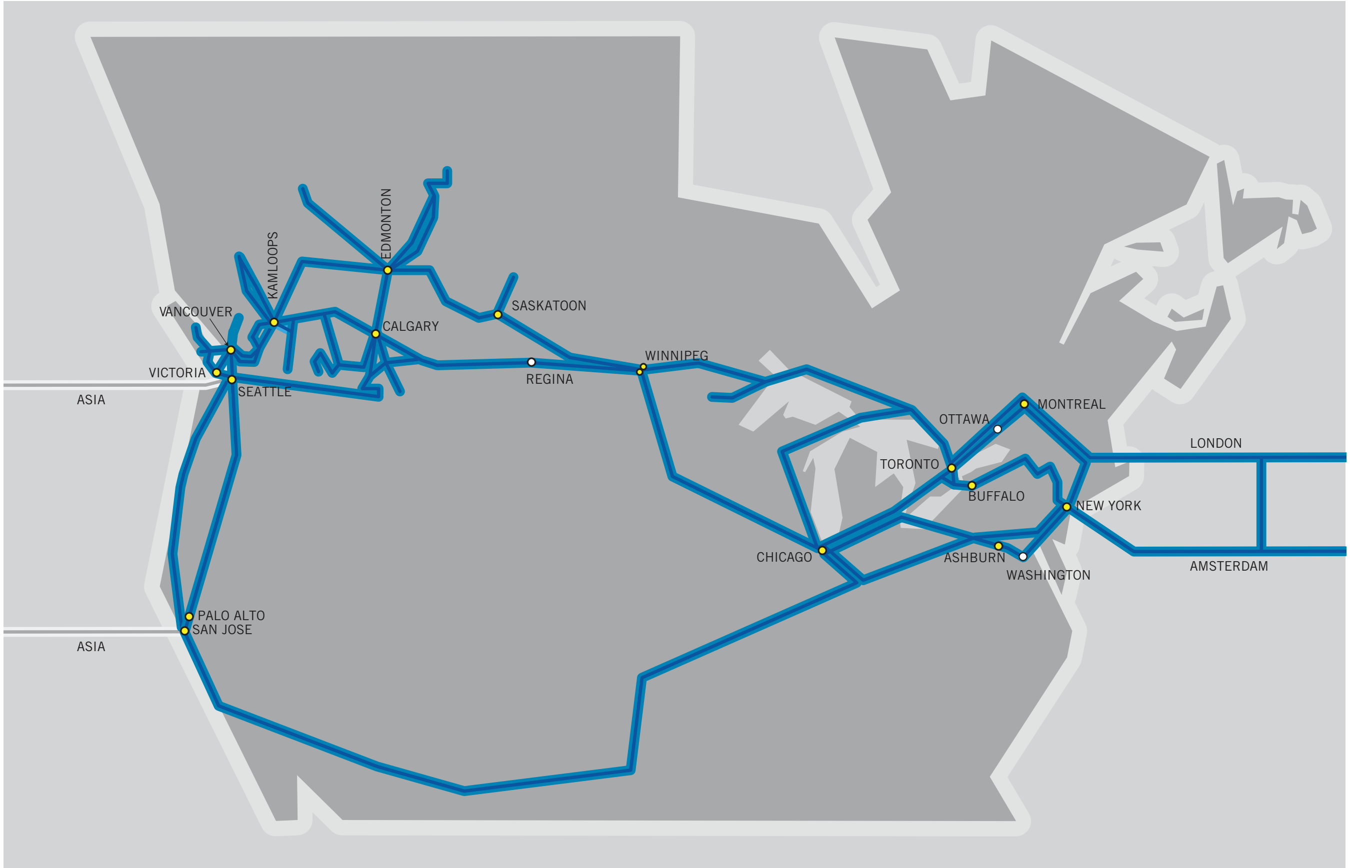
Shaw's Network

At Shaw we are proud of our advanced hybrid fibre-coax network that is comprised of:

- North American fibre backbone
- regional fibre optic and co-axial distribution networks
- local Shaw Go Wifi connectivity

Backbone

The backbone of Shaw's network includes multiple fibre capacity on two diverse cross-North America routes. The southern route principally consists of approximately 6,400 route kilometres of fibre located on routes between Seattle and New York City (via Vancouver, Calgary, Winnipeg, Toronto Buffalo, and Chicago). The northern route consists of approximately 4,000 route kilometres of fibre between Edmonton and Toronto (via Saskatoon, Winnipeg and Thunder Bay). These routes, along with a number of secured capacity routes, provide redundancy for the network. Shaw also uses a marine route consisting of approximately 330 route kilometres from Seattle to Vancouver (via Victoria), and has secured additional capacity on routes between a number of cities, including Vancouver and Calgary, Vancouver and San Jose, Toronto and New York City, Seattle and Vancouver and Edmonton and Toronto.



Regional Distribution Network

We connect our backbone network to residential and business customers through our extensive regional fibre optic and co-axial cable distribution networks.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2015

In 2013 we substantially completed a major upgrade of our co-axial access network to remove analog tier television services. This upgrade liberated bandwidth to significantly increase the capacity of our hybrid fibre-coax network and enabled the expansion of our broadband Internet and other offerings. Digital video terminals were deployed into customer homes that allowed them to receive digital television services in place of former analog services. We referred to this reclamation initiative as the Digital Network Upgrade ("DNU").

In 2014 and 2015, we removed the remaining analog basic services in the Vancouver area, our largest market, in an initiative referred to as "DNU II". As a result, customers in this region only receive digital video services. A similar process to remove remaining analog basic services in our other major markets will begin in 2016.

Shaw continues to optimize the capacity and efficiency of our network and reduce congestion by deploying fibre optic cable deeper into our access networks and closer to our customers. We are also increasing the number of optical serving areas or "nodes" in the network. This is a continual process that we apply year-over-year to increase fibre optic usage in our network and reduce the distance signals travel over coaxial cable to each consumer.

In addition to the initiatives above, our network roadmap in 2016 includes the roll out of the latest version of the Data over Cable Service Interface Specification or "DOCSIS 3.1" which will provide significant added capacity in our hybrid fibre-coax network and lay the groundwork for further speed increases for our broadband customers. DOCSIS 3.1 represents the latest development in a set of technologies that increase the capability of a hybrid fibrecoax network to transmit data both to and from customer premises.

With the various DNU initiatives, the deployment of fibre closer to our customers, by continuing to increase the number of nodes in our hybrid fibre-coax network and by implementing DOCSIS 3.1 technologies we will continue to significantly improve the performance and capacity of our network for years to come.

Shaw Go WiFi

In 2011 we began deploying WiFi access points to create Canada's most extensive managed carrier-grade WiFi network, Shaw Go WiFi, as a wireless extension of our access network into the community. Shaw Go WiFi extends a customer's broadband experience beyond the home as a valuable extension of our customer network experience as an alternative to relying on mobile service.

We continue to expand our Shaw Go WiFi build-out. To date, we have over 73,000 Shaw Go WiFi access points installed and operating throughout the network and over two million unique active devices using Shaw Go WiFi. In addition, we have entered into agreements with 90 municipalities to extend Shaw Go WiFi service into public areas within those cities.

Shaw GoWiFi

Community Investment

Shaw has a proud and lengthy track record of supporting causes and charities that focus on the health and strength of Canadian communities. For decades, we have been recognized as a philanthropic leader in our communities, providing support to hundreds of small and large organizations.

In fiscal 2015, Shaw contributed approximately $60 million in cash and in-kind support to charitable and community organizations working to make our neighbourhoods and cities better. We also took steps in 2015 to focus our governance, discipline and awareness of our community contributions, reflecting the increased value our stakeholders place on community investment activities when making decisions about doing business with organizations.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2015

Notably, we implemented a strategy in 2015 to focus the majority of our community investment activities on organizations that support the needs of children, youth and millennials. Specifically, investments and causes that positively affect this demographic's health and wellbeing, education and their access to technology and the Internet. This approach has resonated well with customers, employees, and government and community stakeholders, generating positive feedback from local and federal government officials, a significant increase in applications for charitable funding, and significantly higher media coverage of our initiatives. At the end of 2015, 80% of Shaw's community investments supported organizations focused on needs of children and youth.

In 2015, Shaw also brought greater public and stakeholder awareness of our community investment activities under the umbrella of the Shaw Kids Investment Program, known as "SKIP". SKIP is a public platform used to describe our partnerships that benefit kids and youth-focused charities, and is an important vehicle by which we drive brand reputation.

Shaw's partnerships with local and national charities are also used to complement local and regional marketing and sponsorship activities. Combining community investments with traditional business activities speaks to our overall brand values of being a caring and customer centric organization. The most prominent example of this combination is Shaw's partnership with local Calgary business leaders and the PGA TOUR in staging the Shaw Charity Classic, a premier tournament on the Champions Tour that benefits 89 Alberta charities and has generated more than $8 million in charitable contributions in its three-year history. The event has become a fixture on the Calgary tourism calendar, and has been recognized as one of the top tournaments on the Champions Tour. Importantly, the event also strengthens Shaw's business and community relationships.

Additional Information Concerning the Business

Environmental Matters
Shaw's operations are subject to environmental regulations, including those related to electronic waste, printed paper and packaging. A number of provinces have enacted regulations providing for the diversion of certain types of electronic and other waste through product stewardship programs ("PSP"). Under a PSP, companies who supply designated products in or into a province are required to participate in or develop an approved program for the collection and recycling of designated materials and, in some cases, pay a per-item fee. Such regulations have not had, and are not expected to have, a material effect on the Company's earnings or competitive position.

Foreign Operations
In September 2014, the Company acquired ViaWest, a U.S.-based provider of hybrid IT solutions with 28 data centres in the U.S. ViaWest comprises substantially all of the assets and operations of the Business Infrastructure Services division.

Shaw Business U.S. Inc., a wholly-owned subsidiary of the Company, has entered into an indefeasible right of use ("IRU") with respect to a portion of a United States fibre network and owns certain other fibre and facilities in the United States. Shaw Business U.S. Inc. commenced revenue-generating operations in the United States in 2002. Its revenues for the year ended August 31, 2015 were not material.

Government Regulations and Regulatory Developments

Substantially all of the Company's Canadian business activities are subject to regulations and policies established under various legislation (*Broadcasting Act* (Canada) ("Broadcasting Act"), *Telecommunications Act* (Canada) ("Telecommunications Act"), *Radiocommunication Act* (Canada) ("Radiocommunication Act") and *Copyright Act* (Canada) ("Copyright Act")). Broadcasting and telecommunications are generally administered by the Canadian Radio-television and Telecommunications Commission ("CRTC") under the supervision of the Department of Canadian Heritage ("Canadian Heritage") and the Department of Industry ("Industry Canada").

Pursuant to the Broadcasting Act, the CRTC is mandated to supervise and regulate all aspects of the broadcasting system in a flexible manner. The Broadcasting Act requires BDUs to give priority to the carriage of Canadian services and to provide efficient delivery of programming services. The Broadcasting Act also sets out requirements for television broadcasters with respect to Canadian content. Shaw's businesses are dependent upon licenses (or operate pursuant to an exemption order) granted and issued by the CRTC and Industry Canada.

Under the Telecommunications Act, the CRTC is responsible for ensuring that Canadians in all regions of Canada have access to reliable and affordable telecommunication services of high-quality. The CRTC has the authority to forbear from regulating certain services or classes of services provided by a carrier if the CRTC finds that there is sufficient competition for that service to protect the interests of users. All of Shaw's telecommunication retail services have been forborne from regulation and are not subject to price regulation. However, regulations do impact certain terms and conditions under which these services are provided.

The technical operating aspects of the Company's businesses are also regulated by technical requirements and performance standards established by Industry Canada, primarily under the Telecommunications Act and the Radiocommunication Act.

Pursuant to the Copyright Act, the Copyright Board of Canada oversees the collective administration of copyright royalties in Canada, including the review and approval of copyright tariff royalties payable to copyright collectives by BDUs, television broadcasters and online content services.

The sections below include a more detailed discussion of various regulatory matters and recent developments specific to Shaw's businesses.

Licensing and ownership

For each of its cable, direct to home satellite ("DTH") and SRDU undertakings, the Company holds a separate broadcasting license or is exempt from licensing. In November 2010, the majority of cable undertakings owned and operated by the Company were renewed by the CRTC for a five-year period ending August 31, 2015. On February 16, 2015, the CRTC issued an administrative renewal of the licenses for Shaw's undertakings serving British Columbia, Alberta, Saskatchewan, Manitoba and Ontario for a period of one year, to August 31, 2016. The licenses of the Company's DTH and SRDU undertakings were renewed in 2013 by the CRTC for a seven year period ending August 31, 2019. Shaw has never failed to obtain a license renewal for its cable, DTH or SRDU undertakings.

The Company also holds a separate license for each of its conventional over the air ("OTA") television stations and each specialty service. These CRTC broadcasting licenses must be renewed from time to time and cannot be transferred without regulatory approval. The majority of the Company's licenses for its OTA television stations and specialty services are current to August 31, 2016 and are expected to be administratively renewed to August 31, 2017. Under these licenses, the Company is subject to an expenditure-based regulatory regime, whereby the Company must expend a certain percentage of its prior year revenues from its conventional OTA and specialty services on Canadian content, and also on specific categories of Canadian programs defined as "programs of national interest". These obligations are imposed on an individual license basis, but with certain restrictions, may be shared among various conventional OTA and specialty licenses.

The potential for new or increased fees through regulation

In July 2012, the CRTC determined to phase out completely, as of September 2014, the Local Programming Improvement Fund to support local television stations operating in non-metropolitan markets with contributions from licensed BDUs.

CRTC Regulations require licensed cable BDUs to obtain the consent of an OTA broadcaster to deliver its signal in a distant market. The Regulations provide that DTH undertakings may distribute a local over-the-air television signal without consent within the province of origin, but must obtain permission to deliver the over-the-air television signal beyond the province of origin unless the DTH distribution undertaking is required to carry the signal on its basic service. Broadcasters may assert a right to limit distribution of distant signals or to seek remuneration for the distribution of their signals in distant markets on the basis of these Regulations.

The Copyright Board is considering a proposed tariff for the retransmission of programming in distant television stations for the years 2014 through 2018. The tariff proposed by the retransmission rights collectives would, if approved, represent a significant increase in the per subscriber rates payable for the retransmission of programming in distant signals. The Company has objected to the tariff on behalf of its cable and DTH satellite divisions and is participating in the current hearing.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2015

Let's Talk TV regulatory framework

In October 2013, the CRTC initiated a "conversation with Canadians about the future of television", commonly referred to as "Let's Talk TV", which led to a major review of the regulatory and policy framework for the Canadian television broadcasting system and a series of policy decisions in 2015. The new policy framework will require licensed BDUs to offer a $25 entry-level service offering (basic service) by March 2016. BDUs will be allowed to offer a larger "first-tier offering". By March 2016, all discretionary services (not offered on the basic service) must be offered either on a standalone basis or in packages of up to ten programming services. On or after December 1, 2016, these services must be offered both on a standalone basis and in packages of up to ten programming services. These changes will significantly impact BDUs' customer management systems and may create market uncertainty for both BDUs and programming services. Additional uncertainty may result from the elimination of genre protection and changes to access rules. The CRTC has made new regulations, which will come into force on December 1, 2015, governing simultaneous substitution. These new regulations may result in rebates (BDU errors) or loss of privileges (broadcaster errors). The CRTC has also introduced new codes governing the relationship between BDUs and their customers, the "Television Service Provider Code of Conduct", and the relationship between distributors and programmers, the "Wholesale Code". The CRTC has, as well, prohibited 30-day cancellation policies for voice, Internet and broadcasting distribution services. A proceeding on local and community television may result in changes to the policies and funding regimes governing community channels and local television stations.

Access rights

For its network Shaw requires access to support structures, such as poles, strand and conduits of telecommunication carriers and electric utilities, in order to deploy cable facilities. Under the Telecommunications Act the CRTC has jurisdiction over support structures of telecommunication carriers, including rates for third party use. The CRTC's jurisdiction does not extend to electrical utility support structures, which are regulated by provincial utility authorities. For its network Shaw also requires access to construct facilities in roadways and other public places. Under the Telecommunications Act, Shaw may do so with the consent of the municipality.

New media and Internet

The CRTC has issued a digital media exemption order requiring that Internet-based and mobile point-to-point broadcasting services not offer television programming on an exclusive or preferential basis in a manner that depends on subscription to a specific mobile or retail Internet service and not confer an undue preference or disadvantage.

The CRTC has decided to not impose a levy on the revenue of exempt digital media undertakings to support Canadian new media content and instead issued an exemption order for VOD services offered both by licensed BDUs and direct to consumer over the Internet, such as shomi. These services benefit from virtually the same flexibility as services operating under the digital media exemption order (including the ability to offer exclusive programming) and are subject to similar restrictions on offering a service on an exclusive or preferential basis or conferring an undue preference or disadvantage.

Third Party Internet Access

Shaw is mandated by the CRTC to allow independent ISPs to provide Internet services at premises served by Shaw's network ("Third Party Internet Access" or "TPIA"). In 2014-2015, the CRTC completed a review of the wholesale wireline telecommunications policy framework, including TPIA, and extended mandated wholesale access services to include fibre-to-the-premise facilities, which will coincide with a shift to a new disaggregated wholesale Internet access service to be phased in over the next three years. The new disaggregated model will increase the number of interconnection points within the networks of wholesale providers, such as Shaw. Depending on how the model is implemented, Shaw may need to adjust its network design and configuration.

Within the coming year, the CRTC also plans to review the competitor quality of service indicators and the rate rebate plan for competitors to ensure alignment with the new wholesale services framework. As part of this review, the CRTC may extend quality of service obligations to providers of wholesale Internet services.

CRTC basic services proceeding

In April 2015, the CRTC initiated a comprehensive review of basic telecommunications services to determine what services (e.g. telephone and broadband) are required by all Canadians to fully participate in the digital economy, whether there should be changes to the subsidy regime and national contribution mechanism to fund expansion or adoption of broadband services in

Canada, and what the respective roles of the private sector, the CRTC and government should be in providing telecommunications services. Currently, the national contribution fund overseen by the CRTC provides subsidies for local phone services in high cost serving areas and video relay service. Canadian telecommunications service providers, including Shaw, are required to contribute to the fund.

Other legislation

Canada's anti-spam legislation (together with the related regulations "CASL") sets out a comprehensive regulatory regime regarding online commerce, including requirements to obtain consent prior to sending commercial electronic messages and installing computer programs. CASL is administered primarily by the CRTC, and non-compliance may result in fines of up to $10 million. To ensure compliance with CASL, Shaw reviewed and updated its current practices with respect to marketing and other communications with customers and its practices regarding computer program installations.

On March 10, 2015, Bill C-13, *An Act to amend the Criminal Code, the Canada Evidence Act, the Competition Act and the Mutual Legal Assistance in Criminal Matters Act* ("Bill C-13") came into force. Bill C-13 expands the lawful access powers of the Government and introduces new requirements for telecommunications providers to preserve and produce subscriber information. Almost all of the newly proposed measures under Bill C-13 are subject to judicial oversight and do not require the provision of information without a warrant or discharge of a burden of proof.

On June 18, 2015, Bill S-4, *An Act to amend the Personal Information Protection and Electronic Documents Act and to make a consequential amendment to another Act"* ("Bill S-4") received Royal Assent. Bill S-4 will introduce a mandatory record-keeping and notification system applicable with respect to breaches of privacy respecting the personal information held by Shaw, and penalties for failure to comply with these new requirements. In addition, Bill S-4 modifies the standard for obtaining consent for the collection, use and retention of personal information, creating a higher burden for organizations.

Digital transition and repurposing of spectrum

In July 2009, the CRTC identified the major markets where it expected conventional television broadcasters to convert their full-power OTA analog transmitters to digital transmitters by August 31, 2011. The conversion from analog to digital freed up spectrum for government auction to mobile providers. The Company completed the digital transition in all mandatory markets as of August 31, 2011. Since then, the Company has been converting transmitters in non-mandatory markets with a view to completion in 2016, a condition of the CRTC's approval of the Canwest Global acquisition. On December 18, 2014, Industry Canada launched a consultation to consider repurposing some of the 600 MHz spectrum band currently used by our Media division and other broadcasters for OTA transmission. At the same time, Industry Canada introduced a moratorium on applications to modify existing television broadcasting certificates and on any new licensing in the spectrum band pending the consultations and related processes. Shaw has, accordingly, requested from the CRTC an extension of the time line to complete the full slate of analog to digital conversions.

On August 14, 2015, Industry Canada confirmed its intent to proceed with repurposing some of the 600 MHz spectrum band for commercial mobile use and to jointly establish a new allotment plan in collaboration with the United States. Accommodating this change will require our Media division to install new equipment or reconfigure existing equipment at affected sites and may have an impact on signal quality and coverage. Industry Canada has not yet decided whether broadcasters will be reimbursed for their costs of facilitating this transition, stating that this decision is the first step in a multi-year repurposing process and that consideration of compensation to broadcasters was not a part of this phase.

Limits on non-Canadian ownership and control for broadcasting undertakings

Non-Canadians are permitted to own and control, directly or indirectly, up to 33.3% of the voting shares and 33.3% of the votes of a holding company that has a subsidiary operating company licensed under the Broadcasting Act. In addition, up to 20% of the voting shares and 20% of the votes of a licensee may be owned and controlled, directly or indirectly, by non-Canadians. As well, the chief executive officer (CEO) and not less than 80% of the board of directors of the licensee must be resident Canadians. There are no restrictions on the number of non-voting shares that may be held by non-Canadians at either the holding company or licensee level. Neither the holding company nor the licensee may be controlled in fact by non-Canadians, the determination of which is a question of fact within the jurisdiction of the CRTC.

The same restrictions apply to certain Canadian carriers pursuant to the Telecommunications Act, the Radiocommunication Act and associated regulations, except that there is no requirement that the CEO be a resident Canadian. In June 2012, the Telecommunications Act was amended to remove Canadian ownership requirements for wireline and wireless telecommunications carriers with annual revenues from the provision of telecommunications services in Canada that represent less than 10% of the total annual revenues. This may lead to greater levels of competition in the Canadian telecommunications market.

The Company's Articles contain measures to ensure the Company continues to comply with applicable Canadian ownership requirements and its ability to obtain, amend or renew a license to carry on any business. Shaw must file a compliance report annually with the CRTC confirming that it is eligible to operate in Canada as a telecommunications common carrier.

KEY PERFORMANCE DRIVERS

Shaw measures the success of its strategies using a number of key performance drivers which are outlined below, including a discussion as to their relevance, definitions, calculation methods and underlying assumptions.

Financial Measures

Revenue

Revenue is a measurement determined in accordance with International Financial Reporting Standards ("IFRS"). It represents the inflow of cash, receivables or other consideration arising from the sale of products and services. Revenue is net of items such as trade or volume discounts, agency commissions and certain excise and sales taxes. It is the base on which free cash flow, a key performance driver, is determined; therefore, it measures the potential to deliver free cash flow as well as indicating growth in a competitive market place.

The Company's continuous disclosure documents may provide discussion and analysis of non-IFRS financial measures. These financial measures do not have standard definitions prescribed by IFRS and therefore may not be comparable to similar measures disclosed by other companies. The Company's continuous disclosure requirements may also provide discussion and analysis of additional GAAP measures. Additional GAAP measures include line items, headings and sub-totals in financial statements. The Company utilizes these measures in making operating decisions and assessing its performance. Certain investors, analysts and others utilize these measures in assessing the Company's operational and financial performance and as an indicator of its ability to service debt and return cash to shareholders. These non-IFRS measures and additional GAAP measures have not been presented as an alternative to net income or any other measure of performance or liquidity prescribed by IFRS. The following contains a description of the Company's use of non-IFRS financial measures and additional GAAP measures and provides a reconciliation to the nearest IFRS measure or provides a reference to such reconciliation.

Operating income before restructuring costs and amortization

Operating income before restructuring costs and amortization is calculated as revenue less operating, general and administrative expenses. It is intended to indicate the Company's ability to service and/or incur debt, and therefore it is calculated before one-time items like restructuring costs, amortization (a non-cash expense) and interest. Operating income before restructuring costs and amortization is also one of the measures used by the investing community to value the business.

Relative increases period-over-period in operating income before restructuring costs and amortization and in operating margin are indicative of the Company's success in delivering valued products and services, and engaging programming content to its customers in a cost-effective manner.

(millions of Canadian dollars)	Year ended August 31, 2015	2014
Operating income	**1,432**	1,439
Add back (deduct):		
Restructuring costs	**52**	58
Amortization:		
Deferred equipment revenue	**(78)**	(69)
Deferred equipment costs	**164**	142
Property, plant and equipment, intangibles and other	**809**	692
Operating income before restructuring costs and amortization	**2,379**	2,262

Operating margin
Operating margin is calculated by dividing operating income before restructuring costs and amortization by revenue.

Free cash flow
Free cash flow is calculated as operating income before restructuring costs and amortization, less interest, cash taxes paid or payable, capital expenditures (on an accrual basis and net of proceeds on capital dispositions and adjusted to exclude amounts funded through the accelerated capital fund) and equipment costs (net), adjusted to exclude share-based compensation expense, less cash amounts associated with funding the new and assumed CRTC benefit obligations related to the acquisition of Shaw Media as well as excluding non-controlling interest amounts that are consolidated in the operating income before restructuring costs and amortization, capital expenditure and cash tax amounts. Free cash flow also includes changes in receivable related balances with respect to customer equipment financing transactions as a cash item, and is adjusted for recurring cash funding of pension amounts net of pension expense. Dividends paid on the Company's Cumulative Redeemable Rate Reset Preferred Shares are also deducted.

Free cash flow has not been reported on a segmented basis. Certain components of free cash flow including operating income before restructuring costs and amortization, CRTC benefit obligation funding, and non-controlling interest amounts continue to be reported on a segmented basis. Capital expenditures (on an accrual basis net of proceeds on capital dispositions) and equipment costs (net) are reported on a combined basis for Consumer and Business Network Services due to the common infrastructure while Business Infrastructure Services and Media are separately reported. Other items, including interest and cash taxes, are not generally directly attributable to a segment, and are reported on a consolidated basis.

Shaw Communications Inc.

Management's Discussion and Analysis
August 31, 2015

The Company uses free cash flow as a measure of the Company's ability to repay debt and return cash to shareholders. Consolidated free cash flow is calculated as follows:

	Year ended August 31,	
(millions of Canadian dollars)	**2015**	**2014[3]**
Revenue		
Consumer	**3,752**	3,768
Business Network Services	**520**	484
Business Infrastructure Services	**246**	–
Media	**1,080**	1,096
	5,598	5,348
Intersegment eliminations	**(110)**	(107)
	5,488	5,241
Operating income before restructuring costs and amortization[1]

Business Infrastructure Services	**38.6%**	n/a
Media	**31.7%**	32.2%

(1) Refer to Key performance drivers.
(2) Per Note 24 to the audited Consolidated Financial Statements.
(3) Restated to reflect the change in segment reporting whereby residential and enterprise services that were included in the Cable and Satellite segments are now realigned into new Consumer and Business Network Services segments.

Accelerated capital fund

During 2013, the Company established a notional fund, the accelerated capital fund, of up to $500 million with proceeds received, and to be received, from several strategic transactions. The accelerated capital initiatives were funded through this fund and not cash generated from operations. Key investments included the Calgary data centres, further digitization of the network and additional bandwidth upgrades, development of IP delivery of video, expansion of the Shaw Go WiFi network, and additional innovative product offerings related to Shaw Go and other applications to provide an enhanced customer experience. Approximately $110 million was invested in fiscal 2013, $240 million was invested in fiscal 2014 and $150 million invested in fiscal 2015.

Statistical Measures

Subscriber counts (or Revenue Generating Units ("RGUs")), including penetration and bundled customers

The Company measures the count of its customers in its Consumer and Business Network Services divisions. Cable video subscribers include residential customers, multiple dwelling units ("MDUs") and commercial customers. A residential subscriber who receives at a minimum, basic cable service, is counted as one subscriber. In the case of MDUs, such as apartment buildings, each tenant with a minimum of basic cable service is counted as one subscriber, regardless of whether invoiced individually or having services included in his or her rent. Each building site of a commercial customer (e.g., hospitals, hotels or retail franchises) that is receiving at a minimum, basic cable service, is counted as one subscriber. Satellite video subscribers are counted in the same manner as cable video customers except that they also include seasonal customers who have indicated their intention to reconnect within 180 days of disconnection. Internet customers include all modems on billing and Phone lines includes all phone lines on billing. All subscriber counts exclude complimentary accounts but include promotional accounts.

RGUs represent the number of products sold to customers and includes Video (cable and satellite subscribers), Internet customers, and Phone lines. As at August 31, 2015 the Company had approximately 5.9 million RGUs.

Subscriber counts, or RGUs, and penetration statistics measure market share and also indicate the success of bundling and pricing strategies.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

The Company prepared its Consolidated Financial Statements in accordance with IFRS as issued by the International Accounting Standards Board ("IASB"). An understanding of the Company's accounting policies is necessary for a complete analysis of results, financial position, liquidity and trends. Refer to Note 2 to the Consolidated Financial Statements for additional information on accounting policies. The following section discusses key estimates and assumptions that management has made under IFRS and how they affect the amounts reported in the Consolidated Financial Statements and notes. Following is a discussion of the Company's critical accounting policies:

Revenue and expense recognition

Revenue is considered earned as services are performed, provided that at the time of performance, ultimate collection is reasonably assured. Such performance is regarded as having been achieved when reasonable assurance exists regarding the measurement of the consideration that will be derived from rendering the service. Revenue from cable, Internet, Digital Phone and DTH customers includes subscriber service revenue when earned. The revenue is considered earned as the period of service relating to the customer billing elapses.

The Company has multiple deliverable arrangements comprised of upfront fees (subscriber connection fee revenue and/or customer premise equipment revenue) and related subscription revenue. The Company determined that the upfront fees charged to customers do not constitute separate units of accounting; therefore, these revenue streams are assessed as an integrated package.

The Media division's subscriber revenue is recognized monthly based on subscriber levels. Advertising revenues are recognized in the period in which the advertisements are aired or displayed on the Company's digital properties and recorded net of agency commissions as these amounts are paid directly to the agency or advertiser. When a sales arrangement includes multiple advertising spots, the proceeds are allocated to individual advertising spots under the arrangement based on relative fair values.

Subscriber connection fee revenue

Connection fees have no standalone value to the customer separate and independent of the Company providing additional subscription services, therefore the connection fee revenue must be deferred and recognized systematically over the periods that the subscription services are earned. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered its customer churn rate and other factors, such as competition from new entrants, to determine the deferral period of three years.

Subscriber connection and installation costs

The costs of physically connecting a new home are capitalized as part of the Company's distribution system as the service potential of the distribution system is enhanced by the ability to generate future subscriber revenue. Costs of disconnections are expensed as incurred as the activity does not generate future revenue.

Customer premise equipment revenue and costs

Customer premise equipment available for sale, which generally includes DCT and DTH equipment, has no standalone value to the customer separate and independent of the Company providing additional subscription services. Therefore the equipment revenue is deferred and recognized systematically over the periods that the subscription services are earned. As the equipment sales and the related subscription revenue are considered one transaction, recognition of the equipment revenue commences once the subscriber service is activated. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered various factors including customer churn, competition from new entrants, and technology changes to determine the deferral period of three years.

In conjunction with equipment revenue, the Company also incurs incremental direct costs which include equipment and related installation costs. These direct costs cannot be separated from the undelivered subscription service included in the multiple deliverable arrangement. Under IAS 2 "Inventories", these costs represent inventoriable costs and are deferred and amortized over the period of three years, consistent with the recognition of the related equipment revenue. The equipment and installation costs generally exceed the amounts received from customers on the sale of equipment (the equipment is sold to the customer at a subsidized price). The Company defers the entire cost of the equipment, including the subsidy portion, as it has determined that this excess cost will be recovered from future subscription revenues and that the investment by the customer in the equipment creates value through increased retention.

Shaw Tracking equipment revenue and costs

Shaw Tracking equipment revenue is recognized over the period of the related service contract for airtime, which is generally five years.

In conjunction with Shaw Tracking equipment revenue, the Company incurs incremental direct costs including equipment costs. These direct costs cannot be separated from the undelivered tracking service included in the multiple deliverable arrangement. Under IAS 2 "Inventories", these costs represent inventoriable costs and are deferred and amortized over the period of five years, consistent with the recognition of the related tracking equipment revenue.

Shaw Business installation revenue and expenses

The Company also receives installation revenues in its Shaw Business operation on contracts with commercial customers which are deferred and recognized as revenue on a straight-line basis over the related service contract, generally spanning two to ten years. Direct and incremental costs associated with the service contract, in an amount not exceeding the upfront installation revenue, are deferred and recognized as an operating expense on a straight-line basis over the same period.

Income statement classification

The Company distinguishes amortization of deferred equipment revenue and deferred equipment costs from the revenue and expenses recognized from ongoing service activities on its income statement. Equipment revenue and costs are deferred and recognized over the anticipated term of the related future revenue (i.e., the monthly service revenue) with the period of recognition spanning three to five years. As a result, the amortization of deferred equipment revenue and deferred equipment costs are non-cash items on the income statement, similar to the Company's amortization of deferred IRU revenue, which the Company also segregates from ongoing revenue. Further, within the lifecycle of a customer relationship, the customer generally purchases customer premise equipment at the commencement of the customer relationship, whereas the subscription revenue represents a continuous revenue stream throughout that customer relationship. Therefore, the segregated presentation provides a clearer distinction within the income statement between cash and non-cash activities and between up-front and continuous revenue streams, which assists financial statement readers to predict future cash flows from operations.

Allowance for doubtful accounts

The majority of the Company's revenues are earned from selling on credit to individual subscribers. Because there are some customers who do not pay their debts, selling on credit necessarily involves credit losses. The Company is required to make an estimate of an appropriate allowance for doubtful accounts on its receivables. In determining its estimate, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. The estimated allowance required is a matter of judgement and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foretold, such as future business, personal and economic conditions. Conditions causing deterioration or improvement in the aging of accounts receivable and collections will increase or decrease bad debt expense.

Property, plant and equipment and other intangibles – capitalization of direct labour and overhead

The cost of property, plant and equipment and other intangibles includes direct construction or development costs (such as materials and labour) and overhead costs directly attributable to the construction or development activity. The Company capitalizes direct labour and direct overhead incurred to construct new assets, upgrade existing assets and connect new subscribers. These costs are capitalized as they are directly attributable to the acquisition, construction, development or betterment of the networks or other intangibles. Repairs and maintenance expenditures are charged to operating expenses as incurred.

Direct labour and overhead costs are capitalized in three principal areas:

1. Corporate departments such as Technology and Network Operations ("TNO"): TNO is involved in overall planning and development of the cable/Internet/Digital Phone infrastructure. Labour and overhead costs directly related to these activities are capitalized as the activities directly relate to the planning and design of the construction of the distribution system. In addition, TNO devote considerable efforts towards the development of systems to support Digital Phone, WiFi, and projects related to new customer management, billing and operating support systems. Labour costs directly related to these and other projects are capitalized.
2. Cable regional construction departments, which are principally involved in constructing, rebuilding and upgrading the cable/Internet/Digital Phone infrastructure: Labour and overhead costs directly related to the construction activity are capitalized as the activities directly relate to the construction or upgrade of the distribution system. Capital projects include, but are not limited to, projects such as the new subdivision builds, increasing network capacity for Internet, Digital Phone and VOD by reducing the number of homes fed from each node, and upgrades of plant capacity, including the DNU project, and the WiFi build.
3. Subscriber-related activities such as installation of new drops and Internet and Digital Phone services: The labour and overhead directly related to the installation of new services are capitalized as the activity involves the installation of capital assets (i.e., wiring, software, etc.) which enhance the service potential of the distribution system through the ability to earn future revenues. Costs associated with service calls, collections, disconnects and reconnects that do not involve the installation of a capital asset are expensed.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2015

Amounts of direct labour and direct overhead capitalized fluctuate from year to year depending on the level of customer growth and plant upgrades for new services. In addition, the level of capitalization fluctuates depending on the proportion of internal labour versus external contractors used in construction projects.

The percentage of direct labour capitalized in many cases is determined by the nature of employment in a specific department. For example, a significant portion of labour and direct overhead of the cable regional construction departments is capitalized as a result of the nature of the activity performed by those departments. Capitalization is also based on piece rate work performed by unit-based employees which is tracked directly. In some cases, the amount of capitalization depends on the level of maintenance versus capital activity that a department performs. In these cases, an analysis of work activity is applied to determine this percentage split.

Amortization policies and useful lives

The Company amortizes the cost of property, plant and equipment and other intangibles over the estimated useful service lives of the items. These estimates of useful lives involve considerable judgment. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. On an annual basis, the Company reassesses its existing estimates of useful lives to ensure they match the anticipated life of the technology from a revenue-producing perspective. If technological change happens more quickly or in a different way than the Company has anticipated, the Company may have to shorten the estimated life of certain property, plant and equipment or other intangibles which could result in higher amortization expense in future periods or an impairment charge to write down the value of property, plant and equipment or other intangibles.

Intangibles

The excess of the cost of acquiring cable and satellite and media businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist primarily of amounts allocated to broadcast rights and licenses which represent identifiable assets with indefinite useful lives.

Broadcast rights and licenses in the cable and satellite businesses are comprised of broadcast authorities including licenses and exemptions from licensing that allow access to homes and subscribers in a specific area that are identified on a business combination with respect to the acquisition of shares or assets of a BDU.

Broadcast licenses in the media business are licenses to operate conventional and specialty services that are identified on a business combination with respect to the acquisition of shares or assets of a broadcasting undertaking.

The Company has concluded that the broadcast rights and licenses have indefinite useful lives since there are no legal, regulatory, contractual, economic or other factors that would prevent the Company's license renewals or limit the period over which these assets will contribute to the Company's cash flows. Goodwill and broadcast rights and licenses are not amortized but are assessed for impairment on an annual basis in accordance with IAS 36 "Impairment".

Program rights represent licensed rights acquired to broadcast television programs on the Company's conventional and specialty television channels and program advances are in respect of payments for programming prior to the window license start date. For licensed rights, the Company records a liability for program rights and corresponding asset when the license period has commenced and all of the following conditions have been met: (i) the cost of the program is known or reasonably determinable, (ii) the program material has been accepted by the Company in accordance with the license agreement and (iii) the material is available to the Company for telecast. Program rights are expensed on a systematic basis generally over the estimated exhibition period as the programs are aired and are included in operating, general and administrative expenses.

Other intangibles include software that is not an integral part of the related hardware, customer relationships as well as a trademark and brands. Software is amortized on a straight-line basis over their estimated useful lives ranging from three to ten years. Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over the estimated useful life of 15 years.

Asset impairment

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at March 1) and when events or changes in circumstances indicate that the carrying value may be impaired. The recoverable amount of each cash-generating unit

("CGU") is determined based on the higher of the CGU's fair value less costs to sell and its value in use. A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are Cable, Satellite, Media and Data Centres. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods. The results of the impairment tests are provided in Note 10 to the Consolidated Financial Statements.

Employee benefit plans

As at August 31, 2015, Shaw had non-registered defined benefit pension plans for key senior executives and designated executives and various registered defined benefit plans for certain unionized and non-unionized employees. The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The differences between actual and assumed results are immediately recognized in other comprehensive income/loss. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected will be needed to settle employee benefit obligations and is also used to calculate the interest income on plan assets. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes are required. The following table illustrates the increase on the accrued benefit obligation and pension expense of a 1% decrease in the discount rate:

(millions of Canadian dollars)	Accrued Benefit Obligation at End of Fiscal 2015	Pension Expense Fiscal 2015
Weighted Average Discount Rate – Non-registered Plans	4.10%	4.00%
Weighted Average Discount Rate – Registered Plans	4.10%	4.09%
Impact of: 1% decrease – Non-registered Plans	$ 84	$ 4
Impact of: 1% decrease – Registered Plans	$ 31	$ 3

Deferred income taxes

The Company has recognized deferred income tax assets and liabilities for the future income tax consequences attributable to differences between the financial statement carrying amounts of assets and liabilities and their respective tax bases. Deferred tax assets are also recognized in respect of losses of certain of the Company's subsidiaries. The deferred income tax assets and liabilities are measured using enacted or substantially enacted tax rates expected to apply to taxable income in the years in which the temporary differences are expected to reverse or the tax losses are expected to be utilized. Realization of deferred income tax assets is dependent upon generating sufficient taxable income during the period in which the temporary differences are deductible. The Company has evaluated the likelihood of realization of deferred income tax assets based on forecasts of taxable income of future years, existing tax laws and tax planning strategies. Significant changes in assumptions with respect to internal forecasts or the inability to implement tax planning strategies could result in future impairment of these assets.

Commitments and contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Contractual and other commercial obligations primarily relate to network fees, equipment and service purchases, program rights and operating lease agreements for use of transmission facilities, including maintenance of satellite transponders and lease of premises in the normal course of business. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities.

RELATED PARTY TRANSACTIONS

Related party transactions are reviewed by Shaw's Corporate Governance and Nominating Committee, comprised of independent directors. The following sets forth certain transactions in which the Company is involved.

Corus

The Company and Corus are subject to common voting control. During the year, network, advertising and programming fees were paid to various Corus subsidiaries. The Company provided uplink of television signals, programming content, Internet services and lease of circuits to various Corus subsidiaries. In addition, the Company provided Corus with television advertising spots in return for radio and television advertising.

During 2014, the Company closed the sale of its 50% interest in two French-language channels, Historia and Series+, to Corus.

Burrard Landing Lot 2 Holdings Partnership

The Company has a 33.33% interest in the Partnership. During the current year, the Company paid the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, BC, is the Company's headquarters for its lower mainland operations.

Key management personnel and board of directors

Key management personnel consist of the most senior executive team and along with the Board of Directors have the authority and responsibility for directing and controlling the activities of the Company. In addition to compensation provided to key management personnel and the Board of Directors for services rendered, the Company transacts with companies related to certain Board members primarily for the purchase of remote control units, network programming and installation of equipment.

NEW ACCOUNTING STANDARDS

Shaw has adopted or will adopt a number of new accounting policies as a result of recent changes in IFRS as issued by the IASB. The ensuing discussion provides additional information as to the date that Shaw is or was required to adopt the new standards, the methods of adoption permitted by the standards, the method chosen by Shaw, and the effect on the financial statements as a result of adopting the new policies. The adoption or future adoption of these accounting policies has not and is not expected to result in changes to the Company's current business practices.

Adoption of recent accounting pronouncement

The adoption of the following standard effective September 1, 2014 had no impact on the Company's consolidated financial statements.

- IFRIC 21 *Levies,* provides guidance on when to recognize a financial liability imposed by a government, if the levy is accounted for in accordance with IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*, or where the timing and amount of the levy is certain.

Standards, interpretations and amendments to standards issued but not yet effective

The Company has not yet adopted certain standards, interpretations and amendments that have been issued but are not yet effective. The following pronouncements are being assessed to determine their impact on the Company's results and financial position.

- *Clarification of Acceptable Methods of Depreciation and Amortization* (Amendments to IAS 16 *Property, Plant and Equipment* and IAS 38 *Intangible Assets)* prohibits revenue from being used as a basis to depreciate property, plant and equipment and significantly limits use of revenue-based amortization for intangible assets. The amendments are to be applied prospectively for the annual period commencing September 1, 2016.
- IFRS 15 *Revenue from Contracts with Customers*, was issued in May 2014 and replaces IAS 11 *Construction Contracts*, IAS 18 *Revenue*, IFRIC 13 *Customer Loyalty Programs*, IFRIC 15 *Agreements for the Construction of Real Estate*, IFRIC 18 *Transfers of Assets from Customers* and SIC-31 *Revenue—Barter Transactions Involving Advertising Services*. The new standard requires revenue to be recognized to depict the transfer of promised goods or services to customers in an amount that reflects the consideration expected to be received in exchange for those goods or services. The principles are

to be applied in the following five steps: (1) identify the contract(s) with a customer, (2) identify the performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the performance obligations in the contract, and (5) recognize revenue when (or as) the entity satisfies a performance obligation. The new standard is to be applied either retrospectively or on a modified retrospective basis and is effective for the annual period commencing September 1, 2018.

- IFRS 9 *Financial Instruments: Classification and Measurement*, replaces IAS 39 *Financial Instruments* and applies a principal-based approach to the classification and measurement of financial assets and financial liabilities, including an expected credit loss model for calculating impairment, and includes new requirements for hedge accounting. The standard is required to be applied retrospectively for the annual period commencing September 1, 2018.

KNOWN EVENTS, TRENDS, RISKS AND UNCERTAINTIES

The discussion in this MD&A addresses only what management has determined to be the most significant known events, trends, risks and uncertainties relevant to the Company, its operations and/or its financial results. This discussion is not exhaustive. The discussion of these matters should be considered in conjunction with the "Caution Concerning Forward-Looking Statements".

Competition and technological change

Shaw operates in an open and competitive marketplace. Our businesses face competition from regulated and unregulated entities using existing or new communications technologies and from illegal services. In addition, the rapid deployment of new technologies, services and products has reduced the traditional lines between telecommunications, Internet and broadcasting services and further expands the competitive landscape. Shaw may face competition in the future from other technologies being developed or yet to be developed. While Shaw continually seeks to strengthen its competitive position through investments in infrastructure, technology, programming and customer service, and through acquisitions, there can be no assurance that these investments will be sufficient to maintain Shaw's market share or performance in the future.

The following competitive events, trends, risks and/or uncertainties specific to areas of our business may have a material adverse effect on Shaw, its operations and/or its financial results. In each case, the competitive events, trends, risks and/or uncertainties may increase or continue to increase.

Consumer video

Shaw's Consumer video services, delivered through both our network-connected and satellite platforms, compete with other distributors of video and audio signals, including telephone companies offering video services, other satellite-based video services, other competitive cable television undertakings and OTA local and regional broadcast television signals. We also compete increasingly with unregulated over-the-top video services and offerings available over Internet connections. Continued improvements in the quality of streaming video over the Internet and the increasing availability of television shows and movies online has increased and will continue to increase competition to Shaw's Consumer video services. Our satellite services also compete with illegal satellite services including grey and black market offerings.

We expect that competition, including aggressive discounting practices by competitors to gain market share, will continue to increase.

Consumer Internet

High-speed Internet access services are principally provided through cable modem and digital subscriber line technology, and increasingly through fibre to the home. Shaw competes with a number of different types of ISPs offering residential Internet access including independent service providers, traditional telephone companies, wireless providers and resellers making use of TPIA to provide Internet access in various markets.

Shaw expects that consumer demand for higher Internet access speeds and greater bandwidth will continue to be driven by bandwidth-intensive applications including streaming video, digital downloading and interactive gaming. As described further under "Shaw's Network", Shaw continues to expand the capacity and efficiency of its network to handle the anticipated increases in consumer demand for higher Internet access speeds and greater bandwidth, however there can be no assurance that our investments in network capacity will continue to meet this increasing demand.

Consumer phone

Shaw's competitors for Consumer phone services include traditional telephone companies, competitive local exchange carriers, non-facilities-based Voice over Internet Protocol ("VoIP") providers and wireless providers. Several of such competitors have larger operational and financial resources than Shaw and are well established with residential customers in their respective markets. In addition, there is a continuing trend toward households opting to rely on wireless voice services in place of landline services such as ours. These developments may negatively affect the business and prospects of our Consumer phone services.

Business Network Services

Shaw Business competes with other telecommunications carriers in providing high-speed data and video transport and Internet connectivity services to businesses, ISPs and other telecommunications providers. The telecommunications services industry in Canada is highly competitive, rapidly evolving and subject to constant change. Competitors of Shaw Business include traditional telephone companies, competitive access providers, competitive local exchange carriers, ISPs, private networks built by large end users and other telecommunications companies. In addition, the development and implementation of new technologies by others could give rise to significant additional competition.

Shaw Broadcast Services faces competition principally from one other operating SRDU in Canada. In February 2010, an additional company was licensed by the CRTC to provide both satellite video and SRDU services in Canada, but has not yet commenced service. Shaw Broadcast Services also faces competition from the expansion of fibre distribution systems delivering distant U.S. and Canadian conventional television signals into territories previously served only by SRDU operators.

Business Infrastructure Services

Shaw's hybrid IT services business operates in a highly competitive market that includes telecommunications companies, carriers, ISPs, managed services providers, large real estate investment trusts and other data centre operators, many of which are well-established in the areas where they operate. Ongoing consolidation within the industry has created, and is expected to continue to create, large organizations having larger operational and financial resources than Shaw.

Media

The conventional and specialty television business and the advertising markets in which they operate are highly competitive. Numerous broadcast and specialty television networks, as well as online advertising platforms and websites, compete for subscribers and advertising revenues. Shaw's ability to compete successfully depends on a number of factors, including its ability to secure popular television and other programming rights for all platforms, including traditional linear broadcast rights and non-linear rights, in order to achieve high distribution levels and attract advertising. Shaw's ability to continue to attract advertising customers also depends on its ability to meet the evolving expectations of its advertising customers.

Impact of regulation

As more fully discussed under "Government Regulations and Regulatory Developments", a majority of our Canadian business activities are subject to regulations and policies administered by Industry Canada and/or the CRTC. Shaw's operations and financial results are affected by changes in regulations, policies and decisions, including changes in interpretation of existing regulations by courts, the government or the regulators, in particular the CRTC, Industry Canada, the Competition Bureau and the Copyright Board. This regulation relates to, and may have an impact on, among other things, licensing, competition, programming carriage and terms of carriage, strategic transactions and the potential for new or increased fees. Changes in the regulatory regime may have a material adverse effect on Shaw, its operations and/or its financial results.

Economic conditions

The Canadian and U.S. economies are affected by uncertainty in global financial and equity markets and slowdowns in global economic growth. Changes in economic conditions may affect discretionary consumer and business spending, resulting in increased or decreased demand for Shaw's product offerings. Current or future events caused by volatility in domestic or international economic conditions or a decline in economic growth may have a material adverse effect on Shaw, its operations and/or its financial results.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2015

Interest rates, foreign exchange rates and capital markets
Shaw has the following financial risks in its day-to-day operations:

(a) Interest rates: Due to the capital-intensive nature of Shaw's operations, the Company uses long-term financing extensively in its capital structure. The primary components of this structure include:

1. banking facilities as more fully described in Note 13 to the Consolidated Financial Statements, and

2. various Canadian denominated senior notes and debentures with varying maturities issued in the public markets as more fully described in Note 13 to the Consolidated Financial Statements.

Interest on bank indebtedness is based on floating rates while the senior notes are primarily fixed-rate obligations. If required, Shaw uses its credit facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. Increases in interest rates may have a material adverse effect on Shaw, its operations and/or its financial results.

As at August 31, 2015, 78% of Shaw's consolidated long-term debt was fixed with respect to interest rates.

(b) Foreign exchange: A portion of Shaw's debt, capital expenditures, revenues and operating expenses are denominated in U.S. dollars – both for ViaWest and other operations of Shaw. In addition, Shaw's net investment in ViaWest is exposed to foreign exchange risk related to fluctuations in exchange rates between the Canadian and U.S. dollar. This risk is mitigated by certain U.S. dollar denominated debt which is designated as a hedge of the net investment. Fluctuations in the value of the Canadian dollar relative to the U.S. dollar may have a material adverse effect on Shaw, its operations and/or its financial results.

(c) Capital markets: Shaw requires ongoing access to capital markets to support our operations. Changes in capital market conditions, including significant changes in market interest rates or lending practices, or changes in Shaw's credit ratings, may adversely affect our ability to raise or refinance short-term or long-term debt and therefore may have a material adverse effect on Shaw, its operations and/or its financial results.

Shaw manages its exposure to floating interest rates by maintaining a balance of fixed and floating rate debt. Shaw may enter into forward contracts in respect of U.S. dollar capital expenditure commitments to manage its exposure to foreign exchange uncertainty. In order to minimize the risk of counterparty default under its swap agreements, Shaw assesses the creditworthiness of its swap counterparties. Further information concerning the policy and use of derivative financial instruments is contained in Notes 2 and 28 to the Consolidated Financial Statements.

Litigation
Shaw and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business. Although management does not expect that the outcome of these matters will have a material adverse effect on the Company, there can be no assurance that these matters, or other legal matters that arise in the future, will not have a material adverse effect on Shaw, its operations and/or its financial results.

Satellite failure
Shaw relies on three satellites (Anik F2, Anik F1R and Anik G1) owned by Telesat Canada ("Telesat") to provide satellite services in our Consumer and Business Network Services divisions. The Company owns certain transponders on Anik F2 and has long-term capacity service agreements in place in respect of transponders on Anik F1R, Anik F2 and Anik G1. The Company's interests in these transponders are only insurable indirectly through the satellite owner. For transponders on Anik F1R and Anik F2, the Company does not maintain any indirect insurance coverage as it believes the costs are uneconomic relative to the benefit which could otherwise be derived through an arrangement with Telesat. In the case of Anik G1, Telesat is committed to maintaining insurance on the satellite for five years from its April 2013 launch. As collateral for the transponder capacity pre-payments that were made by the Company to facilitate the construction of the satellite, the Company maintains a security interest in the transponder capacity and any related insurance proceeds that Telesat recovers in connection with an insured loss event.

The Company does not maintain business interruption insurance covering damage or loss to one or more of the satellites as it believes the premium costs are uneconomic relative to the risk of satellite failure. Transponder capacity is available to the

Company on an unprotected, non-preemptible basis, in both the case of the Anik F2 transponders that are owned by Shaw and the Anik F1R, Anik F2 and Anik G1 transponders that are secured through capacity service agreements. The Company has priority access to spare transponders on Anik F1R, Anik F2 and Anik G1 in the case of interruption, subject to availability. In the event of satellite failure, service will only be restored as capacity becomes available. Restoration of satellite service on another satellite may require repositioning or re-pointing of customers' receiving dishes, an upgrade of their video terminal or customers may require a larger dish. The Anik G1 satellite has a switch feature that allows whole channel services (transponders and available spares) to be switched from extended Ku-band to Ku-band, which provides the Company with limited back-up to restore failed whole channel services of Anik F1R. Satellite failure could negatively affect levels of customer service and customer relationships and may have a material adverse effect on Shaw, its operations and/or its financial results.

Network failure

Shaw's business may be interrupted by network failures, including those caused by fire damage, natural disaster, power loss, hacking, computer viruses, disabling devices, acts of war or terrorism and other events. Shaw protects its network through a number of measures including physical and information technology security, ongoing maintenance and placement of insurance on our network equipment and data centres. The Company self-insures the plant in the hybrid fibre-coax network as it believes the premium costs are uneconomic relative to the risk of failure. The risk of loss is mitigated as most of the hybrid fibre-coax network is located underground. In addition, it is likely that network damage caused by any one incident would be limited by geographic area and therefore resulting business interruption and financial damages would be limited. Further, the Company has back-up disaster recovery plans in the event of network failure and redundant capacity for certain portions of the network. In the past, the Company has successfully recovered from network damage caused by natural disasters without significant cost or disruption of service. Although Shaw has taken and continues to take steps to reduce the risk of network failure, network failures may occur, and such failures could negatively affect levels of customer service and customer relationships and may have a material adverse effect on Shaw, its operations and/or its financial results.

Information systems and internal business processes

Many aspects of the Company's business depend to a large extent on various IT systems and software, and on internal business processes. Shaw regularly undertakes initiatives to update and improve these systems and processes. Although the Company has taken steps to reduce the risks of failure of these systems and processes, there can be no assurance that potential failures of, or deficiencies in, these systems, processes or change initiatives will not have an adverse effect on Shaw, its operations and/or its financial results.

Reliance on suppliers

Shaw is connected to or relies on other telecommunication carriers and certain utilities to conduct our business. Any disruption to the services provided by these suppliers, including labour strikes and other work disruptions, bankruptcies, technical difficulties or other events affecting the business operations of these carriers or utilities may affect Shaw's ability to operate and, therefore have a material adverse effect on Shaw, its operations and/or its financial results.

The Company sources its customer premise and capital equipment, capital builds as well as portions of its service offerings from certain key suppliers. While the Company has alternate sources for many of these purchases, the loss of a key supplier may adversely affect the Company's ability to operate, and therefore have a material adverse effect on Shaw, its operations and/or its financial results.

Programming expenses

Expenses for Consumer and Business Network Services video programming continue to be one of our most significant single expense items. Costs continue to increase, particularly for sports programming. In addition, as we add programming or distribute existing programming to more of our subscriber base, programming expenses increase. Although we have been successful at reducing the impact of these cost increases through sale of additional services or increasing subscriber rates, there can be no assurance that we will continue to be able to do so and may have a material adverse effect on Shaw, its operations and/or its financial results.

Programming costs are also one of the most significant expenses in our Media division. Increased competition in the television broadcasting industry and with online video providers for content, developments affecting producers and distributors of programming content, changes in viewer preferences and other developments could impact both the availability and cost of programming content. Although we have processes to effectively manage these costs, programming content may be purchased for broadcasting one to two years in advance, making it more difficult to predict how such content will perform, and if content fails to perform as expected there may be a material adverse effect on Shaw, its operations and/or its financial results.

Unionized labour

Approximately 50% of our Media division employees are employed under one of five collective agreements represented by three unions. If labour disruptions occur, it is possible large numbers of employees may be involved and that our Media business may be disrupted. Shaw is currently preparing to negotiate one collective agreement and the remaining four agreements have been renewed and are in effect for the next one to three years.

Acquisitions and other strategic transactions

Shaw may from time to time make acquisitions to expand its existing businesses or to enter into sectors in which Shaw does not currently operate, dispositions to focus on core offerings or enter into other strategic transactions. Such acquisitions, dispositions and/or strategic transactions may fail to realize the anticipated benefits, result in unexpected costs and/or Shaw may have difficulty incorporating or integrating the acquired business, any of which may have a material adverse effect on Shaw, its operations and/or its financial results.

Holding company structure

Substantially all of Shaw's business activities are operated by our subsidiaries. As a holding company, our ability to meet our financial obligations is dependent primarily upon the receipt of interest and principal payments on intercompany advances, management fees, cash dividends and other payments from our subsidiaries together with proceeds raised by the Company through the issuance of equity and the incurrence of debt, and from proceeds received on the sale of assets. The payment of dividends and the making of loans, advances and other payments to Shaw by its subsidiaries may be subject to statutory or contractual restrictions, are contingent upon the earnings of those subsidiaries and are subject to various business and other considerations.

Control of the Company

Class A Shares are the only shares entitled to vote on all shareholder matters. Voting control of the Company is held by the Shaw Family Living Trust ("SFLT") which holds, for the benefit of descendants of JR and Carol Shaw, 17,562,400 Class A Shares, being approximately 78% of the issued and outstanding shares of such class. The sole trustee of SFLT is a private company owned by JR Shaw and having a board comprised of seven directors, including JR Shaw as chair and five other members of his family. Accordingly, JR Shaw, through SFLT and its trustee, is able to elect a majority of the Board of Directors of the Company and to control any vote by the holders of Class A Shares.

Dividend payments

Shaw currently pays monthly common share dividends in amounts approved on a quarterly basis by the Board of Directors. At the current approved dividend amount, the Company would pay approximately $565 million in common share dividends during fiscal 2016 (before taking into account the Company's dividend reinvestment plan ("DRIP"), as further described in "Financial Position"). While the Company expects to generate sufficient free cash flow in fiscal 2016 to fund these dividend payments, actual results may differ from expectations and there can be no assurance that the Company will continue common share dividend payments at the current level.

SUMMARY OF QUARTERLY RESULTS

Quarter	Revenue	Operating income before restructuring costs and amortization[1]	Net income attributable to equity shareholders	Net income[2]	Basic earnings per share	Diluted earnings per share

(1) Refer to Key performance drivers.
(2) Net income attributable to both equity shareholders and non-controlling interests.

Quarterly revenue and operating income before restructuring costs and amortization are primarily affected by the seasonality of the Media division and fluctuate throughout the year due to a number of factors including seasonal advertising and viewing patterns. Typically, the Media division has higher revenue in the first quarter driven by the fall launch of season premieres and high demand and the third quarter is affected by season finales and mid-season launches. Advertising revenue typically declines in the summer months of the fourth quarter when viewership is generally lower. Effective the first quarter of the current year the results reflect the addition of the new Business Infrastructure Services division upon acquisition of ViaWest on September 2, 2014.

In the fourth quarter of 2015, net income increased by $67 million over the third quarter 2015 due to improved net other revenue items of $190 million and lower restructuring costs of $10 million, partially offset by lower operating income before restructuring costs and amortization of $70 million and higher income tax expense of $57 million. The improvement in net other revenue items was due to the combined effects of the gain on the sale of the wireless spectrum licenses of $158 million and a write-down of $27 million in respect of a private portfolio investment in the fourth quarter and the $59 million net charge arising in the third quarter related to an impairment of goodwill, write-down of IPTV assets and proceeds received on the insurance claim.

In the third quarter of 2015, net income increased $41 million over the second quarter 2015 due to higher operating income before restructuring costs and amortization of $86 million, lower restructuring costs of $26 million and $11 million of proceeds related to the Shaw Court insurance claim, partially offset by a charge for impairment of goodwill of $15 million and write-down of IPTV assets of $55 million as well as the distributions received from a venture capital fund in the second quarter. The impairment of goodwill was in respect of the Tracking operations in the Business Network Services division and was a result of the Company's annual impairment test of goodwill and indefinite-life intangibles in the third quarter. The write-down of IPTV assets was a result of the Company's decision to work with Comcast to begin technical trials of their cloud-based X1 platform.

In the second quarter of 2015 net income decreased $59 million over the first quarter 2015 due to lower operating income before restructuring costs and amortization of $49 million and restructuring expenses of $38 million partially offset by net other revenue items of $29 million due to aforementioned venture capital fund distributions.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2015

In the first quarter of 2015, net income increased $35 million over the fourth quarter 2014 due to higher operating income before restructuring costs and amortization of $81 million, partially offset by increases in amortization of $35 million and net other costs of $17 million. The increase in net other costs was primarily due to an equity loss of $13 million in respect of the Company's 50% interest in shomi, a new subscription video-on-demand service launched in the first quarter.

In the fourth quarter of 2014, net income decreased $36 million primarily due to lower operating income before restructuring costs and amortization of $76 million, partially offset by the effect of the restructuring announced during the previous quarter.

In the third quarter of 2014, net income increased $6 million due to higher operating income before restructuring costs and amortization of $73 million and lower interest and amortization expense totaling $25 million, partially offset by restructuring expenses of $53 million and reduction in net other revenue items of $41 million. The reduction in net other revenue items was primarily due to the gain on sale of media assets of $49 million net of the $8 million of debt retirement costs recorded in the second quarter.

In the second quarter of 2014, net income decreased $23 million due to lower operating income before restructuring costs and amortization of $80 million and increased amortization of $8 million, partially offset by an improvement in net other non-operating items of $36 million due to the aforementioned gain on sale of media assets net of debt retirement costs, and lower income tax expense of $24 million. As a result of the aforementioned changes in net income, basic and diluted earnings per share have trended accordingly.

The following growth (losses) in subscriber statistics are provided to assist in understanding the trend of quarterly revenue and operating income before restructuring costs and amortization for Consumer:

	2015				2014

Highlights

- Net income was $880 million for fiscal 2015 compared to $887 million in 2014.
- Earnings per share were $1.80 in fiscal 2015 compared to $1.84 in 2014.
- Revenue for fiscal 2015 improved 4.7% to $5.49 billion from $5.24 billion last year.
- Operating income before restructuring costs and amortization of $2.38 billion in fiscal 2015 was up 5.2% over last year's amount of $2.26 billion.
- Consolidated free cash flow in fiscal 2015 was $653 million compared to $698 million in 2014.
- During 2015 the Company increased the dividend rate on the Class A Participating Shares and Class B Non-Voting Participating Shares to an equivalent annual per share dividend rate of $1.1825 and $1.185 respectively. Dividends paid in 2015 were $535 million gross of amounts attributed to the dividend reinvestment plan.
- On January 31, 2014 the Company issued $500 million senior unsecured notes at a rate of 4.35% due January 31, 2024 and $300 million floating rate senior unsecured notes due February 1, 2016. The floating rate senior notes bear interest at an annual rate equal to three month CDOR plus 0.69%. The net proceeds from the issuances were used to redeem the $600 million senior unsecured notes due June 2, 2014 and for working capital and general corporate purposes.
- In April 2014 the Company announced changes to the structure of its operating divisions to improve overall efficiency while enhancing its ability to grow as the leading network and content experience company.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2015

Commencing in fiscal 2015, Shaw's residential and enterprise services are reorganized into new Consumer and Business units, respectively, with no changes to the Media division.
  - The Company recorded restructuring costs of $58 million in fiscal 2014 associated with the approximately 400 management and non-customer facing roles which were eliminated by organizational changes in that year.

- In 2015, the Company recorded $52 million in respect of continued restructuring, primarily related to severance and employee related costs, which impacted approximately 1,700 employees.
  - The Company announced a realignment of its customer care operations into centres of expertise in order to improve the end-to-end customer service experience. The realignment affected approximately 1,600 employees.
  - The Company also continued its organizational structure realignment efforts, including further restructuring of certain functions within Business Network Services.
  - The Media division undertook organizational changes as it redefines itself from a traditional broadcaster to the broader focus of a media organization. Approximately 100 roles were eliminated and 45 new roles created.
  - As a result of these restructurings, the Company expects to realize aggregate annual cost savings, net of new hires to support the restructured operations, of approximately $75 million. These efficiencies will phase in through fiscal 2016 and be fully realized in fiscal 2017.
- During fiscal 2015 and 2014, the Company entered into a number of transactions as follows:
  - In late fiscal 2014, the Company announced it had entered into agreements to acquire 100% of the shares of ViaWest for an enterprise value of US$1.2 billion. ViaWest is headquartered in Denver, Colorado and has 27 data centres in 8 key Western U.S. markets providing collocation, cloud and managed services. On September 2, 2014, the Company closed the acquisition which was funded through a combination of cash on hand, assumption of ViaWest debt and a drawdown of US$330 million on the Company's credit facility. The ViaWest acquisition provides the Company with a growth platform in the North American data centre sector and is another step in expanding technology offerings for mid-market enterprises in Western Canada.
  - During the current year, the Company partnered with Rogers to form shomi, a new subscription video-on-demand service having the latest most exclusive shows and selections personalized for viewers. The service was launched in beta in early November 2014 and was made available to all Canadians in August 2015.
  - During 2013, the Company granted Rogers Communications Inc. ("Rogers") an option to acquire its wireless spectrum licenses. The exercise of the option and the sale of the wireless spectrum licenses were subject to various regulatory approvals and therefore, the licenses were not classified as held for sale. During the fiscal 2015, the regulatory reviews concluded at which time Rogers exercised its option and the transfer was completed. The Company had previously received $50 in respect of the purchase price of the option to acquire wireless spectrum licenses and a $200 deposit in respect of the option exercise price. The Company received an additional $100 when the transaction completed and recorded a gain of $158.
  - During 2014, the Company completed sale of its 50% interest in its two French-language channels, Historia and Series+, to Corus.
- During 2013, the Company established a notional fund, the accelerated capital fund, of up to $500 million with proceeds received, and to be received, from the strategic transactions with each of Rogers and Corus. Accelerated capital initiatives are being funded through this fund and not cash generated from operations. Key investments include the Calgary data centres, further digitization of the network and additional bandwidth upgrades, development of IP delivery of video, expansion of the WiFi network, and additional innovative product offerings related to Shaw Go and other applications to provide an enhanced customer experience. Approximately $110 million was invested in fiscal 2013, $240 million in fiscal 2014, and $150 million in fiscal 2015.
- The Company continued to expand on its TV Everywhere content strategy launching Global Go and a number of Shaw Go apps during fiscal 2014, giving subscribers on-the-go access to their favorite programming.
- Shaw also continued to invest in and build awareness of Shaw Go WiFi and as at August 31, 2015 had almost 75,000 access points and 2 million devices authenticated on the network, reflecting the value of the service to customers.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2015

Revenue and operating expenses

Consolidated revenue of $5.49 billion and operating income before restructuring costs and amortization of $2.38 billion for fiscal 2015 improved 4.7% and 5.2%, respectively, over 2014. Revenue growth due to the addition of the new Business Infrastructure Services division and customer growth in the Business Network Services division was partially offset by revenue declines in the Consumer and Media segments. The decline in Consumer revenue was primarily due to higher promotional amounts and video and phone subscriber losses including the one-time effect of the CRTC decision mandating telecommunication providers remove the 30-day cancellation notice requirement, the total of which was partially offset by rate adjustments effective in 2015 and growth in Internet subscribers. The decrease in Media was driven by specialty channel advertising revenue declines reflecting general market softness combined with the effect of the disposition of Historia and Series+ in the prior year. Improvements in operating income before restructuring costs and amortization are primarily attributed to the acquisition of ViaWest and Consumer division rate increases introduced in fiscal 2015 offset partially by increase in programming fees and promotional discounts.

Consolidated revenue of $5.24 billion and operating income before restructuring costs and amortization of $2.26 billion for 2014 both improved 1.9% over 2013. Revenue growth was primarily driven by consumer pricing adjustments and growth in Business which was partially reduced by lower video subscribers, higher programming costs, increased operating costs related to the new Anik G1 satellite which launched in the third quarter of fiscal 2013 and higher employee related amounts. In addition, the 2013 fiscal year benefited from a one-time adjustment to align certain broadcast license fees with the CRTC billing period totaling approximately $14 million.

Amortization

(millions of Canadian dollars)	2015	2014	Change %
Amortization revenue (expense)			
Deferred equipment revenue	**78**	69	13.0
Deferred equipment costs	**(164)**	(142)	15.5
Property, plant and equipment, intangibles and other	**(809)**	(692)	16.9

Amortization of deferred equipment revenue and deferred equipment costs increased over the comparable year primarily due to the impact of the fluctuation in the sales mix of equipment, timing and volume of sales and amortization periods for amounts in respect of customer premise equipment, as well as changes in customer pricing on certain equipment.

Amortization of property, plant and equipment, intangibles and other increased over the comparable year primarily due to the impact of the acquisition of ViaWest on September 2, 2014.

Amortization of financing costs and interest expense

(millions of Canadian dollars)	2015	2014	Change %
Amortization of financing costs – long-term debt	**4**	3	33.3
Interest expense	**283**	266	6.4

Interest expense increased over the comparable year primarily due to the impact of ViaWest's debt and the drawdown of US$330 million on the Company's credit facility to partially finance the acquisition of ViaWest on September 2, 2014 which was partially offset by the combined impact of a lower average cost of borrowing and an increase in capitalized interest.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2015

Other income and expenses

(millions of Canadian dollars)	2015	2014	Increase (decrease) in income
Gain on sale of media assets	**–**	49	(49)
Business acquisition costs	**(6)**	(4)	(2)
Accretion of long-term liabilities and provisions	**(3)**	(6)	3
Debt retirement costs	**–**	(8)	8
Equity loss of a joint venture	**(56)**	–	(56)
Gain on sale of wireless spectrum licenses	**158**	–	158
Impairment of goodwill	**(15)**	–	(15)
Other losses	(49)	(6)	(43)

During 2013, the Company agreed to sell its 50% interest in its two French-language channels, Historia and Series+, to Corus, a related party subject to common voting control. The sale of Historia and Series+ closed on January 1, 2014 and the company recorded proceeds of $141 million and a gain of $49 million.

The Company incurred $6 million of acquisition related costs in fiscal 2015 for professional fees paid to lawyers, consultants and advisors in respect of the acquisition of ViaWest which closed on September 2, 2014. In fiscal 2014, the Company incurred $4 million of acquisition costs related to ViaWest.

The Company records accretion expense in respect of the discounting of certain long-term liabilities and provisions which are accreted to their estimated value over their respective terms. The expense is primarily in respect of CRTC benefit obligations.

On February 18, 2014, the Company redeemed the $600 million 6.50% senior notes due June 2, 2014. In connection with the early redemption, the Company incurred costs of $7 million and wrote-off the remaining finance costs of $1 million.

The Company recorded an equity loss of $56 million in fiscal 2015 related to its interest in shomi, the subscription video-on-demand service launched in early November 2014. The equity loss includes amounts in respect of the development and launch of the business.

During the year, Rogers Communications Inc. exercised its option to acquire the Company's AWS spectrum as announced in January 2013. Previously the Company received $50 million in respect of the purchase price of the option to acquire wireless spectrum licenses and a $200 million deposit in respect of the option exercise price. The Company received an additional $100 million when the transaction completed and recorded a gain of $158 million.

As a result of the Company's annual impairment test of goodwill and indefinite-life intangibles, an impairment charge of $15 million was recorded in fiscal 2015 with respect to the Tracking operations in the Business Network Services division.

Other losses category generally includes realized and unrealized foreign exchange gains and losses on U.S. dollar denominated current assets and liabilities, gains and losses on disposal of property, plant and equipment and minor investments, and the Company's share of the operations of Burrard Landing Lot 2 Holdings Partnership ("Partnership"). In the current year, the category also includes a write-down of $6 million in respect of the property classified as held for sale, distributions of $27 million from a venture capital fund investment, a write-down of $27 million in respect of a private portfolio investment and additional proceeds of $15 million related to the fiscal 2012 Shaw Court insurance claim while the comparative year includes a refund of $5 million from the Canwest CCAA plan implementation fund and proceeds of $6 million in respect of the aforementioned insurance claim. In addition, the current and prior year both include asset write-downs of $55 million and $6 million, respectively. The write-down in the current period relates to assets in respect to development of a certain Internet Protocol Television ("IPTV") platform which the Company has now abandoned.

Income tax expense

The income tax expense was calculated using current statutory income tax rates of 25.7% for 2015 and 26.0% for 2014 and was adjusted for the reconciling items identified in Note 23 to the Consolidated Financial Statements.

Net income

Net income was $880 million in 2015 compared to $887 million in 2014. The year-over-year changes are summarized in the table below.

Net income decreased $7 million from the prior year. The current year included higher amortization and increased interest expense partially offset by higher operating income before restructuring costs and amortization and lower income taxes. Net other costs and revenue in both years was impacted by various items including gains on sales of wireless spectrum licenses and media assets as well as write-downs of various assets while the current year also included an equity loss in a joint venture, an impairment charge for goodwill and distributions received from a venture capital fund investment.

(millions of Canadian dollars)

SEGMENTED OPERATIONS REVIEW

Consumer

Financial highlights

(millions of Canadian dollars)	2015	2014	Change %
Revenue	**3,752**	3,768	(0.4)
Operating income before restructuring costs and amortization(1)	**1,686**	1,669	1.0
Operating margin(1)	**44.9%**	44.3%	0.6pts

(1) Refer to Key performance drivers.

Consumer revenue for the year of $3.75 billion declined 0.4% compared to last year. The effect of price adjustments and growth in Internet was offset by higher promotional costs, reduced On-Demand revenues and lower video and phone subscribers.

Operating income before restructuring costs and amortization of $1.69 billion increased 1.0% over the prior year. The improvement was primarily driven by revenue related growth attributed to rate increases partially offset by lower video and phone subscribers, higher programming fees and promotional discounts.

The current year also includes the effect of implementing the CRTC decision that mandated telecommunication providers could no longer require customers to provide a minimum 30 day cancellation notice. The reduction in revenue and operating income before restructuring costs and amortization for the 7.5 months affecting fiscal 2015 is approximately $13 million and $10 million, respectively.

During the current year, the Company announced the reorganization of its call centre operations around centres of expertise including technical service, sales and billing, loyalty care, technical field support, e-Care, payment solutions and satellite operations. The closure of the Edmonton contact centre and the downsizing of the Kelowna location were completed in the current year with customer care roles realigned through expansions in Victoria, Vancouver, Winnipeg and Mississauga around centres of expertise. The reorganization is expected to be substantially complete in January 2016 when the Calgary call centre operations will close.

The Company completed the second phase of the DNU project in the Vancouver region during fiscal 2015. This second phase converted all remaining video signals to digital and allows the Company to double downstream capacity in the Vancouver market contributing to an enhanced current network and providing for future bandwidth growth. The Company will continue with its DNU project through fiscal 2016 focusing on its other larger markets and enhancement projects.

Business Network Services

Financial highlights

(millions of Canadian dollars)	2015	2014	Change %
Revenue	**520**	484	7.4
Operating income before restructuring costs and amortization(1)	**256**	240	6.7
Operating margin(1)	**49.2%**	49.6%	(0.4)pts

(1) Refer to Key performance drivers.

Revenue of $520 million 7.4% over the prior year primarily due to customer growth in both the small, medium and large enterprise market segments.

Operating income before restructuring costs and amortization of $256 million improved 6.7% over the comparable year due to higher revenue driven by customer growth, partially offset by various expense increases primarily related to employee hires in support of operational growth as well as certain administrative costs.

During the current quarter the Company successfully launched a new phone product, "Smart Voice", which provides a unified communications solution to small businesses that has typically been reserved for large scale enterprise organizations. This service improves productivity by allowing employees to collaborate seamlessly across their desk phones, mobile devices and computers in the office, at a client's business, from home or anywhere in between. In addition the Company also launched "Managed Hotel WiFi" utilizing proven Cisco technology to provide a cloud based WiFi product that is a fully managed solution for the hospitality market.

Business Infrastructure Services

Financial highlights

(millions of Canadian dollars)	2015
Revenue	**246**
Operating income before restructuring costs and amortization(1)	**95**
Operating margin(1)	**38.6%**

(1) Refer to Key performance drivers.

On September 2, 2014, the Company acquired ViaWest, then one of the largest privately held providers of hybrid IT solutions in North America. Through this acquisition Shaw gained significant capabilities, scale and immediate expertise in the growing marketplace for enterprise data services.

Revenue for the year was $246 million while operating income before restructuring costs and amortization was $95 million. For information purposes, on a USD basis and excluding the impact of acquisition related costs, operating income before restructuring costs and amortization grew 10.6% on a full year basis over the comparable period.

ViaWest continues to experience solid demand for its hybrid IT solutions and cloud services and recently announced the launch of cloud recovery service enabling cloud-based backup and replication to further serve the growing IT infrastructure needs of existing and future customers. During the fourth quarter, ViaWest acquired AppliedTrust, which provides managed services with a focus on IT security. The acquisition of AppliedTrust had minimal effect on operating results for the year. Also, the Company opened two new facilities in the fall of 2015: the Hillsboro, Oregon flagship facility with over 50,000 square feet of space and the Calgary, Alberta facility.

Media

Financial highlights

(millions of Canadian dollars)	2015	2014	Change %
Revenue	**1,080**	1,096	(1.5)
Operating income before restructuring costs and amortization[(1)]	**342**	353	(3.1)
Operating margin[(1)]	**31.7%**	32.2%	(0.5)pts

(1) Refer to Key performance drivers.

Revenue and operating income before restructuring costs and amortization for the year were $1.08 billion and $342 million, respectively, compared to $1.10 billion and $353 million for the prior year. The revenue decline was primarily due to reduced advertising revenues on specialty channels and the effect of the disposition in the prior year of Historia and Series+, which was partially offset by increased subscriber and other revenues. Operating income before restructuring costs and amortization declined due to the net revenue decrease and was partially offset by lower employee related, advertising, promotion and various other costs. The prior year benefited by $6 million related to Historia and Series+ and $6 million related to a distant signal retransmission royalty adjustment while fiscal 2015 included $12 million of transactions with shomi.

Global delivered solid programming results throughout 2015 with a number of programs ranking in the top 10 or top 20 nationally and across multiple major markets during the year. The conventional fall programming premiered through the month of September and into October with a solid returning line-up combined with new programming.

Throughout the year, Media's specialty portfolio held solid positions in the channel rankers and closed out the year with 6 of the top 20 channels. The fall programming launched in late fiscal 2015 with a strong stable of returning shows along with new programming.

Global News continues to retain the number one position in the western markets and continued focus on online and mobile audiences have delivered strong growth in both page and video views. In addition, Global National was recognized as Best National Newscast at the Canadian Screen Awards while Globalnew.ca was honoured with the Edward R. Murrow Award for the best news website outside of the U.S. Further, the Media division continues to strengthen its position in efficient delivery of news with the recent consolidation of the production of its national and international segments for the morning news shows and has implemented a streamlined process to deliver local late night and weekend newscasts into all markets.

Consolidated total as per Note 24 to the audited annual consolidated financial statements(1)	**1,122**	1,095	2.5

(1) Fiscal 2015 includes $150 million (2014 – $240 million) related to certain capital investments that were funded from the accelerated capital fund.

Capital investment was $1.12 billion in the current year and included $150 million of investment funded through the accelerated capital fund. Capital investment for the comparable year of $1.10 billion included $240 million of accelerated capital fund investment. The accelerated capital fund initiatives which are now complete, included investment in new internal and external Calgary data centres, increasing network capacity, next generation delivery systems, back office infrastructure upgrades, and expediting the Shaw Go WiFi infrastructure build.

Consumer and business network services

Success-based capital for the year of $284 million was lower by $28 million relative to the prior year. The decline was due to reduced costs related to the deployment of cable video rental units and lower gross customer additions, and reduced satellite video set top box activations for new and existing customers driven by the termination of the Satellite rental program, and lower phone activity, partially offset by higher advanced Internet WiFi modem purchases and increased installations.

Investment in the combined Upgrades and Enhancement and Replacement categories was $388 million compared to $413 million in the prior year. The decrease was mainly due to timing of investment in next generation video delivery systems, combined with lower spend in video, voice and mainline and drop upgrades. These favourable variances were partially offset by increased investments related to bandwidth upgrades and business growth.

Investment in Buildings and other of $176 million for the year was down $82 million compared to the prior year. The decrease relates to lower current year spend on the new internal data centre and Shaw Court refurbishment expenditures partially offset by timing of investment on back office infrastructure upgrades.

New housing development capital investment was up $12 million over the comparable year. The increase was due to timing of spend on mainline expansion and continued activity in new housing starts for single and multifamily developments in western Canada.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2015

Business infrastructure services
Capital investment of $152 million for the year is primarily related to growth related capital investment in core infrastructure and equipment to deploy customer solutions. The amounts include $39 million related to investment in Canada.

ViaWest completed construction of its new facility in Hillsboro, Oregon in fiscal 2015 and completed construction on the new flagship facility in Calgary in the fall of 2015. Each of these facilities will offer a comprehensive suite of infrastructure services, including colocation, cloud and other managed services.

Media
Capital investment for the year was $16 million compared to $18 million in the prior year as work continued on various projects including upgrading production equipment, infrastructure and facility investments.

FINANCIAL POSITION

Total assets were $14.6 billion at August 31, 2015 compared to $13.2 billion at August 31, 2014. Following is a discussion of significant changes in the consolidated statement of financial position since August 31, 2014. The impact of the acquisition of ViaWest includes the ongoing effects of foreign exchange differences arising on translation of those U.S. operations subsequent to acquisition.

Current assets decreased $324 million due to decreases in cash of $239 million, inventories of $59 million and accounts receivable of $25 million. Cash decreased as the cash outlay for investing activities, including the acquisition of ViaWest, exceeded the funds provided by financing and operating activities. Accounts receivable decreased due to lower subscriber and advertising receivables as a result of timing of collections, partially offset by the effect of the acquisition of ViaWest while inventories were lower due to timing of equipment purchases and supply chain efficiencies.

Investments and other assets increased $37 million mainly due to the Company's interest in shomi.

Property, plant and equipment increased $568 million due to the acquisition of ViaWest as well as current year capital investment in excess of amortization. Other long-term assets decreased $24 million due to lower deferred equipment costs. Intangibles and goodwill increased $1.1 billion due to the acquisition of ViaWest, partially offset by the sale of the wireless spectrum licenses.

Current liabilities increased $542 million due to increases in accounts payable and accrued liabilities of $59 million and current portion of long-term debt of $608 million, partially offset by a decline in income taxes payable of $146 million. Accounts payable and accrued liabilities increased due to timing of payment and fluctuations in various payables including capital expenditures as well as the effect of the ViaWest acquisition. The current portion of long-term debt includes the $300 million variable rate senior notes which are due in February 2016, the 6.15% senior notes due in May 2016 and amounts in respect of ViaWest's debt. Income taxes payable decreased due to tax instalment payments, partially offset by the current year provision.

Long-term debt increased $371 million due to ViaWest's debt and borrowings under the Company's credit facility of US$330 million used to partially fund the acquisition of ViaWest, partially offset by the reclassification of the aforementioned senior notes to current liabilities.

Other long-term liabilities decreased $65 million due to contributions to employee benefit plans, partially offset by current year pension expense, and a decrease in CRTC benefit obligations.

Deferred credits decreased $274 million due to completion of the sale of the spectrum licenses as the Company had previously received $50 million in respect of the purchase price of the option to acquire wireless spectrum licenses and a $200 million deposit in respect of the option exercise price during fiscal 2013.

Deferred income tax liabilities, net of deferred income tax assets, increased $42 million due to amounts arising on the acquisition of ViaWest, partially offset by the current year income tax recovery.

Shareholders' equity increased $709 million primarily due to increases in share capital of $318 million and retained earnings of $294 million and a decrease in accumulated other comprehensive loss of $114 million, partially offset by a decrease of $19 million in contributed surplus. Share capital increased due to the issuance of 11,865,236 Class B Non-Voting Shares under the Company's option plan and DRIP. As of November 15, 2015, share capital is as reported at August 31, 2015 with the exception of the issuance of a total of 1,354,808 Class B Non-Voting Shares upon exercise of options under the Company's option plan and the DRIP. Retained earnings increased due to current year earnings of $856 million, partially offset by dividends of $562 million. Accumulated other comprehensive loss decreased due to the net effect of exchange differences arising on the translation of ViaWest and U.S. dollar denominated debt designated as a hedge of the Company's net investment in those foreign operations. Contributed surplus decreased due to the transfer of the fair value of options to share capital upon exercise.

CONSOLIDATED CASH FLOW ANALYSIS

Operating activities

(millions of Canadian dollars)	2015	2014	Change %
Funds flow from operations	**1,637**	1,524	7.4
Net change in non-cash working capital balances related to operations	**(97)**	216	>100.0
	1,540	1,740	(11.5)

Funds flow from operations increased over the last year primarily due to higher operating income before restructuring costs and amortization, a decline in CRTC benefit obligation funding and lower expenditures on program rights and restructuring charges, all of which were partially offset by an increase in funding of defined benefit pension plans and higher interest expense. The net change in non-cash working capital balances related to operations fluctuated over the comparative periods due to the timing of payment of current income taxes payable and accounts payable and accrued liabilities as well as fluctuations in accounts receivable.

Investing activities

(millions of Canadian dollars)	2015	2014	Increase
Cash flow used in investing activities	**(1,904)**	(1,029)	875

The cash used in investing activities increased over the comparative year due to the proceeds on the sale of Historia and Series+ in the prior year and the acquisition of ViaWest in the current year as well as an increased net cash outlay in respect of investments, including shomi, all of which were partially offset by the net proceeds received on the sale of the wireless spectrum licenses and lower cash outlays for capital expenditures and inventory.

Issuance of Class B Non-Voting Shares	**129**	70
Distributions paid to non-controlling interests	**(22)**	(26)
	124	(496)

LIQUIDITY AND CAPITAL RESOURCES

In the current year, the Company generated $653 million of free cash flow. Shaw used its free cash flow along with cash of $239 million, borrowings of $361 million under its credit facility, proceeds on issuance of Class B Non-Voting Shares of $129 million, net proceeds of $99 million in respect of the sale of the wireless spectrum licenses, the net increase in borrowings of $56 million under the ViaWest facilities, cash distributions from a venture capital fund and proceeds from sale of investments of $29 million and other net items of $19 million to finance the $893 million acquisition of ViaWest, pay common share dividends of $369 million, fund $150 million of accelerated capital spend, make $125 million in financial investments and pay $48 million of restructuring costs.

On March 30, 2015, the Company announced that a syndicate of lenders provided a term loan in the amount of US$395 million and a revolving credit facility of US$85 million for ViaWest. The facilities were used to repay the outstanding amounts under ViaWest's prior credit facility and for ViaWest's general corporate purposes. The term loan matures in March 2022 while the revolving credit facility matures in March 2020.

On December 22, 2014, the Company announced that it amended the terms of its $1 billion bank credit facility to extend the maturity date from January 2017 to December 2019. The facility is used for general corporate purposes.

The Company's DRIP allows holders of Class A Shares and Class B Non-Voting Shares who are residents of Canada to automatically reinvest monthly cash dividends to acquire additional Class B Non-Voting Shares. Class B Non-Voting Shares distributed under the Company's DRIP are new shares issued from treasury at a 2% discount from the 5 day weighted average market price immediately preceding the applicable dividend payment date. The DRIP has resulted in cash savings and incremental Class B Non-Voting Shares of $166 million during fiscal 2015.

