205 It is not clear how long the Vendors would have been prepared to operate on an unprofitable basis, without beginning to accept more waste at the Secure Landfill part of the Babkirk Facility. In their final written submissions, the Vendors ask the Tribunal to assume that they would have incurred losses for two years before they decided that their venture had failed.

206 However, the Tribunal has concluded that, because there was no evidence that the Vendors have deep pockets or significant borrowing power, it is unreasonable to suppose that they would have been prepared to operate unprofitably beyond the fall of 2012, when they could have generated additional revenues by accepting more waste into the Secure Landfill part of their facility.

207 Accordingly, it is the Tribunal's view that the Vendors would have started to operate a Full Service Secure Landfill at least by the spring of 2013. In other words, they would have begun to accept significant quantities of Hazardous Waste for direct disposal into Babkirk's Secure Landfill, in competition with CCS. In the alternative, they would have sold Complete or BLS to a purchaser which would have operated a Full Service Secure Landfill. Given that the Vendors had a valuable and scarce asset and given the evidence that demand for Secure Landfill services has, for some time, been projected to increase as new drilling is undertaken in the area north and west of Babkirk, the Tribunal is satisfied that such a sale would have been readily available to the Vendors. Finally, whether Babkirk was operated by the Vendors or a new owner, Babkirk and Silverberry would have become direct and serious competitors by no later than the spring of 2013.

208 We have reached this conclusion notwithstanding CCS' submission that the Vendors' lack of experience and the smaller capacity of the Babkirk Facility would have constrained it from functioning as a serious competitor. In our view, as they had done in the past when they retained IRTL, the Vendors would have hired experts, if needed, to redress their lack of expertise. Moreover, 750,000 tonnes of permitted capacity was sufficient to allow the Vendors or a purchaser to compete effectively with CCS at Silverberry.

209 To summarize, the Tribunal has decided that it is likely that the Vendors would have operated a bioremediation treatment facility with an Incidental Secure Landfill for approximately one year from October 2011 to October 2012 (the "Initial Operating Period"). Thereafter, in the spring of 2013, the Babkirk Facility would have become a Full Service Secure Landfill.

210 Turning to the impact of these developments, it is the Tribunal's view that, as soon as the half cell of the Secure Landfill capacity at the Babkirk Facility was operational in October of 2011, waste generators who tipped at Silverberry would have seen that there was a potential alternative to Silverberry at the Babkirk Facility. The Tribunal cannot predict what would actually have happened. However, we can reasonably expect that, during the Initial Operating Period, some generators of Hazardous Waste would have asked the Vendors to take their waste for direct disposal, if only to use the possibility of disposing at Babkirk as a basis for negotiating lower Tipping Fees at Silverberry. This would have been possible because many oil and gas producers have one year non-exclusive contracts with CCS.

211 As well, given that the Vendors would have needed revenue and given that it might have been convenient for some of their customers, it is reasonable to assume that the Vendors would have accepted at least some Hazardous Waste for direct disposal during the Initial Operating Period, in spite of their evidence that this was not their intention. This possibility was foreseen by Ron Baker when, in his cross-examination, he was asked about the decision matrix in the Operations Plan which reflected that soil which arrived and could not be bioremediated would be landfilled with other soil that could not be bioremediated. He said that, "if we had room", "chances are" such soil would be put in the Secure Landfill.

212 The question is whether this competition afforded by Babkirk in the Initial Operating Period can be considered substantial. In *Canada (Director of Investigation & Research) v. Tele-Direct (Publications) Inc.* (1997), 73 C.P.R. (3d) 1 (Competition Trib.), the Tribunal addressed the question of the potential importance of a small amount of competition, in the course of examining the impact on Yellow Pages consultants of Tele-Direct's discriminatory anti-competitive practices. In that case, the Tribunal was considering whether there had been a substantial lessening of competition.

213 The Tribunal heard evidence that consultants, who charged fees to place Yellow Pages advertisements, had lost time and money and that their ability to attract new customers had been damaged by Tele-Direct's conduct. The Tribunal also found that, although the consultants only occupied a small segment of the market and had a limited and fragile ability to compete with

Tele-Direct, they had had a significant positive influence on the level of service Tele-Direct provided to customers who were purchasing yellow pages advertisements. In this context the Tribunal stated at paragraph 758:

> Where a firm with a high degree of market power [Tele-Direct] is found to have engaged in anti-competitive conduct, smaller impacts on competition resulting from that conduct will meet the test of being "substantial" than where the market situation was less uncompetitive to begin with. In these circumstances, particularly Tele-Direct's overwhelming market power, even a small impact on the volume of consultants' business, of which there is some evidence, by the anti-competitive acts must be considered substantial.

214 In contrast, in this case, the Tribunal has concluded that the competition offered by the Babkirk Facility in the Initial Operating Period would likely have had no material, let alone significant, impact on pricing at Silverberry, because any competition would have been offered on an extremely small scale. In our view, during the Initial Operating Period, Silverberry could have ignored any requests by customers for lower prices because the Babkirk Facility would not have been a viable alternative for the volumes of Hazardous Waste oil and gas producers tipped at Silverberry. This means that the prevention of any competition that would have developed in the Initial Operating Period would not have been "substantial".

215 Turning to the spring of 2013, the competition that would have been offered by Babkirk as a Full Service Secure Landfill would have been direct and substantial and, as discussed below, it is this competition that was substantially prevented by the Merger.

B. What are the Relevant Assessment Factors?

Conditions of Entry

216 The conditions of entry into a relevant market can be a decisive factor in the Tribunal's assessment of whether a merger is likely to prevent or lessen competition substantially. This is because, "[i]n the absence of significant entry barriers it is unlikely that a merged firm, regardless of market share or concentration, could maintain supra-competitive pricing for any length of time" (*Hillsdown*, above, at 324; see also *Propane*, above, at para. 127).

217 To be effective, entry must be timely, likely and sufficient to ensure that any prevention of future competition will not be substantial.

218 CCS maintains that the evidence in this case is that the Secure Landfill business is not characterized by significant entry barriers and that the conditions for entry are conducive for potential competitors. In this regard, CCS asserts that (i) the regulatory regime is permissive, as evidenced by the fact that a number of permits to operate a Secure Landfill have been granted in NEBC in recent years, (ii) there is a growing market in the NEBC region for oil and gas drilling and related services, coupled with a growing demand and pressure for socially responsible waste management alternatives, and (iii) the industry practice of engaging in short-term contracts is conducive to entry. CCS further asserts that the Commissioner's reliance on the fact that BLS took nearly four years to obtain its Secure Landfill permit is misplaced, most importantly because BLS did not pursue concurrent permitting. Concurrent permitting allows an applicant to pursue applications for EA Certificates and an MOE Permits (together the "Authorizations") in tandem. CCS also asserts that entry is much less time consuming if a remote area near Babkirk is selected. Thus, attempts to develop secure landfills in populated areas around Dawson Creek should not be accepted as precedents for the timing that entry might involve near Babkirk.

219 Among other things, prior to seeking the Authorizations, a new entrant must spend several months selecting a site from among various potential sites. This involves drilling test holes to determine whether the site's subsurface characteristics are appropriate for Secure Landfilling. If so, a further assessment is undertaken which involves drilling multiple test holes and installing monitoring equipment. There is no evidence about the time needed to complete only a site selection. However, *[CONFIDENTIAL]* spent 15 to 18 months on site selection and the preparation of an application for a potential landfill.

220 Once a potential entrant has completed the site selection described above, it must then obtain the required Authorizations. The evidence is that this process would likely take at least 18-24 months and that a further 3 to 4 months are needed for construction.

221 Notwithstanding the time and money ($1.3 million) it spent during the development process, as described earlier, SES abandoned its plans to open the Heritage landfill and, after spending $885,000.00, CCS abandoned its proposed Sunrise Landfill in NEBC, due to opposition from local residents. These two incidents of site abandonment by knowledgeable industry participants underscore the risk and uncertainty associated with new entry, as well as the "sunk" nature of the entry costs in the event that an entry initiative is unsuccessful.

222 Based on this evidence, the Tribunal has concluded that, even in a remote location and even with concurrent permitting, it would take a new entrant at least 30 months to complete the process of selecting a new site, obtaining the required Authorizations and constructing a new Secure Landfill. That said, the Tribunal notes that there is no evidence of any proposed entry in the Contestable Area.

Absence of Acceptable Substitutes/Effective Remaining Competition

223 For the reasons given earlier, the Tribunal is satisfied that, for some product and for some generators, bioremediation does not compete in the same market as the supply of Secure Landfill services and does not exercise any constraining influence on price or non-price competition within the latter market.

224 This conclusion is supported by the fact that CCS' Tipping Fees are significantly higher in areas where it does not face competition from other Secure Landfill operators, than they are in areas where CCS does face such competition. In addition, the "natural experiment" that occurred when SES opened its facility in Willesden Green Alberta, and CCS substantially reduced its Tipping Fees to seven of its significant customers, strongly suggests that CCS' pricing behaviour is primarily determined by reference to the location of competing suppliers of Secure Landfill services, rather than by competition with suppliers of bioremediation services.

225 Dr. Baye provided extensive evidence with respect to CCS' alleged ability to price discriminate in order to show that it had market power. However, given the foregoing and because CCS is a monopolist in the relevant market and is not constrained by any actual or potential competition from within or outside the market, it is clear that CCS has significant market power. This conclusion is further supported by the discussion of countervailing market power immediately below. For this reason, it is not necessary to consider the allegation of price discrimination.

Countervailing Power

226 CCS correctly notes that none of its customers have complained about the Merger. CCS encourages the Tribunal to infer from this that the Merger is not likely to prevent competition substantially. However, the Tribunal is not persuaded that this is a reasonable inference.

227 The Tribunal recognizes that CCS' largest customers pay lower Tipping Fees than its smaller customers. However, the Tribunal notes that Dr. Baye's report indicates that even CCS' largest customers are forced to pay higher Tipping Fees in areas where CCS faces no competition than in areas where such competition exists and this evidence was not contested. In 2010, the average Tipping Fees at Silverberry and Northern Rockies were *[CONFIDENTIAL]* and *[CONFIDENTIAL]* respectively. However, Tipping Fees at CCS' South Grande Prairie *[CONFIDENTIAL]* and Rocky *[CONFIDENTIAL]* in Alberta were significantly lower because they both face competition from SES. This no doubt explains why Mr. *[CONFIDENTIAL]*, who testified for the Commissioner, made it clear in his testimony that he would welcome competition for CCS in NEBC.

