The Company manages its capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of underlying assets. The Company may also from time to time change or adjust its objectives when managing capital in light of the Company's business circumstances, strategic opportunities, or the relative importance of competing objectives as determined by the Company. There is no assurance that the Company will be able to meet or maintain its currently stated objectives.

The Company's credit facilities are subject to covenants which include maintaining minimum or maximum financial ratios, including total debt to operating cash flow/adjusted earnings before interest, taxes, depreciation and amortization, and operating cash flow to fixed charges. At August 31, 2017, the Company is in compliance with these covenants and based on current business plans and economic conditions, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants.

The Company's overall capital structure management strategy remains unchanged from the prior year.

31. SUBSEQUENT EVENTS

On September 15, 2017 the Company completed the sale of its group of assets comprising the operations of Shaw Tracking to an external party.

2018 ANNUAL REPORT

The Annual General Meeting of Shareholders will be held on January 17, 2019 at 11:00 a.m. (Mountain Time) at Shaw Court, 630 – 3rd Avenue SW, Calgary, Alberta.

Dear Fellow Shareholders:

We are pleased to report we made significant progress in 2018 towards our goal of delivering long-term and sustainable growth.

This past year, our consolidated financial results were in line with our expectations and demonstrated the emerging strength of our Wireless operations and our focus on profitability and sustainable cost savings in our core Wireline business.

We are actively addressing the opportunities and challenges in our business by making bold changes to our operations. These significant changes are not only helping us create better experiences for our customers, they are enabling a more agile approach to all aspects of our business so we can unlock opportunities, drive growth, and deliver efficiencies.

Millions of Canadians now rely on Shaw for their wireless, data and broadband needs. We will continue to work to improve how we serve them while we focus on driving growth and profitability across all of our divisions.

Wireless

Our Wireless operations have enabled a strategic and transformative shift that supports our long-term, sustainable growth ambitions.

Our Wireless footprint now covers approximately 16 million people in some of Canada's largest urban centres, or almost half of the Canadian population. In fiscal 2019, we expect to expand to an additional population of 1.3 million, primarily in Western Canada.

In fiscal 2018, we added over 255,000 Wireless subscribers and ended the year at over 1.4 million customers, a 22% increase compared to a year earlier. The growth of Freedom Mobile's subscriber base was complemented by strong financial performance and higher average revenue per user ("ARPU"), reflecting the appeal of our differentiated value proposition. Our innovative Big Gig data plans combined with the latest devices available in the market continue to attract higher lifetime value customers to Freedom Mobile. In addition, our Wireless service is now even more accessible to Canadians through the addition, in 2018, of 240 locations with national retail partners, Loblaws and Walmart.

Supporting our Wireless sales are significant investments in our network and customer service capabilities. We are executing a step-by-step plan to improve our network and deploy spectrum in the most efficient way. In fiscal 2018, we completed the deployment of the 2500 MHz spectrum, refarmed 10 MHz of AWS-1 spectrum and, in October 2018, we launched our Extended Range LTE in Calgary, Edmonton, Vancouver and Southwestern Ontario, leveraging 700 MHz spectrum to provide customers with an enhanced experience, including improved indoor wireless reception. We have also recently introduced voice over LTE ("VoLTE") to a wide range of devices. Our network investments support continued growth in our Wireless business and are potential building blocks for future technologies, such as 5G.

In fiscal 2019, we will continue to execute our Wireless operating plan to increase wireless market share and ARPU while also exploring cross-selling opportunities with our Wireline customer base.

Wireline

As we look to fiscal 2019, we are focused on delivering stable Wireline results, including improved broadband growth through more effective targeting and customer segmentation while also shifting our efforts in Video to optimize profitability.

Our team is modernizing all aspects of our operations as we work to better meet the needs of today's customer. We are leveraging insights from data to help us better understand customer preferences and provide them with the services they want. We are shifting customer interactions to digital platforms and driving more self-install and self-service.

We are starting to see the results of these efforts as our teams begin to think and work differently to deliver a modern connectivity experience anchored in broadband. As the key product in the customer's home, our broadband service is a significant and cost-effective competitive advantage. We have deployed DOCSIS 3.1 across our extensive wireline network to give us the ability to potentially deliver gigabit speeds across virtually all of our cable footprint.

Our best-in-class partnerships enable us to leverage the latest technology and applications, including Comcast's XB6 Advanced WiFi modem – the heart of the Shaw connected home. In early 2019, we will enable additional internet protocol ("IP") services such as xFi and WiFi extenders that will differentiate our broadband service from the competition.

In addition, in 2019 we will begin deploying a full IPTV experience to our customers. With this service, we will reduce the amount of equipment needed in the home and simplify the installation process – enhancing the ability of customers to self-install.

Our Wireline Business division contributed solid results again in fiscal 2018, leveraging our SmartSuite products that deliver enterprise-grade services to small and medium size businesses.

SmartSuite products are the foundation for growth in Shaw Business and we expect to continue increasing market share, revenue and profitability, as we focus on delivering our services in targeted strategic verticals. Our SmartSuite products can scale to larger businesses as well giving us opportunities to deliver services across Canada.

Building towards long-term growth

In reviewing fiscal 2018, we are pleased with our financial results and operational achievements. In fiscal 2019, we will continue to build the key areas of our business that will drive growth and optimize for profitability the more mature areas. Our network advantage provides flexibility to leverage future technologies, while offering customers more speed, more data and more ways to connect. We are partnering with best-in-class technology leaders to embrace innovation, improve our processes and deliver today with an eye on tomorrow. We are also making changes to our operations so that we can continue to streamline processes, increase efficiency, and deliver long-term growth.

Transforming any established enterprise is not easy, but our foundation of almost 50 years of operations combined with the leadership and dedication of our over 10,000 employees has given us confidence in our ability to succeed and modernize our business for the future.

We are grateful to each of our employees for their meaningful and ongoing contributions to our future success. We know our people are the source of everything that is great at Shaw and we are humbled by their commitment and excited by what we can all accomplish together.

Management's Discussion & Analysis

Contents

Forward

Tabular dollar amounts are in millions of Canadian dollars, except per share amounts or unless otherwise indicated. This Management's Discussion and Analysis should be read in conjunction with the Consolidated Financial Statements. The terms "we," "us," "our," "Shaw" and "the Company" refer to Shaw Communications Inc. or, as applicable, Shaw Communications Inc. and its direct and indirect subsidiaries as a group.

Caution Concerning Forward Looking Statements

Statements included in this Management's Discussion and Analysis that are not historic constitute "forward-looking statements" within the meaning of applicable securities laws. They can generally be identified by words such as "anticipate", "believe", "expect", "plan", "intend", "target", "goal" and similar expressions (although not all forward-looking statements contain such words). All of the forward-looking statements made in this report are qualified by these cautionary statements. Forward looking statements in this Management's Discussion and Analysis include, but are not limited to statements relating to:

- future capital expenditures;
- proposed asset acquisitions and dispositions;
- expected cost efficiencies;
- financial guidance and expectations for future performance;
- business and technology strategies and measures to implement strategies;
- the Company's equity investments, joint ventures and partnership arrangements;
- expected growth in subscribers and the services to which they subscribe;
- competitive strengths;
- expected project schedules, regulatory timelines, completion/in-service dates for the Company's capital and other projects;
- expected number of retail outlets;
- timing of new product and service launches;
- expected number of customers using voice over LTE, or VoLTE;
- the deployment of: (i) network infrastructure to improve capacity and coverage and (ii) new technologies, including next generation wireless and wireline technologies such as 5G and IPTV, respectively;
- expected growth in subscribers and the products/services to which they subscribe;
- the cost of acquiring and retaining subscribers and deployment of new services;
- the restructuring charges (related primarily to severance and employee related costs as well as additional costs directly associated with the Company's Total Business Transformation ("TBT") initiative) expected to be incurred in connection with the TBT initiative;
- the anticipated annual cost reductions related to the Voluntary Departure Program ("VDP") (including reductions in operating and capital expenditures) and the timing of realization thereof;
- the impact that the employee exits will have on Shaw's business operations;
- outcome of the TBT initiative, including the timing thereof and the total savings at completion; and
- expansion and growth of Shaw's business and operations and other goals and plans.

Forward-looking statements are based on assumptions and analyses made by the Company in light of its experience and its perception of historical trends, current conditions and expected future developments as well as other factors it believes are appropriate in the circumstances as of the current date. The Company's management believes that its assumptions and analysis in this Management's Discussion and Analysis are reasonable and that the expectations reflected in the forward-looking statements contained herein are also reasonable based on the information available on the date such statements are made and the process used to prepare the information. These assumptions, many of which are confidential, include but are not limited to:

- general economic conditions;
- future interest rates;
- previous performance being indicative of future performance;
- future income tax and exchange rates;
- technology deployment;
- subscriber growth;
- short term incremental costs associated with growth in Wireless handset sales;
- pricing, usage, and churn rates;
- availability of devices;
- content and equipment costs;

- completion of proposed transactions;
- industry structure, conditions and stability;
- government regulation;
- the TBT initiative being completed in a timely and cost-effective manner yielding the expected results and benefits, including: (i) resulting in a leaner, more integrated and agile company with improved efficiencies and execution to better meet Shaw's consumers' needs and expectations (including the products and services offered to its customers) and (ii) realizing the expected cost reductions;
- the Company being able to complete the employee exits pursuant to the VDP with minimal impact on business operations within the anticipated timeframes and for the budgeted amount;
- the cost estimates for any outsourcing requirements and new roles in connection with the VDP;
- the Company can gain access to sufficient retail distribution channels;
- the Company can access the spectrum resources required to execute on its current and long-term strategic initiatives; and
- the integration of acquisitions.

You should not place undue reliance on any forward-looking statements. Many factors, including those not within the Company's control, may cause the Company's actual results to be materially different from the views expressed or implied by such forward-looking statements, including, but not limited to:

- changes in general economic, market and business conditions;
- changing interest rates, income taxes, and exchange rates;
- changes in the competitive environment in the markets in which the Company operates and from the development of new markets for emerging technologies;
- changing industry trends, technological developments, and other changing conditions in the entertainment, information and communications industries;
- changes in the value of the Company's equity investments, joint ventures and partnership arrangements;
- the Company's failure to execute its strategic plans and complete its capital and other projects by the completion date;
- the Company's failure to grow subscribers;
- the Company's failure to close key transactions;
- the Company's failure to have the spectrum resources required to execute on its current and long-term strategic initiatives;
- the Company's failure to gain sufficient access to retail distribution channels;
- the Company's failure to achieve cost efficiencies;
- the Company's failure to implement the TBT initiative as planned and realize the anticipated benefits therefrom, including: (i) the failure of the TBT to result in a leaner, more integrated and agile company with improved efficiencies and execution to better meet Shaw's consumers' needs and expectations (including the products and services offered to its customers) and (ii) the failure to realize the expected cost reductions;
- the Company's failure to complete employee exits pursuant to the VDP with minimal impact on operations;
- technology, privacy, cyber security and reputational risks;
- opportunities that may be presented to and pursued by the Company;
- changes in laws, regulations and decisions by regulators that affect the Company or the markets in which it operates;
- the Company's status as a holding company with separate operating subsidiaries; and
- other factors described in this report under the heading "Known events, trends, risks and uncertainties".

The foregoing is not an exhaustive list of all possible factors. Should one or more of these risks materialize, or should assumptions underlying the forward-looking statements prove incorrect, actual results may vary materially from those described herein.

The Company provides certain financial guidance for future performance as the Company believes that certain investors, analysts and others utilize this and other forward-looking information in order to assess the Company's expected operational and financial performance and as an indicator of its ability to service debt and pay dividends to shareholders. The Company's financial guidance may not be appropriate for this or other purposes.

Any forward-looking statement speaks only as of the date on which it was originally made and, except as required by law. The Company expressly disclaims any obligation or undertaking to disseminate any updates or revisions to any forward-looking statement to reflect any change in related assumptions, events, conditions or circumstances. All forward-looking statements contained in this Management's Discussion and Analysis are expressly qualified by this statement.

ABOUT OUR BUSINESS

At Shaw, we are focused on delivering long-term growth and connecting customers to the world through a best-in-class seamless connectivity experience. In fiscal 2018, we took purposeful strides to evolve Shaw's value proposition of providing leading and innovative products and services, driving operational momentum and enhancing our customers' connectivity experience.

In the first quarter of fiscal 2018, we implemented the previously announced changes to the structure of our operating divisions to improve overall efficiency while enhancing our ability to grow as a leading Canadian connectivity company. Our previously existing Consumer and Business Network Services divisions were combined to form a new Wireline division with no changes to the existing Wireless division.

Wireline

Shaw is one of the largest providers of residential communication services in Canada

Our Consumer division connects families in British Columbia, Alberta, Saskatchewan, Manitoba and Northern Ontario through our hybrid fibre-coax network

Shaw Direct is one of two licensed satellite Video services available across Canada

Our Business division leverages the same network infrastructure as Consumer with a product suite targeting small and medium-sized businesses

Wireless

Freedom Mobile currently operates in Ontario, Alberta and British Columbia.

Approximately 16 million Canadians reside within our current mobile wireless network service area

In the following sections we provide select financial highlights and additional details with respect to our strategy, our Wireline and Wireless divisions, our network and our presence in the communities in which we operate.

Shaw is traded on the Toronto and New York stock exchanges and is included in the S&P/TSX 60 Index (Trading Symbols: TSX – SJR.B, SJR.PR.A, SJR.PR.B, NYSE – SJR, and TSXV –SJR.A). For more information, please visit www.shaw.ca.

Select Financial and Operational Highlights

Through an evolving operating and competitive landscape our consolidated business has delivered stable and profitable results in fiscal 2018.

Basis of presentation

On April 1, 2016, Shaw sold 100% of its wholly owned subsidiary Shaw Media Inc. ("Shaw Media") to Corus Entertainment Inc ("Corus").

On August 1, 2017, the Company sold 100% of its wholly owned subsidiary ViaWest, Inc. and its subsidiaries (collectively, "ViaWest"), previously reported under the Business Infrastructure Services division, to Peak 10 Holding Corporation ("Peak 10").

On September 15, 2017, the Company sold a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation with the Company's Business segment, to Omnitracs Canada. The Company determined that the assets and liabilities of the Shaw Tracking business met the criteria to be classified as a disposal group held for sale for the period ended August 31, 2017.

Accordingly, the operating results and operating cash flows for the previously reported Business Infrastructure Services division, Shaw Tracking business (an operating segment within the Business division) and Media division are presented as discontinued operations separate from the Company's continuing operations. The Business Infrastructure Services division was comprised primarily of ViaWest. The remaining operations of the previously reported Business Infrastructure Services segment and their results are now included within the Business segment. This Management's Discussion and Analysis ("MD&A") reflects the results of continuing operations, unless otherwise noted.

Our Strategy

At Shaw, we are focused on delivering long-term and sustainable growth by connecting customers to the world through a best-in-class seamless connectivity experience by leveraging our world class converged network. In fiscal 2018, we concentrated on operational efficiency and executing on our strategic priorities through delivery of an exceptional customer experience.

Fiscal 2018 was an exciting year for our Wireless business. In a short amount of time, we have created a stronger, high quality network and are delivering an improved customer experience. Investment in our Wireless network continues to be a top priority and throughout the year, we completed the roll out of the 2500 MHz spectrum (in high traffic sites in the greater Toronto area ("GTA"), Calgary, Edmonton and Vancouver) and commenced the deployment of the 700 MHz spectrum later in the year which is expected to continue throughout fiscal 2019. These network and spectrum improvements supported the launch of our Big Gig data plans, expanded handset lineup (which now includes iPhone) and two new national retail agreements to further develop our distribution network. The execution of our operating strategy drove significant subscriber and average revenue per user ("ARPU") growth in the year. Since the acquisition of Freedom Mobile in 2016, we have added approximately half a million subscribers which is a true testament to Freedom Mobile delivering a differentiated and sustainable value proposition to customers.

In our Wireline division, as part of our operating strategy, we continue to leverage our broadband advantage by introducing new services to our residential and business customers that are aligned with our focus on profitable growth and stability. Through the introduction of Total Business Transformation ("TBT") and the related Voluntary Departure Program ("VDP") in fiscal 2018, we began the work to shift customer interactions to digital platforms, deploy self-help and self-install programs and streamline the operations that build and service our network. As part of this multi-year journey, we will continue to build and transition into a new digital operating service model, improving the customer experience while significantly reducing costs in the Wireline division.

In addition to strengthening the long-term strategic positioning of the Company over the last several fiscal years, we have a strong balance sheet that is supportive of the level of investment required for long-term growth while remaining committed to an investment grade credit rating and long-term free cash flow growth.

Total Business Transformation

In the second quarter of fiscal 2018, we introduced TBT, a multi-year initiative designed to reinvent Shaw's operating model to better meet the evolving needs and expectations of our consumers and businesses by optimizing the use of resources, maintaining and ultimately improving customer service, and by reducing staff. The three key elements of TBT are to: 1) shift customer interactions to digital platforms; 2) drive more self-install and self-serve; and, 3) streamline the operations that build and service our networks. As part of the TBT initiative, we also plan to reduce input costs, consolidate functions, and streamline processes, which is expected to create operational improvements across the business allowing us to evolve into a more efficient organization.

As a first step in the TBT, a voluntary departure package (the "VDP package"), was offered to approximately 6,500 eligible employees representing approximately 50% of our total workforce. The outcome of the VDP had approximately 3,300 employees or 25% of our total workforce accepting the VDP package. Related to the VDP, approximately 1,300 employees departed the Company in fiscal 2018. The anticipated annualized savings, which include reductions in operating expenses and capital expenditures (i.e. labour costs that can be identified or associated with a capital project), related to the VDP, are expected to be approximately $215 million and will be fully realized in fiscal 2020. Shaw expects these cost reductions to be weighted 60% to operating expenses, being approximately $130 million, and 40% to capital expenditures, being approximately $85 million. VDP related cost reductions in fiscal 2018 totaled $47 million, of which $39 million were attributed to operating expenses and $8 million attributed to capital expenditures.

In connection with the VDP and various other TBT activities, the Company has incurred a total restructuring charge of $446 million in fiscal 2018, primarily related to severance and other employee related costs, as well as additional costs directly associated with the TBT initiative. While the restructuring charge has been recognized in fiscal 2018, the actual timing of employee exits will take place over a 24-month period and payments to employees will occur over a 34-month period, commencing on March 29, 2018 due to the ability of the eligible employees to defer VDP payments until the first day of the next calendar year following their departure. We expect that total restructuring charges will not exceed $450 million as the restructuring activities related to the TBT initiative have been substantially completed. See also "Other Income and Expense Items", "Caution Concerning Forward Looking Statements" and "Risks and Uncertainties" for a discussion of the TBT, the VDP and the risks and assumptions associated therewith.

Culture and People

As we repositioned ourselves as a leading Canadian connectivity company, we began evolving our culture to enable us to deliver on this corporate and operational strategy. Building off a strong foundation of leadership discipline and our core values, Shaw's culture enables our efficiency and growth potential by ensuring business decisions are made in accordance with a customer-centric perspective.

At Shaw, we believe success and strength stems from our people first approach. Our people are the source of everything that is great at Shaw.

Through various data sources, as well as listening to our employees through our recurring PeoplePulse surveys, we continue to focus on the following four cultural imperatives to help achieve our people and culture objectives:

1) **Leading Effectively** – elevating our collective ability to deliver growth as we foster a culture of empowerment and continuous improvement with a focus on developing effective leaders at every level of the Company to deliver extraordinary business results by bringing out the best in our people

2) **Enabling Work** – simplifying how work gets done and providing our people with modern tools, processes and technologies that are simple and efficient, making it faster for leaders and employees to do their jobs effectively

3) **Enhancing the Employee Experience** – commitment to investing in our employees, supporting career and personal growth through skill and capability development and creating new ways of working and learning in order to enable employees to perform better in their current roles and prepare them for future roles by removing barriers and responding faster

4) **Maximizing Performance** – evolving performance philosophy and assessment approach, implementing reward and recognition programs that drive a culture of accountability and reward performance excellence for all employees

Inspiring and engaging our diverse employee base from across Canada to align with our strategy is the cornerstone of our success. Our employees are committed to delivering an exceptional seamless connectivity experience for our customers and the communities we serve.

Our World-Class Converged Network

As our customers spend more of their time in the digital environment, they increasingly need and expect an always-on, seamless connectivity experience, which requires multiple integrated technological platforms. With our unique hybrid fibre-coax ("HFC"), Wi-Fi and LTE-Advanced networks, we have the opportunity to continue to innovate in response to changing consumer needs and technological developments. The world of connectivity will change in the coming years as wireline broadband technologies develop, standards for 5G are set and wireless and wireline platforms converge. Following the acquisition of Freedom Mobile in 2016, we initiated the work to integrate our wireline and wireless networks which have already started to yield capital expenditure synergies and customer benefits.

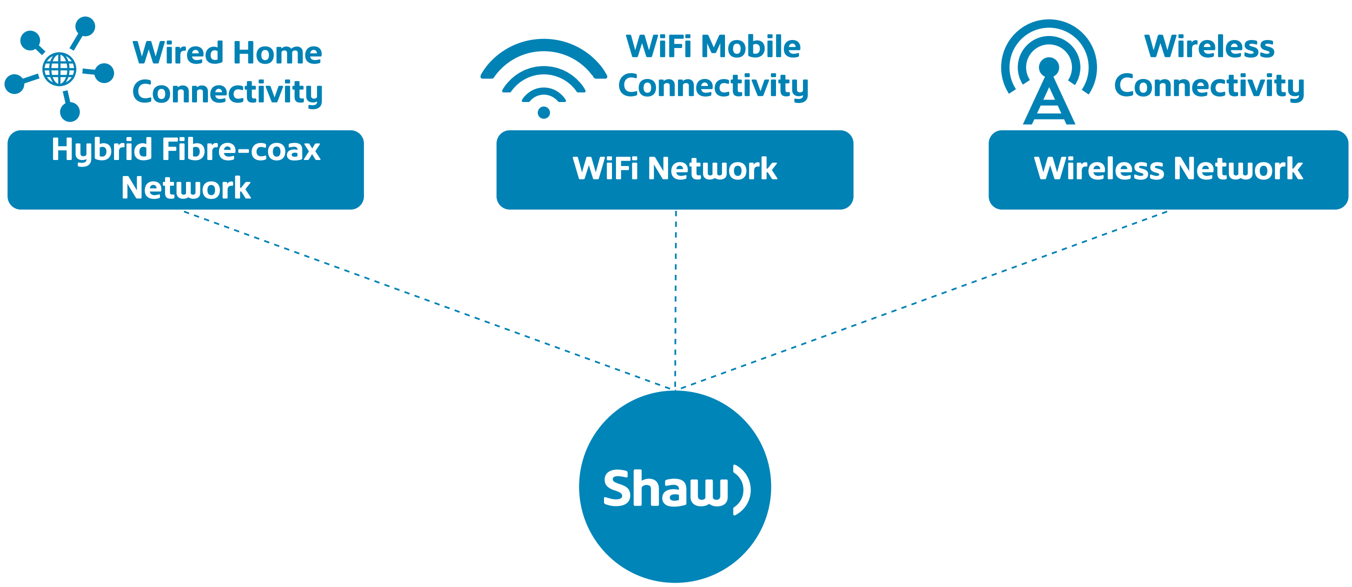
Global Technology Leaders

In order to efficiently secure and deliver leading technology for our customers – both for today and tomorrow – we recognize that we must participate in global scale initiatives through partnerships with best-in-class service providers. This ensures that the technology we adopt and invest in is, and continues to be, leading-edge in the global communications industry.

This approach allows us to leverage our current assets where we have strength and expertise, while also ensuring our capital investments are aligned with industry leaders to support the development, maintenance and advancement of new technology where it is impractical for us to do so on a standalone basis. This allows us to direct our capital resources and further our commitment to continue the advances in innovation, performance and reliability of our products and services. In addition, this strategic approach to our business gives us the opportunity to better manage costs by participating in purchasing opportunities on a global scale.

We have solidified a series of significant relationships this year with global leaders on the following initiatives:

- our continued Shaw BlueSky TV rollout powered by the X1 Video platform and launch of our first DOCSIS 3.1 advanced Wi-Fi modem (XB6), both of which are developed by Comcast (see discussion under "Consumer")
- the deployment of Freedom Mobile's LTE-Advanced network, which was designed, planned and deployed by NOKIA, a global leader in mobile wireless technology and solutions (see discussion under "Wireless")
- our "Smart" suite of business services that includes SmartWiFi, SmartSecurity and SmartSurveillance, in collaboration with Cisco's Meraki and SmartVoice, in collaboration with Broadsoft (see discussion under "Business")



WIRELESS

Our Wireless division, through Freedom Mobile, provides wireless voice and data services through an expanding and improving wireless network infrastructure

WIRELINE - CONSUMER

Our Wireline - Consumer division connects consumers in their homes and on the go with broadband Internet, Shaw Go WiFi, video (including BlueSky TV) and traditional home phone services

WIRELINE - BUSINESS

Our Wireline - Business division provides business customers with a full suite of connectivity and managed services, including Internet, data, WiFi and phone, which enables them to focus on building their business

(1) Refer to key performance drivers.

(2) On March 1, 2016, Shaw acquired Mid-Bowline Group Corp. and its wholly owned subsidiary, Freedom Mobile (formerly, WIND Mobile). Revenue and operating income before restructuring costs and amortization in fiscal 2016 is for the period from March 1, 2016 to August 31, 2016.

Our Wireless division was formed following the acquisition of Freedom Mobile in March 2016. This acquisition transformed Shaw into a leading Canadian connectivity company, adding the critical wireless component to our converged network. Our Wireless division currently operates in Ontario, Alberta and British Columbia, offering the leading alternative for mobile services to the three national wireless incumbent carriers.

Launch of Big Gig Plans

In October 2017, Freedom Mobile, by leveraging its newly built AWS-3 LTE-Advanced Network, launched the Big Gig data plans, targeting a data-centric customer with 10 GB of data for only $50 per month – unlike any other plan offered in Canada at that time. Paired with the most popular devices, the Big Gig plans and ongoing improvements in the strength and capacity of our network is part of our commitment to giving Canadians a better option when choosing a wireless service provider.

Distribution Network

In fiscal 2017, our distribution network included over 300 branded stores and kiosks, which were owned by Freedom Mobile or independent dealers. Most of our sales have been made through these physical outlets. During 2018, we continued to expand our retail network by entering into distribution agreements with Loblaws and Walmart. Freedom Mobile products and services are currently being distributed in approximately 100 Loblaws' "The Mobile Shop" locations and approximately 140 Walmart locations throughout Ontario, Alberta and British Columbia. When combined with our existing corporate and dealer store network, we remain on track to have approximately 600 retail distribution locations operational in early fiscal 2019. In fiscal 2018, we also introduced a new format to our corporate stores which will continue to roll out and expand into new markets in 2019. These retail distribution growth initiatives will substantially improve the accessibility of Freedom Mobile's Wireless products and services which is expected to help close our historical retail distribution gap with other wireless providers in the markets we serve.

While online sales comprised a relatively small portion of Freedom Mobile's sales in fiscal 2018, we continue to improve Freedom Mobile's digital sales platform and initiatives which are expected to increase on-line sales.

Handset Availability

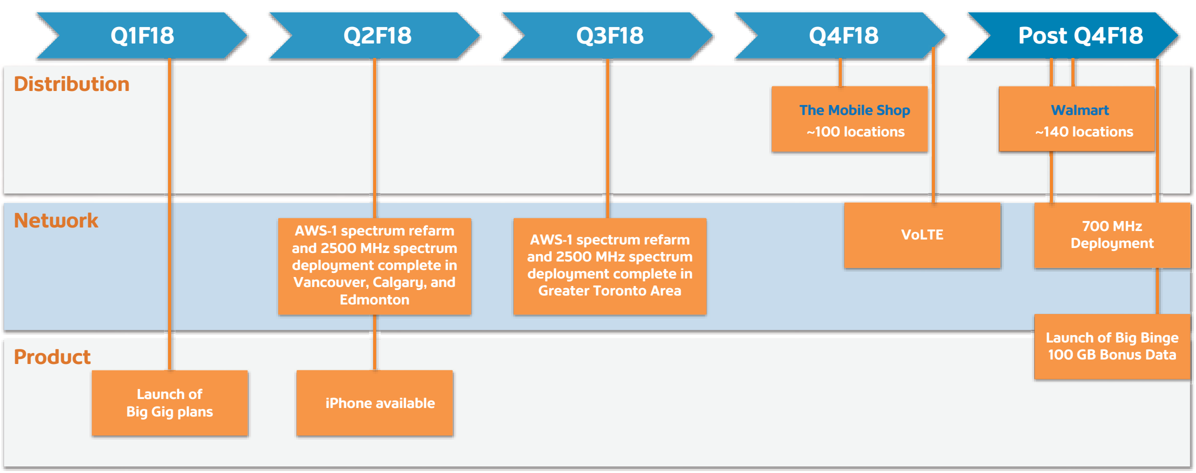
In December 2017, we began selling Apple iPhone products compatible with our AWS-3 LTE network. Freedom Mobile customers can either bring their own device to the network or participate in one of Freedom Mobile's discretionary wireless handset discount plans – MyTab and MyTab Boost. MyTab allows Freedom Mobile customers to pay a discounted price for a handset upfront with no predetermined monthly incremental charge. MyTab Boost allows Freedom Mobile customers to receive a further reduction on the upfront payment for a handset which could be as low as $0 if they pay a predetermined incremental amount on a monthly basis.

As more carriers adopted the AWS-3 LTE network technology in fiscal 2018, many iconic devices in high consumer demand including the Apple 8, 8+, X, XR, XS, XS+, Samsung S8, S9, and Note 9 became compatible with Freedom Mobile's AWS-3 LTE network. With T-Mobile, AT&T, and Verizon all using AWS-3 spectrum, we expect the handset ecosystem will continue to produce broader handset options.

Network Upgrades

In October 2017, we announced another significant step forward as we began deploying Freedom Mobile's recently acquired 2500 MHz spectrum and refarming a portion of our AWS-1 spectrum to enhance customers' access to LTE data speeds. The refarming of 10 MHz of AWS-1 spectrum has made it easier for Canadians to bring their own devices to Freedom Mobile and enjoy the full benefit of our LTE-Advanced network where previously they had 3G service.

Fiscal 2018 Highlights



In fiscal 2018, we successfully upgraded and deployed 2500 MHz in high traffic sites in the GTA, Calgary, Edmonton and Vancouver. This step, along with completion of the re-farming of 10 MHz of our existing AWS-1 spectrum to LTE in the second quarter of fiscal 2018, resulted in a large majority of our existing customers migrating from 3G to LTE service using their existing devices. This transition has shifted our data traffic from 92% on a 3G service to the current 80% on our LTE network, which now offers LTE service across three spectrum bands – AWS-1, AWS-3 and 2500 MHz. As a result, service has significantly improved for customers that were migrated from 3G to our AWS-1 and 2500 MHz LTE network as well as for our remaining 3G customers.

We are currently focused on rolling out our 700 MHz spectrum, which will continue throughout fiscal 2019 and once fully deployed, will enable our Wireless customers with compatible devices to receive an improved service experience, particularly in dense urban areas. In the third quarter of fiscal 2018, we began deploying the 700 MHz spectrum in key cell site locations in the GTA, Calgary, Edmonton, and Vancouver. (see "Shaw's Wireless Network").

5G Technical Trials

In May 2018, we announced the successful completion of our first 5G technical trials in Calgary. Conducted in collaboration with Nokia, CableLabs and Rohde & Schwarz, our trials leveraged 28 GHz mmWave and 3.5GHz spectrum and demonstrated the significant and sustained speeds for the next generation of wireless technology. The 5G trials were conducted using pre-commercial equipment at Shaw's Barlow Campus Technology Centre in Calgary and leveraged developmental 28GHz licenses provided by Innovation, Science and Economic Development ("ISED"). As part of this trial, we also conducted comparative testing between 28GHz and 3.5GHz spectrum to better understand the interoperability between two of the bands considered vital to the growth and proliferation of 5G. We will continue to conduct technical trials in fiscal 2019 to test the 5G ecosystem as part of our larger commitment to improving performance across our LTE-Advanced network.

While the distribution and network improvements that we have implemented continue to provide significant benefits to customers today, we are also making decisions that reflect our long-term view regarding new technologies that are on the horizon. In 2018, the government announced consultations to release certain spectrum bands that will support 5G wireless network deployment. This exciting step provides further visibility into the deployment of 5G where our Wireline and Wireless networks are very well positioned. We are pleased that our initial trials have been a success and, through our partnerships with best-in-class industry leaders, we will work to better understand the strengths and capabilities of 5G while continuing to invest in our network to offer Canadians a new era of strong and sustainable competition for the next generation of wireless technologies.

Subscriber and ARPU Growth

Approximately 16 million Canadians reside within our current mobile wireless network service area. Our Wireless division's customer base is growing, with over 1.4 million customers, including over 255,000 net new customers added in fiscal 2018. The growth of Freedom Mobile's subscriber base was complemented, on an annual basis, by ARPU improvement of 6.1% to $39.26 over fiscal 2017, reflecting the appeal of our differentiated value proposition.

Since acquiring the Wireless business in the spring of 2016, we have made significant investments and improvements to our network and our service. We are excited by the tremendous growth potential of the Wireless business, and, as shown by our results this year, we are committed to delivering a strong and competitive wireless alternative that will benefit all Canadians.

Our Wireless operating footprint covers ~16 million people or almost 50% of the Canadian population[(1)]

(1) Assumes Canadian population of 35 million (https://www.statcan.gc.ca/pub/12-581-x/2017000/pop-eng.htm)

We are transforming our Wireline business to enable an agile, digital-first company that will continue to meet the needs of our customers. In fiscal 2018, we introduced a significant amount of change that resulted in a leaner organization and a management team with clear accountabilities, direction and targets as we head into the new fiscal year. We will remain focused on delivering profitable growth and stabilizing our Consumer results by improving on our execution, leading with strong broadband services and optimizing our Video packages.

Our brand promise to our customers is that, with Shaw, "they won't miss a thing".

Our Consumer division provides residential customers with leading connectivity experiences on two platforms.

- Wireline Services – we provide broadband Internet, Shaw Go WiFi, Video and Phone services to customers that are connected to our local and regional hybrid-fibre coaxial ("HFC") network in British Columbia, Alberta, Saskatchewan, Manitoba and Northern Ontario
- Satellite Services – we provide Video by satellite to customers across Canada

Wireline Internet, Video and Phone Services

Shaw is one of the largest providers of residential communications services in Canada. Our Consumer division connects families in British Columbia, Alberta, Saskatchewan, Manitoba and Northern Ontario through our HFC network with broadband Internet, Shaw Go WiFi, Video and Phone services to meet their needs at home and on the go.

As our customers' needs evolve, we continue to focus on innovative value-added service offerings. Our customer-centric strategy is designed to deliver a quality customer service experience, value and choice for our customers.

Internet

As a leading Canadian connectivity company, we believe that the Internet plays a fundamental role in connecting our customers to the world and everything in it. We recognize the importance of providing reliable, affordable and worry-free connectivity to meet the ever-increasing appetite of our customers for discovery, social connectivity and streaming.

Building on the success of our WideOpen Internet 150 offering, in July 2018, we introduced Internet 300 – doubling our fastest residential speed with Unlimited Data – which is available across virtually all of our cable footprint. Canadian homes are now equipped with more devices today than ever before. Internet 300 with Unlimited Data allows our customers to stream, game, make video calls and surf the web all at the same time, with improved buffering time and without incurring additional data charges.

We continue to focus on our 2-year Value Plans, which gives customers price certainty and is expected to increase retention. Our full Internet line-up, which now ranges from Internet 15 to Internet 300, gives our customers that live within our cable footprint choice, value, and reliable connectivity. In the third quarter of fiscal 2018, we launched our first DOCSIS 3.1 advanced Wi-Fi modem (XB6), powered by Comcast, which enables faster internet speeds, supports more devices and ensures a stronger in-home internet connection.

In addition to our reliable service, a key value-added differentiator for Shaw Internet customers is access to our carrier-grade Shaw Go WiFi network, which continues to show growth in the number of devices connecting to our network. Over 3.3 million devices have authenticated on our Shaw Go WiFi network and there are over 100,000 access points used by our customers in coffee shops, restaurants, gyms, malls, public transit and other public spaces covering locations from British Columbia to Ontario.

In fiscal 2018, Shaw in partnership with the City of Vancouver, continued to expand the #VanWiFi public network making it one of the largest free public Wi-Fi networks in North America. In total, those who live, work and visit Vancouver have access to free public Wi-Fi at over 600 locations throughout the city.

Video

Our wireline Video services continue to offer a wide selection of standard definition ("SD") and high definition ("HD") television channels with access to one of Western Canada's largest selection of on-demand titles, including access to both free and paid movies, television shows and music content.

Our Video customers can choose from a selection of primary packages and can add additional channels from a variety of sports, family and other theme specialty packages, as well as a number of individual channels offered on a channel-by-channel basis. Customers can customize their channel lineups by selecting preferred theme pack subscriptions or can default to our suggested theme packs for each service level. Customers can also add extra theme packs, individual channels and premium services to round out their viewing experience.

Our flagship Video offering is the Comcast Xfinity-based Video service, which is branded as Shaw BlueSky TV. BlueSky TV is available across our cable footprint and features a voice-powered remote, enhanced search capabilities, custom recommendations, personalized experiences and parental guidance and controls.

Since its launch, we have continued to add to the BlueSky experience with additional features and integrations. In September 2017, we introduced the integration of Netflix into BlueSky TV's interface, a significant milestone in our BlueSky TV Video roadmap. In June 2018, we introduced the integration of YouTube and YouTube Kids apps into the intuitive BlueSky TV platform. Early in the fourth quarter of fiscal 2018, we launched our first 4K ready set top box which provides access to Netflix 4K content for customers that subscribe to Netflix 4K. Users can now stream videos and keep up with livestreams from the comfort of their couches in a whole new way – revamping the TV, Netflix and YouTube experience. These integrations mark a significant improvement in a customers' content search experience – a single voice search command now returns content available for viewing from live TV, Video On Demand, YouTube and Netflix (where subscribed) – it's all in one place.

Our Video customers also have access to the X1 based "FreeRange TV" which is free for Shaw TV customers. The app makes available, over the Internet and mobile devices, a large library of content, including current TV shows, movies, sports, and shows for kids. Free Range TV was also enhanced to offer download-to-go movies on a number of channels which enables our customers to travel with the video experience they enjoy at home.

Phone

Our Phone service offers a full-featured residential digital telephone service through our wireline network as a complement to our broadband Internet and Video services.

Satellite Services

Shaw Direct connects families across Canada with Video and audio programming by satellite. Shaw Direct customers have access to over 550 digital video channels (including over 250 HD channels) and over 10,000 on-demand, pay-per-view and subscription movie and television titles.

Similar to our wireline Video service, our satellite customers can select a primary TV package that includes a set number of base channels plus a selection of add-on channels. Shaw customers can further customize their TV packages by adding additional theme packs, premium packages and individual channels.

Shaw Direct is one of two licensed satellite Video services currently available across Canada. While Shaw Direct has many customers in urban centres, market penetration for satellite video is generally stronger in rural areas. The service is marketed through Shaw Direct and a nation-wide distribution network of third party retailers.

We are committed to securing and delivering leading technology for our customers. Currently, we have access to three satellites that will enable us to enhance our offerings with nearly all HD programming and improved service quality. Our plan to move all Video services from MPEG-2 to MPEG-4 to improve the operational efficiencies of Shaw's transponders in three phases is progressing and on schedule. We expect to be 100% MPEG-4 by the fall of 2019, and to be able to offer all carried and available English and French services in HD by early 2020. The efficiencies gained from the conversion from MPEG-2 to MPEG-4 allowed Shaw Direct to launch a total of 31 new HD channels in fiscal 2018.

A listing of our satellite capacity is provided below.

Shaw Satellite Transponders

Transponders	Interest	Nature of Satellite
Anik G1	16 xKu-band	Leased
Anik F2 [(1)]	16 Ku-band	Owned
	6 Ku-band	Leased
Anik F1R	28 Ku-band	Leased
	1 C-band	Leased

(1) On September 15, 2017, the Company sold a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation, to Omnitracs Canada. As part of the transaction, the leases to access the Anik F2 2 Ku-band (partial) and the Intelsat Galaxy 16 1 Ku-band (partial) were assigned to Omnitracs Canada.

While financial results for the Consumer division are generally not subject to significant seasonal fluctuations, subscriber activity may fluctuate from one quarter to another. Subscriber activity may also be affected by competition and Shaw's promotional activity. Further, satellite subscriber activity is modestly higher around the summer time when more subscribers have second homes in use. Our Consumer Video business does not depend on any single customer or concentration of customers.

BUSINESS

Shaw Business provides connectivity solutions to business customers of all sizes, from home offices to medium and large-scale enterprises, leveraging our business grade HFC and fibre-to-the-premise ("FTTP") network. Through the acquisition of ENMAX Envision Inc. in 2013, Shaw significantly increased its fibre footprint and profile among larger enterprise customers in Calgary, Alberta.

The range of services offered by Shaw Business includes:

Fibre Internet

- Scalable, symmetrical fibre Internet solutions from 10 Mbps to more than 10 Gbps.

Business Internet

- In the fourth quarter, Shaw Business launched Internet 300 to meet our business customers' growing bandwidth needs.
- All of our Business Internet 20, 75, 150 and 300 packages offer unlimited data usage, one dynamic and one static IP address and are available on month-to-month, 1, 3, and 5-year terms.

Data Connectivity – secure private connectivity for multiple locations

Voice Solutions

- Shaw Business offers a range of voice solutions from traditional analog to digital Business Phone and robust, fully-managed voice systems with unified communications functionality.
- Shaw Business Digital Phone offers more than 18 business features including multi-line hunting, voicemail to email and an included toll-free number.
- In addition to competitive long-distance rates across the globe and month-to-month uncontracted rates, Shaw Business phone customers have 1, 3, and 5-year contracted options to provide cost consistency for their business.

Video

- Video and audio service offering content for public viewing.
- Similar to our consumer Video service, Business cable and satellite customers can choose from a selection of primary channel packages and may add from a variety of sports, family and other theme specialty packages, and a number of individual channels that we offer on a channel-by-channel basis.

Broadcast Video

- Delivers high-quality Video to service providers across North America in real time.

Shaw) Business

Shaw has positioned itself as a trusted business advisor with a focus on the small and medium business ("SMBs") segment of the market. Shaw Business takes care of all aspects of its customers' increasingly complex always-on connectivity requirements so they can focus on growing their business. As part of this strategy, Shaw has collaborated with global scale technology leaders to offer its "Smart" suite of easy to use and flexible managed business communications solutions. The Smart suite of services provides cost-effective enterprise grade managed IT and communications solutions that are increasingly valued by SMBs as the digital economy grows in scope and complexity.

The Smart suite of services includes:

SmartVoice

- SmartVoice is a unified communications solution that integrates instant messaging, presence, email, video conferencing and a mobile application that is built on Broadsoft's BroadWorks platform.
- From comprehensive traditional phone features such as auto-attendant, hunt groups and call recording to collaboration tools such as instant messenger and screen sharing, SmartVoice gives businesses the flexibility to work in a modern way.
- SmartVoice offers three different levels of packaging based on business needs and is available on 1, 3, or 5-year contract terms.

SmartWiFi

- SmartWiFi is a fully-managed Internet solution deployed over Cisco's Meraki platform that enables seamless, secure wireless connectivity for employees and guests in the office.
- SmartWiFi also enables access to the cloud portal where customers can easily manage their service, configure their set service identifiers, or SSIDs, to gain insight from network analytics and create a custom splash page.
- Available at speeds of 75, 150 or 300 megabits per second, plus Wireless access points, SmartWiFi provides our customers with exceptional Wi-Fi coverage on 1, 3, or 5-year contract terms.

SmartSecurity

- SmartSecurity is a fully-managed network security platform deployed over Cisco's Meraki platform that protects a wired and Wi-Fi network at the edge with access control, virus protection, the ability to control which applications run on the network, content filtering and the connection of branch locations. A SmartSecurity premium package also includes the ability to set-up a secure virtual private network, or VPN.
- SmartSecurity is available when bundled with SmartWiFi or Business Internet on 3 or 5-year contract terms.

SmartSurveillance

- SmartSurveillance is a fully-managed, enterprise-grade security camera solution deployed over Cisco's Meraki platform. Managed through a cloud-portal, SmartSurveillance enables business owners to view footage and manage their cameras from anywhere using an intuitive on-line dashboard. Sophisticated features, such as motion-based search and heat mapping, allow owners to quickly find footage of interest and identify activity patterns.
- SmartSurveillance can also be bundled with SmartWiFi or Business Internet on a 3 or 5-year contract terms.

Software Defined Wide Area Network ("SD-WAN")

- SD-WAN provides businesses with a better way to connect multiple offices in a scalable and cost-effective manner on a cloud-managed platform.
- With integrated security, seamless three level failover and intelligent path control, SD-WAN enables companies to deploy a resilient, cost-effective, high-bandwidth connectivity solution.

- Powered in partnership with Cisco Meraki, SD-WAN sites are connected by internet links secured by our SmartSecurity service which provides network protection and cloud-based security policy updates to protect businesses from the latest vulnerabilities and network threats.

Session Initiation Protocol ("SIP") Trunking

- Our next-generation SIP Trunking solution, on the Broadsoft platform, delivers a centralized voice solution managed in an easy-to-use cloud portal.
- SIP allows customers to pay only for what they need with the ability to scale the system quickly as businesses grow.
- The integration with Broadsoft's platform provides businesses with access to unified communications features such as video conferencing, call queuing and auto-attendant as well as the ability to join offices with SmartVoice and SIP into the same environment to save cost and increase efficiency.

On the success of its SmartSuite of products, Shaw Business continues to grow at a steady pace despite recent years of economic challenges experienced in parts of western Canada. Highlighted by growth in the SMBs markets, our Business division continues to consistently increase its customer base, revenue and profitability.

In order to continue to meet the evolving needs of our customers, we are executing our plan to ensure that our wireline network keeps pace with our customers' expectations for bandwidth, speed and reliability. See "Shaw's Wireline Network" for a description of our wireline network and the advances that we are undertaking.

Shaw Business, through the Calgary1 data centre, also provides hybrid IT services to customers in western Canada. These services are a natural complement to Shaw Business' current offerings.

Wholesale Wireline Network Services

Using our national and regional access wireline networks, we provide services to Internet service providers ("ISPs"), other communications companies, broadcasters, governments and other businesses and organizations that require end-to-end Internet and data connectivity in Canada and the United States. We also engage in public and private peering arrangements with high speed connections to major North American, European and Asian networks and other tier-one backbone carriers. All service solutions are sold on 1, 3 or 5-year terms and pricing is negotiated based on the specific solution provided to the customer.

Broadcast Services

Shaw Broadcast Services uses our substantial fibre backbone network to manage one of North America's largest full-service commercial signal distribution networks, delivering more television and radio signals by satellite to cable operators and other multi-channel system operators in Canada and the US than any other single-source satellite supplier. This business is referred to as a "satellite relay distribution undertaking" or "SRDU". Shaw Broadcast Services currently provides SRDU and advanced signal transport services to over 300 distribution undertakings and redistributes over 500 television signals and over 100 audio signals in both English and French to multi-channel system operators.

Tracking

On September 15, 2017, the Company sold a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation, to Omnitracs Canada for approximately US$20 million.

Shaw's Wireline Network

At Shaw, we are proud of our advanced wireline network, which combines the power of fibre, coax, and Wi-Fi and is comprised of Shaw's:

- North American fibre backbone;
- Regional fibre optic and co-axial distribution networks; and
- Local Shaw Go WiFi connectivity.

Wireline Backbone

The backbone of Shaw's wireline network includes terabits of capacity over multiple fibres on two diverse cross-North America routes. The southern route principally consists of approximately 7,000 route kilometres of fibre located on routes between Seattle and New York City (via Vancouver, Calgary, Regina, Winnipeg, Toronto, Chicago and Buffalo). The northern route consists of approximately 4,000 route kilometres of fibre between Edmonton and Toronto (via Saskatoon, Winnipeg and Thunder Bay). A third secured capacity backbone route for advanced redundancy is located from Vancouver to Edmonton to Calgary and Calgary to Toronto through Dallas and New York. These routes, along with a number of other secured capacity routes, provide redundancy for the network. Shaw also uses a marine route consisting of approximately 330 route kilometres from Seattle to Vancouver (via Victoria), and has secured additional capacity on routes between a number of cities, including (i) Vancouver and Calgary, (ii) Seattle and San Jose, (iii) Seattle and Calgary, (iv) Seattle and Vancouver, (v) Toronto and New York City, (vi) Toronto and Montreal, and (vii) Edmonton and Fort McMurray.

Regional Distribution Network

We connect our backbone network to residential and business customers through our extensive regional fibre optic and HFC distribution networks.

In fiscal 2018, we completed the deployment of the newest generation of cable modem termination system equipment referred to as the Converged Cable Access Platform ("CCAP").

This equipment enhances the capabilities of our HFC network and enables Shaw to leverage the next generation of cable access technology known as Data over Cable Interface Specification version 3.1 ("DOCSIS 3.1"). Combined with the launch of our latest generation of DOCSIS 3.1 enabled Cable modem, the XB6, the upgrade allowed us to launch Wide Open Internet 300 in July 2018 which is now widely available across virtually all of our cable footprint. DOCSIS 3.1 is also being leveraged to provide wireless backhaul services for our Freedom Wireless LTE small cells, providing significantly improved wireless coverage and capacity in both indoor and outdoor locations, while minimizing deployment and upgrade costs.

In conjunction with our DOCSIS 3.1 upgrades, we are continually increasing the spectrum usable on our cable plant, enabling increased upstream and downstream capacities. These combinations will continue to allow cable technology to achieve fiber equivalent performance in download and upload speeds at a fraction of the costs.

Shaw continues to optimize the capacity and efficiency of our wireline network and has virtually eliminated network congestion by deploying fibre optic cable deeper into our access networks and closer to where our customers reside. We continue to increase the number of optical serving areas or "nodes" in the wireline network. This is a continual process that we apply year-over-year to increase fibre optic usage in our wireline network and reduce the distance signals travel over coaxial cable to each consumer. Driving fibre deeper into our network also supports wireless and business service deployments, as well as future services such as 5G, FTTP, or the newly released Full Duplex DOCSIS ("FDX") specification, which are all potential building blocks for multi-gigabit symmetrical services over co-axial infrastructure.

Shaw Go WiFi

Shaw has created Canada's most extensive service provider Wi-Fi network, Shaw Go WiFi. Shaw Go WiFi extends a customer's broadband experience beyond the home as a valuable extension of our customer wireline network experience. Over 3.3 million devices have authenticated to our carrier-grade Shaw Go WiFi network and there are approximately 100,000 access points. In addition, we have entered into agreements with 108 municipalities to extend Shaw Go WiFi service into public areas within those cities.

Shaw's Wireless Network

Shaw partnered with NOKIA to roll-out our next generation LTE-Advanced wireless network to our customers in our existing markets in Ontario, Alberta and British Columbia. LTE-Advanced is the latest standard of cellular technologies available in the marketplace today. Until the launch of our LTE-Advanced network to all of our existing markets in fiscal 2017, all of our customers were served by our 3G network using AWS-1 spectrum. In fiscal 2017, LTE roaming was launched with Bell, Rogers, and AT&T offering more than 97% of the Canadian and US population roaming coverage outside of Freedom Mobile's existing markets to Freedom Mobile customers that subscribe to an LTE plan.

In October 2017, we announced the deployment of the 2500 MHz spectrum acquired from Quebecor and re-farming of a portion of our existing AWS-1 spectrum which will enhance our customers' access to LTE data speeds. This step along with completion of the re-farming of 10 MHz of our existing AWS-1 spectrum to LTE in the second quarter of fiscal 2018 resulted in a large majority of our existing customers migrating from 3G to LTE service using their existing devices. This transition resulted in our data traffic moving from 92% on a 3G service to the current 80% on our LTE network, which now offers LTE service across three spectrum bands – AWS-1, AWS-3 and 2500 MHz. As a result, service significantly improved for customers that were migrated from 3G to our AWS-1 and 2500 MHz LTE network as well as for our remaining 3G customers.

In the fourth quarter of fiscal 2018, we launched Voice over LTE ("VoLTE") nationwide across all three of our LTE spectrum bands – AWS-1, AWS-3 and 2500 MHz – offering our customers with compatible devices an improvement in voice quality and a reduction in call set-up time. In fiscal 2018, we also started deploying small cell technology (low-powered wireless and receivers with a range of 100 m to 200 m), designed to provide network coverage to smaller areas. As tall high-power macro towers keep the network signal strong across large distances, small cells suit more densely developed areas like city centres and popular venues by providing LTE/VoLTE quality, speed, capacity and coverage improvements in these high traffic areas.

The Company is currently focused on building out its 700 MHz spectrum, which will continue throughout fiscal 2019 and where deployed, 700 MHz will enable Wireless customers with compatible devices to receive an improved service experience both in-building as well as extending service at the edge of our current coverage area. In the third quarter of fiscal 2018, the Company started deploying its 700 MHz spectrum in key cell sites locations in the GTA, Calgary, Edmonton, and Vancouver.

Spectrum holdings

On July 24, 2017, the Company acquired 700 MHz and 2500 MHz wireless spectrum licences from Quebecor for $430 million. The spectrum licences acquired are comprised of 10 MHz licences of 700 MHz spectrum in each of British Columbia, Alberta, and Southern Ontario and the 20 MHz licences of 2500 MHz spectrum in each of Vancouver, Edmonton, Calgary, and Toronto. This spectrum and the incremental network investment to deploy the spectrum, will materially improve our long-term wireless customer experience and further enable our ability to offer converged network solutions. We have transitioned 10 MHz of our AWS-1 spectrum from 3G to LTE-Advanced which improved network performance and makes LTE-Advanced available to more of our customers.

Our Wireless division currently holds 50 MHz of AWS spectrum, 10 MHz of 700 MHz and 20-40 MHz of 2500 MHz spectrum in the main service areas of Southern Ontario, Alberta and British Columbia. We also hold 20-60 MHz of AWS spectrum, 0-10 MHz of 700 MHz and 0-30 MHz of 2500 MHz spectrum in other markets within Southern Ontario, Eastern Ontario, Alberta and British Columbia. As discussed below, ISED conducted a consultation regarding the policy framework for the 600 MHz spectrum auction. In March 2018, ISED released its decision on the policy and licensing framework for the 600 MHz band. In the decision, ISED established a set aside of 30 MHz for eligible entities of the total 70 MHz of spectrum that will be available in an auction that will commence on March 12, 2019. (for further detail see "Government Regulations and Regulatory Developments –Radiocommunication Act – Wireless Spectrum Licences").

The Company expects that its spectrum assets will continue to support anticipated growth in LTE subscribers, as well as its 3G network subscribers, and supports new growth, geographic diversification, and scale opportunities in the markets in which we operate.

Equity Interest in Corus

Corus is a leading media and content company that creates and delivers high quality brands and content across platforms for audiences around the world. Its portfolio of multimedia offerings encompasses 44 specialty television services, 39 radio stations, 15 conventional television stations, a global content business, digital assets, live events, children's book publishing, animation software, technology and media services. Corus' roster of premium brands includes Global Television, W Network, OWN: Oprah Winfrey Network Canada, HGTV Canada, Food Network Canada, HISTORY®, Showcase, National Geographic Channel, Q107, CKNW, Fresh Radio, Disney Channel Canada, YTV and Nickelodeon Canada. Corus is headquartered in Canada, and its stock is listed on the TSX under the symbol CJR.B.

In connection with the sale of the Media division to Corus in April 2016, the Company received 71,364,853 Corus Class B non-voting shares (the "Corus B Consideration Shares") representing approximately 37% of Corus' total issued equity of Class A and Class B shares. The Company agreed to retain approximately one third of its Corus B Consideration Shares for 12 months post-closing, a second one third for 18 months post-closing and the final one third for 24 months post-closing. The Company also agreed to have its Corus B Consideration Shares participate in Corus' dividend reinvestment plan until September 1, 2017. For the year ended August 31, 2018, the Company received dividends of $92 million (fiscal 2017– $88 million) from Corus, $nil (fiscal 2017 – $81 million) were reinvested in additional Corus Class B non-voting participating shares as the Company withdrew from Corus' dividend reinvestment plan on September 1, 2017. On June 27, 2018, Corus announced an 80% dividend cut effective September 1, 2018, which results in expected cash dividends to the Company of approximately $19 million in fiscal 2019 compared to the $92 million in cash dividends received in fiscal 2018.

At August 31, 2018, the Company owned 80,630,383 (2017 – 80,630,383) Corus Class B non-voting shares having a fair value of $298 million (2017 –$1,109 million) and representing 38% (2017 – 39%) of Corus' total issued equity of Class A and Class B shares. The Company's weighted average ownership of Corus for the year ended August 31, 2018 was 39% (fiscal 2017 – 38%). Although the Corus Class B non-voting shares do not have voting rights, the Company is considered to have significant influence due to Board representation. In addition, Shaw Family Living Trust ("SFLT") and its subsidiaries control both Shaw and Corus. The sole trustee of SFLT is a private company owned by JR Shaw and having a board comprised of seven directors, including JR Shaw (Chair), Bradley S. Shaw, four other members of JR Shaw's family and one independent director (See "Related Party Transaction – Corus").

In the third quarter of fiscal 2018, the Company assessed its investment in Corus for indicators of impairment, which included a significant and sustained decrease in the share price as well as the recording by Corus of an impairment charge against their goodwill and broadcast license intangibles and found that there was evidence that impairment had occurred. The Company compared the recoverable amount to the carrying value and determined that an impairment charge of $284 million was required. The recoverable amount was determined based on the value in use of the investment.

Community Investment

By partnering with leading charitable organizations and leveraging our range of sponsorship, marketing and public relations assets, we are making a positive impact on hundreds of thousands of kids, youth, and families across Canada, while demonstrating our community investment leadership to our employees, customers, and stakeholders

Under the umbrella of the Shaw Kids Investment Program ("SKIP"), Shaw supports charitable and community organizations that improve the lives of Canadian kids. In 2018, Shaw contributed over $45 million in cash and in-kind support – as well as 11,000 hours of volunteer time – to over 700 local and national youth-focused charitable organizations.

The Shaw Charity Classic held from August 29 – September 2, 2018 marked the sixth year of the PGA TOUR Champions event hosted in Calgary which has become a significant fundraising platform for Alberta's children and youth charities. In 2018, the Shaw Charity Classic raised $10 million, benefitting 182 organizations that help more than 500,000 kids and families in Alberta. Since its inception in 2013, the Shaw Charity Classic has raised over $32 million for Alberta charities, fully demonstrating Shaw's impact as both an employer and corporate citizen when sponsorship and community investment activities are integrated to support the programs and organizations that are building positive communities for kids and youth.

In 2018, Shaw continued its efforts to support positivity, inclusion, and respect in schools, through our Shaw Kindness Sticks grants. The initiative invited youth across Canada to think of how they can help promote kindness and respect in their schools for a chance to receive a grant of up to $5,000 to bring their idea to life. We received 150 applications from kids and youth across the country, and prominent Canadian athletes, icons, and community builders joined Shaw in selecting the top 10 ideas to be awarded funding.

GOVERNMENT REGULATIONS AND REGULATORY DEVELOPMENTS

Substantially all of the Company's Canadian business activities are subject to regulations and policies established under various pieces of legislation, including the Broadcasting Act (Canada) ("Broadcasting Act"), the Telecommunications Act (Canada) ("Telecommunications Act"), the Radiocommunication Act (Canada) ("Radiocommunication Act") and the Copyright Act (Canada) ("Copyright Act"). Broadcasting and telecommunications are generally administered by the Canadian Radio-television and Telecommunications Commission ("CRTC") under the supervision of the Department of Canadian Heritage ("Canadian Heritage") and ISED, respectively. The allocation and use of wireless spectrum in Canada are governed by spectrum licences issued by, and radio authorization conditions set by, ISED pursuant to the Radiocommunication Act.

In June 2018, pursuant to the commitment in the federal government's 2017 budget, ISED and Canadian Heritage launched a joint review of the Broadcasting Act and the Telecommunications Act, which will also include a review of the Radiocommunication Act (the "Joint Review"). The Joint Review will be conducted by a panel of external experts tasked with studying the legislation and making recommendations to the Ministers of ISED and Canadian Heritage by January 31, 2020. The expert panel will examine issues such as telecommunications and content creation in the digital age, net neutrality and cultural diversity, and how to strengthen the future of Canadian media and Canadian content creation.

Limits on non-Canadian ownership and control

Neither a holding company that has a subsidiary operating company licensed under the Broadcasting Act, nor any such licensee, may be controlled in fact by non-Canadians, the determination of which is a question of fact within the jurisdiction of the CRTC. Pursuant to the *Direction to the CRTC (Ineligibility of Non-Canadians)* (the "Direction"), non-Canadians are permitted to own and control, directly or indirectly, up to 33.3% of the voting shares and 33.3% of the votes of a holding company that has a subsidiary operating company licensed under the Broadcasting Act. In addition, up to 20% of the voting shares and 20% of the votes of a licensee may be owned and controlled, directly or indirectly, by non-Canadians. As well, the chief executive officer ("CEO") and not less than 80% of the board of directors of the licensee must be resident Canadians. There are no restrictions on the number of non-voting shares that may be held by non-Canadians at either the holding company or licensee level. If a holding company of a licensee does not satisfy the requirement that 80% of its board of directors be resident Canadians, it must have a CRTC-approved Independent Programming Committee ("IPC") in place to ensure that neither the holding company nor its directors exercise control or influence over the programming decisions of its subsidiary licensee. With CRTC approval, Shaw has implemented an IPC to comply with the Direction.

Similar restrictions apply to certain Canadian carriers pursuant to the Telecommunications Act, the Radiocommunication Act and associated regulations, except that there is no requirement that the CEO be a resident Canadian of a company operating pursuant to those Acts. Instead, the Telecommunications Act, the Radiocommunication Act and associated regulations require only that 80% of the voting shares of such entities be held by resident Canadians. The Canadian ownership requirements do not apply to wireline and wireless telecommunications carriers that have annual revenues from the provision of telecommunications services in Canada that represent less than 10% of the total annual revenues for the sector.

The Company's Articles contain measures to ensure the Company continues to comply with applicable Canadian ownership requirements and its ability to obtain, amend or renew a license to carry on any business. Shaw must file a compliance report annually with the CRTC confirming that it is eligible to operate in Canada as a telecommunications common carrier.

Broadcasting Act

Pursuant to the Broadcasting Act, the CRTC is mandated to regulate and supervise all aspects of the broadcasting system in a flexible manner. The Broadcasting Act requires broadcast distribution undertakings ("BDUs") to give priority to the carriage of Canadian services; to provide efficient delivery of programming services at affordable rates; to provide reasonable terms for the carriage, packaging and retailing of those programming services; and provides the option to operate a community channel. The Broadcasting Act also sets out requirements for television broadcasters with respect to Canadian content. The Company's broadcasting distribution business and on-demand programming services depends on licences (or operates under an exemption order) granted and issued by the CRTC under the Broadcasting Act. Pursuant to CRTC Regulations, the Company is required to contribute 5% of its cable and DTH BDUs' revenues to the production of Canadian programming.

Licensing and ownership

In August 2018, the Commission renewed the Company's cable licences for a five-year term from September 1, 2018 to August 31, 2023. On August 31, 2018, the Company submitted renewal applications for its direct-to-home ("DTH") and Satellite Relay Distribution Undertaking ("SRDU") licences which expire on August 31, 2019.

In May 2017, Shaw On Demand's licence was renewed for a five-year term from September 1, 2017 to August 31, 2022. On August 31, 2018, the Company submitted renewal applications for Shaw Pay-Per-View's ("PPV")'s terrestrial PPV and DTH PPV licences which expire on August 31, 2019.

New media

The CRTC has issued a digital media exemption order requiring that Internet-based and mobile point-to-point broadcasting services not offer television programming on an exclusive or preferential basis in a manner that depends on subscription to a specific mobile or retail Internet service and not confer an undue preference or disadvantage. The CRTC has decided to not impose a levy on the revenue of exempt digital media undertakings to support Canadian new media content.

The potential for new or increased fees

Any changes to the Broadcasting Act pursuant to the Joint Review (see "Government Regulations and Regulatory Developments") could impact the business practices of the Company, or result in new fees payable by the Company's cable, DTH or SRDU services. New fees could also be imposed pursuant to CRTC Regulation, as the Commission indicated that in 2019-2020 it may consider ways to support television news production through increased access to subscription revenue, which could increase costs for the Company's cable and DTH services.

CRTC Regulations require cable BDUs to obtain the consent of an over-the-air ("OTA") broadcaster to deliver its signal in a distant market (which can be either within the province of origin or out-of-province). In the case of DTH BDUs, CRTC Regulations permit the distribution of local OTA television signals on a distant basis without consent within the province of origin, but DTH BDUs must obtain broadcaster consent to deliver the OTA television signal out-of-province unless the DTH BDU is required to carry the signal out-of-province on its basic service. Broadcasters may assert a right to limit distribution of distant signals or to seek remuneration for the distribution of their signals in distant markets on the basis of the CRTC Regulations.

Telecommunications Act

Under the Telecommunications Act, the CRTC is responsible for ensuring that Canadians in all regions of Canada have access to reliable and affordable high-quality telecommunication services. The CRTC has the authority to forbear from regulating one or more services or classes of services provided by a carrier if the CRTC finds that there is sufficient competition for those services to protect the interests of users. Retail Internet, home phone services and mobile wireless services have been forborne from price regulation. However, regulations do affect certain terms and conditions under which Shaw's retail services are provided. As described further below under "Third Party Internet Access," certain Shaw wholesale services are regulated.

The CRTC and ISED can impose monetary penalties on companies that contravene the Telecommunications Act, the Radiocommunication Act and the regulations and rules promulgated thereunder. The technical operating aspects of the Company's businesses are regulated by technical requirements and performance standards established by ISED, primarily under the Telecommunications Act and the Radiocommunication Act.

Any changes to the Telecommunications Act pursuant to the Joint Review could impact the business practices of the Company, and/or result in new fees on the Company, for example, by requiring ISPs to contribute a fixed percentage of revenues to support the creation of Canadian content – a possible policy option presented in the CRTC's May 2018 report (see "Government Regulations and Regulatory Developments").

Third Party Internet Access

Shaw is mandated by the CRTC to provide a wholesale service at regulated rates that allows independent ISPs to provide Internet services at premises served by Shaw's wireline network ("Third Party Internet Access" or "TPIA"). In 2015, the CRTC completed a review of the wholesale wireline telecommunications policy framework, including TPIA, and: (i) extended mandated wholesale access services to include FTTP facilities; and (ii) initiated a shift to a new disaggregated wholesale Internet access service. The new disaggregated service will be phased-in over a period of three years and is intended to allow independent ISPs to reduce reliance on the transport facilities currently included as part of the regulated wholesale service. The CRTC has approved interim disaggregated rates for Ontario and Quebec. The CRTC has initiated a process to extend the disaggregated service into Western Canada, including Shaw's territory. Shaw has filed a proposed network architecture for disaggregated TPIA but has not yet been directed to file disaggregated tariffs or proposed rates for its serving area.

Although the CRTC has initiated a shift to a new disaggregated service, in October of 2016, the CRTC approved, pending the completion of its review of aggregated costing studies, interim aggregated rates which were lower than the proposed rates. At the completion of this review, the CRTC may require further adjustments to Shaw's costing studies, which may result in further reductions in the wholesale rates we charge for aggregated TPIA service.

The CRTC further indicated its intention to review the process for setting rates of regulated wireline and wireless wholesale services, including consideration of alternative costing approaches, the feasibility of using a common economic model by wholesale service carriers to establish wholesale rates and certain costing elements such as cost of capital.

Competition Bureau Study on the State of Competition in the Wireline Broadband Market

In May 2018, the Competition Bureau launched a market study into the state of competition in the wireline broadband sector, with a goal of identifying the steps that regulators or policy makers could take to enhance competition. Following the filing of submissions and expert reports by Shaw and other stakeholders, in October, the Bureau released an update to the Study as well as an online survey. The Bureau will continue with consultations during the Fall and Winter of 2019 and is targeting June 2019 for publication of its report. The Bureau's recommendations could influence future government and CRTC policies and regulations, including the CRTC's framework for wholesale wireline services and the regulations for TPIA.

CRTC Review of Wholesale Roaming Rates and Wi-Fi First

As part of its comprehensive policy framework for wholesale wireless services, the CRTC had established interim wholesale roaming rates pending its review of the costing studies submitted by the incumbent wireless carriers. In March 2018, the CRTC completed its review of rates for the mandated wholesale roaming service and established final rates that were lower than the interim rates set in early 2015.

In Telecom Decision 2017-56 the CRTC had determined that public Wi-Fi did not constitute a mobile wireless home network for the purposes of accessing mandated wholesale wireless roaming rates. In June 2017, the Governor in Council ("GiC") referred CRTC Telecom Decision 2017-56 back to the CRTC for review. The GiC asked the CRTC to review whether expanding the definition of home network to include public Wi-Fi would have a positive impact on the affordability of retail mobile wireless services and whether the negative impact of such a change on facilities-based investment and competition would outweigh the benefits. In March 2018, the CRTC declined to extend the mandated roaming regime to include Wi-Fi First providers.

The CRTC has indicated that it will review its regulatory framework for mobile wireless services beginning in 2019. As part of this review, the Commission will consider whether additional regulatory measures are necessary to further support the competitiveness of the market, such as mandating MVNO access or developing policies that facilitate the sharing or deployment of wireless facilities. If the CRTC reverses its previous positions, Wi-Fi First, MVNO and other resale providers could gain access to incumbent wireless networks at regulated rates for the purposes of roaming.

Lower-Cost Data Only Plans

In its Wi-Fi First Decision, the CRTC acknowledged the Government's concerns about wireless affordability at the lower end of the market, particularly for data-only packages, and found that it was unclear whether the market could be relied on to deliver lower-cost data only plans. Accordingly, the CRTC launched a new consultation to investigate the availability and pricing of data-only packages, including whether wireless carriers should be required to offer low-cost data-only packages. As part of this proceeding, the three national wireless incumbent carriers were required to propose an affordable data-only offering for comment. A CRTC decision to mandate the provision of these products at specific rates or other terms may affect our ability to compete in the data-only segment of the market.

Retail Sales Practices

In June 2018, the Governor in Council ("GiC") issued an order to the CRTC, directing it to investigate the retail sales practices used by Canada's large telecommunications carriers and report back to the GIC by February 2019 with its findings on the prevalence of such practices and how existing consumer protections could be expanded, or new protections developed, to ensure consumers are empowered and treated fairly by their service providers. Shaw was made a party to this proceeding by the CRTC and participated in the oral public hearing in October 2018. A decision to regulate our retail sales practices could impact our ability to serve our customers and could result in cost increases for the Company.

CRTC Internet Service Provider Code

On November 9, 2018, the CRTC initiated a proceeding to establish a mandatory code applicable to Internet services provided by larger, facilities-based ISPs, such as Shaw. The CRTC has tabled a draft Internet Code and will accept comments from the industry and the public, with final submissions due April 8, 2019. The CRTC has already enacted a Wireless Code and a Television Service Provider Code applicable to wireless and television service providers, respectively. If implemented, the Internet Code will require Shaw to modify its existing Internet contracts and related processes, which may negatively effect our business and also result in cost increases to the Company.

Access for wireline network

For its wireline network Shaw requires access to support structures, such as poles, strand and conduits of telecommunication carriers and electric utilities, in order to deploy cable facilities. Under the Telecommunications Act, the CRTC has jurisdiction over support structures of telecommunication carriers, including rates for third party use. The CRTC's jurisdiction does not extend to electrical utility support structures, which are regulated by provincial utility authorities. Shaw's wireline network also requires access to construct facilities in roadways and other public places. Under the Telecommunications Act, Shaw may do so with the consent of the municipality or other public authority having jurisdiction.

Radiocommunication Act

Our Wireless division holds licences for the use of radiofrequency spectrum required to operate its mobile wireless business. Those spectrum licences are administered by ISED under the Radiocommunication Act. Spectrum use is governed by conditions of license, including license term, transferability/divisibility, technical compliance requirements, lawful interception, research and development, and mandated antenna site sharing and domestic roaming services.

Any changes to the Radiocommunications Act pursuant to the Joint Review (see "Government Regulations and Regulatory Developments") could impact the business practices of the Company and/or the processes governing its acquisition of new spectrum for purposes of building its wireless networks.

Wireless Spectrum Licences

The Wireless division's AWS-1 spectrum licences were issued in 2009, for a term of ten years, and prior to expiration, the licences may be renewed. The AWS-3 spectrum licences were issued in April 2015 and have a term of 20 years. The 700 MHz and 2500 MHz spectrum licences that the Company purchased from Quebecor were initially issued in February 2014 and May 2015, respectively for a term of 20 years.

The applicable terms and conditions of renewal of our and other carriers' spectrum licences after the initial term are determined by ISED through public consultation processes that begin prior to the expiry of those licences. Following a public consultation in the summer of 2017, in early 2018 ISED issued its policy decision relating to the renewal of AWS-1 and other spectrum licences auctioned in 2008, including those held by our Wireless division. The decision confirmed that, if Freedom Mobile has met its conditions of licence, including any applicable deployment obligations, Freedom Mobile will have a high expectation to be eligible for renewal. We expect to meet the applicable requirements and conditions of licence for those spectrum licences that are material to our plans for the Wireless division. As expected, ISED also imposed more onerous deployment conditions for licences issued through the renewal process.

Over the past year, ISED conducted several spectrum policy consultations regarding spectrum bands that will be licensed or otherwise made available for future wireless deployments, including 5G. The consultations relate to:

- the release of millimetre wave spectrum in the 26 GHz, 28 GHz, 37-40 GHz and 64-71 GHz frequency bands
- revisions to the 3500 MHz Band to accommodate mobile services;
- the technical, policy and licensing framework to govern the auction of spectrum licences in the 600 MHz band for mobile use; and
- ISED's Spectrum Outlook, which reviewed the department's overall approach and planning activities related to the release of spectrum for commercial mobile services, licence-exempt applications, satellite services and wireless backhaul services over the years 2018-2022.

In March 2018, ISED released its decision on the policy and licensing framework for the 600 MHz band. In the decision, ISED established a set aside of 30 MHz for eligible entities (of the total 70 MHz of spectrum that will be auctioned off). The auction will commence on March 12, 2019.

In June 2018, ISED released its Spectrum Outlook decision. Citing the importance of mobile services and the future of 5G, ISED stated its intention to release a variety of low, mid and high band spectrum over the next several years. ISED's highest priority bands for release include 600 MHz, 3500 MHz and the millimetre wave bands for mobile, as well as 32 GHz, 70 GHz, and 80 GHz for backhaul use.

Decisions on the millimetre wave and 3500 MHz consultations are pending. We anticipate that ISED will hold further public consultations on a licensing process regarding the 3500 MHz band for mobile use.

ISED has a framework that sets out criteria for reviewing and approving license transfers, prospective transfers, and deemed license transfers, including consideration of the quantum and concentration of spectrum holdings before and after the proposed transfer.

Our Wireless division's operations could be materially affected by our failure to:

- obtain new or additional spectrum licences;
- renew existing spectrum licences;
- obtain approval of any transfer of spectrum licences; or
- procure spectrum licences that provide access to adequate allocations of low-band spectrum, which has superior propagation and penetration characteristics, or of other spectrum that is required for 5G.

In addition, the Wireless division could experience increased costs, or reduced revenues or reduced margins, or the deployment or service plans could be negatively affected by, amended or newly-adopted laws and regulations, or decisions of ISED or the CRTC. The CRTC and ISED can impose monetary penalties on companies that contravene the Telecommunications Act, the Radiocommunication Act, and the regulations and rules promulgated thereunder.

Access for Wireless Network

Our Wireless division's operations depend on being able to locate and construct wireless antenna sites, which in some cases requires certain authorizations or approvals from municipalities, which vary from one municipality to another but are also subject to federal oversight. The process for such approvals can include a comprehensive consultation process related to local land use priorities and new antenna site design parameters.

The Wireless division also uses arrangements whereby it co-locates its antennae equipment on towers and/or sites owned and operated by third party tower and/or sites providers and the three national wireless incumbent carriers. Pursuant to the conditions of their spectrum licences and the CRTC's policy framework for wholesale wireless services, the three national wireless incumbent carriers must allow competitors, including Freedom Mobile, to co-locate equipment at these locations. However, the application and approval process for the sharing of towers is lengthy, and the ISED and CRTC processes that are available to enforce the existing rules can also be challenging and time consuming.

Copyright Act

Canada's Copyright Act accords the creators and owners of content various rights to authorize or be remunerated for the use of their works and performances, including, in some instances, by broadcast distribution undertakings. In addition, the Copyright Act creates certain exceptions that permit the use of copyrighted works without the authorization or remuneration of rights holders. Parliament initiated a mandated five-year review of the Copyright Act in December 2017. The Standing Committee on Industry, Science and Technology is conducting the review and will produce a report making recommendations to the Government in 2019. This process could lead to amendments to the Copyright Act that impact the terms and conditions applicable to the use of content, including the potential for increased fees, and the scope of flexibility with respect to the use of content pursuant to exceptions under the Copyright Act.

Furthermore, on November 5, 2018, the Government tabled Bill C-86, a budget implementation act. Bill C-86 contains proposed amendments to the Copyright Act that could result in an increase in fees payable by the Company to copyright holders. Increased payments could result from new rate-setting criteria that the Copyright Board would be required to consider if the Bill is passed, and new flexibility for copyright collective societies to proceed by way of negotiation, rather than tariff hearings, to establish the price for the use of copyright works.

Finally, pursuant to the Copyright Act, the Copyright Board of Canada ("the Copyright Board") oversees the collective administration of copyright royalties in Canada, including the review and approval of copyright tariff royalties payable to copyright collectives by BDUs, television broadcasters and online content services. The Copyright Board may also make rulings on the interpretation of the Copyright Act in the course of issuing copyright tariff decisions.

The potential for new or increased fees

The Copyright Board is currently considering a proposed tariff for the retransmission of programming in distant television signals for the years 2014 through 2018. The tariff proposed by the retransmission rights collectives would, if approved, represent a significant increase in the per-subscriber rates payable for the retransmission of programming in distant signals. The Company participated in the hearing process and objected to the tariff on behalf of its cable and DTH satellite divisions. The record of this proceeding is now complete, and the parties are awaiting the decision of the Copyright Board.

In addition, in August 2017, the Copyright Board issued a decision interpreting the scope and meaning of "making available" which is defined in the Copyright Act as part of the right to communicate a work to the public by telecommunication. In the Online Music Services proceeding, SOCAN and other rights owners argued that making a musical work available for download would trigger an obligation to pay public performance royalties to SOCAN. The Objectors, including the Company, argued that since downloading is not a public performance, SOCAN is not entitled to royalties for downloads. The Copyright Board held that while the act of downloading is not itself a communication to the public and, as such, is outside the scope of the proposed tariff, the act of loading copyright materials onto servers to facilitate downloading is a form of "making available" and a communication to the public and falls under the SOCAN tariff. The Company, along with a number of other broadcasting and internet companies, has filed an application for judicial review, arguing that the Board's interpretation is erroneous. If the Copyright Board's interpretation is upheld, it could lead to new claims by rights holders in connection with Company technologies that facilitate downloading.

United States, Canada and Mexico Agreement (USMCA)

On September 30, 2018, Canada announced that it had reached an agreement on a new North American free trade agreement between the US, Mexico and Canada, called the USMCA. The USMCA will, once ratified by all three parties, will replace NAFTA. US demands made in the course of negotiations for changes that could have had a material impact on the Company were not included in the USMCA. Until the USMCA is formally adopted pursuant to the legal requirements of each party country, the NAFTA will remain effective. There remains a possibility that a party will decline to finalize and implement the agreement. In such a case, there is a risk that negotiations towards an amended USMCA will be reinitiated, in which case the scope of negotiations and ultimate outcomes are unknown.

Personal Information Protection and Electronic Documents Act and Canadian Anti-Spam Legislation

The Personal Information Protection and Electronic Documents Act (Canada) ("PIPEDA") is Canada's federal privacy law regulating the collection, use and disclosure of personal information in Canada by a federally regulated organization in the private sector. Shaw has established a privacy policy and its internal privacy processes in accordance with PIPEDA.

PIPEDA provisions requiring mandatory reporting of serious privacy breaches, introduced in 2015, came into effect on November 1, 2018. These provisions require companies to (i) track all breaches of security safeguards that involve personal information under their control, and (ii) report to affected individuals and to the Office of the Privacy Commissioner serious breaches of personal information that create a real risk of significant harm. Any such breach and disclosure by Company could result in fines and significant reputational harm.

New consent Guidelines issued by the Office of the Privacy Commissioner of Canada ("OPC") will come into effect on January 1, 2019. These Guidelines set out principles for organizations to follow in order to obtain meaningful consent and require that organizations provide more interactive, easy-to-understand privacy disclosures to their users. The Company maintains internal practices and policies to facilitate compliance with the new consent Guidelines.

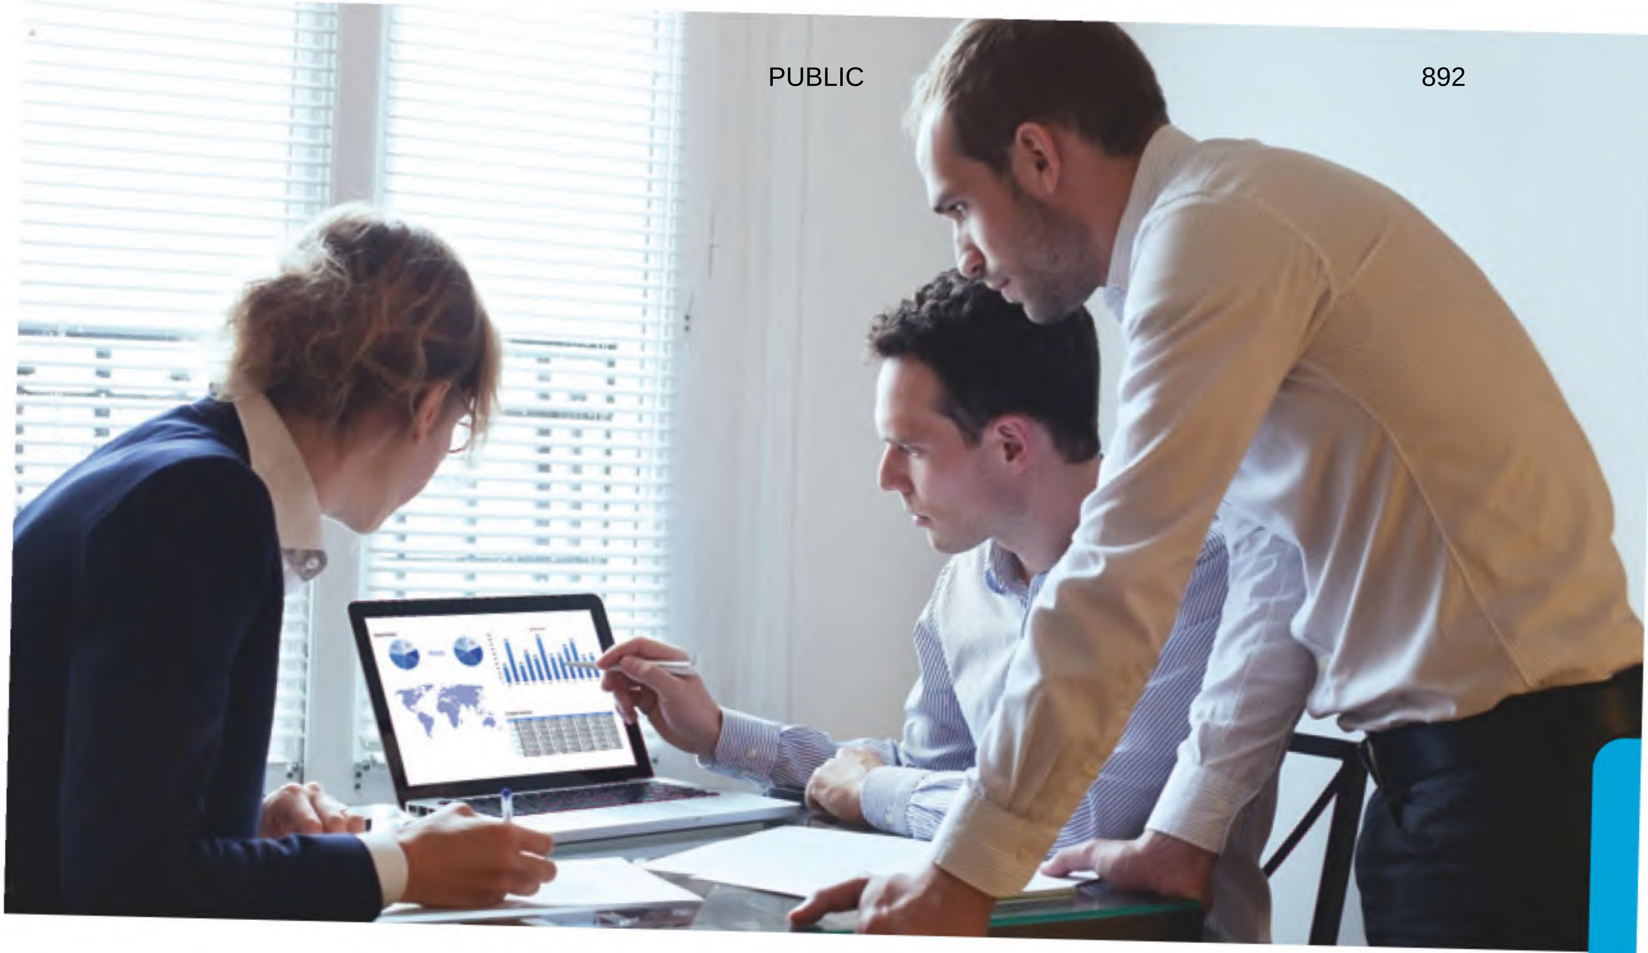
More broadly, the Government initiated a National Digital and Data Consultation in June 2018. This process includes consultations in connection with "Privacy and Trust" and could lead to changes to privacy regulation that increase privacy-related measures with which the Company is required to comply, as well as the Company's exposure to increased penalties and claims in connection with any non-compliance.

Canada's anti-spam legislation (together with the related regulations, "CASL") sets out a comprehensive regulatory regime regarding online commerce, including requirements to obtain consent prior to sending commercial electronic messages and installing computer programs. CASL is administered primarily by the CRTC, and non-compliance may result in fines of up to $10 million. The Company maintains internal practices and policies to facilitate compliance with CASL.

On November 5, 2018, the CRTC issued guidelines on the Commission's approach to enforcement of CASL provisions prohibiting a party from, among other things, aiding a violation of CASL. These suggest that "Telecommunications and Internet Service Providers" could be found liable for violating CASL by facilitating or technically enabling services that transgress CASL. While the guidance suggests that liability would be linked to the level of control and connection with the violators, and whether reasonable safeguards were in place to prevent or stop a violation, no examples of potential liability for ISPs or telecommunications service providers were provided. As well, the guidelines indicate that awareness of a violation is not necessary for a finding of liability. As such, the new Guidelines create a risk that Shaw could be fined for non-compliance in connection with the provision of network services.

Environmental matters

Shaw's operations are subject to environmental regulations, including those related to electronic waste, printed paper and packaging. A number of provinces have enacted regulations providing for the diversion of certain types of electronic and other waste through product stewardship programs ("PSP"). Under a PSP, companies who supply designated products in or into a province are required to participate in or develop an approved program for the collection and recycling of designated materials and, in some cases, pay a per item fee. Such regulations have not had, and are not expected to have, a material effect on the Company's earnings or competitive position.



KEY PERFORMANCE DRIVERS

Shaw measures the success of its strategies using a number of key performance drivers which are outlined below, including a discussion as to their relevance, definitions, calculation methods and underlying assumptions.

FINANCIAL MEASURES

Revenue

Revenue is a measurement determined in accordance with International Financial Reporting Standards ("IFRS"). It represents the inflow of cash, receivables or other consideration arising from the sale of products and services. Revenue is net of items such as trade or volume discounts, agency commissions and certain excise and sales taxes. It is the base on which free cash flow, a key performance driver, is determined; therefore, it measures the potential to deliver free cash flow as well as indicating growth in a competitive market place.

The Company's continuous disclosure documents may provide discussion and analysis of non-IFRS financial measures. These financial measures do not have standard definitions prescribed by IFRS and therefore may not be comparable to similar measures disclosed by other companies. The Company's continuous disclosure requirements may also provide discussion and analysis of additional GAAP measures. Additional GAAP measures include line items, headings and sub-totals included in financial statements. The Company utilizes these measures in making operating decisions and assessing its performance. Certain investors, analysts and others utilize these measures in assessing the Company's operational and financial performance and as an indicator of its ability to service debt and return cash to shareholders. These non-IFRS measures and additional GAAP measures have not been presented as an alternative to net income or any other measure of performance or liquidity prescribed by IFRS. The following contains a description of the Company's use of non-IFRS financial measures and additional GAAP measures and provides a reconciliation to the nearest IFRS measure or provides a reference to such reconciliation.

Operating margin

Operating margin is calculated by dividing operating income before restructuring costs and amortization by revenue.

	Year ended August 31,		
	2018	**2017**	**Change**
Wireline	**44.6%**	43.6%	1.0pts
Wireless	**18.5%**	22.0%	(3.5pts)
Combined Wireline and Wireless	**39.9%**	40.9%	(1.0pts)

Operating income before restructuring costs and amortization

Operating income before restructuring costs and amortization is calculated as revenue less operating, general and administrative expenses. It is intended to indicate the Company's ability to service and/or incur debt, and therefore it is calculated before one-time items like restructuring costs, amortization (a non-cash expense) and interest. Operating income before restructuring costs and amortization is also one of the measures used by the investing community to value the business.

Relative increases period-over-period in operating income before restructuring costs and amortization and in operating margin are indicative of the Company's success in delivering valued products and services, and connecting customers to the world through a best-in-class seamless connectivity experience.

	Year ended August 31,	
(millions of Canadian dollars)	**2018**	**2017**
Operating income from continuing operations	**631**	999
Add back (deduct):		
Restructuring costs	**446**	54
Amortization:		
Deferred equipment revenue	**(30)**	(38)
Deferred equipment costs	**110**	122
Property, plant and equipment, intangibles and other	**932**	860
Operating income before restructuring costs and amortization	**2,089**	1,997

Net debt leverage ratio

The Company uses this measure to set its optimal leverage. Refer to "Liquidity and Capital Resources" for further detail.

Free cash flow

The Company utilizes this measure to assess the Company's ability to repay debt and pay dividends to shareholders. Free cash flow is calculated as free cash flow from continuing operations and free cash flow from discontinued operations.

Free cash flow from continuing operations is comprised of operating income before restructuring costs and amortization adding dividends from equity accounted associates, changes in receivable related balances with respect to customer equipment financing transactions as a cash item and deducting capital expenditures (on an accrual basis and net of proceeds on capital dispositions) and equipment costs (net), interest, cash taxes paid or payable, dividends paid on the preferred shares, recurring cash funding of pension amounts net of pension expense and adjusted to exclude share-based compensation expense.

Free cash flow from continuing operations has not been reported on a segmented basis. Certain components of free cash flow from continuing operations, including operating income before restructuring costs and amortization continue to be reported on a segmented basis. Capital expenditures and equipment costs (net) are reported on a combined basis for Consumer and Business due to the common infrastructure and separately for Wireless. Other items, including interest and cash taxes, are not generally directly attributable to a segment, and are reported on a consolidated basis.

Free cash flow from discontinued operations is comprised of income from discontinued operations before restructuring costs, amortization, taxes and other non-operating items after deducting capital expenditures (on an accrual basis and net of proceeds on capital dispositions), cash taxes paid or payable, program rights amortization on assets held for sale, recurring cash funding of pension amounts net of pension expense and excludes non-controlling interest amounts that are included in the income from discontinued operations before restructuring costs, amortization, taxes and other non-operating items.

Free cash flow is calculated as follows:

	Year ended August 31,		
(millions of Canadian dollars)	2018	2017	Change %
Revenue			
Consumer	**3,725**	3,747	(0.6)
Business	**567**	533	6.4
Wireline	**4,292**	4,280	0.3
Service	**595**	482	23.4
Equipment	**356**	123	>100.0
Wireless	**951**	605	57.2
	5,243	4,885	7.3

Wireline	**1,913**	1,864	2.6
Wireless	**176**	133	32.3
	2,089	1,997	4.6
Capital expenditures and equipment costs (net): (2)			
Wireline	**1,024**	970	5.6
Wireless	**343**	255	34.5
	1,367	1,225	11.6
Free cash flow from continuing operations before the following	**722**	772	(6.5)
Less:			
Interest	**(247)**	(265)	(6.8)
Cash taxes	**(166)**	(174)	(4.6)
Other adjustments:			
Dividends from equity accounted associates	**92**	88	4.5
Non-cash share-based compensation	**2**	3	(33.3)
Pension adjustment	**11**	8	37.5
Customer equipment financing	**5**	8	(37.5)
Preferred share dividends	**(8)**	(8)	–
Free cash flow from continuing operations	**411**	432	(4.9)
Income from discontinued operations before restructuring costs, amortization, taxes and other non-operating items	**–**	140	(100.0)
Less:	**–**		
Capital expenditures	**–**	(99)	(100.0)
Interest	**–**	(33)	(100.0)
Cash taxes	**–**	(2)	(100.0)
Free cash flow from discontinued operations	**–**	6	(100.0)
Free cash flow	**411**	438	(6.2)

(1) Refer to key performance drivers.
(2) Per Note 25 to the audited Consolidated Financial Statements.

STATISTICAL MEASURES:

Subscriber counts (or Revenue Generating Units ("RGUs"))

The Company measures the count of its subscribers in its Consumer, Business and Wireless divisions.

In the Consumer and Business divisions, wireline Video subscribers include residential customers, multiple dwelling units ("MDUs") and commercial customers. A residential subscriber who receives at a minimum, basic cable service, is counted as one subscriber. In the case of MDUs, such as apartment buildings, each tenant with a minimum of basic cable service is counted as one subscriber, regardless of whether invoiced individually or having services included in his or her rent. Each building site of a commercial customer (e.g., hospitals, hotels or retail franchises) that is receiving at a minimum, basic cable service, is counted as one subscriber. Video satellite subscribers are counted in the same manner as wireline Video customers except that it also includes seasonal customers who have indicated their intention to reconnect within 180 days of disconnection. Internet customers include all modems on billing and Phone includes all phone lines on billing. All subscriber counts exclude complimentary accounts but include promotional accounts.

Consumer and Business divisions' RGUs represent the number of products sold to customers and includes Video (cable and Satellite subscribers), Internet customers, and Phone lines. As at August 31, 2018 these combined divisions had approximately 5.7 million RGUs.

In the Wireless division, a recurring subscriber or RGU (e.g. cellular phone, smartphone, tablet or mobile Internet device) has access to the wireless network for voice and/or data communications, whether Prepaid or Postpaid. Prepaid subscribers include RGUs where the account is within 90 days of the prepaid credits expiring. As at August 31, 2018 the Wireless divisions had approximately 1.4 million RGUs.

Wireless average revenue per subscriber unit per month ("ARPU")

Wireless ARPU is calculated as service revenue divided by the average number of subscribers on the network during the period and is expressed as a rate per month. This measure is an industry metric that is useful in assessing the operating performance of a wireless entity, but does not have a standardized meaning under IFRS. Refer to "Segmented Operations Review" for Wireless ARPU details and description.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

The Company prepared its Consolidated Financial Statements in accordance with IFRS as issued by the International Accounting Standards Board ("IASB"). An understanding of the Company's accounting policies is necessary for a complete analysis of results, financial position, liquidity and trends. Refer to Note 2 to the Consolidated Financial Statements for additional information on accounting policies. The following section discusses key estimates and assumptions that management has made under IFRS and how they affect the amounts reported in the Consolidated Financial Statements and notes. Following is a discussion of the Company's critical accounting policies:

Revenue and expense recognition

Revenue is considered earned as services are performed, provided that at the time of performance, ultimate collection is reasonably assured. Such performance is regarded as having been achieved when reasonable assurance exists regarding the measurement of the consideration that will be derived from rendering the service. Revenue from Video, Internet, Phone, and Wireless customers includes subscriber service revenue when earned. The revenue is considered earned as the period of service relating to the customer billing elapses. For customers with multi-year service plans, the total amount of contractual service revenue is accounted for on a straight-line basis over the term of the plan.

The Company has multiple deliverable arrangements comprised of upfront fees (subscriber connection fee revenue and/or customer premise equipment revenue) and related subscription revenue. The Company determined that the upfront fees charged to customers do not constitute separate units of accounting; therefore, these revenue streams are assessed as an integrated package.

Subscriber connection fee revenue

Connection fees have no standalone value to the customer separate and independent of the Company providing additional subscription services, therefore the connection fee revenue must be deferred and recognized systematically over the periods that the subscription services are earned. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered its customer churn rate and other factors, such as competition from new entrants, to determine the deferral period of three years.

Subscriber connection and installation costs

The costs of physically connecting a new home are capitalized as part of the Company's distribution system as the service potential of the distribution system is enhanced by the ability to generate future subscriber revenue. Costs of disconnections are expensed as incurred as the activity does not generate future revenue.

Customer premise equipment revenue and costs

Customer premise equipment available for sale, which generally includes digital cable terminal ("DCT") and direct-to-home ("DTH") equipment, has no standalone value to the customer separate and independent of the Company providing additional subscription services. Therefore, the equipment revenue is deferred and recognized systematically over the periods that the subscription services are earned. As the equipment sales and the related subscription revenue are considered one transaction, recognition of the equipment revenue commences once the subscriber service is activated. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered various factors including customer churn, competition from new entrants, and technology changes to determine the deferral period of three years.

In conjunction with equipment revenue, the Company also incurs incremental direct costs which include equipment and related installation costs. These direct costs cannot be separated from the undelivered subscription service included in the multiple deliverable arrangement. Under IAS 2 "Inventories", these costs represent inventoriable costs and are deferred and amortized over the period of three years, consistent with the recognition of the related equipment revenue. The equipment and installation costs generally exceed the amounts received from customers on the sale of equipment (the equipment is sold to the customer at a subsidized price). The Company defers the entire cost of the equipment, including the subsidy portion, as it has determined that this excess cost will be recovered from future subscription revenues and that the investment by the customer in the equipment creates value through increased retention.

Shaw Business installation revenue and expenses

The Company also receives installation revenues in its Shaw Business operation on contracts with commercial customers which are deferred and recognized as revenue on a straight-line basis over the related service contract, generally spanning two to ten years. Direct and incremental costs associated with the service contract, in an amount not exceeding the upfront installation revenue, are deferred and recognized as an operating expense on a straight-line basis over the same period.

Wireless equipment revenue

Revenue from the direct sale of equipment to subscribers or dealers is recognized when the equipment is delivered and accepted by the subscribers or dealers.

Freedom Mobile offers a discretionary handset discount program, whereby the subscriber earns the applicable discount by maintaining services with the Company, such that the receivable relating to the discount at inception of the transaction is reduced over a period of time. A portion of future revenue earned in connection with the services is applied against the up-front discount provided on the handset. Freedom Mobile also offers a plan allowing customers to receive larger up-front handset discounts than they would otherwise qualify for, if they pay a predetermined incremental charge to their existing service plan on a monthly basis. The charge is billed on a monthly basis and is recognized as revenue at that time.

The Company recognizes the handset discount as a receivable and revenue upon the sale of the equipment on the basis that the receivable is recoverable. The receivable is realized on a straight-line basis over the period which the discount is forgiven to a maximum of two years with an offsetting reduction to revenue. The amount receivable is classified as part of other current or non-current receivables, as applicable, in the Consolidated Statement of Financial Position.

Discontinued operation equipment revenue and costs

In the Shaw Tracking operation, equipment revenue was recognized over the period of the related service contract for airtime, which was generally five years.

In conjunction with Shaw Tracking equipment revenue, the Company incurred incremental direct costs including equipment costs. These direct costs cannot be separated from the undelivered tracking service included in the multiple deliverable arrangement. Under IAS 2 "Inventories", these costs represent inventoriable costs and were deferred and amortized over the period of five years, consistent with the recognition of the related tracking equipment revenue.

Income statement classification

The Company distinguishes amortization of deferred equipment revenue and deferred equipment costs from the revenue and expenses recognized from ongoing service activities on its income statement. Equipment revenue and costs are deferred and recognized over the anticipated term of the related future revenue (i.e., the monthly service revenue) with the period of recognition spanning three to five years. As a result, the amortization of deferred equipment revenue and deferred equipment costs are non-cash items on the income statement, similar to the Company's amortization of deferred IRU revenue, which the Company also segregates from ongoing revenue. Further, within the lifecycle of a customer relationship, the customer generally purchases customer premise equipment at the commencement of the customer relationship, whereas the subscription revenue represents a continuous revenue stream throughout that customer relationship. Therefore, the segregated presentation provides a clearer distinction within the income statement between cash and non-cash activities and between up-front and continuous revenue streams, which assists financial statement readers to predict future cash flows from operations.

Allowance for doubtful accounts

The majority of the Company's revenues are earned from selling on credit to individual subscribers. Because there are some customers who do not pay their debts, selling on credit necessarily involves credit losses. The Company is required to make an estimate of an appropriate allowance for doubtful accounts on its receivables. In determining its estimate, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. The estimated allowance required is a matter of judgment and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foreseen, such as future business, personal and economic conditions. Conditions causing deterioration or improvement in the aging of accounts receivable and collections will increase or decrease bad debt expense.

Property, plant and equipment and other intangibles – capitalization of direct labour and overhead

The cost of property, plant and equipment and other intangibles includes direct construction or development costs (such as materials and labour) and overhead costs directly attributable to the construction or development activity. The Company capitalizes direct labour and direct overhead incurred to construct new assets, upgrade existing assets and connect new subscribers. These costs are capitalized as they are directly attributable to the acquisition, construction, development or betterment of the networks or other intangibles. Repairs and maintenance expenditures are charged to operating expenses as incurred.

Direct labour and overhead costs are capitalized in three principal areas:

1. **Corporate departments such as Technology, Operations, Products, and Supply chain ("TOPS"):** TOPS is involved in overall planning and development of the Video/Internet/Phone/Wireless infrastructure. Labour and overhead costs directly related to these activities are capitalized as the activities directly relate to the planning and design of the construction of the distribution system. In addition, TOPS devotes considerable efforts towards the development of systems to support Phone, Wi-Fi, and projects related to new customer management, billing and operating support systems. Labour costs directly related to these and other projects are capitalized.
2. **Cable regional construction departments, which are principally involved in constructing, rebuilding and upgrading the cable/Internet/Phone infrastructure:** Labour and overhead costs directly related to the construction activity are capitalized as the activities directly relate to the construction or upgrade of the distribution system. Capital projects include, but are not limited to, projects such as the new subdivision builds, increasing network capacity for Internet, home Phone and VOD by reducing the number of homes fed from each node, and upgrades of plant capacity and the Wi-Fi build.
3. **Subscriber-related activities such as installation of new drops and Internet and Digital Phone services:** The labour and overhead directly related to the installation of new services are capitalized as the activity involves the installation of capital assets (i.e., wiring, software, etc.) which enhance the service potential of the distribution system through the ability to earn future revenues. Costs associated with service calls, collections, disconnects and reconnects that do not involve the installation of a capital asset are expensed.

Amounts of direct labour and direct overhead capitalized fluctuate from year to year depending on the level of customer growth and plant upgrades for new services. In addition, the level of capitalization fluctuates depending on the proportion of internal labour versus external contractors used in construction projects.

The percentage of direct labour capitalized in many cases is determined by the nature of employment in a specific department. For example, a significant portion of labour and direct overhead of the cable regional construction departments is capitalized as a result of the nature of the activity performed by those departments. Capitalization is also based on piece rate work performed by unit-based employees which is tracked directly. In some cases, the amount of capitalization depends on the level of maintenance versus capital activity that a department performs. In these cases, an analysis of work activity is applied to determine this percentage split. Further information regarding the capitalization of internal labour costs can be found under "Certification" on page 66.

Amortization policies and useful lives

The Company amortizes the cost of property, plant and equipment and other intangibles over the estimated useful service lives of the items. These estimates of useful lives involve considerable judgment. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. On an annual basis, the Company reassesses its existing estimates of useful lives to ensure they match the anticipated life of the technology from a revenue-producing perspective. If technological change happens more quickly or in a different way than the Company has anticipated, the

Company may have to shorten the estimated life of certain property, plant and equipment or other intangibles which could result in higher amortization expense in future periods or an impairment charge to write down the value of property, plant and equipment or other intangibles.

Intangibles

The excess of the cost of acquiring cable, satellite, data centre and wireless businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist of amounts allocated to broadcast rights and licences, wireless spectrum licences, trademarks, brands, customer relationships and software assets. Broadcast rights and licences, wireless spectrum licences, trademarks and brands represent identifiable assets with indefinite useful lives.

Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over their estimated useful lives ranging from 4 – 15 years.

Software that is not an integral part of the related hardware is classified as an intangible asset. Internally developed software assets are recorded at historical cost and include direct material and labour costs as well as borrowing costs on qualifying assets. Software assets are amortized on a straight-line basis over estimated useful lives ranging from 3 – 10 years. The Company reviews the estimates of lives and useful lives on a regular basis.

Asset impairment

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at February 1) and when events or changes in circumstances indicate that the carrying value may be impaired. The recoverable amount of each cash-generating unit ("CGU") is determined based on the higher of the CGU's fair value less costs to sell and its value in use. A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are Cable, Satellite, and Wireless. The Company had an additional cash generating unit, Data Centres, until the sale of Viawest in August 2017. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods. The results of the impairment tests are provided in Note 10 to the Consolidated Financial Statements.

Employee benefit plans

As at August 31, 2018, Shaw had non-registered defined benefit pension plans for key senior executives and designated executives. The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The differences between actual and assumed results are immediately recognized in other comprehensive income/loss. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected to be needed to settle employee benefit obligations and is also used to calculate the interest income on plan assets. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes are required. The following table illustrates the increase on the accrued benefit obligation and pension expense of a 1% decrease in the discount rate:

(millions of Canadian dollars)	Accrued Benefits Obligation at End of Fiscal 2018	Pension Expense Fiscal 2018
Weighted Average Discount Rate – Non-registered Plans	3.70%	3.70%
Impact of: 1% decrease – Non-registered Plans	$ 72	$ 4

Deferred income taxes

The Company has recognized deferred income tax assets and liabilities for the future income tax consequences attributable to differences between the financial statement carrying amounts of assets and liabilities and their respective tax bases. Deferred tax assets are also recognized in respect of losses of certain of the Company's subsidiaries. The deferred income tax assets and liabilities are measured using enacted or substantially enacted tax rates expected to apply to taxable income in the years in which the temporary differences are expected to reverse or the tax losses are expected to be utilized. Realization of deferred income tax assets is dependent upon generating sufficient taxable income during the period in which the temporary differences are deductible. The Company has evaluated the likelihood of realization of deferred income tax assets based on forecasts of taxable income of future years, existing tax laws and tax planning strategies. Significant changes in assumptions with respect to internal forecasts or the inability to implement tax planning strategies could result in future impairment of these assets.

Commitments and contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Contractual and other commercial obligations primarily relate to network fees and operating lease agreements for use of transmission facilities, including maintenance of satellite transponders and lease of premises in the normal course of business. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities.

RELATED PARTY TRANSACTIONS

Related party transactions are reviewed by Shaw's Corporate Governance and Nominating Committee, comprised of independent directors. The following sets forth certain transactions in which the Company is involved.

Corus

The Company and Corus are subject to common voting control. During 2016, the Company sold its wholly owned subsidiary Shaw Media to Corus. The transaction closed on April 1, 2016. In fiscal 2018, network, advertising and programming fees were paid to various Corus subsidiaries. The Company provided uplink of television signals, programming content, Internet services and lease of circuits to various Corus subsidiaries. The Company also received dividends from Corus related to its Class B non-voting participating shareholdings representing 39% of the total issued equity of Corus (see "Equity Interest in Corus").

Burrard Landing Lot 2 Holdings Partnership

The Company has a 33.33% interest in the Partnership. During the current year, the Company paid the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, BC, is the Company's headquarters for its lower mainland BC operations.

Key management personnel and Board of Directors

Key management personnel consist of the most senior executive team and along with the Board of Directors have the authority and responsibility for directing and controlling the activities of the Company. In addition to compensation provided to key management personnel and the Board of Directors for services rendered, the Company transacts with companies related to certain Board members primarily for the purchase of remote control units, network programming and installation of equipment.

Refer to Note 28 to the Consolidated Financial Statements for further related party transaction detail.

NEW ACCOUNTING STANDARDS

Shaw has adopted or will adopt a number of new accounting policies as a result of recent changes in IFRS as issued by the IASB. The ensuing discussion provides additional information as to the date that Shaw is or was required to adopt the new standards, the methods of adoption permitted by the standards, the method chosen by Shaw, and the effect on the financial statements as a result of adopting the new policies. The adoption or future adoption of these accounting policies has not and is not expected to result in changes to the Company's current business practices.

Adoption of recent accounting pronouncements

The adoption of the following IFRS amendments effective September 1, 2017 had no impact on the Company's consolidated financial statements.

- *Statement of Cash Flows* (amendments to IAS 7) improves disclosures regarding changes in financing liabilities. The amendments were applied prospectively for the annual period commencing September 1, 2017.
- *Income Taxes* (amendments to IAS 12) clarifies how to account for deferred tax assets related to debt instruments measured at fair value. The amendments were applied prospectively for the annual period commencing September 1, 2017.

Standards, interpretations and amendments to standards issued but not yet effective

The Company has not yet adopted certain standards and interpretations that have been issued but are not yet effective. The following pronouncements are being assessed to determine the impact on the Company's results and financial position.

- IFRS 2 *Share-based Payment* was amended in 2016 to clarify the accounting and measurement for certain types of share-based payment transactions. It is required to be applied for annual periods commencing on or after January 1, 2018. The amendments to IFRS 2 will not have a significant impact on our financial statements.
- IFRS 9 *Financial Instruments: Classification and Measurement* replaces IAS 39 *Financial Instruments* and applies a principal-based approach to the classification and measurement of financial assets and financial liabilities, including an expected credit loss model for calculating impairment, and includes new requirements for hedge accounting. The standard is required to be applied retrospectively for the annual period commencing January 1, 2018. The adoption of IFRS 9 will not have a significant impact on our financial statements.
- IFRS 16 *Leases* was issued in January 2016 and replaces IAS 17 *Leases*. The new standard requires entities to

recognize lease assets and lease obligations on the balance sheet. For lessees, IFRS 16 removes the classification of leases as either operating leases or finance leases, effectively treating all leases as finance leases. Certain short-term leases (less than 12 months) and leases of low-value are exempt from the requirements and may continue to be treated as operating leases. Lessors will continue with a dual lease classification model. Classification will determine how and when a lessor will recognize lease revenue, and what assets would be recorded.

As the Company has significant contractual obligations currently being recognized as operating leases, we anticipate that the application of IFRS 16 will result in a material increase to both assets and liabilities and material changes to the timing of the recognition of expenses associated with the lease arrangements although at this stage in the Company's IFRS 16 implementation process, it is not possible to make reasonable quantitative estimates of the effects of the new standard.

We have a team engaged to ensuring our compliance with IFRS 16. This team has been responsible for determining information technology requirements, ensuring scoping and data collection is appropriate, and communicating the upcoming changes with various stakeholders. In 2019, we will be implementing a process that will enable us to comply with the requirements of IFRS 16 on a lease-by-lease basis. As a result, we are continuing to assess the effect of this standard on our consolidated financial statements and it is not yet possible to make a reliable estimate of its effect. We expect to disclose the estimated financial effects of the adoption of IFRS 16 in our 2019 consolidated financial statements.

The standard may be applied retroactively or using a modified retrospective approach for annual periods commencing January 1, 2019, which for the Company will be the annual period commencing September 1, 2019. The Company will evaluate the adoption approach in conjunction with its assessment of the expected impacts of adoption.

- IFRIC 23 *Uncertainty over Income Tax Treatments* was issued in 2017 to clarify how to apply the recognition and measurement requirements in IAS 12 when there is uncertainty over income tax treatments. It is required to be applied for annual periods commencing January 1, 2019.
- IFRS 15 *Revenue from Contracts with Customers*, was issued in May 2014 and replaces IAS 11 *Construction Contracts*, IAS 18 *Revenue*, IFRIC 13 *Customer Loyalty Programs*, IFRIC 15 *Agreements for the Construction of Real Estate*, IFRIC 18 *Transfers of Assets from Customers* and SIC-31 *Revenue – Barter Transactions Involving Advertising Services*. The new standard requires revenue to be recognized in a manner that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration expected to be received in exchange for those goods or services. The principles are to be applied in the following five steps: (1) identify the contract(s) with a customer, (2) identify the performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the performance obligations in the contract, and (5) recognize revenue when (or as) the entity satisfies a performance obligation. IFRS 15 also provides guidance relating to the treatment of contract acquisition and contract fulfillment costs.

The application of IFRS 15 will impact the Company's reported results, including the classification and timing of revenue recognition and the treatment of costs incurred to obtain contracts with customers.

Revenue – timing and classification

The application of this standard will most significantly affect our Wireless arrangements that bundle equipment and service together, specifically with regards to the timing of recognition and classification of revenue. The timing of recognition and classification of revenue is affected because at contract inception, IFRS 15 requires the estimation of total consideration to be received over the contract term, and the allocation of that consideration to performance obligations in the contract, typically based on the relative stand-alone selling price of each obligation. This will result in a decrease to equipment revenue recognized at contract inception, as the discount previously recognized over 24 months will now be recognized at contract inception, and a decrease to service revenue recognized over the course of the contract, as a portion of the discount previously allocated solely to equipment revenue will be allocated to service revenue. The measurement of total revenue recognized over the life of a contract will be largely unaffected by the new standard. We do not expect the application of IFRS 15 to affect our timing of cash flows from operations or the methods and underlying economics through which we transact with our customers.

Costs of contract acquisition – timing of recognition

IFRS 15 also requires that incremental costs to obtain a contract with a customer (for example, commissions) be capitalized and amortized into operating expenses over the life of a contract on a rational, systematic basis consistent with the pattern of the transfer of goods or services to which the asset relates. The Company currently expenses such costs as incurred.

Contract assets and liabilities

The Company's financial position will also be impacted by the adoption of IFRS 15, with new contract asset and contract liability categories recognized to reflect differences between the timing of revenue recognition and the actual billing of those goods and services to customers. While similar differences are recognized currently, IFRS 15 introduces additional requirements and disclosures specific to contracts with customers.

For purposes of applying the new standard on an ongoing basis, we must make judgments in respect of the new standard. We must make judgments in determining whether a promise to deliver goods or services is considered distinct, how to determine the transaction prices and how to allocate those amounts amongst the associated performance obligations. We must also exercise judgment as to whether sales-based compensation amounts are costs incurred to obtain contracts with customers that should be capitalized and subsequently amortized on a systematic basis over time.

The new standard is effective for annual periods beginning on or after January 1, 2018, which for the Company will be the annual period commencing September 1, 2018 and must be applied either retrospectively or on a modified retrospective basis for all contracts that are not complete as at that date. We have made a policy choice to restate each period presented and recognize the cumulative effect of initially applying IFRS 15 as an adjustment to the opening balance of equity at the beginning of the earliest period presented, subject to certain adopted practical expedients.

Impacts of IFRS 15, Revenue from Contracts with Customers

Based on our preliminary analysis, IFRS 15, *Revenue from Contracts with Customers,* will affect the fiscal 2018 comparative amounts to be reported in our fiscal 2019 Consolidated Statements of Income as follows:

		Year ended August 31, 2018		
(billions of Canadian dollars)		**As reported**	**Estimated effect of transition**	**Subsequent to transition**
Revenue	i.	5.24	(0.05)	5.19
Operating, general and administrative expenses	ii.	(3.15)	0.02	(3.13)
Other non-operating costs		(1.88)	–	(1.88)
Income from continuing operations before income taxes		0.21	(0.03)	0.18
Income tax expense		0.14	(0.01)	0.13
Net income from continuing operations		0.07	(0.02)	0.05

i) Allocation of transaction price

Revenue recognized at point of sale requires the estimation of total consideration over the contract term and allocation of that consideration to all performance obligations in the contract based on their relative stand-alone selling prices. For Wireless term contracts, equipment revenue recognized at contract inception, as well as service revenue recognized over the course of the contract will be lower than previously recognized.

ii) Deferred commission costs

Costs incurred to obtain or fulfill a contract with a customer were previously expensed as incurred. Under IFRS 15, these costs are capitalized and subsequently amortized as an expense over the life of the contract on a rational, systematic basis consistent with the pattern of the transfer of goods and services to which the asset relates. As a result, commission costs are reduced in the period, with an offsetting increase in amortization of capitalized costs over the average life of a customer contract.

Based on our preliminary analysis, IFRS 15, *Revenue from Contracts with Customers,* will affect the fiscal 2018 comparative amounts to be reported in our fiscal 2019 Consolidated Statements of Financial Position as follows:

[billions of Canadian dollars]		As at September 1, 2017 As reported	Estimated effect of transition	Subsequent to transition	As at August 31, 2018 As reported	Estimated effect of transition	Subsequent to transition
ASSETS							
Current							
Current portion of contract assets	i.	–	0.01	0.01	–	0.05	0.05
Other current assets	ii.	0.16	0.02	0.18	0.29	(0.04)	0.25
Remainder of current assets		0.96	–	0.96	0.74	–	0.74
		1.12	0.03	1.15	1.03	0.01	1.04
Contract assets	i.	–	0.05	0.05	–	0.08	0.08
Other long-term assets	ii.	0.26	(0.03)	0.23	0.29	(0.08)	0.21
Remainder of long-term assets		12.99	–	12.99	13.10	–	13.10
		14.37	0.05	14.42	14.42	0.01	14.43
LIABILITIES AND SHAREHOLDERS' EQUITY							
Current							
Unearned revenue	i.	0.21	(0.21)	–	0.22	(0.22)	–
Current portion of contract liabilities	i.	–	0.21	0.21	–	0.22	0.22
Remainder of current liabilities		1.18	–	1.18	1.39	–	1.39
		1.39	–	1.39	1.61	–	1.61
Deferred credits	i.	0.49	(0.02)	0.47	0.46	(0.02)	0.44
Deferred income tax liabilities	ii.	1.86	–	1.86	1.89	(0.01)	1.88
Contract liabilities	i.	–	0.02	0.02	–	0.02	0.02
Remainder of long-term liabilities		4.48	–	4.48	4.50	–	4.50
		8.22	–	8.22	8.46	(0.01)	8.45
Shareholders' equity		6.15	0.05	6.20	5.96	0.02	5.98
		14.37	0.05	14.42	14.42	0.01	14.43

i) Contract assets and liabilities

Contract assets and liabilities are the result of the difference in timing related to revenue recognized at the beginning of a contract and cash collected. Contract assets arise primarily as a result of the difference between revenue recognized on the sale of wireless device at the onset of a term contract and the cash collected at the point of sale.

Contract liabilities are the result of receiving payment related to a customer contract before providing the related goods or services. We will account for contract assets and liabilities on a contract-by-contract basis, with each contract being presented as a single net contract asset or net contract liability accordingly.

ii) Deferred commission cost asset

Under IFRS 15, we will defer commission costs paid to internal and external representatives as a result of obtaining contracts with customers as deferred commission cost assets and amortize them over the pattern of the transfer of goods and services to the customer, which is typically evenly over 24 to 36 months.

The application of IFRS 15 will not affect our cash flows from operating, investing, or financing activities.

RISK MANAGEMENT

In the normal course of our business activities, the Company is subject to risks. The purpose of risk management is to manage and mitigate risk, rather than to eliminate risk. The Company is committed to continually strengthening our risk management capabilities to protect and enhance value.

Risk Governance and Oversight

The Board of Directors has overall risk governance and oversight responsibilities. Specifically, the Board is responsible for identifying and assessing the principal risks inherent in the business activities of the Company and ensuring that management takes all reasonable steps to implement appropriate systems to manage such risks. The Board of Directors has delegated elements of its risk oversight responsibilities to specific Board committees. The Audit Committee is responsible for: (1) overseeing the Company's processes for identifying, assessing and managing risks; and (2) ensuring that management implements and maintains effective internal controls and procedures for identifying, assessing and managing the principal risks to the Corporation and its business. In addition, the Human Resources and Compensation Committee is responsible for ensuring that the Company's long-term and short-term incentive plans do not incent risk-taking beyond the Company's risk tolerance.

Responsibilities for Risk Management

Responsibility for risk management is shared across our organization. Each department's operating management, led by the Company's executive team, have integrated controls and risk management practices into day-to-day activities and decision-making processes. We have risk management and compliance functions across the organization such as Finance, Security and Risk, Legal and Regulatory, and Technology Risk Governance. The Internal Audit and Advisory Services ("IA&AS") department provides independent and objective audit and advisory services to evaluate and improve the effectiveness of the Company's governance, internal controls, disclosure processes, and risk management activities. The Audit Committee oversees the work of the IA&AS department and all reports issued by the IA&AS department. In addition, the IA&AS department's annual plan is reviewed and approved by the Audit Committee.

Enterprise Risk Management

The Audit Committee undertakes a further review of the significant corporate level risks through the Enterprise Risk Management program ("ERM"). The ERM is a performance focused process designed to identify and manage significant corporate level risks that could impact the achievement of our strategic objectives. The Company's executives meet to: (1) review and update significant corporate level risks, (2) assess such corporate level risks in terms of likelihood and magnitude of impact, (3) review the response strategy, and (4) monitor progress. The latest ERM update was provided to the Audit Committee in April 2018, with updates to be provided to the Board and/or Audit Committee at least annually. The significant risks and uncertainties affecting the Company and its business are discussed under "Known Events, Trends, Risks and Uncertainties".

KNOWN EVENTS, TRENDS, RISKS AND UNCERTAINTIES

The discussion in this MD&A addresses only what management has determined to be the most significant known events, trends, risks and uncertainties relevant to the Company, its operations and/or its financial results. This discussion is not exhaustive. The discussion of these matters should be considered in conjunction with the "Caution Concerning Forward-Looking Statements".

Competition and Technological Change

Shaw operates in an open and competitive marketplace. Our businesses face competition from regulated and unregulated entities using existing or new communications technologies and from illegal services. In addition, the rapid deployment of new technologies, services and products has blurred the traditional lines between telecommunications, Internet and distribution services and further expands the competitive landscape. Shaw may also face competition from platforms that may gain advantage through regulatory processes. While Shaw continually seeks to strengthen its competitive position through investments in infrastructure, technology and customer service and through acquisitions, there can be no assurance that these investments will maintain Shaw's market share or performance in the future.

The following competitive events, trends, risks and/or uncertainties specific to areas of our business may have a material adverse effect on Shaw and its reputation, as well as its operations and/or its financial results. In each case, the competitive events, trends, risks and/or uncertainties may increase or continue to increase. Competition for new subscribers and retention of existing subscribers may require substantial promotional activity and increase our cost of customer acquisition, decrease our ARPU or both. We expect that competition, including aggressive discounting practices by competitors to gain market share, is likely to continue to increase for all our businesses.

Consumer Internet

Shaw competes with different types of ISPs offering residential Internet access including traditional telephone companies, wireless providers and independent ISPs making use of wholesale services to provide Internet access in various markets.

Shaw expects that consumer demand for higher Internet access speeds and greater bandwidth will continue to be driven by bandwidth-intensive applications including streaming video, digital downloading, Internet-of-Things ("IOT") and interactive gaming. As described further under "Shaw's Wireline Network", Shaw continues to expand the capacity and efficiency of its wireline network to handle the anticipated increases in consumer demand for higher Internet access speeds and greater bandwidth. However, there can be no assurance that our investments in network capacity will continue to meet this increasing demand.

Consumer Video

Shaw's Consumer Video services, delivered through both our wireline and satellite platforms, compete with other distributors of video and audio signals. We also compete increasingly with unregulated over-the-top ("OTT") video services and offerings available over Internet connections. Continued improvements in the quality of streaming video over the Internet and the increasing availability of television shows and movies online will continue to increase competition to Shaw's Consumer Video services. Our Video services also compete with illegal services including grey and black market satellite offerings as well as OTT video piracy services.

Consumer Phone

Shaw's competitors for Consumer wireline phone services include traditional telephone companies, other wireline carriers, Voice over Internet Protocol ("VoIP") providers and wireless providers. Several of these competitors have larger operational and financial resources than Shaw. In addition, households increasingly rely on wireless services in place of wireline phone services which negatively affects the business and prospects of our Consumer wireline phone services.

Wireless

Freedom Mobile is a new entrant in the highly competitive Canadian wireless market which is characterized by three national wireless incumbent carriers and regional participants. The national wireless incumbent carriers have larger, and more diverse, spectrum holdings than Shaw, as well as larger operational and financial resources than Shaw and are well established in the market. The LTE-Advanced overlay network has been built using our AWS-1, AWS-3 and 2500 MHz spectrum holdings. Freedom Mobile's ability to continue to offer and improve Wireless services and to offer new services depends on, among other factors, continued access to, and deployment of, adequate spectrum, including the ability to both renew current spectrum licences and acquire new spectrum licences (in various spectrum bands). If Freedom Mobile cannot acquire and retain needed spectrum, it may not be able to continue to offer and improve its current wireless services and deploy new services on a timely basis, including providing competitive data speeds its customers want. As a result, Freedom Mobile's ability to attract and retain customers could be adversely affected. In addition, an inability to acquire and retain needed spectrum could affect network quality and result in higher capital expenditures. Our Wireless division may face increased competition from other facilities based or non-facilities based new entrants or alternate technologies, including as a result of regulatory decisions or government policies that favour certain competitive platforms. (see "Government Regulations and Regulatory Developments –Telecommunication Act –CRTC review of Wi-Fi First").

Business Network Services

Shaw Business competes with other telecommunications carriers in providing high-speed data and video transport and Internet connectivity services to businesses, ISPs and other telecommunications providers. The telecommunications services industry in Canada is highly competitive, rapidly evolving and subject to constant change. Shaw Business' competitors include traditional telephone companies, competitive access providers, competitive local exchange carriers, ISPs, private networks built by large end users and other telecommunications companies. In addition, the development and implementation of new technologies by others could give rise to significant additional competition. Competitors for the delivery of voice and unified communication services include traditional telecommunications companies, resellers and new entrants to the market leveraging new technologies to deliver services. Shaw Broadcast Services also competes in industries that are highly competitive, rapidly evolving and subject to constant change.

Impact of Regulation

As discussed under "Government Regulations and Regulatory Developments", a majority of our Canadian business activities are subject to: (i) regulations and policies administered by ISED and/or the CRTC, and (ii) conditions of licences granted by ISED and/or the CRTC. Shaw's operations, financial results, and future prospects are affected by changes in regulations, policies and decisions, conditions of licences and decisions, including changes in interpretation of existing regulations and requirements contained in such conditions of licences by courts, the government or the regulators, in particular the CRTC, ISED, Competition Bureau and Copyright Board. These changes relate to, and may have an impact on, among other things, licensing and licence renewal, spectrum holdings, products and services, competition, programming carriage and terms of carriage, strategic transactions, and infrastructure access, and the potential for new or increased fees or costs. All such changes in the regulatory regime may have a material adverse effect on Shaw and its reputation, as well as Shaw operations, financial results and/or future prospects.

Economic Conditions

The Canadian economy is affected by uncertainty in global financial and equity markets and slowdowns in national and/ or global economic growth. Changes in economic conditions, which may differ across our regional footprint, may affect discretionary consumer and business spending, resulting in increased or decreased demand for Shaw's product offerings. Current or future events caused by volatility in domestic or international economic conditions or a decline in economic growth may have a material adverse effect on Shaw, its operations and/or financial results.

Total Business Transformation and Voluntary Departure Program

In the second quarter of fiscal 2018, the Company introduced TBT, a multi-year initiative designed to reinvent Shaw's operating model to better meet the changing tastes and expectations of consumers and businesses by optimizing the use of resources, maintaining and ultimately improving customer service, and by reducing staff. Three key elements of TBT are to: 1) shift customer interactions to digital platforms; 2) drive more self-install and self-serve; and 3) streamline the organization that builds and services our network. As part of the TBT initiative, the Company also plans to reduce input costs, consolidate functions, and streamline processes, which is expected to create operational improvements across the business allowing it to evolve into a more efficient organization.

There is an overall risk that the TBT initiative may not be completed in a timely and cost-effective manner to yield the expected results and benefits or result in a leaner, more integrated and agile company with improved efficiencies and execution to better meet its consumers' needs and expectations (including the products and services offered to its customers). Specifically, there is a risk that the Company may not be able to: (i) establish and continue to upgrade a digital platform that will effectively engage customers, (ii) successfully adopt a digital platform that will yield the expected results and benefits, including maintaining the quality of customer service, protecting the security of customer information, and coordinating the delivery of product and service offerings; (iii) deploy programs that will result in customers using the self-serve functions and electing to self-install the Company's products and services; and (iv) consolidate and streamline the functions and processes of the divisions responsible for building and servicing its networks. The realization of any of these risks may have a material adverse effect on Shaw, its operations and/or financial results.

As a first step in the TBT, the VDP was offered to eligible employees. The outcome of the program had approximately 3,300 Shaw employees accepting the VDP package representing approximately 25% of all employees. As part of the program design, the majority of customer-facing employees (i.e. Customer Care, Retail, Sales) were not eligible to participate in the VDP. A large portion of employees who elected to participate in the VDP are in functions that will be addressed through the aforementioned key elements of the TBT and Shaw has control over the timing of employee departures across the Company through an actively managed, orderly transition over an 18-month period. In select functions, the Company determined that some employees will transition over a 24-month period, an extension from the 18-month period initially expected. Related to the VDP, approximately 1,300 employees departed the Company in fiscal 2018.

With approximately 3,300 employees accepting the VDP package, there is a risk that the Company may not be able to: (i) complete the employee exits with minimal impact on business operations within the anticipated timeframes and for the budgeted amounts, (ii) replace or outsource the functions performed by certain key employees that have accepted the VDP package in a manner that aligns with customer expectations which may have a material adverse effect on the Company's business operations, (iii) continue to operate the business in the normal course, and maintain or improve customer services, (iv) maintain employee morale as a result of the organizational changes, staff and cost reductions; (v) ensure that the staff reductions will reduce costs, and achieve the financial goals, cost competitiveness and profitability required to be attractive to investors. In addition, there can be no assurance that restructuring costs of the VDP will be limited to the budgeted amounts or that the expected annualized cost reductions from the VDP (including reductions in operating and capital expenditures will be realized within the expected time frames or at all). The realization of any of these risks may have a material adverse effect on Shaw, its operations and/or financial results.

Interest Rates, Foreign Exchange Rates and Capital Markets

Shaw has the following financial risks in its day-to-day operations:

(a) **Interest rates:** Due to the capital-intensive nature of Shaw's operations, the Company uses long-term financing extensively in its capital structure. The primary components of this structure include banking facilities and various Canadian denominated senior notes and debentures with varying maturities issued in the public markets. These are more fully described in Note 14 to the Consolidated Financial Statements.

Interest on bank indebtedness is based on floating rates while the senior notes are all fixed-rate obligations. If required, Shaw uses its credit facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. Increases in interest rates may have a material adverse effect on Shaw, its operations and/or its financial results.

As at August 31, 2018, virtually all of Shaw's consolidated long-term debt was fixed with respect to interest rates.

(b) **Capital markets:** Shaw requires ongoing access to capital markets to support our operations. Changes in capital market conditions, including significant changes in market interest rates or lending practices, or changes in Shaw's credit ratings, may adversely affect our ability to raise or refinance short-term or long-term debt and therefore may have a material adverse effect on Shaw, its operations and/or its financial results.

Shaw manages its exposure to floating interest rates by maintaining a mix of fixed and floating rate debt. Interest on the Company's unsecured banking facility and the recently implemented accounts receivable securitization program are based on floating rates, while the senior notes are all fixed rate obligations.

The Company may also enter into forward contracts to mitigate its exposure to foreign exchange and interest rate risk. While hedging and other efforts to manage these risks are intended to mitigate Shaw's risk exposure, because of the inherent nature and risk of such transactions, those activities can result in losses. For instance, if Shaw hedges its floating interest rate exposure, it may forego the benefits that may otherwise be experienced if rates were to fall and it is subject to credit risks associated with the counterparties with whom it contracts. In order to minimize the risk of counterparty default under its swap agreements, Shaw assesses the creditworthiness of its swap counterparties. Further information concerning the policy and use of derivative financial instruments is contained in Notes 2 and 28 to the Consolidated Financial Statements.

Equity Investment in Corus

As at August 31, 2018, the Company owned 80,630,383 Class B non-voting shareholdings representing 38% of Corus' the total issued equity of Class A and Class B shares. Corus operates a portfolio of multimedia offerings comprised of specialty television services, radio stations, conventional television stations, a global content business, digital assets, live events, children's book publishing, animation software, technology and media services (see "Equity Interest in Corus"). Each of these businesses faces competition, including competition for subscribers, advertising customers and engaging content. Corus' performance affects the value of the Company's investment in Corus and the Company's financial results. Corus' performance may not meet the Company's expectations (including in respect of Corus' payment of a regular dividend) in the near and/or long term.

As Corus is a publicly traded company, its value to the Company may be determined by market factors that do not reflect its intrinsic value. This may limit the Company's ability to market its interest in Corus at a price that reflects the intrinsic value of Corus to the Company.

Programming Expenses

Expenses for video programming continue to be one of our most significant single expense items to Shaw. Costs continue to increase, particularly for sports programming. In addition, as we add programming or distribute existing programming to more of our subscriber base, programming expenses increase. Although we have been successful at reducing the impact of these cost increases through the sale of additional services or increasing subscriber rates, there can be no assurance that we will continue to be able to do so and this may have a material adverse effect on Shaw, its operations and/or its financial results.

Satellite

Shaw uses three satellites (Anik F2, Anik F1R and Anik G1) owned by Telesat Canada ("Telesat") to provide satellite services in our Consumer and Business Network Services divisions. The Company owns certain transponders on Anik F2 and has long-term capacity service agreements in place in respect of transponders on Anik F1R, Anik F2 and Anik G1. While the Company intends to renew or replace some or all of these long-term capacity service agreements as they expire, there can be no assurance that replacement transponder capacity will be available or that such agreements will be entered into on favourable terms or in similar amounts, which may have a material adverse effect on customer service and customer relationships, as well as the Company's reputation, operations and/or financial results.

The Company does not maintain any insurance coverage for the transponders on Anik F1R, Anik F2 and Anik G1 as it believes the costs are uneconomic relative to the benefit which could be otherwise derived through an arrangement with Telesat. As collateral for the transponder capacity pre-payments that were made by the Company to facilitate the construction of the satellite, the Company maintains a security interest in the transponder capacity and any related insurance proceeds that Telesat recovers in connection with an insured loss event.

The Company does not maintain business interruption insurance covering damage or loss to one or more of the satellites as it believes the premium costs are uneconomic relative to the risk of satellite failure. The majority of transponder capacity is available to the Company on an unprotected, non-pre-emptible basis, in both the case of the Anik F2 transponders that are owned by Shaw and the Anik F1R, Anik F2 and Anik G1 transponders that are secured through capacity service agreements. The Company has priority access to spare transponders on Anik F1R, Anik F2 and Anik G1 in the case of interruption, subject to availability. In the event of satellite failure, service will only be restored as capacity becomes available. Restoration of satellite service on another satellite may require repositioning or re-pointing of customers' receiving dishes, an upgrade of their video terminal or customers may require a larger dish. The Anik G1 satellite has a switch feature that allows whole channel services (transponders and available spares) to be switched from extended Ku-band to Ku-band, which provides the Company with limited back-up to restore failed whole channel services of Anik F1R. Satellite failure could negatively affect levels of customer service and customer relationships and may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Network Failure

Shaw's business may be interrupted by wireline or wireless network failures, including its own or third party networks. Such network failures may be caused by fire damage, natural disaster, power loss, hacking, computer viruses, disabling devices, acts of war or terrorism and other events which may be beyond Shaw's control.

As insurance premium costs are uneconomic relative to the risk of failure, Shaw self-insures the plant in its HFC network. It is likely that wireline or wireless network damage caused by any one incident would be limited by geographic area and the resulting business interruption and financial damages would be also limited. In addition, with respect to a wireline network failure, we expect the risk of loss to be mitigated as most of the backbone fibre network and much of the HFC access network is located underground.

Shaw protects its wireline network through a number of measures including physical and information technology security, and ongoing maintenance and placement of insurance on our network equipment and data centres, including the Calgary1 data centre. In the past, the Company has successfully recovered from network damage caused by natural disasters without significant cost or disruption of service.

Shaw protects its wireless network and mitigates wireless network failure through physical and information technology security, ongoing maintenance, and by carrying insurance on its wireless network equipment.

Despite the steps Shaw takes to reduce the risk of wireline and wireless network failure, failures may still occur, and such failures could negatively affect levels of customer service and relationships which may have a material adverse effect on Shaw and its reputation, as well as its operations and/or financial results.

Cyber Security Risks

Although Shaw's systems and network architecture are designed and operated to be secure, they are vulnerable to the risks of an unauthorized third party accessing these systems or its network. This could lead to a number of adverse consequences, including the unavailability, disruption or loss of Shaw's services or key functionalities within Shaw's technology systems or software or the unauthorized disclosure, corruption or loss of sensitive company, customer or personal information. Our insurance may not cover or be adequate to fully reimburse us for any associated costs and losses.

We continue to assess and enhance our cyber security within Shaw while we are monitoring the risks of cyber attacks and implement appropriate security policies, procedures and information technology systems to mitigate the risk of cyber attacks.

External threats to our network are constantly changing, and there is no assurance that Shaw will be able to protect its network from all future threats which may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Information Systems and Internal Business Processes

Many aspects of the Company's businesses depend to a large extent on various information technology (IT) systems and software, and on internal business processes. Shaw regularly undertakes initiatives to update and improve these systems and processes. Although the Company has taken steps to reduce the risks of failure of these systems and processes, there can be no assurance that potential failures of, or deficiencies in, these systems, processes or change initiatives will not have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Reliance on Suppliers

Shaw is connected to or relies on other telecommunication carriers and certain utilities to conduct its business. Any disruption to the services provided by these suppliers, including labour strikes and other work disruptions, bankruptcies, technical difficulties or other events affecting the business operations of these carriers or utilities may affect Shaw's ability to operate and, therefore may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

The Company sources its customer premise and capital equipment, capital builds as well as portions of its service offerings from certain key suppliers. While the Company has alternate sources for many of these purchases, the loss of a key supplier may adversely affect the Company's ability to operate, and therefore may have a material adverse effect on Shaw, its operations and/or its financial results. There are a limited number of suppliers of popular mobile devices and there is a risk that the Company will not be able to maintain contracts for its existing supply of mobile devices and/or contract for the supply of new devices on commercially reasonable terms.

Litigation

Shaw and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business, whether in Canada or the US. Although management does not expect that the outcome of these matters will have a material adverse effect on the Company, there can be no assurance that these matters, or other legal matters that arise in the future, will not have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Taxes

Shaw's business is subject to various tax laws, changes to tax laws and the adoption of new tax laws, regulations thereunder and interpretations thereof, which may have adverse tax consequences to Shaw.

While Shaw believes it has adequately provided for all income and commodity taxes based on information that is currently available, the calculation and the applicability of taxes in many cases require significant judgment in interpreting tax rules and regulations. In addition, Shaw's tax filings are subject to government audits which could result in material changes in the amount of current and deferred income tax assets and liabilities and other liabilities which may, in certain circumstances, result in the assessment of interest and penalties.

Concerns about Alleged Health Risks relating to Radiofrequency Emissions

Concerns about alleged health risks relating to radiofrequency emissions may adversely affect our Wireless division and our Shaw Go WiFi operations. Some studies have alleged that links exist between radiofrequency emissions from certain wireless devices and cell sites and various health problems or possible interference with electronic medical devices, including hearing aids and pacemakers. The Company complies with all applicable laws and regulations. Further, the Company relies on suppliers of wireless network equipment and customer equipment to meet or exceed all applicable regulatory and safety requirements. No definitive evidence exists of harmful effects from exposure to radiofrequency emissions when legal limits are complied with. Additional studies of radiofrequency emissions are ongoing and we cannot be certain of results, which could result in additional or more restrictive regulation or exposure to potential litigation.

Acquisitions, Dispositions and Other Strategic Transactions

Shaw may from time to time make acquisitions to expand its existing businesses or to enter into sectors in which Shaw does not currently operate, dispositions to focus on core offerings or enter into other strategic transactions. Such acquisitions, dispositions and/or strategic transactions may fail to realize the anticipated benefits, result in unexpected costs and/or Shaw may have difficulty incorporating or integrating the acquired business, any of which may have a material adverse effect on Shaw, its operations and/or financial results.

Holding company structure

Substantially all of Shaw's business activities are operated by its subsidiaries. As a holding company, our ability to meet our financial obligations is dependent primarily upon the receipt of interest and principal payments on intercompany advances, management fees, cash dividends and other payments from our subsidiaries together with proceeds raised by the Company through the issuance of equity and the incurrence of debt, and from proceeds received on the sale of assets.

The payment of dividends and the making of loans, advances and other payments to Shaw by its subsidiaries may be subject to statutory or contractual restrictions, are contingent upon the earnings of those subsidiaries and are subject to various business and other considerations.

Control of the Company

Class A Shares are the only shares entitled to vote on all shareholder matters. Voting control of the Company is held by SFLT and its subsidiaries, which hold, for the benefit of descendants of JR and Carol Shaw, 17,562,400 Class A Shares, being approximately 78% of the issued and outstanding shares of such class as at August 31, 2018. The sole trustee of SFLT is a private company owned by JR Shaw and having a board comprised of seven directors, including JR Shaw (chair), Bradley S. Shaw, four other members of JR Shaw's family, and one independent director. Accordingly, JR Shaw, through SFLT, its subsidiaries and its trustee, is able to elect a majority of the Board of Directors of the Company and to control any vote by the holders of Class A Shares.

Dividend Payments are not Guaranteed

Shaw currently pays monthly common share and quarterly preferred share dividends in amounts approved on a quarterly basis by the Board of Directors. Over the long term, Shaw expects to continue to pay dividends from its free cash flow; however, balance sheet cash and/or credit facilities may be used to stabilize dividends from time to time. Although Shaw intends to make regular dividend payments, dividends are not guaranteed as actual results may differ from expectations and there can be no assurance that the Company will continue common or preferred share dividend payments at the current level. In addition to the standard legislated solvency and liquidity tests that must be met, the Company would not be able to declare and pay dividends if there was an event of default or a pending event of default would result (as a consequence of declaring and paying dividends) under its credit facilities.

Talent Management and Succession Planning

Our success is substantially dependent upon the retention and the continued performance of our executive officers. Many of these executive officers are uniquely qualified in their areas of expertise, making it difficult to replace their services in the short to medium term. The loss of the services of any key executives and/or employees in critical roles or inadequate processes designed to attract, develop, motivate and retain productive and engaged employees could have a material adverse effect on Shaw, its operations and/or financial results.

To mitigate this risk, the Company's comprehensive compensation program is designed to attract, retain, motivate and reward the executive team and key employees by aligning management's interest with our business objectives and performance. Furthermore, the Company conducts annual succession planning to identify and develop key leaders to build capabilities and experiences required for the future.

Labour Relations

As of August 31, 2018, approximately 5.5% of our employees are represented by unions under collective bargaining agreements. While the Company strives to maintain positive labour relations, we can neither predict the outcome of current or future negotiations relating to labour disputes, union representation or renewal of collective bargaining agreements, nor be able to avoid future work stoppages, strikes or other forms of labour protests pending the outcome of any current or future negotiations. A prolonged work stoppage, strike or other form of labour protest could have a material adverse effect on our businesses, operations and reputation. Even if the Company does not experience strikes or other forms of labour protests, the outcome of labour negotiations could adversely affect our businesses and results of operations. In addition, our ability to make short-term adjustments to control compensation and benefits costs could be limited by the terms of such collective bargaining agreements.

Given the level of change occurring across the organization in connection with the VDP and TBT, the Company has held various round tables with senior leaders, created cross functional work groups to address day-to-day operational issues and provided education for leaders on how to manage change and maintain positive employee engagement and relations.

DISCUSSION OF OPERATIONS AND FOURTH QUARTER

To comply with the requirements of Items 1.4 (Discussion of Operations) and 1.10 (Fourth Quarter) of Form 51-102F1 of National Instrument 51-102, the sections entitled "Discussion of Operations" and "Overview" in the Company's Management's Discussion and Analysis for the fourth quarter and year ended August 31, 2018 (the "**2018 Fourth Quarter MD&A**") are incorporated by reference herein. The 2018 Fourth Quarter MD&A can be found on SEDAR at www.sedar.com

(1) Refer to key performance drivers.
(2) Net income attributable to both equity shareholders and non-controlling interests.

F18 Q4 **vs** F18 Q3	In the fourth quarter of fiscal 2018, net income improved by $291 million compared to the third quarter of fiscal 2018 primarily due to an impairment charge of $284 million related to the Company's investment in Corus recorded in the prior quarter.
F18 Q3 **vs** F18 Q2	In the third quarter of fiscal 2018, net income increased $73 million compared to the second quarter of fiscal 2018 mainly due to the quarter-over-quarter decrease in restructuring costs of $404 million and an increase in operating income before restructuring costs and amortization. The increase was partially offset by impairment charge of $284 million in the third quarter related to the Company's investment in Corus Entertainment Inc. and higher income taxes.
F18 Q2 **vs** F18 Q1	In the second quarter of fiscal 2018, net income decreased $279 million compared to the first quarter of fiscal 2018 mainly due to $417 million of restructuring costs recorded during the quarter related to the Company's TBT initiative which is composed primarily of the costs associated with the VDP. The decrease was partially offset by a deferred tax recovery relating to the restructuring charges as well as an increase in operating income before restructuring costs and amortization.
F18 Q1 **vs** F17 Q4	In the first quarter of fiscal 2018, net income decreased $366 million compared to the fourth quarter of fiscal 2017 mainly due to the $330 million gain on divestiture, net of tax, of ViaWest, as well as an $11 million non-operating provision recovery in the prior quarter.
F17 Q4 **vs** F17 Q3	In the fourth quarter of fiscal 2017, net income increased $348 million compared to the third quarter of fiscal 2017 mainly due to the gain on divestiture, net of tax, of ViaWest, and lower current quarter restructuring costs. The increase was partially offset by a decrease in operating income before restructuring costs and amortization, higher amortization, lower equity income from our investment in Corus and higher income taxes. Net other costs and revenue changed primarily due to a $14 million decrease in income from an equity accounted associate and an $11 million provision reversal related to the wind down of shomi in the quarter.
F17 Q3 **vs** F17 Q2	In the third quarter of fiscal 2017, net income decreased $14 million compared to the second quarter of fiscal 2017 mainly due to third quarter restructuring costs and losses on discontinued operations, net of tax, as well as increased amortization. The decrease was partially offset by an increase in operating income before restructuring costs and amortization and lower income taxes. Net other costs and revenue changed primarily due to a $16 million increase in income from an equity accounted associate and a $15 million provision reversal related to the wind down of shomi in the quarter.
F17 Q2 **vs** F17 Q1	In the second quarter of fiscal 2017, net income increased $57 million compared to the first quarter of fiscal 2017 mainly due to a non-recurring provision related to the wind down of shomi operations recorded in the first quarter, partially offset by an increase in amortization and income taxes. Also contributing to the increased net income were lower restructuring costs, partially offset by lower equity income from our investment in Corus. Net other costs and revenue changed primarily due to a provision of $107 million recorded in the prior quarter relating to shomi operations partially offset by a $17 million decrease in income from an equity accounted associate in the quarter.
F17 Q1 **vs** F16 Q4	In the first quarter of fiscal 2017, net income decreased $64 million compared to the fourth quarter of fiscal 2016 mainly due to a non-recurring provision related to the wind down of shomi operations included in net other costs and revenue for the first quarter of fiscal 2017. Also contributing to the decreased net income was lower operating income before restructuring costs and amortization, higher restructuring charges and lower income from discontinued operations, partially offset by lower income taxes. Net other costs and revenue changed primarily due to a $107 million impairment of the Company's joint venture investment in shomi and a $27 million increase in income from an equity accounted associate in the first quarter of fiscal 2017.

While financial results for the Company are generally not subject to significant seasonal fluctuations, subscriber activity may fluctuate from one quarter to another. Subscriber activity may also be affected by competition and Shaw's promotional activity. Further, satellite subscriber activity is modestly higher around the summer time when more subscribers have second homes in use. Shaw's Wireline, Satellite, Wireless or Data Centre businesses do not depend on any single customer or concentration of customers.

The following further assists in explaining the trend of quarterly revenue and operating income before restructuring costs and amortization:

Growth (losses) in subscriber statistics as follows:

Fiscal 2018 Highlights

- Revenue for fiscal 2018 improved 7.3% to $5.24 billion from $4.88 billion in 2017.
- Operating income before restructuring costs and amortization of $2.089 billion in fiscal 2018 was up 4.6% over prior year's $2.0 billion.
- Net income was $60 million for fiscal 2018 compared to $851 million in 2017.
- Earnings per share were $0.10 in fiscal 2018 compared to $1.72 in 2017.
- Consolidated free cash flow in fiscal 2018 was $411 million compared to $438 million in 2017.

- During 2018, the Company's dividend rates on Shaw's Class A Participating Shares and Class B Non-Voting Participating Shares were $1.1825 and $1.1850, respectively. Dividends paid in 2018 were $605 million gross of amounts attributed to the dividend reinvestment plan.

Corporate

- In the first quarter of fiscal 2018, Shaw implemented its previously announced changes to the structure of its operating divisions to improve overall efficiency while enhancing its ability to grow as a leading Canadian connectivity company. Shaw's previously existing Consumer and Business Network Services divisions were combined to form a new Wireline division with no changes to the existing Wireless division.
- In the second quarter of fiscal 2018, the Company introduced TBT, a multi-year initiative designed to reinvent Shaw's operating model to better meet the evolving needs and expectations of consumers and businesses by optimizing the use of resources, maintaining and ultimately improving customer service, and by reducing staff. Three key elements of the transformation are to: 1) shift customer interactions to digital platforms; 2) drive more self-install and self-serve; and, 3) streamline the organization that builds and services the networks.
- As a first step in the TBT, a voluntary departure program, or VDP, was offered to eligible employees. The outcome of the program resulted in approximately 3,300 Shaw employees accepting the VDP package representing approximately 25% of all employees at that time. Related to the VDP, approximately 1,300 employees departed the Company in fiscal 2018.
- In fiscal 2018, the Company incurred a total restructuring charge of $446 million related to severance and other employee related costs, as well as additional costs directly associated with the TBT initiative. As the restructuring activities related to the TBT initiative have been substantially completed, the total restructuring charge is not expected to exceed $450 million.
- The anticipated annualized savings, which include reductions in operating expenses and capital expenditures (i.e. labour costs that can be identified or associated with a capital project), related to the VDP, are expected to be approximately $215 million and will be fully realized in fiscal 2020. Shaw expects these cost reductions to be weighted 60% to operating expenses and 40% to capital expenditure being approximately $130 and $85 million, respectively. VDP related cost reductions in fiscal 2018 totaled $47 million, of which $39 million were attributed to operating expenses and $8 million attributed to capital expenditures. (For further detail see "Total Business Transformation and Voluntary Departure Program").
- In the third quarter of fiscal 2018, the Company incurred an impairment charge of $284 million related to its investment in Corus.

Financing Activities

- On June 19, 2018, the Company established an accounts receivable securitization program with a Canadian financial institution which allows it to sell certain trade receivables into the program. As at August 31, 2018, the proceeds of the sales were committed up to a maximum of $100 million, with $40 million currently drawn under the program.
- On November 2, 2018, the Company closed its offering of $1 billion of senior notes, comprised of $500 million principal amount of 3.80% senior notes due 2023 and $500 million principal amount of 4.40% senior notes due 2028.
- On November 21, 2018, the Company amended the terms of its bank credit facility to extend the maturity date to December 2023. This credit facility is used for working capital and general corporate purposes.

Wireless – Freedom Mobile

- In fiscal 2018, Freedom Mobile added over 255,000 subscribers which was complemented, on an annual basis, by an ARPU improvement of 6.1% (to $39.26) over fiscal 2017, reflecting the appeal of its differentiated value proposition.
- In October 2017, Freedom Mobile launched the Big Gig data plans, targeting a data-centric customer with 10 GB of data for only $50 per month – unlike any other plan offered in Canada at that time.
- On November 22, 2017 Freedom Mobile began pre-selling iPhoneX, iPhone 8 and 8 Plus at all Freedom Mobile retail locations across Canada.
- In the second quarter of fiscal 2018, the Company completed the re-farm of 10 MHz of AWS-1 spectrum across Freedom Mobile's footprint, significantly expanding Freedom Mobile's addressable market as the AWS-1 spectrum supports nearly all LTE devices currently in use in Canada.
- In May 2018, the Company completed its first successful 5G trials in Calgary by leveraging 28GHz mmWave and 3.5GHz spectrum in collaboration with Nokia, CableLabs and Rode & Schwarz.

- In fiscal 2018, the Company successfully upgraded and deployed 2500 MHz spectrum in high traffic sites in the GTA, Calgary, Edmonton, and Vancouver and commenced the deployment of 700 MHz spectrum later in the year which is expected to continue throughout fiscal 2019. This step, the deployment of the 2500 MHz spectrum, along with the completion of the re-farming of 10 MHz of the Company's existing AWS-1 spectrum to LTE in the second quarter of fiscal 2018 resulted in a large majority of the Company's existing customers migrating from 3G to LTE service using their exiting devices.
- In the fourth quarter of fiscal 2018, the Company launched voice over LTE, or VoLTE nationwide across all three of its LTE spectrum bands – AWS-1, AWS-3, and 2500 MHz – offering customers with compatible devices a significant improvement in voice quality and a reduction in call set-up time.
- During 2018, Freedom Mobile continued to expand its retail network by entering into distribution agreements with Loblaws and Walmart. Freedom Mobile products and services are currently being distributed in approximately 100 Loblaws' "The Mobile Shop" locations and approximately 140 Walmart locations throughout Ontario, Alberta and British Columbia. When combined with our existing corporate and dealer store network, we remain on track to have approximately 600 retail locations expected to be operational in early 2019.

Wireline – Consumer & Business

- On September 15, 2017, the Company sold a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation, to Omnitracs LLC for proceeds of approximately US$20 million.
- In December 2017, Shaw Business launched SmartSurveillance, an enterprise-grade managed video surveillance solution designed to help owners monitor and protect their businesses while providing valuable analytical insights.
- In the third quarter of fiscal 2018, the Company deployed the latest DOCSIS 3.1 advanced XB6 Wi-Fi modem, powered by Comcast, which enables faster internet speeds, supports more devices and ensures a stronger in-home internet connection. DOCSIS 3.1 represents the latest development in a set of technologies that increase the capability of a hybrid fibre-coax network to transmit data both to and from customer premises.
- During fiscal 2018, the Company continued to improve its BlueSky platform, powered by Comcast's next generation X1 platform, which features a voice controlled remote and advanced search, by integrating both Netflix and YouTube seamlessly with live TV, video-on-demand and recorded content.
- In July 2018, the Company launched Internet 300 with download speeds of up to 300 megabits-per-second:
  - The Consumer division launched Internet 300 with unlimited data which is available across virtually all of Shaw's Western Canadian footprint.
  - Shaw Business launched:
    - Internet 300 with unlimited data, making it easier for Shaw Business customers to share files through cloud storage services, video conference with colleagues, and operate point of sale systems more efficiently; and
    - SmartWiFi 300, an enterprise-grade WiFi solution, that provides simultaneous device connections, instant analytics, three separate networks, and bandwidth allocation (to monitor and limit usage for heavy data users).

Fiscal 2017 Highlights

- Revenue for fiscal 2017 improved 8.1% to $4.88 billion from $4.52 billion in 2016.
- Operating income before restructuring costs and amortization of $2.0 billion in fiscal 2017 was up 1.0% over prior year's $1.98 billion.
- Net income was $851 million for fiscal 2017 compared to $1.24 billion in 2016.
- Earnings per share were $1.72 in fiscal 2017 compared to $2.51 in 2016.
- Consolidated free cash flow in fiscal 2017 was $438 million compared to $482 million in 2016.
- During 2017, the Company's dividend rates on Shaw's Class A Participating Shares and Class B Non-Voting Participating Shares were $1.1825 and $1.1850, respectively. Dividends paid in 2017 were $595 million gross of amounts attributed to the dividend reinvestment plan.

Corporate

On August 1, 2017, the Company sold 100% of its wholly-owned subsidiary ViaWest, Inc. and its subsidiaries (collectively, “ViaWest”) for approximately US$1.675 billion in cash.

- The Company enhanced its wireless network capabilities through the acquisition of wireless spectrum licences from Quebecor on July 24, 2017 for $430 million. The acquired spectrum licences comprise 10 MHz licences of 700 MHz spectrum in each of British Columbia, Alberta and Southern Ontario, as well as the 20 MHz licences of the 2500 MHz spectrum in each of Vancouver, Edmonton, Calgary and Toronto.

Financing Activities

- On December 15, 2016, the Company extended the term of its five-year $1.5 billion bank credit facility from December 2019 to December 2021. This credit facility is used for working capital and general corporate purposes.
- The Company conducted a number of capital market activities, including:
    - the extension of its dividend reinvestment plan in respect of its Class A Participating Shares and Class B Non-Voting Participating Shares to eligible shareholders who are residents of the United States;
    - the issuance of 3.80% $300 million senior unsecured notes due March 1, 2027;
    - the repayment of $400 million senior unsecured notes due March 2, 2017; and
    - the repayment of US$846 million in borrowings under the Company’s and ViaWest’s credit facilities related to the sale of ViaWest.
    - The Company participated in Corus’ dividend reinvestment program for its initial investment in Corus Class B non-voting participating shares until September 1, 2017.

Wireless – Freedom Mobile

- The Company continued to improve its network performance with the rollout of Freedom Mobile’s LTE-Advanced network to all its existing markets, on schedule and on budget, as of the end of fiscal 2017.
- Freedom Mobile’s handset lineup continued to expand in fiscal 2017, with Apple, LG, Samsung, Sony and ZTE all being compatible with its AWS-3 LTE network.

Wireline – Consumer & Business

- In fiscal 2017, the Company began to deploy its newest generation of cable modem termination system equipment referred to as the Converged Cable Access Platform (“CCAP”) into its serving hubs. CCAP significantly enhances the capabilities of Shaw’s cable network and enabling it to leverage the next generation of cable access technology known as DOCSIS 3.1.
- Shomi, the over-the-top streaming platform that launched as a joint venture of Shaw and Rogers Communications Inc. (“Rogers”) in fiscal 2015 was wound down with its operations and service ending on November 30, 2016. As a result, Shaw incurred investment losses of $82 million in fiscal 2017 relating to shomi’s liabilities in connection with the wind down of the shomi joint venture.
- The Company launched the market leading, BlueSky TV which is based on Comcast’s X1 video platform. BlueSky TV was launched in phases, with the initial launch in Calgary followed by the Vancouver launch in February and the national launch in April 2017.
- The Company continued to expand its Shaw Go WiFi build-out. As at August 31, 2017, the Company had approximately 100,000 Shaw Go WiFi access points installed and operating throughout the network and over 3.3 million devices using Shaw Go WiFi. Moreover, the Company has leveraged its Wi-Fi access points to improve network coverage for Freedom Mobile customers which represents an important step in Shaw’s converged network strategy.

Fiscal 2016 Highlights

- Revenue for fiscal 2016 improved 7.4% to $4.52 billion from $4.21 billion in fiscal 2015.
- Operating income before restructuring costs and amortization of $1.98 billion in fiscal 2016 was up 2.4% over fiscal 2015 amount of $1.93 billion.
- Net income was $1.24 billion for fiscal 2016 compared to $880 million in 2015.
- Earnings per share were $2.51 in fiscal 2016 compared to $1.80 in 2015.
- Consolidated free cash flow in fiscal 2016 was $482 million compared to $653 million in 2015.
- During 2016, the Company's dividend rates on Shaw's Class A Participating Shares and Class B Non-Voting Participating Shares were $1.1825 and $1.1850 respectively. Dividends paid in 2016 were $568 million gross of amounts attributed to the dividend reinvestment plan.

Corporate

- On December 15, 2015, ViaWest closed the acquisition of 100% of the shares of INetU, Inc. for US$162 million which was funded through a combination of borrowings under ViaWest's and the Company's revolving credit facilities as well as incremental term loan proceeds under ViaWest's credit facility.
- On March 1, 2016, the Company completed the acquisition of 100% of the shares of Mid-Bowline Group Corp. and its wholly owned subsidiary WIND Mobile Corp. for an enterprise value of $1.6 billion which was funded through a combination of cash on hand, a drawdown of $1.3 billion on the Company's credit facilities and the issuance of 2,866,384 Class B Non-Voting Participating Shares. The fair value of purchase consideration consisted of $1.59 billion in cash and $68 million in shares. The acquisition of WIND Mobile led to the creation of the Company's Wireless division.
  - The addition of wireless enabled Shaw to combine the power of fibre, coax, Wi-Fi and wireless networks to deliver a seamless experience of anytime and anywhere enhanced connectivity within our operating footprint. On November 21, 2016, WIND Mobile Corp. was rebranded to Freedom Mobile Inc.
- On April 1, 2016, the Company entered into an agreement with Corus, a related party subject to common voting control, to sell 100% of its wholly owned subsidiary Shaw Media Inc. for a purchase price of approximately $2.65 billion, comprised of $1.85 billion in cash and 71,364,853 Corus Class B non-voting participating shares. As a result of the transaction and including the impact of Corus' prospectus and private placement financings, as at August 31, 2016, Shaw owned approximately 38% of Corus' total issued equity.
  - Through holding of the shares in Corus, the Company effectively retained an indirect, non-controlling interest in the former Media division subsequent to the sale, but the Company no longer had control over the Media division.
- In fiscal 2016, the Company underwent a restructuring following a set of significant asset realignment initiatives, including the acquisition of Freedom Mobile and divestiture of Shaw Media affecting approximately 200 employees of which $23 million of restructuring costs were recorded relating primarily to severance and employee related costs.

Financing Activities

- In February 2016, the Company increased the borrowing capacity of its five-year bank credit facility by $500 million to a total of $1.5 billion under the terms of the amended facility. Funds are available to the Company in both Canadian and US dollars. Interest rates fluctuate with Canadian prime and bankers' acceptance rates, US bank base rates and LIBOR rates.
- In March 2016, ViaWest entered into an incremental US$80 million term loan and increased the borrowing capacity available on its revolving facility by US$35 million. The incremental term loan had quarterly principal repayments that commenced in May 2016 with the balance due on maturity in March 2022. Interest rates fluctuated with LIBOR, US prime and US Federal Funds rates and the facilities were secured by a first priority security interest in specific assets pursuant to the terms of a security agreement.
- In connection with the acquisition of Freedom Mobile on March 1, 2016, the Company drew down $1.3 billion on its credit facility comprised of a $1.0 billion non-revolving credit facility with a syndicate of lenders that was entered into on March 1, 2016 along with $300 million drawn on the Company's existing credit facility. These amounts were repaid on April 1, 2016 using the cash proceeds received from the Shaw Media disposition.

- The Company conducted a number of capital market activities, including:
  - On February 1, 2016, the Company repaid $300 million floating rate senior notes.
  - On February 19, 2016, the Company issued $300 million senior notes at a rate of 3.15% due February 19, 2021.
  - On May 9, 2016, the Company repaid $300 million 6.15% senior notes.

Consumer

- The Company had a 50% interest in shomi, a subscription video-on-demand service, that launched in November 2014 as a joint venture arrangement with Rogers.
- In January 2016, Shaw launched FreeRange TV, a mobile destination for its Video customers that combined their TV and content subscriptions in one place, providing on-the-go access to live and on demand content.
- The CRTC's "Let's Talk TV" initiative resulted in a new policy framework requiring Shaw to offer a $25 entry-level service offering (basic service) and all discretionary services (not offered on the basic service) either on a standalone basis or in packages of up to 10 programming services by March 2016. In addition, the Company was required to offer these services both on a standalone basis and in packages of up to ten programming services by December 1, 2016.
  - In March 2016, the Company introduced a new small basic service called "Limited TV" and revised its offerings to include small, medium and large theme packs starting at $6 per theme pack.
  - In November 15, 2016, the Shaw launched "pick and pay" which allows customers to subscribe for a primary package (including Limited TV), select theme packs and add-on individual channels on a channel by channel basis.
- The Company continued to expand its Shaw Go WiFi build-out. As at August 31, 2016, the Company had approximately 85,000 Shaw Go WiFi access points installed and operating throughout the network and over 2.6 million devices using Shaw Go WiFi.

Business

- The Company continued to expand its Business Network Services offering, including the successful expansion of its smart suite of products to include Smart Security in addition to SmartWiFi and SmartVoice.

Revenue and operating income before restructuring costs and amortization

Shaw delivered full year fiscal 2018 financial results that met its guidance. Operating income before restructuring costs and amortization of $2,089 million in fiscal 2018 was in line with the target of $2.1 billion. For further discussion of divisional performance see "Segmented Operations Review."

Consolidated revenue of $5.24 billion for fiscal 2018 improved 7.3% over $4.88 billion for fiscal 2017. Revenue improved primarily due to the Wireless division contributing revenues of $951 million in fiscal 2018 as compared to $605 million in the prior year. The year-over-year improvement in Wireless revenue of $346 million or 57.2% reflects higher equipment revenues of $233 million and higher service revenues of $113 million driven primarily by added postpaid RGUs, higher ARPU and a large share of new postpaid subscribers purchasing handsets. Excluding the results of the Wireless division, revenue for the twelve-month period for the Wireline division was up $12 million or 0.3%. Customer acquisition and rate increases were the primary driver of the $34 million in revenue growth from the Business division while Consumer division revenues decreased $22 million or 0.6% compared to the twelve-month period of fiscal 2017 reflecting the change in customer mix and a decline in Video and Phone RGUs.

Operating income before restructuring costs and amortization of $2.09 billion for the twelve-month period improved 4.6% compared to $2.0 billion for fiscal 2017. The improvement was primarily due to the Wireless division contributing $176 million over the twelve-month period as compared to $133 million in fiscal 2017 and the Wireline division increase of $49 million year-over-year. Wireless increased $43 million or 32.3% over the comparable period primarily due to the growth in subscribers and ARPU and a $13 million credit for a retroactive domestic roaming rate adjustment received in the year partially offset by lower equipment margins and higher distribution channel costs. Wireline increased $49 million or 2.6% over the comparable period as a result of VDP cost reductions and lower marketing costs, partially offset by higher programming costs, RGU losses in Video and Phone, and the change in the Video customer and package mix.

Restructuring costs

Restructuring costs generally include severance, employee related costs and other costs directly associated with a restructuring program. For the year ended August 31, 2018, the category included $446 million in restructuring charges related to the Company's TBT initiative. As a first step in the TBT, the VDP was offered to eligible employees in the second quarter of fiscal 2018. The outcome of the program had approximately 3,300 Shaw employees accepting the VDP package, representing approximately 25% of all employees. The costs related to this program make up the majority of the restructuring costs recorded in the year to date; however, in the fourth quarter of fiscal 2018, further organizational changes in the execution of TBT resulted in additional restructuring costs. See "About our Business" for further details on the TBT and the VDP.

Amortization

(millions of Canadian dollars)	2018	2017	Change %
Amortization revenue (expense)			
Deferred equipment revenue	**30**	38	(21.1)
Deferred equipment costs	**(110)**	(122)	(9.8)
Property, plant and equipment, intangibles and other	**(932)**	(860)	8.4

Amortization of property, plant and equipment, intangibles and other increased 8.4% for the year ended August 31, 2018 over the comparable period due to amortization of new expenditures exceeding the amortization of assets that became fully amortized during the year.

Amortization of financing costs and Interest expense

(millions of Canadian dollars)	2018	2017	Change %
Amortization of financing costs – long-term debt	**3**	2	50.0
Interest expense	**248**	267	(7.1)

Interest expense for the twelve-month period ended August 31, 2018 decreased over the comparable period primarily due to lower average outstanding debt balances in the current year.

Other income and expenses

(millions of Canadian dollars)	2018	2017	Increase (decrease) in income
Equity income (loss) of an associate or joint venture	**(200)**	73	(273)
Other gains (losses)	**29**	(65)	94
	(171)	8	(179)

In fiscal 2018, the Company recorded an equity loss of $200 million related to its interest in Corus, this compares to equity income of $73 million in the prior year. The decrease substantially reflects a $284 million impairment from the Company's investment in Corus recorded in the third quarter of fiscal 2018.

Other gains (losses) generally include realized and unrealized foreign exchange gains and losses on US dollar denominated current assets and liabilities, gains and losses on disposal of property, plant and equipment and minor investments, and the Company's share of the operations of Burrard Landing Lot 2 Holdings Partnership. In the current year, the category includes a $16 million gain on the sale of certain wireless spectrum licenses as well as a $5 million provision recovery. In the prior year, the category includes a $82 million provision in respect of the Company's investment in shomi, which discontinued operations in fiscal 2017.

Income tax expense

The income tax expense was calculated using current statutory income tax rates of 26.8% for 2018 and 26.7% for 2017 and was adjusted for the reconciling items identified in Note 24 to the Consolidated Financial Statements.

Earnings per share

(millions of Canadian dollars except per share amounts)	2018	2017	Change %
Net income	**60**	851	(92.9)
Weighted average number of participating shares outstanding during period (millions)	**502**	491	
Earnings per share			
Basic	**0.10**	1.72	
Diluted	**0.10**	1.71	

Net income

Net income was $60 million in 2018 compared to $851 million in 2017. The year-over-year changes are summarized in the table below.

(millions of Canadian dollars)	
Increased operating income before restructuring costs and amortization	**92**
Increased restructuring costs	**(392)**
Increased amortization	**(69)**
Decreased interest expense	**19**
Decreased or loss equity income of an associate or joint venture	**(273)**
Change in other net costs and revenue [(1)]	**94**
Decrease or increase income taxes	**38**
Decreased income from discontinued operations, net of tax	**(300)**
	(791)

(1) Net other costs and revenue includes business acquisition costs, accretion of long-term liabilities and provisions, debt retirement costs and other losses as detailed in the Consolidated Statements of Income.

Net other costs and revenues had a $94 million favourable impact on net income primarily due to an $82 million provision in respect of the Company's investment in shomi in fiscal 2017 as well as a $16 million gain on the sale of certain spectrum licenses in the current year. See "Other income and expenses" above for further detail on non-operating items.

SEGMENTED OPERATIONS REVIEW

WIRELINE

(millions of Canadian dollars)	2018	2017	Change %
Consumer	**3,725**	3,747	(0.6)
Business	**567**	533	6.4
Wireline revenue	**4,292**	4,280	0.3
Operating income before restructuring costs and amortization [(1)]	**1,913**	1,864	2.6
Operating margin [(1)]	44.6%	43.6%	1.0pts

(1) Refer to key performance drivers.

Wireline RGUs decreased by 133,142 in the current year, compared to net additions of 25,321 RGUs in fiscal 2017. Total Business RGU gains of 31,791 were more than fully offset by total Consumer RGU losses of 164,933 in the year which included net losses in cable Video of 86,045, Phone of 71,684 and satellite Video of 23,139 partially offset by the addition of approximately 15,935 Internet RGUs. RGU disconnects were driven primarily by the Company's moderated promotional activity throughout the year, with more selective retention offers and more disciplined subscriber acquisition offers, focused on higher value Internet and Video subscribers.

Consumer revenue for the year of $3.7 billion was comparable to last year. Higher revenue generated by annual rate adjustments and incremental Internet RGUs were fully offset by the impact of reductions to cable Video and Phone RGUs, as well as customer downward migration in Video packages relative to a year ago. Business revenue for the year of $567 million was 6.4% higher over the prior year primarily due to customer growth in small to medium size businesses as well as the impact of annual rate adjustments. Growth was led by the continued success of selling the SmartSuite of products, specifically Smart WiFi, Smart Voice and Smart Security.

Operating income before restructuring costs and amortization of $1.9 billion increased 2.6% over the comparable period as a result of VDP cost reductions, including savings of approximately $39 million, and lower marketing costs, partially offset by the change in the Video customer and package mix and higher programming costs.