Based on available credit facilities and forecasted free cash flow, the Company expects to have sufficient liquidity to fund operations and obligations during the upcoming fiscal year. On a longer-term basis, Shaw expects to generate free cash flow and have borrowing capacity sufficient to finance foreseeable future business plans and refinance maturing debt.

Debt structure and financial policy

Shaw structures its borrowings generally on a standalone basis. With the exception of ViaWest, the borrowings of Shaw are unsecured. While certain non-wholly owned subsidiaries and ViaWest, its immediate parent and its subsidiaries are subject to contractual restrictions which may prevent the transfer of funds to Shaw, there are no similar restrictions with respect to other subsidiaries of the Company.

Shaw's borrowings are subject to covenants which include maintaining minimum or maximum financial ratios. At August 31, 2015, Shaw is in compliance with these covenants and based on current business plans, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants over the life of the borrowings.

As at August 31, 2015, the ratio of debt to operating income before restructuring costs and amortization for the Company is 2.0 times. Having regard to prevailing competitive, operational and capital market conditions, the Board of Directors has determined that having this ratio in the range of 2.0 to 2.5 times would be optimal leverage for the Company in the current environment. Should the ratio fall below this, on an other than temporary basis, the Board may choose to recapitalize back into this optimal range. The Board may also determine to increase the Company's debt above these levels to finance specific strategic opportunities such as a significant acquisition.

Off-balance sheet arrangement and guarantees

Guarantees

Generally it is not the Company's policy to issue guarantees to non-controlled affiliates or third parties; however, it has entered into certain agreements as more fully described in Note 25 to the Consolidated Financial Statements. As disclosed thereto, Shaw believes it is remote that these agreements would require any cash payment.

Contractual obligations

The amounts of estimated future payments under the Company's contractual obligations at August 31, 2015 are detailed in the following table.

	Payments due by period				
(millions of Canadian dollars)	Total	Within 1 year	2 –3 years	4 –5 years	More than 5 years
Long-term debt(1)	9,051	905	943	2,166	5,037
Operating obligations(2)	1,971	635	566	382	388
Purchase obligations(3)	49	49	–	–	–
Other obligations(4)	21	–	19	2	–
	11,092	1,589	1,528	2,550	5,425

(1) Includes principal repayments and interest payments.
(2) Includes maintenance and lease of satellite transponders, program related agreements, lease of transmission facilities and premises and exclusive rights to use intellectual property in Canada.
(3) Includes capital expenditure and inventory purchase commitments.
(4) Includes other non-current financial liabilities.

ADDITIONAL INFORMATION

Additional information relating to Shaw, including the Company's 2015 Annual Information Form can be found on SEDAR at www.sedar.com.

COMPLIANCE WITH NYSE CORPORATE GOVERNANCE LISTING STANDARDS

Disclosure of the Company's corporate governance practices which differ from the New York Stock Exchange ("NYSE") corporate governance listing standards are posted on Shaw's website, www.shaw.ca under Investors/Corporate Governance/ Compliance with NYSE Corporate Governance Listing Standards.

CERTIFICATION

The Company's Chief Executive Officer and Chief Financial Officer have filed certifications regarding Shaw's disclosure controls and procedures and internal control over financial reporting.

As at August 31, 2015, the Company's management, together with its Chief Executive Officer and Chief Financial Officer, has evaluated the effectiveness of the design and operation of each of the Company's disclosure controls and procedures and internal control over financial reporting. Based on these evaluations, the Chief Executive Officer and Chief Financial Officer have concluded that the Company's disclosure controls and procedures and the Company's internal control over financial reporting are effective.

As permitted by SEC guidance, management has excluded its subsidiary, ViaWest, from this evaluation of the system of internal control over financial reporting. Shaw completed the purchase of 100% of Viawest on September 2, 2014. Additional information regarding this acquisition is included in Note 3 to the consolidated financial statements. ViaWest had assets and revenues representing approximately 12% and 4%, respectively, of the related Consolidated Financial Statement amounts as of and for the year ended August 31, 2015. Further information on ViaWest is included in Note 24 to the Consolidated Financial Statements. ViaWest will be included in management's evaluation of internal controls over financial reporting for the fiscal year ended August 31, 2016.

There were no changes in the Company's internal controls over financial reporting during the fiscal year that have materially affected or are reasonably likely to materially affect Shaw's internal controls over financial reporting.

The design of any system of controls and procedures is based in part upon certain assumptions about the likelihood of certain events. There can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions, regardless of how remote.

Shaw Communications Inc.
Management's Responsibility for Financial Statements and Report on Internal Control over Financial Reporting

November 23, 2015

Management's Responsibility for Financial Reporting

The accompanying consolidated financial statements of Shaw Communications Inc. and all the information in this annual report are the responsibility of management and have been approved by the Board of Directors.

The financial statements have been prepared by management in accordance with International Financial Reporting Standards. When alternative accounting methods exist, management has chosen those it deems most appropriate in the circumstances. Financial statements are not precise since they include certain amounts based on estimates and judgments. Management has determined such amounts on a reasonable basis in order to ensure that the financial statements are presented fairly, in all material respects. Management has prepared the financial information presented elsewhere in the annual report and has ensured that it is consistent with the financial statements.

Management has a system of internal controls designed to provide reasonable assurance that the financial statements are accurate and complete in all material respects. The internal control system includes an internal audit function and an established business conduct policy that applies to all employees. Management believes that the systems provide reasonable assurance that transactions are properly authorized and recorded, financial information is relevant, reliable and accurate and that the Company's assets are appropriately accounted for and adequately safeguarded.

The Board of Directors is responsible for ensuring management fulfils its responsibilities for financial reporting and is ultimately responsible for reviewing and approving the financial statements. The Board carries out this responsibility through its Audit Committee.

The Audit Committee is appointed by the Board and its members are unrelated and independent. The Committee meets periodically with management, as well as the external auditors, to discuss internal controls over the financial reporting process, auditing matters and financial reporting issues; to satisfy itself that each party is properly discharging its responsibilities; and to review the annual report, the financial statements and the external auditors' report. The Audit Committee reports its findings to the Board for consideration when approving the financial statements for issuance to the shareholders. The Committee also considers, for review by the Board and approval by the shareholders, the engagement or re-appointment of the external auditors.

The financial statements have been audited by Ernst & Young LLP, the external auditors, in accordance with Canadian generally accepted auditing standards on behalf of the shareholders. Ernst & Young LLP has full and free access to the Audit Committee.

Management's Report on Internal Control over Financial Reporting

Management is responsible for establishing and maintaining an adequate system of internal control over financial reporting. Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the financial statements for external purposes in accordance with generally accepted accounting principles.

Due to its inherent limitations, internal control over financial reporting may not prevent or detect misstatements on a timely basis. Also, projections of any evaluation of the effectiveness of internal control to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies and procedures may deteriorate. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to the financial statement preparation and presentation.

Management conducted an evaluation of the effectiveness of the system of internal control over financial reporting based on the framework in "Internal Control – Integrated Framework (2013)" issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this evaluation, management concluded that the Company's system of internal control over financial reporting was effective as at August 31, 2015.

As permitted by SEC guidance, management has excluded its subsidiary, ViaWest, Inc. ("ViaWest"), from this evaluation of the system of internal control over financial reporting. Shaw completed the purchase of 100% of ViaWest on September 2, 2014. Additional information regarding this acquisition is included in Note 3 to the Consolidated Financial Statements. ViaWest had assets and revenues representing approximately 12% and 4%, respectively, of the related Consolidated Financial Statement amounts as of and for the year ended August 31, 2015. Further information on ViaWest is included in Note 24 to the

Management's Responsibility for Financial Statements and Report on Internal Control over Financial Reporting

Consolidated Financial Statements. ViaWest will be included in management's evaluation of internal controls over financial reporting for the fiscal year ended August 31, 2016.

Shaw Communications Inc.
Independent Auditors' Report of Registered Public Accounting Firm

To the Shareholders of Shaw Communications Inc.

We have audited the accompanying consolidated financial statements of Shaw Communications Inc., which comprise the consolidated statements of financial position as at August 31, 2015 and 2014, and the consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years ended August 31, 2015 and 2014, and a summary of significant accounting policies and other explanatory information.

Management's Responsibility for the Consolidated Financial Statements
Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditors' Responsibility
Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards and the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditors' judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditors consider internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the consolidated financial statements, evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion
In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of Shaw Communications Inc. as at August 31, 2015 and 2014, and its financial performance and its cash flows for the years ended August 31, 2015 and 2014 in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board.

Other Matter
We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Shaw Communication Inc.'s internal control over financial reporting as of August 31, 2015, based on the criteria established in Internal Control – Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission 2013 framework and our report dated November 23, 2015 expressed an unqualified opinion on Shaw Communications Inc.'s internal control over financial reporting.

Shaw Communications Inc.

Independent Auditors' Report on Internal Controls under Standards of the Public Company Accounting Oversight Board (United States)

To the Shareholders of Shaw Communications Inc.

We have audited Shaw Communications Inc.'s internal control over financial reporting as at August 31, 2015, based on the criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission 2013 framework (the COSO criteria). Shaw Communications Inc.'s management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with IFRS, and that receipts and expenditures of the company are being made only in accordance with authorization of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

As indicated in the accompanying Shaw Communications Inc.'s Management Report on Internal Control Over Financial Reporting, management's assessment of and conclusion on the effectiveness of internal control over financial reporting did not include the internal controls of ViaWest, Inc., which is included in the August 31, 2015 consolidated financial statements of Shaw Communications Inc. and constituted $1,733 million of total assets as of August 31, 2015 and $246 million of revenues for the year then ended. Our audit of internal control over financial reporting of Shaw Communications Inc. also did not include an evaluation of the internal control over financial reporting of ViaWest, Inc..

In our opinion, Shaw Communications Inc. maintained, in all material respects, effective internal control over financial reporting as at August 31, 2015, based on the COSO criteria.

We have also audited, in accordance with Canadian generally accepted auditing standards and the standards of the Public Accounting Oversight Board (United States), the consolidated statements of financial position of Shaw Communications Inc. as at August 31, 2015 and 2014, and the consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years ended August 31, 2015 and 2014, and our report dated November 23, 2015 expressed an unqualified opinion thereon.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2015 and 2014
[all amounts in millions of canadian dollars except share and per share amounts]

1. CORPORATE INFORMATION

Shaw Communications Inc. (the "Company") is a diversified Canadian communications company whose core operating business is providing: Cable telecommunications and Satellite video services to residential customers ("Consumer"); data networking, Cable telecommunications, Satellite video and fleet tracking services to businesses and public sector entities ("Business Network Services"); data centre colocation, cloud technology and managed IT solutions to businesses ("Business Infrastructure Services"); and programming content ("Media").

The Company was incorporated under the laws of the Province of Alberta on December 9, 1966 under the name Capital Cable Television Co. Ltd. and was subsequently continued under the Business Corporations Act (Alberta) on March 1, 1984 under the name Shaw Cablesystems Ltd. Its name was changed to Shaw Communications Inc. on May 12, 1993. The Company's shares are listed on the Toronto Stock Exchange, TSX Venture Exchange and New York Stock Exchange. The registered office of the Company is located at Suite 900, 630 – 3rd Avenue S.W., Calgary, Alberta, Canada T2P 4L4.

2. BASIS OF PRESENTATION AND ACCOUNTING POLICIES

Statement of compliance

These consolidated financial statements of the Company have been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB").

The consolidated financial statements of the Company for the years ended August 31, 2015 and 2014, were approved by the Board of Directors and authorized for issue on November 23, 2015.

Basis of presentation

These consolidated financial statements have been prepared primarily under the historical cost convention and are expressed in millions of Canadian dollars unless otherwise indicated. Other measurement bases used are outlined below and in the applicable notes. The consolidated statements of income are presented using the nature classification for expenses.

Basis of consolidation

(i) Subsidiaries

The consolidated financial statements include the accounts of the Company and those of its subsidiaries, which are entities over which the Company has control. Control exists when the Company has power over an investee, is exposed to or has rights to variable returns from its involvement and has the ability to affect those returns. Intercompany transactions and balances are eliminated on consolidation. The results of operations of subsidiaries acquired during the period are included from their respective dates of acquisition, being the time at which the Company obtains control. Consolidation of a subsidiary ceases when the Company loses control. A change in ownership interests of a subsidiary, without a loss of control, is accounted for as an equity transaction. The Company assesses control through share ownership and voting rights.

Non-controlling interests arise from business combinations in which the Company acquires less than 100% ownership interest. At the time of acquisition, non-controlling interests are measured at either fair value or their proportionate share of the fair value of acquiree's identifiable assets. The Company determines the measurement basis on a transaction by transaction basis. Subsequent to acquisition, the carrying amount of non-controlling interests is increased or decreased for their share of changes in equity.

(ii) Joint operations

A joint operation is a type of joint arrangement whereby the parties that have joint control of the arrangement have rights to the assets and obligations for the liabilities, relating to the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control. The consolidated financial statements include the Company's proportionate share of the assets, liabilities, revenues, and expenses of its interests in joint operations.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2015 and 2014
[all amounts in millions of canadian dollars except share and per share amounts]

The Company's joint operations include a 33.33% interest in the Burrard Landing Lot 2 Holdings Partnership (the "Partnership") and until January 1, 2014, a 50% interest in Historia and Series+ s.e.nc ("Historia and Series+").

The Partnership owns and leases commercial space in Shaw Tower in Vancouver, BC, which is the Company's headquarters for its lower mainland operations. In classifying its 33.33% interest in the Partnership as a joint operation, the Company considered the terms and conditions of the partnership agreement and other facts and circumstances including the primary purpose of Shaw Tower which is to provide lease space to the partners.

Historia and Series+ are two Canadian French-language specialty television channels. The Company classified its 50% interest as a joint operation after considering the terms and conditions of the partnership agreement and other facts and circumstances including the significant obligations that arise with respect to the CRTC broadcasting licenses which are required to operate the channels and which are held at the partner level.

Investments in associates and joint ventures

Associates are entities over which the Company has significant influence. Significant influence is the power to participate in the operating and financial policies of the investee, but is not control or joint control.

A joint venture is a type of joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control.

Investments in associates and joint ventures are accounted for using the equity method. Investments of this nature are recorded at original cost and adjusted periodically to recognize the Company's proportionate share of the associate's or joint venture's net income/loss and other comprehensive income/loss after the date of investment, additional contributions made and dividends received.

The Company has classified its 50% interest in Shomi Partnership ("shomi") after considering the terms and conditions of the partnership agreement and other facts and circumstances including business plans to make the service available to subscribers of other distributors and as an over-the-top service for purchase by any subscriber.

Revenue and expenses

The Company has multiple deliverable arrangements comprised of upfront fees (subscriber connection, installation and customer premise equipment revenue) and related subscription and service revenue. Upfront fees charged to customers do not constitute separate units of accounting, therefore these revenue streams are assessed as an integrated package.

(i) Revenue

Revenue from cable, Internet, Digital Phone and DTH customers includes subscriber revenue earned as services are provided. Satellite distribution services and telecommunications service revenue is recognized in the period in which the services are rendered to customers. Affiliate subscriber revenue is recognized monthly based on subscriber levels. Advertising revenues are recognized in the period in which the advertisements are broadcast and recorded net of agency commissions as these amounts are paid directly to the agency or advertiser. When a sales arrangement includes multiple advertising spots, the proceeds are allocated to individual advertising spots under the arrangement based on relative fair values. Revenue from data centre customers includes colocation and other services revenue, including managed infrastructure revenue. Colocation revenue is recognized on a straight-line line basis over the term of the customer contract. Other services revenue, including managed infrastructure revenue, is recognized as the services are provided.

Subscriber connection fees received from customers are deferred and recognized as revenue on a straight-line basis over three years. Direct and incremental initial selling, administrative and connection costs related to subscriber acquisitions are recognized as an operating expense as incurred. The costs of physically connecting a new home are capitalized as part of the distribution system and costs of disconnections are expensed as incurred.

Initial setup fees related to the installation of data centre services and installation revenue received on contracts with commercial business customers are deferred and recognized as revenue on a straight-line basis over the related service contract, which generally span two to ten years. Direct and incremental costs associated with the installation of services or service contract, in an amount not exceeding the upfront revenue, are deferred and recognized as an operating expense on a straight-line basis over the same period.

(ii) Deferred equipment revenue and deferred equipment costs

Revenue from sales of DTH equipment and DCTs is deferred and recognized on a straight-line basis over three years commencing when subscriber service is activated. The total cost of the equipment, including installation, represents an inventoriable cost which is deferred and recognized on a straight-line basis over the same period. The DCT and DTH equipment is generally sold to customers at cost or a subsidized price in order to expand the Company's customer base.

Revenue from sales of satellite tracking hardware and costs of goods sold is deferred and recognized on a straight-line basis over the related service contract for monthly service charges for air time, which is generally five years. The amortization of the revenue and cost of sale of satellite service equipment commences when goods are shipped.

Recognition of deferred equipment revenue and deferred equipment costs is recorded as deferred equipment revenue amortization and deferred equipment costs amortization, respectively.

(iii) Deferred IRU revenue

Prepayments received under indefeasible right to use ("IRU") agreements are amortized on a straight-line basis into income over the term of the agreement and included in amortization of property, plant and equipment, intangibles and other in the consolidated statements of income.

Cash

Cash is presented net of outstanding cheques. When the amount of outstanding cheques and the amount drawn under the Company's revolving term facility are greater than the amount of cash, the net amount is presented as bank indebtedness.

Allowance for doubtful accounts

The Company maintains an allowance for doubtful accounts for the estimated losses resulting from the inability of its customers to make required payments. In determining the allowance, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances.

Inventories

Inventories include subscriber equipment such as DCTs and DTH receivers, which are held pending rental or sale at cost or at a subsidized price. When subscriber equipment is sold, the equipment revenue and equipment costs are deferred and amortized over three years. When the subscriber equipment is rented, it is transferred to property, plant and equipment and amortized over its useful life. Inventories are determined on a first-in, first-out basis, and are stated at cost due to the eventual capital nature as either an addition to property, plant and equipment or deferred equipment costs.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2015 and 2014
[all amounts in millions of canadian dollars except share and per share amounts]

Property, plant and equipment

Property, plant and equipment are recorded at purchase cost. Direct labour and other directly attributable costs incurred to construct new assets, upgrade existing assets and connect new subscribers are capitalized as well as borrowing costs on qualifying assets. In addition, any asset removal and site restoration costs in connection with the retirement of assets are capitalized. Repairs and maintenance expenditures are charged to operating expense as incurred. Amortization is recorded on a straight-line basis over the estimated useful lives of assets as follows:

Asset	Estimated useful life
Cable and telecommunications distribution system	5-20 years
Digital cable terminals and modems	2-5 years
Satellite audio, video and data network equipment and DTH receiving equipment	3-15 years
Transmitters, broadcasting and communication equipment	5-15 years
Buildings	15-40 years
Data centre infrastructure	3-21 years
Data processing	3-4 years
Other	3-20 years

The Company reviews the estimates of lives and useful lives on a regular basis.

Assets held for sale

Non-current assets and disposal groups are classified as held for sale when specific criteria are met and are measured at the lower of carrying amount and estimated fair value less costs to sell. Assets held for sale are not amortized and are reported separately on the statement of financial position.

Other long-term assets

Other long-term assets primarily include (i) equipment costs, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over three to five years, (ii) credit facility arrangement fees amortized on a straight-line basis over the term of the facility, (iii) long-term receivables, (iv) network capacity leases, (v) the non-current portion of prepaid maintenance and support contracts and (vi) direct costs in connection with initial setup fees and installation of services, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over two to ten years.

Intangibles

The excess of the cost of acquiring businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist of amounts allocated to broadcast rights and licenses, trademarks, brands, program rights, customer relationships and software assets. Broadcast rights and licenses, trademarks and brands represent identifiable assets with indefinite useful lives. Spectrum licenses were acquired in Industry Canada’s auction of licenses for advanced wireless services and have an indefinite life.

Program rights represent licensed rights acquired to broadcast television programs on the Company’s conventional and specialty television channels and program advances are in respect of payments for programming prior to the window license start date. For licensed rights, the Company records a liability for program rights and corresponding asset when the license period has commenced and all of the following conditions have been met: (i) the cost of the program is known or reasonably determinable, (ii) the program material has been accepted by the Company in accordance with the license agreement and (iii) the material is available to the Company for telecast. Program rights are expensed on a systematic basis generally over the estimated exhibition period as the programs are aired and are included in operating, general and administrative expenses. Program rights are segregated on the statement of financial position between current and noncurrent based on expected life at time of acquisition.

Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over the estimated useful life of 15 years.

Software that is not an integral part of the related hardware is classified as an intangible asset. Internally developed software assets are recorded at historical cost and include direct material and labour costs as well as borrowing costs on qualifying assets. Software assets are amortized on a straight-line basis over estimated useful lives ranging from three to ten years. The Company reviews the estimates of lives and useful lives on a regular basis.

Borrowing costs

The Company capitalizes borrowing costs on qualifying assets, for which the commencement date is on or after September 1, 2010, that take more than one year to construct or develop using the Company's weighted average cost of borrowing which approximated 6% (2014 – 6.25%).

Impairment

(i) Goodwill and indefinite-life intangibles

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at March 1) and when events or changes in circumstances indicate that the carrying value may be impaired. The recoverable amount of each cash-generating unit ("CGU") is determined based on the higher of the CGU's fair value less costs to sell ("FVLCS") and its value in use ("VIU"). A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are Cable, Satellite, Media and Data centres. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods.

(ii) Non-financial assets with finite useful lives

For non-financial assets, such as property, plant and equipment and finite-life intangible assets, an assessment is made at each reporting date as to whether there is an indication that an asset may be impaired. If any indication exists, the recoverable amount of the asset is determined based on the higher of FVLCS and VIU. Where the carrying amount of the asset exceeds its recoverable amount, the asset is considered impaired and written down to its recoverable amount. Previously recognized impairment losses are reviewed for possible reversal at each reporting date and all or a portion of the impairment is reversed if the asset's value has increased.

CRTC benefit obligations

The fair value of CRTC benefit obligations committed as part of business acquisitions are initially recorded at the present value of amounts to be paid net of any expected incremental cash inflows. The obligation is subsequently adjusted for the incurrence of related expenditures, the passage of time and for revisions to the timing of the cash flows. Changes in the obligation due to the passage of time are recorded as accretion of long-term liabilities and provisions in the income statement.

Provisions

Provisions are recognized when the Company has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. The timing or amount of the outflow may still be uncertain. Provisions are measured using the best estimate of the expenditure required to settle the present obligation at the end of the reporting period, taking into account risks and uncertainties associated with the obligation. Provisions are discounted where the time value of money is considered material.

(i) Asset retirement obligations

The Company recognizes the fair value of a liability for an asset retirement obligation in the period in which it is incurred, on a discounted basis, with a corresponding increase to the carrying amount of property and equipment, primarily in respect of transmitter sites. This cost is amortized on the same basis as the related asset. The liability is subsequently increased for the passage of time and the accretion is recorded in the income statement as accretion of long-term liabilities and provisions. The discount rates applied are subsequently adjusted to current rates as required at the end of reporting periods. Revisions due to the estimated timing of cash flows or the amount required to settle the obligation may result in an increase or decrease in the liability. Actual costs incurred upon settlement of the obligation are charged against the liability to the extent recorded.

(ii) Restructuring provisions

Restructuring provisions, primarily in respect of employee termination benefits, are recognized when a detailed plan for the restructuring exists and a valid expectation has been raised to those affected that the plan will be carried out.

(iii) Other provisions

Provisions for disputes, legal claims and contingencies are recognized when warranted. The Company establishes provisions after taking into consideration legal assessments (if applicable), expected availability of insurance or other recourse and other available information.

Deferred credits

Deferred credits primarily include: (i) prepayments received under IRU agreements amortized on a straight-line basis into income over the term of the agreement, (ii) equipment revenue, as described in the revenue and expenses accounting policy, deferred and amortized over three to five years, (iii) connection fee revenue, initial setup fees and upfront installation revenue, as described in the revenue and expenses accounting policy, deferred and amortized over two to ten years, (iv) a deposit on a future fibre sale, and (v) amounts received in respect of granting an option to acquire its wireless spectrum licenses.

Leases

(i) Operating leases

Rent expense for real estate leases that have escalating lease payments is recorded on a straight-line basis over the term of the lease. The difference between the expense recorded and the amount paid is recorded as deferred rent and included in deferred credits in the statement of financial position.

(ii) Finance leases

Leases of property and equipment that transfer substantially all the risks and rewards of ownership are classified as finance leases. Finance leases are capitalised at the commencement of the lease at the fair value of the leased property or, if lower, at the present value of the minimum lease payments. Lease payments are apportioned between interest expense and reduction of the lease liability. The property and equipment acquired under finance leases is depreciated over the shorter of the useful life of the asset and the lease term.

Income taxes

The Company accounts for income taxes using the liability method, whereby deferred income tax assets and liabilities are determined based on differences between the financial reporting and tax bases of assets and liabilities measured using substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse. Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset and they relate to income taxes levied by the same authority in the same taxable entity. Income tax expense for the period is the tax payable for the period using tax rates substantively enacted at the reporting date, any adjustments to taxes payable in respect of previous years and any change during the period in deferred income tax assets and liabilities, except to the extent that they relate to a business combination or divestment, items recognized directly in equity or in other comprehensive income. The Company records interest and penalties related to income taxes in income tax expense.

Tax credits and government grants

Until August 31, 2014, the Company had access to a government program which supported local programming produced by conventional television stations. In addition, the Company receives tax credits primarily related to its research and development activities. Government financial assistance is recognized when management has reasonable assurance that the conditions of the government programs are met and accounted for as a reduction of related costs, whether capitalized and amortized or expensed in the period the costs are incurred.

Foreign currency translation

Transactions originating in foreign currencies are translated into Canadian dollars at the exchange rate at the date of the transaction. Monetary assets and liabilities are translated at the period-end rate of exchange and non-monetary items are translated at historic exchange rates. The net foreign exchange loss recognized on the translation and settlement of current monetary assets and liabilities was $8 (2014 – $8) and is included in other losses.

The functional currency of the Company's foreign operations is US dollars. Assets and liabilities, including goodwill and fair value adjustments arising on acquisition, are translated into Canadian dollars using the foreign exchange rate at the end of the reporting period. Revenue and expenses are translated using average foreign exchange rates, which approximate the foreign exchange rates on the dates of the transactions. Foreign exchange differences arising on translation are included in other comprehensive income/loss and accumulated in equity.

Financial instruments other than derivatives

Financial instruments have been classified as loans and receivables, assets available-for-sale, assets held-for-trading or financial liabilities. Cash has been classified as held-for-trading and is recorded at fair value with any change in fair value immediately recognized in income (loss). Other financial assets are classified as available-for-sale or as loans and receivables. Available-for-sale assets are carried at fair value with changes in fair value recorded in other comprehensive income (loss) until realized. Available-for-sale equity instruments not quoted in an active market and where fair value cannot be reliably measured are recorded at cost less impairment. Loans and receivables and financial liabilities are carried at amortized cost. None of the Company's financial assets are classified as held-to-maturity and none of its financial liabilities are classified as held-for-trading.

Finance costs and discounts associated with the issuance of debt securities are netted against the related debt instrument and amortized to income using the effective interest rate method. Accordingly, long-term debt accretes over time to the principal amount that will be owing at maturity.

Derivative financial instruments and hedging activities

The Company uses derivative financial instruments, such as foreign currency forward purchase contracts, to manage risks from fluctuations in foreign exchange rates. All derivative financial instruments are recorded at fair value in the statement of financial position. Where permissible, the Company accounts for these financial instruments as hedges which ensures that counterbalancing gains and losses are recognized in income in the same period. With hedge accounting, changes in the fair value of derivative financial instruments designated as cash flow hedges are recorded in other comprehensive income (loss) until the variability of cash flows relating to the hedged asset or liability is recognized in income (loss). When an anticipated transaction is subsequently recorded as a non-financial asset, the amounts recognized in other comprehensive income (loss) are reclassified to the initial carrying amount of the related asset. Where hedge accounting is not permissible or derivatives are not designated in a hedging relationship, they are classified as held-for-trading and the changes in fair value are immediately recognized in income (loss).

Instruments that have been entered into by the Company to hedge exposure to foreign currency risk are reviewed on a regular basis to ensure the hedges are still effective and that hedge accounting continues to be appropriate.

A net investment hedge of a foreign operation is accounted for similarly to a cash flow hedge. The Company may designate certain US dollar denominated debt as a hedge of its net investment in foreign operations where the US dollar is the functional currency. Unrealized gains and losses arising from translation of the US dollar denominated debt are included in other comprehensive income/loss and accumulated in equity.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements

[all amounts in millions of canadian dollars except share and per share amounts]

Fair value measurements

Fair value estimates are made at a specific point in time, based on relevant market information and information about the financial instrument. These estimates are subjective in nature and involve uncertainties and matters of significant judgement and, therefore, cannot be determined with precision. Changes in assumptions could significantly affect the estimates.

The fair value hierarchy is based on inputs to valuation techniques that are used to measure fair value that are either observable or unobservable. Observable inputs reflect assumptions market participants would use in pricing an asset or liability based on market data obtained from independent sources while unobservable inputs reflect a reporting entity's pricing based upon their own market assumptions.

The fair value hierarchy consists of the following three levels:

Level 1 Inputs are quoted prices in active markets for identical assets or liabilities.

Level 2 Inputs for the asset or liability are based on observable market data, either directly or indirectly, other than quoted prices.

Level 3 Inputs for the asset or liability are not based on observable market data.

The Company determines whether transfers have occurred between levels in the fair value hierarchy by assessing the impact of events and changes in circumstances that could result in a transfer at the end of each reporting period.

Employee benefits

The Company accrues its obligations under its employee benefit plans, net of plan assets. The cost of pensions and other retirement benefits earned by certain employees is actuarially determined using the projected benefit method pro-rated on service and management's best estimate of salary escalation and retirement ages of employees. Past service costs from plan initiation and amendments are recognized immediately in the income statement. Remeasurements include actuarial gains or losses and the return on plan assets (excluding interest income). Actuarial gains and losses occur because assumptions about benefit plans relate to a long time frame and differ from actual experiences. These assumptions are revised based on actual experience of the plans such as changes in discount rates, expected retirement ages and projected salary increases. Remeasurements are recognized in other comprehensive income (loss) on an annual basis, at a minimum, and on an interim basis when there are significant changes in assumptions.

August 31 is the measurement date for the Company's employee benefit plans. The last actuarial valuations for funding purposes for the various plans were performed effective December 31, 2014 and the next actuarial valuations for funding purposes are effective December 31, 2015.

Share-based compensation

The Company has a stock option plan for directors, officers, employees and consultants to the Company. The options to purchase shares must be issued at not less than the fair value at the date of grant. Any consideration paid on the exercise of stock options, together with any contributed surplus recorded at the date the options vested, is credited to share capital. The Company calculates the fair value of share-based compensation awarded to employees using the Black-Scholes option pricing model. The fair value of options are expensed and credited to contributed surplus over the vesting period of the options using the graded vesting method.

The Company has a deferred share unit ("DSU") plan for its Board of Directors. Compensation cost is recognized immediately as DSUs vest when granted. DSUs will be settled in cash and the obligation is measured at the end of each period at fair value using the Black-Scholes option pricing model and the number of outstanding DSUs.

Share appreciation rights ("SARs") issued by a subsidiary to eligible employees are cash settled and measured at fair value using the Black-Scholes option pricing model. The fair value is recognized over the vesting period of the SARs by applying the graded vesting method, adjusting for estimated forfeitures. The obligation for SARs is remeasured at the end of each period up to the date of settlement which requires a reassessment of the estimates used at the end of each reporting period.

The Company has an employee share purchase plan (the "ESPP") under which eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the participant's contributions and records such amounts as compensation expense.

Earnings per share

Basic earnings per share is based on net income attributable to equity shareholders adjusted for dividends on preferred shares and is calculated using the weighted average number of Class A Shares and Class B Non-Voting Shares outstanding during the period. Diluted earnings per share is calculated by considering the effect of all potentially dilutive instruments. In calculating diluted earnings per share, any proceeds from the exercise of stock options and other dilutive instruments are assumed to be used to purchase Class B Non-Voting Shares at the average market price during the period.

Guarantees

The Company discloses information about certain types of guarantees that it has provided, including certain types of indemnities, without regard to whether it will have to make any payments under the guarantees.

Estimation uncertainty and critical judgements

The preparation of consolidated financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the period. Actual results could differ from those estimates and significant changes in assumptions could cause an impairment in assets. The following require the most difficult, complex or subjective judgements which result from the need to make estimates about the effects of matters that are inherently uncertain.

Estimation uncertainty

The following are key assumptions concerning the future and other key sources of estimation uncertainty that could impact the carrying amount of assets and liabilities and results of operations in future periods.

(i) Allowance for doubtful accounts

The Company is required to make an estimate of an appropriate allowance for doubtful accounts on its receivables. The estimated allowance required is a matter of judgement and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foretold, such as future business, personal and economic conditions.

(ii) Property, plant and equipment

The Company is required to estimate the expected useful lives of its property, plant and equipment. These estimates of useful lives involve significant judgement. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. Management's judgement is also required in determination of the amortization method, the residual value of assets and the capitalization of labour and overhead.

(iii) Business combinations – purchase price allocation

Purchase price allocations involve uncertainty because management is required to make assumptions and judgements to estimate the fair value of the identifiable assets acquired and liabilities assumed in business combinations. Fair value estimates are based on quoted market prices and widely accepted valuation techniques, including discounted cash flow ("DCF") analysis. Such estimates include assumptions about inputs to the valuation techniques, industry economic factors and business strategies.

(iv) Impairment

The Company estimates the recoverable amount of its CGUs using a FVLCS calculation based on a DCF analysis. Significant judgements are inherent in this analysis including estimating the amount and timing of the cash flows attributable to the broadcast rights and licenses, the selection of an appropriate discount rate, and the identification of appropriate terminal growth rate assumptions. In this analysis the Company estimates the discrete future cash flows associated with the intangible asset for five years and determines a terminal value. The future cash flows are based on the Company's estimates of future operating results, economic conditions and the competitive environment. The terminal value is estimated using both a perpetuity growth assumption and a multiple of operating income before restructuring costs and amortization. The discount rates used in the analysis are based on the Company's weighted average cost of capital and an assessment of the risk inherent in the projected cash flows. In analyzing the FVLCS determined by the DCF analysis, the Company also considers a market approach determining a recoverable amount for each unit and total entity value determined using a market capitalization approach. Recent market transactions are taken into account, when available. The key assumptions used to determine the recoverable amounts, including a sensitivity analysis, are included in note 10. The DCF analysis uses significant unobservable inputs and is therefore considered a level 3 fair value measurement.

(v) Employee benefit plans

The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected will be needed to settle employee benefit obligations. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes are required.

(vi) Income taxes

The Company is required to estimate income taxes using substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse. In determining the measurement of tax uncertainties, the Company applies a probable weighted average methodology. Realization of deferred income tax assets is dependent on generating sufficient taxable income during the period in which the temporary differences are deductible. Although realization is not assured, management believes it is more likely than not that all recognized deferred income tax assets will be realized based on reversals of deferred income tax liabilities, projected operating results and tax planning strategies available to the Company and its subsidiaries.

(vii) Contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities.

Critical judgements

The following are critical judgements apart from those involving estimation:

(i) Determination of a CGU

Management's judgement is required in determining the Company's cash generating units for the impairment assessment of its indefinite-life intangible assets. The CGUs have been determined considering operating activities and asset management and are Cable, Satellite, Media and Data centres.

(ii) Broadcast rights and licenses and spectrum licenses – indefinite-life assessment

The Company's businesses are dependent upon broadcast licenses (or operate pursuant to an exemption order) granted and issued by the CRTC. While these licenses must be renewed from time to time, the Company has never failed to do so. In addition, there are currently no legal, regulatory or competitive factors that limit the useful lives of these assets.

Adoption of recent accounting pronouncement

The adoption of the following standard effective September 1, 2014 had no impact on the Company's consolidated financial statements.

- IFRIC 21 *Levies* provides guidance on when to recognize a financial liability imposed by a government, if the levy is accounted for in accordance with IAS 37 *Provisions, Contingent Liabilities and Contingent Assets*, or where the timing and amount of the levy is certain.

Standards, interpretations and amendments to standards issued but not yet effective

The Company has not yet adopted certain standards and interpretations that have been issued but are not yet effective. The following pronouncements are being assessed to determine the impact on the Company's results and financial position.

- *Clarification of Acceptable Methods of Depreciation and Amortization* (Amendments to IAS 16 *Property, Plant and Equipment* and IAS 38 *Intangible Assets)* prohibits revenue from being used as a basis to depreciate property, plant and equipment and significantly limits use of revenue-based amortization for intangible assets. The amendments are to be applied prospectively for the annual period commencing September 1, 2016.
- IFRS 15 *Revenue from Contracts with Customers,* was issued in May 2014 and replaces IAS 11 *Construction Contracts,* IAS 18 *Revenue,* IFRIC 13 *Customer Loyalty Programs,* IFRIC 15 *Agreements for the Construction of Real Estate*, IFRIC 18 *Transfers of Assets from Customers* and SIC-31 *Revenue – Barter Transactions Involving Advertising Services*. The new standard requires revenue to be recognized to depict the transfer of promised goods or services to customers in an amount that reflects the consideration expected to be received in exchange for those goods or services. The principles are to be applied in the following five steps: (1) identify the contract(s) with a customer, (2) identify the performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the performance obligations in the contract, and (5) recognize revenue when (or as) the entity satisfies a performance obligation. The new standard is to be applied either retrospectively or on a modified retrospective basis and is effective for the annual period commencing September 1, 2018.
- IFRS 9 *Financial Instruments: Classification and Measurement* replaces IAS 39 *Financial Instruments* and applies a principal-based approach to the classification and measurement of financial assets and financial liabilities, including an expected credit loss model for calculating impairment, and includes new requirements for hedge accounting. The standard is required to be applied retrospectively for the annual period commencing September 1, 2018.

3. BUSINESS ACQUISITIONS, ASSET DISPOSITIONS AND ASSET HELD FOR SALE

Business acquisitions

ViaWest, Inc ("ViaWest")

On September 2, 2014, the Company closed the acquisition of 100% of the shares of ViaWest for an enterprise value of US $1.2 billion which was funded through a combination of cash on hand, assumption of ViaWest debt and a drawdown of US $330 on the Company's credit facility. The ViaWest acquisition provides the Company with a growth platform in the North American data centre sector and is another step in expanding technology offerings for mid-market enterprises in Western Canada. The operating results of ViaWest are included in the Company's consolidated financial statements from the date of acquisition. Revenue and net loss for 2015 were $246 and $17, respectively.

In connection with the transaction, the Company incurred $4 of acquisition related costs in fiscal 2014 for professional fees paid to lawyers, consultants and advisors. During the current year, the Company incurred additional acquisition related costs of $6.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2015 and 2014
[all amounts in millions of canadian dollars except share and per share amounts]

The purchase consideration consisted of $898 of cash and issuance of share-based awards of $8. A summary of net assets and allocation of consideration is as follows:

	$
Net assets acquired at assigned fair values	
Cash and cash equivalents	5
Receivables	10
Other current assets	5
Property and equipment	311
Other long-term assets	2
Intangibles[(1)]	404
Goodwill, not deductible for tax[(2)]	674
	1,411
Current liabilities	16
Current debt[(3)]	7
Deferred income taxes	76
Long-term debt[(3)]	406
	906

(1) Intangibles include a trade name, customer relationships and software assets.

(2) Goodwill comprises the value of upside and expansion potential due to industry growth expectations and demand for data centre services as well as a strong management team and an assembled workforce.

(3) Current and long-term debt is comprised of amounts that were outstanding under ViaWest's credit facility, finance lease obligations in respect of certain equipment and amounts owing to landlords in respect of financing leasehold improvements.

Other

Effective June 30, 2015, ViaWest acquired 100% of the shares of AppliedTrust Engineering, Inc. ("AppliedTrust"), a provider of security, compliance, DevOps and infrastructure consulting services to a wide range of clients. AppliedTrust's capabilities augment the ViaWest platform with fast enablement of secure hybrid services including IT assessment, migration, compliance consulting, cloud readiness and deeper application support. The purchase consideration consisted of $9 in cash and contingent consideration of $2.

A summary of net assets and preliminary allocation of consideration is as follows:

	$
Net assets acquired at assigned fair values	
Receivables	1
Goodwill, not deductible for tax[(1)]	10
	11

(1) Goodwill comprises the estimated economic value of providing enhanced professional services offerings, growth expectations as well as an assembled workforce with deep expertise in risk management and compliance consulting services.

[all amounts in millions of canadian dollars except share and per share amounts]

Asset dispositions

Sale of wireless spectrum licenses to Rogers Communications Inc. ("Rogers")

During 2013, the Company granted Rogers an option to acquire its wireless spectrum licenses. The exercise of the option and the sale of the wireless spectrum licenses were subject to various regulatory approvals and therefore, the licenses were not classified as assets held for sale. The regulatory reviews concluded during 2015 at which time the transfer was completed. The Company had previously received $50 in respect of the purchase price of the option to acquire the wireless spectrum licenses and a $200 deposit in respect of the option exercise price. The Company received an additional $100 when the transaction completed and recorded a gain of $158.

Sale of Historia and Series+ to Corus Entertainment Inc. ("Corus")

The sale of Historia and Series+ to Corus closed in 2014. Historia and Series+ represented a disposal group within the media segment and accordingly, were not presented as discontinued operations in the statement of income. The Company received sale proceeds of $141 and recorded a gain of $49.

Asset held for sale

A real estate property has been classified as held for sale in the statement of financial position at August 31, 2015 and 2014 and measured at estimated fair value less costs to sell. At August 31, 2015, the property's fair value was based on the sale which closed subsequent to year end. Previously the estimated fair value had been determined by a commercial real estate service by means of an income capitalization approach.

4. ACCOUNTS RECEIVABLE

	2015 **$**	**2014** **$**
Subscriber and trade receivables	**473**	506
Due from related parties *[note 27]*	**4**	–

Publicly traded company	**4**	7
Investments in private entities	**49**	53
Investment in a joint venture	**44**	–
	97	60

During 2015, the Company recorded an unrealized loss of $3 (2014 – $2) in respect of its investment in a publicly traded company (see note 20).

The Company has a portfolio of minor investments in various private entities.

The Company has a 50% joint control interest in shomi, which is a subscription video-on-demand service that launched in November 2014. The Company's interest in shomi is accounted for using the equity method. Summarized financial information at August 31, 2015 and for the ten months then ended is as follows:

	$
Current assets	28
Non-current assets	132
Current liabilities	(54)
Non-current liabilities	(16)
Partnership net assets	90
Carrying amount of the investment[1]	44

	$
Revenue	18
Expenses	128
Partnership net loss	110
Equity loss in the partnership[1]	56

[1] The Company's carrying amount of the investment and equity loss does not equal 50% of the partnership's net assets and net loss due to elimination of unrealized profit on downstream transactions between the Company and shomi.

	3,370	969	–	(655)	(32)	3,652

In 2015, the Company recognized a gain of $6 (2014 – loss of $1) on the disposal of property, plant and equipment. The write-down of assets in 2015 was in respect of development of a certain Internet Protocol Television (“IPTV”) platform which forms part of the common infrastructure for the Consumer and Business Network Services divisions.

9. OTHER LONG-TERM ASSETS

	2015 $	2014 $

Net book value	**8,965**	7,896

Broadcast rights and licenses, trademark, brands and wireless spectrum licenses have been assessed as having indefinite useful lives. While licenses must be renewed from time to time, the Company has never failed to do so. In addition, there are currently no legal, regulatory, competitive or other factors that limit the useful lives of these assets.

The changes in the carrying amount of intangibles with indefinite useful lives, and therefore not subject to amortization, are as follows:

Impairment testing of indefinite-life intangibles and goodwill

The Company conducted its annual impairment test on goodwill and indefinite-life intangibles as at March 1, 2015 and as a result, an impairment charge of $15 was recorded with respect to goodwill associated with the Tracking operations in the Satellite cash generating unit. The Company estimated the recoverable amount using a discounted cash flow analysis based on the most recent estimates of future operating results which are reflective of long-term pressures as customers migrate from satellite based tracking to wireless tracking. The recoverable amount of the other cash generating units exceeded their carrying value.

A hypothetical decline of 10% in the recoverable amount of the broadcast rights and licenses for each of the Cable, Satellite and Media cash generating units as at March 1, 2015 would not result in any impairment loss. The data centre cash generating unit was created with the acquisition of ViaWest. A hypothetical decline of 10% in the recoverable amount of the data centre cash generating unit as at March 1, 2015 would result in an impairment loss and is reflective of the Company acquiring ViaWest at fair value on September 2, 2014. A 1% increase in the discount rate or 1% decrease in the terminal growth rate would cause the carrying amount of the Data centres CGU to exceed its recoverable amount by approximately $200 and $150, respectively. In order for the CGU's recoverable amount to be equal to the carrying amount and holding all other assumptions constant, the discount rate would have to be 8.75% or terminal growth rate would have to be 6%. These sensitivities are indicative only and should be considered with caution, as the effect of the variation in each assumption on the estimated recoverable amount is calculated in isolation without changing any other assumptions. The extent of any such impairment loss would be determined after incorporating any consequential effects of that change on estimated operating income before restructuring costs and amortization and on other factors. Any changes in economic conditions since the impairment testing conducted as at March 1, 2015 do not represent events or changes in circumstance that would be indicative of impairment at August 31, 2015.

[all amounts in millions of canadian dollars except share and per share amounts]

Significant estimates inherent to this analysis include discount rates and the terminal value. At March 1, 2015, the estimates that have been utilized in the impairment tests reflect any changes in market conditions and are as follows:

		Terminal value	
	Post-tax discount rate	**Terminal growth rate**	**Terminal operating income before restructuring costs and amortization multiple**
Cable	8.0%	1.0%	6.0X
Satellite	8.5%	0.0%	5.0X
Media	8.5%	0.0%	6.5X
Data centres	8.5%	6.3%	10.0X

A sensitivity analysis of significant estimates is conducted as part of every impairment test. With respect to the impairment tests performed in the third quarter, the estimated decline in recoverable amount for the sensitivity of significant estimates is as follows:

	Estimated decline in recoverable amount		
		Terminal value	
	1% increase in discount rate	**1% decrease in terminal growth rate**	**0.5 times decrease in terminal operating income before restructuring costs and amortization multiple**
Cable	8.0%	5.0%	3.0%
Satellite	7.0%	n/a	3.0%
Media	7.0%	n/a	2.0%
Data centres	19.0%	16.0%	2.0%

(1) During 2014, the Company announced changes to the structure of its operating units to improve overall efficiency while enhancing its ability to grow as the leading network and content experience company. In connection with the restructuring of its operations, approximately 400 management and non-customer facing roles were affected by the organizational changes. During 2015, the Company announced a realignment of its customer care operations in the Consumer division into centres of expertise to enhance customer service, and continued its organizational structure realignment efforts including further restructuring of certain functions within its Business Network Services division. In addition, the media division undertook organizational changes as it redefines itself from a traditional broadcaster to the broader focus of a media organization. Approximately 1,700 employees were affected by the continued restructurings in 2015. Restructuring amounts are primarily in respect of severance and employee related costs. The majority of remaining costs at August 31, 2015 are expected to be paid within the next six months.

Corporate

Bank loans

During 2012, a syndicate of banks provided the Company with an unsecured $1 billion credit facility which includes a maximum revolving term or swingline facility of $50. During 2014, the Company amended the terms of the facility to extend the maturity date from January 2017 to December 2019. The credit facility has a feature whereby the Company may request an additional $500 of borrowing capacity so long as no event of default or pending event of default has occurred and is continuing or would occur as a result of the increased borrowings. No lender has any obligation to participate in the requested increase unless it agrees to do so at its sole discretion. Funds are available to the Company in both Canadian and US dollars. At August 31, 2015, $1 has been drawn as committed letters of credit against the revolving term facility. Interest rates fluctuate with Canadian prime and bankers' acceptance rates, US bank base rates and LIBOR rates. Excluding the revolving term facility, the effective interest rate on actual borrowings under the credit facility during 2015 was 1.57%. No amounts were drawn under the under the credit facility during 2014. The effective interest rate on the revolving term facility for 2015 was 3.24% (2014 – 3.38%).

Senior notes

The senior notes are unsecured obligations and rank equally and ratably with all existing and future senior indebtedness. The fixed rate notes are redeemable at the Company's option at any time, in whole or in part, prior to maturity at 100% of the principal amount plus a make-whole premium.

On January 31, 2014, the Company issued $500 senior notes at a rate of 4.35% due January 31, 2024 and $300 floating rate senior rates due February 1, 2016. The $300 senior notes bear interest at an annual rate equal to three month CDOR plus 0.69%.

Other

ViaWest

During 2015, ViaWest's credit facility which was assumed on acquisition was repaid with proceeds from a new credit facility. ViaWest's prior credit facility was scheduled to mature in May 2017 and was secured by a first priority security interest in specific assets pursuant to the terms of the Security Agreement. On September 2, 2014, ViaWest's credit facility consisted of a term loan of US $322 and US $28 of borrowings under a US $40 revolving facility. The term loan had quarterly principal repayments of US $1 with the balance due on maturity. Interest rates fluctuated with LIBOR, US prime, US Federal Funds and Eurodollar rates. ViaWest had a US $130 interest rate swap which hedged the exposure to changes in cash flows and minimized variability related to its prior credit facility. The interest rate swap terminated in June 2015. The new facility consists of a term loan in the amount of US $395 and a revolving credit facility of US $85. Commencing August 2015, the term loan has quarterly principal repayments of US $1 with the balance due on maturity in March 2022 while the revolving credit facility matures in March 2020. Interest rates fluctuate with LIBOR, US prime and US Federal Funds rates and the facilities are secured by a first priority security interest in specific assets pursuant to the terms of the Security Agreement.

Finance lease obligations and amounts owing to landlords in connection with financing of leasehold improvements expire and mature at various dates through to 2023. Collateral has been provided as security for the related transactions and agreements as required. The effective interest rates on the obligations range from 4.42% to 9.39%.

Burrard Landing Lot 2 Holdings Partnership (the "Partnership")

The Company has a 33.33% interest in the Partnership which built the Shaw Tower project with office/retail space and living/working space in Vancouver, BC. In the fall of 2004, the commercial construction of the building was completed and at that time, the Partnership issued ten year 6.31% secured mortgage bonds in respect of the commercial component of the Shaw Tower. In February 2014, the Partnership refinanced its debt. The Partnership received a mortgage loan and used the proceeds to prepay the outstanding balance of the previous mortgage and loan excess funds to each of its partners. The mortgage loan matures on November 1, 2024 and bears interest at 4.683% compounded semi-annually with interest only payable for the first five years. The mortgage loan is collateralized by the property and the commercial rental income from the building with no recourse to the Company.

Debt retirement costs

On February 18, 2014, the Company redeemed the 6.50% senior notes. In connection with the early redemption, the Company incurred costs of $7 and wrote-off the remaining finance costs of $1.

Debt covenants

The Company and its subsidiaries have undertaken to maintain certain covenants in respect of the credit agreements and trust indentures described above. The Company and its subsidiaries were in compliance with these covenants at August 31, 2015.

Long-term debt repayments

Mandatory principal repayments on all long-term debt in each of the next five years and thereafter are as follows:

	$

16. SHARE CAPITAL

Authorized

The Company is authorized to issue a limited number of Class A voting participating shares ("Class A Shares") of no par value, as described below, and an unlimited number of Class B non-voting participating shares ("Class B Non-Voting Shares") of no par value, Class 1 preferred shares, Class 2 preferred shares, Class A preferred shares and Class B preferred shares.

The authorized number of Class A Shares is limited, subject to certain exceptions, to the lesser of that number of shares (i) currently issued and outstanding and (ii) that may be outstanding after any conversion of Class A Shares into Class B Non-Voting Shares.

Issued and outstanding

2015	2014		2015	2014
Number of securities			$	$

485,891,626	474,026,390		**3,500**	3,182

Class A Shares and Class B Non-Voting Shares

Class A Shares are convertible at any time into an equivalent number of Class B Non-Voting Shares. In the event that a take-over bid is made for Class A Shares, in certain circumstances, the Class B Non-Voting Shares are convertible into an equivalent number of Class A Shares.

Changes in Class A Share capital and Class B Non-Voting Share capital in 2015 and 2014 are as follows:

	Class A Shares		Class B Non-Voting Shares	
	Number	$	Number	$
September 1, 2013	22,520,064	2	430,306,542	2,660

August 31, 2014	22,420,064	2	439,606,326	2,887
Stock option exercises	–	–	5,871,621	152
Dividend reinvestment plan	–	–	5,993,615	166
August 31, 2015	22,420,064	2	451,471,562	3,205

Series A Preferred Shares

The Cumulative Redeemable Rate Reset Preferred Shares, Series A ("Series A Preferred Shares") represent a series of class 2 preferred shares and are classified as equity since redemption, at $25.00 per Series A Preferred Share, is at the Company's option and payment of dividends is at the Company's discretion.

Share transfer restriction

The Articles of the Company empower the directors to refuse to issue or transfer any share of the Company that would jeopardize or adversely affect the right of Shaw Communications Inc. or any subsidiary to obtain, maintain, amend or renew a license to operate a broadcasting undertaking pursuant to the Broadcasting Act (Canada).

[all amounts in millions of canadian dollars except share and per share amounts]

17. SHARE-BASED COMPENSATION AND AWARDS

Stock option plan

Under a stock option plan, directors, officers, employees and consultants of the Company are eligible to receive stock options to acquire Class B Non-Voting Shares with terms not to exceed ten years from the date of grant. Options granted up to August 31, 2015 vest evenly on the anniversary dates from the original grant date at either 25% per year over four years or 20% per year over five years. The options must be issued at not less than the fair market value of the Class B Non-Voting Shares at the date of grant. The maximum number of Class B Non-Voting Shares issuable under the plan may not exceed 52,000,000. As at August 31, 2015, 30,632,531 Class B Non-Voting Shares have been issued under the plan.

The changes in options are as follows:

	2015		2014	
	Number	Weighted average exercise price $	Number	Weighted average exercise price $
Outstanding, beginning of year	**16,477,563**	**22.34**	19,555,441	21.71
Granted	**2,911,250**	**28.29**	1,633,000	25.76
Forfeited	**(978,528)**	**25.12**	(1,279,330)	22.12
Exercised(1)	**(5,871,621)**	**21.94**	(3,431,548)	20.46
Outstanding, end of year	**12,538,664**	**23.70**	16,477,563	22.34

(1) The weighted average Class B Non-Voting Share price for the options exercised was $29.28.

The following table summarizes information about the options outstanding at August 31, 2015:

	Options outstanding			Options exerciseable	
Range of prices	Number outstanding	Weighted average remaining contractual life	Weighted average exercise price	Number exercisable	Weighted average exercise price
$16.30 – $19.99	2,696,237	3.89	19.15	2,615,737	19.14
$20.00 – $24.99	6,020,777	4.32	23.25	4,611,027	23.30
$25.00 – $30.87	3,821,650	8.31	27.61	616,650	26.26

The weighted average estimated fair value at the date of the grant for common share options granted for the year ended August 31, 2015 was $2.85 (2014 – $2.61) per option. The fair value of each option granted was estimated on the date of the grant using the Black-Scholes option pricing model with the following weighted-average assumptions:

	2015	2014
Dividend yield	**3.96%**	4.18%
Risk-free interest rate	**1.41%**	1.61%
Expected life of options	**6 years**	5 years
Expected volatility factor of the future expected market price of Class B Non-Voting Shares	**19.1%**	19.6%

Expected volatility has been estimated based on the historical share price volatility of the Company's Class B Non-Voting Shares.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2015 and 2014
[all amounts in millions of canadian dollars except share and per share amounts]

Deferred share unit plan

The Company has a DSU plan for its Board of Directors whereby directors can elect to receive their annual cash compensation, or a portion thereof, in DSUs. In addition, the Company may adjust and/or supplement directors' compensation with periodic grants of DSUs. A DSU is a right that tracks the value of one Class B Non-Voting Share. Holders will be entitled to a cash payout when they cease to be a director. The cash payout will be based on market value of a Class B Non-Voting Share at the time of payout. When cash dividends are paid on Class B Non-Voting Shares, holders are credited with DSUs equal to the dividend. DSUs do not have voting rights as there are no shares underlying the plan.

During 2015, $2 was recognized as compensation expense (2014 – $3). The carrying value and intrinsic value of DSUs at August 31, 2015 was $15 and $13, respectively (August 31, 2014 – $13 and $11, respectively).

Employee share purchase plan

The Company's ESPP provides employees with an incentive to increase the profitability of the Company and a means to participate in that increased profitability. Generally, all non-unionized full time or part time employees of the Company are eligible to enroll in the ESPP. Under the ESPP, eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the employee's contributions.

During 2015, $6 was recorded as compensation expense (2014 – $5).

Share appreciation rights

A subsidiary of the Company grants SARs to eligible employees of ViaWest. A SAR entitles the holder to the appreciation in value of one share of ViaWest over the exercise price over a period of time. SARs granted to ViaWest employees post-acquisition vest 25% per year over four years, have a 10 year contractual term and are cash settled. During 2015, $4 was recognized as compensation expense. The carrying value of SARs liabilities, including the SARs granted as partial consideration for the acquisition of ViaWest (see note 3), at August 31, 2015 was $13. At August 31, 2015, no SARs had vested.

18. EARNINGS PER SHARE

Earnings per share calculations are as follows:

	2015	**2014**
Numerator for basic and diluted earnings per share ($)		
Net income	**880**	887
Deduct: net income attributable to non-controlling interests in subsidiaries	**(24)**	(30)
Deduct: dividends on Series A Preferred Shares	**(14)**	(14)
Net income attributable to common shareholders	**842**	843
Denominator (millions of shares)		
Weighted average number of Class A Shares and Class B Non-Voting Shares for basic earnings per share	**468**	457
Effect of potentially dilutive securities(1)	**3**	2
Weighted average number of Class A Shares and Class B Non-Voting Shares for diluted earnings per share	**471**	459
Earnings per share ($)		
Basic	**1.80**	1.84
Diluted	**1.79**	1.84

(1) The earnings per share calculation does not take into consideration the potential dilutive effect of certain stock options since their impact is anti-dilutive. For the year ended August 31, 2015, 2,548,433 options were excluded from the diluted earnings per share calculation (2014 – 1,729,227).

Shaw Communications Inc.

Notes to the Consolidated Financial Statements

August 31, 2015 and 2014

[all amounts in millions of canadian dollars except share and per share amounts]

19. DIVIDENDS

Common share dividends

The holders of Class A Shares and Class B Non-Voting Shares are entitled to receive such dividends as the Board of Directors determines to declare on a share-for-share basis, as and when any such dividends are declared or paid. The holders of Class B Non-Voting Shares are entitled to receive during each dividend period, in priority to the payment of dividends on the Class A Shares, an additional dividend at a rate of $0.0025 per share per annum. This additional dividend is subject to proportionate adjustment in the event of future consolidations or subdivisions of shares and in the event of any issue of shares by way of stock dividend. After payment or setting aside for payment of the additional non-cumulative dividends on the Class B Non-Voting Shares, holders of Class A Shares and Class B Non-Voting Shares participate equally, share for share, as to all subsequent dividends declared.

Preferred share dividends

Holders of the Series A Preferred Shares are entitled to receive, as and when declared by the Company's Board of Directors, a cumulative quarterly fixed dividend yielding 4.50% annually for the initial period ending June 30, 2016. Thereafter, the dividend rate will be reset every five years at a rate equal to the then current 5-year Government of Canada bond yield plus 2.00%. Holders of Series A Preferred Shares will have the right, at their option, to convert their shares into Cumulative Redeemable Floating Rate Preferred Shares, Series B (the "Series B Preferred Shares"), subject to certain conditions, on June 30, 2016 and on June 30 every five years thereafter. The Series B Preferred Shares also represent a series of Class 2 preferred shares and holders will be entitled to receive cumulative quarterly dividends, as and when declared by the Company's Board of Directors, at a rate set quarterly equal to the then current three-month Government of Canada Treasury Bill yield plus 2.00%.

Dividend reinvestment plan

The Company has a Dividend Reinvestment Plan ("DRIP") that allows holders of Class A Shares and Class B Non-Voting Shares who are residents of Canada to automatically reinvest monthly cash dividends to acquire additional Class B Non-Voting Shares. Class B Non-Voting Shares distributed under the Company's DRIP are new shares issued from treasury at a 2% discount from the 5 day weighted average market price immediately preceding the applicable dividend payment date.

Dividends declared

The dividends per share recognized as distributions to common shareholders for dividends declared during the year ended August 31, 2015 and 2014 are as follows:

2015		2014	
Class A Voting Share	**Class B Non-Voting Share**	**Class A Voting Share**	**Class B Non-Voting Share**
1.1613	1.1638	1.0775	1.0800

The dividends per share recognized as distributions to holders of Series A Preferred Shares was $1.125 during each of the years ended August 31, 2015 and 2014.

On June 25, 2015, the Company declared dividends of $0.28125 per Series A Preferred Share which were paid on September 30, 2015. The total amount paid was $3 of which $1 was not recognized as at August 31, 2015.

On October 22, 2015, the Company declared dividends of $0.098542 per Class A Voting Share and $0.09875 per Class B Non-Voting Share payable on each of December 30, 2015, January 28, 2016 and February 26, 2016 to shareholders of record at the close of business on December 15, 2015, January 15, 2016 and February 12, 2016, respectively.

On October 22, 2015, the Company declared dividends of $0.28125 per Series A Preferred Share payable on December 31, 2015 to holders of record at the close of business on December 15, 2015.

20. OTHER COMPREHENSIVE INCOME (LOSS) AND ACCUMULATED OTHER COMPREHENSIVE LOSS

Components of other comprehensive income and the related income tax effects for 2015 are as follows:

	Amount $	Income taxes $	Net $
Items that may subsequently be reclassified to income			
Change in unrealized fair value of derivatives designated as cash flow hedges	**8**	**(2)**	**6**
Adjustment for hedged items recognized in the period	**(8)**	**2**	**(6)**
Unrealized loss on available-for-sale investment	**(3)**	**–**	**(3)**
Exchange differences on translation of a foreign operation	**184**	**–**	**184**
Exchange differences on translation of US debt hedging a foreign operation	**(74)**	**–**	**(74)**
	107	**–**	**107**
Items that will not be subsequently reclassified to income			
Remeasurements on employee benefit plans	**7**	**–**	**7**
	114	**–**	**114**

Components of other comprehensive loss and the related income tax effects for 2014 are as follows:

	Amount $	Income taxes $	Net $
Items that may subsequently be reclassified to income			
Change in unrealized fair value of derivatives designated as cash flow hedges	3	–	3
Adjustment for hedged items recognized in the period	(6)	1	(5)
Unrealized loss on available-for-sale investment	(2)	–	(2)
	(5)	1	(4)
Items that will not be subsequently reclassified to income			
Remeasurements on employee benefit plans	(58)	16	(42)
	(63)	17	(46)

Accumulated other comprehensive loss is comprised of the following:

	2015 $	2014 $
Items that may subsequently be reclassified to income		
Unrealized loss on available-for-sale investment	**(5)**	(2)
Foreign currency translation adjustments	**110**	–
Items that will not be subsequently reclassified to income		
Remeasurements on employee benefit plans	**(124)**	(131)
	(19)	(133)

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2015 and 2014
[all amounts in millions of canadian dollars except share and per share amounts]

21. OPERATING, GENERAL AND ADMINISTRATIVE EXPENSES AND RESTRUCTURING COSTS

	2015 $	2014 $
Employee salaries and benefits	**987**	945
Purchases of goods and services	**2,174**	2,092
	3,161	3,037

22. OTHER LOSSES

Other losses generally includes realized and unrealized foreign exchange gains and losses on US dollar denominated current assets and liabilities, gains and losses on disposal of property, plant and equipment and minor investments, and the Company's share of the operations of Burrard Landing Lot 2 Holdings Partnership. In the current year, the category also includes a write-down of $6 in respect of the property classified as held for sale, distributions of $27 from a venture capital fund investment, a write-down of $27 in respect of a private portfolio investment and additional proceeds of $15 related to the fiscal 2012 Shaw Court insurance claim while the comparative year includes a refund of $5 from the Canwest CCAA plan implementation fund and proceeds of $6 in respect of the aforementioned insurance claim. In addition, the current and prior year both include asset write-downs of $55 and $6, respectively. The write-down of assets in the current year related to assets in respect to development of a certain IPTV platform which the Company has now abandoned.

23. INCOME TAXES

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes. The Company's net deferred tax liability consists of the following:

	2015 $	2014 $
Deferred tax assets	**14**	26
Deferred tax liabilities	**(1,135)**	(1,105)
Net deferred tax liability	**(1,121)**	(1,079)

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2015 and 2014
[all amounts in millions of canadian dollars except share and per share amounts]

Significant changes recognized to deferred income tax assets (liabilities) are as follows:

	Property, plant and equipment and software assets $	Broadcast rights, licenses, customer relationships, trademark and brands $	Partnership income $	Non-capital loss carry-forwards $	Accrued charges $	Foreign exchange on long-term debt and fair value of derivative instruments $	Total $
Balance at September 1, 2013	(140)	(813)	(267)	6	73	(1)	(1,142)
Recognized in statement of income	(37)	(5)	107	–	(19)	–	46
Recognized in other comprehensive income	–	–	–	–	16	1	17
Balance at August 31, 2014	(177)	(818)	(160)	6	70	–	(1,079)
Recognized in statement of income	(25)	(21)	107	34	(33)	–	62
Recognized on ViaWest business acquisition	(9)	(142)	–	46	29	–	(76)
Recognized in other comprehensive income:							
Foreign currency translation adjustments	–	(29)	–	12	1	–	(16)
Actuarial gains/losses	–	–	–	–	(12)	–	(12)
Balance at August 31, 2015	**(211)**	**(1,010)**	**(53)**	**98**	**55**	**–**	**(1,121)**

The Company has capital loss carryforwards of approximately $61 for which no deferred income tax asset has been recognized in the accounts. These capital losses can be carried forward indefinitely.

The Company has taxable temporary differences associated with its investment in its subsidiaries. No deferred tax liabilities have been provided with respect to such temporary differences as the Company is able to control the timing of the reversal and such reversal is not probable in the foreseeable future.

The income tax expense differs from the amount computed by applying the statutory rates to income before income taxes for the following reasons:

	2015 $	2014 $
Current statutory income tax rate	**25.7%**	26.0%
Income tax expense at current statutory rates	**302**	311
Net increase (decrease) in taxes resulting from:		
Non-taxable portion of capital gains	**(24)**	(8)
Effect of tax rate changes	**34**	–
Recognition of previously unrecognized tax losses	**–**	(1)
Other	**(18)**	6
Income tax expense	**294**	308

Due to foreign operations, the statutory income tax rate for the Company decreased from 26.0% in 2014 to 25.7% in 2015.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements

[all amounts in millions of canadian dollars except share and per share amounts]

The components of income tax expense are as follows:

	2015 $	2014 $
Current income tax expense	**356**	355
Current income tax recovery from recognition of previously unrecognized tax losses	**–**	(1)
	356	354
Deferred tax recovery related to temporary differences	**(96)**	(46)
Deferred tax expense from tax rate changes	**34**	–
Income tax expense	**294**	308

24. BUSINESS SEGMENT INFORMATION

The Company's operating segments are Consumer, Business Network Services, Business Infrastructure Services and Media. The accounting policies of the segments are the same as those described in the summary of significant accounting policies. Management evaluates divisional performance based on revenue and operating income before charges such as restructuring costs and amortization. As a result of the restructuring undertaken late in 2014, the Company reorganized its residential and enterprise services, previously included in the Cable and Satellite segments, into Consumer and Business Network Services segments, respectively with no change to the Media operating segment. The Consumer division provides Cable telecommunications services including Video, Internet, WiFi and Digital Phone, and Satellite Video, to Canadian consumers. The Business Network Services segment provides data networking, video, voice and Internet services through a national fibre-optic backbone network and also provides satellite Video services, and fleet tracking services to North American businesses and public sector entities. Comparative results have been restated to reflect the new business segments. The Business Infrastructure Services segment was created with the acquisition of ViaWest on September 2, 2014, and provides data centre colocation, cloud and managed services to North American businesses. All of the Company's operations are substantially located in Canada with the exception of ViaWest which is located in the United States.

	2015 $	2014 $

Shaw Communications Inc.

Notes to the Consolidated Financial Statements

August 31, 2015 and 2014

[all amounts in millions of canadian dollars except share and per share amounts]

Capital expenditures

	2015 $	2014 $
Capital expenditures accrual basis		
Consumer and Business Network Services[2]	**870**	1,006
Business Infrastructure Services	**152**	–
Media	**16**	18
	1,038	1,024
Equipment costs (net of revenue)		
Consumer and Business Network Services	**84**	71
Capital expenditures and equipment costs (net)		
Consumer and Business Network Services[2]	**954**	1,077
Business Infrastructure Services	**152**	–
Media	**16**	18
	1,122	1,095
Reconciliation to Consolidated Statements of Cash Flows		
Additions to property, plant and equipment	**939**	976
Additions to equipment costs (net)	**72**	56
Additions to other intangibles	**79**	84
Total of capital expenditures and equipment costs (net) per Consolidated Statements of Cash Flows	**1,090**	1,116
Increase (decrease) in working capital and other liabilities related to capital expenditures	**49**	(7)
Decrease in customer equipment financing receivables	**12**	15
Less: Proceeds on disposal of property, plant and equipment	**(26)**	(26)
Less: Satellite equipment profit[2]	**(3)**	(3)
Total capital expenditures and equipment costs (net) reported by segments	**1,122**	1,095

(1) The Company does not report restructuring costs, amortization, interest or cash taxes on a segmental basis.

(2) The profit from the sale of satellite equipment is subtracted from the calculation of segmented capital expenditures and equipment costs (net) as the Company views the profit on sale as a recovery of expenditures on customer premise equipment

25. COMMITMENTS AND CONTINGENCIES

Commitments

(i) The Company owns and leases Ku-band and C-band transponders on the Anik F1R, Anik F2 and Anik G1 satellites. As part of the Ku-band transponder agreements with Telesat Canada, the Company is committed to paying annual transponder maintenance and license fees for each transponder from the time the satellite becomes operational for a period of 15 years.

(ii) The Company has various long-term operating commitments as follows:

	$
2016	635
2017 – 2020	948
Thereafter	388
	1,971

[all amounts in millions of canadian dollars except share and per share amounts]

Comprised of:	$
Program related agreements	551
Lease of transmission facilities, circuits and premises	643
Lease and maintenance of transponders	659
Exclusive rights to use intellectual property	61
Other (primarily maintenance and support contracts)	57
	1,971

Included in operating, general and administrative expenses are transponder maintenance expenses of $80 (2014 – $80) and rental expenses of $134 (2014 – $107).

(iii) At August 31, 2015, the Company had capital expenditure commitments in the normal course of business of $23 in respect of fiscal 2016.

(iv) As part of the CRTC decisions approving the acquisition of the broadcasting businesses in 2012 and 2011, the Company is required to contribute approximately $182 in new benefits to the Canadian broadcasting system over seven years. The obligations have been recorded in the income statement at fair value, being the sum of the discounted future net cash flows using appropriate discount rates. At August 31, 2015, the remaining expenditure commitments in respect of these obligations is $57 which will be funded over future years through fiscal 2019.

(v) In late fiscal 2014, the Company partnered with Rogers to form shomi, a new subscription video-on-demand service which launched in beta in early November 2014. The Company's remaining capital commitment is $58 of which, $9 was funded subsequent to year end.

Contingencies

The Company and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business. Although resolution of such matters cannot be predicted with certainty, management does not consider the Company's exposure to litigation to be material to these consolidated financial statements.

Guarantees

In the normal course of business the Company enters into indemnification agreements and has issued irrevocable standby letters of credit and commercial surety bonds with and to third parties.

Indemnities

Many agreements related to acquisitions and dispositions of business assets include indemnification provisions where the Company may be required to make payment to a vendor or purchaser for breach of contractual terms of the agreement with respect to matters such as litigation, income taxes payable or refundable or other ongoing disputes. The indemnification period usually covers a period of two to four years. Also, in the normal course of business, the Company has provided indemnifications in various commercial agreements, customary for the telecommunications industry, which may require payment by the Company for breach of contractual terms of the agreement. Counterparties to these agreements provide the Company with comparable indemnifications. The indemnification period generally covers, at maximum, the period of the applicable agreement plus the applicable limitations period under law.

The maximum potential amount of future payments that the Company would be required to make under these indemnification agreements is not reasonably quantifiable as certain indemnifications are not subject to limitation. However, the Company enters into indemnification agreements only when an assessment of the business circumstances would indicate that the risk of loss is remote. At August 31, 2015, management believes it is remote that the indemnification provisions would require any material cash payment.

The Company indemnifies its directors and officers against any and all claims or losses reasonably incurred in the performance of their service to the Company to the extent permitted by law.

[all amounts in millions of canadian dollars except share and per share amounts]

Irrevocable standby letters of credit and commercial surety bonds

The Company and certain of its subsidiaries have granted irrevocable standby letters of credit and commercial surety bonds, issued by high rated financial institutions, to third parties to indemnify them in the event the Company does not perform its contractual obligations. As of August 31, 2015, the guarantee instruments amounted to $4. The Company has not recorded any additional liability with respect to these guarantees, as the Company does not expect to make any payments in excess of what is recorded on the Company's consolidated financial statements. The guarantee instruments mature at various dates during fiscal 2016.

26. EMPLOYEE BENEFIT PLANS

Defined contribution pension plans

The Company has defined contribution pension plans for its non-union employees and certain union employees and, for the majority of these employees, contributes 5% of eligible earnings to the maximum amount deductible under the Income Tax Act. For union employees, the Company contributes amounts up to 9.8% of earnings to the individuals' registered retirement savings plans. Total pension costs in respect of these plans were $38 (2014 – $37) of which $26 (2014 – $24) was expensed and the remainder capitalized.

Defined benefit pension plans

The Company has two non-registered retirement plans for designated executives and senior executives and several registered pension plans for certain employees in the media business. The following is a summary of the accrued benefit liabilities recognized in the statement of financial position.

	2015 $	2014 $
Unregistered plans		
Accrued benefit obligation	**509**	493
Fair value of plan assets	**391**	330
	118	163
Registered plans		
Accrued benefit obligation	**173**	171
Fair value of plan assets	**172**	160
	1	11
Accrued benefit liabilities and deficit	**119**	174

The plans expose the Company to a number of risks, of which the most significant are as follows:

(i) Volatility in market conditions: The accrued benefit obligations are calculated using discount rates with reference to bond yields closely matching the term of the estimated cash flows while many of the assets are invested in other types of assets. If plan assets underperform these yields, this will result in a deficit. Changing market conditions in conjunction with discount rate volatility will result in volatility of the accrued benefit liabilities. To minimize some of the investment risk, the Company has established long-term funding targets where the time horizon and risk tolerance are specified.

(ii) Selection of accounting assumptions: The calculation of the accrued benefit obligations involves projecting future cash flows of the plans over a long time frame. This means that assumptions used can have a material impact on the statements of financial position and comprehensive income because in practice, future experience of the plans may not be in line with the selected assumptions.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2015 and 2014
[all amounts in millions of canadian dollars except share and per share amounts]

Non-registered pension plans

The Company provides a supplemental executive retirement plan ("SERP") for certain of its senior executives. Benefits under this plan are based on the employees' length of service and their highest three-year average rate of eligible pensionable earnings during their years of service. In 2012, the Company closed the plan to new participants and amended the plan to freeze base salary levels at August 31, 2012 for purposes of determining eligible pensionable earnings. The plan was also amended to provide funding of up to 90% of the accrued benefit obligation over a period of six years. Employees are not required to contribute to this plan. Subsequent to year end, the Company made contributions of $25 to a Retirement Compensation Arrangement Trust ("RCA").

The Company provides an executive retirement plan ("ERP") for certain executives not covered by the SERP. Benefits under this plan are comprised of defined contribution and defined benefit components and are based on the employees' length of service as well as final average earnings during their years of service. Employees are not required to contribute to this plan. Annually the employer is to fund 90% of the accrued benefit obligation. Subsequent to year end, the Company made contributions of $2 to an RCA.

The table below shows the change in benefit obligation and funding status and the fair value of plan assets.

	SERP $	ERP $	2015 Total $	SERP $	ERP $	2014 Total $
Accrued benefit obligation, beginning of year	**487**	**6**	**493**	404	2	406
Current service cost	**7**	**2**	**9**	9	3	12
Interest cost	**20**	**–**	**20**	19	–	19
Payment of benefits	**(13)**	**–**	**(13)**	(10)	–	(10)
Gain on settlement	**–**	**(1)**	**(1)**	–	–	–
Remeasurements:						
Effect of changes in demographic assumptions	**(11)**	**–**	**(11)**	1	–	1
Effect of changes in financial assumptions	**1**	**–**	**1**	51	1	52
Effect of experience adjustments	**11**	**–**	**11**	13	–	13
Accrued benefit obligation, end of year	**502**	**7**	**509**	487	6	493
Fair value of plan assets, beginning of year	**328**	**2**	**330**	302	–	302
Employer contributions	**55**	**2**	**57**	13	2	15
Interest income	**14**	**–**	**14**	15	–	15
Payment of benefits	**(13)**	**–**	**(13)**	(10)	–	(10)
Return on plan assets, excluding interest income	**3**	**–**	**3**	8	–	8
Fair value of plan assets, end of year	**387**	**4**	**391**	328	2	330
Accrued benefit liability and plan deficit, end of year	**115**	**3**	**118**	159	4	163

The weighted average duration of the defined benefit obligation of the SERP and ERP at August 31, 2015 is 15.3 years and 22.5 years, respectively.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2015 and 2014
[all amounts in millions of canadian dollars except share and per share amounts]

The underlying plan assets of the SERP and ERP at August 31, 2015 are invested in the following:

	SERP $	ERP $
Cash and cash equivalents	**215**	**2**
Fixed income securities	**93**	**1**
Equity securities – Canadian	**21**	**–**
Equity securities – Foreign	**58**	**1**
	387	**4**

All fixed income and equity securities have a quoted price in active market.

The tables below show the significant weighted-average assumptions used to measure the pension obligation and cost for the plans.

Accrued benefit obligation	2015 SERP %	2015 ERP %	2014 SERP %	2014 ERP %
Discount rate	**4.10**	**4.10**	4.00	4.00
Rate of compensation increase	**5.00[(1)]**	**3.00**	5.00[(1)]	3.00

Benefit cost for the year	2015 SERP %	2015 ERP %	2014 SERP %	2014 ERP %
Discount rate	**4.00**	**4.00**	4.75	4.75
Rate of compensation increase	**5.00[(1)]**	**3.00**	5.00[(1)]	3.00

(1) Applies only to incentive compensation component of eligible pensionable earnings.

The calculation of the accrued benefit obligation is sensitive to the assumptions above. A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2015 by $84. A one percentage point increase in the rate of compensation increase would have increased the accrued benefit obligation by $13.

When calculating the sensitivity of the defined benefit obligation to significant actuarial assumptions, the present value of the defined benefit obligation has been calculated using the projected benefit method which is the same method that is applied in calculating the defined benefit liability recognized in the statement of financial position. The sensitivity analysis presented above may not be representative of the actual change in the accrued benefit obligation as it is unlikely that the change in assumptions would occur in isolation of one another as some assumptions may be correlated.

The net pension benefit plan expense, which is included in employee salaries and benefits expense, is comprised of the following components:

	SERP $	ERP $	2015 Total $	SERP $	ERP $	2014 Total $
Current service cost	**7**	**2**	**9**	9	3	12
Interest cost	**20**	**–**	**20**	19	–	19
Interest income	**(14)**	**–**	**(14)**	(15)	–	(15)
Pension expense	**13**	**2**	**15**	13	3	16

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2015 and 2014
[all amounts in millions of canadian dollars except share and per share amounts]

Registered pension plans

The Company has a number of funded defined benefit pension plans which provide pension benefits to certain unionized and non-unionized employees in the media business. Benefits under these plans are based on the employees' length of service and final average salary. These plans are regulated by the Office of the Superintendent of Financial Institutions, Canada in accordance with the provisions of the Pension Benefits Standards Act and Regulations. The regulations set out minimum standards for funding the plans.

The table below shows the change in the benefit obligations, change in fair value of plan assets and the funded status of these defined benefit plans.

	2015 $	2014 $
Accrued benefit obligation, beginning of year	**171**	152
Current service cost	**6**	5
Interest cost	**7**	7
Employee contributions	**1**	1
Payment of benefits	**(8)**	(10)
Remeasurements:		
Effect of changes in demographic assumptions	**–**	1
Effect of changes in financial assumptions	**(1)**	15
Effect of experience adjustments	**(3)**	–
Accrued benefit obligation, end of year	**173**	171
Fair value of plan assets, beginning of year	**160**	133
Employer contributions	**10**	12
Employee contributions	**1**	1
Interest income	**7**	7
Payment of benefits	**(8)**	(10)
Administrative expenses paid from plan assets	**(1)**	(1)
Return on plan assets, excluding interest income	**3**	18
Fair value of plan assets, end of year	**172**	160
Accrued benefit liability and plan deficit, end of year	**1**	11

The weighted average duration of the defined benefit obligation at August 31, 2015 is 16.3 years.

The plan assets at August 31, 2015 are comprised of investments in pooled funds as follows:

	$
Equity – Canadian	**46**
Equity – Foreign	**27**
Fixed income – Canadian	**99**
	172

The underlying securities in the pooled funds have quoted prices in an active market.

[all amounts in millions of canadian dollars except share and per share amounts]

The tables below show the significant weighted-average assumptions used to measure the pension obligation and cost for these plans.

Accrued benefit obligation	2015 %	2014 %
Discount rate	**4.10**	4.09
Rate of compensation increase	**3.00**	3.00

Benefit cost for the year	2015 %	2014 %
Discount rate	**4.09**	4.84
Rate of compensation increase	**3.00**	3.50

The calculation of the accrued benefit obligation is sensitive to the assumptions above. A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2015 by $31. A one percentage point increase in the rate of compensation increase would have increased the accrued benefit obligation by $6.

When calculating the sensitivity of the defined benefit obligation to significant actuarial assumptions, the present value of the defined benefit obligation has been calculated using the projected benefit method which is the same method that is applied in calculating the defined benefit liability recognized in the statement of financial position. The sensitivity analysis presented above may not be representative of the actual change in the accrued benefit obligation as it is unlikely that the change in assumptions would occur in isolation of one another as some assumptions may be correlated.

The net pension benefit plan expense, which is included in employee salaries and benefits expense, is comprised of the following components:

	2015 $	2014 $
Current service cost	**6**	5
Interest cost	**7**	7
Interest income	**(7)**	(7)
Administrative expenses	**1**	1
Pension expense	**7**	6

[all amounts in millions of canadian dollars except share and per share amounts]

Other benefit plans

The Company has post-employment benefits plans that provide post-retirement health and life insurance coverage to certain executive level retirees and retirees in the media business and are funded on a pay-as-you-go basis. The table below shows the change in the accrued post-retirement obligation which is recognized in the statement of financial position.

	2015 $	2014 $
Accrued benefit obligation and plan deficit, beginning of year	**18**	15
Current service cost	**2**	1
Interest cost	**1**	1
Payment of benefits	**(1)**	(1)
Remeasurements:		
Effect of changes in demographic assumptions	**2**	–
Effect of changes in financial assumptions	**(1)**	2
Effect of experience adjustments	**1**	–
Accrued benefit obligation and plan deficit, end of year	**22**	18

The weighted average duration of the benefit obligation at August 31, 2015 is 17.6 years.

The post-retirement benefit plan expense, which is included in employee salaries and benefits expense, is $3 (2014 – $2) and is comprised of current service and interest cost.

The discount rates used to measure the post-retirement benefit cost for the year and the accrued benefit obligation as at August 31, 2015 were 4.00% and 4.20%, respectively (2014 – 4.75% and 4.00%, respectively). A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2015 by $4.

Employer contributions

The Company's estimated contributions to the defined benefit plans in fiscal 2016 are $37.

27. RELATED PARTY TRANSACTIONS

Controlling shareholder

The majority of the Class A Shares are indirectly held by the Shaw Family Living Trust ("SFLT"). The sole trustee of SFLT is a private company owned and controlled by JR Shaw and has a Board of Directors which includes JR Shaw and members of his family (the "Shaw Family Group"). The Shaw Family Group includes Directors and Senior Executive and Corporate Officers of the Company.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements

Key management personnel and Board of Directors

Key management personnel consist of the most senior executive team and along with the Board of Directors have the authority and responsibility for planning, directing and controlling the activities of the Company.

Compensation

The compensation expense of key management personnel and Board of Directors is as follows:

	2015 $	2014 $
Short-term employee benefits	**38**	42
Post-employment pension benefits	**15**	17
Retirement benefits	**17**	–
Share-based compensation	**1**	3
	71	62

Transactions

The Company paid $2 (2014 – $2) for collection, installation and maintenance services to a company controlled by a Director of the Company.

During the year, the Company paid $6 (2014 – $7) for remote control units to a supplier where Directors of the Company hold positions on the supplier's board of directors.

During the year, network fees of $12 (2014 – $12) were paid to a programmer where a Director of the Company holds a position on the programmer's board of directors.

At August 31, 2015, the Company had $3 owing in respect of these transactions (2014 – $3).

Other related parties

The Company has entered into certain transactions and agreements in the normal course of business with certain of its related parties. These transactions are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties.

Corus

The Company and Corus are subject to common voting control. During the year, network fees of $113 (2014 – $120), advertising fees of $1 (2014 – $1) and programming fees of $1 (2014 – $1) were paid to various Corus subsidiaries and entities subject to significant influence. In addition, the Company provided administrative, advertising and other services for $1 (2014 – $1), uplink of television signals for $6 (2014 – $5), Internet services and lease of circuits for $1 (2014 – $1) and programming content of $2 (2014 – $1). At August 31, 2015, the Company had a net of $18 owing in respect of these transactions (2014 – $20) and commitments in respect of network program agreements of $7 which are included in the amounts disclosed in note 25.

The sale of the Company's two French-language channels, Historia and Series+, to Corus closed in 2014 (see note 3). In conjunction with the closing, the Company settled the non-interest bearing promissory note of $48 that was owing to Corus in respect of ABC Spark and Food Canada Network transactions that had closed in 2013.

The Company provided Corus with television advertising spots in return for radio and television advertising. No monetary consideration was exchanged for these transactions and no amounts were recorded in the accounts.

Burrard Landing Lot 2 Holdings Partnership

During the year, the Company paid $12 (2014 – $10) to the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, BC, is the Company's headquarters for its lower mainland operations. At August 31, 2015, the Company had a remaining commitment of $93 in respect of the office space lease which is included in the amounts disclosed in note 25.

Joint arrangement

During the year, the Company providing programming content and advertising services of $18 and paid $6 in subscriber fees. At August 31, 2015, the Company had a net receivable of $3 in respect of these transactions.

28. FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

Fair values

The fair value of financial instruments has been determined as follows:

(i) Current assets and current liabilities

The fair value of financial instruments included in current assets and current liabilities approximates their carrying value due to their short-term nature.

(ii) Investments and other assets and Other long-term assets

The fair value of publicly traded investments is determined by quoted market prices. Investments in private entities which do not have quoted market prices in an active market and whose fair value cannot be readily measured are carried at cost. No published market exists for such investments. These equity investments have been made as they are considered to have the potential to provide future benefit to the Company and accordingly, the Company has no current intention to dispose of these investments in the near term. The fair value of long-term receivables approximates their carrying value as they are recorded at the net present values of their future cash flows, using an appropriate discount rate.

Shaw Communications Inc.

Notes to the Consolidated Financial Statements

August 31, 2015 and 2014

[all amounts in millions of canadian dollars except share and per share amounts]

(iii) Long-term debt

The carrying value of long-term debt is at amortized cost based on the initial fair value as determined at the time of issuance or at the time of a business acquisition. The fair value of publicly traded notes is based upon current trading values. The fair value of finance lease obligations is determined by discounting future cash flows using a rate for loans with similar terms, conditions and maturity dates. The carrying value of bank credit facilities approximates fair value as the debt bears interest at rates that fluctuate with market rates. Other notes and debentures are valued based upon current trading values for similar instruments.