228 The attenuated or limited nature of any countervailing power that may be in the hands of CCS' largest customers is also reflected in the evidence that written requests by them for price relief were rejected by CCS during the industry downturn in late 2008 and early 2009.

C. Conclusions

229

> (i) Based on all of the foregoing, the Tribunal has concluded that the Merger is likely to prevent competition substantially. The Merger prevented likely future competition between the Vendors and CCS in the supply of Secure Landfilling services in, at the very least, the Contestable Area. Although the competition that was prevented in 2012 is not likely to be substantial, the Tribunal is satisfied that by no later than the spring of 2013, either the Vendors or a party that purchased the Babkirk Facility would have operated in direct and serious competition with CCS in the supply of Secure Landfill services in the Contestable Area.
>
> (ii) In estimating the magnitude of the likely adverse price effects of the Merger, the Commissioner relied on expert evidence adduced by Dr. Baye. That evidence included economic theory and regression models. However, for reasons discussed below the Tribunal has not given significant weight to that economic theory or to those regression models in assessing the magnitude of the likely adverse price effects of the Merger. In reaching this decision, the Tribunal took into account the fact that the models do not control for costs, and the fact that, although Dr. Baye acknowledged that his theory of spatial competition should only be used if other data were unavailable, he used his theory even though he had actual CCS data.
>
> (iii) Nevertheless, as discussed below in connection with the "effects" element of section 96, the Tribunal is satisfied that prices likely would have been at least 10% lower in the Contestable Area in the absence of the Merger.
>
> (iv) The Tribunal therefore finds that the Merger is more likely than not to maintain the ability of CCS to exercise materially greater market power than in the absence of the Merger, and that the Merger is likely to prevent competition substantially.

Issue 7 When the Efficiencies Defence Is PLEADED, What is the Burden of Proof on the Commissioner and on the Respondent?

230 CCS has alleged that the Commissioner failed to properly discharge her burden to prove the extent of the quantifiable effects of the Merger. CCS alleges that the Commissioner's failure to prove those effects in her case in chief has precluded CCS from being able to meet its overall burden to prove the elements of the efficiencies defence on a balance of probabilities. CCS asserts that the Commissioner's failure means that the effects should be zero and that the Application should therefore be dismissed.

231 In paragraph 48 of its response to the Commissioner's Application, CCS pleaded the efficiencies defence in the following terms:

> The Acquisition has brought about or is likely to bring about gains in efficiency that will be greater than, and will offset, the effects of any prevention of competition that will result from the Acquisition, and the gains in efficiency will not likely be attained if the requested order or orders are made by the Tribunal.

232 The burdens of proof under section 96 were established and applied over the course of the four decisions in *Propane* (*Propane*, at para. 48, rev'd on other grounds 2001 FCA 104, [2001] 3 F.C. 185 (Fed. C.A.) ("*Propane 2*"), leave to appeal to SCC refused [2001 CarswellNat 1905 (S.C.C.)], 28593 (September 13, 2001), redetermination, *Canada (Commissioner of Competition) v. Superior Propane Inc.*, 2002 Comp. Trib. 16, 18 C.P.R. (4th) 417 (Competition Trib.) ("*Propane 3*"), aff'd 2003 FCA 53, [2003] 3 F.C. 529 (Fed. C.A.) ("*Propane 4*")). "The effects of any prevention or lessening of competition" must be demonstrated by the Commissioner on balance of probabilities (*Propane*, above, at para. 402; *Propane*, above, at para. 177, *Propane*, at para. 17). Her burden is to prove (i) the extent of the *anti-competitive* effects in question where they are quantifiable, even if only roughly so (*Propane*, at paras. 35-38), and (ii) any non-quantifiable or qualitative *anti-competitive* effects of the merger. It also includes the burden to demonstrate the extent of any *socially adverse* effects that are likely to result from the merger, i.e., the proportion of the otherwise neutral wealth transfer that should be included in the trade-off assessment contemplated by section 96, as well as the weighting that should be given to those effects (*Propane*, above, at paras. 35-38,

and 61-64). In this case, there being no socially adverse effects, the term "Effects" will be used to described quantifiable and non-quantifiable anti-competitive effects.

233 That said, the respondents bear the burden on the ultimate issue, namely, that the efficiency gains are likely to be greater than, and to offset, the effects of any prevention or lessening of competition likely to result from the merger (*Propane*, above, at para. 154).

234 There is no dispute about the fact that, in his expert report in chief, Dr. Baye only calculated that an average price decrease of at least 10% would be prevented by the Merger. This meant that CCS did not have a figure for the Effects and was obliged to serve its expert report on efficiencies with no ability to take a position about whether the number it calculated for its total efficiencies was greater than the Effects. As a result, CCS maintains that, as a matter of substantive and procedural fairness, it was effectively denied a right of response and the ability to properly meet its own burden under section 96. It therefore asserts that the Tribunal should conclude that there are no quantified Effects as a result of the Merger.

235 Dr. Baye did eventually quantify the Effects but not until he wrote his reply report, which was only made available to CCS two weeks before the hearing. By then, the Tribunal's Scheduling Order did not permit CCS to bring a motion or file a further expert report. In addition, the Tribunal accepts that, in practical terms, there was insufficient time before the hearing to permit CCS to move to strike Dr. Baye's report or to seek leave to file a further report in response to the Commissioner's quantification of the Effects.

236 The Commissioner maintains that her substantive burden to quantify the Effects only arises once a respondent advances its affirmative defence by proving efficiencies. She submits that any other result would require her to respond to every bald assertion of efficiencies, regardless of whether a respondent actually relies on efficiencies at the hearing. She asserts in her final written argument that this "would be an incredible waste of resources, and one that is antithetical to the notion of responding to an affirmative defence".

237 In the Tribunal's view, the Commissioner's argument about resources does not justify her failure to meet her burden to prove the Effects as part of her case in chief. Once CCS pleaded section 96, the efficiencies defence became part of the fabric of the case and, if it had not been pursued by CCS, the Commissioner would have been entitled to costs fully compensating her for work done by her experts to calculate the Effects.

238 The Commissioner also defended her approach by stating that, until CCS served Dr. Kahwaty's report on efficiencies ("Efficiencies Report"), it was an open question whether it was going to pursue the efficiencies defence at all. In this regard, she noted that prior to serving that report, CCS advanced no facts or proof of efficiencies, and provided no guidance on the types of efficiencies that Dr. Kahwaty planned to identify and quantify. She also observed that the Tribunal's Revised Scheduling Order, dated August 19, 2011, indicated that CCS might not pursue the efficiencies defence.

239 The revised scheduling order required the "Corporate Respondents to serve expert reports*, if any*, on efficiencies and provide them to the Tribunal" on or before October 7, 2011 (our emphasis). However, since the phrase "if any" was proposed by the Commissioner and not by CCS, the Tribunal does not accept that it suggests that CCS had resiled from its pleading.

240 In addition, the Tribunal can find no basis in the record for concluding that CCS did not intend to mount the efficiencies defence. The Tribunal notes that the Commissioner asked questions about efficiencies during examination for discovery and asked, during a case management teleconference on August 15, 2011, that CCS be ordered to produce documents relevant to the issue. During that teleconference, the Presiding Judicial Member stated that efficiencies were at issue and that, if relevant documents existed, their production was required.

241 Given the pleading of section 96 and these developments, the Tribunal concludes that there was no reason to doubt that CCS would pursue an efficiencies defence.

242 The Commissioner further asserts that the legislation and the case law do not dictate how she must meet her burden to prove the extent of the Effects. She submits that she is not obliged in every case to lead evidence about demand elasticities

and provide detailed calculations about the range of likely Effects. This is particularly so in a case such as this in which she asserts that the efficiencies are "plainly so minimal that it was an open question whether [the efficiencies defence would even be pursued]".

243 The Tribunal acknowledges that the legislation and the jurisprudence do not dictate how the Commissioner must meet her burden. However, as noted above, where it is possible to quantify the Effects of a merger, even if only in "rough" terms, the Commissioner has the onus to provide an estimate of such Effects (*Propane*, above, at paras. 35 — 38).

244 Indeed, where the necessary data can be obtained, the Commissioner will be expected in future cases to provide estimates of market elasticity and the merged entity's own-price elasticity of demand in her case in chief. These estimates facilitate the calculation of the magnitude of the output reduction and price effects likely to result from the merger. They are also necessary in order to calculate the deadweight loss ("DWL") that will likely result from the output reduction and related price effects. DWL is the loss to the economy as a whole that results from the inefficient allocation of resources which occurs when (i) customers reduce their purchases of a product as its price rises, and shift their purchases to other products that they value less, and (ii) suppliers produce less of the product.

245 Given that there will often be shortcomings in the data used to estimate market elasticities and the merged entity's own-price elasticity of demand, prudence dictates that a range of plausible elasticities should be calculated, to assist the Tribunal to understand the sensitivity of the Commissioner's estimates to changes in those elasticities. The Tribunal will be open to making its assessment of the quantitative extent of the Effects on the basis of persuasively supported "rough estimates" of those Effects, but only if the data required to reliably estimate elasticities cannot reasonably be obtained. Such rough estimates may be derived from evidence with respect to the magnitude of the likely price effects of the merger, including statements or projections made in the internal documents of the respondent or its advisors (including its investment bankers); persuasive estimates by customers, other lay witnesses, or expert witnesses; and persuasive evidence from "natural experiments."

246 Although the Commissioner failed to meet her burden, in the unusual circumstances of this case, CCS was not prejudiced by that failure because, instead of doing the required independent analysis of elasticities, Dr. Baye relied on his assumed price decrease of at least 10% and on certain assumptions used by Dr. Kahwaty in calculating CCS' claimed market expansion efficiencies. In making that calculation, Dr. Kahwaty assumed that the opening of a Secure Landfill at Babkirk would lead waste generators to dispose of approximately *[CONFIDENTIAL]* additional tonnes of Hazardous Waste, as forecast in CCS' internal documents. Further, during the hearing. Dr. Kahwaty was able to effectively attack Dr. Baye's DWL calculations on various grounds, including his failure to base them on conventional calculations of elasticities when he could have obtained the data necessary to perform those calculations. In short, CCS was able to effectively assert the defence and argue that the efficiencies its expert presented were greater than the Effects (i.e. the DLW) calculated by Dr. Baye. For these reasons, the Tribunal declines to dismiss the Application.