WIRELESS

(millions of Canadian dollars)	2018	2017	Change %
Service	**595**	482	23.4
Equipment and other	**356**	123	>100.0
Wireless revenue	**951**	605	57.2
Operating income before restructuring costs and amortization [(1)]	**176**	133	32.3
Operating margin [(1)]	18.5%	22.0%	(3.5pts)

(1) Refer to key performance drivers.

In Wireless, the Company continued to grow postpaid and prepaid wireless subscribers, gaining a combined 255,685 RGUs in the year. The increase in the customer base reflects continued customer demand for premium smartphones combined with device pricing and packaging options, data centric plans, and the ongoing execution of the wireless growth strategy to improve the network and customer experience.

Wireless revenue for the year of $951 million increased $346 million or 57.2% over the prior year. The increase in revenue was driven primarily by year-over-year growth in both equipment and service revenue. The increase in service revenue was driven by RGU and ARPU growth in which a net 265,629 postpaid subscribers were added, representing a 35% increase, and a fourth quarter ARPU of $41.00 while higher equipment revenues were driven by a large share of new postpaid subscribers purchasing handsets. ARPU of $39.26 for the full fiscal year compared to $37.00 for fiscal 2017 and reflects a higher proportionate share of postpaid subscribers.

Operating income before restructuring costs and amortization of $176 million increased $43 million or 32.3% over the comparable period primarily due to the growth in subscribers and ARPU and a $13 million credit for a retroactive domestic roaming rate adjustment received in the year partially offset by lower equipment margins and higher distribution channel costs.

CAPITAL EXPENDITURES AND EQUIPMENT COSTS

	Year ended August 31,		
(millions of Canadian dollars)	2018	2017	Change %
Wireline			
New housing development	**124**	98	26.5
Success based	**284**	308	(7.8)
Upgrades and enhancements	**493**	432	14.1
Replacement	**31**	31	–
Buildings and other	**92**	101	(8.9)
Total as per Note 25 to the audited annual consolidated financial statements	**1,024**	970	5.6
Wireless			
Total as per Note 25 to the audited annual consolidated financial statements	**343**	255	34.5
Consolidated total as per Note 25 to the audited annual consolidated financial statements	**1,367**	1,225	11.6

Capital investment from continuing operations was $1.4 billion in the current year compared to $1.2 billion in fiscal 2017. The increase was driven primarily by incremental capital investment in the Wireless division relating primarily to investment for the continued improvement in network infrastructure, specifically the deployment of 700 MHz spectrum, LTE and small cells as well as back office system and retail upgrades in addition to incremental capital upgrades and enhancements in the Wireline division.

Wireline

Success based capital for the twelve-month period of $284 million was moderately lower than the comparable period last year. The current year decrease in success based capital was due primarily to decreased advanced Internet Wi-Fi modem spend, lower Satellite and digital phone activations as a result of lower gross adds throughout the year and lower installation labour costs across all product lines. These decreases were partially offset by higher video equipment costs related to the BlueSky TV platform.

Capital spend on the combined upgrades and enhancement, and replacement categories was $524 million, a $61 million increase over fiscal 2017, reflecting the Company's continued investment in the wireline network including i) significant bandwidth and upgrade programs; ii) increased investment in support of enhanced digital capabilities relating to the NGV/IPTV video delivery platforms necessary to support BlueSkyTV; and iii) additional investment in back office systems. Increased investments were partly offset by lower capital spend on satellite network upgrades and Shaw Go WiFi access points.

Capital spend on new housing development of $124 million was $26 million higher than the prior year driven by residential and commercial customer network growth and acquisition.

Investment in buildings and other of $92 million for the twelve-month period was down $9 million over the comparable period.

Wireless

Capital investment in the Wireless division of $343 million for the twelve-month period was up $88 million over the prior year. Fiscal 2018 investments relate to continued investment in network infrastructure, specifically the completion of the LTE-Advanced network rollout, the deployment of 700 MHz spectrum and the completion of the refarming of AWS-1 spectrum as well as back office system and retail upgrades.

DISCONTINUED OPERATIONS

SHAW TRACKING

On May 31, 2017, the Company entered an agreement to sell a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation reported within the Company's Business Network Services segment. The Company determined that the assets and liabilities of the Shaw Tracking business met the criteria to be classified as a disposal group held for sale. Accordingly, the assets and liabilities of the Shaw Tracking business were classified in the consolidated statement of financial position at August 31, 2017 as current assets held for sale or current liabilities held for sale, respectively, as the sale of these assets and liabilities was expected to be completed within one year. In addition, the operating results and operating cash flows of the business are presented as discontinued operations separate from the Company's continuing operations. The transaction closed on September 15, 2017.

VIAWEST, INC.

In the fourth quarter of fiscal 2017, the Company entered into an agreement to sell 100% of its wholly owned subsidiary ViaWest, Inc ("ViaWest") for proceeds of approximately USD $1.68 billion. Accordingly, the operating results and operating cash flows for the previously reported Business Infrastructure Services segment relating to ViaWest are presented as discontinued operations separate from the Company's continuing operations. The remaining operations of the previously reported Business Infrastructure Services segment and their results are now included within the Wireline segment.

(1) Eliminations relate to intercompany transactions between continuing and discontinued operations. The costs are included in continuing operations as they are expected to continue to be incurred subsequent to the disposition.

FINANCIAL POSITION

Total assets were $14.4 billion at August 31, 2018 compared to $14.4 billion at August 31, 2017. The following is a discussion of significant changes in the Consolidated Statement of Financial Position since August 31, 2017.

Current assets decreased $92 million due to decreases in cash of $123 million, accounts receivable of $31 million, inventories of $8 million and assets held for sale of $61 million partially offset by an increase in other current assets of $131 million. Cash decreased as the cash outlay for investing activities and financing activities exceeded the funds provided by operations. Accounts receivable decreased primarily due to the receipt of a commodity tax refund relating to the purchase of spectrum licenses in fiscal 2017. Assets held for sale as at August 31, 2017 included the assets of the Shaw Tracking business, which was sold on September 15, 2017.

Other current assets increased over the period mainly due to a significant increase in Wireless subscribers participating in both the Company's MyTab plan, a discretionary wireless handset discount plan and MyTab Boost, a plan that allows customers to pay less for their handset upfront if they pay a predetermined incremental charge on a monthly basis. The significant growth in handset sales was primarily related to the introduction of the iPhone to the Company's handset lineup in the second quarter of fiscal 2018.

Investments and other assets decreased by $277 million primarily due to an impairment charge of $284 million partially offset by equity income and other comprehensive income of associates both related to the Company's investment in Corus. The Company assessed its investment in Corus for indicators of impairment, which included a significant and sustained decrease in the share price as well as the recording by Corus of an impairment charge against their goodwill and broadcast license intangibles, and found that there was evidence that impairment had occurred. The Company compared the recoverable amount to the carrying value and determined that an impairment charge of $284 million was required. The recoverable amount was determined based on the value in use of the investment.

Property, plant and equipment increased $328 million due to capital investments in excess of amortization.

Short-term borrowings increased $40 million due to the Company establishing an accounts receivable securitization program with a Canadian financial institution on June 19, 2018 which allows it to sell certain trade receivables into the program. As at August 31, 2018, the proceeds of the sales were committed up to a maximum of $100 million. See "Liquidity and Capital Resources" for further details on the AR securitization program.

Current liabilities increased $219 million during the period primarily due to an increase in provisions of $169 million, accounts payable and accrued liabilities of $58 million, short-term borrowings of $40 million and unearned revenue of $10 million partially offset by decreases in income taxes payable of $18 million, and liabilities held for sale of $39 million. The increase in current provisions was mainly due to the restructuring costs related to TBT. In connection with the VDP, the Company recorded $446 million in restructuring charges primarily related to severance and other related costs, of which $172 million has been paid, $166 million is included in current provisions and $110 million is included in long-term provisions. Income taxes payable decreased due to normal course tax installment payments (net of refunds), offset by the current period provision. Accounts payable and accruals increased due to the timing of payments and fluctuations in various payables including capital expenditures and network fees. Liabilities held for sale as at August 31, 2017 included the liabilities of the Shaw Tracking business, which was sold on September 15, 2017.

Long-term debt increased $12 million primarily due to an increase in the Burrard Landing Lot 2 Holdings Partnership mortgage of $10 million. The additional loan matures on November 1, 2024 and bears interest at 4.14% compounded semi-annually.

Other long-term liabilities decreased $101 million during the year primarily due to a remeasurement of the Company's defined benefit plan related to the effect of experience adjustments due to changes in demographic assumptions. The cost and related accrued benefit obligation of the Company's non-registered pension plans are determined using actuarial valuations. The actuarial valuations involve estimates and actuarial assumptions including discount rates and rate of compensation increase (financial assumptions) as well as mortality rates and retirement rates (demographic assumptions). Due to the long-term nature of the non-registered pension plans, such estimates are subject to significant uncertainty. Remeasurements related to the effect of experience adjustments arise when the non-registered pension plans' experience differs from the experience expected using the actuarial assumptions, such as mortality and retirement rates.

Shareholders' equity decreased $197 million mainly due to a decrease in retained earnings of $545 million partially offset by an increase in share capital of $259 million and accumulated other comprehensive income of $92 million. Share capital increased due to the issuance of 9,843,483 Class B non-voting participating shares ("Class B Non-Voting Shares") under the Company's option plan and Dividend Reinvestment Plan ("DRIP").

As at November 15, 2018, share capital is as reported at August 31, 2018 with the exception of the issuance of a total 1,486,183 Class B Non-Voting Shares upon exercise of options under the Company's option plan and the issuance of shares under the Company's dividend reinvestment plan. Retained earnings decreased due to dividends of

$605 million, offset by current year income of $60 million. Accumulated other comprehensive loss decreased due to the re-measurement recorded on employee benefit plans and a change in unrealized fair value of derivatives.

CONSOLIDATED CASH FLOW ANALYSIS

Operating activities

(millions of Canadian dollars)	2018	2017	Change %
Funds flow from continuing operations	**1,259**	1,530	(17.7)
Net change in non-cash working capital balances related to continuing operations	**94**	(110)	>(100.0)
Operating activities of discontinued operations	**(2)**	82	>(100.0)
	1,351	1,502	(10.1)

On a year-to-date basis, funds flow from operations decreased over the comparable period primarily due to higher restructuring costs and lower operating income of discontinued operations partially offset by higher operating income before restructuring costs and amortization, lower income taxes, and lower interest costs. The net change in non-cash working capital balances related to continuing operations fluctuated over the comparative period due to changes in the accounts receivable, other current asset, and other long-term asset balances and the timing of payment of current income taxes payable and accounts payable and accrued liabilities.

Investing activities

(millions of Canadian dollars)	2018	2017	Increase
Cash flow used in investing activities	**(1,174)**	49	(1,223)

For the twelve-month period ended August 31, 2018, cash used in investing activities increased over the comparable period due primarily to proceeds of US$1.675 billion received on the sale of discontinued operations in the prior year and higher outlays for capital expenditures in the current year partially offset by a $405 million decrease in spectrum purchases, an $85 million increase in cash dividends received from Corus as a result of ceasing participation in their DRIP program in the current year and a $107 million decrease in cash payments relating to the wind-up of shomi.

Financing activities

The changes in financing activities during 2018 and 2017 were as follows:

(millions of Canadian dollars)	2018	2017
Bank loans – net borrowings (repayments)	**49**	(475)
Repay 5.70% Senior unsecured notes	–	(400)
Issuance of 3.80% Senior unsecured notes	–	300
Senior notes issuance cost	–	(2)
Freedom Mobile finance lease obligations	–	(2)
Bank facility arrangement costs	–	(2)
Dividends	**(392)**	(393)
Issuance of Class B Non-Voting Shares	**43**	77
Financing activities of discontinued operations	–	(551)
	(300)	(1,448)

LIQUIDITY AND CAPITAL RESOURCES

In the current year, the Company generated $411 million of free cash flow. Shaw used its free cash flow along with proceeds on issuance of Class B Non-Voting Shares of $43 million, proceeds from the sale of the Shaw Tracking business of $18 million to fund the net working capital change of $107 million, pay common share dividends of $384 million, and pay $177 million in restructuring costs.

The Company issued Class B Non-Voting Shares from treasury under its DRIP which resulted in cash savings and incremental Class B Non-Voting Shares of $211 million during the twelve months ending August 31, 2018.

Debt structure and financial policy

Shaw structures its borrowings generally on an unsecured and standalone basis. While certain non-wholly owned subsidiaries are subject to contractual restrictions which may prevent the transfer of funds to Shaw, there are no similar restrictions with respect to wholly-owned subsidiaries of the Company.

On June 19, 2018, the Company established an accounts receivable securitization program with a Canadian financial institution which allows it to sell certain trade receivables into the program. As at August 31, 2018, the proceeds of the sales were committed up to a maximum of $100 million (with $40 million currently drawn under the program). The Company continues to service and retain substantially all of the risks and rewards relating to the trade receivables sold, and therefore, the trade receivables remain recognized on the Company's Consolidated Statement of Financial Position and the funding received is recorded as a current liability (revolving floating rate loans) secured by the trade receivables. The buyer's interest in the accounts receivable ranks ahead of the Company's interest and the program restricts it from using the trade receivables as collateral for any other purpose. The buyer of the trade receivable has no claim on any of our other assets.

As at August 31, 2018, the net debt leverage ratio for the Company is 1.9 times which is consistent with August 31, 2017. Having regard to prevailing competitive, operational and capital market conditions, the Board of Directors has determined that having this ratio in the range of 2.0 to 2.5x would be optimal leverage for the Company in the current environment. Should the ratio fall below this, other than on a temporary basis, the Board may choose to recapitalize back into this optimal range. The Board may also determine to increase the Company's debt above these levels to finance specific strategic opportunities such as a significant acquisition or repurchase of Class B Non-Voting Participating Shares in the event that pricing levels were to drop precipitously.

The Company calculates net debt leverage ratio as follows[(1)]:

(millions of Canadian dollars)	2018	2017
Short-term borrowings	**40**	–
Current portion of Long-Term Debt	**1**	2
Long-Term Debt	**4,310**	4,298
50% of Outstanding Preferred Shares	**147**	147
Cash	**(384)**	(507)
(A) Net Debt [(3)]	**4,114**	3,940
Operating income before restructuring costs and amortization [(2)]	**2,089**	1,997
Corus Dividends	**92**	88
(B) Adjusted operating income before restructuring costs and amortization [(3)]	**2,181**	2,085
(A/B) Net debt leverage ratio [(2)]	**1.9x**	1.9x

(1) The following contains a description of the Company's use of non-IFRS financial measures provides a reconciliation to the nearest IFRS measure or provides a reference to such reconciliation.
(2) Refer to key performance drivers.
(3) These financial measures do not have standard definitions prescribed by IFRS and therefore may not be comparable to similar measures disclosed by other companies and have not been presented as an alternative to liquidity prescribed by IFRS.

Shaw's credit facilities are subject to customary covenants which include maintaining minimum or maximum financial ratios. At August 31, 2018 Shaw is in compliance with these covenants and based on current business plans, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants over the life of the borrowings.

	Covenant Limit
Shaw Credit Facilities	
Total Debt to Operating Cash Flow (1) Ratio	< 5.00:1
Operating Cash Flow (1) to Fixed Charges (2) Ratio	> 2.00:1

(1) Operating Cash Flow, for the purposes of the covenants, is calculated as net earnings before interest expense, depreciation, amortization and current and deferred income taxes, excluding profit or loss from investments accounted for on an equity basis, for the most recently completed fiscal quarter multiplied by four, plus cash dividends and other cash distributions received in the most recently completed four fiscal quarters from investments accounted for on an equity basis.

(2) Fixed Charges are defined as the aggregate interest expense for the most recently completed fiscal quarter multiplied by four.

Subsequent to year-end, on November 2, 2018 the Company issued $1 billion of senior notes, comprised of $500 million principal amount of 3.80% senior notes due 2023 and $500 million principal amount of 4.40% senior notes due 2028. Estimated net proceeds (after issuance at a discount of $1.4 million and issue and underwriting expenses) of $994 million will be used for general corporate purposes, which may include the repayment of outstanding indebtedness of the Company. Pending any such use of net proceeds, the Company may invest the net proceeds in bank deposits and short-term marketable securities.

Subsequent to year end, on November 21, 2018, the Company amended the terms of its bank credit facility to extend the maturity date to December 2023. The credit facility is used for general corporate or working capital purposes.

On June 30, 2016, 1,987,607 of the Company's Cumulative Redeemable Rate Reset Class 2 Preferred Shares, Series A ("Series A Shares") were converted into an equal number of Cumulative Redeemable Floating Rate Class 2 Preferred Shares, Series B ("Series B Shares") in accordance with the notice of conversion right issued on May 31, 2016. As a result of the conversion, the Company has 10,012,393 Series A Shares and 1,987,607 Series B Shares issued and outstanding. The Series A Shares will continue to be listed on the TSX under the symbol SJR.PR.A. The Series B Shares began trading on the TSX on June 30, 2016 under the symbol SJR.PR.B. The annual fixed dividend rate for the Series A Shares, payable quarterly, was reset to 2.791% for the five-year period from and including June 30, 2016 to but excluding June 30, 2021. The floating quarterly dividend rate for the Series B Preferred Shares were set as follows:

Period	Annual Dividend Rate
June 30, 2016 to September 29, 2016	2.539%
September 30, 2016 to December 30, 2016	2.512%
December 31, 2016 to March 30, 2017	2.509%
March 31, 2017 to June 29, 2017	2.480%
June 30, 2017 to September 29, 2017	2.529%
September 30, 2017 to December 30, 2017	2.742%
December 31, 2017 to March 30, 2018	2.872%
March 31, 2018 to June 29, 2018	3.171%
June 30, 2018 to September 29, 2018	3.300%
September 30, 2018 to December 30, 2018	3.509%

The floating quarterly dividend rate will be reset quarterly.

Based on the aforementioned financing activities, available credit facilities and forecasted free cash flow, the Company expects to have sufficient liquidity to fund operations and obligations, including maturing debt, during the upcoming fiscal year. On a longer-term basis, Shaw expects to generate free cash flow and have borrowing capacity sufficient to finance foreseeable future business plans and refinance maturing debt.

Off-balance sheet arrangement and guarantees

Guarantees

Generally, it is not the Company's policy to issue guarantees to non-controlled affiliates or third parties; however, it has entered into certain agreements as more fully described in Note 26 to the Consolidated Financial Statements. As disclosed thereto, Shaw believes it is remote that these agreements would require any cash payment.

Contractual obligations

The amounts of estimated future payments under the Company's contractual obligations at August 31, 2018 are detailed in the following table.

Contractual Obligations

	Payments due by period				
(millions of Canadian dollars)	Total	Within 1 year	2 – 3 years	4 – 5 years	More than 5 years
Long-term debt [1]	6,815	242	2,373	268	3,932
Lease and maintenance obligations [2]	955	207	325	192	231
Purchase obligations [3]	645	372	261	5	7
Property, plant and equipment	220	194	26	–	–
	8,635	1,015	2,985	465	4,170

(1) Includes principal repayments and interest payments.
(2) Includes maintenance and lease of satellite transponders, program related agreements, lease of transmission facilities and premises and exclusive rights to use intellectual property in Canada.
(3) Includes contractual obligations under service, product, and wireless device contracts.

Share Capital and Listings

The Company is authorized to issue a limited number of Class A participating shares ("**Class A Shares**"); an unlimited number of Class B Non-Voting participating shares (the "**Class B Non-Voting Shares**"); an unlimited number of Class 1 Preferred Shares issuable in series; and an unlimited number of Class 2 Preferred Shares issuable in series, of which 12,000,000 were designated Cumulative Redeemable Rate Reset Class 2 Preferred Shares, Series A (the "**Series A Shares**") and 12,000,000 were designated Cumulative Redeemable Floating Rate Class 2 Preferred Shares, Series B (the "**Series B Shares**"). The authorized number of Class A Shares is limited, subject to certain exceptions, to the lesser of that number of such shares (i) currently issued and outstanding; and (ii) that may be outstanding after any conversion of Class A Shares into Class B Non-Voting Shares.

As at November 15, 2018, there were 485,680,527 Class B Non-Voting Shares, 10,012,393 Series A Shares, and 1,987,607 Series B Shares and 22,420,064 Class A Shares issued and outstanding. Shaw is traded on the Toronto and New York stock exchanges and is included in the S&P/TSX 60 Index (Trading Symbols: TSX – SJR.B, SJR.PR.A, SJR.PR.B, NYSE – SJR, and TSXV – SJR.A). For more information, please visit www.shaw.ca.

The following table sets forth, for each month during the fiscal year ending August 31, 2018, the monthly price range and volume traded for the Class B Non-Voting Shares, Series A Shares and Series B Shares on the Toronto Stock Exchange (TSX) and for the Class A Shares on the TSX Venture Exchange (TSXV).

Share Splits

There have been four splits of the Company's Class A and Class B Shares: July 30, 2007 (2 for 1); February 7, 2000 (2 for 1); May 18, 1994 (2 for 1); and September 23, 1987 (3 for 1). In addition, as a result of the Arrangement referred to in the Management Information Circular dated July 22, 1999, a Shareholder's Adjusted Cost Base was reduced for tax purposes.

ADDITIONAL INFORMATION

Additional information relating to Shaw, including the Company's 2018 Annual Information Form can be found on SEDAR at www.sedar.com.

COMPLIANCE WITH NYSE CORPORATE GOVERNANCE LISTING STANDARDS

Disclosure of the Company's corporate governance practices which differ from the New York Stock Exchange ("NYSE") corporate governance listing standards are posted on Shaw's website, www.shaw.ca (under Investors/Corporate Governance/ Compliance with NYSE Corporate Governance Listing Standards).

CERTIFICATION

The Company's Chief Executive Officer and Executive Vice President, Chief Financial & Corporate Development Officer have filed certifications regarding Shaw's disclosure controls and procedures and internal control over financial reporting ("ICFR").

As at August 31, 2018, the Company's management, together with its Chief Executive Officer and Executive Vice President, Chief Financial & Corporate Development Officer, have evaluated the effectiveness of the design and operation of each of the Company's disclosure controls and procedures and ICFR. Based on these evaluations, the Chief Executive Officer and Executive Vice President, Chief Financial & Corporate Development Officer have concluded that the Company's disclosure controls and procedures and the Company's ICFR are effective.

During the course of our year-end procedures over ICFR, we retrospectively reviewed and identified a deficiency in the operating effectiveness of controls over the capitalization of internal labour costs, as described in "Critical Accounting Policies and Estimates" on page 36, for fiscal 2017. Specifically, the operation of the controls did not result in sufficient evidence of review considering the nature of the data subject to the control activities. This deficiency represented a material weakness in ICFR as at August 31, 2017 which was not identified at that time and therefore not previously reported.

The material weakness identified did not result in any identified misstatement or error in the Company's consolidated financial statements as at and for the year ended August 31, 2017 and there were no changes in the Company's previously released financial statements.

In order to address the material weakness identified as of August 31, 2017, the controls related to capitalized labour have been re-designed during fiscal 2018, specifically the retention of additional evidence of review. The controls operated effectively as of August 31, 2018. Based on these efforts, the identified fiscal 2017 material weakness relating to ICFR over capitalized labor has been remediated.

There were no changes in the Company's ICFR during the fiscal year, other than the enhancements over capitalized labour noted above, that have materially affected or are reasonably likely to materially affect Shaw's ICFR.

The design of any system of controls and procedures is based in part upon certain assumptions about the likelihood of certain events. There can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions, regardless of how remote.

MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL STATEMENTS AND REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

November 28, 2018

Management's Responsibility for Financial Reporting

The accompanying consolidated financial statements of Shaw Communications Inc. and all the information in this annual report are the responsibility of management and have been approved by the Board of Directors.

The financial statements have been prepared by management in accordance with International Financial Reporting Standards. When alternative accounting methods exist, management has chosen those it deems most appropriate in the circumstances. Financial statements are not precise since they include certain amounts based on estimates and judgments. Management has determined such amounts on a reasonable basis in order to ensure that the financial statements are presented fairly, in all material respects. Management has prepared the financial information presented elsewhere in the annual report and has ensured that it is consistent with the financial statements.

Management has a system of internal controls designed to provide reasonable assurance that the financial statements are accurate and complete in all material respects. The internal control system includes an internal audit function and an established business conduct policy that applies to all employees. Management believes that the systems provide reasonable assurance that transactions are properly authorized and recorded, financial information is relevant, reliable and accurate and that the Company's assets are appropriately accounted for and adequately safeguarded.

The Board of Directors is responsible for ensuring management fulfils its responsibilities for financial reporting and is ultimately responsible for reviewing and approving the financial statements. The Board carries out this responsibility through its Audit Committee.

The Audit Committee is appointed by the Board and its directors are unrelated and independent. The Committee meets periodically with management, as well as the external auditors, to discuss internal controls over the financial reporting process, auditing matters and financial reporting issues; to satisfy itself that each party is properly discharging its responsibilities; and, to review the annual report, the financial statements and the external auditors' report. The Audit Committee reports its findings to the Board for consideration when approving the financial statements for issuance to the shareholders. The Committee also considers, for review by the Board and approval by the shareholders, the engagement or re-appointment of the external auditors.

The financial statements have been audited by Ernst & Young LLP, the external auditors, in accordance with Canadian generally accepted auditing standards on behalf of the shareholders. Ernst & Young LLP has full and free access to the Audit Committee.

Management's Report on Internal Control over Financial Reporting

Management is responsible for establishing and maintaining an adequate system of internal control over financial reporting. Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the financial statements for external purposes in accordance with generally accepted accounting principles.

Due to its inherent limitations, internal control over financial reporting may not prevent or detect misstatements on a timely basis. Also, projections of any of the effectiveness of internal control are subject to the risk that the controls may become inadequate because of changes in conditions or that the degree of compliance with the policies and procedures may deteriorate. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to the financial statement preparation and presentation.

Independent Auditors' Report of Registered Public Accounting Firm

Management conducted an evaluation of the effectiveness of the system of internal control over financial reporting based on the framework in "Internal Control – Integrated Framework" issued by the Committee of Sponsoring Organizations of the Treadway Commission 2013 framework. Based on this evaluation, management concluded that the Company's system of internal control over financial reporting was effective as at August 31, 2018.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders of Shaw Communications Inc.:

Opinion on the Consolidated Financial Statements

We have audited the accompanying consolidated financial statements of Shaw Communications Inc. (the "Company"), which comprise the consolidated statements of financial position as at August 31, 2018 and August 31, 2017, the consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years then ended, and the related notes, comprising a summary of significant accounting policies and other explanatory information (collectively referred to as the "consolidated financial statements").

In our opinion, the consolidated financial statements present fairly, in all material respects, the consolidated financial position of the Company as at August 31, 2018 and August 31, 2017, and its consolidated financial performance and its consolidated cash flows for the years then ended in accordance with International Financial Reporting Standards (IFRSs) as issued by the International Accounting Standards Board.

Report on internal control over financial reporting

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the Company's internal control over financial reporting as of August 31, 2018, based on the criteria established in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission ("COSO"), and our report dated November 28, 2018 expressed an unqualified opinion on the effectiveness of the Company's internal control over financial reporting.

Basis for Opinion

Management's Responsibility for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with International Financial Reporting Standards (IFRSs) as issued by the International Accounting Standards Board, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditors' Responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards and the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement, whether due to error or fraud. Those standards also require that we comply with ethical requirements, including independence. We are required to be independent with respect to the Company in accordance with the ethical requirements that are relevant to our audit of the consolidated financial statements in Canada, the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB. We are a public accounting firm registered with the PCAOB.

An audit includes performing procedures to assess the risks of material misstatements of the consolidated financial statements, whether due to error or fraud, and performing procedures to respond to those risks. Such procedures included obtaining and examining, on a test basis, audit evidence regarding the amounts and disclosures in the consolidated financial statements. The procedures selected depend on our judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, we consider internal control relevant to the Company's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances.

An audit also includes evaluating the appropriateness of accounting policies and principles used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a reasonable basis for our audit opinion.

We have served as the Company's auditor since 1966.

Calgary, Canada

Ernst & Young LLP

Chartered Professional Accountants

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders of Shaw Communications Inc.:

Opinion on Internal Control over Financial Reporting

We have audited Shaw Communications Inc.'s internal control over financial reporting as of August 31, 2018, based on criteria established in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO criteria). In our opinion, Shaw Communications Inc. (the "Company") maintained, in all material respects, effective internal control over financial reporting as of August 31, 2018, based on the COSO criteria.

We also have audited, in accordance with Canadian generally accepted auditing standards and the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the consolidated statements of financial position as at August 31, 2018 and August 31, 2017, the consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years then ended, and the related notes, comprising a summary of significant accounting policies and other explanatory information and our report dated November 28, 2018 expressed an unqualified opinion thereon.

Basis of Opinion

The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Report on Internal Controls over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the ethical requirements that are relevant to our audit of the consolidated financial statements in Canada, the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audit in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

Definition and Limitations of Internal Control Over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

[all amounts in millions of Canadian dollars except share and per share amounts]

1. CORPORATE INFORMATION

Shaw Communications Inc. (the "Company") is a diversified Canadian connectivity company whose core operating business is providing: Cable telecommunications, Satellite video services and data networking to residential customers, business and public-sector entities ("Wireline"); and wireless services for voice and data communications ("Wireless").

The Company was incorporated under the laws of the Province of Alberta on December 9, 1966 under the name Capital Cable Television Co. Ltd. and was subsequently continued under the Business Corporations Act (Alberta) on March 1, 1984 under the name Shaw Cablesystems Ltd. Its name was changed to Shaw Communications Inc. on May 12, 1993. The Company's shares are listed on the Toronto Stock Exchange ("TSX"), TSX Venture Exchange and New York Stock Exchange ("NYSE") (Symbol: TSX – SJR.B, SJR.PR.A, SJR.PR.B, NYSE – SJR, and TSXV – SJR.A). The registered office of the Company is located at Suite 900, 630 – 3rd Avenue S.W., Calgary, Alberta, Canada T2P 4L4.

2. BASIS OF PRESENTATION AND ACCOUNTING POLICIES

Statement of compliance

These consolidated financial statements of the Company have been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB").

The consolidated financial statements of the Company for the years ended August 31, 2018 and 2017, were approved by the Board of Directors and authorized for issue on November 28, 2018.

Basis of presentation

These consolidated financial statements have been prepared primarily under the historical cost convention and are expressed in millions of Canadian dollars unless otherwise indicated. Other measurement bases used are outlined below and in the applicable notes. The consolidated statements of income are presented using the nature classification for expenses.

Certain comparative figures have been reclassified to conform to the current year's presentation.

Basis of consolidation

(i) Subsidiaries

The consolidated financial statements include the accounts of the Company and those of its subsidiaries, which are entities over which the Company has control. Control exists when the Company has power over an investee, is exposed to or has rights to variable returns from its involvement and has the ability to affect those returns. Intercompany transactions and balances are eliminated on consolidation. The results of operations of subsidiaries acquired during the period are included from their respective dates of acquisition, being the time at which the Company obtains control. Consolidation of a subsidiary ceases when the Company loses control. A change in ownership interests of a subsidiary, without a loss of control, is accounted for as an equity transaction. The Company assesses control through share ownership and voting rights.

Non-controlling interests arise from business combinations in which the Company acquires less than 100% ownership interest. At the time of acquisition, non-controlling interests are measured at either fair value or their proportionate share of the fair value of the acquiree's identifiable assets. The Company determines the measurement basis on a transaction by transaction basis. Subsequent to acquisition, the carrying amount of non-controlling interests is increased or decreased for their share of changes in equity.

(ii) Joint operations

A joint operation is a type of joint arrangement whereby the parties that have joint control of the arrangement have rights to the assets and obligations for the liabilities, relating to the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control. The consolidated financial statements include the Company's proportionate share of the assets, liabilities, revenues, and expenses of its interests in joint operations.

The Company's joint operations include a 33.33% interest in the Burrard Landing Lot 2 Holdings Partnership (the "Partnership"). The Partnership owns and leases commercial space in Shaw Tower in Vancouver, BC, which is the Company's headquarters for its lower mainland operations. In classifying its 33.33% interest in the Partnership as a joint operation, the Company considered the terms and conditions of the partnership agreement and other facts and circumstances including the primary purpose of Shaw Tower which is to provide lease space to the partners.

Investments in associates and joint ventures

Associates are entities over which the Company has significant influence. Significant influence is the power to participate in the operating and financial policies of the investee, but is not control or joint control.

A joint venture is a type of joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control.

Investments in associates and joint ventures are accounted for using the equity method. Investments of this nature are recorded at original cost and adjusted periodically to recognize the Company's proportionate share of the associate's or joint venture's net income/loss and other comprehensive income/loss after the date of investment, additional contributions made and dividends received.

The Company has classified its approximate 38% participating interest in Corus Entertainment Inc. ("Corus") as an investment in an associate after considering both companies are subject to common control and the ability of the Company to appoint directors to Corus' Board of Directors.

The Company classified its 50% interest in the Shomi Partnership ("shomi") as an investment in a joint venture after considering the terms and conditions of the partnership. In September 2016, Shaw and Rogers Communications Inc., announced the decision to wind down its operations with service ending November 30, 2016. In December 2017, the remaining assets associated with shomi were transferred to their respective partners and the partnership was officially wound up.

Revenue and expenses

The Company has multiple deliverable arrangements comprised of upfront fees (subscriber connection and installation fee revenue, customer premise equipment revenue, handset equipment revenue) and related subscription and service revenue. Upfront fees charged to customers do not constitute separate units of accounting, therefore these revenue streams are assessed as an integrated package.

(i) Revenue

Revenue from Cable, Internet, Digital Phone, Direct-to-Home ("DTH") and Wireless customers includes subscriber revenue earned as services are provided. Satellite distribution services and telecommunications service revenue is recognized in the period in which the services are rendered to customers. In addition to monthly service plans, the Company also offers multi-year service plans in which the total amount of the contractual service revenue is accounted for on a straight-line basis over the term of the plan. Fees for wireless voice, text and data services on a pay-per-use basis are recognized in the period that the service is provided. Revenue from the direct sale of equipment to wireless subscribers or dealers is recognized when the equipment is delivered and accepted by the subscribers or dealers.

Subscriber connection fees received from Cable, Internet, and Digital Phone customers are deferred and recognized as revenue on a straight-line basis over three years. Direct and incremental initial selling, administrative and connection costs related to subscriber acquisitions are recognized as an operating expense as incurred. The costs of physically connecting a new home are capitalized as part of the distribution system and costs of disconnections are expensed as incurred.

Initial setup fees related to the installation of data centre services and installation revenue received on contracts with commercial business customers are deferred and recognized as revenue on a straight-line basis over the related service contract, which generally span two to ten years. Direct and incremental costs associated with the installation of services or service contract, in an amount not exceeding the upfront revenue, are deferred and recognized as an operating expense on a straight-line basis over the same period.

The Company offers a discretionary wireless handset discount program, whereby the subscriber earns the applicable discount by maintaining services with the Company, such that the receivable relating to the discount at inception of the transaction is reduced over a period of time. A portion of future revenues earned in connection with the services is applied against the up-front discount provided on the handset. The Company also offers a plan allowing customers to receive larger up-front handset discounts than they would otherwise qualify for, if they pay a predetermined incremental charge to their existing service plan on a monthly basis. The charge is billed on a monthly basis and is recognized as revenue at that time. The Company recognizes the handset discount as a receivable and revenue upon the sale of the equipment on the basis that the receivable is recoverable. The receivable is realized on a straight-line basis over the period which the discount is forgiven to a maximum of two years with an offsetting reduction to revenue. The amount receivable is classified as part of other current or non-current receivables, as applicable, in the consolidated statement of financial position.

Affiliate subscriber revenue is recognized monthly based on subscriber levels. Advertising revenues are recognized in the period in which the advertisements are broadcast and recorded net of agency commissions as these amounts are paid directly to the agency or advertiser. When a sales arrangement includes multiple advertising spots, the proceeds are allocated to individual advertising spots under the arrangement based on relative fair values. Revenue from data centre customers includes colocation and other services revenue, including managed infrastructure revenue. Colocation revenue is recognized on a straight-line line basis over the term of the customer contract. Other services revenue, including managed infrastructure revenue, is recognized as the services are provided.

(ii) Deferred equipment revenue and deferred equipment costs

Revenue from sales of DTH equipment and Digital Cable Terminals ("DCTs") is deferred and recognized on a straight-line basis over three years commencing when subscriber service is activated. The total cost of the equipment, including installation, represents an inventoriable cost which is deferred and recognized on a straight-line basis over the same period. The DCT and DTH equipment is generally sold to customers at cost or a subsidized price in order to expand the Company's customer base.

Revenue from sales of satellite tracking hardware and costs of goods sold is deferred and recognized on a straight-line basis over the related service contract for monthly service charges for air time, which is generally five years. The amortization of the revenue and cost of sale of satellite service equipment commences when goods are shipped.

Recognition of deferred equipment revenue and deferred equipment costs is recorded as deferred equipment revenue amortization and deferred equipment costs amortization, respectively.

(iii) Deferred IRU revenue

Prepayments received under indefeasible right to use ("IRU") agreements are amortized on a straight-line basis into income over the term of the agreement and included in amortization of property, plant and equipment, intangibles and other in the consolidated statements of income.

Cash

Cash is presented net of outstanding cheques. When the amount of outstanding cheques and the amount drawn under the Company's revolving term facility are greater than the amount of cash, the net amount is presented as bank indebtedness.

Securitization of trade receivables

Sales of trade receivables in securitization transactions are recognized as collateralized short-term borrowings as we do not transfer control and substantially all the risks and rewards of ownership to another entity and thus do not result in our de-recognition of the trade receivables sold.

Allowance for doubtful accounts

The Company maintains an allowance for doubtful accounts for the estimated losses resulting from the inability of its customers to make required payments. In determining the allowance, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances.

Inventories

Inventories include subscriber equipment such as DCTs and DTH receivers, which are held pending rental or sale at cost or at a subsidized price. When subscriber equipment is sold, the equipment revenue and equipment costs are deferred and amortized over three years. When the subscriber equipment is rented, it is transferred to property, plant and equipment and amortized over its useful life. Inventories are determined on a first-in, first-out basis, and are stated at cost due to the eventual capital nature as either an addition to property, plant and equipment or deferred equipment costs.

Inventories of wireless handsets, accessories and SIM cards are carried at the lower of cost and net realizable value. Cost is determined using the weighted average method and includes expenditures incurred in acquiring the inventories and bringing them to their existing condition and location. Net realizable value is the estimated selling price in the ordinary course of business, less selling expenses.

Property, plant and equipment

Property, plant and equipment are recorded at purchase cost. Direct labour and other directly attributable costs incurred to construct new assets, upgrade existing assets and connect new subscribers are capitalized as well as borrowing costs on qualifying assets. In addition, any asset removal and site restoration costs in connection with the retirement of assets are capitalized. Repairs and maintenance expenditures are charged to operating expense as incurred. Amortization is recorded on a straight-line basis over the estimated useful lives of assets as follows:

Asset	Estimated useful life
Cable, Wireless and telecommunications distribution system	3 – 20 years
Digital cable terminals and modems	2 – 5 years
Satellite audio, video and data network equipment and DTH receiving equipment	3 – 15 years
Buildings	15 – 40 years
Data centre infrastructure	3 – 21 years
Data processing	4 – 10 years
Other	4 – 20 years

The Company reviews the estimates of lives and useful lives on a regular basis.

Assets held for sale and discontinued operations

Non-current assets and disposal groups are classified as held for sale when specific criteria are met and are measured at the lower of carrying amount and estimated fair value less costs to sell. Assets held for sale are not amortized and are reported separately on the statement of financial position.

The Company reports financial results for discontinued operations separately from continuing operations to distinguish the financial impact of disposal transactions from ongoing operations. Discontinued operations reporting occurs when the disposal of a component or a group of components of the Company represents a strategic shift that will have a major impact on the Company's operations and financial results, and where the operations and cash flows can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the Company.

The results of discontinued operations are excluded from both continuing operations and business segment information in the consolidated financial statements and the notes to the consolidated financial statements, unless otherwise noted, and are presented net of tax in the statement of income for the current and comparative periods. Refer to Note 3 for further information regarding the Company's discontinued operations.

Other long-term assets

Other long-term assets primarily include (i) equipment costs, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over three to five years, (ii) multi-year service plan discounts, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over the term of the plan, (iii) the non-current portion of wireless handset discounts receivable as described in the revenue and expenses accounting policy, (iv) credit facility arrangement fees amortized on a straight-line basis over the term of the facility, (v) long-term receivables, (vi) network capacity leases, (vii) the non-current portion of prepaid maintenance and support contracts and (viii) direct costs in connection with initial setup fees and installation of services, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over two to ten years.

Intangibles

The excess of the cost of acquiring cable, satellite, media, data centre and wireless businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist of amounts allocated to broadcast rights and licences, wireless spectrum licences, trademarks, brands, program rights, customer relationships and software assets. Broadcast rights and licences, wireless spectrum licences, trademarks and brands represent identifiable assets with indefinite useful lives.

Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over their estimated useful lives ranging from 4 – 15 years.

Software that is not an integral part of the related hardware is classified as an intangible asset. Internally developed software assets are recorded at historical cost and include direct material and labour costs as well as borrowing costs on qualifying assets. Software assets are amortized on a straight-line basis over estimated useful lives ranging from 3 – 10 years. The Company reviews the estimates of lives and useful lives on a regular basis.

Borrowing costs

The Company capitalizes borrowing costs on qualifying assets, for which the commencement date is on or after September 1, 2010, that take more than one year to construct or develop using the Company's weighted average cost of borrowing which approximated 6% (2017 – 6%).

Impairment

(i) Goodwill and indefinite-life intangibles

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at February 1) and when events or changes in circumstances indicate that the carrying value may be impaired. The recoverable amount of each cash-generating unit ("CGU") is determined based on the higher of the CGU's fair value less costs to sell ("FVLCS") and its value in use ("VIU"). A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are Cable, Satellite, and Wireless. The Company had an additional cash generating unit, Data Centres, until the sale of Viawest in August 2017. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods.

(ii) Non-financial assets with finite useful lives

For non-financial assets, such as property, plant and equipment and finite-life intangible assets, an assessment is made at each reporting date as to whether there is an indication that an asset may be impaired. If any indication exists, the recoverable amount of the asset is determined based on the higher of FVLCS and VIU. Where the carrying amount of the asset exceeds its recoverable amount, the asset is considered impaired and written down to its recoverable amount. Previously recognized impairment losses are reviewed for possible reversal at each reporting date and all or a portion of the impairment is reversed if the asset's value has increased.

Provisions

Provisions are recognized when the Company has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. The timing or amount of the outflow may still be uncertain. Provisions are measured using the best estimate of the expenditure required to settle the present obligation at the end of the reporting period, taking into account risks and uncertainties associated with the obligation. Provisions are discounted where the time value of money is considered material.

(i) Asset retirement obligations

The Company recognizes the fair value of a liability for an asset retirement obligation in the period in which it is incurred, on a discounted basis, with a corresponding increase to the carrying amount of property and equipment, primarily in respect of wireless and transmitter sites. This cost is amortized on the same basis as the related asset. The liability is subsequently increased for the passage of time and the accretion is recorded in the income statement as accretion of long-term liabilities and provisions. The discount rates applied are subsequently adjusted to current rates as required at the end of reporting periods. Revisions due to the estimated timing of cash flows or the amount required to settle the obligation may result in an increase or decrease in the liability. Actual costs incurred upon settlement of the obligation are charged against the liability to the extent recorded.

(ii) Restructuring provisions

Restructuring provisions, primarily in respect of employee termination benefits, are recognized when a detailed plan for the restructuring exists and a valid expectation has been raised to those affected that the plan will be carried out.

(iii) Other provisions

Provisions for disputes, legal claims and contingencies are recognized when warranted. The Company establishes provisions after taking into consideration legal assessments (if applicable), expected availability of insurance or other recourse and other available information.

Deferred credits

Deferred credits primarily include: (i) prepayments received under IRU agreements amortized on a straight-line basis into income over the term of the agreement, (ii) equipment revenue, as described in the revenue and expenses accounting policy, deferred and amortized over three to five years, (iii) connection fee revenue, initial setup fees and upfront installation revenue, as described in the revenue and expenses accounting policy, deferred and amortized over two to ten years, and (iv) a deposit on a future fibre sale.

Leases

(i) Operating leases

Rent expense for real estate leases that have escalating lease payments is recorded on a straight-line basis over the term of the lease. The difference between the expense recorded and the amount paid is recorded as deferred rent and included in deferred credits in the statement of financial position.

(ii) Finance leases

Leases of property and equipment that transfer substantially all the risks and rewards of ownership are classified as finance leases. Finance leases are capitalized at the commencement of the lease at the fair value of the leased property or, if lower, at the present value of the minimum lease payments. Lease payments are apportioned between interest expense and reduction of the lease liability. The property and equipment acquired under finance leases is depreciated over the shorter of the useful life of the asset and the lease term.

Income taxes

The Company accounts for income taxes using the liability method, whereby deferred income tax assets and liabilities are determined based on differences between the financial reporting and tax bases of assets and liabilities measured using substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse. Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset and they relate to income taxes levied by the same authority in the same taxable entity. Income tax expense for the period is the tax payable for the period using tax rates substantively enacted at the reporting date, any adjustments to taxes payable in respect of previous years and any change during the period in deferred income tax assets and liabilities, except to the extent that they relate to a business combination or divestment, items recognized directly in equity or in other comprehensive income. The Company records interest and penalties related to income taxes in income tax expense.

Tax credits and government grants

The Company receives tax credits primarily related to its research and development activities. Government financial assistance is recognized when management has reasonable assurance that the conditions of the government programs are met and accounted for as a reduction of related costs, whether capitalized and amortized or expensed in the period the costs are incurred.

Foreign currency translation

Transactions originating in foreign currencies are translated into Canadian dollars at the exchange rate at the date of the transaction. Monetary assets and liabilities are translated at the period-end rate of exchange and non-monetary items are translated at historic exchange rates. The net foreign exchange gain/(loss) recognized on the translation and settlement of current monetary assets and liabilities was $1 (2017 – $12) and is included in other gains/(losses).

The functional currency of the Company's discontinued foreign operations was US dollars. Assets and liabilities, including goodwill and fair value adjustments arising on acquisition, were translated into Canadian dollars using the foreign exchange rate at the end of the reporting period. Revenue and expenses were translated using average foreign exchange rates, which approximate the foreign exchange rates on the dates of the transactions. Foreign exchange differences arising on translation were included in other comprehensive income/loss and accumulated in equity and reclassified to net income in the period the foreign operations were disposed of.

Financial instruments other than derivatives

Financial instruments have been classified as loans and receivables, assets available-for-sale, assets held-for-trading or financial liabilities. Cash has been classified as held-for-trading and is recorded at fair value with any change in fair value immediately recognized in income (loss). Other financial assets are classified as available-for-sale or as loans and receivables. Available-for-sale assets are carried at fair value with changes in fair value recorded in other comprehensive income (loss) until realized. Available-for-sale equity instruments not quoted in an active market and where fair value cannot be reliably measured are recorded at cost less impairment. Loans and receivables and financial liabilities are carried at amortized cost. None of the Company's financial assets are classified as held-to-maturity and none of its financial liabilities are classified as held-for-trading.

Finance costs and discounts associated with the issuance of debt securities are netted against the related debt instrument and amortized to income using the effective interest rate method. Accordingly, long-term debt accretes over time to the principal amount that will be owing at maturity.

Derivative financial instruments and hedging activities

The Company uses derivative financial instruments, such as foreign currency forward purchase contracts, to manage risks from fluctuations in foreign exchange rates. All derivative financial instruments are recorded at fair value in the statement of financial position. Where permissible, the Company accounts for these financial instruments as hedges which ensures that counterbalancing gains and losses are recognized in income in the same period. With hedge accounting, changes in the fair value of derivative financial instruments designated as cash flow hedges are recorded in other comprehensive income (loss) until the variability of cash flows relating to the hedged asset or liability is recognized in income (loss). When an anticipated transaction is subsequently recorded as a non-financial asset, the amounts recognized in other comprehensive income (loss) are reclassified to the initial carrying amount of the related asset. Where hedge accounting is not permissible or derivatives are not designated in a hedging relationship, they are classified as held-for-trading and the changes in fair value are immediately recognized in income (loss).

Instruments that have been entered into by the Company to hedge exposure to foreign currency risk are reviewed on a regular basis to ensure the hedges are still effective and that hedge accounting continues to be appropriate.

A net investment hedge of the discontinued foreign operation was accounted for similarly to a cash flow hedge. The Company designated certain US dollar denominated debt as a hedge of its net investment in foreign operations where the US dollar was the functional currency. Unrealized gains and losses arising from translation of the US dollar denominated debt were included in other comprehensive income/loss and accumulated in equity and reclassified to net income in the period the foreign operations were disposed of.

Fair value measurements

Fair value estimates are made at a specific point in time, based on relevant market information and information about the financial instrument. These estimates are subjective in nature and involve uncertainties and matters of significant judgement and, therefore, cannot be determined with precision. Changes in assumptions could significantly affect the estimates.

The fair value hierarchy is based on inputs to valuation techniques that are used to measure fair value that are either observable or unobservable. Observable inputs reflect assumptions market participants would use in pricing an asset or liability based on market data obtained from independent sources while unobservable inputs reflect a reporting entity's pricing based upon their own market assumptions.

The fair value hierarchy consists of the following three levels:

Level 1 Inputs are quoted prices in active markets for identical assets or liabilities.

Level 2 Inputs for the asset or liability are based on observable market data, either directly or indirectly, other than quoted prices.

Level 3 Inputs for the asset or liability are not based on observable market data.

The Company determines whether transfers have occurred between levels in the fair value hierarchy by assessing the impact of events and changes in circumstances that could result in a transfer at the end of each reporting period.

Employee benefits

The Company accrues its obligations under its employee benefit plans, net of plan assets. The cost of pensions and other retirement benefits earned by certain employees is actuarially determined using the projected benefit method pro-rated on service and management's best estimate of salary escalation and retirement ages of employees. Past service costs from plan initiation and amendments are recognized immediately in the income statement. Remeasurements include actuarial gains or losses and the return on plan assets (excluding interest income). Actuarial gains and losses occur because assumptions about benefit plans relate to a long time frame and differ from actual experiences. These assumptions are revised based on actual experience of the plans such as changes in discount rates, expected retirement ages and projected salary increases. Remeasurements are recognized in other comprehensive income (loss) on an annual basis, at a minimum, and on an interim basis when there are significant changes in assumptions.

August 31 is the measurement date for the Company's employee benefit plans. The last actuarial valuations for funding purposes for the various plans were performed effective August 31, 2018 and the next actuarial valuations for funding purposes are effective August 31, 2019.

Share-based compensation

The Company has a stock option plan for directors, officers, employees and consultants to the Company. The options to purchase shares must be issued at not less than the fair value at the date of grant. Any consideration paid on the exercise of stock options, together with any contributed surplus recorded at the date the options vested, is credited to share capital. The Company calculates the fair value of share-based compensation awarded to employees using the Black-Scholes option pricing model. The fair value of options are expensed and credited to contributed surplus over the vesting period of the options using the graded vesting method.

The Company has a restricted share unit ("RSU") plan for officers and employees of the Company. RSUs vest on the first, second and third anniversary of the grant date and compensation is recognized on a straight-line basis over the three-year vesting period. RSUs will be settled in cash and the obligation for RSUs is measured at the end of each period at fair value using the Black-Scholes option pricing model and the number of outstanding RSUs.

The Company has a deferred share unit ("DSU") plan for its Board of Directors. Compensation cost is recognized immediately as DSUs vest when granted. DSUs will be settled in cash and the obligation is measured at the end of each period at fair value using the Black-Scholes option pricing model and the number of outstanding DSUs.

The Company has an employee share purchase plan (the "ESPP") under which eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the participant's contributions, increasing to 33% once an employee reaches 10 years of continuous service, and records such amounts as compensation expense.

Share appreciation rights ("SARs") issued by a discontinued subsidiary to eligible employees were cash settled and measured at fair value using the Black-Scholes option pricing model. The fair value was recognized over the vesting period of the SARs by applying the graded vesting method, adjusting for estimated forfeitures. The obligation for SARs was remeasured at the end of each period up to the date of settlement which required a reassessment of the estimates used at the end of each reporting period.

Earnings per share

Basic earnings per share is based on net income attributable to equity shareholders adjusted for dividends on preferred shares and is calculated using the weighted average number of Class A Shares and Class B Non-Voting Shares outstanding during the period. Diluted earnings per share is calculated by considering the effect of all potentially dilutive instruments. In calculating diluted earnings per share, any proceeds from the exercise of stock options and other dilutive instruments are assumed to be used to purchase Class B Non-Voting Shares at the average market price during the period.

Guarantees

The Company discloses information about certain types of guarantees that it has provided, including certain types of indemnities, without regard to whether it will have to make any payments under the guarantees.

Estimation uncertainty and critical judgments

The preparation of consolidated financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the period. Actual results could differ from those estimates and significant changes in assumptions could cause an impairment in assets. The following require the most difficult, complex or subjective judgments which result from the need to make estimates about the effects of matters that are inherently uncertain.

Estimation uncertainty

The following are key assumptions concerning the future and other key sources of estimation uncertainty that could impact the carrying amount of assets and liabilities and results of operations in future periods.

(i) Allowance for doubtful accounts

The Company is required to make an estimate of an appropriate allowance for doubtful accounts on its receivables. The estimated allowance required is a matter of judgment and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foretold, such as future business, personal and economic conditions.

(ii) Contractual service revenue

The Company is required to make an estimate of the total amount of contractual service revenue when offering discounts on multi-year service plans. The estimated revenue is a matter of judgment and the total revenue earned over the period may be more or less than the estimate, depending on events which have yet to occur and which cannot be foretold, such as future business, customer and economic conditions.

(iii) Property, plant and equipment

The Company is required to estimate the expected useful lives of its property, plant and equipment. These estimates of useful lives involve significant judgment. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. Management's judgment is also required in determination of the amortization method, the residual value of assets and the capitalization of labour and overhead.

(iv) Business combinations – purchase price allocation

Purchase price allocations involve uncertainty because management is required to make assumptions and judgments to estimate the fair value of the identifiable assets acquired and liabilities assumed in business combinations. Fair value estimates are based on quoted market prices and widely accepted valuation techniques, including discounted cash flow ("DCF") analysis. Such estimates include assumptions about inputs to the valuation techniques, industry economic factors and business strategies.

(v) Impairment

The Company estimates the recoverable amount of its CGUs using a FVLCS calculation based on a DCF analysis or market approach. Where a DCF analysis is used, significant judgments are inherent in this analysis including estimating the amount and timing of the cash flows attributable to the broadcast rights and licences, the selection of an appropriate discount rate, and the identification of appropriate terminal growth rate assumptions. In this analysis the Company estimates the discrete future cash flows associated with the intangible asset for five years and determines a terminal value. The future cash flows are based on the Company's estimates of future operating results, economic conditions and the competitive environment. The terminal value is estimated using both a perpetuity growth assumption and a multiple of operating income before restructuring costs and amortization. The discount rates used in the analysis are based on the Company's weighted average cost of capital and an assessment of the risk inherent in the projected cash flows. In analyzing the FVLCS determined by a DCF analysis, the Company also considers a market approach determining a recoverable amount for each unit and total entity value determined using a market capitalization approach. Recent market transactions are taken into account, when available. The key assumptions used to determine the recoverable amounts, including a sensitivity analysis, are included in note 10. A DCF analysis uses significant unobservable inputs and is therefore considered a level 3 fair value measurement.

(vi) Employee benefit plans

The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected will be needed to settle employee benefit obligations. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes are required.

(vii) Income taxes

The Company is required to estimate income taxes using substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse. In determining the measurement of tax uncertainties, the Company applies a probable weighted average methodology. Realization of deferred income tax assets is dependent on generating sufficient taxable income during the period in which the temporary differences are deductible. Although realization is not assured, management believes it is more likely than not that all recognized deferred income tax assets will be realized based on reversals of deferred income tax liabilities, projected operating results and tax planning strategies available to the Company and its subsidiaries.

(viii) Contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities.

Critical judgements

The following are critical judgements apart from those involving estimation:

(i) Determination of a CGU

Management's judgement is required in determining the Company's cash generating units for the impairment assessment of its indefinite-life intangible assets. The CGUs have been determined considering operating activities and asset management and are Cable, Satellite, and Wireless. The Company had an additional CGU, Data Centres, until the sale of Viawest in August 2017.

(ii) Broadcast rights and licences and spectrum licences – indefinite-life assessment

A number of the Company's businesses are dependent upon broadcast licences (or operate pursuant to an exemption order) granted and issued by the CRTC or wireless spectrum licences issued by the Department of Innovation, Science and Economic Development (formerly, Industry Canada). While these licences must be renewed from time to time, the Company has never failed to do so. In addition, there are currently no legal, regulatory or competitive factors that limit the useful lives of these assets.

Adoption of recent accounting pronouncement

The adoption of the following IFRS amendments effective September 1, 2017 had no impact on the Company's consolidated financial statements.

- *Statement of Cash Flows* (amendments to IAS 7) improves disclosures regarding changes in financing liabilities. The amendments were applied prospectively for the annual period commencing September 1, 2017.
- *Income Taxes* (amendments to IAS 12) clarifies how to account for deferred tax assets related to debt instruments measured at fair value. The amendments were applied prospectively for the annual period commencing September 1, 2017.

Standards, interpretations and amendments to standards issued but not yet effective

The Company has not yet adopted certain standards and interpretations that have been issued but are not yet effective. The following pronouncements are being assessed to determine the impact on the Company's results and financial position.

- IFRS 2 *Share-based Payment* was amended in 2016 to clarify the accounting and measurement for certain types of share-based payment transactions. It is required to be applied for annual periods commencing on or after January 1, 2018. The amendments to IFRS 2 will not have a significant impact on our financial statements.
- IFRS 9 *Financial Instruments: Classification and Measurement* replaces IAS 39 *Financial Instruments* and applies a principal-based approach to the classification and measurement of financial assets and financial liabilities, including an expected credit loss model for calculating impairment, and includes new requirements for hedge accounting. The standard is required to be applied retrospectively for the annual period commencing January 1, 2018. The adoption of IFRS 9 will not have a significant impact on our financial statements.
- IFRS 16 *Leases* was issued in January 2016 and replaces IAS 17 *Leases.* The new standard requires entities to recognize lease assets and lease obligations on the balance sheet. For lessees, IFRS 16 removes the classification of leases as either operating leases or finance leases, effectively treating all leases as finance leases. Certain short-term leases (less than 12 months) and leases of low-value are exempt from the requirements and may continue to be treated as operating leases. Lessors will continue with a dual lease classification model. Classification will determine how and when a lessor will recognize lease revenue, and what assets would be recorded.

  As the Company has significant contractual obligations currently being recognized as operating leases, we anticipate that the application of IFRS 16 will result in a material increase to both assets and liabilities and material changes to the timing of the recognition of expenses associated with the lease arrangements although at this stage in the Company's IFRS 16 implementation process, it is not possible to make reasonable quantitative estimates of the effects of the new standard.

  We have a team engaged to ensuring our compliance with IFRS 16. This team has been responsible for determining information technology requirements, ensuring scoping and data collection is appropriate, and communicating the upcoming changes with various stakeholders. In 2019, we will be implementing a process that will enable us to comply with the requirements of IFRS 16 on a lease-by-lease basis. As a result, we are continuing to assess the effect of this standard on our consolidated financial statements and it is not yet possible to make a reliable estimate of its effect. We expect to disclose the estimated financial effects of the adoption of IFRS 16 in our 2019 consolidated financial statements.

  The standard may be applied retroactively or using a modified retrospective approach for annual periods commencing January 1, 2019, which for the Company will be the annual period commencing September 1, 2019. The Company will evaluate the adoption approach in conjunction with its assessment of the expected impacts of adoption.
- IFRIC 23 *Uncertainty over Income Tax Treatments* was issued in 2017 to clarify how to apply the recognition and measurement requirements in IAS 12 when there is uncertainty over income tax treatments. It is required to be applied for annual periods commencing January 1, 2019.
- IFRS 15 *Revenue from Contracts with Customers*, was issued in May 2014 and replaces IAS 11 *Construction Contracts*, IAS 18 *Revenue*, IFRIC 13 *Customer Loyalty Programs*, IFRIC 15 *Agreements for the Construction of Real Estate*, IFRIC 18 *Transfers of Assets from Customers* and SIC-31 *Revenue – Barter Transactions Involving Advertising Services*. The new standard requires revenue to be recognized in a manner that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration expected to be received in exchange for those goods or services. The principles are to be applied in the following five steps: (1) identify the contract(s) with a customer, (2) identify the performance obligations in the contract, (3) determine the transaction price, (4) allocate the transaction price to the performance obligations in the contract, and (5) recognize revenue when (or as) the entity satisfies a performance obligation. IFRS 15 also provides guidance relating to the treatment of contract acquisition and contract fulfillment costs.

  The application of IFRS 15 will impact the Company's reported results, including the classification and timing of revenue recognition and the treatment of costs incurred to obtain contracts with customers.

  Revenue – timing and classification
  The application of this standard will most significantly affect our Wireless arrangements that bundle equipment and service together, specifically with regards to the timing of recognition and classification of revenue. The timing of recognition and classification of revenue is affected because at contract inception, IFRS 15 requires the estimation of total consideration to be received over the contract term, and the allocation of that consideration to performance obligations in the contract, typically based on the relative stand-alone selling price of each obligation. This will result in a decrease to equipment revenue recognized at contract inception, as the discount previously recognized over 24 months will now be recognized at

contract inception, and a decrease to service revenue recognized over the course of the contract, as a portion of the discount previously allocated solely to equipment revenue will be allocated to service revenue. The measurement of total revenue recognized over the life of a contract will be largely unaffected by the new standard. We do not expect the application of IFRS 15 to affect our timing of cash flows from operations or the methods and underlying economics through which we transact with our customers.

Costs of contract acquisition – timing of recognition
IFRS 15 also requires that incremental costs to obtain a contract with a customer (for example, commissions) be capitalized and amortized into operating expenses over the life of a contract on a rational, systematic basis consistent with the pattern of the transfer of goods or services to which the asset relates. The Company currently expenses such costs as incurred.

Contract assets and liabilities
The Company's financial position will also be impacted by the adoption of IFRS 15, with new contract asset and contract liability categories recognized to reflect differences between the timing of revenue recognition and the actual billing of those goods and services to customers. While similar differences are recognized currently, IFRS 15 introduces additional requirements and disclosures specific to contracts with customers.

For purposes of applying the new standard on an ongoing basis, we must make judgments in respect of the new standard. We must make judgments in determining whether a promise to deliver goods or services is considered distinct, how to determine the transaction prices and how to allocate those amounts amongst the associated performance obligations. We must also exercise judgment as to whether sales-based compensation amounts are costs incurred to obtain contracts with customers that should be capitalized and subsequently amortized on a systematic basis over time.

The new standard is effective for annual periods beginning on or after January 1, 2018, which for the Company will be the annual period commencing September 1, 2018 and must be applied either retrospectively or on a modified retrospective basis for all contracts that are not complete as at that date. We have made a policy choice to restate each period presented and recognize the cumulative effect of initially applying IFRS 15 as an adjustment to the opening balance of equity at the beginning of the earliest period presented, subject to certain adopted practical expedients.

Impacts of IFRS 15, Revenue from Contracts with Customers

Based on our preliminary analysis, IFRS 15, *Revenue from Contracts with Customers,* will affect the fiscal 2018 comparative amounts to be reported in our fiscal 2019 Consolidated Statements of Income as follows:

		Year ended August 31, 2018		
(billions of Canadian dollars)		**As reported**	**Estimated effect of transition**	**Subsequent to transition**
Revenue	i.	5.24	(0.05)	5.19
Operating, general and administrative expenses	ii.	(3.15)	0.02	(3.13)
Other non-operating costs		(1.88)	–	(1.88)
Income from continuing operations before income taxes		0.21	(0.03)	0.18
Income tax expense		0.14	(0.01)	0.13
Net income from continuing operations		0.07	(0.02)	0.05

i) Allocation of transaction price
Revenue recognized at point of sale requires the estimation of total consideration over the contract term and allocation of that consideration to all performance obligations in the contract based on their relative stand-alone selling prices. For Wireless term contracts, equipment revenue recognized at contract inception, as well as service revenue recognized over the course of the contract will be lower than previously recognized.

ii) Deferred commission costs
Costs incurred to obtain or fulfill a contract with a customer were previously expensed as incurred. Under IFRS 15, these costs are capitalized and subsequently amortized as an expense over the life of the contract on a rational, systematic basis consistent with the pattern of the transfer of goods and services to which the asset relates. As a result, commission costs are reduced in the period, with an offsetting increase in amortization of capitalized costs over the average life of a customer contract.

Based on our preliminary analysis, IFRS 15, *Revenue from Contracts with Customers,* will affect the fiscal 2018 comparative amounts to be reported in our fiscal 2019 Consolidated Statements of Financial Position as follows:

(billions of Canadian dollars)		As at September 1, 2017 As reported	As at September 1, 2017 Estimated effect of transition	As at September 1, 2017 Subsequent to transition	As at August 31, 2018 As reported	As at August 31, 2018 Estimated effect of transition	As at August 31, 2018 Subsequent to transition
ASSETS

Current portion of contract liabilities	i.	–	0.21	0.21	**–**	**0.22**	**0.22**
Remainder of current liabilities		1.18	–	1.18	**1.39**	**–**	**1.39**
		1.39	–	1.39	**1.61**	**–**	**1.61**
Deferred credits	i.	0.49	(0.02)	0.47	**0.46**	**(0.02)**	**0.44**
Deferred income tax liabilities	ii.	1.86	–	1.86	**1.89**	**(0.01)**	**1.88**
Contract liabilities	i.	–	0.02	0.02	**–**	**0.02**	**0.02**
Remainder of long-term liabilities		4.48	–	4.48	**4.50**	**–**	**4.50**
		8.22	–	8.22	**8.46**	**(0.01)**	**8.45**
Shareholders' equity		6.15	0.05	6.20	**5.96**	**0.02**	**5.98**
		14.37	0.05	14.42	**14.42**	**0.01**	**14.43**

i) Contract assets and liabilities
Contract assets and liabilities are the result of the difference in timing related to revenue recognized at the beginning of a contract and cash collected. Contract assets arise primarily as a result of the difference between revenue recognized on the sale of wireless device at the onset of a term contract and the cash collected at the point of sale.

Contract liabilities are the result of receiving payment related to a customer contract before providing the related goods or services. We will account for contract assets and liabilities on a contract-by-contract basis, with each contract being presented as a single net contract asset or net contract liability accordingly.

ii) Deferred commission cost asset
Under IFRS 15, we will defer commission costs paid to internal and external representatives as a result of obtaining contracts with customers as deferred commission cost assets and amortize them over the pattern of the transfer of goods and services to the customer, which is typically evenly over 24 to 36 months.

The application of IFRS 15 will not affect our cash flows from operating, investing, or financing activities.

Change in accounting policy

In September 2017, the IFRS Interpretations Committee ("the Committee") published a summary of its agenda decision regarding accounting for interest and penalties related to income taxes, which is not specifically addressed by IFRS Standards. Although the Committee decided not to add this issue to its standard-setting agenda, the Committee noted if an entity considers a particular amount payable or receivable for interest and penalties to be an income tax, then the entity applies IAS 12 *Income Taxes* to that amount. If an entity does not apply IAS 12 to a particular amount payable or receivable for interest and penalties, it applies IAS 37 *Provisions, Contingent Liabilities and Contingent Assets*. As such, the Company retrospectively changed its accounting policy for the accounting of interest and penalties related to income taxes to be in line with the Committee decision. The change of accounting policy did not have a significant impact on the previously reported consolidated financial statements.

3. ASSET DISPOSITIONS AND ASSET HELD FOR SALE

Shaw Tracking

In the third quarter of fiscal 2017, the Company entered into an agreement to sell a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation reported within the Company's Wireline segment, for proceeds of approximately US $20 million, net of working capital adjustments. Accordingly, the operating results and operating cash flows of the Tracking business are presented as discontinued operations separate from the Company's continuing operations.

The transaction closed on September 15, 2017 and the Company recognized a loss on the divestiture within income from discontinued operations as follows:

	August 31, 2018
Proceeds on disposal, net of transaction costs of $nil	**18**
Net assets disposed	**(22)**
	(4)
Income taxes	**2**
Loss on divestiture, net of tax	**(6)**

The asset and liabilities disposed of were as follows:

	$
Accounts receivable	**6**
Inventories	**5**
Other current assets	**1**
Other long-term assets	**25**
Goodwill	**24**
	61
Accounts payable and accrued liabilities	**8**
Deferred credits	**33**
Deferred income tax liabilities	**(2)**
	22

The following table summarizes the carrying value of the major classes of assets and liabilities of the disposal group which were classified as held for sale as at August 31, 2017:

	August 31, 2017
Accounts receivable	6
Inventories	6
Other current assets	1
Other long-term assets	24
Goodwill	24
Total assets of the discontinued operations classified as held for sale	61
Accounts payable and accrued liabilities	9
Deferred credits	32
Deferred income tax liabilities	(2)
Total liabilities of the discontinued operations classified as held for sale	39

ViaWest

In the fourth quarter of fiscal 2017, the Company announced it had entered into an agreement to sell 100% of its wholly owned subsidiary Viawest, Inc. ("Viawest") for proceeds of approximately US$1.68 billion. Accordingly, the operating results and operating cash flows for the previously reported Business Infrastructure Services segment are presented as discontinued operations separate from the Company's continuing operations. Prior period financial information has also been reclassified to present the Business Infrastructure Services division of the Company as a discontinued operation.

The transaction closed on August 1, 2017 and the Company recognized a gain on the divestiture within income from discontinued operations as follows:

	August 31, 2017
Proceeds on disposal, net of transaction costs of $14	**1,905**
Reclassification of accumulated exchange differences from other comprehensive income related to the sale of a foreign operation	**82**
Net assets disposed	**(1,625)**
	362
Income taxes	**32**
Gain on divestiture, net of tax	**330**

In connection with the sale, the Company repaid Viawest debt of approximately US$466 and amounts outstanding under the Company's bank credit facility of US$380.

The assets and liabilities disposed of were as follows:

	$
Cash	10
Accounts receivable	19
Other current assets	11
Property, plant and equipment	491
Other long-term assets	17
Intangibles	443
Goodwill	934
	1,925
Accounts payable and accrued liabilities	32
Unearned revenue	5
Long-term debt	139
Other long-term liabilities	20
Deferred credits	15
Deferred income tax liabilities	89
	300

Results of Discontinued Operations

A reconciliation of the major classes of line items constituting income from discontinued operations, net of tax, as presented in the consolidated statements of income is shown below:

August 31, 2018	Shaw Tracking	ViaWest	Total
Revenue	**1**	**–**	**1**
Operating, general and administrative expenses			**–**
Purchases of goods and services	**1**	**–**	**1**
	1	**–**	**1**
Loss from discontinued operations before loss on divestiture	**–**	**–**	**–**
Loss on divestiture, net of tax	**(6)**	**–**	**(6)**
Loss from discontinued operations, net of tax	**(6)**	**–**	**(6)**

August 31, 2017	Shaw Tracking	ViaWest	Total
Revenue	33	336	369
Eliminations [(1)]	–	(2)	(2)
	33	334	367
Operating, general and administrative expenses			–
Employee salaries and benefits	7	80	87
Purchases of goods and services	18	124	142
	25	204	229
Eliminations [(1)]	–	(2)	(2)
	25	202	227
Restructuring costs	3	–	3
Amortization [(2)]	(2)	103	101
Interest on long-term debt	–	32	32
Accretion of long-term liabilities and provisions	–	12	12
Impairment of goodwill/disposal group	32	–	32
Loss from discontinued operations before tax and gain on divestiture	(25)	(15)	(40)
Income taxes	2	(6)	(4)
Loss from discontinued operations before gain on divestiture	(27)	(9)	(36)
Gain on divestiture, net of tax	–	330	330
Income (loss) from discontinued operations, net of tax	(27)	321	294

(1) Eliminations relate to intercompany transactions between continuing and discontinued operations. The costs are included in continuing operations as they continue to be incurred subsequent to the disposition.

(2) As of the date Viawest met the criteria to be classified as held for sale, the Company ceased amortization of non-current assets of the division, including property, plant and equipment, intangibles and other. Amortization that would otherwise have been taken in the year amounted to $16.

4. ACCOUNTS RECEIVABLE

	2018 $	2017 $
Subscriber and trade receivables	**305**	278
Due from related parties (note 28)	**–**	1
Miscellaneous receivables	**7**	55
	312	334

Publicly traded companies	**615**	896
Investments in private entities	**45**	41
	660	937

The Company has a portfolio of minor investments in various private entities.

Corus

Corus is a leading media and content company that creates and delivers high quality brands and content across platforms for audiences around the world. The company's portfolio of multimedia offerings encompasses 44 specialty television services, 39 radio stations, 15 conventional television stations, a global content business, digital assets, live events, children's book publishing, animation software, technology and media services. Corus is headquartered in Canada, and its stock is listed on the TSX under the symbol CJR.B.

In connection with the sale of the Media division to Corus in 2016, the Company received 71,364,853 Corus Class B non-voting participating shares (the "Corus B Consideration Shares") representing approximately 37% of Corus' total issued equity of Class A and Class B shares. Although the Class B Corus shares do not have voting rights, the Company is considered to have significant influence due to Board representation. The Company agreed to retain approximately one third of its Corus B Consideration Shares for 12 months post-closing, a second one third for 18 months post-closing, and the final one third for 24 months post-closing, until March 31, 2018. As at August 31, 2018, the Company still holds all of the Corus B Consideration Shares that were received.

The Company also agreed to have its Corus B Consideration Shares participate in Corus' dividend reinvestment plan until September 1, 2017. For the year ended August 31, 2018, the Company received dividends of $92 (2017 – $88) from Corus, of which $nil (2017 – $81) were reinvested in additional Corus Class B shares. At August 31, 2018, the Company owned

80,630,383 (2017 – 80,630,383) Corus Class B shares having a fair value of $298 (2017 – $1,109) and representing 38% (2017 – 39%) of the total issued equity of Corus. The Company's weighted average ownership of Corus for the year ended August 31, was 39% (2017 – 38%). As of September 1, 2017, the Company's Corus B Consideration Shares no longer participate in Corus' dividend reinvestment plan.

Summary financial information for Corus is as follows:

	2018 $	2017 $
Current assets	**508**	525
Non-current assets	**4,375**	5,543
Current liabilities	**(523)**	(604)
Non-current liabilities	**(2,683)**	(2,864)
Net assets	**1,677**	2,600
Less: non-controlling interests	**(154)**	(159)
	1,523	2,441
Carrying amount of the investment less accumulated impairment losses	**615**	897

	Year ended August 31,	
	2018	2017
Revenue	**1,647**	1,679
Net income (loss) attributable to:		
Shareholders	**(784)**	192
Non-controlling interest	**26**	32
	(758)	224
Other comprehensive income, attributable to shareholders	**25**	33
Comprehensive income (loss)	**(733)**	257
Equity income from associates, excluding goodwill impairment	**84**	73

Equity income from associates (2)	**(200)**	73
Other comprehensive income from equity accounted associates (2)	**10**	13
	(190)	86

(1) The Company assessed its investment in Corus for indicators of impairment, which included a significant and sustained decrease in the share price as well as the recording by Corus of an impairment charge against their goodwill and broadcast license intangibles, and found that there was evidence that impairment had occurred. The Company compared the recoverable amount to the carrying value and determined that an impairment charge of $284 was required. The recoverable amount was determined based on the value in use of the investment.

(2) The Company's share of income and other comprehensive income reflect the weighted average proportion of Corus net income and other comprehensive income attributable to shareholders for the years ended August 31, 2018 and 2017.

Shomi Partnership

The Company had a 50% joint control interest in Shomi Partnership (“shomi”), which was a subscription video-on-demand service that launched in November 2014. In September 2016, Shaw and Rogers Communications Inc., announced the decision to wind down its operations with service ending on November 30, 2016. The Company’s interest in shomi was accounted for using the equity method until May 31, 2016, at which point the investment was written down to zero. In December 2017, the remaining assets associated with shomi were transferred to their respective partners and the partnership was officially wound up. For the year ended August 31, 2018, an investment loss of $nil (2017 – $82) has been recorded. Summarized financial information is as follows:

	2018 $	2017 $
Current assets	–	10
Non-current assets	–	–
Current liabilities	–	–
Non-current liabilities	–	–
Partnership net assets	–	10
Carrying amount of the investment [1]	–	–

	Year ended August 31,	
	2018	2017
Revenue	–	(19)
Expenses	–	252
Partnership net loss	–	271
Equity loss in the partnership [1]	–	–

[1] The Company’s carrying amount the investment and equity loss does not equal 50% of the partnership’s net assets and net loss due to elimination of unrealized profit on downstream transactions between the Company and shomi and the write-down of the carrying amount of the investment during the year.

8. PROPERTY, PLANT AND EQUIPMENT

	August 31, 2018			August 31, 2017		
	Cost $	Accumulated amortization $	Net book value $	Cost $	Accumulated amortization $	Net book value $

	4,607	1,122	–	–	(869)	(2)	(491)	(23)	4,344

In 2018, the Company recognized a loss of $1 (2017 – loss of $2) on the disposal of property, plant and equipment.

9. OTHER LONG-TERM ASSETS

	2018 $	2017 $
Equipment costs subject to a deferred revenue arrangement	**121**	163
Long-term Wireless handset receivables	**99**	29
Customer equipment financing receivables	**–**	2
Credit facility arrangement fees	**4**	5
Other	**76**	56
	300	255

Amortization provided in the accounts for 2018 amounted to $196 (2017 – $134), including $nil (2017 – $12) recorded in discontinued operations, and was recorded as amortization of deferred equipment costs and other amortization.

10. INTANGIBLES AND GOODWILL

	2018 $	2017 $
Broadcast rights and licences		
Cable systems	**4,016**	4,016
DTH and satellite services	**1,013**	1,013
	5,029	5,029
Wireless spectrum licences	**1,953**	1,947
Other intangibles		
Software	**434**	380
Customer relationships	**66**	79
	7,482	7,435
Goodwill		
Cable and telecommunications systems	**79**	79
Wireless	**201**	201
	280	280
Net book value	**7,762**	7,715

Broadcast rights and licences, trademark, brands and wireless spectrum licences have been assessed as having indefinite useful lives. While licences must be renewed from time to time, the Company has never failed to do so. In addition, there are currently no legal, regulatory, competitive or other factors that limit the useful lives of these assets.

The changes in the carrying amount of intangibles with indefinite useful lives, and therefore not subject to amortization, are as follows:

	Broadcast rights and licences $	Trademark and brands $	Goodwill $	Wireless spectrum licences $
September 1, 2016	5,029	53	1,315	1,517
Additions	–	–	–	430

Impairment testing of indefinite-life intangibles and goodwill

The Company conducted its annual impairment test on goodwill and indefinite-life intangibles as at February 1, 2018 and the recoverable amount of the cash generating units exceeded their carrying value.

A hypothetical decline of 10% in the recoverable amount of the broadcast rights and licences for the Cable cash generating unit as at February 1, 2018 would not result in any impairment loss. A hypothetical decline of 10% in the recoverable amount of the broadcast rights and licences for the Satellite cash generating unit as at February 1, 2018 would not result in an impairment loss. The Wireless cash generating unit was created with the acquisition of Freedom on March 1, 2016. A hypothetical decline of 10% in the recoverable amount of the Wireless generating unit as at February 1, 2018 would not result in any impairment loss.

Any changes in economic conditions since the impairment testing conducted as at February 1, 2018 do not represent events or changes in circumstance that would be indicative of impairment at August 31, 2018.

Significant estimates inherent to this analysis include discount rates and the terminal value. At February 1, 2018, the estimates that have been utilized in the impairment tests reflect any changes in market conditions and are as follows:

		Terminal value	
	Post-tax discount rate	**Terminal growth rate**	**Terminal operating income before restructuring costs and amortization multiple**
Cable	8.0%	2.5%	7.5X
Satellite	8.5%	0.0%	5.5X
Wireless	9.0%	2.5%	8.0X

A sensitivity analysis of significant estimates is conducted as part of every impairment test. With respect to the impairment tests performed in the second quarter, the estimated decline in recoverable amount for the sensitivity of significant estimates is as follows:

	Estimated decline in recoverable amount		
		Terminal value	
	1% increase in discount rate	**1% decrease in terminal growth rate**	**0.5 times decrease in terminal operating income before restructuring costs and amortization multiple**
Cable	10.0%	6.0%	3.0%
Satellite	7.0%	n/a	3.0%
Wireless	11.0%	7.0%	3.0%

11. SHORT-TERM BORROWINGS

On June 19, 2018 the Company established an accounts receivable securitization program with a Canadian financial institution which will allow it to sell certain trade receivables into the program up to a maximum of $100. The Company will continue to service and retain substantially all of the risks and rewards relating to the trade receivables sold, and therefore, the trade receivables will remain recognized on the Company's Consolidated Statement of Financial Position and the funding received will be recorded as a current liability (revolving floating rate loans) secured by the trade receivables. The buyer's interest in the accounts receivable ranks ahead of the Company's interest and the program restricts it from using the trade receivables as collateral for any other purpose. The buyer of the trade receivables has no claim on any of the Company's other assets. Sale proceeds in respect of the new securitization program of approximately $40 were received on June 19, 2018. The term of this revolving-period agreement ends on June 19, 2019.

A summary of our accounts receivable securitization program as at August 31 is as follows:

	2018 $	2017 $
Trade accounts receivable sold to buyer as security	**429**	–
Short-term borrowings from buyer	**(40)**	–
Overcollateralization	**389**	–

(1) During 2017, the Company restructured certain operations within the Wireline segment and announced a realignment to integrate certain Consumer/Business operations and Freedom Mobile. A total of $5 has been paid in fiscal 2018. The majority of the remaining costs are expected to be paid within the next six months.

(2) During the second quarter of fiscal 2018, the Company offered a voluntary departure program to a group of eligible employees and in the second half of 2018 additional changes to its organizational structure as part of a total business transformation initiative. In connection with the restructuring, the Company recorded $446 primarily related to severance and employee related costs in respect of the approximate 3,300 affected employees. A total of $172 has been paid in fiscal 2018. The remaining costs are expected to be paid within the next 29 months.

Corporate

Bank loans

During 2012, a syndicate of banks provided the Company with an unsecured $1 billion credit facility which includes a maximum revolving term or swingline facility of $50. During 2016, the Company elected to increase its borrowing capacity by $500 under the terms of the amended facility. During 2017, the Company amended the terms of the facility to extend the maturity date from December 2019 to December 2021. Funds are available to the Company in both Canadian and US dollars. At August 31, 2018, $2 (2017 – $2) has been drawn as committed letters of credit against the revolving term facility. Interest rates fluctuate with Canadian prime and bankers' acceptance rates, US bank base rates and LIBOR rates. Excluding the revolving term facility, the effective interest rate on actual borrowings under the credit facility during 2018 was nil (2017 – 2.48%). The effective interest rate on the revolving term facility for 2018 was nil (2017 – 3.18%).

Senior notes

The senior notes are unsecured obligations and rank equally and ratably with all existing and future senior indebtedness. The fixed rate notes are redeemable at the Company's option at any time, in whole or in part, prior to maturity at 100% of the principal amount plus a make-whole premium.

On February 28, 2017, the Company issued $300 senior notes at a rate of 3.80% due March 1, 2027.

On March 2, 2017, the Company repaid $400 5.70% senior notes at their maturity.

Other

Freedom Mobile

Finance lease obligations and amounts owing in connection with financing of certain computer equipment and services matured in 2018.

Burrard Landing Lot 2 Holdings Partnership (the "Partnership")

The Company has a 33.33% interest in the Partnership which built the Shaw Tower project with office/retail space and living/working space in Vancouver, BC. In the fall of 2004, the commercial construction of the building was completed and at that time, the Partnership issued ten year 6.31% secured mortgage bonds in respect of the commercial component of the Shaw Tower. In February 2014, the Partnership refinanced its debt. The Partnership received a mortgage loan and used the proceeds to prepay the outstanding balance of the previous mortgage and loan excess funds to each of its partners. The mortgage loan matures on November 1, 2024 and bears interest at 4.683% compounded semi-annually with interest only payable for the first five years. The mortgage loan is collateralized by the property and the commercial rental income from the building with no recourse to the Company.

In February 2018, the Partnership refinanced its debt. The Partnership received an additional mortgage loan of $30 and used the proceeds to loan excess funds to each of its partners, of which the Company received $10. The additional loan matures on November 1, 2024 and bears interest at 4.14% compounded semi-annually.

ViaWest

During 2015, ViaWest entered into a credit facility consisting of a term loan in the amount of US $395 and a revolving credit facility of US $85. Commencing August 2015, the term loan had quarterly principal repayments of US $1 with the balance due on maturity in March 2022 while the revolving credit facility matured in March 2020. During 2016, ViaWest entered into an incremental US $80 term loan and increased the borrowing capacity available on the revolving facility by US $35. The incremental term loan had quarterly principal repayments commencing May 2016 with the balance due on maturity in March 2022. Interest rates fluctuated with LIBOR, US prime and US Federal Funds rates and the facilities were secured by a first priority security interest in specific assets pursuant to the terms of the security agreement.

ViaWest finance lease obligations and amounts owing to landlords in connection with financing of leasehold improvements had various expiry and maturity dates through to 2023. Collateral was provided as security for the related transactions and agreements as required.

Both the ViaWest credit facility and other obligations were divested in connection with the sale of ViaWest in August 2017.

Debt covenants

The Company and its subsidiaries have undertaken to maintain certain covenants in respect of the credit agreements and trust indentures described above. The Company and its subsidiaries were in compliance with these covenants at August 31, 2018.

Long-term debt repayments

Mandatory principal repayments on all long-term debt in each of the next five years and thereafter are as follows:

	$
2019	1
2020	1,251
2021	801
2022	1

16. DEFERRED CREDITS

	2018 $	2017 $
IRU prepayments	**411**	423
Equipment revenue	**29**	44
Connection fee and installation revenue	**18**	20
Deposit on future fibre sale	**2**	2
Other	**–**	1
	460	490

Amortization of deferred credits for 2018 amounted to $55 (2017 – $79) and was recorded in the accounts as described below.

IRU agreements are in place for periods ranging from 21 to 60 years and are being amortized to income over the agreement periods. Amortization in respect of the IRU agreements for 2018 amounted to $13 (2017 – $13) and was recorded as other amortization. Amortization of equipment revenue for 2018 amounted to $29 (2017 – $52), of which $nil (2017 – $14) is included in the results for discontinued operations. Amortization of connection fee and installation revenue for 2018 amounted to $13 (2017 – $14) and was recorded as revenue.

17. SHARE CAPITAL

Authorized

The Company is authorized to issue a limited number of Class A voting participating shares ("Class A Shares") of no par value, as described below, and an unlimited number of Class B non-voting participating shares ("Class B Non-Voting Shares") of no par value, Class 1 preferred shares, Class 2 preferred shares, Class A preferred shares and Class B preferred shares.

The authorized number of Class A Shares is limited, subject to certain exceptions, to the lesser of that number of shares (i) currently issued and outstanding and (ii) that may be outstanding after any conversion of Class A Shares into Class B Non-Voting Shares.

Issued and outstanding

2018	2017		2018 $	2017 $
Number of securities				
22,420,064	22,420,064	Class A Shares	**2**	2
484,194,344	474,350,861	Class B Non-Voting Shares	**4,054**	3,795
10,012,393	10,012,393	Series A Preferred Shares	**245**	245
1,987,607	1,987,607	Series B Preferred Shares	**48**	48
518,614,408	508,770,925		**4,349**	4,090

Class A Shares and Class B Non-Voting Shares

Class A Shares are convertible at any time into an equivalent number of Class B Non-Voting Shares. In the event that a take-over bid is made for Class A Shares, in certain circumstances, the Class B Non-Voting Shares are convertible into an equivalent number of Class A Shares.

Changes in Class A Share capital and Class B Non-Voting Share capital in 2018 and 2017 are as follows:

	Class A Shares		Class B Non-Voting Shares	
	Number	$	Number	$
September 1, 2016	22,420,064	2	463,827,512	3,504
Stock option exercises	–	–	3,256,981	93
Dividend reinvestment plan	–	–	7,266,368	198
August 31, 2017	22,420,064	2	474,350,861	3,795
Stock option exercises	**–**	**–**	**1,854,594**	**48**
Dividend reinvestment plan	**–**	**–**	**7,988,889**	**211**
August 31, 2018	**22,420,064**	**2**	**484,194,344**	**4,054**

Series A and B Preferred Shares

The Cumulative Redeemable Rate Reset Preferred Shares, Series A (“Series A Preferred Shares”) and Series B (“Series B Preferred Shares”) represent series of class 2 preferred shares and are classified as equity since redemption, at $25.00 per Series A Preferred Share and Series B Preferred Share, is at the Company’s option and payment of dividends is at the Company’s discretion.

Share transfer restriction

The Articles of the Company empower the directors to refuse to issue or transfer any share of the Company that would jeopardize or adversely affect the right of Shaw Communications Inc. or any subsidiary to obtain, maintain, amend or renew a licence to operate a broadcasting undertaking pursuant to the Broadcasting Act (Canada).

18. SHARE-BASED COMPENSATION AND AWARDS

Stock option plan

Under a stock option plan, directors, officers, employees and consultants of the Company are eligible to receive stock options to acquire Class B Non-Voting Shares with terms not to exceed ten years from the date of grant. Options granted up to August 31, 2018 vest evenly on the anniversary dates from the original grant date at either 25% per year over four years or 20% per year over five years. The options must be issued at not less than the fair market value of the Class B Non-Voting Shares at the date of grant. The maximum number of Class B Non-Voting Shares issuable under the plan may not exceed 52,000,000. As at August 31, 2018, 37,571,214 Class B Non-Voting Shares have been issued under the plan.

The changes in options are as follows:

	2018		2017	
	Number	Weighted average exercise price $	Number	Weighted average exercise price $
Outstanding, beginning of year	**10,158,005**	**24.45**	11,353,136	23.70
Granted	**2,790,000**	**27.17**	2,923,000	26.89
Forfeited	**(1,714,445)**	**26.45**	(861,150)	25.82
Exercised [1]	**(1,854,594)**	**23.05**	(3,256,981)	23.72
Outstanding, end of year	**9,378,966**	**25.18**	10,158,005	24.45

[1] The weighted average Class B Non-Voting Share price for the options exercised was $27.87.

The following table summarizes information about the options outstanding at August 31, 2018:

	Options outstanding			Options exerciseable	
Range of prices	Number outstanding	Weighted average remaining contractual life	Weighted average exercise price	Number exercisable	Weighted average exercise price
$18.79 - $20.80	1,497,200	1.22	19.56	1,497,200	19.56
$20.81 - $24.21	1,667,417	6.04	23.36	952,117	23.08
$24.22 - $26.22	1,212,764	7.51	25.25	533,164	25.00
$26.23 - $27.19	1,943,630	8.33	26.46	439,430	26.55
$27.20 - $30.87	3,057,955	7.84	28.08	924,105	28.16

The weighted average estimated fair value at the date of the grant for common share options granted for the year ended August 31, 2018 was $2.11 (2017 – $1.83) per option. The fair value of each option granted was estimated on the date of the grant using the Black-Scholes option pricing model with the following weighted-average assumptions:

	2018	2017
Dividend yield	**4.37%**	4.41%
Risk-free interest rate	**1.88%**	0.94%
Expected life of options	**6 years**	6 years
Expected volatility factor of the future expected market price of Class B Non-Voting Shares	**16.30%**	16.80%

Expected volatility has been estimated based on the historical share price volatility of the Company's Class B Non-Voting Shares.

Restricted stock unit plan

The Company has an RSU plan for its officers and employees. An RSU is a right that tracks the value of one Class B Non-Voting Share. Holders will be entitled to a cash payout upon vesting. The cash payout will be based on market value of a Class B Non-Voting Share at the time of payout. When cash dividends are paid on Class B Non-Voting Shares, holders are credited with RSUs equal to the dividend. RSUs do not have voting rights as there are no shares underlying the plan.

During 2018, $3 was recognized as compensation expense (2017 – $2). The carrying value and intrinsic value of RSUs at August 31, 2018 was $3 and $3, respectively (August 31, 2017 – $2 and $2, respectively).

Deferred share unit plan

The Company has a DSU plan for its Board of Directors whereby directors can elect to receive their annual cash compensation, or a portion thereof, in DSUs. In addition, the Company may adjust and/or supplement directors' compensation with periodic grants of DSUs. A DSU is a right that tracks the value of one Class B Non-Voting Share. Holders will be entitled to a cash payout when they cease to be a director. The cash payout will be based on market value of a Class B Non-Voting Share at the time of payout. When cash dividends are paid on Class B Non-Voting Shares, holders are credited with DSUs equal to the dividend. DSUs do not have voting rights as there are no shares underlying the plan.

During 2018, $2 was recognized as compensation expense (2017 – $4). The carrying value and intrinsic value of DSUs at August 31, 2018 was $24 and $20, respectively (August 31, 2017 – $22 and $19, respectively).

Employee share purchase plan

The Company's ESPP provides employees with an incentive to increase the profitability of the Company and a means to participate in that increased profitability. Generally, all non-unionized full time or part time employees of the Company are eligible to enroll in the ESPP. Under the ESPP, eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the employee's contributions, increasing to 33% once an employee reaches 10 years of continuous service.

During 2018, $7 was recorded as compensation expense (2017 – $7).

Share appreciation rights

A subsidiary of the Company, that was included in the disposition of ViaWest in the previous year, granted share appreciation rights ("SAR") to eligible employees of ViaWest. A SAR entitled the holder to the appreciation in value of one share of ViaWest over the exercise price over a period of time. SARs granted to ViaWest employees post-acquisition vested 25% per year over four years, had a 10 year contractual term and were cash settled. During 2018, $nil was recognized as compensation expense (2017 – $1) and recorded in the results of discontinued operations. The carrying value of SARs liabilities, including the SARs granted as partial consideration for the acquisition of ViaWest, at August 31, 2018 was $nil (2017 – $nil) as ViaWest was divested on August 1, 2017.

19. EARNINGS PER SHARE

Earnings per share calculations are as follows:

	2018	2017
Numerator for basic and diluted earnings per share ($)		
Net income from continuing operations	**66**	557
Deduct: dividends on Preferred Shares	**(8)**	(8)
Net income attributable to common shareholders from continuing operations	**58**	549
Net income from discontinued operations attributable to common shareholders	**(6)**	294
Net income attributable to common shareholders	**52**	843
Denominator (millions of shares)		
Weighted average number of Class A Shares and Class B Non-Voting Shares for basic earnings per share	**502**	491
Effect of dilutive securities (1)	**1**	1
Weighted average number of Class A Shares and Class B Non-Voting Shares for diluted earnings per share	**503**	492
Basic earnings per share ($)		
Continuing operations	**0.11**	1.12
Discontinued operations	**(0.01)**	0.60
Attributable to common shareholders	**0.10**	1.72
Diluted earnings per share ($)		
Continuing operations	**0.11**	1.11
Discontinued operations	**(0.01)**	0.60
Attributable to common shareholders	**0.10**	1.71

(1) The earnings per share calculation does not take into consideration the potential dilutive effect of certain stock options since their impact is anti-dilutive. For the year ended August 31, 2018, 4,263,940 options were excluded from the diluted earnings per share calculation (2017 – 2,138,047).

20. DIVIDENDS

Common share dividends

The holders of Class A Shares and Class B Non-Voting Shares are entitled to receive such dividends as the Board of Directors determines to declare on a share-for-share basis, as and when any such dividends are declared or paid. The holders of Class B Non-Voting Shares are entitled to receive during each dividend period, in priority to the payment of dividends on the Class A Shares, an additional dividend at a rate of $0.0025 per share per annum. This additional dividend is subject to proportionate adjustment in the event of future consolidations or subdivisions of shares and in the event of any issue of shares by way of stock dividend. After payment or setting aside for payment of the additional non-cumulative dividends on the Class B Non-Voting Shares, holders of Class A Shares and Class B Non-Voting Shares participate equally, share for share, as to all subsequent dividends declared.

Preferred share dividends

Holders of the Series A Preferred Shares were entitled to receive, as and when declared by the Company's Board of Directors, a cumulative quarterly fixed dividend yielding 4.50% annually for the initial period ending June 30, 2016. Commencing June 30, 2016, the dividend rate was reset to 2.791% for the five year period ending June 30, 2021. Thereafter, the dividend rate will be reset every five years at a rate equal to the then current 5-year Government of Canada bond yield plus 2.00%. Holders of Series A Preferred Shares had the right, at their option, to convert their shares into Cumulative Redeemable Floating Rate Preferred Shares, Series B (the "Series B Preferred Shares"), subject to certain conditions, on June 30, 2016 and on June 30 every five years thereafter, with the next conversion date being June 30, 2021.

On June 30, 2016, 1,987,607 Series A Preferred Shares were converted into an equal number of Series B Preferred Shares. The Series B Preferred Shares also represent a series of Class 2 preferred shares and holders will be entitled to receive cumulative quarterly dividends, as and when declared by the Company's Board of Directors, at a rate set quarterly equal to the then current three-month Government of Canada Treasury Bill yield plus 2.00%. The floating quarterly dividend rate for the Series B Preferred Shares were set as follows:

Period	Annual Dividend Rate
June 30, 2016 to September 29, 2016	2.539%
September 30, 2016 to December 30, 2016	2.512%
December 31, 2016 to March 30, 2017	2.509%
March 31, 2017 to June 29, 2017	2.480%
June 30, 2017 to September 29, 2017	2.529%
September 30, 2017 to December 30, 2017	2.742%
December 31, 2017 to March 30, 2018	2.872%
March 31, 2018 to June 29, 2018	3.171%
June 30, 2018 to September 29, 2018	3.300%
September 30, 2018 to December 30, 2018	3.509%

Dividend reinvestment plan

The Company has a Dividend Reinvestment Plan ("DRIP") that allows holders of Class A Shares and Class B Non-Voting Shares who are residents of Canada and, effective December 16, 2016, the United States, to automatically reinvest monthly cash dividends to acquire additional Class B Non-Voting Shares. Class B Non-Voting Shares distributed under the Company's DRIP are new shares issued from treasury at a 2% discount from the 5 day weighted average market price immediately preceding the applicable dividend payment date.

Dividends declared

The dividends per share recognized as distributions to common shareholders for dividends declared during the year ended August 31, 2018 and 2017 are as follows:

2018		2017	
Class A Voting Share	Class B Non-Voting Share	Class A Voting Share	Class B Non-Voting Share
1.1825	1.1850	1.1825	1.1850

The dividends per share recognized as distributions to preferred shareholders for dividends declared during the year ended August 31, 2018 and 2017 are as follows:

2018		2017	
Series A Preferred Share	**Series B Preferred Share**	**Series A Preferred Share**	**Series B Preferred Share**
0.6978	0.7553	0.6978	0.6269

On June 28, 2018, the Company declared dividends of $0.17444 per Series A Preferred Share and $0.20625 per Series B Preferred Share which were paid on October 1, 2018. The total amount paid was $2 of which $1 was not recognized as at August 31, 2018.

On October 25, 2018, the Company declared dividends of $0.098542 per Class A Voting Share and $0.09875 per Class B Non-Voting Share payable on each of December 28, 2018, January 30, 2019 and February 27, 2019 to shareholders of record at the close of business on December 14, 2018, January 15, 2019 and February 15, 2019, respectively.

On October 25, 2018, the Company declared dividends of $0.17444 per Series A Preferred Share and $0.21931 per Series B Preferred Share payable on December 31, 2018 to holders of record at the close of business on December 14, 2018.

21. OTHER COMPREHENSIVE INCOME (LOSS) AND ACCUMULATED OTHER COMPREHENSIVE LOSS

Components of other comprehensive income and the related income tax effects for 2018 are as follows:

	Amount $	Income taxes $	Net $
Items that may subsequently be reclassified to income			
Continuing operations:			
Change in unrealized fair value of derivatives designated as cash flow hedges	7	(2)	5
Adjustment for hedged items recognized in the period	4	(1)	3
Share of other comprehensive income of associates	10	–	10
	21	(3)	18
Items that will not be subsequently reclassified to income			
Remeasurements on employee benefit plans:			
Continuing operations	101	(27)	74
	122	(30)	92

Components of other comprehensive loss and the related income tax effects for 2017 are as follows:

	Amount $	Income taxes $	Net $
Items that may subsequently be reclassified to income			
Continuing operations:			
Change in unrealized fair value of derivatives designated as cash flow hedges	(9)	2	(7)
Adjustment for hedged items recognized in the period	(3)	1	(2)
Share of other comprehensive income of associates	13	–	13
Discontinued operations:			
Exchange differences on translation of a foreign operation	(50)	–	(50)
Exchange differences on translation of US denominated debt hedging a foreign operation	24	–	24
Reclassification of accumulated exchange differences to income related to the sale of a foreign operation	(82)	–	(82)
	(107)	3	(104)
Items that will not be subsequently reclassified to income			
Remeasurements on employee benefit plans:			
Continuing operations	34	(9)	25
	(73)	(6)	(79)

Accumulated other comprehensive loss is comprised of the following:

	2018 $	2017 $
Items that may subsequently be reclassified to income		
Continuing operations:		
Change in unrealized fair value of derivatives designated as cash flow hedges	**–**	(8)
Share of other comprehensive income of associates	**18**	8
Items that will not be subsequently reclassified to income		
Remeasurements on employee benefit plans:		
Continuing operations	**(57)**	(131)
	(39)	(131)

22. OPERATING, GENERAL AND ADMINISTRATIVE EXPENSES AND RESTRUCTURING COSTS

	2018 $	2017 $
Employee salaries and benefits [1]	**1,176**	859
Purchases of goods and services	**2,420**	2,080
	3,596	2,939

(1) Employee salaries and benefits include $423 (2017 – $54) in employee-related restructuring costs.

23. OTHER GAINS (LOSSES)

	2018 $	2017 $
Realized and unrealized foreign exchange gains	**1**	12
Investment write-downs	**–**	(82)
Gain/(loss) on disposal of fixed assets	**15**	(2)
Other	**13**	7
	29	(65)

Other gains (losses) generally includes realized and unrealized foreign exchange gains and losses on US dollar denominated current assets and liabilities, gains and losses on disposal of property, plant and equipment and minor investments, and the Company's share of the operations of Burrard Landing Lot 2 Holdings Partnership. In the prior year, the category also includes a write-down of $82 in respect of the Company's investment in shomi which announced a wind down of operations in September 2016.

24. INCOME TAXES

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes. The Company's net deferred tax liability consists of the following:

	2018 $	2017 $
Deferred tax assets	**4**	4
Deferred tax liabilities	**(1,894)**	(1,858)
Net deferred tax liability	**(1,890)**	(1,854)

Significant changes recognized to deferred income tax assets (liabilities) are as follows:

	Property, plant and equipment and software assets $	Broadcast rights, licences, customer relationships, trademark and brands $	Partnership income $	Non-capital loss carry-forwards $	Accrued charges $	Total $
Balance at September 1, 2016	(283)	(1,841)	56	120	40	(1,908)
Recognized in statement of income	13	(25)	(17)	(1)	(9)	(39)
Recognized in discontinued operations	–	8	–	2	(6)	4
Recognized on ViaWest divestiture	5	168	–	(76)	(8)	89
Recognized in other comprehensive income:						
Foreign currency translation adjustments	–	10	–	(4)	–	6
Actuarial gains/losses	–	–	–	–	(6)	(6)
Balance at August 31, 2017	(265)	(1,680)	39	41	11	(1,854)
Recognized in statement of income	**(25)**	**(53)**	**(10)**	**–**	**82**	**(6)**
Recognized in other comprehensive income:						
Actuarial gains/losses	**–**	**–**	**–**	**–**	**(30)**	**(30)**
Balance at August 31, 2018	**(290)**	**(1,733)**	**29**	**41**	**63**	**(1,890)**

The Company has capital loss carryforwards of approximately $15 for which no deferred income tax asset has been recognized in the accounts. These capital losses can be carried forward indefinitely.

The Company has non-capital loss carryforwards of approximately $593 for which no deferred income tax asset has been recognized in the accounts. The balance expires in varying annual amounts from 2034 to 2038.

The Company has taxable temporary differences associated with its investment in its subsidiaries. No deferred tax liabilities have been provided with respect to such temporary differences as the Company is able to control the timing of the reversal and such reversal is not probable in the foreseeable future.

The income tax expense differs from the amount computed by applying the statutory rates to income before income taxes for the following reasons:

	2018 $	2017 $
Current statutory income tax rate	**26.8%**	26.7%
Income tax expense at current statutory rates	**56**	197
Net increase (decrease) in taxes resulting from:		
Effect of tax rate changes	**28**	(5)
Equity (income) loss of an associate not recognized	**54**	(20)
Other	**5**	9
Income tax expense	**143**	181

The statutory income tax rate for the Company increased from 26.7% in 2017 to 26.8% in 2018 as a result of provincial tax rate changes.

The components of income tax expense are as follows:

	2018 $	2017 $
Current income tax expense	**137**	142
Deferred tax expense (recovery) related to temporary differences	**(22)**	44
Deferred tax expense (recovery) from tax rate changes	**28**	(5)
Income tax expense	**143**	181

25. BUSINESS SEGMENT INFORMATION

The Company's chief operating decision makers are the Chief Executive Officer, President and Executive Vice President, Chief Financial & Corporate Development Officer and they review the operating performance of the Company by segments, which are comprised of Wireline and Wireless. As a result of the restructuring undertaken in 2017, the Company reorganized and integrated its management structure, previously separated in the Consumer and Business Network Services segments, into a combined Wireline segment, as costs were becoming increasingly inseparable between these segments. There was no change to the Wireless operating segment. The accounting policies of the segments are the same as those described in the summary of significant accounting policies. The chief operating decision makers utilize operating income before restructuring costs and amortization for each segment as a key measure in making operating decisions and assessing performance.

The Wireline segment provides Cable telecommunications services including Video, Internet, Wi-Fi, Phone, Satellite Video and data networking through a national fibre-optic backbone network to Canadian consumers, North American businesses and public-sector entities. The Wireless segment provides wireless services for voice and data communications serving customers in Ontario, British Columbia and Alberta.

The previously reported Business Infrastructure Services segment was comprised primarily of the ViaWest operations and as a result, the majority of this segment is now reported in discontinued operations. The remaining operations and their results are now included within the Wireline segment.

Both of the Company's reportable segments are substantially located in Canada. Information on operations by segment is as follows:

	2018 $	2017 $
Revenue		
Wireline	**4,292**	4,280
Wireless		
Service	**595**	482
Equipment	**356**	123
	951	605
	5,243	4,885
Intersegment eliminations	**(4)**	(3)
	5,239	4,882
Operating income before restructuring costs and amortization		
Wireline	**1,913**	1,864
Wireless	**176**	133
	2,089	1,997
Restructuring costs [(1)]	**(446)**	(54)
Amortization [(1)]	**(1,012)**	(944)
Operating income	**631**	999
Interest [(1)]		
Operating	**247**	265
Other/non-operating	**1**	2
	248	267
Current taxes [(1)]		
Operating	**166**	174
Other/non-operating	**(29)**	(32)
	137	142

(1) The Company does not report restructuring costs, amortization, interest or cash taxes on a segmented basis.

Capital expenditures

	2018 $	2017 $
Capital expenditures accrual basis		
Wireline	**970**	890

Reconciliation to Consolidated Statements of Cash Flows		
Additions to property, plant and equipment	**1,127**	999
Additions to equipment costs (net)	**49**	73
Additions to other intangibles	**131**	111
Total of capital expenditures and equipment costs (net) per Consolidated Statements of Cash Flows	**1,307**	1,183
Increase (decrease) in working capital and other liabilities related to capital expenditures	**65**	35
Decrease in customer equipment financing receivables	**4**	7
Less: Proceeds on disposal of property, plant and equipment	**(9)**	–
Total capital expenditures and equipment costs (net) reported by segments	**1,367**	1,225

26. COMMITMENTS AND CONTINGENCIES

Commitments

(i) The Company owns and leases Ku-band and C-band transponders on the Anik F1R, Anik F2 and Anik G1 satellites. As part of the Ku-band transponder agreements with Telesat Canada, the Company is committed to paying annual transponder maintenance and licence fees for each transponder from the time the satellite becomes operational for a period of 15 years.

(ii) The Company has various long-term operating commitments as follows:

	$
2019	579
2020 – 2023	783
Thereafter	238
	1,600

Comprised of:	$
Lease of transmission facilities, circuits and premises	604
Lease and maintenance of transponders	351
Purchase obligations	645
	1,600

Included in operating, general and administrative expenses are transponder maintenance expenses of $84 (2017 – $78) and rental expenses of $153 (2017 – $183), of which $nil (2017 – $26) has been recorded in the results of discontinued operations.

(iii) At August 31, 2018, the Company had capital expenditure commitments in the normal course of business of $220 in respect of fiscal 2019 and 2020.

Contingencies

The Company and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business. Although resolution of such matters cannot be predicted with certainty, management does not consider the Company's exposure to litigation to be material to these consolidated financial statements.

Guarantees

In the normal course of business the Company enters into indemnification agreements and has issued irrevocable standby letters of credit and commercial surety bonds with and to third parties.

Indemnities

Many agreements related to acquisitions and dispositions of business assets include indemnification provisions where the Company may be required to make payment to a vendor or purchaser for breach of contractual terms of the agreement with respect to matters such as litigation, income taxes payable or refundable or other ongoing disputes. The indemnification period usually covers a period of two to four years. Also, in the normal course of business, the Company has provided indemnifications in various commercial agreements, customary for the telecommunications industry, which may require payment by the Company for breach of contractual terms of the agreement. Counterparties to these agreements provide the Company with comparable indemnifications. The indemnification period generally covers, at maximum, the period of the applicable agreement plus the applicable limitations period under law.

The maximum potential amount of future payments that the Company would be required to make under these indemnification agreements is not reasonably quantifiable as certain indemnifications are not subject to limitation. However, the Company enters into indemnification agreements only when an assessment of the business circumstances would indicate that the risk of loss is remote. At August 31, 2018, management believes it is remote that the indemnification provisions would require any material cash payment.

The Company indemnifies its directors and officers against any and all claims or losses reasonably incurred in the performance of their service to the Company to the extent permitted by law.

Irrevocable standby letters of credit and commercial surety bonds

The Company and certain of its subsidiaries have granted irrevocable standby letters of credit and commercial surety bonds, issued by high rated financial institutions, to third parties to indemnify them in the event the Company does not perform its contractual obligations. As of August 31, 2018, the guarantee instruments amounted to $5. The Company has not recorded any additional liability with respect to these guarantees, as the Company does not expect to make any payments in excess of what is recorded on the Company's consolidated financial statements. The guarantee instruments mature at various dates during fiscal 2019 and fiscal 2020.

27. EMPLOYEE BENEFIT PLANS

Defined contribution pension plans

The Company has defined contribution pension plans for its non-union employees and, for the majority of these employees, contributes 5% of eligible earnings to the maximum amount deductible under the Income Tax Act. For union employees, the Company contributes amounts up to 9.8% of earnings to the individuals' registered retirement savings plans. Total pension costs in respect of these plans were $32 (2017 – $35) of which $21 (2017 – $23) was expensed and the remainder capitalized.

Defined benefit pension plans

The Company has two non-registered retirement plans for designated executives and senior executives. The following is a summary of the accrued benefit liabilities recognized in the statement of financial position.

	2018 $	2017 $
Non-registered plans		
Accrued benefit obligation	**446**	532
Fair value of plan assets	**436**	433
Accrued benefit liabilities and deficit	**10**	99

The plans expose the Company to a number of risks, of which the most significant are as follows:

(i) Volatility in market conditions: The accrued benefit obligations are calculated using discount rates with reference to bond yields closely matching the term of the estimated cash flows while many of the assets are invested in other types of assets. If plan assets underperform these yields, this will result in a deficit. Changing market conditions in conjunction with discount rate volatility will result in volatility of the accrued benefit liabilities. To minimize some of the investment risk, the Company has established long-term funding targets where the time horizon and risk tolerance are specified.

(ii) Selection of accounting assumptions: The calculation of the accrued benefit obligations involves projecting future cash flows of the plans over a long time frame. This means that assumptions used can have a material impact on the statements of financial position and comprehensive income because in practice, future experience of the plans may not be in line with the selected assumptions.

Non-registered pension plans

The Company provides a supplemental executive retirement plan ("SERP") for certain of its senior executives. Benefits under this plan are based on the employees' length of service and their highest three-year average rate of eligible pensionable earnings during their years of service. In 2012, the Company closed the plan to new participants and amended the plan to freeze base salary levels at August 31, 2012 for purposes of determining eligible pensionable earnings. Employees are not required to contribute to this plan.

The Company provides an executive retirement plan ("ERP") for certain executives not covered by the SERP. Benefits under this plan are comprised of defined contribution and defined benefit components and are based on the employees' length of service as well as final average earnings during their years of service. Employees are not required to contribute to this plan.

The table below shows the change in benefit obligation and funding status and the fair value of plan assets.

	SERP $	ERP $	2018 Total $	SERP $	ERP $	2017 Total $
Accrued benefit obligation, beginning of year	**518**	**14**	**532**	553	10	563
Current service cost	**6**	**8**	**14**	7	4	11
Interest cost	**17**	**1**	**18**	19	–	19
Payment of benefits to employees	**(18)**	**(7)**	**(25)**	(20)	–	(20)
Transfer from DC plan	**–**	**3**	**3**			
Remeasurements:						
Effect of changes in demographic assumptions	**(5)**	**–**	**(5)**	(2)	–	(2)
Effect of changes in financial assumptions	**–**	**–**	**–**	(41)	–	(41)
Effect of experience adjustments [1]	**(89)**	**(2)**	**(91)**	2	–	2
Accrued benefit obligation, end of year	**429**	**17**	**446**	518	14	532
Fair value of plan assets, beginning of year	**420**	**13**	**433**	432	6	438
Employer contributions	**–**	**5**	**5**	–	7	7
Interest income	**15**	**1**	**16**	16	–	16
Transfer from DC plan	**–**	**3**	**3**			
Payment of benefits	**(18)**	**(7)**	**(25)**	(20)	–	(20)
Return on plan assets, excluding interest income	**4**	**–**	**4**	(8)	–	(8)
Fair value of plan assets, end of year	**421**	**15**	**436**	420	13	433
Accrued benefit liability and plan deficit, end of year	**8**	**2**	**10**	98	1	99

(1) In the second quarter of the fiscal year, a remeasurement related to the effect of experience adjustments of $85 was recognized to reflect the decrease in the accrued benefit obligation due to demographic experience in the quarter.

The weighted average duration of the defined benefit obligation of the SERP and ERP at August 31, 2018 is 16.1 years and 21.5 years, respectively.

The underlying plan assets of the SERP and ERP at August 31, 2018 are invested in the following:

	SERP $	ERP $
Cash and cash equivalents	**213**	**13**
Fixed income securities	**78**	**1**
Equity securities – Canadian	**41**	**–**
Equity securities – Foreign	**89**	**1**
	421	**15**

All fixed income and equity securities have a quoted price in active market.

The tables below show the significant weighted-average assumptions used to measure the pension obligation and cost for the plans.

Accrued benefit obligation	2018 SERP %	2018 ERP %	2017 SERP %	2017 ERP %
Discount rate	**3.70**	**3.70**	3.70	3.70
Rate of compensation increase	**3.00**[1]	**3.00**	3.00[1]	3.00

Benefit cost for the year	2018 SERP %	2018 ERP %	2017 SERP %	2017 ERP %
Discount rate	**3.70**	**3.70**	3.50	3.50
Rate of compensation increase	**3.00**[(1)]	**3.00**	5.00[(1)]	3.00

(1) Applies only to incentive compensation component of eligible pensionable earnings.

The calculation of the accrued benefit obligation is sensitive to the assumptions above. A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2018 by $73. A one percentage point increase in the rate of compensation increase would have increased the accrued benefit obligation by $12.

When calculating the sensitivity of the defined benefit obligation to significant actuarial assumptions, the present value of the defined benefit obligation has been calculated using the projected benefit method which is the same method that is applied in calculating the defined benefit liability recognized in the statement of financial position. The sensitivity analysis presented above may not be representative of the actual change in the accrued benefit obligation as it is unlikely that the change in assumptions would occur in isolation of one another as some assumptions may be correlated.

The net pension benefit plan expense, which is included in employee salaries and benefits expense, is comprised of the following components:

	SERP $	ERP $	2018 Total $	SERP $	ERP $	2017 Total $
Current service cost	**6**	**8**	**14**	7	4	11
Interest cost	**17**	**1**	**18**	19	–	19
Interest income	**(15)**	**(1)**	**(16)**	(16)	–	(16)
Pension expense	**8**	**8**	**16**	10	4	14

Other benefit plans

The Company has post-employment benefits plans that provide post-retirement health and life insurance coverage to certain executive level retirees and are funded on a pay-as-you-go basis. The table below shows the change in the accrued post-retirement obligation which is recognized in the statement of financial position.

	2018 $	2017 $
Accrued benefit obligation and plan deficit, beginning of year	**4**	4
Current service cost	**–**	–
Interest cost	**–**	–
Payment of benefits to employees	**–**	–
Remeasurements:		
Effect of changes in demographic assumptions	**(1)**	–
Accrued benefit obligation and plan deficit, end of year	**3**	4

The weighted average duration of the benefit obligation at August 31, 2018 is 17.0 years.

The post-retirement benefit plan expense, which is included in employee salaries and benefits expense, is $nil (2017 – $nil) and is comprised of current service and interest cost.

The discount rates used to measure the post-retirement benefit cost for the year and the accrued benefit obligation as at August 31, 2018 were 3.80% and 3.70%, respectively (2017 – 3.60% and 3.80%, respectively). A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2018 by $1.

Employer contributions

The Company's estimated contributions to the defined benefit plans in fiscal 2019 is $1.

28. RELATED PARTY TRANSACTIONS

Controlling shareholder

The majority of the Class A Shares are held by the Shaw Family Living Trust ("SFLT"). The sole trustee of SFLT is a private company owned by JR Shaw and having a board comprised of seven directors, including JR Shaw as chair, Bradley S. Shaw, four other members of his family, and one independent director. JR Shaw and members of his family are represented as Directors, Senior Executive and Corporate Officers of the Company.

Significant investments in subsidiaries

The following are the significant subsidiaries of the Company, all of which are incorporated or partnerships in Canada.

	Ownership Interest	
	August 31, 2018	**August 31, 2017**
Shaw Cablesystems Limited	**100%**	100%
Shaw Cablesystems G.P.	**100%**	100%
Shaw Cablesystems (VCI) Ltd.	**100%**	100%
Shaw Envision Inc.	**100%**	100%
Shaw Telecom Inc.	**100%**	100%
Shaw Telecom G.P.	**100%**	100%
Shaw Satellite Services Inc.	**100%**	100%
Star Choice Television Network Incorporated	**100%**	100%
Shaw Satellite G.P.	**100%**	100%
Freedom Mobile Inc.	**100%**	100%

Key management personnel and Board of Directors

Key management personnel consist of the most senior executive team and along with the Board of Directors, and have the authority and responsibility for planning, directing and controlling the activities of the Company.

Compensation

The compensation expense of key management personnel and Board of Directors is as follows:

	2018 $	**2017 $**
Short-term employee benefits	**25**	31
Post-employment pension benefits	**8**	9
Termination benefits	**7**	–
Share-based compensation	**4**	5
	44	45

Transactions

The Company paid $2 (2017 – $2) for collection, installation and maintenance services to a company controlled by a Director of the Company.

During the year, the Company paid $12 (2017 – $11) for remote control units to a supplier where Directors of the Company hold positions on the supplier's board of directors.

During the year, network fees of $26 (2017 – $20) were paid to a programmer where a Director of the Company holds a position on the programmer's board of directors.

At August 31, 2018, the Company had $4 owing in respect of these transactions (2017 – $4).

Other related parties

The Company has entered into certain transactions and agreements in the normal course of business with certain of its related parties. These transactions are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties.

Corus

The Company and Corus are subject to common voting control. During the year, network fees of $133 (2017 – $135), advertising fees of $4 (2017 – $8), programming fees of $2 (2017 – $1), and administrative fees of $2 (2017 – $1) were paid to various Corus subsidiaries and entities subject to significant influence. In addition, the Company provided administrative, advertising and other services for $5 (2017 – $7), uplink of television signals for $8 (2017 – $8), and Internet services and lease of circuits for $1 (2017 – $1). At August 31, 2018, the Company had a net of $13 owing in respect of these transactions (2017 – $24).

The Company provided Corus with advertising spots in return for radio and television advertising. No monetary consideration was exchanged for these transactions and no amounts were recorded in the accounts.

Burrard Landing Lot 2 Holdings Partnership

During the year, the Company paid $12 (2017 – $13) to the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, BC, is the Company's headquarters for its lower mainland operations. At August 31, 2018, the Company had a remaining commitment of $64 in respect of the office space lease which is included in the amounts disclosed in note 26.

29. FINANCIAL INSTRUMENTS

Fair values

The fair value of financial instruments has been determined as follows:

(i) Current assets and current liabilities

The fair value of financial instruments included in current assets and current liabilities approximates their carrying value due to their short-term nature.

(ii) Investments and other assets and Other long-term assets

The fair value of publicly traded investments is determined by quoted market prices. Investments in private entities which do not have quoted market prices in an active market and whose fair value cannot be readily measured are carried at cost. No published market exists for such investments. These equity investments have been made as they are considered to have the potential to provide future benefit to the Company and accordingly, the Company has no current intention to dispose of these investments in the near term. The fair value of long-term receivables approximates their carrying value as they are recorded at the net present values of their future cash flows, using an appropriate discount rate.

(iii) Long-term debt

The carrying value of long-term debt is at amortized cost based on the initial fair value as determined at the time of issuance. The fair value of publicly traded notes is based upon current trading values. The fair value of finance lease obligations is determined by discounting future cash flows using a rate for loans with similar terms, conditions and maturity dates. The carrying value of bank credit facilities approximates fair value as the debt bears interest at rates that fluctuate with market rates. Other notes and debentures are valued based upon current trading values for similar instruments.

(iv) Derivative financial instruments

The fair value of US currency forward purchase contracts is determined using an estimated credit-adjusted mark-to-market valuation using observable forward exchange rates at the end of reporting periods and contract forward rates.

The carrying values and estimated fair values of an investment in a publicly traded company and long-term debt are as follows:

	August 31, 2018		August 31, 2017	
	Carrying value $	Estimated fair value $	Carrying value $	Estimated fair value $
Assets				
Investment in publicly traded company (1)	**615**	**298**	897	1,109
Liabilities				
Long-term debt (2)	**4,311**	**4,788**	4,300	4,901

(1) Level 1 fair value – determined by quoted market prices.
(2) Level 2 fair value – determined by valuation techniques using inputs based on observable market data, either directly or indirectly, other than quoted prices.

Risk management

The Company is exposed to various market risks including currency risk and interest rate risk, as well as credit risk and liquidity risk associated with financial assets and liabilities. The Company has designed and implemented various risk management strategies, discussed further below, to ensure the exposure to these risks is consistent with its risk tolerance and business objectives.

Market risk

Market risk is the risk that the fair value or cash flows of a financial instrument will fluctuate as a result of changes in market prices, including foreign exchange and interest rates, the Company's share price and market price of publicly traded investments.

Currency risk

Certain of the Company's capital expenditures and equipment costs are incurred in US dollars, while its revenue is primarily denominated in Canadian dollars. Decreases in the value of the Canadian dollar relative to the US dollar could have an adverse effect on the Company's cash flows. To mitigate some of the uncertainty in respect to capital expenditures and equipment costs, the Company regularly enters into forward contracts in respect of US dollar commitments. With respect to 2018, the Company entered into forward contracts to purchase US $182 over a period of 24 months commencing in September 2017 at an average exchange rate of 1.3031 Cdn. At August 31, 2018 the Company had forward contracts to purchase US $96 over a period of 12 months commencing September 2018 at an average exchange rate of 1.2915 Cdn in respect of US dollar commitments.

Interest rate risk

Due to the capital-intensive nature of its operations, the Company utilizes long-term financing extensively in its capital structure. The primary components of this structure are a banking facility and various Canadian senior notes with varying maturities issued in the public markets as more fully described in Note 14.

Interest on the Company's unsecured banking facility is based on floating rates, while the senior notes are fixed-rate obligations. The Company utilizes its credit facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. As at August 31, 2018, 100% of the Company's consolidated long-term debt was fixed with respect to interest rates.

Sensitivity analysis

The sensitivity to currency risk has been determined based on a hypothetical change in Canadian dollar to US dollar foreign exchange rates of 10%. Foreign exchange forward contracts would be impacted by this hypothetical change resulting in a change to other comprehensive income by $9 net of tax (2017 – $17). A portion of the Company's accounts receivables and accounts payable and accrued liabilities is denominated in US dollars; however, due to their short-term nature, there is no significant market risk arising from fluctuations in foreign exchange rates.

Interest on the Company's banking facility is based on floating rates. As at August 31, 2018 there is no significant market risk arising from interest rate fluctuations within a reasonably contemplated range from their actual amounts.

At August 31, 2018, a one dollar change in the Company's Class B Non-Voting Shares would have had an impact on net income of $1 in respect of the Company's DSU and RSU plans.

Credit risk

Accounts receivable in respect of the Consumer, Business and Wireless divisions are not subject to any significant concentrations of credit risk due to the Company's large and diverse customer base. As at August 31, 2018, the Company had accounts receivable of $255 (August 31, 2017 – $286), net of the allowance for doubtful accounts of $57 (August 31, 2017 – $48). The Company maintains an allowance for doubtful accounts for the estimated losses resulting from the inability of its customers to make required payments. In determining the allowance, the Company considers factors such as the number of days the customer account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. As at August 31, 2018, $123 (August 31, 2017 – $94) of accounts receivable is considered to be past due, defined as amounts outstanding past normal credit terms and conditions. Uncollectible accounts receivable are charged against the allowance account based on the age of the account and payment history. The Company believes that its allowance for doubtful accounts is sufficient to reflect the related credit risk.

The Company mitigates credit risk of subscriber receivables through advance billing and procedures to downgrade or suspend services on accounts that have exceeded agreed credit terms and routinely assesses the financial strength of its business customers through periodic review of payment practices.

Credit risks associated with US currency contracts arise from the inability of counterparties to meet the terms of the contracts. In the event of non-performance by the counterparties, the Company's accounting loss would be limited to the net amount that it would be entitled to receive under the contracts and agreements. In order to minimize the risk of counterparty default under its swap agreements, the Company assesses the creditworthiness of its swap counterparties.

Liquidity risk

Liquidity risk is the risk that the Company will experience difficulty in meeting obligations associated with financial liabilities. The Company manages its liquidity risk by monitoring cash flow generated from operations, available borrowing capacity, and by managing the maturity profiles of its long-term debt.

The Company's undiscounted contractual maturities as at August 31, 2018 are as follows:

	Short-term borrowings $	Accounts payable and accrued liabilities[(1)] $	Long-term debt repayable at maturity $	Interest payments $
Within one year	40	971	1	241
1 to 3 years	–	–	2,052	322
3 to 5 years	–	–	2	266
Over 5 years	–	–	2,295	1,636
	40	971	4,350	2,465

(1) Includes accrued interest and dividends of $227.

30. CONSOLIDATED STATEMENTS OF CASH FLOWS

Additional disclosures with respect to the Consolidated Statements of Cash Flows are as follows:

(i) Funds flow from continuing operations

	2018 $	2017 $
Net income from continuing operations	**66**	557
Adjustments to reconcile net income to funds flow from operations:		
Amortization	**1,015**	946
Deferred income tax recovery	**6**	39
Share-based compensation	**3**	3
Defined benefit pension plans	**11**	8
Accretion of long-term liabilities and provisions	**(5)**	(1)
Equity (income) loss of an associate or joint venture	**200**	(73)
Provision for investment loss	**–**	82
Other	**(37)**	(31)
Funds flow from continuing operations	**1,259**	1,530

(ii) Interest and income taxes paid and interest received and classified as operating activities are as follows:

	2018 $	2017 $
Interest paid	**239**	271
Income taxes paid (net of refunds)	**155**	220
Interest received	**4**	3

(iii) Non-cash transactions

The Consolidated Statements of Cash Flows exclude the following non-cash transactions:

	2018 $	2017 $
Issuance of Class B Non-Voting Shares:		
Dividend reinvestment plan (note 20)	**211**	198

31. CAPITAL STRUCTURE MANAGEMENT

The Company's objectives when managing capital are:

(i) to maintain a capital structure which optimizes the cost of capital, provides flexibility and diversity of funding sources and timing of debt maturities, and adequate anticipated liquidity for organic growth and strategic acquisitions;

(ii) to maintain compliance with debt covenants; and

(iii) to manage a strong and efficient capital base to maintain investor, creditor and market confidence.

The Company defines capital as comprising all components of shareholders' equity (other than non-controlling interests and amounts in accumulated other comprehensive income/loss), long-term debt (including the current portion thereof), short-term borrowings and bank indebtedness less cash and cash equivalents.

	2018 $	2017 $
Cash	**(384)**	(507)
Short-term borrowings	**40**	–
Long-term debt repayable at maturity	**4,350**	4,342
Share capital	**4,349**	4,090
Contributed surplus	**27**	30
Retained earnings	**1,619**	2,164
	10,001	10,119

The Company manages its capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of underlying assets. The Company may also from time to time change or adjust its objectives when managing capital in light of the Company's business circumstances, strategic opportunities, or the relative importance of competing objectives as determined by the Company. There is no assurance that the Company will be able to meet or maintain its currently stated objectives.

The Company's credit facilities are subject to covenants which include maintaining minimum or maximum financial ratios, including total debt to operating cash flow/adjusted earnings before interest, taxes, depreciation and amortization, and operating cash flow to fixed charges. At August 31, 2018, the Company is in compliance with these covenants and based on current business plans and economic conditions, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants.

The Company's overall capital structure management strategy remains unchanged from the prior year.

32. SUBSEQUENT EVENTS

On November 2, 2018 the Company issued $1 billion of senior notes, comprised of $500 million principal amount of 3.80% senior notes due 2023 and $500 million principal amount of 4.40% senior notes due 2028. Estimated net proceeds (after issuance at a discount of $1.4 million and issue and underwriting expenses) of $994 million will be used for general corporate purposes, which may include the repayment of outstanding indebtedness of the Company. Pending any such use of net proceeds, the Company may invest the net proceeds in bank deposits and short-term marketable securities.

On November 21, 2018, the Company amended the terms of its bank credit facility to extend the maturity date to December 2023.

This is Exhibit 29 to the affidavit of Kenneth Mathieu, affirmed remotely by Jonathan Bitran stated as being located in the city of Toronto in the province of Ontario, on the 20th day of October, 2022, in accordance with O.Reg431/20, Administering Oath or Declaration Remotely.

Shaw
Annual Report 2019

The Annual General Meeting of Shareholders will be held on January 14, 2020 at 11:00 a.m. (Mountain Time) at Shaw Court, 630 – 3rd Avenue SW, Calgary, Alberta.

Dear Fellow Shareholders:

We are pleased with our performance in fiscal 2019 as we delivered solid financial and operating results and we firmly believe we are on a path to generate long-term growth that is beneficial to all of our stakeholders.

In fiscal 2019, we continued to expand our Wireless business, stabilized our Wireline operations, and made considerable progress in managing through our transformation program. Our leadership team and our people were focused on achieving three key objectives critical to our success:

- Grow the number of people and families who use our services,
- Improve our execution and deliver stable Wireline results, and
- Thoughtfully and methodically manage the continuous change throughout our organization.

We are pleased to report significant success on all of these objectives.

Wireless

Over the past year we have built on our reputation as the disruptive wireless competitor by clearly establishing Freedom Mobile as the innovator that champions affordability for Canadians. The combination of an enhanced network experience, innovative packaging and pricing, an expanding footprint, and effective marketing has made Canadians excited about what Freedom Mobile can offer. In fiscal 2019, Freedom Mobile delivered the strongest period of customer growth in its history, despite a dynamic and competitive environment throughout the year, and Wireless revenue surpassed $1 billion.

At the end of fiscal 2019, over 1.6 million Canadians called Freedom Mobile their wireless provider. Notably, the subscriber performance drove Wireless service revenue 23% higher year-over-year to approximately $694 million. In 2019, Freedom Mobile launched its wireless service in 19 new communities in Alberta, British Columbia, and Ontario to cover an additional population of 1.4 million. Today, our wireless service is now available to over 18 million people, or almost half of the Canadian population, living in most of Canada's largest urban centres.

In 2019, we executed our plan to improve our network and deploy spectrum in the most efficient way, including the successful acquisition of 600 MHz spectrum across our Wireless operating footprint. Throughout the year, we made significant enhancements to our customer experience with the deployment of our Extended Range LTE, leveraging our 700 MHz spectrum to provide customers with improved in-building service – a key driver of the significant 22-basis point year-over-year improvement in postpaid churn to 1.32%. At the end of fiscal 2019, approximately 70% of this build is complete in Western Canada, with the remaining deployment of our 700 MHz spectrum expected to continue throughout fiscal 2020.

We are committed to building on the foundation that we have created over the past number of years by continuing to disrupt the wireless marketplace, deliver better value, and enhance our customers' experiences.

Wireline

In an industry that remains competitive, we improved our Wireline operations and delivered solid financial results by increasing internet subscribers, focusing on video profitability, and generating efficiency in our operations.

In our Consumer business, our team modernized several components of our operations to better meet the needs of today's customers. Data-based insights help us better understand our customers' preferences and enables us to provide them with the services they want. We are shifting customer interactions to digital platforms and making it easier for them to take advantage of more self-help, self-install and self-service options. At the end of fiscal 2019, 45% of our customers chose to self-install their services, significantly reducing operating costs while increasing customer satisfaction.

We are also capitalizing on our network and technology investments so we can provide customers with the seamless connectivity experience they want today and in the future. Early in fiscal 2019, we capitalized on the strength and breadth of our FibrePlus network and doubled speeds of our top residential and business internet plans. Later, in April, we unveiled Shaw BlueCurve, the latest technology that allows us to deliver more value to our broadband customers with speed, coverage and control enhancements.

Our BlueCurve platform is the foundation of future innovations and represents a clear competitive advantage as we push for better broadband results. We have established a strong position in the marketplace as a technology leader and we delivered improved broadband subscriber performance throughout the year, including 35,000 new internet subscribers. And, with our expanding BlueCurve IPTV service now available in approximately 70% of our Wireline footprint, we're able to work effectively to retain more high-quality video subscribers and lower our cost to serve customers.

Our Business division delivered another year of strong revenue growth, fueled by the continued success of our SmartSuite products with small and medium business customers, as well as additional product launches, including gigabyte Internet speeds. By leveraging the strength of our product offerings and our strong network, Shaw Business is establishing itself as a solid competitor to provide services to businesses of all sizes across Canada.

Looking ahead

We believe 2019 represented a critical milestone in the transformation of our business, building a solid foundation for growing our Wireless, Broadband and Business divisions and driving long-term sustainable free cash flow growth.

Throughout the past year we improved our customers' experiences across both our Wireline and Wireless divisions while removing significant operating and capital costs. We monetized our investment in Corus Entertainment Inc. further solidifying our balance sheet and enabling us to continue our transformation into an agile, lean and digital-first organization that is focused on providing a seamless connectivity experience for our customers now and in the future. Simply put, our operational and financial performances are concrete evidence that, though difficult, we made choices and decisions that will provide positive and meaningful results for the long term.

We have always understood that Canadians want more from their providers, not less. We have demonstrated that we are able to offer the latest technologies and services because we have invested significantly to build and enhance the leading-edge networks that support these services.

Late in the fiscal year, we saw regulators inject a new level of uncertainty with regard to the wholesale rates charged by network-building companies to broadband resellers in Canada. We firmly believe that Canada requires strong facilities-based investment to compete on the global stage, but if network-building companies like Shaw no longer have the opportunity to earn an appropriate return on selling wholesale access to their networks, they will be forced to change their infrastructure investment strategy. As a result, innovation, and the development of new services and technologies, such as 5G, Internet of Things and the fundamentals of artificial intelligence, will diminish, along with the service levels that Canadians have been accustomed to.

Since these regulatory developments, we have found it prudent to alter our plans with respect to launching new higher speed internet tiers and additional wireless expansion beyond our current footprint. Throughout the process, we will work hard to ensure regulators recognize that healthy network-building companies play a critical role in the ability to usher in new technologies while delivering better and faster services for all Canadians.

While there is additional regulatory uncertainty in both the Wireline and Wireless categories, our strategy and ability to execute have us in an enviable position. In the past few years, we have had to be bold in our decision-making and in transforming our business so we could be successful in the future. We are confident in our plan and, most importantly, we are encouraged by our team's ability to work together and execute our growth initiatives.

For five decades we have served our customers with the products and services that have kept them connected to the world around them. In tackling the new challenges ahead, our employees have demonstrated exceptional resilience, creativity and professionalism. Without doubt, all levels of our organization have embraced the imperatives of modernization and provided us with a clean slate to write the next chapters of our story. While the world and the expectations of our customers continue to change, we are pleased to say we have every confidence that the dedication of our 10,000 employees and the strength of our leadership have prepared us well to succeed.

Management's Discussion & Analysis

Contents

Forward

Tabular dollar amounts are in millions of Canadian dollars, except per share amounts or unless otherwise indicated. This Management's Discussion and Analysis ("MD&A") should be read in conjunction with the Consolidated Financial Statements. The terms "we," "us," "our," "Shaw" and "the Company" refer to Shaw Communications Inc. or, as applicable, Shaw Communications Inc. and its direct and indirect subsidiaries as a group. This MD&A is current as at November 27, 2019 and was approved by Shaw's Board of Directors.

Caution Concerning Forward Looking Statements

Statements included in this Management's Discussion and Analysis that are not historic constitute "forward-looking statements" within the meaning of applicable securities laws. They can generally be identified by words such as "anticipate", "believe", "expect", "plan", "intend", "target", "goal" and similar expressions (although not all forward-looking statements contain such words). All of the forward-looking statements made in this report are qualified by these cautionary statements. Forward looking statements in this Management's Discussion and Analysis include, but are not limited to statements relating to:

- future capital expenditures;
- proposed asset acquisitions and dispositions;
- expected cost efficiencies;
- financial guidance and expectations for future performance;
- business and technology strategies and measures to implement strategies;
- the Company's equity investments, joint ventures and partnership arrangements;
- expected growth in subscribers and the services to which they subscribe;
- competitive strengths;
- expected project schedules, regulatory timelines, completion/in-service dates for the Company's capital and other projects;
- expected number of retail outlets;
- timing of new product and service launches;
- expected number of customers using voice over LTE, or VoLTE;
- the deployment of: (i) network infrastructure to improve capacity and coverage and (ii) new technologies, including next generation wireless and wireline technologies such as 5G and IPTV, respectively;
- the cost of acquiring and retaining subscribers and deployment of new services;
- the restructuring charges (related primarily to severance and employee related costs as well as additional costs directly associated with the Company's Total Business Transformation ("TBT") initiative) expected to be incurred in connection with the TBT initiative;
- the anticipated annual cost reductions related to the Voluntary Departure Program ("VDP") (including reductions in operating and capital expenditures) and the timing of realization thereof;
- the impact that the employee exits will have on Shaw's business operations;
- outcome of the TBT initiative, including the timing thereof and the total savings at completion; and
- expansion and growth of Shaw's business and operations and other goals and plans.

Forward-looking statements are based on assumptions and analyses made by the Company in light of its experience and its perception of historical trends, current conditions and expected future developments as well as other factors it believes are appropriate in the circumstances as of the current date. The Company's management believes that its assumptions and analysis in this Management's Discussion and Analysis are reasonable and that the expectations reflected in the forward-looking statements contained herein are also reasonable based on the information available on the date such statements are made and the process used to prepare the information. These assumptions, many of which are confidential, include but are not limited to:

- general economic conditions;
- future interest rates;
- previous performance being indicative of future performance;
- future income tax and exchange rates;
- technology deployment;
- subscriber growth;
- incremental costs associated with growth in Wireless handset sales;
- pricing, usage, and churn rates;
- availability of devices;
- content and equipment costs;

- completion of proposed transactions;
- industry structure, conditions and stability;
- government regulation (and its impact or projected impact on the Company's business);
- access to key suppliers and third-party service providers required to execute on its current and long term strategic initiatives on commercially reasonable terms;
- retention of key employees;
- the TBT initiative being completed in a timely and cost-effective manner yielding the expected results and benefits, including: (i) resulting in a leaner, more integrated and agile company with improved efficiencies and execution to better meet Shaw's consumers' needs and expectations (including the products and services offered to its customers) and (ii) realizing the expected cost reductions;
- the Company being able to complete the employee exits pursuant to the VDP with minimal impact on business operations within the anticipated timeframes and for the budgeted amount;
- the cost estimates for any outsourcing requirements and new roles in connection with the VDP;
- the Company can gain access to sufficient retail distribution channels;
- the Company can access the spectrum resources required to execute on its current and long-term strategic initiatives; and
- the integration of acquisitions.

You should not place undue reliance on any forward-looking statements. Many factors, including those not within the Company's control, may cause the Company's actual results to be materially different from the views expressed or implied by such forward-looking statements, including, but not limited to:

- changes in general economic, market and business conditions;
- changing interest rates, income taxes, and exchange rates;
- changes in the competitive environment in the markets in which the Company operates and from the development of new markets for emerging technologies;
- changing industry trends, technological developments, and other changing conditions in the entertainment, information and communications industries;
- changes in laws, regulations and decisions by regulators that affect the Company or the markets in which it operates;
- changes in the value of the Company's equity investments, joint ventures and partnership arrangements;
- the Company's ability to execute its strategic plans and complete its capital and other projects by the completion date;
- the Company's ability to grow subscribers;
- the Company's ability to close key transactions;
- the Company's ability to have the spectrum resources required to execute on its current and long-term strategic initiatives;
- the Company's ability to gain sufficient access to retail distribution channels;
- the Company's ability to achieve cost efficiencies;
- the Company ability to retain key employees;
- the Company's ability to access key suppliers and third-party service providers required to execute on its current and long term strategic initiatives on commercially reasonable terms;
- the Company's ability to implement the TBT initiative as planned and realize the anticipated benefits therefrom, including: (i) TBT resulting in a leaner, more integrated and agile company with improved efficiencies and execution to better meet Shaw's consumers' needs and expectations (including the products and services offered to its customers) and (ii) the ability to realize the expected cost reductions;
- the Company's ability to complete employee exits pursuant to the VDP with minimal impact on operations;
- technology, privacy, cyber security and reputational risks;
- opportunities that may be presented to and pursued by the Company;
- the Company's ability to recognize and adequately respond to climate change concerns or public and governmental expectations on environmental matters;
- the Company's status as a holding company with separate operating subsidiaries; and
- other factors described in this report under the heading "Known events, trends, risks and uncertainties".

The foregoing is not an exhaustive list of all possible factors.

Should one or more of these risks materialize, or should assumptions underlying the forward-looking statements prove incorrect, actual results may vary materially from those described herein.

The Company provides certain financial guidance for future performance as the Company believes that certain investors, analysts and others utilize this and other forward-looking information in order to assess the Company's expected operational and financial performance and as an indicator of its ability to service debt and pay dividends to shareholders. The Company's financial guidance may not be appropriate for this or other purposes.

This Management's Discussion and Analysis provides certain future-oriented financial information or financial outlook (as such terms are defined in applicable securities laws), including the financial guidance and assumptions disclosed under "Outlook," the expected annualized savings to be realized from the VDP and the total anticipated TBT restructuring costs for fiscal 2020. Shaw discloses this information because it believes that certain investors, analysts and others utilize this and other forward-looking information to assess Shaw's expected operational and financial performance, and as an indicator of its ability to service debt and pay dividends to shareholders. The Company cautions that such financial information may not be appropriate for this or other purposes.

Any forward-looking statement speaks only as of the date on which it was originally made and, except as required by law, the Company expressly disclaims any obligation or undertaking to disseminate any updates or revisions to any forward-looking statement to reflect any change in related assumptions, events, conditions or circumstances. All forward-looking statements contained in this Management's Discussion and Analysis are expressly qualified by this statement.

ABOUT OUR BUSINESS

At Shaw, we are focused on delivering sustainable long-term growth and connecting customers to the world through a best-in-class seamless connectivity experience. After undergoing a period of significant and transformative change, our focus has shifted to driving operational efficiency and executing on our strategic priorities through the delivery of an exceptional customer experience and a more agile operating model. In fiscal 2019, our strategic focus remained unchanged as we believe that we are well positioned with our current set of complementary assets to meet the increasing needs and demands for connectivity by our customers and deliver long-term, sustainable growth.

Wireline

Shaw is one of the largest providers of residential communication services in Canada

Our Consumer division connects people and families in British Columbia, Alberta, Saskatchewan, Manitoba and Northern Ontario through our FibrePlus network

Shaw Direct is one of two licensed satellite Video services available across Canada

Our Business division leverages the same network infrastructure as Consumer with a product suite targeting small and medium-sized businesses

Wireless

Freedom Mobile currently operates in Ontario, Alberta and British Columbia.

Over 18 million Canadians reside within our current mobile wireless network service area

In the following sections we provide selected financial highlights and additional details with respect to our strategy, our Wireline and Wireless divisions, our network and our presence in the communities in which we operate.

Shaw is traded on the Toronto and New York stock exchanges and is included in the S&P/TSX 60 Index (Trading Symbols: TSX – SJR.B, SJR.PR.A, SJR.PR.B, NYSE – SJR, and TSXV – SJR.A). For more information, please visit www.shaw.ca.

Select Financial and Operational Highlights

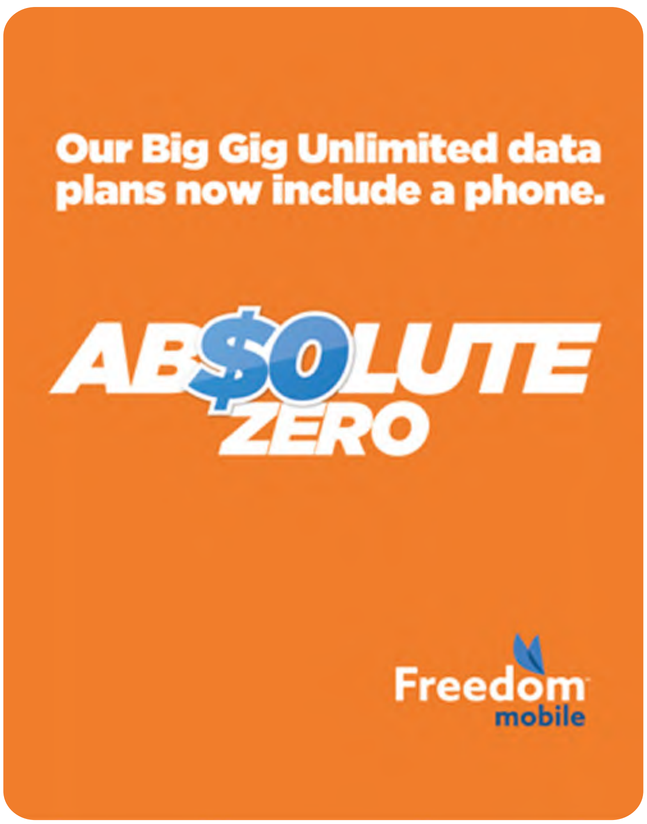
Through an evolving operating and competitive landscape our consolidated business has delivered stable and profitable results in fiscal 2019.

Basis of presentation

On August 1, 2017, the Company sold 100% of its wholly owned subsidiary ViaWest, Inc. and its subsidiaries (collectively, “ViaWest”), previously reported under the Business Infrastructure Services division, to Peak 10 Holding Corporation (“Peak 10”).

On September 15, 2017, the Company sold a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation within the Company’s Business segment, to Omnitracs Canada. The Company determined that the assets and liabilities of the Shaw Tracking business met the criteria to be classified as a disposal group held for sale for the period ended August 31, 2017.

Accordingly, the operating results and operating cash flows for the previously reported Business Infrastructure Services division and Shaw Tracking business (an operating segment within the Business division) are presented as discontinued operations separate from the Company’s continuing operations. The Business Infrastructure Services division was comprised primarily of ViaWest. The remaining operations of the previously reported Business Infrastructure Services segment and their results are now included within the Business segment. This Management’s Discussion and Analysis (“MD&A”) reflects the results of continuing operations, unless otherwise noted.



2019 Total Revenue

$5.3 BILLION

Free cash flow [2]	**538**	385	39.7	411	438	(6.2)

(1) Fiscal 2018 reported figures have been restated applying IFRS 15 and also reflect a change in accounting policy related to the treatment of digital cable terminals ("DCTs") to record them as property, plant and equipment rather than inventory upon acquisition. Comparative fiscal 2017 results have not been restated. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2018.

(2) Refer to key performance drivers.

(3) As of the date ViaWest met the criteria to be classified as held for sale, the Company ceased amortization of non-current assets of the division, including property, plant and equipment, intangibles and other. Amortization that would otherwise have been taken in the period ended August 31, 2017, before tax, amounted to $16.

(4) Funds flow from operations is before changes in non-cash working capital balances related to operations as presented in the Consolidated Statements of Cash Flows.

(1) The Company reduced the August 31, 2019 ending balance by 10,914 due to account cancellations dating back to 2016 previously not reported. The cancellations were comprised of 3,821 postpaid and 7,093 prepaid subscribers. In the Company's view, the cancellations were not significant in relation to previously reported amounts.

Our Strategy

At Shaw, we are focused on delivering sustainable long-term growth by connecting customers to the world through a best-in-class seamless connectivity experience by leveraging our world class converged network. After undergoing a period of significant and transformative change, our focus has shifted to driving operational efficiency and executing on our strategic priorities through delivery of an exceptional customer experience and a more agile operating model. In fiscal 2019, our strategic focus remained unchanged as we believe that we are well positioned with our current set of complementary assets to meet our customers' increasing needs and demands for connectivity and deliver long-term, sustainable growth.

Fiscal 2019 was another exciting year of strong performance from our Wireless business. Through thoughtful and strategic investments and spectrum deployment, we have created a stronger, higher quality network that enables us to deliver an improved customer experience. Through our popular Big Gig Unlimited and Absolute Zero Plans, which leverage our continuous network quality improvements and additional points of distribution, we were able to deliver both subscriber growth of over 266,000 (net additions), ABPU improvement of 6.3% (to $41.67) and service revenue growth of approximately 23% (to over $690 million) in the year. Since the acquisition of Freedom Mobile in 2016, our subscriber base has grown by approximately 65% to over 1.65 million subscribers at the end of fiscal 2019, which is a true testament to Freedom Mobile delivering a differentiated and sustainable value proposition to customers.

In fiscal 2019, investment in our wireless network was a top priority and throughout the year, we continued to roll out our 700 MHz spectrum to a significant portion of sites in Calgary, Edmonton, and Vancouver as well as the greater Toronto area ("GTA"). At the end of fiscal 2019, approximately 70% of the build is complete in Western Canada, with the remaining deployment of the 700 MHz expected to continue throughout fiscal 2020. Additionally, through the 600 MHz spectrum auction which concluded in April 2019, we successfully acquired 11 paired blocks of 20-year 600 MHz spectrum across our Wireless footprint. The 600 MHz spectrum will not only enable us to vastly improve our current LTE service but will also serve as a foundational element of our 5G strategy.

In fiscal 2019, we also expanded our wireless network with the launch of 19 new markets in British Columbia, Alberta and Ontario. Our wireless operating footprint now covers over 18 million people, or approximately 50% of the Canadian population, in some of Canada's largest urban centres, as well as many smaller communities throughout British Columbia, Alberta and Ontario.

In our Wireline division, we continued to leverage our broadband network by introducing new and improved services to our residential and business customers that align with our focus on profitable growth and stability. In fiscal 2019, we doubled the speeds of our Internet 150 and 300 to Internet 300 and 600. We also introduced Shaw BlueCurve to our residential customers, through the BlueCurve Gateway, BlueCurve Home App, and BlueCurve Pods (that create a mesh Wi-Fi network that reduces dead spots), as well as an enhanced and more cost-effective customer Video experience through internet protocol television, or IPTV. Both initiatives support our ongoing transformation, specifically the Total Business Transformation ("TBT"), which seeks to shift customer interactions to digital platforms, deploy self-help and self-install programs and streamline the operations that build and service our network. (see "Total Business Transformation"). At the end of fiscal 2019, approximately 45% of our customers elected to self-install their services. As part of this multi-year journey, we will continue to build and transition into a new digital operating service model, improving the customer experience while significantly reducing costs in the Wireline division.

In addition to strengthening the long-term strategic positioning of the Company over the last several fiscal years, we have maintained a strong balance sheet that supported the significant level of investment required for long-term growth while remaining committed to an investment grade credit rating and long-term free cash flow growth that supports our initiatives to return capital to our shareholders.

Total Business Transformation

In the second quarter of fiscal 2018, we introduced TBT, a multi-year initiative designed to reinvent Shaw's operating model to better meet the evolving needs and expectations of our consumers and businesses by optimizing the use of resources, maintaining and ultimately improving customer service, and by reducing staff. The three key elements of TBT were to: 1) shift customer interactions to digital platforms; 2) drive more self-install and self-serve; and, 3) streamline the operations that build and service our networks. As part of the TBT initiative, we have reduced input costs, consolidated functions, and streamlined processes, which led to operational improvements across the business allowing us to evolve into a more efficient organization.

As a first step in the TBT, a voluntary departure package (the "VDP package") was offered to approximately 6,500 eligible employees representing approximately 50% of our total workforce. The outcome of the voluntary departure program, or VDP had approximately 3,300 employees or 25% of our total workforce accepting the VDP package at that time. The Company's execution of the VDP continued in fiscal 2019, resulting in approximately 1,000 employees exiting the Company for a total of approximately 2,300 employees since inception. In fiscal 2019, approximately 90 employees either rescinded their acceptance of the VDP package with the approval of the Company or declined their package in order to expedite their departure date. As of November 15, 2019, approximately 2,700 employees had departed the Company, which represents approximately 84% of the employees that accepted the VDP package. The Company expects to complete the VDP in fiscal 2020.

The anticipated annualized savings that will be achieved in fiscal 2020 through the TBT initiative (specifically VDP savings) are expected to be approximately $200 million (approximately $125 million attributable to operating expenses and approximately $75 million attributable to capital expenditures (i.e. labour costs that can be identified or associated with a capital project)) which is materially in line with the original estimate of $215 million. In fiscal 2019, VDP related cost reductions totaled $135 million of which $98 million were attributed to operating expenses and $37 million attributed to capital expenditures.

In connection with the VDP and various other TBT activities, the Company incurred a total restructuring charge of approximately $446 million in fiscal 2018, primarily related to severance and other employee related costs, as well as additional costs directly associated with the TBT initiative. While the restructuring charge has been recognized in fiscal 2018, the actual timing of employee exits are expected to occur over a 24-month period and payments to employees over a 34-month period due to the ability of the eligible employees to defer VDP payments until the first day of the next calendar year following their departure. As the VDP approaches completion, the total restructuring charge was reduced by $9 million in fiscal 2019 and is now expected to total approximately $437 million due to certain individuals rescinding their acceptance of the VDP package with the approval of the Company or declining their VDP package to expedite their departure date. As of August 31, 2019 and November 15, 2019, approximately $292 million and $325 million, respectively, has been paid with the remaining costs expected to be paid out over the next 16 months.

As of the date of this report, both VDP and TBT remain materially on plan in terms of both total restructuring costs and cost savings with limited operational impact to-date due to successful mitigation strategies and execution of our transformation program, which streamlined the way we work and serve our customers in order to provide sustainable operational efficiencies. See also "Restructuring costs", "Caution Concerning Forward Looking Statements" and "Risks and Uncertainties" for a discussion of the TBT, the VDP and the risks and assumptions associated therewith.

People and Culture

As a leading Canadian connectivity company, we are transforming our culture and making purposeful investments in our people which enables us to deliver on our corporate and operational strategy. Building off a foundation of strong leadership and talent, our commitment to a diverse employee base ensures business decisions are made with our customers' needs at the forefront to create a seamless connectivity experience.

Through various inputs and interactions, as well as listening to our employees through our recurring PeoplePulse surveys, we continue to focus on the following three imperatives to achieve our people and culture objectives:

1) **Talent** – Elevating our people by giving them personalized development tools, skills, and the knowledge they need to succeed today and in the future, as well as proactively future-proofing skill gaps and keeping an eye on emerging talent needs.

2) **Leadership** – Investing in our leaders by enhancing their capabilities to drive performance, support our culture and inspire our people.

3) **Culture** – A key driver to our success and competitive advantage stems from our corporate culture and putting our people first to ensure we deliver on exceptional employee and customer experiences. As well, our commitment to sustainability and our environment ensures we are delivering value in the best ways.

Our employees are the source of everything amazing at Shaw and are committed to delivering an exceptional and seamless connectivity experience for our customers and the communities we serve.

Our World-Class Converged Network

As our customers spend more of their time in the digital environment, they increasingly need and expect an always-on, seamless connectivity experience, which requires multiple integrated technology platforms. With our unique FibrePlus (our hybrid fibre-coax network comprised of fibre and coaxial cable), Wi-Fi and LTE networks, we have the opportunity to continue to innovate in response to changing consumer needs and technological developments. The world of connectivity will change in the coming years as wireline broadband technologies develop, standards for 5G are set, and wireless and wireline platforms converge. We continue to further integrate our wireline and wireless networks in order to realize additional capital expenditure synergies and customer benefits.

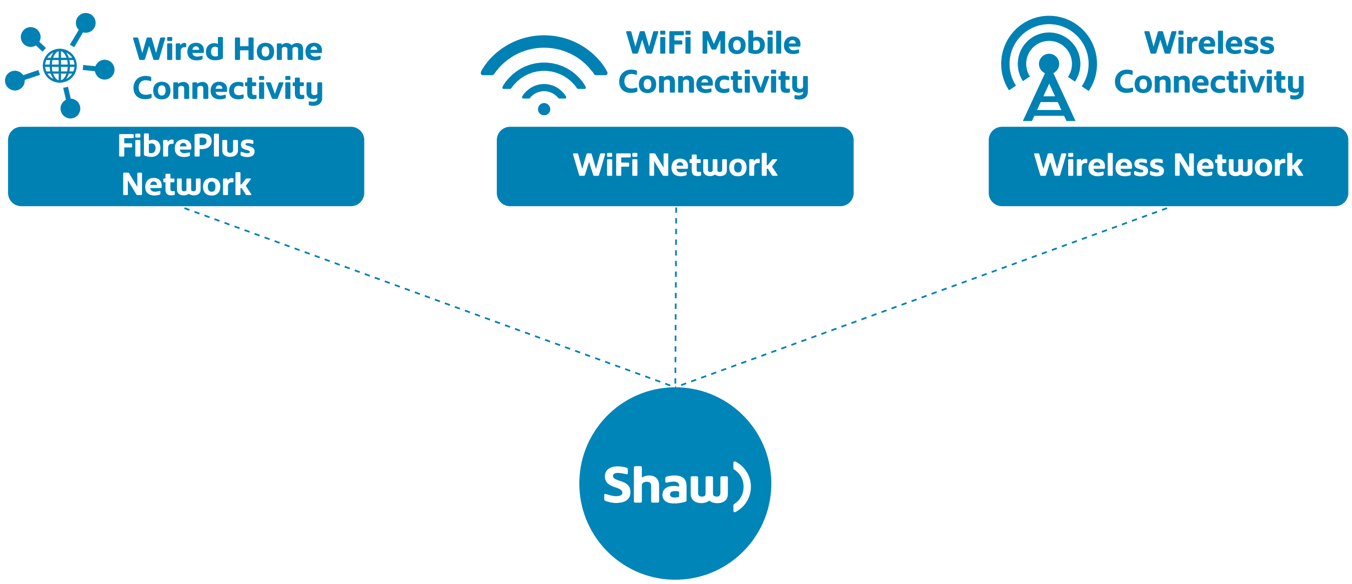
Global Technology Leaders

In order to efficiently secure and deliver leading technology for our customers – both for today and tomorrow – we recognize that we must participate in global scale initiatives through partnerships with best-in-class service providers. This ensures that the technology we adopt and invest in is, and continues to be, leading-edge in the global communications industry.

This approach allows us to leverage our current assets, where we have strength and expertise, while also ensuring our capital investments are aligned with industry leaders to support the development, maintenance, and advancement of new technology where it is impractical for us to do so on a standalone basis. This allows us to direct our capital resources and further our commitment to continue the advances in innovation, performance, and reliability of our products and services. In addition, this strategic approach to our business gives us the opportunity to better manage costs by participating in opportunities on a global scale.

We have a series of significant and strong relationships with global leaders on the following initiatives:

- Shaw BlueCurve, a technology that provides customers with greater control over their home Wi-Fi experience (through the BlueCurve Home App and Pods) and supports IPTV, is powered by the BlueCurve Gateway (XB6) DOCSIS 3.1 advanced Wi-Fi modem developed by Comcast (see discussion under "Consumer")
- the deployment of Freedom Mobile's LTE network, which was designed, planned and deployed by NOKIA, a global leader in mobile wireless technology and solutions (see discussion under "Wireless")
- our "Smart" suite of business services that includes SmartWiFi, SmartSecurity and SmartSurveillance, in collaboration with Cisco's Meraki and SmartVoice, in collaboration with Broadsoft (see discussion under "Business")



WIRELESS

Our Wireless division, through Freedom Mobile, provides wireless voice and data services through an expanding and improving wireless network

WIRELINE - CONSUMER

Our Wireline - Consumer division connects consumers in their homes and on the go with broadband Internet, Shaw Go WiFi, video (including BlueCurve TV) and traditional home phone services

WIRELINE - BUSINESS

Our Wireline - Business division provides business customers with a full suite of connectivity and managed services, including Internet, data, WiFi and phone, which enables them to focus on building their business

Wireless and Wireline Performance

In fiscal 2019, we continued to make progress on our TBT initiatives by improving the customer experience across both our Wireline and Wireless divisions while, at the same time, removing significant operating and capital costs from the business. Through our focus on execution, we are growing our wireless and broadband customers, identifying sustainable cost savings in our core Wireline business, and making the appropriate investments to capitalize on future growth. The disposal of our entire equity investment in Corus Entertainment Inc. ("Corus") in the year further solidified our balance sheet and allows us to continue our transformation into an agile, lean and digital-first organization that is focused on providing a seamless connectivity experience that meets the needs of its customers now and into the future. With our successful acquisition of 600 MHz spectrum across our wireless operating footprint, we can continue to improve our LTE experience, provide affordable options for our customers, and lay the foundation for 5G services.

(1) Fiscal 2018 reported figures have been restated applying IFRS 15. The increase for Fiscal 2018 reflects the change from comparative fiscal 2017 results that have not been restated. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2018.

(2) Certain figures have been adjusted to correct an immaterial, inadvertent overstatement of previously reported wireless service revenue for the year ended August 31, 2019 of $7 million.

(3) Refer to key performance drivers.

Our Wireless division was formed following the acquisition of Freedom Mobile in March 2016. This acquisition transformed Shaw into a leading Canadian connectivity company, adding the critical wireless component to our converged network. Our Wireless division currently operates in Ontario, Alberta and British Columbia, offering the leading alternative for mobile services to the three national wireless incumbent carriers.

Launch of Big Gig Unlimited, Absolute Zero, and Prepaid Plans

In fiscal 2018, Freedom Mobile, by leveraging its AWS-3 LTE Network, launched the Big Gig data plans, targeting a data-centric customer with 10 GB of data for only $50 per month – unlike any other plan offered in Canada at that time. Building off the success of our Big Gig Plans, in fiscal 2019, we launched the Big Gig Unlimited and Absolute Zero campaigns in response to the competitive and dynamic wireless environment. Paired with the most popular devices, and ongoing improvements in the strength and capacity of our network, our Big Gig Unlimited and Absolute Zero plans, continue to disrupt the wireless market by providing Canadians with a better, more affordable option when choosing a wireless service provider.

Freedom Mobile customers can either bring their own device to the network or participate in one of Freedom Mobile's discretionary wireless handset discount plans – MyTab, MyTab Boost, and Absolute Zero. MyTab allows Freedom Mobile customers to pay a discounted price for a handset upfront with no predetermined monthly incremental charge. My Tab Boost allows Freedom Mobile customers to receive a further reduction on the upfront payment for a handset which could be as low as $0 if they pay a predetermined incremental amount on a monthly basis. The Absolute Zero plan allows Freedom Mobile customers to receive an eligible handset for $0, with no predetermined incremental amount payable each month, with a two-year standard commitment.

In the third quarter of fiscal 2019, Freedom Mobile introduced new prepaid service plans that better aligned with current market offers which resulted in a significant year-over-year improvement in prepaid market performance.

Distribution Network

During fiscal 2018, we expanded our retail network by entering into distribution agreements with Loblaws and Walmart. Freedom Mobile products and services are currently being distributed in approximately 100 Loblaws' "The Mobile Shop" locations and approximately 140 Walmart locations throughout Ontario, Alberta and British Columbia. In fiscal 2019, Freedom Mobile remodeled its most prominent corporate branded stores and finalized an agreement with a third national retail partner, Mobilinq, to launch prepaid services in approximately 50 of its stores. When combined with our existing corporate and dealer store network, Freedom Mobile ended fiscal 2019 with over 650 retail distribution locations.

Network Upgrades

Supporting our subscriber and revenue growth, and our improved Wireless postpaid churn results, are the significant investments in our network and customer service capabilities. In fiscal 2019, we continued to deploy our Extended Range LTE network in Calgary, Edmonton, Vancouver, and the GTA, which leverages our 700 MHz spectrum, to provide customers with improved in-building coverage as well as extending service at the edge of the current area. At the end of fiscal 2019, approximately 70% of the build is complete in Western Canada, with the remaining deployment of our 700 MHz spectrum expected to continue throughout 2020. In fiscal 2019, Freedom Mobile also migrated its core network to the CloudBand Infrastructure Software platform, which is the latest generation of cloud core architecture from Nokia and a key building block of 5G. With our successful acquisition of the 600 MHz spectrum across our entire wireless operating footprint, we will continue to improve our network experience and provide affordable options for our customers.

5G Technical Trials

In fiscal 2019, we completed extensive 5G pre-commercial trials in the 3.5 GHz and 28 GHz frequency bands in collaboration with Nokia, NovApex Technologies, Keysight Technologies and PCTEL. The trials were conducted at three Freedom Mobile cell sites in suburban Calgary and included both stationary and mobile driving testing.

- The 28 GHz spectrum band testing demonstrated speeds of up to 2.1 Gbps were possible with pre-commercial user devices which could potentially enable a new range of applications including augmented and virtual reality. However, as expected, the results showed that mobile coverage was generally limited to 100–300m from the cell site which makes the 28 GHz spectrum band best suited for hot spot areas with high user density (e.g. outdoor plazas, stadiums, and shopping areas).

- Conversely, stationary and drive test results at the 3.5 GHz spectrum band indicate that seamless mobile coverage is possible using existing sites with download speeds of up to 340 Mbps.
- Performance testing results also showed that significant reductions in latency were possible with 5G with median round trip latencies of 8.5 milliseconds measured at 28 GHz spectrum band, which is approximately ¼ of the time on existing LTE networks.

Both the 3.5 GHz and 28 GHz frequency bands are planned to be auctioned by Innovation, Science and Economic Development ("ISED") in 2020 and 2021, respectively. We are currently conducting additional pre-commercial 5G trials in fiscal 2020 in two key areas: (1) 5G backhaul over DOCSIS, and (2) 5G in the 600 MHz frequency band. Backhauling 5G traffic over DOCSIS offers the prospect of significantly reducing the time and cost to deploy 5G networks. 5G in the 600 MHz frequency band offers lower latency, improved device connectivity, and higher speeds compared to LTE.

Subscriber and ABPU Growth

In fiscal 2019, our Wireless division delivered strong, high quality subscriber growth while continuing to improve operating margins and lower churn. Over 18 million Canadians or 50% of the Canadian population reside within our current mobile wireless network service area. Our Wireless division's customer base continues to grow, with over 1.65 million customers, including over 266,000 net new customers added in fiscal 2019. The growth of Freedom Mobile's subscriber base was complemented, on an annual basis, by an ABPU improvement of 6.3% (to $41.67) over fiscal 2018, reflecting the increased number of customers subscribing to higher value plans and purchasing devices through Freedom Mobile.

Since the acquisition of Freedom Mobile, we have made significant investments and improvements to scale the business. We have firmly established Freedom Mobile as the industry innovator and recognized champion of wireless affordability for Canadians. Through years of thoughtful and strategic capital investing, we are expanding and improving our facilities-based wireless network that is capable of meeting the evolving needs of our customers. We are excited by the growth potential of the Wireless business, and, as shown by our results this year, we are committed to delivering a strong and competitive wireless alternative that will benefit all Canadians.

Wireless subscriber activity is influenced by the launch of popular new mobile devices, seasonal promotional periods and the level of competitive intensity. Our first and fourth quarters typically experience higher volumes of Wireless competitive activity as a result of back to school and holiday season-related consumer behaviour. Aggressive promotional offers are often advertised during these periods which can impact our Wireless subscriber metrics. Shaw's Wireless business does not depend on any single customer or concentration of customers.

1 Assumes Canadian population of 35 million (https://www.statcan.gc.ca/pub/12-581-x/2017000/pop-eng.htm).

In our Wireline business, we have cemented our status as a technology leader with our BlueCurve and SmartSuite products. Through our digital transformation, we have made it easier to interact with our customers and are leveraging insights from customer data to better understand their preferences so we can provide them with the services they want. We are shifting customer interactions to digital platforms and driving more self-help, self-install and self-service. At the end of fiscal 2019, 45% of our customers elected to self-install their services. We continue to streamline and simplify manual processes that improve the customer experience and day-to-day operations for our employees. This focus has played an instrumental role in executing our overall VDP, which is approximately 84% complete as at November 15, 2019.

Our focus remains on the execution and delivery of stable and profitable Wireline results. This includes growing Internet subscribers, primarily through two-year ValuePlans, and attracting and retaining high quality Video subscribers which support our Consumer profitability objectives.

Our Consumer division provides residential customers with leading connectivity experiences on two platforms.

- **Wireline Services** – we provide broadband Internet, Shaw Go WiFi, Video, and Phone services to customers that are connected to our local and regional FibrePlus network in British Columbia, Alberta, Saskatchewan, Manitoba and Northern Ontario
- **Satellite Services** – we provide Video by satellite to customers across Canada

Wireline Internet, Video and Phone Services

Shaw is one of the largest providers of residential communications services in Canada. Our Consumer division connects our customers in British Columbia, Alberta, Saskatchewan, Manitoba and Northern Ontario through our FibrePlus network with broadband Internet, Shaw Go WiFi, Video, and Phone services to meet their needs at home and on the go.

As our customers' needs evolve, we continue to focus on innovative value-added service offerings. Our customer-centric strategy is designed to deliver a quality service experience, value and choice for our customers.

Leveraging our strategic partnership with Comcast, we continued to roll-out an advanced series of technologies catered to serve an increasingly connected Canadian population beginning with Shaw BlueCurve, our next generation technology which features the BlueCurve Gateway, BlueCurve Home App, BlueCurve Pods, BlueCurve TV, and BlueCurve TV App. In connection with the BlueCurve launch, we introduced a new brand advertising platform representing our shift to a modern Shaw. Wrapped under the campaign line "You Got It", our BlueCurve platform puts our customers at the centre of it all – by showcasing the way our products and services fuel their connected lives.

Internet

As a leading Canadian connectivity company, we believe that the Internet plays a fundamental role in connecting our customers to the world and everything in it. We recognize the importance of providing reliable, affordable and worry-free connectivity to meet the ever-increasing appetite of our customers for discovery, social connectivity and streaming.

In 2019, we continued to deploy our Data over Cable Interface Specification version 3.1 ("DOCSIS 3.1") advanced Wi-Fi modem (XB6), powered by Comcast, which enables faster internet speeds, supports more devices and ensures a stronger in-home internet connection. Building on our network advantage and the success of our Internet offerings, in the first quarter of 2019, we introduced Internet 600 – doubling our fastest residential speed with Unlimited Data – which is available across virtually all of our Western Canadian cable footprint.

As part of the Internet 600 launch, we doubled speeds of our top residential tiers, Internet 150 and 300 to Internet 300 to 600, respectively. Our Internet services now ranges from Internet 50 to Internet 600, giving customers that live within our cable footprint choice, value, and reliable connectivity. As Canadians continue to add more devices and use more data, Internet 600 with Unlimited Data allows our customers to stream, game, make video calls and surf the web all at the same time, with improved buffering time and without incurring additional data charges.