(vi) Other long-term liabilities

The fair value of program rights payable, estimated by discounting future cash flows, approximates their carrying value. The fair value of contingent consideration arising from a business acquisition is determined by calculating the present value of the probability weighted assessment of the likelihood that revenue targets will be met and the estimated timing of such payments.

(v) Derivative financial instruments

The fair value of US currency forward purchase contracts is determined using an estimated credit-adjusted mark-to-market valuation using observable forward exchange rates at the end of reporting periods and contract forward rates.

The carrying values and estimated fair values of an investment in a publicly traded company, long-term debt and a contingent liability are as follows:

	August 31, 2015		August 31, 2014	
	Carrying value $	Estimated fair value $	Carrying value $	Estimated fair value $
Assets				
Investment in publicly traded company[1]	**4**	**4**	7	7
Liabilities				
Long-term debt (including current portion)[2]	**5,669**	**6,307**	4,690	5,390
Contingent liability[3]	**2**	**2**	–	–

(1) Level 1 fair value – determined by quoted market prices.

(2) Level 2 fair value – determined by valuation techniques using inputs based on observable market data, either directly or indirectly, other than quoted prices.

(3) Level 3 fair value – determined by valuation techniques using inputs that are not based on observable market data.

Risk management

The Company is exposed to various market risks including currency risk and interest rate risk, as well as credit risk and liquidity risk associated with financial assets and liabilities. The Company has designed and implemented various risk management strategies, discussed further below, to ensure the exposure to these risks is consistent with its risk tolerance and business objectives.

Market risk

Market risk is the risk that the fair value or cash flows of a financial instrument will fluctuate as a result of changes in market prices, including foreign exchange and interest rates, the Company's share price and market price of publicly traded investments.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2015 and 2014
[all amounts in millions of canadian dollars except share and per share amounts]

Currency risk

Certain of the Company's capital expenditures and equipment costs in respect of its Canadian operations are incurred in US dollars, while its revenue is primarily denominated in Canadian dollars. Decreases in the value of the Canadian dollar relative to the US dollar could have an adverse effect on the Company's cash flows. To mitigate some of the uncertainty in respect of capital expenditures and equipment costs, the Company regularly enters into forward contracts in respect of US dollar commitments. With respect to 2015, the Company entered into forward contracts to purchase US $100 over a period of 10 months commencing in November 2014 at an average exchange rate of 1.1586 Cdn. At August 31, 2015 the Company had no forward contracts in respect of US dollar commitments.

The Company's net investment in its foreign operation is exposed to market risk attributable to fluctuations in foreign currency exchange rates in respect of changes in the value of the Canadian dollar versus the US dollar. This risk is partially mitigated as a portion of the purchase price of ViaWest was borrowed in US dollars under the Company's credit facility. At August 31, 2015, the investment in ViaWest amounted to US $812. The exchange rate used to convert US dollars into Canadian dollars for the statement of financial position at August 31, 2015 was $1.3157 Cdn. The impact of a 10% change in the exchange rate would change other comprehensive income by $63.

Interest rate risk

Due to the capital-intensive nature of its operations, the Company utilizes long-term financing extensively in its capital structure. The primary components of this structure are a banking facility and various Canadian senior notes with varying maturities issued in the public markets as more fully described in note 13.

Interest on the Company's unsecured banking facility and ViaWest's credit facilities are based on floating rates, while the senior notes are primarily fixed-rate obligations. The Company utilizes its banking facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. As at August 31, 2015, 78% of the Company's consolidated long-term debt was fixed with respect to interest rates.

Sensitivity analysis

The Company held no foreign exchange forward contracts at August 31, 2015. A portion of the Company's accounts receivable and accounts payable and accrued liabilities in respect of its Canadian operations is denominated in US dollars; however, due to their short-term nature, there is no significant market risk arising from fluctuations in foreign exchange rates.

Interest on the Company's banking and credit facilities are based on floating rates and the variable rate senior notes are based on CDOR. There is no significant market risk arising from interest rates fluctuating by reasonably possible amounts from their actual values at August 31, 2015.

A change of one dollar in the market price per share of the Company's publicly traded investment would change other comprehensive loss by $1 at August 31, 2015.

At August 31, 2015, a one dollar change in the Company's Class B Non-Voting Shares would not have had an impact on net income in respect of the Company's DSU plan.

Credit risk

Accounts receivable in respect of the Consumer, Business Networks Services and Business Infrastructure Services divisions are not subject to any significant concentrations of credit risk due to the Company's large and diverse customer bases. For the Media division, a significant portion of sales are made to advertising agencies which results in some concentration of credit risk. At August 31, 2015, approximately 72% (2014 – 61%) of the $186 (2014 – $201) of advertising receivables is due from the ten largest accounts. The largest amount due from an advertising agency is $20 (2014 – $20) which is approximately 11% (2014 – 10%) of advertising receivables. As at August 31, 2015, the Company had accounts receivable of $468 (August 31, 2014 – $493), net of the allowance for doubtful accounts of $26 (August 31, 2014 – $32). The Company maintains an allowance for doubtful accounts for the estimated losses resulting from the inability of its customers to make required payments. In determining the allowance, the Company considers factors such as the number of days the customer account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. As at August 31, 2015, $121 (August 31, 2014 – $129) of accounts receivable is considered to be past due, defined as amounts outstanding past normal credit terms and conditions. Uncollectible accounts receivable are charged against the allowance account based on the age of the account and payment history. The Company believes that its allowance for doubtful accounts is sufficient to reflect the related credit risk.

[all amounts in millions of canadian dollars except share and per share amounts]

The Company mitigates the credit risk of advertising receivables by performing initial and ongoing credit evaluations of advertising customers. Credit is extended and credit limits are determined based on credit assessment criteria and credit quality. In addition, the Company mitigates credit risk of subscriber receivables through advance billing and procedures to downgrade or suspend services on accounts that have exceeded agreed credit terms and routinely assesses the financial strength of its business customers through periodic review of payment practices.

Credit risks associated with US currency contracts arise from the inability of counterparties to meet the terms of the contracts. In the event of non-performance by the counterparties, the Company's accounting loss would be limited to the net amount that it would be entitled to receive under the contracts and agreements. In order to minimize the risk of counterparty default under its swap agreements, the Company assesses the creditworthiness of its swap counterparties.

Liquidity risk

Liquidity risk is the risk that the Company will experience difficulty in meeting obligations associated with financial liabilities. The Company manages its liquidity risk by monitoring cash flow generated from operations, available borrowing capacity, and by managing the maturity profiles of its long-term debt.

The Company's undiscounted contractual maturities as at August 31, 2015 are as follows:

	Accounts payable and accrued liabilities[1] $	Other long-term liabilities $	Long-term debt repayable at maturity $	Interest payments $
Within one year	887	–	609	296
1 to 3 years	–	19	417	526
3 to 5 years	–	2	1,705	461
Over 5 years	–	–	2,995	2,042
	887	21	5,726	3,325

(1) Includes accrued interest and dividends of $229.

Shaw Communications Inc.

29. CONSOLIDATED STATEMENTS OF CASH FLOWS

Additional disclosures with respect to the Consolidated Statements of Cash Flows are as follows:

(i) Funds flow from operations

	2015 $	2014 $
Net income	**880**	887
Adjustments to reconcile net income to funds flow from operations:		
Amortization	**899**	768
Program rights	**15**	(10)
Deferred income tax recovery	**(62)**	(46)
CRTC benefit obligation funding	**(31)**	(58)
Gain on sale of media assets *[note 3]*	**–**	(49)
Share-based compensation	**4**	3
Defined benefit pension plans	**(45)**	(5)
Accretion of long-term liabilities and provisions	**3**	6
Equity loss of a joint venture	**56**	–
Gain on sale of wireless spectrum licenses *[note 3]*	**(158)**	–
Impairment of goodwill *[note 10]*	**15**	–
Debt retirement costs *[note 13]*	**–**	8
Write-down of assets *[note 22]*	**55**	6
Write-down of property held for sale *[note 22]*	**6**	–
Write-down of investment *[note 22]*	**27**	–
Distributions from a venture capital fund investment *[note 22]*	**(27)**	–
Other	**–**	14
Funds flow from operations	**1,637**	1,524

(ii) Interest and income taxes paid and interest and distributions received and classified as operating activities are as follows:

	2015 $	2014 $
Interest paid	**283**	283
Income taxes paid (net of refunds)	**488**	137
Interest received	**2**	5

(iii) Non-cash transactions

The Consolidated Statements of Cash Flows exclude the following non-cash transactions:

	2015 $	2014 $
Issuance of Class B Non-Voting Shares:		
Dividend reinvestment plan *[note 19]*	**166**	146
Non-monetary exchange:		
Exchange of fibre assets for network capacity leases	**–**	5
Lease transactions	**2**	5

[all amounts in millions of canadian dollars except share and per share amounts]

30. CAPITAL STRUCTURE MANAGEMENT

The Company's objectives when managing capital are:

(i) to maintain a capital structure which optimizes the cost of capital, provides flexibility and diversity of funding sources and timing of debt maturities, and adequate anticipated liquidity for organic growth and strategic acquisitions;

(ii) to maintain compliance with debt covenants; and

(iii) to manage a strong and efficient capital base to maintain investor, creditor and market confidence.

The Company defines capital as comprising all components of shareholders' equity (other than non-controlling interests and amounts in accumulated other comprehensive income/loss), long-term debt (including the current portion thereof), and bank indebtedness less cash and cash equivalents.

	August 31, 2015 $	August 31, 2014 $
Cash and cash equivalents	**(398)**	(637)
Long-term debt repayable at maturity	**5,726**	4,740
Share capital	**3,500**	3,182
Contributed surplus	**45**	64
Retained earnings	**1,883**	1,589
	10,756	8,938

The Company manages its capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of underlying assets. The Company may also from time to time change or adjust its objectives when managing capital in light of the Company's business circumstances, strategic opportunities, or the relative importance of competing objectives as determined by the Company. There is no assurance that the Company will be able to meet or maintain its currently stated objectives.

On December 5, 2014 Shaw received the approval of the TSX to renew its normal course issuer bid to purchase its Class B Non-Voting Shares for a further one year period. The Company is authorized to acquire up to 20,000,000 Class B Non-Voting Shares during the period December 9, 2014 to December 8, 2015.

The Company's credit facilities are subject to covenants which include maintaining minimum or maximum financial ratios, including total debt to operating cash flow/adjusted earnings before interest, taxes, depreciation and amortization, and operating cash flow to fixed charges. At August 31, 2015, the Company is in compliance with these covenants and based on current business plans and economic conditions, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants.

The Company's overall capital structure management strategy remains unchanged from the prior year.

31. SUBSEQUENT EVENT

On November 16, 2015, ViaWest entered into an agreement to acquire 100% of the outstanding shares in INetU, Inc. for US $162. INetU, Inc. is a solutions provider for public, private and hybrid cloud environments in addition to offering managed security and compliance services. The transaction is expected to close by December 31, 2015.

Shareholders' Information
August 31, 2015

Share Capital and Listings

The Company is authorized to issue a limited number of Class A participating and an unlimited number of Class B Non-Voting participating shares. The authorized number of Class A Shares is limited, subject to certain exceptions, to the lesser of that number of such shares (i) currently issued and outstanding; and (ii) that may be outstanding after any conversion of Class A Shares into Class B Non-Voting Shares. At August 31, 2015, the Company had 22,420,064 Class A Shares and 451,471,562 Class B Non-Voting Shares outstanding. The Class A Shares are listed on the TSX Venture Stock Exchange under the symbol SJR.A. The Class B Non-Voting Shares are listed on the Toronto Stock Exchange under SJR.B and on the New York Stock Exchange under the symbol SJR. The Series A Preferred Shares are listed on the Toronto Stock Exchange under the symbol SJR.PR.A.

Trading Range of Class B Non-Voting Shares on the Toronto Stock Exchange

Quarter	High Close	Low Close	Total Volume
September 1, 2014 to August 31, 2015			
First	30.89	26.92	55,482,111

Shaw)

The Annual General Meeting of Shareholders will be held on January 12, 2017 at 11:00 am (Mountain Time) at the Shaw Court Building, 630 – 3rd Avenue SW, Calgary, Alberta.

Shaw Communications Inc.
Report to Shareholders
August 31, 2016

Dear Fellow Shareholders:

Through bold moves that will help us stay ahead of Canadians' demand for connectivity, we are building a stronger future for Shaw that will drive long-term value for all stakeholders. We continue to make critical investments for growth and deepen our strategic relationships with best-in-class partners, while we capitalize on operational efficiencies. Following a year full of transformative change, intense competition and a slowed economic environment, we are pleased to report solid financial results, driven by our focus to deliver exceptional customer experiences.

In 2016, Shaw repositioned itself for the future as a leading enhanced connectivity provider that will connect our customers to the world and everything in it. By adding the critical wireless platform to our existing fibre and coax networks, we can build and deliver a world-class converged network. We have taken important steps to make our broadband and Wi-Fi products even stronger, which include enhancing the availability of the best possible speeds at the best possible prices right across our footprint. We are also delivering innovative ways for Canadians to find and enjoy their favourite content on all devices. For small and medium sized businesses, we have expanded our products and services with innovative new offerings that are tailored to this segment of the market.

Strategic Transformation

With the completion of two transformative transactions in 2016 and other significant strategic initiatives and acquisitions in recent years, we have strengthened the growth profile of Shaw. Our growth segments, comprised of Wireless, Business Network Services and Business Infrastructure Services will continue to be key contributors to our success.

In March 2016, we completed the acquisition of WIND Mobile for approximately $1.6 billion, opening the door to wireless product offerings and reinforcing our commitment to providing customers with options and choice. The acquisition also provides Shaw with a solid foundation of spectrum holdings, management expertise and existing subscriber scale, which accelerates, and lowers the risk of, Shaw's entry into the Canadian wireless market in comparison to building our own wireless platform. We have made significant progress on our path towards an LTE Advanced network as we continue to integrate our fibre, coax, Wi-Fi and wireless facilities to create a converged network that is capable of delivering a seamless customer experience.

Our transformational shift was completed in April 2016 with the sale of Shaw Media Inc. ("Shaw Media") to Corus Entertainment Inc. ("Corus") for total consideration of approximately $2.65 billion. This transaction crystallized value creation for Shaw shareholders since acquiring the broadcasting business of Canwest Global in 2010. As part of the transaction, Shaw maintained a substantial equity stake in Corus, allowing Shaw shareholders to participate in the upside potential resulting from the combination of Shaw Media and Corus.

Operations

We enter fiscal 2017 with a solid foundation in place to execute on our strategic initiatives. We continue to improve our network through the ongoing implementation of DOCSIS 3.1 and use this to our advantage in the marketplace. The July launch of WideOpen Internet 150 builds upon the investments made over the past several years to enhance the quality and capacity of our network. WideOpen Internet 150 became available to a wide customer base in the fourth quarter, giving more than 90% of our footprint access to an attractive balance of top-tier speeds and affordability. Early in the fiscal year, we enhanced the speeds of our Shaw Go WiFi network six-fold for our mid-tier and top-tier Internet customers to enjoy at approximately 85,000 hotspots across western Canada.

Customers of our Consumer and Business Network Services divisions continued to benefit from the combination of our network investments and our commitment to bring to market innovative products and services that are industry solutions led by global partners with scale. In January 2016, we launched FreeRange TV, a mobile destination for our 2.6 million video customers that combines their TV and content subscriptions in one place, and provides on-the-go access to live and on-demand content. FreeRange TV uses Comcast's world-class X1 platform – the latest in cloud-based and mobile video technology – and represents the first step in the evolution of Shaw's new video product roadmap.

Business Network Services continued to make strong advances in becoming trusted advisors to small and medium sized businesses. Applying a managed services strategy developed in partnership with Broadsoft, Cisco and Meraki, we have launched SmartVoice, SmartWiFi, and SmartSecurity, making it easy for these businesses to harness technology advances for their connectivity and IT needs.

Shaw Communications Inc.
Report to Shareholders
August 31, 2016

Our Business Infrastructure Services division continues its industry leadership in providing hybrid IT solutions, including colocation, cloud and managed services, by leveraging ViaWest's established track record. We have expanded our capacity and geographic reach with the acquisition of INetU and the opening of ViaWest's newest data centre in the Dallas suburb of Plano, Texas.

Growth

As a leading enhanced connectivity provider, the growth potential for our business is compelling. Customers are becoming more connected in more ways – from smart phones and tablets to connected appliances and vehicles, to virtual offices. As our customers spend more of their time in the digital environment, they increasingly need and expect an always-on, seamless connectivity experience. This requires multiple technological platforms that are combined effectively. Shaw is in a strong position to grow as we develop a world-class converged network and provide this seamless experience.

The marketplace continues to evolve rapidly, spurred by the possibilities of the Internet and the creativity it fosters. Our strategy is to drive growth in each of our businesses by leveraging the opportunities available to us, including our network platforms, our partnerships and our focus to deliver exceptional customer experiences.

Our video and network technology and product roadmaps will ensure we have the best experiences available for our customers. By the end of fiscal 2017, we expect to have the X1 set-top box available across western Canada and DOCSIS 3.1 implemented throughout our wireline network, enabling Internet speeds of 1GB and more. Our wireless offering will also strengthen as we complete the LTE Advanced upgrade in major metropolitan centres in Ontario, British Columbia and Alberta.

People

We are humbled that millions of people across Canada trust Shaw and our people every day to help them stay connected to their communities and the world. Each year, we are also grateful for the opportunity to support hundreds of charitable organizations around the country to promote the ongoing wellness and well-being of our kids and youth.

Because our people serve customers who are their families, their neighbours and their friends, we are deeply touched when difficulty strikes one of our communities, as it did when wildfires hit the northern Alberta city of Fort McMurray in May 2016. While the operational challenges were daunting, particularly in the frightening early days of the crisis, we were grateful for the safety of all our staff and their families in the area. We are also proud that our network remained operative for the first responders and initial re-entrants into the community and that Shaw Go WiFi was available for free for all Northern Alberta residents to access during and for several months following the crisis. As this city rebuilds and recovers, Shaw is proud to stand with the community, our customers and our families.

Our industry is changing quickly. We are driven to ensure that our customers and our communities can embrace and accelerate change in this always-on, always-connected environment, whether by growing a small business or staying in touch with friends and family.

Across the country, thousands of Shaw employees deliver exceptional experiences to our customers, and we thank them for their dedication and contributions to our company's ongoing success. We would also like to recognize our exceptional management team for its unwavering commitment to putting our customers at the centre of every decision. Finally, we would like to thank the members of our Board of Directors for their continued insight, guidance, and counsel to help navigate the opportunities in front of us.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

November 28, 2016

FORWARD

Tabular dollar amounts are in millions of Canadian dollars, except per share amounts or unless otherwise indicated. This Management's Discussion and Analysis should be read in conjunction with the Consolidated Financial Statements. The terms "we," "us," "our," "Shaw" and "the Company" refer to Shaw Communications Inc. and, as applicable, Shaw Communications Inc. and its direct and indirect subsidiaries as a group.

CAUTION CONCERNING FORWARD LOOKING STATEMENTS

Statements included in this Management's Discussion and Analysis that are not historic constitute "forward-looking statements" within the meaning of applicable securities laws. Such statements include, but are not limited to:

- statements about future capital expenditures;
- asset acquisitions and dispositions;
- cost efficiencies;
- financial guidance for future performance;
- business strategies and measures to implement strategies;
- statements about Company's equity investments, joint ventures and partnership arrangements;
- competitive strengths; and
- expansion and growth of Shaw's business and operations and other goals and plans.

They can generally be identified by words such as "anticipate", "believe", "expect", "plan", "intend", "target", "goal" and similar expressions (although not all forward-looking statements contain such words). All of the forward-looking statements made in this report are qualified by these cautionary statements.

Forward-looking statements are based on assumptions and analyses made by the Company in light of its experience and its perception of historical trends, current conditions and expected future developments as well as other factors it believes are appropriate in the circumstances as of the current date. The Company's management believes that its assumptions and analysis in this Management's Discussion and Analysis are reasonable and that the expectations reflected in the forward looking statements contained herein are also reasonable based on the information available on the date such statements are made and the process used to prepare the information. These assumptions, many which are confidential, include but are not limited to:

- general economic conditions;
- interest;
- income tax and exchange rates;
- technology deployment;
- content and equipment costs;
- industry structure;
- conditions and stability;
- government regulation; and
- the integration of recent acquisitions.

You should not place undue reliance on any forward-looking statements. Many factors, including those not within the Company's control, may cause the Company's actual results to be materially different from the views expressed or implied by such forward-looking statements, including, but not limited to:

- general economic, market and business conditions;
- changes in the competitive environment in the markets in which Shaw operates and from the development of new markets for emerging technologies;
- industry trends, technological developments, and other changing conditions in the entertainment, information and communications industries;
- the Company's ability to execute its strategic plans and capital projects;
- the Company's ability to achieve cost efficiencies;
- technology, cyber security and reputational risks;
- opportunities that may be presented to and pursued by the Company;

- changes in laws, regulations and decisions by regulators that affect the Company or the markets in which it operates;
- the Company's status as a holding company with separate operating subsidiaries; and
- other factors described in this report under the heading "Known events, trends, risks and uncertainties".

The foregoing is not an exhaustive list of all possible factors.

Should one or more of these risks materialize, or should assumptions underlying the forward-looking statements prove incorrect, actual results may vary materially from those described herein.

The Company provides certain financial guidance for future performance as the Company believes that certain investors, analysts and others utilize this and other forward-looking information in order to assess the Company's expected operational and financial performance and as an indicator of its ability to service debt and pay dividends to shareholders. The Company's financial guidance may not be appropriate for this or other purposes.

Any forward-looking statement speaks only as of the date on which it was originally made and, except as required by law, Shaw expressly disclaims any obligation or undertaking to disseminate any updates or revisions to any forward-looking statement to reflect any change in related assumptions, events, conditions or circumstances. All forward looking statements contained in this Management's Discussion and Analysis are expressly qualified by this statement.

(1) Internet subscribers at August 31, 2015 have been restated to reclassify 2,081 customers from Consumer to Business Network Services.

(2) Wireless subscribers (or Revenue Generating Units ("RGUs") – Recurring RGUs (e.g. cellular phone, smartphone, tablet or mobile Internet device) that has access to the wireless network for voice and/or data communications, whether Prepaid or Postpaid. Prepaid subscribers include RGUs where the account is within 90 days of the prepaid credits expiring. See Key Performance Drivers.

Our Strategy

At Shaw, we are focused to deliver long-term growth and connect customers to the world through a best in class seamless connectivity experience.

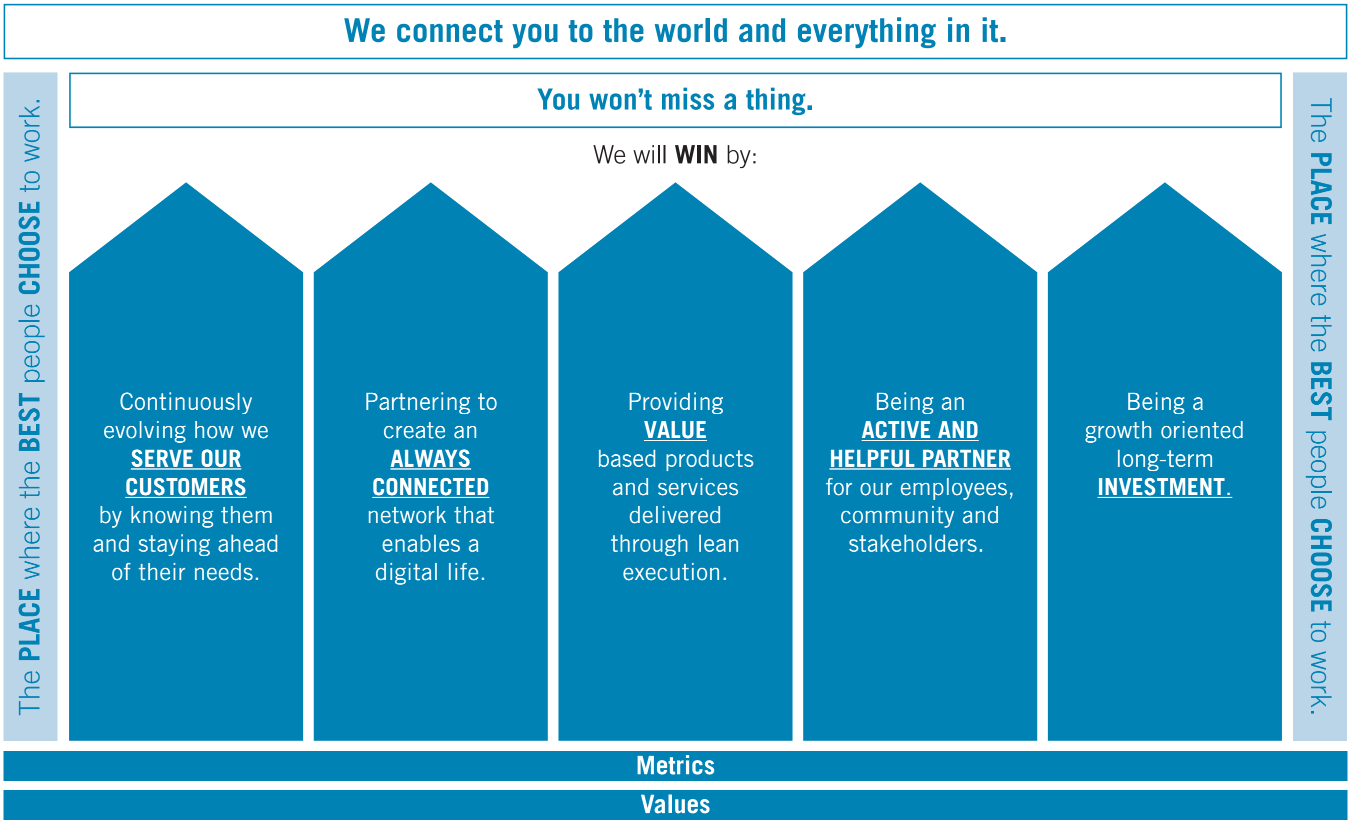
In 2016, Shaw positioned itself as a leading enhanced connectivity provider through two transformational transactions: the acquisition of WIND Mobile and the divestiture of Shaw Media. The addition of wireless enables Shaw to combine the power of fibre, coax, Wi-Fi and wireless networks to deliver a seamless experience of anytime and anywhere enhanced connectivity within our operating footprint.

We will continue our sharp focus on operational efficiency to ensure we execute on our strategic priorities and build on delivering an exceptional customer experience that is centered on our world-class converged network and strategic partnerships with best in-class providers.

Culture and People

As Shaw repositioned itself as a leading enhanced connectivity provider, we also embarked on evolving our culture to enable us to deliver on this corporate and operational strategy. Building off the success of its *Focus To Deliver* program launched in 2014, Shaw continues to maintain its efficiency and growth potential by ensuring business decisions are made in accordance with disciplined customer-centric criteria.

Shaw believes its success and strength stems from its people and its commitment to making Shaw the place where the best people choose to work. Shaw continues to modernize and enhance the model below to ensure its leaders and employees are highly engaged to deliver on our customer promises.



Through various data points, including Shaw's annual employee engagement survey, Shaw identified the following four areas of focus to help achieve its culture and people objectives:

1) **Leading Effectively** – instituting masterful leaders at every level of the Company who deliver extraordinary business results by bringing out the best from the people that report to them
2) **Enabling Work** – providing people tools, processes and technologies that are simple, efficient and easy, making it easier for leaders and employees to carry out their duties and responsibilities
3) **Enhancing the Employee Experience** – delivering an exceptional employee experience tailored to our diverse employee base which considers an employees' day to day activities and career aspirations
4) **Maximizing Performance** – implementing reward and recognition programs that drive a culture of accountability and rewards performance excellence for all employees (without encouraging employees to take extraordinary risks)

Inspiring and engaging its employees to align with its strategy is the cornerstone of Shaw's success. We are grateful to have approximately 14,000 employees committed to delivering an exceptionally seamless connectivity experience for our customers and the communities we serve.

Our World-Class Converged Network

As our customers spend more of their time in the digital environment, they increasingly need and expect an always-on, seamless connectivity experience. This requires multiple technological platforms that are combined effectively to provide seamless connectivity to the customer. By adding our Wireless division to complement our existing, leading hybrid fibre-coax and Wi-Fi networks, Shaw has the opportunity to continue to innovate in response to changing consumer needs and technological developments. The world of connectivity will change in the coming years as wireline broadband technologies develop, standards for 5G are set and wireless and wireline platforms converge. Following the acquisition of WIND Mobile in 2016, Shaw has initiated the work to integrate its wireline and wireless networks. In 2016, Shaw also invested in the newest generation of broadband equipment to enable future access technologies that will enhance our hybrid fibre-coax network. In addition, by the end of fiscal 2017, we expect to complete the LTE-Advanced upgrade to our mobile wireless network. These and other initiatives in 2016 position us to take advantage of the opportunities to innovate that will be available through our converged network.

Global Technology Leaders

In order to efficiently secure and deliver leading technology for our customers – both for today and tomorrow – we recognize that we must join global scale initiatives. This ensures that the technology we adopt and invest in is, and continues to be, leading-edge in the communications industry globally.

This approach allows us to leverage our current assets where we have strength and expertise, while also ensuring our capital investments are aligned with industry leaders to support the development, maintenance and advancement of new technology where it is impractical for us to do so on a standalone basis. This ensures that there is sufficient capital, resources and commitment to continue advances in innovation, performance and reliability of our services and products. In addition, this strategic approach to our business gives us the opportunity to better manage costs by participating in purchasing opportunities on a global scale.

We have solidified a series of significant relationships this year with global leaders on the following initiatives:

- our planned rollout of the TV Everywhere X1 video platform developed by Comcast (see discussion under "Consumer")
- our ongoing work with NOKIA, a global leader in mobile wireless technology and solutions, to design, plan and deploy LTE-Advanced, the world's most advanced wireless technology (see discussion under "Wireless")
- our "Smart" suite of business services that includes SmartWiFi in collaboration with Cisco's Meraki and SmartVoice with Broadsoft (see discussion under "Business Network Services").

Consumer

	2016		2015	
(millions of Canadian dollars)	$	share of consolidated	$	share of consolidated
Revenue	3,752	76%(1)	3,752	83%(1)
Operating income before restructuring costs and amortization(2)	1,667	78%	1,686	82%

(1) Before intersegment eliminations.
(2) Refer to Key performance drivers.

Our brand promise to our customers is that, with Shaw, "they won't miss a thing". Our Consumer division provides residential customers with leading connectivity experiences on two platforms.

- Wireline Services – we provide broadband Internet, Shaw Go WiFi, video and phone to customers that are connected to our local and regional hybrid fibre-coax network
- Satellite Services – we provide video by satellite to customers across Canada

Wireline Internet, Video and Phone Services

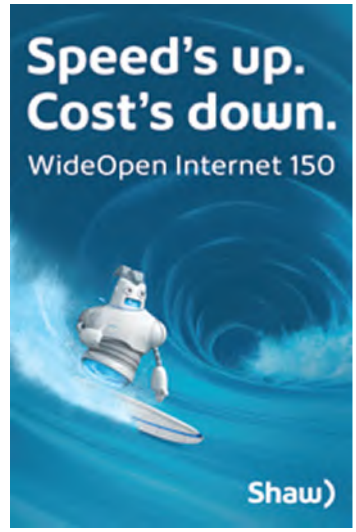
As one of the largest providers of residential communications in Canada, our Consumer division connects families in British Columbia, Alberta, Saskatchewan, Manitoba and Northern Ontario on our hybrid fibre – coax network with broadband Internet, Shaw Go WiFi, video and home phone services to meet their needs at home and on the go.

As our customer needs evolve, we continue to focus on innovative service offerings. Our customer-centric strategy is designed to deliver high-quality customer service, simplicity, value and choice for our customers.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

Internet

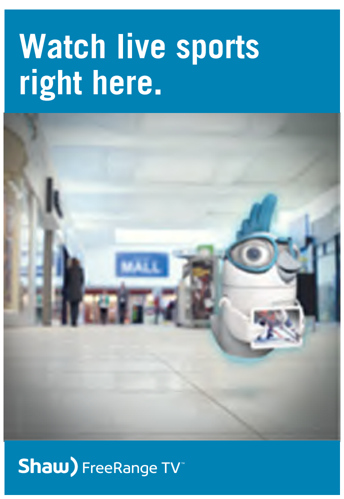
As an enhanced connectivity company, we believe that the Internet plays a fundamental role in connecting our customers to the world and everything in it. We recognize the importance of providing reliable, affordable and worry-free connectivity to meet the ever increasing appetite of our customers for discovery, social connectivity and streaming.



We continue to make the necessary investments to ensure that our advanced hybrid fibre – coax network keeps pace with the current and future expectations of our customers. These investments made it possible for Shaw to launch WideOpen Internet 150 in July, 2016 and provide customers with the speed and data capacity they need. Shaw offers 150 Mbps download speeds to over 90% of our footprint. WideOpen Internet 150 is offered at an affordable price and when paired with our improved two-year ValuePlans, it provides cost certainty for our customers which we expect will improve customer retention.

We also improved our carrier-grade Shaw Go WiFi service in the first half of fiscal 2016 by making it six times faster for our mid-tier and top-tier Internet customers. These upgrades support the continuing growth in the number of devices connecting to our network. Over 2.5 million devices have authenticated to our carrier-grade Shaw Go WiFi network and there are approximately 85,000 access points representing an increase of approximately 12,500 in fiscal 2016 covering locations from British Columbia to Ontario.

Video



Our wireline video services continue to offer a wide selection of television channels (including over 120 high definition ("HD") channels) and over 10,000 on-demand, pay-per-view and subscription movie, and television programming titles.

Our wireline video customers can choose from a selection of primary packages and can add additional channels from a variety of sports, family and other theme specialty packages as well as a number of individual channels offered on a channel-by-channel basis. In March 2016, we expanded customer choice with the introduction of a new small basic service called "Limited TV" and we also revised our offering to include small, medium and large theme packs starting at $6 per theme pack. By December 2016, our customers will have the ability to subscribe for a primary package (including Limited TV), any theme packs they choose, and add-on individual channels on a channel-by-channel basis which they can select from all of our channels.

Our wireline video customers can access our television offerings through an interactive, on-screen program guide which includes access to on-demand movies and television programming and pay-per-view content, including scheduled sporting, concerts and other special events. With an enabled video terminal, wireline video customers can record and store programs for later viewing and pause and rewind live and recorded programs.

In June 2015, Shaw announced that it has partnered with Comcast Corporation ("Comcast"), and Cisco Systems Inc. ("Cisco") as integrator, to make its market-leading cloud-based X1 video platform available to Shaw's wireline video customers. The X1 platform offers a seamless viewing experience across multiple screens and devices both in and out of the home. As a result of this collaboration, Shaw will be the first in Canada to capitalize on this cloud technology. Shaw is progressing on its plan to roll out this new technology through fiscal 2017.

In October 2015, Shaw began the deployment of the whole home video terminal used by Comcast in place of its current gateway and HD PVR terminals. This Comcast terminal operates on our current video platform and is compatible with the rollout of the X1 in-home experience for Shaw's wireline video customers. In March 2016, we re-launched our customer contract offer with two-year ValuePlans that included rental video equipment hardware at the core of the offer. The ValuePlans were re-launched with two primary goals in mind: (i) a reduction in customer churn/turnover, and (ii) to provide more value to our contracted customers in exchange for their commitment.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

As part of the X1 experience, in January 2016, we launched the X1 mobile application ("app") called "FreeRange TV" for our wireline video and satellite customers. This app makes available, over the Internet and on mobile devices, a selection of linear channels and up to 30,000 on-demand video titles based on the customer's home video subscription. FreeRange TV enables our customers to travel with the video experience that they currently enjoy in the home.

Phone

Shaw's phone service offers a full-featured residential digital telephone service through our wireline network as a complement to our broadband Internet and video services.

Satellite Services

Through Shaw Direct, our Consumer division connects families across Canada with video and audio programming by satellite. Shaw Direct customers have access to over 550 digital video channels (including over 220 HD channels) and over 10,000 on-demand, pay-per-view and subscription movie and television programming titles.

Similar to our wireline video service, satellite customers can now choose from a selection of primary channel packages and may add from a variety of sports, family and other theme specialty packages, and a number of individual channels that we offer on a channel-by-channel basis. In March 2016, we expanded satellite customer choice with the introduction of a new small basic service called "Limited TV" and we also revised our offering to include small, medium and large theme packs starting at $6 per theme pack. By December 2016, our satellite consumers will have the ability to subscribe for a primary package (including Limited TV), any theme packs they choose, and add-on individual channels on a channel-by-channel basis which they can select from all of our channels.

Shaw Direct is one of two satellite video services currently available across Canada. While Shaw Direct has many customers in urban centres, market penetration for satellite video is stronger in areas having no or limited (generally fewer than 80 channels) cable television coverage. The service is marketed through Shaw Direct and a nation-wide distribution network of third party retailers.

Shaw is committed to leading technology with access to three satellites that enable us to enhance our offerings, improve service quality and provide in-orbit back-up capacity. In March 2016, Shaw announced a plan to move all video services from MPEG-2 to MPEG-4 in three phases starting in April 2017 which will improve the efficiency of Shaw's transponders. Shaw's objective is to be 100% MPEG-4 by the fall of 2019.

A listing of Shaw's satellite capacity is provided below.

Shaw Satellite Transponders

Transponders	Interest	Nature of Satellite
Anik G1	16 xKu-band	Leased
Anik F2	16Ku-band	Owned
	6 Ku-band	Leased
	2 Ku-band (partial)	Leased
Anik F1R	28 Ku-band	Leased
	1 C-band	Leased
Intelsat Galaxy 16	1 Ku-band (partial)	Leased

Seasonality

While financial results for the Consumer division are generally not subject to significant seasonal fluctuations, subscriber activity may fluctuate from one quarter to another. Subscriber activity may also be affected by competition and Shaw's promotional activity. Further, satellite subscriber activity is modestly higher around the summer time when more subscribers have second homes in use. Shaw's wireline and satellite Consumer businesses do not depend on any single customer or concentration of customers.

Shomi

Shomi, the over-the-top streaming platform that launched as a joint venture of Shaw and Rogers Communications in fiscal 2015 will be wound down with service ending November 30, 2016. As a result, Shaw expects to incur additional investment losses of up to $120 million in the first quarter of fiscal 2017 relating to a provision for future liabilities in Shomi. See Note 7 of the financial statements attached to this Management's Discussion and Analysis for reconciliation of the equity loss in the Shomi joint venture in fiscal 2016 and 2015.

Wireless

(millions of Canadian dollars)	2016 $	2016 share of consolidated
Revenue(3)	**280**	**6%(1)**
Operating income before restructuring costs and amortization(2)(3)	**59**	**3%**

(1) Before intersegment eliminations.
(2) Refer to Key performance drivers.
(3) Effective March 1, 2016, Shaw acquired Mid-Bowline Group Corp. and its wholly owned subsidiary, WIND Mobile Corp. Revenue and Operating income before restricting costs and amortization is for the period from March 1, 2016 to August 31, 2016.

Our Wireless division was formed following the acquisition of WIND Mobile in March 2016. This acquisition transformed Shaw into an enhanced connectivity provider, adding the critical wireless component of our converged network. Our Wireless division currently operates in Ontario, Alberta and British Columbia, offering the leading alternative for mobile services to the three national wireless incumbent carriers.

Approximately 15 million Canadians reside within our current mobile wireless network service area. Our Wireless division's customer base is growing, with over one million customers presently served, including over 125,000 customers added in fiscal 2016. In the second half of fiscal 2016, Shaw completed the first critical step in our wireless network upgrade. All 3G equipment in western Canada was replaced with Nokia equipment which enables us to increase speeds and throughput as well as put to use an additional 10MHz of AWS-1 spectrum to significantly enhance performance. Shaw's path towards an LTE Advanced network is currently underway and we expect to have this completed by the end of fiscal 2017.

Current Wireless Service and Launch of Freedom Mobile

On November 21, 2016, Shaw announced that WIND Mobile would be renamed Freedom Mobile as the next step in enhancing the effectiveness of our Wireless division in serving the needs of our customers. The launch of Freedom Mobile provides a fresh start and an opportunity to sharpen our focus on providing a customer-centric alternative to the value-conscious segment of the wireless market. This milestone allows our Wireless division to build on our current strengths, providing full control over our future branding strategy and redirecting resources from royalty payments for use of the WIND brand name to other marketing or brand building initiatives. Freedom Mobile is committed to delivering significant value to customers with its easy to understand pricing plans and no term contracts.

Our Wireless division is undertaking several initiatives to enhance its competitiveness in the market by:

- improving the retail and customer care experiences,
- expanding its handset lineup with more high-end devices, and
- improving its network performance with the deployment of LTE-Advanced.

LTE Advanced

We have partnered with NOKIA in the initiative to launch a world class, next generation mobile wireless network to our customers in Ontario, Alberta and British Columbia. LTE-Advanced is the latest standard of cellular technologies available in the marketplace today. Completing this initiative will allow us to provide a mobile connectivity experience that significantly improves on today's offering, including faster speeds and more reliable network performance.

Business Network Services

Our Business Network Services division serves business and public sector customers – whether connected by our wireline or satellite networks which allow us to better focus on the needs of our business customers.

Shaw Business connects customers of all sizes to our wireline-network or by satellite with a range of communications services – from home offices and regional businesses to large scale enterprises. While we provide business grade network access to smaller clients on our local and regional hybrid fibre-coax network, our larger enterprise customers are generally connected by fibre to the premise. Through the acquisition of ENMAX Envision Inc. in 2013, Shaw significantly increased its fibre footprint and profile among larger enterprise customers in Calgary, Alberta.

The range of services offered by Shaw Business includes:

- Fibre Internet – scalable, symmetrical fibre Internet solutions from 10 Mbps to more than 10 Gbps
- Data Connectivity – secure private connectivity for multiple locations
- Voice Solutions – from services that connect customer premise equipment to the phone network and single voice line solutions to robust fully managed hosted unified communications functionality
- Video – video and audio service offering content for public viewing
- Broadcast Video – high-quality video across North America in real time

Shaw has positioned itself as a trusted business advisor with a focus on the small and medium enterprise segment of the market. Shaw Business takes care of all aspects of its customers' increasingly complex communications so they can focus on growing their business. As part of this strategy, Shaw has collaborated with global scale technology leaders to offer its "Smart" suite of easy to use and flexible managed business communications solutions. The Smart suite of services provides cost-effective enterprise grade managed IT and communications solutions that are increasingly valued by small and medium sized businesses as the digital economy grows in scope and complexity. The Smart suite of services includes:

SmartVoice – a unified communications solution that integrates instant messaging, presence, email, video conferencing and a mobile application that is built on Broadsoft's BroadWorks platform

SmartWiFi – a fully-managed Internet solution that enables seamless, secure wireless connectivity for employees and guests in the office and on the go that is deployed over Cisco's Meraki platform

SmartSecurity – a fully-managed network security platform deployed over Cisco's Meraki platform that protects a wired and Wi-Fi network at the edge with access control, the ability to control which applications run on the network, content filtering and connecting branch locations

In order to continue to meet the evolving needs of our customers, we are executing our plan to ensure that our wireline network keeps pace with the expectations for bandwidth, speed and reliability that our Shaw Business customers expect today and will expect in the future. See "Shaw's Wireline Network" for a description of our wireline network and the advances that we are undertaking.

Shaw Business is also leading the rollout to customers in western Canada of hybrid IT services with the opening in 2015 of the Calgary1 data centre. These services are a natural complement to Shaw Business' current offerings and leverage ViaWest's 17 years of experience as a hybrid IT solutions provider. See discussion under "Business Infrastructure Services."

Wholesale Wireline Network Services

Using our national and regional access wireline networks, we provide services to Internet service providers ("ISPs"), other communications companies, broadcasters, governments and other businesses and organizations that require end-to-end Internet and data connectivity in Canada and the United States. We also engage in public and private peering arrangements with high speed connections to major North American, European and Asian networks and other tier-one backbone carriers.

Broadcast Services

Shaw Broadcast Services uses our substantial fibre backbone network to manage one of North America's largest full-service commercial signal distribution networks, delivering more television and radio signals by satellite to cable operators and other multi-channel system operators in Canada and the U.S. than any other single-source satellite supplier. This business is referred to as a "satellite relay distribution undertaking" or "SRDU". Shaw Broadcast Services currently provides SRDU and advanced signal transport services to over 300 distribution undertakings and redistributes over 500 television signals and over 100 audio signals in both English and French to multi-channel system operators.

Tracking

Shaw Tracking provides asset tracking and communication services primarily in Canada to over 600 customers in the transportation industry that have an aggregate of approximately 49,000 vehicles. By satellite, cellular, Wi-Fi and Bluetooth, Shaw Tracking provides immediate real-time visibility to a customer's fleet and freight, including location, performance, and productivity.

Our Business Infrastructure Services division was formed with the acquisition of Denver, Colorado based ViaWest in September 2014. We acquired ViaWest as a growth platform in the attractive North American data centre sector and to support the expansion of our business offerings in western Canada.

ViaWest is a leading hybrid IT solutions provider, offering colocation, cloud and managed services, and security and compliance assessment and mitigation capabilities. It enables businesses to leverage both their existing IT infrastructure and emerging cloud resources to deliver the right balance of cost, scalability and security.

ViaWest has grown from five data centres in two markets in 2004 to 30 data centres with over 1,000,000 square feet of usable raised floor space, of which, over 700,000 is currently ready for use throughout the U.S., including locations in Denver, Dallas, Austin, Salt Lake City, Las Vegas, Minneapolis, Phoenix, Portland, greater Philadelphia and our recently opened facility in the Dallas suburb of Plano, Texas. ViaWest has the capacity to support further U.S. growth with 71% utilization of its ready for use capacity (approximately 500,000 square feet) in its current facilities and additional expansion capacity at its Denver, Las Vegas, Minneapolis, Portland and Plano properties.

In late 2015, we expanded operations into Canada with the opening of the new Calgary1 data centre and cloud platform under our Canadian brand "Shaw Data Centre and Cloud Solutions, Powered by ViaWest". Shaw Data Centre and Cloud Solutions offers a comprehensive product set of hybrid IT solutions to enterprises of all sizes throughout Canada supported by ViaWest's leading expertise and 17-year track record.

Business Infrastructure Services continues to execute on its growth plans with the acquisitions of AppliedTrust in fiscal 2015 and INetU in fiscal 2016. Through the acquisition of AppliedTrust, we offer leading security, compliance, development operations and infrastructure consulting services that address the pressing security and compliance needs of our customers. INetU increases our cloud and managed services capabilities and expands our geographic reach to eastern U.S. and Europe.

Over 2,000 businesses trust their infrastructure and mission critical data to our Business Infrastructure Services team because of the dedicated personnel who provide local, personalized, flexible and tailored solutions to meet the unique business needs of our customers. With our team-based account management approach and 100% uptime commitment, we offer tailored solutions designed for maximum reliability and flexibility.

Shaw's Wireline Network

At Shaw, we are proud of our advanced wireline network, which combines the power of fibre, coax, and Wi-Fi and is comprised of:

- North American fibre backbone
- regional fibre optic and co-axial distribution networks
- local Shaw Go WiFi connectivity

Wireline Backbone

The backbone of Shaw's wireline-network includes multiple fibre capacity on two diverse cross-North America routes. The southern route principally consists of approximately 7,000 kilometres of fibre located on routes between Seattle and New York City (via Vancouver, Calgary, Winnipeg, Toronto, Buffalo, and Chicago). The northern route consists of approximately 4,000 route kilometres of fibre between Edmonton and Toronto (via Saskatoon, Winnipeg and Thunder Bay). These routes, along with a number of secured capacity routes, provide redundancy for the network. Shaw also uses a marine route consisting of approximately 330 route kilometres from Seattle to Vancouver (via Victoria), and has secured additional capacity on routes between a number of cities, including Vancouver and Calgary, Vancouver and San Jose, Toronto and New York City, Seattle and Vancouver and Edmonton and Toronto.

Regional Distribution Network

We connect our backbone network to residential and business customers through our extensive regional fibre optic and co-axial cable distribution networks.

In 2013, we substantially completed a major upgrade of our co-axial access network to remove analog tier television services. This upgrade liberated bandwidth to significantly increase the capacity of our hybrid fibre-coax network and enable the expansion of our broadband Internet and other offerings. Digital video terminals were deployed into customer homes that allowed them to receive digital television services in place of former analog services. We referred to this reclamation initiative as the Digital Network Upgrade ("DNU").

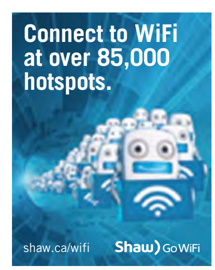
In 2014 and 2015, we removed the remaining analog basic services in the Vancouver area, our largest market, in an initiative referred to as "DNU II". As a result, customers in the Vancouver area now receive digital video services. In 2016, analog basic services were removed from the remaining large markets of Calgary, Edmonton, Winnipeg and Victoria as well as a number of midsized markets. We expect to remove analog video basic services from all other major, midsized and small markets by November 2016.

Shaw continues to optimize the capacity and efficiency of our wireline network and reduce congestion by deploying fibre optic cable deeper into our access networks and closer to our customers. We are also increasing the number of optical serving areas or "nodes" in the wireline network. This is a continual process that we apply year-over-year to increase fibre optic usage in our wireline network and reduce the distance signals travel over coaxial cable to each consumer.

In 2016, our newest generation of cable modem termination system equipment referred to as the "Converged Cable Access Platform" was deployed in our serving hubs. This equipment will enable future access technologies such as Data over Cable Interface Specification version 3.1 ("DOCSIS 3.1") to be deployed. DOCSIS 3.1 represents the latest development in a set of technologies that increase the capability of a hybrid fibre-coax network to transmit data both to and from customer premises. Our ongoing investments in our network have, for example, enabled the launch of WideOpen Internet 150 in July 2016. With the various DNU initiatives, the deployment of fibre closer to our customers and by continuing to increase the number of nodes in our hybrid fibre-coax network, we expect to continue significantly improving the performance and capacity of our network.

Shaw Go WiFi

Shaw has created Canada's most extensive service provider Wi-Fi network, Shaw Go WiFi. Shaw Go WiFi extends a customer's broadband experience beyond the home as a valuable extension of our customer wireline network experience.



We continue to expand our Shaw Go WiFi build-out. In fiscal 2016, Shaw installed 12,500 Shaw Go WiFi hotspots bringing the total number of hotspots to approximately 85,000 operating throughout its network and over 2.6 million unique active devices using Shaw Go WiFi. In addition, we have entered into agreements with 105 municipalities to extend Shaw Go WiFi service into public areas within those cities.

Wireless Network

With the acquisition of WIND Mobile in March 2016, Shaw has added the critical mobile component to its converged network.

Our Wireless division currently operates a wireless network in British Columbia, Alberta, and Ontario, focused on the major metropolitan markets in and around Vancouver, Edmonton, Calgary, Ottawa and Toronto.

The Division currently provides its services on a 3G HSPA+ network using AWS-1 spectrum. 3G is the third generation of mobile wireless standards and technology. HSPA or "High Speed Packet Access" is an IP-based packet data enhancement technology that provides high speed broadband packet data services over 3G networks.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

In 2016, we upgraded the existing 3G HSPA+ network to benefit our customers in Alberta and British Columbia. Our Wireless division is currently working with NOKIA to significantly improve its service offering by deploying an LTE-Advanced upgrade across its entire wireless network service area (see above under "Wireless").

Our Wireless division currently holds 50 MHz of AWS spectrum in the main service areas of Ontario, Alberta and British Columbia, and 10-50 MHz of AWS spectrum in certain other non-core markets. Our spectrum assets will support the planned upgrade to LTE-Advanced as well as anticipated subscriber growth on the existing 3G HSPA+ network (see below under "Regulation of Wireless").

Equity Interest in Corus

Corus is a leading media and content company that creates and delivers high quality brands and content across platforms for audiences around the world. Its portfolio of multimedia offerings encompasses 45 specialty television services, 39 radio stations, 15 conventional television stations, a global content business, digital assets, live events, children's book publishing, animation software, technology and media services. Corus' roster of premium brands includes Global Television, W Network, OWN: Oprah Winfrey Network Canada, HGTV Canada, Food Network Canada, HISTORY®, Showcase, National Geographic Channel, Q107, CKNW, Fresh Radio, Disney Channel Canada, YTV and Nickelodeon Canada. Corus is headquartered in Canada, and its stock is listed on the TSX under the symbol CJR.B.

In connection with the sale of Shaw Media Inc. to Corus, the Company received 71,364,853 Corus Class B non-voting participating shares. The Company agreed to retain approximately one third of its interest in Corus for 12 months post-closing, a second one third for 18 months post-closing and the final one third for 24 months post-closing. The Company also agreed to have its Corus Class B Shares participate in Corus' dividend reinvestment plan while subject to these retention periods until September 1, 2017. As a result of the additional shares issued to the Company pursuant to its participation in Corus' dividend reinvestment plan, at August 31, 2016, the Company held 74,135,891 Corus Class B non-voting participating shares, representing approximately 38% of Corus' total issued equity of Class A and Class B shares. The Company's weighted average ownership of Corus for the period from April 1 to August 31, 2016 was 37%.

Although the Corus Class B shares do not have voting rights, the Company is considered to have significant influence due to Board representation. In addition, Shaw Family Living Trust ("SFLT") controls both Shaw and Corus. SFLT is controlled by its sole trustee, SFLTCO Ltd., a private company owned by JR Shaw and having a board comprised of seven directors, including JR Shaw (Chair), Carol Shaw and four other members of JR Shaw's family. See "Related Party Transaction – Corus".

Community Investment

Shaw has been investing in the communities that it serves for over 40 years. Shaw believes that being a community oriented company is about much more than philanthropic gifts – it is about bringing together and using its suite of assets to help shine a spotlight on the work Shaw's community partners are doing to help make a difference.

Supporting charitable organizations that focus on children and youth has been a pillar of Shaw's community initiatives for decades, and as its business grows, Shaw continues to leverage the Shaw Kids Investment Program, or SKIP, to raise awareness and support for organizations striving to make Canada a better place for kids.

In 2016, Shaw contributed over $60 million in cash and in-kind support to over 1,000 local and national charitable organizations that work to improve the lives of children and youth across Canada.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

Shaw's partnerships with local and national charities are also used to complement local and regional marketing and sponsorship activities. Combining community investments with traditional business activities speaks to our overall values of being a caring and customer centric organization. The most prominent example of this combination is Shaw's partnership with local Calgary business leaders and the PGA TOUR in staging the Shaw Charity Classic, a premier tournament on the Champions Tour that benefit 124 youth-based Alberta charities and has generated more than $13 million in charitable contributions in its four-year history. The event has become a fixture on the Calgary tourism calendar, and has been recognized as one of the top tournaments on the Champions Tour. Importantly, the event also strengthens Shaw's business and community relationships

Shaw has launched a year-long project to celebrate Canada's 150th birthday. As part of this initiative, Shaw will grant 150 birthday wishes for Canada by providing funding to celebrate the people and organizations making a difference for children and youth across the country. Another major initiative that Shaw is proud to support is Pink Shirt Day, a national campaign geared to raise awareness of bullying prevention. In February 2016, Shaw's Pink Shirt Promise campaign engaged nearly 100,000 Canadians in a dialogue to prevent and combat bullying.

Government regulations and regulatory developments

Substantially all of the Company's Canadian business activities are subject to regulations and policies established under various legislation (*Broadcasting Act* (Canada) ("Broadcasting Act"), *Telecommunications Act* (Canada) ("Telecommunications Act"), *Radiocommunication Act* (Canada) ("Radiocommunication Act") and *Copyright Act* (Canada) ("Copyright Act")). Broadcasting and telecommunications are generally administered by the Canadian Radio-television and Telecommunications Commission ("CRTC") under the supervision of the Department of Canadian Heritage ("Canadian Heritage") and Department of Innovation, Science and Economic Development ("ISED"), respectively.

Pursuant to the Broadcasting Act, the CRTC is mandated to supervise and regulate all aspects of the broadcasting system in a flexible manner. The Broadcasting Act requires BDUs to give priority to the carriage of Canadian services, to contribute a certain percentage of revenue to the production of Canadian programming and to provide efficient delivery of programming services. The Broadcasting Act also sets out requirements for television broadcasters with respect to Canadian content. Shaw's broadcasting distribution businesses depend on licenses (or operate pursuant to an exemption order) granted and issued by the CRTC.

The Minister of Canadian Heritage is currently overseeing, a process aimed at strengthening Canadian content creation, discoverability and export in the changing digital era. This process could lead to changes in the manner in which Canadian content is supported, including by way of amendments to the Broadcasting Act and other legislation related to broadcasting. This process is currently in the consultation phase. The Minister is expected to issue a report on the consultations by the end of January 2017. As of November 28, 2016, no proposals for particular changes have, to date, been made by the Minister.

Under the Telecommunications Act, the CRTC is responsible for ensuring that Canadians in all regions of Canada have access to reliable and affordable telecommunication services of high-quality. The CRTC has the authority to forbear from regulating one or more services or classes of services provided by a carrier if the CRTC finds that there is sufficient competition for those services to protect the interests of users. Shaw's retail Internet and home phone services have been forborne from regulation and are not subject to price regulation. However, regulations do affect certain terms and conditions under which Shaw's retail services are provided. As described further below under "Third Party Internet Access", certain Shaw wholesale services are regulated.

The CRTC and ISED can impose monetary penalties on companies that contravene the Telecommunications Act, the Radiocommunication Act and the regulations and rules promulgated thereunder. The technical operating aspects of the Company's businesses are regulated by technical requirements and performance standards established by ISED, primarily under the Telecommunications Act and the Radiocommunication Act.

Pursuant to the Copyright Act, the Copyright Board of Canada ("the Copyright Board") oversees the collective administration of copyright royalties in Canada, including the review and approval of copyright tariff royalties payable to copyright collectives by BDUs, television broadcasters and online content services. The Copyright Board may also make rulings on the interpretation of the Copyright Act in the course of issuing copyright tariff decisions.

The sections below provide a more detailed discussion of various regulatory matters and recent developments specific to Shaw's businesses.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

Licensing and ownership

For each of its cable, direct-to-home satellite ("DTH") and SRDU undertakings, the Company holds a separate broadcasting license or is exempt from licensing under the Broadcasting Act. In August 2016, Shaw submitted an application to renew its licenses for all licensed cable undertakings. In May 2016, the CRTC administratively renewed these licenses until November 30, 2016 and stated its intention to subsequently renew the licenses from December 1, 2016 to August 31, 2017. As part of this renewal process, the CRTC conducted an oral hearing in September 2016 to review the practices of BDUs, including Shaw, with regard to the small basic service and flexible packaging requirements to ensure that licensees are offering the services in a manner that is consistent with the requirements set out in the regulations and with the spirit of the Let's Talk TV policy framework.

The Company also holds separate licenses for each of Shaw on Demand (Video on Demand) and Shaw Pay-Per-View. The renewal of Shaw on Demand licences are currently under consideration as part of the CRTC proceeding to renew television licences held by large ownership groups.

The potential for new or increased fees through regulation

CRTC Regulations require licensed cable BDUs to obtain the consent of an OTA broadcaster to deliver its signal in a distant market. The Regulations provide that DTH undertakings may distribute a local over-the-air television signal without consent within the province of origin, but must obtain permission to deliver the over-the-air television signal beyond the province of origin unless the DTH distribution undertaking is required to carry the signal on its basic service. Broadcasters may assert a right to limit distribution of distant signals or to seek remuneration for the distribution of their signals in distant markets on the basis of these Regulations.

The Copyright Board is considering a tariff for the retransmission of programming in distant television regions for the years 2014 through 2018. The tariff proposed by the retransmission rights collectives would, if approved, represent a significant increase in the per subscriber rates payable for the retransmission of programming in distant signals. The Company has participated in the hearing process and objected to the tariff on behalf of its cable and DTH satellite divisions. The record of this proceeding is now complete and the parties are awaiting the decision of the Copyright Board.

Let's Talk TV regulatory framework

In October 2013, the CRTC initiated a "conversation with Canadians about the future of television", commonly referred to as "Let's Talk TV", which led to a major review of the regulatory and policy framework for the Canadian television broadcasting system and a series of policy decisions in 2015 including the following:

- The new policy framework required licensed BDUs to offer a $25 entry-level service offering (basic service) by March 2016. As of March 2016, all discretionary services (not offered on the basic service) must be offered either on a standalone basis or in packages of up to ten programming services. By December 1, 2016, these services must be offered both on a standalone basis and in packages of up to ten programming services. These changes will significantly affect BDUs' customer management systems and may create market uncertainty for both BDUs and programming services.
- Additional uncertainty may result from changes to the linkage rules for related and independent discretionary services.
- The CRTC has also proposed new regulations governing simultaneous substitution, which may result in rebates for BDU errors or loss of privileges for broadcaster errors.
- The CRTC has also introduced new codes governing the relationship between BDUs and their customers, the "Television Service Provider Code of Conduct", and the relationship between BDUs and programmers, the "Wholesale Code". The CRTC has, as well, prohibited 30-day cancellation policies for voice, Internet and broadcasting distribution services.
- A new policy framework for local and community television introduced changes to funding regimes and requirements governing community channels and local television stations.

Access for Wireline Network

For its wireline network Shaw requires access to support structures, such as poles, strand and conduits of telecommunication carriers and electric utilities, in order to deploy cable facilities. Under the Telecommunications Act, the CRTC has jurisdiction over support structures of telecommunication carriers, including rates for third party use. The CRTC's jurisdiction does not extend to electrical utility support structures, which are regulated by provincial utility authorities. Shaw's wireline network also requires access to construct facilities in roadways and other public places. Under the Telecommunications Act, Shaw may do so with the consent of the municipality or other public authority having jurisdiction.

New Media

The CRTC has issued a digital media exemption order requiring that Internet-based and mobile point to point broadcasting services not offer television programming on an exclusive or preferential basis in a manner that depends on subscription to a specific mobile or retail Internet service and not confer an undue preference or disadvantage.

The CRTC has decided to not impose a levy on the revenue of exempt digital media undertakings to support Canadian new media content and instead issued an exemption order for Video on Demand services offered both by licensed BDUs and direct to consumer over the Internet.

Third Party Internet Access

Shaw is mandated by the CRTC to allow independent ISPs to provide Internet services at premises served by Shaw's wireline network ("Third Party Internet Access" or "TPIA"). In 2015, the CRTC completed a review of the wholesale wireline telecommunications policy framework, including TPIA, and extended mandated wholesale access services to include fibre-to-the-premise facilities and a shift to a new disaggregated wholesale Internet access service. The new disaggregated service will be phased in over the next three years and is intended to allow independent ISPs to reduce reliance on the transport facilities currently included as part of the regulated wholesale service.

In early 2016, the CRTC further directed Shaw and other carriers to file updated wholesale wireline costing studies as part of a review of wholesale Internet rates. These updates are required further to the CRTC making several changes to the wholesale Internet costing approach and the parameters used within the costing studies. In October of 2016, the CRTC approved interim rates, pending the completion of its review of these costing studies, which were lower than the proposed rates. At the completion of this review, the CRTC may require further adjustments to Shaw's costing studies, which may result in further reductions in Shaw's TPIA rates.

Within the coming year, the CRTC also plans to review the competitor quality of service indicators and the rate rebate plan for competitors to ensure alignment with the new wholesale services framework. As part of this review, the CRTC may extend quality of service obligations to providers of wholesale Internet services.

Regulation of Wireless Division

Our Wireless division holds licenses for the use of radiofrequency spectrum required to operate its mobile wireless business. Those licenses are administered by ISED under the Radiocommunication Act. Spectrum use is governed by conditions of license, including license term, transferability/divisibility, technical compliance requirements, lawful interception, research and development, and mandated antenna site sharing and domestic roaming services.

The Wireless division's AWS-1 licenses were issued in 2009, for a term of ten years, and prior to expiration, the licenses may be renewed for an additional term of up to ten years. The AWS-3 licenses were issued in April 2015 and have a term of 20 years. The applicable terms and conditions of renewal of our and other carriers' spectrum licenses after the initial term will be determined by ISED through public consultation processes that will begin prior to the expiry of those licenses.

ISED has a framework that sets out criteria for reviewing and approving license transfers, prospective transfers, and deemed license transfers, including consideration of the quantum and concentration of license holdings before and after the proposed transfer.

Our Wireless division's operations could be materially affected by our failure to:

- obtain new or additional spectrum licenses;
- renew existing spectrum licenses;
- obtain approval of any transfer of spectrum licenses; or
- procure spectrum licenses that provide access to adequate allocations of low-band spectrum, which has superior propagation and penetration characteristics.

In addition, the Wireless division could experience increased costs, or reduced revenues or reduced margins, due to amended or newly-adopted laws and regulations, or decisions of ISED or the CRTC. The CRTC and ISED can impose monetary penalties on companies that contravene the Telecommunications Act, the Radiocommunication Act, and the regulations and rules promulgated thereunder.

The CRTC has the authority to regulate mobile wireless telecommunications services under the Telecommunications Act. The CRTC has decided to forbear from regulating most aspects of mobile wireless services, while maintaining oversight over customer confidential information and other general conditions for mobile wireless service, including mandating wireless number portability and issues pertaining to mobile 911. In 2013, the CRTC also implemented the Wireless Code, which, among other things:

- imposes limitations on early cancellation fees;
- prohibits contract terms longer than two years; and
- requires unlocking of wireless devices, trial periods for wireless contracts and caps on overage roaming charges.

In May 2015, the CRTC decided to regulate certain aspects of wholesale wireless services provided by the three national wireless incumbent carriers and issued a comprehensive policy framework for wholesale wireless services, including roaming, tower sharing and mobile virtual network operators (MVNOs). The new framework requires the three national wireless incumbent carriers to provide wholesale roaming services to non-incumbent wireless carriers at cost-based rates. A proceeding is presently underway to set these rates and the terms and conditions for wholesale domestic roaming services. This proceeding is expected to be complete in early to mid-2017 and may affect our roaming costs and the rates and services that we can offer customers.

Our Wireless division's operations depend on being able to locate and construct wireless antenna sites, which in some cases requires certain authorizations or approvals from municipalities, which vary from one municipality to another but are also subject to federal oversight. The process for such approvals can include a comprehensive consultation process related to local land use priorities and new antenna site design parameters.

The Wireless division also uses arrangements whereby it co-locates its antennae equipment on towers owned and operated by third party tower providers and the three national wireless incumbent carriers. Pursuant to the conditions of their spectrum licenses and the CRTC's policy framework for wholesale wireless services, the three national wireless incumbent carriers must allow competitors, including WIND, to co-locate equipment on their towers. However, the process of negotiating the sharing of towers is uncertain and time consuming, and the ISED and CRTC processes that are available to force the incumbents to abide by the existing rules can also be challenging and time consuming.

CRTC Basic Services Proceeding

In June, 2016, the CRTC's review of basic telecommunications services in Canada came to a close. In this proceeding, the CRTC considered: (i) the services (e.g., telephone and broadband) required by all Canadians to fully participate in the digital economy, (ii) whether there should be changes to the subsidy regime and national contribution mechanism to fund expansion or adoption of broadband services in Canada, (iii) what measures should be taken to address the affordability of broadband services in Canada, and (iv) what the respective roles of the private sector, the CRTC and government should be in ensuring access to basic telecommunications services by Canadians. Currently, the national contribution fund overseen by the CRTC provides subsidies for local phone services in high cost serving areas and video relay service for Canadians that are hearing-impaired. Canadian telecommunications service providers, including Shaw, are required to contribute to this fund. While the outcome of this proceeding is uncertain, it could result in significant changes to Shaw's regulatory obligations as a telecommunications service provider. The CRTC's decision is pending.

Review of Differential Pricing Practices

In May, 2016, the CRTC initiated a review of differential pricing practices related to wireline and mobile wireless data plans. The CRTC will consider which differential pricing practices, if any, are contrary to the Telecommunications Act, as well as the benefits of and concerns about these practices more generally, with a view to establishing a clear and transparent regulatory policy.

Anti-Spam Legislation

Canada's anti-spam legislation (together with the related regulations "CASL") sets out a comprehensive regulatory regime regarding online commerce, including requirements to obtain consent prior to sending commercial electronic messages and installing computer programs. CASL is administered primarily by the CRTC, and non-compliance may result in fines of up to $10 million.

Limits on non-Canadian ownership and control

Non-Canadians are permitted to own and control, directly or indirectly, up to 33.3% of the voting shares and 33.3% of the votes of a holding company that has a subsidiary operating company licensed under the Broadcasting Act. In addition, up to 20% of the voting shares and 20% of the votes of a licensee may be owned and controlled, directly or indirectly, by non-Canadians. As well, the chief executive officer (CEO) and not less than 80% of the board of directors of the licensee must be resident Canadians. There are no restrictions on the number of non-voting shares that may be held by non-Canadians at either the holding company or licensee level. Neither the holding company nor the licensee may be controlled in fact by non-Canadians, the determination of which is a question of fact within the jurisdiction of the CRTC. In order to comply with the director residency requirements of the *Direction to the CRTC (Ineligibility of Non-Canadians)* (the "Direction"), 80% of Shaw's board of directors need to be Canadian residents. Alternatively, with approval of the CRTC, the requirements of the Direction may be satisfied by the creation of an Independent Programming Committee (IPC) to oversee programming decisions. With CRTC approval, Shaw implemented an IPC to comply with the Direction.

The same restrictions apply to certain Canadian carriers pursuant to the Telecommunications Act, the Radiocommunication Act and associated regulations, except that there is no requirement that the CEO be a resident Canadian. The Canadian ownership requirements do not apply to wireline and wireless telecommunications carriers that have annual revenues from the provision of telecommunications services in Canada that represent less than 10% of the total annual revenues for the sector. This may lead to greater levels of competition in the Canadian telecommunications market.

The Company's Articles contain measures to ensure the Company continues to comply with applicable Canadian ownership requirements and its ability to obtain, amend or renew a license to carry on any business. Shaw must file a compliance report annually with the CRTC confirming that it is eligible to operate in Canada as a telecommunications common carrier.

Environmental matters

Shaw's operations are subject to environmental regulations, including those related to electronic waste, printed paper and packaging. A number of provinces have enacted regulations providing for the diversion of certain types of electronic and other waste through product stewardship programs ("PSP"). Under a PSP, companies who supply designated products in or into a province are required to participate in or develop an approved program for the collection and recycling of designated materials and, in some cases, pay a per-item fee. Such regulations have not had, and are not expected to have, a material effect on the Company's earnings or competitive position.

KEY PERFORMANCE DRIVERS

Shaw measures the success of its strategies using a number of key performance drivers which are outlined below, including a discussion as to their relevance, definitions, calculation methods and underlying assumptions.

FINANCIAL MEASURES

Revenue

Revenue is a measurement determined in accordance with International Financial Reporting Standards ("IFRS"). It represents the inflow of cash, receivables or other consideration arising from the sale of products and services. Revenue is net of items such as trade or volume discounts, agency commissions and certain excise and sales taxes. It is the base on which free cash flow, a key performance driver, is determined; therefore, it measures the potential to deliver free cash flow as well as indicating growth in a competitive market place.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

The Company's continuous disclosure documents may provide discussion and analysis of non-IFRS financial measures. These financial measures do not have standard definitions prescribed by IFRS and therefore may not be comparable to similar measures disclosed by other companies. The Company's continuous disclosure requirements may also provide discussion and analysis of additional GAAP measures. Additional GAAP measures include line items, headings and sub-totals included in financial statements. The Company utilizes these measures in making operating decisions and assessing its performance. Certain investors, analysts and others utilize these measures in assessing the Company's operational and financial performance and as an indicator of its ability to service debt and return cash to shareholders. These non-IFRS measures and additional GAAP measures have not been presented as an alternative to net income or any other measure of performance or liquidity prescribed by IFRS. The following contains a description of the Company's use of non-IFRS financial measures and additional GAAP measures and provides a reconciliation to the nearest IFRS measure or provides a reference to such reconciliation.

Operating income before restructuring costs and amortization

Operating income before restructuring costs and amortization is calculated as revenue less operating, general and administrative expenses. It is intended to indicate the Company's ability to service and/or incur debt, and therefore it is calculated before one-time items like restructuring costs, amortization (a non-cash expense) and interest. Operating income before restructuring costs and amortization is also one of the measures used by the investing community to value the business.

Relative increases period-over-period in operating income before restructuring costs and amortization and in operating margin are indicative of the Company's success in delivering valued products and services, and connecting customers to the world through a best in class seamless connectivity experience.

	Year ended August 31,	
(millions of Canadian dollars)	**2016**	**2015**
Operating income from continuing operations	**1,134**	1,134

Free cash flow

Free cash flow is comprised of free cash flow from continuing operations and free cash flow from discontinued operations.

Free cash flow from continuing operations is calculated as operating income before restructuring costs and amortization adding dividends from equity accounted associates, changes in receivable related balances with respect to customer equipment financing transactions as a cash item and deducting capital expenditures (on an accrual basis and net of proceeds on capital dispositions adjusted to exclude amounts funded through the accelerated capital fund) and equipment costs (net), interest, cash taxes paid or payable, dividends paid on the Company's Cumulative Redeemable Rate Reset Preferred Shares, recurring cash funding of pension amounts net of pension expense and adjusted to exclude share-based compensation expense.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

Free cash flow from continuing operations has not been reported on a segmented basis. Certain components of free cash flow from continuing operations, including operating income before restructuring costs and amortization continue to be reported on a segmented basis. Capital expenditures and equipment costs (net) are reported on a combined basis for Consumer and Business Network Services due to the common infrastructure and separately reported for each the Business Infrastructure Services and Wireless divisions. Other items, including interest and cash taxes, are not generally directly attributable to a segment, and are reported on a consolidated basis.

Free cash flow from discontinued operations is comprised of income from discontinued operations before restructuring costs, amortization, taxes and other non-operating items after deducting capital expenditures (on an accrual basis and net of proceeds on capital dispositions and adjusted to exclude amounts funded through the accelerated capital fund) and equipment costs (net), cash taxes paid or payable, program rights amortization on assets held for sale, cash amounts associated with funding CRTC benefit obligations related to media acquisitions, recurring cash funding of pension amounts net of pension expense and excludes non-controlling interest amounts that are included in the income from discontinued operations before restructuring costs, amortization, taxes and other non-operating items.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

The Company uses free cash flow as a measure of the Company's ability to repay debt and pay dividends to shareholders. Consolidated free cash flow is calculated as follows:

(1) Refer to Key performance drivers.

(2) See Note 24 to the audited Consolidated Financial Statements.

Accelerated capital fund

During 2013, the Company established a notional fund, the accelerated capital fund, of up to $500 million with proceeds received, and to be received, from several strategic transactions. The accelerated capital initiatives were funded through this fund and not cash generated from operations. Key investments included the internal and external Calgary data centres, further digitization of the network and additional bandwidth upgrades, development of IP delivery of video, expansion of the Wi-Fi network, and additional innovative product offerings related to Shaw Go WiFi and other applications to provide an enhanced connectivity experience. Approximately $110 million was invested in fiscal 2013, $240 million was invested in fiscal 2014 and $150 million invested in fiscal 2015. The accelerated capital fund closed in fiscal 2015.

STATISTICAL MEASURES:

Subscriber counts (or Revenue Generating Units ("RGUs")), including penetration and bundled customers

The Company measures the count of its subscribers in its Consumer, Business Network Services and Wireless divisions.

In the Consumer and Business Network Services divisions, video cable subscribers include residential customers, multiple dwelling units ("MDUs") and commercial customers. A residential subscriber who receives at a minimum, basic cable service, is counted as one subscriber. In the case of MDUs, such as apartment buildings, each tenant with a minimum of basic cable service is counted as one subscriber, regardless of whether invoiced individually or having services included in his or her rent. Each building site of a commercial customer (e.g., hospitals, hotels or retail franchises) that is receiving at a minimum, basic cable service, is counted as one subscriber. Video satellite subscribers are counted in the same manner as Video cable customers except that it also includes seasonal customers who have indicated their intention to reconnect within 180 days of disconnection. Internet customers include all modems on billing and Phone lines includes all phone lines on billing. All subscriber counts exclude complimentary accounts but include promotional accounts.

Subscriber counts, or RGUs, and penetration statistics measure market share and also indicate the success of bundling and pricing strategies.

Consumer and Business Network Services divisions' RGUs represent the number of products sold to customers and includes Video (Cable and Satellite subscribers), Internet customers, and Phone lines. As at August 31, 2016 these combined divisions had approximately 5.8 million RGUs.

In the Wireless division, a recurring subscriber or RGU (e.g. cellular phone, smartphone, tablet or mobile Internet device) has access to the wireless network for voice and/or data communications, whether Prepaid or Postpaid. Prepaid subscribers include RGUs where the account is within 90 days of the prepaid credits expiring. As at August 31, 2016 the Wireless divisions had approximately 1.0 million RGUs.

Wireless Average revenue per subscriber unit per month (ARPU)

Wireless ARPU is calculated as service revenue divided by the average number of subscribers on the network during the period and is expressed as a rate per month. This measure is an industry metric that is useful in assessing the operating performance of a wireless entity, but does not have a standardized meaning under IFRS.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

The Company prepared its Consolidated Financial Statements in accordance with IFRS as issued by the International Accounting Standards Board ("IASB"). An understanding of the Company's accounting policies is necessary for a complete analysis of results, financial position, liquidity and trends. Refer to Note 2 to the Consolidated Financial Statements for additional information on accounting policies. The following section discusses key estimates and assumptions that management has made under IFRS and how they affect the amounts reported in the Consolidated Financial Statements and notes. Following is a discussion of the Company's critical accounting policies:

Revenue and expense recognition

Revenue is considered earned as services are performed, provided that at the time of performance, ultimate collection is reasonably assured. Such performance is regarded as having been achieved when reasonable assurance exists regarding the measurement of the consideration that will be derived from rendering the service. Revenue from cable, Internet, Digital Phone,

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

DTH and wireless customers includes subscriber service revenue when earned. The revenue is considered earned as the period of service relating to the customer billing elapses.

The Company has multiple deliverable arrangements comprised of upfront fees (subscriber connection fee revenue and/or customer premise equipment revenue) and related subscription revenue. The Company determined that the upfront fees charged to customers do not constitute separate units of accounting; therefore, these revenue streams are assessed as an integrated package.

Subscriber connection fee revenue

Connection fees have no standalone value to the customer separate and independent of the Company providing additional subscription services, therefore the connection fee revenue must be deferred and recognized systematically over the periods that the subscription services are earned. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered its customer churn rate and other factors, such as competition from new entrants, to determine the deferral period of three years.

Subscriber connection and installation costs

The costs of physically connecting a new home are capitalized as part of the Company's distribution system as the service potential of the distribution system is enhanced by the ability to generate future subscriber revenue. Costs of disconnections are expensed as incurred as the activity does not generate future revenue.

Customer premise equipment revenue and costs

Customer premise equipment available for sale, which generally includes DCT and DTH equipment, has no standalone value to the customer separate and independent of the Company providing additional subscription services. Therefore the equipment revenue is deferred and recognized systematically over the periods that the subscription services are earned. As the equipment sales and the related subscription revenue are considered one transaction, recognition of the equipment revenue commences once the subscriber service is activated. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered various factors including customer churn, competition from new entrants, and technology changes to determine the deferral period of three years.

In conjunction with equipment revenue, the Company also incurs incremental direct costs which include equipment and related installation costs. These direct costs cannot be separated from the undelivered subscription service included in the multiple deliverable arrangement. Under IAS 2 "Inventories", these costs represent inventoriable costs and are deferred and amortized over the period of three years, consistent with the recognition of the related equipment revenue. The equipment and installation costs generally exceed the amounts received from customers on the sale of equipment (the equipment is sold to the customer at a subsidized price). The Company defers the entire cost of the equipment, including the subsidy portion, as it has determined that this excess cost will be recovered from future subscription revenues and that the investment by the customer in the equipment creates value through increased retention.

Shaw Tracking equipment revenue and costs

Shaw Tracking equipment revenue is recognized over the period of the related service contract for airtime, which is generally five years.

In conjunction with Shaw Tracking equipment revenue, the Company incurs incremental direct costs including equipment costs. These direct costs cannot be separated from the undelivered tracking service included in the multiple deliverable arrangement. Under IAS 2 "Inventories", these costs represent inventoriable costs and are deferred and amortized over the period of five years, consistent with the recognition of the related tracking equipment revenue.

Shaw Business installation revenue and expenses

The Company also receives installation revenues in its Shaw Business operation on contracts with commercial customers which are deferred and recognized as revenue on a straight-line basis over the related service contract, generally spanning two to ten years. Direct and incremental costs associated with the service contract, in an amount not exceeding the upfront installation revenue, are deferred and recognized as an operating expense on a straight-line basis over the same period.

Wireless equipment revenue

Revenue from the direct sale of equipment to subscribers or dealers is recognized when the equipment is delivered and accepted by the subscribers or dealers.

The Company offers a discretionary handset discount program, whereby the subscriber earns the applicable discount by maintaining services with the Company, such that the receivable relating to the discount at inception of the transaction is reduced over a period of time. A portion of future revenue earned in connection with the services is applied against the up-front discount provided on the handset. The Wireless division also offers a plan allowing customers to receive larger up-front handset discounts than they would otherwise qualify for, if they pay a predetermined incremental charge to their existing service plan on a monthly basis. The charge is billed on a monthly basis and is recognized as revenue at that time.

The Company recognizes the handset discount as a receivable and revenue upon the sale of the equipment on the basis that the receivable is recoverable. The receivable is realized on a straight-line basis over the period which the discount is forgiven to a maximum of two years with an offsetting reduction to revenue. The amount receivable is classified as part of other current or non-current receivables, as applicable, in the consolidated statement of financial position.

Discontinued operation subscriber revenue

In the former Media division, subscriber revenue was recognized monthly based on subscriber levels. Advertising revenues were recognized in the period in which the advertisements were aired or displayed on the Company's digital properties and recorded net of agency commissions as these amounts were paid directly to the agency or advertiser. When a sales arrangement includes multiple advertising spots, the proceeds were allocated to individual advertising spots under the arrangement based on relative fair values.

Income statement classification

The Company distinguishes amortization of deferred equipment revenue and deferred equipment costs from the revenue and expenses recognized from ongoing service activities on its income statement. Equipment revenue and costs are deferred and recognized over the anticipated term of the related future revenue (i.e., the monthly service revenue) with the period of recognition spanning three to five years. As a result, the amortization of deferred equipment revenue and deferred equipment costs are non-cash items on the income statement, similar to the Company's amortization of deferred IRU revenue, which the Company also segregates from ongoing revenue. Further, within the lifecycle of a customer relationship, the customer generally purchases customer premise equipment at the commencement of the customer relationship, whereas the subscription revenue represents a continuous revenue stream throughout that customer relationship. Therefore, the segregated presentation provides a clearer distinction within the income statement between cash and non-cash activities and between up-front and continuous revenue streams, which assists financial statement readers to predict future cash flows from operations.

Allowance for doubtful accounts

The majority of the Company's revenues are earned from selling on credit to individual subscribers. Because there are some customers who do not pay their debts, selling on credit necessarily involves credit losses. The Company is required to make an estimate of an appropriate allowance for doubtful accounts on its receivables. In determining its estimate, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. The estimated allowance required is a matter of judgment and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foretold, such as future business, personal and economic conditions. Conditions causing deterioration or improvement in the aging of accounts receivable and collections will increase or decrease bad debt expense.

Property, plant and equipment and other intangibles – capitalization of direct labour and overhead

The cost of property, plant and equipment and other intangibles includes direct construction or development costs (such as materials and labour) and overhead costs directly attributable to the construction or development activity. The Company capitalizes direct labour and direct overhead incurred to construct new assets, upgrade existing assets and connect new subscribers. These costs are capitalized as they are directly attributable to the acquisition, construction, development or betterment of the networks or other intangibles. Repairs and maintenance expenditures are charged to operating expenses as incurred.

Direct labour and overhead costs are capitalized in three principal areas:

1. Corporate departments such as Technology and Network Operations ("TNO"): TNO is involved in overall planning and development of the cable/Internet/Digital Phone infrastructure. Labour and overhead costs directly related to these activities are capitalized as the activities directly relate to the planning and design of the construction of the distribution system. In addition, TNO devotes considerable efforts towards the development of systems to support Digital Phone, Wi-Fi, and projects related to new customer management, billing and operating support systems. Labour costs directly related to these and other projects are capitalized.

2. Cable regional construction departments, which are principally involved in constructing, rebuilding and upgrading the cable/Internet/Digital Phone infrastructure: Labour and overhead costs directly related to the construction activity are capitalized as the activities directly relate to the construction or upgrade of the distribution system. Capital projects include new subdivision builds, increasing network capacity for Internet, Digital Phone and VOD by reducing the number of homes fed from each node, and upgrades of plant capacity, including the DNU project, and the Wi-Fi build.

3. Subscriber-related activities such as installation of new drops and Internet and Digital Phone services: The labour and overhead directly related to the installation of new services are capitalized as the activity involves the installation of capital assets (i.e., wiring, software, etc.) which enhance the service potential of the distribution system through the ability to earn future revenues. Costs associated with service calls, collections, disconnects and reconnects that do not involve the installation of a capital asset are expensed.

Amounts of direct labour and direct overhead capitalized fluctuate from year to year depending on the level of customer growth and plant upgrades for new services. In addition, the level of capitalization fluctuates depending on the proportion of internal labour versus external contractors used in construction projects.

The percentage of direct labour capitalized in many cases is determined by the nature of employment in a specific department. For example, a significant portion of labour and direct overhead of the cable regional construction departments is capitalized as a result of the nature of the activity performed by those departments. Capitalization is also based on piece rate work performed by unit-based employees which is tracked directly. In some cases, the amount of capitalization depends on the level of maintenance versus capital activity that a department performs. In these cases, an analysis of work activity is applied to determine this percentage split.

Amortization policies and useful lives

The Company amortizes the cost of property, plant and equipment and other intangibles over the estimated useful service lives of the items. These estimates of useful lives involve considerable judgment. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. On an annual basis, the Company reassesses its existing estimates of useful lives to ensure they match the anticipated life of the technology from a revenue-producing perspective. If technological change happens more quickly or in a different way than the Company has anticipated, the Company may have to shorten the estimated life of certain property, plant and equipment or other intangibles which could result in higher amortization expense in future periods or an impairment charge to write down the value of property, plant and equipment or other intangibles.

Intangibles

The excess of the cost of acquiring cable, satellite, media, data centre and wireless businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist of amounts allocated to broadcast rights and licenses, wireless spectrum licenses, trademarks, brands, program rights, customer relationships and software assets. Broadcast rights and licenses, wireless spectrum licenses, trademarks and brands represent identifiable assets with indefinite useful lives.

Program rights represent licensed rights acquired to broadcast television programs on the former Media division's conventional and specialty television channels and program advances are in respect of payments for programming prior to the window license start date. For licensed rights, the Company records a liability for program rights and corresponding asset when the license period has commenced and all of the following conditions have been met: (i) the cost of the program is known or reasonably determinable, (ii) the program material has been accepted by the Company in accordance with the license agreement and (iii) the material is available to the Company for telecast. Program rights are expensed on a systematic basis generally over the estimated exhibition period as the programs are aired and are included in operating, general and administrative expenses. Program rights are segregated on the statement of financial position between current and noncurrent assets based on expected life at time of acquisition.

Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over their estimated useful lives ranging from 4 – 15 years.

Software that is not an integral part of the related hardware is classified as an intangible asset. Internally developed software assets are recorded at historical cost and include direct material and labour costs as well as borrowing costs on qualifying assets. Software assets are amortized on a straight-line basis over estimated useful lives ranging from three to ten years. The Company reviews the estimates of lives and useful lives on a regular basis.

Asset impairment

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at March 1) and when events or changes in circumstances indicate that the carrying value may be impaired. The recoverable amount of each cash-generating unit ("CGU") is determined based on the higher of the CGU's fair value less costs to sell and its value in use. A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are Cable, Satellite, Data centres and Wireless. The Company had an additional cash generating unit, Media, until the sale of the division in April 2016. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods. The results of the impairment tests are provided in Note 10 to the Consolidated Financial Statements.