247 There is a second reason why CCS' request is being denied. CCS was also required to show that the cognizable efficiencies would be likely to *offset* the Effects. This means that even if the Tribunal had accepted CCS' submission that a zero weighting should be given to the quantifiable Effects, it would not necessarily follow that the Tribunal would find that the *offset* element of section 96 has been established on a balance of probabilities.

248 This is so for two reasons. First, as noted in *Propane*, above, at para. 172, "it cannot be concluded that the Tribunal would find that efficiency gains (whether large or small) that marginally exceeded the effects (whether large or small) would necessarily offset those effects." This is because the loss of dynamic competition will always merit some non-trivial qualitative weighting in the trade-off assessment. Indeed, dynamic efficiencies and dynamic Effects can have a major impact on the trade-off assessment. Second, in this case, the Commissioner adduced evidence of *qualitative* Effects in Dr. Baye's expert report in chief. As well, CCS adduced evidence of qualitative efficiencies, such as improved service, reduced risk for customers and the environment, which put in play the issue of whether a substantial prevention of competition likely would adversely impact upon these matters.

249 Accordingly, the Commissioner's failure to meet her burden to quantify the Effects, even in rough terms, at the appropriate time is not a sufficient reason to conclude that CCS is relieved of its obligation to meet its burden to meet the "offset" element in section 96.

Issue 8 Has CCS Successfully Established an Efficiencies Defence?

What are the Claimed Efficiencies?

250 We now turn to summarizing the efficiencies claimed by CCS. In that regard, Dr. Kahwaty testified on behalf of CCS that the Merger would likely result in efficiencies that he grouped into the following five categories.

251 *Transportation efficiencies*: These were described as being productive efficiencies realized by those customers presently serviced at Silverberry, who have an aggregate of *[CONFIDENTIAL]* locations that are situated closer to the Babkirk Facility than to Silverberry. Once CCS opens the Babkirk as a Secure Landfill, those customers will realize significant transportation cost savings, thereby freeing up resources for other uses. Based on what he described as the "going rate" of approximately *[CONFIDENTIAL]* for trucking services, the number of loads shipped from each of the above-mentioned *[CONFIDENTIAL]* locations in 2010, and the time saved by tipping at Babkirk instead of Silverberry, Dr. Kahwaty estimated the annual aggregate transportation cost savings for the aforementioned customers to be *[CONFIDENTIAL]*. Using a lower trucking rate of *[CONFIDENTIAL]* per hour per load (or $5 per tonne per hour of transport), Dr. Kahwaty provided a second estimate of those annual transportation cost savings, which totaled *[CONFIDENTIAL]*. Dr. Kahwaty also calculated that his two estimates represented approximately *[CONFIDENTIAL]* and *[CONFIDENTIAL]* respectively of CCS' 2010 revenue derived from the *[CONFIDENTIAL]* customer locations in question.

252 *Market expansion efficiencies*: Dr. Kahwaty stated that, absent the opening of a Secure Landfill at Babkirk, a significant volume of existing Legacy Waste and newly generated Hazardous Waste, within the drawing area of the Babkirk Facility, would not have been transported to Silverberry due to the significant risk, and related financial liability, that would be associated with transporting such waste over the long distance to Silverberry. However, with the opening of a Secure Landfill at the Babkirk Site, CCS estimated that approximately *[CONFIDENTIAL]* tonnes per year of such waste ("Market Expansion Waste") likely would be transported for disposal at Babkirk. Dr. Kahwaty acknowledged that this estimate is "necessarily imprecise," and suggested that the incremental volume of Market Expansion Waste could substantially exceed CCS' estimate of *[CONFIDENTIAL]* tonnes per year. Based on the reported margin for Silverberry in 2009 of *[CONFIDENTIAL]* and a price of *[CONFIDENTIAL]* per tonne, Dr. Kahwaty estimated an increase in producer surplus from this incremental volume of *[CONFIDENTIAL]*. In addition, based on an estimated reduction in disposal costs of *[CONFIDENTIAL]* per tonne, Dr. Kahwaty estimated that customers would gain approximately *[CONFIDENTIAL]* per year in consumer surplus. This is only 50% of the product of multiplying *[CONFIDENTIAL]* by *[CONFIDENTIAL]*, because Dr. Kahwaty felt that customers do not gain the full reduction in the costs of disposal when they are induced to dispose of their waste by virtue of a lower overall cost of disposition. The sum of the estimated *[CONFIDENTIAL]* in producer surplus gains and the estimated *[CONFIDENTIAL]* in consumer gains, was a total of *[CONFIDENTIAL]* of annual market expansion efficiencies.

253 *Overhead Efficiencies*: Dr. Kahwaty estimated that the Merger would result in annual overhead savings of approximately *[CONFIDENTIAL]*. He stated that these savings likely would be achieved by virtue of the fact that CCS could draw upon its existing administrative staff (e.g., those persons who deal with legal, regulatory, marketing, engineering, financial and health & safety matters) in operating the Babkirk Facility. In the absence of the Merger, he stated that the Vendors likely would have had to incur expenses associated with these functions. In reaching his estimate of *[CONFIDENTIAL]*, Dr. Kahwaty used the cost reductions that CCS has achieved in operating Complete's Roll-off Bin Business as a proxy. In addition, he submitted that some "qualitative" credit should be given to this category of efficiencies, because Complete would otherwise need to expend resources developing administrative systems and to deal with some of the matters identified above.

254 *Roll-off Bin Business Efficiencies*: Dr. Kahwaty estimated that CCS's Merger of the Roll-off Bin Business has resulted in annual cost savings of approximately *[CONFIDENTIAL]*. These savings were described as having been achieved as a result

of (i) the upgrading of its trucks to meet higher safety standards, (ii) investments in business development efforts, and (iii) the absorption of administrative functions, such as billing, into CCS' pre-existing corporate systems.

255 *Qualitative efficiencies*: Dr. Kahwaty listed the following qualitative efficiencies as being likely to result from the Merger:

a. the landfill services to be offered by CCS at the Babkirk Site will be of higher (and known) quality and involve less risk for customers due to CCS's knowledge and experience in the operation and management of hazardous waste landfills;

b. customers will benefit from being able to purchase bundled packages of services that may include, for example, loading, trucking and tipping services;

c. the landfill services to be offered by CCS at the Babkirk Site will reduce risks for customers due to CCS's substantial financial resources, which provide assurance to customers regarding the long-term management of the Babkirk Facility and the potential continuing liability for wastes disposed in that landfill;

d. CCS will have the capability and resources necessary to expand the Babkirk Facility as necessary and to meet special customer needs (e.g., rapid responses to increased disposal needs);

e. since landfilling is CCS' business and since the Vendors were not planning to operate a Secure Landfill, CCS will promote landfilling services to a greater extent than the Vendors would have done, once the Babkirk Site is operational, making trucking cost efficiencies available to more customers;

f. the provision of Secure Landfill services by CCS at the Babkirk Site will reduce risks for generators, trucking firms, and other road users related to the transportation of Hazardous Waste on roads over long distances;

g. increased competition in the Roll-off Bin Business will benefit roll-off customers and may reduce the extent of any DWL in the roll-off industry, which will increase the total surplus generated in the roll-off marketplace; and

h. increased site remediation from reduced trucking costs will benefit area residents, wildlife, and the overall environment, and will also further the government's policy of expanding contaminated site remediations.

256 Dr. Kahwaty also stated that some or all of the efficiencies identified above would likely be achieved sooner by CCS than by Complete or by any third-party who might acquire the Babkirk Facility pursuant to an order of the Tribunal.

257 In addition, Dr. Kahwaty stated that CCS should be given credit for some of the efficiencies that it has already achieved in respect of the Roll-off Bin Business.

258 Finally, Dr. Kahwaty provided reasoned estimates about the extent to which the above-mentioned trucking and market expansion efficiencies would increase under market growth scenarios of 1%, 2% and 4% compounded annually over the next 10 years. Based on this work, he suggested that these increased efficiencies ought to be considered by the Tribunal.

259 After providing his annual estimates of the quantifiable efficiencies, Dr. Kahwaty calculated the net present value of those efficiencies as of January 1, 2012 using three different discount rates: (i) a risk-free interest rate of 1%, which he described as being the annual yield on one to three year government of Canada marketable bonds over the 10 week period preceding the date of his report (October 7, 2011); (ii) an interest rate of 10%, which he described as being "roughly equivalent to rates prevailing in the oil and gas industry"; and (iii) an intermediate rate of 5.5%.

260 The Tribunal accepts the evidence of Mr. Harrington, the Commissioner's expert, that, in broad terms, the discount rate used in calculating the net present value of efficiencies typically does not matter, so long as the same discount rate is used to calculate the net present value of the Effects. That said, the Tribunal also accepts Mr. Harrington's evidence that, (i) as a general principle, the appropriate discount rate to use in discounting a set of future cash flows is a function of the risk of those cash flows being wrong, (ii) there is some uncertainty associated with the efficiencies identified and estimated by Dr. Kahwaty and

CCS, and therefore (iii) the midpoint (5.5%) of the three discount rates identified by Dr. Kahwaty is the most defensible of the three rates to use in calculating efficiencies and Effects in this case.

The assessment of the claimed efficiencies

261 In the initial stage of assessing efficiencies claimed under section 96 of the Act, the Tribunal applies five screens to eliminate efficiencies that are not cognizable under that section.