In April 2019, the Company unveiled Shaw BlueCurve, a technology that provides customers with greater control over their home Wi-Fi experience through the BlueCurve Home App and expanded Wi-Fi coverage with BlueCurve Pods. The launch of Shaw BlueCurve technology aligns with the Company's TBT initiative regarding a more agile, innovative, and customer-centric approach to modernizing all aspects of its operations, including a more efficient delivery of products and services. In particular, the BlueCurve technology supports an easy-to-use self-install program which allows us to differentiate our broadband service by saving our customers' time so they can get connected quickly.

The BlueCurve Home App is the latest innovative in-home consumer product that Shaw has brought to market through its partnership with Comcast, and it is available with Shaw's BlueCurve Gateway modem – the hub of customers' in-home content and connectivity experience. The BlueCurve Home App provides an intuitive way for our customers to manage their in-home Wi-Fi, including time controls, user-controls, usage reporting, troubleshooting and self-installation. BlueCurve Pods are simple plug-in devices which enable Wi-Fi to reach every corner of our customers' homes by creating a mesh Wi-Fi network that reduces dead spots. The BlueCurve Pods can be easily self-installed through the BlueCurve Home App, plug directly into indoor electrical outlets, and can be easily moved to suit customers' distinct coverage needs.

In addition to our reliable service enhanced by our BlueCurve experience, a key value-added differentiator for Shaw Internet customers is access to our carrier-grade Shaw Go WiFi network, which continues to show growth in the number of devices connecting to our network. Over 3.6 million devices have authenticated on our Shaw Go WiFi network and there are over 100,000 access points used by our customers in coffee shops, restaurants, gyms, malls, public transit and other public spaces covering locations from British Columbia to Ontario.

In fiscal 2019, we continued the focus on our 2-year Value Plans, which provide customers with price certainty over the term and has resulted in lower churn rates on those plans. Due to the strength of our FibrePlus network and our focus on improving execution, we added approximately 35,000 Internet customers in fiscal 2019, including 11,400 Internet customers in the fourth quarter.

Video

Our wireline Video services continue to offer a wide selection of standard definition ("SD") and high definition ("HD") television channels with access to one of Western Canada's largest selection of on-demand titles, including access to both free and paid movies, television shows and music content.

Our Video customers can choose pre-selected packages with the most popular channels or start with a basic primary package and then add additional channels from a variety of sports, family and other theme specialty packages, as well as individual channels offered on a channel-by-channel basis.

Our flagship Video offering is the Comcast Xfinity-based Video service, branded as Shaw BlueCurve TV, our next generation of TV service (replacing our BlueSky TV service). Blue Curve TV is available across most of our western Canadian cable footprint. BlueCurve TV provides a superior and unique content search experience – a single voice command on the remote returns content available for viewing from live TV, Video On Demand, YouTube, Crave, Netflix, Amazon Prime, and other OTT platforms (where subscribed) – it's all in one place.

In connection with the BlueCurve TV launch, we also upgraded our Video packages to provide a simplified offering for Canadians with improved channels and entertainment value for our customers that bundled BlueCurve TV and Internet services.

Our Shaw BlueCurve TV customers also have access to the X1 based "BlueCurve TV App", our next generation TV app (replacing our Free Range TV app), which is free for all Shaw Video (Cable and Shaw Direct) customers. The BlueCurve TV App makes available, over the Internet and mobile devices, a large library of content, including current TV shows, movies, sports, and family content. In addition, the BlueCurve TV App allows BlueCurve TV customers to access to their PVR recordings and download any recordings and take with them on the go.

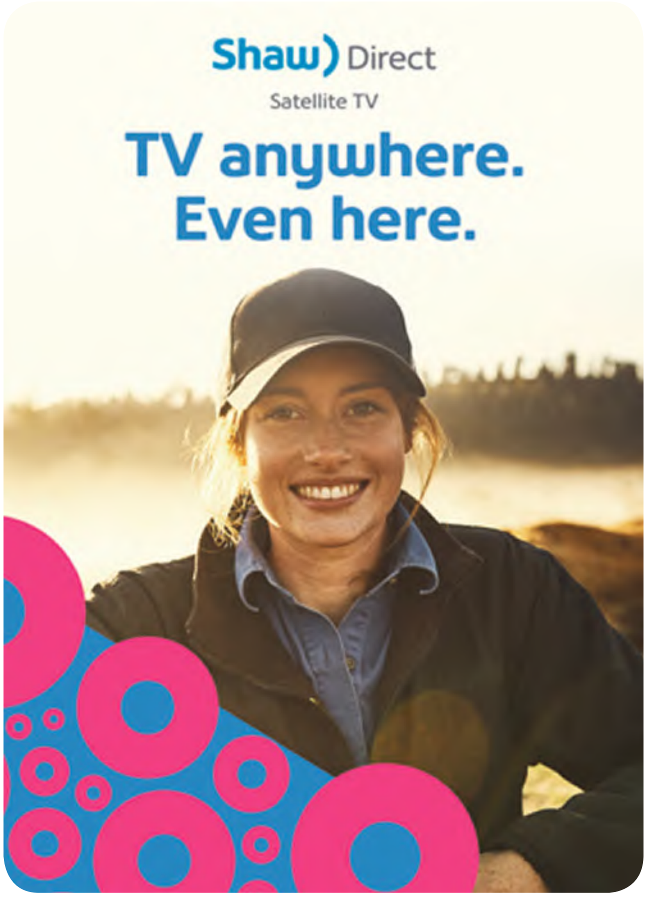
Building on the BlueCurve gateway modem, in May 2019, we began to seamlessly roll-out our IPTV service on a market-by-market basis providing Canadians with additional functionality on the BlueCurve TV platform, including access to a 4K wireless player which allows them to watch TV in any part of their home. As of August 31, 2019, we successfully launched our IPTV service across 70% of our Western Canadian footprint with the full roll-out expected to be complete over the next few months.

Phone

Our Phone service offers a full-featured residential digital telephone service through our wireline network as a complement to our broadband Internet and Video services.

Satellite Services

Shaw Direct connects families across Canada with Video and audio programming by satellite. Shaw Direct customers have access to over 550 digital video channels (including over 300 HD channels) and thousands of on-demand, pay-per-view and subscription movie and television titles.



Similar to our wireline Video service, our satellite customers can select a primary TV package that includes a set number of base channels plus a selection of add-on channels. Shaw Direct customers can further customize their TV packages by adding additional theme packs, premium packages and individual channels.

Shaw Direct is one of two licensed satellite Video services currently available across Canada. While Shaw Direct has many customers in urban centres, market penetration for satellite Video is generally stronger in rural areas. The service is marketed through Shaw Direct and a nation-wide distribution network of third-party retailers.

We are committed to securing and delivering leading technology for our customers. Currently, we have access to three satellites that enable us to enhance our offerings with nearly all HD programming and improved service quality. During fiscal 2019, we completed the final phase to move all Video services from MPEG-2 to MPEG-4 to improve the operational efficiencies of our transponders. We expect to be able to offer all carried and available English and French services in HD by early 2020.

A listing of our satellite capacity is provided below as at August 31, 2019.

Shaw Satellite Transponders

Transponders	Interest	Nature of Satellite
Anik G1	16 xKu-band	Leased
Anik F2 [1]	16 Ku-band 6 Ku-band	Owned[2][3] Leased
Anik F1R	28 Ku-band[3] 1 C-band	Leased Leased

[1] On September 15, 2017, the Company sold a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation, to Omnitracs Canada. As part of the transaction, the leases to access the Anik F2 2 Ku-band (partial) and the Intelsat Galaxy 16 1 Ku-band (partial) were assigned to Omnitracs Canada.

[2] Effective October 1, 2019, the Company transferred its interest in the 16 Anik F2 transponders which it owned, back to Telesat.

[3] Also effective October 1, 2019, the Company adjusted its satellite traffic on the Anik F1R and Anik F2 satellites, and renewed its capacity service agreements on 6 Anik F1R Ku-band transponders and 16 Anik F2 Ku-band transponders until the effective end-of-life date of such satellites.

While financial results for the Consumer division are generally not subject to significant seasonal fluctuations, subscriber activity may fluctuate from one quarter to another. Subscriber activity may also be affected by competition and Shaw's promotional activity. Further, satellite subscriber activity is modestly higher around the summertime when more subscribers have second homes in use. Our Consumer Video business does not depend on any single customer or concentration of customers.

BUSINESS

Shaw Business provides connectivity solutions to business customers of all sizes, from home offices to medium and large-scale enterprises, leveraging our business grade FibrePlus and fibre-to-the-premise (“FTTP”) networks.

The range of services offered by Shaw Business includes:

Fibre Internet

- Scalable, symmetrical fibre Internet solutions from 10 Mbps to more than 10 Gbps.

Business Internet

- On March 7, 2019, Shaw Business launched its fastest internet tier in select areas, with download speeds of up to 1 Gbps paired with upload speeds of up to 125 Mbps, which allows businesses of all sizes to get the bandwidth they need and ensure their employees, customers and guests can get the most out of their connectivity experience.
- In the third quarter of fiscal 2019, Shaw Business:
    - upgraded its Internet 25 and other lower tier speed customers to Internet 75 (with download speeds of up to 75 Mbps paired with uploads speeds of up to 15 Mbps).
    - doubled the speeds of eligible Shaw Business Internet and Smart Wi-Fi 150 and 300 customers to Shaw Business Internet and Smart WiFi 300 and 600 (with download speeds of up to 300 Mbps and 600 Mbps, respectively paired with upload speeds of up to 20 Mbps and 30 Mbps, respectively). Shaw Business Internet and Smart WiFi 150 and 300 customers were notified about their eligibility to receive this complimentary speed increase and a new Hitron DOCSIS 3.1 modem.
    - all these packages offer unlimited data usage, one dynamic and one static IP address, and are available on month-to-month, 2, 3, and 5-year contract terms.

Data Connectivity – provides secure private connectivity for multiple locations

- In January 2019, Shaw Business launched an enhanced data service, Ethernet over DOCSIS (EoD), which offers symmetrical data speeds of up to 100 Mbps making Shaw the first multiple system operator in North America to offer these symmetrical speeds over a hybrid fibre coaxial network.
- Leveraging our hybrid fibre-coaxial network, or FibrePlus network, we have extended this EoD service to over 300,000 business locations in Western Canada.

Voice Solutions

- Shaw Business offers a range of voice solutions from traditional analog to digital Business Phone and robust, fully-managed voice systems with unified communications functionality.
- Shaw Business Digital Phone offers more than 18 business features including multi-line hunting, voicemail to email and an included toll-free number.
- in addition to competitive long-distance rates across the globe and month-to-month uncontracted rates, Shaw Business phone customers have 2, 3, and 5-year contract options to provide cost consistency for their business.

Video

- Video and audio service offering content for public viewing.
- Similar to our consumer Video service, Business cable and satellite customers can choose from a selection of primary channel packages and may add from a variety of sports, family and other theme specialty packages, and a number of individual channels that we offer on a channel-by-channel basis.
- In August 2019, Shaw Business launched a Video Casting solution for hospitality giving guests the ability to securely and seamlessly cast video content from their personal devices to a guest room television. This property management solution streamlines the guest authentication experience and enables hoteliers to monetize the Wi-Fi solution.

Broadcast Video

- Delivers high-quality Video to service providers across North America in real time.

Shaw) Business

Shaw Business has positioned itself as a trusted business advisor by taking care of all aspects of its customers' increasingly complex always-on connectivity requirements so they can focus on growing their business. As part of this strategy, Shaw collaborates with global scale technology leaders to offer its "Smart" suite of easy to use and flexible managed business communications solutions. The Smart suite of services provides cost-effective enterprise grade managed IT and communications solutions that are increasingly valued by businesses of all sizes as the digital economy grows in scope and complexity.

The Smart Suite of services includes:

SmartVoice

- SmartVoice is a unified communications solution that integrates instant messaging, presence, email, video conferencing and a mobile application that is built on Broadsoft's BroadWorks platform.

- From comprehensive traditional phone features such as auto-attendant, hunt groups and call recording to collaboration tools such as instant messenger and screen sharing, SmartVoice gives businesses the flexibility to work in a modern way.
- SmartVoice offers three different levels of packaging based on business needs and is available on 2, 3, or 5-year contract terms.

SmartWiFi

- SmartWiFi is a fully-managed Internet solution deployed over Cisco's Meraki platform that enables seamless, secure wireless connectivity for employees, customers and guests in the office.
- SmartWiFi also enables access to the cloud portal where customers can easily manage their service, configure their set service identifiers, or SSIDs, to gain insight from network analytics and create a custom dashboard.
- Available at speeds of up to 75 Mbps, 300 Mbps, 600 Mbps and 1 Gbps, plus Wireless access points, SmartWiFi provides our customers with exceptional Wi-Fi coverage on 2, 3, or 5-year contract terms.

SmartSecurity

- SmartSecurity is a fully-managed network security platform deployed over Cisco's Meraki platform that protects a wired and Wi-Fi network at the edge with access control, virus protection, the ability to control which applications run on the network, content filtering and the connection of branch locations. A SmartSecurity premium package also includes the ability to set-up a secure a virtual private network, or VPN.
- In February 2019, Shaw Business introduced LTE Failover, an add-on service for SmartSecurity, which provides redundancy through a secondary Internet connection that ensures seamless and automatic failover in case of an outage.
- SmartSecurity is available when bundled with SmartWiFi or Business Internet on 3 or 5-year contract terms.

SmartSurveillance

- SmartSurveillance is a fully-managed, enterprise-grade security camera solution deployed over Cisco's Meraki platform. Managed through a cloud-portal, SmartSurveillance enables business owners to view footage and manage their cameras from anywhere using an intuitive on-line dashboard. Sophisticated features, such as motion-based search and heat mapping, allow owners to quickly find footage of interest and identify activity patterns.
- SmartSurveillance can also be bundled with SmartWiFi or Business Internet 75 and above on a 3 or 5-year contract term.

Software Defined Wide Area Network ("SD-WAN")

- In October 2018, Shaw Business launched SD-WAN, which provides businesses with a better way to connect multiple offices in a scalable and cost-effective manner on a cloud-managed platform.
- With integrated security, multiple Internet links, seamless LTE failover and intelligent path control, SD-WAN enables companies to deploy a resilient, cost-effective, high-bandwidth connectivity solution.
- Powered in partnership with Cisco Meraki, SD-WAN sites are connected by Internet links secured by our SmartSecurity service which provides network protection and cloud-based security policy updates to protect businesses from the latest vulnerabilities and network threats.

Session Initiation Protocol ("SIP") Trunking

- Our next-generation SIP Trunking solution, on the Broadsoft platform, delivers a centralized voice solution managed in an easy-to-use cloud portal.
- SIP allows customers to pay only for what they need with the ability to scale the system quickly as businesses grow.
- The integration with Broadsoft's platform provides businesses with access to unified communications features such as video conferencing, call queuing and auto-attendant as well as the ability to join offices with SmartVoice and SIP into the same environment to save cost and increase efficiency.

On the success of its SmartSuite of products, Shaw Business continues to grow at a steady pace despite recent years of economic challenges experienced in parts of Western Canada. Highlighted by growth in the small and medium sized business markets, our Business division continues to consistently increase its customer base, revenue and profitability. Our SmartSuite products can scale to larger businesses, giving us opportunities to deliver services across Canada.

In order to continue to meet the evolving needs of our customers, we are executing our plan to ensure that our wireline network keeps pace with our customers' expectations for bandwidth, speed and reliability. See "Shaw's Wireline Network" for a description of our wireline network and the advances that we are undertaking.

Calgary1 Data Centre

On August 1, 2019, Shaw Business completed the sale of the assets of the Shaw Calgary1 data centre, including all of the contractual relationships residing in the facility and the existing operational and sales teams, to a third party. As part of the transaction, the parties entered into a multi-year customer agreement whereby the purchaser will be a third-party data centre supplier to Shaw Business in Calgary, further complimenting Shaw Business' connectivity capabilities.

Wholesale Wireline Network Services

Using our national and regional access wireline networks, we provide services to Internet service providers ("ISPs"), other communications companies, broadcasters, governments and other businesses and organizations that require end-to-end Internet and data connectivity in Canada and the United States. We also engage in public and private peering arrangements with high speed connections to major North American, European and Asian networks and other tier-one backbone carriers. All service solutions are sold on 1, 3 or 5-year contract terms and pricing is negotiated based on the specific solution provided to the customer.

Broadcast Services

Shaw Broadcast Services uses our satellite network to manage one of North America's largest full-service commercial signal distribution networks. Shaw Broadcast Services currently provides distribution of English, French, and third-language, Canadian, US and International television and radio programming services to hundreds of multichannel operators.

As we continue to improve overall efficiency and provide a seamless connectivity experience to our customers, the Company announced that commencing in fiscal 2020, the Wholesale Wireline Network Services and Broadcast Services will be reported as part of the Consumer division.

Tracking

In fiscal 2018, the Company sold a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation, to Omnitracs Canada for approximately US$20 million.

Shaw's Wireline Network

At Shaw, we are proud of our advanced FibrePlus wireline network, which combines the power of fibre, coax, and Wi-Fi and is comprised of our:

- North American fibre backbone;
- Regional fibre optic and co-axial distribution networks; and
- Local Shaw Go WiFi connectivity.

Wireline Backbone

The backbone of Shaw's wireline network includes terabits of capacity over multiple fibres on two diverse cross-North America routes. The southern route principally consists of approximately 7,000 route kilometres of fibre located on routes between Seattle and New York City (via Vancouver, Calgary, Regina, Winnipeg, Toronto, Chicago and Buffalo). The northern route consists of approximately 5,000 route kilometres of fibre between Prince George and Montreal (via Edmonton, Saskatoon, Winnipeg, Thunder Bay, Toronto and Ottawa). Current fibre construction to extend our Northern route from Prince George to North Vancouver is underway in collaboration with the federal government's Connect to Innovate and Connecting British Columbia programs. A third secured capacity backbone route for advanced redundancy is located from Vancouver to Edmonton to Calgary and Calgary to Toronto through Dallas and New York. These routes, along with a number of other secured capacity routes, provide redundancy for the network. Shaw also uses a marine route consisting of approximately 330 route kilometres from Seattle to Vancouver (via Victoria), and has secured additional capacity on routes between a number of cities, including (i) Vancouver and Calgary, (ii) Seattle and San Jose, (iii) Seattle and Calgary, (iv) Seattle and Vancouver, (v) Toronto and New York City, (vi) Toronto and Montreal, (vii) Edmonton and Fort McMurray, and (viii) Denver and Calgary.

Regional Distribution Network

We connect our backbone network to residential and business customers through our extensive regional fibre optic and FibrePlus distribution networks.

In fiscal 2018, we completed the activation of the next generation of cable access technology known as DOCSIS 3.1. Powered by our latest generation of DOCSIS 3.1 enabled Cable modem, the XB6, the upgrade allowed us to launch our Internet 600 consumer speed tier and our 1 Gbps business speed tier across virtually all of our cable footprint. The upgrade also enabled Shaw to double the speeds of its Internet 150 and 300 customers to Internet 300 and 600, respectively in December of 2018, enabling industry leading speeds in Western Canada. DOCSIS 3.1 is also being leveraged to provide wireless backhaul services for our Freedom Wireless LTE small cells, providing significantly improved wireless coverage and capacity in both indoor and outdoor locations, while minimizing deployment and upgrade costs.

In conjunction with our DOCSIS 3.1 upgrades, we are continually increasing the spectrum usable on our cable plant, enabling increased upstream and downstream capacities. In March 2019, Shaw Business launched its fastest Internet tier with download speeds of up to 1 Gbps paired with upload speeds of up to 125 Mbps, which is currently one of the fastest broadly available upload speeds by a North American cable operator. We expect that these efficient upgrades will continue to allow cable technology to achieve fiber equivalent performance in download and upload speeds.

Shaw continues to optimize the capacity and efficiency of our wireline network and has virtually eliminated network congestion by deploying fibre optic cable deeper into our access networks and closer to where our customers reside. We continue to increase the number of optical serving areas or "nodes" in the wireline network. This is a continual process that we apply year-over-year to increase fibre optic usage in our wireline network and reduce the distance signals travel over coaxial cable to each consumer. Driving fibre deeper into our network also supports wireless and business service deployments, as well as future services such as 5G, fibre-to-the-premises or FTTP, or the newly released DOCSIS 4.0 specification, which are all potential building blocks for multi-gigabit symmetrical services over co-axial infrastructure.

Shaw Go WiFi

Shaw has created Canada's most extensive service provider Wi-Fi network, Shaw Go WiFi. Shaw Go WiFi extends a Shaw Internet customer's broadband experience beyond the home as a valuable extension of our customer wireline network experience. Over 3.6 million devices have authenticated to our carrier-grade Shaw Go WiFi network and there are over 100,000 access points used by our customers in coffee shops, restaurants, gyms, malls, public transit and other public spaces covering locations from British Columbia to Ontario. Freedom Mobile customers can also access Freedom WiFi at more than 100,000 Shaw Go WiFi access points and over 300,000 home hotspots across Western Canada making it easier to stream and download at more locations.

Shaw's Wireless Network

Shaw partnered with NOKIA to roll-out our next generation LTE wireless network to our customers in our existing markets in Ontario, Alberta and British Columbia. Until the launch of our LTE network to all of our existing markets in fiscal 2017, our customers were served by our 3G network using AWS-1 spectrum.

In October 2017, we announced the deployment of the 2500 MHz spectrum acquired from Quebecor and re-farming of a portion of our existing AWS-1 spectrum which enhanced our customers' access to LTE data speeds. This step, along with completion of the re-farming of 10 MHz of our existing AWS-1 spectrum to LTE in the second quarter of fiscal 2018, resulted in a large majority of our existing customers migrating from 3G to LTE service using their existing devices, which allowed us to offer LTE service across three spectrum bands – AWS-1, AWS-3 and 2500 MHz. As a result, service significantly improved for customers that were migrated from 3G to our AWS-1 and 2500 MHz LTE network as well as for our remaining 3G customers.

In the fourth quarter of fiscal 2018, we launched Voice over LTE ("VoLTE") nationwide across all three of our LTE spectrum bands – AWS-1, AWS-3 and 2500 MHz – offering our customers with compatible devices an improvement in voice quality and a reduction in call set-up time. In fiscal 2018, we also started deploying small cell technology (low-powered wireless antennas and receivers with a range of 100m to 200m), designed to provide network coverage to smaller areas. As tall high-power macro towers keep the network signal strong across large distances, small cells suit more densely developed areas like city centres and popular venues by providing LTE/VoLTE quality, speed, capacity and coverage improvements in these high traffic areas.

In fiscal 2019, we continued to deploy our Extended Range LTE network in Calgary, Edmonton, Vancouver, and the GTA, which leverages our 700 MHz spectrum, to provide customers with improved in-building coverage and as well as extending service at the edge of the current area. At the end of fiscal 2019, approximately 70% of the build is complete in Western Canada, with the remaining deployment of our 700 MHz spectrum expected to continue throughout 2020. In fiscal 2019, Freedom Mobile also migrated its core network to the newly produced CloudBased Infrastructure Software platform, which is the latest generation of cloud Core architecture from Nokia and a key building block of 5G. With our successful acquisition of the 600 MHz spectrum across our entire wireless operating footprint, we will continue to improve our network experience and provide affordable options for our customers.

Spectrum holdings

In April 2019, the Company successfully acquired 11 paired blocks of 20-year 600 MHz spectrum across its wireless operating footprint, for a total purchase price of $492 million, or $0.78 per MHz-Pop. The spectrum licences secured through the 600 MHz spectrum auction include 30 MHz across each of British Columbia, Alberta, and Southern Ontario as well as 20 MHz in Eastern Ontario. This spectrum, and the incremental network investment to deploy the spectrum, will materially improve our long-term wireless customer experience and further enable our ability to offer converged network solutions.

In addition to the recently acquired 600 MHz spectrum, our Wireless division currently holds 50 MHz of AWS spectrum, 10 MHz of 700 MHz and 20-40 MHz of 2500 MHz spectrum in the main service areas of Southern Ontario, Alberta and British Columbia. We also hold 20-60 MHz of AWS spectrum, 0-10 MHz of 700 MHz and 0-30 MHz of 2500 MHz spectrum in other markets within Southern Ontario, Eastern Ontario, Alberta and British Columbia. As discussed below, ISED has undertaken a consultation regarding the policy framework for the 3500 MHz spectrum auction. (For further detail see "Government Regulations and Regulatory Developments – Radiocommunication Act – Wireless Spectrum Licences").

The Company expects that its spectrum assets will continue to support anticipated growth in Wireless subscribers, as well as new growth, geographic diversification and scale opportunities in the markets in which we operate.

Equity Interest in Corus

Corus is a leading media and content company that develops and delivers high quality brands and content across platforms for audiences around the world. Its portfolio of multimedia offerings encompasses 35 specialty television services, 39 radio stations, 15 conventional television stations, a suite of digital assets, animation software, technology and media services. Corus is an established creator of globally distributed content through Nelvana animation studio, Corus Studios, and children's book publishing house Kids Can Press. Corus also owns innovative full-service social digital agency so.da, and lifestyle entertainment company Kin Canada. Corus' roster of premium brands includes Global Television, W Network, HGTV Canada, Food Network Canada, HISTORY®, Showcase, National Geographic, Disney Channel Canada, YTV and Nickelodeon Canada, Global News, globalnews.ca, Q107, Country 105, and CFOX. Corus is headquartered in Canada and its stock is listed on the TSX under the symbol CJR.B.

In connection with the sale of the Media division to Corus in April 2016, the Company received 71,364,853 Corus Class B non-voting participating shares (the "Corus B Consideration Shares") representing approximately 37% of Corus' total issued equity at that time. The Company agreed to retain approximately one third of its Corus B Consideration Shares for 12 months post-closing, a second one third for 18 months post-closing and the final one third for 24 months post-closing. The Company also agreed to have its Corus B Consideration Shares participate in Corus' dividend reinvestment plan until September 1, 2017. For the year ended August 31, 2019, the Company received dividends of approximately $10 million (fiscal 2018 – $92 million) from Corus, $nil (fiscal 2018 – $nil) were reinvested in additional Corus Class B non-voting participating shares as the Company withdrew from Corus' dividend reinvestment plan on September 1, 2017.

In the third quarter of fiscal 2018, the Company assessed its investment in Corus for indicators of impairment, which included a significant and sustained decrease in the share price as well as the recording by Corus of an impairment charge against their goodwill and broadcast license intangibles and found that there was evidence that impairment had occurred. The Company compared the recoverable amount to the carrying value and determined that an impairment charge of $284 million was required. The recoverable amount was determined based on the value in use of the investment.

On May 31, 2019, the Company completed its secondary offering of its 80,630,383 Class B non-voting participating shares of Corus at a price of $6.80 per share, representing approximately 38% of the outstanding Class B non-voting participating shares for net proceeds to the Company of approximately $526 million. Shaw no longer holds any equity interest in Corus.

Climate Change and Environmental Responsibility

Shaw is committed to delivering a seamless connectivity experience to Canadians in an environmentally responsible and sustainable manner. In fiscal 2019, we continued to make positive strides on our climate change initiatives, which include:

- **Reducing Consumption** – We support efforts to reduce employee, customer, and enterprise consumption of:
  a) Power – through the use of energy efficient technologies,
  b) Water – by reducing water consumption in Shaw owned buildings, and
  c) Paper – by continuing to promote e-bill and efficient printing behaviours amongst employees and customers to reduce paper use by shifting interactions to digital platforms as part of the Company's digital transformation.
- **Waste Reduction** – To reduce employee, customer, and enterprise waste we have implemented waste diversion and e-waste recycling programs and reduced single-use items in our marketing campaigns and packaging.
- **Reducing Carbon Emissions** – To reduce Shaw's carbon footprint by carbon reduction (through LED lighting, high-efficiency boilers, e-billing, and reduced truck rolls due to increased consumer self-install of CPE) and offsetting carbon emissions at its major facilities;
- **Engagement and Awareness** – Drive employee, customer and enterprise awareness of Shaw's environmental initiatives. Engaging employees in our journey, through the establishment of green teams, earth week, and waste reduction initiatives, to advance our goals of educating and sharing common beliefs and values around environmental sustainability.

The Company participates in the Society of Cable Telecommunications Engineers' Energy 2020 program which set targets to reduce power consumption per unit by 20%, reduce energy costs by 25% on a unit basis, and reduce grid dependency by 5% by 2020 relative to a 2014 baseline.

Shaw is also a signatory of the Canadian Voluntary Agreement on Energy Efficiency (CEEVA) with respect to Set-Top Boxes (STBs). CEEVA aims to significantly reduce the total annual energy consumption used by STBs in Canada, cutting the annual carbon emissions by over 100,000 tons – the equivalent of taking 44,000 cars off the road (i.e. subcompact cars driving 15,000 km per year).

Community Investment

Shaw's approach to community investment is designed to build brand awareness and affinity, advance business objectives, and deepen employee engagement, while creating demonstrable impacts in our communities. By partnering with leading charitable organizations and leveraging our range of sponsorship, marketing and public relations assets, our activities positively affect more than 850,000 youth and families across Canada each year. In fiscal 2019, Shaw contributed over $45 million in cash and in-kind support – as well as 10,000 hours of volunteer time – to over 500 local and national youth-focused charitable organizations that help improve the quality of life for kids, youth, and their families.

The Shaw Charity Classic, one of the most popular stops on the PGA TOUR Champions, continues to be our flagship platform to annually showcase our community investment activities as a leading employer and corporate citizen. In fiscal 2019, the seventh edition of the tournament generated approximately $14.1 million in charitable donations, benefitting 200 organizations that help more than 500,000 kids and families in Alberta. Since its inception in 2013, the Shaw Charity Classic has raised more than $48 million for charity and is a momentous annual fundraising platform for children and youth charities supporting Alberta families.

In fiscal 2019, Shaw continued its efforts to support positivity, inclusion, and respect in schools, through our Shaw Kindness Sticks grants. The initiative provided grants up to $5,000 to develop 10 youth-led initiatives that promoted kindness and respect in their schools. Over 150 applications were received from kids and youth across the country, and prominent Canadian athletes, icons, and community builders joined Shaw in selecting awarding, and activating the top 10 ideas to be awarded funding, which engaged more than 10,000 students.

In fiscal 2020, we will continue to take steps to advance our Community Investment approach to better meet the needs of our stakeholders through cross-functional execution, operational integration, and modernization. We are working to further enhance brand trust with employees, customers, and government while making a better impact on local business and community needs across the country. Specifically, we are doing more to integrate community investment activities into our core operations; modernizing our best-in-class employee giving programs to better engage their energy to support our communities; and creating cross-functional regional leadership committees to direct local grassroots donations that will drive business objectives and community impact. Together, these and other efforts are intended to raise the profile of Shaw locally and nationally as a community leader committed to enabling a better future for Canadians.

GOVERNMENT REGULATIONS AND REGULATORY DEVELOPMENTS

Substantially all of the Company's Canadian business activities are subject to regulations and policies established under various pieces of legislation, including the Broadcasting Act (Canada) ("Broadcasting Act"), the Telecommunications Act (Canada) ("Telecommunications Act"), the Radiocommunication Act (Canada) ("Radiocommunication Act") and the Copyright Act (Canada) ("Copyright Act"). Broadcasting and telecommunications are generally administered by the Canadian Radio-television and Telecommunications Commission ("CRTC") under the supervision of the Department of Canadian Heritage ("Canadian Heritage") and Innovation, Science and Economic Development Canada ("ISED"), respectively. The allocation and use of wireless spectrum in Canada are governed by spectrum licences issued by, and radio authorization conditions set by, ISED pursuant to the Radiocommunication Act.

In June 2018, ISED and Canadian Heritage launched a joint review of the Broadcasting Act and the Telecommunications Act, which will also include a review of the Radiocommunication Act (the "Joint Review"). The Joint Review is being conducted by a panel of external experts ("Expert Panel") tasked with studying the legislation and making recommendations to the Ministers of ISED and Canadian Heritage by January 31, 2020. The Expert Panel is examining issues such as telecommunications and content creation in the digital age, net neutrality and cultural diversity, and how to strengthen the future of Canadian media and Canadian content creation.

Limits on non-Canadian ownership and control

Neither a holding company that has a subsidiary operating company licensed under the Broadcasting Act, nor any such licensee, may be controlled in fact by non-Canadians, the determination of which is a question of fact within the jurisdiction of the CRTC. Pursuant to the *Direction to the CRTC (Ineligibility of Non-Canadians)* (the "Direction"), non-Canadians are permitted to own and control, directly or indirectly, up to 33.3% of the voting shares and 33.3% of the votes of a holding company that has a subsidiary operating company licensed under the Broadcasting Act. In addition, up to 20% of the voting shares and 20% of the votes of a licensee may be owned and controlled, directly or indirectly, by non-Canadians. As well, the chief executive officer ("CEO") and not less than 80% of the board of directors of the licensee must be resident Canadians. There are no restrictions on the number of non-voting shares that may be held by non-Canadians at either the holding company or licensee level. If a holding company of a licensee does not satisfy the requirement that 80% of its board of directors be resident Canadians, it must have a CRTC-approved Independent Programming Committee ("IPC") in place to ensure that neither the holding company nor its directors exercise control or influence over the programming decisions of its subsidiary licensee. With CRTC approval, Shaw has implemented an IPC to comply with the Direction.

Similar restrictions apply to certain Canadian carriers pursuant to the Telecommunications Act, the Radiocommunication Act and associated regulations, except that there is no requirement that the CEO be a resident Canadian of a company operating pursuant to those Acts. Instead, the Telecommunications Act, the Radiocommunication Act and associated regulations require only that 80% of the voting shares of such entities be held by resident Canadians. The Canadian ownership requirements do not apply to wireline and wireless telecommunications carriers that have annual revenues from the provision of telecommunications services in Canada that represent less than 10% of the total annual revenues for the sector.

The Company's Articles contain measures to ensure the Company continues to comply with applicable Canadian ownership requirements and its ability to obtain, amend or renew a license to carry on any business. Shaw must file a compliance report annually with the CRTC confirming that it is eligible to operate in Canada as a telecommunications common carrier.

Broadcasting Act

Pursuant to the Broadcasting Act, the CRTC is mandated to regulate and supervise all aspects of the broadcasting system in a flexible manner. The Broadcasting Act requires broadcast distribution undertakings ("BDUs") to give priority to the carriage of Canadian services; to provide efficient delivery of programming services at affordable rates; to provide reasonable terms for the carriage, packaging and retailing of those programming services; and provides the option to operate a community channel. Under the Broadcasting Act, the Governor in Council (GiC) may issue broad policy directions of general application on matters with respect to the objectives of Canada's broadcasting policy and related regulatory policy.

The Broadcasting Act also sets out requirements for television broadcasters with respect to Canadian content. The Company's broadcasting distribution business and on-demand programming services depend on licences (or operate under an exemption order) granted and issued by the CRTC under the Broadcasting Act. Pursuant to CRTC Regulations, the Company is required to contribute 5% of its cable and direct-to-home ("DTH") BDUs' revenues to the production of Canadian programming.

Licensing and ownership

In August 2018, the Commission renewed the Company's cable licences for a five-year term from September 1, 2018 to August 31, 2023. On August 31, 2018, the Company submitted renewal applications for its DTH and Satellite Relay Distribution Undertaking ("SRDU") licences which were to expire on August 31, 2019. In July 2019, these services were issued administrative renewals of their licences, which will expire November 30, 2019, by which time we expect CRTC decisions with longer renewal terms.

In May 2017, Shaw On Demand's licence was renewed for a five-year term from September 1, 2017 to August 31, 2022. On August 5, 2019, the Company's terrestrial Pay-Per-View ("PPV") and DTH PPV licences held by Shaw PPV, were renewed for five-year terms from September 1, 2019 to August 31, 2024.

New media

The CRTC has issued a digital media exemption order requiring that Internet-based and mobile point-to-point broadcasting services not offer television programming on an exclusive or preferential basis in a manner that depends on subscription to a specific mobile or retail Internet service and not confer an undue preference or disadvantage. The CRTC has not imposed any levy on the revenue of exempt digital media undertakings to support Canadian new media content.

In July 2019, the Minister of Canadian Heritage indicated that the federal government intends to take appropriate measures swiftly, when it receives the final report of the Expert Panel in connection with the Joint Review, to ensure that “all players, including the Internet giants” offer meaningful levels of Canadian content, contribute to the creation of Canadian content, and promote Canadian content and make it easily accessible on platforms.

The potential for new or increased fees

Any changes to the Broadcasting Act pursuant to the Joint Review (see “Government Regulations and Regulatory Developments”) could impact the business practices of the Company, or result in new fees payable by the Company’s cable, DTH or on-line services. New fees could also be imposed pursuant to CRTC Regulation, as the Commission indicated that in 2020-2021 it will consider whether to examine new mechanisms to support television news production. If the CRTC were to consider and implement support for television news production through increased access to subscription revenue, it would increase costs for the Company.

CRTC Regulations require cable BDUs to obtain the consent of an over-the-air (“OTA”) broadcaster to deliver its signal in a distant market (which can be either within the province of origin or out-of-province). In the case of DTH BDUs, CRTC Regulations permit the distribution of local OTA television signals on a distant basis without consent within the province of origin, but DTH BDUs must obtain broadcaster consent to deliver the OTA television signal out-of-province unless the DTH BDU is required to carry the signal out-of-province on its basic service. Broadcasters may assert a right to limit distribution of distant signals or to seek remuneration for the distribution of their signals in distant markets on the basis of the CRTC Regulations.

Telecommunications Act

Under the Telecommunications Act, the CRTC is responsible for ensuring that Canadians in all regions of Canada have access to reliable and affordable high-quality telecommunication services. The CRTC has the authority to forbear from regulating one or more services or classes of services provided by a carrier if the CRTC finds that there is sufficient competition for those services to protect the interests of users. Retail Internet, home phone services and mobile wireless services have been forborne from price regulation. However, regulations do affect certain terms and conditions under which Shaw’s retail services are provided. As described further below under “Third Party Internet Access,” certain Shaw wholesale services are regulated.

Under the Telecommunications Act, the GiC may issue broad policy directions of general application to the CRTC with regard to the telecommunications policy directives set out in the Telecommunications Act (“Telecommunications Policy Direction”). As described below under “New Government Policy Direction to the CRTC Concerning Telecommunications”, a recent Telecommunications Policy Direction is intended to guide the CRTC’s decision-making on telecommunications matters, including in its upcoming Wireless Review.

The CRTC and ISED can also impose monetary penalties on companies that contravene the Telecommunications Act, the Radiocommunication Act and the regulations and rules promulgated thereunder.

ISED is responsible for the allocation, issuance and management of radio spectrum pursuant to the Radiocommunication Act. As well, the technical operating aspects of the Company’s businesses are regulated by technical requirements and performance standards established by ISED, primarily under the Telecommunications Act and the Radiocommunication Act.

Any changes to the Telecommunications Act pursuant to the Joint Review could impact the business practices of the Company, and/or result in new fees for the Company, for example, by requiring ISPs to contribute a fixed percentage of revenues to support the creation of Canadian content – a possible policy option presented in the CRTC’s May 2018 report and publicly noted by the CRTC Chair in June 2019.

Third Party Internet Access

Shaw is mandated by the CRTC to provide a wholesale high-speed access (“HSA”) service at regulated rates to independent ISPs (“Resellers”), who use the wholesale HSA services to provide their own retail Internet services to their end-users (“Third Party Internet Access” or “TPIA”). On August 15, 2019, the CRTC issued Telecom Order 2019-288 (the “Order”), which set Shaw’s final wholesale HSA service rates. The final rates are significantly lower than the interim rates set in October 2016, and retroactive to January 31, 2017. The Order, if upheld and unvaried, will significantly reduce the amount that the Company can charge for aggregated HSA service and negatively impact its broadband wireline revenues and its ability to compete with Resellers and other facilities-based HSA providers.

On September 13, 2019, Shaw jointly with Cogeco, Eastlink, Rogers and Videotron (the “Cable Carriers”) filed a motion for leave to appeal the Order with the Federal Court of Appeal, as well as a motion to stay the Order, pending the final judgment on the appeal (if leave is granted). On November 22, 2019, the motion for leave to appeal the Order, as well as the motion to stay the Order pending final judgment on the appeal was granted. As well, on November 13, 2019, the Cable Carriers filed a Petition requesting that the Cabinet order the CRTC to reconsider the Order. A decision on whether to vary, rescind or refer the Order back to the Commission must be made within one year from the date of the Order.

Any of the following developments could significantly reduce the amount that Shaw can charge for aggregated HSA service and negatively impact Shaw's broadband wireline revenues and its ability to compete with Resellers and other facilities-based HSA providers: any decision, pursuant to the granting of an appeal, to uphold the Order in a form that is substantially unvaried; a refusal by Cabinet to order a variance, rescission or reconsideration of the Order; and any variance or reconsideration that does not result in any substantial changes to the Order.

In 2015, the CRTC completed a review of the wholesale wireline policy framework, including TPIA and: (i) extended mandated wholesale access services to include FTTP facilities; and (ii) initiated a shift to a new disaggregated wholesale HSA service. The new disaggregated HSA regime is being phased-in. The CRTC approved interim disaggregated rates for Ontario and Quebec. The CRTC's process to extend the disaggregated service into Western Canada, including Shaw's territory, is on hold, but is expected to resume in 2020-2021. The final rates and the terms of implementation of disaggregated HSA service could impact broadband revenues and our ability to compete with Resellers and other facilities-based disaggregated HSA providers. The CRTC is currently planning to review the process and methodologies for setting rates of regulated wireline and wireless wholesale services in 2019-2020. The CRTC is also currently planning to review wireline wholesale services in 2020-2021.

Competition Bureau Study on the State of Competition in the Wireline Broadband Market

On August 7, 2019, the Competition Bureau released its report regarding the state of competition in the wireline broadband sector (the "Report"). The Report was the result of a year-long study that was initiated with the goal of identifying the steps that regulators and policy makers could take to enhance competition. Rather than making recommendations, the Report articulated key questions which "will be important to address in the process of crafting and refining" industry regulation going forward and "necessary to conceptualize and define competition analysis in future fora." The Report indicated that the results of the study "paint a largely positive picture" regarding the state of competition and consumer choice in Canada's broadband market and emphasized that the strength of Canada's wireline broadband networks depend on investment and innovation by facilities-based competitors. The Bureau's recommendations could influence future government and CRTC policies and regulations, including those pertaining to wholesale wireline services and the regulations for TPIA.

CRTC Wireless Review

In March 2018, the CRTC declined to extend the mandated roaming regime to include public Wi-Fi providers. The Commission subsequently undertook a consultation to investigate the availability and pricing of low cost data-only packages, including whether wireless carriers should be required to offer low-cost data-only packages. In December 2018, the CRTC determined that it would refrain from mandating specific low-cost data-only plans and instead opted to direct the three incumbent national wireless carriers to make available proposed low-cost data-only plans and to keep those plans in the market at least until a decision is issued in its upcoming review of mobile wireless services.

In February 2019, the CRTC initiated its review of the regulatory framework for mobile wireless services with a public hearing currently scheduled for February 2020. The proceeding will include assessments of: (i) competition in the retail market, including potential regulatory intervention, such as new retail policies and mandated low-cost data-only plans; (ii) wholesale wireless regulation, including wholesale access for mobile virtual network operators ("MVNOs"); and (iii) barriers to the introduction of new technologies and any regulatory interventions to support investment and competition, including as it relates to small-cell deployment. The CRTC will not be revisiting the final rates for mandated wholesale roaming on the national incumbent wireless carriers' networks set in 2018, which are lower than the interim rates set in early 2015. The Commission has conveyed its preliminary view that it would be appropriate to mandate wholesale MVNO access to the networks of the national incumbents. The Notice includes a series of questions regarding the possible eligibility requirements and other terms and conditions of a possible mandated MVNO regime. The CRTC's determinations on these questions and other questions in the Notice could affect Shaw's ability to compete in the mobile wireless market. The new Telecommunications Policy Direction to the CRTC regarding telecommunications, described below, will apply to this proceeding.

36-Month Device Financing

The CRTC is reviewing whether 36-month equipment installment plans ("EIPs") are compliant with the Wireless Code. On August 2, 2019, following the introduction by the national incumbent wireless carriers of EIPs ranging from 24- to 36-months, the Commission ordered all wireless service providers to cease offering EIPs longer than 24-months until the Commission has had an opportunity to complete a full review of the practice. If 36-month EIPs are permitted, it could impact Freedom's ability to gain market-share.

New Government Policy Direction to CRTC Regarding Telecommunications

On June 16, 2019, the Government published a finalized Policy Direction (following its publication of a proposed Policy Direction on March 9, 2019) that provides general guidance to the CRTC on all telecommunications regulatory measures, including those affecting Shaw's Consumer and Business Internet and phone services, wholesale telecommunications services, and Shaw's wireless services. The new Telecommunications Policy Direction directs the CRTC to consider how measures can promote all forms of competition and investment, as well as affordability, consumer interests and innovation. The impact of the new Policy Direction will depend on how the CRTC interprets it in the context of specific matters and proceedings.

2019 Federal Election

During the recent federal election, which resulted in a minority government, several parties expressed commitments to reduce the price of mobile and internet services. The introduction of any future regulation or policy to implement such commitments could have a material adverse impact on the Company's financial results.

CRTC Internet Service Provider Code

On November 9, 2018, the CRTC initiated a proceeding to establish a mandatory code applicable to Internet services provided by larger, facilities-based ISPs, such as Shaw. The CRTC has already enacted a Wireless Code and a Television Service Provider Code applicable to wireless and television service providers, respectively.

On July 31, 2019, the Commission published a final version of the Internet Code and indicated that it would take effect on January 31, 2020. This final version is generally consistent with Shaw's submissions as to appropriate scope and commercial terms and practices. However, implementation of the Internet Code may result in cost increases for the Company.

Retail Sales Practices

In June 2018, the GiC issued an order to the CRTC, directing it to investigate the retail sales practices used by Canada's large telecommunications carriers and report back to the GiC by February 2019 with its findings on the prevalence of such practices and how existing consumer protections could be expanded, or new protections developed, to ensure consumers are empowered and treated fairly by their service providers. Shaw was made a party to this proceeding by the CRTC and participated in the oral public hearing in October 2018.

On February 20, 2019, the CRTC published its Report on Misleading or Aggressive Communications Retail Sales Practices and found that "a significant portion of Canadians are experiencing misleading or aggressive sales practices through all types of sales channels" in connection with their purchase of telecommunications and broadcasting services. While the Report did not result in new rules or regulatory obligations, the Report's findings, coupled with a planned Commission examination of activities undertaken in 2020-2021 to address those findings, could lead to new measures implemented in the context of current or future proceedings. The introduction of any such measures could negatively impact our ability to serve our customers, result in cost increases for the Company and negatively impact the Company's revenue.

Access for wireline network

For its wireline network Shaw requires access to support structures, such as poles, strand and conduits of telecommunication carriers and electric utilities, in order to deploy cable facilities. Under the Telecommunications Act, the CRTC has jurisdiction over support structures of telecommunication carriers, including rates for third party use. The CRTC's jurisdiction does not extend to electrical utility support structures, which are regulated by provincial utility authorities. Shaw's wireline network also requires access to construct facilities in roadways and other public places. Under the Telecommunications Act, Shaw may access such places with the consent of the municipality or other public authority having jurisdiction.

Radiocommunication Act

Our Wireless division holds licences for the use of radiofrequency spectrum required to operate its mobile wireless business. Those spectrum licences are administered by ISED under the Radiocommunication Act. Spectrum use is governed by conditions of license, including license term, transferability/divisibility, technical compliance requirements, lawful interception, research and development, and mandated antenna site sharing and domestic roaming services.

Any changes to the Radiocommunications Act pursuant to the Joint Review (see "Government Regulations and Regulatory Developments") could impact the business practices of the Company and/or the processes governing its acquisition of new spectrum for purposes of building its wireless networks.

Wireless Spectrum Licences

The Wireless division's AWS-1 spectrum licences were renewed at three different stages, each for a term of 20 years, and prior to expiration, the licences may be renewed. The applicable terms and conditions of renewal of Shaw's and other carriers' spectrum licences, after the initial terms, were determined by ISED pursuant to public consultation processes that began in the summer of 2017. In early 2018, ISED issued its policy decision relating to the renewal of AWS-1 and other spectrum licences auctioned in 2008. As expected, ISED also imposed more onerous deployment conditions for licences issued through the renewal process.

The AWS-3 spectrum licences were issued in April 2015 and have a term of 20 years. The 700 MHz and 2500 MHz spectrum licences that the Company purchased from Quebecor were initially issued in February 2014 and May 2015, respectively for a term of 20 years.

Following a consultation in 2018, ISED released a decision allowing future mobile use in the millimeter wave bands including 26 GHz, 28 GHz, and 38 GHz bands, as well as licence-exempt use in the 64-71 GHz bands. The details of these frameworks will be the subject of future proceedings.

ISED's 600 MHz auction took place in March and April 2019 following a public consultation process in 2018. The auction framework included a set-aside of 30 MHz of the total 70 MHz of spectrum available. Shaw secured spectrum in Alberta, British Columbia and Ontario.

In June 2019, ISED released its decision on revisions to the 3500 MHz (3450-3650 MHz) band, enabling existing holders to retain a portion of their 3500 MHz spectrum to convert to mobile spectrum, with the remainder to be made available for the 3500 MHz auction. In June 2019, ISED initiated a consultation on a policy and licensing framework for the 3500 MHz band (the "Consultation"). The Consultation is also seeking comments on the 3500 MHz auction format and rules, including potential pro-competitive measures, including a set-aside, a cap, or a combination of mechanisms. The 3500 MHz auction is expected to take place in 2020.

In July 2019, ISED issued a decision in response to its consultation on a new set of smaller service areas for spectrum licensing ("Tier 5 Service Areas") to complement ISED's existing service areas. ISED has created Tier 5 Service Areas with the objective of encouraging additional access to spectrum within rural areas pursuant to its licensing process. Currently, none of the Company's licences are subject to Tier 5 deployment requirements, but future licences may incorporate a requirement for deployment in such new service areas.

Access for Wireless Network

Our Wireless division's operations depend on being able to locate and construct wireless antenna sites, which in some cases requires certain authorizations or approvals from municipalities, which vary from one municipality to another but are also subject to federal oversight. The process for such approvals can include a comprehensive consultation process related to local land use priorities and new antenna site design parameters.

The Wireless division also uses arrangements whereby it co-locates its antennae equipment on towers and/or sites owned and operated by third party tower and/or sites providers and the three national wireless incumbent carriers. Pursuant to the conditions of their spectrum licences and the CRTC's policy framework for wholesale wireless services, the three national wireless incumbent carriers must allow competitors, including Freedom Mobile, to co-locate equipment at these locations. However, the application and approval process for the sharing of towers is lengthy, and the ISED and CRTC processes that are available to enforce the existing rules can also be challenging and time consuming.

Copyright Act

Canada's Copyright Act accords the creators and owners of content various rights to authorize or be remunerated for the use of their works and performances, including, in some instances, by broadcast distribution undertakings. In addition, the Copyright Act creates certain exceptions that permit the use of copyrighted works without the authorization or remuneration of rights holders. Parliament initiated a mandated five-year review of the Copyright Act in December 2017. The Standing Committee on Industry, Science and Technology has conducted the review and produced a report making recommendations to the Government on June 3, 2019. No new rights or limitations on exceptions to copyright were recommended by this Report.

On December 17, 2018, Bill C-86, the Budget Implementation Act ("BIA"), received Royal Assent and contains several amendments to the Copyright Act which came into force on April 1, 2019. The amendments create the potential for increased fees as well as risk of copyright infringement. Changes to the Copyright Act introduced by the BIA include the elimination of the Copyright Act's mandatory tariff-setting regime for tariffs applicable to the public performance of works, providing performance rights collectives the option of negotiating payments on a user-by-user basis through direct licensing. A direct licensing approach, if undertaken by a collective to which Shaw remits tariff payments, could increase royalties as well as the transactional costs associated with clearing copyrights. The BIA also potentially increases risk of claims (and associated liability) in connection with unrepresented repertoire, by removing a provision that had prevented infringement proceedings by unrepresented rightsholders in situations where no tariff was filed. Finally, pursuant to the Copyright Act, the Copyright Board of Canada ("the Copyright Board") oversees the collective administration of copyright royalties in Canada, including the review and approval of copyright tariff royalties payable to copyright collectives by BDUs, television broadcasters and online content services. The Copyright Board may also make rulings on the interpretation of the Copyright Act in the course of issuing copyright tariff decisions.

The potential for new or increased fees

In August 2017, the Copyright Board issued a decision interpreting the scope and meaning of "making available" which is defined in the Copyright Act as part of the right to communicate a work to the public by telecommunication. In the Online Music Services proceeding, SOCAN and other rights owners argued that making a musical work available for download would trigger an obligation to pay public performance royalties to SOCAN. The Objectors, including the Company, argued that since downloading is not a public performance, SOCAN is not entitled to royalties for downloads. The Copyright Board held that while the act of downloading is not itself a communication to the public and, as such, is outside the scope of the proposed tariff, the act of loading copyright materials onto servers to facilitate downloading is a form of "making available" and a communication to the public and falls under the SOCAN tariff. The Company, along with a number of other broadcasting and internet companies, has filed an application for judicial review, arguing that the Board's interpretation is erroneous. If the Copyright Board's interpretation is upheld, it could lead to new claims by rights holders in connection with Company technologies that facilitate downloading.

On December 18, 2018, the Copyright Board released a rate decision for the Distant Signal Retransmission Tariff for the past tariff period of 2014-2018, inclusive. While the decision did not contain written reasons (which were to follow), it introduced a rate increase over the last year of the previous tariff period and established an interim tariff for 2019 based on the 2018 rate set out in the December 18, 2018 decision. Both Collectives and Objectors filed a Notice of Application for judicial review with the Federal Court of Appeal and a request for an adjournment pending the issuance of the Copyright Board's written reasons for the rate decisions. Such written reasons were issued on August 2, 2019 and amended Notices of Application seeking judicial review were filed on November 4, 2019. If a Notice of Application for judicial review of the Copyright Board's decision is resumed, such a review could result in significantly increased royalty rates pursuant to either a Court determination or any redetermination of the rates by the Copyright Board.

United States, Canada and Mexico Agreement (USMCA)

On September 30, 2018, Canada announced that it had reached an agreement on a new North American free trade agreement between the US, Mexico and Canada, called the USMCA. The USMCA, once ratified by all three parties, will replace NAFTA. US demands made in the course of negotiations for changes that could have had a material impact on the Company were not included in the USMCA. Until the USMCA is formally adopted pursuant to the legal requirements of each party country, the NAFTA will remain effective. There remains a possibility that a party will decline to finalize and implement the agreement. In such a case, there is a risk that negotiations towards an amended USMCA will be reinitiated, in which case the scope of negotiations and ultimate outcomes are unknown.

Personal Information Protection and Electronic Documents Act and Canadian Anti-Spam Legislation

The Personal Information Protection and Electronic Documents Act (Canada) ("PIPEDA") is Canada's federal privacy law regulating the collection, use and disclosure of personal information in Canada by a federally regulated organization in the private sector. Shaw has established a privacy policy and its internal privacy processes in accordance with PIPEDA.

PIPEDA provisions requiring mandatory reporting of serious privacy breaches, introduced in 2015, came into effect on November 1, 2018. These provisions require companies to: (i) track all breaches of security safeguards that involve personal information under their control, and (ii) report to affected individuals and to the Office of the Privacy Commissioner serious breaches of personal information that create a real risk of significant harm. Any such breach and disclosure by the Company could result in fines and significant reputational harm.

New consent Guidelines issued by the Office of the Privacy Commissioner of Canada ("OPC") came into effect on January 1, 2019. These Guidelines set out principles for organizations to follow in order to obtain meaningful consent and require that organizations provide more interactive, easy-to-understand privacy disclosures to their users. The Company maintains internal practices and policies to facilitate compliance with the new consent Guidelines.

In April 2019, the OPC initiated a consultation on transfers of information for processing, based on a revised PIPEDA interpretation that would, if adopted, require Canadian organizations, including the Company, to make significant and costly changes to their privacy practices. The OPC received 87 submissions in response to the consultation. On September 23, 2019, the OPC concluded that its historical guidance on the issue of transfers for processing was maintained with no changes under current law. The OPC also indicated that it would focus its efforts on the legislative review process (described below).

The Government initiated a National Digital and Data Consultation in June 2018. This led to the Government's publication, in May 2019, of a principles-based Digital Charter and a consultation to modernize PIPEDA. These processes could lead to changes to privacy regulation that would require that organizations adjust their policies and practices in key areas including data anonymization, consent and data portability. The consultation also looks at a possible enhancement of the OPC's enforcement powers, which could expose the Company to increased penalties and claims in connection with any non-compliance.

Canada's anti-spam legislation (together with the related regulations, "CASL") sets out a comprehensive regulatory regime regarding online commerce, including requirements to obtain consent prior to sending commercial electronic messages and installing computer programs. CASL is administered primarily by the CRTC, and non-compliance may result in fines of up to $10 million. The Company maintains internal practices and policies to facilitate compliance with CASL.

On November 5, 2018, the CRTC issued guidelines on the Commission's approach to enforcement of CASL provisions prohibiting a party from, among other things, aiding a violation of CASL. These guidelines suggest that "Telecommunications and Internet Service Providers" could be found liable for violating CASL by facilitating or technically enabling services that transgress CASL. While the guidance suggests that liability would be linked to the level of control and connection with the violators, and whether reasonable safeguards were in place to prevent or stop a violation, no examples of potential liability for ISPs or telecommunications service providers were provided. As well, the guidelines indicate that awareness of a violation is not necessary for a finding of liability. As such, the new Guidelines create a risk that Shaw could be fined for non-compliance in connection with the provision of network services.

Environmental matters

Shaw's operations are subject to environmental regulations, including those related to electronic waste, printed paper and packaging. A number of provinces have enacted regulations providing for the diversion of certain types of electronic and other waste through product stewardship programs ("PSP"). Under a PSP, companies who supply designated products in or into a province are required to participate in or develop an approved program for the collection and recycling of designated materials and, in some cases, pay a per item fee. Such regulations have not had, and are not expected to have, a material effect on the Company's earnings or competitive position.

KEY PERFORMANCE DRIVERS

Shaw measures the success of its strategies using a number of key performance drivers which are outlined below, including a discussion as to their relevance, definitions, calculation methods and underlying assumptions.

FINANCIAL MEASURES

Revenue

Revenue is a measurement determined in accordance with International Financial Reporting Standards ("IFRS"). It represents the inflow of cash, receivables or other consideration arising from the sale of products and services. Revenue is net of items such as trade or volume discounts, agency commissions and certain excise and sales taxes. It is the base on which free cash flow, a key performance driver, is determined; therefore, it measures the potential to deliver free cash flow as well as indicating growth in a competitive market place.

The Company's continuous disclosure documents may provide discussion and analysis of non-IFRS financial measures. These financial measures do not have standard definitions prescribed by IFRS and therefore may not be comparable to similar measures disclosed by other companies. The Company's continuous disclosure requirements may also provide discussion and analysis of additional GAAP measures. Additional GAAP measures include line items, headings and sub-totals included in financial statements. The Company utilizes these measures in making operating decisions and assessing its performance. Certain investors, analysts and others utilize these measures in assessing the Company's operational and financial performance and as an indicator of its ability to service debt and return cash to shareholders. These non-IFRS measures and additional GAAP measures have not been presented as an alternative to net income or any other measure of performance or liquidity prescribed by IFRS. The following contains a description of the Company's use of non-IFRS financial measures and additional GAAP measures and provides a reconciliation to the nearest IFRS measure or provides a reference to such reconciliation.

Operating income before restructuring costs and amortization

Operating income before restructuring costs and amortization is calculated as revenue less operating, general and administrative expenses. It is intended to indicate the Company's ongoing ability to service and/or incur debt and is therefore calculated before items such as restructuring costs, equity income/loss of an associate or joint venture, amortization (a non-cash expense) and interest. Operating income before restructuring costs and amortization is also one of the measures used by the investing community to value the business.

(millions of Canadian dollars)	Year ended August 31, 2019	2018 (restated) [1]	Change %
Operating income from continuing operations	**1,125**	586	92.0
Add back (deduct):			
Restructuring costs	**(9)**	446	>(100.0)
Amortization:			
Deferred equipment revenue	**(21)**	(30)	(30.0)
Deferred equipment costs	**85**	110	(22.7)
Property, plant and equipment, intangibles and other	**974**	945	3.1
Operating income before restructuring costs and amortization	**2,154**	2,057	4.7

(1) Fiscal 2018 reported figures have been restated applying IFRS 15. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2018.

Operating margin

Operating margin is calculated by dividing operating income before restructuring costs and amortization by revenue. Operating margin is also one of the measures used by the investing community to value the business.

	Year ended August 31, 2019	2018 (restated) [1]	Change %
Wireline	**45.5%**	44.6%	2.0
Wireless	**19.0%**	15.8%	20.3
Combined Wireline and Wireless	**40.3%**	39.6%	1.8

(1) Fiscal 2018 reported figures have been restated applying IFRS 15. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2018.

Net debt leverage ratio

The Company uses this measure to set its optimal leverage. Refer to "Liquidity and Capital Resources" for further detail.

Free cash flow

The Company utilizes this measure to assess the Company's ability to repay debt and return funds to shareholders through dividends and the recently announced NCIB program. Free cash flow is calculated as free cash flow from continuing operations and free cash flow from discontinued operations.

Free cash flow is comprised of operating income before restructuring costs and amortization, adding dividends from equity accounted associates, changes in receivable related balances with respect to wireline customer equipment financing transactions as a cash item and deducting capital expenditures (on an accrual basis and net of proceeds on capital dispositions) and equipment costs (net), interest, cash taxes paid or payable, dividends paid on the preferred shares, recurring cash funding of pension amounts net of pension expense and adjusted to exclude share-based compensation expense.

Free cash flow has not been reported on a segmented basis. Certain components of free cash flow from continuing operations, including operating income before restructuring costs and amortization continue to be reported on a segmented basis. Capital expenditures and equipment costs (net) are also reported on a segmented basis. Other items, including interest and cash taxes, are not generally directly attributable to a segment, and are reported on a consolidated basis.

Free cash flow is calculated as follows:

(millions of Canadian dollars)	Year ended August 31, 2019	2018 (restated) [1]	Change %
Revenue			
Consumer	**3,707**	3,725	(0.5)
Business	**593**	567	4.6
Wireline	**4,300**	4,292	0.2
Service [2]	**694**	564	23.0
Equipment	**353**	337	4.7
Wireless	**1,047**	901	16.2
	5,347	5,193	3.0
Intersegment eliminations	**(7)**	(4)	75.0
	5,340	5,189	2.9
Operating income before restructuring costs and amortization [2][3]			
Wireline	**1,955**	1,915	2.1
Wireless	**199**	142	40.1
	2,154	2,057	4.7
Capital expenditures and equipment costs (net): [4]			
Wireline	**827**	1,018	(18.8)
Wireless	**385**	343	12.2
	1,212	1,361	(10.9)
Free cash flow from continuing operations before the following	**942**	696	35.3
Less:			
Interest	**(256)**	(247)	3.6
Cash taxes	**(160)**	(166)	(3.6)
Other adjustments:			
Dividends from equity accounted associates	**10**	92	(89.1)
Non-cash share-based compensation	**3**	2	50.0
Pension adjustment	**7**	11	(36.4)
Customer equipment financing	**1**	5	(80.0)
Preferred share dividends	**(9)**	(8)	12.5
Free cash flow	**538**	385	39.7

(1) Fiscal 2018 reported figures have been restated applying IFRS 15 and also reflect a change in accounting policy. See "New Accounting Standards" for additional details.
(2) Certain figures have been adjusted to correct an immaterial, inadvertent overstatement of previously reported wireless service revenue for the year ended August 31, 2019 of $7 million.
(3) Refer to key performance drivers.
(4) Per Note 26 to the audited Consolidated Financial Statements.

STATISTICAL MEASURES:

Subscriber counts (or Revenue Generating Units ("RGUs"))

The Company measures the count of its subscribers in its Consumer, Business and Wireless divisions.

In the Consumer and Business divisions, wireline Video subscribers include residential customers, multiple dwelling units ("MDUs") and commercial customers. A residential subscriber who receives at a minimum, basic cable service, is counted as one subscriber. In the case of MDUs, such as apartment buildings, each tenant with a minimum of basic cable service is counted as one subscriber, regardless of whether invoiced individually or having services included in his or her rent. Each building site of a commercial customer (e.g., hospitals, hotels or retail franchises) that is receiving at a minimum, basic cable service, is counted as one subscriber. Video satellite subscribers are counted in the same manner as wireline Video customers except that it also includes seasonal customers who have indicated their intention to reconnect within 180 days of disconnection. Internet customers include all modems on billing and Phone includes all phone lines on billing. All subscriber counts exclude complimentary accounts but include promotional accounts.

Consumer and Business divisions' RGUs represent the number of products sold to customers and includes Video (cable and Satellite subscribers), Internet customers, and Phone lines. As at August 31, 2019 these combined divisions had approximately 5.5 million RGUs.

In the Wireless division, a recurring subscriber or RGU (e.g. cellular phone, smartphone, tablet or mobile Internet device) has access to the wireless network for voice and/or data communications, whether Prepaid or Postpaid. Prepaid subscribers include RGUs where the account is within 90 days of the prepaid credits expiring. As at August 31, 2019 the Wireless division had approximately 1.7 million RGUs.

Wireless Postpaid Churn

To assist in understanding the performance of our Wireless business, in fiscal 2019 we commenced disclosing Wireless postpaid subscriber or RGU churn ("postpaid churn"). Subscriber churn measures success in retaining subscribers. Wireless postpaid churn is a measure of the number of postpaid subscribers that deactivated during a period as a percentage of the average postpaid subscriber base during a period, calculated on a monthly basis. It is calculated by dividing the number of Wireless postpaid subscribers that deactivated (in a month) by the average number of postpaid subscribers during the month. When used or reported for a period greater than one-month, postpaid churn represents the sum of the number of subscribers deactivating for each period incurred divided by the sum of the average number of postpaid subscribers of each period incurred. Refer to "Segmented Operations Review" for postpaid churn details and description.

Postpaid churn improved 22-basis points in fiscal 2019 to 1.32% reflecting the ongoing enhancements to the wireless customer experience including our expanding and improving network and the Big Gig data-centric pricing and packaging options partially offset by the increased competitive environment experienced during the year.

Wireless average billing per subscriber unit ("ABPU")

To assist in understanding the underlying economics of our Wireless business, this fiscal year we commenced disclosing Wireless average billing per subscriber per month ("ABPU"). This measure is an industry metric that is useful in assessing the operating performance of a wireless entity. We use ABPU as a measure that approximates the average amount the Company invoices an individual subscriber unit on a monthly basis. ABPU helps us to identify trends and measures the Company's success in attracting and retaining higher lifetime value subscribers. Wireless ABPU is calculated as service revenue (excluding the allocation of the device subsidy attributable to service revenue under IFRS 15) plus the monthly repayments of the outstanding device balance owing from customers on contract, divided by the average number of subscribers on the network during the period and is expressed as a rate per month. Refer to "Segmented Operations Review" for ABPU details and description.

ABPU of $41.67 in fiscal 2019 compares to $39.19 in the prior year. ABPU growth reflects the increased number of customers that are subscribing to higher value service plans and purchasing a device through Freedom Mobile.

Wireless average revenue per subscriber unit per month ("ARPU")

Wireless ARPU is calculated as service revenue divided by the average number of subscribers on the network during the period and is expressed as a rate per month. This measure is an industry metric that is useful in assessing the operating performance of a wireless entity, but does not have a standardized meaning under IFRS. Refer to "Segmented Operations Review" for ARPU details and description.

ARPU of $37.92 in fiscal 2019 compares to $37.11 in the prior year. ARPU growth reflects the impact of changes in accounting policies upon the adoption of IFRS 15, whereby a portion of the device subsidy, previously fully allocated as a reduction to equipment revenue, is now partially allocated as a reduction to service revenue.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

The Company prepared its Consolidated Financial Statements in accordance with IFRS as issued by the International Accounting Standards Board ("IASB"). An understanding of the Company's accounting policies is necessary for a complete analysis of results, financial position, liquidity and trends. Refer to Note 2 to the Consolidated Financial Statements for additional information on accounting policies. The following section discusses key estimates and assumptions that management has made under IFRS and how they affect the amounts reported in the Consolidated Financial Statements and notes. Following is a discussion of the Company's critical accounting policies:

Revenue and expense recognition

The identification of performance obligations within a contract and the timing of satisfaction of performance obligations under long-term contracts requires judgment. For bundled arrangements, we account for individual products and services when they are separately identifiable, and the customer can benefit from the product or service on its own or with other readily available resources. The Company has multiple deliverable arrangements comprised of upfront fees (subscriber connection fee revenue and/or customer premise equipment revenue) and related subscription revenue. The Company determined that the upfront fees charged to customers do not constitute separate performance obligations; therefore, these revenue streams are assessed as an integrated package.

Revenue is considered earned as services are performed, provided that at the time of performance, ultimate collection is reasonably assured. Such performance is regarded as having been achieved when reasonable assurance exists regarding the measurement of the consideration that will be derived from rendering the service. Revenue from Video, Internet, Digital Phone, Direct-to-Home ("DTH"), and Wireless customers includes subscriber revenue earned as services are provided. The revenue is considered earned as the period of service relating to the customer billing elapses. In addition to monthly service plans, the Company also offers multi-year service plans in which the total amount of the contractual service revenue is accounted for on a straight-line basis over the term of the plan.

When a customer can modify their contract within predefined terms such that we are not able to enforce the transaction price agreed to, but can only contractually enforce a lower amount, we allocate revenue between performance obligations using the minimum enforceable rights and obligations and any excess amount is recognized as revenue as its earned.

Subscriber connection fee revenue

Connection fees have no standalone value to the customer separate and independent of the Company providing additional subscription services, therefore the connection fee revenue must be deferred as contract liabilities and recognized systematically over the periods that the subscription services are earned. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered its customer churn rate and other factors, such as competition from new entrants, to determine the deferral period of three years.

Subscriber connection and installation costs

The costs of physically connecting a new home are capitalized as part of the Company's distribution system as the service potential of the distribution system is enhanced by the ability to generate future subscriber revenue. Costs of disconnections are expensed as incurred as the activity does not generate future revenue.

Costs incurred to obtain or fulfill a contract

The incremental costs to obtain or fulfill a contract with a customer are deferred and amortized into operating expenses over their expected period of benefit to the extent they are recoverable. These costs include certain commissions paid to internal and external representatives that we expect to be recoverable. Determining the deferral criteria for these costs requires us to make significant judgments.

Customer premise equipment revenue and costs

Customer premise equipment available for sale, which generally includes DTH equipment, has no standalone value to the customer separate and independent of the Company providing additional subscription services. Therefore, the equipment revenue is deferred and recognized systematically over the periods that the subscription services are earned. As the equipment sales and the related subscription revenue are considered one transaction, recognition of the equipment revenue commences once the subscriber service is activated. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered various factors including customer churn, competition from new entrants, and technology changes to determine the deferral period of three years.

In conjunction with equipment revenue, the Company also incurs incremental direct costs which include equipment and related installation costs. These direct costs cannot be separated from the undelivered subscription service included in the multiple deliverable arrangement. Under IAS 2 "Inventories", these costs represent inventoriable costs and are deferred and amortized over the period of three years, consistent with the recognition of the related equipment revenue. The equipment and installation costs generally exceed the amounts received from customers on the sale of equipment (the equipment is sold to the customer at a subsidized price). The Company defers the entire cost of the equipment, including the subsidy portion, as it has determined that this excess cost will be recovered from future subscription revenues and that the investment by the customer in the equipment creates value through increased retention.

Shaw Business installation revenue and expenses

The Company also receives installation revenues in its Shaw Business operation on contracts with commercial customers which are deferred and recognized as revenue on a straight-line basis over the related service contract, generally spanning two to ten years. Direct and incremental costs associated with the service contract, in an amount not exceeding the upfront installation revenue, are deferred and recognized as an operating expense on a straight-line basis over the same period.

Wireless equipment revenue

Revenue for performance obligations satisfied at a point in time is recognized when control of the item or service transfers to the customer. Revenue from the direct sale of equipment to subscribers or dealers is recognized when the equipment is delivered and accepted by the subscribers or dealers.

For bundled arrangements (e.g. wireless handsets, and voice and data services), items are accounted for as separate performance obligations if the item meets the definition of a distinct good or service. Stand-alone selling prices are determined using observable prices adjusted for market conditions and other factors, as appropriate. The Company offers a discretionary wireless handset discount program, whereby the subscriber earns the applicable discount by maintaining services with the Company, such that the receivable relating to the discount at inception of the transaction is reduced over a period of time. This discount is allocated proportionately between the equipment and service revenue, with the equipment discount recognized when the handset is delivered and the corresponding service discount is classified as a contract asset. The contract asset is reduced on a straight-line basis over the period which the discount is forgiven to a maximum of two years with an offsetting reduction to service revenue.

The Company also offers a plan allowing customers to receive larger up-front handset discount than they would otherwise qualify for if they pay a predetermined incremental charge to their existing service plan on a monthly basis. The charge is billed on a monthly basis but is recognized as revenue when the handset is delivered and accepted by the subscriber. The amount receivable is classified as part of other current or non-current receivables, as applicable, in the consolidated statement of financial position.

Income statement classification

The Company distinguishes amortization of deferred equipment revenue and deferred equipment costs from the revenue and expenses recognized from ongoing service activities on its income statement. Equipment revenue and costs are deferred and recognized over the anticipated term of the related future revenue (i.e., the monthly service revenue) with the period of recognition spanning three to five years. As a result, the amortization of deferred equipment revenue and deferred equipment costs are non-cash items on the income statement, similar to the Company's amortization of deferred IRU revenue, which the Company also segregates from ongoing revenue. Further, within the lifecycle of a customer relationship, the customer generally purchases customer premise equipment at the commencement of the customer relationship, whereas the subscription revenue represents a continuous revenue stream throughout that customer relationship. Therefore, the segregated presentation provides a clearer distinction within the income statement between cash and non-cash activities and between up-front and continuous revenue streams, which assists financial statement readers to predict future cash flows from operations.

Allowance for doubtful accounts

A significant portion of the Company's revenues are earned from selling on credit to individual subscribers. Because there are some customers who do not pay their debts, selling on credit necessarily involves credit losses. The Company is required to make an estimate of an appropriate allowance for doubtful accounts on its receivables. In determining its estimate, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. The estimated allowance required is a matter of judgment and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foreseen, such as future business, personal and economic conditions. Conditions causing deterioration or improvement in the aging of accounts receivable and collections will increase or decrease bad debt expense.

Property, plant and equipment and other intangibles – capitalization of direct labour and overhead

The cost of property, plant and equipment and other intangibles includes direct construction or development costs (such as materials and labour) and overhead costs directly attributable to the construction or development activity. The Company capitalizes direct labour and direct overhead incurred to construct new assets, upgrade existing assets and connect new subscribers. These costs are capitalized as they are directly attributable to the acquisition, construction, development or betterment of the networks or other intangibles. Repairs and maintenance expenditures are charged to operating expenses as incurred.

Direct labour and overhead costs are capitalized in three principal areas:

1. **Corporate departments such as Technology, Operations, Products, and Supply Chain ("TOPS"):** TOPS is involved in overall planning and development of the Video/Internet/Phone/Wireless infrastructure. Labour and overhead costs directly related to these activities are capitalized as the activities directly relate to the planning and design of the construction of the distribution system. In addition, TOPS devotes considerable efforts towards the development of systems to support Phone, Wi-Fi, and projects related to new customer management, billing and operating support systems. Labour costs directly related to these and other projects are capitalized.

2. **Cable regional construction departments, which are principally involved in constructing, rebuilding and upgrading the Cable/Internet/Phone infrastructure:** Labour and overhead costs directly related to the construction activity are capitalized as the activities directly relate to the construction or upgrade of the distribution system. Capital projects include, but are not limited to, projects such as the new subdivision builds, increasing network capacity by reducing the number of homes fed from each node, and upgrades of plant capacity and the Wi-Fi build.

3. **Subscriber-related activities such as installation of new drops and Internet and Digital Phone services:** The labour and overhead directly related to the installation of new services are capitalized as the activity involves the installation of capital assets (i.e., wiring, software, etc.) which enhance the service potential of the distribution system through the ability to earn future revenues. Costs associated with service calls, collections, disconnects and reconnects that do not involve the installation of a capital asset are expensed.

Amounts of direct labour and direct overhead capitalized fluctuate from year to year depending on the level of customer growth and plant upgrades for new services. In addition, the level of capitalization fluctuates depending on the proportion of internal labour versus external contractors used in construction projects.

The percentage of direct labour capitalized in many cases is determined by the nature of employment in a specific department. For example, a significant portion of labour and direct overhead of the cable regional construction departments is capitalized as a result of the nature of the activity performed by those departments. Capitalization is also based on piece rate work performed by unit-based employees which is tracked directly. In some cases, the amount of capitalization depends on the level of maintenance versus capital activity that a department performs. In these cases, an analysis of work activity is applied to determine this percentage split.

Amortization policies and useful lives

The Company amortizes the cost of property, plant and equipment and other intangibles over the estimated useful service lives of the items. These estimates of useful lives involve considerable judgment. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. On an annual basis, the Company reassesses its existing estimates of useful lives to ensure they match the anticipated life of the technology from a revenue-producing perspective. If technological change happens more quickly or in a different way than the Company has anticipated, the Company may have to shorten the estimated life of certain property, plant and equipment or other intangibles which could result in higher amortization expense in future periods or an impairment charge to write down the value of property, plant and equipment or other intangibles.

Intangibles

The excess of the cost of acquiring cable, satellite, data centre and wireless businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist of amounts allocated to broadcast rights and licences, wireless spectrum licences, trademarks, brands, customer relationships and software assets. Broadcast rights and licences, wireless spectrum licences, trademarks and brands represent identifiable assets with indefinite useful lives.

Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over their estimated useful lives ranging from 4 – 15 years.

Software that is not an integral part of the related hardware is classified as an intangible asset. Internally developed software assets are recorded at historical cost and include direct material and labour costs as well as borrowing costs on qualifying assets. Software assets are amortized on a straight-line basis over estimated useful lives ranging from 3 – 10 years. The Company reviews the estimates of lives and useful lives on a regular basis.

Asset impairment

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at February 1) and when events or changes in circumstances indicate that the carrying value may be impaired. The recoverable amount of each cash-generating unit ("CGU") is determined based on the higher of the CGU's fair value less costs to sell and its value in use. A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are Cable, Satellite, and Wireless. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods. The results of the impairment tests are provided in Note 10 to the Consolidated Financial Statements.

Asset retirement obligations

The Company recognizes the fair value of a liability for an asset retirement obligation in the period in which it is incurred, on a discounted basis, with a corresponding increase to the carrying amount of property and equipment, primarily in respect of wireless and transmitter sites. This cost is amortized on the same basis as the related asset. The timing or amount of the outflow is subject to estimation and judgment. The liability is subsequently increased for the passage of time and the accretion is recorded in the income statement as interest expense. The discount rates applied are subsequently adjusted to current rates as required at the end of reporting periods. Revisions due to the estimated timing of cash flows or the amount required to settle the obligation may result in an increase or decrease in the liability. Actual costs incurred upon settlement of the obligation are charged against the liability to the extent recorded.

Employee benefit plans

As at August 31, 2019, Shaw had non-registered defined benefit pension plans for key senior executives and designated executives. The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The differences between actual and assumed results are immediately recognized in other comprehensive income/loss. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected to be needed to settle employee benefit obligations and is also used to calculate the interest income on plan assets. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes are required. The following table illustrates the increase on the accrued benefit obligation and pension expense of a 1% decrease in the discount rate:

(millions of Canadian dollars)	Accrued Benefits Obligation at End of Fiscal 2019	Pension Expense Fiscal 2019
Weighted Average Discount Rate – Non-registered Plans	2.90%	3.70%
Impact of: 1% decrease – Non-registered Plans	$ 88	$ 4

Deferred income taxes

The Company has recognized deferred income tax assets and liabilities for the future income tax consequences attributable to differences between the financial statement carrying amounts of assets and liabilities and their respective tax bases. Deferred tax assets are also recognized in respect of losses of certain of the Company's subsidiaries. The deferred income tax assets and liabilities are measured using enacted or substantially enacted tax rates expected to apply to taxable income in the years in which the temporary differences are expected to reverse or the tax losses are expected to be utilized. Realization of deferred income tax assets is dependent upon generating sufficient taxable income during the period in which the temporary differences are deductible. The Company has evaluated the likelihood of realization of deferred income tax assets based on forecasts of taxable income of future years, existing tax laws and tax planning strategies. Significant changes in assumptions with respect to internal forecasts or the inability to implement tax planning strategies could result in future impairment of these assets.

Commitments and contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Contractual and other commercial obligations primarily relate to network fees and operating lease agreements for use of transmission facilities, including maintenance of satellite transponders and lease of premises in the normal course of business. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities.

RELATED PARTY TRANSACTIONS

Related party transactions are reviewed by Shaw's Corporate Governance and Nominating Committee, comprised of independent directors. The following sets forth certain transactions in which the Company is involved.

Corus

The Company and Corus are subject to common voting control. During 2016, the Company sold its wholly owned subsidiary Shaw Media to Corus. The transaction closed on April 1, 2016. In fiscal 2019, network, advertising and programming fees were paid to various Corus subsidiaries. The Company provided uplink of television signals, programming content, Internet services and lease of circuits to various Corus subsidiaries. The Company also received dividends from Corus related to its Corus Class B non-voting participating shareholdings representing 38% of the total issued equity of Corus. On May 31, 2019, the Company completed its secondary offering of its 80,630,383 Class B non-voting participating shares of Corus at a price of $6.80 per share for net proceeds to the Company of approximately $526 million. (see "Equity Interest in Corus").

Shaw no longer holds any equity interest in Corus.

Burrard Landing Lot 2 Holdings Partnership

The Company has a 33.33% interest in Burrard Landing Lot 2 Holdings Partnership (the "Partnership"). During the current year, the Company paid the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, BC, is the Company's headquarters for its lower mainland BC operations.

Sale of Real Property

On May 15, 2019, the Company completed the sale of a non-core parcel of land and the building located thereon (the "Property"), to an affiliate of Shaw Family Living Trust ("SFLT") (the "Purchaser"), for total net proceeds of approximately $45 million (for further detail about SFLT see "Known Events, Risks and Uncertainties – Control of the Company"). The Property had a net book value of approximately $4 million resulting in a gain on disposition of approximately $41 million. The purchase price was determined based on appraisals performed by two independent valuators. As part of the transaction, the Purchaser agreed to lease back the Property to the Company for a term of three years at market rental rates (which was also based on appraisals from the two independent valuators) allowing the Company to monetize a non-core asset. The transaction was approved by the independent Board members of the Company.

Key management personnel and Board of Directors

Key management personnel consist of the most senior executive team and along with the Board of Directors have the authority and responsibility for directing and controlling the activities of the Company. In addition to compensation provided to key management personnel and the Board of Directors for services rendered, the Company transacts with companies related to certain Board members primarily for the purchase of remote control units, network programming and installation of equipment.

Refer to Note 29 to the Consolidated Financial Statements for further related party transaction detail.

NEW ACCOUNTING STANDARDS

Shaw has adopted or will adopt a number of new accounting policies as a result of recent changes in IFRS as issued by the IASB. The ensuing discussion provides additional information as to the date that Shaw is or was required to adopt the new standards, the methods of adoption permitted by the standards, the method chosen by Shaw, and the effect on the financial statements as a result of adopting the new policies. The adoption or future adoption of these accounting policies has not and is not expected to result in changes to the Company's current business practices.

Adoption of recent accounting pronouncements

We adopted the following new accounting standards effective September 1, 2018.

- IFRS 15 *Revenue from Contracts with Customers*, was issued in May 2014 and replaced IAS 11 *Construction Contracts*, IAS 18 *Revenue*, IFRIC 13 *Customer Loyalty Programs*, IFRIC 15 *Agreements for the Construction of Real Estate*, IFRIC 18 *Transfers of Assets from Customers* and SIC-31 *Revenue – Barter Transactions Involving Advertising Services*. The new standard requires revenue to be recognized in a manner that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration expected to be received in exchange for those goods or services. The principles are to be applied in the following five steps:

(1) identify the contract(s) with a customer;

(2) identify the performance obligations in the contract;

(3) determine the transaction price;

(4) allocate the transaction price to the performance obligations in the contract; and,

(5) recognize revenue when (or as) the entity satisfies a performance obligation.

IFRS 15 also provides guidance relating to the treatment of contract acquisition and contract fulfillment costs.

The application of IFRS 15 impacted the Company's reported results, including the classification and timing of revenue recognition and the treatment of costs incurred to obtain contracts with customers.

The application of this standard most significantly affected our Wireless arrangements that bundle equipment and service together, specifically with regards to the timing of recognition and classification of revenue. The timing of recognition and classification of revenue was affected because at contract inception, IFRS 15 requires the estimation of total consideration to be received over the contract term, and the allocation of that consideration to performance obligations in the contract, typically based on the relative stand-alone selling price of each obligation. This resulted in a decrease to equipment revenue recognized at contract inception, as the discount previously recognized over 24 months is now recognized at contract inception, and a decrease to service revenue recognized over the course of the contract, as a portion of the discount previously allocated solely to equipment revenue is allocated to service revenue. The measurement of total revenue recognized over the life of a contract was unaffected by the new standard.

IFRS 15 also requires that incremental costs to obtain a contract with a customer (for example, commissions) be capitalized and amortized into operating expenses over the life of a contract on a rational, systematic basis consistent with the pattern of the transfer of goods or services to which the asset relates. The Company previously expensed such costs as incurred.

The Company's financial position was also impacted by the adoption of IFRS 15, with new contract asset and contract liability categories recognized to reflect differences between the timing of revenue recognition and the actual billing of those goods and services to customers.

For purposes of applying the new standard on an ongoing basis, we are required to make judgments in respect of the new standard, including judgments in determining whether a promise to deliver goods or services is considered distinct, how to determine the transaction prices and how to allocate those amounts amongst the associated performance obligations. We must also exercise judgment as to whether sales-based compensation amounts are costs incurred to obtain contracts with customers that should be capitalized and subsequently amortized on a systematic basis over time.

We have made a policy choice to adopt IFRS 15 with full retrospective application, subject to certain practical expedients. As a result, all comparative information in these financial statements has been prepared as if IFRS 15 had been in effect since September 1, 2017.

Upon adoption of, and transition to, IFRS 15, we elected to utilize the following practical expedients:

- Completed contracts that begin and end within the same annual reporting period and those completed before September 1, 2017 are not restated;
- Contracts modified prior to September 1, 2017 are not restated. The aggregate effect of these modifications is reflected when identifying the satisfied and unsatisfied performance obligations, determining the transaction price and allocating the transaction price to the satisfied and unsatisfied performance obligations; and
- Not disclose, on an annual basis, the unsatisfied portions of performance obligations related to contracts with a duration of one year or less or where the revenue we recognize is equal to the amount invoiced to the customer.

Impacts of IFRS 15, Revenue from Contracts with Customers

The effect of transition to IFRS 15 on impacted line items on our condensed Consolidated Statements of Income as disclosed in “Transition adjustments” for the year ended August 31, 2018, are as follows:

		Year ended August 31, 2018		
(millions of Canadian dollars)		**As reported**	**Effect of transition**	**Subsequent to transition**
Revenue	i.	5,239	(50)	5,189
Operating, general and administrative expenses	ii.	(3,150)	18	(3,132)
Other gains/(losses)		29	3	32
Income tax expense (recovery)		143	(12)	131
Net income (loss) from continuing operations		66	(17)	49

i) Allocation of transaction price

Revenue recognized at point of sale requires the estimation of total consideration over the contract term and allocation of that consideration to all performance obligations in the contract based on their relative stand-alone selling prices. For Wireless term contracts, equipment revenue recognized at contract inception, as well as service revenue recognized over the course of the contract is lower than previously recognized as noted above.

ii) Deferred commission costs

Costs incurred to obtain or fulfill a contract with a customer were previously expensed as incurred. Under IFRS 15, these costs are capitalized and subsequently amortized as an expense over the life of the customer on a rational, systematic basis consistent with the pattern of the transfer of goods and services to which the asset relates. As a result, commission costs are reduced in the period, with an offsetting increase in amortization of capitalized costs over the average life of a customer.

The effect of transition to IFRS 15 on our disaggregated revenues for the year ended August 31, 2018, are as follows:

	Year ended August 31, 2018		
(millions of Canadian dollars)	**As reported**	**Effect of transition**	**Subsequent to transition**
Services			
Wireline – Consumer	3,725	–	3,725
Wireline – Business	567	–	567
Wireless	595	(31)	564
	4,887	(31)	4,856
Equipment and other			
Wireless	356	(19)	337
	356	(19)	337
Intersegment eliminations	(4)	–	(4)
Total revenue	5,239	(50)	5,189

The effect of transition to IFRS 15 on impacted line items on our Consolidated Statements of Financial Position as at September 1, 2017 and August 31, 2018 are as follows:

		As at August 31, 2018			As at September 1, 2017		
(millions of Canadian dollars)		**As reported**	**Effect of transition**	**Subsequent to transition**	**As reported**	**Effect of transition**	**Subsequent to transition**
Current portion of contract assets	i.	–	59	59	–	15	15
Other current assets	ii.	286	(13)	273	155	24	179
Contract assets	i.	–	76	76	–	44	44
Other long-term assets	ii.	300	(102)	198	255	(39)	216
Accounts payable and accrued liabilities	i.	971	(1)	970	913	(4)	909
Unearned revenue	i.	221	(221)	–	211	(211)	–
Current portion of contract liabilities	i.	–	226	226	–	214	214
Deferred credits	i.	460	(18)	442	490	(21)	469
Deferred income tax liabilities		1,894	(7)	1,887	1,858	5	1,863
Contract liabilities	i.	–	18	18	–	21	21
Shareholders' equity		5,957	23	5,980	6,154	40	6,194

i) Contract assets and liabilities

Contract assets and liabilities are the result of the difference in timing related to revenue recognized at the beginning of a contract and cash collected. Contract assets arise primarily as a result of the difference between revenue recognized on the sale of wireless device at the onset of a term contract and the cash collected at the point of sale.

Contract liabilities are the result of receiving payment related to a customer contract before providing the related goods or services. We account for contract assets and liabilities on a contract-by-contract basis, with each contract being presented as a single net contract asset or net contract liability accordingly.

ii) Deferred commission cost asset

Under IFRS 15, we will defer commission costs paid to internal and external representatives as a result of obtaining contracts with customers as deferred commission cost assets and amortize them over the pattern of the transfer of goods and services to the customer, which is typically evenly over 24 to 36 months.

Refer to "Transition adjustments" for the impact of application of IFRS 15 on our previously reported consolidated statements of cash flows.

- IFRS 9 *Financial Instruments* was revised and issued in July 2014 and replaces IAS 39 *Financial Instruments: Recognition and Measurement.* IFRS 9 includes updated guidance on the classification and measurement of financial instruments, new guidance on measuring impairment on financial assets, and new hedge accounting guidance. We have applied IFRS 9, and the related consequential amendments to other IFRSs, on a retrospective basis except for the changes to hedge accounting as described below which were applied on a prospective basis. The adoption of IFRS 9 did not have a significant impact on our financial performance or the carrying amounts of our financial instruments as set out in "Transition adjustments" below.

  IFRS 9 replaces the classification and measurement models in IAS 39 with a single model under which financial assets are classified and measured at amortized cost, fair value through other comprehensive income (FVOCI) or fair value through profit or loss (FVTPL) and eliminates the IAS 39 categories of held-to-maturity, loans and receivables and available-for-sale. Investments and equity instruments are required to be measured by default at FVTPL unless an irrevocable option for each equity instrument is taken to measure at FVOCI. The classification and measurement of financial assets is based on the business model that the asset is managed and its contractual cash flow characteristics. The adoption of IFRS 9 did not change the measurement bases of our financial assets

  - Cash and derivative instruments classified as held-for-trading and measured at FVTPL under IAS 39 continue to be measured as such under IFRS 9 with an updated classification of FVTPL
  - Investments in equity securities not quoted in an active market and where fair value cannot be reliably measured that were classified as available-for-sale and recorded at cost less impairment under IAS 39 are now required to be classified and measured at FVTPL under IFRS 9. There has been no change to the measurement of these assets on transition
  - Trade and other receivables classified as loans and receivables and measured at amortized cost under IAS 39 continue to be measured as such under IFRS 9 with an updated classification of amortized cost

  For financial liabilities, IFRS 9 retains most of the IAS 39 requirements. We did not choose the option of designating any financial liabilities at FVTPL as such, the adoption of IFRS 9 did not impact our accounting policies for financial liabilities as all liabilities continue to be measured at amortized cost.

  The impairment of financial assets under IFRS 9 is based on an expected credit loss (ECL) model, as opposed to the incurred loss model in IAS 39. IFRS 9 applies to financial assets measured at amortized cost, including contract assets under IFRS 15, and requires that we consider factors that include historical, current and forward-looking information when measuring the ECL. We use the simplified approach for measuring losses based on the lifetime ECL for trade receivables and contract assets. Amounts considered uncollectible are written off and recognized in operating, general and administrative expenses in the Consolidated Statement of Income. This change did not have a significant impact to our receivables.

  IFRS 9 does not fundamentally change the types of hedging relationships or the requirements to measure and recognize ineffectiveness; however, it requires us to ensure that the hedge accounting relationships are aligned with our risk management objective and strategy and to apply a more qualitative and forward-looking approach to assess hedge effectiveness. It also requires that amounts related to cash flow hedges of anticipated purchases of non-financial assets settled during the period to be reclassified from accumulated other comprehensive income to the initial cost of the non-financial asset when it is recognized. Under IAS 39, when an anticipated transaction was subsequently recorded as a non-financial asset, the amounts were reclassified from other comprehensive income (loss).

  In accordance with IFRS 9's transition provisions for hedge accounting, the Company has applied the IFRS 9 hedge accounting requirements prospectively from the date of initial application without restatement of prior period comparatives. The Company's qualifying hedging relationships in place as at August 31, 2018 also qualified for hedge accounting in accordance with IFRS 9 and were therefore regarded as continuing hedging relationships. As the critical terms of the hedging instruments match those of their corresponding hedged items, all hedging relationships continue to be effective under IFRS 9's effectiveness assessment requirements. The Company has not designated any hedging relationships under IFRS 9 that would not have met the qualifying hedge accounting criteria under IAS 39.

Change in accounting policy

Effective September 1, 2018, the Company voluntarily changed its accounting policy related to the treatment of digital cable terminals ("DCTs") to record them as property, plant and equipment rather than inventory upon acquisition. The Company believes that the change in accounting policy will result in clearer and more relevant financial information as the Company has recently changed its offerings to customers, which has resulted in DCTs being predominantly rented rather than sold to customers. Previously, inventories included DCTs which were held pending rental or sale to the customer at cost or at a subsidized price. When the subscriber equipment was rented, it was transferred to property, plant and equipment and amortized over its useful life and then removed from capital and returned to inventory when returned by a customer. Under the new policy, all DCTs will be classified as property, plant and equipment regardless of whether or not they are currently deployed to a customer as the Company believes that this better reflects the economic substance of its operations. This change in accounting policy has been applied retrospectively. Refer to "Transition adjustments" below for the impact of this change of accounting policy on previously reported consolidated Statements of Financial Position, consolidated Statements of Income and consolidated Statements of Cash Flows.

Transition adjustments

Below is the effect of transition to IFRS 15 and adoption of our new accounting policy described above on our consolidated Statements of Income for the year ended August 31, 2018.

	Year ended August 31, 2018			
(millions of Canadian dollars)	**As reported**	**IFRS 15 transition**	**Change in accounting policy**	**Subsequent to transition**
Revenue	5,239	(50)	–	5,189

Below is the effect of transition to IFRS 15 and adoption of our new accounting policy described above on our consolidated Statement of Cash Flows for the year ended August 31, 2018.

	Year ended August 31, 2018			
(millions of Canadian dollars)	**As reported**	**IFRS 15 transition**	**Change in accounting policy**	**Subsequent to transition**
OPERATING ACTIVITIES				
Funds flow from continuing operations	1,259	(82)	–	1,177
Net change in non-cash balances related to continuing operations	102	82	(6)	178
Operating activities of discontinued operations	(2)	–	–	(2)
	1,359	–	(6)	1,353
INVESTING ACTIVITIES				
Additions to property, plant and equipment	(1,127)	–	6	(1,121)
Additions to equipment costs (net)	(49)	–	–	(49)
Additions to other intangibles	(131)	–	–	(131)
Proceeds on sale of spectrum licenses	35	–	–	35
Purchase of spectrum licenses	(25)	–	–	(25)
Proceeds on sale of discontinued operations, net of cash sold	18	–	–	18
Net additions to investments and other assets	88	–	–	88
Proceeds on disposal of property, plant and equipment	9	–	–	9
	(1,182)	–	6	(1,176)
FINANCING ACTIVITIES				
Increase in short-term borrowings	40	–	–	40
Increase in long-term debt	10	–	–	10
Issue of Class B Non-Voting Shares	43	–	–	43
Dividends paid on Class A Shares and Class B Non-Voting Shares	(384)	–	–	(384)
Dividends paid on Preferred Shares	(8)	–	–	(8)
Other	(1)	–	–	(1)
	(300)	–	–	(300)
Increase (decrease) in cash	(123)	–	–	(123)
Cash, beginning of the period	507	–	–	507
Cash, end of the period	384	–	–	384

Standards, interpretations and amendments to standards issued but not yet effective

The Company has not yet adopted certain standards and interpretations that have been issued but are not yet effective. The following pronouncements are being assessed to determine the impact on the Company's results and financial position.

- IFRS 16 *Leases* was issued on January 2016 and replaces IAS 17 *Leases*. The new standard requires entities to recognize lease assets and lease obligations on the balance sheet. For lessees, IFRS 16 removes the classification of leases as either operating leases or finance leases, instead requiring that leases be capitalized by recognizing the present value of the lease payments and showing them as lease assets (right-of-use assets) and representing the right to use the underlying leased asset. If lease payments are made over time, the Company would recognize a lease liability representing its obligation to make future lease payments. Certain short-term leases (less than 12 months) and leases of low-value may be exempted from the requirements and may continue to be treated as operating leases if certain elections are made. Lessors will continue with a dual lease classification model. Classification will determine how and when a lessor will recognize lease revenue, and what assets would be recorded.

  As the Company has significant contractual obligations currently being recognized as operating leases, upon adoption of IFRS 16, we will recognize a significant increase to both assets and liabilities on our Consolidated Statements of Financial Position as well as a decrease to operating costs, as a result of removing the lease expense, an increase to depreciation and amortization, due to the depreciation of the right-of-use asset, and an increase to finance costs, due to the accretion of the lease liability. Relative to the results of applying the current standard, although actual cash flows will be unaffected, the Company's statement of cash flows will reflect increases in cash flows from operating activities offset equally by decreases in cash flows from financing activities.

We do not expect significant impacts for contracts in which we are the lessor.

Implementation

We continue to make progress towards adoption of IFRS 16, including the implementation of a new lease system that enables us to comply with the requirements of the standard on a contract-by-contract basis. Changes and enhancements to business processes and systems of internal control are also being completed.

We will adopt IFRS 16 on September 1, 2019, using a modified retrospective approach whereby the financial statements of prior periods presented are not restated. The cumulative effect of the initial application of the new standard will be recognized at the date of initial application. Generally, right-of-use assets at transition will be measured at an amount equal to the corresponding lease liabilities, adjusted for any prepaid or accrued rent outstanding. We do not intend to elect the recognition exemptions on short-term leases or low-value leases; however, we may choose to elect these recognition exemptions on a class-by-class basis for new classes and lease-by-lease basis, respectively, in the future.

As permitted by IFRS 16, we will apply certain practical expedients to facilitate the initial adoption and ongoing application of IFRS 16 including the following:

- not separate fixed non-lease components from lease components for certain classes of underlying assets. Each lease component and any associated non-lease components will be accounted for as a single lease component
- apply a single discount rate to a portfolio of leases with similar characteristics
- exclude initial direct costs from measuring the right-of-use asset as at September 1, 2019
- use hindsight in determining the lease term where the contract contains purchase, extension, or termination options

Effect of Transition to IFRS 16

While our testing, data validation, and assessment process is ongoing, our preliminary estimated effect of transition to IFRS 16 on our Consolidated Statements of Financial Position as at September 1, 2019 is as follows:

(billions of Canadian dollars)	As reported as at August 31, 2019	Estimated effect of IFRS 16 transition	Subsequent to transition as at September 1, 2019
Current assets	0.3	**	0.3
Non-current assets	4.9	1.3	6.2
Current liabilities	1.3	0.2	1.5
Non-current liabilities	6.0	1.1	7.1
Shareholders' equity	6.3	**	6.3

** Amounts less than $0.1 billion.

Upon adoption of the Standard on September 1, 2019, actual amounts could differ from these preliminary estimates.

- IFRIC 23 *Uncertainty over Income Tax Treatments* was issued in 2017 to clarify how to apply the recognition and measurement requirements in IAS 12 when there is uncertainty over income tax treatments. It is required to be applied for annual periods commencing January 1, 2019, which for the Company will be the annual period commencing September 1, 2019. The Company is currently assessing the impact of this standard on its consolidated financial statements. The Company does not expect this standard to have a material effect on its September 1, 2019 balance sheet.

RISK MANAGEMENT

In the normal course of our business activities, the Company is subject to risks. The purpose of risk management is to manage and mitigate risk, rather than to eliminate risk. The Company is committed to continually strengthening our risk management capabilities to protect and enhance value.

Risk Governance and Oversight

The Board of Directors has overall risk governance and oversight responsibilities. Specifically, the Board is responsible for identifying and assessing the principal risks inherent in the business activities of the Company and ensuring that management takes all reasonable steps to implement appropriate systems to manage such risks. The Board of Directors has delegated elements of its risk oversight responsibilities to specific Board committees. The Audit Committee is responsible for: (1) overseeing the Company's processes for identifying, assessing and managing risks; and (2) ensuring that management implements and maintains effective internal controls and procedures for identifying, assessing and managing the principal risks to the Corporation and its business. In addition, the Human Resources and Compensation Committee is responsible for ensuring that the Company's short, medium and long-term incentive plans do not incent risk-taking beyond the Company's risk tolerance.

Responsibilities for Risk Management

Responsibility for risk management is shared across our organization. Each department's operating management, led by the Company's executive team, have integrated controls and risk management practices into day-to-day activities and decision-making processes. We have risk management and compliance functions across the organization such as Finance, Privacy, Security and Risk, Legal and Regulatory, and Technology Risk Governance. The Internal Audit and Advisory Services ("IA&AS") department provides independent and objective audit and advisory services to evaluate and improve the effectiveness of the Company's governance, internal controls, disclosure processes, and risk management activities. The Audit Committee oversees the work of the IA&AS department and all reports issued by the IA&AS department. In addition, the IA&AS department's annual plan is reviewed and approved by the Audit Committee.

Enterprise Risk Management

The Audit Committee undertakes a further review of the significant corporate level risks through the Enterprise Risk Management program ("ERM"). The ERM is a performance focused process designed to identify, monitor and manage significant corporate level risks that could impact the achievement of our strategic objectives. The Company's executives meet periodically to: (1) review and update significant corporate level risks, (2) assess such corporate level risks in terms of likelihood and magnitude of impact, (3) review the response strategy, and (4) monitor progress. The latest ERM update was provided to the Board of Directors in April 2019, with updates to be provided to the Board and/or Audit Committee at least annually. The significant risks and uncertainties affecting the Company and its business are discussed under "Known Events, Trends, Risks and Uncertainties".

KNOWN EVENTS, TRENDS, RISKS AND UNCERTAINTIES

The discussion in this MD&A addresses only what management has determined to be the most significant known events, trends, risks and uncertainties relevant to the Company, its operations and/or its financial results. This discussion is not exhaustive. The discussion of these matters should be considered in conjunction with the "Caution Concerning Forward-Looking Statements".

Competition and Technological Change

Shaw operates in an open and competitive marketplace. Our businesses face competition from regulated and unregulated entities using existing or new communications technologies and from illegal services. In addition, the rapid deployment of new technologies, services and products has blurred the traditional lines between telecommunications, Internet and distribution services and further expands the competitive landscape. Shaw may also face competition from platforms that may gain advantage through regulatory processes. While Shaw continually seeks to strengthen its competitive position through investments in infrastructure, technology and customer service and through acquisitions, there can be no assurance that these investments will maintain Shaw's market share or performance in the future.

The following competitive events, trends, risks and/or uncertainties specific to areas of our business may have a material adverse effect on Shaw and its reputation, as well as its operations and/or its financial results. In each case, the competitive events, trends, risks and/or uncertainties may increase or continue to increase. Competition for new subscribers and retention of existing subscribers may require substantial promotional activity and increase our cost of customer acquisition, decrease our ABPU, ARPU or all of them. We expect that competition, including aggressive discounting practices by competitors to gain market share, is likely to continue to increase for all our businesses.

Consumer Internet

Shaw competes with different types of ISPs offering residential Internet access including traditional telephone companies, wireless providers and independent ISPs making use of wholesale services to provide Internet access in various markets.

Shaw expects that consumer demand for higher Internet access speeds and greater bandwidth will continue to be driven by bandwidth-intensive applications including streaming video, digital downloading, Internet-of-Things ("IOT"), interactive gaming, and cloud based services. As described further under "Shaw's Wireline Network", Shaw continues to expand the capacity and efficiency of its wireline network to handle the anticipated increases in consumer demand for higher Internet access speeds and greater bandwidth. However, there can be no assurance that our investments in network capacity will continue to meet this increasing demand.

Consumer Video

Shaw's Consumer Video services, delivered through both our wireline and satellite platforms, compete with other distributors of video and audio signals. We also compete increasingly with unregulated over-the-top ("OTT") video services and offerings available over Internet connections. Continued improvements in the quality of streaming video over the Internet and the increasing availability of television shows and movies online will continue to increase competition to Shaw's Consumer Video services. Our Video services also compete with illegal services including grey and black market satellite offerings as well as OTT video piracy services. As a result, we have experienced an increase in cord cutting and cord shaving as customers continue to withdraw from traditional cable services.

Consumer Phone

Shaw's competitors for Consumer wireline phone services include traditional telephone companies, other wireline carriers, Voice over Internet Protocol ("VoIP") providers and wireless providers. Several of these competitors have larger operational and financial resources than Shaw. In addition, households increasingly rely on wireless services in place of wireline phone services which negatively affects the business and prospects of our Consumer wireline phone services.

Wireless

Freedom Mobile is a new entrant in the highly competitive Canadian wireless market which is characterized by three national wireless incumbent carriers and regional participants. The national wireless incumbent carriers have larger, and more diverse spectrum holdings than Shaw, as well as larger operational and financial resources than Shaw and are well established in the market. Freedom Mobile's ability to continue to offer and improve Wireless services and to offer new services depends on, among other factors, continued access to, and deployment of, adequate spectrum, including the ability to both renew current spectrum licences and acquire new spectrum licences (in various spectrum bands). If Freedom Mobile cannot acquire and retain needed spectrum, it may not be able to continue to offer and improve its current wireless services and deploy new services on a timely basis, including providing competitive data speeds its customers want. As a result, Freedom Mobile's ability to attract and retain customers could be adversely affected. In addition, an inability to acquire and retain needed spectrum could affect network quality and result in higher capital expenditures. Our Wireless division may face increased competition from other facilities based or non-facilities based new entrants or alternate technologies, including as a result of regulatory decisions or government policies that favour certain competitive platforms. (see "Government Regulations and Regulatory Developments – Telecommunication Act – CRTC Wireless Review").

Business Network Services

Shaw Business competes with other telecommunications carriers in providing high-speed data and video transport and Internet connectivity services to businesses, ISPs and other telecommunications providers. The telecommunications services industry in Canada is highly competitive, rapidly evolving and subject to constant change. Shaw Business' competitors include traditional telephone companies, competitive access providers, competitive local exchange carriers, ISPs, private networks built by large end users and other telecommunications companies. In addition, the development and implementation of new technologies by others could give rise to significant additional competition. Competitors for the delivery of voice and unified communication services include traditional telecommunications companies, resellers and new entrants to the market leveraging new technologies to deliver services. Shaw Broadcast Services also competes in industries that are highly competitive, rapidly evolving and subject to constant change.

Impact of Regulation

As discussed under "Government Regulations and Regulatory Developments", a majority of our Canadian business activities are subject to: (i) regulations and policies administered by ISED and/or the CRTC, and (ii) conditions of licences granted by ISED and/or the CRTC. Shaw's operations, financial results, and future prospects are affected by changes in regulations, policies and decisions, conditions of licences and decisions, including changes in interpretation of existing regulations and requirements contained in such conditions of licences by courts, the government or the regulators, in particular the CRTC, ISED, Competition Bureau and Copyright Board. These changes relate to, and may have an impact on, among other things, licensing and licence renewal, spectrum holdings, products and services, competition, programming carriage and terms of carriage, strategic transactions, and infrastructure access, and the potential for new or increased fees or costs. All such changes in the regulatory regime may have a material adverse effect on Shaw and its reputation, as well as Shaw operations, financial results and/or future prospects.

2019 Federal Election

During the recent federal election, which resulted in a minority government, several parties expressed commitments to reduce the price of mobile and internet services. The introduction of any future regulation or policy to implement such commitments could have a material adverse impact on our financial results.

Customer Experience

Shaw's customer loyalty, retention and likelihood to recommend Shaw all depend on our ability to provide a seamless connectivity experience that meets or exceeds their expectations. As part of the digital transformation, the Company modernized several aspects of its wireline operations to better meet the needs of today's customer, including shifting customer interactions to digital platforms and driving more self-help, self-install and self-service. The Company continues to streamline and simplify manual processes that improve its customers overall connectivity experience and day-to-day operations for our employees. The failure to sustain and expand customer relationships through quality products and customer service could have a material adverse effect on our businesses, financial condition and results of operations.

Network Failure

Shaw's business may be interrupted by wireline or wireless network failures, including its own or third party networks. Such network failures may be caused by fire damage, natural disaster, power loss, cyber attacks, human error, disabling devices, acts of war or terrorism and other events which may be beyond Shaw's control.

As insurance premium costs are uneconomic relative to the risk of failure, Shaw self-insures the plant in its FibrePlus network. It is likely that wireline or wireless network damage caused by any one incident would be limited by geographic area and the resulting business interruption and financial damages would be also limited. In addition, with respect to a wireline network failure, we expect the risk of loss to be mitigated as most of the backbone fibre network and much of the HFC access network is located underground.

Shaw protects its wireline network through a number of measures including physical and information technology security, and ongoing maintenance and placement of insurance on our network equipment and data centres, including the Calgary1 data centre (which was sold to a third party on August 1, 2019). In the past, the Company has successfully recovered from network damage caused by natural disasters without significant cost or disruption of service.

Shaw protects its wireless network and mitigates wireless network failure through physical and information technology security, ongoing maintenance, and by carrying insurance on its wireless network equipment.

Despite the steps Shaw takes to reduce the risk of wireline and wireless network failure, failures may still occur, and such failures could negatively affect levels of customer service and relationships which may have a material adverse effect on Shaw and its reputation, as well as its operations and/or financial results.

Information Systems and Internal Business Processes

Many aspects of the Company's businesses depend to a large extent on various information technology (IT) systems and software, and on internal business processes. Shaw regularly undertakes initiatives to update and improve these systems and processes. Although the Company has taken steps to reduce the risks of failure of these systems and processes, there can be no assurance that potential failures of, or deficiencies in, these systems, processes or change initiatives will not have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Cyber Security Risks

Although Shaw's systems and network architecture are designed and operated to be secure, they are vulnerable to the risks of an unauthorized third party accessing these systems or its network. This could lead to a number of adverse consequences, including the unavailability, disruption or loss of Shaw's services or key functionalities within Shaw's technology systems or software or the unauthorized disclosure, corruption or loss of sensitive company, customer or personal information. Our insurance may not cover or be adequate to fully reimburse us for any associated costs and losses.

We continue to assess and enhance our cyber security within Shaw while we are monitoring the risks of cyber attacks and implement appropriate security policies, procedures and information technology systems to mitigate the risk of cyber attacks.

External threats to our network are constantly changing, and there is no assurance that Shaw will be able to protect its network from all future threats which may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Satellite

Shaw uses three satellites (Anik F2, Anik F1R and Anik G1) owned by Telesat Canada ("Telesat") to provide satellite services in our Consumer division. In connection with the Company's digital network upgrade (DNU) program initiated in 2017, the Company has effectively optimized satellite traffic on the Anik F1R and Anik F2 satellites, enabling a reduction in the total number of transponders required by the Company to conduct its business. Effective October 1, 2019, the Company transferred its ownership interest in the 16 Anik F2 transponders, adjusted its satellite traffic on the Anik F1R and Anik F2 satellites, and renewed its capacity service agreements in place on both Anik F1R and Anik F2 and Anik G1 until the effective end-of-life date of such satellites. While the Company intends to negotiate and enter into new capacity service agreements to meet its long term satellite capacity requirements, there can be no assurance that replacement transponder capacity will be available or that such agreements will be entered into on favourable terms, which may have a material adverse effect on customer service and customer relationships, as well as the Company's reputation, operations and/or financial results.

The Company does not maintain any insurance coverage for the transponders on Anik F1R, Anik F2 and Anik G1 as it believes the costs are uneconomic relative to the benefit which could be otherwise derived through an arrangement with Telesat. As collateral for the transponder capacity pre-payments that were made by the Company to facilitate the construction of the satellite, the Company maintains a security interest in the transponder capacity and any related insurance proceeds that Telesat recovers in connection with an insured loss event.

The Company does not maintain business interruption insurance covering damage related to the loss of use of one or more of the transponders on the satellites as it believes that the insurance premium costs are uneconomic relative to the risk of transponder and/or satellite failure. The majority of transponder capacity is available to the Company on an unprotected, non-pre-emptible basis. The Company has the option to contract transponders with excess capacities on Anik F2, subject to availability. In the event of satellite failure, service will be restored as capacity becomes available. Restoration of satellite service on another satellite may require repositioning or re-pointing of customers' receiving dishes, an upgrade to their video receivers or customers may require a larger dish. The Anik G1 satellite has a switch feature that allows whole channel services (transponders and available spares) to be switched from extended Ku-band to Ku-band, which provides the Company with limited back-up to restore failed whole channel services of Anik F1R. The Company has reserved limited access to Ku band frequencies in the 107.3 orbital location to enable the switching feature, subject to availability. Satellite failure could negatively affect levels of customer service and customer relationships and may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Reliance on Suppliers and Third Party Service Providers

Shaw is connected to or relies on other telecommunication carriers and certain utilities to conduct its business. Any disruption to the services provided by these suppliers, including labour strikes and other work disruptions, bankruptcies, technical difficulties or other events affecting the business operations of these carriers or utilities may affect Shaw's ability to operate and, therefore may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

The Company sources its customer premise, capital equipment, and capital builds as well as portions of its service offerings, including network, video delivery and IT functions from certain key suppliers. While the Company has alternate sources for many of these purchases, the loss of a key supplier may require us to incur additional capital expenditures for the substitution of existing products and services which could adversely affect the Company's ability to operate, and therefore may have a material adverse effect on Shaw, its operations and/or its financial results. In the course of fulfilling service arrangements, third-party service providers must ensure our information is appropriately protected and safeguarded. Failure to do so may affect Shaw through increased regulatory risk, reputational damage, and damage to customer experience.

There are a limited number of suppliers of popular mobile devices and there is a risk that the Company will not be able to maintain contracts for its existing supply of mobile devices and/or contract for the supply of new devices on commercially reasonable terms.

Programming Expenses

Expenses for video programming continue to be one of our most significant operating expenses. Costs continue to increase, particularly for sports programming. In addition, as we add programming or distribute existing programming to more of our subscriber base, programming expenses increase. Although we have been successful at reducing the impact of these cost increases through the sale of additional services or increasing subscriber rates, there can be no assurance that we will continue to be able to do so and this may have a material adverse effect on Shaw, its operations and/or its financial results.

Economic Conditions

The Canadian economy is affected by uncertainty in global financial and equity markets and slowdowns in national and/or global economic growth. Changes in economic conditions, which may differ across our regional footprint, may affect discretionary consumer and business spending, resulting in increased or decreased demand for Shaw's product offerings. Current or future events caused by volatility in domestic or international economic conditions or a decline in economic growth may have a material adverse effect on Shaw, its operations and/or financial results.

Talent Management and Succession Planning

Our success is substantially dependent upon the retention and the continued performance of our executive officers. Many of these executive officers are uniquely qualified in their areas of expertise, making it difficult to replace their services in the short to medium term. The loss of the services of any key executives and/or employees in critical roles or inadequate processes designed to attract, develop, motivate and retain productive and engaged employees could have a material adverse effect on Shaw, its operations and/or financial results.

To mitigate this risk, the Company's comprehensive compensation program is designed to attract, retain, motivate and reward the executive team and key employees through aligning management's interest with our business objectives and performance. Furthermore, the Company conducts annual succession planning to identify and develop key leaders to build capabilities and experiences required for the future.

Total Business Transformation and Voluntary Departure Program

In the second quarter of fiscal 2018, the Company introduced TBT, a multi-year initiative designed to reinvent Shaw's operating model to better meet the changing tastes and expectations of consumers and businesses by optimizing the use of resources, maintaining and ultimately improving customer service, and by reducing staff. Three key elements of TBT are to: 1) shift customer interactions to digital platforms; 2) drive more self-install and self-serve; and 3) streamline the organization that builds and services our network. As part of the TBT initiative, the Company also plans to reduce input costs, consolidate functions, and streamline processes, which is expected to create operational improvements across the business allowing it to evolve into a more efficient organization.

There is an overall risk that the TBT initiative may not be completed in a timely and cost-effective manner to yield the expected results and benefits or result in a leaner, more integrated and agile company with improved efficiencies and execution to better meet its consumers' needs and expectations (including the products and services offered to its customers). Specifically, there is a risk that the Company may not be able to: (i) establish and continue to upgrade a digital platform that will effectively engage customers, (ii) successfully adopt a digital platform that will yield the expected results and benefits, including maintaining the quality of customer service, protecting the security of customer information, and coordinating the delivery of product and service offerings; (iii) deploy programs that will result in customers using the self-serve functions and electing to self-install the Company's products and services; and (iv) consolidate and streamline the functions and processes of the divisions responsible for building and servicing its networks. The realization of any of these risks may have a material adverse effect on Shaw, its operations and/or financial results.

As a first step in the TBT, the VDP was offered to eligible employees. The outcome of the program initially had approximately 3,300 Shaw employees accepting the VDP package representing approximately 25% of all employees at that time. The Company's VDP continued in fiscal 2019, which resulted in approximately 1,000 employees exiting the Company for a total of approximately 2,300 employees since inception. In fiscal 2019, approximately 90 employees either rescinded their acceptance of the VDP package with the approval of the Company or declined their package in order to expedite their departure date. As part of the program design, the majority of customer-facing employees (i.e. Customer Care, Retail, Sales) were not eligible to participate in the VDP. A large portion of employees who elected to participate in the VDP are in functions that will be addressed through the aforementioned key elements of the TBT and Shaw has control over the timing of employee departures across the Company through an actively managed, orderly transition over an 18-month period. In select functions, the Company determined that some employees will transition over a 24-month period, an extension from the 18-month period initially expected. With remaining employees expected to depart in fiscal 2020, there is a risk that the Company may not be able to: (i) complete the employee exits with minimal impact on business operations within the anticipated timeframes and for the budgeted amounts, (ii) replace or outsource the functions performed by certain key employees that have accepted the VDP package in a manner that aligns with customer expectations which may have a material adverse effect on the Company's business operations, (iii) continue to operate the business in the normal course, and maintain or improve customer services, (iv) maintain employee morale as a result of the organizational changes, staff and cost reductions; (v) ensure that the staff reductions will reduce costs, and achieve the financial goals, cost competitiveness and profitability required to be attractive to investors. In addition, there can be no assurance that restructuring costs of the VDP will be limited to the budgeted amounts or that the expected annualized cost reductions from the VDP (including reductions in operating and capital expenditures will be realized within the expected time frames or at all). The realization of any of these risks may have a material adverse effect on Shaw, its operations and/or financial results.

Labour Relations

As of August 31, 2019, approximately 5.5% of our employees are represented by unions under collective bargaining agreements. While the Company strives to maintain positive labour relations, we can neither predict the outcome of current or future negotiations relating to labour disputes, union representation or renewal of collective bargaining agreements, nor be able to avoid future work stoppages, strikes or other forms of labour protests pending the outcome of any current or future negotiations. A prolonged work stoppage, strike or other form of labour protest could have a material adverse effect on our businesses, operations and reputation. Even if the Company does not experience strikes or other forms of labour protests, the outcome of labour negotiations could adversely affect our businesses and results of operations. In addition, our ability to make short-term adjustments to control compensation and benefits costs could be limited by the terms of such collective bargaining agreements.

There has been a significant amount of change across the organization in connection with the VDP and our TBT initiative. To support all leaders and employees, we continually listen to remove barriers and respond in real-time to needs and concerns. We also continue to provide support for leaders on how to manage change and maintain positive employee engagement and relations.

Interest Rates, Foreign Exchange Rates and Capital Markets

Shaw has the following financial risks in its day-to-day operations:

(a) **Interest rates:** Due to the capital-intensive nature of Shaw's operations, the Company uses long-term financing extensively in its capital structure. The primary components of this structure include banking facilities and various Canadian denominated senior notes and debentures with varying maturities issued in the public markets. These are more fully described in Note 14 to the Consolidated Financial Statements.

Interest on bank indebtedness is based on floating rates while the senior notes are all fixed-rate obligations. If required, Shaw uses its credit facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. Increases in interest rates may have a material adverse effect on Shaw, its operations and/or its financial results.

As at August 31, 2019, virtually all of Shaw's consolidated long-term debt was fixed with respect to interest rates.

(b) **Capital markets:** Shaw requires ongoing access to capital markets to support our operations. Changes in capital market conditions, including significant changes in market interest rates or lending practices, or changes in Shaw's credit ratings, may adversely affect our ability to raise or refinance short-term or long-term debt and therefore may have a material adverse effect on Shaw, its operations and/or its financial results.

Shaw manages its exposure to floating interest rates by maintaining a mix of fixed and floating rate debt. Interest on the Company's unsecured banking facility and the recently implemented accounts receivable securitization program are based on floating rates, while the senior notes are all fixed rate obligations.

The Company may also enter into forward contracts to mitigate its exposure to foreign exchange and interest rate risk. While hedging and other efforts to manage these risks are intended to mitigate Shaw's risk exposure, because of the inherent nature and risk of such transactions, those activities can result in losses. For instance, if Shaw hedges its floating interest rate exposure, it may forego the benefits that may otherwise be experienced if rates were to fall and it is subject to credit risks associated with the counterparties with whom it contracts. In order to minimize the risk of counterparty default under its swap agreements, Shaw assesses the creditworthiness of its swap counterparties. Further information concerning the policy and use of derivative financial instruments is contained in Notes 2 and 30 to the Consolidated Financial Statements.

Inventory

Our Wireless division's inventory balance consists of devices which generally have short product lifecycles due to frequent new device introductions. The failure to effectively manage inventory levels based on product demand may increase the risk of inventory obsolescence, which may have a material adverse effect on Shaw's operations and/or financial results.

Similar to other wireless service providers, Shaw substantially subsidizes the cost of subscriber devices to attract customers to sign a term contract with Freedom Mobile. Shaw also commits to a minimum subsidy per unit with certain suppliers of devices. There is a risk that Shaw may be unable to recover the costs of subsidies over the term of the customer contract which could have a material adverse effect on our business, operations or financial results.

Impacts of Climate Change

Global climate change is an important consideration for Shaw. Climate change may increase the severity and frequency of natural threats on our business, including weather-related events, which may require us to protect, test, maintain, repair and replace our networks, IT systems, equipment and other infrastructure. For example:

- increased temperatures could impact our networks, IT systems, equipment and other infrastructure which could require the installation of additional cooling devices;
- ice storms or extreme precipitations could have a negative impact on our physical network, equipment and other infrastructure which could affect our delivery of service;
- flooding, hurricanes, tornados, and tsunamis could impact or destroy our facilities or network, equipment, and other infrastructure and will increase our insurance related expenses;
- climate change related impacts to our key suppliers could adversely affect their ability to supply us with required products and services; and
- We may be required to incur additional capital expenditures from substitution of existing products and services with lower emissions options.

The occurrence of any of these events could have a material adverse effect on our operations and/or financial results. See also "Network Failure" risks below which could increase in severity and/or frequency as a result of climate change related natural disasters.

Although we have business continuity and disaster recovery plans and strategies in place, the failure of any of our climate change mitigation and adaptation efforts (including response strategies and business continuity protocols) may affect our business through potential disruption of our operations, damage to our facilities and infrastructure, and affect the communities that we serve (which may have a material adverse effect on Shaw and its reputation, as well as its operations, prospects and/or financial results).

Global climate change is drawing more attention through evolving public interest. Many aspects of our operations are subject to evolving and increasingly stringent federal, provincial, and local environmental, health, and safety laws and regulations. These laws and regulations impose requirements with respect to matters such as fuel storage, the recovery and recycling of end-of-life electronic products, greenhouse gas emissions, the release of substances into the environment, corrective and remedial action concerning such releases, and the proper handling, management and disposal of substances. These evolving considerations and more stringent laws and regulations could lead to increased costs for compliance and utilities, which could be material. Failure to recognize and adequately respond to changing environmental matters and expectations, or to comply with environmental laws and regulations, could result in fines, new regulatory obligations and associated costs, or damage to our reputation or brand any of which could have a material adverse effect on our operations and/or financial results. As we self-insure our FibrePlus network, we have limited insurance coverage against the losses resulting from natural disasters affecting our networks which covers our network equipment and data centres (for further detail see "Network Failure" above).

Litigation

Shaw and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business, whether in Canada or the US. Although management does not expect that the outcome of these matters will have a material adverse effect on the Company, there can be no assurance that these matters, or other legal matters that arise in the future, will not have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Taxes

Shaw's business is subject to various tax laws, changes to tax laws and the adoption of new tax laws, regulations thereunder and interpretations thereof, which may have adverse tax consequences to Shaw.

While Shaw believes it has adequately provided for all income and commodity taxes based on information that is currently available, the calculation and the applicability of taxes in many cases require significant judgment in interpreting tax rules and regulations. In addition, Shaw's tax filings are subject to government audits which could result in material changes in the amount of current and deferred income tax assets and liabilities and other liabilities which may, in certain circumstances, result in the assessment of interest and penalties.

Concerns about Alleged Health Risks relating to Radiofrequency Emissions

Concerns about alleged health risks relating to radiofrequency emissions may adversely affect our Wireless division and our Shaw Go WiFi operations. Some studies have alleged that links exist between radiofrequency emissions from certain wireless devices and cell sites and various health problems or possible interference with electronic medical devices, including hearing aids and pacemakers. The Company complies with all applicable laws and regulations. Further, the Company relies on suppliers of wireless network equipment and customer equipment to meet or exceed all applicable regulatory and safety requirements. No definitive evidence exists of harmful effects from exposure to radiofrequency emissions when legal limits are complied with. Additional studies of radiofrequency emissions are ongoing and we cannot be certain of results, which could result in additional or more restrictive regulation or exposure to potential litigation.

Acquisitions, Dispositions and Other Strategic Transactions

Shaw may from time to time make acquisitions to expand its existing businesses or to enter into sectors in which Shaw does not currently operate, dispositions to focus on core offerings or enter into other strategic transactions. Such acquisitions, dispositions and/or strategic transactions may fail to realize the anticipated benefits, result in unexpected costs and/or Shaw may have difficulty incorporating or integrating the acquired business, any of which may have a material adverse effect on Shaw, its operations and/or financial results.

Dividend Payments are not Guaranteed

Shaw currently pays monthly common share and quarterly preferred share dividends in amounts approved on a quarterly basis by the Board of Directors. Over the long term, Shaw expects to continue to pay dividends from its free cash flow; however, balance sheet cash and/or credit facilities may be used to stabilize dividends from time to time. Although Shaw intends to make regular dividend payments, dividends are not guaranteed as actual results may differ from expectations and there can be no assurance that the

Company will continue common or preferred share dividend payments at the current level. In addition to the standard legislated solvency and liquidity tests that must be met, the Company would not be able to declare and pay dividends if there was an event of default or a pending event of default would result (as a consequence of declaring and paying dividends) under its credit facilities.

Holding Company Structure

Substantially all of Shaw's business activities are operated by its subsidiaries. As a holding company, our ability to meet our financial obligations is dependent primarily upon the receipt of interest and principal payments on intercompany advances, management fees, cash dividends and other payments from our subsidiaries together with proceeds raised by the Company through the issuance of equity and the incurrence of debt, and from proceeds received on the sale of assets. The payment of dividends and the making of loans, advances and other payments to Shaw by its subsidiaries may be subject to statutory or contractual restrictions, are contingent upon the earnings of those subsidiaries and are subject to various business and other considerations.

Control of the Company

Class A participating shares ("Class A Shares") are the only shares entitled to vote on all shareholder matters. Voting control of the Company is held by SFLT and its subsidiaries, which hold, for the benefit of descendants of JR and Carol Shaw, 17,562,400 Class A Shares, being approximately 79% of the issued and outstanding shares of such class as at August 31, 2019. The sole trustee of SFLT is a private company owned by JR Shaw and having a board comprised of seven directors, including JR Shaw (chair), Bradley S. Shaw, four other members of JR Shaw's family, and one independent director. Accordingly, JR Shaw, through SFLT, its subsidiaries and its trustee, is able to elect a majority of the Board of Directors of the Company and to control any vote by the holders of Class A Shares.

DISCUSSION OF OPERATIONS AND FOURTH QUARTER

To comply with the requirements of Items 1.4 (Discussion of Operations) and 1.10 (Fourth Quarter) of Form 51-102F1 of National Instrument 51-102, the sections entitled "Discussion of Operations" and "Overview" in the Company's Management's Discussion and Analysis for the fourth quarter and year ended August 31, 2019 (the "**2019 Fourth Quarter MD&A**") are incorporated by reference herein. The 2019 Fourth Quarter MD&A can be found on SEDAR at www.sedar.com. Certain figures included within this Annual Report have been adjusted to correct an immaterial, inadvertent overstatement of previously reported wireless service revenue for the year ended August 31, 2019 of $7 million (Q1 $1 million; Q2 $1 million; Q3 $2 million; Q4 $3 million).

SUMMARY OF QUARTERLY RESULTS

(1) Fiscal 2018 reported figures have been restated applying IFRS 15 and also reflect a change in accounting policy. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2018.

(2) See definition and discussion under "Non-IFRS and additional GAAP measures."

(3) Net income attributable to both equity shareholders and non-controlling interests.

F19 Q4 **vs** F19 Q3	In the fourth quarter of fiscal 2019, net income decreased $63 million compared to the third quarter of fiscal 2019 mainly due to a $21 million increase in current taxes in the fourth quarter, a $41 million gain on the disposal of property, plant and equipment to a related party, a $15 million gain on the sale of a portfolio investment, and the $102 million impact of a tax rate change on deferred taxes partially offset by a $109 million loss on the disposal of the Company's entire equity investment in Corus all recorded in the third quarter.
F19 Q3 **vs** F19 Q2	In the third quarter of fiscal 2019, net income increased $74 million compared to the second quarter of fiscal 2019 mainly due to a $41 million gain on the disposal of property, plant and equipment to a related party, a $15 million gain on the sale of a portfolio investment and the $102 million impact of a tax rate change on deferred taxes partially offset by a $109 million loss on the disposal of the Company's investment in Corus all recorded in the third quarter.
F19 Q2 **vs** F19 Q1	In the second quarter of fiscal 2019, net income decreased $32 million compared to the first quarter of fiscal 2019 mainly due to a $20 million decrease in equity income related to the Company's investment in Corus in the quarter and higher income taxes.
F19 Q1 **vs** F18 Q4	In the first quarter of fiscal 2019, net income decreased $10 million compared to the fourth quarter of fiscal 2018 mainly due to a $12 million decrease in operating income before restructuring costs and amortization and a decrease in other gains mainly related to a $16 million gain on the sale of certain wireless spectrum licenses in the fourth quarter of fiscal 2018. These decreases were partially offset by a $10 million increase in equity income related to the Company's investment in Corus in the first quarter.
F18 Q4 **vs** F18 Q3	In the fourth quarter of fiscal 2018, net income improved by $293 million compared to the third quarter of fiscal 2018 primarily due to an impairment charge of $284 million related to the Company's investment in Corus recorded in the prior quarter.
F18 Q3 **vs** F18 Q2	In the third quarter of fiscal 2018, the net loss decreased $76 million compared to the second quarter of fiscal 2018 mainly due to a decrease in the third quarter restructuring costs of $404 million and an increase in operating income before restructuring costs and amortization. The increase was partially offset by impairment charge of $284 million in the third quarter related to the Company's investment in Corus and higher income taxes.
F18 Q2 **vs** F18 Q1	In the second quarter of fiscal 2018, net income decreased $286 million compared to the first quarter of fiscal 2018 mainly due to $417 million of restructuring costs recorded during the quarter related to the Company's TBT initiative which is composed primarily of the costs associated with the VDP, including severance and other employee related costs. The decrease was partially offset by increased wireless revenues of $93 million.
F18 Q1 **vs** F17 Q4	In the first quarter of fiscal 2018, net income decreased $370 million compared to the fourth quarter of fiscal 2017 mainly due to the $330 million gain on divestiture, net of tax, of ViaWest, as well as an $11 million non-operating provision recovery in the prior quarter.

While financial results for the Company are generally not subject to significant seasonal fluctuations, subscriber activity may fluctuate from one quarter to another. Subscriber activity may also be affected by competition and Shaw's promotional activity. Our Video subscriber activity is influenced by cord shaving and cord cutting trends, which has resulted in fewer subscribers watching traditional cable TV, as well as a lower number of TV subscribers. In addition, trends in the use of wireless products and Internet or social media as substitutes for traditional home phone products have resulted in fewer Phone subscribers. Satellite subscriber activity is modestly higher around the summertime when more subscribers have second homes in use. Wireless subscriber activity is influenced by the launch of popular new mobile devices, seasonal promotional periods, and the level of competitive intensity. Our first and fourth quarters typically experience higher volumes of Wireless competitive activity as a result of back to school and holiday season-related consumer behavior. Aggressive promotional offers are often advertised during these periods which can impact our Wireless subscriber metrics. Shaw's Wireline, Satellite, Wireless or Data Centre businesses do not depend on any single customer or concentration of customers.

The following further assists in explaining the trend of quarterly revenue and operating income before restructuring costs and amortization:

Growth (losses) in subscriber statistics as follows:

(1) The Company reduced the August 31, 2019 ending balance by 10,914 due to account cancellations dating back to 2016 previously not reported. The cancellations were comprised of 3,821 postpaid and 7,093 prepaid subscribers. In the Company's view, the cancellations were not significant in relation to previously reported amounts.

(1) Fiscal 2018 reported figures have been restated applying IFRS 15. Comparative fiscal 2017 results have not been restated. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2018.
(2) Refer to key performance drivers.
(3) Funds flow from operations is presented before changes in non-cash working capital as presented in the Consolidated Statements of Cash Flows.

Fiscal 2019 Developments

- Revenue for fiscal 2019 increased 2.9% to $5.34 billion from $5.19 billion in fiscal 2018.
- Operating income before restructuring costs and amortization of $2.15 billion in fiscal 2019 was up 4.7% over the prior year's $2.06 billion.
- Net income was $733 million for fiscal 2019 compared to $33 million in fiscal 2018.
- Earnings per share were $1.41 in fiscal 2019 compared to $0.05 in fiscal 2018.
- Consolidated free cash flow in fiscal 2019 was $538 million compared to $385 million in fiscal 2018.

- During 2019, the Company's dividend rates on Shaw's Class A Shares and Class B Non-Voting Shares were $1.1825 and $1.1850, respectively. Dividends paid in fiscal 2019 were $606 million gross of amounts attributed to the dividend reinvestment plan.

Corporate

- The Company's voluntary departure program, or VDP, continued in fiscal 2019, resulting in approximately 1,000 employees exiting the Company in fiscal 2019 bringing the total to approximately 2,300 employees since the program commenced in March 2018. As of November 15, 2019, approximately 2,700 employees had departed the Company pursuant to the VDP, which is approximately 84% complete.
- As the VDP approaches completion, the total restructuring charge is now expected to total approximately $437 million as approximately 90 employees either rescinded their acceptance of the VDP package with the approval of the Company or declined their package in order to expedite their departure date resulting in a $10 million recovery in fiscal 2019.
- The anticipated annualized savings related to the VDP to be fully realized in fiscal 2020 are expected to be approximately $200 million (with approximately $125 million attributable to operating expenses and approximately $75 million attributable to capital expenditures) which is materially in line with the original estimate of $215 million. In fiscal 2019, VDP related cost savings totaled $135 million, of which $98 million were attributed to operating expenses and $37 million were attributed to capital expenditures. (For further detail, see "Total Business Transformation").
- On May 31, 2019, the Company completed its secondary offering of 80,630,383 Corus Class B non-voting participating shares of Corus at a price of $6.80 per share, representing approximately 39% of the outstanding Corus Class B non-voting participating shares for net proceeds to the Company of approximately $526 million. Shaw no longer holds any equity interest in Corus.

Financing Activities

- On November 2, 2018, the Company closed its offering of $1 billion of senior notes, comprised of $500 million principal amount of 3.80% senior notes due 2023 and $500 million principal amount of 4.40% senior notes due 2028.
- On November 21, 2018, the Company amended its $1.5 billion credit facility to extend the maturity date by two years, to December 22, 2023. The credit facility can be used for working capital and general corporate purposes.
- Effective May 29, 2019, the Company amended the terms of its accounts receivable securitization program with a Canadian financial institution to extend the term to May 29, 2022 and increase sales committed up to a maximum of $200 million. As at August 31, 2019, $40 million was drawn under the program. On November 1, 2019, the Company drew an additional $80 million bringing the total amount drawn under the program to $120 million.
- On October 1, 2019, the Company repaid $1.25 billion 5.65% senior notes.
- On October 25, 2019, in accordance with the terms of its DRIP, the Company announced that in lieu of issuing shares from treasury, it will satisfy its share delivery obligations under the DRIP by purchasing Class B Non-Voting Shares on the open market. In addition, the Company will reduce the DRIP discount from 2% to 0% for the Class B Non-Voting Shares delivered under the DRIP. These changes to DRIP will apply to the dividends payable on November 28, 2019 to shareholders of record on November 15, 2019.
- On October 29, 2019, the Company announced that it had received approval from the Toronto Stock Exchange ("TSX") to establish a normal course issuer bid ("NCIB") program. The program commenced on November 1, 2019 and will remain in effect until October 31, 2020. As approved by the TSX, the Company has the ability to purchase for cancellation up to 24,758,127 Class B Non-Voting Shares, representing 5% of all of the issued and outstanding Class B Non-Voting Shares. As of November 15, 2019, the Company has purchased 483,428 Class B Non-Voting Shares for cancellation for a total cost of approximately $13 million under the NCIB.
- On November 21, 2019, the Company extended the term of its five-year $1.5 billion bank credit facility from December 2023 to December 2024. This credit facility is used for working capital and general corporate purposes.

Wireless – Freedom Mobile

- In fiscal 2019, Freedom Mobile added over 266,000 subscribers which was complemented, on an annual basis, by ABPU improvement of 6.3% (to $41.67) and service revenue growth of 23% (to $694 million) compared to fiscal 2018. The performance reflects the increased number of customers subscribing to higher value service plans and purchasing devices from Freedom Mobile.

- During 2019, Freedom Mobile continued to roll-out of its Extended Range LTE in Calgary, Edmonton, Vancouver, and the GTA, which leverages our 700 MHz spectrum, to provide customers with improved in-building service as well as extending service at the edge of the coverage service area. The Company continues to focus on improving its customer experience through the deployment of the 700 MHz spectrum which is expected to continue throughout fiscal 2020, resulting in a 22-basis point reduction year-over-year in post-paid customer churn to 1.32%.
- On February 28, 2019, the CRTC issued the Notice of Consultation (the "Notice") for its anticipated review of the regulatory framework for mobile wireless services in Canada. The Notice conveys the CRTC's preliminary view that it would be appropriate to mandate wholesale mobile virtual network operators ("MVNOs") access to the networks of the national incumbents. The CRTC's determinations on these and other questions in the Notice could affect Shaw's ability to compete in the mobile wireless market. (For further details see "Government Regulations and Regulatory Developments – CRTC Wireless Review").
- In the third quarter of fiscal 2019, Freedom Mobile introduced new prepaid service plans that better aligned with current market offers resulting in a significant year-over-year improvement in prepaid market performance. Freedom Mobile also finalized an agreement with a third national retail partner, Mobilinq, to launch prepaid services in approximately 50 of its stores. At the end of fiscal 2019, Freedom had over 650 points of retail distribution.
- On April 10, 2019, Freedom Mobile successfully acquired 11 paired blocks of 20-year 600 MHz spectrum, across its wireless operating footprint, for a total purchase price of $492 million, or $0.78 per MHz-Pop. The spectrum acquisition rights secured through the 600 MHz auction include 30 MHz across each of British Columbia, Alberta, and Southern Ontario as well as 20 MHz in Eastern Ontario. These licences were issued for a 20-year term, expiring in 2039.
- In fiscal 2019, Freedom Mobile expanded its network through the launch of 19 new communities in Alberta, British Columbia, and Ontario.

Wireline – Consumer & Business

- In fiscal 2019, the Company completed the activation of the next generation of cable access technology known as DOCSIS 3.1. Powered by our latest generation of DOCSIS 3.1 enabled Cable modem, the XB6, the upgrade allowed us to launch our Internet 600 consumer speed tier and our 1 Gbps business speed tier across virtually all of our Western Canadian cable footprint.
- In November 2018, the Company doubled internet speeds of its top residential tiers, Internet 150 and Internet 300 to Internet 300 to Internet 600, respectively.
- In April 2019, the Company unveiled Shaw BlueCurve, a technology that provides customers greater control over their home Wi-Fi experience through the BlueCurve Home App and Pods. Shaw Blue Curve is a simple and powerful new technology that gives customers more coverage and greater control over their home Wi-Fi experience while at the same time helping redefine their relationship with in-home connected devices. The Shaw Blue Curve app is the latest innovative product that the Company has introduced to the market, through its partnership with Comcast Corporation, and it is available with Shaw's BlueCurve modem – the hub of our customers' in-home content and connectivity experience. Shaw BlueCurve Pods expand in-home coverage by creating a mesh Wi-Fi network which blankets our customer's home with wireless coverage and reduces the challenges of Wi-Fi deadspots.
- Building on the BlueCurve gateway modem, the Company launched internet protocol television, or IPTV in Calgary in May and continues to expand this service, which is available across 70% of its Western Canadian cable footprint. The Company expects to complete the roll-out over the next several months.
- In January 2019, Shaw Business launched 100 Mbps symmetrical private data connections to over 300,000 business locations in western Canada with the next generation Ethernet over DOCSIS technology.
- In March 2019, Shaw Business:
    - launched its fastest Internet tier in select areas – with download speeds of up to 1 Gbps paired with upload speeds of up to 125 Mbps allowing businesses of all sizes to get the bandwidth they need and ensure their employees and guests can get the most out of their connectivity experience; and
    - doubled the speeds of eligible Shaw Business Internet and Smart WiFi 150 and 300 customers to Shaw Business Internet and Smart WiFi 300 and 600, respectively.

- On August 1, 2019, the Company completed the sale of the assets of the Shaw Calgary1 data center, including all of the contractual relationships residing in the facility and the existing operational and sales teams, to a third party.
- On August 15, 2019, the CRTC issued Telecom Order 2019-288 (the "Order"), which set the Company's final wholesale high speed service ("HSA") rates. The final rates were significantly lower than the interim rates set in October 2016, and retroactive to January 31, 2017. On September 13, 2019, the Company jointly with Cogeco, Eastlink, Rogers, and Videotron (the "Cable Carriers") filed a motion for leave to appeal the Order with the Federal Court of Appeal, as well as a motion to stay the Order, pending the final Judgment on the appeal (if leave is granted). On November 22, 2019, the motion for leave to appeal the order, as well as the motion to stay the order pending final judgement on the appeal was granted. As well, on November 13, 2019, the Cable Carriers filed a petition requesting that the Cabinet order the CRTC to rescind the Order. A decision on whether to vary, rescind or refer the Order back to the Commission must be made within one year from the date of the Order. (For further detail, see "Government Regulations and Regulatory Developments – Third Party Internet Access").

Fiscal 2018 Highlights

- Revenue for fiscal 2018 improved 7.3% to $5.24 billion from $4.88 billion in fiscal 2017.
- Operating income before restructuring costs and amortization of $2.09 billion in fiscal 2018 was up 4.6% over fiscal 2017's $2.0 billion.
- Net income was $60 million for fiscal 2018 compared to $851 million in fiscal 2017.
- Earnings per share were $0.10 in fiscal 2018 compared to $1.72 in fiscal 2017.
- Consolidated free cash flow in fiscal 2018 was $411 million compared to $438 million in fiscal 2017.
- During 2018, the Company's dividend rates on Shaw's Class A Shares and Class B Non-Voting Shares were $1.1825 and $1.1850, respectively. Dividends paid in fiscal 2018 were $605 million gross of amounts attributed to the dividend reinvestment plan.

Corporate

- In the first quarter of fiscal 2018, Shaw changed the structure of its operating divisions to improve overall efficiency while enhancing its ability to grow as a leading Canadian connectivity company. Shaw's previously existing Consumer and Business Network Services divisions were combined to form a new Wireline division with no changes to the existing Wireless division.
- In the second quarter of fiscal 2018, the Company introduced TBT, a multi-year initiative designed to reinvent Shaw's operating model to better meet the evolving needs and expectations of consumers and businesses by optimizing the use of resources, maintaining and ultimately improving customer service, and by reducing staff. Three key elements of the transformation are to: 1) shift customer interactions to digital platforms; 2) drive more self-install and self-serve; and, 3) streamline the organization that builds and services the networks.
- As a first step in the TBT, a voluntary departure program, or VDP, was offered to eligible employees resulting in approximately 1,300 employees departing the Company in fiscal 2018.
- In fiscal 2018, the Company incurred a total restructuring charge of $446 million related to severance and other employee related costs, as well as additional costs directly associated with the TBT initiative. VDP related cost reductions in fiscal 2018 totaled $47 million, of which $39 million were attributed to operating expenses and $8 million attributed to capital expenditures. (For further detail see "Total Business Transformation").
- In the third quarter of fiscal 2018, the Company incurred an impairment charge of $284 million related to its investment in Corus.

Financing Activities

- On June 19, 2018, the Company established an accounts receivable securitization program with a Canadian financial institution which allows it to sell certain trade receivables into the program up to a maximum of $100 million. As at August 31, 2018, $40 million had been drawn under the program.

Wireless – Freedom Mobile

- In fiscal 2018, Freedom Mobile added over 255,000 subscribers which was complemented, on an annual basis, by an ABPU improvement of 6.1% (to $39.26) over fiscal 2017, reflecting the appeal of its differentiated value proposition.
- In October 2017, Freedom Mobile launched the Big Gig data plans, targeting a data-centric customer with 10 GB of data for only $50 per month – unlike any other plan offered in Canada at that time.
- In November 2017, Freedom Mobile began pre-selling iPhone X, iPhone 8 and 8 Plus at all Freedom Mobile retail locations across Canada.
- In the second quarter of fiscal 2018, the Company completed the re-farm of 10 MHz of AWS-1 spectrum across Freedom Mobile's footprint, significantly expanding Freedom Mobile's addressable market as the AWS-1 spectrum supports nearly all LTE devices currently in use in Canada.
- In May 2018, the Company completed its first successful 5G trials in Calgary by leveraging 28GHz mm wave and 3.5GHz spectrum in collaboration with Nokia, CableLabs and Rode & Schwarz.
- In fiscal 2018, the Company successfully upgraded and deployed 2500 MHz spectrum in high traffic sites in the GTA, Calgary, Edmonton, and Vancouver and commenced the deployment of 700 MHz spectrum later in the year. This step, the deployment of the 2500 MHz spectrum, along with the completion of the re-farming of 10 MHz of the Company's existing AWS-1 spectrum to LTE in the second quarter of fiscal 2018, resulted in a large majority of the Company's existing customers migrating from 3G to LTE service using their existing devices.
- In the fourth quarter of fiscal 2018, the Company launched voice over LTE, or VoLTE, nationwide across all three of its LTE spectrum bands – AWS-1, AWS-3, and 2500 MHz – offering customers with compatible devices a significant improvement in voice quality and a reduction in call set-up time.
- During 2018, Freedom Mobile continued to expand its retail network by entering into distribution agreements with Loblaws and Walmart. Freedom Mobile products and services are currently being distributed in approximately 100 Loblaws' "The Mobile Shop" locations and approximately 140 Walmart locations throughout Ontario, Alberta and British Columbia.

Wireline – Consumer & Business

- On September 15, 2017, the Company sold a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation, to Omnitracs LLC for proceeds of approximately US$20 million.
- In December 2017, Shaw Business launched SmartSurveillance, an enterprise-grade managed video surveillance solution designed to help owners monitor and protect their businesses while providing valuable analytical insights.
- In the third quarter of fiscal 2018, the Company deployed the latest DOCSIS 3.1 advanced XB6 Wi-Fi modem, powered by Comcast, which enabled faster internet speeds, supported more devices and ensured a stronger in-home internet connection. DOCSIS 3.1 represents the latest development in a set of technologies that increase the capability of a hybrid fibre-coax network to transmit data both to and from customer premises.
- During fiscal 2018, the Company continued to improve its BlueSky platform, powered by Comcast's next generation X1 platform, which features a voice controlled remote and advanced search, by integrating both Netflix and YouTube seamlessly with live TV, video-on-demand and recorded content.
- In July 2018, the Company launched Internet 300 with download speeds of up to 300 Mbps:
  - The Consumer division launched Internet 300 with unlimited data available across virtually all of Shaw's Western Canadian footprint.
  - Shaw Business launched:
    - Internet 300 with unlimited data, which made it easier for Shaw Business customers to share files through cloud storage services, video conference with colleagues, and operate point of sale systems more efficiently; and
    - SmartWiFi 300, an enterprise-grade WiFi solution, that provides simultaneous device connections, instant analytics, 3 separate networks, and bandwidth allocation (to monitor and limit usage for heavy data users).

Fiscal 2017 Highlights

- Revenue for fiscal 2017 improved 8.1% to $4.88 billion from $4.52 billion in fiscal 2016.
- Operating income before restructuring costs and amortization of $2.0 billion in fiscal 2017 was up 1.0% over prior year's $1.98 billion.
- Net income was $851 million for fiscal 2017 compared to $1.24 billion in fiscal 2016.
- Earnings per share were $1.72 in fiscal 2017 compared to $2.51 in fiscal 2016.
- Consolidated free cash flow in fiscal 2017 was $438 million compared to $482 million in fiscal 2016.
- During 2017, the Company's dividend rates on Shaw's Class A Shares and Class B Non-Voting Shares were $1.1825 and $1.1850, respectively. Dividends paid in 2017 were $595 million gross of amounts attributed to the dividend reinvestment plan.

Corporate

- On August 1, 2017, the Company sold 100% of its wholly-owned subsidiary ViaWest, Inc. and its subsidiaries (collectively, "ViaWest") for approximately US$1.675 billion in cash.
- The Company enhanced its wireless network capabilities through the acquisition of wireless spectrum licences from Quebecor on July 24, 2017 for $430 million. The acquired spectrum licences comprise 10 MHz licences of 700 MHz spectrum in each of British Columbia, Alberta and Southern Ontario, as well as the 20 MHz licences of the 2500 MHz spectrum in each of Vancouver, Edmonton, Calgary and Toronto.

Financing Activities

- On December 15, 2016, the Company extended the term of its five-year $1.5 billion bank credit facility from December 2019 to December 2021. This credit facility is used for working capital and general corporate purposes.
- The Company conducted a number of capital market activities, including:
  - the extension of its dividend reinvestment plan in respect of its Class A Shares and Class B Non-Voting Shares to eligible shareholders who are residents of the United States;
  - the issuance of 3.80% $300 million senior unsecured notes due March 1, 2027;
  - the repayment of $400 million senior unsecured notes due March 2, 2017; and
  - the repayment of US$846 million in borrowings under the Company's and ViaWest's credit facilities related to the sale of ViaWest.
- The Company participated in Corus' dividend reinvestment program for its initial investment in Corus Class B non-voting participating shares until September 1, 2017.

Wireless – Freedom Mobile

- The Company continued to improve its network performance with the rollout of Freedom Mobile's LTE-Advanced network to all its existing markets, on schedule and on budget, as of the end of fiscal 2017.
- Freedom Mobile's handset lineup continued to expand in fiscal 2017, with Apple, LG, Samsung, Sony and ZTE all being compatible with its AWS-3 LTE network.

Wireline – Consumer & Business

- In fiscal 2017, the Company began to deploy its newest generation of cable modem termination system equipment referred to as the Converged Cable Access Platform ("CCAP") into its serving hubs. CCAP significantly enhances the capabilities of Shaw's cable network and enabling it to leverage the next generation of cable access technology known as DOCSIS 3.1.
- shomi, the over-the-top streaming platform that launched as a joint venture of Shaw and Rogers in fiscal 2015 was wound down with its operations and service ending on November 30, 2016.
- The Company launched the market leading BlueSky TV, which is based on Comcast's X1 video platform. BlueSky TV was launched in phases, with the initial launch in Calgary followed by the Vancouver launch in February and the national launch in April 2017.
- The Company continued to expand its Shaw Go WiFi build-out. As at August 31, 2017, the Company had approximately 100,000 Shaw Go WiFi access points installed and operating throughout the network and over 3.3 million devices using Shaw Go WiFi. Moreover, the Company has leveraged its Wi-Fi access points to improve network coverage for Freedom Mobile customers which represents an important step in Shaw's converged network strategy.

Revenue and operating income before restructuring costs and amortization

Shaw delivered full year fiscal 2019 financial results that met its guidance. Operating income before restructuring costs and amortization of $2,154 million in fiscal 2019 increased 4.7% over fiscal 2018 and was in line with the targeted increase of 4% to 6%. For further discussion of divisional performance see "Segmented Operations Review."

Consolidated revenue of $5.34 billion for fiscal 2019 improved 2.9% over $5.19 billion for fiscal 2018. Revenue improved primarily due to the Wireless division contributing revenues of $1,047 million in fiscal 2019 as compared to $901 million in the prior year. The year-over-year improvement in Wireless revenue of $146 million or 16.2% reflects higher service revenues of $130 million and higher equipment revenues of $16 million driven primarily by added postpaid RGUs, higher ARPU, and higher ABPU. Excluding the results of the Wireless division, revenue for the twelve-month period for the Wireline division was up $8 million or 0.2%. Customer acquisition and rate increases were the primary driver of the $26 million in revenue growth from the Business division while Consumer division revenues decreased $18 million or 0.5% compared to the twelve-month period of fiscal 2018 as contributions from rate adjustments and growth in Internet revenue were offset by declines in Video, Satellite and Phone subscribers and revenue.

Operating income before restructuring costs and amortization of $2.15 billion for the twelve-month period improved 4.7% compared to $2.06 billion for fiscal 2018. The improvement was primarily due to the Wireless division contributing $199 million over the twelve-month period as compared to $142 million in fiscal 2018 and the Wireline division increase of $40 million year-over-year. Wireless increased $57 million or 40.1% over the comparable period driven primarily by subscriber growth, higher equipment margins and ABPU growth, partially offset by higher distribution channel costs and the impact of the $13 million credit for a retroactive domestic roaming rate adjustment in the prior year. Wireline increased $40 million or 2.1% over the comparable period primarily as a result of lower operating costs mainly related to VDP partially offset by the $10 million provision related primarily to the CRTC decision to reduce wholesale broadband rates available to third party internet providers from 2016 onward and the impact of the $15 million payment to address certain IP licensing matters.

Restructuring costs

Restructuring costs generally include severance, employee related costs and other costs directly associated with a restructuring program. As a first step in the TBT, the VDP was offered to eligible employees in the second quarter of fiscal 2018. The outcome of the program had approximately 3,300 Shaw employees accepting the VDP package, representing approximately 25% of all employees at that time. For the year ended August 31, 2019, the category included a $10 million reversal in restructuring charges related to the Company's TBT initiative as a result of approximately 90 employees either rescinding their acceptance of the VDP package with the approval of the Company or forgoing their package to expedite their departure date. See "About our Business" for further details on the TBT and the VDP.

Amortization

(millions of Canadian dollars)	2019	2018 (restated)[1]	Change %
Amortization revenue (expense)			
Deferred equipment revenue	**21**	30	(30.0)
Deferred equipment costs	**(85)**	(110)	(22.7)
Property, plant and equipment, intangibles and other	**(974)**	(945)	3.1

[1] Fiscal 2018 reported figures have been restated applying IFRS 15. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2018.

Amortization of property, plant and equipment, intangibles and other increased 3.1% for the year ended August 31, 2019 over the comparable period due to amortization of new expenditures exceeding the amortization of assets that became fully amortized during the year.

Amortization of financing costs and Interest expense

(millions of Canadian dollars)	2019	2018	Change %
Amortization of financing costs – long-term debt	**3**	3	–
Interest expense	**258**	248	4.0

Interest expense for the twelve-month period ended August 31, 2018 increased over the comparable period primarily due to higher average outstanding debt balances in the current year.

Other income and expenses

(millions of Canadian dollars)	2019	2018 (restated)[1]	Increase / (decrease)
Equity income (loss) of an associate or joint venture	**46**	(200)	246
Loss on disposal of an associate or joint venture	**(109)**	–	(109)
Other gains	**50**	32	18
	(13)	(168)	155

[1] Fiscal 2018 reported figures have been restated applying IFRS 15. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2018.

In fiscal 2018, the Company recorded equity income of $46 million related to its investment in Corus compared to an equity loss of $200 million in the prior year. The increase substantially reflects a $284 million impairment from the Company's investment in Corus recorded in the third quarter of fiscal 2018.

On May 31, 2019, the Company sold all of its 80,630,383 Corus Class B non-voting participating shares at a price of $6.80 per share. Proceeds, net of transaction costs, were $526 million, which resulted in a loss of $109 million for the twelve months ended August 31, 2019.

Other gains (losses) generally include realized and unrealized foreign exchange gains and losses on US dollar denominated current assets and liabilities, gains and losses on disposal of property, plant and equipment and minor investments, and the Company's share of the operations of Burrard Landing Lot 2 Holdings Partnership. In the current year, the category includes a net $32 million gain on the disposal of property, plant and equipment, a $6 million gain on the disposal of a non-core business, as well as a $15 million gain on the disposal of a minor portfolio investment. In the prior year, the category includes a $16 million gain on the sale of certain wireless spectrum licenses as well as a $5 million provision recovery.

Earnings per share

(millions of Canadian dollars except per share amounts)	2019	2018 (restated)[1]	Change %
Net income	**733**	33	>100.0
Weighted average number of participating shares outstanding during period (millions)	**511**	502	
Earnings per share			
Basic	**1.41**	0.05	
Diluted	**1.41**	0.05	

[1] Fiscal 2018 reported figures have been restated applying IFRS 15. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2018.

Net income

Net income was $733 million in 2019 compared to $33 million in 2018[1]. The year-over-year changes are summarized in the table below[1].

(millions of Canadian dollars)	
Increased operating income before restructuring costs and amortization [2]	**97**
Decreased restructuring costs	**455**
Increased amortization	**(13)**
Increased interest expense	**(10)**
Increased equity income of an associate or joint venture	**246**
Change in other net costs and revenue [3]	**(91)**
Decreased income taxes	**10**
Increased income from discontinued operations, net of tax	**6**
	700

[1] Fiscal 2018 reported figures have been restated applying IFRS 15. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2018.
[2] See definitions and discussion under "Non-IFRS and additional GAAP measures"
[3] Net other costs and revenue include gains and losses on disposals of fixed assets and intangibles, business acquisition costs, accretion of long-term liabilities and provisions, debt retirement costs, realized and unrealized foreign exchange differences and other losses as detailed in the unaudited Consolidated Statements of Income

Net other costs and revenues had a $91 million unfavourable impact on net income primarily due to a $109 million loss related to the Company's disposal of its investment in Corus Class B non-voting participating shares partially offset by a $15 million gain on the disposal of a minor portfolio investment in the current year.

SEGMENTED OPERATIONS REVIEW

WIRELINE

(millions of Canadian dollars)	2019	2018 (restated)[1]	Change %
Consumer	**3,707**	3,725	(0.5)
Business	**593**	567	4.6
Wireline revenue	**4,300**	4,292	0.2
Operating income before restructuring costs and amortization [2]	**1,955**	1,915	2.1
Operating margin [2]	**45.5%**	44.6%	2.0

[1] Fiscal 2018 reported figures have been restated applying IFRS 15. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2018.
[2] Refer to key performance drivers.

Wireline RGUs decreased by 186,973 in the current year, compared to net losses of 133,142 RGUs in fiscal 2018. Total Business RGU gains of 18,411 were more than fully offset by total Consumer RGU losses of 205,384 in the year which included net losses in cable Video of 106,861, Phone of 86,102 and satellite Video of 47,180 partially offset by the addition of approximately 34,759 Internet RGUs.

Consumer revenue for the year of $3.7 billion was comparable to last year. Higher revenue generated by annual rate adjustments and incremental Internet RGUs were fully offset by the impact of reductions to Video, Satellite and Phone RGUs. Business revenue for the year of $593 million was 4.6% higher over the prior year primarily due to customer growth as well as the impact of annual rate adjustments.

Operating income before restructuring costs and amortization of $2.2 billion increased 4.7% over the comparable period primarily as a result of lower operating costs mainly related to VDP partially offset by the $10 million provision related primarily to the CRTC decision to reduce wholesale broadband rates available to third party internet providers from 2016 onward and the impact of the $15 million payment to address certain IP licensing matters.

WIRELESS

(millions of Canadian dollars)	2019	2018 (restated)[1]	Change %
Service	**694**	564	23.0
Equipment and other	**353**	337	4.7
Wireless revenue	**1,047**	901	16.2
Operating income before restructuring costs and amortization [2]	**199**	142	40.1
Operating margin [2]	**19.0%**	15.8%	20.3

[1] Fiscal 2018 reported figures have been restated applying IFRS 15. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2018.
[2] Refer to key performance drivers.

In Wireless, the Company continued to grow postpaid and prepaid wireless subscribers, gaining a combined 266,241 RGUs in the year. The increase in the customer base reflects continued customer demand for the Big Gig data-centric pricing and packaging options, including Absolute Zero, the success of the new prepaid plans that were launched in April 2019, and the ongoing execution of the wireless growth strategy to improve the network and customer experience.

Wireless revenue for the year of $1,047 million increased $146 million or 16.2% over the prior year. The increase in revenue was driven primarily by year-over-year growth in both service and equipment revenue. The increase in service revenue was driven by RGU and ARPU growth in which a net

287,929 postpaid subscribers were added, representing a 28% increase, and ARPU of $37.92 in fiscal 2019 compared to $37.11 in the prior year. The higher equipment revenues were driven by a large share of new postpaid subscribers purchasing handsets. ABPU of $41.67 for the full fiscal year compared to $39.19 for fiscal 2018 and reflects a higher proportionate share of postpaid subscribers.

Operating income before restructuring costs and amortization of $199 million increased $57 million or 40.1% over the comparable period driven primarily by subscriber growth, higher equipment margins and ABPU growth, partially offset by higher distribution channel costs and the impact of the $13 million credit for a retroactive domestic roaming rate adjustment in the prior year.

Consolidated total as per Note 26 to the audited annual consolidated financial statements	**1,212**	1,361	(10.9)

(1) Fiscal 2018 reported figures have been restated. Refer to "Change in Accounting Policy" for additional details on the changes for fiscal 2018.

Capital investment was $1,212 million in the current year compared to $1,361 million in fiscal 2018. The decrease was driven primarily by a $191 million decrease in Wireline primarily due to lower system network infrastructure spending partially offset by incremental capital investment in the Wireless division relating primarily to investment for the continued deployment of 700 MHz spectrum and the expansion of the wireless network into 19 new markets.

Wireline

Success-based capital for fiscal 2019 of $256 million was moderately lower than fiscal 2018. The current year decrease in success-based capital was due primarily to lower Video equipment purchases in the year.

Capital spend on the combined upgrades and enhancement, and replacement categories was $374 million for the current year, a $150 million decrease over fiscal 2018 driven primarily by lower planned Wireline spend on system network infrastructure.

Capital spend on new housing development of $138 million was $14 million higher than the prior year driven by residential and commercial customer network growth and acquisition.

Investment in buildings and other of $59 million for the twelve-month period was down $33 million over the comparable period primarily due to the impact of proceeds received on the disposition of non-core assets.

Wireless

Capital investment in the Wireless division of $385 million for the twelve-month period was up $42 million over the prior year. In fiscal 2019, the Company continued to focus on investment in the Wireless network and infrastructure, specifically the deployment of 700 MHz spectrum, LTE and small cells as well as retail expansion in new and existing markets and enhancements to the back-office systems.

DISCONTINUED OPERATIONS

SHAW TRACKING

On May 31, 2017, the Company entered an agreement to sell a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation reported within the Company's Business Network Services segment. The Company determined that the assets and liabilities of the Shaw Tracking business met the criteria to be classified as a disposal group held for sale. Accordingly, the assets and liabilities of the Shaw Tracking business were classified in the consolidated statement of financial position at August 31, 2017 as current assets held for sale or current liabilities held for sale, respectively, as the sale of these assets and liabilities was expected to be completed within one year. In addition, the operating results and operating cash flows of the business are presented as discontinued operations separate from the Company's continuing operations. The transaction closed on September 15, 2017.

	2019	2018
Revenue	–	1
Operating, general and administrative expenses		
Employee salaries and benefits	–	–
Purchases of goods and services	–	1
Loss from discontinued operations before tax	–	–
Income taxes	–	–
Loss from discontinued operations, net of tax, before divestiture	–	–
Loss on divestiture, net of tax	–	(6)
Loss from discontinued operations, net of tax	–	(6)

FINANCIAL POSITION

Total assets were $15.6 billion at August 31, 2019 compared to $14.4 billion at August 31, 2018. The following is a discussion of significant changes in the Consolidated Statement of Financial Position since August 31, 2018.

Current assets increased $1.14 billion primarily due to increases in cash of $1.06 billion, receivables of $34 million, inventory of $25 million, other current assets of $18 million, and current portion of contract assets of $3 million. Cash increased primarily due to the issuance of $1 billion of senior notes, netting proceeds of $993 million, proceeds of $551 million collected from the sale of its investment in Corus and other portfolio investments, proceeds of $59 million on the disposal of property, plant and equipment as well as funds provided by continuing operations. This was partially offset by cash outlays for the spectrum acquisition of $492 million and other capital additions.

Accounts receivable increased $34 million year-over-year primarily due to the increase in Wireless subscribers and the impact of rate changes in Wireline while inventory increased $25 million as a result of higher handset and satellite purchases towards the end of fiscal 2019 relative to the end of fiscal 2018.

Other current assets increased over the period mainly due to an increase in Wireless subscribers participating in the Company's MyTab Boost, a plan that allows customers to pay less for their handset upfront if they pay a predetermined incremental amount on a monthly basis. This increase continues to be driven by growth in handset sales.

Investments and other assets decreased by $623 million due to the disposal of the Company's investment in Corus and another minor portfolio investment. Property, plant and equipment increased $181 million due to capital investments in excess of amortization. Intangible assets increased $497 million primarily due to the acquisition of spectrum for $492 million.

Contract assets increased $20 million over the period mainly due to an increase in Wireless subscribers participating in the Company's discretionary wireless handset discount program, MyTab. Under IFRS 15, the portion of this discount relating to the handset is applied against equipment revenue at the point in time that the handset is transferred to the customer while the portion relating to service revenue is recorded as a contract asset and amortized over the life of the contract against future service revenues.

Current liabilities increased $1.21 billion during the period primarily due to an increase in the current portion of long-term debt of $1.25 billion due to the reclassification of a $1.25 billion senior note due in October 2019, and an increase in accounts payable and accrued liabilities of $45 million, partially offset by decreases in provisions of $21 million, income taxes payable of $51 million and current portion of contract liabilities of $3 million.

Accounts payable and accruals increased due to the timing of payment and fluctuations in various payables including capital expenditures, interest and programming costs. The decrease in current provisions was mainly due to the payment of restructuring costs related to the TBT. In connection with the VDP, the Company recorded a total of $437 million in restructuring charges in fiscal 2018 and 2019 primarily related to severance and other related costs, of which $292 million has been paid, $142 million is included in current provisions and $1 million is included in long-term provisions. Income taxes payable decreased due to normal course tax installment payments and a lower current period provision.

Long-term debt decreased $253 million primarily due to the change in classification of the $1.25 billion senior note to current liabilities, partially offset by the issuance of $1 billion in senior notes, with $500 million due in 2023 and $500 million due in 2028.

Shareholders' equity increased $315 million mainly due to an increase in share capital of $256 million and retained earnings of $113 million partially offset by an increase in accumulated other comprehensive loss of $55 million. Share capital increased due to the issuance of 10,147,427 Class B Non-Voting Shares under the Company's stock option plan and DRIP.

As at November 15, 2019, share capital is as reported at August 31, 2019 with the exception of the issuance of a total of 1,169,500 Class B Non-Voting Shares upon exercise of options under the Company's option plan and the issuance of shares under the Company's dividend reinvestment plan as well as the cancellation of 396,982 Class B Non-Voting Shares in relation to the Company's NCIB program which commenced on November 1, 2019. Retained earnings increased due to current year income of $733 million partially offset by dividends of $618 million. Accumulated other comprehensive loss increased primarily due to the re-measurement recorded on employee benefit plans and the reclassification of the Company's share of other comprehensive income of associates to income as a result of the sale of our investment in Corus in the fiscal year.

CONSOLIDATED CASH FLOW ANALYSIS

Operating activities

(millions of Canadian dollars)	2019	2018 (restated) [1]	Change %
Funds flow from continuing operations	**1,777**	1,177	51.0
Net change in non-cash working capital balances related to continuing	**(209)**	178	>(100.0)
Operating activities of discontinued operations	**–**	(2)	100.0
	1,568	1,353	15.9

[1] Fiscal 2018 reported figures have been restated applying IFRS 15. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2018.

Funds flow from operations in fiscal 2019 increased over the comparable period primarily due to lower restructuring costs, higher operating income before restructuring costs and amortization and lower current income taxes partially offset by higher interest costs. The net change in non-cash working capital balances related to continuing operations fluctuated over the comparative period due to changes in the accounts receivable, other current asset, and other long-term asset balances and the timing of payment of current income taxes payable and accounts payable and accrued liabilities.

Investing activities

(millions of Canadian dollars)	2019	2018 (restated)[1]	Increase
Cash flow used in investing activities	(1,133)	(1,176)	(43)

[1] Fiscal 2018 reported figures have been restated applying IFRS 15. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2018.

In fiscal 2019, cash used in investing activities decreased over the comparable period primarily due to proceeds of $551 million received from the sale of our investment in Corus and other investments, $90 million more proceeds generated from the disposal of a non-core business and property, plant and equipment and lower outlays for capital expenditures in the current year as compared to the prior year. The increased cash from disposal activities was partially offset by a $467 million increase year over year in spectrum purchases and an $82 million decrease in cash dividends received from Corus in the current year.

Financing activities

The changes in financing activities during 2019 and 2018 were as follows:

(millions of Canadian dollars)	2019	2018
Senior notes – net borrowings (repayments)	**1,000**	10
Bank loans – net borrowings	**–**	40
Bank facility arrangement costs	**(9)**	–
Dividends	**(398)**	(392)
Issuance of Class B Non-Voting Shares	**35**	43
Other	**(1)**	(1)
	627	(300)

LIQUIDITY AND CAPITAL RESOURCES

In fiscal 2019, the Company generated $538 million of free cash flow. Shaw used its free cash flow along with $551 million net proceeds from the sale of its investment in Corus and another minor portfolio investment, $993 million net proceeds from senior note issuances, and proceeds on issuance of Class B Non-Voting Shares of $35 million to fund the net working capital change of $113 million, pay common share dividends of $389 million, purchase $492 million in spectrum licenses, pay $124 million in restructuring costs, and increase the cash on hand balance by $1 billion.

The Company issued Class B Non-Voting Shares from treasury under its DRIP which resulted in cash savings and incremental Class B Non-Voting Shares of $217 million during fiscal 2019.