Employee benefit plans

As at August 31, 2016, Shaw had non-registered defined benefit pension plans for key senior executives and designated executives. The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The differences between actual and assumed results are immediately recognized in other comprehensive income/loss. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected will be needed to settle employee benefit obligations and is also used to calculate the interest income on plan assets. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes are required. The following table illustrates the increase on the accrued benefit obligation and pension expense of a 1% decrease in the discount rate:

(millions of Canadian dollars)	Accrued Benefit Obligation at End of Fiscal 2016	Pension Expense Fiscal 2016
Weighted Average Discount Rate – Non-registered Plans	3.50%	4.10%
Weighted Average Discount Rate – Registered Plans	3.86%	3.86%
Impact of: 1% decrease – Non-registered Plans	$ 96	$ 14
Impact of: 1% decrease – Registered Plans[1]	–	–

[1] The Company had a number of funded defined benefit pension plans which provided pension benefits to certain unionized and non-unionized employees in the media business. These plans were divested along with the sale of the Media division in April 2016.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

Deferred income taxes

The Company has recognized deferred income tax assets and liabilities for the future income tax consequences attributable to differences between the financial statement carrying amounts of assets and liabilities and their respective tax bases. Deferred tax assets are also recognized in respect of losses of certain of the Company's subsidiaries. The deferred income tax assets and liabilities are measured using enacted or substantially enacted tax rates expected to apply to taxable income in the years in which the temporary differences are expected to reverse or the tax losses are expected to be utilized. Realization of deferred income tax assets is dependent upon generating sufficient taxable income during the period in which the temporary differences are deductible. The Company has evaluated the likelihood of realization of deferred income tax assets based on forecasts of taxable income of future years, existing tax laws and tax planning strategies. Significant changes in assumptions with respect to internal forecasts or the inability to implement tax planning strategies could result in future impairment of these assets.

Commitments and contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Contractual and other commercial obligations primarily relate to network fees, program rights and operating lease agreements for use of transmission facilities, including maintenance of satellite transponders and lease of premises in the normal course of business. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities.

RELATED PARTY TRANSACTIONS

Related party transactions are reviewed by Shaw's Corporate Governance and Nominating Committee, which is comprised of independent directors. The following sets forth certain related party transactions in which the Company is involved.

Corus

The Company and Corus are subject to common voting control. During 2016, the Company's sold its wholly owned subsidiary Shaw Media to Corus. The transaction closed on April 1, 2016. During the year, network, advertising and programming fees were paid to various Corus subsidiaries, as well as transitional services related to the operations sold to Corus. The Company provided uplink of television signals, programming content, Internet services and lease of circuits to various Corus subsidiaries. In addition, the Company provided Corus with television advertising spots in return for radio and television advertising prior to Corus' acquisition of Shaw Media.

Burrard Landing Lot 2 Holdings Partnership

The Company has a 33.33% interest in the Burrard Landing Lot 2 Holdings Partnership (the "Partnership"). During fiscal 2016, the Company paid the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, BC, is the Company's headquarters for its lower mainland operations.

Key management personnel and Board of Directors

Key management personnel, which consists of the most senior executive team and the Board of Directors have the authority and responsibility for directing and controlling the activities of the Company. In addition to compensation provided to key management personnel and the Board of Directors for services rendered, the Company transacts with companies related to certain Board members primarily for the purchase of remote control units, network programming and installation of equipment.

NEW ACCOUNTING STANDARDS

Shaw has adopted or will adopt a number of new accounting policies as a result of recent changes in IFRS as issued by the IASB. The ensuing discussion provides additional information as to the date that Shaw is or was required to adopt the new standards, the methods of adoption permitted by the standards, the method chosen by Shaw, and the effect on the financial statements as a result of adopting the new policies. The adoption or future adoption of these accounting policies has not and is not expected to result in changes to the Company's current business practices.

Adoption of recent accounting pronouncement

The adoption of the following IFRS amendments effective September 1, 2015 had no impact on the Company's consolidated financial statements.

- Amendments to IFRS 10 *Consolidated Financial Statements* and IAS 28 *Investments in Associates and Joint Ventures* outlined in *Sale or Contribution of Assets between an Investor and its Associates or Joint Venture* as issued by the IASB in September 2014. These amendments were to be applied prospectively to transactions occurring for annual periods commencing after a date to be determined by the IASB, however earlier application is permitted.

Standards, interpretations and amendments to standards issued but not yet effective

The Company has not yet adopted certain standards and amendments that have been issued but are not yet effective. The following pronouncements are being assessed to determine their impact on the Company's results and financial position.

- IFRS 2 *Share-based Payment* was amended in 2016 to clarify the accounting and measurement for certain types of share-based payment transactions. It is required to be applied for annual periods commencing on or after January 1, 2018, however earlier application is permitted.
- IFRS 16 *Leases* requires entities to recognize lease assets and lease obligations on the balance sheet. For lessees, IFRS 16 removes the classification of leases as either operating leases or finance leases, effectively treating all leases as finance leases. Certain short-term leases (less than 12 months) and leases of low-value are exempt from the requirements and may continue to be treated as operating leases. Lessors will continue with a dual lease classification model. Classification will determine how and when a lessor will recognize lease revenue, and what assets would be recorded. It may be applied retroactively or using a modified retrospective approach for annual periods commencing January 1, 2019, with early adoption permitted if IFRS 15 *Revenue from Contracts with Customers* has been adopted.
- IAS 12 *Income Taxes* was amended in 2016 to clarify how to account for deferred tax assets related to debt instruments measured at fair value. It is required to be applied for annual periods commencing January 1, 2017.
- IAS 7 *Statement of Cash Flows* was amended in 2016 to improve disclosures regarding changes in financing liabilities. It is required to be applied for annual period beginning on or after January 1, 2017.
- *Clarification of Acceptable Methods of Depreciation and Amortization* (Amendments to IAS 16 *Property, Plant and Equipment* and IAS 38 *Intangible Assets)* prohibits revenue from being used as a basis to depreciate property, plant and equipment and significantly limits use of revenue-based amortization for intangible assets. The amendments are to be applied prospectively for the annual period commencing September 1, 2016.
- IFRS 15 *Revenue from Contracts with Customers,* was issued in May 2014 and replaces IAS 11 *Construction Contracts,* IAS 18 *Revenue,* IFRIC 13 *Customer Loyalty Programs,* IFRIC 15 *Agreements for the Construction of Real Estate*, IFRIC 18 *Transfers of Assets from Customers* and SIC-31 *Revenue—Barter Transactions Involving Advertising Services.* The new standard requires revenue to be recognized to depict the transfer of promised goods or services to customers in an amount that reflects the consideration expected to be received in exchange for those goods or services. The principles are to be applied in the following five steps: (1) identify the contract(s) with a customer, (2) identify the performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the performance obligations in the contract, and (5) recognize revenue when (or as) the entity satisfies a performance obligation. The new standard is to be applied either retrospectively or on a modified retrospective basis and is effective for the annual period commencing September 1, 2018.
- IFRS 9 *Financial Instruments: Classification and Measurement* replaces IAS 39 *Financial Instruments* and applies a principal-based approach to the classification and measurement of financial assets and financial liabilities, including an expected credit loss model for calculating impairment, and includes new requirements for hedge accounting. The standard is required to be applied retrospectively for the annual period commencing September 1, 2018.

KNOWN EVENTS, TRENDS, RISKS AND UNCERTAINTIES

The discussion in this MD&A addresses only what management has determined to be the most significant known events, trends, risks and uncertainties relevant to the Company, its operations and/or its financial results. This discussion is not exhaustive. The discussion of these matters should be considered in conjunction with the "Caution Concerning Forward-Looking Statements".

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

Competition and Technological Change

Shaw operates in an open and competitive marketplace. Our businesses face competition from regulated and unregulated entities using existing or new communications technologies and from illegal services. In addition, the rapid deployment of new technologies, services and products has reduced the traditional lines between telecommunications, Internet and distribution services and further expands the competitive landscape. Shaw may face competition in the future from other technologies being developed or yet to be developed. While Shaw continually seeks to strengthen its competitive position through investments in infrastructure, technology and customer service and through acquisitions, there can be no assurance that these investments will be sufficient to maintain Shaw's market share or performance in the future.

The following competitive events, trends, risks and/or uncertainties specific to areas of our business may have a material adverse effect on Shaw and its reputation, as well as its operations and/or its financial results. In each case, the competitive events, trends, risks and/or uncertainties may increase or continue to increase. Competition for new subscribers and retention of existing subscribers may require substantial promotional activity and increase our cost of customer acquisition, decrease our ARPU, or both. We expect that competition, including aggressive discounting practices by competitors to gain market share, will continue to increase for all of our businesses.

Consumer Internet

Shaw competes with a number of different types of ISPs offering residential Internet access including traditional telephone companies, wireless providers and independent ISPs making use of wholesale services to provide Internet access in various markets.

Shaw expects that consumer demand for higher Internet access speeds and greater bandwidth will continue to be driven by bandwidth-intensive applications including streaming video, digital downloading and interactive gaming. As described further under "Shaw's Wireline Network", Shaw continues to expand the capacity and efficiency of its wireline network to handle the anticipated increases in consumer demand for higher Internet access speeds and greater bandwidth, however, there can be no assurance that our investments in network capacity will continue to meet this increasing demand.

Consumer Video

Shaw's Consumer video services, delivered through both our wireline and satellite platforms, compete with other distributors of video and audio signals. We also compete increasingly with unregulated over-the-top video services and offerings available over Internet connections. Continued improvements in the quality of streaming video over the Internet and the increasing availability of television shows and movies online will continue to increase competition to Shaw's Consumer video services. Our satellite services also compete with illegal satellite services including grey and black market offerings.

Consumer Phone

Shaw's competitors for Consumer wireline phone services include traditional telephone companies, other wireline carriers, Voice over Internet Protocol ("VoIP") providers and wireless providers. Several of such competitors have larger operational and financial resources than Shaw. In addition, households increasingly rely on wireless services in place of wireline phone services which negatively affects the business and prospects of our Consumer wireline phone services.

Wireless

Freedom Mobile, formerly WIND Mobile, is a new entrant in the highly competitive Canadian wireless market which is characterized by three national wireless incumbent carriers and regional participants. The national wireless incumbent carriers have larger, and more diverse, spectrum holdings than Shaw, as well as larger operational and financial resources than Shaw and are well established in the market. The LTE-Advanced overlay network will be built using our Wireless division's AWS-3 spectrum licences. A robust ecosystem of handset devices for the AWS-3 spectrum band may not emerge in a timeframe that matches the planned roll-out of our LTE-Advanced network. In addition, our Wireless division may face increased competition from other facilities based or non-facilities based new entrants or alternate technologies.

Business Network Services

Shaw Business competes with other telecommunications carriers in providing high-speed data and video transport and Internet connectivity services to businesses, ISPs and other telecommunications providers. The telecommunications services industry in Canada is highly competitive, rapidly evolving and subject to constant change. Shaw Business' competitors include traditional telephone companies, competitive access providers, competitive local exchange carriers, ISPs, private networks built by large end users and other telecommunications companies. In addition, the development and implementation of new technologies by others could give rise to significant additional competition. Competitors for the delivery of voice and unified communication services include traditional telecommunications companies, resellers and new entrants to the market leveraging new technologies to deliver services. Shaw Broadcast Service and Shaw Tracking also compete in industries that are highly competitive, rapidly evolving and subject to constant change.

Business Infrastructure Services

Shaw's hybrid IT services business operates in a highly competitive market that includes telecommunications companies, carriers, ISPs, managed service providers, large real estate investment trusts and other data centre operators, many of which are well-established in the areas where they operate. Ongoing consolidation within the industry has created, and is expected to continue to create, large organizations having larger operational and financial resources than Shaw.

Impact of Regulation

As more fully discussed under "Government regulations and regulatory developments", a majority of our Canadian business activities are subject to: (i) regulations and policies administered by ISED and/or the CRTC, and (ii) conditions of licenses. Shaw's operations, financial results, and future prospects are affected by changes in regulations, policies and decisions, conditions of licenses and decisions, including changes in interpretation of existing regulations by courts, the government or the regulators, in particular the CRTC, ISED, Competition Bureau and Copyright Board. This regulation relates to, and may have an impact on, among other things, licensing, spectrum holdings, products and services, competition, programming carriage and terms of carriage, strategic transactions, and infrastructure access, and the potential for new or increased fees or costs. Changes in the regulatory regime may have a material adverse effect on Shaw and its reputation, as well as Shaw operations, financial results and/or future prospects.

Economic Conditions

The Canadian and U.S. economies are affected by uncertainty in global financial and equity markets and slowdowns in national and/or global economic growth. Changes in economic conditions may affect discretionary consumer and business spending, resulting in increased or decreased demand for Shaw's product offerings. Current or future events caused by volatility in domestic or international economic conditions or a decline in economic growth may have a material adverse effect on Shaw, its operations and/or financial results.

Foreign Operations

ViaWest and Shaw's other U.S. operations are exposed to fluctuations in the U.S. economy, U.S. regulatory changes, and other political developments, all of which could have an adverse impact on Shaw's business and financial results. The U.S. tends to be a litigious environment with larger damages awards compared to Canada. In some instances, Shaw may be subject to the exclusive jurisdiction of the U.S. courts.

Interest Rates, Foreign Exchange Rates and Capital Markets

Shaw has the following financial risks in its day-to-day operations:

(a) Interest rates: Due to the capital-intensive nature of Shaw's operations, the Company uses long-term financing extensively in its capital structure. The primary components of this structure include banking facilities as more fully described in Note 13 to the Consolidated Financial Statements, and various Canadian denominated senior notes and debentures with varying maturities issued in the public markets as more fully described in Note 13 to the Consolidated Financial Statements.

Interest on bank indebtedness is based on floating rates while the senior notes are primarily fixed-rate obligations. If required, Shaw uses its credit facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. Increases in interest rates may have a material adverse effect on Shaw, its operations and/or its financial results.

As at August 31, 2016, 79% of Shaw's consolidated long-term debt was fixed with respect to interest rates.

(b) Foreign exchange: A portion of Shaw's debt, capital expenditures, revenues and operating expenses are denominated in U.S. dollars – both for ViaWest and Shaw's other U.S. operations. In addition, Shaw's net investment in ViaWest is exposed to foreign exchange risk related to fluctuations in exchange rates between the Canadian and U.S. dollar. This risk is mitigated by certain U.S. dollar denominated debt which is designated as a hedge for the net investment in ViaWest as well as U.S. dollar forward purchases to reduce foreign exchange exposure to Shaw. Fluctuations in the value of the Canadian dollar relative to the U.S. dollar may have a material adverse effect on Shaw, its operations and/or its financial results.

(c) Capital markets: Shaw requires ongoing access to capital markets to support our operations. Changes in capital market conditions, including significant changes in market interest rates or lending practices, or changes in Shaw's credit ratings, may adversely affect our ability to raise or refinance short-term or long-term debt and therefore may have a material adverse effect on Shaw, its operations and/or its financial results.

Shaw manages its exposure to floating interest rates by maintaining a balance of fixed and floating rate debt. Shaw may enter into forward contracts in respect of U.S. dollar capital expenditure and operating commitments to manage its exposure to foreign exchange uncertainty. While hedging and other efforts to manage floating interest rate risk are intended to mitigate Shaw's risk exposure, because of the inherent nature and risk of such transactions, those activities can result in losses. If Shaw hedges its floating interest rate exposure, it may forego the benefits that may otherwise be experienced if rates were to fall and it is subject to credit risks associated with the counterparties with whom it contracts. In order to minimize the risk of counterparty default under its swap agreements, Shaw assesses the creditworthiness of its swap counterparties. Further information concerning the policy and use of derivative financial instruments is contained in Notes 2 and 28 to the Consolidated Financial Statements.

Equity Investment in Corus

As at August 31, 2016, the Company had a 38**%** interest in Corus, which operates a portfolio of multimedia offerings comprised of specialty television services, radio stations, conventional television stations, a global content business, digital assets, live events, children's book publishing, animation software, technology and media services (see "Equity Interest in Corus"). Each of these businesses faces competition, including competition for subscribers, advertising customers and engaging content. Corus' performance affects the value of the Company's investment in Corus and the Company's financial results. Corus' performance may not meet the Company's expectations (including in respect of Corus' payment of a regular dividend) in the near and/or long term.

As Corus is a publicly traded company, its value to the Company may be determined by market factors that do not reflect its value. This may limit the Company's ability to market its interest in Corus at a price that reflects the intrinsic value of Corus to the Company.

Programming Expenses

Expenses for video programming continue to be one of our most significant single expense items. Costs continue to increase, particularly for sports programming. In addition, as we add programming or distribute existing programming to more of our subscriber base, programming expenses increase. Although we have been successful at reducing the impact of these cost increases through the sale of additional services or increasing subscriber rates, there can be no assurance that we will continue to be able to do so and may have a material adverse effect on Shaw, its operations and/or its financial results.

Satellite Failure

Shaw relies on three satellites (Anik F2, Anik F1R and Anik G1) owned by Telesat Canada ("Telesat") to provide satellite services in our Consumer and Business Network Services divisions. The Company owns certain transponders on Anik F2 and has long-term capacity service agreements in place in respect of transponders on Anik F1R, Anik F2 and Anik G1. For transponders on Anik F1R and Anik F2, the Company does not maintain any indirect insurance coverage as it believes the costs are uneconomic relative to the benefit which could otherwise be derived through an arrangement with Telesat. In the case of Anik G1, Telesat is committed to maintaining insurance on the satellite for five years from its April 2013 launch. As collateral for the transponder capacity pre-payments that were made by the Company to facilitate the construction of the satellite, the Company maintains a security interest in the transponder capacity and any related insurance proceeds that Telesat recovers in connection with an insured loss event.

The Company does not maintain business interruption insurance covering damage or loss to one or more of the satellites as it believes the premium costs are uneconomic relative to the risk of satellite failure. The majority of transponder capacity is available to the Company on an unprotected, non-preemptible basis, in both the case of the Anik F2 transponders that are owned by Shaw and the Anik F1R, Anik F2 and Anik G1 transponders that are secured through capacity service agreements. The Company has priority access to spare transponders on Anik F1R, Anik F2 and Anik G1 in the case of interruption, subject to availability. In the event of satellite failure, service will only be restored as capacity becomes available. Restoration of satellite service on another satellite may require repositioning or re-pointing of customers' receiving dishes, an upgrade of their video terminal or customers may require a larger dish. The Anik G1 satellite has a switch feature that allows whole channel services (transponders and available spares) to be switched from extended Ku-band to Ku-band, which provides the Company with limited back-up to restore failed whole channel services of Anik F1R. Satellite failure could negatively affect levels of customer service and customer relationships and may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Network Failure

Shaw's business may be interrupted by wireline or wireless network failures, including Shaw's own networks or third party networks. Such network failures may be caused by fire damage, natural disaster, power loss, hacking, computer viruses, disabling devices, acts of war or terrorism and other events which may be beyond Shaw's control.

As insurance premium costs are uneconomic relative to the risk of failure, Shaw self-insures the plant in the hybrid fibre-coax network. It is likely that wireline or wireless network damage caused by any one incident would be limited by geographic area and the resulting business interruption and financial damages would be also limited. In addition, with respect to a wireline network failure, we expect the risk of loss to be mitigated as most of the backbone fibre network and much of the hybrid fibre-coax access network is located underground.

Shaw protects its wireline network through a number of measures including physical and information technology security, and ongoing maintenance and placement of insurance on our network equipment and data centres. In the past, the Company has successfully recovered from network damage caused by natural disasters without significant cost or disruption of service.

Shaw protects its wireless network and mitigates wireless network failure through physical and information technology security, ongoing maintenance, and by carrying insurance on its wireless network equipment.

Despite the steps Shaw takes to reduce the risk of wireline and wireless network failure, failures may still occur, and such failures could negatively affect levels of customer service and relationships which may have a material adverse effect on Shaw and its reputation, as well as its operations and/or financial results.

Cyber Security Risks

Shaw's systems and network architecture are designed and operated to be secure, but they are vulnerable to the risks of an unauthorized third party accessing these systems or its network. This could lead to a number of adverse consequences, including the unavailability, disruption or loss of Shaw's services or key functionalities within Shaw's technology systems or software or the unauthorized disclosure, corruption or loss of sensitive company, customer or personal information. Our insurance may not cover or be adequate to fully reimburse us for any associated costs and losses.

We continue to assess and enhance our cyber security stance within Shaw while we continue to monitor the risks of cyber attacks and implement appropriate security policies, procedures and information technology systems to mitigate the risk of cyber attacks.

External threats to our network are constantly changing, and there is no assurance we will be able to protect the network from all future threats which may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Information Systems and Internal Business Processes

Many aspects of the Company's businesses depend to a large extent on various IT systems and software, and on internal business processes. Shaw regularly undertakes initiatives to update and improve these systems and processes. Although the Company has taken steps to reduce the risks of failure of these systems and processes, there can be no assurance that potential failures of, or deficiencies in, these systems, processes or change initiatives will not have an adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Reliance on Suppliers

Shaw is connected to or relies on other telecommunication carriers and certain utilities to conduct its business. Any disruption to the services provided by these suppliers, including labour strikes and other work disruptions, bankruptcies, technical difficulties or other events affecting the business operations of these carriers or utilities may affect Shaw's ability to operate and, therefore may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

The Company sources its customer premise and capital equipment, capital builds as well as portions of its service offerings from certain key suppliers. While the Company has alternate sources for many of these purchases, the loss of a key supplier may adversely affect the Company's ability to operate, and therefore may have a material adverse effect on Shaw, its operations and/or its financial results. There are a limited number of suppliers of popular mobile devices and there is a risk that the Company will not be able to maintain contracts for its existing supply of mobile devices and/or contract for the supply of new devices on commercially reasonable terms.

Litigation

Shaw and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business, whether in Canada or the U.S. Although management does not expect that the outcome of these matters will have a material adverse effect on the Company, there can be no assurance that these matters, or other legal matters that arise in the future, will not have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Taxes

Shaw's business is subject to various tax laws, changes to tax laws and the adoption of new tax laws, regulations thereunder and interpretations thereof, which may have adverse tax consequences to Shaw.

While Shaw believes it has adequately provided for all income and commodity taxes based on information that is currently available, the calculation and the applicability of taxes in many cases require significant judgment in interpreting tax rules and regulations. In addition, Shaw's tax filings are subject to government audits which could result in material changes in the amount of current and deferred income tax assets and liabilities and other liabilities which may, in certain circumstances, result in the assessment of interest and penalties.

Concerns about Alleged Health Risks relating to Radiofrequency Emissions

Concerns about alleged health risks relating to radiofrequency emissions may adversely affect our Wireless division. Some studies have alleged that links exist between radiofrequency emissions from certain wireless devices and cell sites and various health problems or possible interference with electronic medical devices, including hearing aids and pacemakers. Our Wireless division complies with all applicable laws and regulations. Further, our Wireless division relies on suppliers of wireless network equipment and customer equipment to meet or exceed all applicable regulatory and safety requirements. No definitive evidence exists of harmful effects from exposure to radiofrequency emissions when legal limits are complied with. Additional studies of radiofrequency emissions are ongoing and we cannot be certain of results, which could result in additional or more restrictive regulation or exposure to potential litigation.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

Acquisitions, Dispositions and Other Strategic Transactions

Shaw may from time to time make acquisitions to expand its existing businesses or to enter into sectors in which Shaw does not currently operate, dispositions to focus on core offerings or enter into other strategic transactions. Such acquisitions, dispositions and/or strategic transactions may fail to realize the anticipated benefits, result in unexpected costs and/or Shaw may have difficulty incorporating or integrating the acquired business, any of which may have a material adverse effect on Shaw, its operations and/or financial results.

Holding company structure

Substantially all of Shaw's business activities are operated by its subsidiaries. As a holding company, our ability to meet our financial obligations is dependent primarily upon the receipt of interest and principal payments on intercompany advances, management fees, cash dividends and other payments from our subsidiaries together with proceeds raised by the Company through the issuance of equity and the incurrence of debt, and from proceeds received on the sale of assets. The payment of dividends and the making of loans, advances and other payments to Shaw by its subsidiaries may be subject to statutory or contractual restrictions, are contingent upon the earnings of those subsidiaries and are subject to various business and other considerations.

Control of the Company

Class A Shares are the only shares entitled to vote on all shareholder matters. Voting control of the Company is held by Shaw Family Living Trust ("SFLT") which holds, for the benefit of descendants of JR and Carol Shaw, 17,562,400 Class A Shares, being approximately 78% of the issued and outstanding shares of such class as at August 31, 2016. The sole trustee of SFLT is a private company owned by JR Shaw and having a board comprised of seven directors, including JR Shaw as chair, Carol Shaw, and four other members of JR Shaw's family. Accordingly, JR Shaw, through SFLT and its trustee, is able to elect a majority of the Board of Directors of the Company and to control any vote by the holders of Class A Shares.

Dividend Payments are not Guaranteed

Shaw currently pays monthly common share and quarterly preferred share dividends in amounts approved on a quarterly basis by the Board of Directors. Over the long term, Shaw expects to continue to pay dividends from its free cash flow; however, balance sheet cash and/or credit facilities may be used to stabilize dividends from time to time. Although Shaw intends to make regular dividend payments, dividends are not guaranteed as actual results may differ from expectations and there can be no assurance that the Company will continue common or preferred share dividend payments at the current level. In addition to the standard legislated solvency and liquidity tests that must be met, the Company would not be able to declare and pay dividends if there was an event of default or a pending event of default would result (as a consequence of declaring and paying dividends) under its credit facilities.

DISCUSSION OF OPERATIONS AND FOURTH QUARTER

To comply with the requirements of Items 1.4 (Discussion of Operations) and 1.10 (Fourth Quarter) of Form 51-102F1 of National Instrument 51-102, the sections entitled "Discussion of Operations" and "Overview" in the Company's Management's Discussion and Analysis for the fourth quarter and year ended August 31, 2016 (the "**2016 Fourth Quarter MD&A**") are incorporated by reference herein. The 2016 Fourth Quarter MD&A can be found on SEDAR at www.sedar.com.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

SUMMARY OF QUARTERLY RESULTS

Quarter	Revenue	Operating income before restructuring costs and amortization[1]	Net income from continuing operations attributable to equity shareholders	Net income attributable to equity shareholders	Net income[2]	Basic and diluted earnings per share from continuing operations	Basic and diluted earnings per share
(millions of Canadian dollars except per share amounts)							
2016							
Fourth	1,306	549	144	154	154	0.29	0.31
Third	1,283	555	58	700	704	0.11	1.44
Second	1,151	502	116	156	164	0.24	0.32
First	1,144	508	138	209	218	0.28	0.43
Total	4,884	2,114	456	1,219	1,240	0.92	2.50
2015							
Fourth	1,131	525	247	272	276	0.51	0.57
Third	1,135	527	136	202	209	0.28	0.42
Second	1,118	498	135	163	168	0.28	0.34
First	1,100	487	148	219	227	0.31	0.46
Total	4,484	2,037	666	856	880	1.38	1.79

(1) Refer to Key performance drivers.
(2) Net income attributable to both equity shareholders and non-controlling interests.

While financial results for the Company are generally not subject to significant seasonal fluctuations, subscriber activity may fluctuate from one quarter to another. Subscriber activity may also be affected by competition and Shaw's promotional activity. Further, satellite subscriber activity is modestly higher around the summer time when more subscribers have second homes in use. Shaw's wireline, satellite, wireless or data centre businesses do not depend on any single customer or concentration of customers.

Fourth quarter net income decreased $550 million compared to the third quarter of fiscal 2016 mainly due to lower income from discontinued operations relating primarily to the gain on the divestiture of the former Media division recorded in the third quarter, decreased operating income before restructuring costs and amortization, and higher income taxes. Partly offsetting the decrease in net income were decreases in net other costs and revenues and restructuring costs. Net other costs and revenue decreased primarily due to non-recurring charges recorded in the third quarter, including a $17 million impairment of goodwill relating to the Tracking business, a $51 million impairment of the Company's joint venture investment in shomi, a $20 million write-down of a private portfolio investment, $12 million in acquisition related costs and a $10 million loss from an equity accounted associate. See "Other income and Expense" for further detail on non-operating items.

Net income for the third quarter increased $540 million compared to the second quarter of fiscal 2016 mainly due to higher income from discontinued operations relating primarily to the gain on the divestiture of the former Media division, increased operating income before restructuring costs and amortization and lower income taxes. Partly offsetting the net income improvement in the quarter were: i) decreased net other costs and revenue; ii) increased restructuring charges; and iii) increased amortization. Net other costs and revenue decreased primarily due to $17 million impairment of goodwill relating to the Tracking business, a $51 million impairment of the Company's shomi joint venture investment, a $20 million write-down of a private portfolio investment and a $10 loss from an equity accounted associate.

In the second quarter of 2016, net income decreased $54 million compared to the first quarter of fiscal 2016 mainly due to decreased income from discontinued operations of $32 million, primarily due to the seasonality of the Media business reflected in income from discontinued operations, net of tax, and net other costs and revenues of $13 million. Net other costs and revenues decreased primarily due to $8 million of costs recorded in the quarter related to the acquisition of WIND and INetU.

In the first quarter of 2016, net income decreased $58 million compared to the fourth quarter of 2015 mainly due to a change in net other costs and revenues of $140 million and decrease in operating income before restructuring costs and amortization of $17 million offset by an increase in income from discontinued operations, net of tax, of $51 million and a decrease in income taxes of $50 million. Net other costs and revenues decreased primarily due to a fourth quarter 2015 gain on the sale of wireless spectrum of $158 million less the impact of a $27 million write-down of a private portfolio investment in the same period offset by an increase in the equity loss of a joint venture of $5 million in the first quarter of 2016.

In the fourth quarter of 2015, net income increased $67 million primarily due to improved net other revenue items of $191 million partially offset by lower income from discontinued operations, net of tax, of $44 million and higher income tax expense of $70 million. The improvement in net other costs and revenue items was due to the combined effects of the aforementioned sale of spectrum licenses and write-down of a private portfolio investment during the fourth quarter and the $59 million net charge arising in the third quarter related to an impairment of goodwill, write-down of IPTV assets and proceeds received on the Shaw Court insurance claim.

In the third quarter of 2015, net income increased $41 million due to higher operating income before restructuring costs and amortization of $29 million, an increase in income from discontinued operations, net of tax, of $40 million, lower restructuring costs of $35 million and $11 million of proceeds related to the Shaw Court insurance claim, partially offset by a charge for impairment of goodwill of $15 million and write-down of IPTV assets of $55 million as well as the distributions received from a venture capital fund in the second quarter. The impairment of goodwill was in respect of the Tracking operations in the Business Network Services division and was a result of the Company's annual impairment test of goodwill and indefinite-life intangibles in the third quarter. The write-down of IPTV assets was a result of the Company's decision to work with Comcast to begin technical trials of their cloud-based X1 platform.

In the second quarter of 2015, net income decreased $59 million due to lower income from discontinued operations, net of tax, of $46 million and restructuring expenses of $36 million partially offset by higher operating income before restructuring costs and amortization of $10 million, net other costs and revenue items of $24 million due to the aforementioned venture capital fund distributions.

In the first quarter of 2015, net income increased $35 million due to income from discontinued operations, net of tax, of $56 million and a decrease in income taxes of $26 million, partially offset by increases in amortization of $33 million and net other costs of $17 million. The increase in net other costs and revenue was primarily due to an equity loss of $13 million in respect of the Company's joint venture interest in shomi.

The following further assists in explaining the trend of quarterly revenue and operating income before restructuring costs and amortization:

Growth (losses) in subscriber statistics as follows:

	2016				2015			
Subscriber Statistics	**First**	**Second**	**Third**	**Fourth**	**First**	**Second**	**Third**	**Fourth**
Video – Cable	**(20,900)**	**(39,354)**	**(25,993)**	**(23,773)**	(15,591)	(35,967)	(24,524)	(39,315)
Video – Satellite	**(12,628)**	**(3,560)**	**1,113**	**(6,780)**	(17,980)	(8,254)	(2,820)	(8,146)

Fiscal 2016 Highlights

- Net income was $1.24 billion for fiscal 2016 compared to $880 million in 2015.
- Earnings per share were $2.51 in fiscal 2016 compared to $1.80 in 2015.
- Revenue for fiscal 2016 improved 8.9% to $4.88 billion from $4.49 billion last year.
- Operating income before restructuring costs and amortization of $2.11 billion in fiscal 2016 was up 3.8% over last year's amount of $2.04 billion.
- Consolidated free cash flow in fiscal 2016 was $482 million compared to $653 million in 2015.

- During 2016 the Company's dividend rates on Shaw's Class A Participating Shares and Class B Non-Voting Participating Shares were $1.1825 and $1.1850 respectively. Dividends paid in 2016 were $568 million gross of amounts attributed to the dividend reinvestment plan.

Significant acquisitions, financings and other transactions:

ViaWest acquisition of INetU, Inc.

- On December 15, 2015, ViaWest closed the acquisition of 100% of the shares of INetU, Inc. ("INetU") for US$162 million which was funded through a combination of borrowings under ViaWest's and the Company's revolving credit facilities as well as incremental term loan proceeds under ViaWest's credit facility.
- INetU is a solutions provider of public, private and hybrid cloud environments offering managed security and compliance services. The acquisition of INetU allowed ViaWest to add new services to its cloud and managed offerings, and expanded its geographical footprint with eastern U.S. and European cloud locations.

Acquisition of Mid-Bowline Group Corp and its wholly owned subsidiary WIND Mobile Corp.

- On March 1, 2016, the Company completed the acquisition of 100% of the shares of Mid-Bowline Group Corp. and its wholly owned subsidiary WIND Mobile Corp. for an enterprise value of $1.6 billion which was funded through a combination of cash on hand, a drawdown of $1.3 billion on the Company's credit facilities and the issuance of 2,866,384 Class B Non-Voting Participating Shares.
  - The fair value of purchase consideration consisted of $1.59 billion in cash and $68 million in shares. The acquisition of WIND Mobile led to the creation of our Wireless division.
- The addition of wireless enables Shaw to combine the power of fibre, coax, Wi-Fi and wireless networks to deliver a seamless experience of anytime and anywhere enhanced connectivity within our operating footprint.

Sale of Shaw Media Inc.

- On April 1, 2016, the Company entered into an agreement with Corus, a related party subject to common voting control, to sell 100% of its wholly owned subsidiary Shaw Media Inc. for a purchase price of approximately $2.65 billion, comprised of $1.85 billion of cash and 71,364,853 Corus Class B non-voting participating shares representing approximately 37% of Corus' total issued equity of Class A and Class B shares.
  - For fiscal 2016, the assets and liabilities, operating results and operating cash flows for the previously reported Media segment were presented as discontinued operations separate from the Company's continuing operations. Prior period financial information was also reclassified to present the former Media division as a discontinued operation.
  - The Company recognized a gain on the divestiture, net of tax, in income from discontinued operations of $625 million.
- Through holding of the shares in Corus, the Company will effectively retain an indirect, non-controlling interest in the former Media division subsequent to the sale, but the Company will no longer have control over the Media division.
- The Company participates in Corus' dividend reinvestment program for its initial investment in Corus Class B Shares. For the year ended August 31, 2016, the Company received dividends of $34 million from Corus that were reinvested through the program into additional Corus Class B shares. At August 31, 2016, the Company owned 74,135,891 Corus Class B shares having a fair value of $911 million and representing 38% of the total issued equity of Corus.

Financing activity

- During 2012, a syndicate of banks provided the Company with an unsecured $1 billion credit facility which includes a maximum revolving term facility of $50 million. During 2014, the Company amended the terms of the facility to extend the maturity date from January 2017 to December 2019. During 2016, the Company elected to increase its borrowing capacity by $500 million under the terms of the amended facility to a total of $1.5 billion. Funds are available to the Company in both Canadian and US dollars. Interest rates fluctuate with Canadian prime and bankers' acceptance rates, US bank base rates and LIBOR rates.

- During 2016, ViaWest entered into an incremental US$80 million term loan and increased the borrowing capacity available on the revolving facility by US$35 million. The incremental term loan has quarterly principal repayments commencing May 2016 with the balance due on maturity in March 2022. Interest rates fluctuate with LIBOR, US prime and US Federal Funds rates and the facilities are secured by a first priority security interest in specific assets pursuant to the terms of the Security Agreement
- On February 1, 2016, the Company repaid $300 million floating rate senior notes.
- On February 19, 2016, the Company issued $300 million senior notes at a rate of 3.15% due February 19, 2021.
- In connection with the acquisition of WIND Mobile on March 1, 2016, the Company drew down $1.3 billion on its credit facility comprised of a $1.0 billion non-revolving credit facility with a syndicate of lenders that was entered into on March 1, 2016 along with $300 million drawn on the Company's existing credit facility. These amounts were repaid on April 1, 2016 using the cash proceeds received from the Shaw Media disposition.
- On May 9, 2016, the Company repaid $300 million 6.15% senior notes.

Other items of significance

- The Company has a 50% interest in Shomi Partnership ("shomi") a joint venture arrangement with Rogers Communications Inc. ("Rogers"), a subscription video-on-demand service that launched in November 2014. Subsequent to the year end, shomi announced its decision to wind down its operations with service ending November 30, 2016. As a result, the Company expects to incur an investment loss of up to $120 million in its first quarter ending November 30, 2016 relating to estimated provisions for future liabilities in shomi.
- During 2016, the Company underwent a restructuring following a set of significant asset realignment initiatives, including the acquisition of WIND and divestiture of Shaw Media. As part of the restructuring, the Company initiated an efficiency program that will deliver fiscal 2017 operating cost and capital efficiencies, in aggregate, of approximately $75 million. Approximately 200 employees were affected by the 2016 restructuring of which $23 million of restructuring costs were recorded relating primarily to severance and employee related costs.

Fiscal 2015 Highlights:

- Net income was $880 million for fiscal 2015 compared to $887 million in 2014.
- Earnings per share were $1.80 in fiscal 2015 compared to $1.84 in 2014.
- Revenue for fiscal 2015 improved 6.3% to $4.49 billion from $4.22 billion in 2014
- Operating income before restructuring costs and amortization of $2.04 billion in fiscal 2015 was up 6.7% over 2014 amount of $1.91 billion.
- Consolidated free cash flow in fiscal 2015 was $653 million compared to $698 million in 2014.
- During 2015 the Company increased the dividend rate on Shaw's Class A Participating Shares and Class B Non-Voting Participating Shares to an equivalent annual per share dividend rate of $1.1825 and $1.185 respectively. Dividends paid in 2015 were $535 million gross of amounts attributed to the dividend reinvestment plan.

Significant acquisitions, financings and other transactions:

Acquisition of ViaWest

- On September 2, 2014, the Company closed the acquisition of 100% of the shares of ViaWest for an enterprise value of US $1.2 billion which was funded through a combination of cash on hand, assumption of ViaWest debt and a drawdown of US $330 million on the Company's credit facility.
- The ViaWest acquisition provided the Company with a growth platform in the North American data centre sector and represented another step in expanding technology offerings for mid-market enterprises in Western Canada.

Other items of significance

- In April 2014 the Company announced changes to the structure of its operating divisions to improve overall efficiency while enhancing its ability to grow as the leading network and content experience company. Commencing in fiscal 2015, Shaw's residential and enterprise services were reorganized into new Consumer and Business units, respectively. The organization structure realignment efforts included the following initiatives:
  - Adapting its customer care operations into centres of expertise in order to improve the end-to-end customer service experience;
  - Restructuring certain functions within the Business Network Services division to improve customer service and performance; and
  - Organizational changes in the former Media division to transition from a traditional broadcaster to a broader focus media organization.
  - In 2015, the Company recorded $52 million in respect of continued restructuring, primarily related to severance and employee related costs, which impacted approximately 1,700 employees.
- During fiscal 2015, the Company entered into a joint venture arrangement with Rogers to form shomi, a subscription video-on-demand. The service was launched in early November 2014.
- During 2013, the Company granted Rogers an option to acquire its wireless spectrum licenses. The exercise of the option and the sale of the wireless spectrum licenses were subject to various regulatory approvals and therefore, the licenses were not classified as held for sale. During fiscal 2015, the regulatory reviews concluded at which time Rogers exercised its option and the transfer was completed. The Company had previously received $50 million in respect of the purchase price of the option to acquire wireless spectrum licenses and a $200 million deposit in respect of the option exercise price. The Company received an additional $100 million when the transaction completed and recorded a gain of $158 million.
- During 2013, the Company established a notional fund, the accelerated capital fund, of up to $500 million with proceeds received, and to be received, from strategic transactions. Accelerated capital initiatives were funded through this fund and not cash generated from operations. Key investments included the Calgary data centres, further digitization of the network and additional bandwidth upgrades, development of IP delivery of video, expansion of the Wi-Fi network, and additional innovative product offerings related to Shaw Go WiFi and other applications to provide an enhanced customer experience. Approximately $110 million was invested in fiscal 2013, $240 million in fiscal 2014, and $150 million in fiscal 2015. The accelerated capital fund was closed in fiscal 2015.

Fiscal 2014 Highlights:

Significant acquisitions, financings and other transactions:

- In 2014, we adopted a program called "Focus to Deliver" designed to enhance our efficiency and growth potential by ensuring business decisions are made in accordance with disciplined customer-centric criteria.
- Shaw also continued to invest in and build awareness of Shaw Go WiFi and as at August 31, 2014 had approximately 45,000 hotspots and 1.25 million devices registered on the network. The Company increased its equivalent annual per share dividend rate on Shaw's Class A Participating Shares and Class B Non-Voting Participating Shares to an equivalent dividend rate of $1.0975 and $1.10 respectively. Dividends paid in 2014 were $485 million gross of amounts attributed to the dividend reinvestment plan.
- The Company conducted a number of capital market activities, including:
  - The issuance of 4.35% $500 million senior unsecured notes due January 31, 2024.
  - The issuance of $300 million floating rate senior unsecured notes due February 1, 2016.
  - The redemption of $600 million senior unsecured notes due June 2, 2014.

Revenue and operating income before restructuring costs and amortization

Consolidated revenue of $4.88 billion for fiscal 2016 improved 8.9% over $4.49 billion for fiscal 2015. Revenue growth was due to the addition of the new Wireless division and customer growth in the Business Network Services and the Business Infrastructure Services divisions as well as due to the incremental revenue acquired with the purchase of INetU. Consumer

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

revenue was comparable to the prior year where improvements in revenue from annual August rate increases and growth in Internet RGUs were offset by video, phone and satellite RGU declines and lower On Demand revenues.

Operating income before restructuring costs and amortization of $2.11 billion for the twelve month period improved 3.8% compared to $2.04 billion for fiscal 2015. The improvement reflects the addition of the Wireless division and growth in the Business Infrastructure Services and Business Network Services divisions attributable to profitable customer growth and the acquisition of INetU. This improvement was partially offset by lower operating income before restructuring costs and amortization in the Consumer division related primarily to higher costs associated with the deployment of FreeRange TV and programming.

Amortization

(millions of Canadian dollars)	2016	2015	Change %
Amortization revenue (expense) –			
Deferred equipment revenue	**67**	78	(14.1)
Deferred equipment costs	**(151)**	(164)	7.9
Property, plant and equipment, intangibles and other	**(873)**	(778)	(12.2)

Amortization of deferred equipment revenue and deferred equipment costs decreased over the comparable year primarily due to the impact of the fluctuation in the sales mix of equipment, timing and volume of sales and amortization periods for amounts in respect of customer premise equipment, as well as changes in customer pricing on certain equipment.

Amortization of property, plant and equipment, intangibles and other increased 12.2% for the year ended August 31, 2016 over the comparable periods due to amortization related to the new Wireless division as well as the effect of higher foreign exchange rates on the translation of ViaWest and the amortization of new expenditures exceeding the amortization of assets that became fully amortized during the periods

Amortization of financing costs and Interest expense

(millions of Canadian dollars)	2016	2015	Change %
Amortization of financing costs – long-term debt	**5**	4	25.0
Interest expense	**301**	283	6.4

Interest expense for the twelve month period ended August 31, 2016 increased over the comparable period primarily due to increased debt related to business acquisitions, foreign exchange on U.S. dollar denominated debt and a decrease in capitalized interest.

Other income and expenses

(millions of Canadian dollars)	2016	2015	Increase (decrease) in income
Business acquisition costs	**(21)**	(6)	(15)
Equity loss of an associate or joint venture	**(61)**	(56)	(5)
Gain on sale of wireless spectrum licenses	**–**	158	(158)
Impairment of goodwill	**(17)**	(15)	(2)
Other losses	**(102)**	(44)	(58)
	(201)	37	(238)

In fiscal 2016, the Company incurred $20 million of acquisition related costs for professional fees paid to lawyers, consultants, advisors and other related costs in respect of the acquisition of WIND which closed on March 1, 2016, and $1 million related to the acquisition of INetU. During the first quarter of the prior year, $6 million of costs were incurred in respect of the acquisition of ViaWest.

The Company recorded an equity loss of $52 million in fiscal 2016 (2015 – $56) related to its interest in shomi, the subscription video-on-demand service launched in early November 2014. The equity loss includes amounts in respect of the development and launch of the business. The Company recorded an equity loss of $10 million in fiscal 2016 (2015 – $nil) related to its interest in Corus.

In fiscal 2014, Rogers Communications Inc. exercised its option to acquire the Company's AWS spectrum as announced in January 2013. Previously the Company received $50 million in respect of the purchase price of the option to acquire wireless spectrum licenses and a $200 million deposit in respect of the option exercise price. The Company received an additional $100 million when the transaction completed in fiscal 2015 and recorded a gain of $158 million in that period.

As a result of the Company's annual impairment test of goodwill and indefinite-life intangibles, an impairment charge of $17 million was recorded in fiscal 2016 with respect to the Tracking operations in the Business Network Services division.

Other losses generally includes realized and unrealized foreign exchange gains and losses on U.S. dollar denominated current assets and liabilities, gains and losses on disposal of property, plant and equipment and minor investments, and the Company's share of the operations of Burrard Landing Lot 2 Holdings Partnership. In the current year, the category also includes a write-down of $54 in respect of the Company's investment in shomi, a write-down of $20 in respect of a private portfolio investment and asset write-downs of $16. In the prior year, the category included a write-down of $6 in respect of a property held for sale, distributions of $27 from a venture capital fund investment, a write-down of $27 in respect of a private portfolio investment, additional proceeds of $15 related to the fiscal 2012 Shaw Court insurance claim and asset write-downs of $55.

Subsequent to the period end, shomi, announced an orderly wind down with service ending November 30, 2016. As a result, the Company expects to incur an investment loss of up to $120 million in its first quarter ending November 30, 2016 relating to a provision for future liabilities in shomi.

Income tax expense

The income tax expense was calculated using current statutory income tax rates of 26.2% for 2016 and 25.5% for 2015 and was adjusted for the reconciling items identified in Note 23 to the Consolidated Financial Statements.

Earnings per share

(millions of Canadian dollars except per share amounts)	2016	2015	Change %

Basic	**2.51**	1.80	
Diluted	**2.51**	1.79	

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

Net income

Net income was $1.24 billion in 2016 compared to $880 million in 2015. The year-over-year changes are summarized in the table below.

(millions of Canadian dollars)	
Increased operating income before restructuring costs and amortization	**77**
Decreased restructuring costs	**16**
Increased amortization	**(93)**
Increased interest expense	**(18)**
Change in other net costs and revenue(1)	**(239)**
Decreased income taxes	**47**
Increased income from discontinued operations, net of tax	**570**
	360

(1) Net other costs and revenue includes gains on sales of wireless spectrum licenses and media assets, business acquisition costs, accretion of long-term liabilities and provisions, debt retirement costs, equity loss of an associate or joint venture, impairment of goodwill and other losses as detailed in the Consolidated Statements of Income.

Net income for the twelve month period ended increased $360 million relative to the comparable period primarily due to higher income from discontinued operations, net of tax, higher operating income before restructuring and amortization and a decrease in income taxes. Partly offsetting the improvement were increases in net other costs and revenue, higher interest expense and amortization, and reduced income from discontinued operations, net of tax, for the period following the divestiture.

Net other costs and revenues were unfavourable primarily due to amounts incurred in the third quarter related to the acquisition of WIND, a $17 million impairment of goodwill relating to the Tracking business, the impairment and equity loss of the Company's joint venture in shomi of $54 million, the write-down of private portfolio investment and a $10 million loss from an equity accounted associate. See "Other income and Expense" for further detail on non-operating items.

SEGMENTED OPERATIONS REVIEW

CONSUMER

FINANCIAL HIGHLIGHTS

(millions of Canadian dollars)	2016	2015	Change %
Revenue	**3,752**	3,752	–
Operating income before restructuring costs and amortization(1)	**1,667**	1,686	(1.1)
Operating margin(1)	**44.4%**	44.9%	(0.5pts)

(1) Refer to Key performance drivers.

Consumer revenue for the year of $3.8 billion was comparable to last year. The effect of price adjustments and growth in Internet was offset by higher promotional costs, reduced On-Demand revenues and lower video and phone subscribers.

Operating income before restructuring costs and amortization of $1.67 billion decreased 1.1% over the prior year. The year-to-date result was affected primarily by higher expenses including implementation and recurring costs attributable to the launch of FreeRange TV, and programming costs due to annual contracted increases and new content, offset partially by lower employee related costs due in part to the efficiency program enacted in the third quarter.

BUSINESS NETWORK SERVICES

Financial Highlights

(millions of Canadian dollars)	2016	2015	Change %
Revenue	**548**	520	5.4
Operating income before restructuring costs and amortization[1]	**265**	256	3.5
Operating margin[1]	**48.4%**	49.2%	(0.8pts)

(1) Refer to Key performance drivers.

Revenue of $548 million was 5.4% higher than the prior year primarily due to customer growth in both small to medium size businesses and in large enterprise markets as well as an August 2016 rate increase for legacy video, internet and phone products. The core business, which excludes satellite services, increased revenues 7.0% on a full year basis, reflecting continued customer growth converting to or adding Shaw's Smart suite of products.

Operating income before restructuring costs and amortization of $265 million improved 3.5% over the comparable year due to consistent customer growth trends throughout fiscal 2016 partly offset by the incremental costs associated with pursuing new customer opportunities including additional employee and marketing costs incurred relating to the Smart suite of products.

BUSINESS INFRASTRUCTURE SERVICES

Financial Highlights

(millions of Canadian dollars)	2016	2015	Change %
Revenue	**334**	246	35.8
Operating income before restructuring costs and amortization[1]	**123**	95	29.5
Operating margin[1]	**36.8%**	38.6%	(1.8pts)

(1) Refer to Key performance drivers.

Revenue for the year was $334 million and operating income before restructuring costs and amortization was $123 million. For the year, revenue of $334 million increased 35.8% over the prior year due primarily to the acquisition of INetU and customer growth in addition to a favourable foreign exchange impact and a full year of results from AppliedTrust, acquired in the fourth quarter of 2015. Excluding the effect of foreign exchange, revenue for the U.S. based operations increased by 24.3% to US$252 million for the twelve month period. Excluding the effect of INetU, revenue for the U.S. based operations increased by 12.0% to US$227 million for the twelve month period.

Total as per Note 24 to the audited annual consolidated financial statements	**121**	–	n/a
Consolidated total as per Note 24 to the audited annual consolidated financial statements(1)	**1,191**	1,106	7.7

(1) Fiscal 2015 includes $150 million related to certain capital investments that were funded from the accelerated capital fund.

Capital investment was $1.2 billion in the current year compared to $1.1 billion in the prior year which included $150 million of investment funded through the accelerated capital fund. The accelerated capital fund initiatives, which were completed in the fourth quarter of 2015, included investment on new internal and external Calgary data centres, increasing network capacity, next generation video delivery systems, back office infrastructure upgrades, and expediting the Wi-Fi infrastructure build.

Consumer and Business Network Services

Success based capital for the twelve month period of $275 million was moderately lower than the comparable periods last year. The current year decrease in success based capital was due primarily to lower phone installations and decreased advanced Internet Wi-Fi modem spend partially offset by higher Satellite success based capital spend driven by higher customer activations, increased equipment discounts and lower rental returns. Rental returns decreased in the year due mainly to the termination of the Satellite rental program.

Investment in the combined upgrades and enhancement and replacement categories was $444 million, a $56 million increase over fiscal 2015 due to: i) investment in the wireline network including significant bandwidth and upgrade programs; ii) next generation video delivery platforms necessary to support the rollout of Comcast's X1 and TVE products; iii) timing of bulk material and vehicle purchases; iv) initial investment in support of Satellite MPEG2 to MPEG4 upgrade: v) investment in Business Network Services managed Wi-Fi and SmartVoice products; and vi) mainline upgrade activities. Increased investments were partly offset by lower spend on Shaw Go WiFi access points and fibre builds in support of Business Network Services.

Investment in buildings and other of $91 million for the twelve month period was down $85 million over the comparable period. The decreases in each of the current quarter and year-to-date periods relate to lower spend on the internal data centre, Shaw Court refurbishment expenditures, lower internal network, software and equipment upgrades and lower capitalized interest.

Capital spend on new housing development was $105 million comparable to the prior year.

Business Infrastructure Services

Capital investment of $155 million for the twelve month period was primarily growth related capital investment in core infrastructure and equipment to expand existing facilities in Denver, Colorado and Portland, Oregon along with development of the newest data center in Plano, Texas. Also included in the twelve-month period is $11 million related to investment in the Calgary1 data centre located in Calgary, Alberta facility.

Wireless

Capital investment of $121 million for the six months since the formation of the Wireless division, respectively, represented investment for the continued improvement in the network infrastructure primarily in the LTE-Advanced core and radio network rollout readiness project across the network as well as capital investments made on the upgrade of back office systems.

DISCONTINUED OPERATIONS – SHAW MEDIA

(1) Eliminations relate to intercompany transactions between continuing and discontinued operations. The costs are included in continuing operations as they are expected to continue to be incurred subsequent to the disposition.

(2) As of the date the Media division met the criteria to be classified as held for sale, the Company ceased amortization of non-current assets of the division, including program rights, property, plant and equipment, intangibles and other. Amortization that would otherwise have been taken in twelve month period amounted to $35 for program rights and $6 for property, plant and equipment, intangibles and other.

For the twelve month period, revenue of $564 million and income from discontinued operations, net of tax, of $784 million compared to $1.0 billion and $214 million last year, respectively. The revenue decrease was the result of seven months of results in the current year prior to the divestiture of the former Media division on April 1, 2016. The increase in income from discontinued operations, net of tax, was primarily due to the $672 million gain on the divesture offset by the impact of lower income from discontinued operations before gain on divestiture, the result of only seven months of results in the current year, and income taxes on the gain.

FINANCIAL POSITION

Total assets were $15.2 billion at August 31, 2016 compared to $14.6 billion at August 31, 2015. Following is a discussion of significant changes in the consolidated statement of financial position since August 31, 2015.

Current assets decreased $133 million due to decreases in accounts receivable of $200 million, partially offset by increases in cash of $7 million and other current assets of $60 million. Accounts receivable decreased primarily due to the sale of the former Media division, partly offset by accounts receivable of WIND acquired during the third quarter. Cash increased as the funds provided by operations exceeded the cash outlay for investing and financing activities. Other current assets increased with the acquisition of WIND.

Investments and other assets increased $756 million primarily due to the Corus Class B shares received as proceeds on the sale of the Media division, partially offset by equity losses of associates and joint ventures and write-downs of an investment in shomi and an investment in a privately held entity.

Property, plant and equipment increased $387 million due to the WIND and INetU business acquisitions and capital investment in excess of amortization, partly offset by property, plant and equipment of the Media division, which was sold during the third quarter. Other long-term assets increased $16 million mainly due to the acquisition of WIND. Intangibles and goodwill decreased $343 million due to goodwill and intangibles related to the Media division which was disposed of during the quarter, partly offset by $1.6 billion of intangibles and $231 million goodwill recorded on the acquisitions of INetU and WIND, net software intangible additions and the ongoing effect of foreign exchange arising on translation of ViaWest.

Current liabilities decreased $119 million during the quarter due to decreases in the current portion of long-term debt of $196 million and current provisions of $19 million, partially offset by increases of $57 million in accounts payable and accruals, $20 million in income taxes payable and $19 million in unearned revenue. The decrease in current portion of long term debt is due to the repayment of $300 million variable rate senior notes on February 1, 2016 and $300 million 6.15% senior notes on May 9, 2016, partly offset by inclusion of $400 million 5.70% senior notes due March 2, 2017. Current provisions decreased primarily due to lower unpaid restructuring amounts. Accounts payable and accruals increased due the inclusion of accounts payable related to WIND which was acquired in the third quarter, partially offset by accounts payable related to the Media division which was sold during the third quarter and the timing of payment and fluctuations in various payables including capital expenditures and interest. Income taxes payable increased as a result of the current period provision partially offset by installments made in the period.

Long-term debt increased $139 million due to the issuance of $300 million in fixed rate senior notes at a rate of 3.15% due February 19, 2021, the debt incurred related to the acquisition of INetU under ViaWest's and the Company's credit facility totaling US $170 million and the effect of foreign exchanges rates on ViaWest's debt and the Company's US dollar borrowings under its credit facility, partially offset by the reclassification of the 6.15% senior notes to current liabilities.

Other long-term liabilities decreased $51 million mainly due to amounts related to the former Media division which was sold and contributions to employee benefit plans partially offset by actuarial losses recorded on those plans in the current quarter. Provisions increased due to the addition of WIND asset retirement obligations.

Deferred credits decreased $25 million due to a decline in deferred equipment revenue.

Deferred income tax liabilities increased $39 million primarily due to the amounts recorded on the acquisition of WIND and INetU, partly offset by amounts related to the former Media division which was sold during the previous quarter and current year income tax recovery.

Shareholders' equity increased $649 million primarily due to increases in share capital of $299 million and retained earnings of $622 million partly offset by decreases in accumulated other comprehensive loss of $33 million and equity attributable to non-controlling interests of $236 million. Share capital increased due to the issuance of 9,489,566 Class B non-voting participating shares ("Class B Non-Voting Shares") under the Company's option plan and Dividend Reinvestment Plan ("DRIP") and the issuance of 2,866,384 Class B Non-Voting Shares in connection with the acquisition of WIND. As at November 15, 2016, share capital is as reported at August 31, 2016 with the exception of the issuance of a total of 1,390,525 Class B Non-Voting Shares upon exercise of options under the Company's option plan and the DRIP. Retained earnings increased due to current year earnings of $1.2 billion, partially offset by dividends of $584 million while equity attributable to non-controlling interests decreased due to their share of current year earnings and derecognition in connection to the sale of Shaw Media. Accumulated other comprehensive loss decreased due to the net effect of exchange differences arising on the translation of ViaWest and U.S. dollar denominated debt designated as a hedge of the Company's net investment in those foreign operations as well as re-measurements recorded on employee benefit plans.

CONSOLIDATED CASH FLOW ANALYSIS

Operating activities

(millions of Canadian dollars)	2016	2015	Change %
Funds flow from operations	**1,483**	1,398	6.1
Net change in non-cash working capital balances related to operations	**72**	(106)	>100.0
Operating activities of discontinued operations	**108**	249	(56.6)
	1,663	1,541	7.9

On a year-to-date basis, funds flow from operations increased over the comparable period primarily due to higher operating income before restructuring costs and amortization, lower restructuring costs and lower income tax expense, partially offset by higher business acquisition costs and interest expense. The net change in non-cash working capital balances related to operations fluctuated over the comparative periods due to changes in accounts receivable balances and the timing of payment of current income taxes payable and accounts payable and accrued liabilities.

Investing activities

(millions of Canadian dollars)	2016	2015	Decrease
Cash flow used in investing activities	**(1,227)**	(1,904)	677

For the twelve month period ended August 31, 2016, cash used in investing activities decreased over the comparable period primarily due to proceeds on the sale of the former Media division, partially offset by higher acquisitions and cash outlays for capital expenditures and inventory in the current year. The prior year also reflected net proceeds on the sale of wireless spectrum licenses.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

Financing activities

The changes in financing activities during 2016 and 2015 were as follows:

(millions of Canadian dollars)	2016	2015
Bank loans – net borrowings	**69**	361
ViaWest's credit facilities (net) and finance lease obligations	**183**	52
WIND finance lease obligations	**(1)**	–
Repay Cdn variable rate senior notes	**(300)**	–
Issuance of 3.15% senior unsecured notes	**300**	–
Senior notes issuance cost	**(2)**	–
Repay 6.15% senior unsecured notes	**(300)**	–
Bank facility arrangement costs	**(11)**	(14)
Dividends	**(393)**	(382)
Issuance of Class B Non-Voting Shares	**38**	129
Financing activities of discontinued operations	**(12)**	(23)
	(429)	123

LIQUIDITY AND CAPITAL RESOURCES

In the current year, the Company generated $482 million of free cash flow, including $132 million of free cash flow from discontinued operations. Shaw used its free cash flow along with $1.8 billion net proceeds on the sale of the Media division, $300 million proceeds from a 3.15% senior note issuance, borrowings of $1.4 billion under its credit facilities, borrowings of $192 million under ViaWest's credit facility, proceeds on issuance of Class B Non-Voting Shares of $37 million and funding through the net working capital change of $114 million to repay at maturity $300 million of variable rate senior notes, repay at maturity $300 million 6.15% senior notes, finance the $223 million acquisition of INetU, finance the $1.6 billion acquisition of WIND, pay common share dividends of $380 million, make $104 million in financial investments, repay $1.4 billion borrowings under its credit facilities, pay $35 million in restructuring costs and pay $7 million in other net items.

The Company issues Class B Non-Voting Shares from treasury under its DRIP which resulted in cash savings and incremental Class B Non-Voting Shares of $188 million during the twelve months ending August 31, 2016.

On December 15, 2015, ViaWest closed the acquisition of 100% of the shares of INetU for approximately US$162 million which was funded through a combination of borrowings under ViaWest's and the Company's revolving credit facilities and incremental term loan proceeds under ViaWest's credit facility. In addition, ViaWest's revolving credit facility was increased from US$85 million to US$120 million.

On February 11, 2016 the Company amended the terms of its bank credit facility to increase the maximum borrowings from $1.0 billion to $1.5 billion under the bank credit facility.

The Company entered into an agreement with a syndicate of lenders to provide a $1.0 billion non-revolving term loan facility to partially fund the acquisition of WIND. The Company used the proceeds of the term loan along with cash on hand, $300 million borrowings under its existing bank credit facility and proceeds from the issuance of 2,866,384 Class B Non-Voting Shares to finance the acquisition of WIND on March 1, 2016. The $1.0 billion non-revolving term loan facility and $300 million borrowings under the Company's bank credit facility were repaid on April 1, 2016 with the proceeds from the sale of Shaw Media.

Debt structure and financial policy

Shaw structures its borrowings generally on a standalone basis. With the exception of ViaWest, the borrowings of Shaw are unsecured. While certain non-wholly owned subsidiaries are subject to contractual restrictions which may prevent the transfer of funds to Shaw, there are no similar restrictions with respect to wholly-owned subsidiaries of the Company.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

As at August 31, 2016, the ratio of debt to operating income before restructuring costs and amortization for the Company is 2.4 times. Having regard to prevailing competitive, operational and capital market conditions, the Board of Directors has determined that having this ratio in the range of 2.0 to 2.5 times would be optimal leverage for the Company in the current environment. Should the ratio fall below this, on an other than temporary basis, the Board may choose to recapitalize back into this optimal range. The Board may also determine to increase the Company's debt above these levels to finance specific strategic opportunities such as a significant acquisition or repurchase of Class B Non-Voting Participating Shares in the event that pricing levels were to drop precipitously.

Shaw's and ViaWest's credit facilities are subject to customary covenants which include maintaining minimum or maximum financial ratios. At August 31, 2016 Shaw is in compliance with these covenants and based on current business plans, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants over the life of the borrowings.

	Covenant Limit
Shaw Credit Facilities	
Total Debt to Operating Cash Flow(1) Ratio	< 5.00:1
Operating Cash Flow(1) to Fixed Charges(2) Ratio	> 2.00:1
ViaWest Credit Facilities	
Total Net Leverage Ratio(3)	≤ 6.50:1

(1) Operating Cash Flow, for the purposes of the covenants, is calculated as net earnings before interest expense, depreciation, amortization and current and deferred income taxes, excluding profit or loss from investments accounted for on an equity basis, for the most recently completed fiscal quarter multiplied by four, plus cash dividends and other cash distributions received in the most recently completed four fiscal quarters from investments accounted for on an equity basis.

(2) Fixed Charges are defined as the aggregate of interest expense for the most recently completed fiscal quarter multiplied by four and dividends paid or accrued on shares (other than participating shares) during the most recently completed four fiscal quarters.

(3) Total Net Leverage Ratio is calculated as the ratio of consolidated total debt under the facility as of the last day of the most recent completed four fiscal quarters to Consolidated Adjusted EBITDA of ViaWest for the same period. Consolidated Adjusted EBITDA, for the purposes of the covenants, is calculated similar to Operating income before restructuring and amortization with adjustments for certain items such as one-time expenses and extraordinary items.

On June 30, 2016, 1,987,607 of the Company's Cumulative Redeemable Rate Reset Class 2 Preferred Shares, Series A ("Series A Shares") were converted into an equal number of Cumulative Redeemable Floating Rate Class 2 Preferred Shares, Series B ("Series B Shares") in accordance with the notice of conversion right issued on May 31, 2016. As a result of the conversion, the Company has 10,012,393 Series A Shares and 1,987,607 Series B Shares issued and outstanding. The Series A Shares will continue to be listed on the TSX under the symbol SJR.PR.A. The Series B Shares began trading on the TSX on June 30, 2016 under the symbol SJR.PR.B. The annual fixed dividend rate for the Series A Shares, payable quarterly, was reset to 2.791% for the five year period from and including June 30, 2016 to but excluding June 30, 2021. The floating quarterly dividend rate for the Series B Shares was set at an annual dividend rate of 2.539% for the period from and including June 30, 2016 to but excluding September 30, 2016. During the quarter, the floating quarterly dividend rate for the Series B Shares was set at an annual dividend rate of 2.512% for the period from and including September 30, 2016 to but excluding December 31, 2016. The floating quarterly dividend rate will be reset quarterly.

Based on the aforementioned financing activities, available credit facilities and forecasted free cash flow, the Company expects to have sufficient liquidity to fund operations and obligations, including maturing debt, during the upcoming fiscal year. On a longer-term basis, Shaw expects to generate free cash flow and have borrowing capacity sufficient to finance foreseeable future business plans and refinance maturing debt.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2016

Off-balance sheet arrangement and guarantees

Guarantees

Generally it is not the Company's policy to issue guarantees to non-controlled affiliates or third parties; however, it has entered into certain agreements as more fully described in Note 25 to the Consolidated Financial Statements. As disclosed thereto, Shaw believes it is remote that these agreements would require any cash payment.

Contractual obligations

The amounts of estimated future payments under the Company's contractual obligations at August 31, 2016 are detailed in the following table.

Contractual Obligations

	Payments due by period				
(millions of Canadian dollars)	Total	Within 1 year	2 – 3 years	4 – 5 years	More than 5 years
Long-term debt[(1)]	8,797	710	570	3,048	4,469
Operating obligations[(2)]	1,383	310	455	295	323
Purchase obligations[(3)]	215	163	52	–	–
Other obligations[(4)]	5	–	5	–	–
	10,400	1,183	1,082	3,343	4,792

(1) Includes principal repayments and interest payments.
(2) Includes maintenance and lease of satellite transponders, program related agreements, lease of transmission facilities and premises and exclusive rights to use intellectual property in Canada.
(3) Includes capital expenditure and inventory purchase commitments.
(4) Includes other non-current financial liabilities.

ADDITIONAL INFORMATION

Additional information relating to Shaw, including the Company's 2016 Annual Information Form can be found on SEDAR at www.sedar.com.

COMPLIANCE WITH NYSE CORPORATE GOVERNANCE LISTING STANDARDS

Disclosure of the Company's corporate governance practices which differ from the New York Stock Exchange ("NYSE") corporate governance listing standards are posted on Shaw's website, www.shaw.ca (under Investors/Corporate Governance/ Compliance with NYSE Corporate Governance Listing Standards).

CERTIFICATION

The Company's Chief Executive Officer and Chief Financial Officer have filed certifications regarding Shaw's disclosure controls and procedures and internal control over financial reporting.

As at August 31, 2016, the Company's management, together with its Chief Executive Officer and Chief Financial Officer, has evaluated the effectiveness of the design and operation of each of the Company's disclosure controls and procedures and internal control over financial reporting. Based on these evaluations, the Chief Executive Officer and Chief Financial Officer have concluded that the Company's disclosure controls and procedures and the Company's internal control over financial reporting are effective.

There were no changes in the Company's internal control over financial reporting during the fiscal year that have materially affected or are reasonably likely to materially affect Shaw's internal control over financial reporting.

The design of any system of controls and procedures is based in part upon certain assumptions about the likelihood of certain events. There can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions, regardless of how remote.

Shaw Communications Inc.
Management's Responsibility For Financial Statements And Report On Internal Control Over Financial Reporting

November 28, 2016

MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL REPORTING

The accompanying consolidated financial statements of Shaw Communications Inc. and all the information in this annual report are the responsibility of management and have been approved by the Board of Directors.

The financial statements have been prepared by management in accordance with International Financial Reporting Standards. When alternative accounting methods exist, management has chosen those it deems most appropriate in the circumstances. Financial statements are not precise since they include certain amounts based on estimates and judgments. Management has determined such amounts on a reasonable basis in order to ensure that the financial statements are presented fairly, in all material respects. Management has prepared the financial information presented elsewhere in the annual report and has ensured that it is consistent with the financial statements.

Management has a system of internal controls designed to provide reasonable assurance that the financial statements are accurate and complete in all material respects. The internal control system includes an internal audit function and an established business conduct policy that applies to all employees. Management believes that the systems provide reasonable assurance that transactions are properly authorized and recorded, financial information is relevant, reliable and accurate and that the Company's assets are appropriately accounted for and adequately safeguarded.

The Board of Directors is responsible for ensuring management fulfils its responsibilities for financial reporting and is ultimately responsible for reviewing and approving the financial statements. The Board carries out this responsibility through its Audit Committee.

The Audit Committee is appointed by the Board and its directors are unrelated and independent. The Committee meets periodically with management, as well as the external auditors, to discuss the internal control over financial reporting process, auditing matters and financial reporting issues; to satisfy itself that each party is properly discharging its responsibilities; and, to review the annual report, the financial statements and the external auditors' report. The Audit Committee reports its findings to the Board for consideration when approving the financial statements for issuance to the shareholders. The Committee also considers, for review by the Board and approval by the shareholders, the engagement or re-appointment of the external auditors.

The financial statements have been audited by Ernst & Young LLP, the external auditors, in accordance with Canadian generally accepted auditing standards on behalf of the shareholders. Ernst & Young LLP has full and free access to the Audit Committee.

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

Management is responsible for establishing and maintaining an adequate system of internal control over financial reporting. Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the financial statements for external purposes in accordance with generally accepted accounting principles.

Due to its inherent limitations, internal control over financial reporting may not prevent or detect misstatements on a timely basis. Also, projections of any of the effectiveness of internal control are subject to the risk that the controls may become inadequate because of changes in conditions or that the degree of compliance with the policies and procedures may deteriorate. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to the financial statement preparation and presentation.

Management conducted an evaluation of the effectiveness of the system of internal control over financial reporting based on the framework in "Internal Control – Integrated Framework" issued by the Committee of Sponsoring Organizations of the Treadway Commission 1992 framework. Based on this evaluation, management concluded that the Company's system of internal control over financial reporting was effective as at August 31, 2016.

Shaw Communications Inc.
Management's Responsibility For Financial Statements And Report On Internal Control Over Financial Reporting

As permitted by SEC guidance, management has excluded its subsidiary, WIND Mobile Corp. ("WIND") from this evaluation of the system of internal control over financial reporting. Shaw completed the purchase of 100% of WIND on March 1, 2016. Additional information regarding this acquisition is included in Note 3 to the consolidated financial statements. WIND had assets and revenues representing approximately 14% and 6%, respectively, of the related consolidated financial statement amounts as of and for the year ended August 31, 2016. Further information on WIND is included in Note 24 to the consolidated financial statements. WIND will be included in management's evaluation of internal controls over financial reporting for the fiscal year ended August 31, 2017.

Shaw Communications Inc.
INDEPENDENT AUDITORS' REPORT OF REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders of Shaw Communications Inc.

We have audited the accompanying consolidated financial statements of Shaw Communications Inc., which comprise the consolidated statements of financial position as at August 31, 2016 and 2015, and the consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years ended August 31, 2016 and 2015, and a summary of significant accounting policies and other explanatory information.

Management's responsibility for the consolidated financial statements

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditors' responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards and the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditors' judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditors consider internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the consolidated financial statements, evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of Shaw Communications Inc. as at August 31, 2016 and 2015, and its financial performance and its cash flows for the years ended August 31, 2016 and 2015 in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board.

Other matter

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Shaw Communication Inc.'s internal control over financial reporting as of August 31, 2016, based on the criteria established in Internal Control – Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission 2013 framework and our report dated November 28, 2016 expressed an unqualified opinion on Shaw Communications Inc.'s internal control over financial reporting.

Calgary, Canada

Chartered Professional Accountants

Ernst & Young LLP

Shaw Communications Inc.
INDEPENDENT AUDITORS' REPORT ON INTERNAL CONTROLS UNDER STANDARDS OF THE PUBLIC COMPANY ACCOUNTING OVERSIGHT BOARD (UNITED STATES)

To the Shareholders of Shaw Communications Inc.

We have audited Shaw Communications Inc.'s internal control over financial reporting as at August 31, 2016, based on the criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission 2013 framework (the COSO criteria). Shaw Communications Inc.'s management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with IFRS, and that receipts and expenditures of the company are being made only in accordance with authorization of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

As indicated in the accompanying Shaw Communications Inc.'s Management Report on Internal Control Over Financial Reporting, management's assessment of and conclusion on the effectiveness of internal control over financial reporting did not include the internal controls of WIND Mobile Corp., which is included in the August 31, 2016 consolidated financial statements of Shaw Communications Inc. and constituted $2,146 million of total assets as of August 31, 2016 and $280 million of revenues for the year then ended. Our audit of internal control over financial reporting of Shaw Communications Inc. also did not include an evaluation of the internal control over financial reporting of WIND Mobile Corp..

In our opinion, Shaw Communications Inc. maintained, in all material respects, effective internal control over financial reporting as at August 31, 2016, based on the COSO criteria.

We have also audited, in accordance with Canadian generally accepted auditing standards and the standards of the Public Accounting Oversight Board (United States), the consolidated statements of financial position of Shaw Communications Inc. as at August 31, 2016 and 2015, and the consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years ended August 31, 2016 and 2015, and our report dated November 28, 2016 expressed an unqualified opinion thereon.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

1. CORPORATE INFORMATION

Shaw Communications Inc. (the "Company") is a diversified Canadian communications company whose core operating business is providing: Cable telecommunications and Satellite video services to residential customers ("Consumer"); data networking, Cable telecommunications, Satellite video and fleet tracking services to businesses and public sector entities ("Business Network Services"); data centre colocation, cloud technology and managed IT solutions to businesses ("Business Infrastructure Services"); and wireless services for voice and data communications ("Wireless").

The Company was incorporated under the laws of the Province of Alberta on December 9, 1966 under the name Capital Cable Television Co. Ltd. and was subsequently continued under the Business Corporations Act (Alberta) on March 1, 1984 under the name Shaw Cablesystems Ltd. Its name was changed to Shaw Communications Inc. on May 12, 1993. The Company's shares are listed on the Toronto and New York Stock Exchanges. The registered office of the Company is located at Suite 900, 630 – 3rd Avenue S.W., Calgary, Alberta, Canada T2P 4L4.

2. BASIS OF PRESENTATION AND ACCOUNTING POLICIES

Statement of compliance

These consolidated financial statements of the Company have been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB").

The consolidated financial statements of the Company for the years ended August 31, 2016 and 2015, were approved by the Board of Directors and authorized for issue on November 28, 2016.

Basis of presentation

These consolidated financial statements have been prepared primarily under the historical cost convention and are expressed in millions of Canadian dollars unless otherwise indicated. Other measurement bases used are outlined below and in the applicable notes. The consolidated statements of income are presented using the nature classification for expenses.

Basis of consolidation

(i) Subsidiaries

The consolidated financial statements include the accounts of the Company and those of its subsidiaries, which are entities over which the Company has control. Control exists when the Company has power over an investee, is exposed to or has rights to variable returns from its involvement and has the ability to affect those returns. Intercompany transactions and balances are eliminated on consolidation. The results of operations of subsidiaries acquired during the period are included from their respective dates of acquisition, being the time at which the Company obtains control. Consolidation of a subsidiary ceases when the Company loses control. A change in ownership interests of a subsidiary, without a loss of control, is accounted for as an equity transaction. The Company assesses control through share ownership and voting rights.

Non-controlling interests arise from business combinations in which the Company acquires less than 100% ownership interest. At the time of acquisition, non-controlling interests are measured at either fair value or their proportionate share of the fair value of acquiree's identifiable assets. The Company determines the measurement basis on a transaction by transaction basis. Subsequent to acquisition, the carrying amount of non-controlling interests is increased or decreased for their share of changes in equity.

(ii) Joint operations

A joint operation is a type of joint arrangement whereby the parties that have joint control of the arrangement have rights to the assets and obligations for the liabilities, relating to the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control. The consolidated financial statements include the Company's proportionate share of the assets, liabilities, revenues, and expenses of its interests in joint operations.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

The Company's joint operations include a 33.33% interest in the Burrard Landing Lot 2 Holdings Partnership (the "Partnership"). The Partnership owns and leases commercial space in Shaw Tower in Vancouver, BC, which is the Company's headquarters for its lower mainland operations. In classifying its 33.33% interest in the Partnership as a joint operation, the Company considered the terms and conditions of the partnership agreement and other facts and circumstances including the primary purpose of Shaw Tower which is to provide lease space to the partners.

Investments in associates and joint ventures

Associates are entities over which the Company has significant influence. Significant influence is the power to participate in the operating and financial policies of the investee, but is not control or joint control.

A joint venture is a type of joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control.

Investments in associates and joint ventures are accounted for using the equity method. Investments of this nature are recorded at original cost and adjusted periodically to recognize the Company's proportionate share of the associate's or joint venture's net income/loss and other comprehensive income/loss after the date of investment, additional contributions made and dividends received.

The Company has classified its approximate 38% participating interest in Corus Entertainment Inc. ("Corus") as an investment in an associate after considering both companies are subject to common control and the ability of the Company to appoint directors to Corus' Board of Directors.

The Company has classified its 50% interest in the Shomi Partnership ("shomi") as an investment in a joint venture after considering the terms and conditions of the partnership agreement.

Revenue and expenses

The Company has multiple deliverable arrangements comprised of upfront fees (subscriber connection and installation fee revenue and/or customer premise equipment revenue) and related subscription and service revenue. Upfront fees charged to customers do not constitute separate units of accounting, therefore these revenue streams are assessed as an integrated package.

(i) Revenue

Revenue from cable, Internet, Digital Phone, DTH and Wireless customers includes subscriber revenue earned as services are provided. Satellite distribution services and telecommunications service revenue is recognized in the period in which the services are rendered to customers. Affiliate subscriber revenue is recognized monthly based on subscriber levels. Advertising revenues are recognized in the period in which the advertisements are broadcast and recorded net of agency commissions as these amounts are paid directly to the agency or advertiser. When a sales arrangement includes multiple advertising spots, the proceeds are allocated to individual advertising spots under the arrangement based on relative fair values. Revenue from data centre customers includes colocation and other services revenue, including managed infrastructure revenue. Colocation revenue is recognized on a straight-line line basis over the term of the customer contract. Other services revenue, including managed infrastructure revenue, is recognized as the services are provided. Fees for wireless voice, text and data services on a pay-per-use basis are recognized in the period that the service is provided. Revenue from the direct sale of equipment to wireless subscribers or dealers is recognized when the equipment is delivered and accepted by the subscribers or dealers.

Subscriber connection fees received from customers are deferred and recognized as revenue on a straight-line basis over three years. Direct and incremental initial selling, administrative and connection costs related to subscriber acquisitions are recognized as an operating expense as incurred. The costs of physically connecting a new home are capitalized as part of the distribution system and costs of disconnections are expensed as incurred.

Initial setup fees related to the installation of data centre services and installation revenue received on contracts with commercial business customers are deferred and recognized as revenue on a straight-line basis over the related service contract, which generally span two to ten years. Direct and incremental costs associated with the installation of services or service contract, in an amount not exceeding the upfront revenue, are deferred and recognized as an operating expense on a straight-line basis over the same period.

The Company offers a discretionary wireless handset discount program, whereby the subscriber earns the applicable discount by maintaining services with the Company, such that the receivable relating to the discount at inception of the transaction is reduced over a period of time. A portion of future revenues earned in connection with the services is applied against the up-front discount provided on the handset. The Company also offers a plan allowing customers to receive larger up-front handset discounts than they would otherwise qualify for, if they pay a predetermined incremental charge to their existing service plan on a monthly basis. The charge is billed on a monthly basis and is recognized as revenue at that time. The Company recognizes the handset discount as a receivable and revenue upon the sale of the equipment on the basis that the receivable is recoverable. The receivable is realized on a straight-line basis over the period which the discount is forgiven to a maximum of two years with an offsetting reduction to revenue. The amount receivable is classified as part of other current or non-current receivables, as applicable, in the consolidated statements of financial position.

(ii) Deferred equipment revenue and deferred equipment costs

Revenue from sales of DTH equipment and DCTs is deferred and recognized on a straight-line basis over three years commencing when subscriber service is activated. The total cost of the equipment, including installation, represents an inventoriable cost which is deferred and recognized on a straight-line basis over the same period. The DCT and DTH equipment is generally sold to customers at cost or a subsidized price in order to expand the Company's customer base.

Revenue from sales of satellite tracking hardware and costs of goods sold is deferred and recognized on a straight-line basis over the related service contract for monthly service charges for air time, which is generally five years. The amortization of the revenue and cost of sale of satellite service equipment commences when goods are shipped.

Recognition of deferred equipment revenue and deferred equipment costs is recorded as deferred equipment revenue amortization and deferred equipment costs amortization, respectively.

(iii) Deferred IRU revenue

Prepayments received under indefeasible right to use ("IRU") agreements are amortized on a straight-line basis into income over the term of the agreement and included in amortization of property, plant and equipment, intangibles and other in the consolidated statements of income.

Cash

Cash is presented net of outstanding cheques. When the amount of outstanding cheques and the amount drawn under the Company's revolving term facility are greater than the amount of cash, the net amount is presented as bank indebtedness.

Allowance for doubtful accounts

The Company maintains an allowance for doubtful accounts for the estimated losses resulting from the inability of its customers to make required payments. In determining the allowance, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances.

Inventories

Inventories include subscriber equipment such as DCTs and DTH receivers, which are held pending rental or sale at cost or at a subsidized price. When subscriber equipment is sold, the equipment revenue and equipment costs are deferred and amortized over three years. When the subscriber equipment is rented, it is transferred to property, plant and equipment and amortized over its useful life. Inventories are determined on a first-in, first-out basis, and are stated at cost due to the eventual capital nature as either an addition to property, plant and equipment or deferred equipment costs.

Inventories of wireless handsets, accessories and SIM cards are carried at the lower of cost and net realizable value. Cost is determined using the weighted average method and includes expenditures incurred in acquiring the inventories and bringing them to their existing condition and location. Net realizable value is the estimated selling price in the ordinary course of business, less selling expenses.

Property, plant and equipment

Property, plant and equipment are recorded at purchase cost. Direct labour and other directly attributable costs incurred to construct new assets, upgrade existing assets and connect new subscribers are capitalized as well as borrowing costs on qualifying assets. In addition, any asset removal and site restoration costs in connection with the retirement of assets are capitalized. Repairs and maintenance expenditures are charged to operating expense as incurred. Amortization is recorded on a straight-line basis over the estimated useful lives of assets as follows:

Asset	Estimated useful life
Cable and telecommunications distribution system	5-20 years
Digital cable terminals and modems	2-5 years
Satellite audio, video and data network equipment and DTH receiving equipment	3-15 years
Transmitters, broadcasting and communication equipment	5-15 years
Buildings	15-40 years
Data centre infrastructure	3-21 years
Data processing	3-5 years
Other	3-20 years

The Company reviews the estimates of lives and useful lives on a regular basis.

Assets held for sale and discontinued operations

Non-current assets and disposal groups are classified as held for sale when specific criteria are met and are measured at the lower of carrying amount and estimated fair value less costs to sell. Assets held for sale are not amortized and are reported separately on the statement of financial position.

The Company reports financial results for discontinued operations separately from continuing operations to distinguish the financial impact of disposal transactions from ongoing operations. Discontinued operations reporting occurs when the disposal of a component or a group of components of the Company represents a strategic shift that will have a major impact on the Company's operations and financial results, and where the operations and cash flows can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the Company.

The results of discontinued operations are excluded from both continuing operations and business segment information in the consolidated financial statements and the notes to the consolidated financial statements, unless otherwise noted, and are presented net of tax in the consolidated statements of income. Refer to Note 3 for further information regarding the Company's discontinued operations.

Other long-term assets

Other long-term assets primarily include (i) equipment costs, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over three to five years, (ii) the non-current portion of wireless handset discounts receivable as described in the revenue and expenses accounting policy, (iii) credit facility arrangement fees amortized on a straight-line basis over the term of the facility, (iv) long-term receivables, (v) network capacity leases, (vi) the non-current portion of prepaid maintenance and support contracts and (vii) direct costs in connection with initial setup fees and installation of services, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over two to ten years.

Intangibles

The excess of the cost of acquiring cable, satellite, media, data centre and wireless businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist of amounts allocated to broadcast rights and licenses, wireless spectrum licenses, trademarks, brands, program rights, customer relationships and software assets. Broadcast rights and licenses, wireless spectrum licenses, trademarks and brands represent identifiable assets with indefinite useful lives.

Program rights represent licensed rights acquired to broadcast television programs on the Company's conventional and specialty television channels and program advances are in respect of payments for programming prior to the window license start date. For licensed rights, the Company records a liability for program rights and corresponding asset when the license period has commenced and all of the following conditions have been met: (i) the cost of the program is known or reasonably determinable, (ii) the program material has been accepted by the Company in accordance with the license agreement and (iii) the material is available to the Company for telecast. Program rights are expensed on a systematic basis generally over the estimated exhibition period as the programs are aired and are included in operating, general and administrative expenses. Program rights are segregated on the statement of financial position between current and noncurrent based on expected life at time of acquisition.

Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over their estimated useful lives ranging from 4 – 15 years.

Software that is not an integral part of the related hardware is classified as an intangible asset. Internally developed software assets are recorded at historical cost and include direct material and labour costs as well as borrowing costs on qualifying assets. Software assets are amortized on a straight-line basis over estimated useful lives ranging from three to ten years. The Company reviews the estimates of lives and useful lives on a regular basis.

Borrowing costs

The Company capitalizes borrowing costs on qualifying assets, for which the commencement date is on or after September 1, 2010, that take more than one year to construct or develop using the Company's weighted average cost of borrowing which approximated 6% (2015 – 6%).

Impairment

(i) Goodwill and indefinite-life intangibles

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at March 1) and when events or changes in circumstances indicate that the carrying value may be impaired. The recoverable amount of each cash-generating unit ("CGU") is determined based on the higher of the CGU's fair value less costs to sell ("FVLCS") and its value in use ("VIU"). A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are Cable, Satellite, Data centres and Wireless. The Company had an additional cash generating unit, Media, until the sale of the division in April 2016. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods.

(ii) Non-financial assets with finite useful lives

For non-financial assets, such as property, plant and equipment and finite-life intangible assets, an assessment is made at each reporting date as to whether there is an indication that an asset may be impaired. If any indication exists, the recoverable amount of the asset is determined based on the higher of FVLCS and VIU. Where the carrying amount of the asset exceeds its recoverable amount, the asset is considered impaired and written down to its recoverable amount. Previously recognized impairment losses are reviewed for possible reversal at each reporting date and all or a portion of the impairment is reversed if the asset's value has increased.

CRTC benefit obligations

The fair value of CRTC benefit obligations committed as part of business acquisitions are initially recorded at the present value of amounts to be paid net of any expected incremental cash inflows. The obligation is subsequently adjusted for the incurrence of related expenditures, the passage of time and for revisions to the timing of the cash flows. Changes in the obligation due to the passage of time are recorded as accretion of long-term liabilities and provisions in the income statement.

Provisions

Provisions are recognized when the Company has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. The timing or amount of the outflow may still be uncertain. Provisions are measured using the best estimate of the expenditure required to settle the present obligation at the end of the reporting period, taking into account risks and uncertainties associated with the obligation. Provisions are discounted where the time value of money is considered material.