262 The first screen eliminates claims that do not involve a type of productive or dynamic efficiency, or that are not otherwise likely to result in any increase in allocative efficiency. The second screen narrows the claimed efficiencies to those that the Tribunal is satisfied are *likely* to be brought about by the Merger. Efficiencies that cannot be demonstrated to be more likely than not to be attained in the Merger are filtered out at this stage. The third screen filters out claimed efficiency gains that would be brought about by reason only of a redistribution of income between two or more persons, as contemplated by subsection 96(3). These types of gains include savings that result solely from a reduction in output, service, quality or product choice, as well as from increases in bargaining leverage and reductions in taxes. The fourth screen filters out claimed efficiency gains that would be achieved outside Canada and would not flow back to shareholders in Canada as well as any savings from operations in Canada that would flow through to foreign shareholders.

263 In the case at bar, the application of the first four screens does not result in the elimination of any of the claimed efficiencies.

264 The fifth screen filters out claimed efficiencies that either (a) would likely be attained through alternative means if the Tribunal were to make the order that it determines would be necessary to ensure that the merger in question does not prevent or lessen competition substantially, or (b) would likely be attained through the Merger even if that order were made. This screen has a critical role to play in the case at bar.

265 In this case, the fifth screen eliminates most of the efficiencies claimed by CCS. With three exceptions, being the one year of transportation efficiencies and the one year of market expansion efficiencies discussed at paragraph 269 below, as well as the overhead efficiencies discussed above, virtually all of the efficiencies claimed by CCS would likely be achieved even if the order referred to in the preceding paragraph is made. That order is an order for the divestiture of the shares or assets of BLS (the "Order").

266 Although there is currently some uncertainty regarding the identity of a prospective purchaser, the Tribunal is satisfied that a divestiture will ultimately be made to a purchaser who will operate the Babkirk Facility and attract essentially the same volumes of Hazardous Waste as were assumed by Dr. Kahwaty in arriving at his estimates of transportation and market expansion efficiencies.

267 The Tribunal has decided that, absent exceptional circumstances, it will not be prepared to conclude that the claimed efficiencies that would be realized by any acceptable alternative purchaser should be included in the trade-off assessment, on the basis that it is not possible to identify any particular *likely* purchaser of the shares or assets contemplated by the divestiture order.

Transportation and Market Expansion Efficiencies

268 Based on the reasonable assumption that a purchaser under the Order will emerge and attract, in its first year of operation, the volume of Hazardous Waste that formed the basis for Dr. Kahwaty's estimates of CCS' claimed transportation and market expansion efficiencies, those efficiencies cannot be considered in the section 96 assessment because they are likely to be achieved even if the Order is made.

269 A noteworthy exception to this conclusion concerns the transportation and market expansion efficiencies that CCS claims would be achieved more quickly by CCS than by a purchaser. In this regard, CCS asserted that it would already have been operating at Babkirk but for the Commissioner's intervention and that, in any event, it is likely to be in a position to operate a Secure Landfill at the Babkirk Site by the summer of 2012. In contrast, CCS stated that a purchaser following a divestiture

is unlikely to be in a position to operate a Secure Landfill facility at the Babkirk Site before mid-2013, having regard to the time required (i) for the Tribunal to render a decision in this proceeding, (ii) to effect the actual sale of the shares or assets of BLS (which it estimates to will require "at least six months, or more," inclusive of due diligence), (iii) to modify or prepare an operations plan for the landfill, (iv) for the MOE to approve the operations plan, and (v) for the purchaser to construct the landfill, bearing in mind that construction can only be undertaken between June and September.

270 In the Tribunal's view, claimed efficiencies that would not likely be achieved by a purchaser under the Order, but that would likely be achieved by CCS solely because of the types of delays identified immediately above and associated with the implementation of the Order, are not cognizable efficiencies under section 96. These will be described as "Order Implementation Efficiencies". In the case at bar, CCS and the Vendors completed the Merger after being advised that the Commissioner intended to apply to the Tribunal. To give the Respondents the benefit of Order Implementation Efficiencies in such circumstances, and thereby potentially preclude the Tribunal from issuing the Order in respect of their anticompetitive Merger, would be contrary to the purposes of the Act.

271 In any event, even if CCS were given full credit for the Order Implementation Efficiencies, those efficiencies are only likely to be between *[CONFIDENTIAL]* and *[CONFIDENTIAL]* (which represents one year of transportation cost savings) plus *[CONFIDENTIAL]* (which represents one year of annual market expansion efficiencies). As discussed below in connection with the Tribunal's treatment of the "offset" element of section 96, these efficiencies are not sufficient to change the Tribunal's overall determination with respect to section 96.

The Roll-off Bin Business Efficiencies

272 The divestiture of the shares or assets of BLS will not have any impact on the Roll-off Bin Business efficiencies claimed by CCS. Stated alternatively, those efficiencies will likely be attained even if the Order is made. Accordingly, those efficiencies cannot be considered in the trade off assessment contemplated by section 96.

273 CCS has also submitted that certain productive efficiencies have already been achieved as a result of (i) its upgrading and sale of trucks to meet higher safety standards and to operate more efficiently, and (ii) CCS having absorbed certain administrative functions into its pre-existing corporate functions. However, as Mr. Harrington testified on behalf of the Commissioner, these efficiencies would only be lost if CCS were required to divest the Roll-off Bin Business. Given that the Order does not include the Roll-off Bin Business, those efficiencies will not be affected by the Order as contemplated by subsection 96(1) of the Act. Accordingly, they are not cognizable. In any event, given the value of these efficiencies, which Dr. Kahwaty estimated to be approximately *[CONFIDENTIAL]*, the Tribunal's overall conclusion with respect to section 96, set forth below, would not change even if these efficiencies were given full value in the trade-off assessment.

274 More generally, if certain efficiencies have already been achieved, they cannot be considered to be a potential "cost" of making the order contemplated by section 96. Therefore, they cannot be considered in the assessment under section 96. In other words, it cannot be said that those efficiencies "would not likely be attained if the order were made," as required by subsection 96(1).

The Overhead Efficiencies

275 As has been noted, Dr. Kahwaty estimated that these efficiencies would likely total approximately *[CONFIDENTIAL]* per year. He arrived at this assessment by, among other things, using as a proxy the cost reductions that CCS has achieved in operating the Roll-off Bin Business. Those cost reductions amounted to approximately 21% of the overhead expenses that previously were incurred by Complete in operating the Roll-off Bin Business. Dr. Kahwaty applied this 21% to the overhead expenses incurred at Silverberry, to reach his estimate of approximately *[CONFIDENTIAL]* in annual overhead savings. Mr. Harrington took issue with this methodology, in part because the Roll-off Bin Business is different from the landfill business. In addition, he opined that if there is a divestiture, some of these savings, which he described as being equivalent to one-half of the annual cost of a full time back-office employee, would likely be achieved by the purchaser. The Tribunal is persuaded

by this reasoning and therefore accepts Mr. Harrington's conclusion that the annual overhead efficiencies which are cognizable under section 96 are reasonable but are probably somewhat less than the *[CONFIDENTIAL]* that CCS has claimed.

276 As a practical matter, given the conclusion that the Tribunal has reached with respect to the "offset" element of section 96, discussed below, the fact that a more precise estimate of the cognizable overhead efficiencies is not available does not affect the Tribunal's overall determination with respect to the efficiencies defence in section 96.

The Qualitative Efficiencies

277 As discussed above, Dr. Kahwaty identified eight types of qualitative efficiencies that he claimed would likely result from the Merger. The Tribunal is not persuaded that any of these efficiencies "would not likely be attained if the Order were made," as provided in subsection 96(1). Ultimately, the answer to that question is dependent upon the expertise, financial resources, and reputation of the purchaser under the Order. Given that the purchaser may well have the same expertise, financial resources and reputation as CCS, the Tribunal cannot give significant weight to these claimed efficiencies. Indeed, given that the purchaser will have to be approved by the Commissioner, the Tribunal is of the view that all, or virtually all, of these claimed efficiencies are likely to be achieved by that purchaser.

278 Regardless of the identity of the purchaser, some of the types of qualitative efficiencies identified by Dr. Kahwaty will be achieved, including those related to the Roll-off Bin Business, the reduction of risks related to the transportation of Hazardous Waste over long distances and the increased site remediation that will benefit residents, wildlife, and the overall environment. In fact, to the extent that the Merger is likely to substantially prevent competition, as the Tribunal has found, we conclude that it is entirely appropriate to take into account, in the trade-off assessment, the likelihood that there will be less site clean-up and tipping of Hazardous Waste in Secure Landfills than otherwise would have occurred if an Order were made. This will be described below when non-quantifiable effects are considered.

279 The Tribunal concludes that the only efficiencies claimed by CCS that are cognizable under section 96 are a maximum of *[CONFIDENTIAL]* in annual overhead efficiencies, having a net present value of approximately *[CONFIDENTIAL]*, using a discount rate of 5.5%.

280 If, contrary to the Tribunal's conclusion, the Order Implementation Efficiencies are also cognizable under section 96, then it would be appropriate to include in the trade-off assessment further amounts of approximately *[CONFIDENTIAL]* to *[CONFIDENTIAL]* (i.e., one year of transportation cost savings) plus *[CONFIDENTIAL]* (i.e., one year of annual market expansion efficiencies).

What are the Effects for the Purposes of Section 96 of the Act?

281 As CCS noted in its Final Argument, the total surplus approach remains the starting point in assessing the effects contemplated by section 96. Under that approach, the cognizable quantifiable efficiencies will be balanced against the DWL that is likely to result from a merger. In addition, the Tribunal considers any cognizable dynamic or other non-quantifiable efficiencies and *anti-competitive* Effects. Where there is evidence of important dynamic or other non-quantifiable efficiencies and anti-competitive effects, such evidence may be given substantial weight in the Tribunal's trade-off assessment.

282 After the Tribunal has assessed the evidence with respect to the quantifiable (i.e., DWL) and non-quantifiable *anti-competitive* Effects of the merger, it will assess any evidence that has been tendered with respect to the other effects contemplated by section 96 and the purpose clause in section 1.1 of the Act. It is at this point that the Tribunal's assessment will proceed beyond the total surplus approach. In brief, at this stage of the Tribunal's assessment, it will determine whether there are likely to be any *socially adverse* effects associated with the merger. If so, it will be necessary to determine how to treat the wealth transfer that will be associated with any adverse price effects that are likely to result from the merger. In a merger among sellers of products, that wealth transfer will be from the merging parties' customers to the merged entity. Of course, to the extent that the merging parties' rivals may be likely to follow such price effects, the wealth transfer would need to be calculated across the sales or purchases of such rivals as well.