Debt structure and financial policy

Shaw structures its borrowings generally on an unsecured and standalone basis. While certain non-wholly owned subsidiaries are subject to contractual restrictions which may prevent the transfer of funds to Shaw, there are no similar restrictions with respect to wholly-owned subsidiaries of the Company.

On November 2, 2018, the Company solidified its balance sheet through the issuance of $1 billion in senior notes, comprised of $500 million at a rate of 3.80% due November 2, 2023 and $500 million at a rate of 4.40% due November 2, 2028. The funds will be used for general corporate purposes which may include the repayment of indebtedness. On November 21, 2018, the Company amended the terms of its $1.5 billion bank credit facility to extend the maturity date to December 2023. The facility can be used for working capital and general corporate purposes, including to issue letters of credit.

On June 19, 2018, the Company established an accounts receivable securitization program with a Canadian financial institution which allows it to sell certain trade receivables into the program. Effective May 29, 2019, the Company amended the terms of its accounts receivable securitization program to extend the term of the program to May 29, 2022 and increase the sales committed up to a maximum of $200 million. As at August 31, 2019 $40 million was drawn under the program. Subsequent to year-end, on November 1, 2019, the Company increased the amount drawn by an additional $80 million under the program for total of $120 million drawn to date. The Company continues to service and retain substantially all of the risks and rewards relating to the trade receivables sold, and therefore, the trade receivables remain recognized on the Company's Consolidated Statement of Financial Position and the funding received is recorded as a current liability (revolving floating rate loans) secured by the trade receivables. The buyer's interest in the accounts receivable ranks ahead of the Company's interest and the program restricts it from using the trade receivables as collateral for any other purpose. The buyer of the trade receivable has no claim on any of our other assets.

As at August 31, 2019, the net debt leverage ratio for the Company is 1.9x which is consistent with August 31, 2018. Considering the prevailing competitive, operational and capital market conditions, the Board of Directors has determined that having this ratio in the range of 2.0 to 2.5x would be optimal leverage for the Company in the current environment. Should the ratio fall below this, other than on a temporary basis, the Board may choose to recapitalize back into this optimal range. The Board may also determine to increase the Company's debt above these levels to finance specific strategic opportunities such as a significant acquisition or repurchase of Class B Non-Voting Participating Shares in the event that pricing levels were to drop precipitously.

The Company calculates net debt leverage ratio as follows [(1)]:

(millions of Canadian dollars)	2019	2018 (restated)[(3)]
Short-term borrowings	**40**	40
Current portion of long-term debt	**1,251**	1
Long-term debt	**4,057**	4,310
50% of outstanding preferred shares	**147**	147
Cash	**(1,446)**	(384)
(A) Net debt [(2)]	**4,049**	4,114
Operating income before restructuring costs and amortization [(2)]	**2,154**	2,056
Corus dividends	**10**	92
(B) Adjusted operating income before restructuring costs and amortization [(2)]	**2,164**	2,148
(A/B) Net debt leverage ratio [(2)]	**1.9x**	1.9x

(1) The following contains a description of the Company's use of non-IFRS financial measures provides a reconciliation to the nearest IFRS measure or provides a reference to such reconciliation.

(2) These financial measures do not have standard definitions prescribed by IFRS and therefore may not be comparable to similar measures disclosed by other companies and have not been presented as an alternative to liquidity prescribed by IFRS.

(3) Fiscal 2018 reported figures have been restated applying IFRS 15. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2018.

In November 2019, the Board of Directors updated its target net debt leverage ratio to 2.5x to 3.0x based on the expected impact of IFRS 16.

Shaw's credit facilities are subject to customary covenants which include maintaining minimum or maximum financial ratios. At August 31, 2019, Shaw is in compliance with these covenants and based on current business plans, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants over the life of the borrowings.

	Covenant Limit
Shaw Credit Facilities	
Total Debt to Operating Cash Flow [(1)] Ratio	< 5.00:1
Operating Cash Flow [(1)] to Fixed Charges [(2)] Ratio	> 2.00:1

(1) Operating Cash Flow, for the purposes of the covenants, is calculated as net earnings before interest expense, depreciation, amortization and current and deferred income taxes, excluding profit or loss from investments accounted for on an equity basis, for the most recently completed fiscal quarter multiplied by four, plus cash dividends and other cash distributions received in the most recently completed four fiscal quarters from investments accounted for on an equity basis.

(2) Fixed Charges are defined as the aggregate interest expense for the most recently completed fiscal quarter multiplied by four.

Subsequent to year-end:

- on October 1, 2019, the Company repaid the $1.25 billion of 5.65% senior notes.
- on October 25, 2019, and in accordance with the terms of our DRIP, the Company announced that in lieu of issuing shares from treasury, it will satisfy its share delivery obligations under the DRIP by purchasing Class B Non-Voting Shares on the open market. In addition, the Company will reduce its discount from 2% to 0% for the Class B Non-Voting Shares delivered under the DRIP. These changes to the DRIP will apply to the dividends payable commencing on November 28, 2019 to shareholders of record on November 15, 2019.
- On November 1, 2019, the Company increased the amount drawn under its accounts receivable securitization program by $80 million for a total of $120 million currently drawn under the program.
- On October 29, 2019, the Company announced that it received approval from the TSX to establish a normal course issuer bid program. The program commenced on November 1, and will remain in effect until October 31, 2020. As approved by the TSX, the Company has the ability to purchase for cancellation up to 24,758,127 Class B Non-Voting Shares, representing 5% of all of the issued and outstanding Class B Non-Voting Shares. As of November 15, 2019, the Company has purchased 483,428 Class B Non-Voting Shares for cancellation for a total cost of approximately $13 million under the NCIB.
- On November 21, 2019, the Company extended the term of its five-year $1.5 billion bank credit facility from December 2023 to December 2024. This credit facility is used for working capital and general corporate purposes.

Preferred Share Dividends

On June 30, 2016, 1,987,607 of the Company's Cumulative Redeemable Rate Reset Class 2 Preferred Shares, Series A ("Series A Shares") were converted into an equal number of Cumulative Redeemable Floating Rate Class 2 Preferred Shares, Series B ("Series B Shares") in accordance with the notice of conversion right issued on May 31, 2016. As a result of the conversion, the Company has 10,012,393 Series A Shares and 1,987,607 Series B Shares issued and outstanding. The Series A Shares will continue to be listed on the TSX under the symbol SJR.PR.A. The Series B Shares began trading on the TSX on June 30, 2016 under the symbol SJR.PR.B. The annual fixed dividend rate for the Series A Shares, payable quarterly, was reset to 2.791% for the five-year period from and including June 30, 2016 to but excluding June 30, 2021. The floating quarterly dividend rate for the Series B Preferred Shares were set as follows:

Period	Annual Dividend Rate
June 30, 2016 to September 29, 2016	2.539%
September 30, 2016 to December 30, 2016	2.512%
December 31, 2016 to March 30, 2017	2.509%
March 31, 2017 to June 29, 2017	2.480%
June 30, 2017 to September 29, 2017	2.529%
September 30, 2017 to December 30, 2017	2.742%
December 31, 2017 to March 30, 2018	2.872%
March 31, 2018 to June 29, 2018	3.171%
June 30, 2018 to September 29, 2018	3.300%
September 30, 2018 to December 30, 2018	3.509%
December 31, 2018 to March 30, 2019	3.713%
March 31, 2019 to June 29, 2019	3.682%
June 30, 2019 to September 29, 2019	3.687%
September 30, 2019 to December 30, 2019	3.638%

The floating quarterly dividend rate will be reset quarterly.

Based on the aforementioned financing activities, available credit facilities and forecasted free cash flow, the Company expects to have sufficient liquidity to fund operations and obligations, including maturing debt, during the upcoming fiscal year. On a longer-term basis, Shaw expects to generate free cash flow and have borrowing capacity sufficient to finance foreseeable future business plans and refinance maturing debt.

Off-balance sheet arrangement and guarantees

Guarantees

Generally, it is not the Company's policy to issue guarantees to non-controlled affiliates or third parties; however, it has entered into certain agreements as more fully described in Note 27 to the Consolidated Financial Statements. As disclosed thereto, Shaw believes it is remote that these agreements would require any cash payment.

Contractual obligations

The amounts of estimated future payments under the Company's contractual obligations at August 31, 2019 are detailed in the following table.

		Payments due by period			
(millions of Canadian dollars)	Total	Within 1 year	2 – 3 years	4 – 5 years	More than 5 years
Long-term debt [(1)]	5,350	1,251	802	1,002	2,295
Lease and maintenance obligations [(2)]	919	170	286	228	235
Purchase obligations [(3)]	983	510	242	102	129
Property, plant and equipment	181	140	21	15	5
	7,433	2,071	1,351	1,347	2,664

(1) Includes principal repayments and interest payments.
(2) Includes maintenance and lease of satellite transponders, and lease of transmission facilities and premises.
(3) Includes contractual obligations under service, product, and wireless device contracts, program related agreements and exclusive rights to use intellectual property in Canada.

Share Capital and Listings

The Company is authorized to issue a limited number of Class A Shares; an unlimited number of Class B Non-Voting Shares; an unlimited number of Class 1 Preferred Shares issuable in series; and an unlimited number of Class 2 Preferred Shares issuable in series, of which 12,000,000 were designated Cumulative Redeemable Rate Reset Class 2 Preferred Shares, Series A (the "**Series A Shares**") and 12,000,000 were designated Cumulative Redeemable Floating Rate Class 2 Preferred Shares, Series B (the "**Series B Shares**"). The authorized number of Class A Shares is limited, subject to certain exceptions, to the lesser of that number of such shares (i) currently issued and outstanding; and (ii) that may be outstanding after any conversion of Class A Shares into Class B Non-Voting Shares.

As at November 15, 2019, there were 495,559,271 Class B Non-Voting Shares, 10,012,393 Series A Shares, and 1,987,607 Series B Shares and 22,372,064 Class A Shares issued and outstanding. There were also 8,174,093 options to purchase Class B Non-Voting Shares and 13,271 RSUs that will settle in Class B Non-Voting Shares issued from Treasury outstanding. Shaw is traded on the Toronto and New York stock exchanges and is included in the S&P/TSX 60 Index (Trading Symbols: TSX – SJR.B, SJR.PR.A, SJR.PR.B, NYSE – SJR, and TSXV – SJR.A). For more information, please visit www.shaw.ca.

The following table sets forth, for each month during the fiscal year ending August 31, 2019, the monthly price range and volume traded for the Class A Shares on the TSX Venture Exchange (TSXV) and for the Class B Non-Voting Shares, Series A Shares and Series B Shares on the Toronto Stock Exchange (TSX).

	Class A Shares [(1)] TSX Venture-SJR.A			Class B Non-Voting Shares [(1)] TSX-SJR.B			Series A Shares [(1)] TSX-SJR.PR.A			Series B Shares [(1)] TSX-SJR.PR.B

Share Splits

There have been four splits of the Company's Class A and Class B Non-Voting Shares: July 30, 2007 (2 for 1); February 7, 2000 (2 for 1); May 18, 1994 (2 for 1); and September 23, 1987 (3 for 1). In addition, as a result of the Arrangement referred to in the Management Information Circular dated July 22, 1999, a Shareholder's Adjusted Cost Base was reduced for tax purposes.

ADDITIONAL INFORMATION

Additional information relating to Shaw, including the Company's 2019 Annual Information Form can be found on SEDAR at www.sedar.com.

COMPLIANCE WITH NYSE CORPORATE GOVERNANCE LISTING STANDARDS

Disclosure of the Company's corporate governance practices which differ from the New York Stock Exchange ("NYSE") corporate governance listing standards are posted on Shaw's website, www.shaw.ca (under Investors/Corporate Governance/Compliance with NYSE Corporate Governance Listing Standards).

CERTIFICATION

The Company's Chief Executive Officer and Executive Vice President, Chief Financial & Corporate Development Officer have filed certifications regarding Shaw's disclosure controls and procedures and internal control over financial reporting ("ICFR").

As at August 31, 2019, the Company's management, together with its Chief Executive Officer and Executive Vice President, Chief Financial & Corporate Development Officer, has evaluated the effectiveness of the design and operation of each of the Company's disclosure controls and procedures and ICFR. Based on these evaluations, the Chief Executive Officer and Executive Vice President, Chief Financial & Corporate Development Officer have concluded that the Company's disclosure controls and procedures and the Company's ICFR are effective.

Other than the items described below, there have been no changes in the Company's ICFR during the fiscal year that have materially affected, or are reasonably likely to materially affect, Shaw's ICFR.

On September 1, 2018, the Company adopted IFRS 15 *Revenue from Contracts with Customers* and implemented a new revenue recognition accounting system that enabled it to comply with the IFRS 15 requirements. As a result, significant additions and modifications have been made to the Company's ICFR for the Wireless segment. Notably, the Company has:

- updated its policies and procedures related to how revenue is recognized;
- implemented controls surrounding the recently implemented revenue recognition system to ensure the inputs, processes, and outputs are accurate; and
- implemented controls designed to address risks associated with the five-step revenue recognition model.

On December 4, 2018, the Company implemented a new Enterprise Resource Planning ("ERP") system for its Wireline operations that comprises both accounting and supply chain modules. In connection with the implementation, the Company updated its ICFR, as necessary, to accommodate related changes to its business processes and accounting procedures. Management will continue to monitor the effectiveness of these processes going forward.

The design of any system of controls and procedures is based in part upon certain assumptions about the likelihood of certain events. There can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions, regardless of how remote.

Notes to the Consolidated Financial Statements

MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL STATEMENTS AND REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

November 27, 2019

Management's Responsibility for Financial Reporting

The accompanying consolidated financial statements of Shaw Communications Inc. and all the information in this annual report are the responsibility of management and have been approved by the Board of Directors.

The financial statements have been prepared by management in accordance with International Financial Reporting Standards. When alternative accounting methods exist, management has chosen those it deems most appropriate in the circumstances. Financial statements are not precise since they include certain amounts based on estimates and judgments. Management has determined such amounts on a reasonable basis in order to ensure that the financial statements are presented fairly, in all material respects. Management has prepared the financial information presented elsewhere in the annual report and has ensured that it is consistent with the financial statements.

Management has a system of internal controls designed to provide reasonable assurance that the financial statements are accurate and complete in all material respects. The internal control system includes an internal audit function and an established business conduct policy that applies to all employees. Management believes that the systems provide reasonable assurance that transactions are properly authorized and recorded, financial information is relevant, reliable and accurate and that the Company's assets are appropriately accounted for and adequately safeguarded.

The Board of Directors is responsible for ensuring management fulfils its responsibilities for financial reporting and is ultimately responsible for reviewing and approving the financial statements. The Board carries out this responsibility through its Audit Committee.

The Audit Committee is appointed by the Board and its directors are unrelated and independent. The Committee meets periodically with management, as well as the external auditors, to discuss internal controls over the financial reporting process, auditing matters and financial reporting issues; to satisfy itself that each party is properly discharging its responsibilities; and, to review the annual report, the financial statements and the external auditors' report. The Audit Committee reports its findings to the Board for consideration when approving the financial statements for issuance to the shareholders. The Committee also considers, for review by the Board and approval by the shareholders, the engagement or re-appointment of the external auditors.

The financial statements have been audited by Ernst & Young LLP, the external auditors, in accordance with Canadian generally accepted auditing standards on behalf of the shareholders. Ernst & Young LLP has full and free access to the Audit Committee.

Management's Report on Internal Control over Financial Reporting

Management is responsible for establishing and maintaining an adequate system of internal control over financial reporting. Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the financial statements for external purposes in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB).

Due to its inherent limitations, internal control over financial reporting may not prevent or detect misstatements on a timely basis. Also, projections of any of the effectiveness of internal control are subject to the risk that the controls may become inadequate because of changes in conditions or that the degree of compliance with the policies and procedures may deteriorate. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to the financial statement preparation and presentation.

Management conducted an evaluation of the effectiveness of the system of internal control over financial reporting based on the framework in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on this evaluation, management concluded that the Company's system of internal control over financial reporting was effective as at August 31, 2019.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders and Board of Directors of Shaw Communications Inc.:

Opinion on the Consolidated Financial Statements

We have audited the accompanying consolidated statements of financial position of Shaw Communications Inc. (the "Company") as of August 31, 2019 and 2018, the related consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years then ended, and the related notes (collectively referred to as the "consolidated financial statements"). In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of the Company at August 31, 2019 and 2018, and its financial performance and its cash flows for the years then ended, in accordance with International Financial Reporting Standards ("IFRSs") as issued by the International Accounting Standards Board.

Report on internal control over financial reporting

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the Company's internal control over financial reporting as of August 31, 2019, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission framework (2013) and our report dated November 27, 2019 expressed an unqualified opinion thereon.

Adoption of IFRS 15 Revenue from Contracts with Customers

As discussed in Note 2 to the consolidated financial statements, the Company changed its method of accounting for Revenue which has been given retrospective application, due to the adoption of IFRS 15, *Revenue from Contracts with Customers*, which included the disclosure of the September 1, 2017 statement of financial position.

Basis for Opinion

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

Critical Audit Matter

The critical audit matter communicated below is a matter arising from the current period audit of the financial statements that was communicated or required to be communicated to the audit committee and that: (1) relates to accounts or disclosures that are material to the financial statements and (2) involved especially challenging, subjective or complex judgments. The communication of the critical audit matter does not alter in any way our opinion on the consolidated financial statements, taken as a whole, and we are not, by communicating the critical audit matter below, providing a separate opinion on the critical audit matter or on the accounts or disclosures to which it relates.

Valuation of the Wireless cash generating unit's indefinite-life intangibles

Description of the Matter	As more fully described in Note 10 to the consolidated financial statements, the Company conducted its annual impairment test on goodwill and indefinite-life intangibles as at February 1, 2019 and the recoverable amount of the cash generating units exceeds their carrying value. Auditing management's impairment test is complex and judgmental due to the estimation required in determining the recoverable amount of the cash generating units. The recoverable amount was estimated using a discounted cash flow and is sensitive to assumptions such as revenue growth rate, earnings growth rate, earnings before interest tax and amortization margin, terminal operating discount rate, terminal growth rate and terminal operating income before restructuring costs and amortization multiple.
How We Addressed the Matter in Our Audit	We obtained an understanding of management's process for identifying indicators of impairment and for performing their impairment assessment. We evaluated the design and tested the operating effectiveness of controls over the Company's impairment indicators assessment and processes to determine the recoverable amount. For example, we tested controls over the Company's strategic planning process as well as controls over the review of the significant assumptions in estimating the recoverable amount of the cash generating units. To test the estimated recoverable amount of the goodwill and indefinite-life intangible assets, our audit procedures included, among others, assessing the methodology used and testing the significant assumptions discussed above and the underlying data used by the Company in its analysis. We also involved an EY valuation specialist to assist us. We compared the significant assumptions used by management to historical and current trends and evaluated the reasonability of revenue streams and margins. We audited the forecasted revenue by evaluating future subscriber growth, expected customer churn, and average rate per subscriber unit. We assessed the historical accuracy of management's estimates and performed sensitivity analyses on significant assumptions to evaluate changes in the recoverable amount of the cash generating units that would result from changes in the assumptions. We assessed the adequacy of the Company's disclosure in the consolidated financial statements.

November 27, 2019

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders and Board of Directors of Shaw Communications Inc.:

Opinion on Internal Control over Financial Reporting

We have audited Shaw Communications Inc.'s internal control over financial reporting as of August 31, 2019, based on criteria established in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (the "COSO criteria"). In our opinion, Shaw Communications Inc. (the "Company") maintained, in all material respects, effective internal control over financial reporting as of August 31, 2019, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the consolidated statements of financial position as at August 31, 2019 and 2018, the related consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years then ended, and the related notes and our report dated November 27, 2019 expressed an unqualified opinion thereon.

Basis of Opinion

The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Report on Internal Controls over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audit in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects.

Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

Definition and Limitations of Internal Control Over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

(all amounts in millions of Canadian dollars except share and per share amounts)

1. CORPORATE INFORMATION

Shaw Communications Inc. (the "Company") is a diversified Canadian connectivity company whose core operating business is providing: Cable telecommunications, Satellite video services and data networking to residential customers, business and public-sector entities ("Wireline"); and wireless services for voice and data communications ("Wireless").

The Company was incorporated under the laws of the Province of Alberta on December 9, 1966 under the name Capital Cable Television Co. Ltd. and was subsequently continued under the Business Corporations Act (Alberta) on March 1, 1984 under the name Shaw Cablesystems Ltd. Its name was changed to Shaw Communications Inc. on May 12, 1993. The Company's shares are listed on the Toronto Stock Exchange ("TSX"), TSX Venture Exchange and New York Stock Exchange ("NYSE") (Symbol: TSX – SJR.B, SJR.PR.A, SJR.PR.B, NYSE – SJR, and TSXV – SJR.A). The registered office of the Company is located at Suite 900, 630 – 3rd Avenue S.W., Calgary, Alberta, Canada T2P 4L4.

2. BASIS OF PRESENTATION AND ACCOUNTING POLICIES

Statement of compliance

These consolidated financial statements of the Company have been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB").

The consolidated financial statements of the Company for the years ended August 31, 2019 and 2018, were approved by the Board of Directors and authorized for issue on November 27, 2019.

Basis of presentation

These consolidated financial statements have been prepared primarily under the historical cost convention and are expressed in millions of Canadian dollars unless otherwise indicated. Other measurement bases used are outlined below and in the applicable notes. The consolidated statements of income are presented using the nature classification for expenses.

Certain comparative figures have been reclassified to conform to the current year's presentation.

Certain figures included within these consolidated financial statements have been adjusted to correct an immaterial, inadvertent overstatement of previously reported wireless service revenue for the year ended August 31, 2019 of $7 million.

Basis of consolidation

(i) Subsidiaries

The consolidated financial statements include the accounts of the Company and those of its subsidiaries, which are entities over which the Company has control. Control exists when the Company has power over an investee, is exposed to or has rights to variable returns from its involvement and has the ability to affect those returns. Intercompany transactions and balances are eliminated on consolidation. The results of operations of subsidiaries acquired during the period are included from their respective dates of acquisition, being the time at which the Company obtains control. Consolidation of a subsidiary ceases when the Company loses control. A change in ownership interests of a subsidiary, without a loss of control, is accounted for as an equity transaction. The Company assesses control through share ownership and voting rights.

Non-controlling interests arise from business combinations in which the Company acquires less than 100% ownership interest. At the time of acquisition, non-controlling interests are measured at either fair value or their proportionate share of the fair value of the acquiree's identifiable assets. The Company determines the measurement basis on a transaction by transaction basis. Subsequent to acquisition, the carrying amount of non-controlling interests is increased or decreased for their share of changes in equity.

(ii) Joint operations

A joint operation is a type of joint arrangement whereby the parties that have joint control of the arrangement have rights to the assets and obligations for the liabilities, relating to the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control. The consolidated financial statements include the Company's proportionate share of the assets, liabilities, revenues, and expenses of its interests in joint operations.

The Company's joint operations consist of a 33.33% interest in the Burrard Landing Lot 2 Holdings Partnership (the "Partnership"). The Partnership owns and leases commercial space in Shaw Tower in Vancouver, BC, which is the Company's headquarters for its lower mainland operations. In classifying its 33.33% interest in the Partnership as a joint operation, the Company considered the terms and conditions of the partnership agreement and other facts and circumstances including the primary purpose of Shaw Tower which is to provide lease space to the partners.

Investments in associates and joint ventures

Associates are entities over which the Company has significant influence. Significant influence is the power to participate in the operating and financial policies of the investee, but is not control or joint control.

A joint venture is a type of joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control.

Investments in associates and joint ventures are accounted for using the equity method. Investments of this nature are recorded at original cost and adjusted periodically to recognize the Company's proportionate share of the associate's or joint venture's net income/loss and other comprehensive income/loss after the date of investment, additional contributions made and dividends received.

The Company classified its approximate 38% participating interest in Corus Entertainment Inc. ("Corus") as an investment in an associate after considering both companies are subject to common control and the ability of the Company to appoint directors to Corus' Board of Directors. On May 31, 2019, the Company sold all of its interest in Corus.

The Company classified its 50% interest in the Shomi Partnership ("shomi") as an investment in a joint venture after considering the terms and conditions of the partnership. In September 2016, Shaw and Rogers Communications Inc., announced the decision to wind down its operations with service ending November 30, 2016. In December 2017, the remaining assets associated with shomi were transferred to their respective partners and the partnership was officially wound up.

Revenue and expenses

The Company has multiple deliverable arrangements comprised of upfront fees (subscriber connection and installation fee revenue, customer premise equipment revenue, handset equipment revenue) and related subscription and service revenue. Upfront fees charged to customers do not constitute separate units of accounting, therefore these revenue streams are assessed as an integrated package.

(i) Revenue

The Company records revenue from contracts with customers in accordance with the following five steps:

(1) identify the contract(s) with a customer;

(2) identify the performance obligations in the contract;

(3) determine the transaction price;

(4) allocate the transaction price to the performance obligations in the contract; and,

(5) recognize revenue when (or as) we satisfy a performance obligation.

Revenue for each performance obligation is recognized either over time or at a point in time. For performance obligations satisfied over time, revenue is recognized as the services are provided. Revenues on certain long-term contracts are recognized using output methods based on products delivered, performance completed to date and time elapsed. Revenue from Cable, Internet, Digital Phone, Direct-to-Home ("DTH") and Wireless customers includes subscriber revenue earned as services are provided. Satellite distribution services and telecommunications service revenue is recognized in the period in which the services are rendered to customers. In addition to monthly service plans, the Company also offers multi-year service plans in which the total amount of the contractual service revenue is accounted for on a straight-line basis over the term of the plan. Fees for wireless voice, text and data services on a pay-per-use basis are recognized in the period that the service is provided.

Revenue from data centre customers includes colocation and other services revenue, including managed infrastructure revenue. Colocation revenue is recognized on a straight-line line basis over the term of the customer contract. Other services revenue, including managed infrastructure revenue, is recognized as the services are provided.

Revenue for performance obligations satisfied at a point in time is recognized when control of the item or service transfers to the customer. Revenue from the direct sale of equipment to wireless subscribers or dealers is recognized when the equipment is delivered and accepted by the subscribers or dealers.

For bundled arrangements (e.g. wireless handsets, and voice and data services), items are accounted for as separate performance obligations if the item meets the definition of a distinct good or service. Stand-alone selling prices are determined using observable prices adjusted for market conditions and other factors, as appropriate. The Company offers a discretionary wireless handset discount program, whereby the subscriber earns the applicable discount by maintaining services with the Company, such that the receivable relating to the discount at inception of the transaction is reduced over a period of time. This discount is allocated proportionately between the equipment and service revenue, with the equipment discount recognized when the handset is delivered and the corresponding service discount is classified as a contract asset. The contract asset is reduced on a straight-line basis over the period which the discount is forgiven to a maximum of two years with an offsetting reduction to service revenue. The Company also offers a plan allowing customers to receive a larger up-front handset discount than they would otherwise qualify for if they pay a predetermined incremental charge to their existing service plan on a monthly basis. The charge is billed on a monthly basis but is recognized as revenue when the handset is delivered and accepted by the subscriber. The amount receivable is classified as part of other current or other long-term assets, as applicable, in the consolidated statement of financial position.

When a customer can modify their contract within predefined terms such that we are not able to enforce the transaction price agreed to, but can only contractually enforce a lower amount, we allocate revenue between performance obligations using the minimum enforceable rights and obligations and any excess amount is recognized as revenue as its earned.

(ii) Contract assets and liabilities

We record a contract asset when we have provided goods and services to our customer but our right to related consideration for the performance obligation is conditional on satisfying other performance obligations. Contract assets are transferred to trade receivables when our right to consideration becomes conditional only as to the passage of time. A contract liability is recognized when we receive consideration in advance of the transfer of products or services to the customer. We account for contract assets and liabilities on a contract-by-contract basis, with each contract presented as either a net contract asset or a net contract liability accordingly.

Subscriber connection fees received from Cable, Internet, and Digital Phone customers are deferred as contract liabilities and recognized as revenue on a straight-line basis over three years. The costs of physically connecting a new home are capitalized as part of the distribution system and costs of disconnections are expensed as incurred.

Initial setup fees related to the installation of data centre services and installation revenue received on contracts with commercial business customers are deferred as contract liabilities and recognized as revenue on a straight-line basis over the related service contract, which generally span two to ten years. Direct and incremental costs associated with the installation of services or service contract, in an amount not exceeding the upfront revenue, are deferred as contract assets and recognized as an operating expense on a straight-line basis over the same period.

(iii) Deferred commission cost assets

We defer the incremental cost to obtain or fulfill a contract with a customer over their expected period of benefit to the extent they are recoverable. These costs include certain commissions paid to internal and external representatives. We defer them as deferred commission cost assets in other assets and amortize them to operating costs over the pattern of the transfer of goods and services to the customer, which is typically evenly over either 24 or 36 consecutive months.

Direct and incremental initial selling, administrative and connection costs, including commissions related to subscriber acquisitions are deferred and recognized as an operating expense on a straight-line basis over three years.

(iv) Deferred equipment revenue and deferred equipment costs

Revenue from sales of DTH equipment is deferred and recognized on a straight-line basis over three years commencing when subscriber service is activated. The total cost of the equipment, including installation, represents an inventoriable cost which is deferred and recognized on a straight-line basis over the same period. The DTH equipment is generally sold to customers at cost or a subsidized price in order to expand the Company's customer base.

Revenue from sales of satellite tracking hardware and costs of goods sold is deferred and recognized on a straight-line basis over the related service contract for monthly service charges for air time, which is generally five years. The amortization of the revenue and cost of sale of satellite service equipment commences when goods are shipped.

Recognition of deferred equipment revenue and deferred equipment costs is recorded as deferred equipment revenue amortization and deferred equipment costs amortization, respectively.

(v) Deferred IRU revenue

Prepayments received under indefeasible right to use ("IRU") agreements are amortized on a straight-line basis into income over the term of the agreement and included in amortization of property, plant and equipment, intangibles and other in the consolidated statements of income.

Cash

Cash is presented net of outstanding cheques. When the amount of outstanding cheques and the amount drawn under the Company's revolving term facility are greater than the amount of cash, the net amount is presented as bank indebtedness.

Securitization of trade receivables

Sales of trade receivables in securitization transactions are recognized as collateralized short-term borrowings as we do not transfer control and substantially all the risks and rewards of ownership to another entity and thus do not result in our de-recognition of the trade receivables sold.

Allowance for doubtful accounts

The Company maintains an allowance for doubtful accounts for the estimated losses resulting from the inability of its customers to make required payments. In determining the allowance, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances.

Inventories

Inventories include subscriber equipment such as DTH receivers, which are held pending rental or sale at cost or at a subsidized price and wireless handsets, accessories and SIM cards. When subscriber equipment is sold, the equipment revenue and equipment costs are deferred and amortized over three years. When the subscriber equipment is rented, it is transferred to property, plant and equipment and amortized over its useful life. Inventories are determined on a first-in, first-out basis, and are stated at cost due to the eventual capital nature as either an addition to property, plant and equipment or deferred equipment costs.

Inventories of wireless handsets, accessories and SIM cards are carried at the lower of cost and net realizable value. Cost is determined using the weighted average method and includes expenditures incurred in acquiring the inventories and bringing them to their existing condition and location. Net realizable value is the estimated selling price in the ordinary course of business, less selling expenses.

Property, plant and equipment

Property, plant and equipment are recorded at purchase cost. Direct labour and other directly attributable costs incurred to construct new assets, upgrade existing assets and connect new subscribers are capitalized as well as borrowing costs on qualifying assets. In addition, any asset removal and site restoration costs in connection with the retirement of assets are capitalized. Repairs and maintenance expenditures are charged to operating expense as incurred. Amortization is recorded on a straight-line basis over the estimated useful lives of assets as follows:

Asset	Estimated useful life
Cable, Wireless and telecommunications distribution system	**3 – 20 years**
Digital cable terminals and modems	**3 – 5 years**
Satellite audio, video and data network equipment and DTH receiving equipment	**3 – 15 years**
Buildings	**15 – 40 years**
Data centre infrastructure	**3 – 21 years**
Data processing	**4 – 10 years**
Other	**4 – 20 years**

The Company reviews the estimates of lives and useful lives on a regular basis.

Assets held for sale and discontinued operations

Non-current assets and disposal groups are classified as held for sale when specific criteria are met and are measured at the lower of carrying amount and estimated fair value less costs to sell. Assets held for sale are not amortized and are reported separately on the statement of financial position.

The Company reports financial results for discontinued operations separately from continuing operations to distinguish the financial impact of disposal transactions from ongoing operations. Discontinued operations reporting occurs when the disposal of a component or a group of components of the Company represents a strategic shift that will have a major impact on the Company's operations and financial results, and where the operations and cash flows can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the Company.

The results of discontinued operations are excluded from both continuing operations and business segment information in the consolidated financial statements and the notes to the consolidated financial statements, unless otherwise noted, and are presented net of tax in the statement of income for the current and comparative periods. Refer to Note 3 for further information regarding the Company's discontinued operations.

Other long-term assets

Other long-term assets primarily include (i) equipment costs, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over three to five years, (ii) the non-current portion of wireless handset discounts receivable as described in the revenue and expenses accounting policy, (iii) credit facility arrangement fees amortized on a straight-line basis over the term of the facility, (iv) long-term receivables, (v) network capacity leases, (vi) the non-current portion of prepaid maintenance and support contracts and (vii) direct costs in connection with initial setup fees and installation of services, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over two to ten years.

Intangibles

The excess of the cost of acquiring cable, satellite, media, data centre and wireless businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist of amounts allocated to broadcast rights and licences, wireless spectrum licences, trademarks, brands, program rights, customer relationships and software assets. Broadcast rights and licences, wireless spectrum licences, trademarks and brands represent identifiable assets with indefinite useful lives.

Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over their estimated useful lives ranging from 4 – 15 years.

Software that is not an integral part of the related hardware is classified as an intangible asset. Internally developed software assets are recorded at historical cost and include direct material and labour costs as well as borrowing costs on qualifying assets. Software assets are amortized on a straight-line basis over estimated useful lives ranging from 3 – 10 years. The Company reviews the estimates of lives and useful lives on a regular basis.

Borrowing costs

The Company capitalizes borrowing costs on qualifying assets that take more than one year to construct or develop using the Company's weighted average cost of borrowing which approximated 5% (2018 – 6%).

Impairment

(i) Goodwill and indefinite-life intangibles

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at February 1) and when events or changes in circumstances indicate that the carrying value may be impaired. The recoverable amount of each cash-generating unit ("CGU") is determined based on the higher of the CGU's fair value less costs to sell ("FVLCS") and its value in use ("VIU"). A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are Cable, Satellite, and Wireless. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods.

(ii) Non-financial assets with finite useful lives

For non-financial assets, such as property, plant and equipment and finite-life intangible assets, an assessment is made at each reporting date as to whether there is an indication that an asset may be impaired. If any indication exists, the recoverable amount of the asset is determined based on the higher of FVLCS and VIU. Where the carrying amount of the asset exceeds its recoverable amount, the asset is considered impaired and written down to its recoverable amount. Previously recognized impairment losses are reviewed for possible reversal at each reporting date and all or a portion of the impairment is reversed if the asset's value has increased.

Provisions

Provisions are recognized when the Company has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. The timing or amount of the outflow may still be uncertain. Provisions are measured using the best estimate of the expenditure required to settle the present obligation at the end of the reporting period, taking into account risks and uncertainties associated with the obligation. Provisions are discounted where the time value of money is considered material.

(i) Asset retirement obligations

The Company recognizes the fair value of a liability for an asset retirement obligation in the period in which it is incurred, on a discounted basis, with a corresponding increase to the carrying amount of property and equipment, primarily in respect of wireless and transmitter sites. This cost is amortized on the same basis as the related asset. The liability is subsequently increased for the passage of time and the accretion is recorded in the income statement as accretion of long-term liabilities and provisions. The discount rates applied are subsequently adjusted to current rates as required at the end of reporting periods. Revisions due to the estimated timing of cash flows or the amount required to settle the obligation may result in an increase or decrease in the liability. Actual costs incurred upon settlement of the obligation are charged against the liability to the extent recorded.

(ii) Restructuring provisions

Restructuring provisions, primarily in respect of employee termination benefits, are recognized when a detailed plan for the restructuring exists and a valid expectation has been raised to those affected that the plan will be carried out.

(iii) Other provisions

Provisions for disputes, legal claims and contingencies are recognized when warranted. The Company establishes provisions after taking into consideration legal assessments (if applicable), expected availability of insurance or other recourse and other available information.

Deferred credits

Deferred credits primarily include: (i) prepayments received under IRU agreements amortized on a straight-line basis into income over the term of the agreement, (ii) equipment revenue, as described in the revenue and expenses accounting policy, deferred and amortized over three to five years, (iii) a deposit on a future fibre sale.

Leases

(i) Operating leases

Rent expense for real estate leases that have escalating lease payments is recorded on a straight-line basis over the term of the lease. The difference between the expense recorded and the amount paid is recorded as deferred rent and included in deferred credits in the statement of financial position.

(ii) Finance leases

Leases of property and equipment that transfer substantially all the risks and rewards of ownership are classified as finance leases. Finance leases are capitalized at the commencement of the lease at the fair value of the leased property or, if lower, at the present value of the minimum lease payments. Lease payments are apportioned between interest expense and reduction of the lease liability. The property and equipment acquired under finance leases is depreciated over the shorter of the useful life of the asset and the lease term.

Income taxes

The Company accounts for income taxes using the liability method, whereby deferred income tax assets and liabilities are determined based on differences between the financial reporting and tax bases of assets and liabilities measured using substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse. Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset and they relate to income taxes levied by the same authority in the same taxable entity. Income tax expense for the period is the tax payable for the period using tax rates substantively enacted at the reporting date, any adjustments to taxes payable in respect of previous years and any change during the period in deferred income tax assets and liabilities, except to the extent that they relate to a business combination or divestment, items recognized directly in equity or in other comprehensive income. The Company records interest and penalties related to income taxes in interest expense.

Tax credits and government grants

The Company receives tax credits primarily related to its research and development activities. Government financial assistance is recognized when management has reasonable assurance that the conditions of the government programs are met and accounted for as a reduction of related costs, whether capitalized and amortized or expensed in the period the costs are incurred.

Foreign currency translation

Transactions originating in foreign currencies are translated into Canadian dollars at the exchange rate at the date of the transaction. Monetary assets and liabilities are translated at the period-end rate of exchange and non-monetary items are translated at historic exchange rates. The net foreign exchange gain/(loss) recognized on the translation and settlement of current monetary assets and liabilities was $5 (2018 – $1) and is included in other gains/(losses).

Financial instruments other than derivatives

Financial instruments have been classified and measured at amortized cost, fair value through other comprehensive income (FVOCI) or fair value through profit or loss (FVTPL). Cash and derivative instruments have been classified as FVTPL and are recorded at fair value with any change in fair value immediately recognized in income (loss). Investments in equity securities are classified and measured at FVTPL. Loans and receivables and financial liabilities are carried at amortized cost. None of the Company's financial liabilities are classified as FVTPL.

Finance costs and discounts associated with the issuance of debt securities are netted against the related debt instrument and amortized to income using the effective interest rate method. Accordingly, long-term debt accretes over time to the principal amount that will be owing at maturity.

Derivative financial instruments and hedging activities

The Company uses derivative financial instruments, such as foreign currency forward purchase contracts, to manage risks from fluctuations in foreign exchange rates. All derivative financial instruments are recorded at fair value in the statement of financial position. Where permissible, the Company accounts for these financial instruments as hedges which ensures that counterbalancing gains and losses are recognized in income in the same period. With hedge accounting, changes in the fair value of derivative financial instruments designated as cash flow hedges are recorded in other comprehensive income (loss) until the variability of cash flows relating to the hedged asset or liability is recognized in income (loss). When an anticipated transaction is subsequently recorded as a non-financial asset, the amounts recognized in other comprehensive income (loss) are reclassified to the initial carrying amount of the related asset. Where hedge accounting is not permissible or derivatives are not designated in a hedging relationship, they are classified as held-for-trading and the changes in fair value are immediately recognized in income (loss).

Instruments that have been entered into by the Company to hedge exposure to foreign currency risk are reviewed on a regular basis to ensure the hedges are still effective and that hedge accounting continues to be appropriate.

Fair value measurements

Fair value estimates are made at a specific point in time, based on relevant market information and information about the underlying asset or liability. These estimates are subjective in nature and involve uncertainties and matters of significant judgement and, therefore, cannot be determined with precision. Changes in assumptions could significantly affect the estimates.

The fair value hierarchy is based on inputs to valuation techniques that are used to measure fair value that are either observable or unobservable. Observable inputs reflect assumptions market participants would use in pricing an asset or liability based on market data obtained from independent sources while unobservable inputs reflect a reporting entity's pricing based upon their own market assumptions.

The fair value hierarchy consists of the following three levels:

Level 1 Inputs are quoted prices in active markets for identical assets or liabilities.

Level 2 Inputs for the asset or liability are based on observable market data, either directly or indirectly, other than quoted prices.

Level 3 Inputs for the asset or liability are not based on observable market data.

The Company determines whether transfers have occurred between levels in the fair value hierarchy by assessing the impact of events and changes in circumstances that could result in a transfer at the end of each reporting period.

Employee benefits

The Company accrues its obligations under its employee benefit plans, net of plan assets. The cost of pensions and other retirement benefits earned by certain employees is actuarially determined using the projected benefit method pro-rated on service and management's best estimate of salary escalation and retirement ages of employees. Past service costs from plan initiation and amendments are recognized immediately in the income statement. Remeasurements include actuarial gains or losses and the return on plan assets (excluding interest income). Actuarial gains and losses occur because assumptions about benefit plans relate to a long time frame and differ from actual experiences. These assumptions are revised based on actual experience of the plans such as changes in discount rates, expected retirement ages and projected salary increases. Remeasurements are recognized in other comprehensive income (loss) on an annual basis, at a minimum, and on an interim basis when there are significant changes in assumptions.

August 31 is the measurement date for the Company's employee benefit plans. The last actuarial valuations for funding purposes for the various plans were performed effective August 31, 2019 and the next actuarial valuations for funding purposes are effective August 31, 2020.

Share-based compensation

The Company has a stock option plan for directors, officers, employees and consultants to the Company. The strike price of options to purchase shares must be issued at not less than the fair value at the date of grant. Any consideration paid on the exercise of stock options, together with any contributed surplus recorded at the date the options vested, is credited to share capital. The Company calculates the fair value of share-based compensation awarded to employees using the Black-Scholes option pricing model. The fair value of options are expensed and credited to contributed surplus over the vesting period of the options using the graded vesting method.

The Company has a restricted share unit ("RSU") and performance share unit ("PSU") plan which provides that RSUs may be granted to officers, employees and directors of the Company, and PSUs may be granted to officers and employees of the Company. RSUs vest on either the first, second and third anniversary of the grant date or 100% on the third anniversary of the grant date and compensation is recognized on a straight-line basis over the three-year vesting period. PSUs vest 100% on the third anniversary of the grant date. RSUs and PSUs will be settled in either cash or Class B Non-Voting Shares as determined by the Human Resources and Compensation Committee at the time of the grant and the obligation for RSUs and PSUs is measured at the end of each period at fair value using the Black-Scholes option pricing model and the number of outstanding RSUs and PSUs. For PSUs, the performance criteria is set by the Human Resources and Compensation Committee at the time of the grant, and typically requires the achievement of a minimum level of performance, otherwise the payment is zero, while maximum performance is capped at 150%. On settlement of vested PSUs, the number of Class B Non-Voting Shares issued or delivered, or the amount of cash payment will be multiplied by the applicable performance factor.

The Company has a deferred share unit ("DSU") plan for its Board of Directors. Compensation cost is recognized immediately as DSUs vest when granted. DSUs will be settled in cash and the obligation is measured at the end of each period at fair value using the Black-Scholes option pricing model and the number of outstanding DSUs.

Directors may elect to receive their compensation in cash, RSUs, DSUs or a combination thereof. Any director who has not met their share ownership guidelines is generally required to elect to receive at least 50% of their annual compensation in DSUs and/or RSUs.

The Company has an employee share purchase plan (the "ESPP") under which eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the participant's contributions, increasing to 33% once an employee reaches 10 years of continuous service, and records such amounts as compensation expense.

Earnings per share

Basic earnings per share is based on net income attributable to equity shareholders adjusted for dividends on preferred shares and is calculated using the weighted average number of Class A Shares and Class B Non-Voting Shares outstanding during the period. Diluted earnings per share is calculated by considering the effect of all potentially dilutive instruments. In calculating diluted earnings per share, any proceeds from the exercise of stock options and other dilutive instruments are assumed to be used to purchase Class B Non-Voting Shares at the average market price during the period.

Guarantees

The Company discloses information about certain types of guarantees that it has provided, including certain types of indemnities, without regard to whether it will have to make any payments under the guarantees.

Estimation uncertainty and critical judgments

The preparation of consolidated financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the period. Actual results could differ from those estimates and significant changes in assumptions could cause an impairment in assets. The following require the most difficult, complex or subjective judgments which result from the need to make estimates about the effects of matters that are inherently uncertain.

Estimation uncertainty

The following are key assumptions concerning the future and other key sources of estimation uncertainty that could impact the carrying amount of assets and liabilities and results of operations in future periods.

(i) Allowance for doubtful accounts

The Company is required to make an estimate of an appropriate allowance for doubtful accounts on its receivables. The estimated allowance required is a matter of judgment and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foretold, such as future business, personal and economic conditions.

(ii) Contractual service revenue

The Company is required to make judgments and estimates that affect the amount and timing of revenue from contracts with customers, including estimates of the stand-alone selling prices of wireless products and services, the identification of performance obligations within a contract and the timing of satisfaction of performance obligations under long-term contracts.

Determining the deferral criteria for the costs incurred to obtain or fulfill a contract requires us to make significant judgments. We expect incremental commission fees paid to internal and external representatives as a result of obtaining contracts with customers to be recoverable.

(iii) Property, plant and equipment

The Company is required to estimate the expected useful lives of its property, plant and equipment. These estimates of useful lives involve significant judgment. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. Management's judgment is also required in determination of the amortization method, the residual value of assets and the capitalization of labour and overhead.

(iv) Business combinations – purchase price allocation

Purchase price allocations involve uncertainty because management is required to make assumptions and judgments to estimate the fair value of the identifiable assets acquired and liabilities assumed in business combinations. Fair value estimates are based on quoted market prices and widely accepted valuation techniques, including discounted cash flow ("DCF") analysis. Such estimates include assumptions about inputs to the valuation techniques, industry economic factors and business strategies.

(v) Impairment

The Company estimates the recoverable amount of its CGUs using a FVLCS calculation based on a DCF analysis or market approach or a VIU calculation based on a DCF analysis. Where a DCF analysis is used, significant judgments are inherent in this analysis including estimating the amount and timing of the cash flows attributable to the broadcast rights and licences, the selection of an appropriate discount rate, and the identification of appropriate terminal growth rate assumptions. In this analysis the Company estimates the discrete future cash flows associated with the intangible asset for five years and determines a terminal value. The future cash flows are based on the Company's estimates of future operating results, economic conditions and the competitive environment. The terminal value is estimated using both a perpetuity growth assumption and a multiple of operating income before restructuring costs and amortization. The discount rates used in the analysis are based on the Company's weighted average cost of capital and an assessment of the risk inherent in the projected cash flows. In analyzing the FVLCS determined by a DCF analysis, the Company also considers a market approach determining a recoverable amount for each unit and total entity value determined using a market capitalization approach. Recent market transactions are taken into account, when available. The key assumptions used to determine the recoverable amounts, including a sensitivity analysis, are included in note 10. A DCF analysis uses significant unobservable inputs and is therefore considered a level 3 fair value measurement.

(vi) Employee benefit plans

The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected will be needed to settle employee benefit obligations. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes are required.

(vii) Income taxes

The Company is required to estimate income taxes using substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse. In determining the measurement of tax uncertainties, the Company applies a probable weighted average methodology. Realization of deferred income tax assets is dependent on generating sufficient taxable income during the period in which the temporary differences are deductible. Although realization is not assured, management believes it is more likely than not that all recognized deferred income tax assets will be realized based on reversals of deferred income tax liabilities, projected operating results and tax planning strategies available to the Company and its subsidiaries.

(viii) Contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under regulatory, contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities.

Critical judgements

The following are critical judgements apart from those involving estimation:

(i) Determination of a CGU

Management's judgement is required in determining the Company's cash generating units (CGU) for the impairment assessment of its indefinite-life intangible assets. The CGUs have been determined considering operating activities and asset management and are Cable, Satellite, and Wireless.

(ii) Broadcast rights and licences and spectrum licences – indefinite-life assessment

A number of the Company's businesses are dependent upon broadcast licences (or operate pursuant to an exemption order) granted and issued by the CRTC or wireless spectrum licences issued by the Department of Innovation, Science and Economic Development (formerly, Industry Canada). While these licences must be renewed from time to time, the Company has never failed to do so. In addition, there are currently no legal, regulatory or competitive factors that limit the useful lives of these assets.

Adoption of recent accounting pronouncements

We adopted the following new accounting standards effective September 1, 2018.

- IFRS 15 *Revenue from Contracts with Customers*, was issued in May 2014 and replaced IAS 11 *Construction Contracts*, IAS 18 *Revenue*, IFRIC 13 *Customer Loyalty Programs*, IFRIC 15 *Agreements for the Construction of Real Estate*, IFRIC 18 *Transfers of Assets from Customers* and SIC-31 *Revenue – Barter Transactions Involving Advertising Services*. The new standard requires revenue to be recognized in a manner that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration expected to be received in exchange for those goods or services. The principles are to be applied in the following five steps:

(1) identify the contract(s) with a customer;

(2) identify the performance obligations in the contract;

(3) determine the transaction price;

(4) allocate the transaction price to the performance obligations in the contract; and,

(5) recognize revenue when (or as) the entity satisfies a performance obligation.

IFRS 15 also provides guidance relating to the treatment of contract acquisition and contract fulfillment costs.

The application of IFRS 15 impacted the Company's reported results, including the classification and timing of revenue recognition and the treatment of costs incurred to obtain contracts with customers.

The application of this standard most significantly affected our Wireless arrangements that bundle equipment and service together, specifically with regards to the timing of recognition and classification of revenue. The timing of recognition and classification of revenue was affected because at contract inception, IFRS 15 requires the estimation of total consideration to be received over the contract term, and the allocation of that consideration to performance obligations in the contract, typically based on the relative stand-alone selling price of each obligation. This resulted in a decrease to equipment revenue recognized at contract inception, as the discount previously recognized over 24 months is now recognized at contract inception, and a decrease to service revenue recognized over the course of the contract, as a portion of the discount previously allocated solely to equipment revenue is allocated to service revenue. The measurement of total revenue recognized over the life of a contract was unaffected by the new standard.

IFRS 15 also requires that incremental costs to obtain a contract with a customer (for example, commissions) be capitalized and amortized into operating expenses over the life of a contract on a rational, systematic basis consistent with the pattern of the transfer of goods or services to which the asset relates. The Company previously expensed such costs as incurred.

The Company's financial position was also impacted by the adoption of IFRS 15, with new contract asset and contract liability categories recognized to reflect differences between the timing of revenue recognition and the actual billing of those goods and services to customers.

For purposes of applying the new standard on an ongoing basis, we are required to make judgments in respect of the new standard, including judgments in determining whether a promise to deliver goods or services is considered distinct, how to determine the transaction prices and how to allocate those amounts amongst the associated performance obligations. We must also exercise judgment as to whether sales-based compensation amounts are costs incurred to obtain contracts with customers that should be capitalized and subsequently amortized on a systematic basis over time.

We have made a policy choice to adopt IFRS 15 with full retrospective application, subject to certain practical expedients. As a result, all comparative information in these financial statements has been prepared as if IFRS 15 had been in effect since September 1, 2017. The accounting policies set out in note 2 have been applied in preparing the consolidated financial statements as at and for the year ended August 31, 2019, the comparative information presented for the year ended August 31, 2018, and for the consolidated statements of financial position as at September 1, 2017 and August 31, 2018.

Upon adoption of, and transition to, IFRS 15, we elected to utilize the following practical expedients:

- Completed contracts that begin and end within the same annual reporting period and those completed before September 1, 2017 are not restated;
- Contracts modified prior to September 1, 2017 are not restated. The aggregate effect of these modifications is reflected when identifying the satisfied and unsatisfied performance obligations, determining the transaction price and allocating the transaction price to the satisfied and unsatisfied performance obligations; and
- Not disclose, on an annual basis, the unsatisfied portions of performance obligations related to contracts with a duration of one year or less or where the revenue we recognize is equal to the amount invoiced to the customer.

Impacts of IFRS 15, Revenue from Contracts with Customers

The effect of transition to IFRS 15 on impacted line items on our condensed Consolidated Statements of Income as disclosed in “Transition adjustments” for the year ended August 31, 2018, are as follows:

		Year ended August 31, 2018		
(millions of Canadian dollars)		**As reported**	**Effect of transition**	**Subsequent to transition**
Revenue	i.	5,239	(50)	5,189
Operating, general and administrative expenses	ii.	(3,150)	18	(3,132)
Other revenue (expense)		29	3	32
Income tax expense (recovery)		143	(12)	131
Net income (loss) from continuing operations		66	(17)	49

i) Allocation of transaction price
Revenue recognized at point of sale requires the estimation of total consideration over the contract term and allocation of that consideration to all performance obligations in the contract based on their relative stand-alone selling prices. For Wireless term contracts, equipment revenue recognized at contract inception, as well as service revenue recognized over the course of the contract is lower than previously recognized as noted above.

ii) Deferred commission costs
Costs incurred to obtain or fulfill a contract with a customer were previously expensed as incurred. Under IFRS 15, these costs are capitalized and subsequently amortized as an expense over the life of the customer on a rational, systematic basis consistent with the pattern of the transfer of goods and services to which the asset relates. As a result, commission costs are reduced in the period, with an offsetting increase in amortization of capitalized costs over the average life of a customer.

The effect of transition to IFRS 15 on our disaggregated revenues for the year ended August 31, 2018, are as follows:

	Year ended August 31, 2018		
(millions of Canadian dollars)	**As reported**	**Effect of transition**	**Subsequent to transition**
Services			
Wireline – Consumer	3,725	–	3,725
Wireline – Business	567	–	567
Wireless	595	(31)	564
	4,887	(31)	4,856
Equipment and other			
Wireless	356	(19)	337
	356	(19)	337
Intersegment eliminations	(4)	–	(4)
Total revenue	5,239	(50)	5,189

The effect of transition to IFRS 15 on impacted line items on our Consolidated Statements of Financial Position as at September 1, 2017 and August 31, 2018 are as follows:

		As at August 31, 2018			As at September 1, 2017		
(millions of Canadian dollars)		**As reported**	**Effect of transition**	**Subsequent to transition**	**As reported**	**Effect of transition**	**Subsequent to transition**

Shareholders' equity		**5,957**	**23**	**5,980**	6,154	40	6,194

i) Contract assets and liabilities
Contract assets and liabilities are the result of the difference in timing related to revenue recognized at the beginning of a contract and cash collected. Contract assets arise primarily as a result of the difference between revenue recognized on the sale of wireless device at the onset of a term contract and the cash collected at the point of sale.

Contract liabilities are the result of receiving payment related to a customer contract before providing the related goods or services. We account for contract assets and liabilities on a contract-by-contract basis, with each contract being presented as a single net contract asset or net contract liability accordingly.

ii) Deferred commission cost asset
Under IFRS 15, we will defer commission costs paid to internal and external representatives as a result of obtaining contracts with customers as deferred commission cost assets and amortize them over the pattern of the transfer of goods and services to the customer, which is typically evenly over 24 to 36 months.

Refer to "Transition adjustments" for the impact of application of IFRS 15 on our previously reported consolidated statements of cash flows.

- IFRS 9 *Financial Instruments* was revised and issued in July 2014 and replaces IAS 39 *Financial Instruments: Recognition and Measurement.* IFRS 9 includes updated guidance on the classification and measurement of financial instruments, new guidance on measuring impairment on financial assets, and new hedge accounting guidance. We have applied IFRS 9, and the related consequential amendments to other IFRSs, on a retrospective basis except for the changes to hedge accounting as described below which were applied on a prospective basis. The adoption of IFRS 9 did not have a significant impact on our financial performance or the carrying amounts of our financial instruments as set out in "Transition adjustments" below.

  IFRS 9 replaces the classification and measurement models in IAS 39 with a single model under which financial assets are classified and measured at amortized cost, fair value through other comprehensive income (FVOCI) or fair value through profit or loss (FVTPL) and eliminates the IAS 39 categories of held-to-maturity, loans and receivables and available-for-sale. Investments and equity instruments are required to be measured by default at FVTPL unless an irrevocable option for each equity instrument is taken to measure at FVOCI. The classification and measurement of financial assets is based on the business model that the asset is managed and its contractual cash flow characteristics. The adoption of IFRS 9 did not change the measurement bases of our financial assets

  - Cash and derivative instruments classified as held-for-trading and measured at FVTPL under IAS 39 continue to be measured as such under IFRS 9 with an updated classification of FVTPL
  - Investments in equity securities not quoted in an active market and where fair value cannot be reliably measured that were classified as available-for-sale and recorded at cost less impairment under IAS 39 are now required to be classified and measured at FVTPL under IFRS 9. There has been no change to the measurement of these assets on transition
  - Trade and other receivables classified as loans and receivables and measured at amortized cost under IAS 39 continue to be measured as such under IFRS 9 with an updated classification of amortized cost

For financial liabilities, IFRS 9 retains most of the IAS 39 requirements. We did not choose the option of designating any financial liabilities at FVTPL as such, the adoption of IFRS 9 did not impact our accounting policies for financial liabilities as all liabilities continue to be measured at amortized cost.

The impairment of financial assets under IFRS 9 is based on an expected credit loss (ECL) model, as opposed to the incurred loss model in IAS 39. IFRS 9 applies to financial assets measured at amortized cost, including contract assets under IFRS 15, and requires that we consider factors that include historical, current and forward-looking information when measuring the ECL. We use the simplified approach for measuring losses based on the lifetime ECL for trade receivables and contract assets. Amounts considered uncollectible are written off and recognized in operating, general and administrative expenses in the Consolidated Statement of Income. This change did not have a significant impact to our receivables.

IFRS 9 does not fundamentally change the types of hedging relationships or the requirements to measure and recognize ineffectiveness; however, it requires us to ensure that the hedge accounting relationships are aligned with our risk management objective and strategy and to apply a more qualitative and forward-looking approach to assess hedge effectiveness. It also requires that amounts related to cash flow hedges of anticipated purchases of non-financial assets settled during the period to be reclassified from accumulated other comprehensive income to the initial cost of the non-financial asset when it is recognized. Under IAS 39, when an anticipated transaction was subsequently recorded as a non-financial asset, the amounts were reclassified from other comprehensive income (loss).

In accordance with IFRS 9's transition provisions for hedge accounting, the Company has applied the IFRS 9 hedge accounting requirements prospectively from the date of initial application without restatement of prior period comparatives. The Company's qualifying hedging relationships in place as at August 31, 2018 also qualified for hedge accounting in accordance with IFRS 9 and were therefore regarded as continuing hedging relationships. As the critical terms of the hedging instruments match those of their corresponding hedged items, all hedging relationships continue to be effective under IFRS 9's effectiveness assessment requirements. The Company has not designated any hedging relationships under IFRS 9 that would not have met the qualifying hedge accounting criteria under IAS 39.

Change in accounting policy

Effective September 1, 2018, the Company voluntarily changed its accounting policy related to the treatment of digital cable terminals ("DCTs") to record them as property, plant and equipment rather than inventory upon acquisition. The Company believes that the change in accounting policy will result in clearer and more relevant financial information as the Company has recently changed its offerings to customers, which has resulted in DCTs being predominantly rented rather than sold to customers. Previously, inventories included DCTs which were held pending rental or sale to the customer at cost or at a subsidized price. When the subscriber equipment was rented, it was transferred to property, plant and equipment and amortized over its useful life and then removed from capital and returned to inventory when returned by a customer. Under the new policy, all DCTs will be classified as property, plant and equipment regardless of whether or not they are currently deployed to a customer as the Company believes that this better reflects the economic substance of its operations. This change in accounting policy has been applied retrospectively. Refer to "Transition adjustments" below for the impact of this change of accounting policy on previously reported consolidated Statements of Financial Position, consolidated Statements of Income and consolidated Statements of Cash Flows.

Transition adjustments

Standards, interpretations and amendments to standards issued but not yet effective

The Company has not yet adopted certain standards and interpretations that have been issued but are not yet effective. The following pronouncements are being assessed to determine the impact on the Company's results and financial position.

- IFRS 16 *Leases* was issued on January 2016 and replaces IAS 17 *Leases*. The new standard requires entities to recognize lease assets and lease obligations on the balance sheet. For lessees, IFRS 16 removes the classification of leases as either operating leases or finance leases, instead requiring that leases be capitalized by recognizing the present value of the lease payments and showing them as lease assets (right-of-use assets) and representing the right to use the underlying leased asset. If lease payments are made over time, the Company would recognize a lease liability representing its obligation to make future lease payments. Certain short-term leases (less than 12 months) and leases of low-value may be exempted from the requirements and may continue to be treated as operating leases if certain elections are made. Lessors will continue with a dual lease classification model. Classification will determine how and when a lessor will recognize lease revenue, and what assets would be recorded.

  As the Company has significant contractual obligations currently being recognized as operating leases, upon adoption of IFRS 16, we will recognize a significant increase to both assets and liabilities on our Consolidated Statements of Financial Position as well as a decrease to operating costs, as a result of removing the lease expense, an increase to depreciation and amortization, due to the depreciation of the right-of-use asset, and an increase to finance costs, due to the accretion of the lease liability. Relative to the results of applying the current standard, although actual cash flows will be unaffected, the Company's statement of cash flows will reflect increases in cash flows from operating activities offset equally by decreases in cash flows from financing activities.

  We do not expect significant impacts for contracts in which we are the lessor.

  Implementation

  We continue to make progress towards adoption of IFRS 16, including the implementation of a new lease system that enables us to comply with the requirements of the standard on a contract-by-contract basis. Changes and enhancements to business processes and systems of internal control are also being completed.

  We will adopt IFRS 16 on September 1, 2019, using a modified retrospective approach whereby the financial statements of prior periods presented are not restated. The cumulative effect of the initial application of the new standard will be recognized at the date of initial application. Generally, right-of-use assets at transition will be measured at an amount equal to the corresponding lease liabilities, adjusted for any prepaid or accrued rent outstanding. We do not intend to elect the recognition exemptions on short-term leases or low-value leases; however, we may choose to elect these recognition exemptions on a class-by-class basis for new classes and lease-by-lease basis, respectively, in the future.

  As permitted by IFRS 16, we will apply certain practical expedients to facilitate the initial adoption and ongoing application of IFRS 16 including the following:

  - not separate fixed non-lease components from lease components for certain classes of underlying assets. Each lease component and any associated non-lease components will be accounted for as a single lease component
  - apply a single discount rate to a portfolio of leases with similar characteristics
  - exclude initial direct costs from measuring the right-of-use asset as at September 1, 2019
  - use hindsight in determining the lease term where the contract contains purchase, extension, or termination options

Effect of Transition to IFRS 16

While our testing, data validation, and assessment process is ongoing, our preliminary estimated effect of transition to IFRS 16 on our Consolidated Statements of Financial Position as at September 1, 2019 is as follows:

(billions of Canadian dollars)	As reported as at August 31, 2019	Estimated effect of IFRS 16 transition	Subsequent to transition as at September 1, 2019
Current assets	0.3	**	0.3
Non-current assets	4.9	1.3	6.2
Current liabilities	1.3	0.2	1.5
Non-current liabilities	6.0	1.1	7.1
Shareholders' equity	6.3	**	6.3

** Amounts less than $0.1 billion.

Upon adoption of the Standard on September 1, 2019, actual amounts could differ from these preliminary estimates.

- IFRIC 23 *Uncertainty over Income Tax Treatments* was issued in 2017 to clarify how to apply the recognition and measurement requirements in IAS 12 when there is uncertainty over income tax treatments. It is required to be applied for annual periods commencing January 1, 2019, which for the Company will be the annual period commencing September 1, 2019. The Company is currently assessing the impact of this standard on its consolidated financial statements. The Company does not expect this standard to have a material effect on its September 1, 2019 balance sheet.

3. ASSET DISPOSITION AND ASSET HELD FOR SALE

Shaw Tracking

In the third quarter of fiscal 2017, the Company entered into an agreement to sell a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation reported within the Company's Wireline segment, for proceeds of approximately US $20 million, net of working capital adjustments. Accordingly, the operating results and operating cash flows of the Tracking business are presented as discontinued operations separate from the Company's continuing operations.

The transaction closed on September 15, 2017 and the Company recognized a loss on the divestiture within income from discontinued operations as follows:

	August 31, 2018
Proceeds on disposal, net of transaction costs of $nil	18
Net assets disposed	(22)
	(4)
Income taxes	2
Loss on divestiture, net of tax	**(6)**

The assets and liabilities disposed of were as follows:

	$
Accounts receivable	6
Inventories	5
Other current assets	1
Other long-term assets	25
Goodwill	24
	61
Accounts payable and accrued liabilities	8
Deferred credits	33
Deferred income tax liabilities	(2)
	22

Results of Discontinued Operations

A reconciliation of the major classes of line items constituting income from discontinued operations, net of tax, as presented in the consolidated statements of income is as follows:

	August 31, 2018
Revenue	**1**
Operating, general and administrative expenses	**–**
Purchases of goods and services	**1**
	1
Income from discontinued operations before loss on divestiture	**–**
Loss on divestiture, net of tax	**(6)**
Loss from discontinued operations, net of tax	**(6)**

4. ACCOUNTS RECEIVABLE

	2019 $	2018 (restated, note 2) $
Subscriber and trade receivables	**370**	305
Due from related parties (note 29)	**–**	–
Miscellaneous receivables	**15**	7
	385	312
Less allowance for doubtful accounts	**(98)**	(59)
	287	253

Included in operating, general and administrative expenses is a provision for doubtful accounts of $40 (2018 – $38).

5. INVENTORIES

	2019 $	2018 (restated, note 2) $
Wireless devices and accessories	**53**	40
DTH subscriber equipment	**33**	21
	86	61

6. OTHER CURRENT ASSETS

	2019 $	2018 (restated, note 2) $
Prepaid expenses	**108**	104
Costs incurred to obtain or fulfill a contract with a customer	**59**	48
Wireless handset receivables	**124**	121
	291	273

7. INVESTMENTS AND OTHER ASSETS

	2019 $	2018 $
Publicly traded companies	–	615
Investments in private entities	**37**	45
	37	660

The Company has a portfolio of minor investments in various private entities. In the third quarter of fiscal 2019, the Company disposed of one of these investments with a book value of $10 for proceeds of $25.

Corus Entertainment Inc.

Corus is a leading media and content company that creates and delivers high quality brands and content across platforms for audiences around the world. Corus' portfolio of multimedia offerings encompasses 35 specialty television services, 39 radio stations, 15 conventional television stations, a global content business, digital assets, live events, children's book publishing, animation software, technology and media services. Corus is headquartered in Canada, and its stock is listed on the TSX under the symbol CJR.B.

In connection with the sale of the Media division to Corus in 2016, the Company received 71,364,853 Corus Class B non-voting participating shares (the "Corus B Consideration Shares") representing approximately 37% of Corus' total issued equity of Class A and Class B shares. Although the Class B Corus shares did not have voting rights, the Company was considered to have significant influence due to Board representation. The Company agreed to retain approximately one third of its Corus B Consideration Shares for 12 months post-closing, a second one third for 18 months post-closing, and the final one third for 24 months post-closing, until March 31, 2018.

On May 31, 2019, the Company sold all of its 80,630,383 Class B non-voting participating shares of Corus at a price of $6.80 per share. Proceeds, net of transaction costs were $526, which resulted in a loss of $109. The Company's weighted average ownership of Corus for the nine months ended May 31, 2019 was 38% (2018 – 39%). For the year ended August 31, 2019, the Company received dividends of $10 (2018 – $92) from Corus. At August 31, 2019, the Company owned nil (2018 – 80,630,383) Corus Class B shares having a fair value of $nil (2018 – $298) and representing nil% (2018 – 38%) of the total issued equity of Corus.

Summary financial information for Corus through the disposal date is as follows:

	Nine months ended May 31, 2019	Year ended August 31, 2018
Revenue	**1,310**	1,647
Net income (loss) attributable to:		
Shareholders	**133**	(784)
Non-controlling interest	**19**	26
	152	(758)
Other comprehensive income, attributable to shareholders	**(40)**	25
Comprehensive income (loss)	**112**	(733)
Equity income from associates, excluding goodwill impairment	**46**	84
Impairment of investment in associate (1)	–	(284)
Equity income (loss) from associates (2)	**46**	(200)
Other comprehensive income from equity accounted associates (2)	**(13)**	10
	33	(190)

(1) The Company assessed its investment in Corus for indicators of impairment, which included a significant and sustained decrease in the share price as well as the recording by Corus of an impairment charge against their goodwill and broadcast license intangibles, and found that there was evidence that impairment had occurred. The Company compared the recoverable amount to the carrying value and determined that an impairment charge of $284 was required. The recoverable amount was determined based on the value in use of the investment.

(2) The Company's share of income and other comprehensive income reflect the weighted average proportion of Corus net income and other comprehensive income attributable to shareholders for the nine-month period ended May 31, 2019 and year ended August 31, 2018.

Carrying amount at August 31, 2018	**615**
Share of equity at disposition date	**46**
Share of other comprehensive loss of associate	**(13)**
Dividends received to disposition date	**(10)**
Carrying value at disposition date	**638**
Proceeds on disposal, net of transaction costs	**526**
Reclassification of accumulated gain from other comprehensive income related to the sale of an associate	**(3)**
Loss on sale of investment	**109**

8. PROPERTY, PLANT AND EQUIPMENT

	August 31, 2019			**August 31, 2018**

	4,702	**1,109**	**–**	**(872)**	**(22)**	**(34)**	**4,883**

	August 31, 2017						August 31, 2018
	Net book value $	Additions $	Transfers $	Amortization $	Disposals and writedown $	Divestment $	Net book value $
Cable and telecommunications distribution system	3,112	578	208	(524)	(10)	–	3,364
Digital cable terminals and modems	408	246	–	(268)	–	–	386
Satellite audio, video and data network and DTH receiving equipment	60	19	–	(14)	–	–	65
Land and buildings	428	4	–	(29)	–	–	403
Data centre infrastructure, data processing and other	285	27	11	(54)	–	–	269
Assets under construction	101	333	(219)	–	–	–	215
	4,394	1,207	–	(889)	(10)	–	4,702

In 2019, the Company recognized a gain of $43 (2018 – gain of $1) on the disposal of property, plant and equipment.

9. OTHER LONG-TERM ASSETS

	2019 $	2018 (restated, note 2) $
Equipment costs subject to a deferred revenue arrangement	**93**	121
Long-term Wireless handset receivables	**45**	27
Costs incurred to obtain or fulfill a contract with a customer	**35**	26
Credit facility arrangement fees	**4**	4
Other	**18**	19
	195	197

Amortization provided in the accounts for 2019 amounted to $88 (2018 – $112) and was recorded as amortization of deferred equipment costs and other amortization.

10. INTANGIBLES AND GOODWILL

	2019 $	2018 $
Broadcast rights and licences		
Cable systems	**4,016**	4,016
DTH and satellite services	**1,013**	1,013
	5,029	5,029
Wireless spectrum licences	**2,445**	1,953
Other intangibles		
Software	**451**	434
Customer relationships	**54**	66
	7,979	7,482
Goodwill		
Cable and telecommunications systems	**79**	79
Wireless	**201**	201
	280	280
Net book value	**8,259**	7,762

Broadcast rights and licences, trademark, brands and wireless spectrum licences have been assessed as having indefinite useful lives. While licences must be renewed from time to time, the Company has never failed to do so. In addition, there are currently no legal, regulatory, competitive or other factors that limit the useful lives of these assets.

The changes in the carrying amount of intangibles with indefinite useful lives, and therefore not subject to amortization, are as follows:

	Broadcast rights and licences $	Goodwill $	Wireless spectrum licences $
September 1, 2017	5,029	280	1,947
Additions	–	–	25
Disposition	–	–	(19)
August 31, 2018	**5,029**	**280**	**1,953**
Additions	**–**	**–**	**492**
Disposition	**–**	**–**	**–**
August 31, 2019	**5,029**	**280**	**2,445**

Intangibles subject to amortization are as follows:

	August 31, 2019			August 31, 2018		
	Cost	Accumulated amortization	Net book value	Cost	Accumulated amortization	Net book value
Software	**697**	**257**	**440**	595	183	412
Software under construction	**11**	**–**	**11**	22	–	22
Customer relationships	**114**	**60**	**54**	114	48	66
	822	**317**	**505**	731	231	500

The changes in the carrying amount of intangibles subject to amortization are as follows:

	Software $	Software under construction $	Customer relationships $	Total $
September 1, 2017	377	3	79	459

Dispositions	**(6)**	**–**	**–**	**(6)**
Amortization	**(100)**	**–**	**(12)**	**(112)**
August 31, 2019	**440**	**11**	**54**	**505**

Impairment testing of indefinite-life intangibles and goodwill

The Company conducted its annual impairment test on goodwill and indefinite-life intangibles as at February 1, 2019 and the recoverable amount of the cash generating units exceeded their carrying value.

A hypothetical decline of 10% in the recoverable amount of the Cable cash generating unit as at February 1, 2019 would not result in any impairment loss. A hypothetical decline of 10% in the recoverable amount of the Satellite cash generating unit as at February 1, 2019 would not result in an impairment loss. The Wireless cash generating unit was created with the acquisition of Freedom on March 1, 2016. A hypothetical decline of 10% in the recoverable amount of the Wireless generating unit as at February 1, 2019 would not result in any impairment loss.

Any changes in economic conditions since the impairment testing conducted as at February 1, 2019 do not represent events or changes in circumstance that would be indicative of impairment at August 31, 2019.

Significant estimates inherent to this analysis include discount rates and the terminal value. At February 1, 2019, the estimates that have been utilized in the impairment tests reflect any changes in market conditions and are as follows:

		Terminal value	
	Post-tax discount rate	Terminal growth rate	Terminal operating income before restructuring costs and amortization multiple
Cable	6.5%	1.5%	7.4X
Satellite	7.5%	-3.0%	5.4X
Wireless	9.3%	1.0%	4.5X

A sensitivity analysis of significant estimates is conducted as part of every impairment test. With respect to the impairment tests performed in the second quarter, the estimated decline in recoverable amount for the sensitivity of significant estimates is as follows:

	Estimated decline in recoverable amount		
		Terminal value	
	1% increase in discount rate	1% decrease in terminal growth rate	0.5 times decrease in terminal operating income before restructuring costs and amortization multiple
Cable	16.4%	14.2%	4.8%
Satellite	8.1%	5.6%	5.6%
Wireless	15.2%	7.7%	8.0%

11. SHORT-TERM BORROWINGS

On June 19, 2018 the Company established an accounts receivable securitization program with a Canadian financial institution which will allow it to sell certain trade receivables into the program up to a maximum of $100. The Company continues to service and retain substantially all of the risks and rewards relating to the trade receivables sold, and therefore, the trade receivables are recognized on the Company's Consolidated Statement of Financial Position and the funding received is recorded as a current liability (revolving floating rate loans) secured by the trade receivables. The buyer's interest in the accounts receivable ranks ahead of the Company's interest and the program restricts it from using the trade receivables as collateral for any other purpose. The buyer of the trade receivables has no claim on any of the Company's other assets. Sale proceeds in respect of the new securitization program of approximately $40 were received on June 19, 2018. The term of this revolving-period agreement was to end on June 19, 2019.

On May 29, 2019, the Company amended the terms of its accounts receivable securitization program to extend the term of the program to May 29, 2022 and increase the sales committed up to a maximum of $200. Under the terms of the amendment, the Company was also required to draw an additional $40 under the program by November 1, 2019. Accordingly, subsequent to year-end on November 1, 2019 the Company increased the amount drawn by $80 to bring the total short-term borrowings from the buyer to $120.

A summary of our accounts receivable securitization program as at August 31 is as follows:

	2019 $	2018 $
Trade accounts receivable sold to buyer as security	**434**	429
Short-term borrowings from buyer	**(40)**	(40)
Overcollateralization	**394**	389

(1) During 2017, the Company restructured certain operations within the Wireline segment and announced a realignment to integrate certain Consumer/Business operations and Freedom Mobile. In fiscal 2019, a total of $3 has been paid (2018 – $5).

(2) During the second quarter of fiscal 2018, the Company offered a voluntary departure program to a group of eligible employees and in the second half of 2018 additional changes to its organizational structure as part of a total business transformation initiative. In connection with the restructuring, the Company recorded $446 in 2018 primarily related to severance and employee related costs in respect of the approximate 3,300 affected employees. In fiscal 2019, a total of $121 has been paid (2018 – $172). The remaining costs are expected to be paid within the next 17 months.

(3) During the year, certain employees and the Company agreed to rescind earlier elections under the voluntary departure program.

Corporate

Bank loans

During 2012, a syndicate of banks provided the Company with an unsecured $1 billion credit facility which includes a maximum revolving term or swingline facility of $50. During 2016, the Company elected to increase its borrowing capacity by $500 under the terms of the amended facility. On November 21, 2018, the Company amended the terms of its bank credit facility to extend the maturity date to December 2023. Subsequent to year-end, on November 21, 2019, the Company further extended the term from December 2023 to December 2024. This credit facility can be used for working capital and general corporate purposes.

Funds are available to the Company in both Canadian and US dollars. At August 31, 2019, $3 (2018 – $2) has been drawn as committed letters of credit against the revolving term facility. Interest rates fluctuate with Canadian prime and bankers' acceptance rates, US bank base rates and LIBOR rates. Excluding the revolving term facility, the effective interest rate on actual borrowings under the credit facility during 2019 was nil (2018 – nil). The effective interest rate on the revolving term facility for 2019 was nil (2018 – nil).

Senior notes

The senior notes are unsecured obligations and rank equally and ratably with all existing and future senior indebtedness. The fixed rate notes are redeemable at the Company's option at any time, in whole or in part, prior to maturity at 100% of the principal amount plus a make-whole premium.

On November 2, 2018, the Company issued $500 senior notes at a rate of 3.80% due November 2, 2023 and $500 senior notes at a rate of 4.40% due November 2, 2028.

Subsequent to year-end, on October 1, 2019, the Company repaid $1,250 of 5.65% senior notes at their maturity.

Other

Burrard Landing Lot 2 Holdings Partnership (the "Partnership")

The Company has a 33.33% interest in the Partnership which built the Shaw Tower project with office/retail space and living/working space in Vancouver, BC. In the fall of 2004, the commercial construction of the building was completed and at that time, the Partnership issued ten year 6.31% secured mortgage bonds in respect of the commercial component of the Shaw Tower. In February 2014, the Partnership refinanced its debt. The Partnership received a mortgage loan and used the proceeds to prepay the outstanding balance of the previous mortgage and loan excess funds to each of its partners. The mortgage loan matures on November 1, 2024 and bears interest at 4.683% compounded semi-annually with interest only payable for the first five years. The mortgage loan is collateralized by the property and the commercial rental income from the building with no recourse to the Company.

In February 2018, the Partnership received an additional mortgage loan of $30 and used the proceeds to loan excess funds to each of its partners, of which the Company received $10. The additional loan matures on November 1, 2024 and bears interest at 4.14% compounded semi-annually.

Debt covenants

The Company and its subsidiaries have undertaken to maintain certain covenants in respect of the credit agreements and trust indentures described above. The Company and its subsidiaries were in compliance with these covenants at August 31, 2019.

Long-term debt repayments

Mandatory principal repayments on all long-term debt in each of the next five years and thereafter are as follows:

	$
2020	1,251
2021	801
2022	1
2023	501
2024	501
Thereafter	2,295
	5,350

Interest expense

	2019 $	2018 $
Interest expense – long-term debt	**280**	245
Amortization of senior notes discounts	**1**	1
Interest income – short-term (net)	**(29)**	(6)
Interest expense – other	**6**	8
	258	248

15. OTHER LONG-TERM LIABILITIES

	2019 $	2018 $
Pension liabilities (note 28)	**69**	10
Post retirement liabilities (note 28)	**4**	3
Other	**2**	–
	75	13

16. DEFERRED CREDITS

	2019 $	2018 (restated, note 2) $
IRU prepayments	**400**	411
Equipment revenue	**23**	29
Deposit on future fibre sale	**2**	2
	425	442

Amortization of deferred credits for 2019 amounted to $34 (2018 – $42) and was recorded in the accounts as described below.

IRU agreements are in place for periods ranging from 21 to 60 years and are being amortized to income over the agreement periods. Amortization in respect of the IRU agreements for 2019 amounted to $13 (2018 – $13) and was recorded as other amortization. Amortization of equipment revenue for 2019 amounted to $21 (2018 – $30).

17. SHARE CAPITAL

Authorized

The Company is authorized to issue a limited number of Class A voting participating shares ("Class A Shares") of no par value, as described below, and an unlimited number of Class B non-voting participating shares ("Class B Non-Voting Shares") of no par value, Class 1 preferred shares, Class 2 preferred shares, Class A preferred shares and Class B preferred shares.

The authorized number of Class A Shares is limited, subject to certain exceptions, to the lesser of that number of shares (i) currently issued and outstanding and (ii) that may be outstanding after any conversion of Class A Shares into Class B Non-Voting Shares.

Issued and outstanding

2019	2018		2019 $	2018 $
Number of securities				
22,372,064	22,420,064	Class A Shares	**2**	2

528,761,835	518,614,408		**4,605**	4,349

Class A Shares and Class B Non-Voting Shares

Class A Shares are convertible at any time into an equivalent number of Class B Non-Voting Shares. In the event that a take-over bid is made for Class A Shares, in certain circumstances, the Class B Non-Voting Shares are convertible into an equivalent number of Class A Shares.

Changes in Class A Share capital and Class B Non-Voting Share capital in 2019 and 2018 are as follows:

	Class A Shares		Class B Non-Voting Shares	
	Number	$	Number	$
September 1, 2017	22,420,064	2	474,350,861	3,795

August 31, 2018	22,420,064	2	484,194,344	4,054
Stock option exercises	**–**	**–**	**1,658,465**	**39**
Dividend reinvestment plan	**–**	**–**	**8,488,962**	**217**
Class A conversion to Class B	**(48,000)**	**–**	**48,000**	**–**
August 31, 2019	**22,372,064**	**2**	**494,389,771**	**4,310**

Series A and B Preferred Shares

The Cumulative Redeemable Rate Reset Preferred Shares, Series A ("Series A Preferred Shares") and Series B ("Series B Preferred Shares") represent series of class 2 preferred shares and are classified as equity since redemption, at $25.00 per Series A Preferred Share and Series B Preferred Share, is at the Company's option and payment of dividends is at the Company's discretion.

Share transfer restriction

The Articles of the Company empower the directors to refuse to issue or transfer any share of the Company that would jeopardize or adversely affect the right of Shaw Communications Inc. or any subsidiary to obtain, maintain, amend or renew a licence to operate a broadcasting undertaking pursuant to the Broadcasting Act (Canada).

Normal Course Issuer Bid Program

Subsequent to year-end, on October 29, 2019, the Company announced that it had received approval from the Toronto Stock Exchange ("TSX") to establish a normal course issuer bid ("NCIB") program. The program commenced on November 1, 2019 and will remain in effect until October 31, 2020. As approved by the TSX, the Company has the ability to purchase for cancellation up to 24,758,127 Class B Shares representing 5% of all of the issued and outstanding Class B Shares as at October 18, 2019. As of November 15, 2019, the Company has purchased 483,428 Class B Non-Voting Shares for cancellation for a total cost of approximately $13 million under the NCIB.

18. SHARE-BASED COMPENSATION AND AWARDS

Stock option plan

Under a stock option plan, directors, officers, employees and consultants of the Company are eligible to receive stock options to acquire Class B Non-Voting Shares with terms not to exceed ten years from the date of grant. Options granted up to August 31, 2019 vest evenly on the anniversary dates from the original grant date at either 25% per year over four years or 20% per year over five years. The options must be issued at not less than the fair market value of the Class B Non-Voting Shares at the date of grant. The maximum number of Class B Non-Voting Shares issuable under the plan may not exceed 62,000,000. As at August 31, 2019, 39,229,679 Class B Non-Voting Shares have been issued under the plan.

The changes in options are as follows:

	2019		2018	
	Number	Weighted average exercise price $	Number	Weighted average exercise price $
Outstanding, beginning of year	**9,378,966**	**25.18**	10,158,005	24.45
Granted	**1,540,000**	**26.36**	2,790,000	27.17
Forfeited	**(897,470)**	**26.66**	(1,714,445)	26.45
Exercised (1)	**(1,658,465)**	**20.76**	(1,854,594)	23.05
Outstanding, end of year	**8,363,031**	**26.11**	9,378,966	25.18

(1) The weighted average Class B Non-Voting Share price for the options exercised was $26.91.

The following table summarizes information about the options outstanding at August 31, 2019:

	Options outstanding			Options exerciseable	
Range of prices	Number outstanding	Weighted average remaining contractual life	Weighted average exercise price	Number exercisable	Weighted average exercise price
$18.79 - $20.80	309,891	1.12	19.59	309,891	19.59
$20.81 - $24.21	1,235,010	5.40	23.49	842,460	23.37
$24.22 - $26.22	1,086,750	6.67	25.18	620,100	25.08
$26.23 - $27.19	2,906,225	8.10	26.43	692,325	26.49
$27.20 - $30.87	2,825,155	7.14	28.01	1,315,205	28.12

The weighted average estimated fair value at the date of the grant for common share options granted for the year ended August 31, 2019 was $2.07 (2018 – $2.11) per option. The fair value of each option granted was estimated on the date of the grant using the Black-Scholes option pricing model with the following weighted-average assumptions:

	2019	2018
Dividend yield	**4.50%**	4.37%
Risk-free interest rate	**2.08%**	1.88%
Expected life of options	**7 years**	6 years
Expected volatility factor of the future expected market price of Class B Non-Voting Shares	**16.30%**	16.30%

Expected volatility has been estimated based on the historical share price volatility of the Company's Class B Non-Voting Shares.

Restricted share unit and Performance share unit plan

The Company has an RSU/PSU plan which provides that RSUs may be granted to directors, officers and employees of the Company and PSUs may be granted to officers and employees of the Company. Vested RSUs and PSUs will be settled in either cash or Class B Non-Voting Shares as determined by the Human Resources and Compensation Committee at the time of the grant. The cash payout will be based on the market value of a Class B Non-Voting Share at the time of the payout. When cash dividends are paid on Class B Non-Voting Shares, holders are credited with additional RSUs or PSUs, as applicable, equal to the dividend.

For PSUs, the performance criteria is set by the Human Resources and Compensation Committee at the time of the grant, and typically requires the achievement of a minimum level of performance, otherwise the payout is zero, while maximum performance is capped at 150%. On settlement of vested PSUs, the number of Class B Non-Voting Shares issued or delivered, or the amount of cash payment will be multiplied by the applicable performance factor.

During 2019, $5 was recognized as compensation expense (2018 – $3). The carrying value and intrinsic value of RSUs at August 31, 2019 was $7 and $7, respectively (August 31, 2018 – $3 and $3, respectively).

Deferred share unit plan

The Company has a DSU plan for its Board of Directors whereby directors can elect to receive their annual cash compensation, or a portion thereof, in DSUs. In addition, the Company may adjust and/or supplement directors' compensation with periodic grants of DSUs. A DSU is a right that tracks the value of one Class B Non-Voting Share. Holders will be entitled to a cash payout when they cease to be a director. The cash payout will be based on market value of a Class B Non-Voting Share at the time of payout. When cash dividends are paid on Class B Non-Voting Shares, holders are credited with DSUs equal to the dividend. DSUs do not have voting rights as there are no shares underlying the plan.

During 2019, $nil was recognized as compensation expense (2018 – $2). The carrying value and intrinsic value of DSUs at August 31, 2019 was $24 and $20, respectively (August 31, 2018 – $24 and $20, respectively).

Employee share purchase plan

The Company's ESPP provides employees with an incentive to increase the profitability of the Company and a means to participate in that increased profitability. Generally, all non-unionized full time or part time employees of the Company are eligible to enroll in the ESPP. Under the ESPP, eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the employee's contributions, increasing to 33% once an employee reaches 10 years of continuous service.

During 2019, $6 was recorded as compensation expense (2018 – $7).

19. EARNINGS (LOSS) PER SHARE

Earnings (loss) per share calculations are as follows:

	2019	2018 (restated, note 2)
Numerator for basic and diluted earnings per share ($)		
Net income from continuing operations	**733**	39
Deduct: net income attributable to non-controlling interests in subsidiaries	**(2)**	–
Deduct: dividends on Preferred Shares	**(9)**	(8)
Net income attributable to common shareholders from continuing operations	**722**	31
Loss from discontinued operations attributable to common shareholders	**–**	(6)
Net income attributable to common shareholders	**722**	25
Denominator (millions of shares)		
Weighted average number of Class A Shares and Class B Non-Voting Shares for basic earnings per share	**511**	502
Effect of dilutive securities [(1)]	**–**	1
Weighted average number of Class A Shares and Class B Non-Voting Shares for diluted earnings per share	**511**	503
Basic earnings (loss) per share ($)		
Continuing operations	**1.41**	0.06
Discontinued operations	**–**	(0.01)
Attributable to common shareholders	**1.41**	0.05
Diluted earnings (loss) per share ($)		
Continuing operations	**1.41**	0.06
Discontinued operations	**–**	(0.01)
Attributable to common shareholders	**1.41**	0.05

(1) The earnings per share calculation does not take into consideration the potential dilutive effect of certain stock options since their impact is anti-dilutive. For the year ended August 31, 2019, 6,126,210 options were excluded from the diluted earnings per share calculation (2018 – 4,263,940).

20. DIVIDENDS

Common share dividends

The holders of Class A Shares and Class B Non-Voting Shares are entitled to receive such dividends as the Board of Directors determines to declare on a share-for-share basis, as and when any such dividends are declared or paid. The holders of Class B Non-Voting Shares are entitled to receive during each dividend period, in priority to the payment of dividends on the Class A Shares, an additional dividend at a rate of $0.0025 per share per annum. This additional dividend is subject to proportionate adjustment in the event of future consolidations or subdivisions of shares and in the event of any issue of shares by way of stock dividend. After payment or setting aside for payment of the additional non-cumulative dividends on the Class B Non-Voting Shares, holders of Class A Shares and Class B Non-Voting Shares participate equally, share for share, as to all subsequent dividends declared.

Preferred share dividends

Holders of the Series A Preferred Shares were entitled to receive, as and when declared by the Company's Board of Directors, a cumulative quarterly fixed dividend yielding 4.50% annually for the initial period ending June 30, 2016. Commencing

June 30, 2016, the dividend rate was reset to 2.791% for the five year period ending June 30, 2021. Thereafter, the dividend rate will be reset every five years at a rate equal to the then current 5-year Government of Canada bond yield plus 2.00%. Holders of Series A Preferred Shares had the right, at their option, to convert their shares into Cumulative Redeemable Floating Rate Preferred Shares, Series B (the "Series B Preferred Shares"), subject to certain conditions, on June 30, 2016 and on June 30 every five years thereafter, with the next conversion date being June 30, 2021.

On June 30, 2016, 1,987,607 Series A Preferred Shares were converted into an equal number of Series B Preferred Shares. The Series B Preferred Shares also represent a series of Class 2 preferred shares and holders will be entitled to receive cumulative quarterly dividends, as and when declared by the Company's Board of Directors, at a rate set quarterly equal to the then current three-month Government of Canada Treasury Bill yield plus 2.00%. The floating quarterly dividend rate for the Series B Preferred Shares were set as follows:

Period	Annual Dividend Rate
June 30, 2016 to September 29, 2016	2.539%
September 30, 2016 to December 30, 2016	2.512%
December 31, 2016 to March 30, 2017	2.509%
March 31, 2017 to June 29, 2017	2.480%
June 30, 2017 to September 29, 2017	2.529%
September 30, 2017 to December 30, 2017	2.742%
December 31, 2017 to March 30, 2018	2.872%
March 31, 2018 to June 29, 2018	3.171%
June 30, 2018 to September 29, 2018	3.300%
September 30, 2018 to December 30, 2018	3.509%
December 31, 2018 to March 30, 2019	3.713%
March 31, 2019 to June 29, 2019	3.682%
June 30, 2019 to September 29, 2019	3.687%
September 30, 2019 to December 30, 2019	3.638%

Dividend reinvestment plan

The Company has a Dividend Reinvestment Plan ("DRIP") that allows holders of Class A Shares and Class B Non-Voting Shares who are residents of Canada and, effective December 16, 2016, the United States, to automatically reinvest monthly cash dividends to acquire additional Class B Non-Voting Shares. As at and for the years ended August 31, 2019 and August 31, 2018, Class B Non-Voting Shares distributed under the Company's DRIP were new shares issued from treasury at a 2% discount from the 5 day weighted average market price immediately preceding the applicable dividend payment date.

Subsequent to year-end, on October 24, 2019, and in accordance with the terms of our Dividend Reinvestment Plan (the "DRIP"), the Company's Board of Directors approved changes to the Company's DRIP program. In lieu of issuing shares from treasury, it will satisfy its share delivery obligations under the DRIP by purchasing Class B Shares on the open market. In addition, the Company will reduce its discount from 2% to 0% for the Class B Shares delivered under the DRIP. These changes to the DRIP will apply to the dividends payable on November 28, 2019 to shareholders of record on November 15, 2019.

Dividends declared

The dividends per share recognized as distributions to common shareholders for dividends declared during the year ended August 31, 2019 and 2018 are as follows:

2019		2018	
Class A Voting Share	Class B Non-Voting Share	Class A Voting Share	Class B Non-Voting Share
1.1825	1.1850	1.1825	1.1850

The dividends per share recognized as distributions to preferred shareholders for dividends declared during the year ended August 31, 2018 and 2017 are as follows:

2019		2018	
Series A Preferred Share	**Series B Preferred Share**	**Series A Preferred Share**	**Series B Preferred Share**
0.6978	0.9119	0.6978	0.7553

On June 27, 2019, the Company declared dividends of $0.17444 per Series A Preferred Share and $0.23044 per Series B Preferred Share which were paid on September 30, 2019. The total amount paid was $2 of which $1 was not recognized as at August 31, 2019.

On October 25, 2019, the Company declared dividends of $0.098542 per Class A Voting Share and $0.09875 per Class B Non-Voting Share payable on each of December 30, 2019, January 30, 2020 and February 27, 2020 to shareholders of record at the close of business on December 13, 2019, January 15, 2020 and February 14, 2020, respectively.

On October 25, 2019, the Company declared dividends of $0.17444 per Series A Preferred Share and $0.22738 per Series B Preferred Share payable on December 31, 2019 to holders of record at the close of business on December 13, 2019.

21. OTHER COMPREHENSIVE INCOME (LOSS) AND ACCUMULATED OTHER COMPREHENSIVE LOSS

Components of other comprehensive income and the related income tax effects for 2019 are as follows:

	Amount $	Income taxes $	Net $
Items that may subsequently be reclassified to income			
Change in unrealized fair value of derivatives designated as cash flow hedges	**3**	**(1)**	**2**
Adjustment for hedged items recognized in the period	**(3)**	**1**	**(2)**
Share of other comprehensive income of associates	**(13)**	**–**	**(13)**
Reclassification of accumulated loss to income related to the sale of an associate	**(3)**	**–**	**(3)**
	(16)	**–**	**(16)**
Items that will not be subsequently reclassified to income			
Remeasurements on employee benefit plans:	**(52)**	**13**	**(39)**
	(68)	**13**	**(55)**

Components of other comprehensive income and the related income tax effects for 2018 are as follows:

	Amount $	Income taxes $	Net $
Items that may subsequently be reclassified to income			
Change in unrealized fair value of derivatives designated as cash flow hedges	7	(2)	5
Adjustment for hedged items recognized in the period	4	(1)	3
Share of other comprehensive income of associates	10	–	10
	21	(3)	18
Items that will not be subsequently reclassified to income			
Remeasurements on employee benefit plans	101	(27)	74
	122	(30)	92

Accumulated other comprehensive loss is comprised of the following:

	2019 $	2018 $
Items that may subsequently be reclassified to income		
Change in unrealized fair value of derivatives designated as cash flow hedges	**1**	–
Share of other comprehensive income of associates	**18**	18
Reclassification of accumulated loss to income related to the sale of an associate	**(18)**	–
Items that will not be subsequently reclassified to income		
Remeasurements on employee benefit plans:	**(95)**	(57)
	(94)	(39)

22. REVENUE

Contract assets and liabilities

The table below provides a reconciliation of the significant changes to the current and long-term portion of contract assets and liabilities balances during the year.

	Contract Assets	Contract Liabilities
September 1, 2017	59	235
Increase in contract assets from revenue recognized during the period	198	–
Contract assets transferred to trade receivables	(118)	–
Contract terminations transferred to trade receivables	(4)	–
Revenue recognized included in contract liabilities at the beginning of the year	–	(225)
Increase in contract liabilities during the period	–	234
August 31, 2018	135	244
Increase in contract assets from revenue recognized during the period	**179**	**–**
Contract assets transferred to trade receivables	**(145)**	**–**
Contract terminations transferred to trade receivables	**(11)**	**–**
Revenue recognized included in contract liabilities at the beginning of the year	**–**	**(236)**
Increase in contract liabilities during the period	**–**	**230**
August 31, 2019	**158**	**238**

	Contract Assets	Contract Liabilities
Current	103	226
Long-term	32	18
Balance as at September 1, 2018	135	244
Current	**106**	**223**
Long-term	**52**	**15**
Balance as at August 31, 2019	**158**	**238**

Deferred commission cost assets

The table below provides a summary of the changes in the deferred commission cost assets recognized from the incremental costs incurred to obtain contracts with customers during the year ended August 31, 2019 and 2018. We believe these amounts to be recoverable through the revenue earned from the related contracts. The deferred commission cost assets are presented within other current assets (when they will be amortized into net income within twelve months of the date of the financial statements) or other long-term assets.

September 1, 2017	57
Additions to deferred commission cost assets	70
Amortization recognized on deferred commission cost assets	(52)
August 31, 2018	75
Additions to deferred commission cost assets	**85**
Amortization recognized on deferred commission cost assets	**(66)**
August 31, 2019	**94**
Current	50
Long-term	25
Balance as at September 1, 2018	75
Current	**59**
Long-term	**35**
Balance as at August 31, 2019	**94**

Commission costs are amortized over a period ranging from 24 to 36 months.

Disaggregation of revenue

	2019 $	2018 (restated, note 2) $
Services		
Wireline – Consumer	**3,707**	3,725
Wireline – Business	**593**	567
Wireless	**694**	564
	4,994	4,856
Equipment and other		
Wireless	**353**	337
	353	337
Intersegment eliminations	**(7)**	(4)
Total revenue	**5,340**	5,189

Remaining performance obligations

The following table includes revenues expected to be recognized in the future related to performance obligations that are unsatisfied (or partially unsatisfied) as at August 31, 2019:

	Within 1 year $	Within 2 years $	Total $
Wireline	2,747	1,211	3,958
Wireless	362	145	507
Total	**3,109**	**1,356**	**4,465**

When estimating minimum transaction prices allocated to the remaining unfilled, or partially unfulfilled, performance obligations, Shaw applied the practical expedient to not disclose information about remaining performance obligations that have original expected duration of one year or less and for those contracts where we bill the same value as that which is transferred to the customer.

23. OPERATING, GENERAL AND ADMINISTRATIVE EXPENSES AND RESTRUCTURING COSTS

	2019 $	2018 (restated, note 2) $
Employee salaries and benefits [1]	**663**	1,158
Purchases of goods and services	**2,514**	2,420
	3,177	3,578

[1] For the year ended August 31, 2019, employee salaries and benefits include a recovery of $9 in employee-related restructuring costs compared to $423 in restructuring costs for the year ended August 31, 2018.

24. OTHER GAINS (LOSSES)

	2019 $	2018 (restated, note 2) $
Gain on disposal of fixed assets and intangibles	**32**	15
Gain on disposal of non-core business	**6**	–
Gain on disposal of investment	**15**	–
Other [1]	**(3)**	17
	50	32

[1] Other gains (losses) generally includes realized and unrealized foreign exchange gains and losses on US dollar denominated current assets and liabilities, and the Company's share of the operations of Burrard Landing Lot 2 Holdings Partnership.

25. INCOME TAXES

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes. The Company's net deferred tax liability consists of the following:

	2019 $	2018 (restated, note 2) $
Deferred tax assets	**4**	4
Deferred tax liabilities	**(1,875)**	(1,884)
Net deferred tax liability	**(1,871)**	(1,880)

Significant changes recognized to deferred income tax assets (liabilities) are as follows:

	Property, plant and equipment and software assets $	Broadcast rights, licences, customer relationships, trademark and brands $	Partnership income $	Non-capital loss carry-forwards $	Accrued charges $	Total $
Balance at September 1, 2017 (restated, note 2)	(265)	(1,680)	39	51	(4)	(1,859)
Recognized in statement of income	(22)	(53)	(10)	17	77	9
Recognized in other comprehensive income	–	–	–	–	(30)	(30)
Balance at August 31, 2018	(287)	(1,733)	29	68	43	(1,880)
Recognized in statement of income	**(12)**	**107**	**(61)**	**25**	**(63)**	**(4)**
Recognized in other comprehensive income	**–**	**–**	**–**	**–**	**13**	**13**
Balance at August 31, 2019	**(299)**	**(1,626)**	**(32)**	**93**	**(7)**	**(1,871)**

The Company has capital loss carryforwards of approximately $44 for which no deferred income tax asset has been recognized in the accounts. These capital losses can be carried forward indefinitely.

The Company has non-capital loss carryforwards of approximately $446 for which no deferred income tax asset has been recognized in the accounts. The balance expires in varying annual amounts from 2034 to 2036.

The Company has taxable temporary differences associated with its investment in its subsidiaries. No deferred tax liabilities have been provided with respect to such temporary differences as the Company is able to control the timing of the reversal and such reversal is not probable in the foreseeable future.

The income tax expense differs from the amount computed by applying the statutory rates to income before income taxes for the following reasons:

	2019	2018 (restated, note 2)
Current statutory income tax rate	**26.8%**	26.9%
Income tax expense at current statutory rates	**228**	45
Net increase (decrease) in taxes resulting from:		
Effect of tax rate changes	**(102)**	28
Equity (income) loss of an associate not recognized	**(12)**	54
Other	**4**	1
Income tax expense	**118**	128

The statutory income tax rate for the Company decreased from 26.9% in 2018 to 26.8% in 2019 as a result of provincial tax rate changes.

The components of income tax expense are as follows:

	2019 $	2018 (restated, note 2) $
Current income tax expense	**114**	137
Deferred tax expense (recovery) related to temporary differences	**106**	(37)
Deferred tax expense (recovery) from tax rate changes	**(102)**	28
Income tax expense	**118**	128

26. BUSINESS SEGMENT INFORMATION

The Company's chief operating decision makers are the Chief Executive Officer, President and Executive Vice President, Chief Financial & Corporate Development Officer and they review the operating performance of the Company by segments, which are comprised of Wireline and Wireless. As a result of the restructuring undertaken in 2017, the Company reorganized and integrated its management structure, previously separated in the Consumer and Business Network Services segments, into a combined Wireline segment, as costs were becoming increasingly inseparable between these segments. There was no change to the Wireless operating segment. The accounting policies of the segments are the same as those described in the summary of significant accounting policies. The chief operating decision makers utilize operating income before restructuring costs and amortization for each segment as a key measure in making operating decisions and assessing performance.

The Wireline segment provides Cable telecommunications services including Video, Internet, Wi-Fi, Phone, Satellite Video and data networking through a national fibre-optic backbone network to Canadian consumers, North American businesses and public-sector entities. The Wireless segment provides wireless services for voice and data communications serving customers in Ontario, British Columbia and Alberta.

Both of the Company's reportable segments are substantially located in Canada. Information on operations by segment is as follows:

	2019 $	2018 (restated, note 2) $
Revenue		
Wireline	**4,300**	4,292
Wireless	**1,047**	901
	5,347	5,193
Intersegment eliminations	**(7)**	(4)
	5,340	5,189
Operating income before restructuring costs and amortization		
Wireline	**1,955**	1,915
Wireless	**199**	142
	2,154	2,057
Restructuring costs [(1)]	**9**	(446)
Amortization [(1)]	**(1,038)**	(1,025)
Operating income	**1,125**	586
Interest [(1)]		
Operating	**255**	247
Other/non-operating	**2**	1
	257	248
Current taxes [(1)]		
Operating	**114**	166
Other/non-operating	**–**	(29)
	114	137

(1) The Company does not report restructuring costs, amortization, interest or cash taxes on a segmented basis.

Capital expenditures

	2019 $	2018 (restated, note 2) $

Additions to equipment costs (net)	**42**	49
Additions to other intangibles	**147**	131
Total of capital expenditures and equipment costs (net) per Consolidated Statements of Cash Flows	**1,298**	1,301
Increase (decrease) in working capital and other liabilities related to capital expenditures	**(28)**	65
Decrease in customer equipment financing receivables	**1**	4
Less: Proceeds on disposal of property, plant and equipment	**(59)**	(9)
Total capital expenditures and equipment costs (net) reported by segments	**1,212**	1,361

27. COMMITMENTS AND CONTINGENCIES

Commitments

(i) The Company has various long-term operating commitments as follows:

	$
2020	681
2021 – 2024	859
Thereafter	362
	1,902

Comprised of:	$
Lease of transmission facilities and premises	474
Lease and maintenance of transponders	445
Purchase obligations	983
	1,902

(ii) The Company owns and leases Ku-band and C-band transponders on the Anik F1R, Anik F2 and Anik G1 satellites. As part of the Ku-band transponder agreements with Telesat Canada, the Company is committed to paying annual transponder maintenance and licence fees for each transponder from the time the satellite becomes operational for a period of 15 years.

Included in operating, general and administrative expenses are transponder maintenance expenses of $84 (2018 – $84) and rental expenses of $164 (2018 – $153).

(iii) At August 31, 2019, the Company had capital expenditure commitments in the normal course of business of $181 in respect of fiscal 2020 to 2025.

Contingencies

The Company and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business. Although resolution of such matters cannot be predicted with certainty, management does not consider the Company's exposure to litigation to be material to these consolidated financial statements.

Guarantees

In the normal course of business the Company enters into indemnification agreements and has issued irrevocable standby letters of credit and commercial surety bonds with and to third parties.

Indemnities

Many agreements related to acquisitions and dispositions of business assets include indemnification provisions where the Company may be required to make payment to a vendor or purchaser for breach of contractual terms of the agreement with respect to matters such as litigation, income taxes payable or refundable or other ongoing disputes. The indemnification period usually covers a period of two to four years. Also, in the normal course of business, the Company has provided indemnifications in various commercial agreements, customary for the telecommunications industry, which may require payment by the Company for breach of contractual terms of the agreement. Counterparties to these agreements provide the Company with comparable indemnifications. The indemnification period generally covers, at maximum, the period of the applicable agreement plus the applicable limitations period under law.

The maximum potential amount of future payments that the Company would be required to make under these indemnification agreements is not reasonably quantifiable as certain indemnifications are not subject to limitation. However, the Company enters into indemnification agreements only when an assessment of the business circumstances would indicate that the risk of loss is remote. At August 31, 2019, management believes it is remote that the indemnification provisions would require any material cash payment.

The Company indemnifies its directors and officers against any and all claims or losses reasonably incurred in the performance of their service to the Company to the extent permitted by law.

Irrevocable standby letters of credit and commercial surety bonds

The Company and certain of its subsidiaries have granted irrevocable standby letters of credit and commercial surety bonds, issued by high rated financial institutions, to third parties to indemnify them in the event the Company does not perform its contractual obligations. As of August 31, 2019, the guarantee instruments amounted to $6. The Company has not recorded any additional liability with respect to these guarantees, as the Company does not expect to make any payments in excess of what is recorded on the Company's consolidated financial statements. The guarantee instruments mature at various dates during fiscal 2020 to fiscal 2022.

28. EMPLOYEE BENEFIT PLANS

Defined contribution pension plans

The Company has defined contribution pension plans for its non-union employees and, for the majority of these employees, contributes 5% of eligible earnings to the maximum amount deductible under the Income Tax Act. Effective January 1, 2019, the Company introduced a voluntary pension contribution matching program whereby, in addition to the 5% of Company contributions, employees who make voluntary contributions will receive a 25% match on contributions up to 5% of their eligible earnings. For union employees, the Company contributes amounts up to 9.8% of earnings to the individuals' registered retirement savings plans. Total pension costs in respect of these plans were $31 (2018 – $32) of which $23 (2018 – $21) was expensed and the remainder capitalized.

Defined benefit pension plans

The Company has two non-registered retirement plans for designated executives and senior executives. The following is a summary of the accrued benefit liabilities recognized in the statement of financial position.

	2019	2018
Non-registered plans		
Accrued benefit obligation	**505**	446
Fair value of plan assets	**436**	436
Accrued benefit liabilities and deficit	**69**	10

The plans expose the Company to a number of risks, of which the most significant are as follows:

(i) Volatility in market conditions: The accrued benefit obligations are calculated using discount rates with reference to bond yields closely matching the term of the estimated cash flows while many of the assets are invested in other types of assets. If plan assets underperform these yields, this will result in a deficiency. Changing market conditions in conjunction with discount rate volatility will result in volatility of the accrued benefit liabilities. To mitigate some of the investment risk, the Company has established long-term funding targets where the time horizon and risk tolerance are specified.

(ii) Selection of accounting assumptions: The calculation of the accrued benefit obligations involves projecting future cash flows of the plans over a long time frame. This means that assumptions used can have a material impact on the statements of financial position and comprehensive income because in practice, future experience of the plans may not be in line with the selected assumptions.

Non-registered pension plans

The Company provides a supplemental executive retirement plan ("SERP") for certain of its senior executives. Benefits under this plan are based on the employees' length of service and their highest three-year average rate of eligible pensionable earnings during their years of service. In 2012, the Company closed the plan to new participants and amended the plan to freeze base salary levels at August 31, 2012 for purposes of determining eligible pensionable earnings. Employees are not required to contribute to this plan.

The Company provides an executive retirement plan ("ERP") for certain executives not covered by the SERP. Benefits under this plan are comprised of defined contribution and defined benefit components and are based on the employees' length of service as well as final average earnings during their years of service. Employees are not required to contribute to this plan.

The table below shows the change in benefit obligation and funding status and the fair value of plan assets.

	SERP $	ERP $	2019 Total $	SERP $	ERP $	2018 Total $
Accrued benefit obligation, beginning of year	**429**	**17**	**446**	518	14	532
Current service cost	**5**	**6**	**11**	6	8	14
Interest cost	**16**	**1**	**17**	17	1	18
Payment of benefits to employees	**(17)**	**(1)**	**(18)**	(18)	(7)	(25)
Transfer from DC plan	**–**	**1**	**1**	–	3	3
Remeasurements:						
Effect of changes in demographic assumptions	**(4)**	**–**	**(4)**	(5)	–	(5)
Effect of changes in financial assumptions	**53**	**3**	**56**	–	–	–
Effect of experience adjustments [1]	**(4)**	–	**(4)**	(89)	(2)	(91)
Accrued benefit obligation, end of year	**478**	**27**	**505**	429	17	446
Fair value of plan assets, beginning of year	**421**	**15**	**436**	420	13	433
Employer contributions	**–**	**5**	**5**	–	5	5
Interest income	**15**	**1**	**16**	15	1	16
Transfer from DC plan	**–**	**1**	**1**	–	3	3
Payment of benefits	**(17)**	**(2)**	**(19)**	(18)	(7)	(25)
Return on plan assets, excluding interest income	**(2)**	**(1)**	**(3)**	4	–	4
Fair value of plan assets, end of year	**417**	**19**	**436**	421	15	436
Accrued benefit liability and plan deficit, end of year	**61**	**8**	**69**	8	2	10

[1] In the second quarter of fiscal 2018, a remeasurement related to the effect of experience adjustments of $85 was recognized to reflect the decrease in the accrued benefit obligation due to demographic experience in the quarter.

The weighted average duration of the defined benefit obligation of the SERP and ERP at August 31, 2019 is 17.2 years and 20.0 years, respectively.

The underlying plan assets of the SERP and ERP at August 31, 2019 are invested in the following:

	SERP	ERP
Cash and cash equivalents	**206**	**14**
Fixed income securities	**72**	**2**
Equity securities – Canadian	**43**	**1**
Equity securities – Foreign	**96**	**2**
	417	**19**

All fixed income and equity securities have a quoted price in active market.

The tables below show the significant weighted-average assumptions used to measure the pension obligation and cost for the plans.

Accrued benefit obligation	2019 SERP %	2019 ERP %	2018 SERP %	2018 ERP %
Discount rate	**2.90**	**2.90**	3.70	3.70
Rate of compensation increase	**3.00**[1]	**3.00**	3.00[1]	3.00

Benefit cost for the year	2019 SERP %	2019 ERP %	2018 SERP %	2018 ERP %
Discount rate	**3.70**	**3.70**	3.70	3.70
Rate of compensation increase	**3.00**[(1)]	**3.00**	3.00[(1)]	3.00

(1) Applies only to incentive compensation component of eligible pensionable earnings.

The calculation of the accrued benefit obligation is sensitive to the assumptions above. A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2019 by $88. A one percentage point increase in the rate of compensation increase would have increased the accrued benefit obligation by $14.

When calculating the sensitivity of the defined benefit obligation to significant actuarial assumptions, the present value of the defined benefit obligation has been calculated using the projected benefit method which is the same method that is applied in calculating the defined benefit liability recognized in the statement of financial position. The sensitivity analysis presented above may not be representative of the actual change in the accrued benefit obligation as it is unlikely that the change in assumptions would occur in isolation of one another as some assumptions may be correlated.

The net pension benefit plan expense, which is included in employee salaries and benefits expense, is comprised of the following components:

	SERP	ERP	2019 Total	SERP	ERP	2018 Total
Current service cost	**5**	**6**	**11**	6	8	14
Interest cost	**16**	**1**	**17**	17	1	18
Interest income	**(15)**	**(1)**	**(16)**	(15)	(1)	(16)
Pension expense	**6**	**6**	**12**	8	8	16

Other benefit plans

The Company has post-employment benefits plans that provide post-retirement health and life insurance coverage to certain executive level retirees and are funded on a pay-as-you-go basis. The table below shows the change in the accrued post-retirement obligation which is recognized in the statement of financial position.

	2019	2018
Accrued benefit obligation and plan deficit, beginning of year	**3**	4
Current service cost	**–**	–
Interest cost	**–**	–
Payment of benefits to employees	**–**	–
Remeasurements:		
Effect of changes in demographic assumptions	**1**	(1)
Accrued benefit obligation and plan deficit, end of year	**4**	3

The weighted average duration of the benefit obligation at August 31, 2019 is 17.2 years.

The post-retirement benefit plan expense, which is included in employee salaries and benefits expense, is $nil (2018 – $nil) and is comprised of current service and interest cost.

The discount rates used to measure the post-retirement benefit cost for the year and the accrued benefit obligation as at August 31, 2019 were 3.70% and 2.90%, respectively (2018 – 3.80% and 3.70%, respectively). A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2019 by $1.

Employer contributions

The Company's estimated contributions to the defined benefit plans in fiscal 2020 is $6.

29. RELATED PARTY TRANSACTIONS

Controlling shareholder

The majority of the Class A Shares are held by the Shaw Family Living Trust ("SFLT"). The sole trustee of SFLT is a private company owned by JR Shaw and having a board comprised of seven directors, including JR Shaw as chair, Bradley S. Shaw, four other members of his family, and one independent director. JR Shaw and members of his family are represented as Directors, Senior Executive and Corporate Officers of the Company.

Significant investments in subsidiaries

The following are the significant subsidiaries of the Company, all of which are incorporated or partnerships in Canada.

	Ownership Interest	
	August 31, 2019	**August 31, 2018**
Shaw Cablesystems Limited	**100%**	100%
Shaw Cablesystems G.P.	**100%**	100%
Shaw Cablesystems (VCI) Ltd.	**100%**	100%
Shaw Envision Inc.	**100%**	100%
Shaw Telecom Inc.	**100%**	100%
Shaw Telecom G.P.	**100%**	100%
Shaw Satellite Services Inc.	**100%**	100%
Star Choice Television Network Incorporated	**100%**	100%
Shaw Satellite G.P.	**100%**	100%
Freedom Mobile Inc.	**100%**	100%

Key management personnel and Board of Directors

Key management personnel consist of the most senior executive team and along with the Board of Directors, and have the authority and responsibility for planning, directing and controlling the activities of the Company.

Compensation

The compensation expense of key management personnel and Board of Directors is as follows:

	2019 $	**2018 $**
Short-term employee benefits	**29**	25
Post-employment pension benefits	**9**	8
Termination benefits	**–**	7
Share-based compensation	**2**	4
	40	44

Transactions

The Company paid $2 (2018 – $2) for collection, installation and maintenance services to a company controlled by a Director of the Company.

During the year, the Company paid $12 (2018 – $12) for remote control units to a supplier where Directors of the Company hold positions on the supplier's board of directors.

During the year, network fees of $27 (2018 – $26) were paid to a programmer where a Director of the Company holds a position on the programmer's board of directors.

At August 31, 2019, the Company had $4 owing in respect of these transactions (2018 – $4).

On May 15, 2019, the Company completed the sale of a non-core parcel of land and the building located thereon (the "Property"), to an affiliate of Shaw Family Living Trust ("SFLT") (the "Purchaser"), for total net proceeds of approximately $45. The Property had a net book value of approximately $4 resulting in a gain on disposition of approximately $41. The purchase price was determined based on appraisals performed by two independent valuators. As part of the transaction, the Purchaser agreed to lease back the Property to the Company for a term of three years at market rental rates (which was also based on appraisals from the two independent valuators) allowing the Company to monetize a non-core asset. The transaction was approved by the independent Board members of the Company.

Other related parties

The Company has entered into certain transactions and agreements in the normal course of business with certain of its related parties. These transactions are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties.

Corus

The Company and Corus are subject to common voting control. During the year, network fees of $124 (2018 – $133), advertising fees of $2 (2018 – $4), programming fees of $16 (2018 – $16), and administrative fees of $4 (2018 – $2) were paid to various Corus subsidiaries and entities subject to significant influence. In addition, the Company provided administrative, advertising and other services for $5 (2018 – $5), uplink of television signals for $8 (2018 – $8), and Internet services and lease of circuits for $1 (2018 – $1). At August 31, 2019, the Company had a net of $11 owing in respect of these transactions (2018 – $13).

The Company provided Corus with advertising spots in return for radio and television advertising. No monetary consideration was exchanged for these transactions and no amounts were recorded in the accounts.

Burrard Landing Lot 2 Holdings Partnership

During the year, the Company paid $10 (2018 – $12) to the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, BC, is the Company's headquarters for its lower mainland operations. At August 31, 2019, the Company had a remaining commitment of $55 in respect of the office space lease which is included in the amounts disclosed in note 27.

30. FINANCIAL INSTRUMENTS

Fair values

The fair value of financial instruments has been determined as follows:

(i) Current assets and current liabilities

The fair value of financial instruments included in current assets and current liabilities approximates their carrying value due to their short-term nature.

(ii) Investments and other assets and Other long-term assets

The fair value of publicly traded investments is determined by quoted market prices. Investments in private entities which do not have quoted market prices in an active market and whose fair value cannot be readily measured are carried at approximate fair value. No published market exists for such investments. These equity investments have been made as they are considered to have the potential to provide future benefit to the Company and accordingly, the Company has no current intention to dispose of these investments in the near term. The fair value of long-term receivables approximates their carrying value as they are recorded at the net present values of their future cash flows, using an appropriate discount rate.

(iii) Long-term debt

The carrying value of long-term debt is at amortized cost based on the initial fair value as determined at the time of issuance. The fair value of publicly traded notes is based upon current trading values. The fair value of finance lease obligations is determined by discounting future cash flows using a rate for loans with similar terms, conditions and maturity dates. The carrying value of bank credit facilities approximates fair value as the debt bears interest at rates that fluctuate with market rates. Other notes and debentures are valued based upon current trading values for similar instruments.

(iv) Derivative financial instruments

The fair value of US currency forward purchase contracts is determined using an estimated credit-adjusted mark-to-market valuation using observable forward exchange rates at the end of reporting periods and contract forward rates.

The carrying values and estimated fair values of an investment in a publicly traded company and long-term debt are as follows:

	August 31, 2019		August 31, 2018	
	Carrying value	Estimated fair value	Carrying value	Estimated fair value
Assets				
Investment in publicly traded company [(1)]	–	–	615	298
Liabilities				
Long-term debt (including current portion) [(2)]	**5,308**	**6,014**	4,311	4,788

(1) Level 1 fair value – determined by quoted market prices.
(2) Level 2 fair value – determined by valuation techniques using inputs based on observable market data, either directly or indirectly, other than quoted prices.

Risk management

The Company is exposed to various market risks including currency risk and interest rate risk, as well as credit risk and liquidity risk associated with financial assets and liabilities. The Company has designed and implemented various risk management strategies, discussed further below, to ensure the exposure to these risks is consistent with its risk tolerance and business objectives.

Market risk

Market risk is the risk that the fair value or cash flows of a financial instrument will fluctuate as a result of changes in market prices, including foreign exchange and interest rates, the Company's share price and market price of publicly traded investments.

Currency risk

Certain of the Company's capital expenditures and equipment costs are incurred in US dollars, while its revenue is primarily denominated in Canadian dollars. Decreases in the value of the Canadian dollar relative to the US dollar could have an adverse effect on the Company's cash flows. To mitigate some of the uncertainty in respect to capital expenditures and equipment costs, the Company regularly enters into forward contracts in respect of US dollar commitments. With respect to 2019, the Company entered into forward contracts to purchase US $96 over a period of 12 months commencing in September 2018 at an average exchange rate of 1.2915 Cdn. At August 31, 2019 the Company had forward contracts to purchase US $72 over a period of 12 months commencing September 2019 at an average exchange rate of 1.3115 Cdn in respect of US dollar commitments.

Interest rate risk

Due to the capital-intensive nature of its operations, the Company utilizes long-term financing extensively in its capital structure. The primary components of this structure are a banking facility and various Canadian senior notes with varying maturities issued in the public markets as more fully described in Note 14.

Interest on the Company's unsecured banking facility and AR securitization program are based on floating rates, while the senior notes are fixed-rate obligations. When drawn, the Company utilizes its credit facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. As at August 31, 2019, 100% of the Company's consolidated long-term debt was fixed with respect to interest rates.

Sensitivity analysis

The sensitivity to currency risk has been determined based on a hypothetical change in Canadian dollar to US dollar foreign exchange rates of 10%. Foreign exchange forward contracts would be impacted by this hypothetical change resulting in a change to other comprehensive income by $7 net of tax (2018 – $9). A portion of the Company's accounts receivables and accounts payable and accrued liabilities is denominated in US dollars; however, due to their short-term nature, there is no significant market risk arising from fluctuations in foreign exchange rates.

Interest on the Company's banking facility is based on floating rates. As at August 31, 2019 there is no significant market risk arising from interest rate fluctuations within a reasonably contemplated range from their actual amounts.

At August 31, 2019, a one dollar change in the Company's Class B Non-Voting Shares would have had an impact on net income of $1 (August 31, 2018 – $1) in respect of the Company's DSU, RSU, and PSU plans.

Credit risk

Accounts receivable in respect of the Consumer, Business and Wireless divisions are not subject to any significant concentrations of credit risk due to the Company's large and diverse customer base. As at August 31, 2019, the Company had accounts receivable of $287 (August 31, 2018 – $255), net of the allowance for doubtful accounts of $98 (August 31, 2018 – $57). The Company maintains an allowance for doubtful accounts for the estimated losses resulting from the inability of its customers to make required payments. In determining the allowance, the Company considers factors such as the number of days the customer account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. As at August 31, 2019, $158 (August 31, 2018 – $123) of accounts receivable is considered to be past due, defined as amounts outstanding past normal credit terms and conditions. Uncollectible accounts receivable are charged against the allowance account based on the age of the account and payment history. The Company believes that its allowance for doubtful accounts is sufficient to reflect the related credit risk.

The Company mitigates credit risk of subscriber receivables through advance billing and procedures to downgrade or suspend services on accounts that have exceeded agreed credit terms and routinely assesses the financial strength of its business customers through periodic review of payment practices.

Credit risks associated with US currency contracts arise from the inability of counterparties to meet the terms of the contracts. In the event of non-performance by the counterparties, the Company's accounting loss would be limited to the net amount that it would be entitled to receive under the contracts and agreements. In order to minimize the risk of counterparty default under its swap agreements, the Company assesses the creditworthiness of its swap counterparties.

Liquidity risk

Liquidity risk is the risk that the Company will experience difficulty in meeting obligations associated with financial liabilities. The Company manages its liquidity risk by monitoring cash flow generated from operations, available borrowing capacity, and by managing the maturity profiles of its long-term debt.

The Company's undiscounted contractual maturities as at August 31, 2019 are as follows:

	Short-term borrowings	Accounts payable and accrued liabilities[(1)]	Other Long-Term Liabilities	Long-term debt repayable at maturity	Interest payments
Within one year	40	1,015	–	1,251	217
1 to 3 years	–	–	1	802	360
3 to 5 years	–	–	1	1,002	320
Over 5 years	–	–	1	2,295	1,608
	40	1,015	3	5,350	2,505

(1) Includes accrued interest and dividends of $244.

31. CONSOLIDATED STATEMENTS OF CASH FLOWS

(i) Funds flow from continuing operations

	2019 $	2018 (restated, note 2) $
Net income from continuing operations	**733**	39
Adjustments to reconcile net income to funds flow from operations:		
Amortization	**1,041**	1,028
Deferred income tax expense (recovery)	**4**	(9)
Share-based compensation	**3**	3
Defined benefit pension plans	**7**	11
Equity (income)/ loss of an associate or joint venture	**(46)**	200
Loss on disposal of an associate or joint venture	**109**	–
Gain on disposal of investments	**(15)**	–
Net change in contract asset balances	**(23)**	(76)
Gain on disposal of fixed assets and intangibles	**(32)**	(15)
Other	**(4)**	(4)
Funds flow from continuing operations	**1,777**	1,177

(ii) Interest and income taxes paid and interest received and classified as operating activities are as follows:

	2019 $	2018 $
Interest paid	**230**	239
Income taxes paid (net of refunds)	**166**	155
Interest received	**29**	4

(iii) Non-cash transactions

The Consolidated Statements of Cash Flows exclude the following non-cash transactions:

	2019 $	2018 $
Issuance of Class B Non-Voting Shares:		
Dividend reinvestment plan (note 20)	**217**	211

32. CAPITAL STRUCTURE MANAGEMENT

The Company's objectives when managing capital are:

(i) to maintain a capital structure which optimizes the cost of capital, provides flexibility and diversity of funding sources and timing of debt maturities, and adequate anticipated liquidity for organic growth and strategic acquisitions;

(ii) to maintain compliance with debt covenants; and

(iii) to manage a strong and efficient capital base to maintain investor, creditor and market confidence.

The Company defines capital as comprising all components of shareholders' equity (other than non-controlling interests and amounts in accumulated other comprehensive income/loss), long-term debt (including the current portion thereof), short-term borrowings and bank indebtedness less cash and cash equivalents.

	2019 $	2018 (restated, note 2) $
Cash	**(1,446)**	(384)
Short-term borrowings	**40**	40
Long-term debt repayable at maturity	**5,350**	4,350
Share capital	**4,605**	4,349
Contributed surplus	**26**	27
Retained earnings	**1,745**	1,632
	10,320	10,014

The Company manages its capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of underlying assets. The Company may also from time to time change or adjust its objectives when managing capital in light of the Company's business circumstances, strategic opportunities, or the relative importance of competing objectives as determined by the Company. There is no assurance that the Company will be able to meet or maintain its currently stated objectives.

The Company's credit facilities are subject to covenants which include maintaining minimum or maximum financial ratios, including total debt to operating cash flow/adjusted earnings before interest, taxes, depreciation and amortization, and operating cash flow to fixed charges. At August 31, 2019, the Company is in compliance with these covenants and based on current business plans and economic conditions, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants.

The Company's overall capital structure management strategy remains unchanged from the prior year.

33. SUBSEQUENT EVENTS

On October 1, 2019, the Company repaid $1,250 of 5.65% senior notes at their maturity.

Subsequent to year-end, on October 24, 2019, in accordance with the terms of our Dividend Reinvestment Plan (the “DRIP”), the Company announced that in lieu of issuing shares from treasury, it will satisfy its share delivery obligations under the DRIP by purchasing Class B Shares on the open market. In addition, the Company will reduce its discount from 2% to 0% for the Class B Shares delivered under the DRIP. These changes to the DRIP will apply to the dividends payable on November 28, 2019 to shareholders of record on November 15, 2019.

Subsequent to year-end, on October 29, 2019, the Company announced that it had received approval from the Toronto Stock Exchange (“TSX”) to establish a normal course issuer bid (“NCIB”) program. The program commenced on November 1, 2019 and will remain in effect until October 31, 2020. As approved by the TSX, the Company has the ability to purchase for cancellation up to 24,758,127 Class B Shares representing 5% of all of the issued and outstanding Class B Shares as at October 18, 2019. As of November 15, 2019, the Company has purchased 483,428 Class B Non-Voting Shares for cancellation for a total cost of approximately $13 million under the NCIB.

On November 21, 2019, the Company extended the term of its $1.5 billion bank credit facility from December 2023 to December 2024. This credit facility is used for working capital and general corporate purposes.

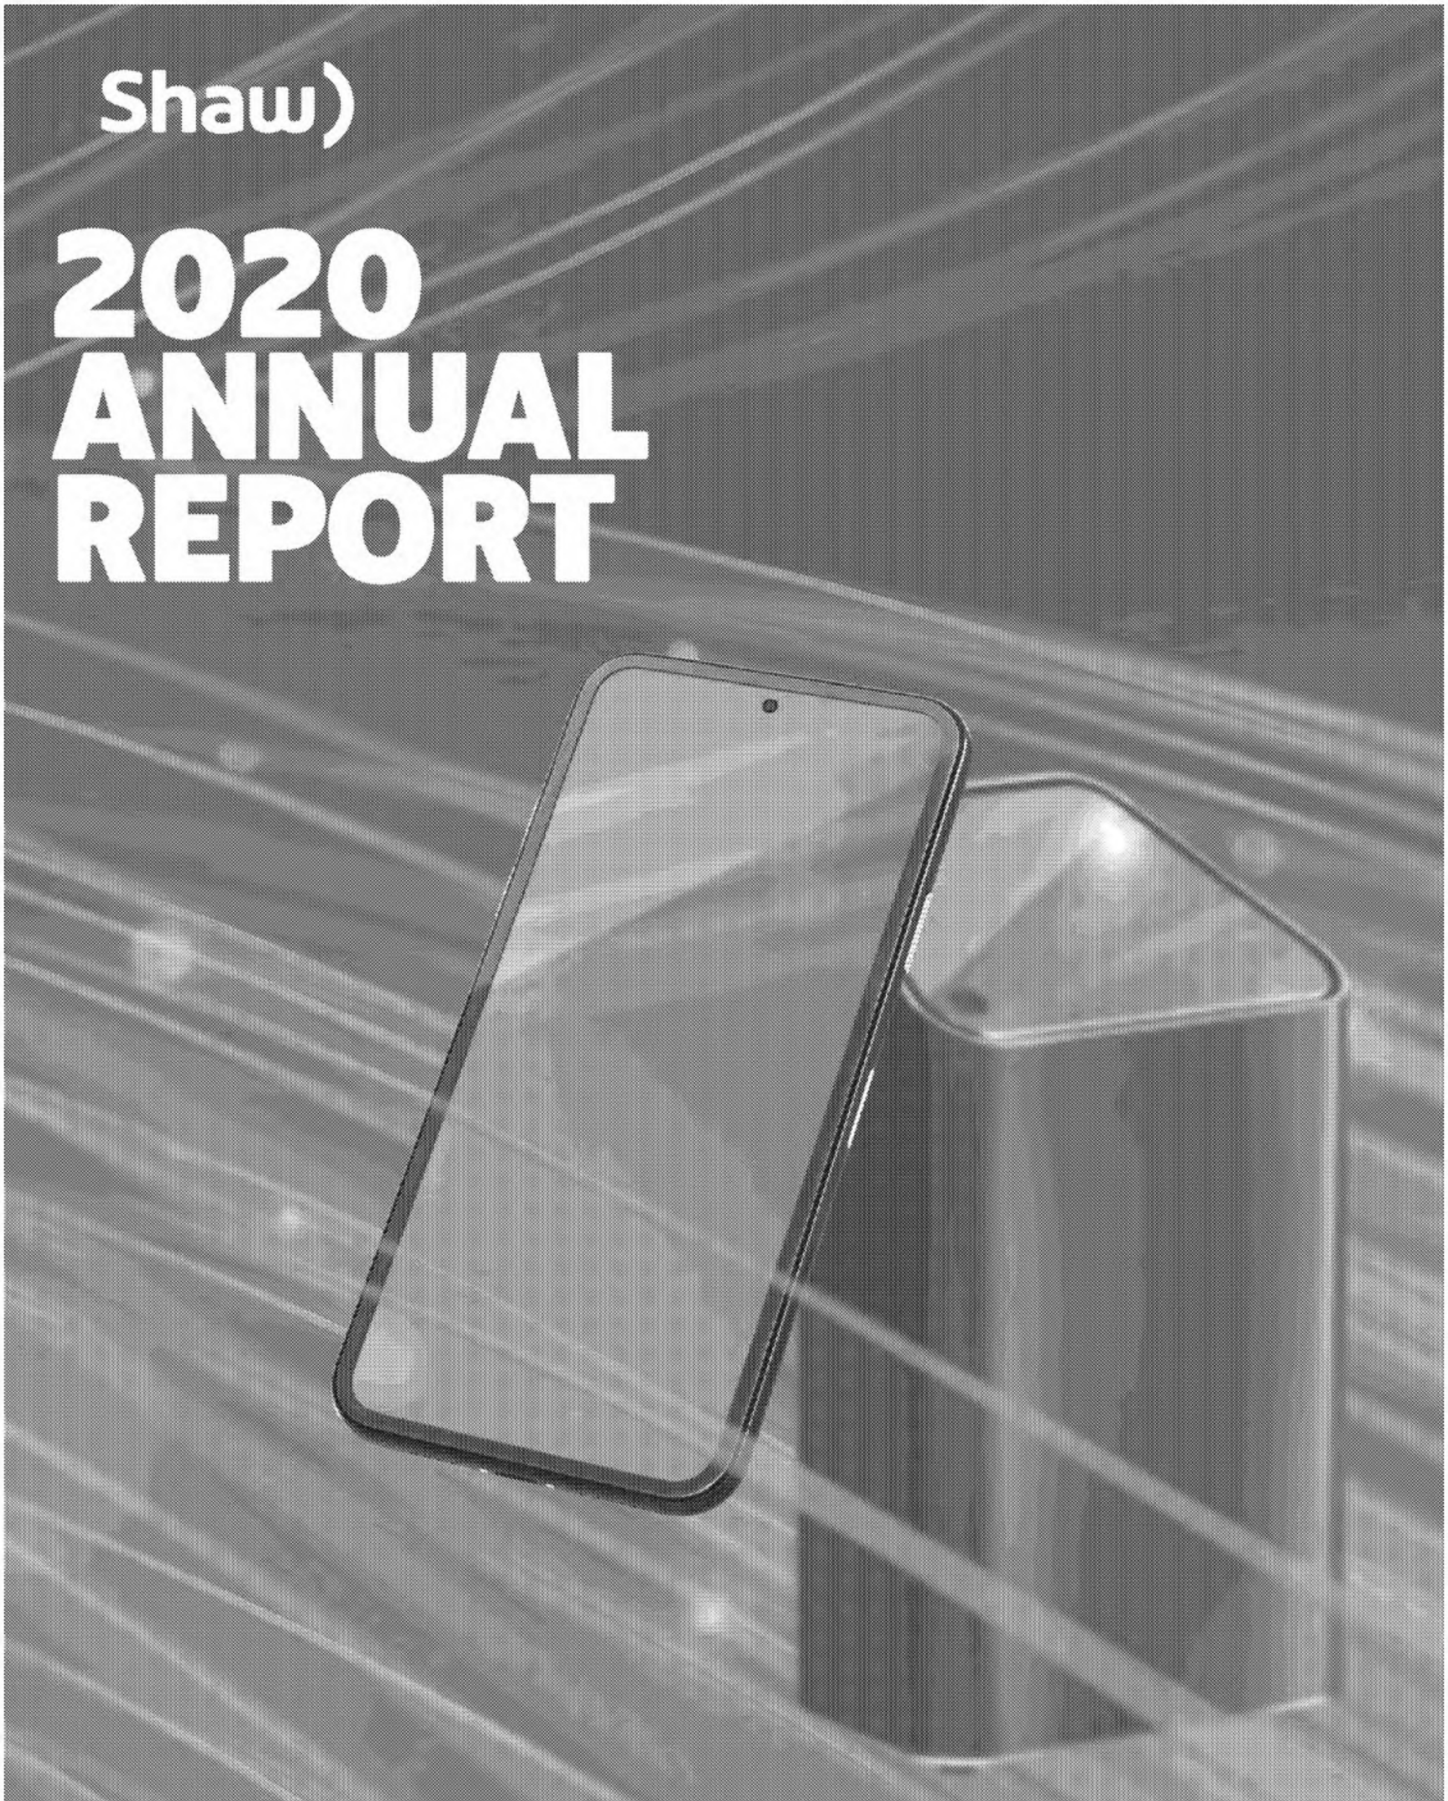
This is Exhibit 30 to the affidavit of Kenneth Mathieu, affirmed remotely by Jonathan Bitran stated as being located in the city of Toronto in the province of Ontario, on the 20th day of October, 2022, in accordance with O.Reg431/20, Administering Oath or Declaration Remotely.



Shaw)
2020
ANNUAL
REPORT

Dear Fellow Shareholders:

Fiscal 2020 marked an unprecedented year for our Company, our country and for people around the world with the emergence of the COVID-19 pandemic. While it caused significant uncertainty and brought about rapid change in virtually every aspect of our lives, it also highlighted the resiliency and financial strength of our Company as well as the critical nature of our highly capable facilities-based infrastructure, which exists today because of our long history of significant investments in our network for the benefit of Canadians and our economy.

As the pandemic intensified throughout 2020, our priority was the safety of our employees and customers and supporting the communities in which we serve. We quickly transitioned the majority of our employees to work from home, where they remain productive, engaged and focused on providing a continuous high-quality connectivity experience for our customers, even as data traffic and peak usage soared. As a responsible corporate citizen, we took decisive action to provide additional free services, financial resources as well as devices and connectivity to our communities and those most impacted by the pandemic.

We entered this crisis from a position of strength and the strategic plan that we have been executing over several years was key to our solid performance over this rapidly evolving and uncertain period. Our purpose is in connecting customers to the world through a best-in-class seamless connectivity experience and this year was no exception. While managing through a global pandemic, we also introduced new products and services for our customers by leveraging our converging wireline and wireless networks which are innovative, affordable and stay ahead of customer expectations. Despite the unique and challenging environment, our consistent focus on this strategy and continued significant capital investments in excess of $1 billion, supported year-over-year growth in our business and a nearly 40% increase in free cash flow, exceeding our financial commitments for the year.

Wireless

Our efforts continue to focus on scaling our Wireless business through driving an overall enhanced customer experience and delivering Canadians better value. Fiscal 2020 saw the continued investments in vital areas such as spectrum deployment, foundational investments for the delivery of 5G services, further expansion of our retail presence and the exciting launch of Shaw Mobile, despite the challenging background.

The COVID-19 pandemic caused the temporary closure of the vast majority of our retail network, impacting Wireless customer growth, resulting in approximately 160,000 new Wireless customers in fiscal 2020; however, it also showcased our strong operating leverage as we delayed new customer acquisition investments during this lower growth period. Wireless service revenue grew an impressive 17.4% to $815 million, a key factor supporting our improved Wireless margin in the year. Our wireless strategy continues to focus on increasing our market share, particularly in western Canada with the addition of Shaw Mobile, and improving Wireless profitability.

The launch of Shaw Mobile on July 30, 2020 was a significant milestone that will fuel the next chapter of our wireless growth story. Shaw Mobile provides Shaw Internet customers with bundling opportunities to take advantage of unprecedented savings, combined with the ability to customize their mobile data requirements through two rate plans – By The Gig and Unlimited Data. Shaw Mobile is a powerful example of how facilities-based service providers can compete and innovate to deliver true wireless affordability. As we expand our retail presence, Shaw Mobile is now available in 24 Shaw retail locations and, combined with our national retail partner stores, over 140 locations in Alberta and British Columbia. Freedom Mobile continues to be available in over 700 retail locations.

Wireline

Our Wireline business delivered another year of consistent and stable performance, including margin improvement in the face of COVID-19 adversity. As customers moved their offices and classrooms home, our extensive Fibre+ network was the true workhorse maintaining these critical connections, without interruption. In the second half of fiscal 2020, we experienced a dramatic increase in data traffic by up to 50% and extended peak hours of usage; however, years of network related investments, including Shaw's industry leading Mid-Split program, had us well prepared to handle the surge in demand. In fact, not only did we maintain our high-quality network performance in fiscal 2020, we introduced even faster Internet speeds to our customers with the launch of Shaw Fibre+ Gig Internet to over 99% of our Wireless customer footprint in western Canada.

Long before we entered this new environment, where we must practice social distancing, we recognized that we needed to evolve towards becoming a digital-first organization and we continued to advance initiatives that quickly became a strategic differentiator for Shaw. A key tenet of this strategy was to drive the adoption of customer self-install, which increased significantly, reaching 79% in the last quarter of fiscal 2020 compared to 45% in the prior year, allowing new and existing customers to get the latest broadband technology from Shaw without having to schedule an appointment.

Shaw Business encountered new challenges this year as businesses across the country were faced with a difficult environment due to the pandemic. Our role as a trusted advisor along with the strength of our network and Smart suite product offering, including new services to meet the demands for more robust work from home solutions, reinforce our strong position in the market.

Looking ahead

We have successfully demonstrated the resilient nature of our business, our agility in operating in this environment and our ability to deliver growth throughout one of the most unique and challenging years in our history. In addition to navigating a new environment brought forth by the COVID-19 pandemic, we are also sadly forging ahead without our Company founder, JR Shaw, who passed in March of this year. His stewardship, guidance, and insight have been missed over this difficult period; however, his unwavering commitment and passion to provide an exceptional customer experience remains forever engrained in our culture.

As we embrace a new year, we will continue to enhance the customer experience by leveraging our new and innovative Shaw Mobile wireless service to deepen our relationship with existing customers and welcome new ones. We will deliver better and faster services through new technology, expanded distribution, and additional digital capabilities. These developments are made possible through the continued investment in our critical infrastructure to stay ahead of customer expectations, including the deployment of 600 MHz spectrum and advancing our 5G capabilities in fiscal 2021.

While we still face elevated levels of uncertainty, including COVID-19 related impacts, commodity pricing related challenges, key regulatory decisions, and an intensifying competitive environment, we are uniquely positioned to drive better value for all our stakeholders. This includes additional transparency into our environmental, social, and governance (ESG) initiatives in our forthcoming ESG report and the critical role it plays in shaping our strategy. By more formally addressing the needs of all our stakeholders, we can thrive in this new environment. Our strong balance sheet enables us to continue making critical investments and our focus on 'brighter together' growth opportunities will drive further efficiencies and contribute to strong and sustainable free cash flow growth and capital return initiatives.

In closing, I would like to extend my gratitude to our Board of Directors, for their invaluable leadership and insight, as well as the entire Shaw team of approximately 9,500 employees for their unwavering dedication throughout this truly exceptional year.

[Signed]

Bradley S. Shaw
Executive Chair & Chief Executive Officer

Tabular dollar amounts are in millions of Canadian dollars, except per share amounts or unless otherwise indicated. This Management's Discussion and Analysis (MD&A) should be read in conjunction with the Consolidated Financial Statements. The terms "we," "us," "our," "Shaw" and "the Company" refer to Shaw Communications Inc. or, as applicable, Shaw Communications Inc. and its direct and indirect subsidiaries as a group. This MD&A is current as at October 30, 2020 and was approved by Shaw's Board of Directors.

Caution Concerning Forward Looking Statements

Statements included in this MD&A that are not historic constitute "forward-looking information" within the meaning of applicable securities laws. They can generally be identified by words such as "anticipate," "believe," "expect," "plan," "intend," "target," "goal," and similar expressions (although not all forward-looking statements contain such words). All of the forward-looking statements made in this report are qualified by these cautionary statements. Forward looking statements in this MD&A include, but are not limited to, statements relating to:

- future capital expenditures;
- proposed asset acquisitions and dispositions;
- expected cost efficiencies;
- financial guidance and expectations for future performance;
- business and technology strategies and measures to implement strategies;
- the Company's equity investments, joint ventures, and partnership arrangements;
- expected growth in subscribers and the products/services to which they subscribe;
- competitive strengths and pressures;
- expected project schedules, regulatory timelines, and completion/in-service dates for the Company's capital and other projects;
- expected number of retail outlets;
- the expected impact of new accounting standards, recently adopted or expected to be adopted in the future;
- the effectiveness of any changes to the design and performance of the Company's internal controls and procedures;
- the expected impact of changes in laws, regulations, decisions by regulators, or other actions by governments or regulators on the Company's business, operations, and/or financial performance or the markets in which the Company operates;
- the expected impact of any emergency measures implemented by governments or regulators;
- timing of new product and service launches;
- Private LTE network offerings, initiatives, and partnerships as well as the performance and capability of such Private LTE networks and their ability to meet the needs of Shaw's customers, including the future provision of 5G services;
- the deployment of: (i) network infrastructure to improve capacity and coverage, and (ii) new technologies, including next generation wireless and wireline technologies such as 5G and Internet protocol television, or IPTV, respectively;
- the expected growth in the Company's market share;
- the ability of Shaw Mobile to drive customer growth;
- the cost of acquiring and retaining subscribers and deployment of new services;
- the sustainability of results/objectives and cost reductions achieved through the Total Business Transformation (TBT) initiative and Voluntary Departure Program (VDP);
- the impact that the employee exits in connection with VDP will have on Shaw's business operations;
- the expansion and growth of Shaw's business and operations and other goals and plans; and
- the expected impact of the ongoing commodity price challenges and the COVID-19 pandemic.

Forward-looking statements are based on assumptions and analyses made by the Company in light of its experience and its perception of historical trends, current conditions and expected future developments as well as other factors it believes are appropriate in the circumstances as of the current date. The Company's management believes that its assumptions and analysis in this MD&A are reasonable and that the expectations reflected in the forward-looking statements contained herein are also reasonable based on the information available on the date such statements are made and the process used to prepare the information. Considering the ongoing presence of commodity price challenges and the uncertain and changing circumstances surrounding the COVID-19 pandemic and the related response from the Company, governments (federal, provincial, and municipal), regulatory authorities, businesses, and customers, there continues to be inherently more uncertainty associated with the Company's assumptions as compared to prior periods. These assumptions, many of which are confidential, include, but are not limited to management expectations with respect to:

- general economic conditions, which includes the impact on the economy and financial markets of (i) fluctuations in commodity prices, and (ii) the COVID-19 pandemic and other health risks;

- the impact of (i) fluctuations in commodity prices, and (ii) the COVID-19 pandemic and other health risks on the Company's business, operations, capital resources, and/or financial results;
- future interest rates;
- previous performance being indicative of future performance;
- future income tax rates;
- future foreign exchange rates;
- technology deployment;
- future expectations and demands of our customers;
- subscriber growth;
- incremental costs associated with growth in Wireless handset sales;
- pricing, usage, and churn rates;
- availability and cost of programming, content, equipment, and devices;
- the completion of proposed transactions;
- the integration of acquisitions;
- industry structure, conditions, and stability;
- regulation, legislation, or other actions by governments or regulators (and the impact or projected impact on the Company's business);
- the implementation of any emergency measures by governments or regulators (and the impact or projected impact on the Company's business, operations, and/or financial results);
- access to key suppliers and third party service providers and their goods and services required to execute on the Company's current and long term strategic initiatives on commercially reasonable terms;
- key suppliers performing their obligations within the expected timelines;
- retention of key employees;
- the Company being able to successfully deploy (i) network infrastructure required to improve capacity and coverage, and (ii) new technologies, including but not limited to next generation wireless and wireline technologies such as 5G and IPTV, respectively;
- the TBT initiative yielding the expected results and benefits, including: (i) resulting in a leaner, more integrated and agile company with improved efficiencies and execution to better meet Shaw's consumers' needs and expectations (including the products and services offered to its customers), and (ii) sustainability of cost reductions achieved through VDP;
- the cost estimates for any outsourcing requirements and new roles in connection with VDP;
- operating expense and capital cost estimates associated with the implementation of enhanced health and safety measures for the Company's offices, retail stores, and employees to reduce the spread of COVID-19;
- the Company can gain access to sufficient retail distribution channels; and
- the Company can access the spectrum resources required to execute on its current and long-term strategic initiatives.

You should not place undue reliance on any forward-looking statements. Many factors, including those not within the Company's control, may cause the Company's actual results to be materially different from the views expressed or implied by such forward-looking statements, including, but not limited to:

- changes in general economic, market, and business conditions including the impact of (i) fluctuations in commodity prices, and (ii) the COVID-19 pandemic and other health risks, on the economy and financial markets which may have a material adverse effect on the Company's business, operations, capital resources, and/or financial results;
- increased operating expenses and capital costs associated with the implementation of enhanced health and safety measures for the Company's offices, retail stores, and employees in response to the COVID-19 pandemic;
- changes in interest rates, income taxes, and exchange rates;
- changes in the competitive environment in the markets in which the Company operates and from the development of new markets for emerging technologies;
- changing industry trends, technological developments, and other changing conditions in the entertainment, information, and communications industries;
- changes in laws, regulations, and decisions by regulators or other actions by governments or regulators that affect the Company or the markets in which it operates;
- any emergency measures implemented by governments or regulators;
- technology, privacy, cyber security, and reputational risks;
- disruptions to service, including due to network failure or disputes with key suppliers;

- the Company's ability to execute its strategic plans and complete its capital and other projects by the completion date;
- the Company's ability to grow subscribers and market share;
- the Company's ability to close key transactions;
- the Company's ability to have and/or obtain the spectrum resources required to execute on its current and long-term strategic initiatives;
- the Company's ability to gain sufficient access to retail distribution channels;
- the Company's ability to access key suppliers and third party service providers required to execute on its current and long term strategic initiatives on commercially reasonable terms;
- the ability of key suppliers to perform their obligations within expected timelines;
- the Company's ability to retain key employees;
- the Company's ability to achieve cost efficiencies;
- the Company's ability to sustain the results/objectives and cost reductions achieved through the TBT initiative and VDP;
- the Company's ability to complete the employee exits in connection with VDP with minimal impact on operations;
- the Company's ability to complete the deployment of (i) network infrastructure required to improve capacity and coverage, and (ii) new technologies, including but not limited to next generation wireless and wireline technologies such as 5G and IPTV, respectively;
- the Company's ability to recognize and adequately respond to climate change concerns or public and governmental expectations on environmental matters;
- the Company's status as a holding company with separate operating subsidiaries; and
- other factors described in this MD&A under the heading "Known Events, Trends, Risks and Uncertainties."

The foregoing is not an exhaustive list of all possible factors. Should one or more of these risks materialize, or should assumptions underlying the forward-looking statements prove incorrect, actual results may vary materially from those described in this MD&A.

The Company provides certain financial guidance for future performance as the Company believes that certain investors, analysts, and others utilize this and other forward-looking information in order to assess the Company's expected operational and financial performance and as an indicator of its ability to service debt and pay dividends to shareholders. The Company's financial guidance may not be appropriate for this or other purposes.

This MD&A provides certain future-oriented financial information or financial outlook (as such terms are defined in applicable securities laws), including the financial guidance and assumptions disclosed under "Fiscal 2021 Guidance." Shaw discloses this information because it believes that certain investors, analysts, and others utilize this and other forward-looking information to assess Shaw's expected operational and financial performance, and as an indicator of its ability to service debt and pay dividends to shareholders. The Company cautions that such financial information may not be appropriate for this or other purposes.

Any forward-looking statement speaks only as of the date on which it was originally made and, except as required by law, the Company expressly disclaims any obligation or undertaking to disseminate any updates or revisions to any forward-looking statement to reflect any change in related assumptions, events, conditions or circumstances. All forward-looking statements contained in this MD&A are expressly qualified by this statement.

ABOUT OUR BUSINESS

At Shaw, we focus on delivering sustainable long-term growth and connecting customers to the world through a best-in-class seamless connectivity experience by leveraging our world class converged network. This includes driving operational efficiencies and executing on our strategic priorities through the delivery of an exceptional customer experience and more agile operating model. Combined with significant facilities-based investments, our powerful and robust networks serve as the foundation for connectivity and innovation. With the onset of the global COVID-19 pandemic in 2020, connectivity rapidly became a critical lifeline for Canadians and our economy. During this unprecedented period, our network performance was exceptional, and we remain focused on supporting our employees, customers, and communities. While the COVID-19 pandemic does impact our business, Shaw continues to be resilient and we believe that we are well positioned to meet the rapidly changing and increasing demands of our customers.

WIRELINE

Shaw is one of the largest providers of residential communications services in Canada.

Our Consumer division connects people and families in British Columbia, Alberta, Saskatchewan, Manitoba, and northern Ontario through our Fibre+ network.

Shaw Direct is one of two licensed satellite video services available across Canada.

WIRELESS

Shaw is the fourth largest wireless provider in Canada, offering both postpaid and prepaid services.

Shaw Mobile currently operates in British Columbia and Alberta. Freedom Mobile currently operates in Ontario, British Columbia and Alberta.

Over 19 million Canadians reside within our current mobile wireless network service area.

BUSINESS

Our Business division leverages our network infrastructure with a product suite targetting businesses of all sizes.

In the following sections we provide selected financial highlights and additional details with respect to our strategy, our Wireline and Wireless divisions, our network and our presence in the communities in which we operate and serve.

Shaw trades on the Toronto and New York stock exchanges and is included in the S&P/TSX 60 Index (Trading Symbols: TSX – SJR.B, SJR.PR.A, SJR.PR.B, NYSE – SJR, and TSXV – SJR.A). For more information, please visit www.shaw.ca.

Select Financial and Operational Highlights

Through an evolving operating and competitive landscape our consolidated business delivered stable and profitable results in fiscal 2020.

Basis of presentation

Fiscal 2020 results are reported in accordance with the newly adopted IFRS 16, *Leases* ("IFRS 16"). Supplementary information is provided in "New Accounting Standards," reflecting the previous leases policy and the changes from the adoption of the new standard. The adoption of IFRS 16 had a significant effect on our reported results. We adopted IFRS 16 using a modified retrospective approach whereby the financial statements of prior periods presented were not restated and continue to be reported under International Accounting Standard (IAS) 17 – *Leases*, as permitted by the specific transition provisions of IFRS 16. The cumulative effect of the initial adoption of IFRS 16 was reflected as an adjustment to the impacted balance sheet accounts as at September 1, 2019.

In conjunction with the adoption of IFRS 16, we also updated certain of our non-GAAP and additional GAAP measures including renaming the previously disclosed "Operating income before restructuring costs and amortization" measure as "adjusted EBITDA" to better align with language used by various stakeholders of the Company. We also amended our free cash flow definition to reflect the impact of IFRS 16 to account for lease payments that are no longer classified as operating expenses under the new standard. See the definitions and discussion under "Key Performance Drivers" for more details.

On September 15, 2017, the Company sold a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation within the Company's Business segment, to Omnitracs Canada. Accordingly, the operating results and operating cash flows for the previously reported Shaw Tracking business (an operating segment within the Business division) are presented as discontinued operations separate from the Company's continuing operations. This MD&A reflects the results of continuing operations, unless otherwise noted.

(1) Fiscal 2020 figures reflect the impact of the adoption and application of IFRS 16 while Fiscal 2019 and Fiscal 2018 figures do not and are not comparable. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2020 as well as discussions under "Results of Operations" and "Segmented Operations Review."

(2) Adjusted EBITDA, adjusted EBITDA margin, and free cash flow are non-GAAP measures and should not be considered substitutes or alternatives for GAAP measures. These are not defined terms under IFRS and do not have a standard meaning, and therefore may not be a reliable way to compare us to other companies. See "Key Performance Drivers" for information about these measures, including how we calculate them.

(3) Funds flow from operations is before changes in non-cash working capital balances related to operations as presented in the Consolidated Statements of Cash Flows.

Our Strategy

At Shaw, we focus on delivering sustainable long-term growth by connecting customers to the world through a best-in-class seamless connectivity experience by leveraging our world class converged network. This includes driving operational efficiencies and executing on our strategic priorities through the delivery of an exceptional customer experience and a more agile operating model. Combined with significant facilities-based investments, our powerful and robust networks serve as the foundation for connectivity and innovation. With the onset of the global COVID-19 pandemic in 2020, connectivity rapidly became a critical lifeline for Canadians and our economy. During this unprecedented period, our network performance was exceptional, and we remain focused on supporting our employees, customers, and communities. While the pandemic has had an impact on our business, Shaw continues to be resilient and we believe that we are well positioned to meet the rapidly changing and increasing demands of our customers.

In a year like none other, fiscal 2020 included another exciting milestone for our Wireless business with the launch of Shaw Mobile in Alberta and British Columbia, complementing our existing Freedom Mobile brand. Shaw Mobile is a new wireless service that leverages our LTE and Fibre+ networks, along with Canada's largest WiFi network, to provide Shaw Internet customers with an innovative wireless experience that offers customers unprecedented savings. The introduction of Shaw Mobile will enable the Company to acquire new customers by leveraging bundling opportunities. Our new 'Brighter Together' advertising campaign highlights customers' ability to customize their mobile data allotment with two rate plans – By The Gig and Unlimited Data – and is the best example yet of how facilities-based providers can compete and innovate to deliver true wireless affordability.

Through continued thoughtful and strategic investments, spectrum deployment, and a growing number of distribution points, we continue to create a stronger, higher quality wireless network that enables us to deliver an improving customer experience that balances profitability and customer growth. Our Wireless operating footprint now covers over 19 million people, or approximately 50% of the Canadian population, in some of Canada's largest urban centres, as well as many smaller communities throughout British Columbia, Alberta, and Ontario.

During fiscal 2020, we delivered Wireless subscriber growth of over 160,000 (net additions), ABPU[1] improvement of 5.9% (to $44.13) and service revenue growth of approximately 17.4% (to over $815 million) in the year. Since the acquisition of Freedom Mobile in 2016, our Wireless subscriber base has grown by approximately 80% to over 1.8 million subscribers at the end of fiscal 2020, which is a true testament to our differentiated and sustainable value proposition to customers.

[1] Refer to "Key Performance Drivers" section for definition and explanation.

In our Wireline division, with approximately 5.3 million RGUs,[2] we continue to leverage our Fibre+ network by introducing new and improved services to our residential and business customers that align with our focus on profitable growth and stability. In fiscal 2020, and in the midst of the COVID-19 pandemic, we introduced our Fibre+ Gig Internet service, which represents the largest deployment of up to gigabit download speeds to residential Internet customers in western Canada.

In addition to rolling out the fastest speeds ever available to our customers, Shaw launched a new entry-level Internet plan as part of a new lineup of Internet tiers, providing customers a full range of choices depending on their connectivity needs.

In response to the changing business environment due to the COVID-19 pandemic, Shaw Business introduced Smart Remote Office, providing business owners peace-of-mind in knowing their company data is protected while giving their employees greater ability to seamlessly work from anywhere.

With the majority of Canadians relying more than ever on video and voice interactions to remain connected for social and business purposes, to access education, and enjoy entertainment, fiscal 2020 saw significant increases in traffic on our wireline network. Due to substantial facilities-based investments, our network performance continues to be exceptional even with the more recent pandemic-related surge in demand, which increased by as much as 50% and included peak period usage extending to over 12 hours a day, 7 days a week. In fact, Ookla named Shaw the fastest and most consistent internet provider in western Canada. Across British Columbia, Alberta, Manitoba, and Saskatchewan, Shaw's Fibre+ network was reported as the fastest. Furthermore, a growing number of customers elected to self-install their services with up to 79% of our customers choosing this option in the last quarter of fiscal 2020. We remain committed to building and transitioning into a new digital operating service model and improving the customer experience with a focus on continued reductions to our cost structure in the Wireline division.

In addition to strengthening the long-term strategic positioning of the Company over the last several years, we have maintained a solid balance sheet that along with a growing free cash flow profile support the significant, albeit moderating in intensity, level of investment required for long-term sustainable growth. We remain committed to the maintenance of our investment grade credit rating and focus on free cash flow growth. Despite the significant uncertainty arising from the COVID-19 pandemic and commodity price challenges, our business demonstrated its resilience thus allowing us to deliver pre-IFRS 16 adjusted EBITDA growth of 3.7%, fund our planned capital investments of over $1 billion, and achieve free cash flow growth of almost 40% in fiscal 2020. Moreover, during the same period, we returned approximately $750 million to our shareholders as part of our enhanced return of capital initiatives, consisting of regular monthly dividends and share repurchases under our normal course issuer bid (NCIB) program, the latter of which was introduced during fiscal 2020 and resulted in the repurchase for cancellation of approximately 5.6 million Class B Non-Voting Participating Shares ("Class B Non-Voting Shares") for a total cost of approximately $140 million and which we believe is synergistic with our now 100% cash-funded dividend program.

Fiscal 2021 Guidance

The Company is introducing its fiscal 2021 guidance, which includes adjusted EBITDA growth over fiscal 2020, consolidated capital investments of approximately $1.0 billion, and free cash flow of approximately $800 million. We believe our business and facilities-based networks provide critical and essential services to Canadians and will continue to remain resilient in this dynamic and uncertain environment. Management continues to actively monitor the impacts to the business and make the appropriate adjustments to operating and capital expenditures to reflect the evolving environment. Considering the ongoing presence of COVID-19, the speed at which it develops and/or changes, and the continued uncertainty of the magnitude, outcome, duration, resurgence, and/or subsequent waves of the pandemic, compounded by commodity price challenges, the current estimates of our operational and financial results which underlie our outlook for fiscal 2021 are subject to a significantly higher degree of uncertainty. Any estimate of the length and severity of these developments is therefore subject to significant uncertainty, as are our estimates of the extent to which the COVID-19 pandemic may, directly or indirectly, materially and adversely affect our operations, financial results, and condition in future periods.

As at the end of fiscal 2020, our net debt leverage ratio[3] was 2.3x compared to the Company's target leverage range of 2.5 to 3.0x. Considering the current leverage position along with its strengthening free cash flow profile, Shaw is announcing that it intends to renew its NCIB program to purchase up to 24,532,404 Class B Non-Voting Shares,

[2] Refer to "Key Performance Drivers" section for definition and explanation.

[3] Net debt leverage ratio is a non-GAAP measure and should not be considered a substitute or alternative for GAAP measures. This is not a defined term under IFRS and does not have a standard meaning, and therefore may not be a reliable way to compare us to other companies. See "Key Performance Drivers" for information about this measure, including how we calculate it.

representing 5% of all of the issued and outstanding Class B Non-Voting Shares as of October 22, 2020. The NCIB program has been approved by the Board of Directors but remains subject to approval by the Toronto Stock Exchange (TSX) and, if accepted, will be conducted in accordance with the applicable rules and policies of the TSX and applicable Canadian securities law.

Impact of Coronavirus (COVID-19) Pandemic

During the second half of fiscal 2020, the Company experienced the following key impacts related to COVID-19:

- a reduction in overall Wireline and Wireless subscriber activity,
- reduced Wireless equipment sales and an improvement in Wireless postpaid churn,
- an increase of approximately 50% in wireline network usage as well as extended peak hours,
- increased demand for Wireless voice services by approximately 25%,
- a decrease in Wireless roaming and overage revenue,
- customer payments substantially in-line with historical trends,
- an increase in bad debt expense, and
- the suspension or cancellation of a number of Business customer accounts, impacting Business revenue.

In the second quarter of fiscal 2020, through the implementation of our detailed business continuity plan, we transitioned a significant portion of our employee base to work from home and temporarily closed retail locations across Canada (except for a limited number of street front stores providing urgent customer support). Throughout these challenging circumstances, the Company has continued to serve its customers, quickly adapting to the dynamic and evolving environment.

While the financial impacts from COVID-19 in fiscal 2020 were not material, the situation remains uncertain in terms of its magnitude, outcome, and duration. Consumer behaviors could still change materially, including the potential downward migration of services, acceleration of cord-cutting, and reduced ability of customers to pay their bills, all due to the challenging economic situation. Shaw Business primarily serves the small and medium sized market, which is particularly vulnerable to the economic impacts of commodity price challenges and COVID-19, including mandated business closures or further social distancing restrictions.

Despite the challenging and uncertain economic environment created by the ongoing impact of the COVID-19 pandemic, our business delivered solid results while demonstrating its resiliency and the critical nature of the connectivity services it provides. Our robust facilities-based network, the result of years of significant investment, has showcased its strength in addressing our customers' need to stay connected to family, friends, and colleagues throughout the COVID-19 pandemic.

As the COVID-19 pandemic continues to evolve, the Company's focus continues to be on the safety and health of its employees, the reliability of its facilities-based network, and the responsiveness to our customers. We continue to be in constant contact with public safety and government officials at all levels, as well as key suppliers, partners, and customers. The Company's business resumption plan, designed for the gradual and safe re-introduction of employees to the workplace, is being implemented in phases as government-imposed restrictions on businesses and individuals are lifted. As of the date of this MD&A, all of our retail stores have re-opened.

As an ongoing risk, the magnitude, outcome, duration, resurgence and/or subsequent waves of the COVID-19 pandemic is still unknown and subject to a significant amount of uncertainty at this time, as is the efficacy and duration of the government interventions. For further detail, see "Known Events, Trends, Risks and Uncertainties – Coronavirus (COVID-19)."

Total Business Transformation

In fiscal 2020, the Company completed VDP, which was a key component of the Company's multi-year TBT initiative, introduced in the second quarter of 2018. The TBT was designed to reinvent Shaw's operating model to better meet the evolving needs and expectations of consumers and businesses by optimizing the use of resources, maintaining and ultimately improving customer service, and by reducing staff. As part of the TBT initiative, we reduced input costs, consolidated functions, and streamlined processes, which has led to operational improvements across the business, allowing us to evolve into a more efficient organization. We have become a more focused, agile, and accountable organization ready to evolve from being product-focused to more purposeful and fully integrated, focusing on satisfying the unique needs of our customers. With the completion of VDP, approximately 3,140 employees exited the Company between the second quarter of fiscal 2018 and the end of fiscal 2020.

For the twelve months ended August 31, 2020, no additional restructuring charges related to the Company's TBT initiative have been recorded, with a total of $437 million in restructuring charges recorded since the beginning of the program, of which $425 million has been paid to date. On March 5, 2020, the Company announced the substantial completion of the TBT initiative with fiscal 2020 annualized savings related to VDP substantially in-line with the previous estimates. See also "Caution Concerning Forward Looking Statements" and "Known Events, Trends, Risks and Uncertainties – Total Business Transformation" for a discussion of the TBT initiative, VDP, and the risks and assumptions associated with each.

People and Culture

As a leading Canadian connectivity company, we are transforming our culture and making purposeful investments in our people which enable us to deliver on our corporate and operational strategy. Building off a foundation of strong leadership and talent, our commitment to a diverse employee base ensures business decisions are made with our customers' needs at the forefront to create a seamless connectivity experience.

Our people and culture strategy is rooted in a people-first approach that empowers and develops our people to deliver break-through results and provides them with the tools they need to deliver on our strategic priorities through the delivery of exceptional employee and customer experiences in a more agile operating model. Through various inputs and interactions, as well as listening to our employees regularly, we are focused on the following four imperatives to achieve our people and culture objectives:

1) **Talent** – Elevating our people by giving them personalized development tools, skills, and the knowledge they need to succeed today and in the future. We proactively build skills while keeping an eye on emerging talent needs.

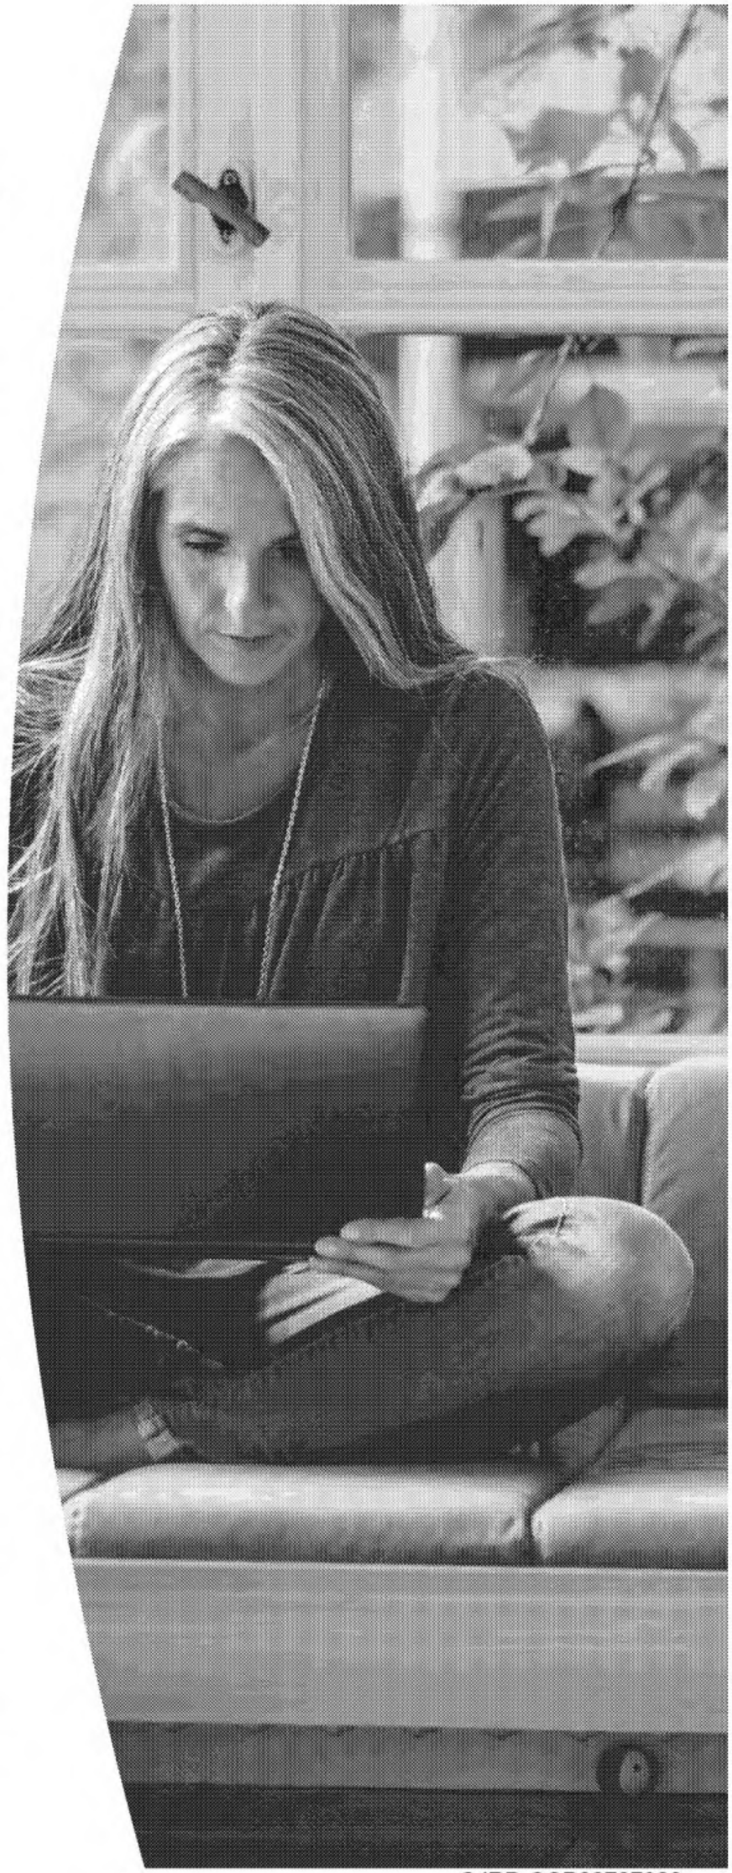
2) **Leadership** – Investing in our leaders by enhancing their capabilities to drive performance, support our culture, and inspire our people.