(i) Asset retirement obligations

The Company recognizes the fair value of a liability for an asset retirement obligation in the period in which it is incurred, on a discounted basis, with a corresponding increase to the carrying amount of property and equipment, primarily in respect of wireless and transmitter sites. This cost is amortized on the same basis as the related asset. The liability is subsequently increased for the passage of time and the accretion is recorded in the income statement as accretion of long-term liabilities and provisions. The discount rates applied are subsequently adjusted to current rates as required at the end of reporting periods. Revisions due to the estimated timing of cash flows or the amount required to settle the obligation may result in an increase or decrease in the liability. Actual costs incurred upon settlement of the obligation are charged against the liability to the extent recorded.

(ii) Restructuring provisions

Restructuring provisions, primarily in respect of employee termination benefits, are recognized when a detailed plan for the restructuring exists and a valid expectation has been raised to those affected that the plan will be carried out.

(iii) Other provisions

Provisions for disputes, legal claims and contingencies are recognized when warranted. The Company establishes provisions after taking into consideration legal assessments (if applicable), expected availability of insurance or other recourse and other available information.

Deferred credits

Deferred credits primarily include: (i) prepayments received under IRU agreements amortized on a straight-line basis into income over the term of the agreement, (ii) equipment revenue, as described in the revenue and expenses accounting policy, deferred and amortized over three to five years, (iii) connection fee revenue, initial setup fees and upfront installation revenue, as described in the revenue and expenses accounting policy, deferred and amortized over two to ten years, (iv) a deposit on a future fibre sale, and (v) amounts received in respect of granting an option to acquire its wireless spectrum licenses.

Leases

(i) Operating leases

Rent expense for real estate leases that have escalating lease payments is recorded on a straight-line basis over the term of the lease. The difference between the expense recorded and the amount paid is recorded as deferred rent and included in deferred credits in the statement of financial position.

(ii) Finance leases

Leases of property and equipment that transfer substantially all the risks and rewards of ownership are classified as finance leases. Finance leases are capitalised at the commencement of the lease at the fair value of the leased property or, if lower, at the present value of the minimum lease payments. Lease payments are apportioned between interest expense and reduction of the lease liability. The property and equipment acquired under finance leases is depreciated over the shorter of the useful life of the asset and the lease term.

Income taxes

The Company accounts for income taxes using the liability method, whereby deferred income tax assets and liabilities are determined based on differences between the financial reporting and tax bases of assets and liabilities measured using substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse. Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset and they relate to income taxes levied by the same authority in the same taxable entity. Income tax expense for the period is the tax payable for the period using tax rates substantively enacted at the reporting date, any adjustments to taxes payable in respect of previous years and any change during the period in deferred income tax assets and liabilities, except to the extent that they relate to a business combination or divestment, items recognized directly in equity or in other comprehensive income. The Company records interest and penalties related to income taxes in income tax expense.

Tax credits and government grants

The Company receives tax credits primarily related to its research and development activities. Government financial assistance is recognized when management has reasonable assurance that the conditions of the government programs are met and accounted for as a reduction of related costs, whether capitalized and amortized or expensed in the period the costs are incurred.

Foreign currency translation

Transactions originating in foreign currencies are translated into Canadian dollars at the exchange rate at the date of the transaction. Monetary assets and liabilities are translated at the period-end rate of exchange and non-monetary items are translated at historic exchange rates. The net foreign exchange loss recognized on the translation and settlement of current monetary assets and liabilities was $1 (2015 – $3) and is included in other losses.

The functional currency of the Company's foreign operations is US dollars. Assets and liabilities, including goodwill and fair value adjustments arising on acquisition, are translated into Canadian dollars using the foreign exchange rate at the end of the reporting period. Revenue and expenses are translated using average foreign exchange rates, which approximate the foreign exchange rates on the dates of the transactions. Foreign exchange differences arising on translation are included in other comprehensive income/loss and accumulated in equity.

Financial instruments other than derivatives

Financial instruments have been classified as loans and receivables, assets available-for-sale, assets held-for-trading or financial liabilities. Cash has been classified as held-for-trading and is recorded at fair value with any change in fair value immediately recognized in income (loss). Other financial assets are classified as available-for-sale or as loans and receivables. Available-for-sale assets are carried at fair value with changes in fair value recorded in other comprehensive income (loss) until realized. Available-for-sale equity instruments not quoted in an active market and where fair value cannot be reliably measured are recorded at cost less impairment. Loans and receivables and financial liabilities are carried at amortized cost. None of the Company's financial assets are classified as held-to-maturity and none of its financial liabilities are classified as held-for-trading.

Finance costs and discounts associated with the issuance of debt securities are netted against the related debt instrument and amortized to income using the effective interest rate method. Accordingly, long-term debt accretes over time to the principal amount that will be owing at maturity.

Derivative financial instruments and hedging activities

The Company uses derivative financial instruments, such as foreign currency forward purchase contracts, to manage risks from fluctuations in foreign exchange rates. All derivative financial instruments are recorded at fair value in the statement of financial position. Where permissible, the Company accounts for these financial instruments as hedges which ensures that counterbalancing gains and losses are recognized in income in the same period. With hedge accounting, changes in the fair value of derivative financial instruments designated as cash flow hedges are recorded in other comprehensive income (loss) until the variability of cash flows relating to the hedged asset or liability is recognized in income (loss). When an anticipated transaction is subsequently recorded as a non-financial asset, the amounts recognized in other comprehensive income (loss) are reclassified to the initial carrying amount of the related asset. Where hedge accounting is not permissible or derivatives are not designated in a hedging relationship, they are classified as held-for-trading and the changes in fair value are immediately recognized in income (loss).

Instruments that have been entered into by the Company to hedge exposure to foreign currency risk are reviewed on a regular basis to ensure the hedges are still effective and that hedge accounting continues to be appropriate.

A net investment hedge of a foreign operation is accounted for similarly to a cash flow hedge. The Company may designate certain US dollar denominated debt as a hedge of its net investment in foreign operations where the US dollar is the functional currency. Unrealized gains and losses arising from translation of the US dollar denominated debt are included in other comprehensive income/loss and accumulated in equity.

Fair value measurements

Fair value estimates are made at a specific point in time, based on relevant market information and information about the financial instrument. These estimates are subjective in nature and involve uncertainties and matters of significant judgement and, therefore, cannot be determined with precision. Changes in assumptions could significantly affect the estimates.

The fair value hierarchy is based on inputs to valuation techniques that are used to measure fair value that are either observable or unobservable. Observable inputs reflect assumptions market participants would use in pricing an asset or liability based on market data obtained from independent sources while unobservable inputs reflect a reporting entity's pricing based upon their own market assumptions.

The fair value hierarchy consists of the following three levels:

Level 1 Inputs are quoted prices in active markets for identical assets or liabilities.

Level 2 Inputs for the asset or liability are based on observable market data, either directly or indirectly, other than quoted prices.

Level 3 Inputs for the asset or liability are not based on observable market data.

The Company determines whether transfers have occurred between levels in the fair value hierarchy by assessing the impact of events and changes in circumstances that could result in a transfer at the end of each reporting period.

Employee benefits

The Company accrues its obligations under its employee benefit plans, net of plan assets. The cost of pensions and other retirement benefits earned by certain employees is actuarially determined using the projected benefit method pro-rated on service and management's best estimate of salary escalation and retirement ages of employees. Past service costs from plan initiation and amendments are recognized immediately in the income statement. Remeasurements include actuarial gains or losses and the return on plan assets (excluding interest income). Actuarial gains and losses occur because assumptions about benefit plans relate to a long time frame and differ from actual experiences. These assumptions are revised based on actual experience of the plans such as changes in discount rates, expected retirement ages and projected salary increases. Remeasurements are recognized in other comprehensive income (loss) on an annual basis, at a minimum, and on an interim basis when there are significant changes in assumptions.

August 31 is the measurement date for the Company's employee benefit plans. The last actuarial valuations for funding purposes for the various plans were performed effective December 31, 2015 and the next actuarial valuations for funding purposes are effective December 31, 2016.

Share-based compensation

The Company has a stock option plan for directors, officers, employees and consultants to the Company. The options to purchase shares must be issued at not less than the fair value at the date of grant. Any consideration paid on the exercise of stock options, together with any contributed surplus recorded at the date the options vested, is credited to share capital. The Company calculates the fair value of share-based compensation awarded to employees using the Black-Scholes option pricing model. The fair value of options are expensed and credited to contributed surplus over the vesting period of the options using the graded vesting method.

The Company has a deferred share unit ("DSU") plan for its Board of Directors. Compensation cost is recognized immediately as DSUs vest when granted. DSUs will be settled in cash and the obligation is measured at the end of each period at fair value using the Black-Scholes option pricing model and the number of outstanding DSUs.

Share appreciation rights ("SARs") issued by a subsidiary to eligible employees are cash settled and measured at fair value using the Black-Scholes option pricing model. The fair value is recognized over the vesting period of the SARs by applying the graded vesting method, adjusting for estimated forfeitures. The obligation for SARs is remeasured at the end of each period up to the date of settlement which requires a reassessment of the estimates used at the end of each reporting period.

The Company has an employee share purchase plan (the "ESPP") under which eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the participant's contributions and records such amounts as compensation expense.

Earnings per share

Basic earnings per share is based on net income attributable to equity shareholders adjusted for dividends on preferred shares and is calculated using the weighted average number of Class A Shares and Class B Non-Voting Shares outstanding during the period. Diluted earnings per share is calculated by considering the effect of all potentially dilutive instruments. In calculating diluted earnings per share, any proceeds from the exercise of stock options and other dilutive instruments are assumed to be used to purchase Class B Non-Voting Shares at the average market price during the period.

Guarantees

The Company discloses information about certain types of guarantees that it has provided, including certain types of indemnities, without regard to whether it will have to make any payments under the guarantees.

Estimation uncertainty and critical judgements

The preparation of consolidated financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the period. Actual results could differ from those estimates and significant changes in assumptions could cause an impairment in assets. The following require the most difficult, complex or subjective judgements which result from the need to make estimates about the effects of matters that are inherently uncertain.

Estimation uncertainty

The following are key assumptions concerning the future and other key sources of estimation uncertainty that could impact the carrying amount of assets and liabilities and results of operations in future periods.

(i) Allowance for doubtful accounts

The Company is required to make an estimate of an appropriate allowance for doubtful accounts on its receivables. The estimated allowance required is a matter of judgement and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foretold, such as future business, personal and economic conditions.

(ii) Property, plant and equipment

The Company is required to estimate the expected useful lives of its property, plant and equipment. These estimates of useful lives involve significant judgement. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. Management's judgement is also required in determination of the amortization method, the residual value of assets and the capitalization of labour and overhead.

(iii) Business combinations – purchase price allocation

Purchase price allocations involve uncertainty because management is required to make assumptions and judgements to estimate the fair value of the identifiable assets acquired and liabilities assumed in business combinations. Fair value estimates are based on quoted market prices and widely accepted valuation techniques, including discounted cash flow ("DCF") analysis. Such estimates include assumptions about inputs to the valuation techniques, industry economic factors and business strategies.

(iv) Impairment

The Company estimates the recoverable amount of its CGUs using a FVLCS calculation based on a DCF analysis or a market approach. Where a DCF analysis is used, significant judgements are inherent in this analysis including estimating the amount and timing of the cash flows attributable to the broadcast rights and licenses, the selection of an appropriate discount rate, and the identification of appropriate terminal growth rate assumptions. In this analysis the Company estimates the discrete future cash flows associated with the intangible asset for five years and determines a terminal value. The future cash flows are based on the Company's estimates of future operating results, economic conditions and the competitive environment. The terminal value is estimated using both a perpetuity growth assumption and a multiple of operating income before restructuring costs and amortization. The discount rates used in the analysis are based on the Company's weighted average cost of capital and an assessment of the risk inherent in the projected cash flows. In analyzing the FVLCS determined by a DCF analysis, the Company also considers a market approach determining a recoverable amount for each unit and total entity value determined using a market capitalization approach. Recent market transactions are taken into account, when available. The key assumptions used to determine the recoverable amounts, including a sensitivity analysis, are included in note 10. A DCF analysis uses significant unobservable inputs and is therefore considered a level 3 fair value measurement.

(v) Employee benefit plans

The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected will be needed to settle employee benefit obligations. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes are required.

(vi) Income taxes

The Company is required to estimate income taxes using substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse. In determining the measurement of tax uncertainties, the Company applies a probable weighted average methodology. Realization of deferred income tax assets is dependent on generating sufficient taxable income during the period in which the temporary differences are deductible. Although realization is not assured, management believes it is more likely than not that all recognized deferred income tax assets will be realized based on reversals of deferred income tax liabilities, projected operating results and tax planning strategies available to the Company and its subsidiaries.

(vii) Contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities.

Critical judgements

The following are critical judgements apart from those involving estimation:

(i) Determination of a CGU

Management's judgement is required in determining the Company's cash generating units for the impairment assessment of its indefinite-life intangible assets. The CGUs have been determined considering operating activities and asset management and are Cable, Satellite, Data centres and Wireless. The Company had an additional CGU, Media, until the sale of the division in April 2016.

(ii) Broadcast rights and licenses and wireless spectrum licenses – indefinite-life assessment

A number of the Company's businesses are dependent upon broadcast licenses (or operate pursuant to an exemption order) granted and issued by the CRTC or wireless spectrum licenses issued by the Department of Innovation, Science and Economic Development (formerly, Industry Canada). While these licenses must be renewed from time to time, the Company has never failed to do so. In addition, there are currently no legal, regulatory or competitive factors that limit the useful lives of these assets.

Adoption of recent accounting pronouncement

The adoption of the following IFRS amendments effective September 1, 2015 had no impact on the Company's consolidated financial statements.

- amendments to IFRS 10 *Consolidated Financial Statements* and IAS 28 *Investments in Associates and Joint Ventures* outlined in *Sale or Contribution of Assets between an Investor and its Associates or Joint Venture* as issued by the IASB in September 2014. These amendments were to be applied prospectively to transactions occurring for annual periods commencing after a date to be determined by the IASB, however earlier application is permitted.

Standards, interpretations and amendments to standards issued but not yet effect

The Company has not yet adopted certain standards and interpretations that have been issued but are not yet effective. The following pronouncements are being assessed to determine the impact on the Company's results and financial position.

- IFRS 2 *Share-based Payment* was amended in 2016 to clarify the accounting and measurement for certain types of share-based payment transactions. It is required to be applied for annual periods commencing on or after January 1, 2018, however earlier application is permitted.
- IFRS 16 *Leases* requires entities to recognize lease assets and lease obligations on the balance sheet. For lessees, IFRS 16 removes the classification of leases as either operating leases or finance leases, effectively treating all leases as finance leases. Certain short-term leases (less than 12 months) and leases of low-value are exempt from the requirements and may continue to be treated as operating leases. Lessors will continue with a dual lease classification model. Classification will determine how and when a lessor will recognize lease revenue, and what assets would be recorded. It may be applied retroactively or using a modified retrospective approach for annual periods commencing January 1, 2019, with early adoption permitted if IFRS 15 *Revenue from Contracts with Customers* has been adopted.
- IAS 12 *Income Taxes* was amended in 2016 to clarify how to account for deferred tax assets related to debt instruments measured at fair value. It is required to be applied for annual periods commencing January 1, 2017.
- IAS 7 *Statement of Cash Flows* was amended in 2016 to improve disclosures regarding changes in financing liabilities. It is required to be applied for annual period beginning on or after January 1, 2017.
- *Clarification of Acceptable Methods of Depreciation and Amortization* (Amendments to IAS 16 *Property, Plant and Equipment* and IAS 38 *Intangible Assets)* prohibits revenue from being used as a basis to depreciate property, plant and equipment and significantly limits use of revenue-based amortization for intangible assets. The amendments are to be applied prospectively for the annual period commencing September 1, 2016.

- IFRS 15 *Revenue from Contracts with Customers*, was issued in May 2014 and replaces IAS 11 *Construction Contracts*, IAS 18 *Revenue*, IFRIC 13 *Customer Loyalty Programs*, IFRIC 15 *Agreements for the Construction of Real Estate*, IFRIC 18 *Transfers of Assets from Customers* and SIC-31 *Revenue – Barter Transactions Involving Advertising Services*. The new standard requires revenue to be recognized to depict the transfer of promised goods or services to customers in an amount that reflects the consideration expected to be received in exchange for those goods or services. The principles are to be applied in the following five steps: (1) identify the contract(s) with a customer, (2) identify the performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the performance obligations in the contract, and (5) recognize revenue when (or as) the entity satisfies a performance obligation. The new standard is to be applied either retrospectively or on a modified retrospective basis and is effective for the annual period commencing September 1, 2018.
- IFRS 9 *Financial Instruments: Classification and Measurement* replaces IAS 39 *Financial Instruments* and applies a principal-based approach to the classification and measurement of financial assets and financial liabilities, including an expected credit loss model for calculating impairment, and includes new requirements for hedge accounting. The standard is required to be applied retrospectively for the annual period commencing September 1, 2018.

3. BUSINESS ACQUISITIONS, ASSET DISPOSITIONS AND ASSET HELD FOR SALE

Business acquisitions

Mid-Bowline Group Corp. (and its wholly owned subsidiary, WIND Mobile Corp.)

On March 1, 2016, the Company completed the acquisition of 100% of the shares of Mid-Bowline Group Corp. and its wholly owned subsidiary WIND Mobile Corp. (collectively, "WIND") for enterprise value of $1.6 billion which was funded through a combination of cash on hand, a drawdown of $1.3 billion on the Company's credit facilities and the issuance of 2,866,384 Class B Non-Voting Participating Shares. The acquisition of WIND is a significant step in the Company's drive for growth and positions the Company to be a leading pure-play provider of connectivity that is focused on delivering consumer and business communications supported by best-in-class wireline, WiFi, wireless and data infrastructure.

The operating results of WIND are included in the Company's consolidated financial statements from the date of acquisition. WIND contributed $280 revenue and $11 net income for the period from March 1, 2016 to August 31, 2016. If the acquisition had closed on September 1, 2015, WIND revenue and net income would have approximated $541 and $15, respectively. In connection with the transaction, the Company incurred $20 of acquisition related costs for professional fees paid to lawyers, consultants and advisors.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

The fair value of purchase consideration consisted of $1,588 in cash and $68 in shares issued in connection with the acquisition. A summary of net assets and allocation of consideration is as follows:

	$
Net assets acquired at assigned fair values	
Cash	35
Accounts receivable(1)	12
Inventories	24
Other current assets	58
Property, plant and equipment	277
Other long term assets	19
Intangibles(2)	1,560
Goodwill, not deductible for tax(3)	65
	2,050
Accounts payable and accrued liabilities	110
Unearned revenue	9
Current debt(4)	3
Long-term debt(4)	2
Provisions	43
Deferred income taxes	227
	1,656

(1) Accounts receivable consist of $23 gross contractual amounts receivable from customers less $11 not expected to be collected.

(2) Intangibles include wireless spectrum licenses, subscriber relationships and software assets.

(3) Goodwill comprises the value of growth opportunities created through the combination of businesses and networks, a strong management team and an assembled workforce.

(4) Current and long-term debt is comprised of finance lease obligations in respect of certain equipment.

INetU, Inc.

On December 15, 2015, ViaWest closed the acquisition of 100% of the shares of INetU, Inc. ("INetU") for US$162 which was funded through a combination of borrowings under ViaWest's and the Company's revolving credit facilities as well as incremental term loan proceeds under ViaWest's credit facility. INetU is a solutions provider of public, private and hybrid cloud environments in addition to offering managed security and compliance services. The acquisition of INetU allows ViaWest to add new services to its cloud and managed offerings, and to expand its geographical footprint with eastern U.S. and European cloud locations.

INetU contributed $32 revenue and $14 net income for the period from December 15, 2015 to August 31, 2016. If the acquisition had closed on September 1, 2015, revenue and net income would have been approximately $46 and $18, respectively.

In connection with the transaction, the Company incurred $1 of acquisition related costs for professional fees paid to lawyers, consultants and advisors.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

The purchase consideration consisted of $223 in cash. A summary of net assets and allocation of consideration is as follows:

	$
Net assets acquired at assigned fair values	
Cash and cash equivalents	–
Receivables	4
Other current assets	1
Property and equipment	25
Intangibles[1]	68
Goodwill, not deductible for tax[2]	166
	264
Current liabilities	7
Deferred income taxes	34
	223

(1) Intangibles include customer relationships and software assets.

(2) Goodwill comprises the value of growth opportunities created through the combination of businesses, a strong management team and an assembled workforce. Goodwill decreased $8 at August 31, 2016 due to translation using the period end foreign exchange rate.

ViaWest, Inc ("ViaWest")

On September 2, 2014, the Company closed the acquisition of 100% of the shares of ViaWest for an enterprise value of US $1.2 billion which was funded through a combination of cash on hand, assumption of ViaWest debt and a drawdown of US $330 on the Company's credit facility. The ViaWest acquisition provides the Company with a growth platform in the North American data centre sector and is another step in expanding technology offerings for mid-market enterprises in Western Canada. The operating results of ViaWest are included in the Company's consolidated financial statements from the date of acquisition.

In connection with the transaction, the Company incurred $4 of acquisition related costs in fiscal 2014 for professional fees paid to lawyers, consultants and advisors. During fiscal 2015, the Company incurred additional acquisition related costs of $6.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

The purchase consideration consisted of $898 of cash and issuance of share-based awards of $8. A summary of net assets and allocation of consideration is as follows:

	$
Net assets acquired at assigned fair values	
Cash and cash equivalents	5
Receivables	10
Other current assets	5
Property and equipment	311
Other long-term assets	2
Intangibles[1]	404
Goodwill, not deductible for tax[2]	674
	1,411
Current liabilities	16
Current debt[3]	7
Deferred income taxes	76
Long-term debt[3]	406
	906

(1) Intangibles include a trade name, customer relationships and software assets.

(2) Goodwill comprises the value of upside and expansion potential due to industry growth expectations and demand for data centre services as well as a strong management team and an assembled workforce.

(3) Current and long-term debt is comprised of amounts that were outstanding under ViaWest's credit facility, finance lease obligations in respect of certain equipment and amounts owing to landlords in respect of financing leasehold improvements.

Other

Effective October 31, 2015, the Company acquired the assets of a small cable system serving approximately 1,300 video subscribers in British Columbia. The cash consideration of $2 has been allocated to property, plant and equipment and broadcast rights.

Effective June 30, 2015, ViaWest acquired 100% of the shares of AppliedTrust Engineering, Inc. ("AppliedTrust"), a provider of security, compliance, DevOps and infrastructure consulting services to a wide range of clients. AppliedTrust's capabilities augment the ViaWest platform with fast enablement of secure hybrid services including IT assessment, migration, compliance consulting, cloud readiness and deeper application support. The purchase consideration consisted of $9 in cash and contingent consideration of $2.

A summary of net assets and preliminary allocation of consideration is as follows:

	$
Net assets acquired at assigned fair values	
Receivables	1
Goodwill, not deductible for tax[1]	10
	11

(1) Goodwill comprises the estimated economic value of providing enhanced professional services offerings, growth expectations as well as an assembled workforce with deep expertise in risk management and compliance consulting services.

Asset dispositions

Sale of Shaw Media Inc. to Corus

In the second quarter of fiscal 2016, the Company announced it entered into an agreement with Corus, a related party subject to common voting control, to sell 100% of its wholly owned subsidiary Shaw Media Inc. ("Shaw Media") for a purchase price of approximately $2.65 billion comprised of $1.85 billion of cash and 71,364,853 Corus Class B non-voting participating shares.

Although, through holding of the shares in Corus, the Company will effectively retain an indirect, non-controlling interest in the Media division subsequent to the sale, the Company will no longer have control over the division. Accordingly, the assets and liabilities, operating results and operating cash flows for the previously reported Media segment are presented as discontinued operations separate from the Company's continuing operations. Prior period financial information has been reclassified to present the Media division as a discontinued operation.

The transaction closed on April 1, 2016, but remains subject to customary closing adjustments. The Company recognized a gain on the divestiture within income from discontinued operations as follows:

	$
Proceeds on disposal, net of transaction costs of $22	**2,645**
Non-controlling interest in disposed net assets	**244**
Net assets disposed	**(2,217)**
	672
Income taxes	**47**
Gain on divestiture, net of tax	**625**

In connection with the disposal, remeasurements of employee benefit plans related to discontinued operations of $14 were transferred within equity from accumulated other comprehensive income to retained earnings.

The assets and liabilities disposed of were as follows:

	$
Cash	**13**
Accounts receivable	**234**
Other current assets	**34**
Property, plant and equipment	**106**
Intangibles	**1,696**
Goodwill	**538**
	2,621
Accounts payable and accrued liabilities	**173**
Provisions	**12**
Income taxes payable	**23**
Unearned revenue	**4**
Other long-term liabilities	**46**
Deferred income tax liabilities	**146**
	404

Shaw Communications Inc.

Notes to the Consolidated Financial Statements

August 31, 2016 and 2015

[all amounts in millions of Canadian dollars except share and per share amounts]

A reconciliation of the major classes of line items constituting income from discontinued operations, net of tax, as presented in the consolidated statements of income is as follows:

	2016 $	2015 $
Revenue	**610**	1,080
Eliminations[(1)]	**(46)**	(78)
	564	1,002
Operating, general and administrative expenses		
Employee salaries and benefits	**109**	180
Purchases of goods and services[(2)]	**272**	558
	381	738
Eliminations[(1)]	**(46)**	(78)
	335	660
Restructuring costs	**–**	13
Amortization[(2)]	**11**	30
Accretion of long-term liabilities and provisions	**2**	4
Other losses	**–**	5
Income from discontinued operations before tax and gain on divestiture	**216**	290
Income taxes	**57**	76
Income from discontinued operations before gain on divestiture	**159**	214
Gain on divestiture, net of tax	**625**	–
Income from discontinued operations, net of tax	**784**	214

(1) Eliminations relate to intercompany transactions between continuing and discontinued operations. The costs are included in continuing operations as they are expected to continue to be incurred subsequent to the disposition.

(2) As of the date the Media division met the criteria to be classified as held for sale, the Company ceased amortization of non-current assets of the division, including program rights, property, plant and equipment, intangibles and other. Amortization that would otherwise have been taken in the year amounted to $35 for program rights $6 for property, plant and equipment, intangibles and other.

Sale of wireless spectrum licenses to Rogers Communications Inc. ("Rogers")

During 2013, the Company granted Rogers an option to acquire its wireless spectrum licenses. The exercise of the option and the sale of the wireless spectrum licenses were subject to various regulatory approvals and therefore, the licenses were not classified as assets held for sale. The regulatory reviews concluded during 2015 at which time the transfer was completed. The Company had previously received $50 in respect of the purchase price of the option to acquire the wireless spectrum licenses and a $200 deposit in respect of the option exercise price. The Company received an additional $100 when the transaction completed and recorded a gain of $158.

Asset held for sale

A real estate property was classified as held for sale in the statement of financial position at August 31, 2015 and measured at estimated fair value less costs to sell. At August 31, 2015, the property's fair value was based on the sale which closed in the current year.

[all amounts in millions of Canadian dollars except share and per share amounts]

4. ACCOUNTS RECEIVABLE

	2016 $	2015 $
Subscriber and trade receivables	**300**	473

Investment in a joint venture	**–**	44
	853	97

During 2016, the Company recorded an unrealized loss of $nil (2015 – $3) in respect of its investment in a publicly traded company (see note 20). The cumulative loss of $5 was realized upon sale of the investment during the year.

The Company has a portfolio of minor investments in various private entities.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

Corus

In connection with the sale of the Shaw Media to Corus, the Company received 71,364,853 Corus Class B non-voting participating shares representing approximately 37% of Corus' total issued equity of Class A and Class B shares. Although the Class B Corus shares do not have voting rights, the Company is considered to have significant influence due to Board representation.

Corus is a leading media and content company that creates and delivers high quality brands and content across platforms for audiences around the world. The company's portfolio of multimedia offerings encompasses 45 specialty television services, 39 radio stations, 15 conventional television stations, a global content business, digital assets, live events, children's book publishing, animation software, technology and media services. Corus is headquartered in Canada, and its stock is listed on the TSX under the symbol CJR.B.

The Company participates in Corus' dividend reinvestment program for its initial investment in Corus Class B Shares. For the year ended August 31, 2016, the Company received dividends of $34 from Corus that were reinvested through the program into additional Corus Class B shares. At August 31, 2016, the Company owned 74,135,891 Corus Class B shares having a fair value of $911 and representing 38% of the total issued equity of Corus. The Company's weighted average ownership of Corus for the period from April 1 to August 31, 2016 was 37%.

Summary financial information for Corus at August 31, 2016 and for the year then ended is as follows:

	$
Current assets	470
Non-current assets	5,623
Current liabilities	(532)
Non-current liabilities	(3,085)
Net assets	2,476
Less: non-controlling interests	(158)
	2,318
Carrying amount of the investment	817
Revenue	1,171
Net income (loss) attributable to:	
Shareholders	126
Non-controlling interest	18
	144
Other comprehensive income (loss), attributable to shareholders	(15)
Comprehensive income	129
Equity income (loss) from associates[1]	(10)
Other comprehensive income (loss) from equity accounted associates[1]	(5)
	(15)

(1) The Company's share of income and other comprehensive income reflect the weighted average proportion of Corus net income and other comprehensive income attributable to shareholders from April 1, 2016.

[all amounts in millions of Canadian dollars except share and per share amounts]

Shomi Partnership

The Company has a 50% joint control interest in Shomi Partnership ("shomi"), which is a subscription video-on-demand service that launched in November 2014. The Company's interest in shomi is accounted for using the equity method. Summarized financial information is as follows:

	2016 $	2015 $
Current assets	**25**	28
Non-current assets	**105**	132
Current liabilities	**(48)**	(54)
Non-current liabilities	**(5)**	(16)
Partnership net assets	**77**	90
Carrying amount of the investment(1)	**–**	44

	2016 $	2015 (ten months) $
Revenue	**46**	18
Expenses	**182**	128
Partnership net loss	**136**	110
Equity loss in the partnership(1)	**52**	56

(1) The Company's carrying amount the investment and equity loss does not equal 50% of the partnership's net assets and net loss due to elimination of unrealized profit on downstream transactions between the Company and shomi and the write-down of the carrying amount of the investment during the year.

8. PROPERTY, PLANT AND EQUIPMENT

Customer relationships	**522**	472
Trademark and brands	**53**	91
	2,421	838
Net book value	**8,622**	8,965

Broadcast rights and licenses, trademark, brands and wireless spectrum licenses have been assessed as having indefinite useful lives. While licenses must be renewed from time to time, the Company has never failed to do so. In addition, there are currently no legal, regulatory, competitive or other factors that limit the useful lives of these assets.

Impairment testing of indefinite-life intangibles and goodwill

The Company conducted its annual impairment test on goodwill and indefinite-life intangibles as at March 1, 2016 and as a result, an impairment charge of $17 was recorded with respect to goodwill associated with the Tracking operations in the Satellite cash generating unit. The Company estimated the recoverable amount using a discounted cash flow analysis based on the most recent estimates of future operating results which are reflective of long-term pressures as customers migrate from satellite based tracking to wireless tracking. The recoverable amount of the other cash generating units exceeded their carrying value.

A hypothetical decline of 10% in the recoverable amount of the broadcast rights and licenses for the Cable cash generating unit as at March 1, 2016 would not result in any impairment loss. A hypothetical decline of 10% in the recoverable amount of the broadcast rights and licenses for the Satellite cash generating unit as at March 1, 2016 would result in an impairment loss of approximately $25.

The data centres cash generating unit was created with the acquisition of ViaWest. A hypothetical decline of 10% in the recoverable amount of the data centre cash generating unit as at March 1, 2016 would result in an impairment loss and is reflective of the Company acquiring ViaWest at fair value on September 2, 2014. A 1% increase in the discount rate or 1% decrease in the terminal growth rate would cause the carrying amount of the data centres CGU to exceed its recoverable amount by approximately $300 and $250, respectively. In order for the CGU's recoverable amount to be equal to the carrying amount and holding all other assumptions constant, the discount rate would have to be 8.6% or terminal growth rate would have to be 6.2%. These sensitivities are indicative only and should be considered with caution, as the effect of the variation in each assumption on the estimated recoverable amount is calculated in isolation without changing any other assumptions. The extent of any such impairment loss would be determined after incorporating any consequential effects of that change on estimated operating income before restructuring costs and amortization and on other factors.

The wireless cash generating unit was created with the acquisition of WIND. A hypothetical decline of 10% in the recoverable amount of the wireless generating unit as at March 1, 2016 would result in an impairment loss and is reflective of the Company acquiring WIND at fair value on March 1, 2016.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

Any changes in economic conditions since the impairment testing conducted as at March 1, 2016 do not represent events or changes in circumstance that would be indicative of impairment at August 31, 2016.

Significant estimates inherent to this analysis include discount rates and the terminal value. At March 1, 2016, the estimates that have been utilized in the impairment tests reflect any changes in market conditions and are as follows:

		Terminal value	
	Post-tax discount rate	Terminal growth rate	Terminal operating income before restructuring costs and amortization multiple
Cable	8.0%	1.5%	6.5X
Satellite	8.5%	0.0%	5.5X
Data centres	8.5%	6.3%	11.0X
Wireless	9.1%	3.0%	8.5X

A sensitivity analysis of significant estimates is conducted as part of every impairment test. With respect to the impairment tests performed in the third quarter, the estimated decline in recoverable amount for the sensitivity of significant estimates is as follows:

	Estimated decline in recoverable amount		
		Terminal value	
	1% increase in discount rate	1% decrease in terminal growth rate	0.5 times decrease in terminal operating income before restructuring costs and amortization multiple
Cable	8.0%	5.0%	3.0%
Satellite	7.0%	n/a	3.0%
Data centres	19.0%	16.0%	2.0%
Wireless	9.0%	8.0%	3.0%

(1) During 2015, the Company announced a realignment of its customer care operations in the Consumer division into centres of excellence to enhance customer service, and continued its organizational structure realignment efforts including further restructuring of certain functions within its Business Network Services division. In addition, the media division undertook organizational changes as it redefined itself from a traditional broadcaster to the broader focus of a media organization. Approximately 1,700 employees were affected by the restructurings in 2015. During 2016, the Company underwent a restructuring following a set of significant asset realignment initiatives, including the acquisition of WIND and divestiture of Shaw Media. Approximately 200 employees were affected by the 2016 restructuring. Restructuring amounts are primarily in respect of severance and employee related costs. The majority of remaining costs at August 31, 2016 are expected to be paid within the next six months.

Corporate

Bank loans

During 2012, a syndicate of banks provided the Company with an unsecured $1 billion credit facility which includes a maximum revolving term or swingline facility of $50. During 2014, the Company amended the terms of the facility to extend the maturity date from January 2017 to December 2019. During 2016, the Company elected to increase its borrowing capacity by $500 under the terms of the amended facility. Funds are available to the Company in both Canadian and US dollars. At August 31, 2016, $4 (2015 – $1) has been drawn as committed letters of credit against the revolving term facility. Interest rates fluctuate with Canadian prime and bankers' acceptance rates, US bank base rates and LIBOR rates. Excluding the revolving term facility, the effective interest rate on actual borrowings under the credit facility during 2016 was 2.04% (2015 – 1.57%). The effective interest rate on the revolving term facility for 2016 was 3.11% (2015 – 3.24%).

In connection to the acquisition of WIND, the Company entered into $1.0 billion non-revolving credit facility with a syndicate of lenders (the "WIND Facility") during 2016. The full amount of the WIND Facility was drawn to fund the acquisition of WIND, along with $300 million drawn on the Company's existing credit facility. These amounts were repaid during the year using the cash proceeds received from the Shaw Media disposition. The effective interest rate on borrowings under the WIND Facility during 2016 was 2.56%.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

Senior notes

The senior notes are unsecured obligations and rank equally and ratably with all existing and future senior indebtedness. The fixed rate notes are redeemable at the Company's option at any time, in whole or in part, prior to maturity at 100% of the principal amount plus a make-whole premium.

On February 19, 2016, the Company issued $300 senior notes at a rate of 3.15% due February 19, 2021.

Other

ViaWest

During 2015, ViaWest's credit facility which was assumed on acquisition was repaid with proceeds from a new credit facility. ViaWest's prior credit facility was scheduled to mature in May 2017 and was secured by a first priority security interest in specific assets pursuant to the terms of the Security Agreement. On September 2, 2014, ViaWest's credit facility consisted of a term loan of US $322 and US $28 of borrowings under a US $40 revolving facility. The term loan had quarterly principal repayments of US $1 with the balance due on maturity. Interest rates fluctuated with LIBOR, US prime, US Federal Funds and Eurodollar rates. ViaWest had a US $130 interest rate swap which hedged the exposure to changes in cash flows and minimized variability related to its prior credit facility. The interest rate swap terminated in June 2015. The new facility consisted of a term loan in the amount of US $395 and a revolving credit facility of US $85. Commencing August 2015, the term loan has quarterly principal repayments of US $1 with the balance due on maturity in March 2022 while the revolving credit facility matures in March 2020. During 2016, ViaWest entered into an incremental US $80 term loan and increased the borrowing capacity available on the revolving facility by US $35. The incremental term loan has quarterly principal repayments commencing May 2016 with the balance due on maturity in March 2022. Interest rates fluctuate with LIBOR, US prime and US Federal Funds rates and the facilities are secured by a first priority security interest in specific assets pursuant to the terms of the Security Agreement.

Finance lease obligations and amounts owing to landlords in connection with financing of leasehold improvements expire and mature at various dates through to 2023. Collateral has been provided as security for the related transactions and agreements as required. The effective interest rates on the obligations range from 5.36% to 9.39%.

WIND

Finance lease obligations and amounts owing in connection with financing of certain computer equipment and services mature at various dates through to 2018.

Burrard Landing Lot 2 Holdings Partnership (the "Partnership")

The Company has a 33.33% interest in the Partnership which built the Shaw Tower project with office/retail space and living/working space in Vancouver, BC. In the fall of 2004, the commercial construction of the building was completed and at that time, the Partnership issued ten year 6.31% secured mortgage bonds in respect of the commercial component of the Shaw Tower. In February 2014, the Partnership refinanced its debt. The Partnership received a mortgage loan and used the proceeds to prepay the outstanding balance of the previous mortgage and loan excess funds to each of its partners. The mortgage loan matures on November 1, 2024 and bears interest at 4.683% compounded semi-annually with interest only payable for the first five years. The mortgage loan is collateralized by the property and the commercial rental income from the building with no recourse to the Company.

Debt covenants

The Company and its subsidiaries have undertaken to maintain certain covenants in respect of the credit agreements and trust indentures described above. The Company and its subsidiaries were in compliance with these covenants at August 31, 2016.

Amortization of deferred credits for 2016 amounted to $92 (2015 – $100) and was recorded in the accounts as described below.

IRU agreements are in place for periods ranging from 21 to 60 years and are being amortized to income over the agreement periods. Amortization in respect of the IRU agreements for 2016 amounted to $13 (2015 – $12) and was recorded as other amortization. Amortization of equipment revenue for 2016 amounted to $67 (2015 – $78). Amortization of connection fee and installation revenue for 2016 amounted to $12 (2015 – $10) and was recorded as revenue.

16. SHARE CAPITAL

Authorized

The Company is authorized to issue a limited number of Class A voting participating shares ("Class A Shares") of no par value, as described below, and an unlimited number of Class B non-voting participating shares ("Class B Non-Voting Shares") of no par value, Class 1 preferred shares, Class 2 preferred shares, Class A preferred shares and Class B preferred shares.

The authorized number of Class A Shares is limited, subject to certain exceptions, to the lesser of that number of shares (i) currently issued and outstanding and (ii) that may be outstanding after any conversion of Class A Shares into Class B Non-Voting Shares.

498,247,576	485,891,626		**3,799**	3,500

Class A Shares and Class B Non-Voting Shares

Class A Shares are convertible at any time into an equivalent number of Class B Non-Voting Shares. In the event that a take-over bid is made for Class A Shares, in certain circumstances, the Class B Non-Voting Shares are convertible into an equivalent number of Class A Shares.

Changes in Class A Share capital and Class B Non-Voting Share capital in 2016 and 2015 are as follows:

	Class A Shares		Class B Non-Voting Shares	
	Number	$	Number	$
September 1, 2014	22,420,064	2	439,606,326	2,887

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

Series A and B Preferred Shares

The Cumulative Redeemable Rate Reset Preferred Shares, Series A ("Series A Preferred Shares") and Cumulative Redeemable Floating Rate Preferred Shares, Series B ("Series B Preferred Shares") represent series of Class 2 preferred shares and are classified as equity since redemption, at $25.00 per Series A Preferred Share and Series B Preferred Share, is at the Company's option and payment of dividends is at the Company's discretion.

Share transfer restriction

The Articles of the Company empower the directors to refuse to issue or transfer any share of the Company that would jeopardize or adversely affect the right of Shaw Communications Inc. or any subsidiary to obtain, maintain, amend or renew a license to operate a broadcasting undertaking pursuant to the Broadcasting Act (Canada).

17. SHARE-BASED COMPENSATION AND AWARDS

Stock option plan

Under a stock option plan, directors, officers, employees and consultants of the Company are eligible to receive stock options to acquire Class B Non-Voting Shares with terms not to exceed ten years from the date of grant. Options granted up to August 31, 2016 vest evenly on the anniversary dates from the original grant date at either 25% per year over four years or 20% per year over five years. The options must be issued at not less than the fair market value of the Class B Non-Voting Shares at the date of grant. The maximum number of Class B Non-Voting Shares issuable under the plan may not exceed 52,000,000. As at August 31, 2016, 32,459,639 Class B Non-Voting Shares have been issued under the plan.

The changes in options are as follows:

	2016		2015	
	Number	Weighted average exercise price $	Number	Weighted average exercise price $
Outstanding, beginning of year	**12,538,664**	**23.70**	16,477,563	22.34
Granted	**2,758,000**	**23.93**	2,911,250	28.29
Forfeited	**(2,116,420)**	**26.17**	(978,528)	25.12
Exercised[(1)]	**(1,827,108)**	**21.15**	(5,871,621)	21.94
Outstanding, end of year	**11,353,136**	**23.70**	12,538,664	23.70

(1) The weighted average Class B Non-Voting Share price for the options exercised was $25.22.

The following table summarizes information about the options outstanding at August 31, 2016:

	Options outstanding			Options exerciseable	
Range of prices	Number outstanding	Weighted average remaining contractual life	Weighted average exercise price	Number exercisable	Weighted average exercise price
$16.71 – $23.19	3,929,586	4.14	20.54	3,312,836	20.14
$23.20 – $24.55	3,987,050	4.59	24.20	2,289,050	24.44
$24.56 – $30.87	3,436,500	7.06	26.75	1,395,750	26.32

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

The weighted average estimated fair value at the date of the grant for common share options granted for the year ended August 31, 2016 was $1.47 (2015 – $2.85) per option. The fair value of each option granted was estimated on the date of the grant using the Black-Scholes option pricing model with the following weighted-average assumptions:

	2016	2015
Dividend yield	**4.93%**	3.96%
Risk-free interest rate	**0.75%**	1.41%
Expected life of options	**5 years**	6 years
Expected volatility factor of the future expected market price of Class B Non-Voting Shares	**17.8%**	19.1%

Expected volatility has been estimated based on the historical share price volatility of the Company's Class B Non-Voting Shares.

Deferred share unit plan

The Company has a DSU plan for its Board of Directors whereby directors can elect to receive their annual cash compensation, or a portion thereof, in DSUs. In addition, the Company may adjust and/or supplement directors' compensation with periodic grants of DSUs. A DSU is a right that tracks the value of one Class B Non-Voting Share. Holders will be entitled to a cash payout when they cease to be a director. The cash payout will be based on market value of a Class B Non-Voting Share at the time of payout. When cash dividends are paid on Class B Non-Voting Shares, holders are credited with DSUs equal to the dividend. DSUs do not have voting rights as there are no shares underlying the plan.

During 2016, $3 was recognized as compensation expense (2015 – $2). The carrying value and intrinsic value of DSUs at August 31, 2016 was $18 and $15, respectively (August 31, 2015 – $15 and $13, respectively).

Employee share purchase plan

The Company's ESPP provides employees with an incentive to increase the profitability of the Company and a means to participate in that increased profitability. Generally, all non-unionized full time or part time employees of the Company are eligible to enroll in the ESPP. Under the ESPP, eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the employee's contributions.

During 2016, $6 was recorded as compensation expense (2015 – $6).

Share appreciation rights

A subsidiary of the Company grants SARs to eligible employees of ViaWest. A SAR entitles the holder to the appreciation in value of one share of ViaWest over the exercise price over a period of time. SARs granted to ViaWest employees post-acquisition vest 25% per year over four years, have a 10 year contractual term and are cash settled. During 2016, $7 was recognized as compensation expense (2015 – $4). The carrying value of SARs liabilities, including the SARs granted as partial consideration for the acquisition of ViaWest (see note 3), at August 31, 2016 was $21 (2015 – $13).

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

18. EARNINGS PER SHARE

Earnings per share calculations are as follows:

	2016	2015
Numerator for basic and diluted earnings per share ($)		
Net income from continuing operations	**456**	666
Deduct: dividends on Preferred Shares	**(13)**	(14)
Net income attributable to common shareholders from continuing operations	**443**	652
Net income from discontinued operations	**784**	214
Deduct: net income from discontinued operations attributable to non-controlling interests	**(20)**	(24)
Net income from discontinued operations attributable to common shareholders	**764**	190
Net income attributable to common shareholders	**1,207**	842
Denominator (millions of shares)		
Weighted average number of Class A Shares and Class B Non-Voting Shares for basic earnings per share	**480**	468
Effect of dilutive securities(1)	**1**	3
Weighted average number of Class A Shares and Class B Non-Voting Shares for diluted earnings per share	**481**	471
Basic earnings per share ($)		
Continuing operations	**0.92**	1.40
Discontinued operations	**1.59**	0.40
Attributable to common shareholders	**2.51**	1.80
Diluted earnings per share ($)		
Continuing operations	**0.92**	1.39
Discontinued operations	**1.59**	0.40
Attributable to common shareholders	**2.51**	1.79

(1) The earnings per share calculation does not take into consideration the potential dilutive effect of certain stock options since their impact is anti-dilutive. For the year ended August 31, 2016, 1,613,077 options were excluded from the diluted earnings per share calculation (2015 – 2,548,433).

19. DIVIDENDS

Common share dividends

The holders of Class A Shares and Class B Non-Voting Shares are entitled to receive such dividends as the Board of Directors determines to declare on a share-for-share basis, as and when any such dividends are declared or paid. The holders of Class B Non-Voting Shares are entitled to receive during each dividend period, in priority to the payment of dividends on the Class A Shares, an additional dividend at a rate of $0.0025 per share per annum. This additional dividend is subject to proportionate adjustment in the event of future consolidations or subdivisions of shares and in the event of any issue of shares by way of stock dividend. After payment or setting aside for payment of the additional non-cumulative dividends on the Class B Non-Voting Shares, holders of Class A Shares and Class B Non-Voting Shares participate equally, share for share, as to all subsequent dividends declared.

Preferred share dividends

Holders of the Series A Preferred Shares were entitled to receive, as and when declared by the Company's Board of Directors, a cumulative quarterly fixed dividend yielding 4.50% annually for the initial period ending June 30, 2016. Commencing June 30, 2016, the dividend rate was reset to 2.791% for the five year period ending June 30, 2021. Thereafter, the dividend rate will be reset every five years at a rate equal to the then current 5-year Government of Canada bond yield plus

[all amounts in millions of Canadian dollars except share and per share amounts]

2.00%. Holders of Series A Preferred Shares had the right, at their option, to convert their shares into Series B Preferred Shares, subject to certain conditions, on June 30, 2016 and on June 30 every five years thereafter, with the next conversion date being June 30, 2021.

On June 30, 2016, 1,987,607 Series A Preferred Shares were converted into an equal number of Series B Preferred Shares. Holders of Series B Preferred Shares are entitled to receive cumulative quarterly dividends, as and when declared by the Company's Board of Directors, at a rate set quarterly equal to the then current three-month Government of Canada Treasury Bill yield plus 2.00%. The floating quarterly dividend rate for the Series B Preferred Shares was set at an annual dividend rate of 2.539% for the initial period from June 30, 2016 to September 30, 2016. The floating quarterly dividend rate for the Series B Preferred Shares was set at an annual dividend rate of 2.512% for the period from September 30, 2016 to December 31, 2016.

Dividend reinvestment plan

The Company has a Dividend Reinvestment Plan ("DRIP") that allows holders of Class A Shares and Class B Non-Voting Shares who are residents of Canada to automatically reinvest monthly cash dividends to acquire additional Class B Non-Voting Shares. Class B Non-Voting Shares distributed under the Company's DRIP are new shares issued from treasury at a 2% discount from the 5 day weighted average market price immediately preceding the applicable dividend payment date.

Dividends declared

The dividends per share recognized as distributions to common shareholders for dividends declared during the year ended August 31, 2016 and 2015 are as follows:

2016		2015	
Class A Voting Share	**Class B Non-Voting Share**	**Class A Voting Share**	**Class B Non-Voting Share**
1.1825	1.1850	1.1613	1.1638

The dividends per share recognized as distributions to preferred shareholders for dividends declared during the year ended August 31, 2016 and 2015 are as follows:

2016		2015	
Series A Preferred Share	**Series B Preferred Share**	**Series A Preferred Share**	**Series B Preferred Share**
1.0538	0.1067	1.1250	–

On June 29, 2016, the Company declared dividends of $0.17444 per Series A Preferred Share and $0.15869 per Series B Preferred Share which were paid on September 30, 2016. The total amount paid was $2 of which $1 was not recognized as at August 31, 2016.

On November 2, 2016, the Company declared dividends of $0.098542 per Class A Voting Share and $0.09875 per Class B Non-Voting Share payable on each of December 29, 2016, January 30, 2017 and February 27, 2017 to shareholders of record at the close of business on December 15, 2016, January 13, 2017 and February 15, 2017, respectively.

On November 2, 2016, the Company declared dividends of $0.17444 per Series A Preferred Share and $0.157 per Series B Preferred Share payable on January 3, 2017 to holders of record at the close of business on December 15, 2016.

20. OTHER COMPREHENSIVE INCOME (LOSS) AND ACCUMULATED OTHER COMPREHENSIVE LOSS

Components of other comprehensive income and the related income tax effects for 2016 are as follows:

	Amount $	Income taxes $	Net $
Items that may subsequently be reclassified to income			
Change in unrealized fair value of derivatives designated as cash flow hedges	**2**	**(1)**	**1**
Reclassification of loss on available-for-sale investment to income	**4**	**–**	**4**
Share of other comprehensive income of associates	**(5)**	**–**	**(5)**
Exchange differences on translation of a foreign operation	**(7)**	**–**	**(7)**
Exchange differences on translation of US denominated debt hedging a foreign operation	**4**	**–**	**4**
	(2)	**(1)**	**(3)**
Items that will not be subsequently reclassified to income			
Remeasurements on employee benefit plans	**(49)**	**13**	**(36)**
Remeasurements on employee benefit plans – Discontinued operations	**(11)**	**3**	**(8)**
	(62)	**15**	**(47)**

Components of other comprehensive loss and the related income tax effects for 2015 are as follows:

	Amount $	Income taxes $	Net $
Items that may subsequently be reclassified to income			
Change in unrealized fair value of derivatives designated as cash flow hedges	8	(2)	6
Adjustment for hedged items recognized in the period	(8)	2	(6)
Unrealized loss on available-for-sale investment	(3)	–	(3)
Exchange differences on translation of a foreign operation	184	–	184
Exchange differences on translation of US denominated debt hedging a foreign operation	(74)	–	(74)
	107	–	107
Items that will not be subsequently be reclassified to income			
Remeasurements on employee benefit plans	(1)	2	1
Remeasurements on employee benefit plans – Discontinued operations	8	(2)	6
	114	–	114

Accumulated other comprehensive loss is comprised of the following:

	2016 $	2015 $
Items that may subsequently be reclassified to income		
Change in unrealized fair value of derivatives designated as cash flow hedges	**1**	–
Share of other comprehensive income of associates	**(5)**	–
Unrealized loss on available-for-sale investment	**–**	(5)
Foreign currency translation adjustments	**108**	110
Items that will not be subsequently reclassified to income		
Remeasurements on employee benefit plans:		
Continuing operations	**(156)**	(119)
Discontinued operations	**–**	(5)
	(52)	(19)

[all amounts in millions of Canadian dollars except share and per share amounts]

21. OPERATING, GENERAL AND ADMINISTRATIVE EXPENSES AND RESTRUCTURING COSTS

	2016 $	2015 $
Employee salaries and benefits	**866**	793
Purchases of goods and services	**1,927**	1,695
	2,793	2,488

22. OTHER LOSSES

Other losses generally includes realized and unrealized foreign exchange gains and losses on US dollar denominated current assets and liabilities, gains and losses on disposal of property, plant and equipment and minor investments, and the Company's share of the operations of Burrard Landing Lot 2 Holdings Partnership. In the current year, the category also includes a write-down of $54 in respect of the Company's investment in shomi, a write-down of $20 in respect of a private portfolio investment and asset write-downs of $16. In the comparative year, the category included a write-down of $6 in respect of a property held for sale, distributions of $27 from a venture capital fund investment, a write-down of $27 in respect of a private portfolio investment, additional proceeds of $15 related to the fiscal 2012 Shaw Court insurance claim and asset write-downs of $55.

23. INCOME TAXES

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes. The Company's net deferred tax liability consists of the following:

	2016 $	2015 $
Deferred tax assets	**6**	14
Deferred tax liabilities	**(1,174)**	(1,135)
Net deferred tax liability	**(1,168)**	(1,121)

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

Significant changes recognized to deferred income tax assets (liabilities) are as follows:

	Property, plant and equipment and software assets $	Broadcast rights, licenses, customer relationships, trademark and brands $	Partnership income $	Non-capital loss carry-forwards $	Accrued charges $	Total $
Balance at September 1, 2014	(177)	(818)	(160)	6	70	(1,079)
Recognized in statement of income	(24)	(21)	107	36	(28)	70
Recognized in discontinued operations	(1)	–	–	(2)	(5)	(8)
Recognized on ViaWest business acquisition	(9)	(142)	–	46	29	(76)
Recognized in other comprehensive income:						
Foreign currency translation adjustments	–	(29)	–	12	1	(16)
Actuarial gains/losses	–	–	–	–	(12)	(12)
Balance at August 31, 2015	(211)	(1,010)	(53)	98	55	(1,121)
Recognized in statement of income	**(17)**	**(8)**	**109**	**(8)**	**–**	**76**
Recognized in discontinued operations	**(2)**	**–**	**–**	**–**	**(14)**	**(16)**
Recognized on business acquisitions	**(33)**	**(262)**	**–**	**29**	**5**	**(261)**
Recognized on Media divestiture	**(20)**	**177**	**–**	**1**	**(12)**	**146**
Recognized in other comprehensive income:						
Foreign currency translation adjustments	**–**	**2**	**–**	**–**	**–**	**2**
Actuarial gains/losses	**–**	**–**	**–**	**–**	**6**	**6**
Balance at August 31, 2016	**(283)**	**(1,101)**	**56**	**120**	**40**	**(1,168)**

The Company has capital loss carryforwards of approximately $63 for which no deferred income tax asset has been recognized in the accounts. These capital losses can be carried forward indefinitely.

The Company has non-capital loss carryforwards of approximately $472 for which no deferred income tax asset has been recognized in the accounts. The balance expires in varying annual amounts from 2034 to 2036.

The Company has taxable temporary differences associated with its investment in its subsidiaries. No deferred tax liabilities have been provided with respect to such temporary differences as the Company is able to control the timing of the reversal and such reversal is not probable in the foreseeable future.

The income tax expense differs from the amount computed by applying the statutory rates to income before income taxes for the following reasons:

	2016 $	2015 $
Current statutory income tax rate	**26.2%**	25.5%
Income tax expense at current statutory rates	**164**	225
Net increase (decrease) in taxes resulting from:		
Non-taxable portion of capital gains	**–**	(24)
Effect of tax rate changes	**–**	34
Tax benefit of equity loss not recognized	**3**	–
Other	**4**	(17)
Income tax expense	**171**	218

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

The statutory income tax rate for the Company increased from 25.5% in 2015 to 26.2% in 2016 as a result of provincial tax rate increases.

The components of income tax expense are as follows:

	2016 $	2015 $
Current income tax expense	**247**	288
Deferred tax recovery related to temporary differences	**(76)**	(104)
Deferred tax expense from tax rate changes	**–**	34
Income tax expense	**171**	218

24. BUSINESS SEGMENT INFORMATION

The Company's operating segments are Consumer, Business Network Services, Business Infrastructure Services and Wireless. The accounting policies of the segments are the same as those described in the summary of significant accounting policies. Management evaluates divisional performance based on revenue and operating income before charges such as restructuring costs and amortization. The Consumer division provides Cable telecommunications services including Video, Internet, WiFi and Digital Phone, and Satellite Video, to Canadian consumers. The Business Network Services segment provides data networking, video, voice and Internet services through a national fibre-optic backbone network and also provides satellite Video services, and fleet tracking services to North American businesses and public sector entities. The Business Infrastructure Services segment was created with the acquisition of ViaWest on September 2, 2014, and provides data centre colocation, cloud and managed services to North American businesses. The Wireless segment was formed by the acquisition of WIND on March 1, 2016, and provides wireless voice and data communications services for customers in Ontario, British Columbia and Alberta with 50MHz of spectrum covering these regions. All of the Company's operations are substantially located in Canada with the exception of ViaWest which is primarily located in the United States.

Less: Satellite equipment profit (2)	**(3)**	(3)
Total capital expenditures and equipment costs (net) reported by segments	**1,191**	1,106

(1) The Company does not report restructuring costs, amortization, interest or cash taxes on a segmented basis.

(2) The profit from the sale of satellite equipment is subtracted from the calculation of segmented capital expenditures and equipment costs (net) as the Company views the profit on sale as a recovery of expenditures on customer premise equipment

25. COMMITMENTS AND CONTINGENCIES

Commitments

(i) The Company owns and leases Ku-band and C-band transponders on the Anik F1R, Anik F2 and Anik G1 satellites. As part of the Ku-band transponder agreements with Telesat Canada, the Company is committed to paying annual transponder maintenance and license fees for each transponder from the time the satellite becomes operational for a period of 15 years.

(ii) The Company has various long-term operating commitments as follows:

	$
2017	310
2018 – 2021	750
Thereafter	323
	1,383

[all amounts in millions of Canadian dollars except share and per share amounts]

Comprised of:	$
Program related agreements	20
Lease of transmission facilities, circuits and premises	705
Lease and maintenance of transponders	565
Other (primarily maintenance and support contracts)	93
	1,383

Included in operating, general and administrative expenses are transponder maintenance expenses of $80 (2015 – $80) and rental expenses of $163 (2015 – $134).

(iii) At August 31, 2016, the Company had capital expenditure commitments in the normal course of business of $151 in respect of fiscal 2017.

Contingencies

The Company and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business. Although resolution of such matters cannot be predicted with certainty, management does not consider the Company's exposure to litigation to be material to these consolidated financial statements.

Guarantees

In the normal course of business the Company enters into indemnification agreements and has issued irrevocable standby letters of credit and commercial surety bonds with and to third parties.

Indemnities

Many agreements related to acquisitions and dispositions of business assets include indemnification provisions where the Company may be required to make payment to a vendor or purchaser for breach of contractual terms of the agreement with respect to matters such as litigation, income taxes payable or refundable or other ongoing disputes. The indemnification period usually covers a period of two to four years. Also, in the normal course of business, the Company has provided indemnifications in various commercial agreements, customary for the telecommunications industry, which may require payment by the Company for breach of contractual terms of the agreement. Counterparties to these agreements provide the Company with comparable indemnifications. The indemnification period generally covers, at maximum, the period of the applicable agreement plus the applicable limitations period under law.

The maximum potential amount of future payments that the Company would be required to make under these indemnification agreements is not reasonably quantifiable as certain indemnifications are not subject to limitation. However, the Company enters into indemnification agreements only when an assessment of the business circumstances would indicate that the risk of loss is remote. At August 31, 2016, management believes it is remote that the indemnification provisions would require any material cash payment.

The Company indemnifies its directors and officers against any and all claims or losses reasonably incurred in the performance of their service to the Company to the extent permitted by law.

Irrevocable standby letters of credit and commercial surety bonds

The Company and certain of its subsidiaries have granted irrevocable standby letters of credit and commercial surety bonds, issued by high rated financial institutions, to third parties to indemnify them in the event the Company does not perform its contractual obligations. As of August 31, 2016, the guarantee instruments amounted to $12. The Company has not recorded any additional liability with respect to these guarantees, as the Company does not expect to make any payments in excess of what is recorded on the Company's consolidated financial statements. The guarantee instruments mature at various dates during fiscal 2017 and fiscal 2018.

[all amounts in millions of Canadian dollars except share and per share amounts]

26. EMPLOYEE BENEFIT PLANS

Defined contribution pension plans

The Company has defined contribution pension plans for its non-union employees and, for the majority of these employees, contributes 5% of eligible earnings to the maximum amount deductible under the Income Tax Act. For union employees, the Company contributes amounts up to 9.8% of earnings to the individuals' registered retirement savings plans. Total pension costs in respect of these plans were $35 (2015 – $38) of which $23 (2015 – $26) was expensed and the remainder capitalized.

Defined benefit pension plans

The Company has two non-registered retirement plans for designated executives and senior executives and had several registered pension plans for certain employees in the media business until the sale of the business in April 2016. The following is a summary of the accrued benefit liabilities recognized in the statement of financial position.

	2016 $	2015 $
Unregistered plans		
Accrued benefit obligation	**563**	509
Fair value of plan assets	**438**	391
	125	118
Registered plans		
Accrued benefit obligation	–	173
Fair value of plan assets	–	172
	–	1
Accrued benefit liabilities and deficit	**125**	119

The plans expose the Company to a number of risks, of which the most significant are as follows:

(i) Volatility in market conditions: The accrued benefit obligations are calculated using discount rates with reference to bond yields closely matching the term of the estimated cash flows while many of the assets are invested in other types of assets. If plan assets underperform these yields, this will result in a deficit. Changing market conditions in conjunction with discount rate volatility will result in volatility of the accrued benefit liabilities. To minimize some of the investment risk, the Company has established long-term funding targets where the time horizon and risk tolerance are specified.

(ii) Selection of accounting assumptions: The calculation of the accrued benefit obligations involves projecting future cash flows of the plans over a long time frame. This means that assumptions used can have a material impact on the statements of financial position and comprehensive income because in practice, future experience of the plans may not be in line with the selected assumptions.

Non-registered pension plans

The Company provides a supplemental executive retirement plan ("SERP") for certain of its senior executives. Benefits under this plan are based on the employees' length of service and their highest three-year average rate of eligible pensionable earnings during their years of service. In 2012, the Company closed the plan to new participants and amended the plan to freeze base salary levels at August 31, 2012 for purposes of determining eligible pensionable earnings. The plan was also amended to provide funding of up to 90% of the accrued benefit obligation over a period of six years. Employees are not required to contribute to this plan.

The Company provides an executive retirement plan ("ERP") for certain executives not covered by the SERP. Benefits under this plan are comprised of defined contribution and defined benefit components and are based on the employees' length of service as well as final average earnings during their years of service. Employees are not required to contribute to this plan. Annually the employer is to fund 90% of the accrued benefit obligation.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

The table below shows the change in benefit obligation and funding status and the fair value of plan assets.

	SERP $	ERP $	2016 Total $	SERP $	ERP $	2015 Total $
Accrued benefit obligation, beginning of year	**502**	**7**	**509**	487	6	493
Current service cost	**6**	**3**	**9**	7	2	9
Interest cost	**21**	**–**	**21**	20	–	20
Payment of benefits to employees	**(19)**	**(2)**	**(21)**	(13)	–	(13)
Gain on settlement	**–**	**–**	**–**	–	(1)	(1)
Remeasurements:						
Effect of changes in demographic assumptions	**(5)**	**–**	**(5)**	(11)	–	(11)
Effect of changes in financial assumptions	**46**	**1**	**47**	1	–	1
Effect of experience adjustments	**2**	**1**	**3**	11	–	11
Accrued benefit obligation, end of year	**553**	**10**	**563**	502	7	509
Fair value of plan assets, beginning of year	**387**	**4**	**391**	328	2	330
Employer contributions	**50**	**4**	**54**	55	2	57
Interest income	**17**	**–**	**17**	14	–	14
Payment of benefits	**(19)**	**(2)**	**(21)**	(13)	–	(13)
Return on plan assets, excluding interest income	**(3)**	**–**	**(3)**	3	–	3
Fair value of plan assets, end of year	**432**	**6**	**438**	387	4	391
Accrued benefit liability and plan deficit, end of year	**121**	**4**	**125**	115	3	118

The weighted average duration of the defined benefit obligation of the SERP and ERP at August 31, 2016 is 15.6 years and 23.2 years, respectively.

The underlying plan assets of the SERP and ERP at August 31, 2016 are invested in the following:

	SERP $	ERP $
Cash and cash equivalents	**237**	**4**
Fixed income securities	**100**	**1**
Equity securities – Canadian	**25**	**–**
Equity securities – Foreign	**70**	**1**
	432	**6**

All fixed income and equity securities have a quoted price in active market.

[all amounts in millions of Canadian dollars except share and per share amounts]

The tables below show the significant weighted-average assumptions used to measure the pension obligation and cost for the plans.

Accrued benefit obligation	2016 SERP %	2016 ERP %	2015 SERP %	2015 ERP %
Discount rate	**3.50**	**3.50**	4.10	4.10
Rate of compensation increase	**5.00(1)**	**3.00**	5.00(1)	3.00

Benefit cost for the year	2016 SERP %	2016 ERP %	2015 SERP %	2015 ERP %
Discount rate	**4.10**	**4.10**	4.00	4.00
Rate of compensation increase	**5.00(1)**	**3.00**	5.00(1)	3.00

(1) Applies only to incentive compensation component of eligible pensionable earnings.

The calculation of the accrued benefit obligation is sensitive to the assumptions above. A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2016 by $96. A one percentage point increase in the rate of compensation increase would have increased the accrued benefit obligation by $14.

When calculating the sensitivity of the defined benefit obligation to significant actuarial assumptions, the present value of the defined benefit obligation has been calculated using the projected benefit method which is the same method that is applied in calculating the defined benefit liability recognized in the statement of financial position. The sensitivity analysis presented above may not be representative of the actual change in the accrued benefit obligation as it is unlikely that the change in assumptions would occur in isolation of one another as some assumptions may be correlated.

The net pension benefit plan expense, which is included in employee salaries and benefits expense, is comprised of the following components:

	SERP $	ERP $	2016 Total $	SERP $	ERP $	2015 Total $
Current service cost	**6**	**3**	**9**	7	2	9
Interest cost	**21**	**–**	**21**	20	–	20
Interest income	**(17)**	**–**	**(17)**	(14)	–	(14)
Pension expense	**10**	**3**	**13**	13	2	15

Registered pension plans

The Company had a number of funded defined benefit pension plans which provided pension benefits to certain unionized and non-unionized employees in the media business. These plans were divested along with the sale of the Media division in April 2016. Benefits under these plans were based on the employees' length of service and final average salary. These plans were regulated by the Office of the Superintendent of Financial Institutions, Canada in accordance with the provisions of the Pension Benefits Standards Act and Regulations. The regulations set out minimum standards for funding the plans.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements

[all amounts in millions of Canadian dollars except share and per share amounts]

The table below shows the change in the benefit obligations, change in fair value of plan assets and the funded status of these defined benefit plans.

	2016 $	2015 $
Accrued benefit obligation, beginning of year	**173**	171
Current service cost	**3**	6
Interest cost	**4**	7
Employee contributions	**–**	1
Payment of benefits to employees	**(5)**	(8)
Remeasurements:		
Effect of changes in demographic assumptions	**–**	–
Effect of changes in financial assumptions	**7**	(1)
Effect of experience adjustments	**–**	(3)
Divestiture of Shaw Media	**(182)**	–
Accrued benefit obligation, end of year	**–**	173
Fair value of plan assets, beginning of year	**172**	160
Employer contributions	**6**	10
Employee contributions	**–**	1
Interest income	**4**	7
Payment of benefit	**(5)**	(8)
Administrative expenses paid from plan assets	**(1)**	(1)
Return on plan assets, excluding interest income	**(3)**	3
Divestiture of Shaw Media	**(173)**	–
Fair value of plan assets, end of year	**–**	172
Accrued benefit liability and plan deficit, end of year	**–**	1

The tables below show the significant weighted-average assumptions used to measure the pension obligation and cost for these plans.

Accrued benefit obligation	2016 %	2015 %
Discount rate	**3.86**	4.10
Rate of compensation increase	**3.00**	3.00

Benefit cost for the year	2016 %	2015 %
Discount rate	**3.86**	4.09
Rate of compensation increase	**3.00**	3.00

The net pension benefit plan expense, which is included in employee salaries and benefits expense, is comprised of the following components:

	2016 $	2015 $
Current service cost	**3**	6
Interest cost	**4**	7
Interest income	**(4)**	(7)
Administrative expenses	**1**	1
Pension expense	**4**	7

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

Other benefit plans

The Company has post-employment benefits plans that provide post-retirement health and life insurance coverage to certain executive level retirees and retirees in the media business and are funded on a pay-as-you-go basis. The plans for media retirees were divested along with the sale of the Media division in April 2016. The table below shows the change in the accrued post-retirement obligation which is recognized in the statement of financial position.

	2016 $	2015 $
Accrued benefit obligation and plan deficit, beginning of year	**22**	18
Current service cost	**–**	2
Interest cost	**1**	1
Payment of benefits to employees	**–**	(1)
Remeasurements:		
Effect of changes in demographic assumptions	**–**	2
Effect of changes in financial assumptions	**1**	(1)
Effect of experience adjustments	**–**	1
Divestiture of Shaw Media	**(20)**	–
Accrued benefit obligation and plan deficit, end of year	**4**	22

The weighted average duration of the benefit obligation at August 31, 2016 is 18.7 years.

The post-retirement benefit plan expense, which is included in employee salaries and benefits expense, is $1 (2015 – $3) and is comprised of current service and interest cost.

The discount rates used to measure the post-retirement benefit cost for the year and the accrued benefit obligation as at August 31, 2016 were 4.20% and 3.60%, respectively (2015 – 4.00% and 4.20%, respectively). A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2016 by $1.

Employer contributions

The Company's estimated contributions to the defined benefit plans in fiscal 2017 are $28.

27. RELATED PARTY TRANSACTIONS

Controlling shareholder

The majority of the Class A Shares are held by the Shaw Family Living Trust ("SFLT"). The sole trustee of SFLT is a private company owned by JR Shaw and having a board comprised of seven directors, including JR Shaw as chair, Carol Shaw, and four other members of JR Shaw's family. JR Shaw and members of his family are represented as Directors, Senior Executive and Corporate Officers of the Company.

Key management personnel and Board of Directors

Key management personnel consist of the most senior executive team and along with the Board of Directors, and have the authority and responsibility for planning, directing and controlling the activities of the Company.

Compensation

The compensation expense of key management personnel and Board of Directors is as follows:

	2016 $	**2015 $**
Short-term employee benefits	**32**	38
Post-employment pension benefits	**3**	15
Retirement benefits	**–**	17
Share-based compensation	**3**	1
	38	71

Transactions

The Company paid $2 (2015 – $2) for collection, installation and maintenance services to a company controlled by a Director of the Company.

During the year, the Company paid $8 (2015 – $6) for remote control units to a supplier where Directors of the Company hold positions on the supplier's board of directors.

During the year, network fees of $14 (2015 – $12) were paid to a programmer where a Director of the Company holds a position on the programmer's board of directors.

At August 31, 2016, the Company had $3 owing in respect of these transactions (2015 – $3).

Other related parties

The Company has entered into certain transactions and agreements in the normal course of business with certain of its related parties. These transactions are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties.

Corus

The Company and Corus are subject to common voting control. During the year, network fees of $118 (2015 – $113), advertising fees of $1 (2015 – $1), programming fees of $1 (2015 – $1), and administrative fees of $1 (2015 – $nil) were paid to various Corus subsidiaries and entities subject to significant influence. In addition, the Company provided administrative, advertising and other services for $7 (2015 – $1), uplink of television signals for $7 (2015 – $6), Internet services and lease of circuits for $1 (2015 – $1) and programming content of $nil (2015 – $2). At August 31, 2016, the Company had a net of $22 owing in respect of these transactions (2015 – $18).

During 2016, the Company's sold its wholly owned subsidiary Shaw Media to Corus. The transaction closed on April 1, 2016 (see note 3).

The Company provided Corus with television advertising spots in return for radio and television advertising. No monetary consideration was exchanged for these transactions and no amounts were recorded in the accounts.

Burrard Landing Lot 2 Holdings Partnership

During the year, the Company paid $13 (2015 – $12) to the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, BC, is the Company's headquarters for its lower mainland operations. At August 31, 2016, the Company had a remaining commitment of $93 in respect of the office space lease which is included in the amounts disclosed in note 25.

Joint arrangement

During the year, the Company provided programming content and advertising services of $6 (2015 – $18) and paid $11 (2015 – $6) in subscriber fees. At August 31, 2016, the Company had a net receivable of $nil (2015 – $3) in respect of these transactions.

28. FINANCIAL INSTRUMENTS

Fair values

The fair value of financial instruments has been determined as follows:

(i) Current assets and current liabilities

The fair value of financial instruments included in current assets and current liabilities approximates their carrying value due to their short-term nature.

(ii) Investments and other assets and Other long-term assets

The fair value of publicly traded investments is determined by quoted market prices. Investments in private entities which do not have quoted market prices in an active market and whose fair value cannot be readily measured are carried at cost. No published market exists for such investments. These equity investments have been made as they are considered to have the potential to provide future benefit to the Company and accordingly, the Company has no current intention to dispose of these investments in the near term. The fair value of long-term receivables approximates their carrying value as they are recorded at the net present values of their future cash flows, using an appropriate discount rate.

Shaw Communications Inc.
Notes to the Consolidated Financial Statements
August 31, 2016 and 2015
[all amounts in millions of Canadian dollars except share and per share amounts]

(iii) Long-term debt

The carrying value of long-term debt is at amortized cost based on the initial fair value as determined at the time of issuance. The fair value of publicly traded notes is based upon current trading values. The fair value of finance lease obligations is determined by discounting future cash flows using a rate for loans with similar terms, conditions and maturity dates. The carrying value of bank credit facilities approximates fair value as the debt bears interest at rates that fluctuate with market rates. Other notes and debentures are valued based upon current trading values for similar instruments.

(iv) Other long-term liabilities

The fair value of program rights payable, estimated by discounting future cash flows, approximates their carrying value. The fair value of contingent consideration arising from a business acquisition is determined by calculating the present value of the probability weighted assessment of the likelihood that revenue targets will be met and the estimated timing of such payments.

(v) Derivative financial instruments

The fair value of US currency forward purchase contracts is determined using an estimated credit-adjusted mark-to-market valuation using observable forward exchange rates at the end of reporting periods and contract forward rates.

The carrying values and estimated fair values an investment in a publicly traded company, long-term debt and a contingent liability are as follows:

	August 31, 2016		August 31, 2015	
	Carrying value $	Estimated fair value $	Carrying value $	Estimated fair value $
Assets				
Investment in publicly traded company[(1)]	–	–	4	4
Liabilities				
Long-term debt[(2)]	**5,612**	**6,252**	5,669	6,307
Contingent liability[(3)]	**2**	**2**	2	2

(1) Level 1 fair value – determined by quoted market prices.

(2) Level 2 fair value – determined by valuation techniques using inputs based on observable market data, either directly or indirectly, other than quoted prices.

(3) Level 3 fair value – determined by valuation techniques using inputs that are not based on observable market data.

Risk management

The Company is exposed to various market risks including currency risk and interest rate risk, as well as credit risk and liquidity risk associated with financial assets and liabilities. The Company has designed and implemented various risk management strategies, discussed further below, to ensure the exposure to these risks is consistent with its risk tolerance and business objectives.

Market risk

Market risk is the risk that the fair value or cash flows of a financial instrument will fluctuate as a result of changes in market prices, including foreign exchange and interest rates, the Company's share price and market price of publicly traded investments.

Currency risk

Certain of the Company's capital expenditures and equipment costs are incurred in US dollars, while its revenue is primarily denominated in Canadian dollars. Decreases in the value of the Canadian dollar relative to the US dollar could have an adverse effect on the Company's cash flows. To mitigate some of the uncertainty in respect to capital expenditures and equipment costs, the Company regularly enters into forward contracts in respect of US dollar commitments. With respect to 2016, the Company entered into forward contracts to purchase US $12 over a period of 12 months commencing in September 2015 at an average exchange rate of 1.3170 Cdn. At August 31, 2016 the Company had forward contracts to purchase US $112 over a period of 12 months commencing September 2016 at an average exchange rate of 1.2932 Cdn in respect of US dollar commitments.

The Company's net investment in its foreign operation is exposed to market risk attributable to fluctuations in foreign currency exchange rates in respect of changes in the value of the Canadian dollar versus the US dollar. This risk is partially mitigated as a portion of the purchase price of ViaWest was borrowed in US dollars under the Company's credit facility. At August 31, 2016, the investment in ViaWest amounted to US $846. The exchange rate used to convert US dollars into Canadian dollars for the statement of financial position at August 31, 2016 was $1.3116 Cdn. The impact of a 10% change in the exchange rate would change other comprehensive income by $62.

Interest rate risk

Due to the capital-intensive nature of its operations, the Company utilizes long-term financing extensively in its capital structure. The primary components of this structure are a banking facility and various Canadian senior notes with varying maturities issued in the public markets as more fully described in note 13.

Interest on the Company's unsecured banking facility and ViaWest's credit facilities are based on floating rates, while the senior notes are primarily fixed-rate obligations. The Company utilizes its credit facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. As at August 31, 2016, 79% of the Company's consolidated long-term debt was fixed with respect to interest rates.

Sensitivity analysis

The sensitivity to currency risk has been determined based on a hypothetical change in Canadian dollar to US dollar foreign exchange rates of 10%. Foreign exchange forward contracts would be impacted by this hypothetical change resulting in a change to other comprehensive income by $11 net of tax (2015 – $nil). A portion of the Company's accounts receivables and accounts payable and accrued liabilities is denominated in US dollars; however, due to their short-term nature, there is no significant market risk arising from fluctuations in foreign exchange rates.

Interest on the Company's banking facility is based on floating rates. There is no significant market risk arising from interest rates fluctuating by reasonably possible amounts from their actual values at August 31, 2016.

At August 31, 2016, a one dollar change in the Company's Class B Non-Voting Shares would have had an impact on net income of $1 in respect of the Company's DSU plan.

Credit risk

Accounts receivable in respect of the Consumer, Business Networks Services, Business Infrastructure Services and Wireless divisions are not subject to any significant concentrations of credit risk due to the Company's large and diverse customer base. As at August 31, 2016, the Company had accounts receivable of $268 (August 31, 2015 – $468), net of the allowance for doubtful accounts of $42 (August 31, 2015 – $26). The Company maintains an allowance for doubtful accounts for the estimated losses resulting from the inability of its customers to make required payments. In determining the allowance, the Company considers factors such as the number of days the customer account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. As at August 31, 2016, $95 (August 31, 2015 – $121) of accounts receivable is considered to be past due, defined as amounts outstanding past normal credit terms and conditions. Uncollectible accounts receivable are charged against the allowance account based on the age of the account and payment history. The Company believes that its allowance for doubtful accounts is sufficient to reflect the related credit risk.

The Company mitigates the credit risk of advertising receivables by performing initial and ongoing credit evaluations of advertising customers. Credit is extended and credit limits are determined based on credit assessment criteria and credit quality. In addition, the Company mitigates credit risk of subscriber receivables through advance billing and procedures to downgrade or suspend services on accounts that have exceeded agreed credit terms and routinely assesses the financial strength of its business customers through periodic review of payment practices.

[all amounts in millions of Canadian dollars except share and per share amounts]

Credit risks associated with US currency contracts arise from the inability of counterparties to meet the terms of the contracts. In the event of non-performance by the counterparties, the Company's accounting loss would be limited to the net amount that it would be entitled to receive under the contracts and agreements. In order to minimize the risk of counterparty default under its swap agreements, the Company assesses the creditworthiness of its swap counterparties.

Liquidity risk

Liquidity risk is the risk that the Company will experience difficulty in meeting obligations associated with financial liabilities. The Company manages its liquidity risk by monitoring cash flow generated from operations, available borrowing capacity, and by managing the maturity profiles of its long-term debt.

The Company's undiscounted contractual maturities as at August 31, 2016 are as follows:

	Accounts payable and accrued liabilities[1] $	Other long-term liabilities $	Long-term debt repayable at maturity $	Interest payments $
Within one year	944	–	412	298
1 to 3 years	–	3	23	540
3 to 5 years	–	1	2,651	361
Over 5 years	–	–	2,582	1,857
	944	4	5,668	3,056

(1) Includes accrued interest and dividends of $228.

29. CONSOLIDATED STATEMENTS OF CASH FLOWS

Additional disclosures with respect to the Consolidated Statements of Cash Flows are as follows:

(i) Funds flow from continuing operations

	2016 $	2015 $
Net income from continuing operations	**456**	666
Adjustments to reconcile net income to funds flow from operations:		
Amortization	**962**	868
Deferred income tax recovery	**(76)**	(70)
Share-based compensation	**3**	4
Defined benefit pension plans	**(40)**	(43)
Accretion of long-term liabilities and provisions	**(1)**	(1)
Equity loss of an associate or joint venture	**61**	56
Impairment of goodwill	**17**	15
Gain on sale of spectrum *[note 3]*	**–**	(158)
Loss on write-down of assets *[note 22]*	**16**	61
Loss on write-down of investments *[note 22]*	**74**	27
Distributions from a venture capital fund investment *[note 22]*	**–**	(27)
Other	**11**	
Funds flow from continuing operations	**1,483**	1,398

[all amounts in millions of Canadian dollars except share and per share amounts]

(ii) Interest and income taxes paid and interest and distributions received and classified as operating activities are as follows:

	2016 $	2015 $
Interest paid	**306**	283
Income taxes paid (net of refunds)	**242**	488
Interest received	**2**	2

(iii) Non-cash transactions

The Consolidated Statements of Cash Flows exclude the following non-cash transactions:

	2016 $	2015 $
Issuance of Class B Non-Voting Shares:		
Dividend reinvestment plan *[note 19]*	**188**	166
Lease transactions	**–**	2

30. CAPITAL STRUCTURE MANAGEMENT

The Company's objectives when managing capital are:

(i) to maintain a capital structure which optimizes the cost of capital, provides flexibility and diversity of funding sources and timing of debt maturities, and adequate anticipated liquidity for organic growth and strategic acquisitions;

(ii) to maintain compliance with debt covenants; and

(iii) to manage a strong and efficient capital base to maintain investor, creditor and market confidence.

The Company defines capital as comprising all components of shareholders' equity (other than non-controlling interests and amounts in accumulated other comprehensive income/loss), long-term debt (including the current portion thereof), and bank indebtedness less cash and cash equivalents.

	August 31, 2016 $	August 31, 2015 $
Cash and cash equivalents	**(405)**	(398)
Long-term debt repayable at maturity	**5,668**	5,726
Share capital	**3,799**	3,500
Contributed surplus	**42**	45
Retained earnings	**2,505**	1,883
	11,609	10,756

The Company manages its capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of underlying assets. The Company may also from time to time change or adjust its objectives when managing capital in light of the Company's business circumstances, strategic opportunities, or the relative importance of competing objectives as determined by the Company. There is no assurance that the Company will be able to meet or maintain its currently stated objectives.

The Company's credit facilities are subject to covenants which include maintaining minimum or maximum financial ratios, including total debt to operating cash flow/adjusted earnings before interest, taxes, depreciation and amortization, and operating cash flow to fixed charges. At August 31, 2016, the Company is in compliance with these covenants and based on current business plans and economic conditions, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants.

The Company's overall capital structure management strategy remains unchanged from the prior year.

31. SUBSEQUENT EVENT

Subsequent to the year end, shomi announced a decision to wind down its operations with service ending November 30, 2016. As a result, the Company expects to incur an investment loss of up to $120 million in 2017 relating to an estimated provision for future liabilities in shomi.

Shaw Communications Inc.
Report to Shareholders
August 31, 2017

Dear Fellow Shareholders:

Every day, across Canada, more people than ever are choosing Shaw to satisfy their connectivity needs and in 2017 we took deliberate steps to make it possible for even more to rely on Shaw in the future.

Building on the foundation provided by the acquisition of Freedom Mobile (formerly, WIND Mobile) and the divestiture of Shaw Media in 2016, we have taken purposeful strides to evolve our value proposition, provide leading and innovative products and services, drive operational momentum and enhance our customers' connectivity. From technology to network deployment, marketing to product pricing and packaging, and billing to service delivery, we are developing a connectivity experience made possible through converging platforms that will meet the future expectations and demands of our customers.

In fiscal 2017, our team reached several milestones on our journey towards becoming a leading Canadian connectivity company.

MORE COVERAGE FOR MORE CUSTOMERS

By the end of 2017, more than 1.1 million Canadians had chosen our Freedom Mobile service as their wireless carrier, 10% more than in the previous year. Early in the year, we began deployment of Canada's newest LTE network in the major metropolitan centres of Toronto, Vancouver, Calgary, Edmonton and Ottawa – giving a large majority of Freedom Mobile customers faster data speeds, smoother streaming and faster downloading.

In the fourth quarter, we acquired 700 MHz and 2500 MHz wireless spectrum licences from Quebecor Media Inc ("Quebecor"). This new spectrum will materially improve our customers' experiences and network coverage across Alberta, British Columbia and Ontario, enhancing our ability to provide true facilities-based competition and affordable wireless services on a more robust network. Also in the fourth quarter, we completed the sale of ViaWest, Inc. and its subsidiaries, to Peak 10 Holding Corporation for approximately US$1.675 billion. A portion of the net cash proceeds were used to fund the acquisition of the 700MHz and 2500 MHz spectrum licences from Quebecor.

THE STRENGTH OF OUR NETWORK ALLOWS US TO DO MORE

The value of our Internet service and plans is reflected in outstanding results – five consecutive quarters of robust net gains in Internet subscribers. Our continued investments in our extensive ultra-broadband network enable us to offer our fastest speeds to over 99% of Western Canadians today – a claim no other provider can make.

We believe Canadians shouldn't have limitations on how much they use the Internet, so we are making it even easier for them to take advantage of our top-tier speeds and ultra-fast network. We have maximized our significant broadband advantage to make getting online easier and more accessible. By making our flagship WideOpen Internet 150 plan available with unlimited data, we are pleased to give customers peace of mind in knowing they can stream, download and browse without any penalty for going over monthly data limits.

REINVENTING CANADA'S VIDEO EXPERIENCE

Subscriber gains were not just limited to our Internet and wireless businesses – our cable Video business posted a remarkable turnaround in the second half of 2017, fueled by greater choice, compelling packaging, and leading technology.

The launch of Shaw BlueSky TV in mid-2017 provided momentum to our video operations, delivering a new premium television product for Canadians. Powered by Comcast's next generation X1 platform, Shaw BlueSky TV leverages the strength of our network to make this new television experience possible for Shaw customers. Integrated with Netflix and featuring benefits like voice-controlled remote and advanced search, Shaw BlueSky TV has given customers an elevated video and entertainment experience – one that has never before been available in Canadian homes.

Shaw is the first in Canada to deploy the X1 platform, and BlueSky TV has brought forward more product and feature benefits than any other television service available in the country. Its voice-controlled remote has made it easier than ever for customers to discover content: by simply saying what they are looking for, customers can immediately enjoy what they want to watch. By making it easier and more enjoyable for our customers, their families and friends to connect to the sports, shows, and movies they love, Shaw BlueSky TV has set a very high standard for Canadian television viewing.

Shaw Communications Inc.

BECOMING CANADA'S CONNECTIVITY LEADER

We look back on these achievements as critical building blocks to achieve our ultimate goal of becoming the Canadian connectivity leader. We continually remind ourselves that the journey is a long one: it requires discipline to stay true to our goal, and flexibility to capitalize on opportunity or to correct course. Our management team is well aware of the need to maintain our financial strength, so we continue to evolve our operating model to ensure we remain efficient and effective in our decision-making.

As our business transforms, we are also evolving our workplace to support and empower our 14,000 employees with an adaptive and collaborative environment. By investing in and ensuring a cohesive internal employee experience, we foster the culture necessary to bring our long-term vision to life. Building off a strong foundation of leadership discipline and alignment to our core values, our team is united by a clear and single purpose which places our customer at the centre of everything we do – to connect people to the world and everything in it.