283 The Tribunal expects that in most cases, it will be readily apparent that the wealth transfer should be treated as neutral in its analysis, because the socio-economic profiles of consumers and the merged entity's shareholders will not be sufficiently different to warrant a conclusion that the wealth transfer is likely to lead to *socially adverse* Effects. For greater certainty, the cognizable social Effects under section 96 do not include broader social effects, such as those related to plant-closings and layoffs (*Superior Propane Inc.*, at para. 444).

284 In these proceedings, the Commissioner adduced no evidence with respect to *socially adverse* effects. Indeed, in her Final Argument (at para. 208) she conceded that the Merger is not likely to result in any such effects, and that the wealth transfer should be treated as being neutral in this case. Accordingly, the discussion below will be confined to *anti-competitive* effects. In other words, in making its determination under section 96 in the case at bar, the Tribunal will adopt the total surplus approach.

Quantifiable Effects

285 Quantifiable *anti-competitive* Effects are generally limited to the DWL that is likely to result from a merger.

286 In this case, the DWL is the future loss to the economy as a whole that will likely result from the fact that purchasers of Secure Landfill services in the Contestable Area will purchase less of those services than they would have purchased had the Tipping Fees for such services declined due to the competition that would likely have materialized between CCS and Babkirk operated as a Full Service Secure Landfill.

287 The DWL that is likely to result from a merger is likely to be significantly greater when there is significant pre-existing market power than when the pre-merger situation is highly competitive (*Propane*, above, at para. 165). In the case at bar, as in *Propane*, the Commissioner did not adduce specific evidence of pre-existing market power, for example, with respect to the extent to which prevailing Tipping Fees exceed competitive levels. Therefore, the Tribunal is not in a position to quantify the impact that any such pre-existing market power likely would have on the extent of the DWL. Where, as in this case, the pre-existing market situation is characterized by a monopoly and the Tribunal is not provided with sufficient persuasive evidence to enable it to quantify the Effects associated with such market power, it will be open to the Tribunal to give qualitative weight to those Effects. Given the very limited nature of the cognizable efficiencies in this case, it has not been necessary for the Tribunal to attribute such a qualitative weighing to those Effects in making its determination under section 96.

288 As discussed above, CCS submitted that the Tribunal should conclude that there are no quantifiable Effects as a result of the Merger, because the Commissioner did not lead any evidence with respect to such Effects until she served Dr. Baye's reply report, on November 4, 2011. The Tribunal has rejected that position because CCS was not ultimately prejudiced in this regard. The Tribunal will therefore proceed to address the evidence adduced in Dr. Baye's reply report. As will be noted below, the Tribunal is satisfied that CCS would not have met its burden under section 96, even if the quantifiable Effects had been deemed to be zero.

289 At the outset of his reply report, Dr. Baye summarized a number of the conclusions set forth in his initial report, dated September 30, 2011. These included the following:

a. the Merger likely prevents the prices for the disposal of Hazardous Waste generated in NEBC from falling significantly for many customers;

b. the effects of the Merger are unlikely to be uniform across all customers in the relevant market; and

c. the average reduction in the Tipping Fees throughout NEBC is likely to be at least 10%, but the effects are likely to be significantly higher for customers generating Hazardous Waste in the vicinity near Babkirk and Silverberry and lower for customers located near the southern and northern boundaries of NEBC.

290 The Tribunal is satisfied, on a balance of probabilities, that with the exception of the geographic extent of the Effects, the foregoing conclusions are supported by the weight of the evidence that it has found to be credible and persuasive. As to the geographic region over which the aforementioned Effects are likely to result from the Merger, the Tribunal finds that, at a

minimum, such Effects are likely to extend throughout the Contestable Area identified by Dr. Kahwaty. Given the conclusions that the Tribunal has reached regarding the minimal nature of the efficiencies claimed by CCS, it is unnecessary to define the scope of the anti-competitive Effects with greater precision.

291 As Dr. Baye explicitly noted, his conclusions were based on a range of different sources of information and economic analyses, rather than on any specific source of information or economic methodology. Those sources included CCS' internal documents and a "natural experiment." The Tribunal has not placed weight on the economic models that are set forth in Dr. Baye's reports, for example, the tipping fee and DiD regressions presented at exhibits 20 and 26 of his initial Report, which are also briefly discussed in his reply report. In the Tribunal's view, some of the assumptions underlying those models are questionable. The same is true of some of the outcomes of those models, such as the prediction of greater adverse price effects for customers located closer to Northern Rockies than to Babkirk. In the Tribunal's view, those predictions of Dr. Baye's models are counterintuitive and are not supported by the weight of the other evidence adduced in these proceedings.

292 More generally, as noted above, Dr. Baye's models do not account for the opportunity cost that CCS would incur if it were to lower Tipping Fees to the 20 - 25% range necessary to attract business from customers located farthest away from Silverberry and Babkirk, respectively, as discussed at paragraphs six and seven of his reply report. The Tribunal is not persuaded that it would be in CCS' interest to reduce prices to that extent in the near future, and to thereby deplete its finite Secure Landfill capacity at Silverberry, assuming that CCS would likely be able to attract business at higher Tipping Fees further in the future to fill that capacity.

293 Notwithstanding the fact that the Tribunal has found the models at exhibits 20 and 26 to be unreliable, we are satisfied, on a balance of probabilities, that competition from an independently owned and operated Full Service Secure Landfill at the Babkirk Site likely would result in CCS reducing its prices by an average of at least 10% for customers in the geographic market described above. This conclusion is based on evidence from CCS' own internal documents, evidence given by *[CONFIDENTIAL]* of *[CONFIDENTIAL]* and the transactions data pertaining to the "natural experiment" at Willesden Green modelled in Dr. Baye's DiD analysis.

294 The internal CCS documents referenced above include:

a. a slide presentation, dated August 26, 2010, which is attached at Exhibit K to Mr. D. Wallace's witness statement, *[CONFIDENTIAL]*

b. an e-mail, dated July 15, 2010, sent by Trevor Barclay to Ryan Hotston and Lance Kile, *[CONFIDENTIAL]*

c. a document, entitled *[CONFIDENTIAL]*, containing several slides dated "3/9/2009/ *[CONFIDENTIAL]*

d. a financial analysis prepared by Dan Wallace, attached to an e-mail dated March 31, 2010, and at Exhibit C to his witness statement, *[CONFIDENTIAL]*

e. a document dated March 31, 2010, entitled *[CONFIDENTIAL]*, attached at Exhibit D to Dan Wallace's witness statement, *[CONFIDENTIAL]*

f. a document, entitled *[CONFIDENTIAL]*, dated September 15, 2009 and included at Tab 32 of the Parties' Admissions Brief, *[CONFIDENTIAL]*.

295 Turning to evidence from customers, there was, as mentioned earlier, an unusual paucity of such evidence in this case. However, Mr. *[CONFIDENTIAL]*, Vice President, Operations, at *[CONFIDENTIAL]* testified that "competition, in our mind, provides a more competitive playing field in terms of your pricing setup" and that "in Northeast B.C. we currently don't have that same level of competition in this facet of our business."

296 Lastly, the transactions data from the "natural experiment" at Willesden Green, which is found in Dr. Baye's initial report, demonstrates that CCS reduced its prices significantly to seven customers after SES' entry at South Grande Prairie.

297 For all these reasons, we have concluded that, in the absence of the Merger, competition in the provision of Secure Landfill services at Silverberry and the Babkirk Site likely would have resulted in prices being, on average, at least 10% lower in the geographic market described above. This is a sufficient basis for concluding that the Merger likely will prevent competition substantially, particularly given that the Merger preserves a monopolistic market structure, and thereby prevents the emergence of potentially important competition.

298 In his reply report, Dr. Baye opined that even if competition is only likely to be substantially prevented in the Contestable Area identified by Dr. Kahwaty, the welfare loss is likely to be significant. Specifically, Dr. Baye estimated that loss to be approximately *[CONFIDENTIAL]* annually. That estimate was based on an assumed price decrease of 10%, from *[CONFIDENTIAL]* to *[CONFIDENTIAL]* per tonne, and certain assumptions and estimates used by Dr. Kahwaty in calculating the market expansion efficiencies, discussed above. In making that calculation, Dr. Kahwaty assumed that the opening of a Secure Landfill facility at Babkirk would likely lead customers to dispose of approximately *[CONFIDENTIAL]* additional tonnes of Hazardous Waste, as forecast in CCS' internal documents. As discussed earlier in these reasons, that forecast increase in demand concerned Legacy Waste and future waste that would not otherwise be transported to Silverberry, due to (i) the level of the current disposal cost (Tipping Fees plus transportation cost) and (ii) the risk that would be associated with transporting Hazardous Waste to Silverberry. Dr. Kahwaty estimated that the total disposal costs of customers located in the Contestable Area that he identified likely would decline by approximately *[CONFIDENTIAL]* per tonne, due to the closer proximity of the Babkirk Facility, relative to Silverberry.

299 Based on the foregoing numbers used by Dr. Kahwaty to estimate the market expansion efficiencies, and the linear demand that was assumed by Dr. Kahwaty, Dr. Baye estimated that a 10% price reduction (from *[CONFIDENTIAL]* to *[CONFIDENTIAL]*) for customers in the Contestable Area would increase the volume of waste disposed of by those customers from *[CONFIDENTIAL]* tonnes to *[CONFIDENTIAL]* tonnes, annually. He further estimated CCS' unit costs to be approximately *[CONFIDENTIAL]*, based on the average 2010 price at Silverberry of *[CONFIDENTIAL]* across all substances, and the *[CONFIDENTIAL]* landfill margin reported for Silverberry in 2009, which was used by Dr. Kahwaty in estimating the market expansion efficiencies.

300 Given the foregoing estimates, Dr. Baye calculated the area under the demand curve for the Contestable Area to be (i) a rectangle that is approximately *[CONFIDENTIAL]* tonnes multiplied by *[CONFIDENTIAL]*, for a total of *[CONFIDENTIAL]*, plus (ii) a right triangle that is *[CONFIDENTIAL]* high and *[CONFIDENTIAL]* wide, for an area of *[CONFIDENTIAL]*. Summing (i) plus (ii) yielded a figure of *[CONFIDENTIAL]*. From this latter amount, Dr. Baye deducted CCS' unit cost of *[CONFIDENTIAL]* multiplied by *[CONFIDENTIAL]*, to arrive at an estimated welfare loss of *[CONFIDENTIAL]*.