3) **Culture** – A key driver of our success and competitive advantage stems from our corporate culture and putting our people first to ensure we deliver on our strategic priorities through the delivery of exceptional employee and customer experiences.

   In support of our ongoing strategies to create a more diverse and inclusive culture, we continue to support our employee-led resource groups (i.e., Spectrum@Shaw, Pride@Shaw, and Women@Shaw). In fiscal 2020, we also launched an internal survey as part of our regular employee listening to gain a deeper understanding of how diverse and inclusive our people feel Shaw is and to help us grow and reflect their needs and the needs of our customers. This information not only helps inform our evolving priorities, but also reveals areas of opportunity to ensure we are reflective of our employee base and the communities we serve. We are proud recipients of Canada's Best Diversity Employers award for 2020.

   As well as paying attention to our internal needs, we are also focused on our external environment. Our unwavering commitment to sustainability and our environment ensures we are delivering value in the best ways that are also connected to our culture.

4) **Well-Being** – Foundational to the growth of our employees and their ability to deliver winning results has been a focus on holistic well-being. As an organization we are proud to play an expanded role in employees' financial, physical, and psychological well-being to ensure they have the resources they need to feel safe and supported – both during the COVID-19 pandemic and beyond. We are putting the health and safety of our people and customers first, ensuring all employees have the flexibility, support, tools, and resources (e.g., virtual healthcare, fitness, leadership development) to navigate how we work and lead during these uncertain and evolving times.



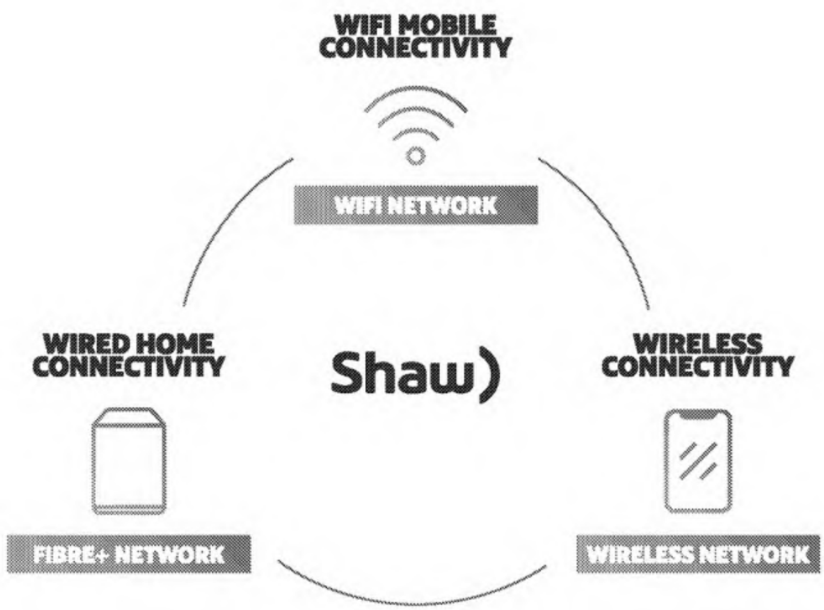
Global Technology Leaders

In order to efficiently secure and deliver leading technology for our customers – both for today and tomorrow – we recognize that we must participate in global scale initiatives through partnerships with best-in-class service providers. This ensures that the technology we adopt and invest in is, and continues to be, leading-edge in the global communications industry.

This approach allows us to leverage our existing assets, where we have strength and expertise, while also ensuring our investments are aligned with industry leaders to support the development, maintenance, and advancement of new technology where it is impractical for us to do so on a standalone basis. This allows us to direct our capital resources and further our commitment to continue the advances in innovation, performance, and reliability of our products and services. In addition, this strategic approach to our business gives us the opportunity to better manage costs by participating in opportunities on a global scale.

We have a series of significant and strong relationships with global leaders on the following initiatives:

- Shaw BlueCurve, a technology that provides customers with greater control over their home WiFi experience (through the BlueCurve Home app and Pods) and supports IPTV, is powered by the BlueCurve Gateway (XB6) Data over Cable Interface Specification (DOCSIS) version 3.1 advanced WiFi modem ("BlueCurve Gateway modem") developed by Comcast (see discussion under "Consumer Services")
- the deployment of our wireless LTE network, which was designed, planned, and deployed by NOKIA, a global leader in mobile wireless technology and solutions (see discussion under "Wireless")
- our "Smart" suite of business services that includes SmartWiFi, SmartTarget, SmartSecurity, SmartSurveillance, and Smart Remote Office, each in collaboration with Cisco Meraki, as well as SmartVoice in collaboration with Broadsoft (see discussion under "Business Services")



Wireless and Wireline Performance

Despite the challenging and uncertain economic environment created by the ongoing impact of the COVID-19 pandemic in the second half of fiscal 2020, our business delivered solid results while demonstrating its resiliency and the critical nature of the connectivity services it provides. Our robust facilities-based network, the result of years of significant investment, has showcased its strength in addressing our customers' need to stay connected to family, friends, and colleagues throughout the COVID-19 pandemic.

While the financial impacts from COVID-19 in the second half of fiscal 2020 were not material, the situation remains uncertain in terms of its magnitude, outcome, and duration. Consumer behaviors could still change materially, including the potential downward migration of services, acceleration of cord-cutting, and reduced ability of customers to pay their bills, all due to the challenging economic situation. Shaw Business primarily serves the small and medium sized market, which is also particularly vulnerable to the economic impacts of commodity price challenges and COVID-19, including mandated closures or further social distancing restrictions.

Throughout these challenging circumstances, the Company has continued to serve its customers, quickly adapting to the dynamic and evolving environment. In fiscal 2020, we completed our TBT initiative by improving the customer experience across both our Wireline and Wireless divisions while, at the same time, removing significant operating and capital costs from the business. Through our focus on execution, we are growing our Wireless customers, identifying sustainable cost savings in our core Wireline business, and making the appropriate investments to capitalize on future growth. Our launch of Shaw Mobile, a new wireless service in western Canada that leverages our LTE and Fibre+ networks, along with Canada's largest WiFi service, further complements our Freedom Mobile brand and deepens our existing relationships with our Wireline customers. We continue our transformation into an agile, lean and digital-first organization that is focused on providing a seamless connectivity experience that meets the needs of its customers now and into the future. As deployment of our 700 MHz spectrum is virtually complete in western Canada and approximately 70% complete nationwide, our focus turns to deploying our 600 MHz spectrum across our Wireless operating footprint, and continuing to improve our LTE experience, providing affordable options for our customers, and laying the foundation for 5G services.

(1) Fiscal 2020 figures reflect the impact of the adoption and application of IFRS 16 while Fiscal 2019 figures do not and are not comparable. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2020 as well as discussions under "Results of Operations" and "Segmented Operations Review."

(2) Adjusted EBITDA is a non-GAAP measure and should not be considered a substitute or alternative for GAAP measures. This is not a defined term under IFRS and does not have a standard meaning, and therefore may not be a reliable way to compare us to other companies. See "Key Performance Drivers" for information about this measure, including how we calculate it.

Our Wireless division was formed following the acquisition of Freedom Mobile in March 2016. This acquisition transformed Shaw into a leading Canadian connectivity company, adding the critical wireless component to our converged network. Our Wireless division currently operates in Ontario, Alberta, and British Columbia, positioned as the leading alternative for mobile services to the three national wireless incumbent carriers.

Launch of Shaw Mobile

On July 30, 2020, the Company launched Shaw Mobile, a new wireless service in western Canada that leverages Shaw's LTE and Fibre+ networks, along with Canada's largest WiFi service, to provide Shaw Internet customers with an innovative wireless experience. Shaw Mobile provides Shaw Internet customers with bundling opportunities to take advantage of unprecedented savings, combined with the ability to customize their mobile data requirements through two rate plans – By The Gig and Unlimited Data.

Shaw Mobile is a powerful example of how facilities-based service providers can compete and innovate to deliver true wireless affordability for Canadians. With its Fibre+ network and Canada's largest WiFi network, Shaw Mobile capitalizes on the long-term trend that shows the vast majority of Canadians' smart device data usage occurs on WiFi networks, a fact amplified by recent work-from-home trends.

Freedom Mobile Big Gig Unlimited, Absolute Zero, and Prepaid Plans

In fiscal 2019, Freedom Mobile launched the Big Gig Unlimited and Absolute Zero campaigns in response to the competitive and dynamic wireless environment. Paired with the most popular devices, and ongoing improvements in the strength and capacity of our network, our Big Gig Unlimited and Absolute Zero plans continue to disrupt the wireless market by providing Canadians with a better, more affordable option when choosing a wireless service provider.

Freedom Mobile customers can either bring their own device to the network or participate in one of Freedom Mobile's discretionary wireless handset discount plans – MyTab or Absolute Zero. MyTab allows Freedom Mobile customers to pay a discounted price for a handset upfront and a predetermined monthly Tab charge in addition to the rate plan cost. Absolute Zero allows Freedom Mobile customers to receive an eligible handset for $0 upfront, $0 extra per month, and $0 owing after 24 months.

In the third quarter of fiscal 2020, Freedom Mobile introduced new prepaid-by-the-year plans to address a need in the current economic environment.

Wireless Distribution Network

In fiscal 2019, Freedom Mobile remodeled its most prominent corporate branded stores and finalized agreements with multiple new national retail partners.

In fiscal 2020, Freedom Mobile continued to modernize more than 20 Freedom-branded stores across the country with the key focus on maximizing customer experience and the safety of both our customers and employees. Freedom Mobile's full suite of products continue to be available in over 700 locations across Ontario, Alberta, and British Columbia through our corporate, dealer, and retail partners. In addition, we have added over 300 "countertop" and "grab & go" locations in independent retail outlets and store-within-a-store environments, catering specifically to the growing prepaid market.

During fiscal 2020, the Shaw Mobile-branded retail presence expanded by adding 12 locations to our corporate network for a total of 21 as August 31, 2020, with another 6 stores set to open in the first quarter of fiscal 2021. Combined with our national retail partners, Walmart and Loblaws, Shaw Mobile is now available at over 140 retail locations in Alberta and British Columbia.

Wireless Network Upgrades

Supporting our Wireless revenue growth are the significant investments in our wireless network and customer service capabilities. We are executing on our operating plan to improve our network and deploy spectrum in the most efficient way to enhance our LTE service and prepare for the delivery of 5G services. Wireless network investments to improve the customer experience continue to be a priority in the areas in which we operate and serve Wireless customers.

Through years of thoughtful and strategic capital investing, we continue to expand and improve our facilities-based wireless network to meet the evolving needs of our customers and continue to fuel Freedom Mobile's momentum. See "Shaw's Wireless Network" for further details on Shaw's wireless network upgrades.

5G Preparation

Shaw has been actively trialing 5G technology starting with pre-commercial trials in the 3.5 GHz and 28 GHz spectrum bands in 2018. In fiscal 2020, we continued conducting 5G trials in two key areas: (i) 600 MHz spectrum band and (ii) backhaul over DOCSIS and ethernet passive optical networks (EPON).

Unlike our previous 5G trials, the 600 MHz spectrum band trial was conducted using commercially available 5G network equipment and end-user devices. This trial, carried out in collaboration with NOKIA, successfully demonstrated 5G operation from the core network to the end-user device and paves the way for future 5G commercial deployments, which are expected to provide lower latency, improved device connectivity, and higher speeds compared to LTE.

In preparation for 5G, Shaw teams have also been strategically planning for future requirements throughout the wireless network, all the way from our core network to the radio sites. In fiscal 2019, the Company migrated its core network to the CloudBased Infrastructure Software platform, the latest generation of cloud core architecture from NOKIA and a key building block of 5G. In addition, 600 MHz radio and antenna designs were implemented by our radio access network teams at new and existing sites in preparation for 5G service. These planning initiatives led to our first 5G call in April 2020 and successful tests with commercially available handsets in June 2020.

In fiscal 2020, in collaboration with NOKIA, Shaw conducted field testing on 5G backhaul over DOCSIS and EPON. The test results successfully demonstrated that 5G backhaul traffic can be reliably transported over existing DOCSIS and EPON technologies, which offers the prospect of significantly reducing the time and cost to deploy our 5G networks.

As part of its converged network strategy, the Company continues to leverage the coaxial cable (which transports both power and multi-gigabit data speeds) in its Fibre+ network for the rapid and flexible deployment of small cells, which will support densification efforts in preparation for 5G.

Subscriber and ABPU Growth

As a result of the impact of the COVID-19 pandemic, in the second half of fiscal 2020, the Wireless division experienced a reduction in overall subscriber activity, a decrease in equipment sales, improved postpaid churn, a decrease in roaming and overage revenue, and an increase of approximately 25% in voice traffic on our network.

In fiscal 2020, our Wireless division delivered solid, high quality subscriber growth while continuing to improve operating margins and lower churn. Over 19 million Canadians, or approximately 50% of the Canadian population, reside within our current wireless network service area. Our Wireless division's customer base continues to grow, with over 1.8 million customers, including over 160,000 net new customers added in fiscal 2020. The growth of our subscriber base was complemented, on an annual basis, by an ABPU improvement of 5.9% (to $44.13) over fiscal 2019 due to the increased subscriber base and growing penetration of Big Gig and Absolute Zero plans.

Since the acquisition of Freedom Mobile, we have made significant investments and improvements to scale the business. We have firmly established Freedom Mobile as the industry innovator and recognized champion of wireless affordability for Canadians. Through years of thoughtful and strategic capital investing, we are expanding and improving our facilities-based wireless network to meet the evolving needs of our customers. The introduction of Shaw Mobile, a new wireless service that leverages our LTE and Fibre+ networks, along with Canada's largest WiFi service, is the latest example of the innovation and affordability that our Wireless business brings to market. Through the flexible design of Shaw Mobile, we expect to further deepen our relationship with existing Wireline customers as we continue to scale our Wireless business.

Seasonality in Wireless Subscriber Activity

Wireless subscriber activity is influenced by the launch of popular new mobile devices, seasonal promotional periods, and the level of competitive intensity. Our first and fourth quarters typically experience higher volumes of wireless competitive activity as a result of back to school and holiday season-related consumer behaviour. Aggressive promotional offers are often advertised during these periods which can impact our Wireless subscriber metrics. Shaw's Wireless business does not depend on any single customer or concentration of customers.

(1) Fiscal 2020 figures reflect the impact of the adoption and application of IFRS 16 while Fiscal 2019 figures do not and are not comparable. Refer to "New Accounting Standards" for additional details on the changes for fiscal 2020 as well as discussions under "Results of Operations" and "Segmented Operations Review."

(2) Adjusted EBITDA is a non-GAAP measure and should not be considered a substitute or alternative for GAAP measures. This is not a defined term under IFRS and does not have a standard meaning, and therefore may not be a reliable way to compare us to other companies. See "Key Performance Drivers" for information about this measure, including how we calculate it.

In our Wireline business, we have cemented our status as a technology leader with our Fibre+ network and BlueCurve and Smart suite products. Through our digital transformation, we have made it easier to interact with our customers and are leveraging insights from customer data to better understand their preferences so we can provide them with the services they want. We are shifting customer interactions to digital platforms and driving more self-help, self-install and self-service. In the fourth quarter of fiscal 2020, up to 79% of our customers were electing to self-install their services. We continue to streamline and simplify manual processes that improve the customer experience and day-to-day operations for our employees.

Despite the unprecedented impact that the COVID-19 pandemic had on the lives of our customers this past year, and the corresponding impacts to the way we serve our customers, our focus remains on the execution and delivery of stable and profitable Wireline results. This includes growth in higher quality Internet subscribers and improving overall customer account profitability by attracting and retaining higher value households with our best value proposition on 2-year ValuePlans for those who want faster Internet with a better customer experience in addition to Video and Wireless services. Through our introduction of Shaw Mobile, we expect to further deepen our relationship with existing Wireline customers with our bundled offering to Internet customers as we continue to scale our Wireless business.

Consumer Services

Shaw is one of the largest providers of residential communications services in Canada. Our Consumer division provides residential customers with leading connectivity experiences on two platforms:

- **Wireline Services** – we provide broadband Internet, Shaw Go WiFi, Video, and Phone services to customers that are connected to our local and regional Fibre+ network in British Columbia, Alberta, Saskatchewan, Manitoba, and northern Ontario
- **Satellite Services** – we provide satellite Video services through Shaw Direct to customers across Canada

Wireline Internet, Video, and Phone Services

As our customers' needs evolve, we continue to focus on innovative value-added service offerings. Our customer-centric strategy is designed to deliver quality service experiences, value, and choice for our customers.

Internet

As a leading Canadian connectivity company, we believe that the Internet plays a fundamental role in connecting our customers to the world and everything in it. We recognize the importance of providing reliable, affordable, and worry-free connectivity to meet the ever-increasing appetite of our customers for discovery, social connectivity, and streaming. With our continued commitment to making strategic

SJRB-CCB00787936

investments in our powerful Shaw Fibre+ network, not only did we meet the unprecedented demands for Internet access from our customers in fiscal 2020, but we also introduced new services that align with our strategic focus on profitable growth and stability.

In fiscal 2020, we continued to deploy our BlueCurve Gateway modem, powered by Comcast, which enables faster Internet speeds, supports more devices, and provides a stronger in-home WiFi connection. For our customers with harder to reach areas in their homes, BlueCurve Pods create a mesh WiFi network to improve the overall customer experience. BlueCurve Pods can easily be self-installed through the BlueCurve Home app, plugged directly into indoor electrical outlets, and can be moved around to suit each customer's distinct coverage needs. Building on our network advantage and the success of our Internet offerings, in May 2020 we introduced a new portfolio of Internet plans with two new higher speeds: the 750 Mbps tier and our Shaw Fibre+ Gig tier, which offers up to gigabit download speeds to 99% of our residential customers located in our western Canadian Wireline operating footprint. Recently, we more than tripled upload speeds for our three highest speed tiers.

Leveraging our strategic partnership with Comcast, we continued to roll out an advanced series of technologies catered to serve an increasingly connected Canadian population. This includes feature enhancements to the BlueCurve Home app which provides our customers a simple way to control their Internet and WiFi experience, including on-boarding as a new customer, adding new devices to the network, managing device and user access, and monitoring usage. Enhancements to the BlueCurve Home app include a WiFi downtime scheduler, a new self-help section with links to chat for additional support, and integration with our BlueCurve TV experience by enabling WiFi password retrieval through the voice remote and display on-screen.

In May 2020, Shaw also introduced an enhanced Internet network security service that protects our customers' devices against cyber threats. This service brings together our new Advanced Network security feature (accessed through the BlueCurve Home app) designed to protect all devices in the home at the network layer, including game consoles, cameras, and any "smart" product, with McAfee Multi-Access Network Security, which provides an additional layer of end-point cyber protection for up to 10 of our customers' devices while at home and on the go.

In addition to our reliable Internet service enhanced by our BlueCurve experience, a key differentiator for our customers continues to be the access they receive to our carrier-grade Shaw Go WiFi network. With over 3.7 million devices authenticated on our network and over 117,000 public access points covering locations from British Columbia to Ontario, we continue to see growth in usage of our Shaw Go WiFi network for Shaw Internet and Freedom Mobile customers, and now Shaw Mobile customers. As an added value proposition, Wireless customers have access to over 350,000 additional "hotspots" by way of our home hotspot deployment.

In late July 2020, Shaw Mobile was launched in western Canada, bringing together Shaw's LTE and Fibre+ networks, along with Canada's largest WiFi service, to provide Shaw Internet customers with unprecedented savings on wireless plans when they bundle with Internet service. With the best of WiFi connectivity at home and the wide availability of Shaw Fibre+ powered WiFi hotspots, Shaw Mobile customers can reduce their monthly wireless data costs even further by connecting more often to WiFi.

In fiscal 2020, we continued the focus on our 2-year ValuePlans, which provide customers with price certainty over the term and have resulted in lower churn rates on those plans. This approach, combined with the strength of our Fibre+ network, our focus on improving execution, and providing additional bundle value when adding Shaw Mobile, is resulting in higher value household accounts with improved overall customer account profitability.

Video

Our Wireline Video services continue to offer a wide selection of standard definition (SD) and high definition (HD) television channels with access to one of western Canada's largest selection of on-demand titles, including access to both free and paid movies, television shows, and music content.

Our Video customers can choose pre-selected packages with the most popular channels or start with a basic primary package and then add additional channels from a variety of sports, family, and other theme specialty packages, as well as individual channels offered on a channel-by-channel basis.

Leveraging our strategic partnership with Comcast, we continued to deploy our flagship all-IP Video services, which is available across 80% of our western Canadian Wireline operating footprint. In November 2019, we added Amazon Prime to the list of apps integrated into the BlueCurve platform, joining Netflix, YouTube, and Crave. With the launch of BlueCurve Total TV in the same month – a new package that has pre-selected all of our most popular channels and content – customers will have the best of TV and over-the-top (OTT) streaming content in one place and accessible with a single voice command. We also simplified the ability to add channels to a customer's subscription through a "click to add" option directly on the screen.

Our customers also have access to the BlueCurve TV app, which is free for all Shaw Video (Cable and Shaw Direct) customers and makes their TV subscription available over the Internet and on mobile devices. This includes access to live TV, video-on-demand, up to 200 hours of a customer's personal video recordings (PVR) from the cloud, and the ability to download any recordings to take on the go.

Phone

Our Phone service offers a full-featured residential digital telephone service through our wireline network as a complement to our broadband Internet and Video services.

Broadcast Services

Shaw Broadcast Services utilizes our satellite network to manage one of North America's largest full-service commercial signal distribution networks. Shaw Broadcast Services currently provides distribution of English, French, third-language, Canadian, US, and International television and radio programming services to hundreds of multichannel operators.

As we continue to improve overall efficiency and provide a seamless connectivity experience to our customers, the Company announced that commencing in fiscal 2020, the Wholesale Wireline Network Services and Broadcast Services will be reported as part of the Consumer division (previously reported under the Shaw Business division).

Satellite Services

Shaw Direct connects families across Canada with Video and audio programming by satellite. Shaw Direct customers have access to over 370 digital video channels (including over 350 HD channels) and thousands of on-demand, pay-per-view (PPV) and subscription movie and television titles. In May 2020 we completed network upgrades which allow us to provide all available English and French services in HD – the first Canadian satellite provider to do so.

Our satellite customers receive choice with each of our current primary TV packages, which include a base set of channels and tiered customization options depending on the size of the TV package. Shaw Direct customers can further customize their TV packages by adding additional theme packs, premium packages, and individual channels.

Shaw Direct is one of two licensed satellite Video services currently available across Canada. While Shaw Direct has many customers in urban centres, market penetration for satellite Video is generally stronger in rural areas. The service is marketed through Shaw Direct and a nation-wide distribution network of third party retailers.

We are committed to securing and delivering leading technology for our customers. Currently, we have access to three satellites that enable us to enhance our offerings with nearly all HD programming and improved service quality. One of our satellites, Anik F1R, is currently being decommissioned as it approaches the end of its life. Decommissioning activities will continue through August 2021 and the Company expects to replace Anik F1R satellite capacity through further service consolidation on Anik G1 as well as the introduction of new leased satellite capacity on Anik F3 in fiscal 2021.

A listing of our satellite capacity is provided below as at August 31, 2020.

Shaw Satellite Transponders

Transponders	Interest	Nature of Satellite
Anik G1	16 xKu-band	Leased
Anik F2 [1]	22 Ku-band	Leased[2]
Anik F1R [3]	6 Ku-band[2] 1 C-band	Leased Leased

(1) On September 15, 2017, the Company sold a group of assets comprising the operations of Shaw Tracking, a fleet tracking operation, to Omnitracs Canada. As part of the transaction, the leases to access the Anik F2 2 Ku-band (partial) and the Intelsat Galaxy 16 1 Ku-band (partial) were assigned to Omnitracs Canada.

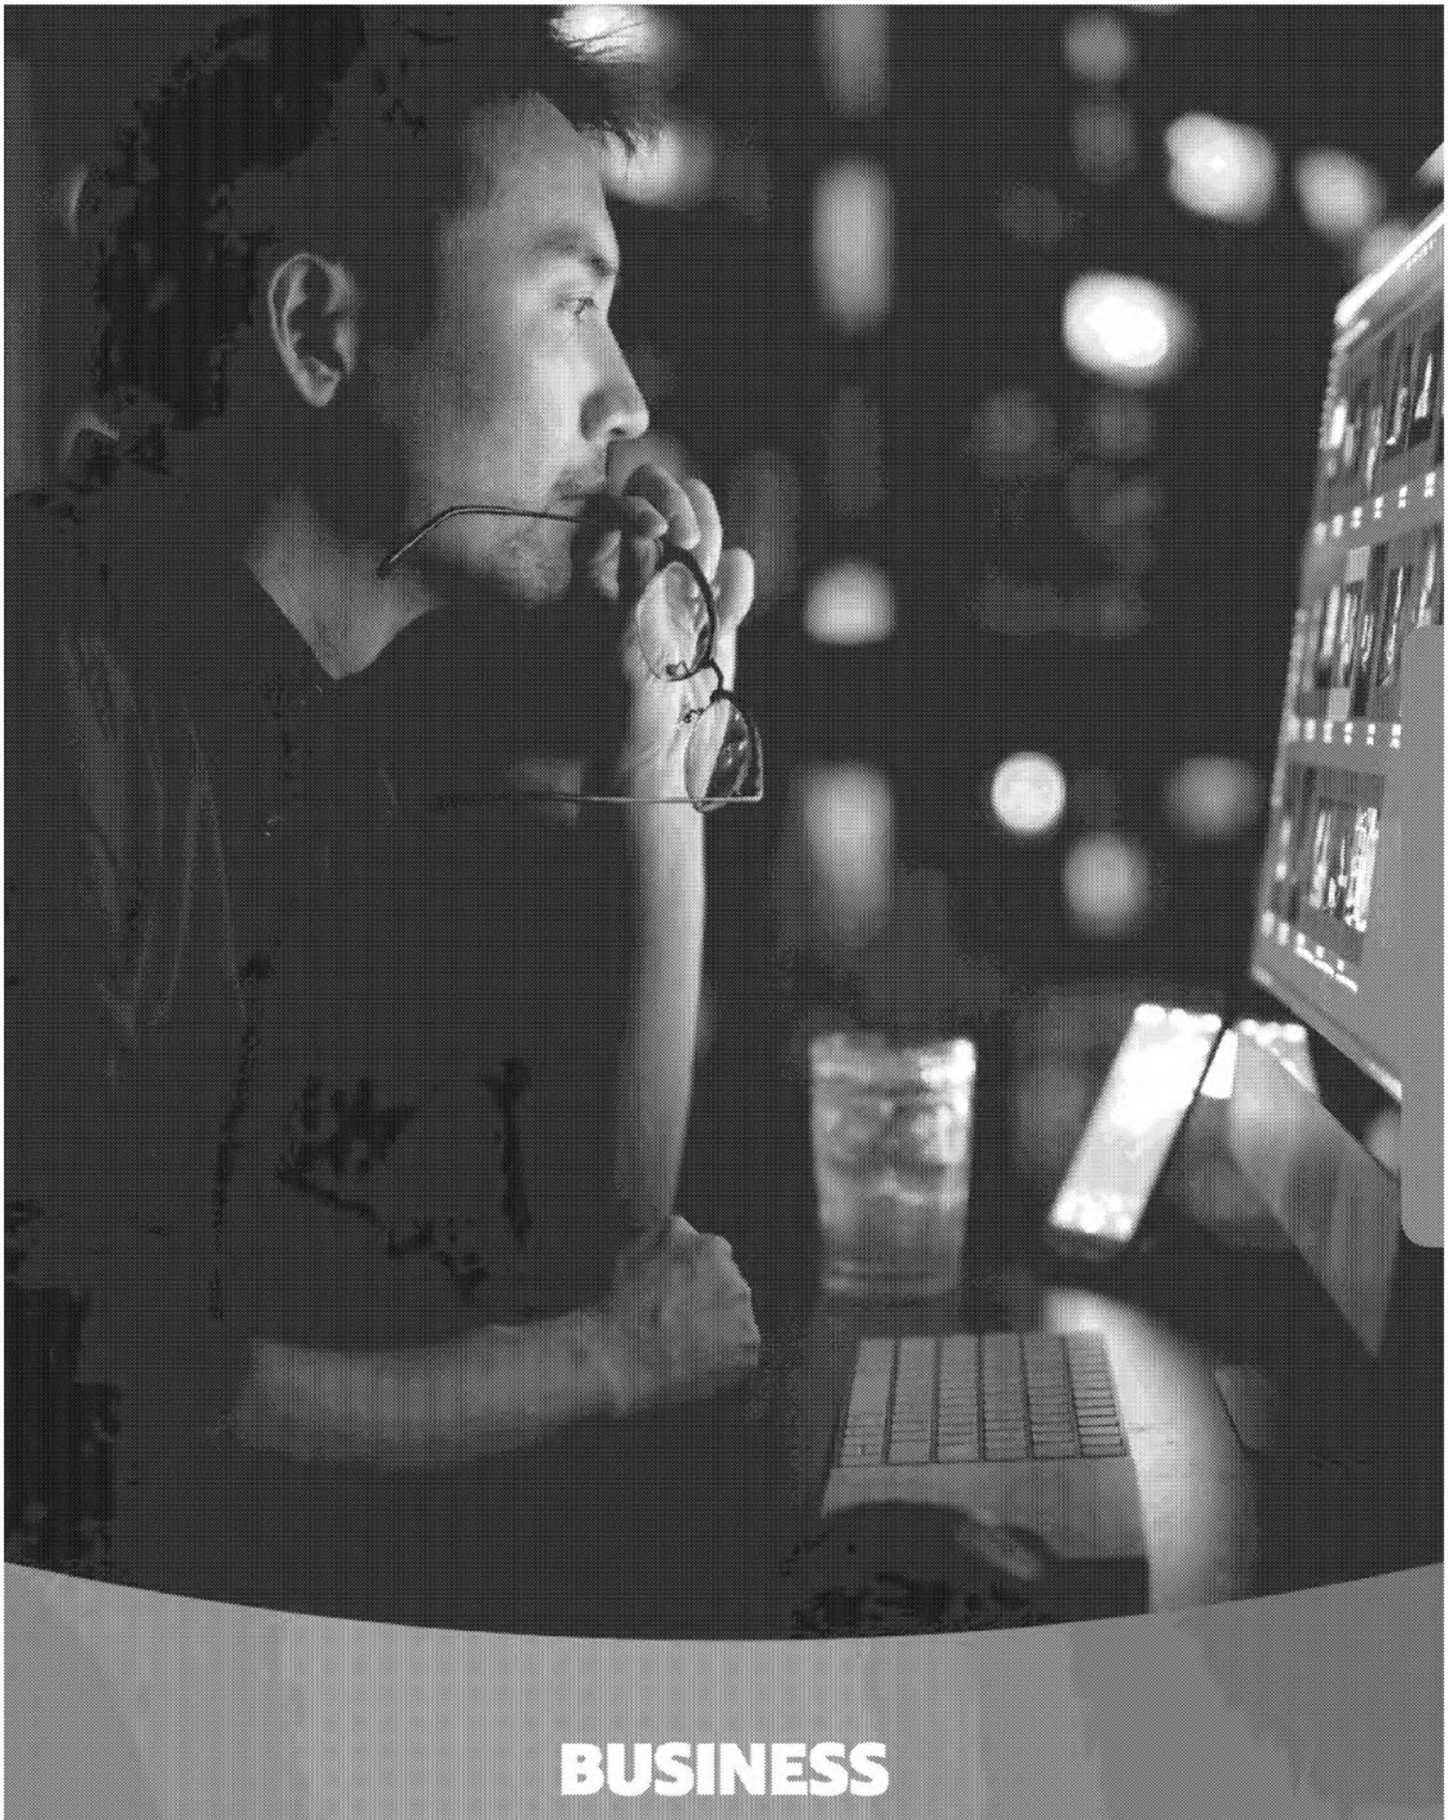
(2) Effective October 1, 2019, the Company transferred its interest in 16 Anik F2 transponders, which it previously owned, back to Telesat Canada ("Telesat"), adjusted its satellite traffic on the Anik F1R and Anik F2 satellites, and renewed its capacity service agreements on 6 Anik F1R Ku-band transponders and 16 Anik F2 Ku-band transponders until the effective end-of-life date of such satellites.

(3) Anik F1R is undergoing decommissioning activities through August 2021 and the Company expects to replace Anik F1R's satellite capacity through further service consolidation and the introduction of new leased satellite capacity on Anik F3 in fiscal 2021.

Seasonality in Consumer Subscriber Activity

While financial results for the Consumer division are generally not subject to significant seasonal fluctuations, subscriber activity may fluctuate from one quarter to another. Subscriber activity may also be affected by competition and Shaw's promotional activity. Further, satellite subscriber activity is modestly higher around the summertime when more subscribers have second homes in use. Our Consumer Video business does not depend on any single customer or concentration of customers.

As a result of the impact of the COVID-19 pandemic, in the second half of fiscal 2020, the Consumer division experienced a reduction in overall subscriber activity and increase of approximately 50% in wireline network usage as well as extended peak hours.



BUSINESS

Business Services

Shaw Business provides connectivity solutions to business customers of all sizes, from home offices to medium and large-scale enterprises, by leveraging our business grade Fibre+ and fibre-to-the-premise (FTTP) networks.

The range of services offered by Shaw Business includes:

Fibre Internet

Our scalable, symmetrical fibre Internet solutions offer download speeds that range from up to 10 Mbps to more than 10 Gbps.

Business Internet

Shaw Business customers can choose from four packages with download speeds ranging from up to 75 Mbps to 1 Gbps. Each package comes with unlimited data usage as well as one dynamic and one static IP address.

In fiscal 2020, Shaw Business launched LTE Backup on January 20, 2020 – a simple, $25 per month, add-on service for Business Internet and SmartWiFi customers that auto-connects, via LTE networks, to the critical systems and applications that our customers want to keep online during an outage (and when the outage is over, everything switches back to the customer's primary Internet connection).

In the first quarter of fiscal 2021, we began increasing upload speeds for certain Business Internet packages. We also upgraded our 600 Mbps plan to 750 Mbps and introduced a new speed tier – up to 300 Mbps download by up to 125 Mbps upload.

Data Connectivity

Shaw Business provides secure private connectivity for business customers operating at multiple locations or connecting branch locations to a head office. Our enhanced data service, Ethernet over DOCSIS (EoD), offers symmetrical data speeds of up to 100 Mbps.

Voice Solutions

Shaw Business offers a range of voice solutions from traditional analog to digital Business Phone and robust, fully-managed voice systems with unified communications functionality.

In addition to competitive long-distance rates across the globe and month-to-month uncontracted rates, Shaw Business Phone customers have 2, 3, and 5-year contract options to provide cost consistency for their business.

Video

Shaw Business provides Video and audio services for public viewing. Similar to our Consumer Video service, Business cable and satellite customers can choose from a selection of primary channel packages and may add from a variety of sports, family, and other theme specialty packages, and a number of individual channels that we offer on a channel-by-channel basis.

In August 2019, Shaw Business launched a Video Casting solution for hospitality customers, providing their guests the ability to securely and seamlessly cast video content from their personal devices to a guest room television. This property management solution streamlines the guest authentication experience and enables hoteliers to monetize their WiFi solution.

In February 2020, Shaw Business launched new Video packaging that provides enhanced choice and flexibility for its hospitality customers, giving guests an improved Video experience during their stay.

Broadcast Video

Shaw Business delivers high-quality Video to service providers across North America in real time.

Collaboration Tools

To build out a more robust collaboration offering, on June 25, 2020 Shaw Business launched Microsoft 365 – our first software as a service product – to small and medium sized businesses. The solution includes Microsoft 365 Business Basic and Business Standard products intended to help Shaw business customers boost productivity and collaborate seamlessly.

Smart Suite Services

Shaw Business has positioned itself as a trusted business advisor by taking care of all aspects of its customers' increasingly complex always-on connectivity requirements so they can focus on growing their businesses. As part of this strategy, Shaw collaborates with global scale technology leaders to offer its "Smart" suite of easy-to-use and flexible managed business communications solutions. The Smart suite of services provides cost-effective enterprise grade managed IT and communications solutions that are increasingly valued by businesses of all sizes as the digital economy grows in scope and complexity.

The Smart suite of services includes:

SmartVoice

SmartVoice is a unified communications solution that integrates instant messaging, presence, email, video conferencing, and a mobile application that is built on Broadsoft's BroadWorks platform. From comprehensive traditional phone features such as auto-attendant, hunt groups, and call recording to collaboration tools such as instant messenger and screen sharing, SmartVoice gives businesses the flexibility to work in a modern way.

SmartVoice offers three different levels of packaging based on business needs and is available on 2, 3, or 5-year contract terms.

SmartWiFi

SmartWiFi is a fully-managed Internet solution deployed over Cisco Meraki's platform that enables seamless and secure wireless connectivity for employees, customers, and guests in the office. SmartWiFi also enables access to a cloud portal where customers can easily manage their service, configure their set service identifiers (SSIDs) to gain insight from network analytics, and create a custom dashboard.

Available at download speeds of up to 75 Mbps, 300 Mbps, 750 Mbps, and 1 Gbps, and including wireless access points, SmartWiFi provides our Shaw Business customers with exceptional WiFi coverage on 1, 2, 3, or 5-year contract terms.

In the first quarter of fiscal 2021, we began increasing upload speeds for certain SmartWiFi packages. We also upgraded our 600 Mbps plan to up to 750 Mbps, and introduced a new speed tier – up to 300 Mbps download by up to 125 Mbps upload.

Smart Remote Office

Launched on August 11, 2020 as a timely response to the COVID-19 pandemic that forced many Canadians to work from home, this new product allows business customers' employees to securely connect to the head office from anywhere. Smart Remote Office is a plug-and-play, no-touch provisioning solution that provides security and virtual private network (VPN) tunneling for employees working remotely.

SmartSecurity

SmartSecurity is a fully-managed network security platform deployed over Cisco Meraki's platform that protects a wired and WiFi network at the edge with access control, virus protection, the ability to control which applications run on the network, content filtering, and the connection of branch locations. A SmartSecurity premium package also includes the ability to set-up a secure VPN.

Shaw Business also offers LTE Backup, an add-on service for SmartSecurity which provides redundancy through a secondary Internet connection that ensures seamless and automatic failover in case of an outage.

SmartSecurity is available when bundled with SmartWiFi or Business Internet on 3 or 5-year contract terms.

SmartSurveillance

SmartSurveillance is a fully-managed, enterprise-grade security camera solution deployed over Cisco Meraki's platform. Managed through a cloud-portal, SmartSurveillance enables business owners to view footage and manage their cameras from anywhere using an intuitive on-line dashboard.

Sophisticated features, such as motion-based search and heat mapping, allow owners to quickly find footage of interest and identify activity patterns. SmartSurveillance can be bundled with SmartWiFi or Business Internet 75 and above on a 3 or 5-year contract term.

SmartTarget

On September 21, 2020, Shaw Business launched SmartTarget, an all-in-one marketing and advanced insights solution that leverages the power of SmartWiFi and a new technology to give business owners a better understanding of their customers' wants and needs to help increase traffic at their physical locations, boost revenue, and build relationships with their customers.

With SmartTarget available as an add-on service to Shaw's SmartWiFi, business owners can get customer demographic insights when visitors join the business owner's guest WiFi network. Once their visitors/customers have opted-in, business owners can use the SmartTarget solution to create targeted emails, surveys, and coupons to help increase customer loyalty, build relationships, and boost store revenues.

Software Defined Wide Area Network (SD-WAN)

SD-WAN provides businesses with a better way to connect multiple offices in a scalable and cost-effective manner on a cloud-managed platform. With integrated security, multiple Internet links, seamless LTE failover, and intelligent path control, SD-WAN enables companies to deploy a resilient, cost-effective, and high-bandwidth connectivity solution.

Powered in partnership with Cisco Meraki, SD-WAN sites are connected by Internet links secured by our SmartSecurity service which provides network protection and cloud-based security policy updates to protect businesses from the latest vulnerabilities and network threats.

Session Initiation Protocol (SIP) Trunking

Our next-generation SIP Trunking solution, on the Broadsoft platform, delivers a centralized voice solution managed in an easy-to-use cloud portal. SIP allows customers to pay only for what they need with the ability to scale the system quickly as their businesses grow.

The integration with Broadsoft's platform provides businesses with access to unified communications features such as video conferencing, call queuing, and auto-attendant as well as the ability to join offices with SmartVoice and SIP into the same environment to reduce costs and increase efficiency.

Wholesale Wireline Network Services

Using our national and regional access wireline networks, we provide services to Internet service providers (ISPs), other communications companies, broadcasters, governments, and other businesses and organizations that require end-to-end Internet and data connectivity in Canada and the United States. We also engage in public and private peering arrangements with high speed connections to major North American, European, and Asian networks and other tier-one backbone carriers. All service solutions are sold on 1, 3, or 5-year contract terms and pricing is negotiated based on the specific solution provided to the customer.

Business Subscriber Activity

Beginning in the second half of fiscal 2020, the COVID-19 pandemic, as well as the commodity price challenges in western Canada, impacted the Business division by causing the suspension or cancellation of a number of Business customer accounts and slowing revenue growth.

Prior to the pandemic, the Business division was on track to deliver another solid year of revenue growth. Despite the difficult market circumstances and the fact that 70% of Business revenue comes from the highly impacted small to medium sized business sector, Shaw Business still managed to achieve year-over-year revenue growth of approximately 2%.

In order to continue to meet the evolving needs of our customers, we are executing our plan to ensure that our Fibre+ wireline network keeps pace with our customers' expectations for bandwidth, speed, and reliability. See "Shaw's Wireline Network" for a description of our wireline network and the advances that we are undertaking.

Our World-Class Converged Network

The severity and duration of impacts related to the COVID-19 pandemic remain uncertain and management continues to focus on the safety of our people (most of whom continue to work from home), connectivity of our customer base, compliance with guidelines and requirements issued by various health authorities and government organizations, and continuity of other critical business operations. Throughout this challenging and unprecedented time, we are proud of the strength of our facilities-based networks, which are not just the core of our digital infrastructure – they are the backbone of our social and economic wellbeing. We have invested billions on building and improving our network and services and the benefits of these investments have never been more critical for Canadians during this crisis.

Shaw's Wireline Network

At Shaw, we are proud of our advanced Fibre+ network, which combines the power of fibre, coax, and WiFi and consists of our:

- North American fibre backbone;
- regional fibre optic and co-axial distribution networks; and
- local Shaw Go WiFi connectivity.

This fiscal year, Shaw's Fibre+ network demonstrated its strength with the launch of our Fibre+ Gig speed tier to over 99% of our western Canadian Wireline operating footprint, while expanding the availability of our 1 Gbps download/125 Mbps upload speed tier (currently the fastest broadly available upload speed tier of any North American cable operator) to all businesses in our major markets. Both of these upgrades were enabled by the deployment of DOCSIS 3.1 and Shaw's industry leading Mid-Split program, which significantly expands usable spectrum on the coaxial "last-mile" of Shaw's Fibre+ network.

The challenges and disruptions associated with the COVID-19 pandemic caused an increase of approximately 50% in wireline network usage as well as extended peak hours. Despite the unprecedented increase in network demands, Shaw was able to maintain our virtually congestion free Internet experience, regardless of the time of day. The investments in our network infrastructure, and our Mid-Split upgrade in particular, allowed Shaw to quickly and seamlessly activate additional capacity. The design and highly resilient nature of Shaw's metro and backbone networks also ensured our services remained stable during this time. Ultimately, the COVID-19 pandemic has highlighted the importance and critical nature of advanced facilities-based broadband networks and demonstrated the strength of Shaw's network infrastructure and our technology roadmap. The strength and performance of our Fibre+ network was further recognized when Ookla named Shaw the fastest and most consistent Internet provider in western Canada. Across British Columbia, Alberta, Manitoba, and Saskatchewan, Shaw's Fibre+ network was reported as the fastest.

Wireline Backbone

The backbone of Shaw's wireline network includes terabits of capacity over multiple fibres on two diverse cross-North America routes. The southern route principally consists of approximately 7,000 route kilometres of fibre located on routes between Seattle and New York City (via Vancouver, Calgary, Regina, Winnipeg, Toronto, Chicago, and Buffalo). The northern route consists of approximately 5,000 route kilometres of fibre between Prince George and Montreal (via Edmonton, Saskatoon, Winnipeg, Thunder Bay, Toronto, and Ottawa). Current fibre construction to extend our northern route from Prince George to North Vancouver is underway in collaboration with the federal government's Connect to Innovate and Connecting British Columbia programs. A third secured capacity backbone route for advanced redundancy is located from Vancouver to Edmonton to Calgary and Calgary to Toronto through Dallas and New York. These routes, along with a number of other secured capacity routes, provide redundancy for the network. Shaw also uses a marine route consisting of approximately 330 route kilometres from Seattle to Vancouver (via Victoria), and has secured additional capacity on routes between a number of cities, including (i) Vancouver and Calgary, (ii) Seattle and San Jose, (iii) Seattle and Calgary, (iv) Seattle and Vancouver, (v) Toronto and New York City, (vi) Toronto and Montreal, (vii) Edmonton and Fort McMurray, and (viii) Denver and Calgary.

During fiscal 2020, Shaw rapidly increased the capacity on numerous backbone links to stay ahead of COVID-19 related growth in traffic.

Regional Distribution Network

We connect our backbone network to residential and business customers through our extensive regional fibre optic and Fibre+ distribution networks.

Over the past decade, Shaw has driven fibre optic cable into every neighborhood we serve. Today, our customers' Internet traffic runs over a route comprising over 99.9% fibre optic cable. In the last few hundred metres between our fibre nodes in customers' neighborhoods and the home or business we serve, we leverage our highly robust and future proof coaxial cable to deliver our fastest speeds to over 99% of our residential customers located in our western Canadian Wireline operating footprint. This fiscal year, we officially rebranded our broadband tiers to "Fibre+" to reflect the true nature of our network and to better articulate the strength of our access network technology and strategy.

In fiscal 2020, we continued to leverage our DOCSIS 3.1 technology and advanced BlueCurve Gateway modem to launch our Fibre+ Gig speed tier to over 99% of homes across our western Canadian Wireline operating footprint. To expand the capacity of our Fibre+ network we are continually increasing the spectrum usable on our cable plant, which enables increased upstream and downstream capacities. In fiscal 2020, we completed our industry leading Mid-Split program in our major markets. This upgrade has allowed us to significantly increase the upstream and downstream capacity available on our Fibre+ distribution network. Shaw was also able to quickly leverage this capacity during the COVID-19 pandemic to not only prevent network congestion, but to also launch our new Fibre+ Gig speed tier to virtually every home we serve. We expect that efficient spectrum expansion upgrades, such as our Mid-Split program and other future technologies, will continue to allow cable technology to achieve fibre equivalent performance.

Shaw continues to optimize the capacity and efficiency of our wireline network and has virtually eliminated network congestion by deploying fibre optic cable deeper into our access networks and closer to where our customers reside. We continue to increase the number of optical serving areas or "nodes" in the wireline network. This is a continuous process that we apply year-over-year to increase fibre optic usage in our wireline network. Driving fibre deeper into our network also supports wireless and business service deployments, as well as future services such as 5G, FTTP, or the newly released DOCSIS 4.0 specification, which are all potential building blocks for multi-gigabit symmetrical services over our existing infrastructure.

Additionally, Shaw continues to leverage our converged network to enable the rapid and flexible deployment of small cells in support of our wireless network and preparations for 5G, due to the ability of our Fibre+ network to transport both power and multi-gigabit data speeds on one cable.

Shaw Go WiFi

Shaw has created Canada's most extensive WiFi network, Shaw Go WiFi. Shaw Go WiFi broadens a Shaw Internet customer's broadband experience beyond the home as a valuable extension of our customer wireline network experience. Over 3.7 million devices have authenticated to our carrier-grade Shaw Go WiFi network and there are over 117,000 public access points used by our customers in coffee shops, restaurants, gyms, malls, public transit, and other public spaces covering locations from British Columbia to Ontario. In addition to these public access points, Wireless customers can seamlessly access more than 350,000 home hotspots across western Canada, making it easier to stream and download at a friend's or relative's home.

We have made several investments to further enhance the Shaw Go WiFi services. In fiscal 2020, we began offering download speeds of up to 100 Mbps, tuned the network to provide customers better performance at the edge of the coverage range, and simplified the login process.

Shaw's Wireless Network

Supporting our Wireless revenue growth are the significant investments in our wireless network and customer service capabilities. We are executing on our operating plan to improve our network and deploy spectrum in an efficient manner. Wireless network investments to improve the customer experience continue to be a priority in the areas in which we operate and serve customers.

Shaw partnered with NOKIA to roll-out our next generation LTE wireless network in our existing markets in Ontario, Alberta, and British Columbia. In fiscal 2020, we continued to deploy our Extended Range LTE network, which leverages our 700 MHz wireless spectrum, to provide customers with improved in-building coverage as well as extending coverage. At the end of fiscal 2020, the deployment of our 700 MHz spectrum was virtually complete in western Canada and approximately 70% complete nationwide, with the remaining deployment expected to continue throughout fiscal 2021. In fiscal 2020, Shaw started to deploy its 600 MHz spectrum, which is expected to continue throughout fiscal 2021.

In fiscal 2020, the Company continued to deploy small cell technologies (low powered wireless antennas and receivers with a range of 100m – 200m) designed to enhance coverage and performance in dense urban locations. As high-power towers keep the network signal strong across large distances, small cells suit more densely developed areas like city centres and popular venues by providing LTE/VoLTE quality speed, capacity, and coverage improvements in these high traffic areas. The deployment of small cell technology was further enhanced by the activation of additional macrosites and the recent upgrades to our Fibre+ network that provide the ability to power and backhaul network traffic. With the completion of the Mid-Split program in major markets in fiscal 2020, the additional capacity created can be leveraged to improve our wireless network, highlighting the synergies of Shaw's converged network strategy in building out its wireline and wireless networks.

Through years of thoughtful and strategic capital investing, we continue to expand and improve our facilities-based wireless network to meet the evolving needs of our customers and continue to fuel our wireless momentum. In fiscal 2020, our operational support systems were enhanced to streamline activation capabilities and provide proactive monitoring and assurance capabilities to assist our operational teams with awareness of potential service issues.

Shaw Mobile

On July 30, 2020, Shaw launched Shaw Mobile, a new wireless service in western Canada that leverages our LTE and Fibre+ networks, along with Canada's largest WiFi network, to provide Shaw Internet customers with an innovative wireless experience that can help reduce their monthly wireless data bill. To support the Shaw Mobile launch, all supporting network features were activated, new models of wireless handsets were certified, and new support services were activated. Our back-office systems were modernized to provide our frontline teams with a modern and intuitive interface to help streamline our internal processes. These upgraded systems also enable the Company to rely on cloud first technologies rather than traditional proprietary systems, which provide for enhanced and improved scaling, resiliency, and agility as we continue to grow Shaw Mobile's business.

Private LTE

Shaw is a leader in developing and delivering Private LTE technology solutions for Canada's mining and energy industries. Private LTE is a complete, standalone cellular network that is used exclusively by the end customer for their business operations. In fiscal 2020, Shaw, in collaboration with Teck Resources Limited ("Teck") and NOKIA, deployed Canada's first Private LTE network using commercial mobile spectrum at Teck's Elkview steelmaking coal mine located in the Elk Valley region of British Columbia. The wireless network deployment at Elkview will generate significant operational value for Teck, providing significantly greater coverage and connectivity. This network will carry many of Teck's current mission critical applications and is built to also enable future Internet-of-things (IoT) and 5G requirements.

Shaw continues to work with other industry partners to develop and deploy Private LTE networks.

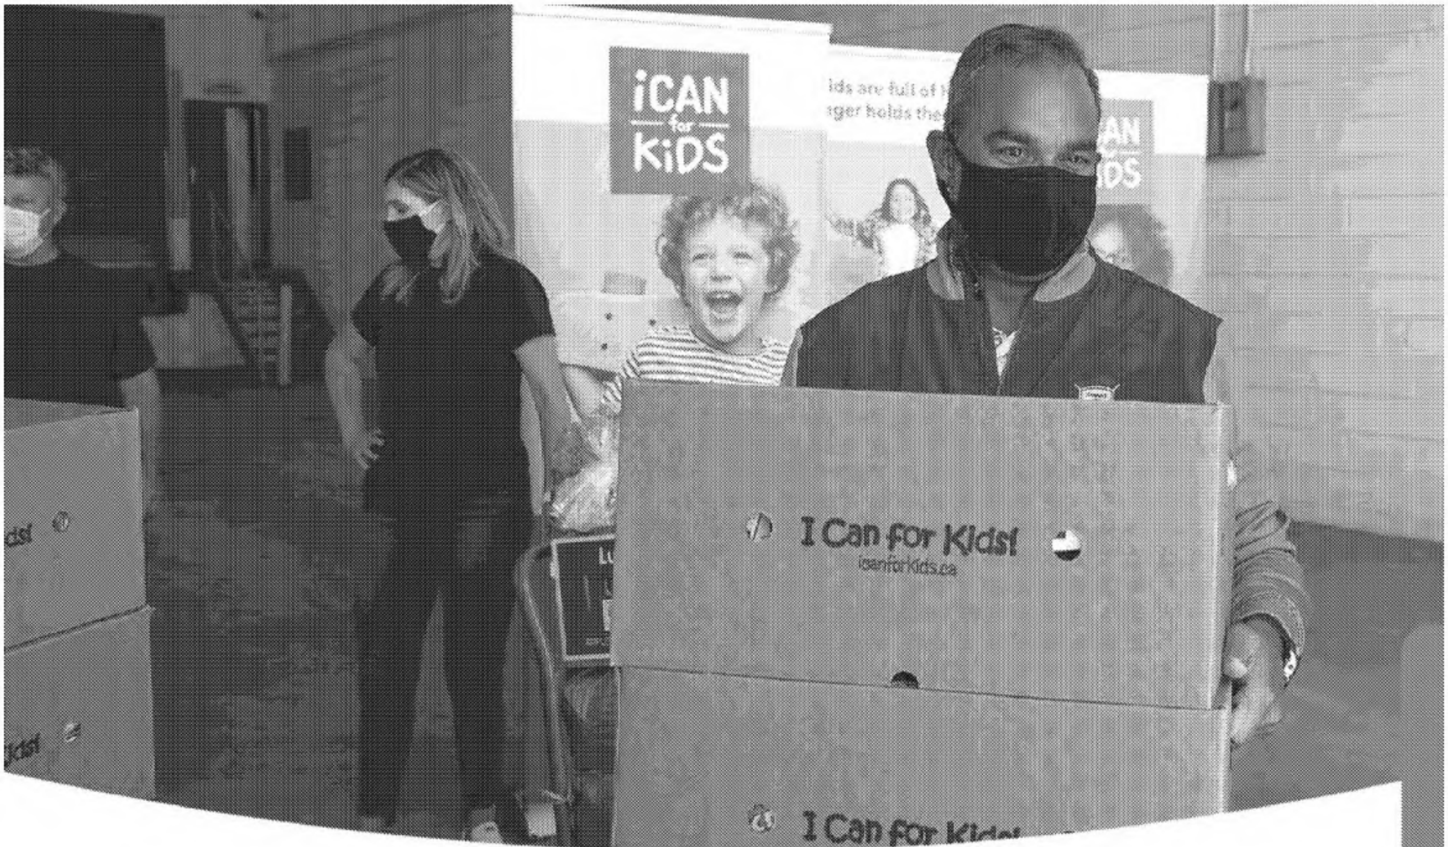
Spectrum holdings

In April 2019, the Company successfully acquired 11 paired blocks of 20-year 600 MHz spectrum across its Wireless operating footprint, for a total purchase price of $492 million, or $0.78 per MHz-Pop. The spectrum licences secured through the 600 MHz spectrum auction include 30 MHz across each of British Columbia, Alberta, and southern Ontario as well as 20 MHz in eastern Ontario. This spectrum, and the incremental network investment to deploy the spectrum, is expected to materially improve our long-term Wireless customer experience and further enable our ability to offer converged network solutions.

In addition to the 600 MHz spectrum acquired in April 2019, our Wireless division currently holds 50 MHz of AWS spectrum, 10 MHz of 700 MHz spectrum and 20-40 MHz of 2500 MHz spectrum in the main service areas of southern Ontario, Alberta, and British Columbia. We also hold 20-60 MHz of AWS spectrum, 0-10 MHz of 700 MHz spectrum, and 0-30 MHz of 2500 MHz spectrum in other markets within southern Ontario, eastern Ontario, Alberta, and British Columbia.

As discussed below, Innovation, Science and Economic Development Canada's (ISED) 3500 MHz spectrum auction is scheduled for June 2021 with up to 200 MHz of spectrum available and a set aside of 50 MHz in most Tier 4 service areas. ISED has also undertaken a consultation regarding the policy framework for the 3800 MHz spectrum band that proposes to reallocate a sizeable portion of the C-band (3700-4200 MHz) for flexible use (i.e., fixed and mobile) services. For further detail see "Government Regulations and Regulatory Developments – Radiocommunication Act – Wireless Spectrum Licences."

The Company expects that its spectrum assets will continue to support anticipated growth in Wireless subscribers, as well as geographic expansion and scale opportunities in the provinces in which we operate.



Community Investment

Shaw's community investment activities continue to build brand awareness and affinity, deepen employee engagement, drive revenue, and advance government and investor relationships while having demonstrable impacts in our communities.

In fiscal 2020, Shaw's Community Investments were valued at over $40 million, supporting over 750 community organizations and 850,000 low income and vulnerable youth across the country. In the past year, our employees came together and contributed over $1.25 million and thousands of volunteer hours to hundreds of charities across the country through our employee giving programs.

Notably, the COVID-19 pandemic changed our world in profound and challenging ways, with major implications for how we gather, work, learn, travel, and connect. For the most vulnerable in our society, the pandemic had an immediate and profound impact.

In the early stages of the crisis, we took decisive action to launch the #ShawHelps initiative to help Canadians feel connected, safe, and engaged as they navigated through the unpredictable challenges brought on by the pandemic. These steps included:

- helping address the dramatic increase in food insecurity and social isolation with a $1 million donation to Community Food Centres Canada;
- opened Shaw Go WiFi across western Canada, giving access to the country's largest network of WiFi hotspots;
- provided two months of free Internet service to low-income families who are part of the Government of Canada's "Connecting Families" program;
- provided all Shaw Cable and Shaw Direct customers access to several TV channels at no additional cost;
- provided Freedom Mobile customers with a rate plan of 3GB of data or less with an extra 2GB of data for free;
- confirmed no data caps on our Internet plans and not limiting our customers' Internet data use;
- collaborated with core partners to create a K-12 virtual education platform available for all Canadians to assist families as their kids schooling moved remotely;
- provided devices and connectivity to support hundreds of students, families, seniors, marginalized Indigenous groups, and victims of domestic violence to help ensure they could continue to learn, stay connected, and access critical social services and support; and
- supported over 75 grassroots organizations in over 50 communities with relief and recovery grants.

Our signature sponsorship, the Shaw Charity Classic, has raised over $50 million for more than 200 charities supporting Alberta youth since 2013. While pandemic-related restrictions forced the event's cancellation in 2020, we recognized it had critical importance to the fundraising activities of local charities and were pleased to donate $1.15 million in fiscal 2020 to support the kids' charities that benefitted from the event.

In fiscal 2021, we will continue to evolve our community investment approach to better meet the needs of our stakeholders through continued cross-functional execution, operational integration, and modernization. By sharpening the focus of our large and grassroots charitable donations and doing more to integrate philanthropic activities with our marketing tactics, Shaw's community investments can continue to help elevate the Company's profile as a community leader committed to enabling a better future for Canadians.

Climate Change and Environmental Responsibility

Shaw is committed to delivering a seamless connectivity experience to Canadians in an environmentally responsible and sustainable manner. A key focus area for the Company involves efficiency and innovation, which includes:

- **Reducing Consumption** – we support efforts to reduce employee, customer, and enterprise consumption of:
  - a) Energy – through the use of energy efficient technologies,
  - b) Water – by reducing water consumption in Shaw owned buildings, and
  - c) Paper – by continuing to promote e-bill and efficient printing behaviours amongst employees and customers to reduce paper use by shifting interactions to digital platforms as part of the Company's digital transformation.
- **Waste Reduction** – to reduce employee, customer, and enterprise waste we have implemented waste diversion and e-waste recycling programs and reduced single-use items in our marketing campaigns and packaging.
- **Reducing Carbon Emissions** – to reduce Shaw's carbon footprint through reduction (e.g., LED lighting, high-efficiency boilers, e-billing, reduced truck rolls due to increased consumer self-install of customer premises equipment (CPE)) and market-based instruments (e.g., renewable energy, offsets);
- **Engagement and Awareness** – to continuously drive employee, customer, and enterprise awareness of Shaw's environmental initiatives. Engaging employees in our journey – through the establishment of green teams, earth week, and waste reduction initiatives – to advance our goals of educating and sharing common beliefs and values around environmental sustainability.

The Company participated in the Society of Cable Telecommunications Engineers' (SCTE) Energy 2020 program, which set goals for reducing power consumption, energy costs, and grid dependency. Shaw contributed to these goals through initiatives such as optimizing network equipment sizing and controls, renegotiating power costs, and participating in demand response programs.

Shaw is also a signatory of the Canadian Energy Efficiency Voluntary Agreement (CEEVA) with respect to Set-Top Boxes (STBs) and Small Network Equipment (SNE). CEEVA aims to significantly reduce the total annual energy consumption used by STBs and SNEs in Canada, cutting the annual carbon emissions by over 100,000 tons – the equivalent of taking 44,000 cars off the road (i.e., subcompact cars driving 15,000 km per year).

Environmental and Social Governance

In fiscal 2020, we continued to make progress on our environmental, social, and governance (ESG) initiatives and expect to provide additional transparency and details in our forthcoming ESG report, which will include, among other things, the critical role it plays in shaping our strategy.

GOVERNMENT REGULATIONS AND REGULATORY DEVELOPMENTS

Substantially all of the Company's Canadian business activities are subject to regulations and policies established under various pieces of legislation, including the *Broadcasting Act* (Canada) ("*Broadcasting Act*"), the *Telecommunications Act* (Canada) ("*Telecommunications Act*"), the *Radiocommunication Act* (Canada) ("*Radiocommunication Act*"), and the *Copyright Act* (Canada) ("*Copyright Act*"). Broadcasting and telecommunications are generally administered by the Canadian Radio-television and Telecommunications Commission (CRTC or the "Commission") under the supervision of the Department of Canadian Heritage ("Canadian Heritage") and ISED, respectively. The allocation and use of wireless spectrum in Canada are governed by spectrum licences issued by, and radio authorization conditions set by, ISED pursuant to the *Radiocommunication Act*.

In June 2018, ISED and Canadian Heritage launched the Broadcasting and Telecommunications Legislative Review (BTLR), which also included a review of the *Radiocommunication Act*. The BTLR was conducted by a panel of external experts (the "Expert Panel") tasked with studying the legislation. On January 29, 2020, the Expert Panel issued its final report making recommendations to the Ministers of Innovation, Science and Industry and Canadian Heritage for modernizing Canada's *Broadcasting Act*, *Telecommunications Act*, and *Radiocommunication Act* (the "BTLR Final Report"), including certain recommendations for legislative and regulatory changes that could impact the business practices of the Company and/or result in new fees for the Company if implemented by the federal government (see "Potential Legislative Changes" in the *Broadcasting Act* and *Telecommunications Act* sections, below). Although the BTLR was initiated – and the Expert Panel was instituted – by the federal government, the Expert Panel was independent of the federal government and its recommendations may or may not be reflected in any legislative reform introduced by the federal government.

Limits on Non-Canadian Ownership and Control

Neither a holding company that has a subsidiary operating company licensed under the *Broadcasting Act*, nor any such licensee, may be controlled in fact by non-Canadians, the determination of which is a question of fact within the jurisdiction of the CRTC. Pursuant to the Direction to the CRTC (Ineligibility of Non-Canadians) (the "Direction"), non-Canadians are permitted to own and control, directly or indirectly, up to 33.3% of the voting shares and 33.3% of the votes of a holding company that has a subsidiary operating company licensed under the *Broadcasting Act*. In addition, up to 20% of the voting shares and 20% of the votes of a licensee may be owned and controlled, directly or indirectly, by non-Canadians. As well, the chief executive officer (CEO) and not less than 80% of the board of directors of the licensee must be resident Canadians. There are no restrictions on the number of non-voting shares that may be held by non-Canadians at either the holding company or licensee level. If a holding company of a licensee does not satisfy the requirement that 80% of its board of directors be resident Canadians, it must have a CRTC-approved Independent Programming Committee (IPC) in place to ensure that neither the holding company nor its directors exercise control or influence over the programming decisions of its subsidiary licensee. With CRTC approval, Shaw has implemented an IPC to comply with the Direction.

Similar restrictions apply to certain Canadian carriers pursuant to the *Telecommunications Act*, the *Radiocommunication Act* and associated regulations, except that there is no requirement that the CEO be a resident Canadian of a company operating pursuant to those Acts. Instead, the *Telecommunications Act*, the *Radiocommunication Act* and associated regulations require only that 80% of the voting shares of such entities be held by resident Canadians. The Canadian ownership requirements do not apply to wireline and wireless telecommunications carriers that have annual revenues from the provision of telecommunications services in Canada that represent less than 10% of the total annual revenues for the sector.

The Company's Articles contain measures to ensure the Company continues to comply with applicable Canadian ownership requirements and its ability to obtain, amend, or renew a license to carry on any business. Shaw must file a compliance report annually with the CRTC confirming that it is eligible to operate in Canada as a telecommunications common carrier.

Broadcasting Act

Pursuant to the *Broadcasting Act*, the CRTC is mandated to regulate and supervise all aspects of the broadcasting system in a flexible manner. The *Broadcasting Act* requires broadcast distribution undertakings (BDUs) to give priority to the carriage of Canadian services; to provide efficient delivery of programming services at affordable rates; to provide reasonable terms for the carriage, packaging and retailing of those programming services; and provides the option to operate a community channel. Under the *Broadcasting Act*, the Governor in Council (GiC) may issue broad policy directions of general application on matters with respect to the objectives of Canada's broadcasting policy and related regulatory policy.

The *Broadcasting Act* also sets out requirements for television broadcasters with respect to Canadian content. The Company's broadcasting distribution business and on-demand programming services depend on licences (or operate under an exemption order) granted and issued by the CRTC under the *Broadcasting Act*. Pursuant to CRTC regulations, the Company is required to contribute 5% of its cable and direct-to-home (DTH) BDUs' gross revenues to the production of Canadian programming.

Licensing and Ownership

In August 2018, the Commission renewed the Company's cable licences for a five-year term from September 1, 2018 to August 31, 2023. In November 2019, the Company's DTH and Satellite Relay Distribution Undertaking (SRDU) licences were each renewed for seven-year terms from December 1, 2019 to August 31, 2026.

In May 2017, the Company's video-on-demand licence was renewed for a five-year term from September 1, 2017 to August 31, 2022. In August 2019, the Company's terrestrial PPV and DTH PPV licences were renewed for five-year terms from September 1, 2019 to August 31, 2024.

New Media

The CRTC has issued a digital media exemption order requiring that Internet-based and mobile point-to-point broadcasting services not offer television programming on an exclusive or preferential basis in a manner that depends on subscription to a specific mobile or retail Internet service and not confer an undue preference or disadvantage. The CRTC has not imposed any levy on the revenue of exempt digital media undertakings to support Canadian new media content.

Potential Legislative Changes

Pursuant to the Ministerial mandate letters issued December 13, 2019, the Minister of Canadian Heritage and the Minister of Innovation, Science and Industry were directed to: "modernize the *Broadcasting Act* and *Telecommunications Act*, examining how best to support Canadian content in English and French [...]"; and "introduce legislation by the end of 2020 that will take appropriate measures to ensure that all content providers, including internet giants, offer meaningful levels of Canadian content in their catalogues, contribute to the creation of Canadian content in both official languages, promote this content and make it easily accessible on their platforms."

Pursuant to the BTLR Final Report, issued on January 29, 2020, the Expert Panel recommended maintaining the existing 5% levy on the gross revenues of BDUs to support the production of Canadian content, while introducing an expanded regulatory regime, in which, among other things, new categories of online digital media offerings would become subject to regulatory obligations and Canadian contribution requirements. The Minister of Canadian Heritage previously indicated in July 2019 that the federal government intends to take appropriate measures swiftly, when it receives the BTLR Final Report, to ensure that "all players, including the Internet giants" offer meaningful levels of Canadian content, contribute to the creation of Canadian content, and promote Canadian content and make it easily accessible on platforms.

Any changes to the *Broadcasting Act* pursuant to the BTLR Final Report or Ministerial mandates could impact the business practices of the Company, or result in new fees payable by the Company's cable, DTH or digital media services; new competition in the provision of broadcasting distribution services; and/or negative impacts to the Company's financial results from broadcasting.

Other Potential New or Increased Fees

New fees could also be imposed pursuant to CRTC regulation, with or without legislative changes. The Commission indicated that in 2020-2021 it will consider whether to examine new mechanisms to support television news production. If the CRTC were to consider and implement support for television news production through increased access by broadcasters to subscription revenue, it would increase costs for the Company. Additionally, the Commission indicated that in 2021-2022 it will "examine options for the appropriate measures needed to ensure that all content providers on all platforms contribute to the creation of Canadian content in both official languages, that Canadian content is promoted and given appropriate prominence, and that it is easily accessible by Canadians." Implementation of new regulatory measures with the foregoing objectives could result in new fees payable by the Company's cable, DTH or digital media services; impact the business practices of the Company, including through new distribution and promotion requirements, with increased costs payable by the Company's cable, DTH, or digital media services; and/or negatively impact the Company's financial results from broadcasting.

Sections 21 and 49 of the CRTC's *Broadcasting Distribution Regulations* (the "BDU Regulations") currently state that a cable BDU must obtain the consent of an over-the-air (OTA) broadcaster in order to distribute its signal in a distant market. In the case of DTH BDUs, the BDU Regulations permit the distribution of local OTA television signals on a distant basis without consent within the province of origin, but the BDU Regulations state that DTH BDUs must obtain broadcaster consent to deliver an OTA television signal out-of-province unless the DTH BDU is required to carry the signal out-of-province on its basic service. There are questions as to the jurisdictional validity of sections 21 and 49 of the BDU Regulations, which are currently being considered by the CRTC pursuant to an application by Rogers Media Inc. (RMI), posted by the Commission on February 21, 2020, asking the Commission to enforce those sections. Based on the current language of sections 21 and 49 of the BDU Regulations and depending on the outcome of RMI's application, broadcasters may seek to limit distribution of distant signals or remuneration for their distribution by the Company, which could increase costs for the Company and limit its offerings to consumers (including pursuant to demands for signal take-down or program blackouts). In addition, any confirmation by the CRTC of the validity of television broadcast licensees' right of authorization regarding the retransmission of their signals in distant markets could lead to similar demands by non-Canadian broadcasters. Any such impacts or demands could significantly impact the Company's costs and negatively impact the Company's financial results.

Telecommunications Act

Under the *Telecommunications Act*, the CRTC is responsible for ensuring that Canadians in all regions of Canada have access to reliable and affordable high-quality telecommunication services. The CRTC has the authority to forbear from regulating one or more services or classes of services provided by a carrier if the CRTC finds that there is sufficient competition for those services to protect the interests of users. Retail Internet, home phone services and mobile wireless services have been forborne from price regulation. However, regulations do affect certain terms and conditions under which Shaw's retail services are provided. As described further below under "Third Party Internet Access," certain Shaw wholesale services are regulated.

Under the *Telecommunications Act*, the GiC may issue broad policy directions of general application to the CRTC with regard to the telecommunications policy directives set out in the *Telecommunications Act* (each a "Telecommunications Policy Direction"). As described below under "Government Policy Direction to CRTC Concerning Telecommunications," a recent Telecommunications Policy Direction was issued by the GiC with the intention of guiding the CRTC's decision-making on telecommunications matters, including in its recently completed review of mobile wireless services (see below under "CRTC Wireless Review").

The CRTC and ISED can also impose monetary penalties on companies that contravene the *Telecommunications Act*, the *Radiocommunication Act*, and the regulations and rules promulgated thereunder.

ISED is responsible for the allocation, issuance and management of radio spectrum pursuant to the *Radiocommunication Act*. As well, the technical operating aspects of the Company's businesses are regulated by technical requirements and performance standards established by ISED, primarily under the *Telecommunications Act* and the *Radiocommunication Act*.

Potential Legislative Changes

The Minister of Canadian Heritage and the Minister of Innovation, Science and Industry were directed, pursuant to the Ministerial mandate letters issued December 13, 2019, to "modernize the *Broadcasting Act* and *Telecommunications Act*, examining how best to [...] ensure quality affordable internet, mobile and media access." The Minister of Innovation, Science and Industry was also directed to reduce mobile prices by 25% within two years, and failing that, to further expand mobile virtual network operators (MVNOs) in Canada and the CRTC's mandate on affordable pricing. In accordance with this mandate, on March 5, 2020, the Minister of Innovation, Science and Industry announced the expectation that the national carriers (Bell Canada, Rogers Communications Canada and TELUS Communications) reduce their prices for mid-range data plans (2-6 GB) by 25% over the next two years, and indicated that if "these targets are not met within two years, the Federal Government will take action with other regulatory tools to further increase competition and help reduce prices."

In the BTLR Final Report, issued on January 29, 2020, the Expert Panel made recommendations that may lead to increased regulatory oversight of retail and wholesale telecommunications services with an emphasis on affordable access to advanced networks. If adopted, the BTLR Panel's recommendations could result in new regulatory obligations applicable to the Company's Wireless or Wireline services.

Implementation of the foregoing Ministerial mandates (assuming that they remain applicable during the second session of the 43rd Parliament) whether or not in reliance upon the recommendations of the BTLR Final Report, could result in: the introduction of new regulatory measures that negatively impact the business practices of the Company and our ability to serve customers and related costs; and/or negative impacts on the Company's financial results and competitiveness in the wireless and wireline market.

Third Party Internet Access

Shaw is mandated by the CRTC to provide a wholesale high-speed access (HSA) service at regulated rates to independent ISPs ("Resellers"), who use the wholesale HSA services to provide their own retail Internet services to their end-users ("Third Party Internet Access" or "TPIA").

Telecom Order CRTC 2019-288

On August 15, 2019, the CRTC issued Telecom Order 2019-288 (the "Order"), which set Shaw's final wholesale HSA service rates. The final rates are significantly lower than the interim rates set in October 2016, and retroactive to January 31, 2017. The Order, if upheld or insufficiently varied, will significantly reduce the amount that the Company can charge for aggregated HSA services and negatively impact its broadband Wireline revenues and investments as well as its ability to compete with Resellers and other facilities-based HSA providers.

Shaw, jointly with Cogeco, Eastlink, Rogers and Videotron (the "Cable Carriers"), pursued all three routes of appeal of the Order permitted under the *Telecommunications Act*, each with a distinct focus:

- On September 13, 2019, the Cable Carriers filed a motion for leave to appeal the Order with the Federal Court of Appeal (FCA), as well as a motion to stay the Order, pending the final judgment on the appeal (if leave was granted). On November 22, 2019, the motion for leave to appeal the Order, as well as the motion to stay the Order pending final judgment on the appeal was granted. The Cable Carriers' appeal was heard by the FCA on June 25-26, 2020.
- On November 13, 2019, the Cable Carriers filed a Petition to federal Cabinet requesting that Cabinet order the CRTC to: (1) reconsider the Order in conjunction with a review of the regulatory framework for wholesale wireline services, while taking into account telecommunications policy objectives including the need to encourage innovation and investment in networks; and (2) vary the Order by cancelling the retroactivity.
- On December 13, 2019, the Cable Carriers filed an application with the CRTC to review and vary the rate-setting methodology and the resulting rates, as well as the requirement to make retroactive payments (the "R&V Proceeding"). The Cable Carriers also requested that the CRTC stay the Order in the event that the FCA stay of the Order is no longer in effect in advance of the CRTC's disposition of the R&V Proceeding.

On August 15, 2020, pursuant to the Petition to federal Cabinet, the GiC determined that the "final rates set by the decision do not, in all instances, appropriately balance the objectives of the wholesale services framework recognized in Order in Council P.C. 2016-332 of May 10, 2016 and that they will, in some instances, undermine investment in high-quality networks." However, the GiC determined that varying or referring the Order back to the CRTC for reconsideration "is premature pending a decision from the Commission with respect to the applications" in the R&V Proceeding. Instead, the GiC "will monitor the public proceeding in respect of the applications and await the Commission's decision."

On September 10, 2020, the FCA dismissed the Cable Carriers' appeal of the Order, which was based on questions of law and jurisdiction, with the effect that the FCA stay of the Order is no longer in effect.

On September 28, 2020, the CRTC granted a stay of the Order while the R&V Proceeding is underway and the Commission considers the Cable Carriers' application to review and vary the rates.

Any of the following developments could significantly reduce the amount that the Company can charge for aggregated HSA services and negatively impact the Company's broadband Wireline revenues and investments as well as its ability to compete with Resellers and other facilities-based HSA providers: a CRTC decision to maintain the final rates set by the Order, or any variance of the Order by the CRTC (most likely pursuant to the existing R&V Proceeding, or further direction from the GiC) that does not result in a material increase in the rates set by the Order.

Distinction between residential and business wholesale HSA services

On March 3, 2020, the Commission initiated a proceeding to examine wholesale HSA tariff provisions that differentiate between residential and business end-users. The Company's tariffs do not limit or restrict reselling to business end-users. If the Commission's decision goes beyond addressing existing tariff provisions that place restrictions on Resellers based on market segmentation, and mandates new wholesale access requirements applicable to the Company's Consumer or Business Internet services, the Company's broadband revenues and investments, as well as its ability to compete, could be negatively impacted.

Disaggregated Wholesale Services Framework

In 2015, the CRTC completed a review of the wholesale wireline policy framework, including TPIA, and: (i) extended mandated wholesale access services to include FTTP facilities; and (ii) initiated a shift to a new disaggregated wholesale HSA service model. On June 11, 2020, the Commission initiated a new proceeding to consider the appropriate network configuration for disaggregated wholesale HSA services across the country, and suspended the proceeding to set final rates, terms, and conditions for the disaggregated wholesale HSA services in Ontario and Quebec, which had previously been reviewed and approved by the CRTC in 2016. The disaggregated wholesale service configuration that is mandated by the Commission could require significant and costly modifications to the Company's broadband network architecture. The final mandated rates and the terms of disaggregated HSA services could negatively impact the Company's broadband revenues and investments as well as its ability to compete with Resellers and other facilities-based disaggregated HSA providers.

Review of the approach to rate setting for wholesale telecommunications services

On April 24, 2020, the Commission initiated a proceeding to review its approach to rate setting for wholesale telecommunications services. The methodology that is selected will impact the amount that the Company can charge for wholesale HSA service and, if the methodology fails to adequately compensate the Company for the costs associated with provisioning HSA services as well as a reasonable return on investment, it will negatively impact the Company's broadband Wireline revenues and investments and our ability to compete with Resellers and other facilities-based HSA providers. The chosen methodology could also potentially apply to wholesale wireless services, including mandated roaming and any service provisioned pursuant to any mandated MVNO regime imposed by the Commission in its review of mobile wireless services (see below under "CRTC Wireless Review"). The deadline for the submission of replies is currently scheduled for December 7, 2020.

CRTC Wireless Review

In March 2018, the CRTC declined to extend the mandated roaming regime to include public WiFi providers. The Commission subsequently undertook a consultation to investigate the availability and pricing of low cost data-only packages, including whether wireless carriers should be required to offer low-cost data-only packages. In December 2018, the CRTC determined that it would refrain from mandating specific low-cost data-only plans and instead opted to direct the three incumbent national wireless carriers to make available proposed low-cost plans and to keep those plans in the market at least until a decision is issued in its 2019-20 review of mobile wireless services.

In February 2019, the CRTC initiated its review of the regulatory framework for mobile wireless services and held a public hearing in February 2020. The Commission is reviewing competition in the retail market, including potential regulatory intervention, such as new retail policies and mandated low-cost data-only plans, and wholesale wireless regulation, including wholesale access for MVNOs.

The three incumbent national wireless carriers are required by CRTC regulation to provide domestic wholesale roaming services to Shaw and other facilities-based wireless competitors at regulated rates. In March 2018, the CRTC finalized the regulated rates for the mandated wholesale roaming service. As part of its Wireless Review, the CRTC sought comments on whether there is any need to make changes to the wholesale roaming policy, but the Notice of Consultation indicated that the CRTC would not be reviewing the regulated roaming rates.

At the outset of the proceeding, the Commission conveyed its preliminary view that it would be appropriate to mandate wholesale MVNO access to the networks of the national incumbents. Its Notice of Consultation included a series of questions regarding the possible eligibility requirements and other terms and conditions of a possible mandated MVNO regime. The Telecommunications Policy Direction to the CRTC regarding telecommunications, described below, applies to this proceeding. Final submissions were filed July 15, 2020, bringing the proceeding to a close. The CRTC's determinations in this proceeding could negatively impact the Company's financial results, growth prospects, and operational flexibility.

36-Month Device Financing

On August 2, 2019, following the introduction by the national incumbent wireless carriers of equipment installment plans (EIPs) ranging from 24- to 36-months, the Commission ordered all wireless service providers to cease offering EIPs longer than 24-months, and initiated a proceeding to examine whether 36-month EIPs are compliant with the Wireless Code. The proceeding closed in October 2019, and a decision is outstanding. If 36-month EIPs are permitted, it could impact our Wireless division's ability to gain market-share.

Government Policy Direction to CRTC Regarding Telecommunications

On June 16, 2019, the GiC published a finalized Policy Direction (following its publication of a proposed Policy Direction on March 9, 2019) that provides general guidance to the CRTC on all telecommunications regulatory measures, including those affecting Shaw's Consumer and Business Internet and Phone services, wholesale telecommunications services, and Shaw's Wireless services. The Telecommunications Policy Direction directs the CRTC to consider how measures can promote all forms of competition and investment, as well as affordability, consumer interests and innovation. The impact of the new Policy Direction will depend on how the CRTC interprets it in the context of specific matters and proceedings.

Retail Sales Practices

In June 2018, the GiC issued an order to the CRTC, directing it to investigate the retail sales practices used by Canada's large telecommunications carriers and report back to the GiC with its findings on the prevalence of such practices and how existing consumer protections could be expanded, or new protections developed, to ensure consumers are empowered and treated fairly by their service providers.

On February 20, 2019, the CRTC published its Report on Misleading or Aggressive Communications Retail Sales Practices and found that "a significant portion of Canadians are experiencing misleading or aggressive sales practices through all types of sales channels" in connection with their purchase of telecommunications and broadcasting services. While the Report did not result in new rules or regulatory obligations, the Report's findings, coupled with a planned Commission examination of activities undertaken in 2020-2021 to address those findings, could lead to new measures implemented in the context of current or future proceedings. The introduction of any such measures could negatively impact our ability to serve our customers, result in cost increases for the Company and negatively impact the Company's revenue.

Access for Wireline Network

For its wireline network Shaw requires access to support structures, such as poles, strand and conduits of telecommunication carriers and electric utilities, in order to deploy cable facilities. Under the *Telecommunications Act*, the CRTC has jurisdiction over support structures of telecommunication carriers, including rates for third party use. The CRTC's jurisdiction does not extend to electrical utility support structures, which are regulated by provincial utility authorities. Shaw's wireline network also requires access to construct facilities in roadways and other public places. Under the *Telecommunications Act*, Shaw may access such places with the consent of the municipality or other public authority having jurisdiction.

On December 10, 2019, the Commission initiated a review to examine "potential barriers and/or regulatory solutions to building new facilities or interconnecting to existing facilities in order to extend broadband-capable networks more efficiently into underserved areas [...]." The Commission specifically requested comments on barriers such as access to affordable transport services and efficient use of support structures; how and to what extent these barriers are preventing carriers from extending transport networks and offering services in underserved regions; and proposals on potential regulatory measures to address the barriers. Due to delays caused by the COVID-19 pandemic, this proceeding is still ongoing. The introduction of regulatory requirements applicable to the provision of wholesale transport services in rural or remote areas could negatively impact the Company's financial results.

Radiocommunication Act

Our Wireless division holds licences for the use of radiofrequency spectrum required to operate its mobile wireless business. Those spectrum licences are administered by ISED under the *Radiocommunication Act*. Spectrum use is governed by conditions of license, including license term, transferability/divisibility, technical compliance requirements, lawful interception, research and development, and mandated antenna site sharing and domestic roaming services.

Any changes to the *Radiocommunications Act* pursuant to the BTLR (see "Government Regulations and Regulatory Developments") could impact the business practices of the Company and/or the processes governing its acquisition of new spectrum for purposes of building its wireless networks.

Wireless Spectrum Licences

The Company's AWS-1 spectrum licences were renewed in 2019 for a new 20-year term. The Company's AWS-3 spectrum licences were issued in April 2015 and have a term of 20 years. The 700 MHz and 2500 MHz spectrum licences that the Company purchased from Quebecor were initially issued in February 2014 and May 2015, respectively for a term of 20 years. The Company also holds other 2500 MHz licences, including those acquired at ISED's 2018 residual auction, which were issued for a 20-year term. The Company also acquired 600 MHz licences at ISED's 2019 auction, which were issued for a 20-year term.

The Company's licences come with conditions, including a variety of deployment conditions. In July 2019, ISED issued a decision in response to its consultation on a new set of smaller service areas for spectrum licensing ("Tier 5 Service Areas") to complement ISED's existing service areas. ISED has created Tier 5 Service Areas with the objective of encouraging additional access to spectrum within rural areas pursuant to its licensing process. Currently, none of the Company's licences are subject to Tier 5 deployment requirements, but future licences may incorporate a requirement for deployment in such new service areas.

In June 2019, ISED released its decision on revisions to the 3500 MHz (3450-3650 MHz) band, which enabled existing holders to retain a portion of their 3500 MHz spectrum to convert to mobile spectrum, with the remaining spectrum to be made available for auction. In March 2020, ISED released its policy and licensing framework (the "Framework") for the upcoming 3500 MHz (3450-3650 MHz) auction, following a public consultation process in 2019. The Framework adopted a spectrum set-aside for eligible entities, the amount of which differs by area depending on the amount of spectrum available for auction and whether the area includes a large population centre. The auction is scheduled to commence in June 2021.

In August 2020, ISED commenced a public consultation on proposed revisions to the 3800 MHz band (3650-4200 MHz). The consultation seeks comments on, among other things, whether and how the band should be repurposed to include mobile use and the treatment of existing users in the band.

Following a consultation in 2018, ISED released a decision allowing future mobile use in the millimetre wave bands, including 26 GHz, 28 GHz, and 38 GHz bands, as well as licence-exempt use in the 64-71 GHz bands. The details of the licensing framework for these bands will be the subject of a future proceeding.

Access for Wireless Network

Our Wireless division's operations depend on being able to locate and construct wireless antenna sites, which in some cases requires certain authorizations or approvals from municipalities, which vary from one municipality to another but are also subject to federal oversight. The process for such approvals can include a comprehensive consultation process related to local land use priorities and new antenna site design parameters.

The Wireless division also uses arrangements whereby it co-locates its antennae equipment on towers and/or sites owned and operated by third party tower and/or sites providers and the three national wireless incumbent carriers. Pursuant to the conditions of their spectrum licences and the CRTC's policy framework for wholesale wireless services, the three national wireless incumbent carriers must allow competitors, including Freedom Mobile and Shaw Mobile, to co-locate equipment at these locations. However, the application and approval process for the sharing of towers is lengthy, and the ISED and CRTC processes that are available to enforce the existing rules can also be challenging and time consuming. The CRTC's review of mobile wireless services included a focus on reducing barriers to infrastructure deployment and whether any further regulatory measures are required to reduce barriers to the deployment of wireless infrastructure.

Copyright Act

Canada's *Copyright Act* accords the creators and owners of content various rights to authorize or be remunerated for the use of their works and performances, including, in some instances, by broadcast distribution undertakings. In addition, the *Copyright Act* creates certain exceptions that permit the use of copyrighted works without the authorization or remuneration of rights holders.

New or Potential Legislative Changes

On December 17, 2018, Bill C-86, the Budget Implementation Act (BIA), received Royal Assent and contains several amendments to the *Copyright Act* which came into force on April 1, 2019. The amendments create the potential for increased fees as well as risk of copyright infringement. Changes to the *Copyright Act* introduced by the BIA include the elimination of the *Copyright Act's* mandatory tariff-setting regime for tariffs applicable to the public performance of works, providing performance rights collectives the option of negotiating payments on a user-by-user basis through direct licensing. A direct licensing approach, if undertaken by a collective to which Shaw remits tariff payments, could increase royalties as well as the transactional costs associated with clearing copyrights. The BIA also potentially increases risk of claims (and associated liability) in connection with unrepresented repertoire, by removing a provision that had prevented infringement proceedings by unrepresented rightsholders in situations where no tariff was filed. Finally, pursuant to the *Copyright Act*, the Copyright Board of Canada (the "Copyright Board") oversees the collective administration of copyright royalties in Canada, including the review and approval of copyright tariff royalties payable to copyright collectives by BDUs, television broadcasters and online content services. The Copyright Board may also make rulings on the interpretation of the *Copyright Act* in the course of issuing copyright tariff decisions.

The Minister of Canadian Heritage and the Minister of ISED were directed, pursuant to their mandate letters issued December 13, 2019, to work together in reviewing the *Copyright Act*. Any amendments to the *Copyright Act* that modify the terms and conditions applicable to the use of content, including new rights and/or the scope of flexibility pursuant to exceptions under the *Copyright Act*, could create increased fees and negatively impact the business practices of the Company, as well as the ability to serve our customers.

Potential for New or Increased Fees

In August 2017, the Copyright Board issued a decision interpreting the scope and meaning of the "making available" provision (section 2.4(1.1) of the *Copyright Act*). The Copyright Board determined that as a result of section 2.4(1.1), the mere making available of a work on a server for the purpose of later streaming or download by the public is an event for which a tariff was payable, expanding the scope of the performance right and the Society of Composers, Authors and Music Publishers of Canada's (SOCAN) entitlement to royalties. In September 2017, the Company, along with a number of other broadcasting and Internet companies, filed an application for judicial review, arguing that the Copyright Board's interpretation of the "making available" provision was erroneous. In June 2020, the FCA overturned the Copyright Board's interpretation. The deadline to file an application for leave to appeal to the Supreme Court of Canada (SCC) is November 12, 2020. If leave is sought and granted and the SCC restores the Copyright Board's interpretation, it could lead to new claims by rights holders in connection with Company technologies that facilitate downloading.

On December 18, 2018, the Copyright Board released a rate decision for the Distant Signal Retransmission Tariff for the past tariff period of 2014-2018, inclusive, which introduced a rate increase that applied retroactively, and established an interim tariff for 2019 based on the 2018 rate. Both the Copyright Collective of Canada (the "Collectives") and Objectors filed a Notice of Application for judicial review with the FCA on November 4, 2019. If the Collectives succeed in the judicial review, the Company could become subject to significantly increased royalty rates for the 2014-208 period, pursuant to either the FCA's decision in the judicial review or any redetermination of the rates by the Copyright Board.

Privacy and Anti-Spam Legislation

Privacy Legislation

The Personal Information Protection and Electronic Documents Act (Canada) (PIPEDA)

is Canada's federal privacy law regulating the collection, use, and disclosure of personal information in Canada by a federally regulated organization in the private sector. The Company has established a privacy policy and its internal privacy processes in accordance with PIPEDA.

The Company has implemented the necessary processes to comply with the PIPEDA provisions requiring mandatory reporting of serious privacy breaches, which came into effect on November 1, 2018. These provisions require companies to: (i) track all breaches of security safeguards that involve personal information under their control, and (ii) report to affected individuals and to the Office of the Privacy Commissioner of Canada (OPC) serious breaches of personal information that create a real risk of significant harm. Failure to report in accordance with these provisions could result in fines.

Consent Guidelines issued by the OPC came into effect on January 1, 2019. These guidelines set out principles for organizations to follow in order to obtain meaningful consent and require that organizations provide more interactive, easy-to-understand privacy disclosures to their users. The Company maintains internal practices and policies to facilitate compliance with these Consent Guidelines.

Global policy developments and heightened public attention on privacy issues have prompted reviews of privacy legislation and regulations in Canada. Any changes to privacy laws and regulations applicable to Shaw could require the Company to adjust its policies and practices in key areas including data anonymization, consent, and data portability.

Such changes could result in new costs payable by the Company, impede the Company's ability to provide services efficiently to its customers, and expose the Company to increased penalties and claims in connection with any non-compliance.

Canada's Anti-Spam Legislation (CASL)

CASL sets out a comprehensive regulatory regime regarding online commerce, including requirements to obtain consent prior to sending commercial electronic messages and installing computer programs. CASL is administered primarily by the CRTC, and non-compliance may result in fines of up to $10 million. The Company maintains internal practices and policies to facilitate compliance with CASL.

On June 5, 2020, the FCA dismissed an appeal filed by CompuFinder, in which the appellant challenged the constitutionality of CASL. In addition to upholding the constitutionality of CASL, the FCA provided guidance on the business to business relationship exemption as well as the conspicuous publication rules and the CASL requirements for a functional unsubscribe mechanism.

Environmental matters

Shaw's operations are subject to environmental regulations, including those related to electronic waste, printed paper and packaging. A number of provinces have enacted regulations providing for the diversion of certain types of electronic and other waste through product stewardship programs (PSP). Under a PSP, companies who supply designated products in or into a province are required to participate in or develop an approved program for the collection and recycling of designated materials and, in some cases, pay a per item fee. Such regulations have not had, and are not expected to have, a material effect on the Company's earnings or competitive position.

KEY PERFORMANCE DRIVERS

Shaw measures the success of its strategies using a number of key performance drivers which are outlined below, including a discussion as to their relevance, definitions, calculation methods and underlying assumptions.

Financial Measures

Revenue

Revenue is a measurement determined in accordance with International Financial Reporting Standards (IFRS). It represents the inflow of cash, receivables or other consideration arising from the sale of products and services. Revenue is net of items such as trade or volume discounts, agency commissions, and certain excise and sales taxes. It is the base on which free cash flow, a key performance driver, is determined; therefore, it measures the potential to deliver free cash flow as well as indicating growth in a competitive market place.

The Company's continuous disclosure documents may provide discussion and analysis of non-GAAP financial measures. These financial measures do not have standard definitions prescribed by IFRS and therefore may not be comparable to similar measures disclosed by other companies. The Company's continuous disclosure requirements may also provide discussion and analysis of additional GAAP measures. Additional GAAP measures include line items, headings, and sub-totals included in financial statements. The Company utilizes these measures in making operating decisions and assessing its performance. Certain investors, analysts and others utilize these measures in assessing the Company's operational and financial performance and as an indicator of its ability to service debt and return cash to shareholders. These non-GAAP measures and additional GAAP measures have not been presented as an alternative to net income or any other measure of performance or liquidity prescribed by IFRS. The following contains a description of the Company's use of non-GAAP financial measures and additional GAAP measures and provides a reconciliation to the nearest IFRS measure or provides a reference to such reconciliation.

Adjusted EBITDA

Adjusted earnings before interest, taxes, depreciation, and amortization ("adjusted EBITDA") (previously referred to as "Operating income before restructuring costs and amortization") is calculated as revenue less operating, general and administrative expenses. It is intended to indicate the Company's ongoing ability to service and/or incur debt and is therefore calculated before items such as restructuring costs, equity income/loss of an associate or joint venture, amortization (a non-cash expense), taxes, and interest. Adjusted EBITDA is one measure used by the investing community to value the business.

Adjusted EBITDA has no directly comparable IFRS financial measure. Alternatively, the following table provides a reconciliation of net income to adjusted EBITDA:

	Year ended August 31,		
(millions of Canadian dollars)	2020 (1)	2019	Change %
Net Income	**688**	733	(6.1)
Add back (deduct):			
Restructuring costs	**14**	(9)	>(100.0)
Amortization:			
Deferred equipment revenue	**(16)**	(21)	(23.8)
Deferred equipment costs	**65**	85	(23.5)
Property, plant and equipment, intangibles and other	**1,168**	974	19.9
Amortization of financing costs – long-term debt	**3**	3	–
Interest expense	**274**	258	6.2
Equity income (loss) of an associate or joint venture	**–**	(46)	(100.0)
Loss on disposal of an associate or joint venture	**–**	109	(100.0)
Other gains (losses)	**16**	(50)	>(100.0)
Current income tax expense	**120**	114	5.3
Deferred income tax expense (recovery)	**59**	4	>100.0
Adjusted EBITDA	**2,391**	2,154	11.0

(1) Fiscal 2020 figures reflect the impact of the adoption and application of IFRS 16 while Fiscal 2019 figures do not and are not comparable. See "New Accounting Standards" as well as discussions under "Results of Operations" and "Segmented Operations Review."

Adjusted EBITDA margin

Adjusted EBITDA margin (previously referred to as "Operating margin") is calculated by dividing adjusted EBITDA by revenue. Adjusted EBITDA margin is also one of the measures used by the investing community to value the business. Adjusted EBITDA margin has no directly comparable IFRS financial measure.

	Year ended August 31,		
	2020 (1)	2019	Change %
Wireline	**48.3%**	45.5%	6.2
Wireless	**28.9%**	19.0%	52.1
Combined Wireline and Wireless	**44.2%**	40.3%	9.7

(1) Fiscal 2020 figures reflect the impact of the adoption and application of IFRS 16 while Fiscal 2019 figures do not and are not comparable. See "New Accounting Standards" as well as discussions under "Results of Operations" and "Segmented Operations Review."

Net debt

The Company uses this measure to perform valuation-related analysis and make decisions about the Company's capital structure. We believe this measure aids investors in analyzing the value of the business and assessing our leverage. Refer to "Liquidity and Capital Resources" for further detail.

Net debt leverage ratio

The Company uses this ratio to determine its optimal leverage ratio. Refer to "Liquidity and Capital Resources" for further detail.

Free cash flow

The Company utilizes this measure to assess the Company's ability to repay debt and pay dividends to shareholders.

In conjunction with the adoption of IFRS 16, we have amended our definition of free cash flow to remove the increase to adjusted EBITDA attributable to IFRS 16 to ensure a consistent focus on free cash flow generation.

Free cash flow consists of adjusted EBITDA, adding dividends from equity accounted associates, changes in receivable related balances with respect to Wireline customer equipment financing transactions as a cash item and deducting capital expenditures (on an accrual basis and net of proceeds on capital dispositions) and equipment costs (net), interest, cash taxes paid or payable, interest on lease liabilities and payments relating to lease liabilities, dividends paid on the preferred shares, recurring cash funding of pension amounts net of pension expense and adjusted to exclude share-based compensation expense.

Free cash flow has not been reported on a segmented basis. Certain components of free cash flow, including adjusted EBITDA, continue to be reported on a segmented basis. Capital expenditures and equipment costs (net) are also reported on a segmented basis. Other items, including interest and cash taxes, are not generally directly attributable to a segment, and are reported on a consolidated basis.

Free cash flow is calculated as follows:

(millions of Canadian dollars)	Year ended August 31, 2020	2019	Change %
Revenue			
Consumer	**3,683**	3,743	(1.6)
Business	**567**	557	1.8
Wireline	**4,250**	4,300	(1.2)
Service	**815**	694	17.4
Equipment	**351**	353	(0.6)
Wireless	**1,166**	1,047	11.4
	5,416	5,347	1.3
Intersegment eliminations	**(9)**	(7)	28.6
	5,407	5,340	1.3
Adjusted EBITDA [1][3]			
Wireline	**2,054**	1,955	5.1
Wireless	**337**	199	69.3
	2,391	2,154	11.0
Capital expenditures and equipment costs (net): [2]			
Wireline	**815**	827	(1.5)
Wireless	**296**	385	(23.1)
	1,111	1,212	(8.3)
Free cash flow before the following	**1,280**	942	35.9
Less:			
Interest	**(223)**	(256)	(12.9)
Interest on lease liabilities [3]	**(44)**	–	>100.0
Cash taxes	**(148)**	(160)	(7.5)
Lease payments relating to lease liabilities [3]	**(112)**	–	>100.0
Other adjustments:			
Dividends from equity accounted associates	–	10	(100.0)
Non-cash share-based compensation	**2**	3	(33.3)
Pension adjustment	**1**	7	(85.7)
Customer equipment financing	–	1	(100.0)
Preferred share dividends	**(9)**	(9)	–
Free cash flow [1]	**747**	538	38.8

(1) Adjusted EBITDA and free cash flow are non-GAAP measures and should not be considered substitutes or alternatives for GAAP measures. These are not defined terms under IFRS and do not have a standard meaning, and therefore may not be a reliable way to compare us to other companies. See "Key Performance Drivers" for information about these measures.
(2) Per Note 26 to the audited Consolidated Financial Statements.
(3) Fiscal 2020 figures reflect the impact of the adoption and application of IFRS 16 while Fiscal 2019 figures do not and are not comparable. See "New Accounting Standards" as well as discussions under "Results of Operations" and "Segmented Operations Review."

Statistical Measures

Subscriber counts (or Revenue Generating Units (RGUs))

The Company measures the count of its subscribers in its Consumer, Business, and Wireless divisions.

In the Consumer and Business divisions, Wireline Video subscribers include residential customers, multiple dwelling units (MDUs) and commercial customers. A residential subscriber who receives at a minimum, basic cable service, is counted as one subscriber. In the case of MDUs, such as apartment buildings, each tenant with a minimum of basic cable service is counted as one subscriber, regardless of whether invoiced individually or having services included in his or her rent. Each building site of a commercial customer (e.g., hospitals, hotels or retail franchises) that is receiving at a minimum, basic cable service, is counted as one subscriber. Video satellite subscribers are counted in the same manner as Wireline Video customers except that it also includes seasonal customers who have indicated their intention to reconnect within 180 days of disconnection.

Internet customers include all modems on billing and Phone includes all phone lines on billing. All subscriber counts exclude complimentary accounts but include promotional accounts.

Consumer and Business divisions' RGUs represent the number of products sold to customers and includes Video (cable and Satellite subscribers), Internet customers, and Phone lines. As at August 31, 2020 these combined divisions had approximately 5.3 million RGUs.

In the Wireless division, a recurring subscriber or RGU (e.g., cellular phone, smartphone, tablet, mobile Internet device) has access to the wireless network for voice and/or data communications, whether prepaid or postpaid. Prepaid subscribers include RGUs where the account is within 90 days of the prepaid credits expiring. As at August 31, 2020 the Wireless division had approximately 1.8 million RGUs.

Wireless Postpaid Churn

Wireless postpaid subscriber or RGU churn ("postpaid churn") measures success in retaining subscribers. Wireless postpaid churn is a measure of the number of postpaid subscribers that deactivated during a period as a percentage of the average postpaid subscriber base during a period, calculated on a monthly basis. It is calculated by dividing the number of Wireless postpaid subscribers that deactivated (in a month) by the average number of postpaid subscribers during the month. When used or reported for a period greater than one month, postpaid churn represents the sum of the number of subscribers deactivating for each period incurred divided by the sum of the average number of postpaid subscribers of each period incurred. Refer to "Segmented Operations Review" for postpaid churn details and description.

Postpaid churn increased 8-basis points in fiscal 2020 to 1.40% from 1.32% in fiscal 2019, reflecting the increased competitive environment experienced during the year.

Wireless average billing per subscriber unit (ABPU)

Wireless ABPU is an industry metric that is useful in assessing the operating performance of a wireless entity. We use ABPU as a measure that approximates the average amount the Company invoices an individual subscriber unit on a monthly basis. ABPU helps us to identify trends and measures the Company's success in attracting and retaining higher lifetime value subscribers. Wireless ABPU is calculated as service revenue (excluding the allocation of the device subsidy attributable to service revenue under IFRS 15) plus the monthly re-payments of the outstanding device balance owing from customers on contract, divided by the average number of subscribers on the network during the period and is expressed as a rate per month. Refer to "Segmented Operations Review" for ABPU details and description.

In fiscal 2020, ABPU grew 5.9% to $44.13 compared to $41.67 in the prior year. ABPU growth reflects the increased number of customers that are subscribing to higher value service plans, partially offset by reduced roaming revenue due to less travel and roaming outside of the Company's wireless home network resulting from the impact of the COVID-19 pandemic.

Wireless average revenue per subscriber unit per month (ARPU)

Wireless ARPU is calculated as service revenue divided by the average number of subscribers on the network during the period and is expressed as a rate per month. This measure is an industry metric that is useful in assessing the operating performance of a wireless entity, but does not have a standardized meaning under IFRS. Refer to "Segmented Operations Review" for ARPU details and description.

In fiscal 2020, ARPU grew 2.7% to $38.95 compared to $37.92 in the prior year. ARPU growth reflects the increased number of Wireless customers subscribing to higher service plans, partially offset by lower roaming revenue in the last two quarters of the year due to less travel and roaming outside of the Company's wireless home network resulting from the impact of the COVID-19 pandemic.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

The Company prepared its Consolidated Financial Statements in accordance with IFRS as issued by the International Accounting Standards Board (IASB). An understanding of the Company's accounting policies is necessary for a complete analysis of results, financial position, liquidity, and trends. Refer to Note 2 to the Consolidated Financial Statements for additional information on accounting policies. The following section discusses key estimates and assumptions that management has made under IFRS and how they affect the amounts reported in the Consolidated Financial Statements and accompanying notes. The following is a discussion of the Company's critical accounting policies.

Revenue and expense recognition

The identification of performance obligations within a contract and the timing of satisfaction of performance obligations under long-term contracts requires judgment. For bundled arrangements, we account for individual products and services when they are separately identifiable, and the customer can benefit from the product or service on its own or with other readily available resources. The Company has multiple deliverable arrangements consisting of upfront fees (subscriber connection fee revenue and/or customer premise equipment revenue) and related subscription revenue. The Company determined that the upfront fees charged to customers do not constitute separate performance obligations; therefore, these revenue streams are assessed as an integrated package.

Revenue is considered earned as services are performed, provided that at the time of performance, ultimate collection is reasonably assured. Such performance is regarded as having been achieved when reasonable assurance exists regarding the measurement of the consideration that will be derived from rendering the service. Revenue from Video, Internet, Phone, DTH, and Wireless customers includes subscriber revenue earned as services are provided. The revenue is considered earned as the period of service relating to the customer billing elapses. In addition to monthly service plans, the Company also offers multi-year service plans in which the total amount of the contractual service revenue is accounted for on a straight-line basis over the term of the plan.

When a customer can modify their contract within predefined terms such that we are not able to enforce the transaction price agreed to, but can only contractually enforce a lower amount, we allocate revenue between performance obligations using the minimum enforceable rights and obligations and any excess amount is recognized as revenue as its earned.

Subscriber connection fee revenue

Connection fees have no standalone value to the customer separate and independent of the Company providing additional subscription services, therefore the connection fee revenue must be deferred as contract liabilities and recognized systematically over the periods that the subscription services are earned. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered its customer churn rate and other factors, such as competition from new entrants, to determine the deferral period of three years for Wireline customers and two years for Wireless customers.

Subscriber connection and installation costs

The costs of physically connecting a new home are capitalized as part of the Company's distribution system as the service potential of the distribution system is enhanced by the ability to generate future subscriber revenue. Costs of disconnections are expensed as incurred as the activity does not generate future revenue.

Costs incurred to obtain or fulfill a contract

The incremental costs to obtain or fulfill a contract with a customer are deferred and amortized into operating expenses over their expected period of benefit to the extent they are recoverable. These costs include certain commissions paid to internal and external representatives that we expect to be recoverable. Determining the deferral criteria for these costs requires us to make significant judgments.

Customer premise equipment revenue and costs

Customer premise equipment available for sale, which generally includes DTH equipment, has no standalone value to the customer separate and independent of the Company providing additional subscription services. Therefore, the equipment revenue is deferred and recognized systematically over the periods that the subscription services are earned. As the equipment sales and the related subscription revenue are considered one transaction, recognition of the equipment revenue commences once the subscriber service is activated. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered various factors including customer churn, competition from new entrants, and technology changes to determine the deferral period of three years.

In conjunction with equipment revenue, the Company also incurs incremental direct costs which include equipment and related installation costs. These direct costs cannot be separated from the undelivered subscription service included in the multiple deliverable arrangement. Under IAS 2 "Inventories," these costs represent inventoriable costs and are deferred and amortized over the period of three years, consistent with the recognition of the related equipment revenue. The equipment and installation costs generally exceed the amounts received from customers on the sale of equipment (the equipment is sold to the customer at a subsidized price). The Company defers the entire cost of the equipment, including the subsidy portion, as it has determined that this excess cost will be recovered from future subscription revenues and that the investment by the customer in the equipment creates value through increased retention.

Shaw Business installation revenue and expenses

The Company also receives installation revenues in its Shaw Business operation on contracts with commercial customers which are deferred and recognized as revenue on a straight-line basis over the related service contract, generally spanning two to ten years. Direct and incremental costs associated with the service contract, in an amount not exceeding the upfront installation revenue, are deferred and recognized as an operating expense on a straight-line basis over the same period.

Wireless equipment revenue

Revenue for performance obligations satisfied at a point in time is recognized when control of the item or service transfers to the customer. Revenue from the direct sale of equipment to subscribers or dealers is recognized when the equipment is delivered and accepted by the subscribers or dealers.

For bundled arrangements (i.e., wireless handsets and voice and data services), items are accounted for as separate performance obligations if the item meets the definition of a distinct good or service. Stand-alone selling prices are determined using observable prices adjusted for market conditions and other factors, as appropriate. The Company offers a discretionary wireless handset discount program, whereby the subscriber earns the applicable discount by maintaining services with the Company, such that the receivable relating to the discount at inception of the transaction is reduced over a period of time. This discount is allocated proportionately between the equipment and service revenue, with the equipment discount recognized when the handset is delivered and the corresponding service discount is classified as a contract asset. The contract asset is reduced on a straight-line basis over the period which the discount is forgiven to a maximum of two years with an offsetting reduction to service revenue.

The Company also offers a plan allowing customers to receive a larger up-front handset discount than they would otherwise qualify for if they pay a predetermined incremental charge to their existing service plan on a monthly basis. The charge is billed on a monthly basis but is recognized as revenue when the handset is delivered and accepted by the subscriber. The amount receivable is classified as part of other current or non-current receivables, as applicable, in the Consolidated Statements of Financial Position.

Income statement classification

The Company distinguishes amortization of deferred equipment revenue and deferred equipment costs from the revenue and expenses recognized from ongoing service activities on its income statement. Equipment revenue and costs are deferred and recognized over the anticipated term of the related future revenue (i.e., the monthly service revenue) with the period of recognition spanning three to five years. As a result, the amortization of deferred equipment revenue and deferred equipment costs are non-cash items on the income statement, similar to the Company's amortization of deferred indefeasible right to use (IRU) revenue, which the Company also segregates from ongoing revenue. Further, within the lifecycle of a customer relationship, the customer generally purchases customer premise equipment at the commencement of the customer relationship, whereas the subscription revenue represents a continuous revenue stream throughout that customer relationship. Therefore, the segregated presentation provides a clearer distinction within the income statement between cash and non-cash activities and between up-front and continuous revenue streams, which assists financial statement readers to predict future cash flows from operations.

Allowance for doubtful accounts

A significant portion of the Company's revenues are earned from selling on credit to individual subscribers. Because there are some customers who do not pay their debts, selling on credit necessarily involves credit losses. The Company is required to make an estimate of an appropriate allowance for doubtful accounts on its receivables. In determining its estimate, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. The estimated allowance required is a matter of judgment and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foreseen, such as future business, personal and economic conditions. Conditions causing deterioration or improvement in the aging of accounts receivable and collections will increase or decrease bad debt expense.

Leases

The application of IFRS 16 requires the Company to make judgments that affect the valuation of the lease liabilities and the valuation of right-of-use assets.

In determining whether a contract contains a lease, the Company makes judgments in determining whether the contract involves the use of an identified asset, whether the Company has the right to obtain substantially all of the economic benefits from use of the asset throughout the period of use, and whether the Company has the right to direct the use of the identified asset.

In determining the contract term, the Company makes judgments in determining the non-cancellable period of the lease and the impact to the term of any options in the contract including options to extend or terminate the lease and whether or not the Company is reasonably certain to exercise these options.

When determining the interest rate used for discounting future cash flows the Company uses the incremental borrowing rate unless the rate implicit in the lease is readily determinable. The determination of the incremental borrowing rate is derived from publicly available rates and adjusted for lease terms. A single incremental borrowing rate is applied to a portfolio of leases with similar characteristics.

Property, plant and equipment and other intangibles – capitalization of direct labour and overhead

The cost of property, plant and equipment and other intangibles includes direct construction or development costs (such as materials and labour) and overhead costs directly attributable to the construction or development activity. The Company capitalizes direct labour and direct overhead incurred to construct new assets, upgrade existing assets and connect new subscribers. These costs are capitalized as they are directly attributable to the acquisition, construction, development or betterment of the networks or other intangibles. Repairs and maintenance expenditures are charged to operating expenses as incurred.

Direct labour and overhead costs are capitalized in three principal areas:

1. **Corporate departments such as Technology, Operations, Products, and Supply Chain (TOPS):** TOPS is involved in overall planning and development of the Video/Internet/Phone/Wireless infrastructure. Labour and overhead costs directly related to these activities are capitalized as the activities directly relate to the planning and design of the construction of the distribution system. In addition, TOPS devotes considerable efforts towards the development of systems to support Phone, WiFi, and projects related to new customer management, billing, and operating support systems. Labour costs directly related to these and other projects are capitalized.
2. **Cable regional construction departments, which are principally involved in constructing, rebuilding and upgrading the Cable/Internet/Phone infrastructure:** Labour and overhead costs directly related to the construction activity are capitalized as the activities directly relate to the construction or upgrade of the distribution system. Capital projects include, but are not limited to, new subdivision builds, increasing network capacity by reducing the number of homes fed from each node, and upgrades of plant capacity and the WiFi build.
3. **Subscriber-related activities such as installation of new drops and Internet and Phone services:** The labour and overhead directly related to the installation of new services are capitalized as the activity involves the installation of capital assets (e.g., wiring, software) which enhance the service potential of the distribution system through the ability to earn future revenues. Costs associated with service calls, collections, disconnects, and reconnects that do not involve the installation of a capital asset are expensed.

Amounts of direct labour and direct overhead capitalized fluctuate from year to year depending on the level of customer growth and plant upgrades for new services. In addition, the level of capitalization fluctuates depending on the proportion of internal labour versus external contractors used in construction projects.

The percentage of direct labour capitalized in many cases is determined by the nature of employment in a specific department. For example, a significant portion of labour and direct overhead of the cable regional construction departments is capitalized as a result of the nature of the activity performed by those departments. Capitalization is also based on piece rate work performed by unit-based employees which is tracked directly. In some cases, the amount of capitalization depends on the level of maintenance versus capital activity that a department performs. In these cases, an analysis of work activity is applied to determine this percentage split.

Amortization policies and useful lives

The Company amortizes the cost of property, plant and equipment and other intangibles over the estimated useful service lives of the items. These estimates of useful lives involve considerable judgment. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. On an annual basis, the Company reassesses its existing estimates of useful lives to ensure they match the anticipated life of the technology from a revenue-producing perspective. If technological change happens more quickly or in a different way than the Company has anticipated, the Company may have to shorten the estimated life of certain property, plant and equipment or other intangibles which could result in higher amortization expense in future periods or an impairment charge to write down the value of property, plant and equipment or other intangibles.

Intangibles

The excess of the cost of acquiring cable, satellite, data centre, and wireless businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist of amounts allocated to broadcast rights and licences, wireless spectrum licences, trademarks, brands, customer relationships, and software assets. Broadcast rights and licences, wireless spectrum licences, trademarks, and brands represent identifiable assets with indefinite useful lives.

Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over their estimated useful lives ranging from 4 – 15 years.

Software that is not an integral part of the related hardware is classified as an intangible asset. Internally developed software assets are recorded at historical cost and include direct material and labour costs as well as borrowing costs on qualifying assets. Software assets are amortized on a straight-line basis over estimated useful lives ranging from 3 – 10 years. The Company reviews the estimates of lives and useful lives on a regular basis.

Asset impairment

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at February 1) and when events or changes in circumstances indicate that the carrying value

SJRB-CCB00787961

may be impaired. The recoverable amount of each cash-generating unit (CGU) is determined based on the higher of the CGU's fair value less costs to sell and its value in use. A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are Cable, Satellite, and Wireless. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods. The results of the impairment tests are provided in Note 9 to the Consolidated Financial Statements.

Asset retirement obligations

The Company recognizes the fair value of a liability for an asset retirement obligation in the period in which it is incurred, on a discounted basis, with a corresponding increase to the carrying amount of property and equipment, primarily in respect of wireless and transmitter sites. This cost is amortized on the same basis as the related asset. The timing or amount of the outflow is subject to estimation and judgment. The liability is subsequently increased for the passage of time and the accretion is recorded in the income statement as interest expense. The discount rates applied are subsequently adjusted to current rates as required at the end of reporting periods. Revisions due to the estimated timing of cash flows or the amount required to settle the obligation may result in an increase or decrease in the liability. Actual costs incurred upon settlement of the obligation are charged against the liability to the extent recorded.

Employee benefit plans

As at August 31, 2020, Shaw had non-registered defined benefit pension plans for key senior executives and designated executives. The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The differences between actual and assumed results are immediately recognized in other comprehensive income/loss. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected to be needed to settle employee benefit obligations and is also used to calculate the interest income on plan assets. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes are required. The following table illustrates the increase on the accrued benefit obligation and pension expense of a 1% decrease in the discount rate:

(millions of Canadian dollars)	Accrued Benefits Obligation at End of Fiscal 2020	Pension Expense Fiscal 2020
Weighted Average Discount Rate – Non-registered Plans	2.70%	2.90%
Impact of: 1% decrease – Non-registered Plans	$ 81	$ 3

Deferred income taxes

The Company has recognized deferred income tax assets and liabilities for the future income tax consequences attributable to differences between the financial statement carrying amounts of assets and liabilities and their respective tax bases. Deferred tax assets are also recognized in respect of losses of certain of the Company's subsidiaries. The deferred income tax assets and liabilities are measured using enacted or substantially enacted tax rates expected to apply to taxable income in the years in which the temporary differences are expected to reverse or the tax losses are expected to be utilized. Realization of deferred income tax assets is dependent upon generating sufficient taxable income during the period in which the temporary differences are deductible. The Company has evaluated the likelihood of realization of deferred income tax assets based on forecasts of taxable income of future years, existing tax laws and tax planning strategies. Significant changes in assumptions with respect to internal forecasts or the inability to implement tax planning strategies could result in future impairment of these assets.

Commitments and contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities. Contractual and other commercial obligations primarily relate to network fees and agreements for use of transmission facilities in the normal course of business.

RELATED PARTY TRANSACTIONS

Related party transactions are reviewed by Shaw's Corporate Governance and Nominating Committee, consisting of independent directors. The following sets forth certain transactions in which the Company is involved.

Corus

The Company and Corus Entertainment Inc. ("Corus") are subject to common voting control. During 2016, the Company sold its wholly owned subsidiary Shaw Media to Corus in exchange for cash and an equity interest. The transaction closed on April 1, 2016. In fiscal 2019, the Company received dividends from Corus related to its Corus Class B non-voting participating shareholdings representing 38% of the total issued equity of Corus. On May 31, 2019, the Company completed its secondary offering of its 80,630,383 Class B non-voting participating shares of Corus at a price of $6.80 per share for net proceeds to the Company of approximately $526 million. In fiscal 2019 and fiscal 2020, network, advertising, and programming fees were paid to various Corus subsidiaries. The Company also provided uplink of television signals, programming content, Internet services and lease of circuits to various Corus subsidiaries.

Shaw no longer holds any equity interest in Corus.

Burrard Landing Lot 2 Holdings Partnership

The Company has a 33.33% interest in Burrard Landing Lot 2 Holdings Partnership (the "Partnership"). During fiscal 2020, the Company paid the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, British Columbia, is the Company's headquarters for its lower mainland British Columbia operations.

Sale of Real Property

On May 15, 2019, the Company completed the sale of a non-core parcel of land and the building located thereon (the "Property"), to an affiliate of Shaw Family Living Trust (SFLT) (the "Purchaser"), for total net proceeds of approximately $45 million (for further detail about SFLT see "Known Events, Trends, Risks and Uncertainties — Control of the Company"). The Property had a net book value of approximately $4 million, resulting in a gain on disposition of approximately $41 million. The purchase price was determined based on appraisals performed by two independent valuators. As part of the transaction, the Purchaser agreed to lease back the Property to the Company for a term of three years at market rental rates (which were also based on appraisals from the two independent valuators) allowing the Company to monetize a non-core asset. The transaction was approved by the independent Board members of the Company.

Key management personnel and Board of Directors

Key management personnel consist of the most senior executive team and along with the Board of Directors have the authority and responsibility for directing and controlling the activities of the Company. In addition to compensation provided to key management personnel and the Board of Directors for services rendered, the Company transacts with companies related to certain Board members primarily for the purchase of remote control units, network programming, and installation of equipment.

Refer to Note 29 to the Consolidated Financial Statements for further related party transaction detail.

NEW ACCOUNTING STANDARDS

Shaw has adopted or will adopt a number of new accounting policies as a result of recent changes in IFRS as issued by the IASB. The ensuing discussion provides additional information as to the date that Shaw is or was required to adopt the new standards, the methods of adoption permitted by the standards, the method chosen by Shaw, and the effect on the financial statements as a result of adopting the new policies. The adoption or future adoption of these accounting policies has not and is not expected to result in changes to the Company's current business practices.

Adoption of recent accounting pronouncements

We adopted the following new accounting standards effective September 1, 2019:

- IFRS 16 Leases was issued on January 2016 and replaces IAS 17 Leases. The new standard requires entities to recognize lease assets and lease obligations on the balance sheet. For lessees, IFRS 16 removes the classification of leases as either operating leases or finance leases, instead requiring that leases be capitalized by recognizing the present value of the lease payments and showing them as lease assets (right-of-use assets) and representing the right to use the underlying leased asset. If lease payments are made over time, the Company would recognize a lease liability representing its obligation to make future lease payments. Certain short-term leases (less than 12 months) and leases of low value may be exempted from the requirements and may continue to be treated as operating leases if certain elections are made. Lessors will continue with a dual lease classification model. Classification will determine how and when a lessor will recognize lease revenue, and what assets would be recorded.

  As a result of adopting IFRS 16, the Company recognized a significant increase to both assets and liabilities on our Consolidated Statements of Financial Position as well as a decrease to operating costs, as a result of removing the lease expense; an increase to depreciation and amortization, due to the depreciation of the right-of-use asset; and an increase to finance costs, due to the accretion of the lease liability. Relative to the results of applying the previous standard, although actual cash flows are unaffected, the Company's Consolidated Statements of Cash Flows will reflect increases in cash flows from operating activities offset equally by decreases in cash flows from financing activities.

  Implementation

  We adopted IFRS 16 using a modified retrospective approach whereby the financial statements of prior periods presented are not restated. We recognized lease liabilities at September 1, 2019 for leases previously classified as operating leases, measured at the present-value of the lease payments using our incremental borrowing rate at that date, with the corresponding right-of-use asset generally measured at an equal amount, adjusted for any prepaid or accrued rent outstanding as at August 31, 2019. Refer to "Transition adjustments" below for details.

  As permitted by IFRS 16, we applied certain practical expedients to facilitate the initial adoption and ongoing application of IFRS 16, including the following:

  - not separate fixed non-lease components from lease components for certain classes of underlying assets. Each lease component and any associated non-lease components will be accounted for as a single lease component;
  - apply a single discount rate to a portfolio of leases with similar characteristics;
  - exclude initial direct costs from measuring the right-of-use asset as at September 1, 2019; and
  - use hindsight in determining the lease term where the contract contains purchase, extension, or termination options.

  On transition, we have not elected the recognition exemptions on short-term leases or low-value leases; however, we may choose to elect these recognition exemptions on a class-by-class basis for new classes and on a lease-by-lease basis, respectively, in the future.

  There was no significant impact for contracts in which we are the lessor.

- IFRIC 23 Uncertainty over Income Tax Treatments was issued in 2017 to clarify how to apply the recognition and measurement requirements in IAS 12 when there is uncertainty over income tax treatments. It was required to be applied for annual periods commencing January 1, 2019, which for the Company was the annual period commencing September 1, 2019. The cumulative effect of the initial application of the new standard has been reflected as an adjustment to retained earnings at September 1, 2019. Refer to "Transition adjustments" below for details.

Below is the effect of transition to IFRS 16 and the adoption of IFRIC 23 on our condensed Consolidated Statements of Financial Position as at September 1, 2019.

(millions of Canadian dollars)	As reported at August 31, 2019	Effect of IFRS 16 transition	Effect of IFRIC 23 Transition	Subsequent to transition as at September 1, 2019
ASSETS				
Current				
Cash	1,446	–	–	1,446

Prior to adopting IFRS 16, our total minimum operating lease commitments as at August 31, 2019 were $919 million. The weighted average discount rate applied to the total lease liabilities was 3.50% at September 1, 2019. The difference between the total of the minimum lease payments set out in Note 27 to our 2019 Consolidated Financial Statements and the total lease liability recognized on transition was a result of:

- the inclusion of lease payments beyond minimum commitments relating to reasonably certain renewal periods or extension options that had not yet been exercised as at August 31, 2019;
- the effect of discounting on the minimum lease payments; and
- certain costs to which we are contractually committed under lease contracts, but which do not qualify to be accounted for as a lease liability, such as variable lease payments not tied to an index or rate.

RISK MANAGEMENT

In the normal course of our business activities, the Company is subject to risks. The purpose of risk management is to manage and mitigate risk, rather than to eliminate risk. The Company is committed to continually strengthening our risk management capabilities to protect and enhance value.

Risk Governance and Oversight

The Board of Directors has overall risk governance and oversight responsibilities. Specifically, the Board is responsible for identifying and assessing the principal risks inherent in the business activities of the Company and ensuring that management takes all reasonable steps to implement appropriate systems to manage such risks. The Board of Directors has delegated elements of its risk oversight responsibilities to specific Board committees. The Audit Committee is responsible for: (1) overseeing the Company's processes for identifying, assessing, and managing risks; and (2) ensuring that management implements and maintains effective internal controls and procedures for identifying, assessing and managing the principal risks to the Corporation and its business. In addition, the Human Resources and Compensation Committee is responsible for ensuring that the Company's short, medium and long-term incentive plans do not incent risk-taking beyond the Company's risk tolerance.

Responsibilities for Risk Management

Responsibility for risk management is shared across our organization. Each department's operating management, led by the Company's executive team, have integrated controls and risk management practices into day-to-day activities and decision-making processes. We have risk management and compliance functions across the organization such as Finance, Privacy, Security and Risk, Legal and Regulatory, and Technology Risk Governance. The Internal Audit and Advisory Services (IA&AS) department provides independent and objective audit and advisory services to evaluate and improve the effectiveness of the Company's governance, internal controls, disclosure processes, and risk management activities. The Audit Committee oversees the work of the IA&AS department and all reports issued by the IA&AS department. In addition, the IA&AS department's annual plan is reviewed and approved by the Audit Committee.

Enterprise Risk Management

As part of its role in risk governance and oversight, the Audit Committee oversees the Enterprise Risk Management (ERM) program. The ERM program is a performance focused process designed to identify, monitor, and manage significant corporate level risks that could impact the achievement of our strategic objectives. The Company's executives meet periodically to: (1) review and update significant corporate level risks, (2) assess such corporate level risks in terms of likelihood and magnitude of impact, (3) review the response strategy, and (4) monitor progress. The latest ERM update was provided to the Audit Committee in October 2020, with updates to be provided to the Board at least annually. The significant risks and uncertainties affecting the Company and its business are discussed under "Known Events, Trends, Risks and Uncertainties."

KNOWN EVENTS, TRENDS, RISKS AND UNCERTAINTIES

The discussion in this MD&A addresses only what management has determined to be the most significant known events, trends, risks, and uncertainties relevant to the Company, its operations, and/or its financial results. This discussion is not exhaustive. The discussion of these matters should be considered in conjunction with the "Caution Concerning Forward-Looking Statements."

Competition and Technological Change

Shaw operates in an open and competitive marketplace. Our businesses face competition from regulated and unregulated entities using existing or new communications technologies and from illegal services. In addition, the rapid deployment of new technologies, services, and products has blurred the traditional lines between telecommunications, Internet, and distribution services and further expands the competitive landscape. Shaw may also face competition from platforms that may gain advantages through regulatory processes. In addition, the industry has experienced a general reduction in barriers to entry due to technological substitution, the development of IP networks, and certain recent regulatory decisions.

While Shaw continually seeks to strengthen its competitive position through investments in infrastructure, technology, and customer service and through acquisitions, there can be no assurance that these investments will maintain Shaw's market share or performance in the future. New technologies in the industry may evolve faster than the historical investment cycle, potentially resulting in additional capital investments not currently planned and shorter useful lives for certain of Shaw's existing assets. New products or services introduced into the marketplace may reduce demand for Shaw's existing products and services or exert downward pricing pressure on Shaw's offerings.

The following competitive events, trends, risks and/or uncertainties specific to areas of our business may have a material adverse effect on Shaw and its reputation, as well as its operations and/or its financial results. In each case, the competitive events, trends, risks, and/or uncertainties may increase or continue to increase. Competition for new subscribers and retention of existing subscribers (churn reduction) may require substantial promotional activity and increase our cost of customer acquisition, decrease our ABPU, ARPU or all of these metrics. We expect that competition, including aggressive discounting practices by competitors to gain market share, is likely to continue to increase for all our businesses.

Consumer Internet

Shaw competes with different types of ISPs offering residential Internet access including traditional telephone companies, wireless providers and independent ISPs making use of wholesale services to provide Internet access in various markets.

Shaw expects that consumer demand for higher Internet access speeds and greater bandwidth will continue to be driven by bandwidth-intensive applications including streaming video, digital downloading, Internet-of-Things (IOT), interactive gaming, and cloud based services. As described further under "Shaw's Wireline Network," Shaw continues to expand the capacity and efficiency of its wireline network to handle the anticipated increases in consumer demand for higher Internet access speeds and greater bandwidth. However, there can be no assurance that our investments in network capacity will continue to meet this increasing demand. In addition, unprecedented situations such as the COVID-19 pandemic highlighted the unpredictable nature of network traffic growth and consumer behavior.

Consumer Video

Shaw's Consumer Video services, delivered through both our wireline and satellite platforms, compete with other distributors of video and audio signals. We also compete increasingly with unregulated OTT and offerings available over Internet connections. Continued improvements in the quality of streaming video over the Internet and the increasing availability of television shows and movies online will continue to increase competition to Shaw's Consumer Video services. Our Video services also compete with illegal services including grey and black market satellite offerings as well as OTT video piracy services. As a result, we continue to experience cord cutting and cord shaving in our traditional cable services and packages.

Consumer Phone

Shaw's competitors for Consumer Wireline Phone services include traditional telephone companies, other wireline carriers, Voice over Internet Protocol (VoIP) providers and wireless providers. In addition, households increasingly rely on wireless services in place of wireline phone services which negatively affects the business and prospects of our Consumer Wireline Phone services.

Wireless

Freedom Mobile and Shaw Mobile are new entrants in the highly competitive Canadian wireless market which is characterized by three national wireless incumbent carriers and regional participants. The national wireless incumbent carriers have larger, and more diverse spectrum holdings than Shaw, as well as larger operational and financial resources than Shaw and are well established in the market. Freedom Mobile and Shaw Mobile's ability to continue to offer and improve Wireless services and to offer new services depends on, among other factors, continued access to, and deployment of, adequate spectrum, including the ability to both renew current spectrum licences and acquire new spectrum licences (in various spectrum bands). If Freedom Mobile and Shaw Mobile cannot acquire and retain required spectrum, they may not be able to continue to offer and improve current Wireless services and deploy new services on a timely basis, including providing competitive data speeds their customers want. For example, the development and utilization of 5G technology requires additional spectrum licenses. While the 5G ecosystems are expected to work on multiple frequency bands, including 600 MHz spectrum, 3.5 GHz spectrum is becoming the primary band for 5G mobile coverage. There is a risk that Shaw may not be able to acquire the 3.5 GHz spectrum required to compete with other wireless carriers. As a result, Freedom Mobile and Shaw Mobile's ability to attract and retain customers could be adversely affected. In addition, an inability to acquire and retain required spectrum could affect network quality and result in higher capital expenditures.

Our Wireless division may face increased competition from other facilities based or non-facilities based new entrants or alternate technologies, including as a result of regulatory decisions or government policies that favour certain competitive platforms. For further detail see "Government Regulations and Regulatory Developments – Telecommunications Act – CRTC Wireless Review."

Business Services

Shaw Business competes with other telecommunications carriers in providing high-speed data and video transport and Internet connectivity services to businesses, ISPs and other telecommunications providers. The telecommunications services industry in Canada is highly competitive, rapidly evolving and subject to constant change. Shaw Business' competitors include traditional telephone companies, competitive access providers, competitive local exchange carriers, ISPs, private networks built by large end users, and other telecommunications companies. In addition, the development and implementation of new technologies by others could give rise to significant additional competition. Competitors for the delivery of voice and unified communication services include traditional telecommunications companies, resellers and new entrants to the market leveraging new technologies to deliver services. Shaw Broadcast Services also competes in industries that are highly competitive, rapidly evolving and subject to constant change.

Impact of Regulation

As discussed under "Government Regulations and Regulatory Developments," a majority of our Canadian business activities are subject to: (i) government legislation, (ii) regulations and policies administered by ISED and/or the CRTC, and (iii) conditions of licence imposed by ISED and/or the CRTC. Shaw's operations, financial results, and future prospects are affected by changes in legislation, regulations, policies, and conditions of licence, including pursuant to changes in the interpretation of existing legislation, regulations and requirements contained in such conditions of licence by courts, governments, or the regulators, in particular the CRTC, ISED, Competition Bureau, and Copyright Board. These changes relate to, and may have an impact on, among other things, licensing and licence renewal, spectrum holdings, products and services, competition, programming carriage and terms of carriage, strategic transactions, infrastructure access, and the potential for new or increased fees or costs. All such changes in the regulatory regime may have a material adverse effect on the Company and its operations, reputation, investment capability, ability to compete, as well as the Company's financial results and/or future prospects.

Coronavirus (COVID-19)

The outbreak of the novel strain of coronavirus, specifically identified as "COVID-19," has resulted in governments worldwide enacting emergency measures to contain the spread of the virus. These measures, which include the implementation of border closures, travel bans, self-imposed quarantine periods, self-isolation, physical and social distancing, and the closure of non-essential businesses, have caused material disruption to businesses in Canada and globally which has resulted in an uncertain and challenging economic environment.

Global debt and equity capital markets have experienced significant volatility, causing governments and central banks to react with significant monetary and fiscal interventions designed to stabilize economic conditions.

As an ongoing risk, the duration, impact, and potential resurgence of the COVID-19 pandemic is unknown at this time, as is the efficacy and duration of the government interventions. Any estimate of the length and severity of these developments is therefore subject to significant uncertainty, and accordingly estimates of the extent to which the COVID-19 pandemic may, directly or indirectly, materially and adversely affect the Company's operations, financial results, and condition in future periods are also subject to significant uncertainty. Such risks include, but are not limited to:

- uncertainty associated with the costs and availability of resources required to provide the appropriate/required levels of service to our customers through our on-line platforms, self-help, and self-install programs;
- impacts on the availability of, and therefore our ability to provide, the content and programming our customers expect;
- a material reduction in demand for, or profitability of, our products or services, acceleration in cord cutting or cord shaving by our customers, or increase in delinquent or unpaid bills, due to job losses and associated financial hardship;
- issues delivering the Company's products and services due to illness, Company or government-imposed isolation programs, restrictions on the movement of personnel, retail store closures/re-openings, and supply chain disruptions;
- significant additional capital expenditures and the availability of resources required to maintain, upgrade or expand our networks in order to accommodate substantially increased network usage while large numbers of our customers continue working from home;
- uncertainty associated with costs, delays and availability of resources required to complete major maintenance and expansion projects on time and budget;
- significant lost revenue in our Shaw Business segment due to the significant economic challenges that our enterprise, small and medium sized business customers are facing due to the impact of the COVID-19 pandemic;
- the impact of additional legislation, regulation and other government interventions in response to the COVID-19 pandemic;
- the negative impact on global debt and equity capital markets, including the trading price of the Company's securities;

- the ability to access capital markets at a reasonable cost; and
- the potential impairment of long-lived assets.

Any of these risks, and others, could have a material adverse effect on our business, operations, capital resources, and/or financial results of operations.

The severity and duration of impacts from the COVID-19 pandemic remain uncertain and management continues to focus on the safety of our people, most of whom continue to work from home, connectivity of our customer base, compliance with guidelines and requirements issued by various health authorities and government organizations, and continuity of other critical business operations. We called into action our robust business continuity plan in the early stages of this crisis to restrict business travel, enable a significant portion of our employee base to work from the safety of their own homes and temporarily close retail locations nationally (with the exception of a limited number of street front stores that remained open to provide urgent customer support).

COVID-19 pandemic continues to evolve and governments reduce, lift, or reimpose emergency measures and interventions, the Company's focus continues to be on the safety and health of its employees, the reliability of its facilities-based network and responsiveness to its customers. The Company's business resumption plan, designed to effect the gradual and safe re-introduction of employees to the workplace and the re-opening of retail stores, is being implemented in phases as government-imposed restrictions on businesses and individuals are lifted. As of the date of this MD&A, substantially all of the Company's retail stores are once again open for business. In order to address the health and safety of its employees returning to work, the Company has put in place many new protocols, including enhanced cleaning measures, sanitization stations, and daily health and wellness self-assessments. The Company is updating employees on a frequent basis to provide information on the situation and on necessary precautions to take. We will continue to have an open dialogue with public safety and government officials at all levels, as well as key suppliers, partners, and customers.

Customer Experience

Shaw's customer loyalty, retention, and likelihood to recommend Shaw all depend on our ability to provide a seamless connectivity experience that meets or exceeds their expectations. As part of the digital transformation, the Company modernized several aspects of its Wireline operations to better meet the needs of today's customer, including shifting customer interactions to digital platforms and driving more self-help, self-install, and self-service. The Company continues to streamline and simplify manual processes that improve its customers overall connectivity experience and day-to-day operations for our employees.

The complexity in our operations due to the use of multiple technology platforms, billing systems, sales channels, marketing databases as well as different rate plans, promotions, and product offerings may limit the Company's ability to respond quickly to market changes and lead to billing, service, or other errors, which may adversely affect customer satisfaction and retention. The failure to sustain and expand customer relationships through quality products and customer service could have a material adverse effect on our business, financial condition, reputation, and/or results of operations.

Shaw uses data analytics tools to perform customer segmentation, improve our offerings to customers, and support corporate decision-making. If the data behind these tools is poor or our analytical tools are not well designed, there is a risk they will not be effective in predicting our customers' needs and wants. The realization of these risks could negatively impact our business and/or reputation.

Network Failure

Shaw's business may be interrupted by wireline or wireless network failures, including its own or third party networks. Such network failures may be caused by fire damage, natural disaster, power loss, cyber attacks, human error, disabling devices, acts of war or terrorism, physical climate change impacts, and other events which may be beyond Shaw's control.

As insurance premium costs are uneconomic relative to the risk of failure, Shaw self-insures its plant (underground and aerial infrastructure) in its Fibre+ network. It is likely that wireline or wireless network damage caused by any one incident would be limited by geographic area and the resulting business interruption and financial damages would also be limited. In addition, with respect to a wireline network failure, we expect the risk of loss to be mitigated as most of the backbone fibre network and much of the hybrid fibre coax (HFC) access network is located underground.

Shaw protects its wireline and wireless networks through a number of measures, including physical and information technology security, redundancy, and ongoing maintenance and placement of insurance on our network equipment and data centres. In the past, the Company has successfully recovered from network damage caused by natural disasters without significant cost or disruption of service.

Despite the steps Shaw takes to reduce the risk of wireline and wireless network failure, failures may still occur, and such failures could negatively affect levels of customer service and relationships which may have a material adverse effect on Shaw and its reputation, as well as its operations and/or financial results.

Shaw's networks may also experience unexpected capacity pressures as a result of the impact of the COVID-19 pandemic which could negatively affect network performance and the Company's ability to provide services. Negative impacts on network availability, speed, and consistency could have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Information Systems and Internal Business Processes

Many aspects of the Company's businesses depend to a large extent on various information technology (IT) systems and software, and on internal business processes. Shaw regularly undertakes initiatives to update and improve these systems and processes. Although the Company has taken steps to reduce the risks of failure of these systems and processes, there can be no assurance that potential failures of, or deficiencies in, these systems, processes or change initiatives will not have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Acquisitions, business combinations and the development and launch of new services typically require significant integration and system development efforts. The Company faces the risk that proposed IT systems or process change initiatives will not be implemented successfully, on budget, or on time. As the complexity of the Company's systems increases, system stability and availability may be affected. Failure to implement and maintain appropriate IT systems could negatively impact Shaw's reputation, operations and/or financial results.

Cyber Security Risks

Cyber attacks are becoming more frequent and sophisticated in nature with an increased potential for damage. Although Shaw's systems and network architecture are designed and operated to be secure, they are vulnerable to the risks of an unauthorized third party accessing these systems or its network. This could lead to a number of adverse consequences, including the unavailability, disruption or loss of Shaw's services or key functionalities within Shaw's technology systems or software; the unauthorized disclosure, corruption or loss of sensitive Company, customer or personal information; litigation, investigations, fines, and liability for failure to comply with privacy and information security laws; increased fraud; increased cyber security protection costs; and higher insurance premiums. Shaw is also exposed to information security threats as a result of actions by our customers, suppliers, third party service providers, employees and business partners – whether maliciously or otherwise. Our insurance may not cover or be adequate to fully reimburse us for any associated costs and losses.

We continue to assess and enhance our cyber security within Shaw while we are monitoring the risks of cyber attacks and implement appropriate security policies, procedures and information technology systems to mitigate the risk of cyber attacks.

External threats to our network are constantly changing, and there is no assurance that Shaw will be able to protect its network from all future threats which may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Satellite

Shaw uses three satellites (Anik F2, Anik F1R, and Anik G1) owned by Telesat to provide satellite services in our Consumer division. In connection with the Company's digital network upgrade (DNU) program initiated in 2017, the Company has effectively optimized satellite traffic on the Anik F1R and Anik F2 satellites, enabling a reduction in the total number of transponders required by the Company to conduct its business. Effective October 1, 2019, the Company transferred its ownership interest in the 16 Anik F2 transponders, adjusted its satellite traffic on the Anik F1R and Anik F2 satellites, and renewed its capacity service agreements in place on Anik F1R, Anik F2, and Anik G1 until the effective end-of-life dates of such satellites. While the Company intends to negotiate and enter into new capacity service agreements to meet its long term satellite capacity requirements, there can be no assurance that replacement transponder capacity will be available or that such agreements will be entered into on favourable terms, which may have a material adverse effect on customer service and customer relationships, as well as the Company's reputation, operations and/or financial results.

The Company does not maintain any insurance coverage for the transponders on Anik F1R, Anik F2 and Anik G1 as it believes the costs are uneconomic relative to the benefit which could be otherwise derived through an arrangement with Telesat. As collateral for the transponder capacity pre-payments that were made by the Company to facilitate the construction of the satellites, the Company maintains a security interest in the transponder capacity and any related insurance proceeds that Telesat recovers in connection with an insured loss event.

The Company does not maintain business interruption insurance covering damage related to the loss of use of one or more of the transponders on the satellites as it believes that the insurance premium costs are uneconomic relative to the risk of transponder and/or satellite failure. The majority of transponder capacity is available to the Company on an unprotected, non-pre-emptible basis. The Company has the option to contract transponders with excess capacities on Anik F2, subject to availability. In the event of satellite failure, service will be restored as capacity becomes available. Restoration of satellite service on another satellite may require repositioning or re-pointing of customers' receiving dishes, an upgrade to their video receivers or customers may require a larger dish. The Anik G1 satellite has a switch feature that allows whole channel services (transponders and available spares) to be switched from extended Ku-band to Ku-band, which provides the Company with limited back-up to restore failed whole channel services of Anik F1R. The Company has reserved limited access to Ku band frequencies in the 107.3 orbital location to enable the switching feature, subject to availability. Satellite failure could negatively affect levels of customer service and customer relationships and may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Reliance on Suppliers and Third Party Service Providers

Shaw is connected to or relies on other telecommunication carriers and certain utilities to conduct its business. Any disruption to the services provided by these suppliers, including labour strikes and other work disruptions, bankruptcies, technical difficulties or other events affecting the business operations of these carriers or utilities may affect Shaw's ability to operate and, therefore may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

The Company sources its customer premise, capital equipment, and capital builds as well as portions of its service offerings, including network, video delivery and IT functions from certain key suppliers. While the Company has alternate sources for many of these purchases, the loss of a key supplier may require us to incur additional capital expenditures for the substitution of existing products and services which could adversely affect the Company's ability to operate, and therefore may have a material adverse effect on Shaw, its operations and/or its financial results. In the course of fulfilling service arrangements, third party service providers must ensure our information is appropriately protected and safeguarded. Failure to do so may affect Shaw through increased regulatory risk, reputational damage, and damage to customer experience.

There are a limited number of suppliers of popular mobile devices and there is a risk that the Company will not be able to maintain contracts for its existing supply of mobile devices and/or contract for the supply of new devices on commercially reasonable terms.

Shaw participates in global scale initiatives through partnerships with best-in-class service providers such as Comcast, Cisco Meraki, and Nokia to ensure that the technology we adopt and invest in is leading-edge in the global communications industry. There is a risk that the Company's participation in such partnerships ends or that the technology roadmap of Shaw and its partners diverges, resulting in disparate strategic approaches. Such divergence may result in higher capital requirements, prolonged development timelines of new products and services, and suboptimal performance of new products and services introduced by Shaw.

Programming Expenses

Expenses for video programming continue to be one of our most significant operating expenses. Costs continue to increase, particularly for sports programming. In addition, as we add programming or distribute existing programming to more of our subscriber base, programming expenses increase. Although we have been successful at reducing the impact of these cost increases through the sale of additional services or increasing subscriber rates, there can be no assurance that we will continue to be able to do so and this may have a material adverse effect on Shaw, its operations and/or its financial results.

Roaming Agreements

Shaw (and/or its wholly owned subsidiaries) has entered into roaming agreements with multiple carriers in Canada and around the world to extend its national and worldwide coverage. If the Company is unable to extend its national and worldwide wireless coverage, or renew or substitute for those roaming agreements at their respective existing terms or on commercially reasonable terms, the Company may be placed at a competitive disadvantage, which could adversely affect its ability to operate its Wireless business, as well as its reputation and customer experience. In addition, if the Company is unable to renew, or substitute for, these roaming agreements on a timely basis and at an acceptable cost, its cost structure could materially increase, and, consequently, its business, prospects, revenues, financial condition, and results of Wireless operations could be adversely affected.

The three incumbent national wireless carriers are required by CRTC regulation to provide domestic wholesale roaming services to Shaw and other facilities-based wireless competitors at regulated rates. Changes to the regulated rates or other terms in the wholesale roaming policy could negatively impact the Company's wireless financial results, growth prospects, and operational flexibility. For further detail see "Government Regulations and Regulatory Developments – Telecommunications Act – CRTC Wireless Review."

Economic Conditions

The Canadian economy is affected by uncertainty in global financial and equity markets, slowdowns in national and/or global economic growth, and commodity price challenges. Changes in economic conditions, which may differ across our regional footprint, may affect discretionary consumer and business spending, resulting in increased or decreased demand for Shaw's product offerings. Current or future events caused by volatility in domestic or international economic conditions or a decline in economic growth may have a material adverse effect on Shaw, its operations and/or financial results. The advent of the COVID-19 pandemic has exacerbated both the uncertainty and volatility in global financial and equity markets, in addition to negatively impacting economic growth rates.

Talent Management and Succession Planning

Our success is substantially dependent upon the retention and the continued performance of our executive officers. Many of these executive officers are uniquely qualified in their areas of expertise, making it difficult to replace their services in the short to medium term. The loss of the services of any key executives and/or employees in critical roles or inadequate processes designed to attract, develop, motivate, and retain productive and engaged employees could have a material adverse effect on Shaw, its operations and/or financial results. To mitigate this risk, the Company's comprehensive compensation program is designed to attract, retain, motivate, and reward the executive team and key employees through aligning management's interest with our business objectives and performance. Furthermore, the Company conducts annual succession planning to identify and develop key leaders to build capabilities and experiences required for the future.

Total Business Transformation and Voluntary Departure Program

In the second quarter of fiscal 2018, the Company introduced TBT, a multi-year initiative designed to reinvent Shaw's operating model to better meet the changing tastes and expectations of consumers and businesses by optimizing the use of resources, maintaining and ultimately improving customer service, and by reducing staff. Three key elements of TBT were to: 1) shift customer interactions to digital platforms; 2) drive more self-install and self-serve; and 3) streamline the organization that builds and services our network.

On March 5, 2020, the Company announced the substantial completion of the TBT initiative with fiscal 2020 annualized savings related to VDP substantially in line with the previous estimates. A total of $437 million in restructuring charges was recorded since the beginning of the program, of which $425 million has been paid to date. As part of the TBT initiative, we reduced input costs, consolidated functions, and streamlined processes, which has led to operational improvements across the business, allowing us to evolve into a more efficient organization. We have become a more focused, agile, and accountable organization ready to evolve from being product-focused to more purposeful and fully integrated, focusing on satisfying the unique needs of our customers. See also "Total Business Transformation" and "Caution Concerning Forward Looking Statements" for further discussion of the TBT initiative and the VDP.

There is an overall risk that the leaner, more integrated and agile Company resulting from the TBT initiative and the VDP may not be sustainable. Specifically, there is a risk that the Company may not be able to (i) maintain sustainable digital platforms that will continue to effectively engage customers; (ii) maintain sustainable digital platforms that continue to meet or exceed our customers' service level expectations, protect the security of customer information, and coordinate the delivery of product and service offerings; (iii) maintain sustainable programs that will result in customers continuing to use the self-serve and self-help functions, and electing to self-install the Company's products and services; and (iv) continue to consolidate and streamline the functions and processes of the divisions responsible for building and servicing its networks.

Despite the Company's mitigation efforts (including outsourcing certain functions, reassigning/repurposing employees, and the increased customer use of our self-serve, self-help, and self-installation functions), there is still a risk that the Company may not be able to (i) replace or outsource the functions performed by certain key employees that exited the Company in connection with the VDP; (ii) continue to operate the business in the normal course and maintain or improve customer service levels; (iii) maintain employee morale as a result of the organizational changes and staff and cost reductions; and (iv) ensure that the staff reductions will result in sustained cost reductions and achieve the financial goals of the TBT initiative. The realization of any of these risks may have a material adverse effect on Shaw, its reputation, operations, and/or financial results.

Labour Relations

As of August 31, 2020, approximately 5% of our employees are represented by unions under collective bargaining agreements. While the Company strives to maintain positive labour relations, we can neither predict the outcome of current or future negotiations relating to labour disputes, union representation, or renewal of collective bargaining agreements, nor be able to avoid future work stoppages, strikes, or other forms of labour protests pending the outcome of any current or future negotiations. A prolonged work stoppage, strike or other form of labour protest could have a material adverse effect on our businesses, operations, and reputation. Even if the Company does not experience strikes or other forms of labour protests, the outcome of labour negotiations could adversely affect our businesses and results of operations. In addition, our ability to make short-term adjustments to control compensation and benefits costs could be limited by the terms of such collective bargaining agreements. To support all leaders and employees, we continually listen to remove barriers and respond in real-time to needs and concerns. We also continue to provide support for leaders on how to manage change and maintain positive employee engagement and relations.

Interest Rates, Foreign Exchange Rates and Capital Markets

Shaw has the following financial risks in its day-to-day operations:

(a) **Interest rates:** Due to the capital-intensive nature of Shaw's operations, the Company uses long-term financing extensively in its capital structure. The primary components of this structure include banking facilities and various Canadian denominated senior notes and debentures with varying maturities issued in the public markets. These are more fully described in Note **13** to the Consolidated Financial Statements.

Interest on bank indebtedness is based on floating rates while the senior notes are all fixed-rate obligations. If required, Shaw uses its credit facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. Increases in interest rates may have a material adverse effect on Shaw, its operations and/or its financial results.

(b) **Capital markets:** Shaw requires ongoing access to capital markets to support its operations. Changes in capital market conditions, including significant changes in market interest rates or lending practices, or changes in Shaw's credit ratings, may adversely affect our ability to raise or refinance short-term or long-term debt and therefore may have a material adverse effect on Shaw, its operations and/or its financial results.

Shaw manages its exposure to floating interest rates by maintaining a mix of fixed and floating rate debt. Interest on the Company's unsecured credit facility and accounts receivable securitization program are based on floating rates, while the senior notes are all fixed rate obligations.

As at August 31, 2020, virtually all of Shaw's consolidated long-term debt was fixed with respect to interest rates.

The Company may also enter into derivative contracts, primarily forward contracts, to mitigate its exposure to foreign exchange and interest rate risks. While hedging and other efforts to manage these risks are intended to mitigate Shaw's risk exposure, because of the inherent nature and risk of such transactions, those activities can result in losses. For instance, if Shaw hedges its floating interest rate exposure, it may forego the benefits that may otherwise be experienced if rates were to fall and it is subject to credit risks associated with the counterparties with whom it contracts. In order to minimize the risk of counterparty default under its derivatives agreements, Shaw assesses the creditworthiness of its derivative counterparties. Further information concerning the policy and use of derivative financial instruments is contained in Notes 2 and 30 to the Consolidated Financial Statements.

Inventory

Our Wireless division's inventory balance consists of devices which generally have short product lifecycles due to frequent new device introductions. The failure to effectively manage inventory levels based on product demand may increase the risk of inventory obsolescence, which could negatively impact Shaw's operations and/or financial results.

Similar to other wireless service providers, Shaw subsidizes the cost of subscriber devices to attract customers to sign a term contract with Freedom Mobile or Shaw Mobile. Shaw also commits to a minimum subsidy per unit with certain suppliers of devices. There is a risk that Shaw may be unable to recover the costs of subsidies over the term of the customer contract which could negatively impact our business, operations, or financial results.

Climate Change

Climate change risks are important considerations for Shaw. These risks have been classified as two main types – physical risks and transition risks – which are described in further detail below.

Physical Risks

In accordance with the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD), we recognize that climate change may increase the severity, duration, and frequency of natural hazards and weather-related events. These in turn may negatively impact our business, which may require us to protect, test, maintain, repair, and replace our networks, IT systems, equipment and other infrastructure. For example:

- increased temperatures could impact our networks, IT systems, equipment and other infrastructure which could require the installation of additional cooling devices;
- acute risks (e.g., ice storms, extreme precipitation, flooding, fires, hurricanes, tornados, tsunamis) and chronic risks (e.g., sea-level rise) could impact or destroy our facilities or network, equipment, and other infrastructure, and affect our employees' ability to safely perform work. These impacts may increase our insurance related expenses, and affect our ability to deliver products and services; and
- climate change related impacts to our key suppliers could adversely affect their ability to supply us with required products and services.

The occurrence of any of these events could have a material adverse effect on our operations and/or financial results. See also "Network Failure" risks above which could increase in severity and/or frequency as a result of climate change related natural disasters.

With the exception of our network equipment and data centres, we self-insure our Fibre+ network and, as a result, have limited insurance coverage against the losses resulting from natural disasters affecting our Fibre+ network. For further detail see "Network Failure" above.

Although we have business continuity/resumption plans and disaster recovery plans and strategies in place, the failure of any of our climate change mitigation and adaptation efforts (including response strategies and business continuity protocols) may affect our business through potential disruption of our operations, damage to our facilities and infrastructure, and affect the communities that we operate in and serve, which may have a material adverse effect on Shaw and its reputation, as well as its operations, prospects and/or financial results.

Transition Risks

Climate change is drawing more attention through evolving public interest as well as government regulation and policy.

- **Policy & legal risk:** Many aspects of our operations are subject to evolving and increasingly stringent federal, provincial, and local environmental, health, and safety laws and regulations. These laws and regulations impose requirements with respect to matters such as fuel storage, the recovery and recycling of end-of-life electronic products, greenhouse gas emissions, the release of substances into the environment, corrective and remedial action concerning such releases, and the proper handling, management and disposal of substances. These evolving considerations and more stringent laws and regulations could lead to increased costs for compliance, which could be material. For example, we may be required to incur additional capital expenditures from substituting existing products and services with lower emissions options. The Company may also incur increased operational costs due to higher fuel and energy prices resulting from carbon taxes and/or cap and trade programs.
- **Reputational Risk:** Failure to recognize and adequately respond to changing environmental matters and expectations, or to comply with environmental laws and regulations, could result in fines, new regulatory obligations and associated costs, or damage to our reputation or brand any of which could have a material adverse effect on our operations and/or financial results.

In fiscal 2020, we continued to make progress on the development of our ESG program. Key areas of focus of the ESG program include the resiliency and sustainability of our converged network and products, including climate change resilience. Through the development of the ESG program, we are considering and integrating climate-related considerations into our governance and risk management practices.

Litigation

Shaw and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business. Although management does not expect that the outcome of these matters will have a material adverse effect on the Company, there can be no assurance that these matters, or other legal matters that arise in the future, will not have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Shaw is a public company with shares trading on the Toronto and New York stock exchanges. As a result, the Company may be subject to civil liability under Canadian and US securities laws for alleged misrepresentations by the Company in its public disclosure documents and/or oral statements.

Legal and Ethical Compliance

Shaw expects and relies on its employees, officers, Board of Directors, contractors, suppliers, and other business partners to act in accordance with applicable legal and ethical standards in all jurisdictions in which we operate, including, but not limited to, anti-bribery, anti-corruption, and anti-money laundering laws and regulations. Situations where Shaw's employees, officers, Board of Directors, contractors, suppliers, and other business partners do not adhere to applicable laws and regulations, the Company's policies or its contractual obligations, whether inadvertently or intentionally, may expose the Company to litigation and the possibility of damages, sanctions, and fines, or of being disqualified from bidding on contracts, which may have a material adverse effect on Shaw and its reputation, as well as its operations, prospects, and/or financial results.

Taxes

Shaw's business is subject to various tax laws, changes to tax laws and the adoption of new tax laws, regulations thereunder and interpretations thereof, which may have adverse tax consequences to Shaw.

While Shaw believes it has adequately provided for all income and commodity taxes based on information that is currently available, the calculation and the applicability of taxes in many cases require significant judgment in interpreting tax rules and regulations. In addition, Shaw's tax filings are subject to government audits which could result in material changes in the amount of current and deferred income tax assets and liabilities and other liabilities which may, in certain circumstances, result in the assessment of interest and penalties.

Concerns about Alleged Health Risks relating to Radiofrequency Emissions

Concerns about alleged health risks relating to radiofrequency emissions may adversely affect our Wireless division and our Shaw Go WiFi operations. Some studies have alleged that links exist between radiofrequency emissions from certain wireless devices and cell sites and various health problems or possible interference with electronic medical devices, including hearing aids and pacemakers. The Company complies with all applicable laws and regulations. Further, the Company relies on suppliers of wireless network equipment and customer equipment to meet or exceed all applicable regulatory and safety requirements. No definitive evidence exists of harmful effects from exposure to radiofrequency emissions when legal limits are complied with. Additional studies of radiofrequency emissions are ongoing and we cannot be certain of results, which could result in additional or more restrictive regulation or exposure to potential litigation.

Acquisitions, Dispositions and Other Strategic Transactions

Shaw may from time to time make acquisitions to expand its existing businesses or to enter into sectors in which Shaw does not currently operate, dispositions to focus on core offerings or enter into other strategic transactions. Such acquisitions, dispositions and/or strategic transactions may fail to realize the anticipated benefits, result in unexpected costs, result in unexcepted liabilities that were not uncovered through the due diligence process and/or Shaw may have difficulty incorporating or integrating the acquired business, any of which may have a material adverse effect on Shaw, its operations and/or financial results.

Dividend Payments are not Guaranteed

Shaw currently pays monthly common share and quarterly preferred share dividends in amounts approved on a quarterly basis by the Board of Directors. Over the long term, Shaw expects to continue to pay dividends from its free cash flow; however, balance sheet cash and/or credit facilities may be used to fund dividends from time to time. Although Shaw intends to make regular dividend payments, dividends are not guaranteed as actual results may differ from expectations and there can be no assurance that the Company will continue common or preferred share dividend payments at the current level. In addition to the standard legislated solvency and liquidity tests that must be met, the Company would not be able to declare and pay dividends if there was an event of default or a pending event of default would result (as a consequence of declaring and paying dividends) under its credit facilities.

Holding Company Structure

Substantially all of Shaw's business activities are operated by its subsidiaries. As a holding company, our ability to meet our financial obligations is dependent primarily upon the receipt of interest and principal payments on intercompany advances, management fees, cash dividends and other payments from our subsidiaries together with proceeds raised by the Company through the issuance of equity and the incurrence of debt, and from proceeds received on the sale of assets. The payment of dividends and the making of loans, advances and other payments to Shaw by its subsidiaries may be subject to statutory or contractual restrictions, are contingent upon the earnings of those subsidiaries and are subject to various business and other considerations.

Control of the Company

Voting control of the Company is held by SFLT and its subsidiaries. As at October 30, 2020, SFLT and its subsidiaries held 17,562,400 Class A Shares, representing approximately 79% of the issued and outstanding Class A Shares, for the benefit of the descendants of the late JR Shaw and Carol Shaw. The sole trustee of SFLT is a private company controlled by a board consisting of seven directors, including as at October 30, 2020, Bradley S. Shaw, four other members of his family, and two independent directors.

The Class A Shares are the only shares entitled to vote in all circumstances. Accordingly, SFLT and its subsidiaries are able to elect a majority of the Board of Directors of the Company and to control the vote on matters submitted to a vote of the Company's Class A Shares.

SUMMARY OF QUARTERLY RESULTS

Below is a summary of the Company's consolidated financial results and selected key performance drivers for fiscal 2020 and 2019.

	2020[1]				2019			
(millions of Canadian dollars except per share amounts)	**Q4**	**Q3**	**Q2**	**Q1**	**Q4**	**Q3**	**Q2**	**Q1**

(1) Fiscal 2020 figures reflect the impact of the adoption and application of IFRS 16 while Fiscal 2019 figures do not and are not comparable. See "New Accounting Standards" as well as discussions below and under "Results of Operations" and "Segmented Operations Review."

(2) Adjusted EBITDA and free cash flow are non-GAAP measures and should not be considered substitutes or alternatives for GAAP measures. These are not defined terms under IFRS and do not have a standard meaning, and therefore may not be a reliable way to compare us to other companies. See "Key Performance Drivers" for information about these measures, including how we calculate them.

(3) Net income attributable to both equity shareholders and non-controlling interests.

F20 Q4 **vs** F20 Q3	In the fourth quarter of fiscal 2020, net income decreased $9 million compared to the third quarter of fiscal 2020 mainly due to an $15 million decrease in adjusted EBITDA and a $23 million increase in current taxes in the fourth quarter as well an $8 million decrease in other gains as a result of an insurance claim recovery in the third quarter partially offset by a $35 million decrease in deferred taxes and a $14 million decrease in restructuring costs in the fourth quarter.
F20 Q3 **vs** F20 Q2	In the third quarter of fiscal 2020, net income increased $17 million compared to the second quarter of fiscal 2020 mainly due to a $26 million increase in other gains/losses, which includes the impact of the $17 million payment related to the early redemption of $800 million in senior notes in the second quarter, a $6 million insurance claim recovery, a $9 million increase in adjusted EBITDA in the third quarter and a $4 million decrease in current taxes, offset by a $14 million restructuring cost and an $8 million increase in deferred taxes, also in the third quarter.
F20 Q2 **vs** F20 Q1	In the second quarter of fiscal 2020, net income increased $5 million compared to the first quarter of fiscal 2020 mainly due to a $13 million decrease in current taxes, a $12 million increase in adjusted EBITDA and a $3 million decrease in interest expense, all in the second quarter, partially offset by a $17 million payment related to the early redemption of $800 million in senior notes and a $10 million increase in deferred taxes, also in the second quarter.
F20 Q1 **vs** F19 Q4	In the first quarter of fiscal 2020, net income decreased $4 million compared to the fourth quarter of fiscal 2019 mainly due to a $23 million decrease in deferred taxes in the first quarter. This was partially offset by a $7 million increase in current taxes in the first quarter as well as the net impact of the adoption of IFRS 16 which resulted in a decrease to operating, general and administrative costs that was more than offset by increases to amortization of property, plant and equipment, intangibles and other and interest expense.

F19 Q4 vs F19 Q3	In the fourth quarter of fiscal 2019, net income decreased $63 million compared to the third quarter of fiscal 2019 mainly due to a $21 million increase in current taxes in the fourth quarter, a $41 million gain on the disposal of property, plant and equipment to a related party, a $15 million gain on the sale of a portfolio investment and the $102 million impact of a tax rate change on deferred taxes, partially offset by a $109 million loss on the disposal of the Company's entire equity investment in Corus, all recorded in the third quarter.
F19 Q3 vs F19 Q2	In the third quarter of fiscal 2019, net income increased $74 million compared to the second quarter of fiscal 2019 mainly due to a $41 million gain on the disposal of property, plant and equipment to a related party, a $15 million gain on the sale of a portfolio investment and the $102 million impact of a tax rate change on deferred taxes, partially offset by a $109 million loss on the disposal of the Company's entire equity investment in Corus, all recorded in the third quarter.
F19 Q2 vs F19 Q1	In the second quarter of fiscal 2019, net income decreased $32 million compared to the first quarter of fiscal 2019 mainly due to a $20 million decrease in equity income related to the Company's investment in Corus in the quarter and higher income taxes.
F19 Q1 vs F18 Q4	In the first quarter of fiscal 2019, net income decreased $10 million compared to the fourth quarter of fiscal 2018 mainly due to a $12 million decrease in adjusted EBITDA and a decrease in other gains mainly related to a $16 million gain on the sale of certain wireless spectrum licences in the fourth quarter of fiscal 2018. These decreases were partially offset by a $10 million increase in equity income related to the Company's investment in Corus in the first quarter.

Fourth Quarter 2020 Highlights

The following discusses the results for the fourth quarter of fiscal 2020 (three-month period ended August 31, 2020) as compared with the results from the fourth quarter of fiscal 2019 (three-month period ended August 31, 2019).

Revenue

Consolidated revenue was comparable year-over-year at $1.35 billion.

- Wireless revenue of $294 million for the fourth quarter of fiscal 2020 increased $14 million, or 5.0%, over the fourth quarter of fiscal 2019. The increase was driven mainly by higher service revenues which contributed an incremental $27 million to consolidated revenue primarily due to higher postpaid RGUs and a 6.6% and 4.2% year-over-year increase in ABPU to $44.81 and ARPU to $39.65, respectively, reflecting the increased number of Wireless customers subscribing to higher service plans, partially offset by lower roaming revenue in the quarter due to less travel and roaming outside of the Company's wireless home network resulting from the impact of the COVID-19 pandemic. Equipment revenue decreased $13 million, or 13.5%, over the previous year due to lower subscriber activations.
- Consumer division revenue decreased $13 million, or 1.4%, to $917 million as growth in Internet revenue was offset by declines in Video, Satellite, and Phone subscribers and revenue.
- Business division revenue of $140 million was essentially flat in comparison to the fourth quarter of fiscal 2019 as impacted Business customers temporarily reduced, suspended, or cancelled their accounts due to the challenging economic environment facing businesses stemming from the COVID-19 pandemic.

Adjusted EBITDA

Adjusted EBITDA for the fourth quarter of $594 million increased $60 million, or 11.2%, from $534 million in the comparable prior year quarter. Removing the $40 million impact from IFRS 16 in the fourth quarter, adjusted EBITDA increased approximately 3.7% over the prior year quarter.

- Wireless adjusted EBITDA of $84 million for the fourth quarter of fiscal 2020 improved by $33 million, or 64.7%, over the fourth quarter of fiscal 2019. The increase reflects the impact of the adoption of IFRS 16 which contributed $20 million, or 39.2%, to the increase while the remaining increase was mainly due to postpaid RGU growth, an increase in margins due to lower equipment sales and lower acquisition related costs, and continued ARPU growth of 4.2% in the quarter.
- Wireline adjusted EBITDA for the fourth quarter of fiscal 2020 of $510 million increased 5.6%, or $27 million, from $483 million in the fourth quarter of fiscal 2019. The increase primarily reflects the impact of the adoption of IFRS 16 which contributed $20 million, or 4.1%, to the increase as well as the impact of the $10 million charge related to CRTC regulatory matters in the fourth quarter of fiscal 2019.

Adjusted EBITDA margin

Adjusted EBITDA margin for the fourth quarter of 44.0% increased 440-basis points compared to 39.6% in the fourth quarter of fiscal 2019. Excluding the impact of IFRS 16, adjusted EBITDA margin of 41.1% increased 150-basis points in comparison to the fourth quarter of fiscal 2019.

Capital expenditures and equipment

In the fourth quarter of fiscal 2020, capital investment of $307 million decreased $75 million from the comparable period in fiscal 2019. Total Wireline capital spending of $192 million decreased by approximately $42 million year-over-year primarily due to lower success-based capital and investments in new housing development. Wireless spending of $115 million decreased by approximately $33 million year-over-year primarily due to the timing of expenditures and lower planned investment in the quarter.

Amortization

Amortization of $312 million increased 24.8% compared to the fourth quarter of 2019. The increase in amortization reflects the impact of the adoption of IFRS 16 which contributed an additional $37 million, or 14.8%, in amortization related to the newly recognized right-of-use assets as well as the amortization of new expenditures exceeding the amortization of assets that became fully amortized during the period.

Interest

Interest expense of $68 million for the fourth quarter increased $2 million over the comparable prior year quarter and reflects the impact of the adoption of IFRS 16 which resulted in an additional $11 million in interest expense related to lease liabilities, partially offset by the lower average outstanding debt balances in the period.

Free cash flow

Free cash flow for the quarter of $152 million compared to $42 million in the comparable prior year quarter. The increase was largely due to higher adjusted EBITDA and lower capital expenditures and interest costs.

Income taxes

Income taxes were lower in the quarter compared to the fourth quarter of fiscal 2019 due mainly to the decrease in net income and the recognition of previously unrecognized tax losses.

Seasonality and Trends

While financial results for the Company are generally not subject to significant seasonal fluctuations, subscriber activity may fluctuate from one quarter to another. Subscriber activity may also be affected by competition and Shaw's promotional activity. Our Video subscriber activity is influenced by cord shaving and cord cutting trends, which has resulted in fewer subscribers watching traditional cable TV, as well as a lower number of TV subscribers. In addition, trends in the use of wireless products and Internet or social media as substitutes for traditional home phone products have resulted in fewer Phone subscribers. Satellite subscriber activity is modestly higher around the summertime when more subscribers have second homes in use. Wireless subscriber activity is influenced by the launch of popular new mobile devices, seasonal promotional periods, and the level of competitive intensity. Our first and fourth quarters typically experience higher volumes of wireless competitive activity as a result of back to school and holiday season-related consumer behavior. Aggressive promotional offers are often advertised during these periods which can impact our Wireless subscriber metrics. Shaw's Wireline and Wireless businesses do not depend on any single customer or concentration of customers.

Subscriber Statistics

Growth (losses) in subscriber statistics as follows:

	2020					
Subscriber Statistics	**Opening**	**First**	**Second**	**Third**	**Fourth**	**Ending**

[1] The Company reduced the August 31, 2019 ending balance by 10,914 due to account cancellations dating back to 2016 previously not reported. The cancellations consisted of 3,821 postpaid and 7,093 prepaid subscribers. In the Company's view, the cancellations were not significant in relation to previously reported amounts.

(1) Fiscal 2020 figures reflect the impact of the adoption and application of IFRS 16 while Fiscal 2019 figures do not and are not comparable. See "New Accounting Standards" as well as discussions below and under "Segmented Operations Review."

(2) Adjusted EBITDA, adjusted EBITDA margin and free cash flow are non-GAAP measures and should not be considered substitutes or alternatives for GAAP measures. These are not defined terms under IFRS and do not have a standard meaning, and therefore may not be a reliable way to compare us to other companies. See "Key Performance Drivers" for information about these measures, including how we calculate them.

(3) Funds flow from operations is presented before changes in non-cash working capital as presented in the Consolidated Statements of Cash Flows.