For more than four decades, our success and strength has been rooted in the quality and integrity of our people, and we are committed to ensuring Shaw is the place where the best people choose to work. We are grateful to every member of our team for making that choice, and for contributing to our ongoing success by caring more, connecting more, and delivering unparalleled customer experiences across the country.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

November 28, 2017

FORWARD

Tabular dollar amounts are in millions of Canadian dollars, except per share amounts or unless otherwise indicated. This Management's Discussion and Analysis should be read in conjunction with the Consolidated Financial Statements. The terms "we," "us," "our," "Shaw" and "the Company" refer to Shaw Communications Inc. and, as applicable, Shaw Communications Inc. and its direct and indirect subsidiaries as a group.

CAUTION CONCERNING FORWARD LOOKING STATEMENTS

Statements included in this Management's Discussion and Analysis that are not historic constitute "forward-looking statements" within the meaning of applicable securities laws. Such statements include, but are not limited to:

- statements about future capital expenditures;
- asset acquisitions and dispositions;
- cost efficiencies;
- financial guidance for future performance;
- business and technology strategies and measures to implement strategies;
- statements about the Company's equity investments, joint ventures and partnership arrangements;
- competitive strengths;
- expected growth in subscribers and the products/services to which they subscribe;
- the cost of acquiring and retaining subscribers and deployment of new services; and
- expansion and growth of Shaw's business and operations and other goals and plans.

They can generally be identified by words such as "anticipate", "believe", "expect", "plan", "intend", "target", "goal" and similar expressions (although not all forward-looking statements contain such words). All of the forward-looking statements made in this report are qualified by these cautionary statements.

Forward-looking statements are based on assumptions and analyses made by the Company in light of its experience and its perception of historical trends, current conditions and expected future developments as well as other factors it believes are appropriate in the circumstances as of the current date. The Company's management believes that its assumptions and analysis in this Management's Discussion and Analysis are reasonable and that the expectations reflected in the forward-looking statements contained herein are also reasonable based on the information available on the date such statements are made and the process used to prepare the information. These assumptions, many of which are confidential, include but are not limited to:

- general economic conditions;
- interest;
- income tax and exchange rates;
- technology deployment;
- subscriber growth;
- pricing, usage, and churn rates;
- availability of devices;
- content and equipment costs;
- industry structure;
- conditions and stability;
- government regulation;
- the completion of any transactions; and
- the integration of acquisitions.

You should not place undue reliance on any forward-looking statements. Many factors, including those not within the Company's control, may cause the Company's actual results to be materially different from the views expressed or implied by such forward-looking statements, including, but not limited to:

- general economic, market and business conditions;
- changes in the competitive environment in the markets in which Shaw operates and from the development of new markets for emerging technologies;

- industry trends, technological developments, and other changing conditions in the entertainment, information and communications industries;
- the Company's ability to execute its strategic plans and complete its capital projects;
- the Company's ability to close any transactions;
- the Company's ability to achieve cost efficiencies;
- technology, cyber security and reputational risks;
- opportunities that may be presented to and pursued by the Company;
- changes in laws, regulations and decisions by regulators that affect the Company or the markets in which it operates;
- the Company's status as a holding company with separate operating subsidiaries; and
- other factors described in this report under the heading "Known events, trends, risks and uncertainties".

The foregoing is not an exhaustive list of all possible factors.

Should one or more of these risks materialize, or should assumptions underlying the forward-looking statements prove incorrect, actual results may vary materially from those described herein.

The Company provides certain financial guidance for future performance as the Company believes that certain investors, analysts and others utilize this and other forward-looking information in order to assess the Company's expected operational and financial performance and as an indicator of its ability to service debt and pay dividends to shareholders. The Company's financial guidance may not be appropriate for this or other purposes.

Any forward-looking statement speaks only as of the date on which it was originally made and, except as required by law. The Company expressly disclaims any obligation or undertaking to disseminate any updates or revisions to any forward-looking statement to reflect any change in related assumptions, events, conditions or circumstances. All forward-looking statements contained in this Management's Discussion and Analysis are expressly qualified by this statement.

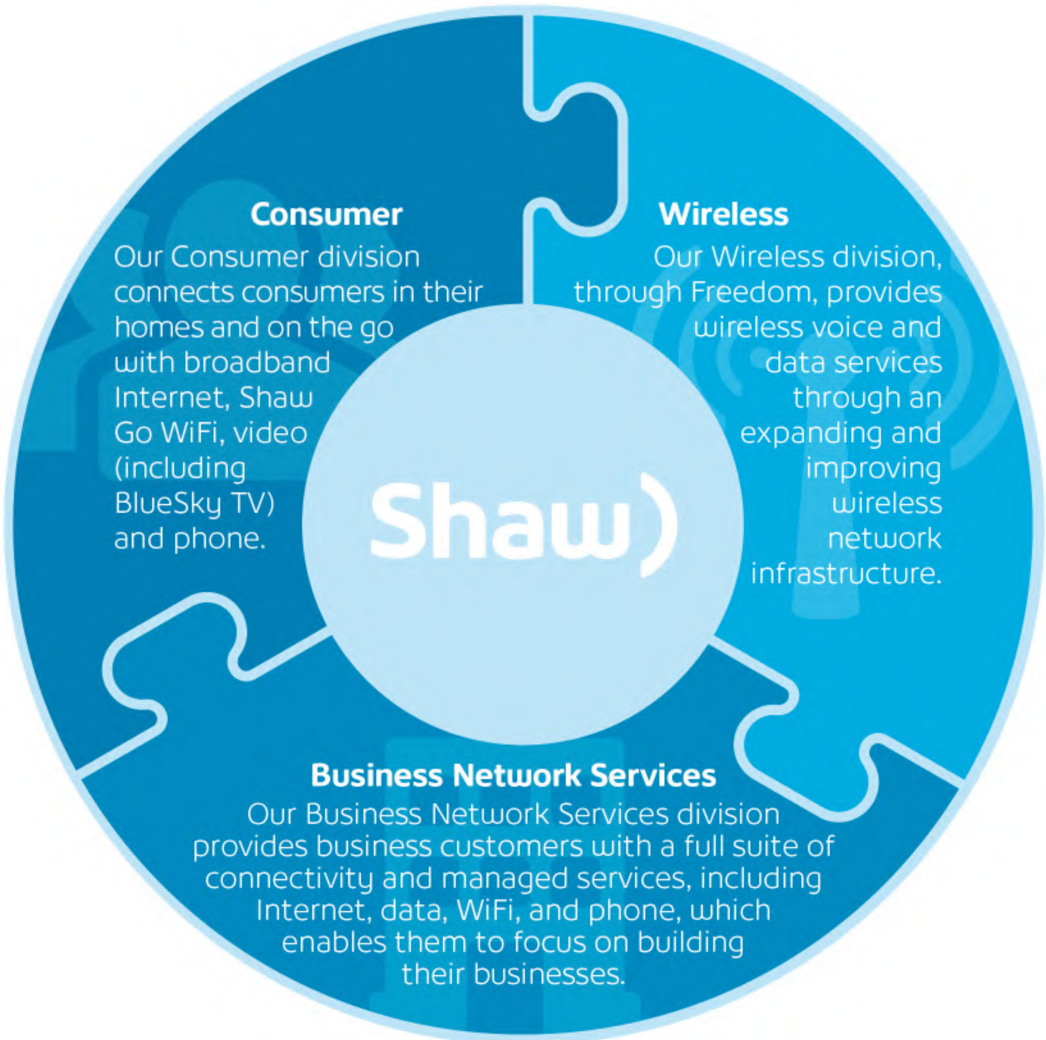
ABOUT OUR BUSINESS

At Shaw, we are focused to deliver long-term growth and connect customers to the world through a best in class seamless connectivity experience.



In the following sections we provide select financial highlights and additional details with respect to our strategy, our three divisions, our network and our presence in the communities in which we operate. During 2017, Shaw announced changes to the structure of its operating divisions to improve overall efficiency while enhancing its ability to grow as a leading Canadian connectivity company. Shaw's existing Consumer and Business Network Services divisions will be combined to form a new Wireline division with no changes to the existing Wireless division. The Company expects to commence reporting on the new divisions of wireline and wireless in fiscal 2018.

Shaw is traded on the Toronto and New York stock exchanges and is included in the S&P/TSX 60 Index (Trading Symbols: TSX – SJR.B, SJR.PR.A, SJR.PR.B, NYSE – SJR, and TSXV – SJR.A). For more information, please visit www.shaw.ca.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

Select Financial and Operational Highlights

Through an evolving operating and competitive landscape our consolidated business has delivered stable and profitable results in 2017.

Basis of presentation

On August 1, 2017, the Company sold 100% of its wholly owned subsidiary ViaWest, Inc. and its subsidiaries (collectively, "ViaWest"), previously reported under the Business Infrastructure Services division, to Peak 10 Holding Corporation ("Peak 10").

On May 31, 2017, the Company entered into an agreement to sell a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation reported within the Company's Business Network Services ("BNS") segment, to Omnitracs Canada. The Company determined that the assets and liabilities of the Shaw Tracking business met the criteria to be classified as a disposal group held for sale for the period ended August 31, 2017. The transaction closed on September 15, 2017, subsequent to the reporting period.

On April 1, 2016, Shaw sold 100% of its wholly owned subsidiary Shaw Media Inc. ("Shaw Media") to Corus Entertainment Inc ("Corus").

Accordingly, the operating results and operating cash flows for the previously reported Business Infrastructure Services division, Shaw Tracking business (an operating segment within the Business Network Services division) and Media division are presented as discontinued operations separate from the Company's continuing operations. The Business Infrastructure Services division was comprised primarily of ViaWest. The remaining operations of the previously reported Business Infrastructure Services segment and their results are now included within the Business Network Services segment. This Management's Discussion and Analysis ("MD&A") reflects the results of continuing operations, unless otherwise noted.

Our Strategy

At Shaw, we are focused to deliver long-term sustainable growth and connect customers to the world through a best-in-class seamless connectivity experience.

In fiscal 2016, Shaw positioned itself as to become a leading enhanced connectivity provider through two transformational transactions: the acquisition of Freedom Mobile (formerly, WIND Mobile) and the divestiture of Shaw Media. The addition of wireless enables Shaw to combine the power of fibre, coax, Wi-Fi and wireless networks to deliver a seamless experience of anytime and anywhere enhanced connectivity.

In fiscal 2017, we continued our journey towards becoming a leading Canadian connectivity company through:

(i) the concurrent announcement of the acquisition of 700 MHz and 2500 MHz wireless spectrum licences from Quebecor Media Inc. ("Quebecor") and the sale of ViaWest to Peak 10; and

(ii) the continued investment in our converged network;

all while maintaining our investment grade credit rating and dividend levels.

We will continue our focus on operational efficiency to ensure we execute on our strategic priorities and build on delivering an exceptional customer experience that is centered on our world-class converged network and strategic partnerships with best-in-class providers.

Culture and People

As Shaw repositioned itself as a leading Canadian connectivity company, we began evolving our culture to enable us to deliver on this corporate and operational strategy. Building off a strong foundation of leadership discipline and our core values, Shaw's

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

corporate culture enables our efficiency and growth potential by ensuring business decisions are made in accordance with a customer-centric perspective.

Shaw believes its success and strength stem from its people and its commitment to making it the place where the best people choose to work. Shaw continues to enhance the model below to ensure its leaders and employees are highly engaged and capable to deliver on our customer promises.

Through various data sources, including our recurring employee engagement surveys, Shaw identified the following four cultural imperatives to help achieve its culture and people objectives:

1) **Leading Effectively** – developing masterful leaders at every level of the Company to deliver extraordinary business results by bringing out the best in our people

2) **Enabling Work** – providing our people with modern tools, processes and technologies that are simple and efficient, making it easier for leaders and employees to do their jobs effectively

3) **Enhancing the Employee Experience** – delivering an exceptional employee experience tailored to our diverse employee base which considers employees every day and at every stage of their career

4) **Maximizing Performance** – implementing reward and recognition programs that drive a culture of accountability and reward performance excellence for all employees

Inspiring and engaging its diverse employees to align with its strategy is the cornerstone of Shaw's success. We are grateful to have approximately 14,000 employees committed to delivering an exceptional seamless connectivity experience for our customers and the communities we serve in Canada.

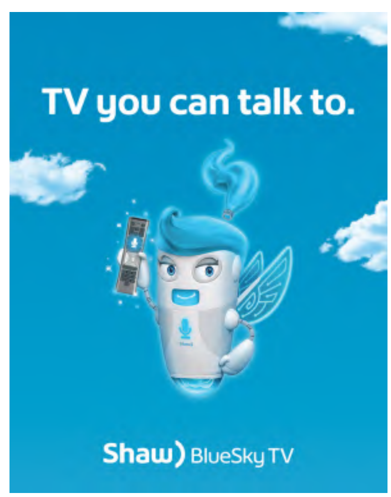
Our World-Class Converged Network

As our customers spend more of their time in the digital environment, they increasingly need and expect an always-on, seamless connectivity experience, which requires multiple integrated technological platforms. With our unique hybrid fibre-coax and Wi-Fi networks, Shaw has the opportunity to continue to innovate in response to changing consumer needs and technological developments. The world of connectivity will change in the coming years as wireline broadband technologies develop, standards for 5G are set and wireless and wireline platforms converge. Following the acquisition of Freedom Mobile (formerly, WIND Mobile) in 2016, Shaw initiated the work to integrate its wireline and wireless networks which has already started to yield significant capital expenditure efficiencies and customer benefits.

Global Technology Leaders

In order to efficiently secure and deliver leading technology for our customers – both for today and tomorrow – we recognize that we must participate in global scale initiatives through partnerships with best-in-class service providers. This ensures that the technology we adopt and invest in is, and continues to be, leading-edge in the global communications industry.

This approach allows us to leverage our current assets where we have strength and expertise, while also ensuring our capital investments are aligned with industry leaders to support the development, maintenance and advancement of new technology where it is impractical for us to do so on a standalone basis. This ensures that there is sufficient capital, resources and commitment to continue advances in innovation, performance and reliability of our services and products. In addition, this strategic approach to our business gives us the opportunity to better manage costs by participating in purchasing opportunities on a global scale.



Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

We have solidified a series of significant relationships this year with global leaders on the following initiatives:

- our successful Shaw BlueSky TV rollout powered by the X1 Video platform developed by Comcast (see discussion under "Consumer")
- the deployment of Freedom Mobile's LTE-Advanced network, which was designed, planned and deployed by NOKIA, a global leader in mobile wireless technology and solutions (see discussion under "Wireless")
- our "Smart" suite of business services that includes SmartWiFi, in collaboration with Cisco's Meraki and SmartVoice, in collaboration with Broadsoft (see discussion under "Business Network Services")

Consumer

(millions of Canadian dollars)	2017 $	2017 share of consolidated	2016 $	2016 share of consolidated

Our brand promise to our customers is that, with Shaw, "they won't miss a thing". Our Consumer division provides residential customers with leading connectivity experiences on two platforms.

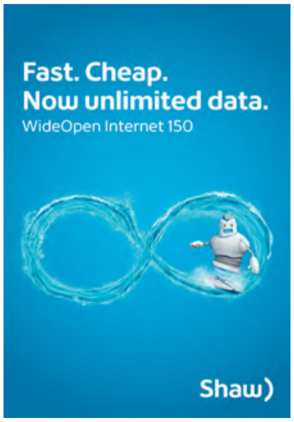
- Wireline Services – we provide broadband Internet, Shaw Go WiFi, Video and Phone to customers that are connected to our local and regional hybrid fibre-coax network
- Satellite Services – we provide Video by satellite to customers across Canada

Wireline Internet, Video and Phone Services

Shaw is one of the largest providers of residential communications services in Canada. Our Consumer division connects families in British Columbia, Alberta, Saskatchewan, Manitoba and Northern Ontario through our hybrid fibre-coax network with broadband Internet, Shaw Go WiFi, Video and phone services to meet their needs at home and on the go.

As our customers' needs evolve, we continue to focus on innovative service offerings. Our customer-centric strategy is designed to deliver high-quality customer service, simplicity, value and choice for our customers.

Internet



As an enhanced connectivity company, we believe that the Internet plays a fundamental role in connecting our customers to the world and everything in it. We recognize the importance of providing reliable, affordable and worry-free connectivity to meet the ever-increasing appetite of our customers for discovery, social connectivity and streaming.

WideOpen Internet 150 continued momentum over the last year and remains our fastest Internet available in over 99% of our cable footprint. In August 2017, Internet 150 was enhanced to include Unlimited Data, allowing our customers to stream worry-free at an affordable price with cost certainty. When paired with our 2-year ValuePlan, Internet 150 has been one of the key drivers in customer retention. Additionally, in July 2017, we introduced our newest Internet tier, Internet 75. This new mid-level Internet tier creates an attractive speed and price combination for customers.

Our carrier-grade Shaw Go WiFi network continues to promote customer engagement and brand recognition. Over the past year there has been continued growth in the number of devices connecting to our network. Over 3.3 million devices have authenticated to Shaw Go WiFi network and there are approximately 100,000 access points representing an increase of over 13,400 access points in fiscal 2017, covering locations from British Columbia to Ontario.

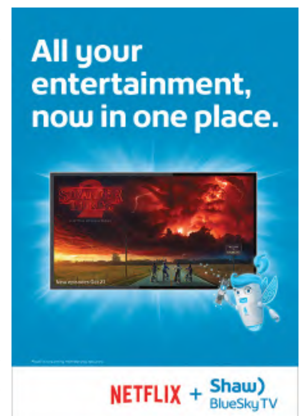
Video

Our wireline Video services continue to offer a wide selection of television channels (including over 125 high definition ("HD") channels) and over 30,000 on-demand, pay-per-view and subscription movie, and television programming titles.

Our wireline Video customers can choose from a selection of primary packages and can add additional channels from a variety of sports, family and other theme specialty packages, as well as a number of individual channels offered on a channel-by-channel basis. In April 2017, we launched a new suite of Video packages, where wireline customer choice and flexibility are placed at the forefront. Small TV, Medium TV and Large TV each bundle with the Limited TV lineup and four, seven or eleven channel theme packs for a set price. Customers now have the opportunity to customize their channel lineups by selecting preferred theme pack subscriptions or can default to our suggested theme packs for each service level. Customers can also add on extra theme packs, individual channels and premium services to round out their viewing experience.

In fiscal 2017, there was an increased focus on launching a number of channels in many small to medium-sized markets, including multicultural, time shift, and various specialty channels.

Shaw is the first in Canada to launch a Comcast Xfinity-based Video offering with our BlueSky TV. BlueSky TV was launched in phases, with the initial launch in Calgary in January 2017 followed by the Vancouver launch in February 2017 and the national launch in April 2017. This Video experience features a voice-powered remote, enhanced searches, custom recommendations, personalized experiences and parental guidance and controls. BlueSky TV was paired exclusively with WideOpen Internet 150 and based in a 2-year ValuePlan for both new and existing customers.



In September 2017, we introduced the integration of Netflix into BlueSky TV's interface, a significant milestone in the development of our BlueSky TV Video platform. Available only from Shaw, BlueSky TV customers who subscribe to Netflix can now search for, access and watch all their favourite content across live TV, Video On Demand, and Netflix, with a single voice command – it's all in one place.

Throughout fiscal 2017 the X1 based "FreeRange TV", our TV Everywhere App free for Shaw TV customers, launched 21 unique channels. The app was also enhanced to offer download-to-go TV shows and movies on a number of channels.

Phone

Shaw's Phone service offers a full-featured residential digital telephone service through our wireline network as a complement to our broadband Internet and Video services.

Satellite Services

Shaw Direct connects families across Canada with Video and audio programming by satellite. Shaw Direct customers have access to over 550 digital video channels (including over 250 HD channels) and over 10,000 on-demand, pay-per-view and subscription movie and television programming titles.

Similar to our wireline Video service, satellite customers can now choose from a selection of primary channel packages and may add from a variety of sports, family and other theme specialty packages, and a number of individual channels that we offer on a channel-by-channel basis. In February 2016, we expanded satellite customer choice with the introduction of a new small basic service called "Limited TV" and we also revised our offering to include customizable "Pick Packs" which allow our customers to purchase a set number of channels at a set price (i.e. Pick 10 or Pick 20). Since December 2016, our satellite consumers have had the ability to subscribe to a primary package (including Limited TV), any theme packs they choose, and add-on individual channels on a channel-by-channel basis which they can select from all of our channels.

Shaw Direct is one of two licensed satellite Video services currently available across Canada. While Shaw Direct has many customers in urban centres, market penetration for satellite video is generally stronger in rural areas. The service is marketed through Shaw Direct and a nation-wide distribution network of third party retailers.

Shaw is committed to securing and delivering leading technology for its customers. In fiscal 2017, the Company introduced new receivers with built-in Wi-Fi connectivity to its Video on-demand service. Currently, the Company has access to three satellites that will enable us to enhance our offerings with nearly all HD programming and improved service quality. Shaw's plan to move all Video services from MPEG-2 to MPEG-4 to improve the operational efficiencies of Shaw's transponders in three phases is progressing on schedule. Shaw expects to be 100% MPEG-4 by the fall of 2019, and to be able to offer all carried and available English and French services in HD by early 2020. The efficiencies gained from the conversion from MPEG-2 to MPEG-4 allowed Shaw Direct to launch 12 new HD channels in fiscal 2017.

A listing of Shaw's satellite capacity is provided below.

Shaw Satellite Transponders

Transponders	Interest	Nature of Satellite
Anik G1	16 xKu-band	Leased
Anik F2[1]	16 Ku-band	Owned
	6 Ku-band	Leased
Anik F1R	28 Ku-band	Leased
	1 C-band	Leased

(1) On September 15, 2017, the Company completed the sale of a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation, to Omnitracs Canada. As part of the transaction, the leases to access the Anik F2 2 Ku-band (partial) and the Intelsat Galaxy 16 1 Ku-band (partial) were assigned to Omnitracs Canada.

Seasonality

While financial results for the Consumer division are generally not subject to significant seasonal fluctuations, subscriber activity may fluctuate from one quarter to another. Subscriber activity may also be affected by competition and Shaw's promotional activity. Further, satellite subscriber activity is modestly higher around the summer time when more subscribers have second homes in use. Shaw's Consumer Wireline Video business does not depend on any single customer or concentration of customers.

Shomi

shomi, the over-the-top streaming platform that launched as a joint venture of Shaw and Rogers Communications Inc. ("Rogers") in fiscal 2015 was wound down with its operations and service ending on November 30, 2016. As a result, Shaw incurred investment losses of $82 million in fiscal 2017 relating to shomi's liabilities in connection with the wind down of the shomi joint venture. See Note 7 of the financial statements accompanying this Management's Discussion and Analysis for a reconciliation of the equity investment loss in the shomi joint venture in fiscal 2016.

Wireless

	2017		2016	
(millions of Canadian dollars)	$	share of consolidated	$	share of consolidated
Revenue	**605**	**12%**[1]	**280**	**6%**[1]

(1) Before intersegment eliminations.
(2) Refer to key performance drivers.
(3) On March 1, 2016, Shaw acquired Mid-Bowline Group Corp. and its wholly owned subsidiary, Freedom Mobile (formerly, WIND Mobile). Revenue and Operating income before restructuring costs and amortization in fiscal 2016 is for the period from March 1, 2016 to August 31, 2016.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

Our Wireless division was formed following the acquisition of Freedom Mobile (formerly, WIND Mobile) in March 2016. This acquisition transformed Shaw into a leading Canadian connectivity company, adding the critical wireless component of our converged network. Our Wireless division currently operates in Ontario, Alberta and British Columbia, offering the leading alternative for mobile services to the three national wireless incumbent carriers.

Launch of Freedom Mobile

On November 21, 2016, Shaw announced that WIND Mobile would be renamed Freedom Mobile, a new brand based on trust and transparency with our customers, as the next step in enhancing the effectiveness of our Wireless division in serving the needs of our customers. The launch of Freedom Mobile, which occurred concurrently with the initial launch of the LTE-Advanced network allowed our Wireless division to: (i) build on our current strengths; (ii) take full control over our future branding strategy; and (iii) redirect resources from royalty payments for use of the WIND brand name to other marketing or brand building initiatives. Freedom Mobile is committed to delivering significant value to customers with its easy to understand pricing plans and no term contracts.

Distribution Network

Freedom Mobile's distribution network currently includes over 300 branded stores and kiosks, which are owned by Freedom Mobile or independent dealers. The majority of our sales are made through these physical outlets. While on-line sales are a relatively small portion of Freedom Mobile's sales today, we are working to grow our on-line sales and expect them to increase in proportion to physical sales at the Freedom Mobile branded stores and kiosks in fiscal 2018.

Handset Availability

Shaw expects to begin selling Apple iPhones that are compatible with the AWS-3 LTE network in December 2017. More carriers are adopting the AWS-3 LTE network technology with the Apple iPhone 7 (certain versions), 8, and X, and Samsung Galaxy 8 all being compatible with the AWS-3 LTE network. In addition, T-Mobile, AT&T, and Verizon are all using AWS-3 spectrum which we expect will further develop the handset ecosystem and translate into broader handset options. As of November 28, 2017, there are a total of 14 handsets available that are compatible with the AWS-3 LTE network, including handsets produced by Apple, LG, Samsung, Sony and ZTE.

In October 2017, we announced another significant step forward as we deploy Freedom Mobile's recently acquired 2500 MHz spectrum and refarm a portion of our existing AWS-1 spectrum to enhance customers' access to LTE data speeds. The work is already underway and expected to be completed by early December 2017 in Western Canada and early 2018 in the rest of Freedom Mobile's coverage area. These network upgrades will make it easier for Canadians to bring their own devices to Freedom Mobile and enjoy the full benefit of our LTE-Advanced network. In particular, these enhancements will improve Freedom Mobile's LTE-Advanced network performance, especially in dense urban areas.

Subscriber Growth

Approximately 15 million Canadians reside within our current mobile wireless network service area. Our Wireless division's customer base is growing, with over 1.1 million customers presently served, including over 100,000 customers added in fiscal 2017.

Business Network Services

	2017		2016	
(millions of Canadian dollars)	$	share of consolidated	$	share of consolidated
Revenue	554	11%(1)	515	11%(1)
Operating income before restructuring costs and amortization(2)	281	14%	252	13%

(1) Before intersegment eliminations.
(2) Refer to key performance drivers.

Shaw Business provides connectivity solutions to business customers of all sizes, from home offices to medium and large scale enterprises, leveraging our business grade hybrid fibre-coax and fibre to the premise network. Through the acquisition of ENMAX Envision Inc. in 2013, Shaw significantly increased its fibre footprint and profile among larger enterprise customers in Calgary, Alberta.

The range of services offered by Shaw Business includes:

- Fibre Internet – scalable, symmetrical fibre Internet solutions from 10 Mbps to more than 10 Gbps
- Data Connectivity – secure private connectivity for multiple locations
- Voice Solutions – from services that connect customer premise equipment to the phone network and single voice line solutions to robust fully managed hosted unified communications functionality
- Video – Video and audio service offering content for public viewing
- Broadcast Video – high-quality Video across North America in real time

Shaw has positioned itself as a trusted business advisor with a focus on the small and medium enterprise segment of the market. Shaw Business takes care of all aspects of its customers' increasingly complex always-on connectivity requirements so they can focus on growing their business. As part of this strategy, Shaw has collaborated with global scale technology leaders to offer its "Smart" suite of easy to use and flexible managed business communications solutions. The Smart suite of services provides cost-effective enterprise grade managed IT and communications solutions that are increasingly valued by small and medium sized businesses as the digital economy grows in scope and complexity.

The Smart suite of services includes:

SmartVoice – a unified communications solution that integrates instant messaging, presence, email, video conferencing and a mobile application that is built on Broadsoft's BroadWorks platform.

SmartWiFi – a fully-managed Internet solution that enables seamless, secure wireless connectivity for employees and guests in the office and on the go that is deployed over Cisco's Meraki platform.

SmartSecurity – a fully-managed network security platform deployed over Cisco's Meraki platform that protects a wired and Wi-Fi network at the edge with access control, the ability to control which applications run on the network, content filtering and the connection of branch locations.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

In order to continue to meet the evolving needs of our customers, we are executing our plan to ensure that our wireline network keeps pace with the expectations for bandwidth, speed and reliability that our Shaw Business customers expect today and will expect in the future. See "Shaw's Wireline Network" for a description of our wireline network and the advances that we are undertaking.

Shaw Business, through the Calgary1 data centre, also provides hybrid IT services to customers in western Canada. These services are a natural complement to Shaw Business' current offerings.

Wholesale Wireline Network Services

Using our national and regional access wireline networks, we provide services to Internet service providers ("ISPs"), other communications companies, broadcasters, governments and other businesses and organizations that require end-to-end Internet and data connectivity in Canada and the United States. We also engage in public and private peering arrangements with high speed connections to major North American, European and Asian networks and other tier-one backbone carriers.

Broadcast Services

Shaw Broadcast Services uses our substantial fibre backbone network to manage one of North America's largest full-service commercial signal distribution networks, delivering more television and radio signals by satellite to cable operators and other multi-channel system operators in Canada and the US than any other single-source satellite supplier. This business is referred to as a "satellite relay distribution undertaking" or "SRDU". Shaw Broadcast Services currently provides SRDU and advanced signal transport services to over 300 distribution undertakings and redistributes over 500 television signals and over 100 audio signals in both English and French to multi-channel system operators.

Tracking

On September 15, 2017, the Company completed the previously announced sale of a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation, to Omnitracs Canada for approximately US$20 million.

Shaw's Wireline Network

At Shaw, we are proud of our advanced wireline network, which combines the power of fibre, coax, and Wi-Fi and is comprised of:

- North American fibre backbone;
- Regional fibre optic and co-axial distribution networks; and
- Local Shaw Go WiFi connectivity

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

Wireline Backbone

The backbone of Shaw's wireline network includes multiple fibre capacity on two diverse cross-North America routes. The southern route principally consists of approximately 7,000 route kilometres of fibre located on routes between Seattle and New York City (via Vancouver, Calgary, Regina, Winnipeg, Toronto, Chicago and Buffalo). The northern route consists of approximately 4,000 route kilometres of fibre between Edmonton and Toronto (via Saskatoon, Winnipeg and Thunder Bay). These routes, along with a number of secured capacity routes, provide redundancy for the network. Shaw also uses a marine route consisting of approximately 330 route kilometres from Seattle to Vancouver (via Victoria), and has secured additional capacity on routes between a number of cities, including (i) Vancouver and Calgary, (ii) Seattle and San Jose, (iii) Seattle and Calgary, (iv) Seattle and Vancouver, (v) Toronto and New York City, (vi) Toronto and Montreal, and (vii) Edmonton and Fort McMurray.

Regional Distribution Network

We connect our backbone network to residential and business customers through our extensive regional fibre optic and co-axial cable distribution networks.

In 2016, we completed the major upgrade of our co-axial access network to remove analog tier basic services from all markets across Shaw's cable footprint (the "Digital Network Upgrade"). As a result, all of our customers within Shaw's cable footprint now receive digital services. This upgrade liberated bandwidth to significantly increase the capacity of our hybrid fibre-coax network and enable the expansion of our broadband Internet and other offerings. Digital video terminals were deployed into customer homes that allowed them to receive digital television services in place of former analog services.

Shaw continues to optimize the capacity and efficiency of our wireline network and reduce congestion by deploying fibre optic cable deeper into our access networks and closer to our customers. We are also increasing the number of optical serving areas or "nodes" in the wireline network. This is a continual process that we apply year-over-year to increase fibre optic usage in our wireline network and reduce the distance signals travel over coaxial cable to each consumer. Driving fibre deeper into our network also supports wireless and business service deployments, as well as future services such as 5G or Fibre-to-the-Premise ("FTTP").

In fiscal 2016, we began to deploy our newest generation of cable modem termination system equipment referred to as the Converged Cable Access Platform ("CCAP") into our serving hubs. This equipment enhances the capabilities of our cable network and enables Shaw to leverage the next generation of cable access technology known as Data over Cable Interface Specification version 3.1 ("DOCSIS 3.1"). At the end of fiscal 2017, DOCSIS 3.1 ready CCAP infrastructure was running in Shaw's major systems. All remaining systems are expected to be running DOCSIS 3.1 ready CCAP infrastructure by the end of fiscal 2018. DOCSIS 3.1 represents the latest development in a set of technologies that increase the capability of a hybrid fibre-coax network to transmit data both to and from customer premises. Our ongoing investments in our network have, for example, enabled the launch of WideOpen Internet 150 in July 2016 which is now available across 99% of our cable footprint. With the Digital Network Upgrade, the deployment of fibre closer to our customers and increasing the number of nodes in our hybrid fibre-coax network, we expect to continue to significantly improving the performance and capacity of our network.

Shaw Go WiFi

Shaw has created Canada's most extensive service provider Wi-Fi network, Shaw Go WiFi. Shaw Go WiFi extends a customer's broadband experience beyond the home as a valuable extension of our customer wireline network experience.

We continue to expand our Shaw Go WiFi build-out. Over 3.3 million devices have authenticated to our carrier-grade Shaw Go WiFi network and there are approximately 100,000 access points representing an increase of over 13,400 access points in fiscal 2017. In addition, we have entered into agreements with 108 municipalities to extend Shaw Go WiFi service into public areas within those cities.

Shaw's Wireless Network

Until the initial launch of our LTE-Advanced network in the Greater Toronto Area ("GTA") in November 2016, all of our customers were served by our 3G network using AWS-1 spectrum. In the second half of fiscal 2016, Shaw completed the first critical step in our Wireless network upgrade with the replacement of all the older 3G equipment in western Canada with

3G HSPA+ technology. HSPA or "High Speed Packet Access" is an IP-based packet data enhancement technology that provides high speed broadband packet data services over 3G networks.

In fiscal 2016, we also partnered with NOKIA in the initiative to launch a world class, next generation mobile wireless network to our customers in Ontario, Alberta and British Columbia. LTE-Advanced is the latest standard of cellular technologies available in the marketplace today. We continue to improve our network performance with the rollout of Freedom Mobile's LTE-Advanced network to all our existing markets, on schedule and on budget, as of the end of fiscal 2017. In fiscal 2017, LTE roaming was launched with Bell, Rogers, and AT&T offering more than 97% of the Canadian and US population roaming coverage outside of Freedom Mobile's existing markets to Freedom Mobile customers that subscribe to the LTE plan.

Spectrum holdings

On July 24, 2017, the Company acquired 700MHz and 2500 MHz wireless spectrum licences from Quebecor for $430 million. The spectrum licences acquired are comprised of 10 MHz licences of 700 MHz spectrum in each of British Columbia, Alberta, and Southern Ontario and the 20 MHz licences of 2500 MHz spectrum in each of Vancouver, Edmonton, Calgary, and Toronto. In addition to the spectrum acquisition cost, fiscal 2018 capital expenditures associated with the deployment of the acquired spectrum are estimated to be approximately $350 million. This incremental investment in our Wireless division, particularly the addition of the 700 MHz spectrum, will materially improve our long-term wireless customer experience and further enable our ability to offer converged network solutions. We will also be transitioning 10 MHz of our AWS-1 spectrum from 3G to LTE-Advanced which will improve network performance and make LTE-Advanced available to more of our customers and other potential customers.

In October 2017, we announced the deployment of the recently acquired 2500 MHz spectrum and refarming of a portion of our existing AWS-1 spectrum which will enhance our customers' access to LTE data speeds. The work is already underway and expected to be completed by early December 2017 in western Canada and early 2018 in the rest of Freedom Mobile's coverage area. These network upgrades will make it easier for Canadians to bring their own devices to Freedom Mobile and enjoy the full benefit of our LTE-Advanced network. In particular, these enhancements will improve Freedom Mobile's LTE-Advanced network performance, especially in dense urban areas.

With the addition of the spectrum licences acquired from Quebecor, our Wireless division currently holds 50 MHz of AWS spectrum, 10 MHz of 700 MHz and 20MHz of 2500 MHz spectrum in the main service areas of Southern Ontario, Alberta and British Columbia, and 10-50 MHz of AWS spectrum in certain other non-core markets. As a result of the spectrum transaction with Quebecor, the Corporation's aggregate spectrum holdings have increased to 80 MHz in certain markets located in Southern Ontario, Alberta, and British Columbia. As discussed below, Innovation, Science and Economic Development Canada ("ISED") is conducting a consultation regarding the policy framework for the 600 MHz spectrum auction (see "Government Regulations and Regulatory Developments – Radiocommunication Act – Wireless Spectrum Licences").

The Company expects that its spectrum assets will support anticipated growth in LTE-Advanced network subscribers, as well as 3G HSPA+ network subscribers, and also provide new growth, geographic diversification, and scale opportunities in the markets in which we operate.

Equity Interest in Corus

Corus is a leading media and content company that creates and delivers high quality brands and content across platforms for audiences around the world. Its portfolio of multimedia offerings encompasses 45 specialty television services, 39 radio stations, 15 conventional television stations, a global content business, digital assets, live events, children's book publishing, animation software, technology and media services. Corus' roster of premium brands includes Global Television, W Network, OWN: Oprah Winfrey Network Canada, HGTV Canada, Food Network Canada, HISTORY®, Showcase, National Geographic Channel, Q107, CKNW, Fresh Radio, Disney Channel Canada, YTV and Nickelodeon Canada. Corus is headquartered in Canada, and its stock is listed on the TSX under the symbol CJR.B.

In connection with the sale of the Media division to Corus in April 2016, the Company received 71,364,853 Corus Class B non-voting participating shares (the "Corus B Consideration Shares") representing approximately 37% of Corus' total issued equity of Class A and Class B shares. The Company agreed to retain approximately one third of its Corus B Consideration Shares for 12 months post-closing, a second one third for 18 months post-closing and the final one third for 24 months post-closing.

The Company also agreed to have its Corus B Consideration Shares participate in Corus' dividend reinvestment plan until September 1, 2017. For the year ended August 31, 2017, the Company received dividends of $88 million (April 1 to August 31, 2016 – $34 million) from Corus, $81 million (April 1 to August 31, 2016 – $34 million) were reinvested in additional Corus Class B non-voting participating shares. At August 31, 2017, the Company owned 80,630,383 (2016 – 74,135,891) Corus Class B non-voting participating shares having a fair value of $1,109 million (2016 – $911 million) and representing 39% (2016 – 38%) of the total issued equity of Corus. The Company's weighted average ownership of Corus for the year ended August 31, 2017 was 38% (April 1 to August 31, 2016 – 37%). As of September 1, 2017, the Company's Corus B Consideration Shares no longer participate in Corus' dividend reinvestment plan thus resulting in expected cash dividends to the Company related to our total Corus shareholdings of approximately $91 million in fiscal 2018.

Although the Corus Class B non-voting participating shares do not have voting rights, the Company is considered to have significant influence due to Board representation. In addition, Shaw Family Living Trust ("SFLT") controls both Shaw and Corus. SFLT is controlled by its sole trustee, SFLTCO Ltd., a private company owned by JR Shaw and having a board comprised of seven directors, including JR Shaw (Chair), Jim Shaw, Bradley S. Shaw, three other members of JR Shaw's family and one independent director (See "Related Party Transaction – Corus").

Community Investment

We know that finding solutions to society's most challenging issues requires more than philanthropic gifts, which is why we use our suite of assets to help advance the goals of our charitable partners. Whether we are shining a spotlight on our partners through our website and social media channels, or connecting employees' time and talents to charitable organizations, we are committed to creating long-lasting, impactful relationships that make a difference in the communities we call home.

skip
Shaw Kids Investment Program

Shaw continues to leverage the Shaw Kids Investment Program ("SKIP") to support organizations that improve the lives of Canadian kids. In 2017, Shaw contributed over $35 million in cash and in-kind support, as well as 18,655 hours of volunteer time, to over 1,000 local and national youth-focused charitable organizations.

In 2017, Shaw marked Canada's 150th anniversary by granting 150 birthday wishes to honour extraordinary people and organizations making the country a better place for kids. Through this year long project, Shaw provided funding to support 40 charitable programs, 60 events, and 50 individuals, all nominated by the community.

In 2017, Shaw celebrated the fifth year of the Shaw Charity Classic, commemorating five years of the PGA TOUR Champions, our community, and giving back. The tournament raised $8.3 million for over 150 children and youth charities in Alberta, bringing the total dollars raised in five years to $22 million. The success of the Shaw Charity Classic over the past five years has reinforced the impact we can have as an employer and corporate citizen when we integrate our sponsorship and community investment activities to provide even greater support for the programs and organizations that are building positive environments for kids and youth in the community.

Shaw)
Charity Classic

Shaw also continued to build partnerships and promote the work of organizations that are working to prevent bullying in our schools, playgrounds and online. In its third year, Shaw's Pink Shirt Promise social media campaign, which raises awareness and funds for bullying prevention programs across Canada, engaged over 1.35 million Canadians and provides funding to bring bullying prevention programs to over 450 schools over the next three years, positively impacting more than 400,000 kids across the country.

Government regulations and regulatory developments

Substantially all of the Company's Canadian business activities are subject to regulations and policies established under various pieces of legislation, including the *Broadcasting Act* (Canada) ("Broadcasting Act"), the *Telecommunications Act* (Canada) ("Telecommunications Act"), the *Radiocommunication* Act (Canada) ("Radiocommunication Act") and the *Copyright Act* (Canada) ("Copyright Act"). Broadcasting and telecommunications are generally administered by the Canadian Radio-television and Telecommunications Commission ("CRTC") under the supervision of the Department of Canadian Heritage ("Canadian

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

Heritage") and ISED, respectively. The allocation and use of wireless spectrum in Canada are governed by spectrum licences issued by, and radio authorization conditions set by, ISED pursuant to the Radiocommunications Act.

Limits on non-Canadian ownership and control

Neither a holding company that has a subsidiary operating company licensed under the Broadcasting Act, nor any such licensee, may be controlled in fact by non-Canadians, the determination of which is a question of fact within the jurisdiction of the CRTC. Pursuant to the *Direction to the CRTC (Ineligibility of Non-Canadians)* (the "Direction"), non-Canadians are permitted to own and control, directly or indirectly, up to 33.3% of the voting shares and 33.3% of the votes of a holding company that has a subsidiary operating company licensed under the Broadcasting Act. In addition, up to 20% of the voting shares and 20% of the votes of a licensee may be owned and controlled, directly or indirectly, by non-Canadians. As well, the chief executive officer (CEO) and not less than 80% of the board of directors of the licensee must be resident Canadians. There are no restrictions on the number of non-voting shares that may be held by non-Canadians at either the holding company or licensee level. If a holding company of a licensee does not satisfy the requirement that 80% of its board of directors be resident Canadians, it must have a CRTC-approved Independent Programming Committee ("IPC") in place to ensure that neither the holding company nor its directors exercise control or influence over the programming decisions of its subsidiary licensee. With CRTC approval, Shaw implemented an IPC to comply with the Direction.

Similar restrictions apply to certain Canadian carriers pursuant to the Telecommunications Act, the Radiocommunication Act and associated regulations, except that there is no requirement that the CEO be a resident Canadian of a company operating pursuant to those Acts. Instead, the Telecommunications Act, the Radiocommunication Act and associated regulations require only that 80% of the voting shares of such entities be held by resident Canadians. The Canadian ownership requirements do not apply to wireline and wireless telecommunications carriers that have annual revenues from the provision of telecommunications services in Canada that represent less than 10% of the total annual revenues for the sector. The US Trade Representative ("USTR") has included in its negotiating objectives for the renegotiation of the North American Free Trade Agreement ("NAFTA") by the US, Canada and Mexico, the removal of all barriers to foreign investment in all sectors. These developments may lead to greater levels of competition in the Canadian telecommunications market.

The Company's Articles contain measures to ensure the Company continues to comply with applicable Canadian ownership requirements and its ability to obtain, amend or renew a license to carry on any business. Shaw must file a compliance report annually with the CRTC confirming that it is eligible to operate in Canada as a telecommunications common carrier.

Broadcasting Act

Pursuant to the Broadcasting Act, the CRTC is mandated to supervise and regulate all aspects of the broadcasting system in a flexible manner. The Broadcasting Act requires broadcast distribution undertakings ("BDUs") to give priority to the carriage of Canadian services, to contribute a certain percentage of revenue to the production of Canadian programming and to provide efficient delivery of programming services. The Broadcasting Act also sets out requirements for television broadcasters with respect to Canadian content. Shaw's broadcasting distribution business depends on licences (or operates under an exemption order) granted and issued by the CRTC under the Broadcasting Act.

In fall 2016, the Minister of Canadian Heritage ("Minister") initiated a consultation process aimed at strengthening Canadian content creation, discoverability and export in the digital era. On September 28, 2017, the Minister announced the result of that process, entitled "Creative Canada Policy Framework" and reconfirmed the Government's earlier commitment (in the 2017 federal budget) to review the Broadcasting Act and the Telecommunications Act. The details of such reviews are expected to be released in fall 2017. In addition, the Minister announced an Order-in-Council directing the CRTC to report back to Cabinet, by June 1, 2018, on likely programming distribution models of the future, how and through whom Canadians will access programming going forward, and the extent to which new distribution models can support the creation, production and distribution of Canadian content.

The Creative Canada Policy Framework did not propose, and the Government has confirmed that it does not support, a levy on broadband distribution services to support Canadian content. The framework does, however, envisage reforms to the Copyright Act (possibly pursuant to the statutory five-year review of the Copyright Act, slated to begin in November 2017) to ensure the protection and compensation of creators. This creates the potential for increased fees or limitations on content uses to the extent that such a review introduces any new rights and entitlements or reduces user flexibility pursuant to existing exceptions under the Copyright Act. Similarly, the upcoming review of the Broadcasting Act creates the potential for new obligations applicable to the Company's cable, satellite, satellite relay distribution and programming undertakings.

Licensing and ownership

For each of its cable, direct-to-home satellite ("DTH") and SRDU undertakings, the Company holds a separate broadcasting license or is exempt from licensing under the Broadcasting Act. In August 2016, Shaw submitted an application to renew its licences for all licensed cable undertakings as part of a renewal process that includes several other major terrestrial BDUs. The Company's DTH and SRDU licences are not due for renewal until August 31, 2019.

The CRTC's consideration of cable license renewal applications has proceeded as a two-phased process. Phase 1 was limited in scope and included a hearing to review BDUs' practices with regard to the small basic service and flexible packaging requirements. The purpose of Phase I was to ensure that licensees are offering the services in accordance with the spirit of the Let's Talk TV policy framework and the associated regulations, and, the imposition of conditions of license relating to the Wholesale Code, the Television Service Provider Code and participation in the Commissioner for Complaints for Telecommunications Services. At the conclusion of Phase 1, Shaw's licences were administratively renewed until August 31, 2017. In May 2017, the CRTC formally initiated Phase 2 of the renewal proceeding, and administratively renewed Shaw's cable licences until May 31, 2018. In Phase 2, the Commission is examining, among other issues: BDUs' practices relating to the small basic and flexible packaging options; community channel compliance; accessibility of the community channels; and, the progress of the set-top box audience-measurement working group. The oral hearing to consider the issues in Phase 2 took place from October 16-19, 2017. A decision is expected in the spring of 2018.

The Company also holds separate licences for each of Shaw on Demand, a video-on-demand ("VOD") service, and Shaw Pay-Per-View. In May 2017, Shaw's national VOD licence was renewed for a 5-year term, from September 1, 2017 to August 31, 2022. The Company's licence for Shaw Pay-Per-View is not due for renewal until August 31, 2019.

New media

The CRTC has issued a digital media exemption order requiring that Internet-based and mobile point-to-point broadcasting services not offer television programming on an exclusive or preferential basis in a manner that depends on subscription to a specific mobile or retail Internet service and not confer an undue preference or disadvantage. The CRTC has decided to not impose a levy on the revenue of exempt digital media undertakings to support Canadian new media content.

The potential for new or increased fees

CRTC Regulations require licensed cable BDUs to obtain the consent of an over-the-air ("OTA") broadcaster to deliver its signal in a distant market. The CRTC Regulations provide that DTH undertakings may distribute a local OTA television signal without consent within the province of origin, but must obtain permission to deliver the OTA television signal beyond the province of origin unless the DTH distribution undertaking is required to carry the signal on its basic service. Broadcasters may assert a right to limit distribution of distant signals or to seek remuneration for the distribution of their signals in distant markets on the basis of the CRTC Regulations (see also "NAFTA" and "Copyright" below).

Telecommunications Act

Under the Telecommunications Act, the CRTC is responsible for ensuring that Canadians in all regions of Canada have access to reliable and affordable telecommunication services of high-quality. The CRTC has the authority to forbear from regulating one or more services or classes of services provided by a carrier if the CRTC finds that there is sufficient competition for those services to protect the interests of users. Retail Internet, home phone services and mobile wireless services have been forborne from price regulation. However, regulations do affect certain terms and conditions under which Shaw's retail services are provided. As described further below under "Third Party Internet Access," certain Shaw wholesale services are regulated.

The CRTC and ISED can impose monetary penalties on companies that contravene the Telecommunications Act, the Radiocommunication Act and the regulations and rules promulgated thereunder. The technical operating aspects of the Company's businesses are regulated by technical requirements and performance standards established by ISED, primarily under the Telecommunications Act and the Radiocommunication Act.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

In the 2017 federal budget, the Government announced its intention to review the Telecommunications Act and the Broadcasting Act. While the process for these reviews has not been initiated, any changes to the Telecommunications Act pursuant thereto could impact the business practices of the Company, including the rates charged for wholesale and retail services in certain instances.

CRTC Wireless Code

In June 2013, the CRTC implemented the Wireless Code to, among other things:

- impose limitations on early cancellation fees;
- prohibit contracts with terms that provide for cancellation fees after two years; and
- require trial periods for wireless contracts and caps on overage roaming charges.

The CRTC commenced a scheduled review of the Wireless Code in September 2016 and held a hearing in February 2017. In June 2017, the CRTC rendered a decision imposing amendments to the Wireless Code, which included, among other things, a prohibition on handset unlocking fees and the imposition of restrictions on the sale of locked phones, consistent with Freedom Mobile's position at the review hearing.

Third Party Internet Access

Shaw is mandated by the CRTC to provide a wholesale service at regulated rates that allows independent ISPs to provide Internet services at premises served by Shaw's wireline network ("Third Party Internet Access" or "TPIA"). In 2015, the CRTC completed a review of the wholesale wireline telecommunications policy framework, including TPIA, and: (i) extended mandated wholesale access services to include FTTP facilities; and (ii) initiated a shift to a new disaggregated wholesale Internet access service. The new disaggregated service will be phased-in over a period of three years and is intended to allow independent ISPs to reduce reliance on the transport facilities currently included as part of the regulated wholesale service. The CRTC has approved interim disaggregated rates for Ontario and Quebec. It remains unclear when Shaw will be directed to file disaggregated tariffs and rates for its serving area.

Although the CRTC has initiated a shift to a new disaggregated service, in October of 2016, the CRTC approved, pending the completion of its review of aggregated costing studies, interim aggregated rates which were lower than the proposed rates. At the completion of this review, the CRTC may require further adjustments to Shaw's costing studies, which may result in further reductions in the wholesale rates we charge for aggregated TPIA service.

The CRTC also commenced a proceeding to review the competitor quality of service indicators and the rate rebate plan for competitors to ensure alignment with the new wholesale services framework. As part of this review, the CRTC may extend quality of service obligations to providers of wholesale Internet services, which would increase the operational costs of providing the TPIA service.

CRTC Review of Wholesale Roaming Rates

In May 2015, the CRTC decided to regulate certain aspects of wholesale wireless services provided by the three national wireless incumbent carriers and issued a comprehensive policy framework for wholesale wireless services, including roaming, tower sharing and mobile virtual network operators (MVNOs). The framework requires the three national wireless incumbent carriers to provide wholesale roaming services to non-incumbent wireless carriers at cost-based rates. The CRTC established interim rates for the mandated wholesale roaming service pending its review of the incumbent carrier cost filings. A CRTC decision on the mandated wholesale roaming service rates is expected in 2018 and may affect our roaming costs and the rates and services that we can offer customers.

CRTC review of Wi-Fi First

CRTC Telecom Decision 2017-56 determined that public Wi-Fi did not constitute a mobile wireless home network for the purposes of accessing mandated wholesale wireless roaming rates. In June 2017, the Governor in Council ("GiC") referred CRTC Telecom Decision 2017-56 back to the CRTC for review. The GiC asked the CRTC to review whether expanding the definition of home network to include public Wi-Fi would have a positive impact on the affordability of retail mobile wireless services and whether the negative impact of such a change on facilities based investment and competition would outweigh the benefits. If the CRTC reverses its previous position, Wi-Fi First providers, and other resale-based models, could gain access to incumbent wireless networks at regulated rates for the purposes of roaming which would disadvantage Shaw in the marketplace. The CRTC must issue its determination by the end of March 2018.

CRTC Modern Telecommunications Decision

In December 2016, the CRTC issued its Modern Telecommunications Services decision following a review of the basic telecommunications services required by all Canadians to fully participate in the digital economy. In its decision, the CRTC determined that 90% of Canadians should have access to broadband Internet speeds of 50 Mbps download and 10 Mbps upload by the year 2021. In order to assist in achieving the foregoing, the CRTC established a new broadband funding mechanism that will replace the local phone subsidy regime that will be phased-out. Shaw, as well as other telecommunications providers, will be required to contribute to the new broadband fund. The CRTC is currently undertaking a process to design the new broadband funding mechanism, which will make $750 million available for broadband subsidies over the next five years. Concurrent with this decision, the CRTC also submitted a report to the Federal Government's Innovation Agenda, which reflects the results of its basic telecommunications services review. The report highlights ways in which the government can focus on ensuring the availability, affordability and adoption of broadband services.

Differential Pricing Practices

In April 2017, the CRTC released a new policy framework for reviewing differential pricing practices. The CRTC formulated stringent guidelines for evaluating practices where certain types of data/Internet content are priced differently than others on wireline and mobile wireless data plans. As part of the decision, the CRTC reaffirmed its commitment to net neutrality.

Access for wireline network

For its wireline network Shaw requires access to support structures, such as poles, strand and conduits of telecommunication carriers and electric utilities, in order to deploy cable facilities. Under the Telecommunications Act, the CRTC has jurisdiction over support structures of telecommunication carriers, including rates for third party use. The CRTC's jurisdiction does not extend to electrical utility support structures, which are regulated by provincial utility authorities. Shaw's wireline network also requires access to construct facilities in roadways and other public places. Under the Telecommunications Act, Shaw may do so with the consent of the municipality or other public authority having jurisdiction.

Radiocommunication Act

Our Wireless division holds licences for the use of radiofrequency spectrum required to operate its mobile wireless business. Those spectrum licences are administered by ISED under the Radiocommunication Act. Spectrum use is governed by conditions of license, including license term, transferability/divisibility, technical compliance requirements, lawful interception, research and development, and mandated antenna site sharing and domestic roaming services.

Wireless Spectrum Licences

The Wireless division's AWS-1 spectrum licences were issued in 2009, for a term of ten years, and prior to expiration, the licences may be renewed. The AWS-3 spectrum licences were issued in April 2015 and have a term of 20 years. The 700 MHz and 2500 MHz spectrum licences that the Company purchased from Quebecor were initially issued in February 2014 and May 2015, respectively for a term of 20 years.

The applicable terms and conditions of renewal of our and other carriers' spectrum licences after the initial term are determined by ISED through public consultation processes that begin prior to the expiry of those licences. In the summer of 2017, ISED held a public consultation relating to the renewal of AWS-1 and other spectrum licences auctioned in 2008, including those held by our Wireless division. If Freedom Mobile has met its conditions of licence, including any applicable deployment obligations, Freedom Mobile will have a high expectation to be eligible for renewal. We expect to meet the applicable requirements and conditions of licence for those spectrum licences that are material to our plans for the Wireless division. As part of the consultation, ISED is proposing more onerous deployment conditions.

The Company is also participating in ISED's consultation regarding the release of millimeter wave spectrum in the 28 GHz, 37-40 GHz and 64-71 GHz frequency bands to support deployment of 5G wireless networks and systems, as well as ISED's Spectrum Outlook consultation, which will review the overall approach and planning activities related to the release of spectrum for commercial mobile services, licence-exempt applications, satellite services and wireless backhaul services over the years 2018-2022.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

ISED has a framework that sets out criteria for reviewing and approving license transfers, prospective transfers, and deemed license transfers, including consideration of the quantum and concentration of spectrum holdings before and after the proposed transfer.

Our Wireless division's operations could be materially affected by our failure to:

- obtain new or additional spectrum licences;
- renew existing spectrum licences;
- obtain approval of any transfer of spectrum licences; or
- procure spectrum licences that provide access to adequate allocations of low-band spectrum, which has superior propagation and penetration characteristics, or of other spectrum that is required for 5G.

In addition, the Wireless division could experience increased costs, or reduced revenues or reduced margins, or the deployment or service plans could be negatively affected by, amended or newly-adopted laws and regulations, or decisions of ISED or the CRTC. The CRTC and ISED can impose monetary penalties on companies that contravene the Telecommunications Act, the Radiocommunication Act, and the regulations and rules promulgated thereunder.

Access for Wireless Network

Our Wireless division's operations depend on being able to locate and construct wireless antenna sites, which in some cases requires certain authorizations or approvals from municipalities, which vary from one municipality to another but are also subject to federal oversight. The process for such approvals can include a comprehensive consultation process related to local land use priorities and new antenna site design parameters.

The Wireless division also uses arrangements whereby it co-locates its antennae equipment on towers and/or sites owned and operated by third party tower and/or sites providers and the three national wireless incumbent carriers. Pursuant to the conditions of their spectrum licences and the CRTC's policy framework for wholesale wireless services, the three national wireless incumbent carriers must allow competitors, including Freedom Mobile, to co-locate equipment at these locations. However, the process of negotiating the sharing of towers is uncertain and time consuming, and the ISED and CRTC processes that are available to force the incumbents to abide by the existing rules can also be challenging and time consuming.

Copyright Act

Canada's Copyright Act accords the creators and owners of content various rights to authorize or be remunerated for the use of their works and performances, including, in some instances, by broadcast distribution undertakings. In addition, the Copyright Act creates certain exceptions that permit the use of copyrighted works without the authorization or remuneration of rights holders. Parliament will commence a mandated 5-year review of the Copyright Act in November, 2017. This process could lead to amendments to the Copyright Act that impact the terms and conditions applicable to the use of content, including the potential for increased fees, and the scope of flexibility with respect to the use of content pursuant to exceptions under the Copyright Act.

Furthermore, pursuant to the Copyright Act, the Copyright Board of Canada ("the Copyright Board") oversees the collective administration of copyright royalties in Canada, including the review and approval of copyright tariff royalties payable to copyright collectives by BDUs, television broadcasters and online content services. The Copyright Board may also make rulings on the interpretation of the Copyright Act in the course of issuing copyright tariff decisions.

The potential for new or increased fees

The Copyright Board is currently considering a proposed tariff for the retransmission of programming in distant television regions for the years 2014 through 2018. The tariff proposed by the retransmission rights collectives would, if approved, represent a significant increase in the per subscriber rates payable for the retransmission of programming in distant signals. The Company has participated in the hearing process and objected to the tariff on behalf of its cable and DTH satellite divisions. The record of this proceeding is now complete and the parties are awaiting the decision of the Copyright Board.

In addition, in August 2017, the Copyright Board issued a decision interpreting the scope and meaning of "making available" as defined in the Copyright Act. In the Online Music Services proceeding, SOCAN and other rights owners argued that downloading musical works constitutes "making available" requiring the payment of public performance royalties. The Objectors, including the Company, argued that since downloading is not a public performance, SOCAN is not entitled to royalties for downloads. The Copyright Board held that while the act of downloading is not itself a communication to the public and, as such, is outside the scope of the proposed tariff, the act of loading copyright materials onto servers to facilitate downloading is a form of "making available" and a communication to the public and falls under the SOCAN tariff. Various applications for judicial review have been filed, arguing that this interpretation is erroneous, and the Company will intervene in support of such applications. If the Copyright Board's interpretation is upheld, it could lead to new claims by rights holders in connection with Company technologies that facilitate downloading.

North American Free Trade Agreement (NAFTA)

Canada has entered into – along with the US and Mexico – a process to renegotiate the NAFTA. The USTR has published negotiating objectives and has been urged by a number of US stakeholders to secure changes to the NAFTA that could, if achieved, impact Canada's broadcasting and telecommunications sectors. Certain Canadian stakeholders have also urged changes as a way to motivate domestic legislative and policy change. While negotiating parties aim to conclude negotiations in the first quarter of the 2018 calendar year, there is no formal end-date for the NAFTA negotiation process and the outcomes of the negotiation are unknown.

The potential for new or increased fees

US broadcasters and certain Canadian broadcasters have, as part of their submissions to their respective governments regarding the renegotiation of the NAFTA, urged the introduction of a retransmission consent regime in Canada and, in some cases, the removal of the existing retransmission compulsory licensing regime from Canada's Copyright Act. To the extent that such changes are incorporated in any revised NAFTA, it could result in the imposition on the Company of significant costs in connection with the distribution of broadcast services on Shaw Video and a reduction of the ability to retransmit US broadcast signals to customers.

Limits on non-Canadian ownership and control

The USTR has included in its negotiating objectives for the renegotiation of the NAFTA by the US, Canada and Mexico, the removal of all barriers to foreign investment in all sectors. These developments could lead to greater levels of competition in the Canadian telecommunications market.

Personal Information Protection and Electronic Documents Act and Canadian Anti-Spam Legislation

The *Personal Information Protection and Electronic Documents Act* (Canada) ("PIPEDA") is Canada's federal privacy law regulating the collection, use and disclosure of personal information in Canada by a federally regulated organization in the private sector. Shaw has established a privacy policy and its internal privacy processes in accordance with PIPEDA.

Canada's anti-spam legislation (together with the related regulations, "CASL") sets out a comprehensive regulatory regime regarding online commerce, including requirements to obtain consent prior to sending commercial electronic messages and installing computer programs. CASL is administered primarily by the CRTC, and non-compliance may result in fines of up to $10 million.

Environmental matters

Shaw's operations are subject to environmental regulations, including those related to electronic waste, printed paper and packaging. A number of provinces have enacted regulations providing for the diversion of certain types of electronic and other waste through product stewardship programs ("PSP"). Under a PSP, companies who supply designated products in or into a province are required to participate in or develop an approved program for the collection and recycling of designated materials and, in some cases, pay a per-item fee. Such regulations have not had, and are not expected to have, a material effect on the Company's earnings or competitive position.

KEY PERFORMANCE DRIVERS

Shaw measures the success of its strategies using a number of key performance drivers which are outlined below, including a discussion as to their relevance, definitions, calculation methods and underlying assumptions.

FINANCIAL MEASURES

Revenue

Revenue is a measurement determined in accordance with International Financial Reporting Standards ("IFRS"). It represents the inflow of cash, receivables or other consideration arising from the sale of products and services. Revenue is net of items such as trade or volume discounts, agency commissions and certain excise and sales taxes. It is the base on which free cash flow, a key performance driver, is determined; therefore, it measures the potential to deliver free cash flow as well as indicating growth in a competitive market place.

The Company's continuous disclosure documents may provide discussion and analysis of non-IFRS financial measures. These financial measures do not have standard definitions prescribed by IFRS and therefore may not be comparable to similar measures disclosed by other companies. The Company's continuous disclosure requirements may also provide discussion and analysis of additional GAAP measures. Additional GAAP measures include line items, headings and sub-totals included in financial statements. The Company utilizes these measures in making operating decisions and assessing its performance. Certain investors, analysts and others utilize these measures in assessing the Company's operational and financial performance and as an indicator of its ability to service debt and return cash to shareholders. These non-IFRS measures and additional GAAP measures have not been presented as an alternative to net income or any other measure of performance or liquidity prescribed by IFRS. The following contains a description of the Company's use of non-IFRS financial measures and additional GAAP measures and provides a reconciliation to the nearest IFRS measure or provides a reference to such reconciliation.

Operating income before restructuring costs and amortization

Operating income before restructuring costs and amortization is calculated as revenue less operating, general and administrative expenses. It is intended to indicate the Company's ability to service and/or incur debt, and therefore it is calculated before one-time items like restructuring costs, amortization (a non-cash expense) and interest. Operating income before restructuring costs and amortization is also one of the measures used by the investing community to value the business.

Relative increases period-over-period in operating income before restructuring costs and amortization and in operating margin are indicative of the Company's success in delivering valued products and services, and connecting customers to the world through a best in class seamless connectivity experience.

	Year ended August 31,	
(millions of Canadian dollars)	**2017**	**2016**
Operating income from continuing operations	**999**	1,115
Add back (deduct):		
Restructuring costs	**54**	23
Amortization:		
Deferred equipment revenue	**(38)**	(52)
Deferred equipment costs	**122**	139
Property, plant and equipment, intangibles and other	**860**	753
Operating income before restructuring costs and amortization	**1,997**	1,978

Operating margin

Operating margin is calculated by dividing operating income before restructuring costs and amortization by revenue.

	Year ended August 31,		
	2017	**2016**	**Change**
Consumer	**42.2%**	44.4%	(2.2pts)
Business Network Services	**50.7%**	48.9%	1.8pts
Wireless	**22.0%**	21.0%	1.0pts

Net debt leverage ratio

The Company uses this measure to set its optimal leverage. Refer to Liquidity and Capital Resources for further detail.

Free cash flow

The Company utilizes this measure to assess the Company's ability to repay debt and pay dividends to shareholders. Free cash flow is calculated as free cash flow from continuing operations and free cash flow from discontinued operations.

Free cash flow from continuing operations is comprised of operating income before restructuring costs and amortization adding dividends from equity accounted associates, changes in receivable related balances with respect to customer equipment financing transactions as a cash item and deducting capital expenditures (on an accrual basis and net of proceeds on capital dispositions) and equipment costs (net), interest, cash taxes paid or payable, dividends paid on the preferred shares, recurring cash funding of pension amounts net of pension expense and adjusted to exclude share-based compensation expense.

Free cash flow from continuing operations has not been reported on a segmented basis. Certain components of free cash flow from continuing operations, including operating income before restructuring costs and amortization continue to be reported on a segmented basis. Capital expenditures and equipment costs (net) are reported on a combined basis for Consumer and Business Network Services due to the common infrastructure and separately for Wireless. Other items, including interest and cash taxes, are not generally directly attributable to a segment, and are reported on a consolidated basis.

Free cash flow from discontinued operations is comprised of income from discontinued operations before restructuring costs, amortization, taxes and other non-operating items after deducting capital expenditures (on an accrual basis and net of proceeds on capital dispositions), cash taxes paid or payable, program rights amortization on assets held for sale, cash amounts associated with funding CRTC benefit obligations related to media acquisitions, recurring cash funding of pension amounts net of pension expense and excludes non-controlling interest amounts that are included in the income from discontinued operations before restructuring costs, amortization, taxes and other non-operating items.

Free cash flow is calculated as follows:

	Year ended August 31,		
(millions of Canadian dollars)	2017	2016	Change %
Revenue			
Consumer	**3,747**	3,752	(0.1)
Business Network Services	**554**	515	7.6
Wireless	**605**	280	116.1
	4,906	4,547	7.9
Intersegment eliminations	**(24)**	(29)	(17.2)
	4,882	4,518	8.1
Operating income before restructuring costs and amortization(1)

Free cash flow	**438**	482	(9.1)

(1) Refer to Key performance drivers.
(2) Per Note 24 to the audited Consolidated Financial Statements.

STATISTICAL MEASURES:

Subscriber counts (or Revenue Generating Units ("RGUs")), including penetration and bundled customers

The Company measures the count of its subscribers in its Consumer, Business Network Services and Wireless divisions.

In the Consumer and Business Network Services divisions, wireline Video subscribers include residential customers, multiple dwelling units ("MDUs") and commercial customers. A residential subscriber who receives at a minimum, basic cable service, is counted as one subscriber. In the case of MDUs, such as apartment buildings, each tenant with a minimum of basic cable service is counted as one subscriber, regardless of whether invoiced individually or having services included in his or her rent. Each building site of a commercial customer (e.g., hospitals, hotels or retail franchises) that is receiving at a minimum, basic cable service, is counted as one subscriber. Video satellite subscribers are counted in the same manner as wireline Video customers except that it also includes seasonal customers who have indicated their intention to reconnect within 180 days of disconnection. Internet customers include all modems on billing and Phone includes all phone lines on billing. All subscriber counts exclude complimentary accounts but include promotional accounts.

Subscriber counts, or RGUs, and penetration statistics measure market share and also indicate the success of bundling and pricing strategies.

Consumer and Business Network Services divisions' RGUs represent the number of products sold to customers and includes Video (cable and Satellite subscribers), Internet customers, and Phone lines. As at August 31, 2017 these combined divisions had approximately 5.8 million RGUs.

In the Wireless division, a recurring subscriber or RGU (e.g. cellular phone, smartphone, tablet or mobile Internet device) has access to the wireless network for voice and/or data communications, whether Prepaid or Postpaid. Prepaid subscribers include RGUs where the account is within 90 days of the prepaid credits expiring. As at August 31, 2017 the Wireless divisions had approximately 1.1 million RGUs.

Wireless average revenue per subscriber unit per month ("ARPU")

Wireless ARPU is calculated as service revenue divided by the average number of subscribers on the network during the period and is expressed as a rate per month. This measure is an industry metric that is useful in assessing the operating performance of a wireless entity, but does not have a standardized meaning under IFRS. Refer to "Segmented Operations Review" for Wireless ARPU details and description.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

The Company prepared its Consolidated Financial Statements in accordance with IFRS as issued by the International Accounting Standards Board ("IASB"). An understanding of the Company's accounting policies is necessary for a complete analysis of results, financial position, liquidity and trends. Refer to Note 2 to the Consolidated Financial Statements for additional information on accounting policies. The following section discusses key estimates and assumptions that management has made under IFRS and how they affect the amounts reported in the Consolidated Financial Statements and notes. Following is a discussion of the Company's critical accounting policies:

Revenue and expense recognition

Revenue is considered earned as services are performed, provided that at the time of performance, ultimate collection is reasonably assured. Such performance is regarded as having been achieved when reasonable assurance exists regarding the measurement of the consideration that will be derived from rendering the service. Revenue from Video, Internet, Phone, and Wireless customers includes subscriber service revenue when earned. The revenue is considered earned as the period of service relating to the customer billing elapses. For customers with multi-year service plans, the total amount of contractual service revenue is accounted for on a straight-line basis over the term of the plan.

The Company has multiple deliverable arrangements comprised of upfront fees (subscriber connection fee revenue and/or customer premise equipment revenue) and related subscription revenue. The Company determined that the upfront fees charged to customers do not constitute separate units of accounting; therefore, these revenue streams are assessed as an integrated package.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

Subscriber connection fee revenue

Connection fees have no standalone value to the customer separate and independent of the Company providing additional subscription services, therefore the connection fee revenue must be deferred and recognized systematically over the periods that the subscription services are earned. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered its customer churn rate and other factors, such as competition from new entrants, to determine the deferral period of three years.

Subscriber connection and installation costs

The costs of physically connecting a new home are capitalized as part of the Company's distribution system as the service potential of the distribution system is enhanced by the ability to generate future subscriber revenue. Costs of disconnections are expensed as incurred as the activity does not generate future revenue.

Customer premise equipment revenue and costs

Customer premise equipment available for sale, which generally includes digital cable terminal ("DCT") and direct-to-home ("DTH") equipment, has no standalone value to the customer separate and independent of the Company providing additional subscription services. Therefore, the equipment revenue is deferred and recognized systematically over the periods that the subscription services are earned. As the equipment sales and the related subscription revenue are considered one transaction, recognition of the equipment revenue commences once the subscriber service is activated. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered various factors including customer churn, competition from new entrants, and technology changes to determine the deferral period of three years.

In conjunction with equipment revenue, the Company also incurs incremental direct costs which include equipment and related installation costs. These direct costs cannot be separated from the undelivered subscription service included in the multiple deliverable arrangement. Under IAS 2 "Inventories", these costs represent inventoriable costs and are deferred and amortized over the period of three years, consistent with the recognition of the related equipment revenue. The equipment and installation costs generally exceed the amounts received from customers on the sale of equipment (the equipment is sold to the customer at a subsidized price). The Company defers the entire cost of the equipment, including the subsidy portion, as it has determined that this excess cost will be recovered from future subscription revenues and that the investment by the customer in the equipment creates value through increased retention.

Shaw Business installation revenue and expenses

The Company also receives installation revenues in its Shaw Business operation on contracts with commercial customers which are deferred and recognized as revenue on a straight-line basis over the related service contract, generally spanning two to ten years. Direct and incremental costs associated with the service contract, in an amount not exceeding the upfront installation revenue, are deferred and recognized as an operating expense on a straight-line basis over the same period.

Wireless equipment revenue

Revenue from the direct sale of equipment to subscribers or dealers is recognized when the equipment is delivered and accepted by the subscribers or dealers.

Freedom Mobile offers a discretionary handset discount program, whereby the subscriber earns the applicable discount by maintaining services with the Company, such that the receivable relating to the discount at inception of the transaction is reduced over a period of time. A portion of future revenue earned in connection with the services is applied against the up-front discount provided on the handset. Freedom Mobile also offers a plan allowing customers to receive larger up-front handset discounts than they would otherwise qualify for, if they pay a predetermined incremental charge to their existing service plan on a monthly basis. The charge is billed on a monthly basis and is recognized as revenue at that time.

The Company recognizes the handset discount as a receivable and revenue upon the sale of the equipment on the basis that the receivable is recoverable. The receivable is realized on a straight-line basis over the period which the discount is forgiven to a maximum of two years with an offsetting reduction to revenue. The amount receivable is classified as part of other current or non-current receivables, as applicable, in the Consolidated Statement of Financial Position.

Discontinued operation equipment revenue and costs

In the Shaw Tracking operation, currently classified as held for sale, equipment revenue is recognized over the period of the related service contract for airtime, which is generally five years.

In conjunction with Shaw Tracking equipment revenue, the Company incurs incremental direct costs including equipment costs. These direct costs cannot be separated from the undelivered tracking service included in the multiple deliverable arrangement. Under IAS 2 "Inventories", these costs represent inventoriable costs and are deferred and amortized over the period of five years, consistent with the recognition of the related tracking equipment revenue.

Discontinued operation subscriber revenue

In the former Media division, subscriber revenue was recognized monthly based on subscriber levels. Advertising revenues were recognized in the period in which the advertisements were aired or displayed on the Company's digital properties and recorded net of agency commissions as these amounts were paid directly to the agency or advertiser. When a sales arrangement includes multiple advertising spots, the proceeds were allocated to individual advertising spots under the arrangement based on relative fair values.

Income statement classification

The Company distinguishes amortization of deferred equipment revenue and deferred equipment costs from the revenue and expenses recognized from ongoing service activities on its income statement. Equipment revenue and costs are deferred and recognized over the anticipated term of the related future revenue (i.e., the monthly service revenue) with the period of recognition spanning three to five years. As a result, the amortization of deferred equipment revenue and deferred equipment costs are non-cash items on the income statement, similar to the Company's amortization of deferred IRU revenue, which the Company also segregates from ongoing revenue. Further, within the lifecycle of a customer relationship, the customer generally purchases customer premise equipment at the commencement of the customer relationship, whereas the subscription revenue represents a continuous revenue stream throughout that customer relationship. Therefore, the segregated presentation provides a clearer distinction within the income statement between cash and non-cash activities and between up-front and continuous revenue streams, which assists financial statement readers to predict future cash flows from operations.

Allowance for doubtful accounts

The majority of the Company's revenues are earned from selling on credit to individual subscribers. Because there are some customers who do not pay their debts, selling on credit necessarily involves credit losses. The Company is required to make an estimate of an appropriate allowance for doubtful accounts on its receivables. In determining its estimate, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. The estimated allowance required is a matter of judgment and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foreseen, such as future business, personal and economic conditions. Conditions causing deterioration or improvement in the aging of accounts receivable and collections will increase or decrease bad debt expense.

Property, plant and equipment and other intangibles – capitalization of direct labour and overhead

The cost of property, plant and equipment and other intangibles includes direct construction or development costs (such as materials and labour) and overhead costs directly attributable to the construction or development activity. The Company capitalizes direct labour and direct overhead incurred to construct new assets, upgrade existing assets and connect new subscribers. These costs are capitalized as they are directly attributable to the acquisition, construction, development or betterment of the networks or other intangibles. Repairs and maintenance expenditures are charged to operating expenses as incurred.

Direct labour and overhead costs are capitalized in three principal areas:

1. **Corporate departments such as Technology and Network Operations ("TNO"):** TNO is involved in overall planning and development of the Video/Internet/Phone infrastructure. Labour and overhead costs directly related to these activities are capitalized as the activities directly relate to the planning and design of the construction of the distribution system. In addition, TNO devotes considerable efforts towards the development of systems to support Phone, Wi-Fi, and projects related to new customer management, billing and operating support systems. Labour costs directly related to these and other projects are capitalized.
2. **Cable regional construction departments, which are principally involved in constructing, rebuilding and upgrading the cable/Internet/Phone infrastructure:** Labour and overhead costs directly related to the construction activity are capitalized as the activities directly relate to the construction or upgrade of the distribution system. Capital projects include, but are not limited to, projects such as the new subdivision builds, increasing network capacity for Internet, home Phone and VOD by reducing the number of homes fed from each node, and upgrades of plant capacity, including the DNU project, and the Wi-Fi build.
3. **Subscriber-related activities such as installation of new drops and Internet and Digital Phone services:** The labour and overhead directly related to the installation of new services are capitalized as the activity involves the installation of capital assets (i.e., wiring, software, etc.) which enhance the service potential of the distribution system through the ability to earn future revenues. Costs associated with service calls, collections, disconnects and reconnects that do not involve the installation of a capital asset are expensed.

Amounts of direct labour and direct overhead capitalized fluctuate from year to year depending on the level of customer growth and plant upgrades for new services. In addition, the level of capitalization fluctuates depending on the proportion of internal labour versus external contractors used in construction projects.

The percentage of direct labour capitalized in many cases is determined by the nature of employment in a specific department. For example, a significant portion of labour and direct overhead of the cable regional construction departments is capitalized as a result of the nature of the activity performed by those departments. Capitalization is also based on piece rate work performed by unit-based employees which is tracked directly. In some cases, the amount of capitalization depends on the level of maintenance versus capital activity that a department performs. In these cases, an analysis of work activity is applied to determine this percentage split.

Amortization policies and useful lives

The Company amortizes the cost of property, plant and equipment and other intangibles over the estimated useful service lives of the items. These estimates of useful lives involve considerable judgment. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. On an annual basis, the Company reassesses its existing estimates of useful lives to ensure they match the anticipated life of the technology from a revenue-producing perspective. If technological change happens more quickly or in a different way than the Company has anticipated, the Company may have to shorten the estimated life of certain property, plant and equipment or other intangibles which could result in higher amortization expense in future periods or an impairment charge to write down the value of property, plant and equipment or other intangibles.

Intangibles

The excess of the cost of acquiring cable, satellite, media, data centre and wireless businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist of amounts allocated to broadcast rights and licences, wireless spectrum licences, trademarks, brands, program rights, customer relationships and software assets. Broadcast rights and licences, wireless spectrum licences, trademarks and brands represent identifiable assets with indefinite useful lives.

Program rights represent licensed rights acquired to broadcast television programs on the former Shaw Media division's conventional and specialty television channels and program advances are in respect of payments for programming prior to the window license start date. For licensed rights, the Company records a liability for program rights and corresponding asset when the license period has commenced and all of the following conditions have been met: (i) the cost of the program is known or reasonably determinable, (ii) the program material has been accepted by the Company in accordance with the license agreement and (iii) the material is available to the Company for telecast. Program rights are expensed on a systematic basis generally over the estimated exhibition period as the programs are aired and are included in operating, general and administrative expenses. Program rights are segregated on the Statement of Financial Position between current and noncurrent based on expected life at time of acquisition.

Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over their estimated useful lives ranging from 4 – 15 years.

Software that is not an integral part of the related hardware is classified as an intangible asset. Internally developed software assets are recorded at historical cost and include direct material and labour costs as well as borrowing costs on qualifying assets. Software assets are amortized on a straight-line basis over estimated useful lives ranging from 3 – 10 years. The Company reviews the estimates of lives and useful lives on a regular basis.

Asset impairment

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at March 1) and when events or changes in circumstances indicate that the carrying value may be impaired. The recoverable amount of each cash-generating unit ("CGU") is determined based on the higher of the CGU's fair value less costs to sell and its value in use. A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are Cable, Satellite, and Wireless. The Company had two additional cash generating units, data centres, until the sale of Viawest in August 2017 and Media, until the sale of the division in April 2016. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods. The results of the impairment tests are provided in Note 10 to the Consolidated Financial Statements.

Employee benefit plans

As at August 31, 2017, Shaw had non-registered defined benefit pension plans for key senior executives and designated executives. The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The differences between actual and assumed results are immediately recognized in other comprehensive income/loss. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected to be needed to settle employee benefit obligations and is also used to calculate the interest income on plan assets. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes are required. The following table illustrates the increase on the accrued benefit obligation and pension expense of a 1% decrease in the discount rate:

(millions of Canadian dollars)	Accrued Benefit Obligation at End of Fiscal 2017	Pension Expense Fiscal 2017
Weighted Average Discount Rate – Non-registered Plans	3.70%	3.50%
Impact of: 1% decrease – Non-registered Plans	$ 86	$ 4

Deferred income taxes

The Company has recognized deferred income tax assets and liabilities for the future income tax consequences attributable to differences between the financial statement carrying amounts of assets and liabilities and their respective tax bases. Deferred tax assets are also recognized in respect of losses of certain of the Company's subsidiaries. The deferred income tax assets and liabilities are measured using enacted or substantially enacted tax rates expected to apply to taxable income in the years in which the temporary differences are expected to reverse or the tax losses are expected to be utilized. Realization of deferred income tax assets is dependent upon generating sufficient taxable income during the period in which the temporary differences are deductible. The Company has evaluated the likelihood of realization of deferred income tax assets based on forecasts of taxable income of future years, existing tax laws and tax planning strategies. Significant changes in assumptions with respect to internal forecasts or the inability to implement tax planning strategies could result in future impairment of these assets.

Commitments and contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Contractual and other commercial obligations primarily relate to network fees, program rights and operating lease agreements for use of transmission facilities, including maintenance of satellite transponders and lease of premises in the normal course of business. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities.

RELATED PARTY TRANSACTIONS

Related party transactions are reviewed by Shaw's Corporate Governance and Nominating Committee, comprised of independent directors. The following sets forth certain transactions in which the Company is involved.

Corus

The Company and Corus are subject to common voting control. During 2016, the Company sold its wholly owned subsidiary Shaw Media to Corus. The transaction closed on April 1, 2016. In fiscal 2017, network, advertising and programming fees were paid to various Corus subsidiaries. The Company provided uplink of television signals, programming content, Internet services and lease of circuits to various Corus subsidiaries. The Company also received dividends from Corus related to its Class B non-voting participating shareholdings representing 39% of the total issued equity of Corus. (See "Equity Interest in Corus")

Burrard Landing Lot 2 Holdings Partnership

The Company has a 33.33% interest in the Partnership. During the current year, the Company paid the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, BC, is the Company's headquarters for its lower mainland BC operations.

Key management personnel and Board of Directors

Key management personnel consist of the most senior executive team and along with the Board of Directors have the authority and responsibility for directing and controlling the activities of the Company. In addition to compensation provided to key management personnel and the Board of Directors for services rendered, the Company transacts with companies related to certain Board members primarily for the purchase of remote control units, network programming and installation of equipment.

Refer to Note 27 to the Consolidated Financial Statements for further related party transaction detail.

NEW ACCOUNTING STANDARDS

Shaw has adopted or will adopt a number of new accounting policies as a result of recent changes in IFRS as issued by the IASB. The ensuing discussion provides additional information as to the date that Shaw is or was required to adopt the new standards, the methods of adoption permitted by the standards, the method chosen by Shaw, and the effect on the financial statements as a result of adopting the new policies. The adoption or future adoption of these accounting policies has not and is not expected to result in changes to the Company's current business practices.

Adoption of recent accounting pronouncement

The adoption of the following IFRS amendments effective September 1, 2016 had no impact on the Company's consolidated financial statements.

- *Clarification of Acceptable Methods of Depreciation and Amortization* (Amendments to IAS 16 *Property, Plant and Equipment* and IAS 38 *Intangible Assets)* prohibits revenue from being used as a basis to depreciate property, plant and equipment and significantly limits use of revenue-based amortization for intangible assets. The amendments were applied prospectively for the annual period commencing September 1, 2016.

Standards, interpretations and amendments to standards issued but not yet effective

The Company has not yet adopted certain standards and interpretations that have been issued but are not yet effective. The following pronouncements are being assessed to determine the impact on the Company's results and financial position.

- IFRS 2 *Share-based Payment* was amended in 2016 to clarify the accounting and measurement for certain types of share-based payment transactions. It is required to be applied for annual periods commencing on or after January 1, 2018, however earlier application is permitted.
- IAS 7 *Statement of Cash Flows* was amended in 2016 to improve disclosures regarding changes in financing liabilities. It is required to be applied for annual period beginning on or after January 1, 2017.
- IFRS 9 *Financial Instruments: Classification and Measurement* replaces IAS 39 *Financial Instruments* and applies a principal-based approach to the classification and measurement of financial assets and financial liabilities, including an expected credit loss model for calculating impairment, and includes new requirements for hedge accounting. The standard is required to be applied retrospectively for the annual period commencing January 1, 2018. We are assessing the impact of this standard on our consolidated financial statements.
- IAS 12 *Income Taxes* was amended in 2016 to clarify how to account for deferred tax assets related to debt instruments measured at fair value. It is required to be applied for annual periods commencing January 1, 2017.
- IFRS 15 *Revenue from Contracts with Customers*, was issued in May 2014 and replaces IAS 11 *Construction Contracts*, IAS 18 *Revenue*, IFRIC 13 *Customer Loyalty Programs*, IFRIC 15 *Agreements for the Construction of Real Estate*, IFRIC 18 *Transfers of Assets from Customers* and SIC-31 *Revenue – Barter Transactions Involving Advertising Services*. The new standard requires revenue to be recognized in a manner that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration expected to be received in exchange for those goods or services. The principles are to be applied in the following five steps: (1) identify the contract(s) with a customer, (2) identify the performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the performance obligations in the contract, and (5) recognize revenue when (or as) the entity satisfies a performance obligation.

  The application of IFRS 15 will impact the Company's reported results, including the classification and timing of revenue recognition and the treatment of costs incurred to obtain contracts with customers. IFRS 15 requires the estimation of total consideration to be received over the contract term at contract inception, and the allocation of that consideration to performance obligations in the contract, typically based on the relative stand-alone selling price of each obligation. IFRS 15 also requires that incremental costs to obtain a contract with a customer (for example, commissions) be capitalized and amortized into operating expenses over time. The Company currently expenses such costs as incurred.

  The Company's financial position will also be impacted by the adoption of IFRS 15, with new contract asset and contract liability categories recognized to reflect differences between the timing of revenue recognition and the actual billing of those goods and services to customers. While similar differences are recognized currently, IFRS 15 introduces additional requirements and disclosures specific to contracts with customers.

  Shaw continues to evaluate the impacts of IFRS 15 and preparations are underway for the adoption of the new standard. Initial planning and scoping efforts were conducted during 2017, with ongoing development of the required accounting policies, significant judgment's and estimates, processes, information systems and internal controls expected to continue throughout the Company's 2018 fiscal year. In connection with these development efforts, the Company also expects a significant historical data gathering initiative will be required to identify and account for multi-year contracts with customers at the date of adoption. At this stage in the Company's IFRS 15 implementation process, it is not possible to make reasonable quantitative estimates of the effects of the new standard

  The new standard is effective for annual periods beginning on or after January 1, 2018, which for the Company will be the annual period commencing September 1, 2018, and must be applied either retrospectively or on a modified retrospective basis for all contracts that are not complete as at that date. The Company continues to evaluate the adoption approach in conjunction with its assessment of the expected impacts of adoption.

- IFRS 16 *Leases* requires entities to recognize lease assets and lease obligations on the balance sheet. For lessees, IFRS 16 removes the classification of leases as either operating leases or finance leases, effectively treating all leases as finance leases. Certain short-term leases (less than 12 months) and leases of low-value are exempt from the requirements and may continue to be treated as operating leases. Lessors will continue with a dual lease classification model. Classification will determine how and when a lessor will recognize lease revenue, and what assets would be recorded.

  As the Company has significant contractual obligations currently being recognized as operating leases, we anticipate that the application of IFRS 16 will result in a material increase to both assets and liabilities and material changes to the timing of the recognition of expenses associated with the lease arrangements although at this stage in the Company's IFRS 16 implementation process, it is not possible to make reasonable quantitative estimates of the effects of the new standard.