301 The Tribunal is persuaded that, on a balance of probabilities, the approach adopted by Dr. Baye, and the numbers he used in reaching his estimate of the likely DWL, are reasonable for the purposes of the Tribunal's assessment of Effects under section 96 of the Act. In the Tribunal's view, the manner in which Dr. Baye proceeded in this regard is sound, and the inputs that he used are reliable and conservative. The fact that Dr. Baye relied on certain assumptions made by Dr. Kahwaty is not particularly important for the purposes of the Tribunal's assessment under section 96. What is important is that there is reliable evidence before the Tribunal that permitted the DWL to be estimated.

302 The Tribunal acknowledges Dr. Kahwaty's testimony that, to calculate the DWL, it is necessary to know the shape of the demand curve, and that, when prices are likely to differ across customers, it is necessary to have customer-specific elasticity data. However, the Tribunal is persuaded that, in the absence of such information, a reliable "rough" estimate of the likely DWL can be obtained based on information such as that which was used by Dr. Baye in reaching his estimated annual welfare loss of approximately *[CONFIDENTIAL]*.

303 Accordingly, the Tribunal accepts Dr. Baye's estimate of *[CONFIDENTIAL]*, as being the minimum annual DWL.

304 Dr. Baye then speculated that, (i) if the average price decrease in that area was 21 percent, the annual DWL would be approximately *[CONFIDENTIAL]*, (ii) if prices across all Hazardous Waste tipped at Silverberry in 2010 decreased by 10%, the

DWL would be approximately *[CONFIDENTIAL]*, and (iii) if prices across all such waste decreased by 21%, the DWL would be approximately *[CONFIDENTIAL]*. However, the Tribunal is not persuaded that these speculations about prices are reasonable.

Non-quantifiable Effects

305 The Tribunal is satisfied that the Merger likely would result in certain important qualitative or other non-quantifiable Effects.

306 In his initial report, Dr. Baye identified at least two important qualitative anti-competitive Effects of the Merger. First, at paragraph 157, he stated that lower Tipping Fees would induce waste generators to more actively clean up legacy sites in NEBC. At paragraph 91 of his report, he described this in terms of lower Tipping Fees inducing waste generators to substitute away from "delay," or bioremediation, towards disposal at a Secure Landfill. As Dr. Kahwaty noted at paragraph 96 of his Efficiencies Report, increased site remediation from lower disposal costs benefits "area residents, wildlife, and the overall environment."

307 Second, at paragraph 137(c) of his initial report, Dr. Baye stated that, to retain its waste volumes in the face of competition from an independently owned and operated Babkirk Facility, CCS "would have had an incentive to compete through 'value propositions' that, among other things, link prices on various services to provide customers with a lower total cost for waste services." Although the services in question were not further discussed by Dr. Baye, they were addressed in "read-in" evidence adduced by the Commissioner and cited by Dr. Baye (at footnote 93 of his initial report). The Tribunal is satisfied, on a balance of probabilities, that competition between CCS and an independently owned and operated Babkirk Facility would have led to important non-price benefits to waste generators in the form of various "value propositions" that include either existing services being provided at lower prices, or new or enhanced services being provided that likely would not otherwise be provided if the Order is not made.

Are the Cognizable Efficiencies Greater than and do they Offset the Effects?

308 Section 96 requires the Tribunal to determine whether the cognizable efficiencies "will be greater than, and will offset" the cognizable effects of any prevention or lessening of competition that will result or is likely to result from a merger.

309 The Tribunal considers that the terms "greater than" and "offset" each contemplate both quantifiable and non-quantifiable (i.e., qualitative) efficiencies. In the Tribunal's view, "greater than" connotes that the efficiencies must be of larger magnitude, or more extensive than, the effects referred to in section 96. This contemplates a balancing of commensurables, even if some of the efficiencies being balanced are not capable of accurate or rough quantification. By contrast, the term "offset" is broad enough to connote a balancing of incommensurables (e.g., apples and oranges) that requires the exercise of subjective judgment to determine whether the efficiencies compensate for the likely effects referred to in section 96.

310 In the case at bar, the Tribunal has found that the cognizable, quantifiable, efficiencies likely to result from the Merger will be a maximum of *[CONFIDENTIAL]* annually. Those are the overhead efficiencies estimated by Dr. Kahwaty. In addition, the Tribunal has found that CCS has not demonstrated, on a balance of probabilities, that the qualitative efficiencies it has claimed are cognizable. In other words, it has not demonstrated that those efficiencies would not likely be attained if the Order were made.

311 On the other hand, the Tribunal has found that the quantifiable Effects are likely to be at least *[CONFIDENTIAL]* annually. That is the value of the minimum DWL associated with the Contestable Area.

312 Based on these findings, it is readily apparent that CCS has not demonstrated that the cognizable, *quantifiable*, efficiencies likely to be brought about by the Merger will likely be "greater than" the *quantifiable* Effects that are likely to result from the Merger. Using a 5.5% discount rate, CCS estimated that the present value of these (overhead) efficiencies to be approximately *[CONFIDENTIAL]*, in comparison with a present value of *[CONFIDENTIAL]* for the aforementioned Effects.

313 Given the Tribunal's conclusion that the Merger would result in a number of important qualitative or other non-quantifiable effects, and that it would not likely bring about significant qualitative, cognizable, efficiencies, it is also readily apparent that the

combined quantitative and qualitative efficiencies are not likely to be "greater than" the combined quantitative and qualitative Effects.

314 In addition, the Tribunal is persuaded, on a balance of probabilities, that even if a zero weighting is given to the *quantifiable* Effects, as CCS submitted should be done, CCS has not satisfied the "offset" element of section 96. In short, the Tribunal is satisfied that the very minor *quantitative* efficiencies, (*[CONFIDENTIAL]* annually) that are cognizable, together with any qualitative or other non-quantifiable efficiencies that may be cognizable, would not "offset" the significant qualitative Effects that it has found are likely to result from the Merger.

315 This conclusion would remain the same even if the Tribunal were to accept and give full weight to the Order Implementation Efficiencies, which only amount to a maximum of *[CONFIDENTIAL]* (which represents one year of transportation cost savings) plus *[CONFIDENTIAL]* (which represents one year of annual market expansion efficiencies).

316 This is because, in the Tribunal's view, the qualitative Effects, when taken together merit substantial weight. That weight is greater than the weight attributable to the aggregate of the cognizable quantitative and qualitative efficiencies under any reasonable approach. In brief, those qualitative Effects are (i) reduced site clean-up and the benefits that such remediation would confer upon "area residents, wildlife, and the overall environment"; and, more importantly, (ii) reduced "value propositions" than would likely otherwise emerge in the relevant market, linking prices to various new or enhanced services.

317 Most importantly, in the absence of the Order, the Merger will maintain a monopolistic structure in the relevant market. In other words, the Merger will not only give rise to the qualitative effects summarized immediately above, but it will also preclude benefits of competition that will arise in ways that will defy prediction.

318 In summary, the Tribunal is satisfied that CCS has not met its burden to establish, on a balance of probabilities, the "greater than" or "offset" elements set forth in section 96.

Issue 9 What is the Appropriate Remedy — Dissolution or Divestiture?

319 An important question under this heading is whether SES is currently a willing purchaser for the Babkirk Site. Surprisingly, when Mr. Amirault of SES testified for the Commissioner, neither her counsel during questioning in chief nor counsel for the Vendors during cross-examination asked Mr. Amirault if SES is still interested in acquiring BLS.

320 The Commissioner's position is that, once she showed that dissolution was an effective and available remedy, the burden of proof shifted to the Vendors to demonstrate that divestiture was an available, effective and less intrusive remedy. The Commissioner maintains that the Vendors were obliged to ask Mr. Amirault if SES is still interested and, because they failed to ask that question and because they failed to lead any evidence about other prospective purchasers, they have no basis to argue that divestiture will be an effective remedy.

321 The Tribunal does not accept the Commissioner's characterization of the onus. In the Tribunal's view, if the Commissioner proposes alternative remedies, as she did in this case, she bears the onus of showing that, although one may be preferable, each is available and effective. Accordingly, the Commissioner's counsel should have asked Mr. Amirault about SES' interest in purchasing the shares of BLS.

322 The Tribunal notes that, in her written final argument, the Commissioner asks the Tribunal not to infer that SES is an interested purchaser. However, in contrast, in final oral argument, counsel for the Commissioner suggested that SES is an interested buyer.

323 The Tribunal accepts the latter submission and has determined, for the following reasons, that SES is likely to make an offer to purchase the Babkirk Facility at some point during the divestiture process under the Order:

- SES has already decided to operate a Secure Landfill in NEBC. It tried unsuccessfully and at considerate expense to secure the Authorizations at its Heritage Site;

• Babkirk already has the necessary Authorizations and SES is confident that its plans to expand the permitted capacity at Babkirk and upgrade the cell design will be approved;

• SES has demonstrated an active and continuing interest in the Babkirk Facility since the Merger. Among other things, this is demonstrated by SES' lawyers' written submissions to the Commissioner and by the participation of its CEO, Mr. Amirault, as a witness in these proceedings.

324 We now turn to the proposed remedies.

325 The Commissioner wants the Babkirk Site operated as a competitive Full Service Secure Landfill and she believes that dissolution will produce this result more quickly than divestiture.

326 Her submission is that, once the Vendors again hold the shares of Complete and have repaid CCS the purchase price, they will be highly motivated to resell Complete or the shares of BLS because this will enable them to recover their funds as soon as possible. However, this submission assumes that the Vendors will immediately be offered a price they are prepared to accept. In the Tribunal's view, there is no basis for this assumption. The evidence is clear that the Vendors have never been willing to be pushed into a quick sale.

327 The Commissioner's submission also assumes that the Vendors will have an incentive to sell quickly because they will be short of funds as a result of having to repay CCS as soon as the shares of Complete are returned to them. This assumption is also questionable, in part because it appears that CCS has indemnified the Vendors against all claims arising from any investigation or actions by the Bureau with respect to the Merger. Given this background, it is possible that CCS may not insist on immediate payment.