Revenue and Adjusted EBITDA

Fiscal 2020 consolidated results were resilient and in line with guidance despite significant uncertainty arising from the COVID-19 pandemic and commodity price challenges. Adjusted EBITDA of $2,391 million in fiscal 2020 increased 11.0% over fiscal 2019. Removing the $158 million impact from IFRS 16 in the year, adjusted EBITDA increased approximately 3.7%. For further discussion of divisional performance see "Segmented Operations Review."

Consolidated revenue of $5.41 billion for fiscal 2020 improved 1.3% over $5.34 billion for fiscal 2019. Revenue improved primarily due to the Wireless division contributing revenues of $1,166 million in fiscal 2020 as compared to $1,047 million in the prior year. The year-over-year improvement in Wireless revenue of $119 million, or 11.4%, reflects higher service revenues of $121 million driven primarily by added postpaid RGUs, higher ARPU, and higher ABPU partially offset by lower equipment revenues of $2 million, reflecting the impact of COVID-19 on consumer activity in the second half of fiscal 2020. Wireline division revenue was down $50 million, or 1.2%. Business division revenues increased $10 million, or 1.8%, and reflect the impacts from COVID-19 on the small and medium sized business market in the second half of the year while

Consumer division revenues decreased $60 million, or 1.6%, compared to fiscal 2019 as contributions from rate adjustments and growth in Internet revenue were offset by declines in Video, Satellite, and Phone subscribers and revenue.

Adjusted EBITDA of $2.39 billion for the twelve-month period improved 11.0% compared to $2.15 billion for fiscal 2019. The improvement was primarily due to the Wireless division contributing $337 million over the twelve-month period as compared to $199 million in fiscal 2019 while the Wireline division contributed $2,054 million over the twelve-month period as compared to $1,955 million in fiscal 2019. The Wireless increase of $138 million, or 69.3%, over the comparable period reflects an increase in underlying performance of $62 million, or 31.2%, and an increase of $76 million, or 38.2%, relating to the impact of the adoption of IFRS 16. The increase in underlying performance was driven primarily by subscriber and ARPU growth. Wireline adjusted EBITDA of $2,054 million for fiscal 2020 increased 5.1%, or approximately 0.9% after removing the $82 million impact from the adoption of IFRS 16, resulting in a Wireline operating margin of 46.4%, an improvement of 90-basis points over fiscal 2019 (on pre-IFRS 16 basis). The increase also reflects the impact of the $10 million provision related primarily to the CRTC decision to reduce wholesale broadband rates available to third party Internet providers from 2016 onwards and the impact of a $15 million payment to address certain IP licensing matters, both recorded in fiscal 2019.

Restructuring costs

Restructuring costs generally include severance, employee related costs and other costs directly associated with a restructuring program. During the third quarter of fiscal 2020, the Company restructured certain operations within the Wireline segment and announced a realignment of the senior leadership team. In connection with the restructuring, the Company recorded costs of $14 million, primarily related to severance and employee related costs.

Amortization

(millions of Canadian dollars)	2020	2019	Change %
Amortization revenue (expense)			
Deferred equipment revenue	**16**	21	(23.8)
Deferred equipment costs	**(65)**	(85)	(23.5)
Property, plant and equipment, intangibles and other [(1)]	**(1,168)**	(974)	19.9

(1) Fiscal 2020 figures reflect the impact of the adoption and application of IFRS 16 while Fiscal 2019 figures do not and are not comparable. See "New Accounting Standards" as well as discussion below.

Amortization of property, plant and equipment, intangibles and other increased 19.9% for the year ended August 31, 2020. The increase in amortization reflects the impact of the adoption of IFRS 16 which resulted in an additional $141 million in amortization related to the newly recognized right-of-use assets as well as the amortization of new expenditures exceeding the amortization of assets that became fully amortized during the period.

Amortization of financing costs and interest expense

(millions of Canadian dollars)	2020	2019	Change %
Amortization of financing costs – long-term debt	**3**	3	–
Interest expense [(1)]	**274**	258	6.2

(1) Fiscal 2020 figures reflect the impact of the adoption and application of IFRS 16 while Fiscal 2019 figures do not and are not comparable. See "New Accounting Standards" as well as discussion below.

Interest expense for the year ended August 31, 2020 increased over the comparable period and reflects the impact of the adoption of IFRS 16, which resulted in an additional $44 million in interest expense related to lease liabilities, partially offset by the lower average outstanding debt balances and interest rates in fiscal 2020 in comparison to fiscal 2019.

Other income and expenses

(millions of Canadian dollars)	2020	2019	Increase / (decrease)
Equity income of an associate or joint venture	–	46	(46)
Loss on disposal of an associate or joint venture	–	(109)	109
Other gains (losses)	**(16)**	50	(66)
	(16)	(13)	(3)

On May 31, 2019, the Company sold all of its 80,630,383 Corus Class B non-voting participating shares at a price of $6.80 per share. Proceeds, net of transaction costs, were $526 million, which resulted in a loss of $109 million for fiscal 2019. In fiscal 2019, the Company also recorded equity income of $46 million related to its investment in Corus. As the Company no longer had an equity investment in Corus for fiscal 2020, there was no income or loss recorded.

Other gains (losses) generally include realized and unrealized foreign exchange gains and losses on US dollar denominated current assets and liabilities, gains and losses on disposal of property, plant and equipment and minor investments, and the Company's share of the operations of Burrard Landing Lot 2 Holdings Partnership. In fiscal 2020, the category includes a net $2 million loss related to the disposal of property, plant and equipment and a $17 million debt redemption penalty related to the early redemption of $800 million in senior notes in December 2019 partially offset by a $6 million insurance claim recovery. In the prior year, the category includes a net $32 million gain on the disposal of property, plant and equipment, a $6 million gain on the disposal of a non-core business, as well as a $15 million gain on the disposal of a minor portfolio investment.

Earnings per share

(millions of Canadian dollars except per share amounts)	2020	2019	Change %

[1] Fiscal 2020 figures reflect the impact of the adoption and application of IFRS 16 while Fiscal 2019 figures do not and are not comparable. See "New Accounting Standards" as well as discussions under "Results of Operations" and "Segmented Operations Review."

Net income

Net income was $688 million in 2020 compared to $733 million in 2019. The year-over-year changes are summarized in the table below.[1]

(millions of Canadian dollars)	
Increased adjusted EBITDA [1][2]	**237**
Increased restructuring costs	**(23)**
Increased amortization [1]	**(179)**
Increased interest expense [1]	**(16)**
Decreased equity income of an associate or joint venture	**(46)**
Change in other net costs and revenue [3]	**43**
Increased income taxes	**(61)**
	(45)

[1] Fiscal 2020 figures reflect the impact of the adoption and application of IFRS 16 while Fiscal 2019 figures do not and are not comparable. See "New Accounting Standards" as well as discussions under "Results of Operations" and "Segmented Operations Review."

[2] Adjusted EBITDA is a non-GAAP measure and should not be considered a substitute or alternative for GAAP measures. This is not a defined term under IFRS and does not have a standard meaning, and therefore may not be a reliable way to compare us to other companies. See "Key Performance Drivers" for information about this measure, including how we calculate it.

[3] Net other costs and revenue include gains and losses on disposals of fixed assets and intangibles, accretion of long-term liabilities and provisions, debt retirement costs, realized and unrealized foreign exchange differences and other losses as detailed in the Consolidated Statements of Income.

Net other costs and revenues had a $45 million favourable impact on net income primarily due to the impact of a $109 million loss related to the Company's disposal of its investment in Corus Class B non-voting participating shares recorded in the prior year, partially offset by a $15 million gain on the disposal of a minor portfolio investment and a $32 million net gain on the disposal of fixed assets and intangibles in the prior year and a $17 million debt redemption penalty in fiscal 2020.

SEGMENTED OPERATIONS REVIEW

WIRELINE

Adjusted EBITDA margin [2]	**48.3%**	45.5%	6.2

(1) Fiscal 2020 figures reflect the impact of the adoption and application of IFRS 16 while Fiscal 2019 figures do not and are not comparable. See "New Accounting Standards" and discussion below.

(2) Adjusted EBITDA and adjusted EBITDA margin are non-GAAP measures and should not be considered substitutes or alternatives for GAAP measures. These are not defined terms under IFRS and do not have a standard meaning, and therefore may not be a reliable way to compare us to other companies. See "Key Performance Drivers" for information about these measures, including how we calculate them.

Wireline RGUs decreased by 234,492 in the current fiscal year, compared to net losses of 186,973 RGUs in fiscal 2019. Total Business RGU gains of 8,825 were more than fully offset by total Consumer RGU losses of 243,317 in the year which included net losses in cable Video of 87,851, Phone of 95,135, satellite Video of 52,496, and Internet of 7,835.

Consumer revenue for the year of $3.7 billion decreased 1.6% compared to the prior year as growth in Internet revenues were more than fully offset by declines in mature products, including Video, Satellite, and Phone subscribers and revenues. Business revenue for the year of $567 million was 1.8% higher over the prior year with the modest growth reflecting the impacts from COVID-19 on the small and medium sized business market in the second half of fiscal 2020.

Adjusted EBITDA of $2.1 billion increased 5.1% over the comparable period and reflects an increase of $82 million, or 4.2%, relating to the impact of the adoption of IFRS 16 while the underlying performance increased approximately 0.9%, resulting in a Wireline operating margin of 46.4%, an improvement of 90-basis points over fiscal 2019 (on a pre-IFRS 16 basis).

WIRELESS

(millions of Canadian dollars)	2020[1]	2019	Change %
Service	**815**	694	17.4

(1) Fiscal 2020 figures reflect the impact of the adoption and application of IFRS 16 while Fiscal 2019 figures do not and are not comparable. See "New Accounting Standards" and discussion below.

(2) Adjusted EBITDA and adjusted EBITDA margin are non-GAAP measures and should not be considered substitutes or alternatives for GAAP measures. These are not defined terms under IFRS and do not have a standard meaning, and therefore may not be a reliable way to compare us to other companies. See "Key Performance Drivers" for information about these measures, including how we calculate them.

In Wireless, the Company gained 163,329 net postpaid and prepaid subscribers in the year, consisting of 168,347 postpaid additions offset by 5,018 prepaid losses. The increase in the customer base reflects continued customer demand for the Big Gig data-centric pricing and packaging options, including Absolute Zero, as well as the launch of Shaw Mobile in British Columbia and Alberta on July 30, 2020.

Wireless revenue for the year of $1,166 million increased $119 million, or 11.4%, over the prior year. The increase in revenue was driven primarily by year-over-year growth in service revenue while equipment revenue was essentially flat as a result of a decrease in subscriber activity relating to the temporary closure of a number of retail locations amid the COVID-19 pandemic in the second half of fiscal 2020. The increase in service revenue was driven by RGU, ABPU, and ARPU growth in which a net 168,347 postpaid subscribers were added, representing a 12.8% increase, while ABPU of $44.13 and ARPU of $38.95 in fiscal 2020 compared to $41.67 and $37.92, respectively, in the prior year.

Adjusted EBITDA for the year of $337 million increased $138 million, or 69.3%, over the prior year and reflects an increase in underlying performance of $62 million, or 31.2%, and an increase of $76 million, or 38.2%, relating to the impact of the adoption of IFRS 16. The increase in underlying performance is driven primarily by subscriber and ARPU growth.

Capital Expenditures and Equipment Costs

(millions of Canadian dollars)	Year ended August 31, 2020	2019	Change %
Wireline			
New housing development	**120**	138	(13.0)
Success based	**243**	256	(5.1)
Upgrades and enhancements	**331**	346	(4.3)
Replacement	**26**	28	(7.1)
Buildings and other	**95**	59	61.0
Total as per Note 26 to the audited annual consolidated financial statements	**815**	827	(1.5)
Wireless			
Total as per Note 26 to the audited annual consolidated financial statements	**296**	385	(23.1)
Consolidated total as per Note 26 to the audited annual consolidated financial statements	**1,111**	1,212	(8.3)

Capital investment was $1,111 million in fiscal 2020 compared to $1,212 million in fiscal 2019. The decrease was driven primarily by a decrease in the Wireless division as a result of lower planned capital expenditures in the year due to increased investments related to market expansion in the prior year while Wireline investment decreased primarily due to lower system network infrastructure spending.

Wireline

Success-based capital for fiscal 2020 of $243 million was $13 million lower than fiscal 2019. The current year decrease in success-based capital was due primarily to lower equipment purchases in the year and an increase in customer self-installs.

Capital spend on the combined upgrades and enhancement, and replacement categories was $357 million for the year, a $17 million decrease over fiscal 2019 driven primarily by lower planned Wireline spend on system network infrastructure.

Capital spend on new housing development of $120 million in the year was $18 million lower than the prior fiscal year, driven by a decrease in residential and commercial customer network growth and acquisition.

Investment in buildings and other of $95 million in fiscal 2020 increased $36 million over fiscal 2019 primarily related to higher corporate related costs in the period as well as the impact of proceeds on disposal of corporate assets received in the comparable period.

Wireless

Capital investment of $296 million in fiscal 2020 decreased $89 million compared to fiscal 2019, primarily due to the planned decrease in Wireless spending in the year as a result of lower costs relating to the continued deployment of 700 MHz spectrum. In fiscal 2020, the Company continued its investment in its wireless network and infrastructure, specifically in the deployment of 600 MHz spectrum and development of 5G capabilities. Enhancements to the back-office systems including the billing system and digital transformation continued along with an increased spend in the area of retail due primarily to the launch of Shaw Mobile.

FINANCIAL POSITION

Effective September 1, 2019, the Company adopted IFRS 16 and IFRIC 23 and has not restated comparatives for fiscal 2019. For the purposes of this analysis, the Company will therefore use September 1, 2019 figures for comparative purposes. See "New Accounting Standards" for more information.

Total assets were $16.2 billion at August 31, 2020, compared to $17.0 billion at September 1, 2019. The following is a discussion of significant changes in the Consolidated Statements of Financial Position since September 1, 2019.

Current assets decreased $700 million primarily due to decreases in cash of $683 million, accounts receivable of $19 million, and inventories of $26 million. These decreases were partially offset by an increase in current portion of contract assets of $26 million and other current assets of $2 million. Cash decreased primarily due to the repayment of $2.05 billion of senior notes offset by the issuance of senior notes totaling $1.30 billion and other financing activities as well as cash outlays for investing activities partially offset by funds flow from continuing operations. Refer to "Liquidity and Capital Resources" for more information.

The current portion of contract assets increased during the year mainly due to the prior year increase in Wireless subscribers participating in the Company's discretionary wireless handset discount program. Under IFRS 15, the portion of this discount relating to the handset is applied against equipment revenue at the point in time that the handset is transferred to the customer while the portion relating to service revenue is recorded as a contract asset and amortized over the life of the contract against future service revenues.

Property, plant and equipment decreased $79 million as the amortization of capital and right-of-use assets exceeded the capital investments and additions to right-of-use assets in the year.

Contract assets decreased $12 million during the year mainly due to a decrease in Wireless subscribers participating in the Company's discretionary wireless handset discount program in the second half of fiscal 2020 primarily due to lower activity associated with the temporary closure of a significant number of retail stores in response to the COVID-19 pandemic.

Current liabilities decreased $1.24 billion during the year primarily due to a decrease in the current portion of long-term debt of $1.25 billion due to the repayment of senior notes in October 2019, a decrease in accounts payable and accrued liabilities of $16 million, a decrease in current provisions of $118 million, a decrease in income taxes payable of $14 million and a $12 million decrease in the current portion of contract liabilities. This was partially offset by an increase in short-term borrowings of $160 million.

Accounts payable and accruals decreased due to the timing of payment and fluctuations in various payables including capital expenditures, interest, and programming costs. The decrease in current provisions was mainly due to the payment of restructuring costs of $130 million related to the TBT in fiscal 2020.

Short-term borrowings increased due to the draw of an additional $160 million under the Company's accounts receivable securitization program.

Long-term debt increased $490 million primarily due to the issuance of senior notes totaling $1.3 billion, partially offset by the early redemption of other senior notes totaling $800 million.

Shareholders' equity decreased $30 million mainly due to a decrease in retained earnings. Retained earnings decreased as the current period income of $688 million was more than fully offset by dividends of $617 million and shares repurchased under the NCIB program of $91 million. Share capital decreased $3 million due to the impact of 5,614,672 shares repurchased under the terms of the Company's NCIB program which was partially offset by the issuance of 1,857,734 Class B Non-Voting Shares under the Company's stock option plan and Dividend Reinvestment Plan (DRIP). Accumulated other comprehensive loss increased $5 million.

As at October 15, 2020, share capital is as reported at August 31, 2020 with the exception of the issuance of a total 14,250 Class B Non-Voting Shares upon exercise of options under the Company's option plan.

CONSOLIDATED CASH FLOW ANALYSIS

Operating activities

(millions of Canadian dollars)	2020	2019	Change %
Funds flow from continuing operations	**1,989**	1,777	11.9
Net change in non-cash working capital balances related to continuing operations	**(69)**	(209)	(67.0)
	1,920	1,568	22.4

Funds flow from operations in fiscal 2020 increased over the comparable period primarily due to an increase in the funds flow from operations which reflects the impact of the adoption of IFRS 16 where payments related to lease liabilities are reflected under financing activities for the period and an increase in the net change in non-cash balances related to operations. The net change in non-cash balances related to operations fluctuated over the comparative period due to changes in accounts receivable, inventory, and other current asset balances, and the timing of payment of current income taxes payable and accounts payable and accrued liabilities.

Investing activities

(millions of Canadian dollars)	2020	2019	Increase
Cash flow used in investing activities	**(1,154)**	(1,133)	21

In fiscal 2020, cash used in investing activities increased over the comparable period primarily due to proceeds of $551 million received from the sale of our investment in Corus and other investments and $90 million in proceeds generated from the disposal of a non-core business and property, plant and equipment all in the prior year partially offset by lower outlays for capital expenditures in the year as compared to the prior year and a $492 million decrease year-over-year in spectrum purchases.

Financing activities

The changes in financing activities during 2020 and 2019 were as follows:

(millions of Canadian dollars)	2020	2019
Increase in short-term borrowings	**160**	–
Issuance of long-term debt	**1,300**	1,000
Repayment of long-term debt	**(2,068)**	–
Bank facility and long-term debt costs	**(14)**	(9)
Payment of lease liabilities	**(112)**	–
Issuance of Class B Non-Voting Shares	**9**	35
Purchase of Class B Non-Voting Shares	**(140)**	–
Dividends paid on Class A Shares and Class B Non-Voting Shares	**(573)**	(389)
Dividends paid on Preferred Shares	**(9)**	(9)
Payment of distributions to non-controlling interests	**(2)**	–
Other	–	(1)
	(1,449)	627

The increase in the payment of lease liabilities in fiscal 2020 reflects the impact of the adoption of IFRS 16 in the current year with these outflows reflected in operating activities in fiscal 2019. See "New Accounting Standards" for further detail.

LIQUIDITY AND CAPITAL RESOURCES

In fiscal 2020, the Company generated $747 million of free cash flow. Shaw used its free cash flow along with cash of $763 million, $1,286 million net proceeds from senior note issuances, $160 million net proceeds from its accounts receivable securitization program, and proceeds from the issuance of Class B Non-Voting Shares of $9 million to fund the net working capital change of $34 million, pay common share dividends of $573 million, repay at maturity $1.25 billion 5.65% senior notes, repurchase $140 million of Class B Non-Voting Shares under the Company's NCIB program, and pay $143 million for amounts related to restructuring costs.

The Company issued Class B Non-Voting Shares from treasury under its DRIP which resulted in cash savings and incremental Class B Non-Voting Shares of $37 million during fiscal 2020.

Debt structure and financial policy

Shaw structures its borrowings generally on an unsecured and standalone basis. While certain non-wholly owned subsidiaries are subject to contractual restrictions which may prevent the transfer of funds to Shaw, there are no similar restrictions with respect to wholly-owned subsidiaries of the Company.

The Company issued Class B Non-Voting Shares from treasury under its DRIP and incremental Class B Non-Voting Shares of $37 million during the year ended August 31, 2020. On October 25, 2019, and in accordance with the terms of its DRIP, the Company announced that in lieu of issuing shares from treasury, it will satisfy its share delivery obligations under the DRIP by purchasing Class B Non-Voting Shares on the open market. In addition, the Company reduced its discount from 2% to 0% for the Class B Non-Voting Shares delivered under the DRIP. These changes to the DRIP were first applied to the dividends payable on November 28, 2019 to shareholders of record on November 15, 2019.

The Company has an accounts receivable securitization program with a Canadian financial institution which allows it to sell certain trade receivables into the program. As at August 31, 2020, the proceeds of the sales were committed up to a maximum of $200 million (with $200 million drawn under the program as at August 31, 2020). The Company continues to service and retain substantially all of the risks and rewards relating to the trade receivables sold, and therefore, the trade receivables remain recognized on the Company's Consolidated Statements of Financial Position and the funding received is recorded as a current liability (revolving floating rate loans) secured by the trade receivables. The buyer's interest in the accounts receivable ranks ahead of the Company's interest and the program restricts it from using the trade receivables as collateral for any other purpose. The buyer of the trade receivables has no claim on any of our other assets.

As at August 31, 2020, the net debt leverage ratio for the Company was 2.3x. Considering the prevailing competitive, operational and capital market conditions, the Board of Directors has determined that having this ratio in the range of 2.5x to 3.0x would be optimal leverage for the Company in the current environment. This target was updated from 2.0x to 2.5x in November 2019 based on the impact of IFRS 16. Should the ratio fall below this, other than on a temporary basis, the Board may choose to recapitalize back into this optimal range. The Board may also determine to increase the Company's debt above these levels to finance specific strategic opportunities such as a significant acquisition or repurchase of Class B Non-Voting Shares in the event that pricing levels were to drop precipitously.

The Company calculates net debt leverage ratio as follows [1]:

(millions of Canadian dollars)	2020	2019
Short-term borrowings	**200**	40
Current portion of long-term debt	**1**	1,251
Current Portion of Lease Liabilities	**113**	–
Long-term debt	**4,547**	4,057
Lease Liabilities	**1,157**	–
50% of outstanding preferred shares	**147**	147
Cash	**(763)**	(1,446)
(A) Net debt [2]	**5,402**	4,049
Adjusted EBITDA [2][3]	**2,391**	2,154
Corus dividends	**–**	10
(B) Adjusted EBITDA [2][3] including Corus dividends	**2,391**	2,164
(A/B) Net debt leverage ratio [2][3]	**2.3x**	1.9x

(1) The following contains a description of the Company's use of non-GAAP financial measures, provides a reconciliation to the nearest IFRS measure or provides a reference to such reconciliation.

(2) Net debt, adjusted EBITDA, and net debt leverage ratio are non-GAAP measures and should not be considered substitutes or alternatives for GAAP measures. These are not defined terms under IFRS and do not have a standard meaning, and therefore may not be a reliable way to compare us to other companies. See "Key Performance Drivers" for information about these measures.

(3) Fiscal 2020 figures reflect the impact of the adoption and application of IFRS 16 while Fiscal 2019 figures do not and are not comparable. See "New Accounting Standards" as well as discussions under "Results of Operations" and "Segmented Operations Review."

On October 29, 2019, the Company announced that it had received approval from the TSX to establish a NCIB program. The NCIB program commenced on November 1, 2019 and remains in effect until October 31, 2020. As approved by the TSX, the Company has the ability to purchase for cancellation up to

24,758,127 Class B Non-Voting Shares representing 5% of all of the issued and outstanding Class B Non-Voting Shares as at October 18, 2019.

During the year ended August 31, 2020, the Company purchased 5,614,672 Class B Non-Voting Shares for cancellation for a total cost of approximately $140 million under the NCIB program. The Company suspended share repurchases under its NCIB program in April 2020.

On October 1, 2019, the Company repaid the $1.25 billion of 5.65% senior notes at maturity with cash on hand.

On December 9, 2019, the Company issued $800 million of senior notes, consisting of $500 million principal amount of 3.30% senior notes due 2029 and $300 million principal amount of 4.25% senior notes due 2049. The net proceeds of the offering of $792 million, along with cash on hand, were used to fund the redemption of the $500 million principal amount of 5.50% senior notes due 2020 and the $300 million principal amount of 3.15% senior notes due 2021 as noted below.

On December 12, 2019, the Company drew an additional $80 million under its accounts receivable securitization program, bringing the total amount drawn under the program to $200 million. The program is now fully drawn.

On December 24, 2019, the Company redeemed the $500 million principal amount of 5.50% senior notes due December 7, 2020 and the $300 million principal amount of 3.15% senior notes due February 19, 2021. In conjunction with the redemption, the Company paid make whole premiums of $17 million and accrued interest of $5 million. The Company has no senior note maturities until November 2023.

On April 22, 2020, the Company issued $500 million principal amount of 2.90% senior notes due December 9, 2030.

Shaw's credit facilities are subject to customary covenants which include maintaining minimum or maximum financial ratios. At August 31, 2020, Shaw is in compliance with these covenants and, based on current business plans, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants over the life of the borrowings.

	Covenant as at August 31, 2020	Covenant Limit
Shaw Credit Facilities		
Total Debt to Operating Cash Flow [1] Ratio	1.82:1	< 5.00:1
Operating Cash Flow [1] to Fixed Charges [2] Ratio	9.84:1	> 2.00:1

(1) Operating Cash Flow, for the purposes of the covenants, is calculated as net earnings before interest expense, depreciation, amortization, restructuring, and current and deferred income taxes, excluding profit or loss from investments accounted for on an equity basis, less payments made with regards to lease liabilities for the most recently completed fiscal quarter multiplied by four, plus cash dividends and other cash distributions received in the most recently completed four fiscal quarters from investments accounted for on an equity basis.

(2) Fixed Charges are defined as the aggregate interest expense, excluding the interest related to lease liabilities, for the most recently completed fiscal quarter multiplied by four.

Subsequent to year-end, on October 29, 2020, the Company's Board of Directors approved the renewal of the NCIB program to purchase up to 24,532,404 Class B Non-Voting Shares, representing 5% of all of the issued and outstanding Class B Non-Voting Shares as of October 22, 2020. The NCIB program remains subject to approval by the TSX and, if accepted, will be conducted in accordance with the applicable rules and policies of the TSX and applicable Canadian securities law.

Preferred Share Dividends

On June 30, 2016, 1,987,607 of the Company's Cumulative Redeemable Rate Reset Class 2 Preferred Shares, Series A ("Series A Shares") were converted into an equal number of Cumulative Redeemable Floating Rate Class 2 Preferred Shares, Series B ("Series B Shares") in accordance with the notice of conversion right issued on May 31, 2016. As a result of the conversion, the Company has 10,012,393 Series A Shares and 1,987,607 Series B Shares issued and outstanding. The Series A Shares will continue to be listed on the TSX under the symbol SJR.PR.A. The Series B Shares began trading on the TSX on June 30, 2016 under the symbol SJR.PR.B. The annual fixed dividend rate for the Series A Shares, payable quarterly, was reset to 2.791% for the five-year period from and including June 30, 2016 to but excluding June 30, 2021. The floating quarterly dividend rates for the Series B Shares were set as follows:

Period	Annual Dividend Rate
June 30, 2016 to September 29, 2016	2.539%
September 30, 2016 to December 30, 2016	2.512%
December 31, 2016 to March 30, 2017	2.509%
March 31, 2017 to June 29, 2017	2.480%
June 30, 2017 to September 29, 2017	2.529%
September 30, 2017 to December 30, 2017	2.742%
December 31, 2017 to March 30, 2018	2.872%
March 31, 2018 to June 29, 2018	3.171%
June 30, 2018 to September 29, 2018	3.300%
September 30, 2018 to December 30, 2018	3.509%
December 31, 2018 to March 30, 2019	3.713%
March 31, 2019 to June 29, 2019	3.682%
June 30, 2019 to September 29, 2019	3.687%
September 30, 2019 to December 30, 2019	3.638%
December 31, 2019 to March 30, 2020	3.652%
March 31, 2020 to June 29, 2020	3.638%
June 30, 2020 to September 29, 2020	2.255%
September 30, 2020 to December 30, 2020	2.149%

The floating quarterly dividend rate will be reset quarterly.

Based on the aforementioned financing activities, available credit facilities and forecasted free cash flow, the Company expects to have sufficient liquidity to fund operations and obligations, including maturing debt, during the upcoming fiscal year. On a longer-term basis, Shaw expects to generate free cash flow and have borrowing capacity sufficient to finance foreseeable future business plans and refinance maturing debt.

Off-balance sheet arrangement and guarantees

Guarantees

Generally, it is not the Company's policy to issue guarantees to non-controlled affiliates or third parties; however, it has entered into certain agreements as more fully described in Note 27 to the Consolidated Financial Statements. As disclosed therein, Shaw believes it is remote that these agreements would require any cash payment.

Contractual obligations

The amounts of estimated future payments under the Company's contractual obligations at August 31, 2020 are detailed in the following table.

		Payments due by period			
(millions of Canadian dollars)	Total	Within 1 year	2 – 3 years	4 – 5 years	More than 5 years
Short-term borrowings	200	200	–	–	–
Long-term debt [1]	7,549	219	938	910	5,482
Lease liabilities	1,631	154	288	273	916
Purchase obligations [2]	1,158	501	311	232	114
Property, plant and equipment	217	184	30	3	–
	10,755	1,258	1,567	1,418	6,512

(1) Includes principal repayments and interest payments.
(2) Includes contractual obligations under service, product, and wireless device contracts, program related agreements and exclusive rights to use intellectual property in Canada.

Share Capital and Listings

The Company is authorized to issue a limited number of Class A Shares; an unlimited number of Class B Non-Voting Shares; an unlimited number of Class 1 Preferred Shares issuable in series; and an unlimited number of Class 2 Preferred Shares issuable in series, of which 12,000,000 were designated the Series A Shares and 12,000,000 were designated the Series B Shares. The authorized number of Class A Shares is limited, subject to certain exceptions, to the lesser of that number of such shares (i) currently issued and outstanding; and (ii) that may be outstanding after any conversion of Class A Shares into Class B Non-Voting Shares.

As at October 15, 2020, there are 22,372,064 Class A Shares, 490,647,083 Class B Non-Voting Shares, 10,012,393 Series A Shares, and 1,987,607 Series B Shares issued and outstanding. There were also 7,212,880 options to purchase Class B Non-Voting Shares and 14,281 RSUs that will settle in Class B Non-Voting Shares issued from treasury outstanding. Shaw is traded on the Toronto and New York stock exchanges and is included in the S&P/TSX 60 Index (Trading Symbols: TSX – SJR.B, SJR.PR.A, SJR.PR.B, NYSE – SJR, and TSXV – SJR.A). For more information, please visit www.shaw.ca.

The following table sets forth, for each month during the fiscal year ending August 31, 2020, the monthly price range and volume traded for the Class A Shares on the TSX Venture Exchange (TSXV) and for the Class B Non-Voting Shares, Series A Shares, and Series B Shares on the TSX.

	Class A Shares[1] TSX Venture-SJR.A			Class B Non-Voting Shares[1] TSX-SJR.B			Series A Shares[1] TSX-SJR.PR.A			Series B Shares[1] TSX-SJR.PR.B

Share Splits

There have been four splits of the Company's Class A and Class B Non-Voting Shares: July 30, 2007 (2 for 1); February 7, 2000 (2 for 1); May 18, 1994 (2 for 1); and September 23, 1987 (3 for 1). In addition, as a result of the Arrangement referred to in the Management Information Circular dated July 22, 1999, a Shareholder's Adjusted Cost Base was reduced for tax purposes.

ADDITIONAL INFORMATION

Additional information relating to Shaw, including the Company's 2020 Annual Information Form, can be found on SEDAR at www.sedar.com.

COMPLIANCE WITH NYSE CORPORATE GOVERNANCE LISTING STANDARDS

Disclosure of the Company's corporate governance practices which differ from the New York Stock Exchange (NYSE) corporate governance listing standards are posted on Shaw's website, www.shaw.ca (under Investor Relations, Corporate Governance, Compliance with NYSE Corporate Governance Listing Standards).

CERTIFICATION

The Company's Executive Chair & Chief Executive Officer and Executive Vice President, Chief Financial & Corporate Development Officer have filed certifications regarding Shaw's disclosure controls and procedures and internal control over financial reporting (ICFR).

As at August 31, 2020, the Company's management, together with its Executive Chair & Chief Executive Officer and Executive Vice President, Chief Financial & Corporate Development Officer, has evaluated the effectiveness of the design and operation of each of the Company's disclosure controls and procedures and ICFR. Based on these evaluations, the Chief Executive Officer and Executive Vice President, Chief Financial & Corporate Development Officer have concluded that the Company's disclosure controls and procedures and the Company's ICFR are effective.

Other than the items described below, there have been no changes in the Company's ICFR during the fiscal year that have materially affected, or are reasonably likely to materially affect, Shaw's ICFR.

On September 1, 2019, the Company adopted IFRS 16 *Leases* and implemented a new lease accounting system that enabled it to comply with the IFRS 16 requirements. As a result, certain additions and modifications have been made to the Company's ICFR. Notably, the Company has:

- updated its policies and procedures related to leases; and
- implemented controls surrounding the recently implemented lease accounting system to ensure the inputs, processes and outputs are accurate

The design of any system of controls and procedures is based in part upon certain assumptions about the likelihood of certain events. There can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions, regardless of how remote.

MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL REPORTING AND REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

October 30, 2020

Management's Responsibility for Financial Reporting

The accompanying consolidated financial statements of Shaw Communications Inc. and all the information in this annual report are the responsibility of management and have been approved by the Board of Directors.

The financial statements have been prepared by management in accordance with International Financial Reporting Standards (IFRS). When alternative accounting methods exist, management has chosen those it deems most appropriate in the circumstances. Financial statements are not precise since they include certain amounts based on estimates and judgments. Management has determined such amounts on a reasonable basis in order to ensure that the financial statements are presented fairly, in all material respects. Management has prepared the financial information presented elsewhere in the annual report and has ensured that it is consistent with the financial statements.

Management has a system of internal controls designed to provide reasonable assurance that the financial statements are accurate and complete in all material respects. The internal control system includes an internal audit function and an established business conduct policy that applies to all employees. Management believes that the systems provide reasonable assurance that transactions are properly authorized and recorded, financial information is relevant, reliable and accurate and that the Company's assets are appropriately accounted for and adequately safeguarded.

The Board of Directors is responsible for ensuring management fulfils its responsibilities for financial reporting and is ultimately responsible for reviewing and approving the financial statements. The Board carries out this responsibility through its Audit Committee.

The Audit Committee is appointed by the Board and its directors are unrelated and independent. The Committee meets periodically with management, as well as the external auditors, to discuss internal controls over the financial reporting process, auditing matters and financial reporting issues; to satisfy itself that each party is properly discharging its responsibilities; and, to review the annual report, the financial statements and the external auditors' report. The Audit Committee reports its findings to the Board for consideration when approving the financial statements for issuance to the shareholders. The Committee also considers, for review by the Board and approval by the shareholders, the engagement or re-appointment of the external auditors.

The financial statements have been audited by Ernst & Young LLP, the external auditors, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB")" on behalf of the shareholders. Ernst & Young LLP has full and free access to the Audit Committee.

Management's Report on Internal Control over Financial Reporting

Management is responsible for establishing and maintaining an adequate system of internal control over financial reporting. Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the financial statements for external purposes in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB).

Due to its inherent limitations, internal control over financial reporting may not prevent or detect misstatements on a timely basis. Also, projections of any of the effectiveness of internal control are subject to the risk that the controls may become inadequate because of changes in conditions or that the degree of compliance with the policies and procedures may deteriorate. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to the financial statement preparation and presentation.

Management conducted an evaluation of the effectiveness of the system of internal control over financial reporting based on the framework in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on this evaluation, management concluded that the Company's system of internal control over financial reporting was effective as at August 31, 2020.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders and Board of Directors of Shaw Communications Inc.:

Opinion on the Consolidated Financial Statements

We have audited the accompanying consolidated statements of financial position of Shaw Communications Inc. (the "Company") as of August 31, 2020 and 2019, the related consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years then ended, and the related notes (collectively referred to as the "consolidated financial statements"). In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of the Company at August 31, 2020 and 2019, and its financial performance and its cash flows for the years then ended, in accordance with International Financial Reporting Standards ("IFRSs") as issued by the International Accounting Standards Board.

Adoption of IFRS 16

As discussed in Note 2 to the consolidated financial statements, the Company changed its method of accounting for leases in 2020 due to the adoption of *IFRS 16 – Leases.*

Report on internal control over financial reporting

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the Company's internal control over financial reporting as of August 31, 2020, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission framework (2013) and our report dated October 30, 2020 expressed an unqualified opinion thereon.

Basis for Opinion

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

Critical Audit Matters

The critical audit matters communicated below are matters arising from the current period audit of the financial statements that were communicated or required to be communicated to the audit committee and that: (1) relates to accounts or disclosures that are material to the financial statements and (2) involved especially challenging, subjective or complex judgments. The communication of critical audit matters does not alter in any way our opinion on the consolidated financial statements, taken as a whole, and we are not, by communicating the critical audit matters below, providing a separate opinion on the critical audit matters or on the accounts or disclosures to which it relates.

Key Audit Matter	***Valuation of the Wireless cash generating unit's indefinite-life intangibles***
Description of the Matter	As more fully described in Note 9 to the consolidated financial statements, the Company conducted its annual impairment test on goodwill and indefinite-life intangibles as at February 1, 2020 and the recoverable amount of the cash generating units exceeds their carrying value. Management performed an assessment of indicators of impairment as at August 31, 2020. Auditing management's impairment test is complex and judgmental due to the estimation required in determining the recoverable amount of the cash generating units. The recoverable amount was estimated using a discounted cash flow and is sensitive to assumptions such as revenue growth rate, earnings growth rate, earnings before interest, tax and amortization margin, terminal operating discount rate, terminal growth rate and terminal operating income before restructuring costs and amortization multiple.
How We Addressed the Matter in Our Audit	We obtained an understanding of management's process for performing their impairment assessment. We evaluated the design and tested the operating effectiveness of controls over the Company's processes to determine the recoverable amount. For example, we tested controls over the Company's strategic planning process as well as controls over the review of the significant assumptions in estimating the recoverable amount of the cash generating units. To test the estimated recoverable amount of the goodwill and indefinite-life intangible assets, our audit procedures included, among others, assessing the methodology used and testing the significant assumptions discussed above and the underlying data used by the Company in its analysis. We also involved an EY valuation specialist to assist us. We compared the significant assumptions used by management to historical and current trends. We audited the forecasted revenue by evaluating future subscriber growth, expected customer churn, and average rate per subscriber unit. We assessed the historical accuracy of management's estimates and performed sensitivity analyses on significant assumptions to evaluate changes in the recoverable amount of the cash generating units that would result from changes in the assumptions. We obtained management's assessment of indicators of impairment as at August 31, 2020 and evaluated management's assessment through review of actual results and the updated revenue forecast. We assessed the adequacy of the Company's disclosure in the consolidated financial statements.
Key Audit Matter	***Adoption of International Financial Reporting Standard 16 – Leases***
Description of the Matter	As more fully described in Note 2 to the consolidated financial statements, the Company's adoption of International Financial Reporting Standard 16 – Leases (IFRS 16), resulted in a transition adjustment as at September 1, 2019 to the opening balance sheet of $1,322 million increasing both property, plant and equipment and lease liabilities. The Company leases a significant number of assets which were previously classified as operating leases under IAS 17 Leases and held off balance sheet. Ensuring that all the leases subject to IFRS 16 are appropriately recorded in the consolidated financial statements is complex, primarily due to the large number of leases held by the Company. There is a risk that the lease data is incomplete or inaccurate. The application of IFRS 16 requires judgement in determining the lease term, including whether or not to exercise a renewal or termination option. The lease liability in each case needs to be discounted using an appropriate rate, the determination of which requires management judgement.
How We Addressed the Matter in Our Audit	We tested controls that address the risk of material misstatement related to the measurement of the transitional adjustment. For example, we tested controls over management's review of contract terms, including whether to exercise a renewal or termination option, and determining the discount rate used for discounting future cash flows. We also tested controls over management's procedures to ensure completeness of the population of contracts. We tested completeness of the lease data by reconciling to the Company's operating lease commitments as reported in the prior year's financial statements and reconciling to cash outflows during the year. We verified the accuracy of the underlying lease data by agreeing a representative sample of leases to original contracts and checked the integrity and mechanical accuracy of the IFRS 16 calculations for each lease sampled through recalculation of the expected IFRS 16 adjustment, including the application of an appropriate discount rate. We tested management's determination of the lease terms through review of historical practices and review of management's future plans. Our EY valuation specialist assisted us to review management's methodology and the application of the discount rate by evaluating the inputs through the use of market data.

Ernst + Young LLP

Chartered Professional Accountants

We have served as the Company's auditor since 1966.

Calgary, Canada
October 30, 2020

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders and Board of Directors of Shaw Communications Inc.:

Opinion on Internal Control over Financial Reporting

We have audited Shaw Communications Inc.'s internal control over financial reporting as of August 31, 2020, based on criteria established in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (the "COSO criteria"). In our opinion, Shaw Communications Inc. (the "Company") maintained, in all material respects, effective internal control over financial reporting as of August 31, 2020, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the consolidated statements of financial position as at August 31, 2020 and 2019, the related consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years then ended, and the related notes and our report dated October 30, 2020 expressed an unqualified opinion thereon.

Basis of Opinion

The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Report on Internal Controls over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audit in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects.

Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

Definition and Limitations of Internal Control Over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

(all amounts in millions of Canadian dollars except share and per share amounts)

1. CORPORATE INFORMATION

Shaw Communications Inc. (the "Company") is a diversified Canadian connectivity company whose core operating business is providing: Cable telecommunications, Satellite video services and data networking to residential customers, business and public-sector entities ("Wireline"); and wireless services for voice and data communications ("Wireless").

The Company was incorporated under the laws of the Province of Alberta on December 9, 1966 under the name Capital Cable Television Co. Ltd. and was subsequently continued under the Business Corporations Act (Alberta) on March 1, 1984 under the name Shaw Cablesystems Ltd. Its name was changed to Shaw Communications Inc. on May 12, 1993. The Company's shares are listed on the Toronto Stock Exchange (TSX), TSX Venture Exchange and New York Stock Exchange (NYSE) (Symbol: TSX – SJR.B, SJR.PR.A, SJR.PR.B, NYSE – SJR, and TSXV – SJR.A). The registered office of the Company is located at Suite 900, 630 – 3rd Avenue S.W., Calgary, Alberta, Canada T2P 4L4.

2. BASIS OF PRESENTATION AND ACCOUNTING POLICIES

Statement of compliance

These consolidated financial statements of the Company have been prepared in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB).

The consolidated financial statements of the Company for the years ended August 31, 2020 and 2019, were approved by the Board of Directors on October 29, 2020 and authorized for issue.

Basis of presentation

These consolidated financial statements have been prepared primarily under the historical cost convention and are expressed in millions of Canadian dollars unless otherwise indicated. Other measurement bases used are outlined below and in the applicable notes. The consolidated statements of income are presented using the nature classification for expenses.

Certain comparative figures have been reclassified to conform to the current year's presentation.

Basis of consolidation

(i) Subsidiaries

The consolidated financial statements include the accounts of the Company and those of its subsidiaries, which are entities over which the Company has control. Control exists when the Company has power over an investee, is exposed to or has rights to variable returns from its involvement and has the ability to affect those returns. Intercompany transactions and balances are eliminated on consolidation. The results of operations of subsidiaries acquired during the period are included from their respective dates of acquisition, being the time at which the Company obtains control. Consolidation of a subsidiary ceases when the Company loses control. A change in ownership interests of a subsidiary, without a loss of control, is accounted for as an equity transaction. The Company assesses control through share ownership and voting rights.

Non-controlling interests arise from business combinations in which the Company acquires less than 100% ownership interest. At the time of acquisition, non-controlling interests are measured at either fair value or their proportionate share of the fair value of the acquiree's identifiable assets. The Company determines the measurement basis on a transaction by transaction basis. Subsequent to acquisition, the carrying amount of non-controlling interests is increased or decreased for their share of changes in equity.

(ii) Joint operations

A joint operation is a type of joint arrangement whereby the parties that have joint control of the arrangement have rights to the assets and obligations for the liabilities, relating to the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control. The consolidated financial statements include the Company's proportionate share of the assets, liabilities, revenues, and expenses of its interests in joint operations.

The Company's joint operations consist of a 33.33% interest in the Burrard Landing Lot 2 Holdings Partnership (the "Partnership"). The Partnership owns and leases commercial space in Shaw Tower in Vancouver, BC, which is the Company's headquarters for its lower mainland operations. In classifying its 33.33% interest in the Partnership as a joint operation, the Company considered the terms and conditions of the partnership agreement and other facts and circumstances including the primary purpose of Shaw Tower which is to provide lease space to the partners.

Investments in associates

Associates are entities over which the Company has significant influence. Significant influence is the power to participate in the operating and financial policies of the investee, but is not control or joint control.

Investments in associates are accounted for using the equity method. Investments of this nature are recorded at original cost and adjusted periodically to recognize the Company's proportionate share of the associate's or joint venture's net income/loss and other comprehensive income/loss after the date of investment, additional contributions made and dividends received.

The Company classified its approximate 38% participating interest in Corus Entertainment Inc. ("Corus") as an investment in an associate after considering both companies are subject to common control and the ability of the Company to appoint directors to Corus' Board of Directors. On May 31, 2019, the Company sold all of its interest in Corus.

Revenue and expenses

The Company has multiple deliverable arrangements comprised of upfront fees (subscriber connection and installation fee revenue, customer premise equipment revenue, handset equipment revenue) and related subscription and service revenue. Upfront fees charged to customers do not constitute separate units of accounting, therefore these revenue streams are assessed as an integrated package.

(i) Revenue

The Company records revenue from contracts with customers in accordance with the following five steps:

(1) identify the contract(s) with a customer;

(2) identify the performance obligations in the contract;

(3) determine the transaction price;

(4) allocate the transaction price to the performance obligations in the contract; and,

(5) recognize revenue when (or as) we satisfy a performance obligation.

Revenue for each performance obligation is recognized either over time or at a point in time. For performance obligations satisfied over time, revenue is recognized as the services are provided. Revenues on certain long-term contracts are recognized using output methods based on products delivered, performance completed to date and time elapsed. Revenue from Cable, Internet, Phone, Direct-to-Home (DTH) and Wireless customers includes subscriber revenue earned as services are provided. Satellite distribution services and telecommunications service revenue is recognized in the period in which the services are rendered to customers. In addition to monthly service plans, the Company also offers multi-year service plans in which the total amount of the contractual service revenue is accounted for on a straight-line basis over the term of the plan. Fees for wireless voice, text and data services on a pay-per-use basis are recognized in the period that the service is provided.

Revenue from data centre customers includes colocation and other services revenue, including managed infrastructure revenue. Colocation revenue is recognized on a straight-line line basis over the term of the customer contract. Other services revenue, including managed infrastructure revenue, is recognized as the services are provided.

Revenue for performance obligations satisfied at a point in time is recognized when control of the item or service transfers to the customer. Revenue from the direct sale of equipment to wireless subscribers or dealers is recognized when the equipment is delivered and accepted by the subscribers or dealers.

For bundled arrangements (e.g. wireless handsets, voice and data services, internet services), items are accounted for as separate performance obligations if the item meets the definition of a distinct good or service. Stand-alone selling prices are determined using observable prices adjusted for market conditions and other factors, as appropriate. The Company offers a discretionary wireless handset discount program, whereby the subscriber earns the applicable discount by maintaining services with the Company, such that the receivable relating to the discount at inception of the transaction is reduced over a period of time. This discount is allocated proportionately between the equipment and service revenues, with the equipment discount recognized when the handset is delivered and the corresponding service discount is classified as a contract asset. The contract asset is reduced on a straight-line basis over the period which the discount is forgiven to a maximum of two years with an offsetting reduction to service revenue. The Company also offers a plan allowing customers to receive a larger up-front handset discount than they would otherwise qualify for if they pay a predetermined incremental charge to their existing service plan on a monthly basis. The charge is billed on a monthly basis but is recognized as revenue when the handset is delivered and accepted by the subscriber. The amount receivable is classified as part of other current or other long-term assets, as applicable, in the consolidated statement of financial position. When wireless equipment and services are bundled with wireline services, revenue is allocated across the Company's segments based on the relative stand-alone selling prices of the goods and services delivered.

When a customer can modify their contract within predefined terms such that we are not able to enforce the transaction price agreed to, but can only contractually enforce a lower amount, we allocate revenue between performance obligations using the minimum enforceable rights and obligations and any excess amount is recognized as revenue as its earned.

(ii) Contract assets and liabilities

We record a contract asset when we have provided goods and services to our customer but our right to related consideration for the performance obligation is conditional on satisfying other performance obligations. Contract assets are transferred to trade receivables when our right to consideration becomes conditional only as to the passage of time. A contract liability is recognized when we receive consideration in advance of the transfer of products or services to the customer. We account for contract assets and liabilities on a contract-by-contract basis, with each contract presented as either a net contract asset or a net contract liability accordingly.

Subscriber connection fees received from Cable, Internet, Phone and Wireless customers are deferred as contract liabilities and recognized as revenue on a straight-line basis over two to three years. The costs of physically connecting a new home are capitalized as part of the distribution system and costs of disconnections are expensed as incurred.

Initial setup fees related to the installation of data centre services and installation revenue received on contracts with commercial business customers are deferred as contract liabilities and recognized as revenue on a straight-line basis over the related service contract, which generally span two to ten years. Direct and incremental costs associated with the installation of services or service contract, in an amount not exceeding the upfront revenue, are deferred as contract assets and recognized as an operating expense on a straight-line basis over the same period.

(iii) Deferred commission cost assets

We defer the incremental cost to obtain or fulfill a contract with a customer over their expected period of benefit to the extent they are recoverable. These costs include certain commissions paid to internal and external representatives. We defer them as deferred commission cost assets in other assets and amortize them to operating costs over the pattern of the transfer of goods and services to the customer, which is typically evenly over either 24 or 36 consecutive months.

Direct and incremental initial selling, administrative and connection costs, including commissions related to subscriber acquisitions are deferred and recognized as an operating expense on a straight-line basis over three years.

(iv) Deferred equipment revenue and deferred equipment costs

Revenue from sales of DTH equipment is deferred and recognized on a straight-line basis over three years commencing when subscriber service is activated. The total cost of the equipment, including installation, represents an inventoriable cost which is deferred and recognized on a straight-line basis over the same period. The DTH equipment is generally sold to customers at cost or a subsidized price in order to expand the Company's customer base.

Recognition of deferred equipment revenue and deferred equipment costs is recorded as deferred equipment revenue amortization and deferred equipment costs amortization, respectively.

(v) Deferred IRU revenue

Prepayments received under indefeasible right to use (IRU) agreements are amortized on a straight-line basis into income over the term of the agreement and included in amortization of property, plant and equipment, intangibles and other in the consolidated statements of income.

Cash

Cash is presented net of outstanding cheques. When the amount of outstanding cheques and the amount drawn under the Company's revolving term facility are greater than the amount of cash, the net amount is presented as bank indebtedness.

Securitization of trade receivables

Sales of trade receivables in securitization transactions are recognized as collateralized short-term borrowings as we do not transfer control and substantially all the risks and rewards of ownership to another entity and thus do not result in our de-recognition of the trade receivables sold.

Allowance for doubtful accounts

The Company maintains an allowance for doubtful accounts for the estimated expected credit losses resulting from the inability of its customers to make required payments. In determining the allowance, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances.

Inventories

Inventories include subscriber equipment such as DTH receivers, which are held pending rental or sale at cost or at a subsidized price and wireless handsets, accessories and SIM cards. When subscriber DTH equipment is sold, the equipment revenue and equipment costs are deferred and amortized over three years. When the subscriber equipment is rented, it is transferred to property, plant and equipment and amortized over its useful life. Inventories are determined on a first-in, first-out basis, and are stated at cost due to the eventual capital nature as either an addition to property, plant and equipment or deferred equipment costs.

Inventories of wireless handsets, accessories and SIM cards are carried at the lower of cost and net realizable value. Cost is determined using the weighted average method and includes expenditures incurred in acquiring the inventories and bringing them to their existing condition and location. Net realizable value is the estimated selling price in the ordinary course of business, less selling expenses.

Property, plant and equipment

Property, plant and equipment are recorded at purchase cost. Direct labour and other directly attributable costs incurred to construct new assets, upgrade existing assets and connect new subscribers are capitalized as well as borrowing costs on qualifying assets. In addition, any asset removal and site restoration costs in connection with the retirement of assets are capitalized. Repairs and maintenance expenditures are charged to operating expense as incurred. Amortization is recorded on a straight-line basis over the estimated useful lives of assets as follows:

Asset	Estimated useful life
Cable, Wireless and telecommunications distribution system	3 – 20 years
Digital cable terminals and modems	3 – 5 years
Satellite audio, video and data network equipment and DTH receiving equipment	3 – 15 years
Buildings	15 – 40 years
Data processing	4 – 10 years
Other	4 – 20 years

The Company reviews the estimates of useful lives on a regular basis.

Leases

The Company adopted IFRS 16 as of September 1, 2019. The company continues to apply IAS 17 in its comparative financial statements.

(i) IFRS 16

Leases are typically entered into for network infrastructure and equipment, including transponders, and land and buildings relating to the Company's wireless and wireline networks, office space and retail stores. At inception of a contract, the Company assesses whether the contract contains a lease. A lease contract conveys the right to control the use of an identified asset for a period in exchange for consideration. To assess whether a contract conveys the right to control the use of an identified asset, the Company assesses whether:

- the contract involves the use of an identified asset;
- the Company has the right to obtain substantially all of the economic benefits from use of the asset throughout the period of use; and
- the Company has the right to direct the use of the identified asset.

Lease liabilities are initially measured at the present value of future lease payments at the commencement date, discounted using the interest rate implicit in the lease or, if not readily determinable, the Company's incremental borrowing rate. A single incremental borrowing rate is applied to a portfolio of leases with similar characteristics.

Lease payments included in the measurement of the lease liability consist of:

- fixed payments, including in-substance fixed payments;
- variable lease payments that depend on an index or rate;
- amounts expected to be payable under a residual value guarantee; and
- payments relating to purchase options and renewal option periods that are reasonably certain to be exercised, or periods subject to termination options that are not reasonably certain to be exercised.

The initial lease term included in the measurement of the lease liability consists of:

- the non-cancellable period of the lease;
- periods covered by options to extend the lease, where the Company is reasonably certain to exercise the option; and
- periods covered by options to terminate the lease, where the Company is reasonably certain not to exercise the option.

Lease liabilities are subsequently measured at amortized cost. Lease liabilities are remeasured when there is a lease modification, and a corresponding adjustment is made to the carrying amount of the right-of-use asset or is recorded in profit or loss if the carrying amount of the right-of-use asset has been reduced to zero. The interest expense for lease liabilities is recorded in *Interest expense* in the Consolidated Statements of Income.

Variable lease payments that do not depend on an index or rate are not included in the measurement of lease liabilities and right-of-use assets. The related payments are expensed in *Operating, general and administrative expenses* in the period in which the event or condition that triggers those payments occurs.

Right-of-use assets are initially measured at cost, which comprises the initial amount of the lease obligation adjusted for any lease payments made at or before the commencement date, plus any initial direct costs incurred, plus an estimate of costs to dismantle and remove the underlying asset or to restore the underlying asset or the site on which it is located, less any lease incentives received. The Company presents right-of-use assets in *Property, plant and equipment.*

If the Company obtains ownership of the leased asset by the end of the lease term or the costs of the right-of-use asset reflects the exercise of a purchase option, we depreciate the right-of-use asset from the lease commencement date to the end of the useful life of the underlying asset. Otherwise, right-of-use assets are depreciated on a straight-line basis from the commencement date to the earlier of the end of the useful life or the end of the lease term. Right-of-use assets are periodically reduced by impairment losses, if any, and adjusted for certain remeasurements on the related lease liability. The depreciation charge for right-of-use assets is recorded in *Amortization – Property, plant and equipment.*

(ii) IAS 17

Operating leases - Rent expense for real estate leases that have escalating lease payments is recorded on a straight-line basis over the term of the lease. The difference between the expense recorded and the amount paid is recorded as deferred rent and included in deferred credits in the statement of financial position.

Finance leases - Leases of property and equipment that transfer substantially all the risks and rewards of ownership are classified as finance leases. Finance leases are capitalized at the commencement of the lease at the fair value of the leased property or, if lower, at the present value of the minimum lease payments. Lease payments are apportioned between interest expense and reduction of the lease liability. The property and equipment acquired under finance leases is depreciated over the shorter of the useful life of the asset and the lease term.

Other long-term assets

Other long-term assets primarily include (i) equipment costs, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over three to five years, (ii) the non-current portion of wireless handset discounts receivable as described in the revenue and expenses accounting policy, (iii) credit facility arrangement fees amortized on a straight-line basis over the term of the facility, (iv) long-term receivables, (v) network capacity leases, (vi) the non-current portion of prepaid maintenance and support contracts, and (vii) direct costs in connection with initial setup fees and installation of services, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over two to ten years.

Intangibles

The excess of the cost of acquiring cable, satellite, media, data centre and wireless businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist of amounts allocated to broadcast rights and licences, wireless spectrum licences, trademarks, brands, program rights, customer relationships and software assets. Broadcast rights and licences, wireless spectrum licences, trademarks and brands represent identifiable assets with indefinite useful lives.

Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over their estimated useful lives ranging from 4 – 15 years.

Software that is not an integral part of the related hardware is classified as an intangible asset. Internally developed software assets are recorded at historical cost and include direct material and labour costs as well as borrowing costs on qualifying assets. Software assets are amortized on a straight-line basis over estimated useful lives ranging from 3 – 10 years. The Company reviews the estimates of lives and useful lives on a regular basis.

Borrowing costs

The Company capitalizes borrowing costs on qualifying assets that take more than one year to construct or develop using the Company's weighted average cost of borrowing which approximated 5% (2019 – 5%).

Impairment

(i) Goodwill and indefinite-life intangibles

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at February 1) and when events or changes in circumstances indicate that the carrying value may be impaired. The recoverable amount of each cash-generating unit (CGU) is determined based on the higher of the CGU's fair value less costs to sell (FVLCS) and its value in use (VIU). A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are Cable, Satellite, and Wireless. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods.

(ii) Non-financial assets with finite useful lives

For non-financial assets, such as property, plant and equipment and finite-life intangible assets, an assessment is made at each reporting date as to whether there is an indication that an asset may be impaired. If any indication exists, the recoverable amount of the asset is determined based on the higher of FVLCS and VIU. Where the carrying amount of the asset exceeds its recoverable amount, the asset is considered impaired and written down to its recoverable amount. Previously recognized impairment losses are reviewed for possible reversal at each reporting date and all or a portion of the impairment is reversed if the asset's value has increased.

Provisions

Provisions are recognized when the Company has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. The timing or amount of the outflow may still be uncertain. Provisions are measured using the best estimate of the expenditure required to settle the present obligation at the end of the reporting period, taking into account risks and uncertainties associated with the obligation. Provisions are discounted where the time value of money is considered material.

(i) Asset retirement obligations

The Company recognizes the fair value of a liability for an asset retirement obligation in the period in which it is incurred, on a discounted basis, with a corresponding increase to the carrying amount of property and equipment, primarily in respect of wireless and transmitter sites. This cost is amortized on the same basis as the related asset. The liability is subsequently increased for the passage of time and the accretion is recorded in the income statement as accretion of long-term liabilities and provisions. The discount rates applied are subsequently adjusted to current rates as required at the end of reporting periods. Revisions due to the estimated timing of cash flows or the amount required to settle the obligation may result in an increase or decrease in the liability. Actual costs incurred upon settlement of the obligation are charged against the liability to the extent recorded.

(ii) Restructuring provisions

Restructuring provisions, primarily in respect of employee termination benefits, are recognized when a detailed plan for the restructuring exists and a valid expectation has been raised to those affected that the plan will be carried out.

(iii) Other provisions

Provisions for disputes, legal claims and contingencies are recognized when an outflow to settle the matter is probable. The Company establishes provisions after taking into consideration legal assessments (if applicable), expected availability of insurance or other recourse and other available information.

Deferred credits

Deferred credits primarily include: (i) prepayments received under IRU agreements amortized on a straight-line basis into income over the term of the agreement, (ii) equipment revenue, as described in the revenue and expenses accounting policy, deferred and amortized over three to five years, and (iii) a deposit on a future fibre sale.

Income taxes

The Company accounts for income taxes using the liability method, whereby deferred income tax assets and liabilities are determined based on differences between the financial reporting and tax bases of assets and liabilities measured using substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse. Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset and they relate to income taxes levied by the same authority in the same taxable entity. Income tax expense for the period is the tax payable for the period using tax rates substantively enacted at the reporting date, any adjustments to taxes payable in respect of previous years and any change during the period in deferred income tax assets and liabilities, except to the extent that they relate to a business combination or divestment, items recognized directly in equity or in other comprehensive income. The Company records interest and penalties related to income taxes in interest expense.

Tax credits and government grants

The Company receives tax credits primarily related to its research and development activities. Government financial assistance is recognized when management has reasonable assurance that the conditions of the government programs are met and accounted for as a reduction of related costs, whether capitalized and amortized or expensed in the period the costs are incurred.

Foreign currency translation

Transactions originating in foreign currencies are translated into Canadian dollars at the exchange rate at the date of the transaction. Monetary assets and liabilities are translated at the period-end rate of exchange and non-monetary items are translated at historic exchange rates. The net foreign exchange gain/(loss) recognized on the translation and settlement of current monetary assets and liabilities was $5 (2019 – $5) and is included in other gains/(losses).

Financial instruments other than derivatives

Financial instruments have been classified and measured at amortized cost, fair value through other comprehensive income (FVOCI) or fair value through profit or loss (FVTPL). Cash and financial instruments have been classified as FVTPL and are recorded at fair value with any change in fair value immediately recognized in income (loss). Investments in equity securities are classified and measured at FVTPL. Loans and receivables and financial liabilities are carried at amortized cost. None of the Company's financial liabilities are classified as FVTPL.

Finance costs and discounts associated with the issuance of debt securities are netted against the related debt instrument and amortized to income using the effective interest rate method. Accordingly, long-term debt accretes over time to the principal amount that will be owing at maturity.

Derivative financial instruments and hedging activities

The Company uses derivative financial instruments, such as foreign currency forward purchase contracts, to manage risks from fluctuations in foreign exchange rates. All derivative financial instruments are recorded at fair value in the statement of financial position. The Company may elect to apply hedge accounting to certain derivative instruments. With hedge accounting, changes in the fair value of derivative financial instruments designated as cash flow hedges are recorded in other comprehensive income (loss) until the variability of cash flows relating to the hedged asset or liability is recognized in income (loss). When an anticipated transaction is subsequently recorded as a non-financial asset, the amounts recognized in other comprehensive income (loss) are reclassified to the initial carrying amount of the related asset. Where hedge accounting is not permissible or derivatives are not designated in a hedging relationship, they are classified as held-for-trading and the changes in fair value are immediately recognized in income (loss).

Instruments that have been entered into by the Company to hedge exposure to foreign currency risk are reviewed on a regular basis to ensure the hedges are still effective and that hedge accounting continues to be appropriate.

Fair value measurements

Fair value estimates are made at a specific point in time, based on relevant market information and information about the underlying asset or liability. These estimates are subjective in nature and involve uncertainties and matters of significant judgement and, therefore, cannot be determined with precision. Changes in assumptions could significantly affect the estimates.

The fair value hierarchy is based on inputs to valuation techniques that are used to measure fair value that are either observable or unobservable. Observable inputs reflect assumptions market participants would use in pricing an asset or liability based on market data obtained from independent sources while unobservable inputs reflect a reporting entity's pricing based upon their own market assumptions.

The fair value hierarchy consists of the following three levels:

Level 1 Inputs are quoted prices in active markets for identical assets or liabilities.

Level 2 Inputs for the asset or liability are based on observable market data, either directly or indirectly, other than quoted prices.

Level 3 Inputs for the asset or liability are not based on observable market data.

The Company determines whether transfers have occurred between levels in the fair value hierarchy by assessing the impact of events and changes in circumstances that could result in a transfer at the end of each reporting period.

Employee benefits

The Company accrues its obligations under its employee benefit plans, net of plan assets. The cost of pensions and other retirement benefits earned by certain employees is actuarially determined using the projected benefit method pro-rated on service and management's best estimate of salary escalation and retirement ages of employees. Past service costs from plan initiation and amendments are recognized immediately in the income statement. Remeasurements include actuarial gains or losses and the return on plan assets (excluding interest income). Actuarial gains and losses occur because assumptions about benefit plans relate to a long time frame and differ from actual experiences. These assumptions are revised based on actual experience of the plans such as changes in discount rates, expected retirement ages and projected salary increases. Remeasurements are recognized in other comprehensive income (loss) on an annual basis, at a minimum, and on an interim basis when there are significant changes in assumptions.

August 31 is the measurement date for the Company's employee benefit plans. The last actuarial valuations for funding purposes for the various plans were performed effective August 31, 2020 and the next actuarial valuations for funding purposes are effective August 31, 2021.

Share-based compensation

The Company has a stock option plan for directors, officers, employees, and consultants to the Company. The exercise price of options to purchase Class B Non-Voting Participating Shares ("Class B Non-Voting Shares") is determined by the Board, or a committee thereof, at a price not less than the closing price of the Class B Non-Voting Shares on the TSX on the trading day immediately preceding the date on which the options are granted. Any consideration paid on the exercise of stock options, together with any contributed surplus recorded at the date the options vested, is credited to share capital. The Company calculates the fair value of share-based compensation awarded to employees using the Black-Scholes option pricing model. The fair value of options are expensed and credited to contributed surplus over the vesting period of the options using the graded vesting method.

The Company has a restricted share unit (RSU) and performance share unit (PSU) plan which provides that RSUs may be granted to officers, employees and directors of the Company, and PSUs may be granted to officers and employees of the Company. RSUs vest on either the first, second and third anniversary of the grant date or 100% on the third anniversary of the grant date and compensation is recognized on a straight-line basis over the three-year vesting period. PSUs vest 100% on the third anniversary of the grant date. RSUs and PSUs will be settled in either cash or Class B Non-Voting Shares as determined by the Human Resources and Compensation Committee at the time of the grant and the obligation for RSUs and PSUs is measured at the end of each period at fair value using the Black-Scholes option pricing model and the number of outstanding RSUs and PSUs. For PSUs, the performance criteria is set by the by the Human Resources and Compensation Committee at the time of the grant, and typically requires the achievement of a minimum level of performance, otherwise the payout is zero, while maximum performance is capped at 150%. On settlement of vested PSUs, the number of Class B Non-Voting Shares issued or delivered, or the amount of cash payment will be multiplied by the applicable performance factor.

The Company has a deferred share unit (DSU) plan for its Board of Directors. Compensation cost is recognized immediately as DSUs vest when granted. DSUs will be settled in cash and the obligation is measured at the end of each period at fair value using the Black-Scholes option pricing model and the number of outstanding DSUs.

Directors may elect to receive their compensation in cash, RSUs, DSUs, or a combination thereof. Any director who has not met their share ownership guidelines is generally required to elect to receive at least 50% of their annual compensation in DSUs and/or RSUs.

The Company has an employee share purchase plan (the "ESPP") under which eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the participant's contributions, increasing to 33% once an employee reaches 10 years of continuous service, and records such amounts as compensation expense.

Earnings per share

Basic earnings per share is based on net income attributable to equity shareholders adjusted for dividends on preferred shares and is calculated using the weighted average number of Class A Participating Shares ("Class A Shares") and Class B Non-Voting Shares outstanding during the period. Diluted earnings per share is calculated by considering the effect of all potentially dilutive instruments. In calculating diluted earnings per share, any proceeds from the exercise of stock options and other dilutive instruments are assumed to be used to purchase Class B Non-Voting Shares at the average market price during the period.

Guarantees

The Company discloses information about certain types of guarantees that it has provided, including certain types of indemnities, without regard to whether it will have to make any payments under the guarantees.

Estimation uncertainty and critical judgments

The preparation of consolidated financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the period. Actual results could differ from those estimates and significant changes in assumptions could cause an impairment in assets. The following require the most difficult, complex or subjective judgments which result from the need to make estimates about the effects of matters that are inherently uncertain.

Estimation uncertainty

The following are key assumptions concerning the future and other key sources of estimation uncertainty that could impact the carrying amount of assets and liabilities and results of operations in future periods.

(i) Allowance for doubtful accounts

The Company is required to make an estimate of expected credit losses on its receivables. The estimated allowance required is a matter of judgment and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foretold, such as future business, personal and economic conditions.

(ii) Contractual service revenue

The Company is required to make judgments and estimates that affect the amount and timing of revenue from contracts with customers, including estimates of the stand-alone selling prices of wireline and wireless products and services, the identification of performance obligations within a contract and the timing of satisfaction of performance obligations under long-term contracts.

Determining the deferral criteria for the costs incurred to obtain or fulfill a contract requires us to make significant judgments. We expect incremental commission fees paid to internal and external representatives as a result of obtaining contracts with customers to be recoverable.

(iii) Property, plant and equipment

The Company is required to estimate the expected useful lives of its property, plant and equipment. These estimates of useful lives involve significant judgment. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. Management's judgment is also required in determination of the amortization method, the residual value of assets and the capitalization of labour and overhead.

(iv) Leases

The application of IFRS 16 requires the Company to make judgments that affect the valuation of the lease liabilities and the valuation of right-of-use assets. These include determining whether a contract contains a lease, determining the contract term, including whether or not to exercise renewal or termination options, and determining the interest rate used for discounting future cash flows.

(v) Business combinations – purchase price allocation

Purchase price allocations involve uncertainty because management is required to make assumptions and judgments to estimate the fair value of the identifiable assets acquired and liabilities assumed in business combinations. Fair value estimates are based on quoted market prices and widely accepted valuation techniques, including discounted cash flow (DCF) analysis. Such estimates include assumptions about inputs to the valuation techniques, industry economic factors and business strategies.

(vi) Impairment

The Company estimates the recoverable amount of its CGUs using a FVLCS calculation based on a DCF analysis or market approach or a VIU calculation based on a DCF analysis. Where a DCF analysis is used, significant judgments are inherent in this analysis including estimating the amount and timing of the cash flows attributable to the broadcast rights and licences, the selection of an appropriate discount rate, and the identification of appropriate terminal growth rate assumptions. In this analysis the Company estimates the discrete future cash flows associated with the intangible asset for five years and determines a terminal value. The future cash flows are based on the Company's estimates of future operating results, economic conditions and the competitive environment. The terminal value is estimated using both a perpetuity growth assumption and a multiple of operating income before restructuring costs and amortization. The discount rates used in the analysis are based on the Company's weighted average cost of capital and an assessment of the risk inherent in the projected cash flows. In analyzing the FVLCS determined by a DCF analysis, the Company also considers a market approach determining a recoverable amount for each unit and total entity value determined using a market capitalization approach. Recent market transactions are taken into account, when available. The key assumptions used to determine the recoverable amounts, including a sensitivity analysis, are included in Note 9. A DCF analysis uses significant unobservable inputs and is therefore considered a level 3 fair value measurement.

(vii) Employee benefit plans

The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected will be needed to settle employee benefit obligations. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes are required.

(viii) Income taxes

The Company is required to estimate income taxes using substantively enacted tax rates and laws in effect or that will be in effect when the temporary differences are expected to reverse. In determining the measurement of tax uncertainties, the Company recognizes an income tax benefit only when it is probable that the tax benefit will be realized. Realization of deferred income tax assets is dependent on generating sufficient taxable income during the period in which the temporary differences are deductible. Although realization is not assured, management believes it is more likely than not that all recognized deferred income tax assets will be realized based on reversals of deferred income tax liabilities, projected operating results and tax planning strategies available to the Company and its subsidiaries.

(ix) Contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under regulatory, contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities.

Critical judgements

The following are critical judgements apart from those involving estimation:

(i) Determination of a CGU

Management's judgement is required in determining the Company's cash generating units (CGU) for the impairment assessment of its indefinite-life intangible assets. The CGUs have been determined considering operating activities and asset management and are Cable, Satellite, and Wireless.

(ii) Broadcast rights and licences and spectrum licences – indefinite-life assessment

A number of the Company's businesses are dependent upon broadcast licences (or operate pursuant to an exemption order) granted and issued by the CRTC or wireless spectrum licences issued by the Department of Innovation, Science and Economic Development. While these licences must be renewed from time to time, the Company has never failed to do so. In addition, there are currently no legal, regulatory or competitive factors that limit the useful lives of these assets.

Adoption of recent accounting pronouncements

We adopted the following new accounting standards effective September 1, 2019.

- IFRS 16 Leases was issued on January 2016 and replaces IAS 17 Leases. The new standard requires entities to recognize lease assets and lease obligations on the balance sheet. For lessees, IFRS 16 removes the classification of leases as either operating leases or finance leases, instead requiring that leases be capitalized by recognizing the present value of the lease payments and showing them as lease assets (right-of-use assets) and representing the right to use the underlying leased asset. If lease payments are made over time, the Company recognizes a lease liability representing its obligation to make future lease payments. Certain short-term leases (less than 12 months) and leases of low-value may be exempted from the requirements and may continue to be treated as operating leases if certain elections are made. Lessors will continue with a dual lease classification model. Classification will determine how and when a lessor will recognize lease revenue, and what assets would be recorded.

  Implementation

  We adopted IFRS 16 using a modified retrospective approach whereby the financial statements of prior periods presented are not restated. We recognized lease liabilities at September 1, 2019 for leases previously classified as operating leases, measured at the present-value of the lease payments using our incremental borrowing rate at that date, with the corresponding right-of-use asset generally measured at an equal amount, adjusted for any prepaid or accrued rent outstanding as at August 31, 2019.

As permitted by IFRS 16, we applied certain practical expedients to facilitate the initial adoption and ongoing application of IFRS 16 including the following:

- not separate fixed non-lease components from lease components for certain classes of underlying assets. Each lease component and any associated non-lease components will be accounted for as a single lease component;
- apply a single discount rate to a portfolio of leases with similar characteristics;
- exclude initial direct costs from measuring the right-of-use asset as at September 1, 2019; and
- use hindsight in determining the lease term where the contract contains purchase, extension, or termination options.

On transition, we have not elected the recognition exemptions on short-term leases or low-value leases; however, we may choose to elect these recognition exemptions on a class-by-class basis for new classes and lease-by-lease basis, respectively, in the future.

There was no significant impact for contracts in which we are the lessor.

- IFRIC 23 Uncertainty over Income Tax Treatments was issued in 2017 to clarify how to apply the recognition and measurement requirements in IAS 12 Income Taxes when there is uncertainty over income tax treatments. It was required to be applied for annual periods commencing January 1, 2019, which for the Company was the annual period commencing September 1, 2019. The cumulative effect of the initial application of the new standard has been reflected as an adjustment to retained earnings at September 1, 2019. Refer to "Transition adjustments" below for details.

Transition adjustments

Below is the effect of transition to IFRS 16 and the adoption of IFRIC 23 on our Consolidated Statements of Financial Position as at September 1, 2019.

(millions of Canadian dollars)	As reported as at August 31, 2019	Effect of IFRS 16 transition	Effect of IFRIC 23 transition	Subsequent to transition as at September 1, 2019
ASSETS				
Current

Common and preferred shareholders	6,282	–	(22)	6,260
Non-controlling interests in subsidiaries	3	–	–	3
	6,285	–	(22)	6,263
	15,646	1,322	–	16,968

Prior to adopting IFRS 16, our total minimum operating lease commitments as at August 31, 2019 were $919 million. The weighted average discount rate applied to the total lease liabilities was 3.50% at September 1, 2019. The difference between the total of the minimum lease payments set out in Note 27 in our 2019 Consolidated Financial Statements and the total lease liability recognized on transition was a result of:

- the inclusion of lease payments beyond minimum commitments relating to reasonably certain renewal periods or extension options that had not yet been exercised as at August 31, 2019;
- the effect of discounting on the minimum lease payments; and
- certain costs to which we are contractually committed under lease contracts, but which do not qualify to be accounted for as a lease liability, such as variable lease payments not tied to an index or rate.

3. ACCOUNTS RECEIVABLE

	2020 $	2019 $
Subscriber and trade receivables [1]	**326**	335
Due from related parties (note 29)	**1**	–
Miscellaneous receivables	**15**	15
	342	350
Less allowance for doubtful accounts [1] (note 30)	**(74)**	(63)
	268	287

[1] In 2020 the Company removed subscriber and trade receivables and the associated allowance for doubtful accounts for certain amounts that were fully provisioned and greater than 12 months. Prior year amounts have also been adjusted to reflect this change.

Included in operating, general and administrative expenses is a provision for doubtful accounts of $60 (2019 – $40).

4. INVENTORIES

	2020 $	2019 $
Wireless devices and accessories	**40**	53
DTH subscriber equipment	**20**	33
	60	86

5. OTHER CURRENT ASSETS

	2020 $	2019 $
Prepaid expenses	**89**	108
Costs incurred to obtain or fulfill a contract with a customer	**61**	59
Wireless handset receivables	**127**	124
	277	291

6. INVESTMENTS AND OTHER ASSETS

	2020 $	2019 $
Investments in private entities	**42**	37

The Company has a portfolio of minor investments in various private entities. In the third quarter of fiscal 2019, the Company disposed of one of these investments with a book value of $10 for proceeds of $25.

Corus Entertainment Inc.

Corus is a leading media and content company that creates and delivers high quality brands and content across platforms for audiences around the world. Corus' portfolio of multimedia offerings encompasses 35 specialty television services, 39 radio stations, 15 conventional television stations, a global content business, digital assets, live events, children's book publishing, animation software, technology and media services. Corus is headquartered in Canada, and its stock is listed on the TSX under the symbol CJR.B.

In connection with the sale of the Media division to Corus in 2016, the Company received 71,364,853 Corus Class B non-voting participating shares (the "Corus Class B Shares") representing approximately 37% of Corus' total issued equity of Class A and Class B shares at that time. Although the Corus Class B Shares did not have voting rights, the Company was considered to have significant influence due to Board representation. The Company agreed to retain approximately one-third of its Corus Class B Shares for 12 months post-closing, a second one-third for 18 months post-closing, and the final one-third for 24 months post-closing, until March 31, 2018.

On May 31, 2019, the Company sold all of its 80,630,383 Corus Class B Shares at a price of $6.80 per share. Proceeds, net of transaction costs, were $526, which resulted in a loss of $109. The Company's weighted average ownership of Corus for the nine months ended May 31, 2019 was 38%. For the nine months ended August 31, 2019, the Company received dividends of $10 from Corus.

Summary financial information for Corus through the disposal date is as follows:

	Nine months ended May 31, 2019
Revenue	1,310
Net income attributable to:	
Shareholders	133
Non-controlling interest	19
	152
Other comprehensive income, attributable to shareholders	(40)
Comprehensive income	112
Equity income from associates [1]	46
Other comprehensive income from equity accounted associates [1]	(13)
	33

[1] The Company's share of income and other comprehensive income reflect the weighted average proportion of Corus net income and other comprehensive income attributable to shareholders for the nine-month period ended May 31, 2019.

Carrying amount at August 31, 2018	615
Share of equity at disposition date	46
Share of other comprehensive loss of associate	(13)
Dividends received to disposition date	(10)
Carrying value at disposition date	**638**
Proceeds on disposal, net of transaction costs	526
Reclassification of accumulated gain from other comprehensive income related to the sale of an associate	(3)
Loss on sale of investment	**109**

7. PROPERTY, PLANT AND EQUIPMENT

	August 31, 2020			August 31, 2019		
	Cost $	Accumulated amortization $	Net book value $	Cost $	Accumulated amortization $	Net book value $

Assets under construction	**461**	**257**	**(406)**	**–**	**–**	**–**	**312**
	4,883	**939**	**(4)**	**(909)**	**(13)**	**–**	**4,896**

	August 31, 2018						August 31, 2019
	Net book value $	Additions $	Transfers $	Amortization $	Disposals and writedown $	Divestment $	Net book value $
Cable and telecommunications distribution system	3,364	306	295	(540)	(1)	(4)	3,420
Digital cable terminals and modems	386	218	–	(236)	–	–	368
Satellite audio, video and data network and DTH receiving equipment	65	11	–	(16)	–	–	60
Land and buildings	403	2	4	(30)	(4)	–	375
Data centre infrastructure, data processing and other	269	9	18	(50)	(17)	(30)	199
Assets under construction	215	563	(317)	–	–	–	461
	4,702	1,109	–	(872)	(22)	(34)	4,883

In 2020, the Company recognized a net loss of $3 (2019 – net gain of $43) on the disposal of property, plant and equipment.

8. OTHER LONG-TERM ASSETS

	2020 $	2019 $
Equipment costs subject to a deferred revenue arrangement	**67**	93
Long-term Wireless handset receivables	**35**	45
Costs incurred to obtain or fulfill a contract with a customer	**37**	35
Credit facility arrangement fees	**4**	4
Other	**20**	18
	163	195

Amortization provided in the accounts for 2020 amounted to $65 (2019 – $85) and was recorded as amortization of deferred equipment costs.

9. INTANGIBLES AND GOODWILL

	2020 $	2019 $
Broadcast rights and licences		
Cable systems	**4,016**	4,016
DTH and satellite services	**1,013**	1,013
	5,029	5,029
Wireless spectrum licences	**2,445**	2,445
Other intangibles		
Software	**479**	451
Customer relationships	**44**	54
	7,997	7,979
Goodwill		
Cable and telecommunications systems	**79**	79
Wireless	**201**	201
	280	280
Net book value	**8,277**	8,259

Broadcast rights and licences, trademark, brands and wireless spectrum licences have been assessed as having indefinite useful lives. While licences must be renewed from time to time, the Company has never failed to do so. In addition, there are currently no legal, regulatory, competitive or other factors that limit the useful lives of these assets.

The changes in the carrying amount of intangibles with indefinite useful lives, and therefore not subject to amortization, are as follows:

	Broadcast rights and licences $	Goodwill $	Wireless spectrum licences $
September 1, 2018	5,029	280	1,953
Additions	–	–	492
Disposition	–	–	–

Impairment testing of indefinite-life intangibles and goodwill

The Company conducted its annual impairment test on goodwill and indefinite-life intangibles as at February 1, 2020 and the recoverable amount of the CGUs exceeded their carrying value.

A hypothetical decline of 10% in the recoverable amount of the Cable CGU as at February 1, 2020 would not result in any impairment loss. A hypothetical decline of 10% in the recoverable amount of the Satellite CGU as at February 1, 2020 would not result in an impairment loss. A hypothetical decline of 10% in the recoverable amount of the Wireless CGU as at February 1, 2020 would not result in any impairment loss.

Any changes in economic conditions since the impairment testing conducted as at February 1, 2020 do not represent events or changes in circumstance that would be indicative of impairment at August 31, 2020.

Significant estimates inherent to this analysis include discount rates and the terminal value. At February 1, 2020, the estimates that have been utilized in the impairment tests reflect any changes in market conditions and are as follows:

		Terminal value	
	Post-tax discount rate	Terminal growth rate	Terminal operating income before restructuring costs and amortization multiple
Cable	6.0%	0.5%	8.0x
Satellite	7.0%	-4.0%	6.7x
Wireless	7.0%	1.0%	5.3x

A sensitivity analysis of significant estimates is conducted as part of every impairment test. With respect to the impairment tests performed in the second quarter, the estimated decline in recoverable amount for the sensitivity of significant estimates is as follows:

	Estimated decline in recoverable amount		
		Terminal value	
	1% increase in discount rate	1% decrease in terminal growth rate	0.5 times decrease in terminal operating income before restructuring costs and amortization multiple
Cable	15.0%	12.5%	6.2%
Satellite	7.8%	5.6%	7.4%
Wireless	18.2%	10.1%	9.4%

10. SHORT-TERM BORROWINGS

On June 19, 2018 the Company established an accounts receivable securitization program with a Canadian financial institution which will allow it to sell certain trade receivables into the program up to a maximum of $100. The Company continues to service and retain substantially all of the risks and rewards relating to the trade receivables sold, and therefore, the trade receivables are recognized on the Company's Consolidated Statements of Financial Position and the funding received is recorded as a current liability (revolving floating rate loans) secured by the trade receivables. The buyer's interest in the accounts receivable ranks ahead of the Company's interest and the program restricts it from using the trade receivables as collateral for any other purpose. The buyer of the trade receivables has no claim on any of the Company's other assets.

On May 29, 2019, the Company amended the terms of its accounts receivable securitization program to extend the term of the program to May 29, 2022 and increase the sales committed up to a maximum of $200.

A summary of our accounts receivable securitization program as at August 31, 2020 is as follows:

	2020 $	2019 $

(1) During fiscal 2018, the Company offered a voluntary departure program to a group of eligible employees as part of a total business transformation initiative. A total of $130 has been paid in fiscal 2020. The remaining costs are expected to be paid out within the next 5 months.

(2) During fiscal 2020, the Company restructured certain operations within the Wireline segment and announced a realignment of the senior leadership team. In connection with the restructuring, the Company recorded $14 in the third quarter primarily related to severance and employee related costs, of which $13 has been paid as at August 31, 2020. The remaining costs are expected to be paid within the next 3 months.

Corporate

Bank loans

During 2012, a syndicate of banks provided the Company with an unsecured $1 billion credit facility which includes a maximum revolving term or swingline facility of $50. During 2016, the Company elected to increase its borrowing capacity by $500 under the terms of the amended facility.

On November 21, 2019, the Company amended the terms of its bank credit facility to extend the maturity date to December 2024. The facility can be used for working capital and general corporate purposes.

Funds are available to the Company in both Canadian and US dollars. At August 31, 2020, $3 (2019 – $3) has been drawn as committed letters of credit against the revolving term facility. Interest rates fluctuate with Canadian prime and bankers' acceptance rates, US bank base rates and LIBOR rates. Excluding the revolving term facility, the effective interest rate on actual borrowings under the credit facility during 2020 was 2.81% (2019 – nil). The effective interest rate on the revolving term facility for 2020 was 4.05% (2019 – nil).

Senior notes

The senior notes are unsecured obligations and rank equally and ratably with all existing and future senior indebtedness. The fixed rate notes are redeemable at the Company's option at any time, in whole or in part, prior to maturity at 100% of the principal amount plus a make-whole premium.

On October 1, 2019, the Company repaid $1,250 of 5.65% senior notes at their maturity.

On December 9, 2019, the Company issued $800 of senior notes, consisting of $500 principal amount of 3.30% senior notes due 2029 and $300 principal amount of 4.25% senior notes due 2049. The net proceeds of the offering of $792, along with cash on hand, were used to fund the redemption of the $500 principal amount of 5.50% senior notes due 2020 and the $300 principal amount of 3.15% senior notes due 2021.

On December 24, 2019, the Company redeemed the $500 principal amount of 5.50% senior notes due December 7, 2020 and the $300 principal amount of 3.15% senior notes due February 19, 2021. In conjunction with the redemption, the Company paid make whole premiums of $17 and accrued interest of $5.

On April 22, 2020, the Company issued $500 principal amount of senior notes at a rate of 2.90% due December 9, 2030.

Other

Burrard Landing Lot 2 Holdings Partnership

The Company has a 33.33% interest in the Partnership which built the Shaw Tower project with office/retail space and living/working space in Vancouver, BC. In the fall of 2004, the commercial construction of the building was completed and at that time, the Partnership issued ten year 6.31% secured mortgage bonds in respect of the commercial component of the Shaw Tower. In February 2014, the Partnership refinanced its debt. The Partnership received a mortgage loan and used the proceeds to prepay the outstanding balance of the previous mortgage and loan excess funds to each of its partners. The mortgage loan matures on November 1, 2024 and bears interest at 4.683% compounded semi-annually with interest only payable for the first five years. Interest and principal payments commenced on April 1, 2019. The mortgage loan is collateralized by the property and the commercial rental income from the building with no recourse to the Company.

In February 2018, the Partnership received an additional mortgage loan of $30 and used the proceeds to loan excess funds to each of its partners, of which the Company received $10. The additional loan matures on November 1, 2024 and bears interest at 4.14% compounded semi-annually. Monthly mortgage payments consist of both principal and interest components.

Debt covenants

The Company and its subsidiaries have undertaken to maintain certain covenants in respect of the credit agreements and trust indentures described above. The Company and its subsidiaries were in compliance with these covenants at August 31, 2020.

Long-term debt repayments

Mandatory principal repayments on all long-term debt in each of the next five years and thereafter are as follows:

	$
2021	1
2022	1
2023	1
2024	1,001
2025	45
Thereafter	3,550
	4,599

Long-term	1,211
Balance as at September 1, 2019	1,324
Current	113
Long-term	1,157
Balance as at August 31, 2020	**1,270**

Lease liabilities are subject to amortization schedules, which results in the principal being repaid over various periods, including reasonably expected renewals. The weighted average interest rate on lease liabilities was approximately 3.50% as at August 31, 2020. Refer to Note 30 for a maturity analysis of the Company's lease liabilities.

The Company leases Ku-band and C-band transponders on the Anik F1R, Anik F2 and Anik G1 satellites. As part of the Ku-band transponder agreements with Telesat Canada, the Company is committed to paying annual transponder maintenance and licence fees for each transponder from the time the satellite becomes operational for a period of 15 years. As at August 31, 2020, the Company has recorded lease liabilities of $306 relating to these transponders. Included in operating, general and administrative expenses are transponder maintenance expenses of $nil (2019 – $84).

Below is a summary of the Company's other expenses related to leases included in operating, general and administrative expenses.

	2020 $	2019 $
Rental expense related to operating leases	–	164
Expenses related to variable lease components not included in lease liabilities	20	–
Expenses related to low-value leases	32	–
	52	164

15. OTHER LONG-TERM LIABILITIES

	2020 $	2019 $
Pension liabilities (note 28)	**68**	69

Deposit on future fibre sale	**2**	2
	406	425

Amortization of deferred credits for 2020 amounted to $29 (2019 – $34) and was recorded in the accounts as described below.

IRU agreements are in place for periods ranging from 21 to 60 years and are being amortized to income over the agreement periods. Amortization in respect of the IRU agreements for 2020 amounted to $13 (2019 – $13) and was recorded as other amortization. Amortization of equipment revenue for 2020 amounted to $16 (2019 – $21).

17. SHARE CAPITAL

Authorized

The Company is authorized to issue a limited number of Class A Shares of no par value, as described below; an unlimited number of Class B Non-Voting Shares of no par value; an unlimited number of Class 1 Preferred Shares issuable in series; and an unlimited number of Class 2 Preferred Shares issuable in series, of which 12,000,000 were designated Cumulative Redeemable Rate Reset Class 2 Preferred Shares, Series A ("Series A Preferred Shares") and 12,000,000 were designated Cumulative Redeemable Floating Rate Class 2 Preferred Shares, Series B ("Series B Preferred Shares").

The authorized number of Class A Shares is limited, subject to certain exceptions, to the lesser of that number of shares (i) currently issued and outstanding and (ii) that may be outstanding after any conversion of Class A Shares into Class B Non-Voting Shares.

Issued and outstanding

2020	2019		2020	2019

525,004,897	528,761,835		**4,602**	4,605

Class A Shares and Class B Non-Voting Shares

Class A Shares are convertible at any time into an equivalent number of Class B Non-Voting Shares. In the event that a take-over bid is made for Class A Shares, in certain circumstances, the Class B Non-Voting Shares are convertible into an equivalent number of Class A Shares.

Changes in Class A Share capital and Class B Non-Voting Share capital in 2020 and 2019 are as follows:

	Class A Shares		Class B Non-Voting Shares	
	Number	$	Number	$

August 31, 2020	**22,372,064**	**2**	**490,632,833**	**4,307**

Series A and B Preferred Shares

The Series A Preferred Shares and Series B Preferred Shares represent series of Class 2 Preferred Shares and are classified as equity since redemption, at $25.00 per Series A Preferred Share and Series B Preferred Share, is at the Company's option and payment of dividends is at the Company's discretion.

Share transfer restriction

The Articles of the Company empower the directors to refuse to issue or transfer any share of the Company that would jeopardize or adversely affect the right of Shaw Communications Inc. or any subsidiary to obtain, maintain, amend or renew a licence to operate a broadcasting undertaking pursuant to the Broadcasting Act (Canada).

Normal Course Issuer Bid

On October 29, 2019, the Company announced that it had received approval from the TSX to establish a normal course issuer bid (NCIB) program. The program commenced on November 1, 2019 and will remain in effect until October 31, 2020. As approved by the TSX, the Company has the ability to purchase for cancellation up to 24,758,127 Class B Non-Voting Shares representing 5% of all of the issued and outstanding Class B Non-Voting Shares as at October 18, 2019.

During the year ended August 31, 2020, the Company purchased 5,614,672 Class B Non-Voting Shares for cancellation for a total cost of approximately $140 under the NCIB. The average book value of the shares repurchased was $8.77 per share and was charged to share capital. The excess of the market price over the average book value, including transaction costs, was approximately $91 and was charged to retained earnings. The Company suspended the program in April 2020.

Subsequent to year-end, on October 29, 2020, the Company's Board of Directors approved the renewal of the NCIB program to purchase up to 24,532,404 Class B Non-Voting Shares representing 5% of all of the issued and outstanding Class B Non-Voting Shares. The NCIB program remains subject to approval by the TSX and, if accepted, will be conducted in accordance with the applicable rules and policies of the TSX and applicable Canadian securities law.

Dividend Reinvestment Plan

On October 24, 2019, in accordance with the terms of our Dividend Reinvestment Plan (DRIP), the Company announced that in lieu of issuing shares from treasury, it will satisfy its share delivery obligations under the DRIP by purchasing Class B Non-Voting Shares on the open market. In addition, the Company reduced its discount from 2% to 0% for the Class B Non-Voting Shares delivered under the DRIP. These changes to the DRIP were applied to the dividends payable on November 28, 2019 to shareholders of record on November 15, 2019.

18. SHARE-BASED COMPENSATION AND AWARDS

Stock option plan

Under the Company's stock option plan, directors, officers, employees, and consultants are eligible to receive stock options to acquire Class B Non-Voting Shares with terms not to exceed ten years from the date of grant and for such number of Class B Non-Voting Shares as the Board, or a committee thereof, determines in its discretion. An option is not immediately exercisable, but rather is exercisable on vesting dates determined by the Board from time to time. The Company's current practice is to award options for terms of ten years with 20% of the options in a grant vesting on each of the first through fifth anniversaries of the grant date. The Board, or a committee thereof, may grant options at an exercise price not less than the closing price of the Class B Non-Voting Shares on the TSX on the trading day immediately preceding the date on which the options are granted. The maximum number of Class B Non-Voting Shares issuable under the plan may not exceed 62,000,000. As at August 31, 2020, 39,637,412 Class B Non-Voting Shares have been issued under the plan.

The changes in options are as follows:

	2020		2019	
	Number	Weighted average exercise price $	Number	Weighted average exercise price $
Outstanding, beginning of year	**8,363,031**	**26.11**	9,378,966	25.18
Granted	**84,000**	**26.88**	1,540,000	26.36
Forfeited	**(681,168)**	**26.65**	(897,470)	26.66
Exercised [1]	**(407,733)**	**21.57**	(1,658,465)	20.76
Outstanding, end of year	**7,358,130**	**26.36**	8,363,031	26.11

[1] The weighted average Class B Non-Voting Share price for the options exercised was $25.60.

The following table summarizes information about the options outstanding at August 31, 2020:

	Options outstanding			Options exerciseable	
Range of prices	Number outstanding	Weighted average remaining contractual life	Weighted average exercise price	Number exercisable	Weighted average exercise price
$19.75 to $24.86	1,438,320	4.74	23.68	1,149,620	23.55
$24.87 to $26.31	1,531,075	5.88	25.93	1,069,575	25.83
$26.32 to $26.83	1,614,100	7.97	26.49	454,350	26.55
$26.84 to $27.71	1,142,135	5.75	27.31	811,235	27.35
$27.72 to $30.87	1,632,500	6.44	28.35	980,750	28.51

The weighted average estimated fair value at the date of the grant for common share options granted for the year ended August 31, 2020 was $1.83 (2019 – $2.07) per option. The fair value of each option granted was estimated on the date of the grant using the Black-Scholes option pricing model with the following weighted-average assumptions:

	2020	2019
Dividend yield	**4.41%**	4.50%
Risk-free interest rate	**1.45%**	2.08%
Expected life of options	**7 years**	7 years
Expected volatility factor of the future expected market price of Class B Non-Voting Shares	**15.90%**	16.30%

Expected volatility has been estimated based on the historical share price volatility of the Company's Class B Non-Voting Shares.

Restricted share unit plan and Performance share unit plan

The Company has an RSU/PSU plan which provides that RSUs may be granted to directors, officers and employees of the Company and PSUs may be granted to officers and employees of the Company. Vested RSUs and PSUs will be settled in either cash or Class B Non-Voting Shares as determined by the Human Resources and Compensation Committee at the time of the grant. The cash payout will be based on the market value of a Class B Non-Voting Share at the time of the payout. When cash dividends are paid on Class B Non-Voting Shares, holders are credited with additional RSUs or PSUs, as applicable, equal to the dividend.

For PSUs, the performance criteria is set by the Human Resources and Compensation Committee at the time of the grant, and typically requires the achievement of a minimum level of performance, otherwise the payout is zero, while maximum performance is capped at 150%. On settlement of vested PSUs, the number of Class B Non-Voting Shares issued or delivered, or the amount of cash payment will be multiplied by the applicable performance factor.

During 2020, $9 was recognized as compensation expense (2019 – $5). The carrying value and intrinsic value of combined RSUs and PSUs at August 31, 2020 was $12 and $12, respectively (August 31, 2019 – $7 and $7, respectively).

Deferred share unit plan

The Company has a DSU plan for its Board of Directors whereby directors may elect to receive their annual cash compensation, or a portion thereof, in DSUs and/or RSUs, provided that any director who has not met the applicable share ownership guideline is generally required to elect to receive at least 50% of his or her annual compensation in DSUs and/or RSUs. In addition, the Company may adjust and/or supplement directors' compensation with periodic grants of DSUs. A DSU is a right that tracks the value of one Class B Non-Voting Share. Holders will be entitled to a cash payout when they cease to be a director. The cash payout will be based on market value of a Class B Non-Voting Share at the time of payout. When cash dividends are paid on Class B Non-Voting Shares, holders are credited with DSUs equal to the dividend. DSUs do not have voting rights as there are no shares underlying the plan.

During 2020, $2 was recognized as compensation expense (2019 – $ nil). The carrying value and intrinsic value of DSUs at August 31, 2020 was $24 and $20, respectively (August 31, 2019 – $24 and $20, respectively).

Employee share purchase plan

The Company's ESPP provides employees with an incentive to increase the profitability of the Company and a means to participate in that increased profitability. Generally, all Canadian, non-unionized, full time or part time employees of the Company are eligible to enroll in the ESPP. Under the ESPP, eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the employee's contributions, increasing to 33% once an employee reaches 10 years of continuous service.

During 2020, $5 was recorded as compensation expense (2019 – $6).

19. EARNINGS PER SHARE

Earnings per share calculations are as follows:

	2020	2019
Numerator for basic and diluted earnings per share ($)		
Net income	**688**	733
Deduct: net income attributable to non-controlling interests in subsidiaries	–	(2)
Deduct: dividends on Preferred Shares	**(9)**	(9)
Net income attributable to common shareholders	**679**	722
Denominator (millions of shares)		
Weighted average number of Class A Shares and Class B Non-Voting Shares for basic earnings per share	**515**	511
Effect of dilutive securities [1]	–	–
Weighted average number of Class A Shares and Class B Non-Voting Shares for diluted earnings per share	**515**	511
Basic and diluted earnings per share ($)	**1.32**	1.41

[1] The earnings per share calculation does not take into consideration the potential dilutive effect of certain stock options since their impact is anti-dilutive. For the year ended August 31, 2020, 6,380,558 options were excluded from the diluted earnings per share calculation (2019 – 6,126,210).

20. DIVIDENDS

Common share dividends

The holders of Class A Shares and Class B Non-Voting Shares are entitled to receive such dividends as the Board of Directors determines to declare on a share-for-share basis, as and when any such dividends are declared or paid. The holders of Class B Non-Voting Shares are entitled to receive during each dividend period, in priority to the payment of dividends on the Class A Shares, an additional dividend amount of $0.0025 per share per annum. This additional dividend amount is subject to proportionate adjustment in the event of future consolidations or subdivisions of shares and in the event of any issue of shares by way of stock dividend. After payment or setting aside for payment of the additional non-cumulative dividends on the Class B Non-Voting Shares, holders of Class A Shares and Class B Non-Voting Shares participate equally, share for share, as to all subsequent dividends declared.

Preferred share dividends

Holders of the Series A Preferred Shares were entitled to receive, as and when declared by the Company's Board of Directors, a cumulative quarterly fixed dividend yielding 4.50% annually for the initial period ending June 30, 2016. Commencing June 30, 2016, the dividend rate was reset to 2.791% for the five year period ending June 30, 2021. Thereafter, the dividend rate will be reset every five years at a rate equal to the then current 5-year Government of Canada bond yield plus 2.00%. Holders of Series A Preferred Shares had the right, at their option, to convert their shares into Series B Preferred Shares, subject to certain conditions, on June 30, 2016 and on June 30 every five years thereafter, with the next conversion date being June 30, 2021.

On June 30, 2016, 1,987,607 Series A Preferred Shares were converted into an equal number of Series B Preferred Shares. The Series B Preferred Shares also represent a series of Class 2 preferred shares and holders will be entitled to receive cumulative quarterly dividends, as and when declared by the Company's Board of Directors, at a rate set quarterly equal to the then current three-month Government of Canada Treasury Bill yield plus 2.00%. The floating quarterly dividend rate for the Series B Preferred Shares were set as follows:

Period	Annual Dividend Rate
June 30, 2016 to September 29, 2016	2.539%
September 30, 2016 to December 30, 2016	2.512%
December 31, 2016 to March 30, 2017	2.509%
March 31, 2017 to June 29, 2017	2.480%
June 30, 2017 to September 29, 2017	2.529%
September 30, 2017 to December 30, 2017	2.742%
December 31, 2017 to March 30, 2018	2.872%
March 31, 2018 to June 29, 2018	3.171%
June 30, 2018 to September 29, 2018	3.300%
September 30, 2018 to December 30, 2018	3.509%
December 31, 2018 to March 30, 2019	3.713%
March 31, 2019 to June 29, 2019	3.682%
June 30, 2019 to September 29, 2019	3.687%
September 30, 2019 to December 30, 2019	3.638%
December 31, 2019 to March 30, 2020	3.652%
March 31, 2020 to June 29, 2020	3.638%
June 30, 2020 to September 29, 2020	2.255%
September 30, 2020 to December 30, 2020	2.149%

Dividend reinvestment plan

The Company has a DRIP that allows holders of Class A Shares and Class B Non-Voting Shares who are residents of Canada and, effective December 16, 2016, the United States, to automatically reinvest monthly cash dividends to acquire additional Class B Non-Voting Shares. As at and for the year ended August 31, 2019 and for the two-month period ended October 30, 2019, Class B Non-Voting Shares distributed under the Company's DRIP were new shares issued from treasury at a 2% discount from the 5 day weighted average market price immediately preceding the applicable dividend payment date.

On October 25, 2019, in accordance with the terms of its DRIP, the Company announced that in lieu of issuing shares from treasury, it will satisfy its share delivery obligations under the DRIP by purchasing Class B Non-Voting Shares on the open market. In addition, the Company reduced its discount from 2% to 0% for the Class B Non-Voting Shares delivered under the DRIP. These changes to the DRIP applied to the dividends payable on November 28, 2019 to shareholders of record on November 15, 2019 and all other dividends payable thereafter.

Dividends declared

The dividends per share recognized as distributions to common shareholders for dividends declared during the year ended August 31, 2020 and 2019 are as follows:

2020		2019	
Class A Voting Share	**Class B Non-Voting Share**	**Class A Voting Share**	**Class B Non-Voting Share**
1.1825	1.1850	1.1825	1.1850

The dividends per share recognized as distributions to preferred shareholders for dividends declared during the year ended August 31, 2020 and 2019 are as follows:

2020		2019	
Series A Preferred Share	**Series B Preferred Share**	**Series A Preferred Share**	**Series B Preferred Share**
0.6978	0.8240	0.6978	0.9119

On July 10, 2020, the Company declared dividends of $0.17444 per Series A Preferred Share and $0.14094 per Series B Preferred Share which were paid on September 30, 2020. The total amount paid was $2 of which $1 was not recognized as at August 31, 2020.

On October 30, 2020, the Company declared dividends of $0.098542 per Class A Share and $0.09875 per Class B Non-Voting Share payable on each of December 30, 2020, January 28, 2021 and February 25, 2021 to shareholders of record at the close of business on December 15, 2020, January 15, 2021 and February 15, 2021, respectively.

On October 30, 2020, the Company declared dividends of $0.17444 per Series A Preferred Share and $0.13431 per Series B Preferred Share payable on December 31, 2020 to holders of record at the close of business on December 15, 2020.

21. OTHER COMPREHENSIVE INCOME (LOSS) AND ACCUMULATED OTHER COMPREHENSIVE LOSS

Components of other comprehensive income and the related income tax effects for 2020 are as follows:

	Amount $	Income taxes $	Net $
Items that may subsequently be reclassified to income			
Change in unrealized fair value of derivatives designated as cash flow hedges	(5)	1	(4)
Adjustment for hedged items recognized in the period	(3)	1	(2)
	(8)	2	(6)
Items that will not be subsequently reclassified to income			
Remeasurements on employee benefit plans:	2	(1)	1
	(6)	1	(5)

Components of other comprehensive income and the related income tax effects for 2019 are as follows:

	Amount $	Income taxes $	Net $
Items that may subsequently be reclassified to income			
Change in unrealized fair value of derivatives designated as cash flow hedges	3	(1)	2
Adjustment for hedged items recognized in the period	(3)	1	(2)
Share of other comprehensive income of associates	(13)	–	(13)
Reclassification of accumulated loss to income related to the sale of an associate	(3)	–	(3)
	(16)	–	(16)
Items that will not be subsequently reclassified to income			
Remeasurements on employee benefit plans	(52)	13	(39)
	(68)	13	(55)

Accumulated other comprehensive loss is comprised of the following:

	2020 $	2019 $
Items that may subsequently be reclassified to income		
Change in unrealized fair value of derivatives designated as cash flow hedges	**(5)**	1
Share of other comprehensive income of associates	–	18
Reclassification of accumulated loss to income related to the sale of an associate	–	(18)
Items that will not be subsequently reclassified to income		
Remeasurements on employee benefit plans:	**(94)**	(95)
	(99)	(94)

22. REVENUE

Contract assets and liabilities

The table below provides a reconciliation of the significant changes to the current and long-term portion of contract assets and liabilities balances during the year.

	Contract Assets	Contract Liabilities
August 31, 2018	135	244
Increase in contract assets from revenue recognized during the period	179	–
Contract assets transferred to trade receivables	(145)	–
Contract terminations transferred to trade receivables	(11)	–
Revenue recognized included in contract liabilities at the beginning of the year	–	(236)
Increase in contract liabilities during the period	–	230
August 31, 2019	158	238
Increase in contract assets from revenue recognized during the period	**200**	–
Contract assets transferred to trade receivables	**(170)**	–
Contract terminations transferred to trade receivables	**(16)**	–
Revenue recognized included in contract liabilities at the beginning of the year	–	**(231)**
Increase in contract liabilities during the period	–	**218**
August 31, 2020	**172**	**225**

	Contract Assets	Contract Liabilities
Current	106	223
Long-term	52	15
Balance as at August 31, 2019	158	238
Current	**132**	**211**
Long-term	**40**	**14**
Balance as at August 31, 2020	**172**	**225**

Deferred commission cost assets

The table below provides a summary of the changes in the deferred commission cost assets recognized from the incremental costs incurred to obtain contracts with customers during the year ended August 31, 2020 and 2019. We believe these amounts to be recoverable through the revenue earned from the related contracts. The deferred commission cost assets are presented within other current assets (when they will be amortized into net income within twelve months of the date of the financial statements) or other long-term assets.

August 31, 2018	75
Additions to deferred commission cost assets	85
Amortization recognized on deferred commission cost assets	(66)
August 31, 2019	94
Additions to deferred commission cost assets	**84**
Amortization recognized on deferred commission cost assets	**(80)**
August 31, 2020	**98**
Current	59
Long-term	35
Balance as at August 31, 2019	94
Current	**61**
Long-term	**37**
Balance as at August 31, 2020	**98**

Commission costs are amortized over a period ranging from 24 to 36 months.

Disaggregation of revenue

	2020 $	2019 $
Services		
Wireline – Consumer	**3,683**	3,743
Wireline – Business	**567**	557
Wireless	**815**	694
	5,065	4,994
Equipment and other		
Wireless	**351**	353
	351	353
Intersegment eliminations	**(9)**	(7)
Total revenue	**5,407**	5,340

Remaining performance obligations

The following table includes revenues expected to be recognized in the future related to performance obligations that are unsatisfied (or partially unsatisfied) as at August 31, 2020:

	Within 1 year	Within 2 years	Within 3 years	Within 4 years	Within 5 years	Thereafter	Total
Wireline	1,504	614	162	92	33	1	2,406
Wireless	418	116	–	–	–	–	534
Total	**1,922**	**730**	**162**	**92**	**33**	**1**	**2,940**

When estimating minimum transaction prices allocated to the remaining unfilled, or partially unfulfilled, performance obligations, Shaw applied the practical expedient to not disclose information about remaining performance obligations that have original expected duration of one year or less and for those contracts where we bill the same value as that which is transferred to the customer. The estimated amounts disclosed are based upon contractual terms and maturities. Revenues recognized based on actual minimum transaction price, and the timing thereof, will differ from these estimates due to the frequency with which the actual durations of contracts with customers do not match their contractual maturities.

23. OPERATING, GENERAL AND ADMINISTRATIVE EXPENSES AND RESTRUCTURING COSTS

	2020 $	2019 $
Employee salaries and benefits [1]	**657**	663
Purchases of goods and services	**2,373**	2,514
	3,030	3,177

[1] For the year ended August 31, 2020, employee salaries and benefits include restructuring costs of $14 compared to a recovery of $9 in restructuring costs for the year ended August 31, 2019.

24. OTHER GAINS (LOSSES)

	2020 $	2019 $
(Loss) gain on disposal of fixed assets and intangibles	**(3)**	32
Gain on disposal of non-core business	–	6
Debt Redemption Penalty	**(17)**	–
Gain on disposal of investment	–	15
Other [1]	**4**	(3)
	(16)	50

[1] Other gains (losses) generally includes realized and unrealized foreign exchange gains and losses on US dollar denominated current assets and liabilities and the Company's share of the operations of Burrard Landing Lot 2 Holdings Partnership.

25. INCOME TAXES

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes. The Company's net deferred tax liability consists of the following:

	2020 $	2019 $
Deferred tax assets	**1**	4
Deferred tax liabilities	**(1,968)**	(1,875)
Net deferred tax liability	**(1,967)**	(1,871)

Significant changes recognized to deferred income tax assets (liabilities) are as follows:

	Property, plant and equipment and software assets $	Broadcast rights, licences, customer relationships, trademark and brands $	Partnership income $	Non-capital loss carry-forwards $	Accrued charges $	Total $
Balance at August 31, 2018	(287)	(1,733)	29	68	43	(1,880)
Recognized in statement of income	(12)	107	(61)	25	(63)	(4)
Recognized in other comprehensive income	–	–	–	–	13	13
Balance at August 31, 2019	(299)	(1,626)	(32)	93	(7)	(1,871)
Recognized in statement of income	**(51)**	**(10)**	**21**	**13**	**(32)**	**(59)**
Effect of IFRS 16 adoption (note 2)	**(4)**	–	–	–	**4**	–
Effect of IFRIC 23 adoption (note 2)	**(40)**	**2**	–	–	–	**(38)**
Recognized in other comprehensive income	–	–	–	–	**1**	**1**
Balance at August 31, 2020	**(394)**	**(1,634)**	**(11)**	**106**	**(34)**	**(1,967)**

The Company has capital loss carryforwards of approximately $46 for which no deferred income tax asset has been recognized in the accounts. These capital losses can be carried forward indefinitely.

The Company has non-capital loss carryforwards of approximately $301 for which no deferred income tax asset has been recognized in the accounts. The balance expires in varying annual amounts from 2034 to 2036.

The Company has taxable temporary differences associated with its investment in its subsidiaries. No deferred tax liabilities have been provided with respect to such temporary differences as the Company is able to control the timing of the reversal and such reversal is not probable in the foreseeable future.

The income tax expense differs from the amount computed by applying the statutory rates to income before income taxes for the following reasons:

	2020	2019
Current statutory income tax rate	**26.3%**	26.8%
Income tax expense at current statutory rates	**228**	228
Net increase (decrease) in taxes resulting from:		
Effect of tax rate change	–	(102)
Recognition of previously unrecognized tax losses	**(22)**	(5)
Equity (income) loss of an associate not recognized	–	(12)
Other	**(27)**	9
Income tax expense	**179**	118

The statutory income tax rate for the Company decreased from 26.8% in 2019 to 26.3% in 2020 as a result of provincial tax rate changes.

The components of income tax expense are as follows:

	2020 $	2019 $
Current income tax expense	**120**	114
Deferred tax expense related to temporary differences	**81**	111
Deferred tax recovery from the recognition of previously unrecognized tax losses	**(22)**	(5)
Deferred tax recovery from tax rate change	–	(102)
Income tax expense	**179**	118

26. BUSINESS SEGMENT INFORMATION

The Company's chief operating decision makers are the Executive Chair & Chief Executive Officer, the President and the Executive Vice President, Chief Financial & Corporate Development Officer and they review the operating performance of the Company by segments, which consist of Wireline and Wireless. The chief operating decision makers utilize adjusted earnings before interest, income taxes, depreciation and amortization ("adjusted EBITDA") for each segment as a key measure in making operating decisions and assessing performance.

The Wireline segment provides Cable telecommunications services including Video, Internet, WiFi, Phone, Satellite Video, and data networking through a national fibre-optic backbone network to Canadian consumers, North American businesses and public-sector entities. The Wireless segment provides wireless services for voice and data communications serving customers in Ontario, British Columbia and Alberta through Freedom Mobile and in British Columbia and Alberta through Shaw Mobile.

Both of the Company's reportable segments are substantially located in Canada. Information on operations by segment is as follows:

	2020 $	2019 $
Revenue		
Wireline	**4,250**	4,300
Wireless	**1,166**	1,047
	5,416	5,347
Intersegment eliminations	**(9)**	(7)
	5,407	5,340
Adjusted EBITDA [1]		
Wireline	**2,054**	1,955
Wireless	**337**	199
	2,391	2,154
Restructuring costs	**(14)**	9
Amortization	**(1,217)**	(1,038)
Operating income	**1,160**	1,125
Interest		
Operating	**267**	255
Other/non-operating	**7**	2
	274	257
Current taxes		
Operating	**113**	114
Other/non-operating	**7**	–
	120	114

[1] Adjusted EBITDA does not have any standardized meaning prescribed by IFRS and is therefore unlikely to be comparable to similar measures presented by other issuers; the Company defines adjusted EBITDA as revenues less operating, general and administrative expenses. We previously referred to this measure as "Operating income before restructuring and amortization" but have renamed it to better align with language used by various stakeholders of the Company.

Capital expenditures

	2020 $	2019 $
Capital expenditures accrual basis		
Wireline	**784**	784
Wireless	**296**	385
	1,080	1,169
Equipment costs (net of revenue)		
Wireline	**31**	43
Capital expenditures and equipment costs (net)		
Wireline	**815**	827
Wireless	**296**	385
	1,111	1,212
Reconciliation to Consolidated Statements of Cash Flows		
Additions to property, plant and equipment	**970**	1,109
Additions to equipment costs (net)	**31**	42
Additions to other intangibles	**150**	147
Total of capital expenditures and equipment costs (net) per Consolidated Statements of Cash Flows	**1,151**	1,298
Increase (decrease) in working capital and other liabilities related to capital expenditures	**(38)**	(28)
Decrease in customer equipment financing receivables	**–**	1
Less: Proceeds on disposal of property, plant and equipment	**(2)**	(59)
Total capital expenditures and equipment costs (net) reported by segments	**1,111**	1,212

27. COMMITMENTS AND CONTINGENCIES

Commitments

The Company has the following future minimum payments for their contractual commitments that are not recognized as liabilities as at August 31, 2020:

	Purchase Obligations [1]	Property, Plant and Equipment
Within one year	501	184
1 to 3 years	311	30
3 to 5 years	232	3
Over 5 years	114	–
	1,158	217

[1] Includes contractual obligations under service, product, and wireless device contracts, program related agreements and exclusive rights to use intellectual property in Canada.

Contingencies

The Company and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business. Although resolution of such matters cannot be predicted with certainty, management does not consider the Company's exposure to litigation to be material to these consolidated financial statements.

Guarantees

In the normal course of business the Company enters into indemnification agreements and has issued irrevocable standby letters of credit and commercial surety bonds with and to third parties.

Indemnities

Many agreements related to acquisitions and dispositions of business assets include indemnification provisions where the Company may be required to make payment to a vendor or purchaser for breach of contractual terms of the agreement with respect to matters such as litigation, income taxes payable or refundable or other ongoing disputes. The indemnification period usually covers a period of two to four years. Also, in the normal course of business, the Company has provided indemnifications in various commercial agreements, customary for the telecommunications industry, which may require payment by the Company for breach of contractual terms of the agreement. Counterparties to these agreements provide the Company with comparable indemnifications. The indemnification period generally covers, at maximum, the period of the applicable agreement plus the applicable limitations period under law.

The maximum potential amount of future payments that the Company would be required to make under these indemnification agreements is not reasonably quantifiable as certain indemnifications are not subject to limitation. However, the Company enters into indemnification agreements only when an assessment of the business circumstances would indicate that the risk of loss is remote. At August 31, 2020, management believes it is remote that the indemnification provisions would require any material cash payment.

The Company indemnifies its directors and officers against any and all claims or losses reasonably incurred in the performance of their service to the Company to the extent permitted by law.

Irrevocable standby letters of credit and commercial surety bonds

The Company and certain of its subsidiaries have granted irrevocable standby letters of credit and commercial surety bonds, issued by high rated financial institutions, to third parties to indemnify them in the event the Company does not perform its contractual obligations. As of August 31, 2020, such instruments amounted to $5. The Company has not recorded any additional liability with respect to these instruments, as the Company does not expect to make any payments in excess of what is recorded on the Company's consolidated financial statements. The instruments mature at various dates during fiscal 2021 to fiscal 2022.

28. EMPLOYEE BENEFIT PLANS

Defined contribution pension plans

The Company has defined contribution pension plans for its non-union employees and, for the majority of these employees, contributes 5% of eligible earnings to the maximum amount deductible under the Income Tax Act. Effective January 1, 2019, the Company introduced a voluntary pension contribution matching program whereby, in addition to the 5% of Company contributions, employees who make voluntary contributions will receive a 25% match on contributions up to 5% of their eligible earnings. For union employees, the Company contributes amounts up to 9.8% of earnings to the individuals' registered retirement savings plans. Total pension costs in respect of these plans were $31 (2019 – $31) of which $24 (2019 – $23) was expensed and the remainder capitalized.

Defined benefit pension plans

The Company has two non-registered retirement plans for designated executives and senior executives. The following is a summary of the accrued benefit liabilities recognized in the statement of financial position.

	2020	2019
Non-registered plans		
Accrued benefit obligation	**513**	505
Fair value of plan assets	**445**	436
Accrued benefit liabilities and deficit	**68**	69

The plans expose the Company to a number of risks, of which the most significant are as follows:

(i) Volatility in market conditions: The accrued benefit obligations are calculated using discount rates with reference to bond yields closely matching the term of the estimated cash flows while many of the assets are invested in other types of assets. If plan assets underperform these yields, this will result in a deficiency. Changing market conditions in conjunction with discount rate volatility will result in volatility of the accrued benefit liabilities. To mitigate some of the investment risk, the Company has established long-term funding targets where the time horizon and risk tolerance are specified.

(ii) Selection of accounting assumptions: The calculation of the accrued benefit obligations involves projecting future cash flows of the plans over a long time frame. This means that assumptions used can have a material impact on the statements of financial position and comprehensive income because in practice, future experience of the plans may not be in line with the selected assumptions.

Non-registered pension plans

The Company provides a supplemental executive retirement plan (SERP) for certain of its senior executives and retirees. Benefits under this plan are based on the employees' length of service and their highest three-year average rate of eligible pensionable earnings during their years of service. In 2012, the Company closed the plan to new participants and amended the plan to freeze base salary levels at August 31, 2012 for purposes of determining eligible pensionable earnings. Employees are not required to contribute to this plan.

The Company provides an executive retirement plan (ERP) for certain executives not covered by the SERP. Benefits under this plan are comprised of defined contribution and defined benefit components and are based on the employees' length of service as well as final average earnings during their years of service. Employees are not required to contribute to this plan.

The table below shows the change in benefit obligation and funding status and the fair value of plan assets.

	SERP $	ERP $	2020 Total $	SERP $	ERP $	2019 Total $
Accrued benefit obligation, beginning of year	**478**	**27**	**505**	429	17	446
Current service cost	**2**	**9**	**11**	5	6	11
Interest cost	**14**	**1**	**15**	16	1	17
Payment of benefits to employees	**(19)**	**(2)**	**(21)**	(17)	(1)	(18)
Transfer from DC plan	**–**	**1**	**1**	–	1	1
Remeasurements:						
Effect of changes in demographic assumptions	**16**	**–**	**16**	(4)	–	(4)
Effect of changes in financial assumptions	**13**	**1**	**14**	53	3	56
Effect of experience adjustments	**(27)**	**(1)**	**(28)**	(4)	–	(4)
Accrued benefit obligation, end of year	**477**	**36**	**513**	478	27	505
Fair value of plan assets, beginning of year	**417**	**19**	**436**	421	15	436
Employer contributions	**–**	**12**	**12**	–	5	5
Interest income	**12**	**1**	**13**	15	1	16
Transfer from DC plan	**–**	**1**	**1**	–	1	1
Payment of benefits	**(19)**	**(2)**	**(21)**	(17)	(2)	(19)
Return on plan assets, excluding interest income	**5**	**(1)**	**4**	(2)	(1)	(3)
Fair value of plan assets, end of year	**415**	**30**	**445**	417	19	436
Accrued benefit liability and plan deficit, end of year	**62**	**6**	**68**	61	8	69

The weighted average duration of the defined benefit obligation of the SERP and ERP at August 31, 2020 is 15.6 years and 17.9 years, respectively.

The underlying plan assets of the SERP and ERP at August 31, 2020 are invested in the following:

	SERP	ERP
Cash and cash equivalents	201	21
Fixed income securities	73	3
Equity securities – Canadian	41	3
Equity securities – Foreign	100	3
	415	30

All fixed income and equity securities have a quoted price in active market.

The tables below show the significant weighted-average assumptions used to measure the pension obligation and cost for the plans.

Accrued benefit obligation	2020 SERP %	2020 ERP %	2019 SERP %	2019 ERP %
Discount rate	2.70	2.70	2.90	2.90
Rate of compensation increase	3.00[1]	3.00	3.00[1]	3.00

Benefit cost for the year	2020 SERP %	2020 ERP %	2019 SERP %	2019 ERP %
Discount rate	2.90	2.90	3.70	3.70
Rate of compensation increase	3.00[1]	3.00	3.00[1]	3.00

(1) Applies only to incentive compensation component of eligible pensionable earnings.

The calculation of the accrued benefit obligation is sensitive to the assumptions above. A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2020 by $81. A one percentage point increase in the rate of compensation increase would have increased the accrued benefit obligation by $4.

When calculating the sensitivity of the defined benefit obligation to significant actuarial assumptions, the present value of the defined benefit obligation has been calculated using the projected benefit method which is the same method that is applied in calculating the defined benefit liability recognized in the statement of financial position. The sensitivity analysis presented above may not be representative of the actual change in the accrued benefit obligation as it is unlikely that the change in assumptions would occur in isolation of one another as some assumptions may be correlated.

The net pension benefit plan expense, which is included in employee salaries and benefits expense, is comprised of the following components:

	SERP	ERP	2020 Total	SERP	ERP	2019 Total
Current service cost	2	9	11	5	6	11
Interest cost	14	1	15	16	1	17
Interest income	(12)	(1)	(13)	(15)	(1)	(16)
Pension expense	4	9	13	6	6	12

Other benefit plans

The Company has post-employment benefits plans that provide post-retirement health and life insurance coverage to certain executive level retirees and are funded on a pay-as-you-go basis. The table below shows the change in the accrued post-retirement obligation which is recognized in the statement of financial position.

	2020	2019
Accrued benefit obligation and plan deficit, beginning of year	**4**	3
Current service cost	–	–
Interest cost	–	–
Payment of benefits to employees	–	–
Remeasurements:		
Effect of changes in demographic assumptions	–	1
Accrued benefit obligation and plan deficit, end of year	**4**	4

The weighted average duration of the benefit obligation at August 31, 2020 is 17.6 years.

The post-retirement benefit plan expense, which is included in employee salaries and benefits expense, is $nil (2019 – $nil) and is comprised of current service and interest cost.

The discount rates used to measure the post-retirement benefit cost for the year and the accrued benefit obligation as at August 31, 2020 were 2.70% and 2.90%, respectively (2019 – 3.70% and 2.90%, respectively). A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2020 by $1.

Employer contributions

The Company's estimated contributions to the defined benefit plans in fiscal 2021 is $3.

29. RELATED PARTY TRANSACTIONS

Controlling shareholder

Voting control of the Company is held by Shaw Family Living Trust (SFLT) and its subsidiaries. As at August 31, 2020, SFLT and its subsidiaries held 17,562,400 Class A Shares, representing approximately 79% of the issued and outstanding Class A Shares, for the benefit of the descendants of the late JR Shaw and Carol Shaw. The sole trustee of SFLT is a private company controlled by a board consisting of seven directors, including as at August 31, 2020, Bradley S. Shaw, four other members of his family, and two independent directors.

The Class A Shares are the only shares entitled to vote in all circumstances. Accordingly, SFLT and its subsidiaries are able to elect a majority of the Board of Directors of the Company and to control the vote on matters submitted to a vote of the Company's Class A Shares.

Significant investments in subsidiaries

The following are the significant subsidiaries of the Company, all of which are incorporated or partnerships in Canada.

	Ownership Interest	
	August 31, 2020	August 31, 2019
Shaw Cablesystems Limited	**100%**	100%
Shaw Cablesystems G.P.	**100%**	100%
Shaw Envision Inc.	**100%**	100%
Shaw Telecom Inc.	**100%**	100%
Shaw Telecom G.P.	**100%**	100%
Shaw Satellite Services Inc.	**100%**	100%
Star Choice Television Network Incorporated	**100%**	100%
Shaw Satellite G.P.	**100%**	100%
Freedom Mobile Inc.	**100%**	100%

Key management personnel and Board of Directors

Key management personnel consist of the most senior executive team and along with the Board of Directors, and have the authority and responsibility for planning, directing and controlling the activities of the Company.

Compensation

The compensation expense of key management personnel and Board of Directors is as follows:

	2020 $	2019 $
Short-term employee benefits	**17**	29
Post-employment pension benefits	**3**	9
Termination benefits	**11**	–
Share-based compensation	**6**	2
	37	40

Transactions

The Company paid $2 (2019 – $2) for collection, installation, and maintenance services to a company controlled by a Director of the Company.

During the year, the Company paid $10 (2019 – $12) for remote control units to a supplier where Directors of the Company hold positions on the supplier's board of directors.

At August 31, 2020, the Company had $1 owing in respect of these transactions (2019 - $nil).

During the year, network fees of $27 (2019 – $27) were paid to a programmer where a Director of the Company holds a position on the programmer's board of directors.

At August 31, 2020, the Company had $4 owing in respect of these transactions (2019 – $4).

In the prior year, the Company completed the sale of a non-core parcel of land and the building located thereon (the "Property"), to an affiliate of SFLT (the "Purchaser"), for total net proceeds of approximately $45. The Property had a net book value of approximately $4 resulting in a gain on disposition of approximately $41. The purchase price was determined based on appraisals performed by two independent valuators. As part of the transaction, the Purchaser agreed to lease back the Property to the Company for a term of three years at market rental rates (which was also based on appraisals from the two independent valuators) allowing the Company to monetize a non-core asset. The transaction was approved by the independent Board members of the Company. At August 31, 2020, the Company had a remaining lease liability of $1 in respect of this lease which is included in the amounts disclosed in Note 14.

Other related parties

The Company has entered into certain transactions and agreements in the normal course of business with certain of its related parties. These transactions are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties.

Corus

The Company and Corus are subject to common voting control. During the year, network fees of $121 (2019 – $127), advertising fees of $6 (2019 – $5), and administrative fees of $1 (2019 – $1) were paid to various Corus subsidiaries and entities subject to significant influence. In addition, the Company provided administrative, advertising and other services for $1 (2019 – $1), uplink of television signals for $5 (2019 – $8), and Internet services and lease of circuits for $6 (2019 – $6). At August 31, 2020, the Company had a net of $21 owing in respect of these transactions (2019 – $11).

As part of a regulatory requirement where Shaw pays Corus in lieu of either providing the news coverage directly or contributing into a fund managed by the CRTC, Shaw paid $13 (2019 - $14) as part of the Local News Community Investment program.

The Company provided Corus with advertising spots in return for radio and television advertising. No monetary consideration was exchanged for these transactions and no amounts were recorded in the accounts.

Burrard Landing Lot 2 Holdings Partnership

During the year, the Company paid $11 (2019 – $10) to the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, BC, is the Company's headquarters for its lower mainland operations. At August 31, 2020, the Company had a remaining lease liability of $67 in respect of the office space lease which is included in the amounts disclosed in Note 14.

30. FINANCIAL INSTRUMENTS

Fair values

The fair value of financial instruments has been determined as follows:

(i) Current assets and current liabilities

The fair value of financial instruments included in current assets and current liabilities approximates their carrying value due to their short-term nature.

(ii) Investments and other assets and Other long-term assets

The fair value of publicly traded investments is determined by quoted market prices. Investments in private entities which do not have quoted market prices in an active market and whose fair value cannot be readily measured are carried at approximate fair value. No published market exists for such investments. These equity investments have been made as they are considered to have the potential to provide future benefit to the Company and accordingly, the Company has no current intention to dispose of these investments in the near term. The fair value of long-term receivables approximates their carrying value as they are recorded at the net present values of their future cash flows, using an appropriate discount rate.

(iii) Long-term debt

The carrying value of long-term debt is at amortized cost based on the initial fair value as determined at the time of issuance. The fair value of publicly traded notes is based upon current trading values. The fair value of finance lease obligations is determined by discounting future cash flows using a rate for loans with similar terms, conditions and maturity dates. The carrying value of bank credit facilities approximates fair value as the debt bears interest at rates that fluctuate with market rates. Other notes and debentures are valued based upon current trading values for similar instruments.

(iv) Derivative financial instruments

The fair value of US currency forward purchase contracts is determined using an estimated credit-adjusted mark-to-market valuation using observable forward exchange rates at the end of reporting periods and contract forward rates.

The carrying value and estimated fair value of long-term debt are as follows:

	August 31, 2020		August 31, 2019	
	Carrying value	Estimated fair value	Carrying value	Estimated fair value
Liabilities				
Long-term debt (including current portion) [1]	**4,548**	**5,613**	5,308	6,014

[1] Level 2 fair value – determined by valuation techniques using inputs based on observable market data, either directly or indirectly, other than quoted prices.

Risk management

The Company is exposed to various market risks including currency risk and interest rate risk, as well as credit risk and liquidity risk associated with financial assets and liabilities. The Company has designed and implemented various risk management strategies, discussed further below, to ensure the exposure to these risks is consistent with its risk tolerance and business objectives.

Market risk

Market risk is the risk that the fair value or cash flows of a financial instrument will fluctuate as a result of changes in market prices, including foreign exchange and interest rates, the Company's share price and market price of publicly traded investments.

Currency risk

Certain of the Company's capital expenditures and operating costs are incurred in US dollars, while its revenue is primarily denominated in Canadian dollars. Decreases in the value of the Canadian dollar relative to the US dollar could have an adverse effect on the Company's cash flows. To mitigate some of the uncertainty in respect to capital expenditures and operating costs, the Company regularly enters into forward contracts in respect of US dollar commitments. With respect to 2020, the Company entered into forward contracts to purchase US $72 over a period of 12 months commencing in September 2019 at an average exchange rate of 1.3115 Cdn. At August 31, 2020 the Company had forward contracts to purchase US $132 over a period of 12 months commencing September 2020 at an average exchange rate of 1.3544 Cdn in respect of US dollar commitments.

Interest rate risk

Due to the capital-intensive nature of its operations, the Company utilizes long-term financing extensively in its capital structure. The primary components of this structure are a banking facility and various Canadian senior notes with varying maturities issued in the public markets as more fully described in Note 13. The Company also has an accounts receivable securitization program as described in Note 10.

Interest on the Company's unsecured banking facility and accounts receivable securitization program are based on floating rates, while the senior notes are fixed-rate obligations. When drawn, the Company utilizes its credit facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. As at August 31, 2020, 100% of the Company's consolidated long-term debt was fixed with respect to interest rates.

Sensitivity analysis

The sensitivity to currency risk has been determined based on a hypothetical change in Canadian dollar to US dollar foreign exchange rates of 10%. Foreign exchange forward contracts would be impacted by this hypothetical change resulting in a change to other comprehensive income by $13 net of tax (2019 – $7). A portion of the Company's accounts receivables and accounts payable and accrued liabilities is denominated in US dollars; however, due to their short-term nature, there is no significant market risk arising from fluctuations in foreign exchange rates.

Interest on the Company's banking facility and accounts receivable securitization program are based on floating rates. As at August 31, 2020 there is no significant market risk arising from interest rate fluctuations within a reasonably contemplated range from their actual amounts.

At August 31, 2020, a one dollar change in the Company's Class B Non-Voting Shares would have had an impact on net income of $1 (August 31, 2019 – $1) in respect of the Company's DSU, RSU, and PSU plans.

Credit risk

Accounts receivable in respect of the Consumer, Business and Wireless divisions are not subject to any significant concentrations of credit risk due to the Company's large and diverse customer base. As at August 31, 2020, the Company had accounts receivable of $268 (August 31, 2019 – $287), net of the allowance for doubtful accounts of $74 (August 31, 2019 – $63). The Company maintains an allowance for doubtful accounts for the expected credit losses resulting from the inability of its customers to make required payments.

	2020 $	2019 $
Balance, beginning of period	63	38
Additions (doubtful accounts expense)	60	40
Net usage	(49)	(15)
Balance, end of period	**74**	**63**

In determining the allowance, the Company considers factors such as the number of days the customer account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. As at August 31, 2020, $105 (August 31, 2019 – $123) of accounts receivable is considered to be past due, defined as amounts outstanding past normal credit terms and conditions. Uncollectible accounts receivable are charged against the allowance account based on the age of the account and payment history. The Company believes that its allowance for doubtful accounts is sufficient to reflect the related credit risk.

The Company mitigates credit risk of subscriber receivables through advance billing and procedures to downgrade or suspend services on accounts that have exceeded agreed credit terms and routinely assesses the financial strength of its business customers through periodic review of payment practices.

Credit risks associated with US currency contracts arise from the inability of counterparties to meet the terms of the contracts. In the event of non-performance by the counterparties, the Company's accounting loss would be limited to the net amount that it would be entitled to receive under the contracts and agreements. In order to minimize the risk of counterparty default under its swap agreements, the Company assesses the creditworthiness of its swap counterparties.

Liquidity risk

Liquidity risk is the risk that the Company will experience difficulty in meeting obligations associated with financial liabilities. The Company manages its liquidity risk by monitoring cash flow generated from operations, available borrowing capacity, and by managing the maturity profiles of its long-term debt.

The Company's undiscounted contractual maturities as at August 31, 2020 are as follows:

	Short-term borrowings	Accounts payable and accrued liabilities[1]	Long-term debt repayable at maturity	Leases (note 14)	Interest payments
Within one year	200	999	1	154	218
1 to 3 years	–	–	502	288	436
3 to 5 years	–	–	546	273	365
Over 5 years	–	–	3,550	916	1,932
	200	999	4,599	1,631	2,951

[1] Includes accrued interest and dividends of $217.

31. CONSOLIDATED STATEMENTS OF CASH FLOWS

(i) Funds flow from continuing operations

	2020 $	2019 $
Net income from continuing operations	**688**	733
Adjustments to reconcile net income to funds flow from operations:		
Amortization	**1,220**	1,041
Deferred income tax expense (recovery)	**59**	4
Share-based compensation	**2**	3
Defined benefit pension plans	**1**	7
Equity (income)/ loss of an associate or joint venture	**–**	(46)
Loss on disposal of an associate or joint venture	**–**	109
Gain on disposal of investments	**–**	(15)
Net change in contract asset balances	**(14)**	(23)
Loss (gain) on disposal of fixed assets and intangibles	**3**	(32)
Loss on write-down of assets	**7**	–
Other	**23**	(4)
Funds flow from continuing operations	**1,989**	1,777

(ii) Interest and income taxes paid and interest received and classified as operating activities are as follows:

	2020 $	2019 $
Interest paid	**287**	230
Income taxes paid (net of refunds)	**134**	166
Interest received	**7**	29

Included in interest paid is interest on lease liabilities of $44 for the year ended August 31, 2020 (2019 – $nil).

SJRB-CCB00788044

(iii) Non-cash transactions

The Consolidated Statements of Cash Flows exclude the following non-cash transactions:

	2020 $	2019 $
Issuance of Class B Non-Voting Shares:		
Dividend reinvestment plan (note 20)	**37**	217

32. CAPITAL STRUCTURE MANAGEMENT

The Company's objectives when managing capital are:

(i) to maintain a capital structure which optimizes the cost of capital, provides flexibility and diversity of funding sources and timing of debt maturities, and adequate anticipated liquidity for organic growth and strategic acquisitions;

(ii) to maintain compliance with debt covenants; and

(iii) to manage a strong and efficient capital base to maintain investor, creditor and market confidence.

The Company defines capital as comprising all components of shareholders' equity (other than non-controlling interests and amounts in accumulated other comprehensive income/loss), long-term debt (including the current portion thereof), lease liabilities (including the current portion thereof), short-term borrowings and bank indebtedness less cash and cash equivalents.

	2020 $	2019 $
Cash	**(763)**	(1,446)
Short-term borrowings	**200**	40
Long-term debt repayable at maturity	**4,599**	5,350
Lease liabilities	**1,270**	–
Share capital	**4,602**	4,605
Contributed surplus	**27**	26
Retained earnings	**1,703**	1,745
	11,638	10,320

The Company manages its capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of underlying assets. The Company may also from time to time change or adjust its objectives when managing capital in light of the Company's business circumstances, strategic opportunities, or the relative importance of competing objectives as determined by the Company. There is no assurance that the Company will be able to meet or maintain its currently stated objectives.

The Company's credit facilities are subject to covenants which include maintaining minimum or maximum financial ratios, including total debt to operating cash flow/adjusted earnings before interest, taxes, depreciation and amortization, and operating cash flow to fixed charges. At August 31, 2020, the Company is in compliance with these covenants and based on current business plans and economic conditions, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants.

The Company's overall capital structure management strategy remains unchanged from the prior year.

33. SUBSEQUENT EVENT

Subsequent to year-end, on October 29, 2020, the Company's Board of Directors approved the renewal of the NCIB program to purchase up to 24,532,404 Class B Non-Voting Shares representing 5% of all of the issued and outstanding Class B Non-Voting Shares. The NCIB program remains subject to approval by the TSX and, if accepted, will be conducted in accordance with the applicable rules and policies of the TSX and applicable Canadian securities law.

This is Exhibit 31 to the affidavit of Kenneth Mathieu, affirmed remotely by Jonathan Bitran stated as being located in the city of Toronto in the province of Ontario, on the 20th day of October, 2022, in accordance with O.Reg431/20, Administering Oath or Declaration Remotely.

Shaw)

2021 ANNUAL REPORT

Dear Fellow Shareholders:

I am incredibly proud of our Company and our employees as I reflect on over 50 years of providing exceptional products and services to Canadians. Shaw's culture has enabled and powered the innovative and vital services we provide to our customers and communities. We have built a powerful combination of assets, from our extensive Fibre+ infrastructure and strengthening wireless network, to our 9,400 engaged and passionate employees. For over five decades, we have created and nurtured an organization that centres around our customers and connects our communities.

The benefits of our relentless customer focus and facilities-based investments have never been more clear with the emergence of COVID-19. While collectively we are still dealing with the evolving impacts nearly two years on, the pandemic has highlighted the essential role of strong and ubiquitous connectivity services, which will only become more critical as economic shifts and technology advancements accelerate Canada's digital transformation. When Canadians have needed us most, we delivered faster speeds, better value and outstanding customer service.

In our communities, we continue to identify and support emerging needs that were accentuated by the pandemic and important social movements impacting employees, customers, and Canadians. We were delighted that our signature sponsorship, the Shaw Charity Classic, was able to return after being cancelled last year due to the pandemic. This Calgary-based event has now raised $75 million for more than 200 charities supporting Alberta youth since 2013.

Despite the significant uncertainty over the last 18-months, we stayed focused on our near-term priorities, including balanced and profitable results, delivering consolidated adjusted EBITDA growth of 4.6% and free cash flow of approximately $961 million in fiscal 2021.

Our fiscal 2021 results reflect continued strong execution, but also mark the beginning of a bold new path for Shaw with the announcement of our combination with Rogers on March 15, 2021. This critical next step in our evolution was taken with our customers' best interests at the forefront. A technology revolution is clearly upon us, with next-generation networks, like 5G, breaking down the boundaries of what's possible, but also requiring significant scale and investment. Tomorrow's networks need to be even stronger, more expansive and more capable in order to compete vigorously and to meet the needs of Canada's emerging connected society.

Wireless

In fiscal 2021, we welcomed approximately 295,000 wireless customers to the Shaw and Freedom network. With the launch of Shaw Mobile in July 2020, we focused on bundling Shaw Mobile wireless with our Internet offerings, enhancing the value proposition for our customers.

Supporting our wireless growth has been the continued investment in our network and distribution channels to elevate the overall customer experience. We are investing in the deployment of our 700 MHz and 600 MHz spectrum to further enhance our existing LTE service, in small cell technology, and additional retail capacity, where Shaw Mobile and Freedom Mobile can now be found in over 200 and 800 locations, respectively. Not only did we modernize and expand our retail presence, but we also improved our digital capabilities, shifting to digital self-serve and online fulfillment of wireless services, ensuring a safe environment for our employees and customers in the face of ongoing COVID uncertainty.

Wireline

With unprecedented demand for Internet access from our customers, our Wireline business continues to be resilient. Investments in network infrastructure have been a cornerstone throughout our history. Not only have we handled the increased Internet usage with ease, but we also introduced even faster service tiers, such as Fibre+ Gig 1.5, designed to provide even the heaviest users the bandwidth they need. With our new Fibre+ Gateway 2.0 modem we introduced the latest WiFi technology and enabled the launch of Shaw Gig WiFi to most of our major markets in western Canada. Outside of our customers' homes, we continue to provide them with access to Canada's largest WiFi network.

Small businesses continue to be the heart of our economy and our Shaw Business division was there to support them throughout the challenges with COVID-19. By collaborating with global scale technology leaders, our growing "Smart" suite of managed services provide businesses of all sizes the tools they need to grow their business and actively participate in the growing digital economy. While Shaw Business was not immune to the challenging backdrop caused by the pandemic, strong relationships with our customers and flexible solutions enabled modest revenue growth in an otherwise difficult environment throughout fiscal 2021.

Looking ahead

As history has shown, network investment is the foundation for connecting Canadians. Continued investment in world-leading network infrastructure, at scale, has never been so critical to Canada's future as it is now. It is fundamental to delivering leading and innovative services and to compete on the global stage. With a stronger, national network presence, the combined entity that will emerge from the proposed arrangement with Rogers will provide significantly more benefits to Canadians much sooner than would otherwise be possible. We look forward to working closely with the Rogers team to support the close of the transaction, expected to occur in the first half of 2022.

In closing, I would like to send my sincerest appreciation to our Board of Directors, for providing a clear vision and stewardship of the Company. Also, to our shareholders, for your overwhelming support for the combination with Rogers. To all of our valued Shaw customers – thank you for inspiring us to always look to the future, to be better, and to be bold. Finally, to all Shaw employees, past and present – your dedication and contributions are invaluable. Thank you for your strong leadership.

[Signed]

Bradley S. Shaw
Executive Chair & Chief Executive Officer

MANAGEMENT'S DISCUSSION & ANALYSIS

Contents

FORWARD

Tabular dollar amounts are in millions of Canadian dollars, except per share amounts or unless otherwise indicated. This Management's Discussion and Analysis (MD&A) should be read in conjunction with the Consolidated Financial Statements. The terms "we," "us," "our," "Shaw" and "the Company" refer to Shaw Communications Inc. or, as applicable, Shaw Communications Inc. and its direct and indirect subsidiaries as a group. This MD&A is current as at October 29, 2021 and was approved by Shaw's Board of Directors.

CAUTION CONCERNING FORWARD LOOKING STATEMENTS

Statements included in this MD&A that are not historic constitute "forward-looking information" within the meaning of applicable securities laws. They can generally be identified by words such as "anticipate," "believe," "expect," "plan," "intend," "target," "goal," and similar expressions (although not all forward-looking statements contain such words). All of the forward-looking statements made in this report are qualified by these cautionary statements. Forward looking statements in this MD&A include, but are not limited to, statements relating to:

- the expected impact of the COVID-19 pandemic;
- future capital expenditures;
- proposed asset acquisitions and dispositions;
- anticipated benefits of the Transaction (as defined below) to Shaw and its securityholders, including corporate, operational, scale and other synergies and the timing thereof;
- the timing, receipt and conditions of required regulatory or other third-party approvals, including but not limited to the receipt of applicable approvals under the *Broadcasting Act* (Canada), the *Competition Act* (Canada) and the *Radiocommunication Act* (Canada) (collectively, the "Key Regulatory Approvals") related to the Transaction;
- the ability of the Company and Rogers (as defined below) to satisfy the other conditions to the closing of the Transaction and the anticipated timing for closing of the Transaction;
- expected cost efficiencies;
- expectations for future operating performance;
- business and technology strategies and measures to implement strategies;
- expected growth in subscribers and the products/services to which they subscribe;
- competitive strengths and pressures;
- expected project schedules, regulatory timelines, and completion/in-service dates for the Company's capital and other projects;
- the expected number of retail outlets;
- the expected impact of new accounting standards, recently adopted or expected to be adopted in the future;
- the effectiveness of any changes to the design and performance of the Company's internal controls and procedures;
- the expected impact of changes in laws, regulations, decisions by regulators, or other actions by governments or regulators on the Company's business, operations and/or financial performance or the markets in which the Company operates;
- the expected impact of any emergency measures implemented or withdrawn by governments or regulators;
- timing of new product and service launches;
- the resiliency and performance of the Company's wireline and wireless networks;
- the deployment of (i) network infrastructure to improve capacity and coverage, (ii) and new technologies, including next generation wireless technologies such as 5G;
- expected changes in the Company's market share;
- the ability of Shaw Mobile to drive customer growth;
- the cost of acquiring and retaining subscribers and deployment of new services;
- expansion of and changes in the Company's business and operations and other goals and plans; and
- execution and success of the Company's current and long term strategic initiatives.

Forward-looking statements are based on assumptions and analyses made by the Company in light of its experience and its perception of historical trends, current conditions and expected future developments as well as other factors it believes are appropriate in the circumstances as at the current date. The Company's management believes that its assumptions and analysis in this MD&A are reasonable and that the expectations reflected in the forward-looking statements contained herein are also reasonable based on the information available on the date such statements are made and the process used to prepare the information.

Considering the uncertain and changing circumstances surrounding the COVID-19 pandemic and the related response from the Company, governments (federal, provincial and municipal), regulatory authorities, businesses and customers, there continues to be inherently more uncertainty associated with the Company's assumptions as compared to prior periods. These assumptions, many of which are confidential, include, but are not limited to management expectations with respect to:

- general economic conditions, including the impact on the economy and financial markets resulting from the COVID-19 pandemic and other health risks;
- the impact of the COVID-19 pandemic and other health risks on the Company's business, operations, capital resources, and/or financial results;
- anticipated benefits of the Transaction to the Company and its security holders;
- the timing, receipt and conditions of required regulatory or other third-party approvals, including but not limited to the receipt of the Key Regulatory Approvals related to the Transaction;
- the ability of the Company and Rogers to satisfy the other conditions to closing of the Transaction in a timely manner and the completion of the Transaction on expected terms;
- the ability of Rogers to obtain the debt financing required to complete the Transaction through the satisfaction of the limited conditions of the debt commitment letter for the debt financing and the absence of events that would prevent Rogers from consummating the debt financing;
- the ability to successfully integrate the Company with Rogers in a timely manner;
- the impact of the announcement of the Transaction, and the dedication of substantial Company resources to pursuing the Transaction, on the Company's ability to maintain its current business relationships (including with current and prospective employees, customers and suppliers) and its current and future operations, financial condition and prospects;
- the ability to satisfy the other expectations and assumptions concerning the Transaction and the operations and capital expenditure plans for the Company following completion of the Transaction;
- future interest rates;
- previous performance being indicative of future performance;
- future income tax rates;
- future foreign exchange rates;
- technology deployment;
- future expectations and demands of our customers;
- subscriber growth;
- incremental costs associated with growth in wireless handset sales;
- pricing, usage and churn rates;
- availability and cost of programming, content, equipment and devices;
- industry structure, conditions, and stability;
- regulation, legislation, or other actions by governments or regulators (and the impact or projected impact on the Company's business);
- the implementation or withdrawal of any emergency measures by governments or regulators (and the impact or projected impact on the Company's business, operations, and/or financial results);
- access to key suppliers and third-party service providers and their goods and services required to execute on the Company's current and long term strategic initiatives on commercially reasonable terms;
- key suppliers performing their obligations within the expected timelines;
- retention of key employees;
- the Company being able to successfully deploy (i) network infrastructure required to improve capacity and coverage, and (ii) new technologies, including next generation wireless technologies such as 5G;
- operating expense and capital cost estimates associated with the implementation of enhanced health and safety measures for the Company's offices, retail stores and employees to reduce the spread of COVID-19;
- the Company's access to sufficient retail distribution channels;
- the Company's access to the spectrum resources required to execute on its current and long-term strategic initiatives; and
- the Company being able to execute on its current and long term strategic initiatives.

You should not place undue reliance on any forward-looking statements. Many factors, including those not within the Company's control, may cause the Company's actual results to be materially different from the views expressed or implied by such forward-looking statements, including, but not limited to:

- changes in general economic, market and business conditions, including the impact of the COVID-19 pandemic and other health risks, on the economy and financial markets which may have a material adverse effect on the Company's business, operations, capital resources and/or financial results;
- increased operating expenses and capital costs associated with the implementation of enhanced health and safety measures for the Company's offices, retail stores, and employees in response to the COVID-19 pandemic;
- the failure of the Company and Rogers to receive, in a timely manner and on satisfactory terms, the necessary regulatory or other third-party approvals, including but not limited to the Key Regulatory Approvals, required to close the Transaction;
- the ability to satisfy, in a timely manner, the other conditions to the closing of the Transaction;
- the ability to complete the Transaction on the terms contemplated by the Arrangement Agreement (as defined below) between the Company and Rogers;
- the ability to successfully integrate the Company with Rogers in a timely manner;
- the ability of Rogers to obtain the debt financing required to complete the Transaction through the satisfaction of the limited conditions of the debt commitment letter for the debt financing and the absence of events that would prevent Rogers from consummating the debt financing;
- the Company's failure to complete the Transaction for any reason could materially negatively impact the trading price of the Company's securities;
- the announcement of the Transaction and the dedication of substantial Company resources to pursuing the Transaction may adversely impact the Company's current business relationships (including with current and prospective employees, customers and suppliers) and its current and future operations, financial condition and prospects;
- the failure of the Company to comply with the terms of the Arrangement Agreement may, in certain circumstances, result in the Company being required to pay the termination fee to Rogers, the result of which will or could have a material adverse effect on the Company's financial position and results of operations and its ability to fund growth prospects and current operations;
- changes in interest rates, income taxes and exchange rates;
- changes in the competitive environment in the markets in which the Company operates and from the development of new markets for emerging technologies;
- changing industry trends, technological developments and other changing conditions in the entertainment, information, and communications industries;
- changes in laws, regulations and decisions by regulators or other actions by governments or regulators that affect the Company or the markets in which it operates;
- any emergency measures implemented or withdrawn by governments or regulators;
- technology, privacy, cyber security, and reputational risks;
- disruptions to service, including due to network failure or disputes with key suppliers;
- the Company's ability to execute its strategic plans and complete its capital and other projects on a timely basis;
- the Company's ability to grow subscribers and market share;
- the Company's ability to have and/or obtain the spectrum resources required to execute on its current and long-term strategic initiatives;
- the Company's ability to gain sufficient access to retail distribution channels;
- the Company's ability to access key suppliers and third-party service providers required to execute on its current and long-term strategic initiatives on commercially reasonable terms;
- the ability of key suppliers to perform their obligations within expected timelines;
- the Company's ability to retain key employees;
- the Company's ability to achieve cost efficiencies;
- the Company's ability to recognize and adequately respond to climate change concerns or public and governmental expectations on environmental matters;
- the Company's status as a holding company with separate operating subsidiaries; and
- other factors described in this MD&A under the heading "Known Events, Trends, Risks and Uncertainties."

The foregoing is not an exhaustive list of all possible factors.

Should one or more of these risks materialize, or should assumptions underlying the forward-looking statements prove incorrect, actual results may vary materially from those described in this MD&A.

Any forward-looking statement speaks only as of the date on which it was originally made and, except as required by law, the Company expressly disclaims any obligation or undertaking to disseminate any updates or revisions to any forward-looking statement to reflect any change in related assumptions, events, conditions or circumstances. All forward-looking statements contained in this MD&A are expressly qualified by this statement.

ABOUT OUR BUSINESS

CONSUMER

Our Consumer division connects people and families in British Columbia, Alberta, Saskatchewan, Manitoba, and northern Ontario through our Fibre+ network.

Shaw Direct is one of two licensed satellite Video services available across Canada.

WIRELESS

Shaw Mobile currently operates in British Columbia and Alberta. Freedom Mobile currently operates in Ontario, British Columbia and Alberta.

Over 19 million Canadians reside within our current mobile wireless network service area.

BUSINESS

Our Business division leverages our network infrastructure with a product suite targeting businesses of all sizes.

In the following sections we provide selected financial highlights and additional details with respect to our Wireline and Wireless divisions as well as our network.

Select Financial and Operational Highlights

Basis of presentation

We adopted IFRS 16, Leases ("IFRS 16") effective September 1, 2019. The adoption of IFRS 16 had a significant effect on our reported results and we adopted IFRS 16 using a modified retrospective approach whereby the financial statements of prior periods presented were not restated and continue to be reported under International Accounting Standard (IAS) 17 – Leases ("IAS 17"), as permitted by the specific transition provisions of IFRS 16. The cumulative effect of the initial adoption of IFRS 16 was reflected as an adjustment to the impacted balance sheet accounts as at September 1, 2019. Accordingly, fiscal 2021 and fiscal 2020 operating results are reported in accordance with IFRS 16 while fiscal 2019 operating results are reported in accordance with IAS 17 and are therefore not comparable.

(1) Fiscal 2021 and 2020 figures reflect the impact of the adoption and application of IFRS 16 while fiscal 2019 figures do not and are not comparable.

(2) Adjusted EBITDA, adjusted EBITDA margin, and free cash flow are non-GAAP financial measures or non-GAAP ratios and should not be considered substitutes or alternatives for GAAP measures. These are not defined terms under IFRS and do not have standardized meanings, and therefore may not be a reliable way to compare us to other companies. See "Key Performance Drivers" for more information about these measures and ratio, including quantitative reconciliations to the most directly comparable financial measures in the Company's Consolidated Financial Statements.

(3) Funds flow from operations is before changes in non-cash working capital balances related to operations as presented in the Consolidated Statements of Cash Flows.

Shaw and Rogers Transaction

On March 15, 2021, Shaw announced that it entered into an arrangement agreement (the "Arrangement Agreement") with Rogers Communications Inc. ("Rogers"), under which Rogers will acquire all of Shaw's issued and outstanding Class A Participating Shares ("Class A Shares") and Class B Non-Voting Participating Shares ("Class B Shares") in a transaction valued at approximately $26 billion, inclusive of approximately $6 billion of Shaw debt (the "Transaction").

Holders of Class A Shares and Class B Shares (other than the Shaw Family Living Trust, the controlling shareholder of Shaw, and related persons (collectively, the "Shaw Family Shareholders")) will receive $40.50 per share in cash. The Shaw Family Shareholders will receive 60% of the consideration for their shares in the form of Class B Non-Voting Shares of Rogers (the "Rogers Shares") on the basis of the volume-weighted average trading price for the Rogers Shares for the 10 trading days ending March 12, 2021, and the balance in cash. As at March 13, 2021, when the Arrangement Agreement was signed, the value of the consideration attributable to the Class A Shares and Class B Shares held by the Shaw Family Shareholders (calculated using the volume-weighted average trading price for the Rogers Shares for the 10 trading days ending March 12, 2021) was equivalent to $40.50 per share.

The Transaction is being implemented by way of a court-approved plan of arrangement under the *Business Corporations Act* (Alberta). At the special meeting of Shaw shareholders held on May 20, 2021, the Company obtained approval of the plan of arrangement by the holders of Shaw's Class A Shares and Class B Shares in the manner required by the interim order granted by the Court of Queen's Bench of Alberta on April 19, 2021. On May 25, 2021, the Court of Queen's Bench of Alberta issued a final order approving the plan of arrangement.

The Transaction remains subject to other customary closing conditions including approvals from certain Canadian regulators. Shaw and Rogers are working cooperatively and constructively with the Competition Bureau, Innovation, Science and Economic Development Canada (ISED) and the Canadian Radio-television and Telecommunications Commission (CRTC) in order to secure the requisite approvals. Subject to receipt of all required approvals and satisfaction of all closing conditions, closing of the Transaction is expected to occur in the first half of 2022.

Redemption of Shaw's Preferred Shares

Pursuant to the terms of the Arrangement Agreement, on May 20, 2021, Rogers exercised its right to require the Company to redeem all of its issued and outstanding Cumulative Redeemable Rate Reset Class 2 Preferred Shares, Series A (the "Series A Shares") and Cumulative Redeemable Floating Rate Class 2 Preferred Shares, Series B (the "Series B Shares", and together with the Series A Shares, the "Preferred Shares") at the redemption price of $25.00 per share (the "Redemption Price") plus any accrued and unpaid dividends up to but excluding the redemption date of June 30, 2021 (the "Redemption Date").

On June 30, 2021, the Company redeemed all of its issued and outstanding Preferred Shares in accordance with their terms (as set out in the Company's articles) at the Redemption Price, less any tax required to be deducted or withheld.

On the Redemption Date, there were 10,012,393 Series A Shares and 1,987,607 Series B Shares issued and outstanding. Accordingly, the aggregate Redemption Price paid by Shaw on the Redemption Date to redeem the Preferred Shares was $300 million.

Further information regarding the Transaction is contained in the management information circular filed April 23, 2021 on Shaw's SEDAR profile at www.sedar.com and EDGAR profile at www.sec.gov/edgar.shtml.

Impact of Coronavirus (COVID-19) Pandemic

COVID-19 continues to significantly impact Canadians and economies around the world as we experience new waves and variants of the virus. The severity and duration of impacts from the COVID-19 pandemic remain uncertain and management continues to focus on the safety of our people, most of whom continue to work from home, connectivity of our customer base, compliance with guidelines and requirements issued by various health authorities and government organizations, and continuity of other critical business operations. In fiscal 2021, Shaw's networks have proven their resiliency and performed well despite the increase in usage and extended peak hours resulting from the impacts of COVID-19.

While the financial impacts from COVID-19 in fiscal 2021 were not material, the situation is still uncertain in terms of its magnitude, outcome, duration, resurgence and/or subsequent waves/variants. Consumer behavior impacts remain uncertain and could still change materially, including the potential downward migration of services, acceleration of cord-cutting and reduced ability to pay their bills, all due to the challenging economic situation. Shaw Business, which primarily serves the small and medium sized market, continues to be particularly vulnerable to COVID-19 related restrictions, including mandated business closures, capacity restrictions or further social distancing measures.

Despite the absence of material financial impacts, the pandemic affected the Company causing increased wireline network usage as well as extended peak hours. The Company also experienced increased demand for wireless voice services and a decrease in wireless roaming revenue.

The Company's business resumption plan, designed for the gradual and safe re-introduction of employees to the workplace, is being implemented in phases based on the current risks posed by the pandemic and in response to government-imposed restrictions on businesses and individuals. We continue to be in constant contact with public safety and government officials at all levels, as well as key suppliers, partners and customers. As at the date of this MD&A, the majority of our employees continue to work from home, but our retail stores have re-opened, albeit some in a reduced capacity.

The environment remains uncertain in terms of the pandemic's magnitude, outcome and duration. Consumer behaviors could still change materially, including the potential downward migration of services, acceleration of cord cutting and reduced ability of customers to pay their bills, all due to an unpredictably challenging economic situation. Shaw Business primarily serves the small and medium sized market, which is particularly vulnerable to COVID-19 related restrictions, including mandated business closures, capacity restrictions or further social distancing and/or vaccination verification measures.

As the COVID-19 pandemic continues to evolve, the Company's focus continues to be on the safety and health of its employees, the reliability of its network infrastructure, and the nimble responsiveness to our customers' needs.

As an ongoing risk, the magnitude, outcome, duration, resurgence and/or subsequent waves and variants of the COVID-19 pandemic is still unknown and subject to a significant amount of uncertainty at this time, as is the efficacy and duration of the government interventions. For further detail, see "Known Events, Trends, Risks and Uncertainties – Coronavirus (COVID-19)."

Fiscal 2021 Highlights

Despite the continued challenging environment created by the ongoing impact of the COVID-19 pandemic throughout the year, in fiscal 2021, our business delivered consolidated adjusted EBITDA growth of 4.6% year-over-year and free cash flow of approximately $961 million while demonstrating the resiliency and the critical nature of the connectivity services we provide.

To deliver a seamless connectivity experience in the fast-approaching 5G era, we announced our combination with Rogers on March 15, 2021, followed by resounding support from holders of the Class A Shares and Class B Shares at the special meeting to approve the combination held on May 20, 2021. Rogers and Shaw recognize that we can do so much more by coming together. Canadians, regardless of where they reside, need access to these vital services which requires significant ongoing investment, supported by a stable regulatory framework. Throughout the extraordinary change we have faced, the entire team at Shaw executed on its fiscal 2021 plan, ensuring that we continue to meet the needs of our customers. In the months ahead, we will collectively work in support of closing the transaction with Rogers.

In fiscal 2021, wireless investments included the deployment of 700 MHz spectrum, which is virtually complete in western Canada and 80% complete nationwide, and 600 MHz spectrum, which reached 80% in Calgary and 60% in Vancouver and the greater Toronto area (the "GTA"). While the network enhancements have contributed to improving postpaid churn results, the increased competitive activity, including the launch of unlimited plans and other aggressive offers in the market, resulted in postpaid churn of 1.41% in fiscal 2021, which is comparable to the previous fiscal year.

On April 6, 2021, ISED published its list of applicants to participate in the 3500 MHz spectrum auction, confirming that Shaw elected not to participate in the auction. The auction commenced in June 2021 and provisional results were published on July 29, 2021.

In fiscal 2021, Shaw Mobile continued its growth among consumers in British Columbia and Alberta who want to bundle their Shaw Wireline Internet services with mobile services.

Freedom Mobile continued to provide stable results in fiscal 2021 in the face of persistent competition in the wireless market and significant challenges with retail closures during the pandemic.

In fiscal 2021, the Company built upon its consumer Wireline offerings with the introduction of a new speed tier – Fibre+ Gig 1.5 – to the majority of its western Canadian Wireline operating footprint, specifically targeting heavy data users who require ultrafast speeds. The Company subsequently announced Shaw Gig WiFi with the release of the WiFi 6-certified Shaw Fibre+ Gateway 2.0 modem. Lastly, the Company completed the roll-out of its IPTV services to 99.5% of its Wireline operating footprint in western Canada.

Our Business division also continued to grow despite challenging economic and social circumstances. The introduction in February 2021 of a 1.5 gigabits-per-second (Gbps) speed tier addresses the growing demand of businesses for faster speeds and more bandwidth.

In fiscal 2021, the Company purchased 14,783,974 Class B Shares for cancellation for a total cost of approximately $336 million. In connection with the announcement of the proposed Transaction on March 15, 2021, the Company suspended share buybacks under its normal course issuer bid (NCIB) program. As at the end of fiscal 2021, the net debt leverage ratio was 2.3x[1].

[1] Net debt leverage ratio is a non-GAAP ratio and net debt, which is a component of net debt leverage ratio, is a non-GAAP financial measure. Net debt leverage ratio and net debt are not standardized measures under IFRS and may not be a reliable way to compare us to other companies. See "Key Performance Drivers" for further information about this measure and ratio.

Global Technology Partnerships

Shaw has access to global-scale technology initiatives through partnerships with best-in-class service and equipment providers and innovation leaders. This approach allows us to leverage our existing assets, where we have strength and expertise, while also ensuring our investments are aligned with industry leaders to support the development, maintenance and advancement of new technology where it is impractical, or we lack scale, for us to do so on a standalone basis. This allows us to efficiently deploy capital resources, and manage our costs, while advancing the innovation, performance and reliability of our products and services.

We have a series of significant and strategic relationships with global leaders on the following initiatives:

- Shaw BlueCurve, a technology that provides customers with greater control over their home WiFi experience (through the BlueCurve Home app and Pods) and supports IPTV, is powered by the Fibre+ Gateway (XB6) and Fibre+ Gateway 2.0 (XB7) Data over Cable Interface Specification (DOCSIS) version 3.1 advanced WiFi modems developed by Comcast (see discussion under "Consumer Services");
- the deployment of our wireless LTE network, which was designed, planned, and deployed in partnership with NOKIA, a global leader in mobile wireless technology and solutions (see discussion under "Wireless"); and
- our "Smart" suite of business services that includes SmartWiFi, SmartTarget, SmartSecurity, SmartSurveillance, and Smart Remote Office, each in collaboration with Cisco Meraki, as well as SmartVoice in collaboration with Broadsoft (see discussion under "Business Services").

Our Wireless division provides wireless voice and data services with the option of postpaid or prepaid billing. Our Wireless division was formed following the acquisition of Wind Mobile (now Freedom Mobile) in March 2016. Our Wireless division covers approximately 50% of the Canadian population with Shaw Mobile currently operating in British Columbia and Alberta markets and Freedom Mobile providing services in British Columbia, Alberta, and Ontario markets.

Freedom Mobile Big Gig Unlimited, Absolute Zero and Prepaid Plans

In fiscal 2021, Freedom Mobile continued its Big Gig Unlimited and Absolute Zero campaigns. Paired with popular devices and the strength and capacity of our LTE network, our Big Gig Unlimited and Absolute Zero plans continue to be available to Canadians.

Freedom Mobile customers can either bring their own device to the network or participate in one of Freedom Mobile's discretionary wireless handset discount plans – MyTab or Absolute Zero. MyTab allows Freedom Mobile customers to pay a discounted price for a handset upfront and a predetermined monthly Tab charge in addition to the rate plan cost. Absolute Zero allows Freedom Mobile customers to receive an eligible handset for $0 upfront, $0 extra per month and $0 owing after 24 months.

Growth of Shaw Mobile

On July 30, 2020, the Company launched Shaw Mobile in western Canadian markets. Leveraging Shaw's LTE and Fibre+ networks, along with Canada's largest WiFi service, Shaw Mobile provides Shaw Internet customers with an innovative, more valuable connectivity experience.

Through fiscal 2021, western Canadians have enjoyed the value that Shaw Mobile paired with Shaw's Fibre+ network delivers. Shaw Mobile provides Shaw Internet customers with attractive bundling opportunities, combined with the ability to customize their mobile data requirements through two rate plans – By The Gig and Unlimited Data.

Wireless Distribution Network

In fiscal 2021, Freedom Mobile continued to modernize Freedom-branded stores across the country with the key focus on maximizing customer experience and the safety of both our customers and employees considering the COVID-19 environment. Freedom Mobile's full suite of products continue to be available in over 800 locations across Ontario, Alberta, and British Columbia through our corporate, dealer, and retail partners. In addition, we have over 300 "countertop" and "grab & go" locations in independent retail outlets and store-within-a-store environments, catering specifically to the prepaid market.

During fiscal 2021, the Shaw Mobile retail presence expanded by adding 11 net new locations to our corporate network for a total of 32 as at August 31, 2021. Combined with our national retail partners, Walmart and Loblaws and a new partnership launched in August 2021 with Best Buy, Shaw Mobile is now available at over 200 retail locations in Alberta and British Columbia.

During the lockdowns and store closures in response to COVID-19, the Company fostered the continued growth of its total Wireless subscriber base by introducing self-serve options and activations: Shaw Mobile, through SIM card distribution to existing customers and Freedom Mobile through online ordering of prepaid services and online chat to order postpaid services.

Wireless Network Upgrades

Supporting our Wireless revenue growth are the investments we made in our wireless LTE network and customer service capabilities. Wireless network investments to improve the customer experience continue to be a priority in the areas in which we operate and serve Wireless customers. Through years of thoughtful and strategic capital investing, we have evolved our facilities-based wireless network to meet the needs of our Shaw Mobile and Freedom Mobile customers. See "Shaw's Wireless Network" for further details on Shaw's wireless network upgrades.

Seasonality in Wireless Subscriber Activity

Wireless subscriber activity is influenced by the launch of popular new mobile devices, seasonal promotional periods and the level of competitive intensity. Our first and fourth quarters typically experience higher volumes of wireless competitive activity as a result of back to school and holiday season-related consumer behaviour. Aggressive promotional offers are often advertised during these periods which can impact our Wireless subscriber metrics. Shaw's Wireless business does not depend on any single customer or concentration of customers.

Furthermore, due to uncertainties relating to the severity, duration, and continuing impact of the COVID-19 pandemic, it is difficult at this time to estimate the impacts of the COVID-19 pandemic on our Wireless business and future financial results. Therefore, the trends experienced during the COVID-19 pandemic, including impacts on consumer demand and spending, may not fully reflect the typical seasonal variations experienced by our Wireless business. Accordingly, it is difficult at this time to evaluate the impacts of the COVID-19 pandemic on the seasonality trends that normally characterize our Wireless business.

[1] See "Key Performance Drivers" for more information about this non-GAAP financial measure.

In our Wireline business, we have focused on enhancing our Fibre+ network and the in-home WiFi experience with Gig WiFi. In fiscal 2021, we continued to streamline and simplify manual processes that improve the customer experience and day-to-day operations for our employees, while still providing the necessary in-person engagements to support the customer experience.

In fiscal 2021, our focus remained on profitable growth and stable Wireline results. This included growth in higher quality Internet subscribers and improving overall customer account profitability by attracting and retaining higher value households with our 2-year ValuePlans for those who want faster Internet with a better customer experience in addition to Video and Wireless services. Through our introduction of Shaw Mobile and the bundling opportunities it provides, in fiscal 2021, more customers migrated to our higher tier Fibre+ Internet offerings which resulted in lower Internet churn.

Consumer Services

Our Consumer division provides residential customers with connectivity experiences on two platforms:

- **Wireline Services** – we provide broadband Internet, Shaw Go WiFi, Video and Phone services to customers connected to our local and regional Fibre+ network in British Columbia, Alberta, Saskatchewan, Manitoba and northern Ontario
- **Satellite Services** – we provide satellite Video services through Shaw Direct to customers across Canada

Internet

Shaw's residential Internet service offering is segmented into the following three tiers:

1. Fibre+ Max;
2. Fibre+ Essentials; and
3. Fibre+ Basics

to provide our consumers with a choice of download speeds ranging from up to 10 megabits-per-second (Mbps) to up to 1.5 Gbps.

In fiscal 2021, we continued to make investments in our Shaw Fibre+ network to meet the unprecedented demands for Internet access from our customers in fiscal 2021. We also introduced new services that respond to these rapidly evolving demands, while also aligning with our focus on profitable growth and stability.

In November 2020, the Company announced the launch of Fibre+ Gig 1.5 – a new Internet plan designed to provide gamers, streamers and other heavy data users with the speed and bandwidth they need for the many connected devices and data-heavy applications they use every day at home.