  The standard may be applied retroactively or using a modified retrospective approach for annual periods commencing January 1, 2019, with early adoption permitted if IFRS 15 *Revenue from Contracts with Customers* has been adopted. The Company will evaluate the adoption approach in conjunction with its assessment of the expected impacts of adoption.

- IFRIC 23, *Uncertainty over Income Tax Treatments* was issued in 2017 to clarify how to apply the recognition and measurement requirements in IAS 12 when there is uncertainty over income tax treatments. It is required to be applied for annual periods commencing January 1, 2019.

RISK MANAGEMENT

In the normal course of our business activities, the Company is subject to both risks and opportunities. The purpose of risk management is to manage and mitigate risk, rather than to eliminate risk. The Company is committed to continually strengthening our risk management capabilities to protect and enhance value.

Risk Governance and Oversight

The Board of Directors has overall risk governance and oversight responsibilities. Specifically, the Board is responsible for identifying and assessing the principal risks inherent in the business activities of the Company and ensuring that management takes all reasonable steps to implement appropriate systems to manage such risks. The Board of Directors has delegated elements of its risk oversight responsibilities to specific Board committees. In particular, the Audit Committee is responsible for: (1) overseeing the Company's processes for identifying, assessing and managing risks; and (2) ensuring that management implements and maintains effective internal controls and procedures for identifying, assessing and managing the principal risks to the Corporation and its business. In addition, the Human Resources and Compensation Committee is responsible for ensuring that the Company's long-term and short-term incentive plans do not incent risk-taking beyond the Company's risk tolerance.

Responsibilities for Risk Management

Responsibility for risk management is shared across our organization. Each department's operating management, led by the Company's executive team, have integrated controls and risk management practices into day-to-day activities and decision-making processes. We have risk management and compliance functions across the organization such as Finance, Security and Risk, Legal and Regulatory, and Technology Risk Governance. The Internal Audit and Advisory Services (IA&AS) department provides independent and objective audit and advisory services in order to evaluate and improve the effectiveness of the Company's governance, internal controls, disclosure processes, and risk management activities. The Audit Committee oversees the work of the IA&AS department and all reports issued by the IA&AS department. In addition, the IA&AS department's annual plan is reviewed and approved by the Audit Committee.

Enterprise Risk Management

The Audit Committee undertakes a further review of the significant corporate level risks through the Enterprise Risk Management program ("ERM"). The ERM is a performance focused process designed to identify and manage significant corporate level risks that could impact the achievement of our strategic objectives. The Company's executives meet quarterly to: (1) review and update significant corporate level risks; (2) assess such corporate level risks in terms of likelihood and magnitude of impact, (3) review the response strategy, and (4) monitor progress. The Company's executives provided an ERM report to the Board in April 2017, with updates to be provided at least annually. The significant risks and uncertainties affecting the Company and its business are discussed under "Known Events, Trends, Risks and Uncertainties in Management's Discussion and Analysis".

KNOWN EVENTS, TRENDS, RISKS AND UNCERTAINTIES

The discussion in this MD&A addresses only what management has determined to be the most significant known events, trends, risks and uncertainties relevant to the Company, its operations and/or its financial results. This discussion is not exhaustive. The discussion of these matters should be considered in conjunction with the "Caution Concerning Forward-Looking Statements".

Competition and Technological Change

Shaw operates in an open and competitive marketplace. Our businesses face competition from regulated and unregulated entities using existing or new communications technologies and from illegal services. In addition, the rapid deployment of new technologies, services and products has reduced the traditional lines between telecommunications, Internet and distribution services and further expands the competitive landscape. Shaw may also face competition from platforms that may gain advantage through regulatory processes. While Shaw continually seeks to strengthen its competitive position through investments in infrastructure, technology and customer service and through acquisitions, there can be no assurance that these investments will be sufficient to maintain Shaw's market share or performance in the future.

The following competitive events, trends, risks and/or uncertainties specific to areas of our business may have a material adverse effect on Shaw and its reputation, as well as its operations and/or its financial results. In each case, the competitive events, trends, risks and/or uncertainties may increase or continue to increase. Competition for new subscribers and retention of existing subscribers may require substantial promotional activity and increase our cost of customer acquisition, decrease our ARPU or both. We expect that competition, including aggressive discounting practices by competitors to gain market share, will continue to increase for all of our businesses.

Consumer Internet

Shaw competes with a number of different types of ISPs offering residential Internet access including traditional telephone companies, wireless providers and independent ISPs making use of wholesale services to provide Internet access in various markets.

Shaw expects that consumer demand for higher Internet access speeds and greater bandwidth will continue to be driven by bandwidth-intensive applications including streaming video, digital downloading and interactive gaming. As described further under "Shaw's Wireline Network", Shaw continues to expand the capacity and efficiency of its wireline network to handle the anticipated increases in consumer demand for higher Internet access speeds and greater bandwidth. However, there can be no assurance that our investments in network capacity will continue to meet this increasing demand.

Consumer Video

Shaw's Consumer Video services, delivered through both our wireline and satellite platforms, compete with other distributors of video and audio signals. We also compete increasingly with unregulated over-the-top ("OTT") video services and offerings available over Internet connections. Continued improvements in the quality of streaming video over the Internet and the increasing availability of television shows and movies online will continue to increase competition to Shaw's Consumer video services. Our satellite services also compete with illegal satellite services including grey and black market offerings.

Consumer Phone

Shaw's competitors for Consumer wireline phone services include traditional telephone companies, other wireline carriers, Voice over Internet Protocol ("VoIP") providers and wireless providers. Several of these competitors have larger operational and financial resources than Shaw. In addition, households increasingly rely on wireless services in place of wireline phone services which negatively affects the business and prospects of our Consumer wireline phone services.

Wireless

Freedom Mobile (formerly, WIND Mobile), is a new entrant in the highly competitive Canadian wireless market which is characterized by three national wireless incumbent carriers and regional participants. The national wireless incumbent carriers have larger, and more diverse, spectrum holdings than Shaw, as well as larger operational and financial resources than Shaw and are well established in the market. The LTE-Advanced overlay network has been built using our Wireless division's AWS-3 spectrum licences. While a substantial ecosystem of handset devices for the AWS-3 spectrum band is emerging in 2018, the selection of handsets supporting the AWS-3 spectrum band currently available remains limited. In addition, our Wireless division may face increased competition from other facilities based or non-facilities based new entrants or alternate technologies, including as a result of regulatory decisions or government policies that favour certain competitive platforms. (see "Government regulations and regulatory developments – Telecommunication Act – CRTC review of Wi-Fi First").

Business Network Services

Shaw Business competes with other telecommunications carriers in providing high-speed data and video transport and Internet connectivity services to businesses, ISPs and other telecommunications providers. The telecommunications services industry in Canada is highly competitive, rapidly evolving and subject to constant change. Shaw Business' competitors include traditional telephone companies, competitive access providers, competitive local exchange carriers, ISPs, private networks built by large end users and other telecommunications companies. In addition, the development and implementation of new technologies by others could give rise to significant additional competition. Competitors for the delivery of voice and unified communication services include traditional telecommunications companies, resellers and new entrants to the market leveraging new technologies to deliver services. Shaw Broadcast Services also competes in industries that are highly competitive, rapidly evolving and subject to constant change.

Impact of Regulation

As discussed under "Government regulations and regulatory developments", a majority of our Canadian business activities are subject to: (i) regulations and policies administered by ISED and/or the CRTC, and (ii) conditions of licences granted by ISED and/or the CRTC. Shaw's operations, financial results, and future prospects are affected by changes in regulations, policies and decisions, conditions of licences and decisions, including changes in interpretation of existing regulations and requirements contained in such conditions of licences by courts, the government or the regulators, in particular the CRTC, ISED, Competition Bureau and Copyright Board. These changes relate to, and may have an impact on, among other things, licensing and licence renewal, spectrum holdings, products and services, competition, programming carriage and terms of carriage, strategic transactions, and infrastructure access, and the potential for new or increased fees or costs. All such changes in the regulatory regime may have a material adverse effect on Shaw and its reputation, as well as Shaw operations, financial results and/or future prospects.

Economic Conditions

The Canadian economy is affected by uncertainty in global financial and equity markets and slowdowns in national and/or global economic growth. Changes in economic conditions, which may differ across our regional footprint, may affect discretionary consumer and business spending, resulting in increased or decreased demand for Shaw's product offerings. Current or future events caused by volatility in domestic or international economic conditions or a decline in economic growth may have a material adverse effect on Shaw, its operations and/or financial results.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

Interest Rates, Foreign Exchange Rates and Capital Markets

Shaw has the following financial risks in its day-to-day operations:

(a) **Interest rates:** Due to the capital-intensive nature of Shaw's operations, the Company uses long-term financing extensively in its capital structure. The primary components of this structure include banking facilities and various Canadian denominated senior notes and debentures with varying maturities issued in the public markets. These are more fully described in Note 13 to the Consolidated Financial Statements.

Interest on bank indebtedness is based on floating rates while the senior notes are all fixed-rate obligations. If required, Shaw uses its credit facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. Increases in interest rates may have a material adverse effect on Shaw, its operations and/or its financial results.

As at August 31, 2017, virtually all of Shaw's consolidated long-term debt was fixed with respect to interest rates.

(b) **Capital markets:** Shaw requires ongoing access to capital markets to support our operations. Changes in capital market conditions, including significant changes in market interest rates or lending practices, or changes in Shaw's credit ratings, may adversely affect our ability to raise or refinance short-term or long-term debt and therefore may have a material adverse effect on Shaw, its operations and/or its financial results.

Shaw manages its exposure to floating interest rates by maintaining a mix of fixed and floating rate debt. Interest on the Company's unsecured banking facility are based on floating rates, while the senior notes are all fixed rate obligations.

The Company may also enter into forward contracts to mitigate its exposure to foreign exchange and interest rate risk. The Company may also maintain a portion of its balance sheet cash in US dollars to provide economic protection against a depreciating Canadian Dollar. While hedging and other efforts to manage these risks are intended to mitigate Shaw's risk exposure, because of the inherent nature and risk of such transactions, those activities can result in losses. For instance, if Shaw hedges its floating interest rate exposure, it may forego the benefits that may otherwise be experienced if rates were to fall and it is subject to credit risks associated with the counterparties with whom it contracts. In order to minimize the risk of counterparty default under its swap agreements, Shaw assesses the creditworthiness of its swap counterparties. Further information concerning the policy and use of derivative financial instruments is contained in Notes 2 and 28 to the Consolidated Financial Statements.

Equity Investment in Corus

As at August 31, 2017, the Company owned 80,630,383 Class B non-voting participating shareholdings representing 39% of the total issued equity interest of Corus. Corus operates a portfolio of multimedia offerings comprised of specialty television services, radio stations, conventional television stations, a global content business, digital assets, live events, children's book publishing, animation software, technology and media services (see "Equity Interest in Corus"). Each of these businesses faces competition, including competition for subscribers, advertising customers and engaging content. Corus' performance affects the value of the Company's investment in Corus and the Company's financial results. Corus' performance may not meet the Company's expectations (including in respect of Corus' payment of a regular dividend) in the near and/or long term.

As Corus is a publicly traded company, its value to the Company may be determined by market factors that do not reflect its intrinsic value. This may limit the Company's ability to market its interest in Corus at a price that reflects the intrinsic value of Corus to the Company.

Programming Expenses

Expenses for video programming continue to be one of our most significant single expense items. Costs continue to increase, particularly for sports programming. In addition, as we add programming or distribute existing programming to more of our subscriber base, programming expenses increase. Although we have been successful at reducing the impact of these cost increases through the sale of additional services or increasing subscriber rates, there can be no assurance that we will continue to be able to do so and this may have a material adverse effect on Shaw, its operations and/or its financial results.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

Satellite

Shaw uses three satellites (Anik F2, Anik F1R and Anik G1) owned by Telesat Canada ("Telesat") to provide satellite services in our Consumer and Business Network Services divisions. The Company owns certain transponders on Anik F2 and has long-term capacity service agreements in place in respect of transponders on Anik F1R, Anik F2 and Anik G1. While the Company intends to renew or replace some or all of these long-term capacity service agreements as they expire, there can be no assurance that replacement transponder capacity will be available or that such agreements will be entered into on favourable terms or in similar amounts, which may have a material adverse effect on customer service and customer relationships, as well as the Company's reputation, operations and/or financial results.

For transponders on Anik F1R and Anik F2, the Company does not maintain any insurance coverage as it believes the costs are uneconomic relative to the benefit which could otherwise be derived through an arrangement with Telesat. In the case of Anik G1, Telesat is committed to maintaining insurance on the satellite for five years from its April 2013 launch. As collateral for the transponder capacity pre-payments that were made by the Company to facilitate the construction of the satellite, the Company maintains a security interest in the transponder capacity and any related insurance proceeds that Telesat recovers in connection with an insured loss event.

The Company does not maintain business interruption insurance covering damage or loss to one or more of the satellites as it believes the premium costs are uneconomic relative to the risk of satellite failure. The majority of transponder capacity is available to the Company on an unprotected, non-pre-emptible basis, in both the case of the Anik F2 transponders that are owned by Shaw and the Anik F1R, Anik F2 and Anik G1 transponders that are secured through capacity service agreements. The Company has priority access to spare transponders on Anik F1R, Anik F2 and Anik G1 in the case of interruption, subject to availability. In the event of satellite failure, service will only be restored as capacity becomes available. Restoration of satellite service on another satellite may require repositioning or re-pointing of customers' receiving dishes, an upgrade of their video terminal or customers may require a larger dish. The Anik G1 satellite has a switch feature that allows whole channel services (transponders and available spares) to be switched from extended Ku-band to Ku-band, which provides the Company with limited back-up to restore failed whole channel services of Anik F1R. Satellite failure could negatively affect levels of customer service and customer relationships and may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Network Failure

Shaw's business may be interrupted by wireline or wireless network failures, including its own or third party networks. Such network failures may be caused by fire damage, natural disaster, power loss, hacking, computer viruses, disabling devices, acts of war or terrorism and other events which may be beyond Shaw's control.

As insurance premium costs are uneconomic relative to the risk of failure, Shaw self-insures the plant in its hybrid fibre-coax network. It is likely that wireline or wireless network damage caused by any one incident would be limited by geographic area and the resulting business interruption and financial damages would be also limited. In addition, with respect to a wireline network failure, we expect the risk of loss to be mitigated as most of the backbone fibre network and much of the hybrid fibre-coax access network is located underground.

Shaw protects its wireline network through a number of measures including physical and information technology security, and ongoing maintenance and placement of insurance on our network equipment and data centres, including the Calgary1 data centre. In the past, the Company has successfully recovered from network damage caused by natural disasters without significant cost or disruption of service.

Shaw protects its wireless network and mitigates wireless network failure through physical and information technology security, ongoing maintenance, and by carrying insurance on its wireless network equipment.

Despite the steps Shaw takes to reduce the risk of wireline and wireless network failure, failures may still occur, and such failures could negatively affect levels of customer service and relationships which may have a material adverse effect on Shaw and its reputation, as well as its operations and/or financial results.

Cyber Security Risks

Although Shaw's systems and network architecture are designed and operated to be secure, they are vulnerable to the risks of an unauthorized third party accessing these systems or its network. This could lead to a number of adverse consequences, including the unavailability, disruption or loss of Shaw's services or key functionalities within Shaw's technology systems or software or the unauthorized disclosure, corruption or loss of sensitive company, customer or personal information. Our insurance may not cover or be adequate to fully reimburse us for any associated costs and losses.

We continue to assess and enhance our cyber security within Shaw while we are monitoring the risks of cyber attacks and implement appropriate security policies, procedures and information technology systems to mitigate the risk of cyber attacks.

External threats to our network are constantly changing, and there is no assurance that Shaw will be able to protect its network from all future threats which may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Information Systems and Internal Business Processes

Many aspects of the Company's businesses depend to a large extent on various IT systems and software, and on internal business processes. Shaw regularly undertakes initiatives to update and improve these systems and processes. Although the Company has taken steps to reduce the risks of failure of these systems and processes, there can be no assurance that potential failures of, or deficiencies in, these systems, processes or change initiatives will not have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Reliance on Suppliers

Shaw is connected to or relies on other telecommunication carriers and certain utilities to conduct its business. Any disruption to the services provided by these suppliers, including labour strikes and other work disruptions, bankruptcies, technical difficulties or other events affecting the business operations of these carriers or utilities may affect Shaw's ability to operate and, therefore may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

The Company sources its customer premise and capital equipment, capital builds as well as portions of its service offerings from certain key suppliers. While the Company has alternate sources for many of these purchases, the loss of a key supplier may adversely affect the Company's ability to operate, and therefore may have a material adverse effect on Shaw, its operations and/or its financial results. There are a limited number of suppliers of popular mobile devices and there is a risk that the Company will not be able to maintain contracts for its existing supply of mobile devices and/or contract for the supply of new devices on commercially reasonable terms.

Litigation

Shaw and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business, whether in Canada or the US. Although management does not expect that the outcome of these matters will have a material adverse effect on the Company, there can be no assurance that these matters, or other legal matters that arise in the future, will not have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Taxes

Shaw's business is subject to various tax laws, changes to tax laws and the adoption of new tax laws, regulations thereunder and interpretations thereof, which may have adverse tax consequences to Shaw.

While Shaw believes it has adequately provided for all income and commodity taxes based on information that is currently available, the calculation and the applicability of taxes in many cases require significant judgment in interpreting tax rules and regulations. In addition, Shaw's tax filings are subject to government audits which could result in material changes in the amount of current and deferred income tax assets and liabilities and other liabilities which may, in certain circumstances, result in the assessment of interest and penalties.

Concerns about Alleged Health Risks relating to Radiofrequency Emissions

Concerns about alleged health risks relating to radiofrequency emissions may adversely affect our Wireless division and our Shaw Go WiFi operations. Some studies have alleged that links exist between radiofrequency emissions from certain wireless

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

devices and cell sites and various health problems or possible interference with electronic medical devices, including hearing aids and pacemakers. The Company complies with all applicable laws and regulations. Further, the Company relies on suppliers of wireless network equipment and customer equipment to meet or exceed all applicable regulatory and safety requirements. No definitive evidence exists of harmful effects from exposure to radiofrequency emissions when legal limits are complied with. Additional studies of radiofrequency emissions are ongoing and we cannot be certain of results, which could result in additional or more restrictive regulation or exposure to potential litigation.

Acquisitions, Dispositions and Other Strategic Transactions

Shaw may from time to time make acquisitions to expand its existing businesses or to enter into sectors in which Shaw does not currently operate, dispositions to focus on core offerings or enter into other strategic transactions. Such acquisitions, dispositions and/or strategic transactions may fail to realize the anticipated benefits, result in unexpected costs and/or Shaw may have difficulty incorporating or integrating the acquired business, any of which may have a material adverse effect on Shaw, its operations and/or financial results.

Holding company structure

Substantially all of Shaw's business activities are operated by its subsidiaries. As a holding company, our ability to meet our financial obligations is dependent primarily upon the receipt of interest and principal payments on intercompany advances, management fees, cash dividends and other payments from our subsidiaries together with proceeds raised by the Company through the issuance of equity and the incurrence of debt, and from proceeds received on the sale of assets. The payment of dividends and the making of loans, advances and other payments to Shaw by its subsidiaries may be subject to statutory or contractual restrictions, are contingent upon the earnings of those subsidiaries and are subject to various business and other considerations.

Control of the Company

Class A Shares are the only shares entitled to vote on all shareholder matters. Voting control of the Company is held by Shaw Family Living Trust ("SFLT") which holds, for the benefit of descendants of JR and Carol Shaw, 17,562,400 Class A Shares, being approximately 78% of the issued and outstanding shares of such class as at August 31, 2017. The sole trustee of SFLT is a private company owned by JR Shaw and having a board comprised of seven directors, including JR Shaw (chair), Jim Shaw, Bradley S. Shaw, three other members of JR Shaw's family, and one independent director. Accordingly, JR Shaw, through SFLT and its trustee, is able to elect a majority of the Board of Directors of the Company and to control any vote by the holders of Class A Shares.

Dividend Payments are not Guaranteed

Shaw currently pays monthly common share and quarterly preferred share dividends in amounts approved on a quarterly basis by the Board of Directors. Over the long term, Shaw expects to continue to pay dividends from its free cash flow; however, balance sheet cash and/or credit facilities may be used to stabilize dividends from time to time. Although Shaw intends to make regular dividend payments, dividends are not guaranteed as actual results may differ from expectations and there can be no assurance that the Company will continue common or preferred share dividend payments at the current level. In addition to the standard legislated solvency and liquidity tests that must be met, the Company would not be able to declare and pay dividends if there was an event of default or a pending event of default would result (as a consequence of declaring and paying dividends) under its credit facilities.

Talent Management and Succession Planning

Our success is substantially dependent upon the retention and the continued performance of our executive officers. Many of these executive officers are uniquely qualified in their areas of expertise, making it difficult to replace their services in the short to medium term. The loss of the services of any key executives and/or employees in critical roles or inadequate processes designed to attract, develop, motivate and retain productive and engaged employees could have a material adverse effect on Shaw, its operations and/or financial results.

To mitigate this risk, the Company's comprehensive compensation program is designed to attract, retain, motivate and reward the executive team and key employees by aligning management's interest with our business objectives and performance. Furthermore, the Company conducts annual succession planning to identify and develop key leaders to build capabilities and experiences required for the future.

Labour Relations

As of August 31, 2017, approximately 6% of our employees are represented by unions under collective bargaining agreements. While the Company's labour relations have been positive in the past, we can neither predict the outcome of current or future negotiations relating to labour disputes, union representation or renewal of collective bargaining agreements, nor be able to avoid future work stoppages, strikes or other forms of labour protests pending the outcome of any current or future negotiations. A prolonged work stoppage, strike or other form of labour protest could have a material adverse effect on our businesses, operations and reputation. Even if we do not experience strikes or other forms of labour protests, the outcome of labour negotiations could adversely affect our businesses and results of operations. In addition, our ability to make short-term adjustments to control compensation and benefits costs could be limited by the terms of such collective bargaining agreements.

DISCUSSION OF OPERATIONS AND FOURTH QUARTER

To comply with the requirements of Items 1.4 (Discussion of Operations) and 1.10 (Fourth Quarter) of Form 51-102F1 of National Instrument 51-102, the sections entitled "Discussion of Operations" and "Overview" in the Company's Management's Discussion and Analysis for the fourth quarter and year ended August 31, 2017 (the "**2017 Fourth Quarter MD&A**") are incorporated by reference herein. The 2017 Fourth Quarter MD&A can be found on SEDAR at www.sedar.com

SUMMARY OF QUARTERLY RESULTS

Quarter	Revenue	Operating income before restructuring costs and amortization(1)	Net income from continuing operations attributable to equity shareholders	Net income attributable to equity shareholders	Net income(2)	Basic and diluted earnings per share from continuing operations	Basic and diluted earnings per share
(millions of Canadian dollars except per share amounts)							
2017							
Fourth	1,244	479	149	481	481	0.30	0.97
Third	1,216	511	164	133	133	0.33	0.27
Second	1,206	503	150	147	147	0.30	0.30
First	1,216	504	94	90	90	0.19	0.18
Total	4,882	1,997	557	851	851	1.12	1.72
2016							
Fourth	1,212	514	145	154	154	0.29	0.31
Third	1,189	519	78	700	704	0.16	1.45
Second	1,055	466	120	156	164	0.24	0.32
First	1,062	479	144	210	218	0.30	0.43
Total	4,518	1,978	487	1,220	1,240	0.99	2.51

(1) Refer to key performance drivers.
(2) Net income attributable to both equity shareholders and non-controlling interests.

While financial results for the Company are generally not subject to significant seasonal fluctuations, subscriber activity may fluctuate from one quarter to another. Subscriber activity may also be affected by competition and Shaw's promotional activity. Further, satellite subscriber activity is modestly higher around the summer time when more subscribers have second homes in use. Shaw's wireline, satellite, wireless or data centre businesses do not depend on any single customer or concentration of customers.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

In the fourth quarter of fiscal 2017, net income increased $348 million compared to the third quarter of fiscal 2017 mainly due to the gain on divestiture, net of tax, of ViaWest, and lower fourth quarter restructuring costs. The increase was partially offset by a decrease in operating income before restructuring costs and amortization, higher amortization, lower equity income from our investment in Corus and higher income taxes. See "Other income and expense items" for further detail on non-operating items.

In the third quarter of fiscal 2017, net income decreased $14 million compared to the second quarter of fiscal 2017 mainly due to third quarter restructuring costs and losses on discontinued operations, net of tax, as well as increased amortization. The decrease was partially offset by an increase in operating income before restructuring costs and amortization and lower income taxes. Net other costs and revenue changed primarily due to a $16 million increase in income from an equity accounted associate and a $15 million provision reversal related to the wind down of shomi in the quarter.

In the second quarter of fiscal 2017, net income increased $57 million compared to the first quarter of fiscal 2017 mainly due to a non-recurring provision related to the wind down of shomi operations recorded in the first quarter, partially offset by an increase in amortization and income taxes. Also contributing to the increased net income were lower restructuring costs, partially offset by lower equity income from our investment in Corus. Net other costs and revenue changed primarily due to a provision of $107 million recorded in the prior quarter relating to shomi operations partially offset by a $17 million decrease in income from an equity accounted associate in the quarter.

In the first quarter of fiscal 2017, net income decreased $64 million compared to the fourth quarter of fiscal 2016 mainly due to a non-recurring provision related to the wind down of shomi operations included in net other costs and revenue for the first quarter of fiscal 2017. Also contributing to the decreased net income was lower operating income before restructuring costs and amortization, higher restructuring charges and lower income from discontinued operations, partially offset by lower income taxes. Net other costs and revenue changed primarily due to a $107 million impairment of the Company's joint venture investment in shomi and a $27 million increase in income from an equity accounted associate in the first quarter of fiscal 2017.

In the fourth quarter of fiscal 2016 net income decreased $550 million compared to the third quarter of fiscal 2016 mainly due to lower income from discontinued operations, net of tax, relating primarily to the gain on the divestiture of the former Media division recorded in the third quarter, decreased operating income before restructuring costs and amortization, and higher income taxes. Partly offsetting the decrease in net income were decreases in net other costs and revenue and restructuring costs. Net other costs and revenue changed primarily due to non-recurring charges recorded in the third quarter, including a $51 million impairment of the Company's joint venture investment in shomi, a $20 million write-down of a private portfolio investment, $12 million acquisition related costs and a $10 million loss from an equity accounted associate.

Net income for the third quarter of fiscal 2016 increased $540 million compared to the second quarter of fiscal 2016 mainly due to higher income from discontinued operations, net of tax, relating primarily to the gain on the divestiture of the former Media division, increased operating income before restructuring costs and amortization and lower income taxes. Partly offsetting the net income improvement in the quarter were: i) decreased net other costs and revenue; ii) increased restructuring charges; and iii) increased amortization. Net other costs and revenue changed primarily due to a $51 million impairment of the Company's shomi joint venture investment, a $20 million write-down of a private portfolio investment and a $10 million loss from an equity accounted associate.

In the second quarter of fiscal 2016, net income decreased $54 million compared to the first quarter of fiscal 2016 mainly due to decreased income from discontinued operations, net of tax, of $30 million, primarily due to the seasonality of the Media business reflected in income from discontinued operations, net of tax, and net other costs and revenue of $13 million. Net other costs and revenue changed primarily due to an additional $8 million of costs recorded in the second quarter related to the acquisition of Freedom Mobile (formerly, WIND Mobile).

In the first quarter of fiscal 2016, net income decreased $58 million compared to the fourth quarter of 2015 mainly due to a change in net other costs and revenues of $140 million and decrease in operating income before restructuring costs and amortization of $17 million offset by an increase in income from discontinued operations, net of tax, of $47 million and a decrease in income taxes of $50 million. Net other costs and revenue changed primarily due to a fourth quarter fiscal 2015 gain on the sale of wireless spectrum of $158 million less the impact of a $27 million write-down of a private portfolio investment in the same period offset by an increase in the equity loss of a joint venture interest in shomi of $5 million in the first quarter of fiscal 2016.

Fiscal 2017 Highlights

- Net income was $851 million for fiscal 2017 compared to $1.24 billion in 2016.
- Earnings per share were $1.72 in fiscal 2017 compared to $2.51 in 2016.
- Revenue for fiscal 2017 improved 8.1% to $4.88 billion from $4.52 billion in 2016.
- Operating income before restructuring costs and amortization of $2.0 billion in fiscal 2017 was up 1.0% over prior year's $1.98 billion.
- Consolidated free cash flow in fiscal 2017 was $438 million compared to $482 million in 2016.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

- During 2017, the Company's dividend rates on Shaw's Class A Participating Shares and Class B Non-Voting Participating Shares were $1.1825 and $1.1850, respectively. Dividends paid in 2017 were $595 million gross of amounts attributed to the dividend reinvestment plan.

Significant acquisitions, financings and other items:

Sale of ViaWest, Inc. and its subsidiaries

- On August 1, 2017, the Company sold 100% of its wholly-owned subsidiary ViaWest. for approximately US$1.675 billion in cash, which represents an attractive return on the Company's original investment in fiscal 2015 of approximately US$1.2 billion.

Acquisition of 700 MHz and 2500 MHz wireless spectrum licences from Quebecor

- The Company enhanced its wireless network capabilities through the acquisition of wireless spectrum licences from Quebecor on July 24, 2017 for $430 million. The acquired spectrum licences comprise 10 MHz licences of 700 MHz spectrum in each of British Columbia, Alberta and Southern Ontario, as well as the 20 MHz licences of the 2500 MHz spectrum in each of Vancouver, Edmonton, Calgary and Toronto.

Financing activity

- On December 15, 2016, the Company extended the term of its five-year $1.5 billion bank credit facility from December 2019 to December 2021. This credit facility is used for working capital and general corporate purposes.
- The Company conducted a number of capital market activities, including:
  - the extension of its dividend reinvestment plan in respect of its Class A Participating Shares and Class B Non-Voting Participating Shares to eligible shareholders who are residents of the United States;
  - the issuance of 3.80% $300 million senior unsecured notes due March 1, 2027; and
  - the repayment of $400 million senior unsecured notes due March 2, 2017.
  - the repayment of US$846 million in borrowings under the Company's and ViaWest's credit facilities related to the sale of ViaWest.

Other items

- shomi, the over-the-top streaming platform that launched as a joint venture of Shaw and Rogers in fiscal 2015 was wound down with its operations and service ending on November 30, 2016. As a result, Shaw incurred investment losses of $82 million in fiscal 2017 relating to shomi's liabilities in connection with the wind down of the joint venture.
- The Company launched the market leading BlueSky TV which is based on the Comcast Corporation ("Comcast") X1 video platform.
  - BlueSky TV was launched in phases, with the initial launch in Calgary in January 2017 followed by the Vancouver launch in February 2017 and the national launch in April 2017.
- On June 1, 2017, the Company announced that it entered into an agreement to sell a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation, to Omnitracs LLC for proceeds of approximately US$20 million. The transaction closed on September 15, 2017.
- The Company continued to improve its network performance with the rollout of Freedom Mobile's LTE-Advanced network to all existing markets, on schedule and on budget, as of the end of fiscal 2017.
- Freedom Mobile's handset lineup has continued to expand in fiscal 2017, currently with a total of 14 handsets that are compatible with the AWS-3 LTE network, including Apple, LG, Samsung, Sony and ZTE.
- In fiscal 2017, the Company began to deploy our newest generation of cable modem termination system equipment referred to as the Converged Cable Access Platform ("CCAP") into our serving hub sites. CCAP significantly enhances the capabilities of our cable network and enables Shaw to leverage the next generation of cable access technology known as Data Over Cable Interface Specification version 3.1 ("DOCSIS 3.1"). DOCSIS 3.1 represents the latest development in a set of technologies that increase the capability of a hybrid fibre-coax network to transmit data both to and from customer premises. As of August 31, 2017, DOCSIS 3.1 ready CCAP infrastructure was running in Shaw's major systems. All remaining systems are expected to be running DOCSIS 3.1 CCAP ready infrastructure by the end of fiscal 2018.

- The Company continued to expand its Shaw Go WiFi build-out. As at August 31, 2017, the Company had approximately 100,000 Shaw Go WiFi access points installed and operating throughout the network and over 3.3 million devices using Shaw Go WiFi. Moreover, the Company has leveraged its WiFi access points to improve network coverage for Freedom Mobile customers which represents an important step in our converged network strategy.

Fiscal 2016 Highlights

- Net income was $1.24 billion for fiscal 2016 compared to $880 million in 2015.
- Earnings per share were $2.51 in fiscal 2016 compared to $1.80 in 2015.
- Revenue for fiscal 2016 improved 7.4% to $4.52 billion from $4.21 billion in fiscal 2015.
- Operating income before restructuring costs and amortization of $1.98 billion in fiscal 2016 was up 2.4% over fiscal 2015 amount of $1.93 billion.
- Consolidated free cash flow in fiscal 2016 was $482 million compared to $653 million in 2015.
- During 2016, the Company's dividend rates on Shaw's Class A Participating Shares and Class B Non-Voting Participating Shares were $1.1825 and $1.1850 respectively. Dividends paid in 2016 were $568 million gross of amounts attributed to the dividend reinvestment plan.

Significant acquisitions: financings and other items.

ViaWest acquisition of INetU, Inc.

- On December 15, 2015, ViaWest closed the acquisition of 100% of the shares of INetU, Inc. ("INetU") for US$162 million which was funded through a combination of borrowings under ViaWest's and the Company's revolving credit facilities as well as incremental term loan proceeds under ViaWest's credit facility.
- INetU is a solutions provider of public, private and hybrid cloud environments offering managed security and compliance services. The acquisition of INetU allowed ViaWest to add new services to its cloud and managed offerings, and expanded its geographical footprint with eastern US and European cloud locations.

Acquisition of Mid-Bowline Group Corp and its wholly owned subsidiary WIND Mobile Corp.

- On March 1, 2016, the Company completed the acquisition of 100% of the shares of Mid-Bowline Group Corp. and its wholly owned subsidiary WIND Mobile Corp. for an enterprise value of $1.6 billion which was funded through a combination of cash on hand, a drawdown of $1.3 billion on the Company's credit facilities and the issuance of 2,866,384 Class B Non-Voting Participating Shares.
    - The fair value of purchase consideration consisted of $1.59 billion in cash and $68 million in shares. The acquisition of WIND Mobile led to the creation of the Wireless division.
- The addition of wireless enables Shaw to combine the power of fibre, coax, Wi-Fi and wireless networks to deliver a seamless experience of anytime and anywhere enhanced connectivity within our operating footprint.

Sale of Shaw Media Inc.

- On April 1, 2016, the Company entered into an agreement with Corus, a related party subject to common voting control, to sell 100% of its wholly owned subsidiary Shaw Media Inc. for a purchase price of approximately $2.65 billion comprised of $1.85 billion of cash and 71,364,853 Corus Class B non-voting participating shares representing approximately 37% of Corus' total issued equity of Corus.
    - For fiscal 2016, the assets and liabilities, operating results and operating cash flows for the previously reported Media segment were presented as discontinued operations separate from the Company's continuing operations. Prior period financial information was also reclassified to present the Media division as a discontinued operation.
    - The Company recognized a gain on the divestiture, net of tax, in income from discontinued operations of $625 million.
- Through holding of the shares in Corus, the Company will effectively retain an indirect, non-controlling interest in the Media division subsequent to the sale, but the Company will no longer have control over the division.

- The Company participated in Corus' dividend reinvestment program for its initial investment in Corus Class B Shares until September 1, 2017. For the year ended August 31, 2016, the Company received dividends of $34 million from Corus that were reinvested through the program into additional Corus Class B shares. At August 31, 2016, the Company owned 74,135,891 Corus Class B shares having a fair value of $911 million and representing 38% of the total issued equity of Corus.

Financing activity

- During 2012, a syndicate of banks provided the Company with an unsecured $1 billion credit facility which includes a maximum revolving term facility of $50 million. During 2014, the Company amended the terms of the facility to extend the maturity date from January 2017 to December 2019. In February 2016, the Company elected to increase its borrowing capacity by $500 million under the terms of the amended facility to a total of $1.5 billion. Funds are available to the Company in both Canadian and US dollars. Interest rates fluctuate with Canadian prime and bankers' acceptance rates, US bank base rates and LIBOR rates.
- In March 2016, ViaWest entered into an incremental US$80 million term loan and increased the borrowing capacity available on the revolving facility by US$35 million. The incremental term loan has quarterly principal repayments commencing May 2016 with the balance due on maturity in March 2022. Interest rates fluctuate with LIBOR, US prime and US Federal Funds rates and the facilities are secured by a first priority security interest in specific assets pursuant to the terms of the Security Agreement.
- In connection with the acquisition of Freedom Mobile (formerly, WIND Mobile) on March 1, 2016, the Company drew down $1.3 billion on its credit facility comprised of a $1.0 billion non-revolving credit facility with a syndicate of lenders that was entered into on March 1, 2016 along with $300 million drawn on the Company's existing credit facility. These amounts were repaid on April 1, 2016 using the cash proceeds received from the Shaw Media disposition.
- The Company conducted a number of capital markets activities, including:
  - On February 1, 2016, the Company repaid $300 million floating rate senior notes.
  - On February 19, 2016, the Company issued $300 million senior notes at a rate of 3.15% due February 19, 2021.
  - On May 9, 2016, the Company repaid $300 million 6.15% senior notes.

Other items

- The Company has a 50% joint control interest in shomi partnership ("shomi"), which is a subscription video-on-demand service that launched in November 2014.
  - Subsequent to fiscal 2016, shomi announced its decision to wind down its operations with service ending November 30, 2016.
- During 2016, the Company underwent a restructuring following a set of significant asset realignment initiatives, including the acquisition of Freedom Mobile (formerly, WIND Mobile) and divestiture of Shaw Media.
  - Approximately 200 employees were affected by the 2016 restructuring of which $23 million of restructuring costs were recorded relating primarily to severance and employee related costs.
- In January 2016, Shaw launched FreeRange TV, a mobile destination for its video customers that combined their TV and content subscriptions in one place, and provides on-the-go access to live and on demand content.
- The Company continued to expand its Business Network Services offering, including the successful expansion of its smart suite of products to include Smart Security in addition to SmartWiFi and SmartVoice.
- The Business Infrastructure Services division expanded its hybrid IT service offerings with the opening of the data centre in Plano, Texas – bringing the total to 30 data centres.
- The CRTC's "Let's Talk TV" initiative resulted in a new policy framework requiring Shaw to offer a $25 entry-level service offering (basic service) and all discretionary services (not offered on the basic service) either on a standalone basis or in packages of up to 10 programming services by March 2016. In addition, the Company was required to offer these services both on a standalone basis and in packages of up to ten programming services by December 1, 2016.
  - In March 2016, the Company introduced a new small basic service called "Limited TV" and revised its offerings to include small, medium and large theme packs starting at $6 per theme pack.

    - In November 15, 2016, Shaw launched "pick and pay" which allows customers to subscribe for a primary package (including Limited TV), select theme packs and add-on individual channels on a channel by channel basis.
- The Company continued to expand its Shaw Go WiFi build-out. As at August 31, 2016, the Company had approximately 85,000 Shaw Go WiFi access points installed and operating throughout the network and over 2.6 million devices using Shaw Go WiFi.

Fiscal 2015 Highlights:

- Net income was $880 million for fiscal 2015 compared to $887 million in 2014.
- Earnings per share were $1.80 in fiscal 2015 compared to $1.84 in 2014.
- Revenue for fiscal 2015 was flat at $4.21 billion as compared to fiscal 2014.
- Operating income before restructuring costs and amortization of $1.93 billion in fiscal 2015 was up 1.0% over 2014 amount of $1.91 billion.
- Consolidated free cash flow in fiscal 2015 was $653 million compared to $698 million in 2014.
- During 2015, the Company increased the dividend rate on Shaw's Class A Participating Shares and Class B Non-Voting Participating Shares to an equivalent dividend rate of $1.1825 and $1.185, respectively. Dividends paid in 2015 were $535 million gross of amounts attributed to the dividend reinvestment plan.

Significant acquisitions, financings and other items:

Acquisition of ViaWest, Inc.

- On September 2, 2014, the Company closed the acquisition of 100% of the shares of ViaWest for an enterprise value of US$1.2 billion which was funded through a combination of cash on hand, assumption of ViaWest debt and a drawdown of US$330 million on the Company's credit facility.
- The ViaWest acquisition provided the Company with a growth platform in the North American data centre sector and represented another step in expanding technology offerings for mid-market enterprises in Western Canada.

Acquisition of AppliedTrust Engineering, Inc.

- On June 30, 2015, ViaWest acquired 100% of the shares of AppliedTrust Engineering, Inc. ("AppliedTrust"), a provider of security, compliance, DevOps and infrastructure consulting services to a wide range of clients. The purchase consideration consisted of $9 million in cash and contingent consideration of $2 million.
- AppliedTrust's capabilities augment the ViaWest platform with fast enablement of secure hybrid services including IT assessment, migration, compliance consulting, cloud readiness and deeper application support.

Other items

- In April 2014, the Company announced changes to the structure of its operating divisions to improve overall efficiency while enhancing its ability to grow as the leading network and content experience company. Commencing in fiscal 2015, Shaw's residential and enterprise services were reorganized into new Consumer and Business units, respectively. The organization structure realignment efforts included the following initiatives:
    - Adapting its customer care operations into centres of expertise in order to improve the end-to-end customer service experience;
    - Restructuring certain functions within the Business Network Services division to improve customer service and performance; and
    - Organizational changes in the former Media division to transition from a traditional broadcaster to a broader focus media organization.
    - In 2015, the Company recorded $39 million in respect of continued restructuring, primarily related to severance and employee related costs, which impacted approximately 1,600 employees.
- During fiscal 2015, the Company partnered with Rogers to form shomi, a subscription video-on-demand. The service was launched in early November 2014.
- During 2013, the Company granted Rogers an option to acquire its wireless spectrum licences. The exercise of the option and the sale of the wireless spectrum licences were subject to various regulatory approvals and

therefore, the licences were not classified as held for sale. During fiscal 2015, the regulatory reviews concluded at which time Rogers exercised its option and the transfer was completed. The Company had previously received $50 million in respect of the purchase price of the option to acquire wireless spectrum licences and a $200 million deposit in respect of the option exercise price. The Company received an additional $100 million when the transaction completed and recorded a gain of $158 million.

- During 2013, the Company established a notional fund, the accelerated capital fund, of up to $500 million with proceeds received, and to be received, from strategic transactions. Accelerated capital initiatives were funded through this fund and not cash generated from operations. Key investments included the Calgary data centres, further digitization of the network and additional bandwidth upgrades, development of IP delivery of video, expansion of the Wi-Fi network, and additional innovative product offerings related to Shaw Go Wi-Fi and other applications to provide an enhanced customer experience. Approximately $110 million was invested in fiscal 2013, $240 million in fiscal 2014, and $150 million in fiscal 2015.
- In June 2015, Shaw announced that it had partnered with Comcast to make its market-leading cloud-based X1 video platform available to our customers. The X1 video platform offers a seamless viewing experience across multiple screens and devices both in and out of the home.
- The Company continued to expand its Business Network Services offering, including the successful launch of a new phone product, "SmartVoice", which provides a unified communications solution to small businesses that has typically been reserved for large scale organizations, and "Managed Hotel WiFi" using proven Cisco technology to provide a cloud based Wi-Fi product that is a fully managed solution for the hospitality market.
- Shaw also continued to invest in and build awareness of Shaw Go WiFi and as at August 31, 2015 had approximately 75,000 access points and 2 million devices using the network.

Revenue and operating income before restructuring costs and amortization

Shaw delivered full year fiscal 2017 financial results that met its revised guidance. Operating income before restructuring costs and amortization of $1,997 million in fiscal 2017 was within the target range of $1,989 – $2,014 million after adjusting for discontinued operations ($2,135 – $2,160 million before adjusting). For further discussion of divisional performance see "Segmented Operations Review."

Consolidated revenue of $4.88 billion for fiscal 2017 improved 8.1% over $4.52 billion for fiscal 2016. Revenue improved primarily due to the Wireless division contributing revenues of $605 million for the twelve-month period in fiscal 2017 as compared to $280 million in the six-month period for fiscal 2016 following the acquisition of Freedom Mobile (formerly, WIND Mobile) on March 1, 2016. Excluding the results of the Wireless division, revenue for the twelve-month period from the combined Consumer and Business Network Services divisions was up $34 million or 0.8%. Customer acquisition was the primary driver of revenue growth in the Business Network Services division. The Consumer division's revenue was comparable to the prior year reflecting the impact of rate increases being fully offset by elevated promotional activity and wireline Video product mix.

Operating income before restructuring costs and amortization of $1,997 million for the twelve-month period improved 1.0% compared to $1,978 million for fiscal 2016. The improvement was primarily due to the Wireless division contributing $133 million over the twelve-month period as compared to $59 million in fiscal 2016 over the six-month period following the acquisition of Freedom Mobile (formerly, WIND Mobile). The operating income before restructuring costs and amortization increase of $29 million for the twelve-month period in the Business Network Services division was more than fully offset by $84 million decrease in the Consumer division. In the Consumer division, rate increases and RGU growth (led by Internet) were more than fully offset by elevated promotional activity and Video product mix in addition to higher programming costs and higher planned marketing investments.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

Amortization

(millions of Canadian dollars)	2017	2016	Change %
Amortization revenue (expense)			
Deferred equipment revenue	**38**	52	(26.9)
Deferred equipment costs	**(122)**	(139)	(12.2)
Property, plant and equipment, intangibles and other	**(860)**	(753)	14.2

Amortization of property, plant and equipment, intangibles and other increased 14.2% for the year ended August 31, 2017 over the comparable period due to amortization of new expenditures exceeding the amortization of assets that became fully amortized during the year. In addition, only six months of Wireless division amortization was included in the prior year subsequent to the acquisition of Freedom Mobile (formerly, WIND Mobile) on March 1, 2016.

Amortization of financing costs and Interest expense

(millions of Canadian dollars)	2017	2016	Change %
Amortization of financing costs – long-term debt	**2**	3	(33.3)
Interest expense	**258**	268	(3.7)

Interest expense for the twelve-month period ended August 31, 2017 decreased over the comparable period primarily due to lower average outstanding debt balances in the current year.

Other income and expenses

(millions of Canadian dollars)	2017	2016	Increase (decrease) in income
Business acquisition costs	**–**	(21)	21
Equity loss of an associate or joint venture	**73**	(61)	134
Other losses	**(65)**	(97)	32
	8	(179)	187

In fiscal 2017, the Company recorded equity income of $73 million related to its interest in Corus, compared to equity losses of $10 million in the prior year. In fiscal 2016, the Company also recorded equity losses of $51 million related to its interest in shomi, the subscription video-on-demand service launched in early November 2014. The equity loss includes amounts in respect of the development and launch of the business.

In fiscal 2016, the Company incurred $21 million of acquisition related costs for professional fees paid to lawyers, consultants, advisors and other related costs in respect of the acquisition of Freedom Mobile (formerly, WIND Mobile) which closed on March 1, 2016.

Other losses generally include realized and unrealized foreign exchange gains and losses on US dollar denominated current assets and liabilities, gains and losses on disposal of property, plant and equipment and minor investments, and the Company's share of the operations of Burrard Landing Lot 2 Holdings Partnership. In the current year, the category also includes a net $82 million provision in respect of the Company's investment in shomi which announced a wind down of operations during the first quarter. In the prior year, the category also includes a write-down of $54 in respect of the Company's investment in shomi, a write-down of $20 in respect of a private portfolio investment and asset write-downs of $16.

Income tax expense

The income tax expense was calculated using current statutory income tax rates of 26.7% for 2017 and 26.7% for 2016 and was adjusted for the reconciling items identified in Note 23 to the Consolidated Financial Statements.

Earnings per share

(millions of Canadian dollars except per share amounts)	2017	2016	Change %
Net income	**851**	1,240	(31.4)
Weighted average number of participating shares outstanding during period (millions)	**491**	480	
Earnings per share			
Basic	**1.72**	2.51	
Diluted	**1.71**	2.51	

Net income

Net income was $851 million in 2017 compared to $1.24 billion in 2016. The year-over-year changes are summarized in the table below.

(millions of Canadian dollars)	
Increased operating income before restructuring costs and amortization	**19**
Increased restructuring costs	**(31)**
Increased amortization	**(103)**
Decreased interest expense	**10**
Increased equity income of an associate or joint venture	**134**
Change in other net costs and revenue(1)	**53**
Increased income taxes	**(12)**
Decreased income from discontinued operations, net of tax	**(459)**
	(389)

(1) Net other costs and revenue includes business acquisition costs, accretion of long-term liabilities and provisions, debt retirement costs and other losses as detailed in the Consolidated Statements of Income.

Net other costs and revenues had a $53 million favourable impact on net income primarily due to amounts incurred in fiscal 2016 related to the following; $21 million for the acquisition of Freedom Mobile (formerly, WIND Mobile), the impairment of the Company's joint venture in shomi of $54 million, and the write-down of private portfolio investment. See "Other income and Expense" for further detail on non-operating items.

SEGMENTED OPERATIONS REVIEW

CONSUMER

Financial Highlights

(millions of Canadian dollars)	2017	2016	Change %
Revenue	**3,747**	3,752	(0.1)
Operating income before restructuring costs and amortization(1)	**1,583**	1,667	(5.0)
Operating margin(1)	**42.2%**	44.4%	(2.2pts)

(1) Refer to key performance drivers.

The Consumer division added a net 25,321 RGUs in the year representing a substantial turnaround over the 170,032 RGU loss in fiscal 2016. Net gains in the year included the addition of approximately 73,367 Internet RGUs partially offset by net losses in Phone of 31,232 and 17,032 in satellite Video RGUs. The successful reversal of subscriber trends has been led by WideOpen Internet 150, our cable Video portfolio including the introduction of BlueSky TV, and compelling bundle and value plan offerings across all product lines.

Consumer revenue for the year of $3.8 billion was comparable to last year. The effect of price adjustments and subscriber growth in Internet was fully offset by lower Phone and Satellite video RGUs, elevated promotional activity and change in Video product mix.

Operating income before restructuring costs and amortization of $1.58 billion decreased 5.0% over the prior year. The year-to-date result was affected primarily by elevated promotional activity and change in Video product mix in addition to higher programming costs as well as higher planned marketing costs driving Internet and BlueSky TV.

WIRELESS

Financial Highlights

(millions of Canadian dollars)	2017	2016	Change %
Revenue	**605**	280	>100.0
Operating income before restructuring costs and amortization[(1)]	**133**	59	>100.0
Operating margin[(1)]	**22.0%**	21.1%	0.9pts

(1) Refer to key performance drivers.

In Wireless, the Company continued to grow postpaid and prepaid wireless subscribers, gaining a combined 103,885 RGUs in the year. An expanded handset lineup, simplified packaging and pricing on the new LTE-Advanced network, and targeted seasonal promotional activity helped drive sequential and year-over-year subscriber growth while collectively contributing to the compelling value proposition of Freedom Mobile's offering to thousands of value-conscious Canadians.

Revenue for the twelve-month period of $605 million increased $325 million from $280 million for the comparable period in fiscal 2016. The year-over-year improvement in revenue was primarily due to recognizing revenues for the whole twelve-month period in fiscal 2017 as compared to $280 million in the six-month period for fiscal 2016 following the acquisition of Freedom Mobile (formerly, WIND Mobile) on March 1, 2016. Fiscal 2017 incremental revenue was driven by RGU and ARPU growth in which a net 97,063 postpaid subscribers and 6,822 prepaid subscribers were added representing a 10% increase and a fourth quarter ARPU of $37.66. ARPU of $37.00 for the full fiscal year compared to $36.84 for the six-month period following the fiscal 2016 acquisition, reflecting a higher proportionate share of postpaid subscribers.

Operating income before restructuring costs and amortization of $133 million increased $74 million over $59 million from fiscal 2016. The year-over-year improvement was primarily due to contributions for the twelve-month period in fiscal 2017 compared to $59 million for the six-month period in fiscal 2016 following the acquisition of Freedom Mobile (formerly, WIND Mobile) on March 1, 2016. Revenue growth from RGU net additions, ARPU increases, and operational efficiencies achieved following the May 2017 restructuring were partially offset by the costs related to new customer onboarding and network related costs.

BUSINESS NETWORK SERVICES

Financial Highlights

(millions of Canadian dollars)	2017	2016	Change %
Revenue	**554**	515	7.6
Operating income before restructuring costs and amortization[(1)]	**281**	252	11.5
Operating margin[(1)]	**50.7%**	48.9%	1.8pts

(1) Refer to key performance drivers.

Revenue of $554 million was 7.6% higher over the prior year primarily due to customer growth in both small to medium size businesses and in large enterprise markets, as well as an August 2017 rate increase for legacy Video, Internet and Phone products. The core business, excluding satellite services, increased revenues 8.9% on a full year basis, reflecting continued customer growth converting to or adding Shaw's Smart suite of products.

Operating income before restructuring costs and amortization of $281 million improved 11.5% over the comparable year due to consistent profitable customer growth trends throughout fiscal 2017 and cost reductions specifically related to programming, professional fees and efficiencies achieved through optimized sales and operational resources. Operating income before restructuring and amortization for the core business, excluding satellite services, increased by 11.6% on a full year basis.

CAPITAL EXPENDITURES AND EQUIPMENT COSTS

	Year ended August 31,		
(millions of Canadian dollars)	2017	2016	Change %
Consumer and Business Network Services			
New housing development	**98**	105	(6.7)
Success based	**308**	278	10.8
Upgrades and enhancements	**432**	411	5.1
Replacement	**31**	43	(27.9)
Buildings and other	**101**	91	11.0
Total as per Note 24 to the audited annual consolidated financial statements	**970**	928	4.5
Wireless			
Total as per Note 24 to the audited annual consolidated financial statements	**255**	121	110.7
Consolidated total as per Note 24 to the audited annual consolidated financial statements	**1,225**	1,049	16.8

Capital investment from continuing operations was $1.2 billion in the current year compared to $1.1 billion in fiscal 2016. The increase was driven primarily by incremental success based capital in each of the Consumer and Business Network Services divisions in addition to a full year of capital investment in the Wireless division relating primarily to investment for the continued improvement in network infrastructure, specifically the rollout of the LTE-Advanced network.

Consumer and Business Network Services

Success based capital for the twelve-month period of $308 million was moderately higher than the comparable period last year. The current year increase in success based capital was due primarily to increased advanced Internet Wi-Fi modem spend and higher video equipment costs driven by subscriber installations, and higher Satellite success based capital spend driven by satellite network MPEG-4 upgrades. These increases were partially offset by lower installation labour costs across all product lines.

Capital spend on the combined upgrades and enhancement, and replacement categories was $463 million, a $9 million increase over fiscal 2016, reflecting the Company's continued investment in the wireline network including i) significant bandwidth and upgrade programs; ii) initial investment in support of Satellite MPEG-2 to MPEG-4 upgrade; and iii) investment in Business Network Services managed Wi-Fi and SmartVoice products. Increased investments were partly offset by lower capital spend due to timing of expenditures in the X1 video delivery platforms necessary to support BlueSky TV, decreased spend on Shaw Go WiFi access points, reduced spend on fleet replacement and lower drop upgrade costs.

Capital spend on new housing development of $98 million was comparable to the prior year as the Company continues to expand its network in developing communities.

Investment in buildings and other of $101 million for the twelve-month period was up $10 million over the comparable period.

Wireless

Capital investment in the Wireless division of $255 million for the twelve-month period was up $134 million over the prior year reflecting a full year of capital spend compared to six months in fiscal 2016. Fiscal 2017 investments relate to continued

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

improvements in network infrastructure primarily in the LTE-Advanced network upgrade project and to a lesser extent capital expenditures related to the upgrade of back office systems.

DISCONTINUED OPERATIONS

VIAWEST, INC.

On August 1, 2017, Shaw sold 100% of its wholly owned subsidiary ViaWest, Inc to Peak 10 for net cash proceeds of US$1.675 billion. Accordingly, the operating results and operating cash flows for the previously reported Business Infrastructure Services division are presented as discontinued operations separate from the Company's continuing operations.

	Year ended August 31,	
	2017	**2016**
Revenue	**336**	334
Eliminations(1)	**(2)**	(2)
	334	332
Operating, general and administrative expenses		
Employee salaries and benefits	**80**	84
Purchases of goods and services	**124**	123
	204	207
Eliminations(1)	**(2)**	(2)
	202	205
Amortization(2)	**103**	121
Interest on long-term debt	**32**	33
Amortization of transaction costs	**12**	2
Other losses	**–**	5
Income (loss) from discontinued operations before tax and gain on divestiture	**(15)**	(34)
Income taxes	**(6)**	(11)
Income (loss) from discontinued operations, net of tax, before gain on divestiture	**(9)**	(23)
Gain on divestiture, net of tax	**330**	–
Income (loss) from discontinued operations, net of tax	**321**	(23)

(1) Eliminations relate to intercompany transactions between continuing and discontinued operations. The costs are included in continuing operations as they are expected to continue to be incurred subsequent to the disposition.

(2) As of the date ViaWest met the criteria to be classified as held for sale, the Company ceased amortization of non-current assets of the division, including property, plant and equipment, intangibles and other. Amortization that would otherwise have been taken in the three and twelve month periods ended August 31, 2017 amounted to $16.

SHAW TRACKING

On May 31, 2017, the Company entered an agreement to sell a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation reported within the Company's Business Network Services segment. The Company determined that the assets and liabilities of the Shaw Tracking business met the criteria to be classified as a disposal group held for sale for the period ended May 31, 2017. Accordingly, the assets and liabilities of the Shaw Tracking business are classified in the Consolidated Statement of Financial Position at August 31, 2017 as current assets held for sale or current liabilities held for sale, respectively, as the sale of these assets and liabilities is expected within one year. In addition, the operating results and operating cash flows of the business are presented as discontinued operations separate from the Company's continuing operations.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

Subsequent to year-end, on September 15, 2017, the sale of these assets and liabilities was completed and net proceeds of approximately US$15 million were received.

	Year ended August 31,	
	2017	2016
Revenue	**33**	33
Operating, general and administrative expenses		
Employee salaries and benefits	**7**	7
Purchases of goods and services	**18**	17
	25	24
Restructuring	**3**	–
Amortization	**(2)**	(3)
Impairment of goodwill/disposal group	**32**	17
Income (loss) from discontinued operations before tax	**(25)**	(5)
Income taxes	**2**	3
Income (loss) from discontinued operations, net of tax	**(27)**	(8)

SHAW MEDIA

On April 1, 2016, Shaw sold 100% of its wholly owned subsidiary Shaw Media to Corus, a related party subject to common voting control for $2.65 billion, comprised of $1.85 billion in cash and 71,364,853 Corus Class B non-voting participating shares. Accordingly, the operating results and operating cash flows for the previously reported Media division are presented as discontinued operations separate from the Company's continuing operations.

	Year ended August 31,	
	2017	2016
Revenue	–	610
Eliminations(1)	–	(46)
	–	564
Operating, general and administrative expenses		
Employee salaries and benefits	–	109
Purchases of goods and services(2)	–	272
	–	381
Eliminations(1)	–	(46)
	–	335
Restructuring costs	–	–
Amortization(2)	–	11
Accretion of long-term liabilities and provisions	–	2
Other losses	–	–
Income from discontinued operations before tax and gain on divestiture	–	216

Income from discontinued operations before gain on divestiture	–	159
Gain on divestiture	–	672
Income taxes on gain	–	47
Income (loss) from discontinued operations, net of tax	–	784

(1) Eliminations relate to intercompany transactions between continuing and discontinued operations. The costs are included in continuing operations as they are expected to continue to be incurred subsequent to the disposition.

(2) As of the date the Media division met the criteria to be classified as held for sale, the Company ceased amortization of non-current assets of the division, including program rights, property, plant and equipment, intangibles and other. Amortization that would otherwise have been taken in twelve-month period amounted to $35 for program rights and $6 for property, plant and equipment, intangibles and other.

FINANCIAL POSITION

Total assets were $14.4 billion at August 31, 2017. Following is a discussion of significant changes in the Consolidated Statement of Financial Position since August 31, 2016.

Current assets increased $242 million due to increases in cash of $102 million, accounts receivable of $18 million, inventories of $44 million, other current assets of $17 million and assets held for sale of $61 million. Cash increased as the cash outlay for financing activities was exceeded by the funds provided by operations and investing activities mainly relating to the ViaWest disposition. Inventories increased due to the acquisition of additional customer equipment to support the newly-launched BlueSky TV service. Other current assets increased due to the timing of payments related to prepaid expenses. Assets held for sale include the assets of the Shaw Tracking business for which the sale was completed subsequent to year-end, on September 15, 2017.

Investments and other assets increased $84 million primarily due to equity income and other comprehensive income of associates related to the Company's investment in Corus. Property, plant and equipment decreased $263 million due to the disposition of $491 million of ViaWest assets partially offset by capital investment in excess of amortization. Intangibles and goodwill decreased $1.1 billion due to the disposition of ViaWest assets of $1.4 billion and Shaw Tracking goodwill of $24 million reclassified as held for sale, partially offset by spectrum additions of $430 million and net software intangible additions.

Current liabilities decreased $427 million during the year due to decreases in current portion of long-term debt of $410 million, accounts payable and accrued liabilities of $31 million and income taxes payable of $34 million, partially offset by increases of $13 million in current provisions and $39 million in liabilities held for sale. Current portion of long-term debt decreased due to the repayment of $400 million 5.7% senior note at maturity on March 2, 2017. Accounts payable and accruals decreased mainly due to the disposition of ViaWest partially offset by the timing of payment and fluctuations in various payables including capital expenditures and interest. Income taxes payable decreased due to tax installment payments, partially offset by the current period provision. Current provisions increased primarily due to unpaid amounts relating to network fees and restructuring.

Long-term debt decreased $902 million primarily due to the repayment of US$846 million in bank loans related to the sale of ViaWest and the disposition of ViaWest partially offset by the issuance of $300 million fixed rate senior notes at a rate of 3.80% due March 1, 2027. The $300 million proceeds from the issuance of the fixed rate senior notes, together with cash on hand, was used to repay the $400 million senior note due on March 2, 2017.

Shareholders' equity increased $456 million primarily due to an increase in share capital of $291 million and an increase in retained earnings of $256 million partially offset by an increase in accumulated other comprehensive loss of $79 million. Share capital increased due to the issuance of 10,523,349 Class B non-voting participating shares ("Class B Non-Voting Shares") under the Company's option plan and Dividend Reinvestment Plan ("DRIP").

As at November 15, 2017, share capital is as reported at August 31, 2017 with the exception of the issuance of a total of 2,105,118 Class B Non-Voting Shares upon exercise of options under the Company's option plan and the issuance of shares under the Company's dividend reinvestment plan. Retained earnings decreased due to dividends of $397 million, partially offset by current year earnings of $851 million. Accumulated other comprehensive loss increased due to the net effect of reclassifying the accumulated exchange differences arising on the translation of ViaWest and US dollar denominated debt designated as a hedge of the Company's net investment in those foreign operations due to the sale of ViaWest in the quarter as well as re-measurements recorded on employee benefit plans and the Company's share of other comprehensive income of associates.

CONSOLIDATED CASH FLOW ANALYSIS

Operating activities

(millions of Canadian dollars)	2017	2016	Change %
Funds flow from operations	**1,530**	1,388	10.2
Net change in non-cash working capital balances related to operations	**(110)**	53	(>100.0)
Operating activities of discontinued operations	**82**	222	(63.1)
	1,502	1,663	(9.7)

On a year-to-date basis, funds flow from operations decreased over the comparable period primarily due to higher amortization, higher restructuring costs, higher income tax expense and lower operating income of discontinued operations partially offset by higher operating income before restructuring costs and amortization, higher equity income on investees, lower business acquisition costs and lower pension funding. The net change in non-cash working capital balances related to operations fluctuated over the comparative periods due to changes in accounts receivable and other current asset balances and the timing of payment of current income taxes payable and accounts payable and accrued liabilities.

Investing activities

(millions of Canadian dollars)	2017	2016	Decrease
Cash flow used in investing activities	**49**	(1,227)	1,276

For the twelve month period ended August 31, 2017, cash used in investing activities decreased over the comparable period due primarily to the US$1.675 billion in proceeds received on the sale of Viawest partially offset by the $245 million net impact of the acquisition of Freedom Mobile (formerly, WIND Mobile) and sale of Media in the prior year, the purchase of $430 million in spectrum licences in the current year and higher cash outlays for inventory and capital expenditures in the current year. The twelve-month period also includes the $223 acquisition of INetU in the prior year which was included in the sale of Viawest in the current year.

Financing activities

The changes in financing activities during 2017 and 2016 were as follows:

(millions of Canadian dollars)	2017	2016
Bank loans – net borrowings (repayments)	**(475)**	67
Repay 5.70% Senior unsecured notes	**(400)**	–
Issuance of 3.80% Senior unsecured notes	**300**	–
Repay Cdn variable rate senior notes	**–**	(300)
Issuance of 3.15% senior unsecured notes	**–**	300
Repay 6.15% Senior unsecured notes	**–**	(300)
Senior notes issuance cost	**(2)**	(2)
Freedom Mobile finance lease obligations	**(2)**	(1)
Bank facility arrangement costs	**(2)**	(6)
Dividends	**(393)**	(393)
Issuance of Class B Non-Voting Shares	**77**	38
Financing activities of discontinued operations	**(551)**	168
	(1,448)	(429)

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

LIQUIDITY AND CAPITAL RESOURCES

In the current year, the Company generated $438 million of free cash flow, including $7 million of free cash flow from discontinued operations. Shaw used its free cash flow along with US$1.675 billion net proceeds on the sale of ViaWest, $300 million proceeds from a senior note issuance, borrowings of $350 million under its credit facilities, borrowings of $40 million under ViaWest's credit facility and proceeds on issuance of Class B Non-Voting Shares of $77 million to repay at maturity $400 million 5.7% senior notes, repay $824 million borrowings under its credit facilities, repay $588 million borrowings under ViaWest's credit facilities, fund the net working capital change of $160 million, pay common share dividends of $385 million, make $180 million in financial investments, purchase $430 million in spectrum licences, and pay $54 million in restructuring costs.

The Company issued Class B Non-Voting Shares from treasury under its DRIP which resulted in cash savings and incremental Class B Non-Voting Shares of $198 million during the twelve months ending August 31, 2017. On December 16, 2016, the Company amended its DRIP to permit eligible shareholders who are residents of the United States to enrol their Class A Participating Shares and Class B Non-voting Participating Shares in the DRIP. Prior to this amendment, the DRIP was only available to eligible shareholders who were residents of Canada.

Debt structure and financial policy

Shaw structures its borrowings generally on a standalone basis and are unsecured. While certain non-wholly owned subsidiaries are subject to contractual restrictions which may prevent the transfer of funds to Shaw, there are no similar restrictions with respect to wholly-owned subsidiaries of the Company.

As at August 31, 2017, the net debt leverage ratio for the Company is 1.9 times as compared to 2.7 times at August 31, 2016. Having regard to prevailing competitive, operational and capital market conditions, the Board of Directors has determined that having this ratio in the range of 2.0 to 2.5x would be optimal leverage for the Company in the current environment. Should the ratio fall below this, other than on a temporary basis, the Board may choose to recapitalize back into this optimal range. The Board may also determine to increase the Company's debt above these levels to finance specific strategic opportunities such as a significant acquisition or repurchase of Class B Non-Voting Participating Shares in the event that pricing levels were to drop precipitously.

The Company calculates net debt leverage ratio as follows[1]:

(millions of Canadian dollars)	2017	2016
Current portion of Long-Term Debt	**2**	412
Long-Term Debt	**4,298**	5,200
50% of Outstanding Preferred Shares	**147**	147
Cash	**(507)**	(405)
(A) Net Debt[3]	**3,940**	5,354
Operating income before restructuring costs and amortization[2]	**1,997**	1,978
Corus Dividends	**88**	34
(B) Adjusted operating income before restructuring costs and amortization[3]	**2,085**	2,012
(A/B) Net debt leverage ratio[2]	**1.9x**	2.7x

(1) The following contains a description of the Company's use of non-IFRS financial measures provides a reconciliation to the nearest IFRS measure or provides a reference to such reconciliation.

(2) Refer to key performance drivers.

(3) These financial measures do not have standard definitions prescribed by IFRS and therefore may not be comparable to similar measures disclosed by other companies and have not been presented as an alternative to liquidity prescribed by IFRS.

Shaw's credit facilities are subject to customary covenants which include maintaining minimum or maximum financial ratios. At August 31, 2017 Shaw is in compliance with these covenants and based on current business plans, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants over the life of the borrowings.

	Covenant Limit
Shaw Credit Facilities	
Total Debt to Operating Cash Flow(1) Ratio	< 5.00:1
Operating Cash Flow(1) to Fixed Charges(2) Ratio	> 2.00:1

(1) Operating Cash Flow, for the purposes of the covenants, is calculated as net earnings before interest expense, depreciation, amortization and current and deferred income taxes, excluding profit or loss from investments accounted for on an equity basis, for the most recently completed fiscal quarter multiplied by four, plus cash dividends and other cash distributions received in the most recently completed four fiscal quarters from investments accounted for on an equity basis.

(2) Fixed Charges are defined as the aggregate interest expense for the most recently completed fiscal quarter multiplied by four.

On June 30, 2016, 1,987,607 of the Company's Cumulative Redeemable Rate Reset Class 2 Preferred Shares, Series A ("Series A Shares") were converted into an equal number of Cumulative Redeemable Floating Rate Class 2 Preferred Shares, Series B ("Series B Shares") in accordance with the notice of conversion right issued on May 31, 2016. As a result of the conversion, the Company has 10,012,393 Series A Shares and 1,987,607 Series B Shares issued and outstanding. The Series A Shares will continue to be listed on the TSX under the symbol SJR.PR.A. The Series B Shares began trading on the TSX on June 30, 2016 under the symbol SJR.PR.B. The annual fixed dividend rate for the Series A Shares, payable quarterly, was reset to 2.791% for the five-year period from and including June 30, 2016 to but excluding June 30, 2021. The floating quarterly dividend rate for the Series B Preferred Shares were set as follows:

Period	Annual Dividend Rate
June 30, 2016 to September 29, 2016	2.539%
September 30, 2016 to December 30, 2016	2.512%
December 31, 2016 to March 30, 2017	2.509%
March 31, 2017 to June 290, 2017	2.480%
June 30, 2017 to September 29, 2017	2.529%
September 30, 2017 to December 30, 2017	2.742%

The floating quarterly dividend rate will be reset quarterly.

Based on the aforementioned financing activities, available credit facilities and forecasted free cash flow, the Company expects to have sufficient liquidity to fund operations and obligations, including maturing debt, during the upcoming fiscal year. On a longer-term basis, Shaw expects to generate free cash flow and have borrowing capacity sufficient to finance foreseeable future business plans and refinance maturing debt.

Off-balance sheet arrangement and guarantees

Guarantees

Generally, it is not the Company's policy to issue guarantees to non-controlled affiliates or third parties; however, it has entered into certain agreements as more fully described in Note 25 to the Consolidated Financial Statements. As disclosed thereto, Shaw believes it is remote that these agreements would require any cash payment.

Shaw Communications Inc.
Management's Discussion and Analysis
August 31, 2017

Contractual obligations

The amounts of estimated future payments under the Company's contractual obligations at August 31, 2017 are detailed in the following table.

Contractual Obligations

	Payments due by period				
(millions of Canadian dollars)	Total	Within 1 year	2 – 3 years	4 – 5 years	More than 5 years
Long-term debt[1]	7,044	242	1,667	1,079	4,056
Operating obligations[2]	1,310	359	458	221	272
Purchase obligations[3]	921	921	–	–	–
Other obligations[4]	1	1	–	–	–
	9,276	1,523	2,125	1,300	4,328

(1) Includes principal repayments and interest payments.

(2) Includes maintenance and lease of satellite transponders, program related agreements, lease of transmission facilities and premises and exclusive rights to use intellectual property in Canada.

(3) Includes capital expenditure and inventory purchase commitments.

(4) Includes other non-current financial liabilities.

Share Capital and Listings

The Company is authorized to issue a limited number of Class A participating shares ("**Class A Shares**"); an unlimited number of Class B Non-Voting participating shares (the "**Class B Non-Voting Shares**"); an unlimited number of Class 1 Preferred Shares issuable in series; and an unlimited number of Class 2 Preferred Shares issuable in series, of which 12,000,000 were designated Cumulative Redeemable Rate Reset Class 2 Preferred Shares, Series A (the "**Series A Shares**") and 12,000,000 were designated Cumulative Redeemable Floating Rate Class 2 Preferred Shares, Series B (the "**Series B Shares**"). The authorized number of Class A Shares is limited, subject to certain exceptions, to the lesser of that number of such shares (i) currently issued and outstanding; and (ii) that may be outstanding after any conversion of Class A Shares into Class B Non-Voting Shares.

As at November 15, 2017, there were 476,455,979 Class B Non-Voting Shares, 10,012,393 Series A Shares, and 1,987,607 Series B Shares and 22,420,064 Class A Shares issued and outstanding. Shaw is traded on the Toronto and New York stock exchanges and is included in the S&P/TSX 60 Index (Trading Symbols: TSX – SJR.B, SJR.PR.A, SJR.PR.B, NYSE – SJR, and TSXV – SJR.A). Share Splits

There have been four splits of the Company's Class A and Class B Shares: July 30, 2007 (2 for 1); February 7, 2000 (2 for 1); May 18, 1994 (2 for 1); and September 23, 1987 (3 for 1). In addition, as a result of the Arrangement referred to in the Management Information Circular dated July 22, 1999, a Shareholder's Adjusted Cost Base was reduced for tax purposes.

ADDITIONAL INFORMATION

Additional information relating to Shaw, including the Company's 2017 Annual Information Form can be found on SEDAR at www.sedar.com.

COMPLIANCE WITH NYSE CORPORATE GOVERNANCE LISTING STANDARDS

Disclosure of the Company's corporate governance practices which differ from the New York Stock Exchange ("NYSE") corporate governance listing standards are posted on Shaw's website, www.shaw.ca (under Investors/Corporate Governance/ Compliance with NYSE Corporate Governance Listing Standards).

CERTIFICATION

The Company's Chief Executive Officer and Chief Financial Officer have filed certifications regarding Shaw's disclosure controls and procedures and internal control over financial reporting.

As at August 31, 2017, the Company's management, together with its Chief Executive Officer and Chief Financial Officer, has evaluated the effectiveness of the design and operation of each of the Company's disclosure controls and procedures and internal control over financial reporting. Based on these evaluations, the Chief Executive Officer and Chief Financial Officer have concluded that the Company's disclosure controls and procedures and the Company's internal control over financial reporting are effective.

There were no changes in the Company's internal control over financial reporting during the fiscal year that have materially affected or are reasonably likely to materially affect Shaw's internal control over financial reporting.

The design of any system of controls and procedures is based in part upon certain assumptions about the likelihood of certain events. There can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions, regardless of how remote.

Shaw Communications Inc.
Management's Responsibility For Financial Statements And Report On Internal Control Over Financial Reporting

November 28, 2017

MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL REPORTING

The accompanying consolidated financial statements of Shaw Communications Inc. and all the information in this annual report are the responsibility of management and have been approved by the Board of Directors.

The financial statements have been prepared by management in accordance with International Financial Reporting Standards. When alternative accounting methods exist, management has chosen those it deems most appropriate in the circumstances. Financial statements are not precise since they include certain amounts based on estimates and judgments. Management has determined such amounts on a reasonable basis in order to ensure that the financial statements are presented fairly, in all material respects. Management has prepared the financial information presented elsewhere in the annual report and has ensured that it is consistent with the financial statements.

Management has a system of internal controls designed to provide reasonable assurance that the financial statements are accurate and complete in all material respects. The internal control system includes an internal audit function and an established business conduct policy that applies to all employees. Management believes that the systems provide reasonable assurance that transactions are properly authorized and recorded, financial information is relevant, reliable and accurate and that the Company's assets are appropriately accounted for and adequately safeguarded.

The Board of Directors is responsible for ensuring management fulfils its responsibilities for financial reporting and is ultimately responsible for reviewing and approving the financial statements. The Board carries out this responsibility through its Audit Committee.

The Audit Committee is appointed by the Board and its directors are unrelated and independent. The Committee meets periodically with management, as well as the external auditors, to discuss internal controls over the financial reporting process, auditing matters and financial reporting issues; to satisfy itself that each party is properly discharging its responsibilities; and, to review the annual report, the financial statements and the external auditors' report. The Audit Committee reports its findings to the Board for consideration when approving the financial statements for issuance to the shareholders. The Committee also considers, for review by the Board and approval by the shareholders, the engagement or re-appointment of the external auditors.

The financial statements have been audited by Ernst & Young LLP, the external auditors, in accordance with Canadian generally accepted auditing standards on behalf of the shareholders. Ernst & Young LLP has full and free access to the Audit Committee.

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

Management is responsible for establishing and maintaining an adequate system of internal control over financial reporting. Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the financial statements for external purposes in accordance with generally accepted accounting principles.

Due to its inherent limitations, internal control over financial reporting may not prevent or detect misstatements on a timely basis. Also, projections of any of the effectiveness of internal control are subject to the risk that the controls may become inadequate because of changes in conditions or that the degree of compliance with the policies and procedures may deteriorate. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to the financial statement preparation and presentation.

Shaw Communications Inc.
Management's Responsibility For Financial Statements And Report On Internal Control Over Financial Reporting

Management conducted an evaluation of the effectiveness of the system of internal control over financial reporting based on the framework in "Internal Control – Integrated Framework" issued by the Committee of Sponsoring Organizations of the Treadway Commission 2013 framework. Based on this evaluation, management concluded that the Company's system of internal control over financial reporting was effective as at August 31, 2017.

Shaw Communications Inc.
INDEPENDENT AUDITORS' REPORT OF REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders of Shaw Communications Inc.:

We have audited the accompanying consolidated financial statements of Shaw Communications Inc., which comprise the consolidated statements of financial position as at August 31, 2017 and 2016, and the consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years ended August 31, 2017 and 2016, and a summary of significant accounting policies and other explanatory information.

Management's responsibility for the consolidated financial statements
Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditors' responsibility
Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards and the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditors' judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditors consider internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the consolidated financial statements, evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion
In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of Shaw Communications Inc. as at August 31, 2017 and 2016, and its financial performance and its cash flows for the years ended August 31, 2017 and 2016 in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board.

Other matter
We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Shaw Communication Inc.'s internal control over financial reporting as of August 31, 2017, based on the criteria established in Internal Control – Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission 2013 framework and our report dated November 28, 2017 expressed an unqualified opinion on Shaw Communications Inc.'s internal control over financial reporting.

Shaw Communications Inc.
INDEPENDENT AUDITORS' REPORT ON INTERNAL CONTROLS UNDER STANDARDS OF THE PUBLIC COMPANY ACCOUNTING OVERSIGHT BOARD (UNITED STATES)

To the Shareholders of Shaw Communications Inc.:

We have audited Shaw Communications Inc.'s internal control over financial reporting as at August 31, 2017, based on the criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission 2013 framework (the COSO criteria). Shaw Communications Inc.'s management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with IFRS, and that receipts and expenditures of the company are being made only in accordance with authorization of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Shaw Communications Inc. maintained, in all material respects, effective internal control over financial reporting as at August 31, 2017, based on the COSO criteria.

We have also audited, in accordance with Canadian generally accepted auditing standards and the standards of the Public Accounting Oversight Board (United States), the consolidated statements of financial position of Shaw Communications Inc. as at August 31, 2017 and 2016, and the consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years ended August 31, 2017 and 2016, and our report dated November 28, 2017 expressed an unqualified opinion thereon.

Shaw Communications Inc.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
August 31, 2017 and 2016
[all amounts in millions of Canadian dollars except share and per share amounts]

1. CORPORATE INFORMATION

Shaw Communications Inc. (the "Company") is a diversified Canadian connectivity company whose core operating business is providing: Cable telecommunications and Satellite video services to residential customers ("Consumer"); data networking, Cable telecommunications, and Satellite video services to businesses and public sector entities ("Business Network Services"); and wireless services for voice and data communications ("Wireless").

The Company was incorporated under the laws of the Province of Alberta on December 9, 1966 under the name Capital Cable Television Co. Ltd. and was subsequently continued under the Business Corporations Act (Alberta) on March 1, 1984 under the name Shaw Cablesystems Ltd. Its name was changed to Shaw Communications Inc. on May 12, 1993. The Company's shares are listed on the Toronto and New York Stock Exchanges. The registered office of the Company is located at Suite 900, 630 – 3rd Avenue S.W., Calgary, Alberta, Canada T2P 4L4.

2. BASIS OF PRESENTATION AND ACCOUNTING POLICIES

Statement of compliance

These consolidated financial statements of the Company have been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB").

The consolidated financial statements of the Company for the years ended August 31, 2017 and 2016, were approved by the Board of Directors and authorized for issue on November 28, 2017.

Basis of presentation

These consolidated financial statements have been prepared primarily under the historical cost convention and are expressed in millions of Canadian dollars unless otherwise indicated. Other measurement bases used are outlined below and in the applicable notes. The consolidated statements of income are presented using the nature classification for expenses.

Basis of consolidation

(i) Subsidiaries

The consolidated financial statements include the accounts of the Company and those of its subsidiaries, which are entities over which the Company has control. Control exists when the Company has power over an investee, is exposed to or has rights to variable returns from its involvement and has the ability to affect those returns. Intercompany transactions and balances are eliminated on consolidation. The results of operations of subsidiaries acquired during the period are included from their respective dates of acquisition, being the time at which the Company obtains control. Consolidation of a subsidiary ceases when the Company loses control. A change in ownership interests of a subsidiary, without a loss of control, is accounted for as an equity transaction. The Company assesses control through share ownership and voting rights.

Non-controlling interests arise from business combinations in which the Company acquires less than 100% ownership interest. At the time of acquisition, non-controlling interests are measured at either fair value or their proportionate share of the fair value of the acquiree's identifiable assets. The Company determines the measurement basis on a transaction by transaction basis. Subsequent to acquisition, the carrying amount of non-controlling interests is increased or decreased for their share of changes in equity.

(ii) Joint operations

A joint operation is a type of joint arrangement whereby the parties that have joint control of the arrangement have rights to the assets and obligations for the liabilities, relating to the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control. The consolidated financial statements include the Company's proportionate share of the assets, liabilities, revenues, and expenses of its interests in joint operations.

The Company's joint operations include a 33.33% interest in the Burrard Landing Lot 2 Holdings Partnership (the "Partnership"). The Partnership owns and leases commercial space in Shaw Tower in Vancouver, BC, which is the Company's headquarters for its lower mainland operations. In classifying its 33.33% interest in the Partnership as a joint operation, the Company considered the terms and conditions of the partnership agreement and other facts and circumstances including the primary purpose of Shaw Tower which is to provide lease space to the partners.

Investments in associates and joint ventures

Associates are entities over which the Company has significant influence. Significant influence is the power to participate in the operating and financial policies of the investee, but is not control or joint control.

A joint venture is a type of joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control.

Investments in associates and joint ventures are accounted for using the equity method. Investments of this nature are recorded at original cost and adjusted periodically to recognize the Company's proportionate share of the associate's or joint venture's net income/loss and other comprehensive income/loss after the date of investment, additional contributions made and dividends received.

The Company has classified its approximate 39% participating interest in Corus Entertainment Inc. ("Corus") as an investment in an associate after considering both companies are subject to common control and the ability of the Company to appoint directors to Corus' Board of Directors.

The Company has classified its 50% interest in the Shomi Partnership ("shomi") as an investment in a joint venture after considering the terms and conditions of the partnership.

Revenue and expenses

The Company has multiple deliverable arrangements comprised of upfront fees (subscriber connection and installation fee revenue and/or customer premise equipment revenue) and related subscription and service revenue. Upfront fees charged to customers do not constitute separate units of accounting, therefore these revenue streams are assessed as an integrated package.

(i) Revenue

Revenue from Video, Internet, Phone, Direct-to-Home ("DTH") and Wireless customers includes subscriber revenue earned as services are provided. Satellite distribution services and telecommunications service revenue is recognized in the period in which the services are rendered to customers. In addition to monthly service plans, the Company also offers multi-year service plans in which the total amount of the contractual service revenue is accounted for on a straight-line basis over the term of the plan. Fees for wireless voice, text and data services on a pay-per-use basis are recognized in the period that the service is provided. Revenue from the direct sale of equipment to wireless subscribers or dealers is recognized when the equipment is delivered and accepted by the subscribers or dealers.

Subscriber connection fees received from Video, Internet, and Phone customers are deferred and recognized as revenue on a straight-line basis over three years. Direct and incremental initial selling, administrative and connection costs related to subscriber acquisitions are recognized as an operating expense as incurred. The costs of physically connecting a new home are capitalized as part of the distribution system and costs of disconnections are expensed as incurred.

Initial setup fees related to the installation of data centre services and installation revenue received on contracts with commercial business customers are deferred and recognized as revenue on a straight-line basis over the related service contract, which generally span 2-10 years. Direct and incremental costs associated with the installation of services or service contract, in an amount not exceeding the upfront revenue, are deferred and recognized as an operating expense on a straight-line basis over the same period.

The Company offers a discretionary wireless handset discount program, whereby the subscriber earns the applicable discount by maintaining services with the Company, such that the receivable relating to the discount at inception of the transaction is reduced over a period of time. A portion of future revenues earned in connection with the services is applied against the up-front discount provided on the handset. The Company also offers a plan allowing customers to receive larger up-front handset discounts than they would otherwise qualify for, if they pay a predetermined incremental charge to their existing service plan on a monthly basis. The charge is billed on a monthly basis and is recognized as revenue at that time. The Company recognizes the handset discount as a receivable and revenue upon the sale of the equipment on the basis that the receivable is recoverable. The receivable is realized on a straight-line basis over the period which the discount is forgiven to a maximum of two years with an offsetting reduction to revenue. The amount receivable is classified as part of other current or non-current receivables, as applicable, in the consolidated statement of financial position.

Affiliate subscriber revenue is recognized monthly based on subscriber levels. Advertising revenues are recognized in the period in which the advertisements are broadcast and recorded net of agency commissions as these amounts are paid directly to the agency or advertiser. When a sales arrangement includes multiple advertising spots, the proceeds are allocated to individual advertising spots under the arrangement based on relative fair values. Revenue from data centre customers includes colocation and other services revenue, including managed infrastructure revenue. Colocation revenue is recognized on a straight-line line basis over the term of the customer contract. Other services revenue, including managed infrastructure revenue, is recognized as the services are provided.

(ii) Deferred equipment revenue and deferred equipment costs

Revenue from sales of DTH equipment and digital cable terminals (“DCTs”) is deferred and recognized on a straight-line basis over three years commencing when subscriber service is activated. The total cost of the equipment, including installation, represents an inventoriable cost which is deferred and recognized on a straight-line basis over the same period. The DCT and DTH equipment is generally sold to customers at cost or a subsidized price in order to expand the Company’s customer base.

Revenue from sales of satellite tracking hardware and costs of goods sold is deferred and recognized on a straight-line basis over the related service contract for monthly service charges for air time, which is generally five years. The amortization of the revenue and cost of sale of satellite service equipment commences when goods are shipped.

Recognition of deferred equipment revenue and deferred equipment costs is recorded as deferred equipment revenue amortization and deferred equipment costs amortization, respectively.

(iii) Deferred IRU revenue

Prepayments received under indefeasible right to use (“IRU”) agreements are amortized on a straight-line basis into income over the term of the agreement and included in amortization of property, plant and equipment, intangibles and other in the consolidated statements of income.

Cash

Cash is presented net of outstanding cheques. When the amount of outstanding cheques and the amount drawn under the Company’s revolving term facility are greater than the amount of cash, the net amount is presented as bank indebtedness.

Allowance for doubtful accounts

The Company maintains an allowance for doubtful accounts for the estimated losses resulting from the inability of its customers to make required payments. In determining the allowance, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company’s past collection history and changes in business circumstances.

Inventories

Inventories include subscriber equipment such as DCTs and DTH receivers, which are held pending rental or sale at cost or at a subsidized price. When subscriber equipment is sold, the equipment revenue and equipment costs are deferred and amortized over three years. When the subscriber equipment is rented, it is transferred to property, plant and equipment and amortized over its useful life. Inventories are determined on a first-in, first-out basis, and are stated at cost due to the eventual capital nature as either an addition to property, plant and equipment or deferred equipment costs.