328 Even if the Commissioner is correct and the Vendors are cash-strapped and anxious to resell BLS or Complete, the Tribunal still anticipates that they will want an attractive price. It is also important to remember that all five individual Vendors must agree to accept an offer and they will not necessarily be like-minded, in part because some are near retirement and others are in mid-career.

329 The Tribunal notes that two years will have passed since the Babkirk Facility was last for sale. This means that purchasers, other than SES, may show interest, especially given the increasing rate of gas production in the area northwest of Babkirk. Dr. Baye testified that he thought SES, Newalta and Clean Harbours were potential purchasers. As well, it is not unreasonable to think that an oil and gas producer may decide to own and operate a Secure Landfill. The Tribunal heard evidence that *[CONFIDENTIAL]* is considering becoming a part-owner of the Secure Landfill at Peejay. If the Vendors receive multiple offers, protracted negotiations may follow.

330 Finally, if they do not receive an offer they consider attractive, the Vendors are free to change their minds and resurrect their plan to operate a bioremediation facility with an Incidental Secure Landfill. This would not result in the competition the Commissioner seeks because it will only be realized if the Babkirk Facility operates as a Full Service Secure Landfill.

331 There is also the question of whether a purchaser after dissolution will be an effective competitor. In the proposed order for dissolution found at the conclusion of the Commissioner's final argument, she does not seek the right to approve a purchaser and she only asks for notice of a future merger if it is "among the Respondents". In our view, this makes dissolution a less effective remedy.

332 Given all these observations, the Tribunal is concerned that dissolution may not be effective in that it may not lead to a prompt sale and a timely opening of the Babkirk Facility as a Secure Landfill.

333 It is also the case that dissolution is the more intrusive remedy.

334 Three of the Vendors testified about the financial hardship they would face if dissolution were ordered by the Tribunal. Ken Watson's share of the proceeds of the transaction was *[CONFIDENTIAL]*. He testified that if ordered to return the proceeds to CCS, *[CONFIDENTIAL]*, he expects to face significant financial hardship.

335 Randy Wolsey's share of the proceeds was approximately *[CONFIDENTIAL]*. He testified that almost half of the proceeds have been used to develop a property on which he is constructing a new family home. The balance has been invested in the purchase of various investment products. According to Mr. Wolsey, he expects to lose approximately *[CONFIDENTIAL]* if he is forced to make a quick sale on the residential property before the house under construction has been completed.

336 Karen Baker testified that if required to return her share of the proceeds, approximately *[CONFIDENTIAL]*, then her ability to continue to provide financial support to certain small business will be compromised. She also indicated that if the transactions were to be dissolved, she expects that the "work required to reverse the sale and calculate the adjustments required to account for changes in Complete's assets, working capital and lost opportunity costs, as well as the opportunity costs in time away from the other businesses in which [she is] involved, and cost to some of those businesses for replacement personnel to do the work that [she] should be doing, would cause [her] significant stress and emotional hardship."

337 The Commissioner asserts that, in the particular circumstances of this case, hardship is irrelevant, because she warned the Vendors that she would seek dissolution before they sold Complete to CCS. However, in the Tribunal's view it is the right of private parties to disagree with the Commissioner and make their case before the Tribunal. Accordingly, they are not estopped from raising issues of hardship.

338 The Tribunal is also of the view that dissolution is overbroad, since it involves Complete's other businesses and not just BLS.

339 In the spring of 2007, Complete acquired the assets of a municipal waste management business based in Dawson Creek, British Columbia. As noted earlier, those assets included contracts for the management of the Fort St. John and Bessborough municipal landfills and the Dawson Creek Transfer Station, the supply and hauling of roll-off bins, and the provision of rural refuse collections and transfer services. At the time of the Merger, those contracts and related equipment were transferred to CCS. Hazco has been responsible for this business since then.

340 Mr. Garry Smith, the president of Hazco, testified that Hazco has upgraded Complete's trucks and has sold some older equipment which it considered surplus. The two municipal landfill contracts have been extended and are now held directly by Hazco. Complete's employees are now employed by Hazco and there have been personnel changes. At the hearing, Mrs. Baker testified about the impact of the sale of some of the assets. She stated:

> Now, that equipment was older equipment. It wouldn't have brought big money, but the point is it was sufficient for us to do the work that we wanted it to do. Well, now the oil and gas industry is hot, hot up there. Trying to get equipment back, we certainly wouldn't get that equipment back. Any decent used equipment, I have no idea. The prices would be through the roof. Would we buy new equipment? I don't know. So right now, we don't even have the equipment to go back to work

341 To conclude, the Tribunal has decided that dissolution is intrusive, overbroad and will not necessarily lead to a timely opening of the Babkirk Facility as a Full Service Secure Landfill.

342 Turning to divestiture, the Tribunal finds that it is an available and effective remedy. If reasonable but tight timelines are imposed, it will not matter if, as the Commissioner alleges, SES and CCS are reluctant to negotiate because of their outstanding litigation. In the end, if they cannot agree, a trustee will sell the shares or assets of BLS, either to SES or another purchaser approved by the Commissioner. In other words, divestiture will be effective.

343 A divestiture with tight timelines has other advantages. The Commissioner will have the right to pre-approve the purchaser, the person responsible for effecting the divestiture will ultimately be CCS or a professional trustee, rather than five

individuals, the timing will be certain, a sale will ultimately occur and the approved purchaser will compete with Silverberry on a Full Service basis.

344 For all these reasons, the Tribunal will order CCS to divest the shares or assets of BLS.

H. Costs

345 The Commissioner chose dissolution as her preferred remedy when she commenced the Application. She made this choice because she believed that at the time of the Merger, the Vendors were about to construct and operate a Full Service Secure Landfill. For this reason she concluded that the most timely way to introduce competition was to return Babkirk to the Vendors.

346 However, for the reasons given above, the Tribunal has concluded that the Vendors did not intend to operate a Full Service Secure Landfill. This means that the Commissioner has failed to prove the premise which caused her to name the individual Vendors as parties to the Application. In essence she failed to prove her case against them and for this reasons she is liable for their costs.

347 However, during the Vendors' motion for summary disposition which was heard two weeks before the hearing, they indicated that, if the motion was successful and they were removed as parties, four of them would nevertheless attend the hearing to give evidence. The Tribunal assumes that, had done so, they would have been represented by one counsel. Accordingly, the Commissioner is to pay their costs less the legal fees which would have been incurred had they appeared as witnesses.

I. For These Reasons the Tribunal Orders That:

348 CCS is to divest the shares or assets of BLS on or before December 28, 2012 failing which a trustee is to effect a sale on or before March 31, 2013. If possible, the terms for this process are to be agreed between the Commissioner and CCS and are to be submitted to the Tribunal on or before June 22, 2012. If the agreed terms are accepted by the Tribunal, they will be incorporated in a further order to be called the Divestiture Procedure Order. If the Commissioner and CCS cannot agree to terms, each party is to submit a proposed Divestiture Procedure Order on or before June 29, 2012. If necessary, the Tribunal will hear submissions about each party's proposal in early July and then make the Divestiture Procedure Order.

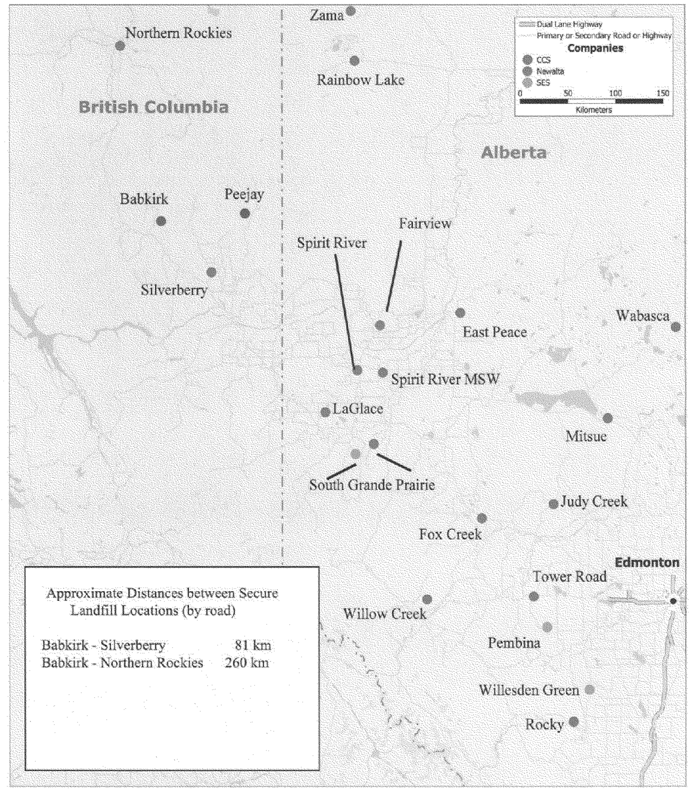
349 CCS is to pay the Commissioner's costs and, because dissolution was not ordered, the Commissioner is to pay the Vendors' costs less the fees they would have paid for legal representation if they had attended as non-parties to give their evidence. The Commissioner is to prepare a bill of costs to be submitted to CCS and the Vendors are to submit a bill of costs to the Commissioner both on or before August 31, 2012. Both are to be prepared in accordance with Federal Court Tariff B at the mid-point of column 3. If by September 14, 2011 no agreement is reached about lump sums to be paid, the Tribunal will hear submissions and fix the awards of costs.

***Paul Crampton Member*:**

J. The Schedules

350 The schedules appear on the following pages:

Schedule A: Map Showing Secure Landfills (based on Exhibit 4-A to Dr. Baye's Expert Report)



Graphic 1

Source: CCS, SES, and Newalta company websites.

This map may be printed in colour.

SCHEDULE "B"

THE EVIDENCE

Witnesses who gave oral testimony (in alphabetical order)

<u>For the Commissioner of Competition</u>

- **Rene Amirault**

  President & CEO of Secure Energy Services Inc.

- **Robert Andrews**

  Section Head- Environmental Management, Government Unit in the British Columbia Ministry of the Environment.