For our customers with harder to reach areas in their homes, Shaw's Fibre+ WiFi Pods create a mesh WiFi network to improve the overall customer experience. In September 2020, the Company introduced its next generation Fibre+ WiFi Pods to customers in Manitoba and Ontario, and to all customers in our Wireline operating footprint in December 2020. The new Pods are faster and have more range than the first generation which allows the Fibre+ Gateway modem to provide even more consistent WiFi coverage throughout the home by reducing WiFi dead spots.

In April 2021, the Company deployed its next generation Fibre+ Gateway 2.0 modem, powered by Comcast, which, as the first WiFi 6-certified modem in Canada, paved the way for the launch of Shaw Gig WiFi to most of our major markets in western Canada. Shaw Gig WiFi delivers WiFi download speeds across multiple devices of up to 1 Gbps, with reduced latency and a more consistent WiFi signal for our customers to connect all their devices at home. The Fibre+ Gateway 2.0 modem also includes a 2.5 Gbps port and can enable speeds beyond 1 Gbps to a wired device and/or multiple wireless devices in aggregate.

With over 3.6 million devices authenticated on our network and over 110,000 public access points covering locations from British Columbia to Ontario, we continue to see growth in usage of our Shaw Go WiFi network for Shaw Internet and Wireless customers. As an added value proposition, Wireless customers have access to over 950,000 additional "hotspots" by way of our Home Hotspot deployment.

In fiscal 2021, we continued to focus on our 2-year ValuePlans, which provide customers with price certainty over the term and resulted in lower churn rates on those plans.

Video

Our Wireline Video services offer a wide selection of standard definition (SD) and high definition (HD) television channels with access to a large selection of on-demand titles, including both free and paid movies, television shows, and music content.

Our Video customers can choose pre-selected packages with the most popular channels or start with a basic primary package and then add additional channels from a variety of sports, family, and other theme specialty packages, as well as individual channels offered on a channel-by-channel basis.

Leveraging our strategic partnership with Comcast, in fiscal 2021, we completed the deployment of our all-IP Video services, which are now available across 99.5% of our western Canadian Wireline operating footprint. We also continued to add new over-the-top (OTT) apps, including StingRay Music, Hayu, and Fite TV.

Our customers also have access to the BlueCurve TV app, which is free for all Shaw Video (Cable and Shaw Direct) customers and makes their TV subscription available over the Internet and on mobile devices. This includes access to live TV, video-on-demand, up to 200 hours of a customer's personal video recordings (PVR) from the cloud, and the ability to download any recordings to take on the go. In fiscal 2021, we enhanced Shaw TV by enabling customers to cast content from the BlueCurve TV app to their Chromecast-enabled devices.

Phone

Our Phone service offers a full-featured residential digital telephone service through our wireline network as a complement to our broadband Internet and Video services.

Broadcast Services

Shaw Broadcast Services utilizes our satellite network to provide distribution of English, French, third-language, Canadian, US, and International television and radio programming services to hundreds of multichannel operators.

Wholesale Wireline Network Services

Using our national and regional access wireline networks, we provide services to Internet service providers (ISPs), other communications companies, broadcasters, governments, and other businesses and organizations that require end-to-end Internet and data connectivity in Canada and the United States. We also engage in public and private peering arrangements with high-speed connections to major North American, European, and Asian networks and other tier-one backbone carriers. All service solutions are sold on 1, 3, or 5-year contract terms and pricing is negotiated based on the specific solution provided to the customer.

Satellite Services

Shaw Direct connects families across Canada with video and audio programming by satellite. Shaw Direct customers have access to over 370 digital video channels (including over 350 HD channels) and thousands of on-demand, pay-per-view (PPV) and subscription movie and television titles. In May 2020, the Company completed network upgrades which provided the ability for us to deliver English and French services in HD where available.

Our satellite customers are offered flexibility with each of our current primary TV packages, which include a base set of channels and tiered customization options depending on the size of the TV package. Shaw Direct customers can further customize their TV packages by adding additional theme packs, premium packages, and individual channels.

Shaw Direct is one of two licensed satellite Video services currently available across Canada. While Shaw Direct has many customers in urban centres, market penetration for satellite Video is generally stronger in rural areas. The service is marketed through Shaw Direct and a nationwide distribution network of third-party retailers.

During fiscal 2021, Anik F1R reached the end of its serviceable life and was decommissioned. The Company consolidated all Shaw Direct services onto two satellites, Anik G1 and Anik F2. Additional capacity was secured on Anik F3 to support C-band distribution provided by Shaw Broadcast Services.

A listing of our satellite capacity is provided below as at August 31, 2021:

Shaw Satellite Transponders

Transponders	Interest	Nature of Satellite
Anik G1	16 xKu-band	Leased
Anik F2	22 Ku-band	Leased[1]
Anik F3 [2]	1 C-band	Leased

(1) Effective October 1, 2019, the Company transferred its interest in 16 Anik F2 transponders, which it previously owned, back to Telesat Canada ("Telesat"), adjusted its satellite traffic on the Anik F1R and Anik F2 satellites, and renewed its capacity service agreements on 6 Anik F1R Ku-band transponders and 16 Anik F2 Ku-band transponders until the effective end-of-life date of such satellites.

(2) With Anik F1R reaching its end of serviceable life in fiscal 2021, Shaw leased capacity on Anik F3 to continue to provide distribution for a Shaw Broadcast Services customer on C-band to enable the customer to distribute its signals primarily throughout the arctic.

Seasonality in Consumer Subscriber Activity

While financial results for the Consumer division are generally not subject to significant seasonal fluctuations, subscriber activity may fluctuate from one quarter to another. Subscriber activity may also be affected by competition and Shaw's promotional activity. Further, satellite subscriber activity is modestly higher around the summertime when more subscribers have second homes in use. Our Consumer Video business does not depend on any single customer or concentration of customers.

Furthermore, due to uncertainties relating to the severity, duration and continuing impact of the COVID-19 pandemic, it is difficult at this time to estimate the impacts of the COVID-19 pandemic on our business and future financial results. Therefore, the trends experienced during the COVID-19 pandemic, including impacts on consumer demand and spending, may not fully reflect the typical seasonal variations experienced by our Consumer Wireline business. Accordingly, it is difficult at this time to evaluate the impacts of the COVID-19 pandemic on the seasonality trends that normally characterize our Consumer Wireline business.

BUSINESS

Business Services

Shaw Business provides connectivity solutions to business customers of all sizes, from home offices to medium and large-scale enterprises, by leveraging our business grade Fibre+ and fibre-to-the-premise (FTTP) networks.

The range of services offered by Shaw Business includes:

Fibre Internet

Our scalable, symmetrical fibre Internet solutions offer download speeds that range from up to 10 Mbps to more than 10 Gbps.

Business Internet

Shaw Business customers can choose from four packages with download speeds ranging from up to 75 Mbps to up to 1.5 Gbps. Each package comes with unlimited data usage as well as one dynamic and one static IP address.

In fiscal 2021, we announced the launch of a new 1.5 Gbps speed tier designed to give businesses of all sizes the speeds and bandwidth they need to use the data-heavy applications and cloud services required to manage and grow their operations. This new speed tier allows both new and existing customers to access download speeds up to 1.5 Gbps through one of two plans – Business Internet Gig 1.5 and SmartWiFi Gig 1.5.

Data Connectivity

Shaw Business provides secure private connectivity for business customers operating at multiple locations or connecting branch locations to a head office. Our Ethernet over DOCSIS (EoD) data service offers our customers symmetrical data speeds of up to 100 Mbps.

Voice Solutions

Shaw Business offers voice solutions from traditional analog to digital Business Phone and robust, fully-managed voice systems with unified communications functionality.

In addition to competitive long-distance rates across the globe and month-to-month uncontracted rates, Shaw Business Phone customers have 2, 3, and 5-year contract options to provide cost consistency for their business.

Video

Shaw Business provides Video and audio services for public viewing. Similar to our Consumer Video service, Business cable and satellite customers can choose from a selection of primary channel packages and may add from a variety of sports, family, and other theme specialty packages, and a number of individual channels that we offer on a channel-by-channel basis.

In February 2021, Shaw Business launched Community Living WiFi. Similar to our Hotel WiFi Casting product, Community Living WiFi provides a new market, independent senior facilities, with connectivity that allows their residents to cast video content from their personal devices to the television in their suite. This property management solution streamlines the guest authentication experience and is an entirely cloud-based solution that gives property owners the ability to monitor usage and network status.

Broadcast Video

Shaw Business delivers high-quality Video to service providers across North America in real time.

Collaboration Tools

Shaw Business offers a robust collaboration product offering, including Microsoft 365 to small and medium sized businesses. The solution includes Microsoft 365 Business Basic and Business Standard products.

Smart Suite Services

Shaw Business collaborates with global scale technology leaders to offer its “Smart” suite of managed business communications solutions. The Smart suite of services provides cost-effective enterprise grade managed IT and communications solutions for businesses of all sizes.

The Smart suite of services includes:

SmartVoice

SmartVoice is a unified communications solution that integrates instant messaging, presence, email, video conferencing, and a mobile application that is built on Broadsoft’s BroadWorks platform. From comprehensive traditional phone features such as auto-attendant, hunt groups, and call recording to collaboration tools such as instant messenger and screen sharing, SmartVoice gives businesses the flexibility to work in innovative and efficient ways.

SmartVoice offers three different levels of packaging based on business needs and is available on 2, 3, or 5-year contract terms.

SmartWiFi

SmartWiFi is a fully-managed Internet solution deployed over Cisco Meraki’s platform that provides wireless connectivity for employees, customers, and guests in the business location. SmartWiFi also enables access to a cloud portal where customers can manage their service, configure their set service identifiers (SSIDs) to gain insight from network analytics, and create a custom dashboard.

Available at download speeds of up to 75 Mbps, 300 Mbps, 750 Mbps, 1 Gbps, and 1.5 Gpbs and including wireless access points, SmartWiFi provides our Shaw Business customers with WiFi coverage on 1, 2, 3, or 5-year contract terms.

In the first quarter of fiscal 2021, we began increasing upload speeds for certain SmartWiFi packages. We also upgraded our 600 Mbps speed tier to 750 Mbps and introduced a new tier – SmartWiFi 300 with download speeds of up to 300 Mbps paired with upload speeds of up to 125 Mbps.

Smart Remote Office

Smart Remote Office allows business customers' employees to securely connect to their head office from anywhere. Smart Remote Office is a plug-and-play, no-touch provisioning solution that provides security and virtual private network (VPN) tunneling for employees working remotely.

SmartSecurity

SmartSecurity is a fully-managed network security platform deployed over Cisco Meraki's platform that protects a wired and WiFi network at the edge with access control, virus protection, the ability to control which applications run on the network, content filtering, and the connection of branch locations. A SmartSecurity premium package also includes the ability to set-up a secure VPN.

Shaw Business also offers LTE Backup, an add-on service for SmartSecurity which provides redundancy through a secondary Internet connection that ensures seamless and automatic failover in case of an outage.

SmartSecurity is available when bundled with SmartWiFi or Business Internet on 3 or 5-year contract terms.

SmartSurveillance

SmartSurveillance is a fully-managed, enterprise-grade security camera solution deployed over Cisco Meraki's platform. Managed through a cloud-portal, SmartSurveillance enables business owners to view footage and manage their cameras from anywhere using an intuitive on-line dashboard.

Sophisticated features, such as motion-based search and heat mapping, allow owners to quickly find footage of interest and identify activity patterns. SmartSurveillance can be bundled with SmartWiFi or Business Internet 75 and above on a 3 or 5-year contract term.

SmartTarget

SmartTarget is an all-in-one marketing and advanced insights solution that leverages the power of SmartWiFi and a new technology to give business owners a better understanding of their customers' wants and needs to help increase traffic at their physical locations, boost revenue, and build relationships with their customers.

With SmartTarget available as an add-on service to Shaw's SmartWiFi, business owners can get customer demographic insights when visitors join the business owner's guest WiFi network. Once their visitors/customers have opted-in, business owners can use the SmartTarget solution to create targeted emails, surveys, and coupons to help increase customer loyalty, build relationships, and boost store revenues.

Software Defined Wide Area Network (SD-WAN)

SD-WAN provides businesses with a better way to connect multiple offices in a scalable and cost-effective manner on a cloud-managed platform. With integrated security, multiple Internet links, seamless LTE failover, and intelligent path control, SD-WAN enables companies to deploy a resilient, cost-effective, and high-bandwidth connectivity solution.

Powered in partnership with Cisco Meraki, SD-WAN sites are connected by Internet links secured by our SmartSecurity service which provides network protection and cloud-based security policy updates to protect businesses from the latest vulnerabilities and network threats.

Session Initiation Protocol (SIP) Trunking

Our next-generation SIP Trunking solution, on the Broadsoft platform, delivers a centralized voice solution managed in an easy-to-use cloud portal. SIP allows customers to pay only for what they need with the ability to scale the system quickly as their businesses grow.

The integration with Broadsoft's platform provides businesses with access to unified communications features such as video conferencing, call queuing, and auto-attendant as well as the ability to join offices with SmartVoice and SIP into the same environment to reduce costs and increase efficiency.

Business Subscriber Activity

Despite the challenging circumstances due to the impacts of COVID-19 and the fact that 70% of Shaw Business revenue comes from the highly impacted small to medium sized business sector, Shaw Business still managed to achieve year-over-year revenue growth of approximately 3%. The majority of growth came from our small to medium sized business channel which demonstrates the resilience of this sector, the strength of our Smart suite of products, targeted "back to business promotions" and our sales efforts.

Our Converged Network

Throughout the challenging and unprecedented events brought about by the COVID-19 pandemic, we are proud of the strength of our converged networks, which are not just the core of our digital infrastructure – they are the backbone of our country's social and economic wellbeing. Connectivity has never been more critical for Canadians, and the importance of converged networks will only grow with Canada's accelerating digital transformation.

Shaw's Wireline Network

Our Fibre+ network combines the power of fibre, coaxial cable, and WiFi, and consists of our:

- North American fibre backbone;
- regional fibre optic and co-axial distribution networks; and
- local Shaw Go WiFi connectivity.

In fiscal 2021, Shaw launched its Fibre+ 1.5 Gigabit speed tier to the majority of its western Canadian Wireline operating footprint, while also increasing the upload speed of its Fibre+ 300, 750, Gig and 1.5 Gig tiers to up to 100 Mbps. Both of these upgrades were enabled by the deployment of DOCSIS 3.1 and Shaw's industry leading Mid-Split program, which significantly expands usable spectrum on the coaxial "last-mile" of Shaw's Fibre+ network.

The challenges and disruptions associated with the COVID-19 pandemic continued to drive increased network usage and extended peak hours in fiscal 2021. Despite the unprecedented and sustained increase in network demands, Shaw was able to maintain our virtually congestion free Internet experience, regardless of the time of day. Prior investments in our network infrastructure, and our Mid-Split upgrade in particular, allowed Shaw to quickly and seamlessly activate additional capacity. The design and resilient nature of Shaw's regional distribution and backbone networks also ensured our services remained stable during this time. The COVID-19 pandemic highlighted the critical importance of efficient, ongoing investment in facilities-based broadband networks.

Wireline Backbone

The backbone of Shaw's wireline network includes terabits of capacity over multiple fibres on two diverse cross-North America routes. The southern route principally consists of approximately 7,000 route kilometres of fibre located on routes between Seattle and New York City (via Vancouver, Calgary, Regina, Winnipeg, Toronto, Chicago, and Buffalo). The northern route consists of approximately 5,000 route kilometres of fibre between Prince George and Montreal (via Edmonton, Saskatoon, Winnipeg, Thunder Bay, Toronto, and Ottawa). Current fibre construction to extend our northern route from Prince George to North Vancouver is underway in collaboration with the federal government's Connect to Innovate and Connecting British Columbia programs.

These routes, along with a number of other secured capacity routes, provide redundancy for the network. Shaw also uses a marine route consisting of approximately 330 route kilometres from Seattle to Vancouver (via Victoria), and has secured additional capacity on routes between a number of cities, including (i) Vancouver and Calgary, (ii) Seattle and San Jose, (iii) Seattle and Calgary, (iv) Seattle and Vancouver, (v) Toronto and New York City, (vi) Toronto and Montreal, (vii) Edmonton and Fort McMurray, and (viii) Denver and Calgary.

During fiscal 2021, Shaw continued to increase the capacity on numerous backbone links to stay ahead of COVID-19 related growth in traffic.

Regional Distribution Network

We connect our backbone network to residential and business customers through our regional fibre optic and Fibre+ distribution networks.

Over the past decade, Shaw has driven fibre optic cable into every neighborhood we serve. Today, our customers' Internet traffic runs over a route comprising over 99.9% fibre optic cable. In the last few hundred metres between our fibre nodes in customers' neighborhoods and the home or business we serve, we leverage coaxial cable to deliver gigabit speeds to over 99% of our residential customers located in our western Canadian Wireline operating footprint. In 2020, we officially rebranded our broadband tiers to "Fibre+" to reflect the true nature of our network and to better articulate the strength of our network technology and strategy.

In fiscal 2021, we continued to leverage our DOCSIS 3.1 technology and Fibre+ Gateway 2.0 modem to launch our Fibre+ 1.5 Gig speed tier to the majority of homes and businesses across our western Canadian Wireline operating footprint. In fiscal 2021, we completed our Mid-Split program in our top 5 markets, and as of the date of this MD&A, the Mid-Split program was substantially completed across our western Canadian operating footprint. This upgrade allowed us to increase the upstream and downstream capacity available on our Fibre+ distribution network. Shaw was also able to quickly leverage this capacity during the COVID-19 pandemic to not only prevent network congestion, but to also launch our new Fibre+ Gig and 1.5 Gig speed tiers to virtually every home we serve in our western Canadian Wireline operating footprint.

In fiscal 2021, Shaw continued to optimize the capacity and efficiency of our wireline network by deploying fibre optic cable deeper into our access networks and closer to where our customers reside. We continue to increase the number of optical serving areas or "nodes" in the wireline network. This is a continuous process that we apply year-over-year to increase fibre optic usage in our wireline network. Driving fibre deeper into our network also supports wireless and business service deployments, as well as future services such as 5G, FTTP, or the newly released DOCSIS 4.0 specification, which are all potential building blocks for multi-gigabit symmetrical services over our existing infrastructure.

Additionally, in fiscal 2021, Shaw continued to leverage our converged network to enable the rapid and flexible deployment of small cells in support of our wireless network and preparations for 5G, due to the ability of our Fibre+ network to transport both power and multi-gigabit data speeds on one cable.

Shaw Go WiFi

Shaw has built Canada's most extensive WiFi network, Shaw Go WiFi. Shaw Go WiFi broadens a Shaw Internet customer's broadband experience beyond the home as a valuable extension of our customer wireline network experience. Over 3.6 million devices have authenticated to our carrier-grade Shaw Go WiFi network and there are over 110,000 public access points used by our customers in coffee shops, restaurants, gyms, malls, public transit, and other public spaces covering locations from British Columbia to Ontario. In addition to these public access points, Wireless customers can seamlessly access more than 950,000 Home Hotspots across western Canada, making it easier to stream and download at a friend's or relative's home.

In fiscal 2021, we continued investing in Shaw Go WiFi by upgrading some of the core elements and significantly increasing the number of Home Hotspots available for Wireless customers.

Shaw's Wireless Network

Supporting our Wireless revenue growth are the significant investments in our wireless network and customer service capabilities. We continued to execute on our operating plan to improve our network and deploy spectrum in an efficient manner. Wireless network investments to improve the customer experience continued to be a priority in the areas in which we operate and serve customers.

Shaw partnered with NOKIA to roll-out our next generation LTE wireless network in our existing markets in Ontario, Alberta, and British Columbia. In fiscal 2021, we continued to deploy our Extended Range LTE network, which leverages our 700 MHz wireless spectrum, to provide customers with improved in-building coverage as well as extending coverage. At the end of fiscal 2021, the deployment of our 700 MHz spectrum was virtually complete in western Canada and approximately 80% complete nationwide.

In fiscal 2021, Shaw continued to deploy its 600 MHz spectrum. At the end of fiscal 2021, the deployment of 600 MHz reached 80% coverage in Calgary and 60% coverage in Vancouver and the GTA.

In fiscal 2021, the Company continued to deploy small cell technologies (low powered wireless antennas and receivers with a range of 100m – 200m) designed to enhance coverage and performance in dense urban locations. As high-power towers keep the network signal strong across large distances, small cells suit more densely developed areas like city centres and popular venues by providing LTE/VoLTE quality speed, capacity, and coverage improvements in these high traffic areas. The deployment of small cell technology was further enhanced by the activation of additional macro sites and the recent upgrades to our Fibre+ network that provide the ability to power and backhaul network traffic.

In fiscal 2021, our operational support systems were enhanced to streamline customer activation capabilities and provide proactive monitoring capabilities to assist our operational teams with awareness of potential service issues in order to address them before they arise or to mitigate customer impact.

Private Wireless Networks

Shaw continues to provide Canadian market leadership in the Private Wireless Network space and build on its momentum, specifically within the mining industry. A Private Wireless Network (previously referred to as "Private LTE") is a complete, standalone cellular network that is used exclusively by the end customer for their business operations. In fiscal 2021, our first customer, Teck Resources Limited ("Teck"), moved to the production phase in their Private Wireless Network, enabling Autonomous Haulage Services at their Elkview operations in Sparwood, British Columbia. Contracts were also awarded for Teck's Highland Valley Copper Operations near Logan Lake, British Columbia in 2021.

Shaw continues to work with other industry partners to develop and deploy Private Wireless Networks.

Spectrum Holdings

Our Wireless division holds spectrum licences in British Columbia, Alberta, southern Ontario, and eastern Ontario. In some cases, licences are issued on a Tier 2 basis, which cover the relevant province or a large region within the relevant province. In other cases, licences are issued on a Tier 3 basis, which cover smaller regions within a province. On a Tier 2 basis, the Wireless division currently holds 40-50 MHz of AWS-1 and AWS-3 spectrum, 30 MHz of 600 MHz spectrum, and 10 MHz of 700 MHz spectrum in each of British Columbia, Alberta, and southern Ontario. In the Tier 2 area of eastern Ontario, the Wireless division holds 20 MHz of 600 MHz spectrum and 10 MHz of AWS-1 spectrum. In some Tier 3 regions within British Columbia, Alberta, southern Ontario, and eastern Ontario, the Wireless division holds an additional 0-40 MHz of 2500 MHz spectrum and 0-10 MHz of AWS-1 spectrum.

Climate Change and Environmental Responsibility

Shaw is committed to delivering a seamless connectivity experience to Canadians in an environmentally responsible and sustainable manner. A key focus area for the Company involves efficiency and innovation, which includes:

- **Reducing Consumption** – we support efforts to reduce employee, customer and enterprise consumption of:
  - a) Energy – through the use of energy efficient technologies;
  - b) Water – by reducing water consumption in Shaw owned buildings; and
  - c) Paper – by continuing to promote e-bill and efficient printing behaviours amongst employees and customers to reduce paper use by shifting interactions to digital platforms as part of the Company's digital transformation.
- **Waste Reduction** – to reduce employee, customer and enterprise waste we have implemented waste diversion and e-waste recycling programs and reduced single-use items in our marketing campaigns and packaging.
- **Reducing Carbon Emissions** – to reduce Shaw's carbon footprint through reduction (e.g., LED lighting, high-efficiency boilers, e-billing, reduced truck rolls due to increased consumer self-install of customer premises equipment (CPE)) and market-based instruments (e.g., renewable energy, offsets);
- **Engagement and Awareness** – to continuously drive employee, customer and enterprise awareness of Shaw's environmental initiatives. Engaging employees in our journey – through the establishment of green teams, earth week, and waste reduction initiatives – to advance our goals of educating and sharing common beliefs and values around environmental sustainability.

Shaw is also a signatory of the Canadian Energy Efficiency Voluntary Agreement (CEEVA) with respect to Set-Top Boxes (STBs) and Small Network Equipment (SNE). CEEVA aims to significantly reduce the total annual energy consumption used by STBs and SNEs in Canada.

Environmental and Social Governance

On December 7, 2020, Shaw issued its inaugural environmental, social and governance (ESG) report to provide stakeholders (i.e., customers, employees, investors, supply chain partners and regulators) with an overview of our ESG program, including Shaw's goals and actions. Shaw's ESG report can be found at https://www.shaw.ca/corporate/environmental-social-governance.

GOVERNMENT REGULATIONS AND REGULATORY DEVELOPMENTS

Substantially all of the Company's Canadian business activities are subject to regulations and policies established under various pieces of legislation, including the *Broadcasting Act* (Canada) ("*Broadcasting Act*"), the *Telecommunications Act* (Canada) ("*Telecommunications Act*"), the *Radiocommunication Act* (Canada) ("*Radiocommunication Act*"), and the *Copyright Act* (Canada) ("*Copyright Act*"). Regulation of broadcasting and telecommunications is generally administered by the Canadian Radio-television and Telecommunications Commission (CRTC or the "Commission") under the supervision of the Department of Canadian Heritage ("Canadian Heritage") and ISED, respectively. The allocation and use of wireless spectrum in Canada are governed by spectrum licences issued by, and radio authorization conditions set by, ISED pursuant to the *Radiocommunication Act*.

Limits on Non-Canadian Ownership and Control

Neither a holding company that has a subsidiary operating company licensed under the *Broadcasting Act*, nor any such licensee, may be controlled in fact by non-Canadians, the determination of which is a question of fact within the jurisdiction of the CRTC. Pursuant to the Direction to the CRTC (Ineligibility of Non-Canadians) (the "Direction"), non-Canadians are permitted to own and control, directly or indirectly, up to 33.3% of the voting shares and 33.3% of the votes of a holding company that has a subsidiary operating company licensed under the *Broadcasting Act*. In addition, up to 20% of the voting shares and 20% of the votes of a licensee may be owned and controlled, directly or indirectly, by non-Canadians. As well, the chief executive officer (CEO) and not less than 80% of the board of directors of the licensee must be resident Canadians. There are no restrictions on the number of non-voting shares that may be held by non-Canadians at either the holding company or licensee level. If a holding company of a licensee does not satisfy the requirement that 80% of its board of directors be resident Canadians, it must have a CRTC-approved Independent Programming Committee (IPC) in place to ensure that neither the holding company nor its directors exercise control or influence over the programming decisions of its subsidiary licensee. With CRTC approval, Shaw has implemented an IPC to comply with the Direction.

Limits on non-Canadian ownership apply to certain Canadian carriers pursuant to the *Telecommunications Act*, the *Radiocommunication Act* and associated regulations, except that there is no requirement that the CEO be a resident Canadian of a company operating pursuant to those Acts. Instead, the *Telecommunications Act*, the *Radiocommunication Act* and associated regulations require only that 80% of the voting shares of such entities be held by resident Canadians. The Canadian ownership requirements do not apply to wireline and wireless telecommunications carriers that have annual revenues from the provision of telecommunications services in Canada that represent less than 10% of the total annual revenues for the sector.

The Company's Articles contain measures to ensure the Company continues to comply with applicable Canadian ownership requirements and its ability to obtain, amend, or renew a license to carry on any business. Shaw must file a compliance report annually with the CRTC confirming that it is eligible to operate in Canada as a telecommunications common carrier.

Broadcasting Act

Pursuant to the *Broadcasting Act*, the CRTC is mandated to regulate and supervise all aspects of the broadcasting system in a flexible manner. The *Broadcasting Act* requires broadcast distribution undertakings (BDUs) to give priority to the carriage of Canadian services; to provide efficient delivery of programming services at affordable rates; to provide reasonable terms for the carriage, packaging and retailing of those programming services; and provides the option to operate a community channel. Under the *Broadcasting Act*, the Governor in Council (GIC) may issue broad policy directions of general application on matters with respect to the objectives of Canada's broadcasting policy and related regulatory policy.

The *Broadcasting Act* also sets out requirements for programming services with respect to Canadian content. The Company's broadcasting distribution business and on-demand programming services depend on licences (or operate under an exemption order) granted and issued by the CRTC under the *Broadcasting Act*. Pursuant to CRTC regulations, the Company is required to contribute 5% of its cable and direct-to-home (DTH) BDUs' gross revenues to support the production of Canadian programming.

Licensing and Ownership

The Company's cable licences are subject to a five-year term, expiring August 31, 2023. The Company's DTH and Satellite Relay Distribution Undertaking (SRDU) licences are subject to a seven-year term, expiring August 31, 2026.

The Company's on-demand licence is subject to a five-year term expiring August 31, 2022. The Company's terrestrial and DTH PPV licences are both subject to five-year terms expiring August 31, 2024.

New Media

The CRTC has issued a digital media exemption order requiring that Internet-based and mobile point-to-point broadcasting services not offer television programming on an exclusive or preferential basis in a manner that depends on subscription to a specific mobile or retail Internet service and not confer an undue preference or disadvantage. The CRTC has not imposed any levy on the revenue of exempt digital media undertakings to support Canadian content.

Potential Legislative Changes

On November 3, 2020, the Minister of Heritage introduced a bill to amend the *Broadcasting Act* ("Bill C-10"). Bill C-10 provided the basis for a new legislative regime that would recognize that new classes of service providers, including Canadian and non-Canadian online broadcasting services and platforms, are part of Canada's broadcasting system, in addition to current classes that include terrestrial and DTH BDUs and programmers. On June 14, 2021, the Standing Committee presented its report on Bill C-10 with amendments in the House of Commons, and on June 22, 2021, the House of Commons passed the Bill. As of the prorogation of the 43rd Parliament, on August 15, 2021, Bill C-10 remained before the Senate. The Liberal Party, which secured a minority government in the 2021 federal election, indicated in its election platform that they would introduce legislation to reform the *Broadcasting Act* within the first 100 days following re-election, and modernize funding tools that support Canada's audio-visual sector.

Any changes to the *Broadcasting Act* and related regulations – pursuant to the introduction of a bill that is substantially similar to Bill C-10 or that proposes different or additional provisions – alone or in combination with the maintenance of existing regulatory measures applicable to the Company's cable and DTH services could impact the business practices of the Company; result in the imposition of new fees and costs on the Company's cable, DTH, or digital media services; allow for the introduction of new competition in the provision of broadcasting distribution services; and/or negatively impact the Company's financial results from broadcasting.

Other Potential New or Increased Fees and Costs

New fees and costs could also be imposed pursuant to CRTC regulation, with or without legislative changes. The Commission indicated that in 2020-2021 it will consider whether to examine new mechanisms to support television news production. If the CRTC were to implement support for television news production through increased access by broadcasters to subscription revenue, it would increase costs for the Company. Additionally, the Commission indicated that in 2021-2022 it will "examine options for the appropriate measures needed to ensure that all content providers on all platforms contribute to the creation of Canadian content in both official languages, that Canadian content is promoted and given appropriate prominence, and that it is easily accessible by Canadians." Implementation of new regulatory measures with the foregoing objectives could result in new fees payable by the Company's cable, DTH or digital media services; impact the business practices of the Company, including through new distribution and promotion requirements, with increased costs payable by the Company's cable, DTH, or digital media services; and/or negatively impact the Company's financial results from broadcasting.

Sections 21 and 49 of the CRTC's *Broadcasting Distribution Regulations* (the "BDU Regulations") currently state that a cable BDU must obtain the consent of an over-the-air (OTA) broadcaster in order to distribute its signal in a distant market. In the case of DTH BDUs, the BDU Regulations permit the distribution of local OTA television signals on a distant basis without consent within the province of origin, but the BDU Regulations state that DTH BDUs must obtain broadcaster consent to deliver an OTA television signal out-of-province, unless the DTH BDU is required to carry the signal out-of-province on its basic service. There are questions as to the jurisdictional validity of sections 21 and 49 of the BDU Regulations, which are currently being considered by the CRTC pursuant to an application by Rogers Media Inc. (RMI), posted by the Commission on February 21, 2020, asking the Commission to enforce those sections. Based on the current language of sections 21 and 49 of the BDU Regulations and depending on the outcome of RMI's application, broadcasters may seek to limit distribution of distant signals or remuneration for their distribution by the Company, which could increase costs for the Company and limit its offerings to consumers (including pursuant to demands for signal take-down or program blackouts). In addition, any confirmation by the CRTC of the validity of television broadcast licensees' right of authorization regarding the retransmission of their signals in distant markets could lead to similar demands by non-Canadian broadcasters. Any such impacts or demands could significantly impact the Company's costs and negatively impact the Company's financial results.

Telecommunications Act

Under the *Telecommunications Act*, the CRTC is responsible for ensuring that Canadians in all regions of Canada have access to reliable and affordable high-quality telecommunication services. The CRTC has the authority to forbear from regulating one or more services or classes of services provided by a carrier if the CRTC finds that there is sufficient competition for those services to protect the interests of users. Retail Internet, home phone services and mobile wireless services have been forborne from price regulation. However, regulations do affect certain terms and conditions under which Shaw's retail services are provided. As described further below under "Third Party Internet Access," certain Shaw wholesale services are regulated.

Under the *Telecommunications Act*, the GIC may issue broad policy directions of general application to the CRTC with regard to the telecommunications policy directives set out in the *Telecommunications Act* (each a "Telecommunications Policy Direction"). As described below under "Government Policy Direction to CRTC Concerning Telecommunications," a Telecommunications Policy Direction was issued by the GIC with the intention of guiding the CRTC's decision-making on telecommunications matters.

The CRTC and ISED can also impose monetary penalties on companies that contravene the *Telecommunications Act*, the *Radiocommunication Act*, and the regulations and rules promulgated thereunder.

ISED is responsible for the allocation, issuance and management of radio spectrum pursuant to the *Radiocommunication Act*. As well, the technical operating aspects of the Company's businesses are regulated by technical requirements and performance standards established by ISED, primarily under the *Telecommunications Act* and the *Radiocommunication Act*.

Potential Legislative Changes

The Minister of Canadian Heritage and the Minister of Innovation, Science and Industry were directed, pursuant to the Ministerial mandate letters issued December 13, 2019, to "modernize the *Broadcasting Act* and *Telecommunications Act*, examining how best to [...] ensure quality affordable internet, mobile and media access." The Minister of Innovation, Science and Industry was also directed to reduce mobile prices by 25% within two years, and failing that, to further expand mobile virtual network operators (MVNOs) in Canada and the CRTC's mandate on affordable pricing. In accordance with this mandate, on March 5, 2020, the Minister of Innovation, Science and Industry announced the expectation that the national wireless carriers (BCE Inc., Rogers Communications Canada and TELUS Communications) reduce their prices for mid-range data plans (2-6 GB) by 25% over the next two years, and indicated that if "these targets are not met within two years, the Federal Government will take action with other regulatory tools to further increase competition and help reduce prices."

Implementation of the foregoing Ministerial mandates (assuming that they remain applicable during the next session of Parliament) could result in: the introduction of new regulatory measures that negatively impact the business practices of the Company and our ability to serve customers and related costs; and/or negative impacts on the Company's financial results and competitiveness in the wireless and wireline market.

Third Party Internet Access

Shaw is mandated by the CRTC to provide a wholesale high-speed access (HSA) service at regulated rates to independent ISPs ("Resellers"), who use the wholesale HSA services to provide their own retail Internet services to consumers ("Third Party Internet Access" or "TPIA").

Telecom Orders CRTC 2019-288 and 2021-181

On August 15, 2019, the CRTC issued Telecom Order 2019-288 (the "Order"), which set Shaw's aggregated wholesale HSA service rates. The rates imposed by the Order were significantly lower than the interim rates set in October 2016, and retroactive to January 31, 2017. Shaw, jointly with Cogeco, Eastlink, Rogers and Videotron (the "Cable Carriers"), pursued all three routes of appeal of the Order: appeal to the Federal Court of Appeal (FCA); Petition to federal Cabinet; and application with the CRTC to review and vary the Order. On May 27, 2021, the CRTC released its decision in the Cable Carriers' application to review and vary the rates set by the Order ("TD 2021-181"), in which it determined that there was substantial doubt as to the correctness of the aggregated wholesale HSA service rates set by the Order and approved on a final basis the interim rates set in October 2016. TekSavvy Solutions Inc. ("TekSavvy"), Competitive Network Operators of Canada ("CNOC"), and National Capital FreeNet Inc. ("NCF") have petitioned to the GIC to vary TD 2021-181 (the "Petitions"), asking the GIC to finalize the rates set by the 2019 Order. TekSavvy and CNOC are also asking the GIC to direct all facilities-based wholesale service providers to immediately remit all retroactive payments in connection with the Order's rates. On September 22, 2021, the Cable Carriers filed a response to the TekSavvy and CNOC Petitions, asking Cabinet to deny the requested relief. The reply to the NCF Petition is due November 1, 2021. On June 28, 2021, TekSavvy also filed a motion for leave to appeal TD 2021-181 to the FCA and has requested that the appeal be heard on an expedited basis. The FCA granted leave on September 15, 2021. In its appeal, TekSavvy will seek an order from the FCA that TD 2021-181 is quashed, and the 2019 Order is reinstated or, in the alternative, that the matter is returned to the CRTC for redetermination. If the GIC or the FCA were to intervene in any way with the effect of decreasing the aggregated wholesale HSA service rates set by TD 2021-181, this could significantly reduce the amount that the Company can charge for aggregated wholesale HSA services and negatively impact the Company's broadband Wireline revenues and investments, as well as its ability to compete with Resellers and other facilities-based HSA providers.

Distinction between residential and business wholesale HSA services

On March 3, 2020, the Commission initiated a proceeding to examine wholesale HSA tariff provisions that differentiate between residential and business end-users. Final replies were filed on February 11, 2021, and a decision is pending. The Company's tariffs do not limit or restrict reselling to business end-users. If the Commission's decision goes beyond addressing existing tariff provisions that place restrictions on Resellers based on market segmentation, and mandates new wholesale access requirements applicable to the Company's Consumer or Business Internet services, the Company's broadband revenues and investments, as well as its ability to compete, could be negatively impacted.

Disaggregated Wholesale Services Framework

In 2015, the CRTC completed a review of the wholesale wireline policy framework, including TPIA, and: (i) extended mandated wholesale access services to include FTTP facilities; and (ii) initiated a shift to a new disaggregated wholesale HSA service model. On June 11, 2020, the Commission initiated a new proceeding to consider the appropriate network configuration for disaggregated wholesale HSA services across the country, and suspended the proceeding to set final rates, terms, and conditions for the disaggregated wholesale HSA services in Ontario and Quebec, for which network configurations had previously been reviewed and approved by the CRTC in 2016. The disaggregated wholesale service configuration that is mandated by the Commission could require significant and costly modifications to the Company's broadband network architecture. The final mandated rates and the terms of disaggregated HSA services could negatively impact the Company's broadband revenues and investments as well as its ability to compete with Resellers and other facilities-based disaggregated HSA providers.

Review of the approach to rate setting for wholesale telecommunications services

On April 24, 2020, the Commission initiated a proceeding to review its approach to rate setting for wholesale telecommunications services. Replies were filed on November 27, 2020, and a decision is pending. The methodology that is selected will impact the amount that the Company can charge for wholesale HSA service. If the methodology fails to adequately compensate the Company for the costs associated with provisioning HSA services as well as a reasonable return on investment, it will negatively impact the Company's broadband Wireline revenues and investments and our ability to compete with Resellers and other facilities-based HSA providers. The chosen methodology could also potentially apply to wholesale wireless services, including mandated roaming.

CRTC Wireless Review

In February 2019, the CRTC initiated its review of the regulatory framework for mobile wireless services and held a public hearing in February 2020. The Commission reviewed competition in the retail market, including potential regulatory intervention, such as new retail policies and mandated low-cost data-only plans, and wholesale wireless regulation, including wholesale access for mobile virtual network operators (MVNOs), and whether there is any need to make changes to the wholesale roaming policy.

In April 2021, the CRTC issued Wireless Review decision, Telecom Regulatory Policy CRTC 2021-130 ("TRP 2021-130"). In it, the CRTC rejected a broad MVNO regime and instead mandated facilities-based MVNO service, whereby the national wireless carriers as well as SaskTel are mandated to provision wholesale MVNO access services only to carriers holding a spectrum licence in a given service area. The terms and conditions of the facilities-based wholesale MVNO access service are still under consideration by the Commission. Rates will be determined through commercial negotiation, with recourse to CRTC Final Offer Arbitration if negotiations reach an impasse. The CRTC also held that the national wireless carriers would be required to provide seamless roaming as part of their mandated domestic wholesale roaming services used by the Company and other carriers as of April 15, 2022 and confirmed that the wholesale roaming policy applies to 5G networks. The national wireless carriers' wholesale roaming tariffs will be reviewed to ensure the rates reflect the underlying costs associated with seamless roaming following its implementation. At that time, the CRTC will also assess the underlying costs of wholesale roaming on 5G networks. TRP 2021-130 did not mandate specific retail services but set clear expectations for the offer and promotion by the national carriers of low-cost, emergency use, and occasional use plans at specified rates. Finally, the CRTC determined that the *Telecommunications Act* does not give it the jurisdiction to adjudicate disputes concerning access to public places for the purpose of constructing, maintaining, and operating mobile wireless transmission facilities. On May 14, 2021, TELUS filed for leave to appeal the CRTC's determinations related to seamless roaming and jurisdiction over access to public places relating to wireless facilities. On August 11, 2021, the FCA granted TELUS leave. Additionally, Data On Tap Inc., an MVNO operating as dotmobile, has petitioned the GIC to vary TRP 2021-130, asking it to broaden mandated MVNO access by, among other things, removing the spectrum requirements and set a maximum allowable wholesale rate.

Compliance and Enforcement and Telecom Notice of Consultation CRTC 2021-9

On January 13, 2021, the CRTC initiated a proceeding to develop a network-level blocking framework to limit botnet traffic targeting Canadians. Shaw has recommended a limited role for the CRTC. If, however, the CRTC implements more onerous obligations, this could introduce additional costs to the Company and a risk of penalties in connection with any non-compliance.

Retail Sales Practices

On February 20, 2019, the CRTC published its Report on Misleading or Aggressive Communications Retail Sales Practices and found that "a significant portion of Canadians are experiencing misleading or aggressive sales practices through all types of sales channels" in connection with their purchase of telecommunications and broadcasting services. While the Report did not result in new rules or regulatory obligations, the Report's findings, coupled with a planned Commission examination of activities undertaken in 2020-2021 to address those findings, could lead to new measures implemented in the context of current or future proceedings. The introduction of any such measures could negatively impact our ability to serve our customers, result in cost increases for the Company and negatively impact the Company's revenue.

Access for Wireline Network

Shaw requires access to support structures, such as poles, strand and conduits of telecommunication carriers and electric utilities, in order to deploy wireline network facilities. Under the *Telecommunications Act*, the CRTC has jurisdiction over support structures of telecommunication carriers, including rates for third party use. The CRTC's jurisdiction does not extend to electrical utility support structures, which are regulated by provincial utility authorities. Shaw's wireline network also requires access to construct facilities in roadways and other public places. Under the *Telecommunications Act*, Shaw may access such places with the consent of the municipality or other public authority having jurisdiction.

On December 10, 2019, the Commission initiated a review to examine "potential barriers and/or regulatory solutions to building new facilities or interconnecting to existing facilities in order to extend broadband-capable networks more efficiently into underserved areas […]." The Commission specifically requested comments on barriers such as access to affordable transport services and efficient use of support structures; how and to what extent these barriers are preventing carriers from extending transport networks and offering services in underserved regions; and proposals on potential regulatory measures to address the barriers. Final submissions were filed in March 2021, and a decision has not yet been issued. The introduction of regulatory requirements applicable to the provision of wholesale transport services in rural or remote areas could negatively impact the Company's financial results.

Radiocommunication Act

Our Wireless division holds licences for the use of radiofrequency spectrum required to operate its mobile wireless business. Those spectrum licences are administered by ISED under the *Radiocommunication Act*. Spectrum use is governed by conditions of license, including license term, transferability/divisibility, technical compliance requirements, lawful interception, research and development, and mandated antenna site sharing and domestic roaming services.

Any changes to the *Radiocommunications Act* could impact the business practices of the Company and/or the processes governing its acquisition of new spectrum for purposes of building its wireless networks.

Wireless Spectrum Licences

The Company's AWS-1 spectrum licences were renewed in 2019 for a 20-year term. The Company's AWS-3 spectrum licences were issued in 2015 for a 20-year term. The 700 MHz and 2500 MHz spectrum licences that the Company purchased from Quebecor were initially issued in February 2014 and May 2015, respectively for a term of 20 years. The Company also holds other 2500 MHz licences, including those acquired at ISED's 2018 residual auction, which were issued for a 20-year term, and the Company also acquired 600 MHz licences at ISED's 2019 auction, which were issued for a 20-year term.

The Company's licences come with conditions, including a variety of deployment conditions. In July 2019, ISED issued a decision in response to its consultation on a new set of smaller service areas for spectrum licensing ("Tier 5 Service Areas") to complement ISED's existing service areas. ISED has created Tier 5 Service Areas with the objective of encouraging additional access to spectrum within rural areas pursuant to its licensing process. Currently, none of the Company's licences are subject to Tier 5 deployment requirements, but future licences may incorporate a requirement for deployment in such new service areas, which could lead to additional future network costs.

In March 2020, ISED released its policy and licensing framework (the "Framework") for the 3500 MHz (3450-3650 MHz) auction, following a public consultation process in 2019. The auction commenced in June 2021, and provisional results were published on July 29, 2021. Shaw did not participate in the auction.

In May 2021, following a public consultation in 2020 on proposed revisions to the 3800 MHz band (3650-4200 MHz), ISED released its decision allowing future mobile use in the band. The band is currently used primarily to provide fixed satellite services. Existing satellite users of the spectrum in remote, satellite dependent areas of the country will be permitted to continue to operate across the band, while those in urban areas will be consolidated in the 4000-4200 MHz spectrum range and subject to a transition process that will be complete in March 2025. The details of the licensing framework for the band will be the subject of a future proceeding.

In June 2019, following a consultation in 2018, ISED released a decision allowing future mobile use in the millimetre wave bands, including 26 GHz, 28 GHz, and 38 GHz bands, as well as licence-exempt use in the 64-71 GHz bands. The details of the licensing framework for these bands will be the subject of a future proceeding.

In May 2021, ISED also released a decision confirming its intention to make 1200 MHz of spectrum in the 6 GHz band (5925-7125 MHz) available for WiFi and other unlicensed uses. Technical standards for equipment operating in the band must be developed before the spectrum becomes available for use.

In August 2021, ISED commenced a consultation on the potential introduction of a new "access licensing framework" to facilitate access to unused spectrum in rural and remote areas. ISED proposes to issue Tier 5 licences on a first-come, first-served basis in areas where existing licensees have not deployed services. ISED proposes to apply this initially to the PCS (1900 MHz) and Cellular (800 MHz) bands. Among other things, the consultation also proposes to streamline the approval process for certain subordination arrangements. Although Shaw does not have spectrum in the PCS or Cellular spectrum bands, these consultations could lead to future spectrum proceedings, or future opportunities for other parties to gain access to spectrum, which could impact the Company's competitiveness or its spectrum licences.

Access for Wireless Network

Our Wireless division's operations depend on being able to locate and construct wireless antenna sites, which in some cases requires certain authorizations or approvals from municipalities, which vary from one municipality to another but are also subject to federal oversight. The process for such approvals can include a comprehensive consultation process related to local land use priorities and new antenna site design parameters. As noted above, the CRTC determined that the *Telecommunications Act* does not give it the jurisdiction to adjudicate disputes concerning access to public places for the purpose of constructing, maintaining, and operating mobile wireless transmission facilities and TELUS is appealing that aspect of the decision at the FCA.

The Wireless division also uses arrangements whereby it co-locates its antennae equipment on towers and/or sites owned and operated by third party tower and/or site providers and the three national wireless carriers. Pursuant to the conditions of their spectrum licences and the CRTC's policy framework for wholesale wireless services, the three national wireless carriers must allow competitors, including Freedom Mobile and Shaw Mobile, to co-locate equipment at these locations. However, the application and approval process for the sharing of towers is lengthy, and the ISED and CRTC processes that are available to enforce the existing rules can also be challenging and time consuming. The CRTC's review of mobile wireless services included a focus on reducing barriers to infrastructure deployment and whether any further regulatory measures are required to reduce barriers to the deployment of wireless infrastructure. In the CRTC's review of mobile wireless services, the Commission indicated that it would examine issues associated with access to various types of infrastructure in order to deploy wireless networks and whether changes should be made to the Commission's existing rules to facilitate such access. In its Wireless Review decision (TRP 2021-130), the CRTC determined that it did not need to take any additional action in relation to tower and site sharing at this time.

Copyright Act

Canada's *Copyright Act* accords the creators and owners of content various rights to authorize and/or be remunerated for the use and performance of their works, including, in some instances, by BDUs. In addition, the *Copyright Act* creates certain exceptions that permit the use of copyrighted works without the authorization or remuneration of rights holders.

New or Potential Legislative Changes

Any amendments to the *Copyright Act* that modify the terms and conditions applicable to the use of content, including new rights or the scope of flexibility pursuant to existing exceptions; or impose new obligations on intermediaries, such as telecommunications service providers, could create increased fees and negatively impact the business practices of the Company, as well as the Company's ability to serve its customers.

Potential for New or Increased Fees

In August 2017, the Copyright Board issued a decision interpreting the scope and meaning of the "making available" provision (section 2.4(1.1) of the *Copyright Act*). The Copyright Board determined that as a result of section 2.4(1.1), the mere making available of a work on a server for the purpose of later streaming or downloading of the work by the public is an event for which a tariff is payable, expanding the scope of the performance right and the Society of Composers, Authors and Music Publishers of Canada's (SOCAN) entitlement to royalties. In September 2017, the Company, along with a number of other broadcasting and Internet companies, filed an application for judicial review, arguing that the Copyright Board's interpretation of the "making available" provision was erroneous. In June 2020, the FCA overturned the Copyright Board's interpretation. On November 12, 2020, SOCAN and Music Canada (collectively, the "Applicants") filed an application for leave to appeal to the Supreme Court of Canada (SCC). On April 21, 2021, leave to appeal was granted to the Applicants. If the SCC restores the Copyright Board's interpretation, it could lead to new claims by rights holders in connection with Company technologies that facilitate downloading.

Judicial Review of the Distant Signal Retransmission Tariff Rates (2014-2018)

On December 18, 2018, the Copyright Board released a rate decision for the Distant Signal Retransmission Tariff for the past tariff period of 2014-2018, inclusive, which introduced a rate increase that applied retroactively, and established an interim tariff for 2019 based on the 2018 rate. Both the Copyright Collective of Canada (the "Collectives") and Objectors filed a Notice of Application for judicial review with the FCA on November 4, 2019. On July 23, 2021, the FCA dismissed the Objectors' application on all grounds, and granted the Collectives' application on two grounds, for the years 2016-2018. The SCC application for leave to appeal the FCA decision was filed on September 29, 2021. If the FCA's decision is upheld, the Company could become subject to significantly increased royalty rates for the 2016-2018 period, pursuant to a redetermination of the rates by the Copyright Board.

Privacy and Anti-Spam Legislation

Privacy Legislation

The Personal Information Protection and Electronic Documents Act (Canada) (PIPEDA) is Canada's federal privacy law regulating the collection, use, and disclosure of personal information in Canada by a federally regulated organization in the private sector. The Company has established a privacy policy and its internal privacy processes in accordance with PIPEDA.

On November 17, 2020, the Minister of Innovation, Science and Industry introduced Bill C-11 – the Digital Charter Implementation Act ("DCIA"), which was intended to replace PIPEDA. Bill C-11 was comprised of two parts: (1) the Consumer Privacy Protection Act (the "CPPA"), which established protections and parameters for the collection, use and disclosure of personal information ("PI"), including enhanced rights for individuals with respect to their privacy and data; enhanced accountabilities for organizations with respect to consent gathering and data usage; and significant penalties (up to 5% of an organization's gross revenue the previous year) for breaches of rights and responsibilities; and (2) the Personal Information and Data Protection Tribunal Act (the "PIDPTA"), which created a new administrative tribunal to oversee enforcement of the CPPA. As of the prorogation of the 43rd Parliament on August 15, 2021, Bill C-11 remained in Second Reading before the House of Commons. The Liberals' election platform indicated that if re-elected, they would move forward with legislation to implement Canada's Digital Charter, strengthen privacy protections for consumers and introduce new rules applicable to the online marketplace.

Changes to privacy laws and regulations resulting from the reinstatement and passage of Bill C-11 or introduction of a new privacy bill, will require the Company to incur costs to adjust its policies and practices related to privacy, as well as data collection, management, disposal and access practices. Such changes could: result in significant new costs payable by the Company to ensure compliance; limit the Company's ability to utilize data in support of its business, as well as preserve and expand its customer base; and expose the Company to the risk of significant penalties and claims (including pursuant to a proposed right of private action) in connection with any non-compliance.

Canada's Anti-Spam Legislation (CASL)

CASL sets out a comprehensive regulatory regime regarding online commerce, including requirements to obtain consent prior to sending commercial electronic messages and installing computer programs. CASL is administered primarily by the CRTC, and non-compliance may result in fines of up to $10 million. The Company maintains internal practices and policies to facilitate compliance with CASL.

Environmental matters

Shaw's operations are subject to environmental regulations, including those related to electronic waste, printed paper and packaging. A number of provinces have enacted regulations providing for the diversion of certain types of electronic and other waste through product stewardship programs (PSP). Under a PSP, companies who supply designated products in or into a province are required to participate in or develop an approved program for the collection and recycling of designated materials and, in some cases, pay a per item fee. Such regulations have not had, and are not expected to have, a material effect on the Company's earnings or competitive position.

KEY PERFORMANCE DRIVERS

Shaw measures the success of its strategies using a number of key performance drivers which are outlined below, including a discussion as to their relevance, definitions, calculation methods and underlying assumptions.

Financial Measures

Revenue

Revenue is a measurement determined in accordance with International Financial Reporting Standards (IFRS). It represents the inflow of cash, receivables or other consideration arising from the sale of products and services. Revenue is net of items such as trade or volume discounts, agency commissions, and certain excise and sales taxes. It is the base on which free cash flow, a key performance driver, is determined; therefore, it measures the potential to deliver free cash flow as well as indicating growth in a competitive market place.

The Company's continuous disclosure documents may provide discussion and analysis of non-GAAP financial measures. These financial measures do not have standard definitions prescribed by IFRS and therefore may not be comparable to similar measures disclosed by other companies. The Company's continuous disclosure requirements may also provide discussion and analysis of additional GAAP measures. Additional GAAP measures include line items, headings, and sub-totals included in financial statements. The Company utilizes these measures in making operating decisions and assessing its performance. Certain investors, analysts and others utilize these measures in assessing the Company's operational and financial performance and as an indicator of its ability to service debt and return cash to shareholders. These non-GAAP measures and additional GAAP measures have not been presented as an alternative to net income or any other measure of performance or liquidity prescribed by IFRS. The following contains a description of the Company's use of non-GAAP financial measures and additional GAAP measures and provides a reconciliation to the nearest IFRS measure or provides a reference to such reconciliation.

Adjusted EBITDA

Adjusted earnings before interest, taxes, depreciation and amortization ("adjusted EBITDA") is calculated as revenue less operating, general and administrative expenses. It is intended to indicate the Company's ongoing ability to service and/or incur debt and is therefore calculated before items such as restructuring costs, other gains (losses), amortization (a non-cash expense), taxes and interest. Adjusted EBITDA is one measure used by the investing community to value the business.

Adjusted EBITDA has no directly comparable GAAP financial measure. Alternatively, the following table provides a reconciliation of net income to adjusted EBITDA:

	Year ended August 31,		
(millions of Canadian dollars)	**2021**	**2020**	**Change%**
Net Income	**986**	688	43.3
Add back (deduct):			
Restructuring costs	**14**	14	—
Amortization:			
Deferred equipment revenue	**(11)**	(16)	(31.3)
Deferred equipment costs	**47**	65	(27.7)
Property, plant and equipment, intangibles and other	**1,183**	1,168	1.3
Amortization of financing costs – long-term debt	**2**	3	(33.3)
Interest expense	**231**	274	(15.7)
Other gains (losses)	**2**	16	(87.5)
Current income tax expense	**30**	120	(75.0)
Deferred income tax expense (recovery)	**16**	59	(72.9)
Adjusted EBITDA	**2,500**	2,391	4.6

Adjusted EBITDA margin

Adjusted EBITDA margin is a non-GAAP ratio that is calculated by dividing adjusted EBITDA by revenue. Adjusted EBITDA margin is also one of the measures used by the investing community to value the business.

	Year ended August 31,		
	2021	**2020**	**Change%**
Wireline	**49.6%**	48.3%	2.7
Wireless	**30.9%**	28.9%	6.9
Combined Wireline and Wireless	**45.4%**	44.2%	2.7

Net debt

The Company uses this measure to perform valuation-related analysis and make decisions about the Company's capital structure. We believe this measure aids investors in analyzing the value of the business and assessing our leverage. Refer to "Liquidity and Capital Resources" for further detail.

Net debt leverage ratio

The Company uses this non-GAAP ratio to determine its optimal leverage ratio. Refer to "Liquidity and Capital Resources" for further detail.

Free cash flow

The Company utilizes this measure to assess the Company's ability to repay debt and pay dividends to shareholders.

Free cash flow is comprised of adjusted EBITDA and then deducting capital expenditures (on an accrual basis and net of proceeds on capital dispositions) and equipment costs (net), interest, cash taxes paid or payable, interest on lease liabilities, lease payments relating to lease liabilities, dividends paid on the preferred shares, and recurring cash funding of pension amounts net of pension expense and adjusted to exclude share-based compensation expense or recovery.

Free cash flow has not been reported on a segmented basis. Certain components of free cash flow, including adjusted EBITDA, continue to be reported on a segmented basis. Capital expenditures and equipment costs (net) are also reported on a segmented basis. Other items, including interest and cash taxes, are not generally directly attributable to a segment, and are reported on a consolidated basis.

Free cash flow is calculated as follows:

	Year ended August 31,		
(millions of Canadian dollars)	**2021**	**2020**	**Change %**
Revenue			
Consumer	**3,665**	3,683	(0.5)
Business	**584**	567	3.0
Wireline	**4,249**	4,250	—
Service	**891**	815	9.3
Equipment	**381**	351	8.5
Wireless	**1,272**	1,166	9.1
	5,521	5,416	1.9
Intersegment eliminations	**(12)**	(9)	33.3
	5,509	5,407	1.9
Adjusted EBITDA			
Wireline	**2,107**	2,054	2.6
Wireless	**393**	337	16.6
	2,500	2,391	4.6
Capital expenditures and equipment costs (net):(1)			
Wireline	**723**	815	(11.3)
Wireless	**280**	296	(5.4)
	1,003	1,111	(9.7)
Free cash flow before the following	**1,497**	1,280	17.0
Less:			
Interest on debt and provisions	**(183)**	(223)	(17.9)
Interest on lease liabilities	**(45)**	(44)	2.3
Cash taxes	**(194)**	(148)	31.1
Lease payments relating to lease liabilities	**(110)**	(112)	(1.8)
Other adjustments:			
Non-cash share-based compensation	**2**	2	–
Pension adjustment	**2**	1	100.0
Preferred share dividends	**(8)**	(9)	(11.1)
Free cash flow	**961**	747	28.6

(1) Per Note 26 to the audited Consolidated Financial Statements.

Statistical Measures

Subscriber counts (or Revenue Generating Units (RGUs))

The Company measures the count of its subscribers in its Consumer, Business, and Wireless divisions.

In the Consumer and Business divisions, Wireline Video subscribers include residential customers, multiple dwelling units (MDUs) and commercial customers. A residential subscriber who receives at a minimum, basic cable service, is counted as one subscriber. In the case of MDUs, such as apartment buildings, each tenant with a minimum of basic cable service is counted as one subscriber, regardless of whether invoiced individually or having services included in the individual's rent. Each building site of a commercial customer (e.g., hospitals, hotels or retail franchises) that is receiving at a minimum, basic cable service, is counted as one subscriber. Video satellite subscribers are counted in the same manner as Wireline Video customers except that it also includes seasonal customers who have indicated their intention to reconnect within 180 days of disconnection. Internet customers include all modems on billing and Phone includes all phone lines on billing. All subscriber counts exclude complimentary accounts but include promotional accounts.

Consumer and Business divisions' RGUs represent the number of products sold to customers and includes Video (cable and Satellite subscribers), Internet customers, and Phone lines. As at August 31, 2021 these combined divisions had approximately 5.0 million RGUs.

In the Wireless division, a recurring subscriber or RGU (e.g., cellular phone, smartphone, tablet, mobile Internet device) has access to the wireless network for voice and/or data communications, whether prepaid or postpaid. Prepaid subscribers include RGUs where the account is within 90 days of the prepaid credits expiring. As at August 31, 2021 the Wireless division had approximately 2.1 million RGUs.

Refer to "Subscriber Highlights" on page 11 for more information on this measure.

Wireless Postpaid Churn

Wireless postpaid subscriber or RGU churn ("postpaid churn") measures success in retaining subscribers. Wireless postpaid churn is a measure of the number of postpaid subscribers that deactivated during a period as a percentage of the average postpaid subscriber base during a period, calculated on a monthly basis. It is calculated by dividing the number of Wireless postpaid subscribers that deactivated (in a month) by the average number of postpaid subscribers during the month. When used or reported for a period greater than one month, postpaid churn represents the sum of the number of subscribers deactivating for each period incurred divided by the sum of the average number of postpaid subscribers of each period incurred.

Postpaid churn of 1.41% in fiscal 2021 was comparable to 1.40% in fiscal 2020.

Wireless average billing per subscriber unit (ABPU)

Wireless ABPU is a supplementary financial measure and industry metric that is useful in assessing the operating performance of a wireless entity. We use ABPU as a measure that approximates the average amount the Company invoices an individual subscriber unit for service on a monthly basis. ABPU helps us to identify trends and measures the Company's success in attracting and retaining higher lifetime value subscribers. Wireless ABPU is calculated as service revenue (excluding allocations to wireless service revenue under IFRS 15) divided by the average number of subscribers on the network during the period and is expressed as a rate per month.

In fiscal 2021, ABPU decreased 6.8% to $41.15 compared to $44.13 in the prior year. The ABPU decrease reflects the increased number of customers that are subscribing to Shaw Mobile as well as reduced roaming revenue due to less travel and roaming outside of the Freedom home network resulting from the impact of the COVID-19 pandemic.

Wireless average revenue per subscriber unit per month (ARPU)

Wireless ARPU is a supplementary financial measure that is calculated as service revenue divided by the average number of subscribers on the network during the period and is expressed as a rate per month. This measure is an industry metric that is useful in assessing the operating performance of a wireless entity. ARPU also helps to identify trends and measure the Company's success in attracting and retaining higher-value subscribers.

In fiscal 2021, ARPU decreased 4.1% to $37.35 compared to $38.95 in the prior year. The ARPU decrease reflects the increased number of customers that are subscribing to Shaw Mobile as well as reduced roaming revenue due to less travel and roaming outside of the Freedom home network resulting from the impact of the COVID-19 pandemic.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

The Company prepared its Consolidated Financial Statements in accordance with IFRS as issued by the International Accounting Standards Board (IASB). An understanding of the Company's accounting policies is necessary for a complete analysis of results, financial position, liquidity, and trends. Refer to Note 2 to the Consolidated Financial Statements for additional information on accounting policies. The following section discusses key estimates and assumptions that management has made under IFRS and how they affect the amounts reported in the Consolidated Financial Statements and accompanying notes. The following is a discussion of the Company's critical accounting policies.

Revenue and expense recognition

The identification of performance obligations within a contract and the timing of satisfaction of performance obligations under long-term contracts requires judgment. For bundled arrangements, we account for individual products and services when they are separately identifiable, and the customer can benefit from the product or service on its own or with other readily available resources. The Company has multiple deliverable arrangements consisting of upfront fees (subscriber connection fee revenue and/or customer premise equipment revenue) and related subscription revenue. The Company determined that the upfront fees charged to customers do not constitute separate performance obligations; therefore, these revenue streams are assessed as an integrated package.

Revenue is considered earned as services are performed, provided that at the time of performance, ultimate collection is reasonably assured. Such performance is regarded as having been achieved when reasonable assurance exists regarding the measurement of the consideration that will be derived from rendering the service. Revenue from Video, Internet, Phone, DTH, and Wireless customers includes subscriber revenue earned as services are provided. The revenue is considered earned as the period of service relating to the customer billing elapses. In addition to monthly service plans, the Company also offers multi-year service plans in which the total amount of the contractual service revenue is accounted for on a straight-line basis over the term of the plan.

When a customer can modify their contract within predefined terms such that we are not able to enforce the transaction price agreed to, but can only contractually enforce a lower amount, we allocate revenue between performance obligations using the minimum enforceable rights and obligations and any excess amount is recognized as revenue as its earned.

Subscriber connection fee revenue

Connection fees have no standalone value to the customer separate and independent of the Company providing additional subscription services, therefore the connection fee revenue must be deferred as contract liabilities and recognized systematically over the periods that the subscription services are earned. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered its customer churn rate and other factors, such as competition from new entrants, to determine the deferral period of three years for Wireline customers and two years for Wireless customers.

Subscriber connection and installation costs

The costs of physically connecting a new home are capitalized as part of the Company's distribution system as the service potential of the distribution system is enhanced by the ability to generate future subscriber revenue. Costs of disconnections are expensed as incurred as the activity does not generate future revenue.

Costs incurred to obtain or fulfill a contract

The incremental costs to obtain or fulfill a contract with a customer are deferred and amortized into operating expenses over their expected period of benefit to the extent they are recoverable. These costs include certain commissions paid to internal and external representatives that we expect to be recoverable. Determining the deferral criteria for these costs requires us to make significant judgments.

Customer premise equipment revenue and costs

Customer premise equipment available for sale, which generally includes DTH equipment, has no standalone value to the customer separate and independent of the Company providing additional subscription services. Therefore, the equipment revenue is deferred and recognized systematically over the periods that the subscription services are earned. As the equipment sales and the related subscription revenue are considered one transaction, recognition of the equipment revenue commences once the subscriber service is activated. There is no specified term for which the customer will receive the related subscription service, therefore the Company has considered various factors including customer churn, competition from new entrants, and technology changes to determine the deferral period of three years.

In conjunction with equipment revenue, the Company also incurs incremental direct costs which include equipment and related installation costs. These direct costs cannot be separated from the undelivered subscription service included in the multiple deliverable arrangement. Under IAS 2 "Inventories," these costs represent inventoriable costs and are deferred and amortized over the period of three years, consistent with the recognition of the related equipment revenue. The equipment and installation costs generally exceed the amounts received from customers on the sale of equipment (the equipment is sold to the customer at a subsidized price). The Company defers the entire cost of the equipment, including the subsidy portion, as it has determined that this excess cost will be recovered from future subscription revenues and that the investment by the customer in the equipment creates value through increased retention.

Shaw Business installation revenue and expenses

The Company also receives installation revenues in its Shaw Business operation on contracts with commercial customers which are deferred and recognized as revenue on a straight-line basis over the related service contract, generally spanning two to ten years. Direct and incremental costs associated with the service contract, in an amount not exceeding the upfront installation revenue, are deferred and recognized as an operating expense on a straight-line basis over the same period.

Wireless equipment revenue

Revenue for performance obligations satisfied at a point in time is recognized when control of the item or service transfers to the customer. Revenue from the direct sale of equipment to subscribers or dealers is recognized when the equipment is delivered and accepted by the subscribers or dealers.

For bundled arrangements (i.e., wireless handsets and voice and data services), items are accounted for as separate performance obligations if the item meets the definition of a distinct good or service. Stand-alone selling prices are determined using observable prices adjusted for market conditions and other factors, as appropriate. The Company offers a discretionary wireless handset discount program, whereby the subscriber earns the applicable discount by maintaining services with the Company, such that the receivable relating to the discount at inception of the transaction is reduced over a period of time. This discount is allocated proportionately between the equipment and service revenue, with the equipment discount recognized when the handset is delivered and the corresponding service discount is classified as a contract asset. The contract asset is reduced on a straight-line basis over the period which the discount is forgiven to a maximum of two years with an offsetting reduction to service revenue.

The Company also offers a plan allowing customers to receive a larger up-front handset discount than they would otherwise qualify for if they pay a predetermined incremental charge to their existing service plan on a monthly basis. The charge is billed on a monthly basis but is recognized as revenue when the handset is delivered and accepted by the subscriber. The amount receivable is classified as part of other current or non-current receivables, as applicable, in the Consolidated Statements of Financial Position.

Income statement classification

The Company distinguishes amortization of deferred equipment revenue and deferred equipment costs from the revenue and expenses recognized from ongoing service activities on its income statement. Equipment revenue and costs are deferred and recognized over the anticipated term of the related future revenue (i.e., the monthly service revenue) with the period of recognition spanning three to five years. As a result, the amortization of deferred equipment revenue and deferred equipment costs are non-cash items on the income statement, similar to the Company's amortization of deferred indefeasible right to use (IRU) revenue, which the Company also segregates from ongoing revenue. Further, within the lifecycle of a customer relationship, the customer generally purchases customer premise equipment at the commencement of the customer relationship, whereas the subscription revenue represents a continuous revenue stream throughout that customer relationship. Therefore, the segregated presentation provides a clearer distinction within the income statement between cash and non-cash activities and between up-front and continuous revenue streams, which assists financial statement readers to predict future cash flows from operations.

Allowance for doubtful accounts

A significant portion of the Company's revenues are earned from selling on credit to individual subscribers. Because there are some customers who do not pay their debts, selling on credit necessarily involves credit losses. The Company is required to make an estimate of an appropriate allowance for doubtful accounts on its receivables. In determining its estimate, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. The estimated allowance required is a matter of judgment and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foreseen, such as future business, personal and economic conditions. Conditions causing deterioration or improvement in the aging of accounts receivable and collections will increase or decrease bad debt expense.

Leases

The application of IFRS 16 requires the Company to make judgments that affect the valuation of the lease liabilities and the valuation of right-of-use assets.

In determining whether a contract contains a lease, the Company makes judgments in determining whether the contract involves the use of an identified asset, whether the Company has the right to obtain substantially all of the economic benefits from use of the asset throughout the period of use, and whether the Company has the right to direct the use of the identified asset.

In determining the contract term, the Company makes judgments in determining the non-cancellable period of the lease and the impact to the term of any options in the contract including options to extend or terminate the lease and whether or not the Company is reasonably certain to exercise these options.

When determining the interest rate used for discounting future cash flows the Company uses the incremental borrowing rate unless the rate implicit in the lease is readily determinable. The determination of the incremental borrowing rate is derived from publicly available rates and adjusted for lease terms. A single incremental borrowing rate is applied to a portfolio of leases with similar characteristics.

Property, plant and equipment and other intangibles – capitalization of direct labour and overhead

The cost of property, plant and equipment and other intangibles includes direct construction or development costs (such as materials and labour) and overhead costs directly attributable to the construction or development activity. The Company capitalizes direct labour and direct overhead incurred to construct new assets, upgrade existing assets and connect new subscribers. These costs are capitalized as they are directly attributable to the acquisition, construction, development or betterment of the networks or other intangibles. Repairs and maintenance expenditures are charged to operating expenses as incurred.

Direct labour and overhead costs are capitalized in three principal areas:

1. **Corporate departments such as Technology, Operations, Products, and Supply Chain (TOPS):** TOPS is involved in overall planning and development of the Video/Internet/Phone/Wireless infrastructure. Labour and overhead costs directly related to these activities are capitalized as the activities directly relate to the planning and design of the construction of the distribution system. In addition, TOPS devotes considerable efforts towards the development of systems to support Phone, WiFi, and projects related to new customer management, billing, and operating support systems. Labour costs directly related to these and other projects are capitalized.
2. **Cable regional construction departments, which are principally involved in constructing, rebuilding and upgrading the Cable/Internet/Phone infrastructure:** Labour and overhead costs directly related to the construction activity are capitalized as the activities directly relate to the construction or upgrade of the distribution system. Capital projects include, but are not limited to, new subdivision builds, increasing network capacity by reducing the number of homes fed from each node, and upgrades of plant capacity and the WiFi build.
3. **Subscriber-related activities such as installation of new drops and Internet and Phone services:** The labour and overhead directly related to the installation of new services are capitalized as the activity involves the installation of capital assets (e.g., wiring, software) which enhance the service potential of the distribution system through the ability to earn future revenues. Costs associated with service calls, collections, disconnects, and reconnects that do not involve the installation of a capital asset are expensed.

Amounts of direct labour and direct overhead capitalized fluctuate from year to year depending on the level of customer growth and plant upgrades for new services. In addition, the level of capitalization fluctuates depending on the proportion of internal labour versus external contractors used in construction projects.

The percentage of direct labour capitalized in many cases is determined by the nature of employment in a specific department. For example, a significant portion of labour and direct overhead of the cable regional construction departments is capitalized as a result of the nature of the activity performed by those departments. Capitalization is also based on piece rate work performed by unit-based employees which is tracked directly. In some cases, the amount of capitalization depends on the level of maintenance versus capital activity that a department performs. In these cases, an analysis of work activity is applied to determine this percentage split.

Amortization policies and useful lives

The Company amortizes the cost of property, plant and equipment and other intangibles over the estimated useful service lives of the items. These estimates of useful lives involve considerable judgment. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. On an annual basis, the Company reassesses its existing estimates of useful lives to ensure they match the anticipated life of the technology from a revenue-producing perspective. If technological change happens more quickly or in a different way than the Company has anticipated, the Company may have to shorten the estimated life of certain property, plant and equipment or other intangibles which could result in higher amortization expense in future periods or an impairment charge to write down the value of property, plant and equipment or other intangibles.

Intangibles

The excess of the cost of acquiring cable, satellite, and wireless businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist of amounts allocated to broadcast rights and licences, wireless spectrum licences, trademarks, brands, customer relationships, and software assets. Broadcast rights and licences, wireless spectrum licences, trademarks, and brands represent identifiable assets with indefinite useful lives.

Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over their estimated useful lives ranging from 4 – 15 years.

Software that is not an integral part of the related hardware is classified as an intangible asset. Internally developed software assets are recorded at historical cost and include direct material and labour costs as well as borrowing costs on qualifying assets. Software assets are amortized on a straight-line basis over estimated useful lives ranging from 3 – 10 years. The Company reviews the estimates of lives and useful lives on a regular basis.

Asset impairment

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at February 1) and when events or changes in circumstances indicate that the carrying value may be impaired. The recoverable amount of each cash-generating unit (CGU) is determined based on the higher of the CGU's fair value less costs to sell and its value in use. A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are Cable, Satellite, and Wireless. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods. The results of the impairment tests are provided in Note 9 to the Consolidated Financial Statements.

Asset retirement obligations

The Company recognizes the fair value of a liability for an asset retirement obligation in the period in which it is incurred, on a discounted basis, with a corresponding increase to the carrying amount of property and equipment, primarily in respect of wireless and transmitter sites. This cost is amortized on the same basis as the related asset. The timing or amount of the outflow is subject to estimation and judgment. The liability is subsequently increased for the passage of time and the accretion is recorded in the income statement as interest expense. The discount rates applied are subsequently adjusted to current rates as required at the end of reporting periods. Revisions due to the estimated timing of cash flows or the amount required to settle the obligation may result in an increase or decrease in the liability. Actual costs incurred upon settlement of the obligation are charged against the liability to the extent recorded.

Employee benefit plans

As at August 31, 2021, Shaw had non-registered defined benefit pension plans for key senior executives and designated executives. The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The differences between actual and assumed results are immediately recognized in other comprehensive income/loss. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected to be needed to settle employee benefit obligations and is also used to calculate the interest income on plan assets. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes are required. The following table illustrates the increase on the accrued benefit obligation and pension expense of a 1% decrease in the discount rate:

(millions of Canadian dollars)	Accrued Benefits Obligation at End of Fiscal 2021	Pension Expense Fiscal 2021
Weighted Average Discount Rate – Non-registered Plans	3.10%	2.70%
Impact of: 1% decrease – Non-registered Plans	$ 72	$ 2

Deferred income taxes

The Company has recognized deferred income tax assets and liabilities for the future income tax consequences attributable to differences between the financial statement carrying amounts of assets and liabilities and their respective tax bases. Deferred tax assets are also recognized in respect of losses of certain of the Company's subsidiaries. The deferred income tax assets and liabilities are measured using enacted or substantially enacted tax rates expected to apply to taxable income in the years in which the temporary differences are expected to reverse or the tax losses are expected to be utilized. Realization of deferred income tax assets is dependent upon generating sufficient taxable income during the period in which the temporary differences are deductible. The Company has evaluated the likelihood of realization of deferred income tax assets based on forecasts of taxable income of future years, existing tax laws and tax planning strategies. Significant changes in assumptions with respect to internal forecasts or the inability to implement tax planning strategies could result in future impairment of these assets.

Commitments and contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities. Contractual and other commercial obligations primarily relate to network fees and agreements for use of transmission facilities in the normal course of business.

RELATED PARTY TRANSACTIONS

Related party transactions are reviewed by Shaw's Corporate Governance and Nominating Committee, consisting of independent directors. The following sets forth certain transactions in which the Company is involved.

Corus

The Company and Corus Entertainment Inc. ("Corus") are subject to common voting control. In fiscal 2020 and fiscal 2021, network, advertising, and programming fees were paid to various Corus subsidiaries. The Company also provided uplink of television signals, programming content, Internet services and lease of circuits to various Corus subsidiaries.

Burrard Landing Lot 2 Holdings Partnership

The Company has a 33.33% interest in Burrard Landing Lot 2 Holdings Partnership (the "Partnership"). During fiscal 2021, the Company paid the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, British Columbia, is the Company's headquarters for its lower mainland British Columbia operations.

Key management personnel and Board of Directors

Key management personnel consist of the most senior executive team and along with the Board of Directors have the authority and responsibility for directing and controlling the activities of the Company. In addition to compensation provided to key management personnel and the Board of Directors for services rendered, the Company transacts with companies related to certain Board members primarily for the purchase of remote control units, network programming, collections, and installation of equipment.

Refer to Note 29 to the Consolidated Financial Statements for further related party transaction detail.

NEW ACCOUNTING STANDARDS

Shaw has adopted or will adopt a number of new accounting policies as a result of recent changes in IFRS as issued by the IASB. The ensuing discussion provides additional information as to the date that Shaw is or was required to adopt the new standards, the methods of adoption permitted by the standards, the method chosen by Shaw, and the effect on the financial statements as a result of adopting the new policies. The adoption or future adoption of these accounting policies has not and is not expected to result in changes to the Company's current business practices.

Standards, interpretations and amendments to standards issued but not yet effective

The Company has not yet adopted certain standards and interpretations that have been issued but are not yet effective. The following pronouncements are being assessed to determine the impact on the Company's results and financial position but the impacts are not expected to be material:

- *Proceeds before Intended Use* (Amendments to IAS 16, *Property, Plant and Equipment*) was amended to prohibit deducting from the cost of an item of property, plant and equipment any proceeds from selling items produced while bringing the asset to capable operations. These amendments are required to be applied for annual periods commencing on or after January 1, 2022, however earlier application is permitted.

- *Onerous Contracts – Costs of Fulfilling a Contract* (Amendments to IAS 37, Provisions, Contingent Liabilities and Contingent Assets) was amended to clarify which costs should be included in determining the cost of fulfilling a potential onerous contract. These amendments are required to be applied for annual periods commencing on or after January 1, 2022, however earlier application is permitted.

- *Classification of Liabilities as Current or Non-Current (Amendments to IAS 1, Presentation of Financial Statements)* was amended to clarify that the classification of liabilities as current or non-current is based on rights that are in existence at the end of the reporting period and specifies that classification is unaffected by expectations about whether an entity will exercise its right to defer settlement of a liability. The amendments are effective January 1, 2023 with early application permitted. The amendments are required to be adopted retrospectively.

RISK MANAGEMENT

In the normal course of our business activities, the Company is subject to risks. The purpose of risk management is to manage and mitigate risk, rather than to eliminate risk. The Company is committed to continually strengthening our risk management capabilities to protect and enhance value.

Risk Governance and Oversight

The Board of Directors has overall risk governance and oversight responsibilities. Specifically, the Board is responsible for identifying and assessing the principal risks inherent in the business activities of the Company and ensuring that management takes all reasonable steps to implement appropriate systems to manage such risks. The Board of Directors has delegated elements of its risk oversight responsibilities to specific Board committees. The Audit Committee is responsible for: (1) overseeing the Company's processes for identifying, assessing, and managing risks; and (2) ensuring that management implements and maintains effective internal controls and procedures for identifying, assessing and managing the principal risks to the Corporation and its business. In addition, the Human Resources and Compensation Committee is responsible for ensuring that the Company's short, medium and long-term incentive plans do not incent risk-taking beyond the Company's risk tolerance.

Responsibilities for Risk Management

Responsibility for risk management is shared across our organization. Each department's operating management, led by the Company's executive team, have integrated controls and risk management practices into day-to-day activities and decision-making processes. We have risk management and compliance functions across the organization such as Finance, Privacy, Security and Risk, Legal and Regulatory, and Technology Risk and Compliance. The Internal Audit and Advisory Services (IA&AS) department provides independent and objective audit and advisory services to evaluate and improve the effectiveness of the Company's governance, internal controls, disclosure processes, and risk management activities. The Audit Committee oversees the work of the IA&AS department and all reports issued by the IA&AS department. In addition, the IA&AS department's annual plan is reviewed and approved by the Audit Committee.

Enterprise Risk Management

As part of its role in risk governance and oversight, the Audit Committee oversees the Enterprise Risk Management (ERM) program. The ERM program is a performance focused process designed to identify, monitor, and manage significant corporate level risks that could impact the achievement of our strategic objectives. The Company's executives meet periodically to: (1) review and update significant corporate level risks, (2) assess such corporate level risks in terms of likelihood and magnitude of impact, (3) review the response strategy, and (4) monitor progress. The latest ERM update was provided to the Audit Committee in October 2021, with updates to be provided to the Board at least annually. The significant risks and uncertainties affecting the Company and its business are discussed under "Known Events, Trends, Risks and Uncertainties."

KNOWN EVENTS, TRENDS, RISKS AND UNCERTAINTIES

The discussion in this MD&A addresses only what management has determined to be the most significant known events, trends, risks, and uncertainties relevant to the Company, its operations, and/or its financial results. This discussion is not exhaustive. The discussion of these matters should be considered in conjunction with the "Caution Concerning Forward-Looking Statements."

Risks Related to the Transaction

The completion of the Transaction is subject to the satisfaction or waiver of several conditions precedent

The completion of the Transaction is subject to a number of conditions precedent, some of which are outside of the control of the Company and Rogers, including receipt of the Key Regulatory Approvals, there not having occurred a Material Adverse Effect or Purchaser Material Adverse Effect (as such terms are defined in the Arrangement Agreement) and the satisfaction of certain other customary closing conditions. There can be no certainty, nor can the Company or Rogers provide any assurance, that all conditions precedent to the Transaction will be satisfied or waived, nor can there be any certainty of the timing of their satisfaction or waiver. In addition, shareholders are advised that the condition relating to the occurrence of a Purchaser Material Adverse Effect is enforceable by, and is for the benefit of, the Shaw Family Living Trust. Accordingly, the Shaw Family Living Trust, which may have interests in the Transaction different from, or in addition to, those of other shareholders, has the right to prevent or delay the completion of the Transaction should it determine that a Purchaser Material Adverse Effect has occurred.

If, for any reason, the Transaction is not completed or its completion is materially delayed and/or the Arrangement Agreement is terminated, the market price of the Company's securities may be materially adversely affected. In such circumstances, the Company's business, financial condition or results of operations could also be subject to various material adverse consequences. In addition, if the Transaction is not completed, in certain circumstances, the Company may be required to pay a termination fee of $800 million to Rogers, the result of which could have a material adverse effect on the Company's business, financial position and results of operations and its ability to fund growth prospects and current operations.

The Key Regulatory Approvals necessary to complete the Transaction may not be obtained or may only be obtained after substantial delay

To complete the Transaction, each of the Company and Rogers must make certain filings with and obtain certain consents and approvals from certain governmental and regulatory authorities. In particular, the Company and Rogers have not yet obtained the Key Regulatory Approvals, all of which are required to complete the Transaction. In addition, governmental or regulatory agencies could deny permission for, or seek to block or challenge the Transaction or the transfer or deemed transfer of specific assets, including spectrum licenses, or impose material conditions relating to the Arrangement or any such transfer. If any one of the Key Regulatory Approvals is not obtained or any applicable law is in effect which makes the consummation of the Transaction illegal, the Transaction will not be completed.

In addition, a substantial delay in obtaining the Key Regulatory Approvals could result in the Transaction not being completed. In particular, if the Transaction is not completed by March 15, 2022 (subject to an extension of up to 90 days if required to obtain the Key Regulatory Approvals), either Shaw or Rogers may terminate the Arrangement Agreement, in which case the Transaction will not be completed.

Under certain circumstances, if the Key Regulatory Approvals are not obtained or any law (that relates to one or more of the Key Regulatory Approvals or the *Competition Act* (Canada)) is in effect which would make the consummation of the Transaction illegal and the failure to obtain the Key Regulatory Approvals is not caused by, and is not a result of, the failure by the Company to perform in all material respects any of its covenants or agreements under the Arrangement Agreement, then Rogers is obligated to pay the $1.2 billion reverse termination amount and certain costs amounting to approximately $120 million relating to Rogers' exercise of its right to require Shaw to redeem all of its issued and outstanding Preferred Shares on June 30, 2021. In addition, the holders of the Class A Shares and Class B Shares will not receive the consideration under the Arrangement Agreement (as the Transaction will not be completed).

The Arrangement Agreement may be terminated in certain circumstances

The Transaction may be terminated by the Company or Rogers in certain circumstances, in which case the Transaction will not be completed. Accordingly, there is no certainty, nor can the Company provide any assurance, that the Arrangement Agreement will not be terminated by the Company or Rogers prior to the completion of the Transaction. The failure to complete the Transaction could materially negatively impact the market price of Shaw's securities. Moreover, if the Arrangement Agreement is terminated and the Company's Board determines to pursue another merger or business combination, there is no assurance that the Company's Board will be able to find a party willing to pay an equivalent or greater price for all of Shaw's issued and outstanding Class A Shares and Class B Shares than the price to be paid by Rogers pursuant to the Transaction.

The failure to complete the Transaction could negatively impact the Company and have a material adverse effect on the current and future operations, financial condition and prospects of the Company

If the Transaction is not completed for any reason, there are risks that the announcement of the Transaction and the dedication of substantial resources of the Company to the completion thereof could have a negative impact on the Company's current business relationships (including with future and prospective employees, customers, suppliers and partners) and could have a material adverse effect on the current and future business, operations, results of operations, financial condition and prospects of the Company. In addition, failure to complete the Transaction for any reason could materially negatively impact the market price of Shaw's securities.

The entering into of the Arrangement Agreement may also preclude the Company from participating in any auction by ISED for wireless spectrum licenses. If the Transaction is not completed, the inability of the Company to participate in any wireless spectrum auction and to acquire licenses thereunder could have a material adverse effect on the current and future operations, financial condition and prospects of the Company.

The Company will incur significant costs and, in certain circumstances, may be required to pay a Termination Fee

Certain costs relating to the Transaction, such as legal, accounting, tax and financial advisory fees, must be paid by the Company even if the Transaction is not completed. In addition, if the Transaction is not completed for certain reasons, the Company may be required to pay a termination fee of $800 million to Rogers, the result of which could have a material adverse effect on the Company's business, financial position and results of operations and its ability to fund growth prospects and current operations.

The Transaction may divert the attention of management of the Company, impact the Company's ability to attract or retain key personnel or impact the Company's third-party business relationships

The Transaction could cause the attention of the Company's management to be diverted from the day-today operations of the Company. These disruptions could be exacerbated by a delay in the completion of the Transaction and could have an adverse effect on the current and future business, operations, results of operations, financial condition and prospects of the Company. Because the completion of the Transaction is subject to uncertainty, officers and employees of the Company may experience uncertainty about their future roles with the Company, which may adversely affect the Company's ability to attract or retain key management and personnel in the period until the completion or termination of the Transaction.

In addition, third parties with which the Company currently has business relationships or may have business relationships in the future, including industry partners, regulators, customers and suppliers, may experience uncertainty associated with the Transaction, including with respect to current or future relationships with the Company or Rogers. Such uncertainty could have a material and adverse effect on the current and future business, operations, results of operations, financial condition and prospects of the Company.

The Arrangement Agreement contains certain restrictions on the ability of the Company to conduct its business

Under the Arrangement Agreement, the Company must generally use its reasonable best efforts to conduct its business in the ordinary course and, prior to the completion of the Transaction or the termination of the Arrangement Agreement, the Company is subject to certain covenants which restrict it from taking certain actions without the prior consent of Rogers and which require it to take certain other actions. In either case, such covenants may delay or prevent the Company from pursuing business opportunities that may arise or preclude actions that would otherwise be advisable if the Company were to remain a standalone entity.

The financing of the Transaction

Although the Arrangement Agreement does not contain a financing condition and Rogers has received the debt commitment letter to provide for the debt financing in order to finance the Transaction, the obligation of the lenders under the debt commitment letter to provide the debt financing is subject to certain limited conditions. In the event that the Transaction cannot be completed due to the failure of Rogers to obtain financing required to close the

Transaction either because the limited conditions to the financing are not satisfied or other events arise which prevent Rogers from consummating the debt financing, the Company expects that Rogers may be unable to fund the consideration required to complete the Transaction, in which case Rogers will be required to pay a reverse termination fee of $1.2 billion to the Company and certain costs amounting to approximately $120 million relating to Rogers' exercise of its right to require Shaw to redeem all of its issued and outstanding Preferred Shares on June 30, 2021. In addition, the holders of the Class A Shares and Class B Shares will not receive the consideration under the Arrangement Agreement (as the Transaction will not be completed).

Coronavirus (COVID-19)

The outbreak of the novel strain of coronavirus, specifically identified as "COVID-19," continues to have worldwide impacts. Since being recognized by the World Health Organization as a pandemic on March 11, 2020, governments worldwide have enacted emergency measures to contain the spread of the virus. These measures, which include the implementation of border closures, travel bans, self-imposed quarantine periods, self-isolation, physical and social distancing, vaccine passports and the closure (or capacity reduction) of businesses, have caused material disruption to businesses in Canada and globally which has resulted in an uncertain and challenging economic environment. The pandemic's impact on the global debt and equity capital markets caused governments and central banks to react with significant monetary and fiscal interventions designed to stabilize economic conditions. While certain interventions have been lifted, others remain in place, have been re-instated or may yet be re-instated as the pandemic continues to threaten the health of Canadians.

It is unknown at this time as to the long-term efficacy of COVID-19 vaccines and the duration of government interventions against the COVID-19 virus and potential variants. Any estimate of the length and severity of these developments is therefore subject to significant uncertainty, and accordingly estimates of the extent to which the COVID-19 pandemic may, directly or indirectly, materially and adversely affect the Company's operations, financial results, and condition in future periods are also subject to significant uncertainty. Such risks include, but are not limited to:

- issues delivering the Company's products and services due to employee illness, Company or government-imposed isolation programs, restrictions on the movement of personnel, retail store closures/re-openings and supply chain disruptions;
- impacts on the availability of components and electronics due to global silicon (microprocessor) supply shortages and logistical/transport issues, impacting our ability to obtain inventory, including customer premise and network equipment;
- significant additional capital expenditures and the availability of resources required to maintain, upgrade or expand our networks in order to accommodate substantially increased network usage while large numbers of our customers continue working from home;
- uncertainty associated with costs, delays and availability of resources required to complete major maintenance and expansion projects on time and budget;
- significant lost revenue in our Shaw Business segment due to the significant economic challenges that our enterprise, small and medium sized business customers are facing due to the impact of the COVID-19 pandemic;
- impacts on the availability of, and therefore our ability to provide, the content and programming our customers expect;
- uncertainty associated with the costs and availability of resources required to provide the appropriate/required levels of service to our customers through our digital and self-serve platforms;
- a material reduction in demand for, or profitability of, our products or services, acceleration in cord cutting or cord shaving by our customers, or increase in delinquent or unpaid bills, due to job losses and associated financial hardship;
- the impact of additional legislation, regulation and other government interventions in response to the COVID-19 pandemic;
- the impact of the withdrawal of COVID-19 related government support programs on customers' demand or ability to pay for our products and services;
- the negative impact on global debt and equity capital markets, including the trading price of the Company's securities;
- the inability to access capital markets at a reasonable cost; and
- the potential impairment of long-lived assets.

Any of these risks, and others, could have a material adverse effect on our business, operations, capital resources, and/or financial results of operations.

The severity and duration of impacts from the COVID-19 pandemic remain uncertain and management continues to focus on the safety of our people, most of whom continue to work from home, providing reliable connectivity to our customer base, compliance with guidelines and requirements issued by various health authorities and government organizations, and continuity of other critical business operations. In fiscal 2020, we temporarily closed retail locations nationally (with the exception of a limited number of street front stores that remained open to provide urgent customer support). As at the date of this MD&A, substantially all of the Company's retail stores are open for business

The COVID-19 pandemic continues to evolve and as governments reduce, lift or reimpose emergency measures and interventions, the Company's focus continues to be on the safety and health of its employees, the reliability of its facilities-based network and responsiveness to its customers. The Company's return to workplace plan, designed to effect the gradual and safe re-introduction of employees to the workplace, continues to be evaluated and will be implemented in phases as government-imposed restrictions on businesses and individuals are lifted.

In order to address the health and safety of its employees returning to work, the Company has or will put in place many new protocols, including vaccination requirements, enhanced cleaning measures, sanitization stations, and daily health and wellness self-assessments. The Company is updating employees on a frequent basis to provide information on the situation and on necessary precautions to take. We will continue to have an open dialogue with our employees and public safety and government officials at all levels, as well as key suppliers, partners, and customers.

Competition and Technological Change

Shaw operates in an open and competitive marketplace. Our businesses face competition from regulated and unregulated entities using existing or new technologies and from illegal services. In addition, the rapid deployment of technologies, services, and products has blurred the traditional lines between telecommunications, Internet and distribution services and further expands the competitive landscape. Shaw may also face competition from platforms that may gain advantages through regulatory processes. In addition, the industry has experienced a general reduction in barriers to entry due to technological substitution, the development of IP networks and certain recent regulatory decisions.

While Shaw continually seeks to strengthen its competitive position through investments in infrastructure, technology and customer service and through acquisitions, there can be no assurance that these investments will maintain Shaw's market share or performance in the future. New technologies in the industry may evolve faster than the historical investment cycle, potentially resulting in additional capital investments not currently planned and shorter useful lives for certain of Shaw's existing assets. New products or services introduced into the marketplace may reduce demand for Shaw's existing products and services or exert downward pricing pressure on Shaw's offerings.

The following developments in the competitive environment, trends, risks and/or uncertainties specific to areas of our business may have a material adverse effect on Shaw and its reputation, as well as its operations and/or its financial results. In each case, the competitive events, trends, risks and/or uncertainties may increase or continue to increase. Competition for new subscribers and retention of existing subscribers (churn reduction) may require substantial promotional activity and increase our cost of customer acquisition, decrease our ABPU, ARPU or all of these metrics. We expect that competition, including aggressive discounting practices by competitors to gain market share, is likely to continue to increase for all our businesses.

Consumer Internet

Shaw competes with different types of ISPs offering residential Internet access including traditional telephone companies, wireless providers and independent ISPs making use of wholesale services to provide Internet access in various markets. In urban areas competition from traditional telephone companies is increasing as they near completion on their FTTP builds, while in rural areas, new entrants leveraging Low Earth Orbit (LEO) satellite technology are offering additional connectivity options. Wireless technology, both LTE and 5G, is also becoming more broadly used for fixed wireless services, as well as through mobile hotspot or tethering features. While Shaw continues to invest in technology and infrastructure to improve its consumer Internet offerings, there can be no assurance that such investments will be sufficient to maintain or enhance the Company's competitive position with respect to new or emerging technologies.

Shaw expects that consumer demand for higher Internet access speeds and greater bandwidth will continue to be driven by bandwidth-intensive applications including streaming video, digital downloading, Internet-of-Things (IOT), remote work, video collaboration technology, interactive gaming, and cloud-based services. As described further under "Shaw's Wireline Network," Shaw continues to expand the capacity and efficiency of its wireline network to handle the anticipated increases in consumer demand for higher Internet access speeds and greater bandwidth. However, there can be no assurance that our investments in network capacity will continue to meet this increasing demand. In addition, unprecedented situations such as the COVID-19 pandemic highlighted the unpredictable nature of network traffic growth and consumer behavior.

Consumer Video

Shaw's Consumer Video services, delivered through both our wireline and satellite platforms, compete with other distributors of video and audio signals. We also compete increasingly with unregulated OTT and offerings available over Internet connections. Continued improvements in the quality of streaming video over the Internet and the increasing availability of television shows and movies online will continue to increase competition to Shaw's Consumer Video services. As a result, we continue to experience cord cutting and cord shaving in our traditional cable services and packages.

Consumer Phone

Shaw's competitors for Consumer Wireline Phone services include traditional telephone companies, other wireline carriers, and Voice over Internet Protocol (VoIP) providers. In addition, households increasingly rely on wireless services in place of wireline phone services which negatively affects the business and prospects of our Consumer Wireline Phone services.

Wireless

Freedom Mobile and Shaw Mobile are relatively new entrants in the highly competitive Canadian wireless market which is characterized by three national wireless incumbent carriers and regional participants. The national wireless incumbent carriers have larger, and more diverse spectrum holdings than Shaw, as well as larger operational and financial resources than Shaw and are well established in the market. Freedom Mobile and Shaw Mobile's ability to continue to offer and improve Wireless services and to offer new services depends on, among other factors, continued access to, and deployment of, adequate spectrum, including the ability to both renew current spectrum licences and acquire new spectrum licences (in various spectrum bands). If Freedom Mobile and Shaw Mobile cannot acquire and retain required spectrum, they may not be able to continue to offer and improve current wireless services and deploy new services on a timely basis, including providing competitive data speeds their customers want. For example, the development and utilization of 5G technology requires additional spectrum licenses. While the 5G ecosystems are expected to work on multiple frequency bands, including 600 MHz spectrum, 3500 MHz spectrum is becoming the primary band for 5G mobile coverage. Our decision not to participate in the recent 3500 MHz spectrum auction may place Shaw's wireless business at a competitive disadvantage if Shaw is unable to acquire the spectrum resources required to launch a 5G service. As a result, Freedom Mobile and Shaw Mobile's ability to attract and retain customers could be adversely affected. In addition, an inability to acquire and retain required spectrum could affect network quality and result in higher capital expenditures. See "Risks Related to the Transaction – The failure to complete the Transaction could negatively impact the Company and have a material adverse effect on the current and future operations, financial condition and prospects of the Company" for more information.

Our Wireless division may face increased competition from other facilities based or non-facilities based new entrants or alternate technologies, including as a result of regulatory decisions or government policies that favour certain competitive platforms. For further detail see "Government Regulations and Regulatory Developments – Telecommunications Act – CRTC Wireless Review."

Business Services

Shaw Business competes with other telecommunications carriers in providing high-speed data and video transport and Internet connectivity services to businesses, ISPs and other telecommunications providers. The telecommunications industry in Canada is highly competitive, rapidly evolving and subject to constant change. Shaw Business' competitors include traditional telephone companies, competitive access providers, competitive local exchange carriers, ISPs, private networks built by large end users, and other telecommunications companies. In addition, the development and implementation of new technologies by others could give rise to significant additional competition. Competitors for the delivery of voice and unified communication services include traditional telecommunications companies, resellers and new entrants to the market leveraging new technologies to deliver services. Shaw Broadcast Services also competes in industries that are highly competitive, rapidly evolving and subject to constant change.

Information Systems and Internal Business Processes

Many aspects of the Company's businesses depend to a large extent on various information technology (IT) systems and software, and on internal business processes. Shaw regularly undertakes initiatives to update and improve these systems and processes. Although the Company has taken steps to reduce the risks of failure of these systems and processes, there can be no assurance that potential failures of, or deficiencies in, these systems, processes or change initiatives will not have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Acquisitions, business combinations and the development and launch of new services typically require significant integration and system development efforts. The Company faces the risk that proposed IT systems or process change initiatives will not be implemented successfully, on budget, or on time. As the complexity of the Company's systems increases, system stability and availability may be affected. Failure to implement and maintain appropriate IT systems could negatively impact Shaw's reputation, operations and/or financial results.

Cyber Security Risks

Cyber attacks continue to become more frequent and sophisticated in nature with a recent increase in telecom attacks globally. Although Shaw's systems and network architecture are designed and operated to be secure, they are vulnerable to the risks of an unauthorized third party accessing these systems or its network. This could lead to a number of adverse consequences, including the unavailability, disruption or loss of Shaw's services or key functionalities within Shaw's technology systems or software; the unauthorized disclosure, corruption or loss of sensitive Company, customer or personal information; litigation, investigations, fines, and liability for failure to comply with privacy and information security laws; increased fraud; increased cyber security protection costs; and higher insurance premiums. Shaw is also exposed to information security threats as a result of actions by our customers, suppliers, third-party service providers, employees and business partners – whether maliciously or otherwise. Our insurance may not cover or be adequate to fully reimburse us for any associated costs and losses.

We continue to assess and enhance our cyber security within Shaw while we are monitoring the risks of cyber attacks and implement appropriate security policies, procedures and information technology systems to mitigate the risk of cyber attacks.

External threats to our network are constantly changing, and there is no assurance that Shaw will be able to protect its network from all future threats which may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Privacy

As part of regular business activities, Shaw collects and manages personal information in compliance with applicable laws. In order to minimize privacy risk, Shaw carries out privacy impact assessments (PIAs) and Threat Risk Vulnerability Assessments (TRVAs) on new initiatives and vendor selection processes, and we regularly conduct privacy training for all Shaw employees. Despite these practices, privacy threats continue to evolve quickly, and the Company is at risk of a breach or compromise of employee or customer data or personal information, which may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results. The Company may also face regulatory penalties and legal claims in connection with non-compliance with federal and/or provincial legislation or regulations. See "Government Regulations & Regulatory Developments – Privacy and Anti-Spam Legislation – Privacy Legislation" for more information.

Impact of Regulation

As discussed under "Government Regulations and Regulatory Developments," a majority of our Canadian business activities are subject to: (i) government legislation, (ii) regulations and policies administered by various government departments and regulators, particularly ISED, Canadian Heritage and the CRTC, and (iii) conditions of licence imposed by ISED and/or the CRTC. Shaw's operations, financial results, and future prospects are affected by changes in legislation, regulations, policies, and conditions of licence, including pursuant to changes in the interpretation of existing legislation, regulations and requirements contained in such conditions of licence by courts, governments, or the regulators, in particular the CRTC, ISED, Canadian Heritage, the Competition Bureau, and the Copyright Board. These changes relate to, and may have an impact on, among other things, licensing and licence renewal, spectrum holdings, products and services, operations, competition, programming carriage and terms of carriage, strategic transactions, infrastructure access, and the potential for new or increased fees or costs. All such changes in the regulatory regime may have a material adverse effect on the Company and its operations, reputation, investment capability, ability to compete, as well as the Company's financial results and/or future prospects.

Reliance on Suppliers and Third Party Service Providers

Shaw is connected to or relies on other telecommunication carriers and certain utilities to conduct its business. Any disruption to the services provided by these suppliers, including labour strikes and other work disruptions, bankruptcies, component sourcing challenges, technical difficulties or other events affecting the business operations of these carriers or utilities may affect Shaw's ability to operate and, therefore may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results. The advent of the COVID-19 pandemic has caused disruption to global supply chains, including those on which Shaw relies to conduct its business.

The Company sources its customer premise, capital equipment, and capital builds as well as portions of its service offerings, including network, video delivery and IT functions from certain key suppliers. While the Company has alternate sources for many of these purchases, the loss of a key supplier (or the inability of a key supplier to provide such products or services for any reason) may require us to incur additional capital expenditures for the substitution of existing products and services which could adversely affect the Company's ability to operate, and therefore may have a material adverse effect on Shaw, its reputation, operations and/or its financial results. Additionally, our ability to obtain customer premise and network equipment is impacted by the availability of components and electronics. Shortages of these materials, such as global silicon (microprocessor), or logistical/transport issues, such as those caused by the ongoing COVID-19 pandemic, may also have a material adverse effect on Shaw or its operations.

In the course of fulfilling service arrangements, third-party service providers must ensure our information is appropriately protected and safeguarded. Failure to do so may affect Shaw through increased regulatory risk, reputational damage, and damage to customer experience.

There are a limited number of suppliers of popular mobile devices and there is a risk that the Company will not be able to maintain contracts for its existing supply of mobile devices and/or contract for the supply of new devices on commercially reasonable terms.

Shaw has access to global scale initiatives through partnerships with best-in-class service providers such as Comcast, Cisco Meraki, and Nokia to ensure that the technology we adopt and invest in is leading-edge in the global communications industry. There is a risk that the Company's participation in such partnerships ends or that the technology roadmap of Shaw and its partners diverges, resulting in disparate strategic approaches. Such divergence may result in higher capital requirements, prolonged development timelines of new products and services, and suboptimal performance of new products and services introduced by Shaw.

Inventory

Our Wireless division's inventory consists of devices which generally have short product lifecycles due to frequent new device introductions. The failure to effectively manage inventory levels based on product demand may increase the risk of inventory obsolescence, which could negatively impact Shaw's operations and/or financial results.

Similar to other wireless service providers, Shaw subsidizes the cost of subscriber devices to attract customers to sign a term contract with Freedom Mobile or Shaw Mobile. Shaw also commits to a minimum subsidy per unit with certain suppliers of devices. There is a risk that Shaw may be unable to recover the costs of subsidies over the term of the customer contract which could negatively impact our business, operations, or financial results.

Network Failure

Shaw's business may be interrupted by wireline or wireless network failures, including its own or third-party networks. Such network failures may be caused by fire damage, natural disaster, power loss, cyber attacks, human error, disabling devices, acts of war or terrorism, physical climate change impacts and other events which may be beyond Shaw's control. In recent years we have seen an increase in the number of severe weather events, such as forest fires (including those occurring in British Columbia during the summer of 2021) and floods, that impact our network. The Company is taking steps to mitigate the consequences of the rise in severe weather events on its networks. Despite these efforts, the Company is still subject to an increased risk of damages to its wireline and wireless networks.

As insurance premium costs are uneconomic relative to the risk of failure, Shaw self-insures its plant (underground and aerial infrastructure) in its Fibre+ network. It is likely that wireline or wireless network damage caused by any one incident would be limited by geographic area and the resulting business interruption and financial damages would also be limited. In addition, with respect to a wireline network failure, we expect the risk of loss to be mitigated as most of the backbone fibre network and much of the hybrid fibre coax, or HFC, access network is located underground.

Shaw protects its wireline and wireless networks through a number of measures, including physical and information technology security, redundancy, and ongoing maintenance and placement of insurance on our network equipment and data centres. In the past, the Company has successfully recovered from network damage caused by natural disasters without significant cost or disruption of service. To further mitigate this risk, Shaw is nearing completion on the build of multiple new diverse fibre routes across British Columbia, as well as other provinces. Additionally, to further increase the resiliency of our fibre infrastructure in areas that are prone to fire and wind damage, we are shifting construction to underground builds, where possible, rather than aerial. The new routes and underground builds, along with ongoing investments to increase the resiliency of critical infrastructure sites and the build of a hub on wheels to allow for rapid restoration from the total loss of a hubsite, will continue to increase the resiliency of Shaw's backbone network.

Despite the steps Shaw takes to reduce the risk of wireline and wireless network failure, failures may still occur, and such failures could negatively affect levels of customer service and relationships which may have a material adverse effect on Shaw and its reputation, as well as its operations and/or financial results.

Shaw's networks may also experience unexpected capacity pressures as a result of the impact of the COVID-19 pandemic which could negatively affect network performance and the Company's ability to provide services. Negative impacts on network availability, speed, and consistency could have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Customer Experience

Shaw's customer loyalty, retention, and likelihood to recommend Shaw all depend on our ability to provide a seamless connectivity experience that meets or exceeds their expectations. To meet customer's needs, the Company has modernized several aspects of its Wireline operations to better serve today's customer, including shifting some self-serve interactions to digital platforms, while maintaining professional install and in-person technical support for customer touchpoints that improve overall satisfaction. The Company continues to simplify manual processes that improve its customers overall connectivity experience and day-to-day operations for our employees.

The complexity in our operations due to the use of multiple technology platforms, billing systems, sales channels, marketing databases as well as different rate plans, promotions, and product offerings may limit the Company's ability to respond quickly to market changes and lead to billing, service, or other errors, which may adversely affect customer satisfaction and retention. The failure to sustain and expand customer relationships through quality products/services, and customer service could have a material adverse effect on our business, financial condition, reputation, and/or results of operations.

Shaw uses data analytics tools to perform customer segmentation, improve our offerings to customers, and support corporate decision-making. If the data behind these tools is poor or our analytical tools are not well designed, there is a risk they will not be effective in predicting our customers' needs and wants. The realization of these risks could negatively impact our business and/or reputation.

Satellite

Shaw uses three satellites (Anik F2, Anik F3 and Anik G1) owned by Telesat to provide satellite services in our Consumer division. Effective October 1, 2019, the Company transferred its ownership interest in the 16 Anik F2 transponders, adjusted its satellite traffic on the Anik F1R and Anik F2 satellites, and renewed its capacity service agreements in place on Anik F1R, Anik F2, and Anik G1 until the effective end-of-life dates of such satellites. In connection with the Company's digital network upgrade (DNU) program, the Company has effectively optimized satellite traffic, enabling a reduction in the total number of transponders required by the Company to conduct its business and absorbing the previous capacity leased on Anik F1R prior to this satellite reaching the end of its serviceable life in August 2021. The Company continues to assess its long term satellite capacity requirements with no assurance that replacement transponder capacity will be available or that agreements for such capacity will be entered into on favourable terms. This may have a material adverse effect on customer service and customer relationships, as well as the Company's reputation, operations and/or financial results.

The Company does not maintain any insurance coverage for the transponders on Anik F2, Anik F3 and Anik G1 as it believes the costs are uneconomic relative to the benefit which could be otherwise derived through an arrangement with Telesat. As collateral for the transponder capacity pre-payments that were made by the Company to facilitate the construction of the satellites, the Company maintains a security interest in the transponder capacity and any related insurance proceeds that Telesat recovers in connection with an insured loss event.

The Company does not maintain business interruption insurance covering damage related to the loss of use of one or more of the transponders on the satellites as it believes that the insurance premium costs are uneconomic relative to the risk of transponder and/or satellite failure. The majority of transponder capacity is available to the Company on an unprotected, non-pre-emptible basis. The Company has the option to contract transponders with excess capacities on Anik F2, subject to availability. In the event of satellite failure, service will be restored as capacity becomes available. Restoration of satellite service on another satellite may require repositioning or re-pointing of customers' receiving dishes, an upgrade to their video receivers or customers may require a larger dish. The Anik G1 satellite has a switch feature that allows whole channel services (transponders and available spares) to be switched from extended Ku-band to Ku-band, which provides the Company with limited back-up to restore failed whole channel services of Anik F2 or augment overall Ku-band capacity if the need arises. The Company has reserved limited access to Ku band frequencies in the 107.3 orbital location to enable the switching feature, subject to availability. Satellite failure could negatively affect levels of customer service and customer relationships and may have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

The provision of Internet connectivity in rural areas by new entrants leveraging LEO satellite technology may accelerate cord cutting and/or cord shaving trends among Shaw Direct customers.

Economic Conditions

The Canadian economy is affected by uncertainty in global financial and equity markets, and slowdowns in national and/or global economic growth. Changes in economic conditions, which may differ across our regional footprint, may affect discretionary consumer and business spending, resulting in increased or decreased demand for Shaw's product offerings. Current or future events caused by volatility in domestic or international economic conditions or a decline in economic growth may have a material adverse effect on Shaw, its operations and/or financial results. The advent of the COVID-19 pandemic has exacerbated both the uncertainty and volatility in economic growth rates.

Programming Expenses

Expenses for video programming continue to be one of our most significant operating expenses. Costs may continue to increase, particularly for sports programming. In addition, as we add programming or distribute existing programming to more of our subscriber base, programming expenses increase. Although we have been successful at reducing the impact of these cost increases through the sale of additional services or increasing subscriber rates, there can be no assurance that we will continue to be able to do so and this may have a material adverse effect on Shaw, its operations and/or its financial results.

Roaming Agreements

Shaw and/or its wholly owned subsidiaries have entered into roaming agreements with multiple carriers in Canada and around the world to extend its national and worldwide coverage. If the Company is unable to extend its national and worldwide wireless coverage, or renew or substitute for those roaming agreements at their respective existing terms or on commercially reasonable terms, the Company may be placed at a competitive disadvantage, which could adversely affect its ability to operate its Wireless business, as well as its reputation and customer experience. In addition, if the Company is unable to renew, or substitute for, these roaming agreements on a timely basis and at an acceptable cost, its cost structure could materially increase, and, consequently, its business, prospects, revenues, financial condition, and results of Wireless operations could be adversely affected.

The three incumbent national wireless carriers are required by CRTC regulation to provide domestic wholesale roaming services to Shaw and other facilities-based wireless competitors at regulated rates. Changes to the regulated rates or other terms in the wholesale roaming policy could negatively impact the Company's wireless financial results, growth prospects, and operational flexibility. For further detail see "Government Regulations and Regulatory Developments – Telecommunications Act – CRTC Wireless Review."

Talent Management and Succession Planning

Shaw's success is substantially dependent upon the retention and the continued performance of our executive officers. Many of these executive officers are uniquely qualified in their areas of expertise, making it difficult to replace their services in the short to medium term. The loss of the services of any key executives and/or employees in critical roles or inadequate processes designed to attract, develop, motivate, and retain productive and engaged employees could have a material adverse effect on Shaw, its operations and/or financial results. To mitigate this risk, the Company's comprehensive compensation program is designed to attract, retain, motivate, and reward the executive team and key employees through aligning management's interest with our business objectives and performance.

Furthermore, in light of the announcement of the Transaction, the Company has provided retention packages for members of the senior leadership team as well as key employees to ensure cooperation and appropriate motivation and alignment of interests of employees in connection with the Arrangement, to retain them during the interim period between the signing of the Arrangement Agreement and the closing of the Transaction, and to compensate them for additional work they will be required to perform as a result of the Transaction (in addition to the full time work they perform for the Company on a daily basis).

Labour Relations

As at August 31, 2021, approximately 5% of our employees are represented by unions under collective bargaining agreements. While the Company strives to maintain positive labour relations, we can neither predict the outcome of current or future negotiations relating to labour disputes, union representation, or renewal of collective bargaining agreements, nor be able to avoid future work stoppages, strikes, or other forms of labour protests pending the outcome of any current or future negotiations. A prolonged work stoppage, strike or other form of labour protest could have a material adverse effect on our businesses, operations, and reputation. Even if the Company does not experience strikes or other forms of labour protests, the outcome of labour negotiations could adversely affect our businesses and results of operations. In addition, our ability to make short-term adjustments to control compensation and benefits costs could be limited by the terms of such collective bargaining agreements. To support all leaders and employees, we continually listen to remove barriers and respond in real-time to needs and concerns. We also continue to provide support for leaders on how to manage change and maintain positive employee engagement and relations.

Climate Change

Climate change risks are important considerations for Shaw. These risks have been classified as two main types – physical risks and transition risks – which are described in further detail below.

Physical Risks

In accordance with the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD), we recognize that climate change may increase the severity, duration, and frequency of natural hazards and weather-related events. These in turn may negatively impact our business, which may require us to protect, test, maintain, repair, and replace our networks, IT systems, equipment and other infrastructure. For example:

- increased temperatures could impact our networks, IT systems, equipment and other infrastructure which could require the installation of additional cooling devices;

- acute risks (e.g., ice storms, extreme precipitation, flooding, fires, hurricanes, tornados, tsunamis) and chronic risks (e.g., sea-level rise) could impact or destroy our facilities or network, equipment, and other infrastructure, and affect our employees' ability to safely perform work. These impacts may increase our insurance related expenses, and affect our ability to deliver products and services; and
- climate change related impacts to our key suppliers could adversely affect their ability to supply us with required products and services.

The occurrence of any of these events could have a material adverse effect on our operations and/or financial results. See also "Network Failure" risks above which could increase in severity and/or frequency as a result of climate change related natural disasters.

With the exception of our network equipment and data centres, we self-insure our Fibre+ network and, as a result, have limited insurance coverage against the losses resulting from natural disasters affecting our Fibre+ network. For further detail see "Network Failure" above.

Although we have business continuity/resumption plans and disaster recovery plans and strategies in place, the failure of any of our climate change mitigation and adaptation efforts (including response strategies and business continuity protocols) may affect our business through potential disruption of our operations, damage to our facilities and infrastructure, and affect the communities that we operate in and serve, which may have a material adverse effect on Shaw and its reputation, as well as its operations, prospects and/or financial results.

Transition Risks

Climate change is drawing more attention through evolving public interest as well as government regulation and policy.

- **Policy & legal risk:** Many aspects of our operations are subject to evolving and increasingly stringent federal, provincial, and local environmental, health, and safety laws and regulations. These laws and regulations impose requirements with respect to matters such as fuel storage, the recovery and recycling of end-of-life electronic products, greenhouse gas emissions, the release of substances into the environment, corrective and remedial action concerning such releases, and the proper handling, management and disposal of substances. These evolving considerations and more stringent laws and regulations could lead to increased costs for compliance, which could be material. For example, we may be required to incur additional capital expenditures from substituting existing products and services with lower emissions options. The Company may also incur increased operational costs due to higher fuel and energy prices resulting from carbon taxes and/or cap and trade programs.
- **Reputational Risk:** Failure to recognize and adequately respond to changing environmental matters and expectations, or to comply with environmental laws and regulations, could result in fines, new regulatory obligations and associated costs, or damage to our reputation or brand any of which could have a material adverse effect on our operations and/or financial results.

On December 7, 2020, Shaw issued its inaugural ESG report to provide stakeholders (i.e. customers, employees, investors, supply chain partners and regulators) with an overview of our ESG program, including Shaw's goals and actions. Shaw's ESG report can be found at https://www.shaw.ca/corporate/environmental-social-governance.

As part of the development of the ESG program, we integrated climate-related considerations into our governance and risk management practices.

Interest Rates, Foreign Exchange Rates and Capital Markets

Shaw has the following financial risks in its day-to-day operations:

(a) **Interest rates**: Due to the capital-intensive nature of Shaw's operations, the Company uses long-term financing extensively in its capital structure. The primary components of this structure include banking facilities and various Canadian denominated senior notes and debentures with varying maturities issued in the public markets. These are more fully described in Note 13 to the Consolidated Financial Statements.

Interest on bank indebtedness is based on floating rates while the senior notes are all fixed-rate obligations. If required, Shaw uses its credit facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. Increases in interest rates may have a material adverse effect on Shaw, its operations and/or its financial results.

(b) **Capital markets**: Shaw requires or may require ongoing access to capital markets to support its operations. Changes in capital market conditions, including significant changes in market interest rates or lending practices, or changes in Shaw's credit ratings, may adversely affect our ability to raise or refinance short-term or long-term debt and therefore may have a material adverse effect on Shaw, its operations and/or its financial results.

Shaw manages its exposure to floating interest rates by maintaining a mix of fixed and floating rate debt. Interest on the Company's unsecured credit facility and accounts receivable securitization program are based on floating rates, while the senior notes are all fixed rate obligations.

As at August 31, 2021, virtually all of Shaw's consolidated long-term debt was fixed with respect to interest rates.

The Company may also enter into derivative contracts, primarily forward contracts, to mitigate its exposure to foreign exchange and interest rate risks. While hedging and other efforts to manage these risks are intended to mitigate Shaw's risk exposure, because of the inherent nature and risk of such transactions, those activities can result in losses. For instance, if Shaw hedges its floating interest rate exposure, it may forego the benefits that may otherwise be experienced if rates were to fall and it is subject to credit risks associated with the counterparties with whom it contracts. In order to minimize the risk of counterparty default under its derivatives agreements, Shaw assesses the creditworthiness of its derivative counterparties. Further information concerning the policy and use of derivative financial instruments is contained in Notes 2 and 30 to the Consolidated Financial Statements.

Litigation

Shaw and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business. Although management does not expect that the outcome of these matters will have a material adverse effect on the Company, there can be no assurance that these matters, or other legal matters that arise in the future, will not have a material adverse effect on Shaw and its reputation, as well as Shaw's operations and/or financial results.

Shaw is a public company with shares trading on the Toronto and New York stock exchanges. As a result, the Company may be subject to civil liability under Canadian and US securities laws for alleged misrepresentations by the Company in its public disclosure documents and/or oral statements.

Legal and Ethical Compliance

Shaw expects and relies on its employees, officers, Board of Directors, contractors, suppliers, and other business partners to act in accordance with applicable legal and ethical standards in all jurisdictions in which we operate, including, but not limited to, anti-bribery, anti-corruption, and anti-money laundering laws and regulations. Situations where Shaw's employees, officers, Board of Directors, contractors, suppliers, and other business partners do not adhere to applicable laws and regulations, the Company's policies or its contractual obligations, whether inadvertently or intentionally, may expose the Company to litigation and the possibility of damages, sanctions, and fines, or of being disqualified from bidding on contracts, which may have a material adverse effect on Shaw and its reputation, as well as its operations, prospects, and/or financial results.

Taxes

Shaw's business is subject to various tax laws, changes to tax laws and the adoption of new tax laws, regulations thereunder and interpretations thereof, which may have adverse tax consequences to Shaw.

While Shaw believes it has adequately provided for all income and commodity taxes based on information that is currently available, the calculation and the applicability of taxes in many cases require significant judgment in interpreting tax rules and regulations. In addition, Shaw's tax filings are subject to government audits which could result in material changes in the amount of current and deferred income tax assets and liabilities and other liabilities which may, in certain circumstances, result in the assessment of interest and penalties.

Concerns about Alleged Health Risks relating to Radiofrequency Emissions

Concerns about alleged health risks relating to radiofrequency emissions may adversely affect our Wireless division and our Shaw Go WiFi operations. Some studies have alleged that links exist between radiofrequency emissions from certain wireless devices and cell sites and various health problems or possible interference with electronic medical devices, including hearing aids and pacemakers. The Company complies with all applicable laws and regulations. Further, the Company relies on suppliers of wireless network equipment and customer equipment to meet or exceed all applicable regulatory and safety requirements. No definitive evidence exists of harmful effects from exposure to radiofrequency emissions when legal limits are complied with. Additional studies of radiofrequency emissions are ongoing and we cannot be certain of results, which could result in additional or more restrictive regulation or exposure to potential litigation.

Acquisitions, Dispositions and Other Strategic Transactions

Shaw may from time to time make acquisitions to expand its existing businesses or to enter into sectors in which Shaw does not currently operate, dispositions to focus on core offerings or enter into other strategic transactions. Such acquisitions, dispositions and/or strategic transactions may fail to realize the anticipated benefits, result in unexpected costs, result in unexcepted liabilities that were not uncovered through the due diligence process and/or Shaw may have difficulty incorporating or integrating the acquired business, any of which may have a material adverse effect on Shaw, its operations and/or financial results. Under the terms of the Arrangement Agreement, and prior to the completion of the Transaction or the termination of the Arrangement Agreement, the Company is subject to covenants which restrict it from making certain acquisitions, dispositions or other strategic transactions without Rogers' consent. For further detail, refer to the Arrangement Agreement and the management information circular, filed March 15, 2021 and April 23, 2021, respectively, on Shaw's SEDAR profile at www.sedar.com and EDGAR profile at www.sec.gov/edgar.shtml.

Dividend Payments are not Guaranteed

Shaw currently pays monthly common share dividends in amounts approved on a quarterly basis by the Board of Directors. Over the long term, Shaw expects to continue to pay dividends from its free cash flow; however, balance sheet cash and/or credit facilities may be used to fund dividends from time to time. Although Shaw intends to make regular dividend payments, dividends are not guaranteed as actual results may differ from expectations and there can be no assurance that the Company will continue common share dividend payments at the current level. In addition to the standard legislated solvency and liquidity tests that must be met, the Company would not be able to declare and pay dividends if there was an event of default or a pending event of default would result (as a consequence of declaring and paying dividends) under its credit facilities.

Under the terms of the Arrangement Agreement entered into with Rogers, the Company is restricted in its ability to increase the amount of the dividend payments prior to the completion of the Transaction without Rogers' consent.

Holding Company Structure

Substantially all of Shaw's business activities are operated by its subsidiaries. As a holding company, our ability to meet our financial obligations is dependent primarily upon the receipt of interest and principal payments on intercompany advances, management fees, cash dividends and other payments from our subsidiaries together with proceeds raised by the Company through the issuance of equity and the incurrence of debt, and from proceeds received on the sale of assets. The payment of dividends and the making of loans, advances and other payments to Shaw by its subsidiaries may be subject to statutory or contractual restrictions, are contingent upon the earnings of those subsidiaries and are subject to various business and other considerations.

Control of the Company

Voting control of the Company is held by SFLT and its subsidiaries. As at October 29, 2021, SFLT and its subsidiaries held, directly or indirectly, or exercised control or direction over 17,662,400 Class A Shares, representing approximately 79% of the issued and outstanding Class A Shares, for the benefit of the descendants of the late JR Shaw and Carol Shaw. The sole trustee of SFLT is a private company controlled by a board consisting of seven directors, including as at October 29, 2021, Bradley S. Shaw, four other members of his family, and two independent directors.

The Class A Shares are the only shares entitled to vote in all circumstances. Accordingly, SFLT and its subsidiaries are able to elect a majority of the Board of Directors of the Company and to control the vote on matters submitted to a vote of the Company's Class A Shares.

SUMMARY OF QUARTERLY RESULTS

Below is a quarterly summary of the Company's consolidated financial results and selected key performance drivers for fiscal 2021 and 2020.

	2021				2020			
(millions of Canadian dollars except per share amounts)	**Q4**	**Q3**	**Q2**	**Q1**	**Q4**	**Q3**	**Q2**	**Q1**

(1) See "Key Performance Drivers" for more information about these non-GAAP financial measures.
(2) Net income attributable to both equity shareholders and non-controlling interests.

F21 Q4 **vs** F21 Q3	In the fourth quarter of fiscal 2021, net income decreased $102 million compared to the third quarter of fiscal 2021 mainly due to a $36 million increase in interest expense and a $126 million increase in current taxes in the fourth quarter as a result of a revision to liabilities for uncertain tax positions which reduced these expenses by $35 million and $125 million respectively in the third quarter as well as a $28 million decrease in adjusted EBITDA partially offset by an $81 million decrease in deferred taxes resulting mainly from the recognition of a tax benefit associated with previously unrecognized tax losses and a decrease of $15 million in other expenses mainly due to lower Transaction related costs, all in the fourth quarter.
F21 Q3 **vs** F21 Q2	In the third quarter of fiscal 2021, net income increased $137 million compared to the second quarter of fiscal 2021 mainly due to a $131 million decrease in current income taxes expense and a $36 million decrease in interest expense mainly due to a revision to liabilities for uncertain tax positions that became statute barred in the period, which reduced these expenses by $125 million and $35 million respectively, a $9 million decrease in deferred taxes, and a $5 million increase in adjusted EBITDA, partially offset by $18 million in Transaction related advisory, legal, financial, and other professional fees in the third quarter and the impact of the $27 million fair value gain on private investments recorded in the second quarter.
F21 Q2 **vs** F21 Q1	In the second quarter of fiscal 2021, net income increased $54 million compared to the first quarter of fiscal 2021 mainly due to a $30 million increase in adjusted EBITDA, an $11 million decrease in restructuring costs, and a $27 million fair value gain on private investments recorded in the second quarter, partially offset by a $9 million increase in deferred taxes and an $8 million increase in current taxes, all in the second quarter.
F21 Q1 **vs** F20 Q4	In the first quarter of fiscal 2021, net income decreased $12 million compared to the fourth quarter of fiscal 2020 mainly due to a $12 million increase in restructuring costs in the first quarter and a $27 million increase in deferred taxes, partially offset by a $13 million increase in adjusted EBITDA and a $6 million decrease in current taxes, all in the first quarter.
F20 Q4 **vs** F20 Q3	In the fourth quarter of fiscal 2020, net income decreased $9 million compared to the third quarter of fiscal 2020 mainly due to a $15 million decrease in adjusted EBITDA and a $23 million increase in current taxes in the fourth quarter as well an $8 million decrease in other gains as a result of an insurance claim recovery in the third quarter partially offset by a $35 million decrease in deferred taxes and a $14 million decrease in restructuring costs in the fourth quarter.

F20 Q3 **vs** F20 Q2	In the third quarter of fiscal 2020, net income increased $17 million compared to the second quarter of fiscal 2020 mainly due to a $26 million increase in other gains/losses, which includes the impact of the $17 million payment related to the early redemption of $800 million in senior notes in the second quarter, a $6 million insurance claim recovery, a $9 million increase in adjusted EBITDA in the third quarter and a $4 million decrease in current taxes, offset by a $14 million restructuring cost and an $8 million increase in deferred taxes, also in the third quarter.
F20 Q2 **vs** F20 Q1	In the second quarter of fiscal 2020, net income increased $5 million compared to the first quarter of fiscal 2020 mainly due to a $13 million decrease in current taxes, a $12 million increase in adjusted EBITDA and a $3 million decrease in interest expense, all in the second quarter, partially offset by a $17 million payment related to the early redemption of $800 million in senior notes and a $10 million increase in deferred taxes, also in the second quarter.
F20 Q1 **vs** F19 Q4	In the first quarter of fiscal 2020, net income decreased $4 million compared to the fourth quarter of fiscal 2019 mainly due to a $23 million decrease in deferred taxes in the first quarter. This was partially offset by a $7 million increase in current taxes in the first quarter as well as the net impact of the adoption of IFRS 16 which resulted in a decrease to operating, general and administrative costs that was more than offset by increases to amortization of property, plant and equipment, intangibles and other and interest expense.

Fourth Quarter 2021 Highlights

The following discusses the results for the fourth quarter of fiscal 2021 (three-month period ended August 31, 2021) as compared with the results from the fourth quarter of fiscal 2020 (three-month period ended August 31, 2020).

Revenue

Consolidated revenue increased 2.1% year-over-year to $1.38 billion.

- Wireless revenue of $321 million for the fourth quarter of fiscal 2021 increased $27 million, or 9.2%, over the fourth quarter of fiscal 2020. The increase was driven mainly by higher service revenues which contributed an incremental $22 million, or 10.4%, to consolidated revenue primarily due to an increased subscriber base, including significant Shaw Mobile additions, which was complemented by an increase in equipment revenue of $5 million, or 6.0%, over the previous year. Fourth quarter ARPU decreased 5.7% to $37.39 reflecting Shaw Mobile customer growth.
- Consumer division revenue decreased $7 million, or 0.8%, to $910 million as growth in Internet revenue was offset by declines in Video, Satellite, and Phone subscribers and revenue.
- Business division revenue of $149 million increased $9 million, or 6.4%, as a result of Internet revenue growth and continued demand for the Smart suite of products, despite the challenging circumstances due to impacts of COVID-19 and considering the majority of Shaw Business revenue comes from the small to medium sized business sector.

Adjusted EBITDA

Adjusted EBITDA for the fourth quarter of $614 million increased $20 million, or 3.4%, from $594 million in the comparable prior year quarter.

- Wireless adjusted EBITDA of $106 million for the fourth quarter of fiscal 2021 improved by $22 million, or 26.2%, over the fourth quarter of fiscal 2020 primarily due to continued service revenue growth. Adjusted EBITDA results include a reduction in bad debt expense compared to the prior year quarter as COVID-19 did not have a significant impact on our customers' ability to pay their bills as expected, combined with an increased focus on collecting aged receivables.
- Wireline adjusted EBITDA for the fourth quarter of fiscal 2021 of $508 million decreased $2 million, or 0.4%, from $510 million in the fourth quarter of fiscal 2020.

Adjusted EBITDA margin

Adjusted EBITDA margin for the fourth quarter of 44.6% increased 60-basis points compared to 44.0% in the fourth quarter of fiscal 2020.

Capital expenditures and equipment

In the fourth quarter of fiscal 2021, capital investment of $287 million decreased $20 million from the comparable period in fiscal 2020. Total Wireline capital spending of $221 million increased by approximately $29 million year-over-year primarily due to higher investments in the combined upgrades, enhancements and replacement categories as well as an increase in new housing development. Wireless spending of $66 million decreased by approximately $49 million year-over-year primarily due to lower planned investments in the quarter.

Amortization

Amortization of $310 million decreased 0.6% compared to the fourth quarter of 2020. The decrease in amortization is mainly due to a decrease in deferred equipment costs in the quarter partially offset by the amortization of new expenditures of property, plant and equipment and intangibles exceeding the amortization of those assets that became fully amortized during the period.

Interest

Interest expense of $67 million for the fourth quarter decreased $1 million over the comparable prior year quarter mainly due to the lower average outstanding debt balances in the period.

Free cash flow

Free cash flow for the quarter of $180 million compared to $152 million in the comparable prior year quarter. The increase was largely due to higher adjusted EBITDA and lower capital expenditures.

Income taxes

Income taxes were lower in the quarter compared to the fourth quarter of fiscal 2020 due mainly to the recognition of a $78 million tax benefit associated with previously unrecognized tax losses in the fourth quarter of 2021 driven by management's expectations that sufficient future taxable profit will be available to fully utilize such losses.

Seasonality and Trends

While financial results for the Company are generally not subject to significant seasonal fluctuations, subscriber activity may fluctuate from one quarter to another. Subscriber activity may also be affected by competition and Shaw's promotional activity. Our Video subscriber activity is influenced by cord shaving and cord cutting trends, which has resulted in fewer subscribers watching traditional cable TV, as well as a lower number of TV subscribers. In addition, trends in the use of wireless products and Internet or social media as substitutes for traditional home phone products have resulted in fewer Phone subscribers. Satellite subscriber activity is modestly higher around the summertime when more subscribers have second homes in use. Wireless subscriber activity is influenced by the launch of popular new mobile devices, seasonal promotional periods, and the level of competitive intensity. Our first and fourth quarters typically experience higher volumes of wireless competitive activity as a result of back to school and holiday season-related consumer behavior. Aggressive promotional offers are often advertised during these periods which can impact our Wireless subscriber metrics. Shaw's Wireline and Wireless businesses do not depend on any single customer or concentration of customers.

Furthermore, due to uncertainties relating to the severity, duration and continuing impact of the COVID-19 pandemic, it is difficult at this time to estimate the impacts of the COVID-19 pandemic on our business and future financial results. Therefore, the trends experienced during the COVID-19 pandemic, including impacts on consumer demand and spending, may not fully reflect the typical seasonal variations experienced by our business. Accordingly, it is difficult at this time to evaluate the impacts of the COVID-19 pandemic on the seasonality trends that normally characterize our business.

Growth (losses) in subscriber statistics as follows:

	2021

(1) Fiscal 2021 and 2020 figures reflect the impact of the adoption and application of IFRS 16 while fiscal 2019 figures do not and are not comparable.
(2) See "Key Performance Drivers" for more information about these non-GAAP financial measures and non-GAAP ratio.
(3) Funds flow from operations is presented before changes in non-cash working capital as presented in the Consolidated Statements of Cash Flows.

Revenue and Adjusted EBITDA

Consolidated revenue increased 1.9% year-over-year to $5.51 billion and adjusted EBITDA increased 4.6% year-over-year to $2.50 billion. Fiscal 2021 results include incremental Wireline Consumer revenue of approximately $20 million related to the release of a provision following the CRTC decision on final aggregated TPIA rates and higher equity-based compensation costs of approximately $24 million due to the significant increase in Shaw's share price in connection with the Transaction announcement on March 15, 2021. In addition, fiscal 2021 adjusted EBITDA results include a reduction in bad debt expense compared to the prior periods of approximately $28 million for the year as COVID-19 did not have a significant impact on our customers' ability to pay their bills as expected, combined with an increased focus on collecting aged receivables. For further discussion of divisional performance see "Segmented Operations Review."

Consolidated revenue of $5.51 billion for fiscal 2021 improved 1.9% over $5.41 billion for fiscal 2020. Revenue improved primarily due to the Wireless division contributing revenues of $1,272 million in fiscal 2021 as compared to $1,166 million in the prior year. The year-over-year improvement in Wireless revenue of $106 million, or 9.1%, reflects higher service revenues of $76 million due to an increased subscriber base, including significant Shaw Mobile additions, along with an increase in equipment revenues of $30 million. Wireline division revenues of $4,249 million in fiscal 2021 were essentially flat compared to $4,250 million in the prior year. Business division revenues increased $17 million, or 3.0%, mainly due to Internet revenue growth and continued demand for the Smart suite of products, despite the challenging circumstances due to impacts of COVID-19 and considering the majority of Shaw Business revenue comes from the small to medium sized business sector. These increases were fully offset by the Consumer division as revenues decreased $18 million, or 0.5%, compared to fiscal 2020 as the incremental $20 million in revenue related to the third quarter release of a provision following the CRTC decision on the final aggregated TPIA rates that date back to August 2019 and growth in Internet revenue were fully offset by declines in Video, Satellite, and Phone subscribers and revenue.

Adjusted EBITDA of $2,500 million for the twelve-month period improved 4.6% compared to $2,391 million for fiscal 2020. The improvement was primarily due to the Wireless division contributing $393 million over the twelve-month period as compared to $337 million in fiscal 2020 while the Wireline division contributed $2,107 million over the twelve-month period as compared to $2,054 million in fiscal 2020. The Wireless increase of $56 million, or 16.6%, over the comparable period primarily reflects an increase in service revenues, improved equipment margins, and a $15 million decrease in bad debt expense, partially offset by additional costs in connection with the expansion of the Shaw retail footprint in the current year. Wireline adjusted EBITDA of $2,107 million for fiscal 2021 increased 2.6%, resulting in a Wireline operating margin of 49.6%, an improvement of 130-basis points over fiscal 2020. The increase primarily reflects the impact of decreased operating costs, including a $13 million decrease in bad debt expense, partially offset by a decrease in Consumer revenue and an increase in equity-based compensation costs as noted above.

Restructuring costs

Restructuring costs generally include severance, employee related costs and other costs directly associated with a restructuring program. During the first, second and third quarters of fiscal 2021, the Company made a number of changes to its organizational structure in an effort to streamline the business, consolidate certain functions, and reduce redundancies between the Wireless and Wireline segments. In connection with the restructuring, the Company recorded costs of $12 million in the first quarter of fiscal 2021, $1 million in the second quarter, and $1 million in the third quarter of fiscal 2021 primarily related to severance and employee related costs.

Amortization

(millions of Canadian dollars)	2021	2020	Change %
Amortization revenue (expense)			
Deferred equipment revenue	**11**	16	(31.3)
Deferred equipment costs	**(47)**	(65)	(27.7)
Property, plant and equipment, intangibles and other	**(1,183)**	(1,168)	1.3

Amortization of deferred equipment revenue and deferred equipment costs decreased 31.3% and 27.7% respectively for the year ended August 31, 2021 as a result of declining satellite equipment purchases and installations during the year compared with prior years. Amortization of property, plant and equipment, intangibles and other increased 1.3% for the year ended August 31, 2021 and reflects the amortization of new expenditures exceeding the amortization of assets that became fully amortized during the period.

Amortization of financing costs and Interest expense

(millions of Canadian dollars)	2021	2020	Change %
Amortization of financing costs – long-term debt	**2**	3	(33.3)
Interest expense	**231**	274	(15.7)

Interest expense for the year ended August 31, 2021 decreased over the comparable periods and primarily reflects the impact of a $35 million reduction of tax related interest expense resulting from a revision of liabilities for uncertain tax positions that became statute barred in the year as well as lower average outstanding debt balances in the period and the decrease in the weighted average interest rate.

Other income and expenses

(millions of Canadian dollars)	2021	2020	Increase / (decrease)
Gain on disposal of fixed assets and intangibles	**3**	(3)	6
Costs associated with Rogers Transaction	**(23)**	–	(23)
Debt Redemption Penalty	**–**	(17)	17
Gain on fair value adjustment of private investment	**27**	–	27
Other	**(9)**	4	(13)
	(2)	(16)	14

Other generally includes realized and unrealized foreign exchange gains and losses on US dollar denominated current assets and liabilities as well as the Company's share of the operations of Burrard Landing Lot 2 Holdings Partnership. In the second quarter of fiscal 2021, the Company recorded a $27 million fair value gain on private investments while in the third and fourth quarters of fiscal 2021, the Company recorded $18 million and $5 million, respectively, in Transaction-related advisory, legal, financial, and other professional costs.

Income taxes

(millions of Canadian dollars)	2021	2020	Increase / (decrease)
Current income tax expense	**30**	120	(90)
Deferred income tax expense	**16**	59	(43)
	46	179	(133)

Income taxes are lower in fiscal 2021 compared to fiscal 2020 mainly due to a $125 million revision to liabilities for uncertain tax positions that became statute barred in 2021 as well as the recognition of a $78 million tax benefit associated with previously unrecognized tax losses in the fourth quarter of 2021 driven by management's expectations that sufficient future taxable profit will be available to fully utilize such losses, offset by the effect of higher pre-tax income.

Earnings per share

(millions of Canadian dollars except per share amounts)	2021	2020	Change %
Net income	**986**	688	43.3
Weighted average number of participating shares outstanding during period (millions)	**504**	515	
Earnings per share			
Basic and diluted	**1.94**	1.32	

Net income

Net income was $986 million in 2021 compared to $688 million in 2020. The year-over-year changes are summarized in the table below.

(millions of Canadian dollars)	
Increased adjusted EBITDA [(1)]	**109**
Increased amortization	**(1)**
Decreased interest expense	**43**
Change in other net costs and revenue [(2)]	**14**
Decreased income taxes	**133**
	298

(1) See "Key Performance Drivers" for more information about this non-GAAP financial measure.

(2) Net other costs and revenue include gains and losses on disposals of fixed assets and intangibles, accretion of long-term liabilities and provisions, debt retirement costs, transaction related costs, gains and losses on private investments, realized and unrealized foreign exchange differences and other losses as detailed in the Consolidated Statements of Income.

Net other costs and revenues had a $14 million favourable impact on net income primarily due to the impact of a $27 million fair value gain on private investments recorded in the current year and a $17 million debt redemption penalty in fiscal 2020, partially offset by $23 million in Transaction-related advisory, legal, financial, and other professional costs and higher foreign exchange losses in fiscal 2021.

SEGMENTED OPERATIONS REVIEW

WIRELINE

Adjusted EBITDA margin(1)	**49.6%**	48.3%	2.7

(1) See "Key Performance Drivers" for more information about this non-GAAP financial measure and non-GAAP ratio.

Wireline RGUs decreased by 248,785 in the current fiscal year, compared to net losses of 234,492 RGUs in fiscal 2020. Total Business RGU gains of 10,151 were more than fully offset by total Consumer RGU losses of 258,936 in the year which included net losses in cable Video of 107,641, Phone of 77,030, satellite Video of 60,149, and Internet of 14,116.

Wireline division revenues of $4,249 million in fiscal 2021 were essentially flat compared to $4,250 million in the prior year. Business division revenues increased $17 million, or 3.0%, mainly due to Internet revenue growth and continued demand for the Smart suite of products, despite the challenging circumstances due to impacts of COVID-19 and considering the majority of Shaw Business revenue comes from the small to medium sized business sector. These increases were fully offset by the Consumer division as revenues decreased $18 million, or 0.5%, compared to fiscal 2020 as the incremental $20 million in revenue related to the third quarter release of a provision following the CRTC decision on the final aggregated TPIA rates that date back to August 2019 and growth in Internet revenue were fully offset by declines in Video, Satellite, and Phone subscribers and revenue.

Adjusted EBITDA of $2,107 million increased 2.6% over the comparable period mainly due to decreased operating costs, partially offset by a decrease in Consumer revenue and higher equity-based compensation costs of approximately $24 million due to the significant increase in Shaw's share price in the year in connection with the Transaction announcement on March 15, 2021. The decrease in operating costs includes a $13 million decrease in bad debt expense as COVID-19 did not have a significant impact on our customers' ability to pay their bills as expected, combined with an increased focus on collecting aged receivables.

WIRELESS

(millions of Canadian dollars)	2021	2020	Change %
Service	**891**	815	9.3

Wireless revenue	**1,272**	1,166	9.1
Adjusted EBITDA(1)	**393**	337	16.6
Adjusted EBITDA margin(1)	**30.9%**	28.9%	6.9

(1) See "Key Performance Drivers" for more information about this non-GAAP financial measure and non-GAAP ratio.

In Wireless, the Company gained 294,857 net subscribers in the year, consisting of 257,114 postpaid and 37,743 prepaid additions, bringing its total customer base to over 2.1 million.

Wireless revenue for the year of $1,272 million increased $106 million, or 9.1%, over the prior year. The increase in revenue reflects higher service revenues of $76 million due to an increased subscriber base, including significant Shaw Mobile additions, along with an increase in equipment revenues of $30 million. The increase in service revenue was driven by RGU growth of 17.3%, while ARPU of $37.35 in fiscal 2021 decreased from $38.95 in the prior year, reflecting Shaw Mobile customer growth.

Adjusted EBITDA for the year of $393 million increased $56 million, or 16.6%, over the prior year primarily due to an increase in service revenues, improved equipment margins, and a $15 million decrease in bad debt expense as COVID-19 did not have a significant impact on our customers' ability to pay their bills as expected, combined with an increased focus on collecting aged receivables. This is partially offset by additional costs in connection with the expansion of the Shaw Mobile retail footprint in the current year.

Capital Expenditures and Equipment Costs

(millions of Canadian dollars)	Year ended August 31, 2021	2020	Change %
Wireline			
New housing development	**109**	120	(9.2)
Success based	**170**	243	(30.0)
Upgrades and enhancements	**351**	331	6.0
Replacement	**34**	26	30.8
Buildings and other	**59**	95	(37.9)
Total as per Note 26 to the audited annual consolidated financial statements	**723**	815	(11.3)
Wireless			
Total as per Note 26 to the audited annual consolidated financial statements	**280**	296	(5.4)
Consolidated total as per Note 26 to the audited annual consolidated financial statements	**1,003**	1,111	(9.7)

Capital investment was $1,003 million in fiscal 2021 compared to $1,111 million in fiscal 2020. The decrease was driven primarily by a decrease in the Wireline division mainly due to lower success-based costs while the Wireless division decreased as a result of lower planned capital expenditures in the year.

Wireline

Success-based capital for fiscal 2021 of $170 million was $73 million lower than fiscal 2020. The current year decrease in success-based capital was due primarily to lower equipment purchases in the year.

Capital spend on the combined upgrades and enhancement, and replacement categories was $385 million for the year, a $28 million increase over fiscal 2020 driven primarily by higher planned Wireline spend on network infrastructure.

Capital spend on new housing development of $109 million in the year was $11 million lower than the prior fiscal year, driven by a decrease in residential and commercial customer network growth and acquisition.

Investment in buildings and other of $59 million in fiscal 2021 decreased $36 million over fiscal 2020 primarily related to higher corporate related costs in the comparable period as well as the impact of proceeds received from the disposal of corporate assets in the current period.

Wireless

Capital investment of $280 million in fiscal 2021 decreased $16 million compared to fiscal 2020, primarily due to lower network and IT related investment partially offset by increased spending related to retail and office space in the current year. In fiscal 2021, the Company continued to focus on investment in the wireless network and infrastructure, specifically the continued deployment of 700 MHz spectrum, 600 MHz spectrum, LTE and small cells as well as enhancements to the back-office systems, retail locations and other corporate initiatives.

FINANCIAL POSITION

Total assets were $15.8 billion at August 31, 2021, compared to $16.2 billion at August 31, 2020. The following is a discussion of significant changes in the Consolidated Statements of Financial Position since August 31, 2020.

Current assets decreased $266 million primarily due to a decrease in cash of $408 million and a decrease in the current portion of contract assets of $35 million, partially offset by increased accounts receivable of $33 million, inventories of $3 million, other current assets of $54 million, and income taxes recoverable of $87 million. Cash decreased primarily due to the payment of $605 million in dividends, $300 million for preferred share redemptions, $336 million for share repurchases, as described below, and cash outlays for investing activities, partially offset by funds flow from operations. Refer to "Liquidity and Capital Resources" for more information.

Accounts receivable increased $33 million mainly due to timing, as the Company continues to migrate customers from two-month advance billing to one-month advance billing.

The current portion of contract assets decreased $35 million over the period due to a $19 million decrease in deferred Wireline costs as a result of lower onboarding promotional activity for new subscribers over the past year and a $16 million decrease due to a decrease in Wireless subscribers participating in the Company's discretionary wireless handset discount program over the past year. Under IFRS 15, up-front promotional offers, such as onboarding or switch credits, offered to new two-year value-plan customers are recorded as a contract asset and amortized over the life of the contract against future service revenues while the portion of the Wireless discount relating to the handset is applied against equipment revenue at the point in time that the handset is transferred to the customer while the portion relating to service revenue is recorded as a contract asset and amortized over the life of the contract against future service revenues.

Property, plant and equipment decreased $123 million as the amortization of capital and right-of-use assets exceeded the capital investments and additions to right-of-use assets in the year.

Current liabilities decreased $128 million during the period primarily due to an $11 million decrease in accounts payable, a decrease in income taxes payable of $57 million, and a decrease of $55 million in current provisions.

Accounts payable and accrued liabilities decreased due to the timing of payments and fluctuations in various payables including capital expenditures and tax remittances. The decrease in current provisions was mainly due to a $35 million reduction to the interest expense provision, a $20 million provision release related to the CRTC decision on final aggregated TPIA rates and the payment of outstanding restructuring costs in the period.

Lease liabilities decreased $25 million mainly due to principal repayments of $110 million, partially offset by $85 million in net new lease liabilities in the period.

Shareholders' equity decreased $190 million mainly due to the $300 million redemption of the Preferred Shares on June 30, 2021. Retained earnings increased as the current period income of $986 million was greater than the dividends of $599 million and the impact of shares repurchased under the NCIB program of $207 million. Share capital decreased $403 million due to the impact of 14,783,974 Class B Shares repurchased under the terms of the Company's NCIB program and the redemption of the preferred shares as noted above, which were partially offset by the issuance of 688,403 Class B Shares under the Company's stock option and RSU plans. Accumulated other comprehensive loss decreased $40 million due to the remeasurements recorded on employee benefit plans in the period.

As at October 15, 2021, share capital is as reported at August 31, 2021 with the exception of the issuance of a total 52,393 Class B Shares upon exercise of options under the Company's stock option plan.

CONSOLIDATED CASH FLOW ANALYSIS

Operating activities

(millions of Canadian dollars)	2021	2020	Change %
Funds flow from operations	**2,249**	1,989	13.1
Net change in non-cash working capital balances related to operations	**(326)**	(69)	>100.0
	1,923	1,920	0.2

Funds flow from operations in fiscal 2021 decreased over the comparable period primarily due to a large decrease in the net change in non-cash balances related to operations partially offset by an increase in the funds flow from operations. The net change in non-cash balances related to operations fluctuated over the comparative period due to changes in accounts receivable, inventory and other current asset balances, and the timing of payments of current income taxes payable and accounts payable and accrued liabilities.

Investing activities

(millions of Canadian dollars)	2021	2020	Decrease
Cash flow used in investing activities	**(997)**	(1,154)	157

In fiscal 2021, cash used in investing activities decreased over the comparable period primarily due to a decrease in additions to property, plant and equipment of $112 million, a decrease in additional to intangibles of $12 million and a decrease to additions to investment and other assets of $4 million, partially offset by an increase in proceeds on disposal of property, plant and equipment of $19 million received in the current period.

Financing activities

The changes in financing activities during 2021 and 2020 were as follows:

(millions of Canadian dollars)	2021	2020
Increase in short-term borrowings	**–**	160
Issuance of long-term debt	**–**	1,300
Repayment of long-term debt	**(1)**	(2,068)
Debt arrangement costs	**–**	(14)
Payment of lease liabilities	**(110)**	(112)
Issuance of Class B Shares	**18**	9
Purchase of Class B Shares	**(336)**	(140)
Dividends paid on Class A Shares and Class B Shares	**(597)**	(573)
Dividends paid on Preferred Shares	**(8)**	(9)
Payment of distributions to non-controlling interests	**–**	(2)
Redemption of Preferred Shares	**(300)**	–
	(1,334)	(1,449)

LIQUIDITY AND CAPITAL RESOURCES

In fiscal 2021, the Company generated $961 million of free cash flow. Shaw used its free cash flow along with cash of $408 million and proceeds from the issuance of Class B Shares of $18 million to pay common share dividends of $597 million, repurchase $336 million in Class B Shares under the Company's NCIB program, redeem $300 million in preferred shares, pay $25 million in restructuring costs and $23 million in Transaction related costs, and fund the net working capital change.

Debt structure and financial policy

Shaw structures its borrowings generally on an unsecured and standalone basis. While certain non-wholly owned subsidiaries are subject to contractual restrictions which may prevent the transfer of funds to Shaw, there are no similar restrictions with respect to wholly-owned subsidiaries of the Company.

The Company has an accounts receivable securitization program with a Canadian financial institution which allows it to sell certain trade receivables into the program. As at August 31, 2021, the proceeds of the sales were committed up to a maximum of $200 million (with $200 million drawn under the program as at August 31, 2021). The Company continues to service and retain substantially all of the risks and rewards relating to the trade receivables sold, and therefore, the trade receivables remain recognized on the Company's Consolidated Statements of Financial Position and the funding received is recorded as a current liability (revolving floating rate loans) secured by the trade receivables. The buyer's interest in the accounts receivable ranks ahead of the Company's interest and the program restricts it from using the trade receivables as collateral for any other purpose. The buyer of the trade receivables has no claim on any of our other assets.

As at August 31, 2021, the net debt leverage ratio for the Company was 2.3x. The terms of the Arrangement Agreement require Shaw to obtain Rogers' consent prior to incurring certain types of indebtedness.

The Company calculates net debt leverage ratio as follows[1]:

(millions of Canadian dollars)	2021	2020
Short-term borrowings	**200**	200
Current portion of long-term debt	**1**	1
Current Portion of Lease Liabilities	**110**	113
Long-term debt	**4,549**	4,547
Lease Liabilities	**1,135**	1,157
50% of outstanding preferred shares	**–**	147
Cash	**(355)**	(763)
(A) Net debt [2]	**5,640**	5,402
(B) Adjusted EBITDA [2]	**2,500**	2,391
(A/B) Net debt leverage ratio [3]	**2.3x**	2.3x

(1) The following contains a breakdown of the components in the calculation of net debt leverage ratio, which is a non-GAAP ratio.

(2) See "Key Performance Drivers" for more information about these non-GAAP financial measures.

(3) Net debt leverage ratio is a non-GAAP ratio and should not be considered as a substitute or alternative for a GAAP measure and may not be a reliable way to compare us to other companies. See "Key Performance Drivers" for further information about this ratio.

On November 2, 2020, the Company announced that it had received approval from the TSX to establish an NCIB program. The program commenced on November 5, 2020 and will remain in effect until November 4, 2021. As approved by the TSX, the Company has the ability to purchase for cancellation up to 24,532,404 Class B Shares representing approximately 5% of all of the issued and outstanding Class B Shares as at October 22, 2020.

During the year ended August 31, 2021, the Company purchased 14,783,974 Class B Shares for cancellation for a total cost of approximately $336 million under the NCIB program. In connection with the announcement of the Transaction on March 15, 2021, the Company suspended share buybacks under its NCIB program.

Shaw's credit facilities are subject to customary covenants which include maintaining minimum or maximum financial ratios.

	Covenant as at August 31, 2021	Covenant Limit
Shaw Credit Facilities		
Total Debt to Operating Cash Flow[1] Ratio	1.92:1	< 5.00:1
Operating Cash Flow[1] to Fixed Charges[2] Ratio	10.23:1	> 2.00:1

(1) Operating Cash Flow, for the purposes of the covenants, is calculated as net earnings before interest expense, depreciation, amortization, restructuring, and current and deferred income taxes, excluding profit or loss from investments accounted for on an equity basis, less payments made with regards to lease liabilities for the most recently completed fiscal quarter multiplied by four, plus cash dividends and other cash distributions received in the most recently completed four fiscal quarters from investments accounted for on an equity basis.

(2) Fixed Charges are defined as the aggregate interest expense, excluding the interest related to lease liabilities, for the most recently completed fiscal quarter multiplied by four.

As at August 31, 2021, Shaw is in compliance with these covenants and based on current business plans, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants over the life of the borrowings which currently mature in December of 2024.

On June 30, 2021, the Company redeemed all of its issued and outstanding Preferred Shares in accordance with their terms (as set out in the Company's articles) at a price equal to $25.00 per Preferred Share, less any tax required to be deducted or withheld.

On the Redemption Date, there were 10,012,393 Series A Shares and 1,987,607 Series B Shares issued and outstanding. Accordingly, the aggregate Redemption Price paid by Shaw on the Redemption Date to redeem the Preferred Shares was $300 million.

As at August 31, 2021, the Company had $355 million of cash on hand and its $1.5 billion bank credit facility was fully undrawn.

Preferred Share Dividends

On June 30, 2016, 1,987,607 of the Company's Series A Shares were converted into an equal number of Series B Shares in accordance with the notice of conversion right issued on May 31, 2016. As a result of the conversion, the Company had 10,012,393 Series A Shares and 1,987,607 Series B Shares issued and outstanding on June 30, 2016. The Company redeemed all of its issued and outstanding Series A Shares and Series B Shares on June 30, 2021.

Prior to the redemption of the Preferred Shares, the annual fixed dividend rate for the Series A Shares, payable quarterly, was reset to 2.791% for the five-year period from and including June 30, 2016 to but excluding June 30, 2021. The floating quarterly dividend rates for the Series B Shares were set as follows:

Period	Annual Dividend Rate
June 30, 2016 to September 29, 2016	2.539%
September 30, 2016 to December 30, 2016	2.512%
December 31, 2016 to March 30, 2017	2.509%
March 31, 2017 to June 29, 2017	2.480%
June 30, 2017 to September 29, 2017	2.529%
September 30, 2017 to December 30, 2017	2.742%
December 31, 2017 to March 30, 2018	2.872%
March 31, 2018 to June 29, 2018	3.171%
June 30, 2018 to September 29, 2018	3.300%
September 30, 2018 to December 30, 2018	3.509%
December 31, 2018 to March 30, 2019	3.713%
March 31, 2019 to June 29, 2019	3.682%
June 30, 2019 to September 29, 2019	3.687%
September 30, 2019 to December 30, 2019	3.638%
December 31, 2019 to March 30, 2020	3.652%
March 31, 2020 to June 29, 2020	3.638%
June 30, 2020 to September 29, 2020	2.255%
September 30, 2020 to December 30, 2020	2.149%
December 31, 2020 to March 30, 2021	2.109%
March 31, 2021 to June 29, 2021	2.073%

On April 14, 2021, the Company's Board of Directors declared a dividend of $0.17444 per Series A Share and $0.12956 per Series B Share, each payable on June 30, 2021 to holders of record on June 15, 2021. These were the final dividends on the Preferred Shares, which were paid separately from the aggregate Redemption Price and in the usual manner. Following payment of the June 30, 2021 dividends, there were no accrued and unpaid dividends on the Preferred Shares.

Based on the aforementioned financing activities, available credit facilities and forecasted free cash flow, the Company expects to have sufficient liquidity to fund operations, obligations and working capital requirements, including maturing debt, during the upcoming year. The terms of the Arrangement Agreement require that the Company maintain sufficient liquidity to pay an $800 million termination fee payable by Shaw in certain circumstances.

Off-balance sheet arrangement and guarantees

Guarantees

Generally, it is not the Company's policy to issue guarantees to non-controlled affiliates or third parties; however, it has entered into certain agreements as more fully described in Note 27 to the Consolidated Financial Statements. As disclosed therein, Shaw believes it is remote that these agreements would require any cash payment.

Contractual obligations

The amounts of estimated future payments under the Company's contractual obligations at August 31, 2021 are detailed in the following table.

	Payments due by period				
(millions of Canadian dollars)	**Total**	**Within 1 year**	**2 – 3 years**	**4 – 5 years**	**More than 5 years**
Short-term borrowings	200	200	—	—	—
Long-term debt[1]	7,330	219	1,409	395	5,307
Lease liabilities	1,596	151	291	260	894
Purchase obligations[2]	1,002	420	297	174	111
Property, plant and equipment	166	157	9	—	—
	10,294	1,147	2,006	829	6,312

(1) Includes principal repayments and interest payments.
(2) Includes contractual obligations under service, product, and wireless device contracts, program related agreements and exclusive rights to use intellectual property in Canada.

Share Capital and Listings

The Company is authorized to issue a limited number of Class A Shares; an unlimited number of Class B Shares; an unlimited number of Class 1 Preferred Shares issuable in series and an unlimited number of Class 2 Preferred Shares issuable in series, of which 12,000,000 were designated the Series A Shares and 12,000,000 were designated the Series B Shares. The authorized number of Class A Shares is limited, subject to certain exceptions, to the lesser of that number of such shares (i) currently issued and outstanding; and (ii) that may be outstanding after any conversion of Class A Shares into Class B Shares.

As at October 15, 2021, there are 22,372,064 Class A Shares and 476,589,655 Class B Shares issued and outstanding. There were also 7,440,247 options to purchase Class B Shares and 36,428 RSUs that will settle in Class B Shares issued from treasury outstanding. Shaw is traded on the Toronto and New York stock exchanges and is included in the S&P/TSX 60 Index (Symbol: TSX – SJR.B, NYSE – SJR and TSXV – SJR.A). For more information, please visit www.shaw.ca.

The following table sets forth, for each month during the fiscal year ending August 31, 2021, the monthly price range and volume traded for the Class A Shares on the TSX Venture Exchange (TSXV) and for the Class B Shares, Series A Shares and Series B Shares on the TSX.

	Class A Shares(1) TSX Venture-SJR.A			Class B Shares(1) TSX-SJR.B			Series A Shares(1)(2) TSX-SJR.PR.A			Series B Shares(1)(2) TSX-SJR.PR.B

(1) Trading price and volume data is obtained from the TMX group.
(2) All issued and outstanding Series A Shares and Series B Shares were redeemed on June 30, 2021.

Share Splits

There have been four splits of the Company's Class A and Class B Shares: July 30, 2007 (2 for 1); February 7, 2000 (2 for 1); May 18, 1994 (2 for 1); and September 23, 1987 (3 for 1). In addition, as a result of the Arrangement referred to in the Management Information Circular dated July 22, 1999, a Shareholder's Adjusted Cost Base was reduced for tax purposes.

ADDITIONAL INFORMATION

Additional information relating to Shaw, including the Company's 2021 Annual Information Form, can be found on SEDAR at www.sedar.com.

COMPLIANCE WITH NYSE CORPORATE GOVERNANCE LISTING STANDARDS

Disclosure of the Company's corporate governance practices which differ from the New York Stock Exchange (NYSE) corporate governance listing standards are posted on Shaw's website, www.shaw.ca (under Investor Relations, Corporate Governance, Compliance with NYSE Corporate Governance Listing Standards).

CERTIFICATION

The Company's Executive Chair & Chief Executive Officer and Executive Vice President, Chief Financial & Corporate Development Officer have filed certifications regarding Shaw's disclosure controls and procedures and internal control over financial reporting (ICFR).

As at August 31, 2021, the Company's management, together with its Executive Chair & Chief Executive Officer and Executive Vice President, Chief Financial & Corporate Development Officer, has evaluated the effectiveness of the design and operation of each of the Company's disclosure controls and procedures and ICFR. Based on these evaluations, the Chief Executive Officer and Executive Vice President, Chief Financial & Corporate Development Officer have concluded that the Company's disclosure controls and procedures and the Company's ICFR are effective.

Other than the items described below, there have been no changes in the Company's ICFR during the fiscal year that have materially affected, or are reasonably likely to materially affect, Shaw's ICFR.

MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL REPORTING AND REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

October 29, 2021

Management's Responsibility for Financial Reporting

The accompanying consolidated financial statements of Shaw Communications Inc. (the "Company") and all the information in this annual report are the responsibility of management and have been approved by the Board of Directors.

The financial statements have been prepared by management in accordance with International Financial Reporting Standards (IFRS). When alternative accounting methods exist, management has chosen those it deems most appropriate in the circumstances. Financial statements are not precise since they include certain amounts based on estimates and judgments. Management has determined such amounts on a reasonable basis in order to ensure that the financial statements are presented fairly, in all material respects. Management has prepared the financial information presented elsewhere in the annual report and has ensured that it is consistent with the financial statements.

Management has a system of internal controls designed to provide reasonable assurance that the financial statements are accurate and complete in all material respects. The internal control system includes an internal audit function and an established business conduct policy that applies to all employees. Management believes that the systems provide reasonable assurance that transactions are properly authorized and recorded, financial information is relevant, reliable and accurate and that the Company's assets are appropriately accounted for and adequately safeguarded.

The Board of Directors is responsible for ensuring management fulfils its responsibilities for financial reporting and is ultimately responsible for reviewing and approving the financial statements. The Board carries out this responsibility through its Audit Committee.

The Audit Committee is appointed by the Board and its directors are unrelated and independent. The Committee meets periodically with management, as well as the external auditors, to discuss internal controls over the financial reporting process, auditing matters and financial reporting issues; to satisfy itself that each party is properly discharging its responsibilities; and, to review the annual report, the financial statements and the external auditors' report. The Audit Committee reports its findings to the Board for consideration when approving the financial statements for issuance to the shareholders. The Committee also considers, for review by the Board and approval by the shareholders, the engagement or re-appointment of the external auditors.

The financial statements have been audited by Ernst & Young LLP, the external auditors, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB")" on behalf of the shareholders. Ernst & Young LLP has full and free access to the Audit Committee.

Management's Report on Internal Control over Financial Reporting

Management is responsible for establishing and maintaining an adequate system of internal control over financial reporting. Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the financial statements for external purposes in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB).

Due to its inherent limitations, internal control over financial reporting may not prevent or detect misstatements on a timely basis. Also, projections of any of the effectiveness of internal control are subject to the risk that the controls may become inadequate because of changes in conditions or that the degree of compliance with the policies and procedures may deteriorate. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to the financial statement preparation and presentation.

Management conducted an evaluation of the effectiveness of the system of internal control over financial reporting based on the framework in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on this evaluation, management concluded that the Company's system of internal control over financial reporting was effective as at August 31, 2021.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders and Board of Directors of Shaw Communications Inc.:

Opinion on the Consolidated Financial Statements

We have audited the accompanying consolidated statements of financial position of Shaw Communications Inc. (the "Company") as of August 31, 2021 and 2020, the related consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years then ended, and the related notes (collectively referred to as the "consolidated financial statements"). In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of the Company at August 31, 2021 and 2020, and its financial performance and its cash flows for the years then ended, in accordance with International Financial Reporting Standards ("IFRSs") as issued by the International Accounting Standards Board.

Report on Internal Control over Financial Reporting

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the Company's internal control over financial reporting as of August 31, 2021, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission framework (2013) and our report dated October 29, 2021 expressed an unqualified opinion thereon.

Basis for Opinion

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

Critical Audit Matters

The critical audit matter communicated below is a matter arising from the current period audit of the financial statements that was communicated or required to be communicated to the audit committee and that: (1) relates to accounts or disclosures that are material to the financial statements and (2) involved our especially challenging, subjective, or complex judgments. The communication of the critical audit matter does not alter in any way our opinion on the consolidated financial statements, taken as a whole, and we are not, by communicating the critical audit matter below, providing a separate opinion on the critical audit matter or on the account or disclosure to which it relates.

Key Audit Matter	**Valuation of the Wireless cash generating unit's indefinite-life intangibles**
Description of the Matter	As more fully described in Note 9 to the consolidated financial statements, the Company conducted its annual impairment test on goodwill and indefinite-life intangibles as at February 1, 2021 and the recoverable amount of the cash generating units exceeds their carrying value. Management performed an assessment of indicators of impairment as at August 31, 2021. Auditing management's impairment test is complex and judgmental due to the estimation required in determining the recoverable amount of the cash generating units. The recoverable amount was estimated using a discounted cash flow and is sensitive to assumptions such as revenue growth rate, earnings growth rate, earnings before interest, tax and amortization margin, terminal operating discount rate, terminal growth rate and terminal operating income before restructuring costs and amortization multiple.
How We Addressed the Matter in Our Audit	We obtained an understanding of management's process for performing their impairment assessment. We evaluated the design and tested the operating effectiveness of controls over the Company's processes to determine the recoverable amount. For example, we tested controls over the Company's strategic planning process as well as controls over the review of the significant assumptions in estimating the recoverable amount of the cash generating units. To test the estimated recoverable amount of the goodwill and indefinite-life intangible assets, our audit procedures included, among others, assessing the methodology used and testing the significant assumptions discussed above and the underlying data used by the Company in its analysis. We also involved an EY valuation specialist to assist us. We compared the significant assumptions used by management to historical and current trends. We audited the forecasted revenue by evaluating future subscriber growth, expected customer churn, and average rate per subscriber unit. We assessed the historical accuracy of management's estimates and performed sensitivity analyses on significant assumptions to evaluate changes in the recoverable amount of the cash generating units that would result from changes in the assumptions. We obtained management's assessment of indicators of impairment as at August 31, 2021 and evaluated management's assessment through review of actual results and the updated revenue forecast. We assessed the adequacy of the Company's disclosure in the consolidated financial statements.

Ernst & Young LLP

Chartered Professional Accountants

We have served as the Company's auditor since 1966.

Calgary, Canada
October 29, 2021

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders and Board of Directors of Shaw Communications Inc.:

Opinion on Internal Control over Financial Reporting

We have audited Shaw Communications Inc.'s internal control over financial reporting as of August 31, 2021, based on criteria established in Internal Control – Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (the "COSO criteria"). In our opinion, Shaw Communications Inc. (the "Company") maintained, in all material respects, effective internal control over financial reporting as of August 31, 2021, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the consolidated statements of financial position as at August 31, 2021 and 2020, the related consolidated statements of income, comprehensive income, changes in shareholders' equity and cash flows for the years then ended, and the related notes and our report dated October 29, 2021 expressed an unqualified opinion thereon.

Basis of Opinion

The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Report on Internal Controls over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audit in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects.

Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

Definition and Limitations of Internal Control Over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

(all amounts in millions of Canadian dollars except share and per share amounts)

1. CORPORATE INFORMATION

Shaw Communications Inc. (the "Company") is a diversified Canadian connectivity company whose core operating business is providing: Cable telecommunications, Satellite video services and data networking to residential customers, businesses and public-sector entities ("Wireline"); and wireless services for voice and data communications ("Wireless").

The Company was incorporated under the laws of the Province of Alberta on December 9, 1966 under the name Capital Cable Television Co. Ltd. and was subsequently continued under the Business Corporations Act (Alberta) on March 1, 1984 under the name Shaw Cablesystems Ltd. Its name was changed to Shaw Communications Inc. on May 12, 1993. The Company's shares are listed on the Toronto Stock Exchange (TSX), TSX Venture Exchange (TSXV) and New York Stock Exchange (NYSE) (Symbol: TSX – SJR.B, NYSE – SJR, and TSXV – SJR.A). The registered office of the Company is located at Suite 900, 630 – 3rd Avenue S.W., Calgary, Alberta, Canada T2P 4L4.

On March 15, 2021, the Company announced that it had entered into an arrangement agreement (the "Arrangement Agreement") with Rogers Communications Inc. ("Rogers"), under which Rogers will acquire all of Shaw's issued and outstanding Class A Participating Shares ("Class A Shares") and Class B Non-Voting Participating Shares ("Class B Shares") in a transaction valued at approximately $26 billion, inclusive of approximately $6 billion of Shaw debt (the "Transaction"). Holders of Shaw Class A Shares and Class B Shares (other than the Shaw Family Living Trust, the controlling shareholder of Shaw, and related persons (collectively the "Shaw Family Shareholders")) will receive $40.50 per share in cash. The Shaw Family Shareholders will receive 60% of the consideration for their shares in the form of Class B Non-Voting Shares of Rogers (the "Rogers Shares") on the basis of the volume-weighted average trading price for the Rogers Shares for the 10 trading days ending March 12, 2021, and the balance in cash.

The Transaction is being implemented by way of a court-approved plan of arrangement under the *Business Corporations Act* (Alberta). At the special meeting of Shaw shareholders held on May 20, 2021, the Company obtained approval of the plan of arrangement by the holders of Shaw's Class A Shares and Class B Shares in the manner required by the interim order granted by the Court of Queen's Bench of Alberta on April 19, 2021. On May 25, 2021, the Court of Queen's Bench of Alberta issued a final order approving the plan of arrangement.

The Transaction remains subject to other customary closing conditions including approvals from certain Canadian regulators, including the Competition Bureau, Innovation, Science and Economic Development Canada (ISED) and the Canadian Radio-television and Telecommunications Commission (CRTC). Subject to the receipt of all required approvals, and the satisfaction of all closing conditions, the Transaction is expected to close in the first half of 2022.