Inventories of wireless handsets, accessories and SIM cards are carried at the lower of cost and net realizable value. Cost is determined using the weighted average method and includes expenditures incurred in acquiring the inventories and bringing them to their existing condition and location. Net realizable value is the estimated selling price in the ordinary course of business, less selling expenses.

Property, plant and equipment

Property, plant and equipment are recorded at purchase cost. Direct labour and other directly attributable costs incurred to construct new assets, upgrade existing assets and connect new subscribers are capitalized as well as borrowing costs on qualifying assets. In addition, any asset removal and site restoration costs in connection with the retirement of assets are capitalized. Repairs and maintenance expenditures are charged to operating expense as incurred. Amortization is recorded on a straight-line basis over the estimated useful lives of assets as follows:

Asset	Estimated useful life
Cable, Wireless and telecommunications distribution system	3-20 years
Digital cable terminals and modems	2-5 years
Satellite audio, video and data network equipment and DTH receiving equipment	3-15 years
Transmitters, broadcasting and communication equipment	5-15 years
Buildings	15-40 years
Data centre infrastructure	3-21 years
Data processing	4-10 years
Other	4-20 years

The Company reviews the estimates of lives and useful lives on a regular basis.

Assets held for sale and discontinued operations

Non-current assets and disposal groups are classified as held for sale when specific criteria are met and are measured at the lower of carrying amount and estimated fair value less costs to sell. Assets held for sale are not amortized and are reported separately on the statement of financial position.

The Company reports financial results for discontinued operations separately from continuing operations to distinguish the financial impact of disposal transactions from ongoing operations. Discontinued operations reporting occurs when the disposal of a component or a group of components of the Company represents a strategic shift that will have a major impact on the Company's operations and financial results, and where the operations and cash flows can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the Company.

The results of discontinued operations are excluded from both continuing operations and business segment information in the consolidated financial statements and the notes to the consolidated financial statements, unless otherwise noted, and are presented net of tax in the statement of income for the current and comparative periods. Refer to Note 3 for further information regarding the Company's discontinued operations.

Other long-term assets

Other long-term assets primarily include (i) equipment costs, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over three to five years, (ii) multi-year service plan discounts, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over the term of the plan, (iii) the non-current portion of wireless handset discounts receivable as described in the revenue and expenses accounting policy, (iv) credit facility arrangement fees amortized on a straight-line basis over the term of the facility, (v) long-term receivables, (vi) network capacity leases, (vii) the non-current portion of prepaid maintenance and support contracts and (viii) direct costs in connection with initial setup fees and installation of services, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over two to ten years.

Intangibles

The excess of the cost of acquiring cable, satellite, media, data centre and wireless businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist of amounts allocated to broadcast rights and licences, wireless spectrum licences, trademarks, brands, program rights, customer relationships and software assets. Broadcast rights and licences, wireless spectrum licences, trademarks and brands represent identifiable assets with indefinite useful lives.

Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over their estimated useful lives ranging from 4 – 15 years.

Software that is not an integral part of the related hardware is classified as an intangible asset. Internally developed software assets are recorded at historical cost and include direct material and labour costs as well as borrowing costs on qualifying assets. Software assets are amortized on a straight-line basis over estimated useful lives ranging from 3 – 10 years. The Company reviews the estimates of lives and useful lives on a regular basis.

Program rights represent licenced rights acquired to broadcast television programs on the Company's conventional and specialty television channels and program advances are in respect of payments for programming prior to the window licence start date. For licenced rights, the Company records a liability for program rights and corresponding asset when the licence period has commenced and all of the following conditions have been met: (i) the cost of the program is known or reasonably determinable, (ii) the program material has been accepted by the Company in accordance with the licence agreement and (iii) the material is available to the Company for telecast. Program rights are expensed on a systematic basis generally over the estimated exhibition period as the programs are aired and are included in operating, general and administrative expenses. Program rights are segregated on the statement of financial position between current and noncurrent based on expected life at time of acquisition.

Borrowing costs

The Company capitalizes borrowing costs on qualifying assets, for which the commencement date is on or after September 1, 2010, that take more than one year to construct or develop using the Company's weighted average cost of borrowing which approximated 6% (2016 – 6%).

Impairment

(i) Goodwill and indefinite-life intangibles

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at March 1) and when events or changes in circumstances indicate that the carrying value may be impaired. The recoverable amount of each cash-generating unit ("CGU") is determined based on the higher of the CGU's fair value less costs to sell ("FVLCS") and its value in use ("VIU"). A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are Cable, Satellite, and Wireless. The Company had two additional cash generating units, Media, until the sale of the division in April 2016 and data centres, until the sale of Viawest in August 2017. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods.

(ii) Non-financial assets with finite useful lives

For non-financial assets, such as property, plant and equipment and finite-life intangible assets, an assessment is made at each reporting date as to whether there is an indication that an asset may be impaired. If any indication exists, the recoverable amount of the asset is determined based on the higher of FVLCS and VIU. Where the carrying amount of the asset exceeds its recoverable amount, the asset is considered impaired and written down to its recoverable amount. Previously recognized impairment losses are reviewed for possible reversal at each reporting date and all or a portion of the impairment is reversed if the asset's value has increased.

CRTC benefit obligations

The fair value of CRTC benefit obligations committed as part of business acquisitions are initially recorded at the present value of amounts to be paid net of any expected incremental cash inflows. The obligation is subsequently adjusted for the incurrence of related expenditures, the passage of time and for revisions to the timing of the cash flows. Changes in the obligation due to the passage of time are recorded as accretion of long-term liabilities and provisions in the income statement.

Provisions

Provisions are recognized when the Company has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. The timing or amount of the outflow may still be uncertain. Provisions are measured using the best estimate of the expenditure required to settle the present obligation at the end of the reporting period, taking into account risks and uncertainties associated with the obligation. Provisions are discounted where the time value of money is considered material.

(i) Asset retirement obligations

The Company recognizes the fair value of a liability for an asset retirement obligation in the period in which it is incurred, on a discounted basis, with a corresponding increase to the carrying amount of property and equipment, primarily in respect of wireless and transmitter sites. This cost is amortized on the same basis as the related asset. The liability is subsequently increased for the passage of time and the accretion is recorded in the income statement as accretion of long-term liabilities and provisions. The discount rates applied are subsequently adjusted to current rates as required at the end of reporting periods. Revisions due to the estimated timing of cash flows or the amount required to settle the obligation may result in an increase or decrease in the liability. Actual costs incurred upon settlement of the obligation are charged against the liability to the extent recorded.

(ii) Restructuring provisions

Restructuring provisions, primarily in respect of employee termination benefits, are recognized when a detailed plan for the restructuring exists and a valid expectation has been raised to those affected that the plan will be carried out.

(iii) Other provisions

Provisions for disputes, legal claims and contingencies are recognized when warranted. The Company establishes provisions after taking into consideration legal assessments (if applicable), expected availability of insurance or other recourse and other available information.

Deferred credits

Deferred credits primarily include: (i) prepayments received under IRU agreements amortized on a straight-line basis into income over the term of the agreement, (ii) equipment revenue, as described in the revenue and expenses accounting policy, deferred and amortized over three to five years, (iii) connection fee revenue, initial setup fees and upfront installation revenue, as described in the revenue and expenses accounting policy, deferred and amortized over two to ten years, and (iv) a deposit on a future fibre sale.

Leases

(i) Operating leases

Rent expense for real estate leases that have escalating lease payments is recorded on a straight-line basis over the term of the lease. The difference between the expense recorded and the amount paid is recorded as deferred rent and included in deferred credits in the statement of financial position.

(ii) Finance leases

Leases of property and equipment that transfer substantially all the risks and rewards of ownership are classified as finance leases. Finance leases are capitalized at the commencement of the lease at the fair value of the leased property or, if lower, at

Shaw Communications Inc.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
August 31, 2017 and 2016
[all amounts in millions of Canadian dollars except share and per share amounts]

the present value of the minimum lease payments. Lease payments are apportioned between interest expense and reduction of the lease liability. The property and equipment acquired under finance leases is depreciated over the shorter of the useful life of the asset and the lease term.

Income taxes

The Company accounts for income taxes using the liability method, whereby deferred income tax assets and liabilities are determined based on differences between the financial reporting and tax bases of assets and liabilities measured using substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse. Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset and they relate to income taxes levied by the same authority in the same taxable entity. Income tax expense for the period is the tax payable for the period using tax rates substantively enacted at the reporting date, any adjustments to taxes payable in respect of previous years and any change during the period in deferred income tax assets and liabilities, except to the extent that they relate to a business combination or divestment, items recognized directly in equity or in other comprehensive income. The Company records interest and penalties related to income taxes in income tax expense.

Tax credits and government grants

The Company receives tax credits primarily related to its research and development activities. Government financial assistance is recognized when management has reasonable assurance that the conditions of the government programs are met and accounted for as a reduction of related costs, whether capitalized and amortized or expensed in the period the costs are incurred.

Foreign currency translation

Transactions originating in foreign currencies are translated into Canadian dollars at the exchange rate at the date of the transaction. Monetary assets and liabilities are translated at the period-end rate of exchange and non-monetary items are translated at historic exchange rates. The net foreign exchange gain/(loss) recognized on the translation and settlement of current monetary assets and liabilities was $12 (2016 – $1) and is included in other losses.

The functional currency of the Company's discontinued foreign operations was US dollars. Assets and liabilities, including goodwill and fair value adjustments arising on acquisition, were translated into Canadian dollars using the foreign exchange rate at the end of the reporting period. Revenue and expenses were translated using average foreign exchange rates, which approximate the foreign exchange rates on the dates of the transactions. Foreign exchange differences arising on translation were included in other comprehensive income/loss and accumulated in equity and reclassified to net income in the period the foreign operations were disposed of.

Financial instruments other than derivatives

Financial instruments have been classified as loans and receivables, assets available-for-sale, assets held-for-trading or financial liabilities. Cash has been classified as held-for-trading and is recorded at fair value with any change in fair value immediately recognized in income (loss). Other financial assets are classified as available-for-sale or as loans and receivables. Available-for-sale assets are carried at fair value with changes in fair value recorded in other comprehensive income (loss) until realized. Available-for-sale equity instruments not quoted in an active market and where fair value cannot be reliably measured are recorded at cost less impairment. Loans and receivables and financial liabilities are carried at amortized cost. None of the Company's financial assets are classified as held-to-maturity and none of its financial liabilities are classified as held-for-trading.

Finance costs and discounts associated with the issuance of debt securities are netted against the related debt instrument and amortized to income using the effective interest rate method. Accordingly, long-term debt accretes over time to the principal amount that will be owing at maturity.

Shaw Communications Inc.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

[all amounts in millions of Canadian dollars except share and per share amounts]

Derivative financial instruments and hedging activities

The Company uses derivative financial instruments, such as foreign currency forward purchase contracts, to manage risks from fluctuations in foreign exchange rates. All derivative financial instruments are recorded at fair value in the statement of financial position. Where permissible, the Company accounts for these financial instruments as hedges which ensures that counterbalancing gains and losses are recognized in income in the same period. With hedge accounting, changes in the fair value of derivative financial instruments designated as cash flow hedges are recorded in other comprehensive income (loss) until the variability of cash flows relating to the hedged asset or liability is recognized in income (loss). When an anticipated transaction is subsequently recorded as a non-financial asset, the amounts recognized in other comprehensive income (loss) are reclassified to the initial carrying amount of the related asset. Where hedge accounting is not permissible or derivatives are not designated in a hedging relationship, they are classified as held-for-trading and the changes in fair value are immediately recognized in income (loss).

Instruments that have been entered into by the Company to hedge exposure to foreign currency risk are reviewed on a regular basis to ensure the hedges are still effective and that hedge accounting continues to be appropriate.

A net investment hedge of the discontinued foreign operation was accounted for similarly to a cash flow hedge. The Company designated certain US dollar denominated debt as a hedge of its net investment in foreign operations where the US dollar was the functional currency. Unrealized gains and losses arising from translation of the US dollar denominated debt were included in other comprehensive income/loss and accumulated in equity and reclassified to net income in the period the foreign operations were disposed of.

Fair value measurements

Fair value estimates are made at a specific point in time, based on relevant market information and information about the financial instrument. These estimates are subjective in nature and involve uncertainties and matters of significant judgement and, therefore, cannot be determined with precision. Changes in assumptions could significantly affect the estimates.

The fair value hierarchy is based on inputs to valuation techniques that are used to measure fair value that are either observable or unobservable. Observable inputs reflect assumptions market participants would use in pricing an asset or liability based on market data obtained from independent sources while unobservable inputs reflect a reporting entity's pricing based upon their own market assumptions.

The fair value hierarchy consists of the following three levels:

Level 1 Inputs are quoted prices in active markets for identical assets or liabilities.

Level 2 Inputs for the asset or liability are based on observable market data, either directly or indirectly, other than quoted prices.

Level 3 Inputs for the asset or liability are not based on observable market data.

The Company determines whether transfers have occurred between levels in the fair value hierarchy by assessing the impact of events and changes in circumstances that could result in a transfer at the end of each reporting period.

Employee benefits

The Company accrues its obligations under its employee benefit plans, net of plan assets. The cost of pensions and other retirement benefits earned by certain employees is actuarially determined using the projected benefit method pro-rated on service and management's best estimate of salary escalation and retirement ages of employees. Past service costs from plan initiation and amendments are recognized immediately in the income statement. Remeasurements include actuarial gains or losses and the return on plan assets (excluding interest income). Actuarial gains and losses occur because assumptions about benefit plans relate to a long time frame and differ from actual experiences. These assumptions are revised based on actual experience of the plans such as changes in discount rates, expected retirement ages and projected salary increases. Remeasurements are recognized in other comprehensive income (loss) on an annual basis, at a minimum, and on an interim basis when there are significant changes in assumptions.

August 31 is the measurement date for the Company's employee benefit plans. The last actuarial valuations for funding purposes for the various plans were performed effective August 31, 2017 and the next actuarial valuations for funding purposes are effective August 31, 2018.

Share-based compensation

The Company has a stock option plan for directors, officers, employees and consultants to the Company. The options to purchase shares must be issued at not less than the fair value at the date of grant. Any consideration paid on the exercise of stock options, together with any contributed surplus recorded at the date the options vested, is credited to share capital. The Company calculates the fair value of share-based compensation awarded to employees using the Black-Scholes option pricing model. The fair value of options are expensed and credited to contributed surplus over the vesting period of the options using the graded vesting method.

The Company has a restricted share unit ("RSU") plan for officers and employees of the Company. RSUs vest on the first, second and third anniversary of the grant date and compensation is recognized on a straight-line basis over the three-year vesting period. RSUs will be settled in cash and the obligation for RSUs is measured at the end of each period at fair value using the Black-Scholes option pricing model and the number of outstanding RSUs.

The Company has a deferred share unit ("DSU") plan for its Board of Directors. Compensation cost is recognized immediately as DSUs vest when granted. DSUs will be settled in cash and the obligation is measured at the end of each period at fair value using the Black-Scholes option pricing model and the number of outstanding DSUs.

The Company has an employee share purchase plan (the "ESPP") under which eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the participant's contributions, increasing to 33% once an employee reaches 10 years of continuous service, and records such amounts as compensation expense.

Share appreciation rights ("SARs") issued by a subsidiary to eligible employees were cash settled and measured at fair value using the Black-Scholes option pricing model. The fair value was recognized over the vesting period of the SARs by applying the graded vesting method, adjusting for estimated forfeitures. The obligation for SARs was remeasured at the end of each period up to the date of settlement which required a reassessment of the estimates used at the end of each reporting period.

Earnings per share

Basic earnings per share is based on net income attributable to equity shareholders adjusted for dividends on preferred shares and is calculated using the weighted average number of Class A Shares and Class B Non-Voting Shares outstanding during the period. Diluted earnings per share is calculated by considering the effect of all potentially dilutive instruments. In calculating diluted earnings per share, any proceeds from the exercise of stock options and other dilutive instruments are assumed to be used to purchase Class B Non-Voting Shares at the average market price during the period.

Guarantees

The Company discloses information about certain types of guarantees that it has provided, including certain types of indemnities, without regard to whether it will have to make any payments under the guarantees.

Estimation uncertainty and critical judgements

The preparation of consolidated financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the period. Actual results could differ from those estimates and significant changes in assumptions could cause an impairment in assets. The following require the most difficult, complex or subjective judgements which result from the need to make estimates about the effects of matters that are inherently uncertain.

Estimation uncertainty

The following are key assumptions concerning the future and other key sources of estimation uncertainty that could impact the carrying amount of assets and liabilities and results of operations in future periods.

(i) Allowance for doubtful accounts

The Company is required to make an estimate of an appropriate allowance for doubtful accounts on its receivables. The estimated allowance required is a matter of judgement and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foretold, such as future business, personal and economic conditions.

(ii) Contractual service revenue

The Company is required to make an estimate of the total amount of contractual service revenue when offering discounts on multi-year service plans. The estimated revenue is a matter of judgement and the total revenue earned over the period may be more or less than the estimate, depending on events which have yet to occur and which cannot be foretold, such as future business, customer and economic conditions.

(iii) Property, plant and equipment

The Company is required to estimate the expected useful lives of its property, plant and equipment. These estimates of useful lives involve significant judgement. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. Management's judgement is also required in determination of the amortization method, the residual value of assets and the capitalization of labour and overhead.

(iv) Business combinations – purchase price allocation

Purchase price allocations involve uncertainty because management is required to make assumptions and judgements to estimate the fair value of the identifiable assets acquired and liabilities assumed in business combinations. Fair value estimates are based on quoted market prices and widely accepted valuation techniques, including discounted cash flow ("DCF") analysis. Such estimates include assumptions about inputs to the valuation techniques, industry economic factors and business strategies.

(v) Impairment

The Company estimates the recoverable amount of its CGUs using a FVLCS calculation based on a DCF analysis or market approach. Where a DCF analysis is used, significant judgements are inherent in this analysis including estimating the amount and timing of the cash flows attributable to the broadcast rights and licences, the selection of an appropriate discount rate, and the identification of appropriate terminal growth rate assumptions. In this analysis the Company estimates the discrete future cash flows associated with the CGU for five years and determines a terminal value. The future cash flows are based on the Company's estimates of future operating results, economic conditions and the competitive environment. The terminal value is estimated using both a perpetuity growth assumption and a multiple of operating income before restructuring costs and amortization. The discount rates used in the analysis are based on the Company's weighted average cost of capital and an assessment of the risk inherent in the projected cash flows. In analyzing the FVLCS determined by a DCF analysis, the Company also considers a market approach determining a recoverable amount for each unit and total entity value determined using a market capitalization approach. Recent market transactions are taken into account, when available. The key assumptions used to determine the recoverable amounts, including a sensitivity analysis, are included in note 10. A DCF analysis uses significant unobservable inputs and is therefore considered a level 3 fair value measurement.

(vi) Employee benefit plans

The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the

Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected will be needed to settle employee benefit obligations. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes are required.

(vii) Income taxes

The Company is required to estimate income taxes using substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse. In determining the measurement of tax uncertainties, the Company applies a probability weighted average methodology. Realization of deferred income tax assets is dependent on generating sufficient taxable income during the period in which the temporary differences are deductible. Although realization is not assured, management believes it is more likely than not that all recognized deferred income tax assets will be realized based on reversals of deferred income tax liabilities, projected operating results and tax planning strategies available to the Company and its subsidiaries.

(viii) Contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities.

Critical judgements

The following are critical judgements apart from those involving estimation:

(i) Determination of a CGU

Management's judgement is required in determining the Company's cash generating units for the impairment assessment of its indefinite-life intangible assets. The CGUs have been determined considering operating activities and asset management and are Cable, Satellite, and Wireless. The Company had two additional CGUs, Media, until the sale of the division in April 2016 and data centres, until the sale of Viawest in August 2017.

(ii) Broadcast rights and licences and spectrum licences – indefinite-life assessment

A number of the Company's businesses are dependent upon broadcast licences (or operate pursuant to an exemption order) granted and issued by the CRTC or wireless spectrum licences issued by the Department of Innovation, Science and Economic Development (formerly, Industry Canada). While these licences must be renewed from time to time, the Company has never failed to do so. In addition, there are currently no legal, regulatory or competitive factors that limit the useful lives of these assets.

Adoption of recent accounting pronouncement

The adoption of the following IFRS amendments effective September 1, 2016 had no impact on the Company's consolidated financial statements.

- *Clarification of Acceptable Methods of Depreciation and Amortization* (Amendments to IAS 16 *Property, Plant and Equipment* and IAS 38 *Intangible Assets)* prohibits revenue from being used as a basis to depreciate property, plant and equipment and significantly limits use of revenue-based amortization for intangible assets. The amendments were applied prospectively for the annual period commencing September 1, 2016.

[all amounts in millions of Canadian dollars except share and per share amounts]

Standards, interpretations and amendments to standards issued but not yet effective

The Company has not yet adopted certain standards and interpretations that have been issued but are not yet effective. The following pronouncements are being assessed to determine the impact on the Company's results and financial position.

- IFRS 2 *Share-based Payment* was amended in 2016 to clarify the accounting and measurement for certain types of share-based payment transactions. It is required to be applied for annual periods commencing on or after January 1, 2018, however earlier application is permitted.
- IAS 7 *Statement of Cash Flows* was amended in 2016 to improve disclosures regarding changes in financing liabilities. It is required to be applied for annual period beginning on or after January 1, 2017.
- IFRS 9 *Financial Instruments: Classification and Measurement* replaces IAS 39 *Financial Instruments* and applies a principal-based approach to the classification and measurement of financial assets and financial liabilities, including an expected credit loss model for calculating impairment, and includes new requirements for hedge accounting. The standard is required to be applied retrospectively for the annual period commencing January 1, 2018. We are assessing the impact of this standard on our consolidated financial statements.
- IAS 12 *Income Taxes* was amended in 2016 to clarify how to account for deferred tax assets related to debt instruments measured at fair value. It is required to be applied for annual periods commencing January 1, 2017.
- IFRS 15 *Revenue from Contracts with Customers*, was issued in May 2014 and replaces IAS 11 *Construction Contracts*, IAS 18 *Revenue*, IFRIC 13 *Customer Loyalty Programs*, IFRIC 15 *Agreements for the Construction of Real Estate*, IFRIC 18 *Transfers of Assets from Customers* and SIC-31 *Revenue – Barter Transactions Involving Advertising Services*. The new standard requires revenue to be recognized in a manner that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration expected to be received in exchange for those goods or services. The principles are to be applied in the following five steps: (1) identify the contract(s) with a customer, (2) identify the performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the performance obligations in the contract, and (5) recognize revenue when (or as) the entity satisfies a performance obligation.

  The application of IFRS 15 will impact the Company's reported results, including the classification and timing of revenue recognition and the treatment of costs incurred to obtain contracts with customers. IFRS 15 requires the estimation of total consideration to be received over the contract term at contract inception, and the allocation of that consideration to performance obligations in the contract, typically based on the relative stand-alone selling price of each obligation. IFRS 15 also requires that incremental costs to obtain a contract with a customer (for example, commissions) be capitalized and amortized into operating expenses over time. The Company currently expenses such costs as incurred.

  The Company's financial position will also be impacted by the adoption of IFRS 15, with new contract asset and contract liability categories recognized to reflect differences between the timing of revenue recognition and the actual billing of those goods and services to customers. While similar differences are recognized currently, IFRS 15 introduces additional requirements and disclosures specific to contracts with customers.

  Shaw continues to evaluate the impacts of IFRS 15 and preparations are underway for the adoption of the new standard. Initial planning and scoping efforts were conducted during 2017, with ongoing development of the required accounting policies, significant judgements and estimates, processes, information systems and internal controls expected to continue throughout the Company's 2018 fiscal year. In connection with these development efforts, the Company also expects a significant historical data gathering initiative will be required to identify and account for multi-year contracts with customers at the date of adoption. At this stage in the Company's IFRS 15 implementation process, it is not possible to make reasonable quantitative estimates of the effects of the new standard.

  The new standard is effective for annual periods beginning on or after January 1, 2018, which for the Company will be the annual period commencing September 1, 2018, and must be applied either retrospectively or on a modified retrospective basis for all contracts that are not complete as at that date. The Company continues to evaluate the adoption approach in conjunction with its assessment of the expected impacts of adoption.
- IFRS 16 *Leases* requires entities to recognize lease assets and lease obligations on the balance sheet. For lessees, IFRS 16 removes the classification of leases as either operating leases or finance leases, effectively treating all leases as

[all amounts in millions of Canadian dollars except share and per share amounts]

finance leases. Certain short-term leases (less than 12 months) and leases of low-value are exempt from the requirements and may continue to be treated as operating leases. Lessors will continue with a dual lease classification model. Classification will determine how and when a lessor will recognize lease revenue, and what assets would be recorded.

As the Company has significant contractual obligations currently being recognized as operating leases, we anticipate that the application of IFRS 16 will result in a material increase to both assets and liabilities and material changes to the timing of the recognition of expenses associated with the lease arrangements although at this stage in the Company's IFRS 16 implementation process, it is not possible to make reasonable quantitative estimates of the effects of the new standard.

The standard may be applied retroactively or using a modified retrospective approach for annual periods commencing January 1, 2019, with early adoption permitted if IFRS 15 *Revenue from Contracts with Customers* has been adopted. The Company will evaluate the adoption approach in conjunction with its assessment of the expected impacts of adoption.

- IFRIC 23, *Uncertainty over Income Tax Treatments* was issued in 2017 to clarify how to apply the recognition and measurement requirements in IAS 12 when there is uncertainty over income tax treatments. It is required to be applied for annual periods commencing January 1, 2019.

Change in accounting policy

In November 2016, the IFRS Interpretations Committee ("the Committee") published a summary of its meeting discussion regarding a request to clarify how an entity determines the expected manner of recovery of an intangible asset with an indefinite useful life for the purposes of measuring deferred tax in accordance with IAS 12 *Income Taxes*. Although the Committee decided not to add this issue to its agenda, the Committee noted that an intangible asset with an indefinite useful life is not a non-depreciable asset because a non-depreciable asset has an unlimited (or infinite) life, and that indefinite does not mean infinite. Consequently, the fact that an entity does not amortize an intangible asset with an indefinite useful life does not necessarily mean that the entity will recover the carrying amount of that asset only through sale and not through use. As such, the Company changed retrospectively its accounting policy for the accounting of deferred tax on intangible assets with indefinite useful lives to be in line with the Committee discussions.

The following table summarizes the impact of this change of accounting policy on previously reported consolidated statements of financial position. The change in accounting policy did not have an impact on the previously reported consolidated statements of income or consolidated statements of cash flows.

Increase (decrease) to previously reported amounts	**As at August 31,**	
	2016	**2015**
Goodwill	143	182
Deferred income tax liabilities	740	779
Retained earnings[(1)]	(597)	(597)

(1) Included in Shareholders' equity – Common and preferred shareholders

3. BUSINESS ACQUISITIONS, ASSET DISPOSITIONS AND ASSET HELD FOR SALE

Business acquisitions

Mid-Bowline Group Corp. (and its wholly owned subsidiary, Freedom Mobile Inc.)

On March 1, 2016, the Company completed the acquisition of 100% of the shares of Mid-Bowline Group Corp. and its wholly owned subsidiary Freedom Mobile Inc. (collectively, "Freedom", previously, WIND Mobile Corp.) for enterprise value of $1.6 billion which was funded through a combination of cash on hand, a drawdown of $1.3 billion on the Company's credit facilities and the issuance of 2,866,384 Class B Non-Voting Participating Shares. The acquisition of Freedom is a significant step in the Company's drive for growth and positions the Company to be a leading pure-play provider of connectivity that is focused on delivering consumer and business communications supported by best-in-class wireline, WiFi, wireless and data infrastructure.

[all amounts in millions of Canadian dollars except share and per share amounts]

The operating results of Freedom are included in the Company's consolidated financial statements from the date of acquisition. Freedom contributed $280 revenue and $11 net income for the period from March 1, 2016 to August 31, 2016. If the acquisition had closed on September 1, 2015, Freedom revenue and net income would have approximated $541 and $15, respectively. In connection with the transaction, the Company incurred $20 of acquisition related costs for professional fees paid to lawyers, consultants and advisors.

The fair value of purchase consideration consisted of $1,588 in cash and $68 in shares issued in connection with the acquisition. A summary of net assets and allocation of consideration is as follows:

	$
Net assets acquired at assigned fair values	
Cash	35
Accounts receivable(1)	12
Inventories	24
Other current assets	58
Property, plant and equipment	277
Other long term assets	19
Intangibles(2)	1,560
Goodwill, not deductible for tax(3)(5)	201
	2,186
Accounts payable and accrued liabilities	110
Unearned revenue	9
Current debt(4)	3
Long-term debt(4)	2
Provisions	43
Deferred income taxes(5)	363
	1,656

(1) Accounts receivable consist of $23 gross contractual amounts receivable from customers less $11 not expected to be collected.

(2) Intangibles include wireless spectrum licences, subscriber relationships and software assets.

(3) Goodwill comprises the value of growth opportunities created through the combination of businesses and networks, a strong management team and an assembled workforce.

(4) Current and long-term debt is comprised of finance lease obligations in respect of certain equipment.

(5) Goodwill and Deferred income taxes increased $136 from amounts reported in fiscal 2016 as a result of the change in accounting policy referenced in Note 2.

INetU, Inc.

On December 15, 2015, ViaWest (a discontinued operation for fiscal 2017 reporting) closed the acquisition of 100% of the shares of INetU, Inc. ("INetU") for US$162 which was funded through a combination of borrowings under ViaWest's and the Company's revolving credit facilities as well as incremental term loan proceeds under ViaWest's credit facility. INetU is a solutions provider of public, private and hybrid cloud environments in addition to offering managed security and compliance services. The acquisition of INetU allowed ViaWest to add new services to its cloud and managed offerings, and to expand its geographical footprint with eastern U.S. and European cloud locations.

[all amounts in millions of Canadian dollars except share and per share amounts]

INetU contributed $32 revenue and $14 net income to the results of discontinued operations for the period from December 15, 2015 to August 31, 2016. If the acquisition had closed on September 1, 2015, revenue and net income would have been approximately $46 and $18, respectively.

In connection with the transaction, the Company incurred $1 of acquisition related costs for professional fees paid to lawyers, consultants and advisors.

The purchase consideration consisted of $223 in cash. A summary of net assets and allocation of consideration is as follows:

	$
Net assets acquired at assigned fair values	
Cash and cash equivalents	–
Receivables	4
Other current assets	1
Property and equipment	25
Intangibles(1)	68
Goodwill, not deductible for tax(2)	166
	264
Current liabilities	7
Deferred income taxes	34
	223

(1) Intangibles include customer relationships and software assets.

(2) Goodwill comprises the value of growth opportunities created through the combination of businesses, a strong management team and an assembled workforce. Goodwill decreased $8 at August 31, 2016 due to translation using the period end foreign exchange rate.

Other

Effective October 31, 2015, the Company acquired the assets of a small cable system serving approximately 1,300 video subscribers in British Columbia. The cash consideration of $2 has been allocated to property, plant and equipment and broadcast rights.

Asset dispositions

Sale of ViaWest

In the fourth quarter of fiscal 2017, the Company announced it had entered into an agreement to sell 100% of its wholly owned subsidiary Viawest, Inc. (“Viawest”) for proceeds of approximately US$1.675 billion. Accordingly, the operating results and operating cash flows for the previously reported Business Infrastructure Services segment are presented as discontinued operations separate from the Company’s continuing operations. Prior period financial information has also been reclassified to present the Business Infrastructure Services division of the Company as a discontinued operation.

The transaction closed on August 1, 2017, but remains subject to customary closing adjustments. The Company recognized a gain on the divestiture within income from discontinued operations as follows:

	August 31, 2017
Proceeds on disposal, net of transaction costs of $14	**1,905**
Reclassification of accumulated exchange differences from other comprehensive income related to the sale of a foreign operation	**82**
Net assets disposed	**(1,625)**
	362
Income taxes	**32**
Gain on divestiture, net of tax	**330**

Shaw Communications Inc.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
August 31, 2017 and 2016
[all amounts in millions of Canadian dollars except share and per share amounts]

In connection with the sale, the Company repaid Viawest debt of approximately US$466 and amounts outstanding under the Company's bank credit facility of US$380.

The assets and liabilities disposed of were as follows:

	$
Cash	**10**
Accounts receivable	**19**
Other current assets	**11**
Property, plant and equipment	**491**
Other long-term assets	**17**
Intangibles	**443**
Goodwill	**934**
	1,925
Accounts payable and accrued liabilities	**32**
Unearned revenue	**5**
Long-term debt	**139**
Other long-term liabilities	**20**
Deferred credits	**15**
Deferred income tax liabilities	**89**
	300

A reconciliation of the major classes of line items related to Viawest constituting income from discontinued operations, net of tax, as presented in the consolidated statements of income is shown below.

Sale of Shaw Media Inc. to Corus

In the second quarter of fiscal 2016, the Company announced it entered into an agreement with Corus, a related party subject to common voting control, to sell 100% of its wholly owned subsidiary Shaw Media Inc. ("Shaw Media") for a purchase price of approximately $2.65 billion comprised of $1.85 billion of cash and 71,364,853 Corus Class B non-voting participating shares.

Although, through holding of the shares in Corus, the Company will effectively retain an indirect, non-controlling interest in the Media division subsequent to the sale, the Company will no longer have control over the division. Accordingly, the assets and liabilities, operating results and operating cash flows for the previously reported Media segment are presented as discontinued operations separate from the Company's continuing operations. Prior period financial information has been reclassified to present the Media division as a discontinued operation.

The transaction closed on April 1, 2016. The Company recognized a gain on the divestiture within income from discontinued operations as follows:

	$
Proceeds on disposal, net of transaction costs of $22	**2,645**
Non-controlling interest in disposed net assets	**244**
Net assets disposed	**(2,217)**
	672
Income taxes	**47**
Gain on divestiture, net of tax	**625**

[all amounts in millions of Canadian dollars except share and per share amounts]

In connection with the disposal, remeasurements of employee benefit plans related to discontinued operations of $14 were transferred within equity from accumulated other comprehensive income to retained earnings.
The assets and liabilities disposed of were as follows:

	$ (restated – note 2)
Cash	**13**
Accounts receivable	**234**
Other current assets	**34**
Property, plant and equipment	**106**
Intangibles	**1,696**
Goodwill	**713**
	2,796
Accounts payable and accrued liabilities	**173**
Provisions	**12**
Income taxes payable	**23**
Unearned revenue	**4**
Other long-term liabilities	**46**
Deferred income tax liabilities	**321**
	579

A reconciliation of the major classes of line items related to Shaw Media constituting income from discontinued operations, net of tax, as presented in the consolidated statements of income is shown below.

Asset held for sale

Sale of Shaw Tracking

In the third quarter of fiscal 2017, the Company entered into an agreement to sell a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation reported within the Company's Business Network Services segment, for proceeds of approximately US$20, net of working capital adjustments. The Company determined that the assets and liabilities of the Shaw Tracking business met the criteria to be classified as a disposal group held for sale. Accordingly, the assets and liabilities of the Shaw Tracking business were reclassified in the consolidated balance sheet at August 31, 2017 to current assets held for sale or current liabilities held for sale, respectively, as the sale of such assets and liabilities is expected within one year. In addition, the operating results and operating cash flows of the business are presented as discontinued operations separate from the Company's continuing operations. The transaction closed on September 15, 2017, subsequent to year end, but remains subject to closing adjustments.

In connection with the reclassification of assets and liabilities of the Shaw Tracking business as held for sale, the Company reviewed the carrying value of the resulting disposal group and determined it exceeded its fair value less cost to sell. Accordingly, an impairment charge of $32 was recorded in the third quarter.

[all amounts in millions of Canadian dollars except share and per share amounts]

The following table summarizes the carrying value of the major classes of assets and liabilities of the disposal group which were classified as held for sale as at August 31, 2017:

	August 31, 2017
Accounts receivable	6
Inventories	6
Other current assets	1
Other long-term assets	24
Goodwill	24
Total assets of the discontinued operations classified as held for sale	**61**
Accounts payable and accrued liabilities	9
Deferred credits	32
Deferred income tax liabilities	(2)
Total liabilities of the discontinued operations classified as held for sale	**39**

A reconciliation of the major classes of line items related to Shaw Tracking constituting income from discontinued operations, net of tax, as presented in the consolidated statements of income is shown below.

A real estate property was classified as held for sale in the statement of financial position at September 1, 2015 and measured at estimated fair value less costs to sell. At September 1, 2015, the property's fair value was based on the sale which closed in fiscal 2016.

Results of Discontinued Operations

A reconciliation of the major classes of line items constituting income from discontinued operations, net of tax, as presented in the consolidated statements of income is as follows:

August 31, 2017	Viawest	Shaw Tracking	Total
Revenue	336	33	369
Eliminations(1)	(2)	–	(2)
	334	33	367
Operating, general and administrative expenses			
Employee salaries and benefits	80	7	87
Purchases of goods and services	124	18	142
	204	25	229
Eliminations(1)	(2)	–	(2)
	202	25	227
Restructuring costs	–	3	3
Amortization(2)	103	(2)	101
Interest on long-term debt	32	–	32
Accretion of long-term liabilities and provisions	12	–	12
Impairment of goodwill/disposal group	–	32	32
Income (loss) from discontinued operations before tax and gain on divestiture	(15)	(25)	(40)
Income taxes	(6)	2	(4)
Income from discontinued operations before gain on divestiture	(9)	(27)	(36)
Gain on divestiture, net of tax	330	–	330
Income from discontinued operations, net of tax	321	(27)	294

(1) Eliminations relate to intercompany transactions between continuing and discontinued operations. The costs are included in continuing operations as they continue to be incurred subsequent to the disposition.

(2) As of the date Viawest met the criteria to be classified as held for sale, the Company ceased amortization of non-current assets of the division, including property, plant and equipment, intangibles and other. Amortization that would otherwise have been taken in the year amounted to $16.

	2017 $	2016 $
Publicly traded companies	**896**	817
Investments in private entities	**41**	36
	937	853

The Company has a portfolio of minor investments in various private entities.

Corus

Corus is a leading media and content company that creates and delivers high quality brands and content across platforms for audiences around the world. The company's portfolio of multimedia offerings encompasses 45 specialty television services, 39 radio stations, 15 conventional television stations, a global content business, digital assets, live events, children's book publishing, animation software, technology and media services. Corus is headquartered in Canada, and its stock is listed on the TSX under the symbol CJR.B.

In connection with the sale of the Media division to Corus in 2016, the Company received 71,364,853 Corus Class B non-voting participating shares representing approximately 37% of Corus' total issued equity of Class A and Class B shares (the "Corus B Consideration Shares"). Although the Class B Corus shares do not have voting rights, the Company is considered to have significant influence due to Board representation. The Company agreed to retain approximately one third of its Corus B Consideration Shares for 12 months post-closing, until March 31, 2017, a second one third for 18 months post-closing, until September 30, 2017, and the final one third for 24 months post-closing, until March 31, 2018. As at August 31, 2017, the Company still holds all of the Corus B Consideration Shares that were received.

The Company also agreed to have its Corus B Consideration Shares participate in Corus' dividend reinvestment plan while subject to these retention periods until September 1, 2017. For the year ended August 31, 2017, the Company received dividends of $88 (2016 – $34) from Corus, of which $81 (6016 – $34) were reinvested in additional Corus Class B shares. At August 31, 2017, the Company owned 80,630,383 (2016 – 74,135,891) Corus Class B shares having a fair value of $1,109 (2016 – $911) and representing 39% (2016 – 38%) of the total issued equity of Corus. The Company's weighted average

Shaw Communications Inc.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
August 31, 2017 and 2016
[all amounts in millions of Canadian dollars except share and per share amounts]

ownership of Corus for the year ended August 31, 2017 was 38% (April 1 to August 31, 2016 – 37%). As of September 1, 2017, the Company's Corus B Consideration Shares no longer participate in Corus' dividend reinvestment plan.

Summary financial information for Corus is as follows:

	August 31, 2017	August 31, 2016
Current assets	**525**	470
Non-current assets	**5,543**	5,623
Current liabilities	**(604)**	(532)
Non-current liabilities	**(2,864)**	(3,085)
Net assets	**2,600**	2,476
Less: non-controlling interests	**(159)**	(158)
	2,441	2,318
Carrying amount of the investment	**897**	817

Summarized statement of earnings of Corus:

	Year ended August 31,	
	2017	2016
Revenue	**1,679**	1,171
Net income (loss) attributable to:		
Shareholders	**192**	126
Non-controlling interest	**32**	18
	224	144
Other comprehensive income, attributable to shareholders	**33**	(15)
Comprehensive income	**257**	129
Equity income from associates[1]	**73**	(10)
Other comprehensive income from equity accounted associates[1]	**13**	(5)
	86	(15)

(1) The Company's share of income and other comprehensive income reflect the weighted average proportion of Corus net income and other comprehensive income attributable to shareholders for the year ended August 31, 2017 and for the five months from April 1, 2016 to August 31, 2016 .

Shomi Partnership

The Company has a 50% joint control interest in Shomi Partnership ("shomi"), which was a subscription video-on-demand service that launched in November 2014. In September 2016, shomi and Rogers Communications Inc., announced the decision to wind down its operations with service ending on November 30, 2016. The Company's interest in shomi was accounted for using the equity method until May 31, 2016, at which point the investment was written down to zero. For the year ended August 31, 2017, an investment loss of $82 (2016 – $54) has been recorded. Summarized financial information is as follows:

	August 31, 2017	August 31, 2016
Current assets	**10**	25
Non-current assets	**–**	105
Current liabilities	**–**	(48)
Non-current liabilities	**–**	(5)
Partnership net assets	**10**	77

	2,406	2,421
Net book value	**7,715**	8,765

Broadcast rights and licences, trademark, brands and wireless spectrum licences have been assessed as having indefinite useful lives. While licences must be renewed from time to time, the Company has never failed to do so. In addition, there are currently no legal, regulatory, competitive or other factors that limit the useful lives of these assets.

The changes in the carrying amount of intangibles with indefinite useful lives, and therefore not subject to amortization, are as follows:

	Broadcast rights and licences $	Trademark and brands $	Goodwill (restated -note 2) $	Wireless spectrum licences $

Impairment testing of indefinite-life intangibles and goodwill

The Company conducted its annual impairment test on goodwill and indefinite-life intangibles as at March 1, 2017 and the recoverable amount of the cash generating units exceeded their carrying value.

A hypothetical decline of 10% in the recoverable amount of the broadcast rights and licences for the Cable cash generating unit as at March 1, 2017 would not result in any impairment loss. A hypothetical decline of 10% in the recoverable amount of the broadcast rights and licences for the Satellite cash generating unit as at March 1, 2017 would result in an impairment loss of approximately $59. The wireless cash generating unit was created with the acquisition of Freedom on March 1, 2016. A hypothetical decline of 10% in the recoverable amount of the wireless generating unit as at March 1, 2017 would not result in any impairment loss.

Any changes in economic conditions since the impairment testing conducted as at March 1, 2017 do not represent events or changes in circumstance that would be indicative of impairment at August 31, 2017.

[all amounts in millions of Canadian dollars except share and per share amounts]

Significant estimates inherent to this analysis include discount rates and the terminal value. At March 1, 2017, the estimates that have been utilized in the impairment tests reflect any changes in market conditions and are as follows:

		Terminal value	
	Post-tax discount rate	Terminal growth rate	Terminal operating income before restructuring costs and amortization multiple
Cable	8.0%	2.5%	7.5X

(1) During 2016, the Company underwent a restructuring following a set of significant asset realignment initiatives, including the acquisition of Freedom and divestiture of Shaw Media. Approximately 200 employees were affected by the 2016 restructuring. During 2017, the Company restructured certain operations within the Consumer segment and announced a realignment to integrate certain Consumer and Business Network Services operations along with Freedom Mobile. Approximately 360 employees were affected by the restructurings in 2017. Restructuring amounts are primarily in respect of severance and employee related costs. The majority of the remaining costs at August 31, 2017 are expected to be paid within the next six months.

(2) In September 2016, shomi, a joint venture of the Company and Rogers Communications Inc., announced the decision to wind down its operations with service ending on November 30, 2016. The Company recorded a provision of $82 relating to the wind down of the investment. The balance of this provision was $nil as at August 31, 2017.

Corporate

Bank loans

During 2012, a syndicate of banks provided the Company with an unsecured $1 billion credit facility which includes a maximum revolving term or swingline facility of $50. During 2016, the Company elected to increase its borrowing capacity by $500 under the terms of the amended facility. During 2017, the Company amended the terms of the facility to extend the maturity date from December 2019 to December 2021. Funds are available to the Company in both Canadian and US dollars. At August 31, 2017, $2 (2016 – $4) has been drawn as committed letters of credit against the revolving term facility. Interest rates fluctuate with Canadian prime and bankers' acceptance rates, US bank base rates and LIBOR rates. Excluding the revolving term facility, the effective interest rate on actual borrowings under the credit facility during 2017 was 2.48% (2016 – 2.04%). The effective interest rate on the revolving term facility for 2017 was 3.18% (2016 – 3.11%).

In connection with the acquisition of Freedom, the Company entered into a $1.0 billion non-revolving credit facility with a syndicate of lenders (the "Freedom Facility") during 2016. The full amount of the Freedom Facility was drawn to fund the acquisition of Freedom, along with $300 million drawn on the Company's existing credit facility. These amounts were repaid during the year using the cash proceeds received from the Shaw Media disposition. The effective interest rate on borrowings under the Freedom Facility during 2016 was 2.56%.

Senior notes

The senior notes are unsecured obligations and rank equally and ratably with all existing and future senior indebtedness. The fixed rate notes are redeemable at the Company's option at any time, in whole or in part, prior to maturity at 100% of the principal amount plus a make-whole premium.

On February 28, 2017, the Company issued $300 senior notes at a rate of 3.80% due March 1, 2027.

On March 2, 2017, the Company repaid $400 5.70% senior notes at their maturity.

Other

ViaWest

During 2015, ViaWest entered into a credit facility consisting of a term loan in the amount of US $395 and a revolving credit facility of US $85. Commencing August 2015, the term loan had quarterly principal repayments of US $1 with the balance due on maturity in March 2022 while the revolving credit facility matured in March 2020. During 2016, ViaWest entered into an incremental US $80 term loan and increased the borrowing capacity available on the revolving facility by US $35. The incremental term loan had quarterly principal repayments commencing May 2016 with the balance due on maturity in March 2022. Interest rates fluctuated with LIBOR, US prime and US Federal Funds rates and the facilities were secured by a first priority security interest in specific assets pursuant to the terms of the Security Agreement.

ViaWest finance lease obligations and amounts owing to landlords in connection with financing of leasehold improvements had various expiry and maturity dates through to 2023. Collateral was provided as security for the related transactions and agreements as required.

Both the ViaWest credit facility and other obligations were divested in connection with the sale of ViaWest in August 2017.

Freedom Mobile

Finance lease obligations and amounts owing in connection with financing of certain computer equipment and services mature at various dates through to 2018.

Burrard Landing Lot 2 Holdings Partnership (the "Partnership")

The Company has a 33.33% interest in the Partnership which built the Shaw Tower project with office/retail space and living/working space in Vancouver, BC. In the fall of 2004, the commercial construction of the building was completed and at that time, the Partnership issued ten year 6.31% secured mortgage bonds in respect of the commercial component of the Shaw Tower. In February 2014, the Partnership refinanced its debt. The Partnership received a mortgage loan and used the proceeds to prepay the outstanding balance of the previous mortgage and loan excess funds to each of its partners. The mortgage loan matures on November 1, 2024 and bears interest at 4.683% compounded semi-annually with interest only payable for the first five years. The mortgage loan is collateralized by the property and the commercial rental income from the building with no recourse to the Company.

Debt covenants

The Company and its subsidiaries have undertaken to maintain certain covenants in respect of the credit agreements and trust indentures described above. The Company and its subsidiaries were in compliance with these covenants at August 31, 2017.

[all amounts in millions of Canadian dollars except share and per share amounts]

[all amounts in millions of Canadian dollars except share and per share amounts]

Amortization of deferred credits for 2017 amounted to $79 (2016 – $92) and was recorded in the accounts as described below.

IRU agreements are in place for periods ranging from 21 to 60 years and are being amortized to income over the agreement periods. Amortization in respect of the IRU agreements for 2017 amounted to $13 (2016 – $13) and was recorded as other amortization. Amortization of equipment revenue for 2017 amounted to $52 (2016 – $67), of which $14 (2016 – $15) is included in the results for discontinued operations. Amortization of connection fee and installation revenue for 2017 amounted to $14 (2016 – $12) and was recorded as revenue.

16. SHARE CAPITAL

Authorized

The Company is authorized to issue a limited number of Class A voting participating shares ("Class A Shares") of no par value, as described below, and an unlimited number of Class B non-voting participating shares ("Class B Non-Voting Shares") of no par value, Class 1 preferred shares, Class 2 preferred shares, Class A preferred shares and Class B preferred shares.

The authorized number of Class A Shares is limited, subject to certain exceptions, to the lesser of that number of shares (i) currently issued and outstanding and (ii) that may be outstanding after any conversion of Class A Shares into Class B Non-Voting Shares.

Issued and outstanding

Class A Shares and Class B Non-Voting Shares

Class A Shares are convertible at any time into an equivalent number of Class B Non-Voting Shares. In the event that a take-over bid is made for Class A Shares, in certain circumstances, the Class B Non-Voting Shares are convertible into an equivalent number of Class A Shares.

Changes in Class A Share capital and Class B Non-Voting Share capital in 2017 and 2016 are as follows:

	Class A Shares		Class B Non-Voting Shares

Shaw Communications Inc.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
August 31, 2017 and 2016
[all amounts in millions of Canadian dollars except share and per share amounts]

Series A and B Preferred Shares

The Cumulative Redeemable Rate Reset Preferred Shares, Series A ("Series A Preferred Shares") and Series B ("Series B Preferred Shares") represent series of class 2 preferred shares and are classified as equity since redemption, at $25.00 per Series A Preferred Share and Series B Preferred Share, is at the Company's option and payment of dividends is at the Company's discretion.

Share transfer restriction

The Articles of the Company empower the directors to refuse to issue or transfer any share of the Company that would jeopardize or adversely affect the right of Shaw Communications Inc. or any subsidiary to obtain, maintain, amend or renew a licence to operate a broadcasting undertaking pursuant to the Broadcasting Act (Canada).

17. SHARE-BASED COMPENSATION AND AWARDS

Stock option plan

Under a stock option plan, directors, officers, employees and consultants of the Company are eligible to receive stock options to acquire Class B Non-Voting Shares with terms not to exceed ten years from the date of grant. Options granted up to August 31, 2017 vest evenly on the anniversary dates from the original grant date at either 25% per year over four years or 20% per year over five years. The options must be issued at not less than the fair market value of the Class B Non-Voting Shares at the date of grant. The maximum number of Class B Non-Voting Shares issuable under the plan may not exceed 52,000,000. As at August 31, 2017, 35,716,620 Class B Non-Voting Shares have been issued under the plan.

The changes in options are as follows:

	2017		2016	
	Number	Weighted average exercise price $	Number	Weighted average exercise price $
Outstanding, beginning of year	**11,353,136**	**23.70**	12,538,664	23.70
Granted	**2,923,000**	**26.89**	2,758,000	23.93
Forfeited	**(861,150)**	**25.82**	(2,116,420)	26.17
Exercised[(1)]	**(3,256,981)**	**23.72**	(1,827,108)	21.15
Outstanding, end of year	**10,158,005**	**24.45**	11,353,136	23.70

(1) The weighted average Class B Non-Voting Share price for the options exercised was $27.90.

The following table summarizes information about the options outstanding at August 31, 2017:

	Options outstanding			Options exerciseable	
Range of prices	Number outstanding	Weighted average remaining contractual life	Weighted average exercise price	Number exercisable	Weighted average exercise price
$18.79 – $20.80	2,023,740	2.18	19.56	2,023,740	19.56
$20.81 – $24.21	2,525,275	6.77	23.22	1,092,075	22.57
$24.22 – $26.22	1,409,005	4.39	25.13	1,044,705	25.15
$26.23 – $27.19	1,913,530	8.79	26.33	160,280	26.99
$27.20 – $30.87	2,286,455	8.15	28.13	607,555	28.14

Shaw Communications Inc.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
August 31, 2017 and 2016
[all amounts in millions of Canadian dollars except share and per share amounts]

The weighted average estimated fair value at the date of the grant for common share options granted for the year ended August 31, 2017 was $1.83 (2016 – $1.47) per option. The fair value of each option granted was estimated on the date of the grant using the Black-Scholes option pricing model with the following weighted-average assumptions:

	2017	2016
Dividend yield	**4.41%**	4.93%
Risk-free interest rate	**0.94%**	0.75%
Expected life of options	**6 years**	5 years
Expected volatility factor of the future expected market price of Class B Non-Voting Shares	**16.8%**	17.8%

Expected volatility has been estimated based on the historical share price volatility of the Company's Class B Non-Voting Shares.

Restricted stock unit plan

The Company has a RSU plan for its Board of Directors whereby directors can elect to receive their annual cash compensation, or a portion thereof, in RSUs. In addition, the Company may adjust and/or supplement directors' compensation with periodic grants of RSUs. An RSU is a right that tracks the value of one Class B Non-Voting Share. Holders will be entitled to a cash payout upon vesting. The cash payout will be based on market value of a Class B Non-Voting Share at the time of payout. When cash dividends are paid on Class B Non-Voting Shares, holders are credited with RSUs equal to the dividend. RSUs do not have voting rights as there are no shares underlying the plan.

During fiscal 2017, $2 was recognized as compensation expense (2016 – $nil). The carrying value and intrinsic value of RSUs at August 31, 2017 was $2 and $2, respectively (August 31, 2016 – $nil and $nil, respectively).

Deferred share unit plan

The Company has a DSU plan for its Board of Directors whereby directors can elect to receive their annual cash compensation, or a portion thereof, in DSUs. In addition, the Company may adjust and/or supplement directors' compensation with periodic grants of DSUs. A DSU is a right that tracks the value of one Class B Non-Voting Share. Holders will be entitled to a cash payout when they cease to be a director. The cash payout will be based on market value of a Class B Non-Voting Share at the time of payout. When cash dividends are paid on Class B Non-Voting Shares, holders are credited with DSUs equal to the dividend. DSUs do not have voting rights as there are no shares underlying the plan.

During fiscal 2017, $4 was recognized as compensation expense (2016 – $3). The carrying value and intrinsic value of DSUs at August 31, 2017 was $22 and $19, respectively (August 31, 2016 – $18 and $15, respectively).

Employee share purchase plan

The Company's ESPP provides employees with an incentive to increase the profitability of the Company and a means to participate in that increased profitability. Generally, all non-unionized full time or part time employees of the Company are eligible to enroll in the ESPP. Under the ESPP, eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the employee's contributions, increasing to 33% once an employee reaches 10 years of continuous service.

During fiscal 2017, $7 was recorded as compensation expense (2016 – $6).

Share appreciation rights

A subsidiary of the Company, that was included in the disposition of ViaWest in the current year, granted share appreciation rights ("SAR") to eligible employees of ViaWest. A SAR entitled the holder to the appreciation in value of one share of ViaWest over the exercise price over a period of time. SARs granted to ViaWest employees post-acquisition vested 25% per year over four years, had a 10 year contractual term and were cash settled. During 2017, $1 was recognized as compensation expense (2016 – $7) and recorded in the results of discontinued operations. The carrying value of SARs liabilities, including the SARs granted as partial consideration for the acquisition of ViaWest, at August 31, 2017 was nil (2016 – $21) as ViaWest was divested on August 1, 2017.

Deduct: dividends on Preferred Shares	**(8)**	(13)
Net income attributable to common shareholders from continuing operations	**549**	474
Net income from discontinued operations	**294**	753
Deduct: net income from discontinued operations attributable to non-controlling interests	**–**	(20)
Net income from discontinued operations attributable to common shareholders	**294**	733
Net income attributable to common shareholders	**843**	1,207
Denominator (millions of shares)		
Weighted average number of Class A Shares and Class B Non-Voting Shares for basic earnings per share	**491**	480
Effect of dilutive securities[(1)]	**1**	1
Weighted average number of Class A Shares and Class B Non-Voting Shares for diluted earnings per share	**492**	481
Basic earnings per share ($)		
Continuing operations	**1.12**	0.99
Discontinued operations	**0.60**	1.52
Attributable to common shareholders	**1.72**	2.51
Diluted earnings per share ($)		
Continuing operations	**1.11**	0.99
Discontinued operations	**0.60**	1.52
Attributable to common shareholders	**1.71**	2.51

(1) The earnings per share calculation does not take into consideration the potential dilutive effect of certain stock options since their impact is anti-dilutive. For the year ended August 31, 2017, 2,138,047 options were excluded from the diluted earnings per share calculation (2016 – 4,876,615).

19. DIVIDENDS

Common share dividends

The holders of Class A Shares and Class B Non-Voting Shares are entitled to receive such dividends as the Board of Directors determines to declare on a share-for-share basis, as and when any such dividends are declared or paid. The holders of Class B Non-Voting Shares are entitled to receive during each dividend period, in priority to the payment of dividends on the Class A Shares, an additional dividend at a rate of $0.0025 per share per annum. This additional dividend is subject to proportionate adjustment in the event of future consolidations or subdivisions of shares and in the event of any issue of shares by way of stock dividend. After payment or setting aside for payment of the additional non-cumulative dividends on the Class B Non-Voting Shares, holders of Class A Shares and Class B Non-Voting Shares participate equally, share for share, as to all subsequent dividends declared.

Preferred share dividends

Holders of the Series A Preferred Shares were entitled to receive, as and when declared by the Company's Board of Directors, a cumulative quarterly fixed dividend yielding 4.50% annually for the initial period ending June 30, 2016. Commencing June 30, 2016, the dividend rate was reset to 2.791% for the five year period ending June 30, 2021. Thereafter, the dividend rate will be reset every five years at a rate equal to the then current 5-year Government of Canada bond yield plus 2.00%.

[all amounts in millions of Canadian dollars except share and per share amounts]

Holders of Series A Preferred Shares had the right, at their option, to convert their shares into Cumulative Redeemable Floating Rate Preferred Shares, Series B (the "Series B Preferred Shares"), subject to certain conditions, on June 30, 2016 and have the same conversion right on June 30 every five years thereafter, with the next conversion date being June 30, 2021.

On June 30, 2016, 1,987,607 Series A Preferred Shares were converted into an equal number of Series B Preferred Shares. Holders of Series B Preferred Shares have the right, at their option, to convert their shares into Series A Preferred Shares, subject to certain conditions, on June 30, 2021 and on June 30 of every fifth year thereafter. The Series B Preferred Shares also represent a series of Class 2 preferred shares and holders will be entitled to receive cumulative quarterly dividends, as and when declared by the Company's Board of Directors, at a rate set quarterly equal to the then current three-month Government of Canada Treasury Bill yield plus 2.00%. The floating quarterly dividend rate for the Series B Preferred Shares were set as follows:

Period	Annual Dividend Rate
June 30, 2016 to September 29, 2016	2.539%
September 30, 2016 to December 30, 2016	2.512%
December 31, 2016 to March 30, 2017	2.509%
March 31, 2017 to June 29, 2017	2.480%
June 30, 2017 to September 29, 2017	2.529%
September 30, 2017 to December 30, 2017	2.742%

Dividend reinvestment plan

The Company has a Dividend Reinvestment Plan ("DRIP") that allows holders of Class A Shares and Class B Non-Voting Shares who are residents of Canada and, effective December 16, 2016, the United States, to automatically reinvest monthly cash dividends to acquire additional Class B Non-Voting Shares. Class B Non-Voting Shares distributed under the Company's DRIP are new shares issued from treasury at a 2% discount from the 5 day weighted average market price immediately preceding the applicable dividend payment date.

Dividends declared

The dividends per share recognized as distributions to common shareholders for dividends declared during the year ended August 31, 2017 and 2016 are as follows:

2017		2016	
Class A Voting Share	Class B Non-Voting Share	Class A Voting Share	Class B Non-Voting Share
1.1825	1.1850	1.1825	1.1850

The dividends per share recognized as distributions to preferred shareholders for dividends declared during the year ended August 31, 2017 and 2016 are as follows:

2017		2016	
Series A Preferred Share	Series B Preferred Share	Series A Preferred Share	Series B Preferred Share
0.6978	0.6269	1.0538	0.1067

On June 28, 2017, the Company declared dividends of $0.17444 per Series A Preferred Share and $0.15806 per Series B Preferred Share which were paid on September 29, 2017. The total amount paid was $2 of which $1 was not recognized as at August 31, 2017.

On October 26, 2017, the Company declared dividends of $0.098542 per Class A Voting Share and $0.09875 per Class B Non-Voting Share payable on each of December 28, 2017, January 30, 2018 and February 27, 2018 to shareholders of record at the close of business on December 15, 2017, January 15, 2018 and February 15, 2018, respectively.

On October 26, 2017, the Company declared dividends of $0.17444 per Series A Preferred Share and $0.17138 per Series B Preferred Share payable on January 2, 2018 to holders of record at the close of business on December 15, 2017.

[all amounts in millions of Canadian dollars except share and per share amounts]

23. INCOME TAXES

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes. The Company's net deferred tax liability consists of the following:

	2017 $	2016 $
Deferred tax assets	**4**	6
Deferred tax liabilities	**(1,858)**	(1,914)
Net deferred tax liability	**(1,854)**	(1,908)

Significant changes recognized to deferred income tax assets (liabilities) are as follows:

	Property, plant and equipment and software assets $	Broadcast rights, licences, customer relationships, trademark and brands $	Partnership income $	Non-capital loss carry-forwards $	Accrued charges $	Total $
Balance at September 1, 2015	(211)	(1,789)	(53)	98	55	(1,900)
Recognized in statement of income	(17)	(8)	109	(8)	–	76
Recognized in discontinued operations	(2)	–	–	–	(14)	(16)
Recognized on business acquisitions	(33)	(398)	–	29	5	(397)
Recognized on Media divestiture	(20)	352	–	1	(12)	321
Recognized in other comprehensive income:						
Foreign currency translation adjustments	–	2	–	–		2
Actuarial gains/losses	–	–	–	–	6	6
Balance at August 31, 2016	(283)	(1,841)	56	120	40	(1,908)
Recognized in statement of income	**13**	**(25)**	**(17)**	**(1)**	**(9)**	**(39)**
Recognized in discontinued operations	**–**	**8**	**–**	**2**	**(6)**	**4**
Recognized on Viawest divestiture	**5**	**168**	**–**	**(76)**	**(8)**	**89**
Recognized in other comprehensive income:						
Foreign currency translation adjustments	**–**	**10**	**–**	**(4)**	**–**	**6**
Actuarial gains/losses	**–**	**–**	**–**	**–**	**(6)**	**(6)**
Balance at August 31, 2017	**(265)**	**(1,680)**	**39**	**41**	**11**	**(1,854)**

The Company has capital loss carryforwards of approximately $62 for which no deferred income tax asset has been recognized in the accounts. These capital losses can be carried forward indefinitely.

The Company has non-capital loss carryforwards of approximately $581 for which no deferred income tax asset has been recognized in the accounts. The balance expires in varying annual amounts from 2034 to 2037.

The Company has taxable temporary differences associated with its investment in its subsidiaries. No deferred tax liabilities have been provided with respect to such temporary differences as the Company is able to control the timing of the reversal and such reversal is not probable in the foreseeable future.

[all amounts in millions of Canadian dollars except share and per share amounts]

The income tax expense differs from the amount computed by applying the statutory rates to income before income taxes for the following reasons:

	2017 $	2016 $
Current statutory income tax rate	**26.7%**	26.7%
Income tax expense at current statutory rates	**199**	178
Net increase (decrease) in taxes resulting from:		
Non-taxable portion of capital gains	**–**	–
Effect of tax rate changes	**(5)**	–
Tax benefit of equity (income) loss not recognized	**(20)**	3
Other	**16**	(3)
Income tax expense	**190**	178

The statutory income tax rate for the Company remained consistent at 26.7% in 2017 and 2016.

The components of income tax expense are as follows:

	2017 $	2016 $
Current income tax expense	**151**	243
Deferred tax recovery related to temporary differences	**44**	(65)
Deferred tax expense from tax rate changes	**(5)**	–
Income tax expense	**190**	178

24. BUSINESS SEGMENT INFORMATION

The Company's operating segments are Consumer, Business Network Services, and Wireless. The accounting policies of the segments are the same as those described in the summary of significant accounting policies. Management evaluates divisional performance based on revenue and operating income before charges such as restructuring costs and amortization. The Consumer segment provides Cable telecommunications services including Video, Internet, WiFi, Phone, and Satellite Video to Canadian consumers. The Business Network Services segment provides data networking, video, voice and Internet services through a national fibre-optic backbone network and also provides satellite Video services to North American businesses and public-sector entities. The Wireless segment was formed by the acquisition of Freedom Mobile (formerly, WIND Mobile) on March 1, 2016, and provides wireless voice and data communications services for customers in Ontario, British Columbia and Alberta. The previously reported Business Infrastructure Services segment was comprised primarily of the Viawest operations and, following the sale of Viawest, the majority of this segment is now reported in discontinued operations. The remaining operations and their results are now included within the Business Network Services segment. All of the Company's reportable segments are substantially located in Canada.

(1) The Company does not report restructuring costs, amortization, interest or cash taxes on a segmented basis.

25. COMMITMENTS AND CONTINGENCIES

Commitments

(i) The Company owns and leases Ku-band and C-band transponders on the Anik F1R, Anik F2 and Anik G1 satellites. As part of the Ku-band transponder agreements with Telesat Canada, the Company is committed to paying annual transponder maintenance and licence fees for each transponder from the time the satellite becomes operational for a period of 15 years.

(ii) The Company has various long-term operating commitments as follows:

	$
2018	359
2019 – 2022	679
Thereafter	272
	1,310

Comprised of:	$
Program related agreements	118
Lease of transmission facilities, circuits and premises	571
Lease and maintenance of transponders	474
Other (primarily maintenance and support contracts)	147
	1,310

Included in operating, general and administrative expenses are transponder maintenance expenses of $78 (2016 – $80) and rental expenses of $183 (2016 – $163), of which $26 (2016 – $30) has been recorded in the results of discontinued operations.

(iii) At August 31, 2017, the Company had capital expenditure commitments in the normal course of business of $177 in respect of fiscal 2018.

Contingencies

The Company and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business. Although resolution of such matters cannot be predicted with certainty, management does not consider the Company's exposure to litigation to be material to these consolidated financial statements.

Guarantees

In the normal course of business the Company enters into indemnification agreements and has issued irrevocable standby letters of credit and commercial surety bonds with and to third parties.

Indemnities

Many agreements related to acquisitions and dispositions of business assets include indemnification provisions where the Company may be required to make payments to a vendor or purchaser for breach of contractual terms of the agreement with respect to matters such as litigation, income taxes payable or refundable or other ongoing disputes. The indemnification period usually covers a period of two to four years. Also, in the normal course of business, the Company has provided indemnifications in various commercial agreements, customary for the telecommunications industry, which may require payment by the Company for breach of contractual terms of the agreement. Counterparties to these agreements provide the Company with comparable indemnifications. The indemnification period generally covers, at maximum, the period of the applicable agreement plus the applicable limitations period under law.

The maximum potential amount of future payments that the Company would be required to make under these indemnification agreements is not reasonably quantifiable as certain indemnifications are not subject to limitation. However, the Company enters into indemnification agreements only when an assessment of the business circumstances would indicate that the risk of loss is remote. At August 31, 2017, management believes it is remote that the indemnification provisions would require any material cash payment.

The Company indemnifies its directors and officers against any and all claims or losses reasonably incurred in the performance of their service to the Company to the extent permitted by law.

Irrevocable standby letters of credit and commercial surety bonds

The Company and certain of its subsidiaries have granted irrevocable standby letters of credit and commercial surety bonds, issued by high rated financial institutions, to third parties to indemnify them in the event the Company does not perform its contractual obligations. As of August 31, 2017, the guarantee instruments amounted to $5. The Company has not recorded any additional liability with respect to these guarantees, as the Company does not expect to make any payments in excess of what is recorded on the Company's consolidated financial statements. The guarantee instruments mature at various dates during fiscal 2018 and fiscal 2019.

26. EMPLOYEE BENEFIT PLANS

Defined contribution pension plans

The Company has defined contribution pension plans for its non-union employees and, for the majority of these employees, contributes 5% of eligible earnings to the maximum amount deductible under the *Income Tax* Act. For union employees, the

[all amounts in millions of Canadian dollars except share and per share amounts]

Company contributes amounts up to 9.8% of earnings to the individuals' registered retirement savings plans. Total pension costs in respect of these plans were $35 (2016 – $35) of which $23 (2016 – $23) was expensed and the remainder capitalized.

Defined benefit pension plans

The Company has two non-registered retirement plans for designated executives and senior executives and had several registered pension plans for certain employees in the media business until the sale of the business in April 2016. The following is a summary of the accrued benefit liabilities recognized in the statement of financial position.

	2017 $	2016 $
Non-registered plans		
Accrued benefit obligation	**532**	563
Fair value of plan assets	**433**	438
Accrued benefit liabilities and deficit	**99**	125

The plans expose the Company to a number of risks, of which the most significant are as follows:

(i) Volatility in market conditions: The accrued benefit obligations are calculated using discount rates with reference to bond yields closely matching the term of the estimated cash flows while many of the assets are invested in other types of assets. If plan assets underperform these yields, this will result in a deficit. Changing market conditions in conjunction with discount rate volatility will result in volatility of the accrued benefit liabilities. To minimize some of the investment risk, the Company has established long-term funding targets where the time horizon and risk tolerance are specified.

(ii) Selection of accounting assumptions: The calculation of the accrued benefit obligations involves projecting future cash flows of the plans over a long time frame. This means that assumptions used can have a material impact on the statements of financial position and comprehensive income because in practice, future experience of the plans may not be in line with the selected assumptions.

Non-registered pension plans

The Company provides a supplemental executive retirement plan ("SERP") for certain of its senior executives. Benefits under this plan are based on the employees' length of service and their highest three-year average rate of eligible pensionable earnings during their years of service. In 2012, the Company closed the plan to new participants and amended the plan to freeze base salary levels at August 31, 2012 for purposes of determining eligible pensionable earnings. Employees are not required to contribute to this plan.

The Company provides an executive retirement plan ("ERP") for certain executives not covered by the SERP. Benefits under this plan are comprised of defined contribution and defined benefit components and are based on the employees' length of service as well as final average earnings during their years of service. Employees are not required to contribute to this plan.

Shaw Communications Inc.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
August 31, 2017 and 2016
[all amounts in millions of Canadian dollars except share and per share amounts]

The table below shows the change in benefit obligation and funding status and the fair value of plan assets.

	SERP $	ERP $	2017 Total $	SERP $	ERP $	2016 Total $
Accrued benefit obligation, beginning of year	**553**	**10**	**563**	502	7	509
Current service cost	**7**	**4**	**11**	6	3	9
Interest cost	**19**	**–**	**19**	21	–	21
Payment of benefits to employees	**(20)**	**–**	**(20)**	(19)	(2)	(21)
Remeasurements:						
Effect of changes in demographic assumptions	**(2)**	**–**	**(2)**	(5)	–	(5)
Effect of changes in financial assumptions	**(41)**	**–**	**(41)**	46	1	47
Effect of experience adjustments	**2**	**–**	**2**	2	1	3
Accrued benefit obligation, end of year	**518**	**14**	**532**	553	10	563
Fair value of plan assets, beginning of year	**432**	**6**	**438**	387	4	391
Employer contributions	**–**	**7**	**7**	50	4	54
Interest income	**16**	**–**	**16**	17	–	17
Payment of benefits	**(20)**	**–**	**(20)**	(19)	(2)	(21)
Return on plan assets, excluding interest income	**(8)**	**–**	**(8)**	(3)	–	(3)
Fair value of plan assets, end of year	**420**	**13**	**433**	432	6	438
Accrued benefit liability and plan deficit, end of year	**98**	**1**	**99**	121	4	125

The weighted average duration of the defined benefit obligation of the SERP and ERP at August 31, 2017 is 15.9 years and 23.8 years, respectively.

The underlying plan assets of the SERP and ERP at August 31, 2017 are invested in the following:

	SERP $	ERP $
Cash and cash equivalents	**213**	**11**
Fixed income securities	**103**	**1**
Equity securities – Canadian	**29**	**–**
Equity securities – Foreign	**75**	**1**
	420	**13**

All fixed income and equity securities have a quoted price in an active market.

Shaw Communications Inc.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
August 31, 2017 and 2016
[all amounts in millions of Canadian dollars except share and per share amounts]

The tables below show the significant weighted-average assumptions used to measure the pension obligation and cost for the plans.

Accrued benefit obligation	2017 SERP %	2017 ERP %	2016 SERP %	2016 ERP %
Discount rate	**3.70**	**3.70**	3.50	3.50
Rate of compensation increase	**3.00**[1]	**3.00**	5.00[1]	3.00

Benefit cost for the year	2017 SERP %	2017 ERP %	2016 SERP %	2016 ERP %
Discount rate	**3.50**	**3.50**	4.10	4.10
Rate of compensation increase	**5.00**[1]	**3.00**	5.00[1]	3.00

(1) Applies only to incentive compensation component of eligible pensionable earnings.

The calculation of the accrued benefit obligation is sensitive to the assumptions above. A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2017 by $86. A one percentage point increase in the rate of compensation increase would have increased the accrued benefit obligation by $13.

When calculating the sensitivity of the defined benefit obligation to significant actuarial assumptions, the present value of the defined benefit obligation has been calculated using the projected benefit method which is the same method that is applied in calculating the defined benefit liability recognized in the statement of financial position. The sensitivity analysis presented above may not be representative of the actual change in the accrued benefit obligation as it is unlikely that the change in assumptions would occur in isolation of one another as some assumptions may be correlated.

The net pension benefit plan expense, which is included in employee salaries and benefits expense, is comprised of the following components:

	SERP $	ERP $	2017 Total $	SERP $	ERP $	2016 Total $
Current service cost	**7**	**4**	**11**	6	3	9
Interest cost	**19**	**–**	**19**	21	–	21
Interest income	**(16)**	**–**	**(16)**	(17)	–	(17)
Pension expense	**10**	**4**	**14**	10	3	13

Registered pension plans

The Company had a number of funded defined benefit pension plans which provided pension benefits to certain unionized and non-unionized employees in the media business. These plans were divested along with the sale of the Media division in April 2016. Benefits under these plans were based on the employees' length of service and final average salary. These plans were regulated by the Office of the Superintendent of Financial Institutions in accordance with the provisions of the Pension Benefits Standards Act and Regulations. The regulations set out minimum standards for funding the plans.

[all amounts in millions of Canadian dollars except share and per share amounts]

The table below shows the change in the benefit obligations, change in fair value of plan assets and the funded status of these defined benefit plans.

	2016 $
Accrued benefit obligation, beginning of year	173
Current service cost	3
Interest cost	4
Employee contributions	–
Payment of benefits to employees	(5)
Remeasurements:	
Effect of changes in demographic assumptions	–
Effect of changes in financial assumptions	7
Effect of experience adjustments	–
Divestiture of Shaw Media	(182)
Accrued benefit obligation, end of year	–
Fair value of plan assets, beginning of year	172
Employer contributions	6
Employee contributions	–
Interest income	4
Payment of benefit	(5)
Administrative expenses paid from plan assets	(1)
Return on plan assets, excluding interest income	(3)
Divestiture of Shaw Media	(173)
Fair value of plan assets, end of year	–
Accrued benefit liability and plan deficit, end of year	–

The tables below show the significant weighted-average assumptions used to measure the pension obligation and cost for these plans.

Accrued benefit obligation	2016 %
Discount rate	3.86
Rate of compensation increase	3.00

Benefit cost for the year	2016 %
Discount rate	3.86
Rate of compensation increase	3.00

The net pension benefit plan expense, which is included in the employee salaries and benefits expense of discontinued operations, is comprised of the following components:

	2016 $
Current service cost	3
Interest cost	4
Interest income	(4)
Administrative expenses	1
Pension expense	4

[all amounts in millions of Canadian dollars except share and per share amounts]

Other benefit plans

The Company has post-employment benefits plans that provide post-retirement health and life insurance coverage to certain executive level retirees and are funded on a pay-as-you-go basis. The Company had additional plans for media retirees in 2016 that were divested along with the sale of the Media division in April 2016. The table below shows the change in the accrued post-retirement obligation which is recognized in the statement of financial position.

	2017 $	2016 $
Accrued benefit obligation and plan deficit, beginning of year	**4**	22
Current service cost	**–**	–
Interest cost	**–**	1
Payment of benefits to employees	**–**	–
Remeasurements:		
Effect of changes in demographic assumptions	**–**	–
Effect of changes in financial assumptions	**–**	1
Effect of experience adjustments	**–**	–
Divestiture of Shaw Media	**–**	(20)
Accrued benefit obligation and plan deficit, end of year	**4**	4

The weighted average duration of the benefit obligation at August 31, 2017 is 19.7 years.

The post-retirement benefit plan expense, which is included in employee salaries and benefits expense, is $nil (2016 – $1) and is comprised of current service and interest cost.

The discount rates used to measure the post-retirement benefit cost for the year and the accrued benefit obligation as at August 31, 2017 were 3.60% and 3.80%, respectively (2016 – 4.20% and 3.60%, respectively). A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2017 by $1.

Employer contributions

The Company's estimated contributions to the defined benefit plans in fiscal 2018 are $4.

27. RELATED PARTY TRANSACTIONS

Controlling shareholder

The majority of the Class A Shares are held by Shaw Family Living Trust ("SFLT") and its subsidiaries. The sole trustee of SFLT is a private company owned by JR Shaw and having a board comprised of seven directors, including JR Shaw as chair, Jim Shaw, Bradley S. Shaw, three other members of his family and one independent director. JR Shaw and members of his family are represented as Directors, Senior Executive and Corporate Officers of the Company.

Key management personnel and Board of Directors

Key management personnel consist of the most senior executive team and along with the Board of Directors, and have the authority and responsibility for planning, directing and controlling the activities of the Company.

Compensation

The compensation expense of key management personnel and Board of Directors is as follows:

	2017 $	2016 $
Short-term employee benefits	**31**	32
Post-employment pension benefits	**9**	3
Share-based compensation	**5**	3
	45	38

Transactions

The Company paid $2 (2016 – $2) for collection, installation and maintenance services to a company controlled by a Director of the Company.

During the year, the Company paid $11 (2016 – $8) for remote control units to a supplier where Directors of the Company hold positions on the supplier's board of directors.

During the year, network fees of $20 (2016 – $14) were paid to a programmer where a Director of the Company holds a position on the programmer's board of directors.

At August 31, 2017, the Company had $4 owing in respect of these transactions (2016 – $3).

Other related parties

The Company has entered into certain transactions and agreements in the normal course of business with certain of its related parties. These transactions are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties.

Corus

The Company and Corus are subject to common voting control. During the year, network fees of $135 (2016 –$118), advertising fees of $8 (2016 – $1), programming fees of $1 (2016 – $1), and administrative fees of $1 (2016 – $1) were paid to various Corus subsidiaries and entities subject to significant influence. In addition, the Company provided administrative, advertising and other services for $7 (2016 – $7), uplink of television signals for $8 (2016 – $7), and Internet services and lease of circuits for $1 (2016 – $1). At August 31, 2017, the Company had a net of $24 owing in respect of these transactions (2016 – $22).

During 2016, the Company's sold its wholly owned subsidiary Shaw Media to Corus. The transaction closed on April 1, 2016 (see note 3).

The Company provided Corus with advertising spots in return for radio and television advertising. No monetary consideration was exchanged for these transactions and no amounts were recorded in the accounts.

Burrard Landing Lot 2 Holdings Partnership

During the year, the Company paid $13 (2016 – $13) to the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, BC, is the Company's headquarters for its lower mainland operations. At August 31, 2017, the Company had a remaining commitment of $80 in respect of the office space lease which is included in the amounts disclosed in note 25.

Joint arrangement – Shomi

During the year, the Company provided programming content and advertising services of $nil (2016 – $6) and paid $nil (2016 – $11) in subscriber fees. At August 31, 2017, the Company had a net receivable of $nil (2016 – $nil) in respect of these transactions.

28. FINANCIAL INSTRUMENTS

Fair values

The fair value of financial instruments has been determined as follows:

(i) Current assets and current liabilities

The fair value of financial instruments included in current assets and current liabilities approximates their carrying value due to their short-term nature.

(ii) Investments and other assets and Other long-term assets

The fair value of publicly traded investments is determined by quoted market prices. Investments in private entities which do not have quoted market prices in an active market and whose fair value cannot be readily measured are carried at cost. No published market exists for such investments. These equity investments have been made as they are considered to have the potential to provide future benefit to the Company and accordingly, the Company has no current intention to dispose of these investments in the near term. The fair value of long-term receivables approximates their carrying value as they are recorded at the net present values of their future cash flows, using an appropriate discount rate.

(iii) Long-term debt

The carrying value of long-term debt is at amortized cost based on the initial fair value as determined at the time of issuance. The fair value of publicly traded notes is based upon current trading values. The fair value of finance lease obligations is determined by discounting future cash flows using a rate for loans with similar terms, conditions and maturity dates. The carrying value of bank credit facilities approximates fair value as the debt bears interest at rates that fluctuate with market rates. Other notes and debentures are valued based upon current trading values for similar instruments.

[all amounts in millions of Canadian dollars except share and per share amounts]

(iv) Other long-term liabilities

The fair value of contingent consideration arising from a business acquisition is determined by calculating the present value of the probability weighted assessment of the likelihood that revenue targets will be met and the estimated timing of such payments.

(v) Derivative financial instruments

The fair value of US currency forward purchase contracts is determined using an estimated credit-adjusted mark-to-market valuation using observable forward exchange rates at the end of reporting periods and contract forward rates.

The carrying values and estimated fair values an investment in a publicly traded company, long-term debt and a contingent liability are as follows:

	August 31, 2017		August 31, 2016	
	Carrying value $	Estimated fair value $	Carrying value $	Estimated fair value $
Assets				
Investment in publicly traded company(1)	**897**	**1,109**	817	911
Liabilities				
Long-term debt(2)	**4,300**	**4,901**	5,612	6,252
Contingent liability(3)	**–**	**–**	2	2

(1) Level 1 fair value – determined by quoted market prices.

(2) Level 2 fair value – determined by valuation techniques using inputs based on observable market data, either directly or indirectly, other than quoted prices.

(3) Level 3 fair value – determined by valuation techniques using inputs that are not based on observable market data.

Risk management

The Company is exposed to various market risks including currency risk and interest rate risk, as well as credit risk and liquidity risk associated with financial assets and liabilities. The Company has designed and implemented various risk management strategies, discussed further below, to ensure the exposure to these risks is consistent with its risk tolerance and business objectives.

Market risk

Market risk is the risk that the fair value or cash flows of a financial instrument will fluctuate as a result of changes in market prices, including foreign exchange and interest rates, the Company's share price and market price of publicly traded investments.

Currency risk

Certain of the Company's capital expenditures and equipment costs are incurred in US dollars, while its revenue is primarily denominated in Canadian dollars. Decreases in the value of the Canadian dollar relative to the US dollar could have an adverse effect on the Company's cash flows. To mitigate some of the uncertainty in respect to capital expenditures and equipment costs, the Company regularly enters into forward contracts in respect of US dollar commitments. With respect to 2017, the Company entered into forward contracts to purchase US $112 over a period of 12 months commencing in September 2016 at an average exchange rate of 1.2932 Cdn. At August 31, 2017 the Company had forward contracts to purchase US $182 over a period of 24 months commencing September 2017 at an average exchange rate of 1.3031 Cdn in respect of US dollar commitments.

Shaw Communications Inc.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
August 31, 2017 and 2016
[all amounts in millions of Canadian dollars except share and per share amounts]

Interest rate risk

Due to the capital-intensive nature of its operations, the Company utilizes long-term financing extensively in its capital structure. The primary components of this structure are a banking facility and various Canadian senior notes with varying maturities issued in the public markets as more fully described in note 13.

Interest on the Company's unsecured banking facility is based on floating rates, while the senior notes are fixed-rate obligations. The Company utilizes its credit facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. As at August 31, 2017, 100% of the Company's consolidated long-term debt was fixed with respect to interest rates.

Sensitivity analysis

The sensitivity to currency risk has been determined based on a hypothetical change in Canadian dollar to US dollar foreign exchange rates of 10%. Foreign exchange forward contracts would be impacted by this hypothetical change resulting in a change to other comprehensive income by $17 net of tax (2016 – $11). A portion of the Company's accounts receivables and accounts payable and accrued liabilities is denominated in US dollars; however, due to their short-term nature, there is no significant market risk arising from fluctuations in foreign exchange rates.

Interest on the Company's banking facility is based on floating rates. As at August 31, 2017 there is no significant market risk arising from interest rate fluctuations within a reasonably contemplated range from their actual amounts.

At August 31, 2017, a one dollar change in the Company's Class B Non-Voting Shares would have had an impact on net income of $1 in respect of the Company's DSU plan.

Credit risk

Accounts receivable in respect of the Consumer, Business Networks Services and Wireless divisions are not subject to any significant concentrations of credit risk due to the Company's large and diverse customer base. As at August 31, 2017, the Company had accounts receivable of $286 (August 31, 2016 – $268), net of the allowance for doubtful accounts of $48 (August 31, 2016 – $42). The Company maintains an allowance for doubtful accounts for the estimated losses resulting from the inability of its customers to make required payments. In determining the allowance, the Company considers factors such as the number of days the customer account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. As at August 31, 2017, $94 (August 31, 2016 – $95) of accounts receivable is considered to be past due, defined as amounts outstanding past normal credit terms and conditions. Uncollectible accounts receivable are charged against the allowance account based on the age of the account and payment history. The Company believes that its allowance for doubtful accounts is sufficient to reflect the related credit risk.

The Company mitigates credit risk of subscriber receivables through advance billing and procedures to downgrade or suspend services on accounts that have exceeded agreed credit terms and routinely assesses the financial strength of its business customers through periodic review of payment practices.

Credit risks associated with US currency contracts arise from the inability of counterparties to meet the terms of the contracts. In the event of non-performance by the counterparties, the Company's accounting loss would be limited to the net amount that it would be entitled to receive under the contracts and agreements. In order to minimize the risk of counterparty default under its swap agreements, the Company assesses the creditworthiness of its swap counterparties.

Liquidity risk

Liquidity risk is the risk that the Company will experience difficulty in meeting obligations associated with financial liabilities. The Company manages its liquidity risk by monitoring cash flow generated from operations, available borrowing capacity, and by managing the maturity profiles of its long-term debt.

[all amounts in millions of Canadian dollars except share and per share amounts]

The Company's undiscounted contractual maturities as at August 31, 2017 are as follows:

	Accounts payable and accrued liabilities[1] $	Other long-term liabilities $	Long-term debt repayable at maturity $	Interest payments $
Within one year	921	–	2	241
1 to 3 years	–	1	1,251	416
3 to 5 years	–	–	801	277
Over 5 years	–	–	2,288	1,768
	921	1	4,342	2,702

(1) Includes accrued interest and dividends of $224.

29. CONSOLIDATED STATEMENTS OF CASH FLOWS

Additional disclosures with respect to the Consolidated Statements of Cash Flows are as follows:

(i) Funds flow from continuing operations

	2017 $	2016 $
Net income from continuing operations	**557**	487
Adjustments to reconcile net income to funds flow from operations:		
Amortization	**946**	843

Income taxes paid (net of refunds)	**220**	242
Interest received	**3**	2

[all amounts in millions of Canadian dollars except share and per share amounts]

(iii) Non-cash transactions

The Consolidated Statements of Cash Flows exclude the following non-cash transactions:

	2017 $	2016 $
Issuance of Class B Non-Voting Shares:		
Dividend reinvestment plan *[note 19]*	**198**	188

30. CAPITAL STRUCTURE MANAGEMENT

The Company's objectives when managing capital are:

(i) to maintain a capital structure which optimizes the cost of capital, provides flexibility and diversity of funding sources and timing of debt maturities, and adequate anticipated liquidity for organic growth and strategic acquisitions;

(ii) to maintain compliance with debt covenants; and

(iii) to manage a strong and efficient capital base to maintain investor, creditor and market confidence.

The Company defines capital as comprising all components of shareholders' equity (other than non-controlling interests and amounts in accumulated other comprehensive income/loss), long-term debt (including the current portion thereof), and bank indebtedness less cash and cash equivalents.

	August 31, 2017 $	August 31, 2016 $ (restated, note 2)