2. BASIS OF PRESENTATION AND ACCOUNTING POLICIES

Statement of compliance

These consolidated financial statements of the Company have been prepared in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB).

The consolidated financial statements of the Company for the years ended August 31, 2021 and 2020, were approved by the Board of Directors on October 28, 2021 and authorized for issue.

Basis of presentation

These consolidated financial statements have been prepared primarily under the historical cost convention and are expressed in millions of Canadian dollars unless otherwise indicated. Other measurement bases used are outlined below and in the applicable notes. The consolidated statements of income are presented using the nature classification for expenses.

Certain comparative figures have been reclassified to conform to the current year's presentation.

Basis of consolidation

(i) Subsidiaries

The consolidated financial statements include the accounts of the Company and those of its subsidiaries, which are entities over which the Company has control. Control exists when the Company has power over an investee, is exposed to or has rights to variable returns from its involvement and has the ability to affect those returns. Intercompany transactions and balances are eliminated on consolidation. The results of operations of subsidiaries acquired during the period are included from their respective dates of acquisition, being the time at which the Company obtains control. Consolidation of a subsidiary ceases when the Company loses control. A change in ownership interests of a subsidiary, without a loss of control, is accounted for as an equity transaction. The Company assesses control through share ownership and voting rights.

Non-controlling interests arise from business combinations in which the Company acquires less than 100% ownership interest. At the time of acquisition, non-controlling interests are measured at either fair value or their proportionate share of the fair value of the acquiree's identifiable assets. The Company determines the measurement basis on a transaction by transaction basis. Subsequent to acquisition, the carrying amount of non-controlling interests is increased or decreased for their share of changes in equity.

(ii) Joint operations

A joint operation is a type of joint arrangement whereby the parties that have joint control of the arrangement have rights to the assets and obligations for the liabilities, relating to the joint arrangement. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require unanimous consent of the parties sharing control. The consolidated financial statements include the Company's proportionate share of the assets, liabilities, revenues, and expenses of its interests in joint operations.

The Company's joint operations consist of a 33.33% interest in the Burrard Landing Lot 2 Holdings Partnership (the "Partnership"). The Partnership owns and leases commercial space in Shaw Tower in Vancouver, BC, which is the Company's headquarters for its lower mainland operations. In classifying its 33.33% interest in the Partnership as a joint operation, the Company considered the terms and conditions of the partnership agreement and other facts and circumstances including the primary purpose of Shaw Tower which is to provide lease space to the partners.

Revenue and expenses

The Company has multiple deliverable arrangements comprised of upfront fees (subscriber connection and installation fee revenue, customer premise equipment revenue, handset equipment revenue) and related subscription and service revenue. Upfront fees charged to customers do not constitute separate units of accounting, therefore these revenue streams are assessed as an integrated package.

(i) Revenue

The Company records revenue from contracts with customers in accordance with the following five steps:

(1) identify the contract(s) with a customer;

(2) identify the performance obligations in the contract;

(3) determine the transaction price;

(4) allocate the transaction price to the performance obligations in the contract; and,

(5) recognize revenue when (or as) we satisfy a performance obligation.

Revenue for each performance obligation is recognized either over time or at a point in time. For performance obligations satisfied over time, revenue is recognized as the services are provided. Revenues on certain long-term contracts are recognized using output methods based on products delivered, performance completed to date and time elapsed. Revenue from Cable, Internet, Phone, Direct-to-Home (DTH) and Wireless customers includes subscriber revenue earned as services are provided. Satellite distribution services and telecommunications service revenue is recognized in the period in which the services are rendered to customers. In addition to monthly service plans, the Company also offers multi-year service plans in which the total amount of the contractual service revenue is accounted for on a straight-line basis over the term of the plan. Fees for wireless voice, text and data services on a pay-per-use basis are recognized in the period that the service is provided.

Revenue from data centre customers includes colocation and other services revenue, including managed infrastructure revenue. Colocation revenue is recognized on a straight-line line basis over the term of the customer contract. Other services revenue, including managed infrastructure revenue, is recognized as the services are provided.

Revenue for performance obligations satisfied at a point in time is recognized when control of the item or service transfers to the customer. Revenue from the direct sale of equipment to wireless subscribers or dealers is recognized when the equipment is delivered and accepted by the subscribers or dealers.

For bundled arrangements (e.g. wireless handsets, voice and data services, internet services), items are accounted for as separate performance obligations if the item meets the definition of a distinct good or service. Stand-alone selling prices are determined using observable prices adjusted for market conditions and other factors, as appropriate. The Company offers a discretionary wireless handset discount program, whereby the subscriber earns the applicable discount by maintaining services with the Company, such that the receivable relating to the discount at inception of the transaction is reduced over a period of time. This discount is allocated proportionately between the equipment and service revenues, with the equipment discount recognized when the handset is delivered and the corresponding service discount is classified as a contract asset. The contract asset is reduced on a straight-line basis over the period which the discount is forgiven to a maximum of two years with an offsetting reduction to service revenue. The Company also offers a plan allowing customers to receive a larger up-front handset discount than they would otherwise qualify for if they pay a predetermined incremental charge to their existing service plan on a monthly basis. The charge is billed on a monthly basis but is recognized as revenue when the handset is delivered and accepted by the subscriber. The amount receivable is classified as part of other current or other long-term assets, as applicable, in the consolidated statements of financial position. When wireless equipment and services are bundled with wireline services, revenue is allocated across the Company's segments based on the relative stand-alone selling prices of the goods and services delivered.

When a customer can modify their contract within predefined terms such that we are not able to enforce the transaction price agreed to, but can only contractually enforce a lower amount, we allocate revenue between performance obligations using the minimum enforceable rights and obligations and any excess amount is recognized as revenue as its earned.

(ii) Contract assets and liabilities

We record a contract asset when we have provided goods and services to our customer but our right to related consideration for the performance obligation is conditional on satisfying other performance obligations. Contract assets are transferred to trade receivables when our right to consideration becomes conditional only as to the passage of time. A contract liability is recognized when we receive consideration in advance of the transfer of products or services to the customer. We account for contract assets and liabilities on a contract-by-contract basis, with each contract presented as either a net contract asset or a net contract liability accordingly.

Subscriber connection fees received from Cable, Internet, Phone and Wireless customers are deferred as contract liabilities and recognized as revenue on a straight-line basis over two to three years. The costs of physically connecting a new home are capitalized as part of the distribution system and costs of disconnections are expensed as incurred.

Initial setup fees related to the installation of data centre services and installation revenue received on contracts with commercial business customers are deferred as contract liabilities and recognized as revenue on a straight-line basis over the related service contract, which generally span two to ten years. Direct and incremental costs associated with the installation of services or service contract, in an amount not exceeding the upfront revenue, are deferred as contract assets and recognized as an operating expense on a straight-line basis over the same period.

(iii) Deferred commission cost assets

We defer the incremental cost to obtain or fulfill a contract with a customer over their expected period of benefit to the extent they are recoverable. These costs include certain commissions paid to internal and external representatives. We defer them as deferred commission cost assets in other assets and amortize them to operating costs over the pattern of the transfer of goods and services to the customer, which is typically evenly over either 24 or 36 consecutive months.

Direct and incremental initial selling, administrative and connection costs, including commissions related to subscriber acquisitions are deferred and recognized as an operating expense on a straight-line basis over three years.

(iv) Deferred equipment revenue and deferred equipment costs

Revenue from sales of DTH equipment is deferred and recognized on a straight-line basis over three years commencing when subscriber service is activated. The total cost of the equipment, including installation, represents an inventoriable cost which is deferred and recognized on a straight-line basis over the same period. The DTH equipment is generally sold to customers at cost or a subsidized price in order to expand the Company's customer base.

Recognition of deferred equipment revenue and deferred equipment costs is recorded as deferred equipment revenue amortization and deferred equipment costs amortization, respectively.

(v) Deferred IRU revenue

Prepayments received under indefeasible right to use (IRU) agreements are amortized on a straight-line basis into income over the term of the agreement and included in amortization of property, plant and equipment, intangibles and other in the consolidated statements of income.

Cash

Cash is presented net of outstanding cheques. When the amount of outstanding cheques and the amount drawn under the Company's revolving term facility are greater than the amount of cash, the net amount is presented as bank indebtedness.

Securitization of trade receivables

Sales of trade receivables in securitization transactions are recognized as collateralized short-term borrowings as we do not transfer control and substantially all the risks and rewards of ownership to another entity and thus do not result in our de-recognition of the trade receivables sold.

Allowance for doubtful accounts

The Company maintains an allowance for doubtful accounts for the estimated expected credit losses resulting from the inability of its customers to make required payments. In determining the allowance, the Company considers factors such as the number of days the account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances.

Inventories

Inventories include subscriber equipment such as DTH receivers, which are held pending rental or sale at cost or at a subsidized price and wireless handsets, accessories and SIM cards. When subscriber DTH equipment is sold, the equipment revenue and equipment costs are deferred and amortized over three years. When the subscriber equipment is rented, it is transferred to property, plant and equipment and amortized over its useful life. Inventories are determined on a first-in, first-out basis, and are stated at cost due to the eventual capital nature as either an addition to property, plant and equipment or deferred equipment costs.

Inventories of wireless handsets, accessories and SIM cards are carried at the lower of cost and net realizable value. Cost is determined using the weighted average method and includes expenditures incurred in acquiring the inventories and bringing them to their existing condition and location. Net realizable value is the estimated selling price in the ordinary course of business, less selling expenses.

Property, plant and equipment

Property, plant and equipment are recorded at purchase cost. Direct labour and other directly attributable costs incurred to construct new assets, upgrade existing assets and connect new subscribers are capitalized as well as borrowing costs on qualifying assets. In addition, any asset removal and site restoration costs in connection with the retirement of assets are capitalized. Repairs and maintenance expenditures are charged to operating expense as incurred. Amortization is recorded on a straight-line basis over the estimated useful lives of assets as follows:

Asset	Estimated useful life
Cable, Wireless and telecommunications distribution system	3-20 years
Digital cable terminals and modems	3-5 years
Satellite audio, video and data network equipment and DTH receiving equipment	3-15 years
Buildings	15-40 years
Data processing	4-10 years
Other	4-20 years

The Company reviews the estimates of useful lives on a regular basis.

Leases

Leases are typically entered into for network infrastructure and equipment, including transponders, and land and buildings relating to the Company's wireless and wireline networks, office space and retail stores. At inception of a contract, the Company assesses whether the contract contains a lease. A lease contract conveys the right to control the use of an identified asset for a period in exchange for consideration. To assess whether a contract conveys the right to control the use of an identified asset, the Company assesses whether:

- the contract involves the use of an identified asset;
- the Company has the right to obtain substantially all of the economic benefits from use of the asset throughout the period of use; and
- the Company has the right to direct the use of the identified asset.

Lease liabilities are initially measured at the present value of future lease payments at the commencement date, discounted using the interest rate implicit in the lease or, if not readily determinable, the Company's incremental borrowing rate. A single incremental borrowing rate is applied to a portfolio of leases with similar characteristics.

Lease payments included in the measurement of the lease liability consist of:

- fixed payments, including in-substance fixed payments;
- variable lease payments that depend on an index or rate;
- amounts expected to be payable under a residual value guarantee; and
- payments relating to purchase options and renewal option periods that are reasonably certain to be exercised, or periods subject to termination options that are not reasonably certain to be exercised.

The initial lease term included in the measurement of the lease liability consists of:

- the non-cancellable period of the lease;
- periods covered by options to extend the lease, where the Company is reasonably certain to exercise the option; and
- periods covered by options to terminate the lease, where the Company is reasonably certain not to exercise the option.

Lease liabilities are subsequently measured at amortized cost. Lease liabilities are remeasured when there is a lease modification, and a corresponding adjustment is made to the carrying amount of the right-of-use asset or is recorded in profit or loss if the carrying amount of the right-of-use asset has been reduced to zero. The interest expense for lease liabilities is recorded in *Interest expense* in the Consolidated Statements of Income.

Variable lease payments that do not depend on an index or rate are not included in the measurement of lease liabilities and right-of-use assets. The related payments are expensed in *Operating, general and administrative expenses* in the period in which the event or condition that triggers those payments occurs.

Right-of-use assets are initially measured at cost, which comprises the initial amount of the lease obligation adjusted for any lease payments made at or before the commencement date, plus any initial direct costs incurred, plus an estimate of costs to dismantle and remove the underlying asset or to restore the underlying asset or the site on which it is located, less any lease incentives received. The Company presents right-of-use assets in *Property, plant and equipment.*

If the Company obtains ownership of the leased asset by the end of the lease term or the costs of the right-of-use asset reflects the exercise of a purchase option, we depreciate the right-of-use asset from the lease commencement date to the end of the useful life of the underlying asset. Otherwise, right-of-use assets are depreciated on a straight-line basis from the commencement date to the earlier of the end of the useful life or the end of the lease term. Right-of-use assets are periodically reduced by impairment losses, if any, and adjusted for certain remeasurements on the related lease liability. The depreciation charge for right-of-use assets is recorded in *Amortization – Property, plant and equipment*.

Other long-term assets

Other long-term assets primarily include (i) equipment costs, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over three to five years, (ii) the non-current portion of wireless handset discounts receivable as described in the revenue and expenses accounting policy, (iii) credit facility arrangement fees amortized on a straight-line basis over the term of the facility, (iv) long-term receivables, (v) network capacity leases, (vi) the non-current portion of prepaid maintenance and support contracts, and (vii) direct costs in connection with initial setup fees and installation of services, as described in the revenue and expenses accounting policy, deferred and amortized on a straight-line basis over two to ten years.

Intangibles

The excess of the cost of acquiring cable, satellite, media, data centre and wireless businesses over the fair value of related net identifiable tangible and intangible assets acquired is allocated to goodwill. Net identifiable intangible assets acquired consist of amounts allocated to broadcast rights and licences, wireless spectrum licences, trademarks, brands, program rights, customer relationships and software assets. Broadcast rights and licences, wireless spectrum licences, trademarks and brands represent identifiable assets with indefinite useful lives.

Customer relationships represent the value of customer contracts and relationships acquired in a business combination and are amortized on a straight-line basis over their estimated useful lives ranging from 4 – 15 years.

Software that is not an integral part of the related hardware is classified as an intangible asset. Internally developed software assets are recorded at historical cost and include direct material and labour costs as well as borrowing costs on qualifying assets. Software assets are amortized on a straight-line basis over estimated useful lives ranging from 3 – 10 years. The Company reviews the estimates of lives and useful lives on a regular basis.

Borrowing costs

The Company capitalizes borrowing costs on qualifying assets that take more than one year to construct or develop using the Company's weighted average cost of borrowing which approximated 5% (2020 – 5%).

Impairment

(i) Goodwill and indefinite-life intangibles

The Company tests goodwill and indefinite-life intangibles for impairment annually (as at February 1) and when events or changes in circumstances indicate that the carrying value may be impaired. The recoverable amount of each cash-generating unit (CGU) is determined based on the higher of the CGU's fair value less costs to sell (FVLCS) and its value in use (VIU). A CGU is the smallest identifiable group of assets that generate cash flows that are independent of the cash inflows from other assets or groups of assets. The Company's cash generating units are Cable, Satellite, and Wireless. Where the recoverable amount of the CGU is less than its carrying amount, an impairment loss is recognized. Impairment losses relating to goodwill cannot be reversed in future periods.

(ii) Non-financial assets with finite useful lives

For non-financial assets, such as property, plant and equipment and finite-life intangible assets, an assessment is made at each reporting date as to whether there is an indication that an asset may be impaired. If any indication exists, the recoverable amount of the asset is determined based on the higher of FVLCS and VIU. Where the carrying amount of the asset exceeds its recoverable amount, the asset is considered impaired and written down to its recoverable amount. Previously recognized impairment losses are reviewed for possible reversal at each reporting date and all or a portion of the impairment is reversed if the asset's value has increased.

Provisions

Provisions are recognized when the Company has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. The timing or amount of the outflow may still be uncertain. Provisions are measured using the best estimate of the expenditure required to settle the present obligation at the end of the reporting period, taking into account risks and uncertainties associated with the obligation. Provisions are discounted where the time value of money is considered material.

(i) Asset retirement obligations

The Company recognizes the fair value of a liability for an asset retirement obligation in the period in which it is incurred, on a discounted basis, with a corresponding increase to the carrying amount of property and equipment, primarily in respect of wireless and transmitter sites. This cost is amortized on the same basis as the related asset. The liability is subsequently increased for the passage of time and the accretion is recorded in the income statement as accretion of long-term liabilities and provisions. The discount rates applied are subsequently adjusted to current rates as required at the end of reporting periods. Revisions due to the estimated timing of cash flows or the amount required to settle the obligation may result in an increase or decrease in the liability. Actual costs incurred upon settlement of the obligation are charged against the liability to the extent recorded.

(ii) Restructuring provisions

Restructuring provisions, primarily in respect of employee termination benefits, are recognized when a detailed plan for the restructuring exists and a valid expectation has been raised to those affected that the plan will be carried out.

(iii) Other provisions

Provisions for disputes, legal claims and contingencies are recognized when an outflow to settle the matter is probable. The Company establishes provisions after taking into consideration legal assessments (if applicable), expected availability of insurance or other recourse and other available information.

Deferred credits

Deferred credits primarily include: (i) prepayments received under IRU agreements amortized on a straight-line basis into income over the term of the agreement, (ii) equipment revenue, as described in the revenue and expenses accounting policy, deferred and amortized over three to five years, and (iii) a deposit on a future fibre sale.

Income taxes

The Company accounts for income taxes using the liability method, whereby deferred income tax assets and liabilities are determined based on differences between the financial reporting and tax bases of assets and liabilities measured using substantively enacted tax rates and laws that will be in effect when the differences are expected to reverse. Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset and they relate to income taxes levied by the same authority in the same taxable entity. Income tax expense for the period is the tax payable for the period using tax rates substantively enacted at the reporting date, any adjustments to taxes payable in respect of previous years and any change during the period in deferred income tax assets and liabilities, except to the extent that they relate to a business combination or divestment, items recognized directly in equity or in other comprehensive income. The Company records interest and penalties related to income taxes in interest expense.

Tax credits and government grants

The Company receives tax credits primarily related to its research and development activities. Government financial assistance is recognized when management has reasonable assurance that the conditions of the government programs are met and accounted for as a reduction of related costs, whether capitalized and amortized or expensed in the period the costs are incurred.

Foreign currency translation

Transactions originating in foreign currencies are translated into Canadian dollars at the exchange rate at the date of the transaction. Monetary assets and liabilities are translated at the period-end rate of exchange and non-monetary items are translated at historic exchange rates. The net foreign exchange gain (loss) recognized on the translation and settlement of current monetary assets and liabilities was $12 (2020 – $5) and is included in other gains (losses).

Financial instruments other than derivatives

Financial instruments have been classified and measured at amortized cost, fair value through other comprehensive income (FVOCI) or fair value through profit or loss (FVTPL). Cash and financial instruments have been classified as FVTPL and are recorded at fair value with any change in fair value immediately recognized in income (loss). Investments in equity securities are classified and measured at FVTPL. Loans and receivables and financial liabilities are carried at amortized cost. None of the Company's financial liabilities are classified as FVTPL.

Finance costs and discounts associated with the issuance of debt securities are netted against the related debt instrument and amortized to income using the effective interest rate method. Accordingly, long-term debt accretes over time to the principal amount that will be owing at maturity.

Derivative financial instruments and hedging activities

The Company uses derivative financial instruments, such as foreign currency forward purchase contracts, to manage risks from fluctuations in foreign exchange rates. All derivative financial instruments are recorded at fair value in the consolidated statements of financial position. The Company may elect to apply hedge accounting to certain derivative instruments. With hedge accounting, changes in the fair value of derivative financial instruments designated as cash flow hedges are recorded in other comprehensive income (loss) until the variability of cash flows relating to the hedged asset or liability is recognized in income (loss). When an anticipated transaction is subsequently recorded as a non-financial asset, the amounts recognized in other comprehensive income (loss) are reclassified to the initial carrying amount of the related asset. Where hedge accounting is not permissible or derivatives are not designated in a hedging relationship, they are classified as held-for-trading and the changes in fair value are immediately recognized in income (loss).

Instruments that have been entered into by the Company to hedge exposure to foreign currency risk are reviewed on a regular basis to ensure the hedges are still effective and that hedge accounting continues to be appropriate.

Fair value measurements

Fair value estimates are made at a specific point in time, based on relevant market information and information about the underlying asset or liability. These estimates are subjective in nature and involve uncertainties and matters of significant judgment and, therefore, cannot be determined with precision. Changes in assumptions could significantly affect the estimates.

The fair value hierarchy is based on inputs to valuation techniques that are used to measure fair value that are either observable or unobservable. Observable inputs reflect assumptions market participants would use in pricing an asset or liability based on market data obtained from independent sources while unobservable inputs reflect a reporting entity's pricing based upon their own market assumptions.

The fair value hierarchy consists of the following three levels:

Level 1 Inputs are quoted prices in active markets for identical assets or liabilities.

Level 2 Inputs for the asset or liability are based on observable market data, either directly or indirectly, other than quoted prices.

Level 3 Inputs for the asset or liability are not based on observable market data.

The Company determines whether transfers have occurred between levels in the fair value hierarchy by assessing the impact of events and changes in circumstances that could result in a transfer at the end of each reporting period.

Employee benefits

The Company accrues its obligations under its employee benefit plans, net of plan assets. The cost of pensions and other retirement benefits earned by certain employees is actuarially determined using the projected benefit method pro-rated on service and management's best estimate of salary escalation and retirement ages of employees. Past service costs from plan initiation and amendments are recognized immediately in the income statement. Remeasurements include actuarial gains or losses and the return on plan assets (excluding interest income). Actuarial gains and losses occur because assumptions about benefit plans relate to a long time frame and differ from actual experiences. These assumptions are revised based on actual experience of the plans such as changes in discount rates, expected retirement ages and projected salary increases. Remeasurements are recognized in other comprehensive income (loss) on an annual basis, at a minimum, and on an interim basis when there are significant changes in assumptions.

August 31 is the measurement date for the Company's employee benefit plans. The last actuarial valuations for funding purposes for the various plans were performed effective August 31, 2021 and the next actuarial valuations for funding purposes are effective August 31, 2022.

Share-based compensation

The Company has a stock option plan for directors, officers, employees, and consultants to the Company. The exercise price of options to purchase Class B Shares is determined by the Board, or a committee thereof, at a price not less than the closing price of the Class B Shares on the TSX on the trading day immediately preceding the date on which the options are granted. Any consideration paid on the exercise of stock options, together with any contributed surplus recorded at the date the options vested, is credited to share capital. The Company calculates the fair value of share-based compensation awarded to employees using the Black-Scholes option pricing model. The fair value of options are expensed and credited to contributed surplus over the vesting period of the options using the graded vesting method.

The Company has a restricted share unit (RSU) and performance share unit (PSU) plan which provides that RSUs may be granted to officers, employees and directors of the Company, and PSUs may be granted to officers and employees of the Company. RSUs vest on either the first, second and third anniversary of the grant date or 100% on the third anniversary of the grant date and compensation is recognized on a straight-line basis over the three-year vesting period. PSUs vest 100% on the third anniversary of the grant date. RSUs and PSUs will be settled in either cash or Class B Shares as determined by the Human Resources and Compensation Committee at the time of the grant and the obligation for RSUs and PSUs is measured at the end of each period at fair value using the Black-Scholes option pricing model and the number of outstanding RSUs and PSUs. For PSUs, the performance criteria is set by the by the Human Resources and Compensation Committee at the time of the grant, and typically requires the achievement of a minimum level of performance, otherwise the payout is zero, while maximum performance is capped at 150%. On settlement of vested PSUs, the number of Class B Shares issued or delivered, or the amount of cash payment will be multiplied by the applicable performance factor.

The Company has a deferred share unit (DSU) plan for its Board of Directors. Compensation cost is recognized immediately as DSUs vest when granted. DSUs will be settled in cash and the obligation is measured at the end of each period at fair value using the Black-Scholes option pricing model and the number of outstanding DSUs.

Directors may elect to receive their compensation in cash, RSUs, DSUs, or a combination thereof. Any director who has not met their share ownership guidelines is generally required to elect to receive at least 50% of their annual compensation in DSUs and/or RSUs.

The Company has an employee share purchase plan (the “ESPP”) under which eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the participant’s contributions, increasing to 33% once an employee reaches 10 years of continuous service, and records such amounts as compensation expense.

Earnings per share

Basic earnings per share is based on net income attributable to equity shareholders adjusted for dividends on preferred shares and is calculated using the weighted average number of Class A Shares and Class B Shares outstanding during the period. Diluted earnings per share is calculated by considering the effect of all potentially dilutive instruments. In calculating diluted earnings per share, any proceeds from the exercise of stock options and other dilutive instruments are assumed to be used to purchase Class B Shares at the average market price during the period.

Guarantees

The Company discloses information about certain types of guarantees that it has provided, including certain types of indemnities, without regard to whether it will have to make any payments under the guarantees.

Estimation uncertainty and critical judgments

The preparation of consolidated financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the period. Actual results could differ from those estimates and significant changes in assumptions could cause an impairment in assets. The following require the most difficult, complex or subjective judgments which result from the need to make estimates about the effects of matters that are inherently uncertain.

Estimation uncertainty

The following are key assumptions concerning the future and other key sources of estimation uncertainty that could impact the carrying amount of assets and liabilities and results of operations in future periods.

(i) Allowance for doubtful accounts

The Company is required to make an estimate of expected credit losses on its receivables. The estimated allowance required is a matter of judgment and the actual loss eventually sustained may be more or less than the estimate, depending on events which have yet to occur and which cannot be foretold, such as future business, personal and economic conditions.

(ii) Contractual service revenue

The Company is required to make judgments and estimates that affect the amount and timing of revenue from contracts with customers, including estimates of the stand-alone selling prices of wireline and wireless products and services, the identification of performance obligations within a contract and the timing of satisfaction of performance obligations under long-term contracts.

Determining the deferral criteria for the costs incurred to obtain or fulfill a contract requires us to make significant judgments. We expect incremental commission fees paid to internal and external representatives as a result of obtaining contracts with customers to be recoverable.

(iii) Property, plant and equipment

The Company is required to estimate the expected useful lives of its property, plant and equipment. These estimates of useful lives involve significant judgment. In determining these estimates, the Company takes into account industry trends and company-specific factors, including changing technologies and expectations for the in-service period of these assets. Management's judgment is also required in determination of the amortization method, the residual value of assets and the capitalization of labour and overhead.

(iv) Leases

The application of IFRS 16 requires the Company to make judgments that affect the valuation of the lease liabilities and the valuation of right-of-use assets. These include determining whether a contract contains a lease, determining the contract term, including whether or not to exercise renewal or termination options, and determining the interest rate used for discounting future cash flows.

(v) Business combinations – purchase price allocation

Purchase price allocations involve uncertainty because management is required to make assumptions and judgments to estimate the fair value of the identifiable assets acquired and liabilities assumed in business combinations. Fair value estimates are based on quoted market prices and widely accepted valuation techniques, including discounted cash flow (DCF) analysis. Such estimates include assumptions about inputs to the valuation techniques, industry economic factors and business strategies.

(vi) Impairment

The Company estimates the recoverable amount of its CGUs using a FVLCS calculation based on a DCF analysis or market approach or a VIU calculation based on a DCF analysis. Where a DCF analysis is used, significant judgments are inherent in this analysis including estimating the amount and timing of the cash flows attributable to the broadcast rights and licences, the selection of an appropriate discount rate, and the identification of appropriate terminal growth rate assumptions. In this analysis, the Company estimates the discrete future cash flows associated with the intangible asset for five years and determines a terminal value. The future cash flows are based on the Company's estimates of future operating results, economic conditions and the competitive environment. The terminal value is estimated using both a perpetuity growth assumption and a multiple of operating income before restructuring costs and amortization. The discount rates used in the analysis are based on the Company's weighted average cost of capital and an assessment of the risk inherent in the projected cash flows. In analyzing the FVLCS determined by a DCF analysis, the Company also considers a market approach determining a recoverable amount for each unit and total entity value determined using a market capitalization approach. Recent market transactions are taken into account, when available. The key assumptions used to determine the recoverable amounts, including a sensitivity analysis, are included in Note 9. A DCF analysis uses significant unobservable inputs and is therefore considered a level 3 fair value measurement.

(vii) Employee benefit plans

The amounts reported in the financial statements relating to the defined benefit pension plans are determined using actuarial valuations that are based on several assumptions including the discount rate and rate of compensation increase. While the Company believes these assumptions are reasonable, differences in actual results or changes in assumptions could affect employee benefit obligations and the related income statement impact. The most significant assumption used to calculate the net employee benefit plan expense is the discount rate. The discount rate is the interest rate used to determine the present value of the future cash flows that is expected will be needed to settle employee benefit obligations. It is based on the yield of long-term, high-quality corporate fixed income investments closely matching the term of the estimated future cash flows and is reviewed and adjusted as changes are required.

(viii) Income taxes

The Company is required to estimate income taxes using substantively enacted tax rates and laws in effect or that will be in effect when the temporary differences are expected to reverse. In determining the measurement of tax uncertainties, the Company recognizes an income tax benefit only when it is probable that the tax benefit will be realized. Realization of deferred income tax assets is dependent on generating sufficient taxable income during the period in which the temporary differences are deductible. Although realization is not assured, management believes it is more likely than not that all recognized deferred income tax assets will be realized based on reversals of deferred income tax liabilities, projected operating results and tax planning strategies available to the Company and its subsidiaries.

(ix) Contingencies

The Company is subject to various claims and contingencies related to lawsuits, taxes and commitments under regulatory, contractual and other commercial obligations. Contingent losses are recognized by a charge to income when it is likely that a future event will confirm that an asset has been impaired or a liability incurred at the date of the financial statements and the amount can be reasonably estimated. Significant changes in assumptions as to the likelihood and estimates of the amount of a loss could result in recognition of additional liabilities.

Critical judgements

The following are critical judgements apart from those involving estimation:

(i) Determination of a CGU

Management's judgment is required in determining the Company's cash generating units (CGU) for the impairment assessment of its indefinite-life intangible assets. The CGUs have been determined considering operating activities and asset management and are Cable, Satellite, and Wireless.

(ii) Broadcast rights and licences and spectrum licences – indefinite-life assessment

A number of the Company's businesses are dependent upon broadcast licences (or operate pursuant to an exemption order) granted and issued by the CRTC or wireless spectrum licences issued by Innovation, Science and Economic Development Canada (ISED). While these licences must be renewed from time to time, the Company has never failed to do so. In addition, there are currently no legal, regulatory or competitive factors that limit the useful lives of these assets.

Standards, interpretations and amendments to standards issued but not yet effective

The Company has not yet adopted certain standards and interpretations that have been issued but are not yet effective. The following pronouncements are being assessed to determine the impact on the Company's results and financial position but the impacts are not expected to be material:

- *Proceeds before Intended Use* (Amendments to IAS 16, *Property, Plant and Equipment*) was amended to prohibit deducting from the cost of an item of property, plant and equipment any proceeds from selling items produced while bringing the asset to capable operations. These amendments are required to be applied for annual periods commencing on or after January 1, 2022, however earlier application is permitted.

- *Onerous Contracts – Costs of Fulfilling a Contract* (Amendments to IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*) was amended to clarify which costs should be included in determining the cost of fulfilling a potential onerous contract. These amendments are required to be applied for annual periods commencing on or after January 1, 2022, however earlier application is permitted.

- *Classification of Liabilities as Current or Non-Current* (Amendments to IAS 1, *Presentation of Financial Statements*) was amended to clarify that the classification of liabilities as current or non-current is based on rights that are in existence at the end of the reporting period and specifies that classification is unaffected by expectations about whether an entity will exercise its right to defer settlement of a liability. The amendments are effective January 1, 2023 with early application permitted. The amendments are required to be adopted retrospectively.

3. ACCOUNTS RECEIVABLE

	2021 $	2020 $
Subscriber and trade receivables	**362**	326
Due from related parties (note 29)	**–**	1
Miscellaneous receivables	**17**	15
	379	342
Less allowance for doubtful accounts (note 30)	**(78)**	(74)
	301	268

Included in operating, general and administrative expenses is a provision for doubtful accounts of $25 (2020 – $60).

4. INVENTORIES

	2021 $	2020 $
Wireless devices and accessories	**33**	40
DTH subscriber equipment	**23**	20
Other – built to suit	**7**	–
	63	60

5. OTHER CURRENT ASSETS

	2021 $	2020 $
Prepaid expenses	**103**	89
Costs incurred to obtain or fulfill a contract with a customer	**59**	61
Wireless handset receivables	**168**	127
Current portion of derivatives	**1**	–
	331	277

6. INVESTMENTS AND OTHER ASSETS

	2021 $	2020 $
Investments in private entities	**70**	42

The Company has a portfolio of minor investments in various private entities. During fiscal 2021, the Company recorded a net fair value adjustment of $27 relating to these investments. This gain is included in other gains (losses) on the Consolidated Statements of Income for the year ended August 31, 2021.

7. PROPERTY, PLANT AND EQUIPMENT

	August 31, 2021			August 31, 2020		
	Cost $	Accumulated amortization $	Net book value $	Cost $	Accumulated amortization $	Net book value $
Cable and telecommunications distribution system	**7,475**	**3,957**	**3,518**	7,189	3,699	3,490
Digital cable terminals and modems	**853**	**541**	**312**	937	579	358
Satellite audio, video and data network and DTH receiving equipment	**106**	**66**	**40**	114	68	46

Assets under construction	461	257	(298)	–	–	420
	4,883	939	(4)	(909)	(13)	4,896

In 2021, the Company recognized a net gain of $3 (2020 – net loss of $3) on the disposal of property, plant and equipment.

8. OTHER LONG-TERM ASSETS

	2021 $	2020 $
Equipment costs subject to a deferred revenue arrangement	**49**	67
Long-term Wireless handset receivables	**45**	35
Costs incurred to obtain or fulfill a contract with a customer	**33**	37
Credit facility arrangement fees	**3**	4
Other	**33**	20
	163	163

Amortization provided in the accounts for 2021 amounted to $47 (2020 – $65) and was recorded as amortization of deferred equipment costs.

9. INTANGIBLES AND GOODWILL

	2021 $	2020 $
Broadcast rights and licences		
Cable systems	**4,016**	4,016
DTH and satellite services	**1,013**	1,013
	5,029	5,029
Wireless spectrum licences	**2,445**	2,445
Other intangibles		
Software	**483**	479
Customer relationships	**39**	44
	7,996	7,997
Goodwill		
Cable and telecommunications systems	**79**	79
Wireless	**201**	201
	280	280
Net book value	**8,276**	8,277

Broadcast rights and licences, trademark, brands and wireless spectrum licences have been assessed as having indefinite useful lives. While licences must be renewed from time to time, the Company has never failed to do so. In addition, there are currently no legal, regulatory, competitive or other factors that limit the useful lives of these assets.

The changes in the carrying amount of intangibles with indefinite useful lives, and therefore not subject to amortization, are as follows:

	Broadcast rights and licences $	Goodwill $	Wireless spectrum licences $
September 1, 2019	5,029	280	2,445
Additions	–	–	–
Disposition	–	–	–
August 31, 2020	**5,029**	**280**	**2,445**
Additions	**–**	**–**	**–**
Disposition	**–**	**–**	**–**
August 31, 2021	**5,029**	**280**	**2,445**

Intangibles subject to amortization are as follows:

	August 31, 2021			August 31, 2020		
	Cost	Accumulated amortization	Net book value	Cost	Accumulated amortization	Net book value
Software	**897**	**416**	**481**	806	335	471
Software under construction	**2**	**–**	**2**	8	–	8
Customer relationships	**114**	**75**	**39**	114	70	44
	1,013	**491**	**522**	928	405	523

The changes in the carrying amount of intangibles subject to amortization are as follows:

	Software $	Software under construction $	Customer relationships $	Total $
September 1, 2019	440	11	54	505
Additions	144	–	–	144
Transfers	7	(3)	–	4
Dispositions	–	–	–	–

August 31, 2020	**471**	**8**	**44**	**523**
Additions	**138**	**–**	**–**	**138**
Transfers	**8**	**(6)**	**–**	**2**
Dispositions	**–**	**–**	**–**	**–**
Amortization	**(136)**	**–**	**(5)**	**(141)**
August 31, 2021	**481**	**2**	**39**	**522**

Impairment testing of indefinite-life intangibles and goodwill

The Company conducted its annual impairment test on goodwill and indefinite-life intangibles as at February 1, 2021 and the recoverable amount of the CGUs exceeded their carrying value.

A hypothetical decline of 10% in the recoverable amount of the broadcast rights and licences for the Cable cash generating unit as at February 1, 2021 would not result in any impairment loss. A hypothetical decline of 10% in the recoverable amount of the broadcast rights and licences for the Satellite cash generating unit as at February 1, 2021 would not result in an impairment loss. A hypothetical decline of 10% in the recoverable amount of the Wireless generating unit as at February 1, 2021 would not result in any impairment loss.

Any changes in economic conditions since the impairment testing conducted as at February 1, 2021 do not represent events or changes in circumstance that would be indicative of impairment at August 31, 2021.

Significant estimates inherent to this analysis include discount rates and the terminal value. At February 1, 2021, the estimates that have been utilized in the impairment tests reflect any changes in market conditions and are as follows:

		Terminal value	
	Post-tax discount rate	Terminal growth rate	Terminal operating income before restructuring costs and amortization multiple
Cable	5.0%	0.0%	9.7x
Satellite	6.0%	-8.0%	6.5x
Wireless	6.0%	1.0%	6.1x

A sensitivity analysis of significant estimates is conducted as part of every impairment test. With respect to the impairment tests performed in the second quarter, the estimated decline in recoverable amount for the sensitivity of significant estimates is as follows:

	Estimated decline in recoverable amount		
		Terminal value	
	1% increase in discount rate	1% decrease in terminal growth rate	0.5 times decrease in terminal operating income before restructuring costs and amortization multiple
Cable	16.4%	13.8%	1.9%
Satellite	6.5%	4.2%	3.6%
Wireless	21.9%	13.5%	2.1%

10. SHORT-TERM BORROWINGS

The Company has an accounts receivable securitization program with a Canadian financial institution which will allow it to sell certain trade receivables into the program up to a maximum of $200. The term of this program extends to May 29, 2022. The Company continues to service and retain substantially all of the risks and rewards relating to the trade receivables sold, and therefore, the trade receivables are recognized on the Company's Consolidated Statements of Financial Position and the funding received is recorded as a current liability (revolving floating rate loans) secured by the trade receivables. The buyer's interest in the accounts receivable ranks ahead of the Company's interest and the program restricts it from using the trade receivables as collateral for any other purpose. The buyer of the trade receivables has no claim on any of the Company's other assets.

A summary of our accounts receivable securitization program as at August 31, 2021 is as follows:

	2021 $	2020 $
Accounts receivable securitization program, beginning of period	**200**	40
Proceeds received from accounts receivable securitization	**–**	160
Repayment of accounts receivable securitization	**–**	–
Accounts receivable securitization program, end of period	**200**	200

	2021 $	2020 $
Trade accounts receivable sold to buyer as security	**416**	446
Short-term borrowings from buyer	**(200)**	(200)
Overcollateralization	**216**	246

11. ACCOUNTS PAYABLE AND ACCRUED LIABILITIES

	2021 $	2020 $
Trade	**112**	82
Program rights	**4**	4
Accrued liabilities	**521**	541
Accrued network fees	**117**	129

(1) During fiscal 2018 the Company offered a voluntary departure program to a group of eligible employees as part of a total business transformation initiative and in fiscal 2020 restructured certain operations within the Wireline segment and announced a realignment of the senior leadership team. A total of $12 has been paid in fiscal 2021 relating to these initiatives. The remaining $1 costs of are expected to be paid out within the next 5 months.

(2) During fiscal 2021, the Company made a number of changes to its organizational structure in an effort to streamline the business, consolidate certain functions, and reduce redundancies between the Wireless and Wireline segments. In connection with the restructuring, the Company recorded $1 in the third quarter, $1 in the second quarter and $12 in the first quarter primarily related to severance and employee related costs, of which $13 has been paid as at August 31, 2021. The remaining $1 costs are expected to be paid within the next 5 months.

(3) During the third quarter of fiscal 2021, the Company recorded a $20 reversal following the CRTC decision on final aggregated Third Party Internet Access rates and a $35 reduction of the interest expense provision.

Corporate

Bank loans

The Company has an unsecured $1.5 billion bank credit facility, which includes a maximum revolving term or swingline facility of $50, with a syndicate of banks which matures in December 2024. The facility can be used for working capital and general corporate purposes.

The terms of the Arrangement Agreement require that the Company maintain sufficient liquidity to pay an $800 million termination fee payable by Shaw in certain circumstances.

Funds are available to the Company in both Canadian and US dollars. At August 31, 2021, $4 (2020 – $3) has been drawn as committed letters of credit against the revolving term facility. Interest rates fluctuate with Canadian prime and bankers' acceptance rates, US bank base rates and LIBOR rates. Excluding the revolving term facility, the effective interest rate on actual borrowings under the credit facility during 2021 was nil (2020 – 2.81%). The effective interest rate on the revolving term facility for 2021 was 3.62% (2020 – 4.05%).

Senior notes

The senior notes are unsecured obligations and rank equally and rateably with all existing and future senior indebtedness. The fixed rate notes are redeemable at the Company's option at any time, in whole or in part, prior to maturity at 100% of the principal amount plus a make-whole premium.

Other

Burrard Landing Lot 2 Holdings Partnership

The Company has a 33.33% interest in the Partnership which built the Shaw Tower project with office/retail space and living/working space in Vancouver, BC. In the fall of 2004, the commercial construction of the building was completed and in February 2014, the Partnership refinanced its debt. The Partnership received a mortgage loan and used the proceeds to prepay the outstanding balance of the previous mortgage and loan excess funds to each of its partners. The mortgage loan matures on November 1, 2024 and bears interest at 4.683% compounded semi-annually with interest only payable for the first five years. Interest and principal payments commenced on April 1, 2019. The mortgage loan is collateralized by the property and the commercial rental income from the building with no recourse to the Company.

In February 2018, the Partnership received an additional mortgage loan of $30 and used the proceeds to loan excess funds to each of its partners, of which the Company received $10. The additional loan matures on November 1, 2024 and bears interest at 4.14% compounded semi-annually. Monthly mortgage payments consist of both principal and interest components.

Debt covenants

The Company and its subsidiaries have undertaken to maintain certain covenants in respect of the credit agreements and trust indentures described above. The Company and its subsidiaries were in compliance with these covenants at August 31, 2021.

Long-term debt repayments

Mandatory principal repayments on all long-term debt in each of the next five years and thereafter are as follows:

	$
2022	1
2023	1
2024	1,001
2025	44
2026	–
Thereafter	3,550
	4,597

Interest expense

	2021 $	2020 $
Interest expense – long-term debt	**223**	224

Current	**110**
Long-term	**1,135**
Balance as at August 31, 2021	**1,245**

Lease liabilities are subject to amortization schedules, which results in the principal being repaid over various periods, including reasonably expected renewals. The weighted average interest rate on lease liabilities was approximately 3.55% as at August 31, 2021. Refer to Note 30 for a maturity analysis of the Company's lease liabilities.

The Company leases Ku-band and C-band transponders on the Anik F1R, Anik F2 and Anik G1 satellites. As part of the Ku-band transponder agreements with Telesat Canada, the Company is committed to paying annual transponder maintenance and licence fees for each transponder from the time the satellite becomes operational for a period of 15 years. As at August 31, 2021, the Company has recorded lease liabilities of $246 relating to these transponders.

Below is a summary of the Company's other expenses related to leases included in operating, general and administrative expenses.

	2021 $	2020 $
Expenses related to variable lease components not included in lease liabilities	**20**	20
Expenses related to low-value leases	**33**	32
	53	52

15. OTHER LONG-TERM LIABILITIES

	2021 $	2020 $
Pension liabilities (note 28)	**21**	68

IRU prepayments	**374**	387
Equipment revenue	**13**	17
Deposit on future fibre sale	**2**	2
	389	406

Amortization of deferred credits for 2021 amounted to $25 (2020 – $29) and was recorded in the accounts as described below.

IRU agreements are in place for periods ranging from 21 to 60 years and are being amortized to income over the agreement periods. Amortization in respect of the IRU agreements for 2021 amounted to $13 (2020 – $13) and was recorded as other amortization. Amortization of equipment revenue for 2021 amounted to $11 (2020 – $16).

17. SHARE CAPITAL

Authorized

The Company is authorized to issue a limited number of Class A Shares of no par value, as described below; an unlimited number of Class B Shares of no par value; an unlimited number of Class 1 Preferred Shares issuable in series; and an unlimited number of Class 2 Preferred Shares issuable in series, of which 12,000,000 were designated Cumulative Redeemable Rate Reset Class 2 Preferred Shares, Series A ("Series A Shares") and 12,000,000 were designated Cumulative Redeemable Floating Rate Class 2 Preferred Shares, Series B ("Series B Shares").

The authorized number of Class A Shares is limited, subject to certain exceptions, to the lesser of that number of shares (i) currently issued and outstanding and (ii) that may be outstanding after any conversion of Class A Shares into Class B Shares.

498,909,326	525,004,897		**4,199**	4,602

Class A Shares and Class B Shares

Class A Shares are convertible at any time into an equivalent number of Class B Shares. In the event that a take-over bid is made for Class A Shares, in certain circumstances, the Class B Shares are convertible into an equivalent number of Class A Shares.

Changes in Class A Share capital and Class B Share capital in 2021 and 2020 are as follows:

	Class A Shares		Class B Shares	
	Number	$	Number	$
September 1, 2019	22,372,064	2	494,389,771	4,310

August 31, 2021	**22,372,064**	**2**	**476,537,262**	**4,197**

Series A and B Shares

The Series A Shares and Series B Shares represented series of Class 2 Preferred Shares that were classified as equity since redemption, at $25.00 per Series A Share and Series B Share, was at the Company's option and payment of dividends was at the Company's discretion.

On June 30, 2021 (the "Redemption Date"), the Company redeemed all of its issued and outstanding Preferred Shares in accordance with their terms (as set out in the Company's articles) at a price equal to $25.00 per Preferred Share (the "Redemption Price"), less any tax required to be deducted or withheld.

On the Redemption Date, there were 10,012,393 Series A Shares and 1,987,607 Series B Shares issued and outstanding. Accordingly, the aggregate Redemption Price paid by Shaw on the Redemption Date to redeem the Preferred Shares was $300.

Share transfer restriction

The Articles of the Company empower the directors to refuse to issue or transfer any share of the Company that would jeopardize or adversely affect the right of Shaw Communications Inc. or any subsidiary to obtain, maintain, amend or renew a licence to operate a broadcasting undertaking pursuant to the Broadcasting Act (Canada).

Normal Course Issuer Bid

On November 2, 2020, the Company announced that it had received approval from the TSX to establish a normal course issuer bid (NCIB) program. The program commenced on November 5, 2020 and will remain in effect until November 4, 2021. As approved by the TSX, the Company has the ability to purchase for cancellation up to 24,532,404 Class B Shares representing approximately 5% of all of the issued and outstanding Class B Shares as at October 22, 2020.

During the year ended August 31, 2021, the Company purchased 14,783,974 Class B Shares for cancellation for a total cost of approximately $336 under the NCIB program. The average book value of the shares repurchased was $8.77 per share and was charged to share capital. The excess of the market price over the average book value, including transaction costs, was approximately $207 and was charged to retained earnings.

In connection with the announcement of the Transaction on March 15, 2021 (as discussed in more detail in Note 1), the Company suspended share buybacks under its NCIB program.

Dividend Reinvestment Plan

On October 24, 2019, in accordance with the terms of our Dividend Reinvestment Plan (DRIP), the Company announced that in lieu of issuing shares from treasury, it will satisfy its share delivery obligations under the DRIP by purchasing Class B Shares on the open market. In addition, the Company reduced its discount from 2% to 0% for the Class B Shares delivered under the DRIP. These changes to the DRIP were applied to the dividends payable on November 28, 2019 to shareholders of record on November 15, 2019 and all other dividends payable thereafter.

18. SHARE-BASED COMPENSATION AND AWARDS

Stock option plan

Under the Company's stock option plan, directors, officers, employees, and consultants are eligible to receive stock options to acquire Class B Shares with terms not to exceed ten years from the date of grant and for such number of Class B Shares as the Board, or a committee thereof, determines in its discretion. An option is not immediately exercisable, but rather is exercisable on vesting dates determined by the Board from time to time. The Company's current practice is to award options for terms of ten years with 20% of the options in a grant vesting on each of the first through fifth anniversaries of the grant date. The Board, or a committee thereof, may grant options at an exercise price not less than the closing price of the Class B Shares on the TSX on the trading day immediately preceding the date on which the options are granted. The maximum number of Class B Shares issuable under the plan may not exceed 62,000,000. As at August 31, 2021, 40,319,392 Class B Shares have been issued under the plan.

The changes in options are as follows:

	2021		2020	
	Number	Weighted average exercise price $	Number	Weighted average exercise price $
Outstanding, beginning of year	**7,358,130**	**26.36**	8,363,031	26.11
Granted	**1,423,000**	**21.82**	84,000	26.88
Forfeited	**(599,260)**	**26.33**	(681,168)	26.65
Exercised[(1)]	**(681,980)**	**25.84**	(407,733)	21.57
Outstanding, end of year	**7,499,890**	**25.56**	7,358,130	26.36

(1) The weighted average Class B Share price for the options exercised for the year ended August 31, 2021 was $33.67 (2020 – $25.60).

The following table summarizes information about the options outstanding at August 31, 2021:

	Options outstanding			Options exerciseable	
Range of prices	Number outstanding	Weighted average remaining contractual life	Weighted average exercise price	Number exercisable	Weighted average exercise price
$19.75 to $22.76	1,485,575	8.79	21.80	67,575	21.28
$22.77 to $26.17	1,501,060	4.34	24.42	1,352,360	24.33
$26.18 to $26.32	1,540,595	6.10	26.28	971,695	26.27
$26.33 to $27.55	1,505,605	5.62	27.05	1,022,705	27.12
$27.56 to $30.87	1,467,055	5.46	28.27	1,134,755	28.33

The weighted average estimated fair value at the date of the grant for common share options granted for the year ended August 31, 2021 was $1.42 (2020 – $1.83) per option. The fair value of each option granted was estimated on the date of the grant using the Black-Scholes option pricing model with the following weighted-average assumptions:

	2021	2020
Dividend yield	**5.43%**	4.41%
Risk-free interest rate	**0.50%**	1.45%
Expected life of options	**7 years**	7 years
Expected volatility factor of the future expected market price of Class B Shares	**20.00%**	15.90%

Expected volatility has been estimated based on the historical share price volatility of the Company's Class B Shares.

Restricted share unit plan and Performance share unit plan

The Company has an RSU/PSU plan which provides that RSUs may be granted to directors, officers and employees of the Company and PSUs may be granted to officers and employees of the Company. Vested RSUs and PSUs will be settled in either cash or Class B Shares as determined by the Human Resources and Compensation Committee at the time of the grant. The cash payout will be based on the market value of a Class B Share at the time of the payout. When cash dividends are paid on Class B Shares, holders are credited with additional RSUs or PSUs, as applicable, equal to the dividend.

For PSUs, the performance criteria is set by the Human Resources and Compensation Committee at the time of the grant, and typically requires the achievement of a minimum level of performance, otherwise the payout is zero, while maximum performance is capped at 150%. On settlement of vested PSUs, the number of Class B Shares issued or delivered, or the amount of cash payment will be multiplied by the applicable performance factor.

During 2021, $22 was recognized as compensation expense (2020 – $9). The carrying value and intrinsic value of combined RSUs and PSUs at August 31, 2021 was $30 and $30, respectively (August 31, 2020 – $12 and $12, respectively).

Deferred share unit plan

The Company has a DSU plan for its Board of Directors whereby directors may elect to receive their annual cash compensation, or a portion thereof, in DSUs and/or RSUs, provided that any director who has not met the applicable share ownership guideline is generally required to elect to receive at least 50% of his or her annual compensation in DSUs and/or RSUs. In addition, the Company may adjust and/or supplement directors' compensation with periodic grants of DSUs. A DSU is a right that tracks the value of one Class B Share. Holders will be entitled to a cash payout when they cease to be a director. The cash payout will be based on market value of a Class B Share at the time of payout. When cash dividends are paid on Class B Shares, holders are credited with DSUs equal to the dividend. DSUs do not have voting rights as there are no shares underlying the plan.

During 2021, $11 was recognized as compensation expense (2020 – $2). The carrying value and intrinsic value of DSUs at August 31, 2021 was $35 and $33, respectively (August 31, 2020 – $24 and $20, respectively).

Employee share purchase plan

Generally, all Canadian, non-unionized, full time or part time employees of the Company are eligible to enroll in the ESPP. Under the ESPP, eligible employees may contribute to a maximum of 5% of their monthly base compensation. The Company contributes an amount equal to 25% of the employee's contributions, increasing to 33% once an employee reaches 10 years of continuous service.

During 2021, $5 was recorded as compensation expense (2020 – $5).

19. EARNINGS PER SHARE

Earnings per share calculations are as follows:

	2021	2020
Numerator for basic and diluted earnings per share ($)		
Net income	**986**	688
Deduct: dividends on Preferred Shares	**(7)**	(9)
Net income attributable to common shareholders	**979**	679
Denominator (millions of shares)		
Weighted average number of Class A Shares and Class B Shares for basic earnings per share	**504**	515
Effect of dilutive securities[(1)]	**1**	–
Weighted average number of Class A Shares and Class B Shares for diluted earnings per share	**505**	515
Basic and diluted earnings per share ($)	**1.94**	1.32

(1) The earnings per share calculation does not take into consideration the potential dilutive effect of certain stock options since their impact is anti-dilutive. For the year ended August 31, 2021, 174,031 options were excluded from the diluted earnings per share calculation (2020 – 6,380,558).

20. DIVIDENDS

Common share dividends

The holders of Class A Shares and Class B Shares are entitled to receive such dividends as the Board of Directors determines to declare on a share-for-share basis, as and when any such dividends are declared or paid. The holders of Class B Shares are entitled to receive during each dividend period, in priority to the payment of dividends on the Class A Shares, an additional dividend amount of $0.0025 per share per annum. This additional dividend amount is subject to proportionate adjustment in the event of future consolidations or subdivisions of shares and in the event of any issue of shares by way of stock dividend. After payment or setting aside for payment of the additional non-cumulative dividends on the Class B Shares, holders of Class A Shares and Class B Shares participate equally, share for share, as to all subsequent dividends declared.

Preferred share dividends

Holders of the Series A Shares were entitled to receive, as and when declared by the Company's Board of Directors, a cumulative quarterly fixed dividend yielding 4.50% annually for the initial period ending June 30, 2016. Commencing

June 30, 2016, the dividend rate was reset to 2.791% for the five year period ending June 30, 2021. Thereafter, the dividend rate was to be reset every five years at a rate equal to the then current 5-year Government of Canada bond yield plus 2.00%. Holders of Series A Shares had the right, at their option, to convert their shares into Series B Shares, subject to certain conditions, on June 30, 2016 and on June 30 every five years thereafter. As noted in note 17, the Company redeemed all of the Series A Shares on June 30, 2021.

On June 30, 2016, 1,987,607 Series A Shares were converted into an equal number of Series B Shares. The Series B Shares also represented a series of Class 2 preferred shares and holders were entitled to receive cumulative quarterly dividends, as and when declared by the Company's Board of Directors, at a rate set quarterly equal to the then current three-month Government of Canada Treasury Bill yield plus 2.00%. The floating quarterly dividend rate for the Series B Shares were set as follows:

Period	Annual Dividend Rate
June 30, 2016 to September 29, 2016	2.539%
September 30, 2016 to December 30, 2016	2.512%
December 31, 2016 to March 30, 2017	2.509%
March 31, 2017 to June 29, 2017	2.480%
June 30, 2017 to September 29, 2017	2.529%
September 30, 2017 to December 30, 2017	2.742%
December 31, 2017 to March 30, 2018	2.872%
March 31, 2018 to June 29, 2018	3.171%
June 30, 2018 to September 29, 2018	3.300%
September 30, 2018 to December 30, 2018	3.509%
December 31, 2018 to March 30, 2019	3.713%
March 31, 2019 to June 29, 2019	3.682%
June 30, 2019 to September 29, 2019	3.687%
September 30, 2019 to December 30, 2019	3.638%
December 31, 2019 to March 30, 2020	3.652%
March 31, 2020 to June 29, 2020	3.638%
June 30, 2020 to September 29, 2020	2.255%
September 30, 2020 to December 30, 2020	2.149%
December 1, 2020 to March 30, 2021	2.109%
March 31, 2021 to June 29, 2021	2.073%

As noted in note 17, the Company redeemed all of the Series B Shares on June 30, 2021 and accordingly, the final dividends on the Preferred Shares were paid by Shaw on the Redemption Date.

Dividend reinvestment plan

The Company has a DRIP that allows holders of Class A Shares and Class B Shares who are residents of Canada and, effective December 16, 2016, the United States, to automatically reinvest monthly cash dividends to acquire additional Class B Shares. For the two-month period ended October 30, 2019, Class B Shares distributed under the Company's DRIP were new shares issued from treasury at a 2% discount from the 5 day weighted average market price immediately preceding the applicable dividend payment date.

On October 25, 2019, in accordance with the terms of its DRIP, the Company announced that in lieu of issuing shares from treasury, it will satisfy its share delivery obligations under the DRIP by purchasing Class B Shares on the open market. In addition, the Company reduced its discount from 2% to 0% for the Class B Shares delivered under the DRIP. These changes to the DRIP applied to the dividends payable on November 28, 2019 to shareholders of record on November 15, 2019 and all other dividends payable thereafter.

Dividends declared

The dividends per share recognized as distributions to common shareholders for dividends declared during the year ended August 31, 2021 and 2020 are as follows:

2021		2020	
Class A Voting Share	**Class B Share**	**Class A Voting Share**	**Class B Share**
1.1825	1.1850	1.1825	1.1850

The dividends per share recognized as distributions to preferred shareholders for dividends declared during the year ended August 31, 2020 and 2019 are as follows:

2021		2020	
Series A Share	**Series B Share**	**Series A Share**	**Series B Share**
0.5233	0.3957	0.6978	0.8240

On October 29, 2021, the Company declared dividends of $0.098542 per Class A Share and $0.09875 per Class B Share payable on each of December 30, 2021, January 28, 2022 and February 25, 2022 to shareholders of record at the close of business on December 15, 2021, January 14, 2022 and February 15, 2022, respectively.

21. OTHER COMPREHENSIVE INCOME (LOSS) AND ACCUMULATED OTHER COMPREHENSIVE LOSS

Components of other comprehensive income and the related income tax effects for 2021 are as follows:

	Amount $	Income taxes $	Net $
Items that may subsequently be reclassified to income			
Change in unrealized fair value of derivatives designated as cash flow hedges	(1)	–	(1)
Adjustment for hedged items recognized in the period	6	(1)	5
	5	(1)	4
Items that will not be subsequently reclassified to income			
Remeasurements on employee benefit plans:	48	(12)	36
	53	(13)	40

Components of other comprehensive income and the related income tax effects for 2020 are as follows:

	Amount $	Income taxes $	Net $
Items that may subsequently be reclassified to income			
Change in unrealized fair value of derivatives designated as cash flow hedges	(5)	1	(4)

Increase in contract liabilities during the period	**–**	**222**
August 31, 2021	**125**	**228**

	Contract Assets	Contract Liabilities
Current	132	211
Long-term	40	14
Balance as at August 31, 2020	172	225
Current	**97**	**213**
Long-term	**28**	**15**
Balance as at August 31, 2021	**125**	**228**

Deferred commission cost assets

The table below provides a summary of the changes in the deferred commission cost assets recognized from the incremental costs incurred to obtain contracts with customers during the year ended August 31, 2021 and 2020. We believe these amounts to be recoverable through the revenue earned from the related contracts. The deferred commission cost assets are presented within other current assets (when they will be amortized into net income within twelve months of the date of the financial statements) or other long-term assets.

August 31, 2019	94
Additions to deferred commission cost assets	84
Amortization recognized on deferred commission cost assets	(80)
August 31, 2020	**98**
Additions to deferred commission cost assets	**75**
Amortization recognized on deferred commission cost assets	**(81)**
August 31, 2021	**92**
Current	61
Long-term	37
Balance as at August 31, 2020	98
Current	**59**
Long-term	**33**
Balance as at August 31, 2021	**92**

Commission costs are amortized over a period ranging from 24 to 36 months.

Wireless	**381**	351
	381	351
Intersegment eliminations	**(12)**	(9)
Total revenue	**5,509**	5,407

Remaining performance obligations

The following table includes revenues expected to be recognized in the future related to performance obligations that are unsatisfied (or partially unsatisfied) as at August 31, 2021:

	Within 1 year	Within 2 years	Within 3 years	Within 4 years	Within 5 years	Thereafter	Total
Wireline	1,583	742	151	77	30	2	2,585
Wireless	348	101	–	–	–	–	449
Total	**1,931**	**843**	**151**	**77**	**30**	**2**	**3,034**

When estimating minimum transaction prices allocated to the remaining unfilled, or partially unfulfilled, performance obligations, Shaw applied the practical expedient to not disclose information about remaining performance obligations that have original expected duration of one year or less and for those contracts where we bill the same value as that which is transferred to the customer. The estimated amounts disclosed are based upon contractual terms and maturities. Revenues recognized based on actual minimum transaction price, and the timing thereof, will differ from these estimates due to the frequency with which the actual durations of contracts with customers do not match their contractual maturities.

23. OPERATING, GENERAL AND ADMINISTRATIVE EXPENSES AND RESTRUCTURING COSTS

	2021 $	2020 $
Employee salaries and benefits [1]	**664**	657
Purchases of goods and services	**2,359**	2,373
	3,023	3,030

[1] For the year ended August 31, 2021, employee salaries and benefits include restructuring costs of $14 (2020 – $14).

24. OTHER GAINS (LOSSES)

	2021 $	2020 $
Gain on disposal of fixed assets and intangibles	**3**	(3)
Costs associated with Rogers Transaction	**(23)**	–
Debt Redemption Penalty	**–**	(17)
Fair value adjustment of private investments	**27**	–
Other [1]	**(9)**	4
	(2)	(16)

[1] Other gains (losses) generally includes realized and unrealized foreign exchange gains and losses on US dollar denominated current assets and liabilities and the Company's share of the operations of Burrard Landing Lot 2 Holdings Partnership.

25. INCOME TAXES

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes. The Company's net deferred tax liability consists of the following:

	2021 $	2020 $
Deferred tax assets	**2**	1
Deferred tax liabilities	**(1,998)**	(1,968)
Net deferred tax liability	**(1,996)**	(1,967)

Significant changes recognized to deferred income tax assets (liabilities) are as follows:

	Property, plant and equipment and software assets $	Broadcast rights, licences, customer relationships, trademark and brands $	Partnership income $	Non-capital loss carry-forwards $	Accrued charges $	Capital Loss Carry-Forwards $	Total $
Balance at August 31, 2019	(299)	(1,626)	(32)	93	(7)	–	(1,871)
Recognized in statement of income	(51)	(10)	21	13	(32)	–	(59)
Effect of IFRS 16 adoption	(4)	–	–	–	4	–	–
Effect of IFRIC 23 adoption	(40)	2	–	–	–	–	(38)
Recognized in other comprehensive income	–	–	–	–	1	–	1
Balance at August 31, 2020	**(394)**	**(1,634)**	**(11)**	**106**	**(34)**	**–**	**(1,967)**
Recognized in statement of income	**(18)**	**(16)**	**(62)**	**56**	**21**	**3**	**(16)**
Recognized in other comprehensive income	**–**	**–**	**–**	**–**	**(13)**	**–**	**(13)**
Balance at August 31, 2021	**(412)**	**(1,650)**	**(73)**	**162**	**(26)**	**3**	**(1,996)**

The Company has capital loss carryforwards of approximately $27 for which no deferred income tax asset has been recognized in the accounts. These capital losses can be carried forward indefinitely.

The Company has taxable temporary differences associated with its investment in its subsidiaries. No deferred tax liabilities have been provided with respect to such temporary differences as the Company is able to control the timing of the reversal and such reversal is not probable in the foreseeable future.

The income tax expense differs from the amount computed by applying the statutory rates to income before income taxes for the following reasons:

	2021	2020
Current statutory income tax rate	**25.5%**	26.3%
Income tax expense at current statutory rates	**263**	228
Net increase (decrease) in taxes resulting from:		
Recognition of previously unrecognized tax losses	**(81)**	(22)
Revision to liabilities for uncertain tax positions	**(125)**	–
Other	**(11)**	(27)
Income tax expense	**46**	179

The statutory income tax rate for the Company decreased from 26.3% in 2020 to 25.5% in 2021 as a result of provincial tax rate changes.

The components of income tax expense are as follows:

	2021 $	2020 $
Current income tax expense	**155**	120
Current tax recovery from revision to liabilities for uncertain tax positions	**(125)**	–
Deferred tax expense related to temporary differences	**97**	81
Deferred tax recovery from the recognition of previously unrecognized tax losses	**(81)**	(22)
Income tax expense	**46**	179

26. BUSINESS SEGMENT INFORMATION

The Company's chief operating decision makers are the Executive Chair & Chief Executive Officer, the President, and the Executive Vice President, Chief Financial & Corporate Development Officer and they review the operating performance of the Company by segments, which are comprised of Wireline and Wireless. The chief operating decision makers utilize adjusted earnings before interest, income taxes, depreciation and amortization ("adjusted EBITDA") for each segment as a key measure in making operating decisions and assessing performance.

The Wireline segment provides Cable telecommunications services including Video, Internet, WiFi, Phone, Satellite Video and data networking through a national fibre-optic backbone network to Canadian consumers, North American businesses and public-sector entities. The Wireless segment provides wireless services for voice and data communications serving customers in Ontario, British Columbia and Alberta through Freedom Mobile and in British Columbia and Alberta through Shaw Mobile.

Both of the Company's reportable segments are substantially located in Canada. Information on operations by segment is as follows:

	2021 $	2020 $
Revenue		
Wireline	**4,249**	4,250
Wireless	**1,272**	1,166
	5,521	5,416
Intersegment eliminations	**(12)**	(9)
	5,509	5,407
Adjusted EBITDA (1)		
Wireline	**2,107**	2,054
Wireless	**393**	337
	2,500	2,391
Restructuring costs	**(14)**	(14)
Amortization	**(1,219)**	(1,217)
Operating income	**1,267**	1,160
Interest		
Operating	**228**	267
Other/non-operating	**3**	7
	231	274
Current taxes (2)		
Operating	**155**	113
Other/non-operating	**(125)**	7
	30	120

(1) Adjusted EBITDA does not have any standardized meaning prescribed by IFRS and is therefore unlikely to be comparable to similar measures presented by other issuers; the Company defines adjusted EBITDA as revenues less operating, general and administrative expenses.

(2) Current taxes are lower for the year ended August 31, 2021 due mainly to a revision to liabilities for uncertain tax positions that became statute barred in the period of $125.

Capital expenditures

	2021 $	2020 $
Capital expenditures accrual basis		
Wireline	**701**	784
Wireless	**280**	296
	981	1,080
Equipment costs (net of revenue)		
Wireline	**22**	31
Capital expenditures and equipment costs (net)		
Wireline	**723**	815
Wireless	**280**	296
	1,003	1,111
Reconciliation to Consolidated Statements of Cash Flows		
Additions to property, plant and equipment	**858**	970
Additions to equipment costs (net)	**21**	31
Additions to other intangibles	**138**	150
Total of capital expenditures and equipment costs (net) per Consolidated Statements of Cash Flows	**1,017**	1,151
Increase (decrease) in working capital and other liabilities related to capital expenditures	**7**	(38)
Less: Proceeds on disposal of property, plant and equipment	**(21)**	(2)
Total capital expenditures and equipment costs (net) reported by segments	**1,003**	1,111

27. COMMITMENTS AND CONTINGENCIES

Commitments

The Company has the following future minimum payments for their contractual commitments that are not recognized as liabilities as at August 31, 2021:

	Purchase Obligations (1)	Property, Plant and Equipment
Within one year	420	157
1 to 3 years	297	9
3 to 5 years	174	–
Over 5 years	111	–
	1,002	166

(1) Includes contractual obligations under service, product, and wireless device contracts, program related agreements and exclusive rights to use intellectual property in Canada.

Contingencies

The Company and its subsidiaries are involved in litigation matters arising in the ordinary course and conduct of its business. Although resolution of such matters cannot be predicted with certainty, management does not consider the Company's exposure to litigation to be material to these consolidated financial statements.

Guarantees

In the normal course of business the Company enters into indemnification agreements and has issued irrevocable standby letters of credit and commercial surety bonds with and to third parties.

Indemnities

Many agreements related to acquisitions and dispositions of business assets include indemnification provisions where the Company may be required to make payment to a vendor or purchaser for breach of contractual terms of the agreement with respect to matters such as litigation, income taxes payable or refundable or other ongoing disputes. The indemnification period usually covers a period of two to four years. Also, in the normal course of business, the Company has provided indemnifications in various commercial agreements, customary for the telecommunications industry, which may require payment by the Company for breach of contractual terms of the agreement. Counterparties to these agreements provide the Company with comparable indemnifications. The indemnification period generally covers, at maximum, the period of the applicable agreement plus the applicable limitations period under law.

The maximum potential amount of future payments that the Company would be required to make under these indemnification agreements is not reasonably quantifiable as certain indemnifications are not subject to limitation. However, the Company enters into indemnification agreements only when an assessment of the business circumstances would indicate that the risk of loss is remote. At August 31, 2021, management believes it is remote that the indemnification provisions would require any material cash payment.

The Company indemnifies its directors and officers against any and all claims or losses reasonably incurred in the performance of their service to the Company to the extent permitted by law.

Irrevocable standby letters of credit and commercial surety bonds

The Company and certain of its subsidiaries have granted irrevocable standby letters of credit and commercial surety bonds, issued by high rated financial institutions, to third parties to indemnify them in the event the Company does not perform its contractual obligations. As of August 31, 2021, such instruments amounted to $4. The Company has not recorded any additional liability with respect to these instruments, as the Company does not expect to make any payments in excess of what is recorded on the Company's consolidated financial statements. The instruments mature at various dates during fiscal 2022 to fiscal 2023.

28. EMPLOYEE BENEFIT PLANS

Defined contribution pension plans

The Company has defined contribution pension plans for its non-union employees and, for the majority of these employees, contributes 5% of eligible earnings to the maximum amount deductible under the Income Tax Act. Effective January 1, 2019, the Company introduced a voluntary pension contribution matching program whereby, in addition to the 5% of Company contributions, employees who make voluntary contributions will receive a 25% match on contributions up to 5% of their eligible earnings. For union employees, the Company contributes amounts up to 9.8% of earnings to the individuals' registered retirement savings plans. Total pension costs in respect of these plans were $30 (2020 – $31) of which $23 (2020 – $24) was expensed and the remainder capitalized.

Defined benefit pension plans

The Company has two non-registered retirement plans for designated executives and senior executives. The following is a summary of the accrued benefit liabilities recognized in the consolidated statements of financial position.

	2021 $	**2020 $**
Non-registered plans		
Accrued benefit obligation	**489**	513
Fair value of plan assets	**468**	445
Accrued benefit liabilities and deficit	**21**	68

The plans expose the Company to a number of risks, of which the most significant are as follows:

(i) Volatility in market conditions: The accrued benefit obligations are calculated using discount rates with reference to bond yields closely matching the term of the estimated cash flows while many of the assets are invested in other types of assets. If plan assets underperform these yields, this will result in a deficiency. Changing market conditions in conjunction with discount rate volatility will result in volatility of the accrued benefit liabilities. To mitigate some of the investment risk, the Company has established long-term funding targets where the time horizon and risk tolerance are specified.

(ii) Selection of accounting assumptions: The calculation of the accrued benefit obligations involves projecting future cash flows of the plans over a long time frame. This means that assumptions used can have a material impact on the consolidated statements of financial position and comprehensive income because in practice, future experience of the plans may not be in line with the selected assumptions.

Non-registered pension plans

The Company provides a supplemental executive retirement plan (SERP) for certain of its senior executives and retirees. Benefits under this plan are based on the employees' length of service and their highest three-year average rate of eligible pensionable earnings during their years of service. In 2012, the Company closed the plan to new participants and amended the plan to freeze base salary levels at August 31, 2012 for purposes of determining eligible pensionable earnings. Employees are not required to contribute to this plan.

The Company provides an executive retirement plan (ERP) for certain executives not covered by the SERP. Benefits under this plan are comprised of defined contribution and defined benefit components and are based on the employees' length of service as well as final average earnings during their years of service. Employees are not required to contribute to this plan.

The table below shows the change in benefit obligation and funding status and the fair value of plan assets.

	SERP $	ERP $	2021 Total $	SERP $	ERP $	2020 Total $
Accrued benefit obligation, beginning of year	**477**	**36**	**513**	478	27	505
Current service cost	**–**	**9**	**9**	2	9	11
Interest cost	**13**	**1**	**14**	14	1	15
Payment of benefits to employees	**(20)**	**(2)**	**(22)**	(19)	(2)	(21)
Transfer from DC plan	**–**	**1**	**1**	–	1	1
Remeasurements:						
Effect of changes in demographic assumptions	**–**	**–**	**–**	16	–	16
Effect of changes in financial assumptions	**(24)**	**(3)**	**(27)**	13	1	14
Effect of experience adjustments	**1**	**–**	**1**	(27)	(1)	(28)
Accrued benefit obligation, end of year	**447**	**42**	**489**	477	36	513
Fair value of plan assets, beginning of year	**415**	**30**	**445**	417	19	436
Employer contributions	**–**	**10**	**10**	–	12	12
Interest income	**11**	**–**	**11**	12	1	13
Transfer from DC plan	**–**	**1**	**1**	–	1	1
Payment of benefits	**(20)**	**(2)**	**(22)**	(19)	(2)	(21)
Return on plan assets, excluding interest income	**22**	**1**	**23**	5	(1)	4
Fair value of plan assets, end of year	**428**	**40**	**468**	415	30	445
Accrued benefit liability and plan deficit, end of year	**19**	**2**	**21**	62	6	68

The weighted average duration of the defined benefit obligation of the SERP and ERP at August 31, 2021 is 14.5 years and 15.9 years, respectively.

The underlying plan assets of the SERP and ERP at August 31, 2021 are invested in the following:

	SERP	ERP
Cash and cash equivalents	199	25
Fixed income securities	69	5
Equity securities – Canadian	52	4
Equity securities – Foreign	108	6
	428	40

All fixed income and equity securities have a quoted price in active market.

The tables below show the significant weighted-average assumptions used to measure the pension obligation and cost for the plans.

Accrued benefit obligation	2021 SERP %	2021 ERP %	2020 SERP %	2020 ERP %
Discount rate	**3.10**	**3.10**	2.70	2.70
Rate of compensation increase	**3.00**[(1)]	**3.00**	3.00[(1)]	3.00

Benefit cost for the year	2021 SERP %	2021 ERP %	2020 SERP %	2020 ERP %
Discount rate	**2.70**	**2.70**	2.90	2.90
Rate of compensation increase	**3.00**[(1)]	**3.00**	3.00[(1)]	3.00

(1) Applies only to incentive compensation component of eligible pensionable earnings.

The calculation of the accrued benefit obligation is sensitive to the assumptions above. A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2021 by $72. A one percentage point increase in the rate of compensation increase would have increased the accrued benefit obligation by $2.

When calculating the sensitivity of the defined benefit obligation to significant actuarial assumptions, the present value of the defined benefit obligation has been calculated using the projected benefit method which is the same method that is applied in calculating the defined benefit liability recognized in the consolidated statements of financial position. The sensitivity analysis presented above may not be representative of the actual change in the accrued benefit obligation as it is unlikely that the change in assumptions would occur in isolation of one another as some assumptions may be correlated.

The net pension benefit plan expense, which is included in employee salaries and benefits expense, is comprised of the following components:

	SERP	ERP	2021 Total	SERP	ERP	2020 Total
Current service cost	**–**	**9**	**9**	2	9	11
Interest cost	**13**	**1**	**14**	14	1	15
Interest income	**(11)**	**–**	**(11)**	(12)	(1)	(13)
Pension expense	**2**	**10**	**12**	4	9	13

Other benefit plans

The Company has post-employment benefits plans that provide post-retirement health and life insurance coverage to certain executive level retirees and are funded on a pay-as-you-go basis. The table below shows the change in the accrued post-retirement obligation which is recognized in the consolidated statements of financial position.

	2021	2020
Accrued benefit obligation and plan deficit, beginning of year	**4**	4
Current service cost	**–**	–
Interest cost	**–**	–
Payment of benefits to employees	**–**	–
Remeasurements:		
Effect of changes in demographic assumptions	**1**	–
Effect of changes in financial assumptions	**(1)**	–
Effect of experience adjustments	**1**	–
Accrued benefit obligation and plan deficit, end of year	**5**	4

The weighted average duration of the benefit obligation at August 31, 2021 is 16.7 years.

The post-retirement benefit plan expense, which is included in employee salaries and benefits expense, is $nil (2020 – $nil) and is comprised of current service and interest cost.

The discount rates used to measure the post-retirement benefit cost for the year and the accrued benefit obligation as at August 31, 2021 were 3.10% and 2.70%, respectively (2020 – 2.70% and 2.90%, respectively). A one percentage point decrease in the discount rate would have increased the accrued benefit obligation at August 31, 2021 by $1.

Employer contributions

The Company's estimated contributions to the defined benefit plans in fiscal 2022 is $nil.

29. RELATED PARTY TRANSACTIONS

Controlling shareholder

Voting control of the Company is held by Shaw Family Living Trust (SFLT) and its subsidiaries. As at August 31, 2021, SFLT and its subsidiaries held, directly or indirectly, or exercised control or direction over 17,662,400 Class A Shares, representing approximately 79% of the issued and outstanding Class A Shares, for the benefit of the descendants of the late JR Shaw and Carol Shaw. The sole trustee of SFLT is a private company controlled by a board consisting of seven directors, including as at August 31, 2021, Bradley S. Shaw, four other members of his family, and two independent directors.

The Class A Shares are the only shares entitled to vote in all circumstances. Accordingly, SFLT and its subsidiaries are able to elect a majority of the Board of Directors of the Company and to control the vote on matters submitted to a vote of the Company's Class A Shares.

Significant investments in subsidiaries

The following are the significant subsidiaries of the Company, all of which are incorporated or partnerships in Canada.

	Ownership Interest	
	August 31, 2021	**August 31, 2020**
Shaw Cablesystems Limited	**100%**	100%
Shaw Cablesystems G.P.	**100%**	100%
Shaw Envision Inc.	**100%**	100%
Shaw Telecom Inc.	**100%**	100%
Shaw Telecom G.P.	**100%**	100%
Shaw Satellite Services Inc.	**100%**	100%
Star Choice Television Network Incorporated	**100%**	100%
Shaw Satellite G.P.	**100%**	100%
Freedom Mobile Inc.	**100%**	100%

Key management personnel and Board of Directors

Key management personnel consist of the most senior executive team and along with the Board of Directors, and have the authority and responsibility for planning, directing and controlling the activities of the Company.

Compensation

The compensation expense of key management personnel and Board of Directors is as follows:

	2021 $	2020 $
Short-term employee benefits	**20**	17
Post-employment pension benefits	**7**	3
Termination benefits	**–**	11
Share-based compensation	**22**	6
	49	37

Transactions

The Company paid $2 (2020 – $2) for collection, installation, and maintenance services to a company controlled by a Director of the Company.

During the year, the Company paid $4 (2020 – $10) for remote control units to a supplier where Directors of the Company hold positions on the supplier's board of directors.

At August 31, 2021, the Company had $nil owing in respect of these transactions (2020 – $1).

During the year, network fees of $24 (2020 – $27) were paid to a programmer where a Director of the Company holds a position on the programmer's board of directors.

At August 31, 2021, the Company had $4 owing in respect of these transactions (2020 – $4).

In fiscal 2019, the Company completed the sale of a non-core parcel of land and the building located thereon (the "Property"), to an affiliate of SFLT (the "Purchaser"). As part of the transaction, the Purchaser agreed to lease back the Property to the Company for a term of three years at market rental rates (which was also based on appraisals from the two independent valuators) allowing the Company to monetize a non-core asset. The transaction was approved by the independent Board members of the Company. At August 31, 2021, the Company had a remaining lease liability of $nil (2020 - $1) in respect of this lease which is included in the amounts disclosed in Note 14.

Other related parties

The Company has entered into certain transactions and agreements in the normal course of business with certain of its related parties. These transactions are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties.

Corus

The Company and Corus are subject to common voting control. During the year, network fees of $116 (2020 – $121), advertising fees of $5 (2020 – $6), and administrative fees of $1 (2020 – $1) were paid to various Corus subsidiaries and entities subject to significant influence. In addition, the Company provided administrative, advertising and other services for $1 (2020 – $1), uplink of television signals for $4 (2020 – $5), and Internet services and lease of circuits for $5 (2020 – $6). At August 31, 2021, the Company had a net of $20 owing in respect of these transactions (2020 – $21).

As part of a regulatory requirement where Shaw pays Corus in lieu of either providing the news coverage directly or contributing into a fund managed by the CRTC, Shaw paid $12 (2020 – $13) as part of the Local News Community Investment program.

The Company provided Corus with advertising spots in return for radio and television advertising. No monetary consideration was exchanged for these transactions and no amounts were recorded in the accounts.

Burrard Landing Lot 2 Holdings Partnership

During the year, the Company paid $10 (2020 – $11) to the Partnership for lease of office space in Shaw Tower. Shaw Tower, located in Vancouver, BC, is the Company's headquarters for its lower mainland operations. At August 31, 2021, the Company had a remaining lease liability of $57 (2020 - $67) in respect of the office space lease which is included in the amounts disclosed in Note 14.

30. FINANCIAL INSTRUMENTS

Fair values

The fair value of financial instruments has been determined as follows:

(i) Current assets and current liabilities

The fair value of financial instruments included in current assets and current liabilities approximates their carrying value due to their short-term nature.

(ii) Investments and other assets and Other long-term assets

The fair value of publicly traded investments is determined by quoted market prices. Investments in private entities which do not have quoted market prices in an active market and whose fair value cannot be readily measured are carried at estimated fair value based on information available with respect to investees' operational and financing activities. No published market exists for such investments. These equity investments have been made as they are considered to have the potential to provide future benefit to the Company and accordingly, the Company has no current intention to dispose of these investments in the near term. The fair value of long-term receivables approximates their carrying value as they are recorded at the net present values of their future cash flows, using an appropriate discount rate.

(iii) Long-term debt

The carrying value of long-term debt is at amortized cost based on the initial fair value as determined at the time of issuance. The fair value of publicly traded notes is based upon current trading values. The fair value of finance lease obligations is determined by discounting future cash flows using a rate for loans with similar terms, conditions and maturity dates. The carrying value of bank credit facilities approximates fair value as the debt bears interest at rates that fluctuate with market rates. Other notes and debentures are valued based upon current trading values for similar instruments.

(iv) Derivative financial instruments

The fair value of US currency forward purchase contracts is determined using an estimated credit-adjusted mark-to-market valuation using observable forward exchange rates at the end of reporting periods and contract forward rates.

The carrying value and estimated fair value of long-term debt are as follows:

	August 31, 2021		August 31, 2020	
	Carrying value	Estimated fair value	Carrying value	Estimated fair value
Liabilities				
Long-term debt (including current portion) [1]	**4,550**	**5,263**	4,548	5,613

[1] Level 2 fair value – determined by valuation techniques using inputs based on observable market data, either directly or indirectly, other than quoted prices.

Risk management

The Company is exposed to various market risks including currency risk and interest rate risk, as well as credit risk and liquidity risk associated with financial assets and liabilities. The Company has designed and implemented various risk management strategies, discussed further below, to ensure the exposure to these risks is consistent with its risk tolerance and business objectives.

Market risk

Market risk is the risk that the fair value or cash flows of a financial instrument will fluctuate as a result of changes in market prices, including foreign exchange and interest rates, the Company's share price and market price of publicly traded investments.

Currency risk

Certain of the Company's capital expenditures and operating costs are incurred in US dollars, while its revenue is primarily denominated in Canadian dollars. Decreases in the value of the Canadian dollar relative to the US dollar could have an adverse effect on the Company's cash flows. To mitigate some of the uncertainty in respect to capital expenditures and operating costs, the Company regularly enters into forward contracts in respect of US dollar commitments. With respect to 2021, the Company entered into forward contracts to purchase US $132 over a period of 12 months commencing in September 2020 at an average exchange rate of 1.3544 Cdn. At August 31, 2021 the Company had forward contracts to purchase US $132 over a period of 12 months commencing September 2021 at an average exchange rate of 1.2666 Cdn in respect of US dollar commitments.

Interest rate risk

Due to the capital-intensive nature of its operations, the Company utilizes long-term financing extensively in its capital structure. The primary components of this structure are an unsecured bank credit facility and various Canadian senior notes with varying maturities issued in the public markets as more fully described in Note 13. The Company also has an accounts receivable securitization program as described in Note 10.

Interest on the Company's unsecured bank credit facility and accounts receivable securitization program are based on floating rates, while the senior notes are fixed-rate obligations. When drawn, the Company utilizes its credit facility to finance day-to-day operations and, depending on market conditions, periodically converts the bank loans to fixed-rate instruments through public market debt issues. As at August 31, 2021, 100% of the Company's consolidated long-term debt was fixed with respect to interest rates.

Sensitivity analysis

The sensitivity to currency risk has been determined based on a hypothetical change in Canadian dollar to US dollar foreign exchange rates of 10%. Foreign exchange forward contracts would be impacted by this hypothetical change resulting in a change to other comprehensive income by $12 net of tax (2020 – $13). A portion of the Company's accounts receivables and accounts payable and accrued liabilities is denominated in US dollars; however, due to their short-term nature, there is no significant market risk arising from fluctuations in foreign exchange rates.

Interest on the Company's unsecured bank credit facility and accounts receivable securitization program are based on floating rates. As at August 31, 2021 there is no significant market risk arising from interest rate fluctuations within a reasonably contemplated range from their actual amounts.

At August 31, 2021, a one dollar change in the Company's Class B Shares would have had an impact on net income of $2 (August 31, 2020 – $1) in respect of the Company's DSU, RSU, and PSU plans.

Credit risk

Accounts receivable in respect of the Consumer, Business and Wireless divisions are not subject to any significant concentrations of credit risk due to the Company's large and diverse customer base. As at August 31, 2021, the Company had accounts receivable of $301 (August 31, 2020 – $268), net of the allowance for doubtful accounts of $78 (August 31, 2020 – $74). The Company maintains an allowance for doubtful accounts for the expected credit losses resulting from the inability of its customers to make required payments.

	2021 $	**2020 $**
Balance, beginning of period	**74**	63
Additions (doubtful accounts expense)	**25**	60
Net usage	**(21)**	(49)
Balance, end of period	**78**	74

In determining the allowance, the Company considers factors such as the number of days the customer account is past due, whether or not the customer continues to receive service, the Company's past collection history and changes in business circumstances. As at August 31, 2021, $124 (August 31, 2020 – $105) of accounts receivable is considered to be past due, defined as amounts outstanding past normal credit terms and conditions. Uncollectible accounts receivable are charged against the allowance account based on the age of the account and payment history. The Company believes that its allowance for doubtful accounts is sufficient to reflect the related credit risk.

The Company mitigates credit risk of subscriber receivables through advance billing and procedures to downgrade or suspend services on accounts that have exceeded agreed credit terms and routinely assesses the financial strength of its business customers through periodic review of payment practices.

Credit risks associated with US currency contracts arise from the inability of counterparties to meet the terms of the contracts. In the event of non-performance by the counterparties, the Company's accounting loss would be limited to the net amount that it would be entitled to receive under the contracts and agreements. In order to minimize the risk of counterparty default under its swap agreements, the Company assesses the creditworthiness of its swap counterparties.

Liquidity risk

Liquidity risk is the risk that the Company will experience difficulty in meeting obligations associated with financial liabilities. The Company manages its liquidity risk by monitoring cash flow generated from operations, available borrowing capacity, and by managing the maturity profiles of its long-term debt.

The Company's undiscounted contractual maturities as at August 31, 2021 are as follows:

	Short-term borrowings	Accounts payable and accrued liabilities[1]	Long-term debt repayable at maturity	Leases (note 14)	Interest payments
Within one year	200	988	1	151	218
1 to 3 years	–	–	1,002	291	407
3 to 5 years	–	–	44	260	351
Over 5 years	–	–	3,550	894	1,757
	200	988	4,597	1,596	2,733

[1] Includes accrued interest and dividends of $210.

31. CONSOLIDATED STATEMENTS OF CASH FLOWS

(i) Funds flow from operations

	2021 $	2020 $
Net income from operations	**986**	688
Adjustments to reconcile net income to funds flow from operations:		
Amortization	**1,221**	1,220
Deferred income tax expense (recovery)	**16**	59
Share-based compensation	**1**	2
Defined benefit pension plans	**2**	1
Fair value adjustments for private investments	**(27)**	–
Net change in contract asset balances	**47**	(14)
Loss (gain) on disposal of fixed assets and intangibles	**(3)**	3
Loss on write-down of assets	**–**	7
Other	**6**	23
Funds flow from operations	**2,249**	1,989

(ii) Interest and income taxes paid and interest received and classified as operating activities are as follows:

	2021 $	2020 $
Interest paid	**265**	287
Income taxes paid (net of refunds)	**174**	134
Interest received	**4**	7

Included in interest paid is interest on lease liabilities of $45 for the year ended August 31, 2021 (2020 – $44).

(iii) Non-cash transactions

The Consolidated Statements of Cash Flows exclude the following non-cash transactions:

	2021 $	2020 $
Issuance of Class B Shares:		
Dividend reinvestment plan (note 20)	–	37

32. CAPITAL STRUCTURE MANAGEMENT

The Company's objectives when managing capital are:

(i) to maintain a capital structure which optimizes the cost of capital, provides flexibility and diversity of funding sources and timing of debt maturities, and adequate anticipated liquidity for organic growth and strategic acquisitions;

(ii) to maintain compliance with debt covenants; and

(iii) to manage a strong and efficient capital base to maintain investor, creditor and market confidence.

The Company defines capital as comprising all components of shareholders' equity (other than non-controlling interests and amounts in accumulated other comprehensive income/loss), long-term debt (including the current portion thereof), lease liabilities (including the current portion thereof), short-term borrowings and bank indebtedness less cash.

	2021 $	2020 $
Cash	**(355)**	(763)
Short-term borrowings	**200**	200
Long-term debt repayable at maturity	**4,597**	4,599
Lease liabilities	**1,245**	1,270
Share capital	**4,199**	4,602
Contributed surplus	**27**	27
Retained earnings	**1,876**	1,703
	11,789	11,638

The Company manages its capital structure and makes adjustments to it in light of changes in economic conditions and the risk characteristics of underlying assets. The Company may also from time to time change or adjust its objectives when managing capital in light of the Company's business circumstances, strategic opportunities, or the relative importance of competing objectives as determined by the Company. There is no assurance that the Company will be able to meet or maintain its currently stated objectives. Further, the terms of the Arrangement Agreement require the Company to obtain Rogers' consent prior to incurring certain types of indebtedness.

The Company's credit facilities are subject to covenants which include maintaining minimum or maximum financial ratios, including total debt to operating cash flow/adjusted earnings before interest, taxes, depreciation and amortization, and operating cash flow to fixed charges. At August 31, 2021, the Company was in compliance with these covenants and based on current business plans and economic conditions, the Company is not aware of any condition or event that would give rise to non-compliance with the covenants.

Other than the redemption of the Company's preferred shares as discussed in note 17, the Company's overall capital structure management strategy remains unchanged from the prior year.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(unaudited)

February 28, 2019 and 2018
[all amounts in millions of Canadian dollars, except share and per share amounts]

1. CORPORATE INFORMATION

Shaw Communications Inc. (the "Company") is a diversified Canadian connectivity company whose core operating business is providing: Cable telecommunications, Satellite video services and data networking to residential customers, businesses and public-sector entities ("Wireline"); and wireless services for voice and data communications ("Wireless"). The Company's shares are listed on the Toronto Stock Exchange ("TSX"), TSX Venture Exchange ("TSXV") and New York Stock Exchange ("NYSE") (Symbol: TSX - SJR.B, SJR.PR.A, SJR.PR.B, NYSE - SJR, and TSXV - SJR.A).

2. BASIS OF PRESENTATION AND ACCOUNTING POLICIES

Statement of compliance

These condensed interim consolidated financial statements of the Company have been prepared in accordance with International Financial Reporting Standards ("IFRS") and in compliance with International Accounting Standard ("IAS") 34 *Interim Financial Reporting* as issued by the International Accounting Standards Board ("IASB").

The condensed interim consolidated financial statements of the Company for the three months ended February 28, 2019 were authorized for issue by the Audit Committee on April 8, 2019.

a) Basis of presentation

These condensed interim consolidated financial statements have been prepared primarily under the historical cost convention except as detailed in the significant accounting policies disclosed in the Company's consolidated financial statements for the year ended August 31, 2018 and are expressed in millions of Canadian dollars unless otherwise indicated. The condensed interim consolidated statements of income are presented using the nature classification for expenses.

Certain comparative figures have been reclassified to conform to the current period's presentation.

The notes presented in these condensed interim consolidated financial statements include only significant events and transactions occurring since the Company's last fiscal year end and are not fully inclusive of all matters required to be disclosed by IFRS in the Company's annual consolidated financial statements. As a result, these condensed interim consolidated financial statements should be read in conjunction with the Company's consolidated financial statements for the year ended August 31, 2018.

The condensed interim consolidated financial statements follow the same accounting policies and methods of application as the most recent annual consolidated financial statements except as noted below.

b) New accounting standards

We adopted the following new accounting standards effective September 1, 2018.

- IFRS 15 *Revenue from Contracts with Customers,* was issued in May 2014 and replaces IAS 11 *Construction Contracts,* IAS 18 *Revenue,* IFRIC 13 *Customer Loyalty Programs,* IFRIC 15 *Agreements for the Construction of Real Estate*, IFRIC 18 *Transfers of Assets from Customers* and SIC-31 *Revenue—Barter Transactions Involving Advertising Services*. The new standard requires revenue to be recognized in a manner that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration expected to be received in exchange for those goods or services. The principles are to be applied in the following five steps:
  (1) identify the contract(s) with a customer;
  (2) identify the performance obligations in the contract;
  (3) determine the transaction price;
  (4) allocate the transaction price to the performance obligations in the contract; and,

(5) recognize revenue when (or as) the entity satisfies a performance obligation.

IFRS 15 also provides guidance relating to the treatment of contract acquisition and contract fulfillment costs.

The application of IFRS 15 impacted the Company's reported results, including the classification and timing of revenue recognition and the treatment of costs incurred to obtain contracts with customers.

The application of this standard most significantly affected our Wireless arrangements that bundle equipment and service together, specifically with regards to the timing of recognition and classification of revenue. The timing of recognition and classification of revenue was affected because at contract inception, IFRS 15 requires the estimation of total consideration to be received over the contract term, and the allocation of that consideration to performance obligations in the contract, typically based on the relative stand-alone selling price of each obligation. This resulted in a decrease to equipment revenue recognized at contract inception, as the discount previously recognized over 24 months is now recognized at contract inception, and a decrease to service revenue recognized over the course of the contract, as a portion of the discount previously allocated solely to equipment revenue is allocated to service revenue. The measurement of total revenue recognized over the life of a contract was unaffected by the new standard.

IFRS 15 also requires that incremental costs to obtain a contract with a customer (for example, commissions) be capitalized and amortized into operating expenses over the life of a contract on a rational, systematic basis consistent with the pattern of the transfer of goods or services to which the asset relates. The Company previously expensed such costs as incurred.

The Company's financial position was also impacted by the adoption of IFRS 15, with new contract asset and contract liability categories recognized to reflect differences between the timing of revenue recognition and the actual billing of those goods and services to customers.

For purposes of applying the new standard on an ongoing basis, we must make judgments in respect of the new standard. We must make judgments in determining whether a promise to deliver goods or services is considered distinct, how to determine the transaction prices and how to allocate those amounts amongst the associated performance obligations. We must also exercise judgment as to whether sales-based compensation amounts are costs incurred to obtain contracts with customers that should be capitalized and subsequently amortized on a systematic basis over time.

We have made a policy choice to adopt IFRS 15 with full retrospective application, subject to certain practical expedients. As a result, all comparative information in these financial statements has been prepared as if IFRS 15 had been in effect since September 1, 2017. The accounting policies set out in note 2 have been applied in preparing the interim consolidated financial statements as at and for the three and six months ended February 28, 2019, the comparative information presented for the three and six months ended February 28, 2018, and for the consolidated statements of financial position as at September 1, 2017 and August 31, 2018.

Upon adoption of, and transition to, IFRS 15, we elected to utilize the following practical expedients:

- Completed contracts that begin and end within the same annual reporting period and those completed before September 1, 2017 are not restated;
- Contracts modified prior to September 1, 2017 are not restated. The aggregate effect of these modifications is reflected when identifying the satisfied and unsatisfied performance obligations, determining the transaction price and allocating the transaction price to the satisfied and unsatisfied performance obligations; and
- Not disclose, on an annual basis, the unsatisfied portions of performance obligations related to contracts with a duration of one year or less or where the revenue we recognize is equal to the amount invoiced to the customer.

[all amounts in millions of Canadian dollars, except share and per share amounts]

Impacts of IFRS 15, Revenue from Contracts with Customers

The effect of transition to IFRS 15 on impacted line items on our condensed Consolidated Statements of Income as disclosed in note 2(f) - “Transition adjustments” for the three and six months ended February 28, 2018, are as follows:

		Three months ended February 28, 2018			Six months ended February 28, 2018		
(millions of Canadian dollars)		**As reported**	**Effect of transition**	**Subsequent transition**	**As reported**	**Effect of transition**	**Subsequent transition**
Revenue	i.	1,355	(26)	1,329	2,604	(30)	2,574
Operating, general and administrative expenses	ii.	(854)	8	(846)	(1,622)	11	(1,611)
Other revenue (expense)		(2)	3	1	2	3	5
Income tax expense (recovery)		(53)	(6)	(59)	24	(7)	17
Net income from continuing operations		(164)	(9)	(173)	(50)	(9)	(59)

i) Allocation of transaction price
Revenue recognized at point of sale requires the estimation of total consideration over the contract term and allocation of that consideration to all performance obligations in the contract based on their relative stand-alone selling prices. For Wireless term contracts, equipment revenue recognized at contract inception, as well as service revenue recognized over the course of the contract is lower than previously recognized as noted above.

ii) Deferred commission costs
Costs incurred to obtain or fulfill a contract with a customer were previously expensed as incurred. Under IFRS 15, these costs are capitalized and subsequently amortized as an expense over the life of the customer on a rational, systematic basis consistent with the pattern of the transfer of goods and services to which the asset relates. As a result, commission costs are reduced in the period, with an offsetting increase in amortization of capitalized costs over the average life of a customer.

The effect of transition to IFRS 15 on our disaggregated revenues for the three and six months ended February 28, 2018, are as follows:

	Three months ended February 28, 2018			Six months ended February 28, 2018		
(millions of Canadian dollars)	**As reported**	**Effect of transition**	**Subsequent transition**	**As reported**	**Effect of transition**	**Subsequent transition**

Contract liabilities	i.	–	21	21	–	18	18
Shareholders' equity		6,154	40	6,194	5,957	22	5,979

i) Contract assets and liabilities
Contract assets and liabilities are the result of the difference in timing related to revenue recognized at the beginning of a contract and cash collected. Contract assets arise primarily as a result of the difference between revenue recognized on the sale of wireless device at the onset of a term contract and the cash collected at the point of sale.

Contract liabilities are the result of receiving payment related to a customer contract before providing the related goods or services. We will account for contract assets and liabilities on a contract-by-contract basis, with each contract being presented as a single net contract asset or net contract liability accordingly.

ii) Deferred commission cost asset
Under IFRS 15, we will defer commission costs paid to internal and external representatives as a result of obtaining contracts with customers as deferred commission cost assets and amortize them over the pattern of the transfer of goods and services to the customer, which is typically evenly over 24 to 36 months.

Refer to note 2(f) "Transition adjustments" for the impact of application of IFRS 15 on our previously reported consolidated statements of cash flows.

- IFRS 9 *Financial Instruments* was revised and issued in July 2014 and replaces IAS 39 *Financial Instruments: Recognition and Measurement.* IFRS 9 includes updated guidance on the classification and measurement of financial instruments, new guidance on measuring impairment on financial assets, and new hedge accounting guidance. We have applied IFRS 9, and the related consequential amendments to other IFRSs, on a retrospective basis except for the changes to hedge accounting as described below which were applied on a prospective basis. The adoption of IFRS 9 did not have a significant impact on our financial performance or the carrying amounts of our financial instruments as set out in note 2(f) below.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(unaudited)

February 28, 2019 and 2018
[all amounts in millions of Canadian dollars, except share and per share amounts]

IFRS 9 replaces the classification and measurement models in IAS 39 with a single model under which financial assets are classified and measured at amortized cost, fair value through other comprehensive income (FVOCI) or fair value through profit or loss (FVTPL) and eliminates the IAS 39 categories of held-to-maturity, loans and receivables and available-for-sale. Investments and equity instruments are required to be measured by default at FVTPL unless an irrevocable option for each equity instrument is taken to measure at FVOCI. The classification and measurement of financial assets is based on the business model that the asset is managed and its contractual cash flow characteristics. The adoption of IFRS 9 did not change the measurement bases of our financial assets

- Cash and derivative instruments classified as held-for-trading and measured at FVTPL under IAS 39 continue to be measured as such under IFRS 9 with an updated classification of FVTPL
- Investments in equity securities not quoted in an active market and where fair value cannot be reliably measured that were classified as available-for-sale and recorded at cost less impairment under IAS 39 are now required to be classified and measured at FVTPL under IFRS 9. There has been no change to the measurement of these assets on transition
- Trade and other receivables classified as loans and receivables and measured at amortized cost under IAS 39 continue to be measured as such under IFRS 9 with an updated classification of amortized cost

For financial liabilities, IFRS 9 retains most of the IAS 39 requirements. We did not choose the option of designating any financial liabilities at FVTPL as such, the adoption of IFRS 9 did not impact our accounting policies for financial liabilities as all liabilities continue to be measured at amortized cost.

The impairment of financial assets under IFRS 9 is based on an expected credit loss (ECL) model, as opposed to the incurred loss model in IAS 39. IFRS 9 applies to financial assets measured at amortized cost, including contract assets under IFRS 15, and requires that we consider factors that include historical, current and forward-looking information when measuring the ECL. We use the simplified approach for measuring losses based on the lifetime ECL for trade receivables and contract assets. Amounts considered uncollectible are written off and recognized in operating, general and administrative expenses in the Consolidated Statement of Income. This change did not have a significant impact to our receivables.

IFRS 9 does not fundamentally change the types of hedging relationships or the requirements to measure and recognize ineffectiveness; however, it requires us to ensure that the hedge accounting relationships are aligned with our risk management objective and strategy and to apply a more qualitative and forward-looking approach to assess hedge effectiveness. It also requires that amounts related to cash flow hedges of anticipated purchases of non-financial assets settled during the period to be reclassified from accumulated other comprehensive income to the initial cost of the non-financial asset when it is recognized. Under IAS 39, when an anticipated transaction was subsequently recorded as a non-financial asset, the amounts were reclassified from other comprehensive income (loss).

In accordance with IFRS 9's transition provisions for hedge accounting, the Company has applied the IFRS 9 hedge accounting requirements prospectively from the date of initial application without restatement of prior period comparatives. The Company's qualifying hedging relationships in place as at August 31, 2018 also qualified for hedge accounting in accordance with IFRS 9 and were therefore regarded as continuing hedging relationships. As the critical terms of the hedging instruments match those of their corresponding hedged items, all hedging relationships continue to be effective under IFRS 9's effectiveness assessment requirements. The Company has not designated any hedging relationships under IFRS 9 that would not have met the qualifying hedge accounting criteria under IAS 39.

c) Standards and amendments to standards issued but not yet effective

The Company has not yet adopted certain standards and amendments that have been issued but are not yet effective. The following pronouncement is being assessed to determine their impact on the Company's results and financial position.

- IFRS 16 *Leases* was issued on January 2016 and replaces IAS 17 Leases. The new standard requires entities to recognize lease assets and lease obligations on the balance sheet. For lessees, IFRS 16 removes the classification of leases as either operating leases or finance leases, effectively treating all leases as finance leases. Certain short-term leases (less than 12 months) and leases of low-value are exempt from the requirements and may continue to be treated as operating leases. Lessors will continue with a dual lease classification model. Classification will determine how and when a lessor will recognize lease revenue, and what assets would be recorded.

  As the Company has significant contractual obligations currently being recognized as operating leases, we anticipate that the application of IFRS 16 will result in a material increase to both assets and liabilities and material changes to the timing of the recognition of expenses associated with the lease arrangements although at this stage in the Company's IFRS 16 implementation process, it is not possible to make reasonable quantitative estimates of the effects of the new standard.

  This new standard is described in our 2018 consolidated financial statements. We continue to assess the impact of this standard on our consolidated financial statements and we are progressing with the implementation of this standard. As at the date of these interim financial statements, there have been no significant changes to the disclosure related to the implementation of this standard that was included in our 2018 financial statements. We intend to disclose the estimated financial effects of the adoption of IFRS 16 in our 2019 annual audited consolidated financial statements.

d) Discontinued operations

The Company reports financial results for discontinued operations separately from continuing operations to distinguish the financial impact of disposal transactions from ongoing operations. Discontinued operations reporting occurs when the disposal of a component or a group of components of the Company represents a strategic shift that will have a major impact on the Company's operations and financial results, and where the operations and cash flows can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the Company.

The results of discontinued operations are excluded from both continuing operations and business segment information in the condensed interim consolidated financial statements and the notes to the condensed interim consolidated financial statements, unless otherwise noted, and are presented net of tax in the statement of income for the current and comparative periods. Refer to the Company's consolidated financial statements for the year ended August 31, 2018 for further information regarding the Company's discontinued operations.

e) Change in accounting policy

Effective September 1, 2018, the Company voluntarily changed its accounting policy related to the treatment of digital cable terminals ("DCTs") to record them as property, plant and equipment rather than inventory upon acquisition. The Company believes that the change in accounting policy will result in clearer and more relevant financial information as the Company has recently changed its offerings to customers, which has resulted in DCTs being predominantly rented rather than sold to customers. Previously, inventories included DCTs which were held pending rental or sale to the customer at cost or at a subsidized price. When the subscriber equipment was rented, it was transferred to property, plant and equipment and amortized over its useful life and then removed from capital and returned to inventory when returned by a customer. Under the new policy, all DCTs will be classified as property, plant and equipment regardless of whether or not they are currently deployed to a customer as the Company believes that this better reflects the economic substance of its operations. This change in accounting policy has been applied retrospectively. Refer to note 2(f) - "Transition adjustments" below for the impact of this change of accounting policy on previously reported consolidated Statements of Financial Position, consolidated Statements of Income and consolidated Statements of Cash Flows.

3. BUSINESS SEGMENT INFORMATION

The Company's chief operating decision makers are the Chief Executive Officer, the President and the Executive Vice President, Chief Financial & Corporate Development Officer and they review the operating performance of the Company by segments which are comprised of Wireline and Wireless. The chief operating decision makers utilize operating income before restructuring costs and amortization for each segment as a key measure in making operating decisions and assessing performance.

The Wireline segment provides Cable telecommunications services including Video, Internet, Wi-Fi, Phone, Satellite Video and data networking through a national fibre-optic backbone network to Canadian consumers, North American businesses and public-sector entities. The Wireless segment provides wireless services for voice and data communications serving customers in Ontario, British Columbia and Alberta.

Both of the Company's reportable segments are substantially located in Canada. Information on operations by segment is as follows:

4. REVENUE

Significant accounting policies

The Company records revenue from contracts with customers in accordance with the following five steps in IFRS 15:
(1) identify the contract(s) with a customer;
(2) identify the performance obligations in the contract;
(3) determine the transaction price;
(4) allocate the transaction price to the performance obligations in the contract; and,
(5) recognize revenue when (or as) we satisfy a performance obligation.

Revenue for each performance obligation is recognized either over time (i.e. services) or at a point in time (i.e. equipment). For performance obligations satisfied over time, revenue is recognized as the services are provided. These services are typically provided, and recognized on a monthly basis. Revenue for performance obligations satisfied at a point in time is recognized when control of the item or service transfers to the customer. Revenues on certain long-term contracts are recognized using output methods based on products delivered, performance completed to date and time elapsed.

For bundled arrangements (e.g. wireless handsets, and voice and data services), items are accounted for as separate performance obligations if the item meets the definition of a distinct good or service. Stand-alone selling prices are determined using observable prices adjusted for market conditions and other factors, as appropriate.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(unaudited)

February 28, 2019 and 2018
[all amounts in millions of Canadian dollars, except share and per share amounts]

When a customer can modify their contract within predefined terms such that we are not able to enforce the transaction price agreed to, but can only contractually enforce a lower amount, we allocate revenue between performance obligations using the minimum enforceable rights and obligations and any excess amount is recognized as revenue as its earned.

Contract assets and liabilities
We record a contract asset when we have provided goods and services to our customer but our right to related consideration for the performance obligation is conditional on satisfying other performance obligations. Contract assets are transferred to trade receivables when our right to consideration becomes conditional only as to the passage of time. A contract liability is recognized when we receive consideration in advance of the transfer of products or services to the customer. We account for contract assets and liabilities on a contract-by-contract basis, with each contract presented as either a net contract asset or a net contract liability accordingly.

Deferred commission cost assets
We defer the incremental cost to obtain or fulfill a contract with a customer over their expected period of benefit to the extent they are recoverable. These costs include certain commissions paid to internal and external representatives. We defer them as deferred commission cost assets in other assets and amortize them to operating costs over the pattern of the transfer of goods and services to the customer, which is typically evenly over either 24 or 36 consecutive months.

Use of estimates and judgments

The application of IFRS 15 requires Shaw to make judgments and estimates that affect the amount and timing of revenue from contracts with customers, including estimates of the stand-alone selling prices of wireless products and services, the identification of performance obligations within a contract and the timing of satisfaction of performance obligations under long-term contracts.

Determining the costs we incur to obtain or fulfill a contract that meet the deferral criteria within IFRS 15 requires us to make significant judgments. We expect incremental commission fees paid to internal and external representatives as a result of obtaining contracts with customers to be recoverable.

Contract assets and liabilities

The table below provides a reconciliation of the significant changes to the current and long-term portion of contract assets and liabilities balances during the period.

	Contract Assets	Contract Liabilities
Opening balance, as at September 1, 2018	135	244
Increase in contract assets from revenue recognized during the period	86	–
Contract assets transferred to trade receivables	(72)	–
Contract terminations transferred to trade receivables	(4)	–
Revenue recognized included in contract liabilities at the beginning of the year	–	(232)
Increase in contract liabilities during the period	–	222
Ending balance, as at February 28, 2019	145	234

February 28, 2019 and 2018
[all amounts in millions of Canadian dollars, except share and per share amounts]

Deferred commission cost assets

The table below provides a summary of the changes in the deferred commission cost assets recognized from the incremental costs incurred to obtain contracts with customers during the six months ended February 28, 2019 and 2018. We believe these amounts to be recoverable through the revenue earned from the related contracts. The deferred commission cost assets are presented within other current assets (when they will be amortized into net income within twelve months of the date of the financial statements) or other long-term assets.

	Six months ended February 28,	
	2019	2018
Opening balance, as at September 1, 2018	**75**	57
Additions to deferred commission cost assets	**37**	31
Amortization recognized on deferred commission cost assets	**(31)**	(24)
Ending balance, as at February 28, 2019	**81**	64

Commission costs are amortized over a period ranging from 24 to 36 months.

Disaggregation of revenue

	Three months ended February 28,		Six months ended February 28,	
	2019	2018 (restated, note 2)	**2019**	2018 (restated, note 2)

(1) Long-term debt is presented net of unamortized discounts and finance costs.

(2) Current portion of long-term debt includes amounts due within one year in respect of senior notes due October 1, 2019 and the Burrard Landing loans.

On November 2, 2018, the Company issued $500 senior notes at a rate of 3.80% due November 2, 2023 and $500 senior notes at a rate of 4.40% due November 2, 2028.

On November 21, 2018, the Company amended the terms of its bank credit facility to extend the maturity date to December 2023.

On December 4, 2018, the Company entered into new unsecured letter of credit facilities, under which letters of credit were issued in favour of and filed with Innovation, Science and Economic Development Canada ("ISED") to fulfill the pre-auction financial deposit requirement with respect to its application to participate in the 600 MHz spectrum auction to be held in March 2019. Under the terms of ISED's 600 Mhz auction, communications between bidders that would provide insights into bidding strategies, including references to preferred blocks, technologies or valuations are precluded until the public announcement of provisional licence winners by ISED. Disclosure of the precise amount of the letters of credit could be interpreted as a signal of bidding intentions.

Issuance of Class B Non-Voting Shares:				
Dividend reinvestment plan	**54**	54	**107**	106

14. FAIR VALUE

Fair value estimates are made at a specific point in time, based on relevant market information and information about the financial instrument. These estimates are subjective in nature and involve uncertainties and matters of significant judgment and, therefore, cannot be determined with precision. Changes in assumptions could significantly affect the estimates.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(unaudited)

February 28, 2019 and 2018
[all amounts in millions of Canadian dollars, except share and per share amounts]

Financial instruments

The fair value of financial instruments has been determined as follows:

(i) Current assets and current liabilities

The fair value of financial instruments included in current assets and current liabilities approximates their carrying value due to their short-term nature.

(ii) Investments and other assets and other long-term assets

The fair value of publicly traded investments is determined by quoted market prices. Investments in private entities which do not have quoted market prices in an active market and whose fair value cannot be readily measured are carried at cost. No published market exists for such investments. These equity investments have been made as they are considered to have the potential to provide future benefit to the Company and accordingly, the Company has no current intention to dispose of these investments in the near term. The fair value of long-term receivables approximates their carrying value as they are recorded at the net present values of their future cash flows, using an appropriate discount rate.

(iii) Long-term debt

The carrying value of long-term debt is at amortized cost based on the initial fair value as determined at the time of issuance or at the time of a business acquisition. The fair value of publicly traded notes is based upon current trading values. The fair value of finance lease obligations is determined by discounting future cash flows using a rate for loans with similar terms, conditions and maturity dates. The carrying value of bank credit facilities approximates fair value as the debt bears interest at rates that fluctuate with market values. Other notes and debentures are valued based upon current trading values for similar instruments.

(iv) Other long-term liabilities

The fair value of contingent consideration arising from a business acquisition is determined by calculating the present value of the probability weighted assessment of the likelihood that revenue targets will be met and the estimated timing of such payments.

(v) Derivative financial instruments

The fair value of US currency forward purchase contracts is determined by an estimated credit-adjusted mark-to-market valuation using observable forward exchange rates at the end of reporting periods and contract forward rates.

The carrying values and estimated fair values of long-term debt and a contingent liability are as follows:

	February 28, 2019		August 31, 2018	
	Carrying value	**Estimated fair value**	Carrying value	Estimated fair value
	$	**$**	$	$
Liabilities				
Long-term debt (including current portion)(1)	**5,306**	**5,801**	4,311	4,788

(1) Level 2 fair value – determined by valuation techniques using inputs based on observable market data, either directly or indirectly, other than quoted prices.

(1) The Company's share of income and other comprehensive income reflect the weighted average proportion of Corus net income and other comprehensive income attributable to shareholders for the three and six month periods ended February 28, 2019 and 2018.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

(unaudited)

February 28, 2019 and 2018
[all amounts in millions of Canadian dollars, except share and per share amounts]

16. INTANGIBLES AND GOODWILL

Impairment testing of indefinite-life intangibles and goodwill

The Company conducted its annual impairment test on goodwill and indefinite-life intangibles as at February 1, 2019 and the recoverable amount of the cash generating units exceeded their carrying value.

A hypothetical decline of 10% in the recoverable amount of the broadcast rights and licences for the Cable cash generating unit as at February 1, 2019 would not result in any impairment loss. A hypothetical decline of 10% in the recoverable amount of the broadcast rights and licences for the Satellite cash generating unit as at February 1, 2019 would not result in an impairment loss. A hypothetical decline of 10% in the recoverable amount of the Wireless generating unit as at February 1, 2019 would not result in any impairment loss.

Any changes in economic conditions since the impairment testing conducted as at February 1, 2019 do not represent events or changes in circumstance that would be indicative of impairment at February 28, 2019.

Significant estimates inherent to this analysis include discount rates and the terminal value. At February 1, 2019, the estimates that have been utilized in the impairment tests reflect any changes in market conditions and are as follows:

		Terminal value	
	Post-tax discount rate	Terminal growth rate	Terminal operating income before restructuring costs and amortization multiple
Cable	6.5%	1.5%	7.4X
Satellite	7.5%	-3.0%	5.4X
Wireless	9.3%	1.0%	4.5X

A sensitivity analysis of significant estimates is conducted as part of every impairment test. With respect to the impairment tests performed in the second quarter, the estimated decline in recoverable amount for the sensitivity of significant estimates is as follows:

	Estimated decline in recoverable amount		
		Terminal value	
	1% increase in discount rate	1% decrease in terminal growth rate	0.5 times decrease in terminal operating income before restructuring costs and amortization multiple
Cable	16.4%	14.2%	4.8%
Satellite	8.1%	9.7%	5.6%
Wireless	15.2%	7.7%	8.0%

This is Exhibit 33 to the affidavit of Kenneth Mathieu, affirmed remotely by Jonathan Bitran stated as being located in the city of Toronto in the province of Ontario, on the 20th day of October, 2022, in accordance with O.Reg431/20, Administering Oath or Declaration Remotely.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(unaudited)

November 30, 2018 and 2017
[all amounts in millions of Canadian dollars, except share and per share amounts]

1. CORPORATE INFORMATION

Shaw Communications Inc. (the "Company") is a diversified Canadian connectivity company whose core operating business is providing: Cable telecommunications, Satellite video services and data networking to residential customers, businesses and public-sector entities ("Wireline"); and wireless services for voice and data communications ("Wireless"). The Company's shares are listed on the Toronto Stock Exchange ("TSX"), TSX Venture Exchange and New York Stock Exchange ("NYSE") (Symbol: TSX - SJR.B, SJR.PR.A, SJR.PR.B, NYSE - SJR, and TSXV - SJR.A).

2. BASIS OF PRESENTATION AND ACCOUNTING POLICIES

Statement of compliance

These condensed interim consolidated financial statements of the Company have been prepared in accordance with International Financial Reporting Standards ("IFRS") and in compliance with International Accounting Standard ("IAS") 34 *Interim Financial Reporting* as issued by the International Accounting Standards Board ("IASB").

The condensed interim consolidated financial statements of the Company for the three months ended November 30, 2018 were authorized for issue by the Audit Committee on January 13, 2019.

a) Basis of presentation

These condensed interim consolidated financial statements have been prepared primarily under the historical cost convention except as detailed in the significant accounting policies disclosed in the Company's consolidated financial statements for the year ended August 31, 2018 and are expressed in millions of Canadian dollars unless otherwise indicated. The condensed interim consolidated statements of income are presented using the nature classification for expenses.

Certain comparative figures have been reclassified to conform to the current period's presentation.

The notes presented in these condensed interim consolidated financial statements include only significant events and transactions occurring since the Company's last fiscal year end and are not fully inclusive of all matters required to be disclosed by IFRS in the Company's annual consolidated financial statements. As a result, these condensed interim consolidated financial statements should be read in conjunction with the Company's consolidated financial statements for the year ended August 31, 2018.

The condensed interim consolidated financial statements follow the same accounting policies and methods of application as the most recent annual consolidated financial statements except as noted below.

b) New accounting standards

We adopted the following new accounting standards effective September 1, 2018.

- IFRS 15 *Revenue from Contracts with Customers,* was issued in May 2014 and replaces IAS 11 *Construction Contracts,* IAS 18 *Revenue,* IFRIC 13 *Customer Loyalty Programs,* IFRIC 15 *Agreements for the Construction of Real Estate*, IFRIC 18 *Transfers of Assets from Customers* and SIC-31 *Revenue—Barter Transactions Involving Advertising Services*. The new standard requires revenue to be recognized in a manner that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration expected to be received in exchange for those goods or services. The principles are to be applied in the following five steps:
  (1) identify the contract(s) with a customer;
  (2) identify the performance obligations in the contract;
  (3) determine the transaction price;
  (4) allocate the transaction price to the performance obligations in the contract; and,
  (5) recognize revenue when (or as) the entity satisfies a performance obligation.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

(unaudited)

November 30, 2018 and 2017
[all amounts in millions of Canadian dollars, except share and per share amounts]

IFRS 15 also provides guidance relating to the treatment of contract acquisition and contract fulfillment costs.

The application of IFRS 15 impacted the Company's reported results, including the classification and timing of revenue recognition and the treatment of costs incurred to obtain contracts with customers.

The application of this standard most significantly affected our Wireless arrangements that bundle equipment and service together, specifically with regards to the timing of recognition and classification of revenue. The timing of recognition and classification of revenue was affected because at contract inception, IFRS 15 requires the estimation of total consideration to be received over the contract term, and the allocation of that consideration to performance obligations in the contract, typically based on the relative stand-alone selling price of each obligation. This resulted in a decrease to equipment revenue recognized at contract inception, as the discount previously recognized over 24 months is now recognized at contract inception, and a decrease to service revenue recognized over the course of the contract, as a portion of the discount previously allocated solely to equipment revenue is allocated to service revenue. The measurement of total revenue recognized over the life of a contract was unaffected by the new standard.

IFRS 15 also requires that incremental costs to obtain a contract with a customer (for example, commissions) be capitalized and amortized into operating expenses over the life of a contract on a rational, systematic basis consistent with the pattern of the transfer of goods or services to which the asset relates. The Company previously expensed such costs as incurred.

The Company's financial position was also impacted by the adoption of IFRS 15, with new contract asset and contract liability categories recognized to reflect differences between the timing of revenue recognition and the actual billing of those goods and services to customers.

For purposes of applying the new standard on an ongoing basis, we must make judgments in respect of the new standard. We must make judgments in determining whether a promise to deliver goods or services is considered distinct, how to determine the transaction prices and how to allocate those amounts amongst the associated performance obligations. We must also exercise judgment as to whether sales-based compensation amounts are costs incurred to obtain contracts with customers that should be capitalized and subsequently amortized on a systematic basis over time.

We have made a policy choice to adopt IFRS 15 with full retrospective application, subject to certain practical expedients. As a result, all comparative information in these financial statements has been prepared as if IFRS 15 had been in effect since September 1, 2017. The accounting policies set out in note 2 have been applied in preparing the interim consolidated financial statements as at and for the three months ended November 30, 2018, the comparative information presented for the three months ended November 30, 2017, and for the consolidated statements of financial position as at September 1, 2017 and August 31, 2018.

Upon adoption of, and transition to, IFRS 15, we elected to utilize the following practical expedients:

- Completed contracts that begin and end within the same annual reporting period and those completed before September 1, 2017 are not restated;
- Contracts modified prior to September 1, 2017 are not restated. The aggregate effect of these modifications is reflected when identifying the satisfied and unsatisfied performance obligations, determining the transaction price and allocating the transaction price to the satisfied and unsatisfied performance obligations; and
- Not disclose, on an annual basis, the unsatisfied portions of performance obligations related to contracts with a duration of one year or less or where the revenue we recognize is equal to the amount invoiced to the customer.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

(unaudited)

November 30, 2018 and 2017
[all amounts in millions of Canadian dollars, except share and per share amounts]

Impacts of IFRS 15, Revenue from Contracts with Customers

The effect of transition to IFRS 15 on impacted line items on our condensed Consolidated Statements of Income as disclosed in note 2(f) - "Transition adjustments" for the three months ended November 30, 2017 are as follows:

		Three months ended November 30, 2017		
(millions of Canadian dollars)		**As reported**	**Effect of transition**	**Subsequent to transition**
Revenue	i.	1,249	(4)	1,245
Operating, general and administrative expenses	ii.	(768)	3	(765)
Income tax expense		77	(1)	76
Net income from continuing operations		120	–	120

i) Allocation of transaction price
Revenue recognized at point of sale requires the estimation of total consideration over the contract term and allocation of that consideration to all performance obligations in the contract based on their relative stand-alone selling prices. For Wireless term contracts, equipment revenue recognized at contract inception, as well as service revenue recognized over the course of the contract is lower than previously recognized as noted above.

ii) Deferred commission costs
Costs incurred to obtain or fulfill a contract with a customer were previously expensed as incurred. Under IFRS 15, these costs are capitalized and subsequently amortized as an expense over the life of the customer on a rational, systematic basis consistent with the pattern of the transfer of goods and services to which the asset relates. As a result, commission costs are reduced in the period, with an offsetting increase in amortization of capitalized costs over the average life of a customer.

The effect of transition to IFRS 15 on our disaggregated revenues for the three months ended November 30, 2017 are as follows:

	Three months ended November 30, 2017		
(millions of Canadian dollars)	**As reported**	**Effect of transition**	**Subsequent to transition**
Services			
Wireline - Consumer	935	–	935
Wireline - Business	140	–	140
Wireless	131	(4)	127
	1,206	(4)	1,202
Equipment and other			
Wireless	44	–	44
	44	–	44
Intersegment eliminations	(1)	–	(1)
Total revenue	1,249	(4)	1,245

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(unaudited)

November 30, 2018 and 2017
[all amounts in millions of Canadian dollars, except share and per share amounts]

The effect of transition to IFRS 15 on impacted line items on our condensed Consolidated Statements of Financial Position as disclosed in note 2(f) - "Transition adjustments" as at September 1, 2017 and August 31, 2018 are as follows:

		As at September 1, 2017			As at August 31, 2018		
(millions of Canadian dollars)		**As reported**	**Effect of transition**	**Subsequent to transition**	**As reported**	**Effect of transition**	**Subsequent to transition**
Current portion of contract assets	i.	–	15	15	–	59	59
Other current assets	ii.	155	24	179	286	(13)	273
Contract assets	i.	–	44	44	–	76	76
Other long-term assets	ii.	255	(39)	216	300	(102)	198
Accounts payable and accrued liabilities	i.	913	(4)	909	971	(1)	970
Unearned revenue	i.	211	(211)	–	221	(221)	–
Current portion of contract liabilities	i.	–	214	214	–	226	226
Deferred credits	i.	490	(21)	469	460	(18)	442
Deferred income tax liabilities	ii.	1,858	5	1,863	1,894	(6)	1,888
Contract liabilities	i.	–	21	21	–	18	18
Shareholders' equity		6,154	40	6,194	5,957	22	5,979

i) Contract assets and liabilities
Contract assets and liabilities are the result of the difference in timing related to revenue recognized at the beginning of a contract and cash collected. Contract assets arise primarily as a result of the difference between revenue recognized on the sale of wireless device at the onset of a term contract and the cash collected at the point of sale.

Contract liabilities are the result of receiving payment related to a customer contract before providing the related goods or services. We will account for contract assets and liabilities on a contract-by-contract basis, with each contract being presented as a single net contract asset or net contract liability accordingly.

ii) Deferred commission cost asset
Under IFRS 15, we will defer commission costs paid to internal and external representatives as a result of obtaining contracts with customers as deferred commission cost assets and amortize them over the pattern of the transfer of goods and services to the customer, which is typically evenly over 24 to 36 months.

Refer to note 2(f) "Transition adjustments" for the impact of application of IFRS 15 on our previously reported consolidated statements of cash flows.

- IFRS 9 *Financial Instruments* was revised and issued in July 2014 and replaces IAS 39 *Financial Instruments: Recognition and Measurement.* IFRS 9 includes updated guidance on the classification and measurement of financial instruments, new guidance on measuring impairment on financial assets, and new hedge accounting guidance. We have applied IFRS 9, and the related consequential amendments to other IFRSs, on a retrospective basis except for the changes to hedge accounting as described below which were applied on a prospective basis. The adoption of IFRS 9 did not have a significant impact on our financial performance or the carrying amounts of our financial instruments as set out in note 2(f) below.

  IFRS 9 replaces the classification and measurement models in IAS 39 with a single model under which financial assets are classified and measured at amortized cost, fair value through other comprehensive income (FVOCI) or fair value through profit or loss (FVTPL) and eliminates the IAS 39 categories of held-to-maturity, loans and receivables and available-for-sale. Investments and equity instruments are required to be measured by default at FVTPL unless an irrevocable option for each equity instrument is taken to measure at FVOCI. The classification and measurement of financial assets is based on the business model that the asset is managed and its contractual cash flow characteristics. The adoption of IFRS 9 did not change the measurement bases of our financial assets

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

(unaudited)

November 30, 2018 and 2017
[all amounts in millions of Canadian dollars, except share and per share amounts]

- Cash and derivative instruments classified as held-for-trading and measured at FVTPL under IAS 39 continue to be measured as such under IFRS 9 with an updated classification of FVTPL
- Other financial assets classified as available-for-sale and measured at FVOCI under IAS 39 continue to be measured as such under IFRS 9 with an updated classification of FVOCI
- Investments in equity securities not quoted in an active market and where fair value cannot be reliably measured that were classified as available-for-sale and recorded at cost less impairment under IAS 39 are now required to be classified and measured at FVTPL under IFRS 9. There has been no change to the measurement of these assets on transition
- Trade and other receivables classified as loans and receivables and measured at amortized cost under IAS 39 continue to be measured as such under IFRS 9 with an updated classification of amortized cost

For financial liabilities, IFRS 9 retains most of the IAS 39 requirements. We did not choose the option of designating any financial liabilities at FVTPL as such, the adoption of IFRS 9 did not impact our accounting policies for financial liabilities as all liabilities continue to be measured at amortized cost.

The impairment of financial assets under IFRS 9 is based on an expected credit loss (ECL) model, as opposed to the incurred loss model in IAS 39. IFRS 9 applies to financial assets measured at amortized cost, including contract assets under IFRS 15, and requires that we consider factors that include historical, current and forward-looking information when measuring the ECL. We use the simplified approach for measuring losses based on the lifetime ECL for trade receivables and contract assets. Amounts considered uncollectible are written off and recognized in operating, general and administrative expenses in the Consolidated Statement of Income. This change did not have a significant impact to our receivables.

IFRS 9 does not fundamentally change the types of hedging relationships or the requirements to measure and recognize ineffectiveness; however, it requires us to ensure that the hedge accounting relationships are aligned with our risk management objective and strategy and to apply a more qualitative and forward-looking approach to assess hedge effectiveness. It also requires that amounts related to cash flow hedges of anticipated purchases of non-financial assets settled during the period to be reclassified from accumulated other comprehensive income to the initial cost of the non-financial asset when it is recognized. Under IAS 39, when an anticipated transaction was subsequently recorded as a non-financial asset, the amounts were reclassified from other comprehensive income (loss).

In accordance with IFRS 9's transition provisions for hedge accounting, the Company has applied the IFRS 9 hedge accounting requirements prospectively from the date of initial application without restatement of prior period comparatives. The Company's qualifying hedging relationships in place as at August 31, 2018 also qualified for hedge accounting in accordance with IFRS 9 and were therefore regarded as continuing hedging relationships. As the critical terms of the hedging instruments match those of their corresponding hedged items, all hedging relationships continue to be effective under IFRS 9's effectiveness assessment requirements. The Company has not designated any hedging relationships under IFRS 9 that would not have met the qualifying hedge accounting criteria under IAS 39.

c) Standards and amendments to standards issued but not yet effective

The Company has not yet adopted certain standards and amendments that have been issued but are not yet effective. The following pronouncement is being assessed to determine their impact on the Company's results and financial position.

- IFRS 16 *Leases* was issued on January 2016 and replaces IAS 17 Leases. The new standard requires entities to recognize lease assets and lease obligations on the balance sheet. For lessees, IFRS 16 removes the classification of leases as either operating leases or finance leases, effectively treating all leases as finance leases. Certain short-term leases (less than 12 months) and leases of low-value are exempt from the requirements and may continue to be treated as operating leases. Lessors will continue with a dual lease classification model. Classification will determine how and when a lessor will recognize lease revenue, and what assets would be recorded.

  As the Company has significant contractual obligations currently being recognized as operating leases, we anticipate that the application of IFRS 16 will result in a material increase to both assets and liabilities and material changes to the timing of the recognition of expenses associated with the lease arrangements although at this stage in the Company's IFRS 16 implementation process, it is not possible to make reasonable quantitative estimates of the effects of the new standard.

  This new standard is described in our 2018 consolidated financial statements. We continue to assess the impact of this standard on our consolidated financial statements and we are progressing with the implementation of this standard. As at the date of these interim financial statements, there have been no significant changes to the disclosure related to the implementation of this standard that was included in our 2018 financial statements. We intend to disclose the estimated financial effects of the adoption of IFRS 16 in our 2019 annual audited consolidated financial statements.

d) Discontinued operations

The Company reports financial results for discontinued operations separately from continuing operations to distinguish the financial impact of disposal transactions from ongoing operations. Discontinued operations reporting occurs when the disposal of a component or a group of components of the Company represents a strategic shift that will have a major impact on the Company's operations and financial results, and where the operations and cash flows can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the Company.

The results of discontinued operations are excluded from both continuing operations and business segment information in the condensed interim consolidated financial statements and the notes to the condensed interim consolidated financial statements, unless otherwise noted, and are presented net of tax in the statement of income for the current and comparative periods. Refer to the Company's consolidated financial statements for the year ended August 31, 2018 for further information regarding the Company's discontinued operations.

e) Change in accounting policy

Effective September 1, 2018, the Company voluntarily changed its accounting policy related to the treatment of digital cable terminals ("DCTs") to record them as property, plant and equipment rather than inventory upon acquisition. The Company believes that the change in accounting policy will result in clearer and more relevant financial information as the Company has recently changed its offerings to customers, which has resulted in DCTs being predominantly rented rather than sold to customers. Previously, inventories included DCTs which were held pending rental or sale to the customer at cost or at a subsidized price. When the subscriber equipment was rented, it was transferred to property, plant and equipment and amortized over its useful life and then removed from capital and returned to inventory when returned by a customer. Under the new policy, all DCTs will be classified as property, plant and equipment regardless of whether or not they are currently deployed to a customer as the Company believes that this better reflects the economic substance of its operations. This change in accounting policy has been applied retrospectively. Refer to note 2(f) - "Transition adjustments" below for the impact of this change of accounting policy on previously reported consolidated Statements of Financial Position, consolidated Statements of Income and consolidated Statements of Cash Flows.

3. BUSINESS SEGMENT INFORMATION

The Company's chief operating decision makers are the Chief Executive Officer, the President and the Executive Vice President, Chief Financial & Corporate Development Officer and they review the operating performance of the Company by segments which are comprised of Wireline and Wireless. The chief operating decision makers utilize operating income before restructuring costs and amortization for each segment as a key measure in making operating decisions and assessing performance.

The Wireline segment provides Cable telecommunications services including Video, Internet, Wi-Fi, Phone, Satellite Video and data networking through a national fibre-optic backbone network to Canadian consumers, North American businesses and public-sector entities. The Wireless segment provides wireless services for voice and data communications serving customers in Ontario, British Columbia and Alberta.

Both of the Company's reportable segments are substantially located in Canada. Information on operations by segment is as follows:

4. REVENUE

Significant accounting policies

The Company records revenue from contracts with customers in accordance with the following five steps in IFRS 15:

(1) identify the contract(s) with a customer;
(2) identify the performance obligations in the contract;
(3) determine the transaction price;
(4) allocate the transaction price to the performance obligations in the contract; and,
(5) recognize revenue when (or as) we satisfy a performance obligation.

Revenue for each performance obligation is recognized either over time (i.e. services) or at a point in time (i.e. equipment). For performance obligations satisfied over time, revenue is recognized as the services are provided. These services are typically provided, and recognized on a monthly basis. Revenue for performance obligations satisfied at a point in time is recognized when control of the item or service transfers to the customer. Revenues on certain long-term contracts are recognized using output methods based on products delivered, performance completed to date and time elapsed.

For bundled arrangements (e.g. wireless handsets, and voice and data services), items are accounted for as separate performance obligations if the item meets the definition of a distinct good or service. Stand-alone selling prices are determined using observable prices adjusted for market conditions and other factors, as appropriate.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(unaudited)

November 30, 2018 and 2017
[all amounts in millions of Canadian dollars, except share and per share amounts]

When a customer can modify their contract within predefined terms such that we are not able to enforce the transaction price agreed to, but can only contractually enforce a lower amount, we allocate revenue between performance obligations using the minimum enforceable rights and obligations and any excess amount is recognized as revenue as its earned.

Contract assets and liabilities
We record a contract asset when we have provided goods and services to our customer but our right to related consideration for the performance obligation is conditional on satisfying other performance obligations. Contract assets are transferred to trade receivables when our right to consideration becomes conditional only as to the passage of time. A contract liability is recognized when we receive consideration in advance of the transfer of products or services to the customer. We account for contract assets and liabilities on a contract-by-contract basis, with each contract presented as either a net contract asset or a net contract liability accordingly.

Deferred commission cost assets
We defer the incremental cost of obtain or fulfill a contract with a customer over their expected period of benefit to the extent they are recoverable. These costs include certain commissions paid to internal and external representatives. We defer them a deferred commission cost assets in other assets and amortize them to operating costs over the pattern of the transfer of goods and services to the customer, which is typically evenly over either 24 or 36 consecutive months.

Use of estimates and judgments

The application of IFRS 15 requires Shaw to make judgments and estimates that affect the amount and timing of revenue from contracts with customers, including estimates of the stand-alone selling prices of wireless products and services, the identification of performance obligations within a contract and the timing of satisfaction of performance obligations under long-term contracts.

Determining the costs we incur to obtain or fulfill a contract that meet the deferral criteria within IFRS 15 requires us to make significant judgments. We expect incremental commission fees paid to internal and external representatives as a result of obtaining contracts with customers to be recoverable.

Contract assets and liabilities

The table below provides a reconciliation of the significant changes to the current and long-term portion of contract assets and liabilities balances during the period.

	Contract Assets	Contract Liabilities
Opening balance, as at September 1, 2018	135	244
Increase in contract assets from revenue recognized during the period	49	–
Contract assets transferred to trade receivables	(38)	–
Contract terminations transferred to trade receivables	(2)	–
Revenue recognized included in contract liabilities at the beginning of the year	–	(229)
Increase in contract liabilities during the period	–	224
Ending balance, as at November 30, 2018	144	239

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(unaudited)

November 30, 2018 and 2017
[all amounts in millions of Canadian dollars, except share and per share amounts]

Deferred commission cost assets

The table below provides a summary of the changes in the deferred commission cost assets recognized from the incremental costs incurred to obtain contracts with customers during the three months ended November 30, 2018 and 2017. We believe these amounts to be recoverable through the revenue earned from the related contracts. The deferred commission cost assets are presented within other current assets (when they will be amortized into net income within twelve months of the date of the financial statements) or other long-term assets.

	Three months ended November 30,	
	2018	2017
Opening balance	**75**	57
Additions to deferred commission cost assets	**20**	14
Amortization recognized on deferred commission cost assets	**(15)**	(11)
Ending balance	**80**	60

Commission costs are amortized over a period ranging from 24 to 36 months.

Disaggregation of revenue

	Three months ended November 30,	
	2018	2017 (restated, note 2)
Services		
Wireline - Consumer	**936**	935
Wireline - Business	**147**	140
Wireless	**167**	127
	1,250	1,202
Equipment and other		
Wireless	**106**	44
	106	44
Intersegment eliminations	**(1)**	(1)
Total revenue	**1,355**	1,245

Remaining performance obligations

The following table includes revenues expected to be recognized in the future related to performance obligations that are unsatisfied (or partially unsatisfied) as at November 30, 2018.

	Within 1 year	**Within 2 years**	**Total**
Wireline	707	259	966
Wireless	281	116	397
Total	**988**	**375**	**1,363**

When estimating minimum transaction prices allocated to the remaining unfilled, or partially unfulfilled, performance obligations, Shaw applied the practical expedient to not disclose information about remaining performance obligations that have original expected duration of one year or less and for those contracts where we bill the same value as that which is transferred to the customer.

(unaudited)

November 30, 2018 and 2017
[all amounts in millions of Canadian dollars, except share and per share amounts]

5. OTHER CURRENT ASSETS

	November 30, 2018	August 31, 2018 (restated, note 2)
	$	$
Prepaid expenses	**135**	104
Costs incurred to obtain or fulfill a contract with a customer(1)	**52**	48
Wireless handset receivables(2)	**149**	121
	336	273

(1) Costs incurred to obtain or fulfill a contract with a customer are capitalized and subsequently amortized as an expense over the average life of a customer.

(2) As described in the revenue and expenses accounting policy detailed in the significant accounting policies disclosed in the Company's consolidated financial statements for the year ended August 31, 2018, these amounts relate to the current portion of wireless handset receivables.

6. SHORT-TERM BORROWINGS

The Company has established an accounts receivable securitization program with a Canadian financial institution which will allow it to sell certain trade receivables into the program up to a maximum of $100. The Company will continue to service and retain substantially all of the risks and rewards relating to the trade receivables sold, and therefore, the trade receivables will remain recognized on the Company's Consolidated Statement of Financial Position and the funding received will be recorded as a current liability (revolving floating rate loans) secured by the trade receivables. The buyer's interest in the accounts receivable ranks ahead of the Company's interest and the program restricts it from using the trade receivables as collateral for any other purpose. The buyer of the trade receivables has no claim on any of the Company's other assets. The term of this revolving-period agreement ends on June 19, 2019.

A summary of our accounts receivable securitization program is as follows:

	November 30, 2018	August 31, 2018
	$	$
Trade accounts receivable sold to buyer as security	**443**	429
Short-term borrowings from buyer	**(40)**	(40)
Over-collateralization	**403**	389

	Three months ended November 30,	
	2018	2017
Accounts receivable securitization program, beginning of period	**40**	–
Proceeds received from accounts receivable securitization	**–**	–
Repayment of accounts receivable securitization	**–**	–
Accounts receivable securitization program, end of period	**40**	**–**

[all amounts in millions of Canadian dollars, except share and per share amounts]

10. SHARE CAPITAL

Changes in share capital during the year ended November 30, 2018 are as follows:

	Class A Shares		Class B Non-Voting Shares		Series A Preferred Shares		Series B Preferred Shares	
	Number	$	Number	$	Number	$	Number	$
August 31, 2018	22,420,064	2	484,194,344	4,054	10,012,393	245	1,987,607	48
Issued upon stock option plan exercises	–	–	73,067	2	–	–	–	–
Issued pursuant to dividend reinvestment	–	–	2,142,987	53	–	–	–	–
November 30, 2018	**22,420,064**	**2**	**486,410,398**	**4,109**	**10,012,393**	**245**	**1,987,607**	**48**

11. EARNINGS (LOSS) PER SHARE

Earnings (loss) per share calculations are as follows:

	Three months ended November 30,	
	2018	2017 (restated, note 2)
Numerator for basic and diluted earnings per share ($)		
Net income from continuing operations	**187**	117
Deduct: dividends on Preferred Shares	**(2)**	(2)
Net income attributable to common shareholders from continuing operations	**185**	115
Loss from discontinued operations	**–**	(6)
Loss from discontinued operations attributable to common shareholders	**–**	(6)
Net income attributable to common shareholders	**185**	109
Denominator (millions of shares)		
Weighted average number of Class A Shares and Class B Non-Voting Shares for basic earnings per share	**507**	498
Effect of dilutive securities (1)	**1**	1
Weighted average number of Class A Shares and Class B Non-Voting Shares for diluted earnings per share	**508**	499
Basic earnings (loss) per share ($)		
Continuing operations	**0.36**	0.23
Discontinued operations	**–**	(0.01)
Attributable to common shareholders	**0.36**	0.22
Diluted earnings (loss) per share ($)		
Continuing operations	**0.36**	0.23
Discontinued operations	**–**	(0.01)
Attributable to common shareholders	**0.36**	0.22

(1) The earnings per share calculation does not take into consideration the potential dilutive effect of certain stock options since their impact is anti-dilutive. For the three months ended November 30, 2018, 6,976,976 (2017 – 2,383,853) options were excluded from the diluted earnings per share calculation.

13. STATEMENTS OF CASH FLOWS

Disclosures with respect to the Consolidated Statements of Cash Flows are as follows:

(i) Funds flow from continuing operations

	Three months ended November 30,	
	2018	2017 (restated, note 2)
Net income from continuing operations	**187**	117
Adjustments to reconcile net income to funds flow from operations:		
Amortization	**263**	261
Deferred income tax expense	**20**	39
Share-based compensation	**1**	1
Defined benefit pension plans	**3**	4
Equity income of an associate or joint venture	**(23)**	(30)
Net change in contract asset balances	**(10)**	(26)
Other	**(2)**	1
Funds flow from continuing operations	**439**	367

(ii) Interest and income taxes paid and interest received and classified as operating activities are as follows:

	Three months ended November 30,	
	2018	2017
Interest paid	**87**	89
Income taxes paid (net of refunds)	**52**	113
Interest received	**1**	1

(iii) Non-cash transactions:

The Consolidated Statements of Cash Flows exclude the following non-cash transactions:

	Three months ended November 30,	
	2018	2017
Issuance of Class B Non-Voting Shares:		
Dividend reinvestment plan	**53**	52

14. FAIR VALUE

Fair value estimates are made at a specific point in time, based on relevant market information and information about the financial instrument. These estimates are subjective in nature and involve uncertainties and matters of significant judgment and, therefore, cannot be determined with precision. Changes in assumptions could significantly affect the estimates.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

(unaudited)

November 30, 2018 and 2017
[all amounts in millions of Canadian dollars, except share and per share amounts]

Financial instruments

The fair value of financial instruments has been determined as follows:

(i) Current assets and current liabilities

The fair value of financial instruments included in current assets and current liabilities approximates their carrying value due to their short-term nature.

(ii) Investments and other assets and other long-term assets

The fair value of publicly traded investments is determined by quoted market prices. Investments in private entities which do not have quoted market prices in an active market and whose fair value cannot be readily measured are carried at cost. No published market exists for such investments. These equity investments have been made as they are considered to have the potential to provide future benefit to the Company and accordingly, the Company has no current intention to dispose of these investments in the near term. The fair value of long-term receivables approximates their carrying value as they are recorded at the net present values of their future cash flows, using an appropriate discount rate.

(iii) Long-term debt

The carrying value of long-term debt is at amortized cost based on the initial fair value as determined at the time of issuance or at the time of a business acquisition. The fair value of publicly traded notes is based upon current trading values. The fair value of finance lease obligations is determined by discounting future cash flows using a rate for loans with similar terms, conditions and maturity dates. The carrying value of bank credit facilities approximates fair value as the debt bears interest at rates that fluctuate with market values. Other notes and debentures are valued based upon current trading values for similar instruments.

(iv) Other long-term liabilities

The fair value of contingent consideration arising from a business acquisition is determined by calculating the present value of the probability weighted assessment of the likelihood that revenue targets will be met and the estimated timing of such payments.

(v) Derivative financial instruments

The fair value of US currency forward purchase contracts is determined by an estimated credit-adjusted mark-to-market valuation using observable forward exchange rates at the end of reporting periods and contract forward rates.

The carrying values and estimated fair values of long-term debt and a contingent liability are as follows:

	November 30, 2018		August 31, 2018	
	Carrying value	**Estimated fair value**	Carrying value	Estimated fair value
	$	**$**	$	$
Liabilities				
Long-term debt (including current portion)[1]	**5,305**	**5,656**	4,311	4,788

[1] Level 2 fair value – determined by valuation techniques using inputs based on observable market data, either directly or indirectly, other than quoted prices.

15. INVESTMENTS AND OTHER ASSETS

Corus Entertainment Inc.

At November 30, 2018, the Company owned 80,630,383 (2017 – 80,630,383) Corus Class B shares having a market value of $398 (2017 - $944) and representing 38% (2017 – 39%) of Corus' total issued equity of Class A and Class B shares. The Company's weighted average ownership of Corus for the three months ended November 30, 2018 was 38% (2017 – 39%). For the three months ended November 30, 2018, the Company received dividends of $nil (2017 - $23) from Corus.

	November 30, 2018	August 31, 2018
Current assets	**610**	508
Non-current assets	**4,372**	4,375
Current liabilities	**(590)**	(523)
Non-current liabilities	**(2,653)**	(2,683)
Net assets	**1,739**	1,677
Less: non-controlling interests	**(155)**	(154)
	1,584	1,523
Carrying amount of the investment less accumulated impairment losses	**639**	615

Summary financial information for Corus and reconciliation with the carrying amount of the investment in the unaudited interim condensed consolidated balance sheets is as follows:

Summarized statement of earnings of Corus:

	Three months ended November 30,	
	2018	2017
Revenue	**467**	457
Net income attributable to:		
Shareholders	**61**	78
Non-controlling interest	**6**	7
	67	85
Other comprehensive income (loss), attributable to shareholders	**2**	(3)
Comprehensive income	**69**	82
Equity income from associates(1)	**23**	30
Other comprehensive income (loss) from equity accounted associates(1)	**1**	(1)
	24	29

(1) The Company's share of income and other comprehensive income reflect the weighted average proportion of Corus net income and other comprehensive income attributable to shareholders for the three month periods ended November 30, 2018 and 2017.

16. SUBSEQUENT EVENT

On December 4, 2018, the Company entered into new unsecured letter of credit facilities, under which letters of credit were issued in favour of and filed with Innovation, Science and Economic Development Canada ("ISED") to fulfill the pre-auction financial deposit requirement with respect to its application to participate in the 600 MHz spectrum auction to be held in March 2019. Under the terms of ISED's 600 Mhz auction, communications between bidders that would provide insights into bidding strategies, including references to preferred blocks, technologies or valuations are precluded until the deadline for the final payment. Disclosure of the precise amount of the letters of credit could be interpreted as a signal of bidding intentions.

This is Exhibit 34 to the affidavit of Kenneth Mathieu, affirmed remotely by Jonathan Bitran stated as being located in the city of Toronto in the province of Ontario, on the 20th day of October, 2022, in accordance with O.Reg431/20, Administering Oath or Declaration Remotely.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(unaudited)

May 31, 2019 and 2018
[all amounts in millions of Canadian dollars, except share and per share amounts]

1. CORPORATE INFORMATION

Shaw Communications Inc. (the "Company") is a diversified Canadian connectivity company whose core operating business is providing: Cable telecommunications, Satellite video services and data networking to residential customers, businesses and public-sector entities ("Wireline"); and wireless services for voice and data communications ("Wireless"). The Company's shares are listed on the Toronto Stock Exchange ("TSX"), TSX Venture Exchange ("TSXV") and New York Stock Exchange ("NYSE") (Symbol: TSX - SJR.B, SJR.PR.A, SJR.PR.B, NYSE - SJR, and TSXV - SJR.A).

2. BASIS OF PRESENTATION AND ACCOUNTING POLICIES

Statement of compliance

These condensed interim consolidated financial statements of the Company have been prepared in accordance with International Financial Reporting Standards ("IFRS") and in compliance with International Accounting Standard ("IAS") 34 *Interim Financial Reporting* as issued by the International Accounting Standards Board ("IASB").

The condensed interim consolidated financial statements of the Company for the three and nine months ended May 31, 2019 were authorized for issue by the Audit Committee on June 26, 2019.

a) Basis of presentation

These condensed interim consolidated financial statements have been prepared primarily under the historical cost convention except as detailed in the significant accounting policies disclosed in the Company's consolidated financial statements for the year ended August 31, 2018 and are expressed in millions of Canadian dollars unless otherwise indicated. The condensed interim consolidated statements of income are presented using the nature classification for expenses.

Certain comparative figures have been reclassified to conform to the current period's presentation.

The notes presented in these condensed interim consolidated financial statements include only significant events and transactions occurring since the Company's last fiscal year end and are not fully inclusive of all matters required to be disclosed by IFRS in the Company's annual consolidated financial statements. As a result, these condensed interim consolidated financial statements should be read in conjunction with the Company's consolidated financial statements for the year ended August 31, 2018.

The condensed interim consolidated financial statements follow the same accounting policies and methods of application as the most recent annual consolidated financial statements except as noted below.

b) New accounting standards

We adopted the following new accounting standards effective September 1, 2018.

- IFRS 15 *Revenue from Contracts with Customers,* was issued in May 2014 and replaces IAS 11 *Construction Contracts,* IAS 18 *Revenue,* IFRIC 13 *Customer Loyalty Programs,* IFRIC 15 *Agreements for the Construction of Real Estate*, IFRIC 18 *Transfers of Assets from Customers* and SIC-31 *Revenue—Barter Transactions Involving Advertising Services*. The new standard requires revenue to be recognized in a manner that depicts the transfer of promised goods or services to customers in an amount that reflects the consideration expected to be received in exchange for those goods or services. The principles are to be applied in the following five steps:
  (1) identify the contract(s) with a customer;
  (2) identify the performance obligations in the contract;
  (3) determine the transaction price;
  (4) allocate the transaction price to the performance obligations in the contract; and,

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

(unaudited)

May 31, 2019 and 2018
[all amounts in millions of Canadian dollars, except share and per share amounts]

(5) recognize revenue when (or as) the entity satisfies a performance obligation.

IFRS 15 also provides guidance relating to the treatment of contract acquisition and contract fulfillment costs.

The application of IFRS 15 impacted the Company's reported results, including the classification and timing of revenue recognition and the treatment of costs incurred to obtain contracts with customers.

The application of this standard most significantly affected our Wireless arrangements that bundle equipment and service together, specifically with regards to the timing of recognition and classification of revenue. The timing of recognition and classification of revenue was affected because at contract inception, IFRS 15 requires the estimation of total consideration to be received over the contract term, and the allocation of that consideration to performance obligations in the contract, typically based on the relative stand-alone selling price of each obligation. This resulted in a decrease to equipment revenue recognized at contract inception, as the discount previously recognized over 24 months is now recognized at contract inception, and a decrease to service revenue recognized over the course of the contract, as a portion of the discount previously allocated solely to equipment revenue is allocated to service revenue. The measurement of total revenue recognized over the life of a contract was unaffected by the new standard.

IFRS 15 also requires that incremental costs to obtain a contract with a customer (for example, commissions) be capitalized and amortized into operating expenses over the life of a contract on a rational, systematic basis consistent with the pattern of the transfer of goods or services to which the asset relates. The Company previously expensed such costs as incurred.

The Company's financial position was also impacted by the adoption of IFRS 15, with new contract asset and contract liability categories recognized to reflect differences between the timing of revenue recognition and the actual billing of those goods and services to customers.

For purposes of applying the new standard on an ongoing basis, we are required to make judgments in respect of the new standard, including judgments in determining whether a promise to deliver goods or services is considered distinct, how to determine the transaction prices and how to allocate those amounts amongst the associated performance obligations. We must also exercise judgment as to whether sales-based compensation amounts are costs incurred to obtain contracts with customers that should be capitalized and subsequently amortized on a systematic basis over time.

We have made a policy choice to adopt IFRS 15 with full retrospective application, subject to certain practical expedients. As a result, all comparative information in these financial statements has been prepared as if IFRS 15 had been in effect since September 1, 2017. The accounting policies set out in note 2 have been applied in preparing the interim consolidated financial statements as at and for the three and nine months ended May 31, 2019, the comparative information presented for the three and nine months ended May 31, 2018, and for the consolidated statements of financial position as at September 1, 2017 and August 31, 2018.

Upon adoption of, and transition to, IFRS 15, we elected to utilize the following practical expedients:

- Completed contracts that begin and end within the same annual reporting period and those completed before September 1, 2017 are not restated;
- Contracts modified prior to September 1, 2017 are not restated. The aggregate effect of these modifications is reflected when identifying the satisfied and unsatisfied performance obligations, determining the transaction price and allocating the transaction price to the satisfied and unsatisfied performance obligations; and
- Not disclose, on an annual basis, the unsatisfied portions of performance obligations related to contracts with a duration of one year or less or where the revenue we recognize is equal to the amount invoiced to the customer.

May 31, 2019 and 2018
[all amounts in millions of Canadian dollars, except share and per share amounts]

Impacts of IFRS 15, Revenue from Contracts with Customers

The effect of transition to IFRS 15 on impacted line items on our condensed Consolidated Statements of Income as disclosed in note 2(f) - "Transition adjustments" for the three and nine months ended May 31, 2018, are as follows:

		Three months ended May 31, 2018			Nine months ended May 31, 2018		
(millions of Canadian dollars)		**As reported**	**Effect of transition**	**Subsequent transition**	**As reported**	**Effect of transition**	**Subsequent transition**
Revenue	i.	1,300	(11)	1,289	3,904	(41)	3,863
Operating, general and administrative expenses	ii.	(753)	2	(751)	(2,375)	13	(2,362)
Other revenue (expense)		1	–	1	3	3	6
Income tax expense (recovery)		58	(3)	55	82	(10)	72
Net loss from continuing operations		(91)	(6)	(97)	(141)	(15)	(156)

i) Allocation of transaction price
Revenue recognized at point of sale requires the estimation of total consideration over the contract term and allocation of that consideration to all performance obligations in the contract based on their relative stand-alone selling prices. For Wireless term contracts, equipment revenue recognized at contract inception, as well as service revenue recognized over the course of the contract is lower than previously recognized as noted above.

ii) Deferred commission costs
Costs incurred to obtain or fulfill a contract with a customer were previously expensed as incurred. Under IFRS 15, these costs are capitalized and subsequently amortized as an expense over the life of the customer on a rational, systematic basis consistent with the pattern of the transfer of goods and services to which the asset relates. As a result, commission costs are reduced in the period, with an offsetting increase in amortization of capitalized costs over the average life of a customer.

The effect of transition to IFRS 15 on our disaggregated revenues for the three and nine months ended May 31, 2018, are as follows:

	Three months ended May 31, 2018			Nine months ended May 31, 2018		
(millions of Canadian dollars)	**As reported**	**Effect of transition**	**Subsequent transition**	**As reported**	**Effect of transition**	**Subsequent transition**

Contract liabilities	i.	–	21	21	–	18	18
Shareholders' equity		6,154	40	6,194	5,957	22	5,979

i) Contract assets and liabilities
Contract assets and liabilities are the result of the difference in timing related to revenue recognized at the beginning of a contract and cash collected. Contract assets arise primarily as a result of the difference between revenue recognized on the sale of wireless device at the onset of a term contract and the cash collected at the point of sale.

Contract liabilities are the result of receiving payment related to a customer contract before providing the related goods or services. We will account for contract assets and liabilities on a contract-by-contract basis, with each contract being presented as a single net contract asset or net contract liability accordingly.

ii) Deferred commission cost asset
Under IFRS 15, we will defer commission costs paid to internal and external representatives as a result of obtaining contracts with customers as deferred commission cost assets and amortize them over the pattern of the transfer of goods and services to the customer, which is typically evenly over 24 to 36 months.

Refer to note 2(f) "Transition adjustments" for the impact of application of IFRS 15 on our previously reported consolidated statements of cash flows.

- IFRS 9 *Financial Instruments* was revised and issued in July 2014 and replaces IAS 39 *Financial Instruments: Recognition and Measurement.* IFRS 9 includes updated guidance on the classification and measurement of financial instruments, new guidance on measuring impairment on financial assets, and new hedge accounting guidance. We have applied IFRS 9, and the related consequential amendments to other IFRSs, on a retrospective basis except for the changes to hedge accounting as described below which were applied on a prospective basis. The adoption of IFRS 9 did not have a significant impact on our financial performance or the carrying amounts of our financial instruments as set out in note 2(f) below.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

(unaudited)

May 31, 2019 and 2018
[all amounts in millions of Canadian dollars, except share and per share amounts]

IFRS 9 replaces the classification and measurement models in IAS 39 with a single model under which financial assets are classified and measured at amortized cost, fair value through other comprehensive income (FVOCI) or fair value through profit or loss (FVTPL) and eliminates the IAS 39 categories of held-to-maturity, loans and receivables and available-for-sale. Investments and equity instruments are required to be measured by default at FVTPL unless an irrevocable option for each equity instrument is taken to measure at FVOCI. The classification and measurement of financial assets is based on the business model that the asset is managed and its contractual cash flow characteristics. The adoption of IFRS 9 did not change the measurement bases of our financial assets

- Cash and derivative instruments classified as held-for-trading and measured at FVTPL under IAS 39 continue to be measured as such under IFRS 9 with an updated classification of FVTPL
- Investments in equity securities not quoted in an active market and where fair value cannot be reliably measured that were classified as available-for-sale and recorded at cost less impairment under IAS 39 are now required to be classified and measured at FVTPL under IFRS 9. There has been no change to the measurement of these assets on transition
- Trade and other receivables classified as loans and receivables and measured at amortized cost under IAS 39 continue to be measured as such under IFRS 9 with an updated classification of amortized cost

For financial liabilities, IFRS 9 retains most of the IAS 39 requirements. We did not choose the option of designating any financial liabilities at FVTPL as such, the adoption of IFRS 9 did not impact our accounting policies for financial liabilities as all liabilities continue to be measured at amortized cost.

The impairment of financial assets under IFRS 9 is based on an expected credit loss (ECL) model, as opposed to the incurred loss model in IAS 39. IFRS 9 applies to financial assets measured at amortized cost, including contract assets under IFRS 15, and requires that we consider factors that include historical, current and forward-looking information when measuring the ECL. We use the simplified approach for measuring losses based on the lifetime ECL for trade receivables and contract assets. Amounts considered uncollectible are written off and recognized in operating, general and administrative expenses in the Consolidated Statement of Income. This change did not have a significant impact to our receivables.

IFRS 9 does not fundamentally change the types of hedging relationships or the requirements to measure and recognize ineffectiveness; however, it requires us to ensure that the hedge accounting relationships are aligned with our risk management objective and strategy and to apply a more qualitative and forward-looking approach to assess hedge effectiveness. It also requires that amounts related to cash flow hedges of anticipated purchases of non-financial assets settled during the period to be reclassified from accumulated other comprehensive income to the initial cost of the non-financial asset when it is recognized. Under IAS 39, when an anticipated transaction was subsequently recorded as a non-financial asset, the amounts were reclassified from other comprehensive income (loss).

In accordance with IFRS 9's transition provisions for hedge accounting, the Company has applied the IFRS 9 hedge accounting requirements prospectively from the date of initial application without restatement of prior period comparatives. The Company's qualifying hedging relationships in place as at August 31, 2018 also qualified for hedge accounting in accordance with IFRS 9 and were therefore regarded as continuing hedging relationships. As the critical terms of the hedging instruments match those of their corresponding hedged items, all hedging relationships continue to be effective under IFRS 9's effectiveness assessment requirements. The Company has not designated any hedging relationships under IFRS 9 that would not have met the qualifying hedge accounting criteria under IAS 39.

[all amounts in millions of Canadian dollars, except share and per share amounts]

c) Standards and amendments to standards issued but not yet effective

The Company has not yet adopted certain standards and amendments that have been issued but are not yet effective. The following pronouncements are being assessed to determine their impact on the Company's results and financial position.

- IFRS 16 *Leases* was issued on January 2016 and replaces IAS 17 Leases. The new standard requires entities to recognize lease assets and lease obligations on the balance sheet. For lessees, IFRS 16 removes the classification of leases as either operating leases or finance leases, effectively treating all leases as finance leases. Certain short-term leases (less than 12 months) and leases of low-value are exempt from the requirements and may continue to be treated as operating leases. Lessors will continue with a dual lease classification model. Classification will determine how and when a lessor will recognize lease revenue, and what assets would be recorded.

  As the Company has significant contractual obligations currently being recognized as operating leases, we anticipate that the application of IFRS 16 will result in a material increase to both assets and liabilities and material changes to the timing of the recognition of expenses associated with the lease arrangements although at this stage in the Company's IFRS 16 implementation process, it is not possible to make reasonable quantitative estimates of the effects of the new standard.

  The Company continues to assess the impact of this standard on its consolidated financial statements and is progressing with the implementation of a new system that will enable it to comply with the requirements of the standard on a contract-by-contract basis. The Company continues to evaluate its accounting policy determinations and has commenced the data validation process, both of which the Company expects will continue throughout fiscal 2019. The Company has decided that it will use a modified retrospective approach upon adoption of IFRS 16 on September 1, 2019. The Company intends to disclose the estimated financial effects of the adoption of IFRS 16 in its 2019 annual audited consolidated financial statements.

- IFRIC 23 *Uncertainty over Income Tax Treatments* was issued in 2017 to clarify how to apply the recognition and measurement requirements in IAS 12 when there is uncertainty over income tax treatments. It is required to be applied for annual periods commencing January 1, 2019, which for the Company will be the annual period commencing September 1, 2019. The Company is currently assessing the impact of this standard on its consolidated financial statements.

d) Discontinued operations

The Company reports financial results for discontinued operations separately from continuing operations to distinguish the financial impact of disposal transactions from ongoing operations. Discontinued operations reporting occurs when the disposal of a component or a group of components of the Company represents a strategic shift that will have a major impact on the Company's operations and financial results, and where the operations and cash flows can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the Company.

The results of discontinued operations are excluded from both continuing operations and business segment information in the condensed interim consolidated financial statements and the notes to the condensed interim consolidated financial statements, unless otherwise noted, and are presented net of tax in the statement of income for the current and comparative periods. Refer to the Company's consolidated financial statements for the year ended August 31, 2018 for further information regarding the Company's discontinued operations.

e) Change in accounting policy

Effective September 1, 2018, the Company voluntarily changed its accounting policy related to the treatment of digital cable terminals ("DCTs") to record them as property, plant and equipment rather than inventory upon acquisition. The Company believes that the change in accounting policy will result in clearer and more relevant financial information as the Company has recently changed its offerings to customers, which has resulted in DCTs being predominantly rented rather than sold to customers. Previously, inventories included DCTs which were held pending rental or sale to the customer at cost or at a subsidized price. When the subscriber equipment was rented, it was transferred to property,

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(unaudited)

May 31, 2019 and 2018
[all amounts in millions of Canadian dollars, except share and per share amounts]

plant and equipment and amortized over its useful life and then removed from capital and returned to inventory when returned by a customer. Under the new policy, all DCTs will be classified as property, plant and equipment regardless of whether or not they are currently deployed to a customer as the Company believes that this better reflects the economic substance of its operations. This change in accounting policy has been applied retrospectively. Refer to note 2(f) - "Transition adjustments" below for the impact of this change of accounting policy on previously reported consolidated Statements of Financial Position, consolidated Statements of Income and consolidated Statements of Cash Flows.

f) Transition adjustments

Below is the effect of transition to IFRS 15 and adoption of our new accounting policy described above on our condensed consolidated Statements of Income for the three and nine months ended May 31, 2018.

3. BUSINESS SEGMENT INFORMATION

The Company's chief operating decision makers are the Chief Executive Officer, the President and the Executive Vice President, Chief Financial & Corporate Development Officer and they review the operating performance of the Company by segments which are comprised of Wireline and Wireless. The chief operating decision makers utilize operating income before restructuring costs and amortization for each segment as a key measure in making operating decisions and assessing performance.

The Wireline segment provides Cable telecommunications services including Video, Internet, Wi-Fi, Phone, Satellite Video and data networking through a national fibre-optic backbone network to Canadian consumers, North American businesses and public-sector entities. The Wireless segment provides wireless services for voice and data communications serving customers in Ontario, British Columbia and Alberta.

Both of the Company's reportable segments are substantially located in Canada. Information on operations by segment is as follows:

4. REVENUE

Significant accounting policies

The Company records revenue from contracts with customers in accordance with the following five steps in IFRS 15:

(1) identify the contract(s) with a customer;
(2) identify the performance obligations in the contract;
(3) determine the transaction price;
(4) allocate the transaction price to the performance obligations in the contract; and,
(5) recognize revenue when (or as) we satisfy a performance obligation.

Revenue for each performance obligation is recognized either over time (i.e. services) or at a point in time (i.e. equipment). For performance obligations satisfied over time, revenue is recognized as the services are provided. These services are typically provided, and recognized on a monthly basis. Revenue for performance obligations satisfied at a point in time is recognized when control of the item or service transfers to the customer. Revenues on certain long-term contracts are recognized using output methods based on products delivered, performance completed to date and time elapsed.

For bundled arrangements (e.g. wireless handsets, and voice and data services), items are accounted for as separate performance obligations if the item meets the definition of a distinct good or service. Stand-alone selling prices are determined using observable prices adjusted for market conditions and other factors, as appropriate.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(unaudited)

May 31, 2019 and 2018
[all amounts in millions of Canadian dollars, except share and per share amounts]

When a customer can modify their contract within predefined terms such that we are not able to enforce the transaction price agreed to, but can only contractually enforce a lower amount, we allocate revenue between performance obligations using the minimum enforceable rights and obligations and any excess amount is recognized as revenue as its earned.

Contract assets and liabilities
We record a contract asset when we have provided goods and services to our customer but our right to related consideration for the performance obligation is conditional on satisfying other performance obligations. Contract assets are transferred to trade receivables when our right to consideration becomes conditional only as to the passage of time. A contract liability is recognized when we receive consideration in advance of the transfer of products or services to the customer. We account for contract assets and liabilities on a contract-by-contract basis, with each contract presented as either a net contract asset or a net contract liability accordingly.

Deferred commission cost assets
We defer the incremental cost to obtain or fulfill a contract with a customer over their expected period of benefit to the extent they are recoverable. These costs include certain commissions paid to internal and external representatives. We defer them as deferred commission cost assets in other assets and amortize them to operating costs over the pattern of the transfer of goods and services to the customer, which is typically evenly over either 24 or 36 consecutive months.

Use of estimates and judgments

The application of IFRS 15 requires Shaw to make judgments and estimates that affect the amount and timing of revenue from contracts with customers, including estimates of the stand-alone selling prices of wireless products and services, the identification of performance obligations within a contract and the timing of satisfaction of performance obligations under long-term contracts.

Determining the costs we incur to obtain or fulfill a contract that meet the deferral criteria within IFRS 15 requires us to make significant judgments. We expect incremental commission fees paid to internal and external representatives as a result of obtaining contracts with customers to be recoverable.

Contract assets and liabilities

The table below provides a reconciliation of the significant changes to the current and long-term portion of contract assets and liabilities balances during the period.

	Contract Assets	Contract Liabilities
Opening balance, as at September 1, 2018	135	244
Increase in contract assets from revenue recognized during the period	116	–
Contract assets transferred to trade receivables	(109)	–
Contract terminations transferred to trade receivables	(6)	–
Revenue recognized included in contract liabilities at the beginning of the year	–	(234)
Increase in contract liabilities during the period	–	224
Ending balance, as at May 31, 2019	**136**	**234**

	Contract Assets	Contract Liabilities
Current	59	226
Long-term	76	18
Balance as at September 1, 2018	135	244
Current	**61**	**219**
Long-term	**75**	**15**
Balance as at May 31, 2019	**136**	**234**

May 31, 2019 and 2018
[all amounts in millions of Canadian dollars, except share and per share amounts]

Deferred commission cost assets

The table below provides a summary of the changes in the deferred commission cost assets recognized from the incremental costs incurred to obtain contracts with customers during the nine months ended May 31, 2019 and 2018. We believe these amounts to be recoverable through the revenue earned from the related contracts. The deferred commission cost assets are presented within other current assets (when they will be amortized into net income within twelve months of the date of the financial statements) or other long-term assets.

	2019	2018
Opening balance, as at September 1	**75**	57
Additions to deferred commission cost assets	**58**	41
Amortization recognized on deferred commission cost assets	**(48)**	(38)
Ending balance, as at May 31	**85**	60

Commission costs are amortized over a period ranging from 24 to 36 months.

Disaggregation of revenue

	Three months ended May 31,		Nine months ended May 31,	
	2019	2018 (restated, note 2)	**2019**	2018 (restated, note 2)
Services				
Wireline - Consumer	**925**	923	**2,784**	2,784
Wireline - Business	**150**	141	**445**	421
Wireless	**178**	146	**513**	407
	1,253	1,210	**3,742**	3,612
Equipment and other				
Wireless	**73**	80	**258**	254
	73	80	**258**	254
Intersegment eliminations	**(2)**	(1)	**(5)**	(3)
Total revenue	**1,324**	1,289	**3,995**	3,863

Remaining performance obligations

The following table includes revenues expected to be recognized in the future related to performance obligations that are unsatisfied (or partially unsatisfied) as at May 31, 2019.

	Within 1 year	**Within 2 years**	**Total**
Wireline	733	140	873
Wireless	318	127	445
Total	**1,051**	**267**	**1,318**

When estimating minimum transaction prices allocated to the remaining unfilled, or partially unfulfilled, performance obligations, Shaw applied the practical expedient to not disclose information about remaining performance obligations that have original expected duration of one year or less and for those contracts where we bill the same value as that which is transferred to the customer.