- **Michael Baye**

  Expert Economist - Special Consultant at National Economic Research Associates, Inc. and the Bert Elwert Professor of Business Economics and Public Policy at the Indiana University Kelley School of Business.

- **Chris Hamilton**

  Project Assessment Director at the British Columbia Environmental Assessment Office.

- **Andrew Harrington**

Expert on Efficiencies - Managing director of the Toronto office of Duff & Phelps.

• **[CONFIDENTIAL]**

Contracting and Procurement Analyst for the **[CONFIDENTIAL]**.

• **[CONFIDENTIAL]**

Vice-President, Operations at **[CONFIDENTIAL]**.

• **Mark Polet**

Associate at Klohn Crippen Berger Ltd. ("KCB"). KCB is a private, specialized engineering and environmental consulting firm with its head office in Vancouver.

• **Del Reinheimer**

Environmental Management Officer in the Environmental Protection Division at the British Columbia Ministry of the Environment.

• **Devin Scheck**

Director, Waste Management & Reclamation at the British Columbia Oil and Gas Commission.

For the Vendors

• **Karen Baker**

One of the founding shareholders of Complete Environmental Inc.

• **Ronald Baker**

One of the founding shareholders of Complete Environmental Inc.

• **Kenneth Watson**

One of the founding shareholders of Complete Environmental Inc.

• **Randy Wolsey**

One of the founding shareholders of Complete Environmental Inc.

For the Corporate Respondents

• **Trevor Barclay**

Landfill Manager of the Northern Rockies Secure Landfill.

• **James Coughlan**

Director of Sales and Marketing of CCS Corporation

• **Henry Kahwaty**

Expert economist - Director with Berkeley Research Group, LLC.

• **Richard Lane**

Vice-President of CCS Midstream Services, a division of CCS Corporation.

• **Pete Marshall**

Principal of Adelantar Consulting, an environmental consultancy based in Edmonton, Alberta.

• **Daniel Wallace**

Manager, Business Development of CCS Corporation's Midstream Services division

__Other Evidence__

• The witness statements from those who testified.

• Read-ins from Examinations for Discovery of Karen Baker and Kenneth Watson for the Vendors, Daniel Wallace for the Corporate Respondents and Trevor MacKay for the Commissioner of Competition

• The statement of agreed facts.

• The witness statements of **Robert Coutts**, President of SkyBase Geomatic Solutions Inc. and **Garry Smith**, President of Hazco Waste Management (owned by CCS). On consent these witnesses were not called to give oral testimony.

• A Joint list of agreed documents.

• The exhibits marked during the hearing.

Schedule C: Map of NEBC, the Contestable Area and the Babkirk Polygon

K. Concurring Reasons by P. Crampton C.J.

351 Although I participated in the writing of, and signed, the Panel's decision in this case, I would like to comment on certain additional matters.

A. Is CCS's Acquisition of Complete a Merger?

352 At paragraph 56 of the Panel's reasons, it is noted that it was not necessary to decide whether Complete's Roll-off Bin Business or its management of municipal dumps could be a business for the purposes of section 91 of the Act. That said, the conclusion reached by the Chairperson on this point was articulated at paragraph 57. That conclusion was stated as follows:

> [A] business being acquired in a merger must have some relevance to a Commissioner's application. In other words, it must have the potential to impact competition in the markets at issue. This observation means that, in this case, Complete's Roll-off Bin Business and its management of municipal dumps would not have been caught by the definition in section 91 because they are not involved in any way in the disposal or treatment of Hazardous Waste.

353 I respectfully disagree. In my view, the term "business", as contemplated by section 91 of the Act, is not, as the Vendors maintained, confined to a business that competes with a business of an acquiring party. There is no such limitation in section 91 or in the definition of the term "business" that is set forth in subsection 2(1) of the Act.

354 The Vendors attempted to support their position by noting that section 92 of the Act requires that a "merger" prevent or lessen, or be likely to prevent or lessen, competition substantially. However, it is not necessary for a merger to involve two or more competing businesses to have the potential to prevent or lessen competition substantially. For example, the inclusion of the terms "supplier" and "customer" in section 91 reflects Parliament's implicit recognition that a vertical merger may have such an effect. The words "or other person" in section 91 reflect that Parliament also did not wish to exclude the possibility that other types of non-horizontal mergers may also have such an effect.

355 Considering the foregoing, I am not persuaded that the Vendors' position is assisted by reading the words of section 91 "in their entire context and in their grammatical and ordinary sense harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament" (E. A. Driedger, *Construction of Statutes* (2nd ed. 1983), at p. 87, quoted in *Rizzo & Rizzo Shoes Ltd., Re*, [1998] 1 S.C.R. 27 (S.C.C.), at 41; and *Canada (Attorney General) v. Mowat*, 2011 SCC 53 (S.C.C.), at para. 33 (".*Mowat*")). In the absence of any apparent ambiguity, one must adopt an interpretation of section 91 "which respects the words chosen by Parliament" (*Mowat*, above). The principle that the Act be given "such fair, large and liberal construction and interpretation as best ensures the attainment of its objects" also supports the view that section 91 ought not be read in the limited manner suggested by the Vendors (*Interpretation Act*, R.S.C. 1985, c. I-21, s. 12).

356 Indeed, if anything, a reading of section 91 in a manner that is harmonious with the scheme and object of the Act and the intention of Parliament arguably further supports interpreting section 91 in a way that does not require the type of assessment of competitive effects that is contemplated by the interpretation advanced by the Vendors. That is to say, when viewed in the context of the scheme and object of the Act as a whole, it is arguable that section 91 was intended by Parliament to be a gating provision, in respect of which an assessment ordinarily is to be made relatively early on in the evaluation contemplated by sections 92 and 93.

357 For example, all but one of the assessment factors in the non-exhaustive list that is set forth in section 93 refer to the "merger or proposed merger" in respect of which an application under section 92 has been made. In my view, this suggests that the merger or proposed merger in question should be identified before the assessment contemplated by sections 92 and 93 is conducted.

358 If an agreement, arrangement or practice cannot properly be characterized as a merger, it will fall to be investigated under another provision of the Act, such as section 45, section 79, or section 90.1, each of which has a substantive framework which

differs in important respects from the framework set forth in section 92. Indeed, in the case of agreements or arrangements that may be investigated under section 45, which is a criminal provision, there are important procedural implications associated with the decision to pursue a matter under that section, versus under section 90.1, 79 or 92. I recognize that there may be cases in which it may be appropriate to assess a matter under section 92 as well as under one or more of the other provisions mentioned immediately above, for a period of time before an election is made under section 98, 45.1, 79(7) or 90.1(10). However, the scheme of the Act and the interests of administrative efficiency arguably support the view that a determination as to whether a matter ought to be investigated as a merger, rather than a type of conduct addressed elsewhere in the Act, ordinarily should be made before the central substantive determinations under the applicable section of the Act are made. Among other things, such substantive determinations often take several months, and sometimes take much longer, to make.

359 In summary, for all of the foregoing reasons, I have concluded that the term "business" in section 91 is sufficiently broad to include any business in respect of which there is an acquisition or establishment of control or a significant interest, as contemplated therein. In the case at bar, this would include Complete's Roll-off Bin Business, which was fully operational at the time of Complete's acquisition by CCS. It would also include Complete's management of municipal dumps.

B. Market Definition

360 Market definition has traditionally been a central part of merger analysis in Canada and abroad for several reasons. These include (i) helping to focus the assessment on products and locations that are close substitutes for the products and locations of the merging parties, (ii) helping to focus the assessment on the central issue of market power, (iii) helping to identify the merging parties' competitors, (iv) helping to understand the basis for existing levels of price and non-price competition, and (v) facilitating the calculation of market shares and concentration levels. In turn, changes in market shares and concentration levels can be very helpful, albeit not determinative, in understanding the likely competitive effects of mergers and in assisting enforcement agencies to triage cases and to provide guidance to the public.

361 In recent years, developments in antitrust economics have reached the point that the United States Department of Justice and Federal Trade Commission have begun to embrace approaches that "need not rely on market definition" (*Horizontal Merger Guidelines* (August 19, 2010), at § 6.1). Likewise, the MEGs, at paragraph 3.1, have been amended to stipulate that market definition is not necessarily a required step in the Commissioner's assessment of a merger.

362 These developments can be accommodated within the existing framework of the Act and the Tribunal's jurisprudence.

363 In discussing market definition, the Panel noted, at paragraph 92 of its reasons, that the Tribunal has in the past cautioned against losing sight of the ultimate inquiry, which is whether the merger being assessed prevents or lessens, or is likely to prevent or lessen, competition substantially. The Tribunal has also previously noted that the Act does not require that a relevant market be defined in assessing whether competition is likely to be prevented or lessened substantially (*Superior Propane Inc.*, above, at para. 56). The logical implication is that defining a relevant market is not a necessary step in assessing whether a merger prevents or lessens, or is likely to prevent or lessen, competition substantially. Accordingly, it will be open to the Tribunal, in an appropriate case, to make this assessment without defining a relevant market.

364 That said, at this point in time, it is anticipated that such cases will be exceptional. Indeed, failing to define a relevant market may make it very difficult to calculate, or even to reasonably estimate, the actual or likely DWL associated with a merger, for the purposes of the efficiencies defence in section 96 of the Act.

C. The Analytical Framework in a "Prevent" Case

365 At the outset of the Commissioner's final oral argument, her counsel urged the Tribunal to clarify the analytical approach applicable to three areas, namely, (i) the assessment of whether a merger prevents, or is likely to prevent, competition substantially, (ii) the efficiencies defence, and (iii) the circumstances in which the Tribunal will entertain the remedy of dissolution, and what factors will be taken into account in determining the appropriate remedy in any particular case.

366 These topics are all addressed to some extent in the Panel's decision. I would simply like to add some additional comments, particularly with respect to the analytical framework applicable to the Tribunal's assessment of whether a merger prevents, or is likely to prevent, competition substantially.

367 The Tribunal's general focus in assessing cases brought under the "substantial prevention of competition" and "substantial lessening of competition" branches of section 92 is essentially the same. In brief, that focus is upon whether the merged entity is likely to be able to exercise materially greater market power than in the absence of the merger. The same is true with respect to other sections of the Act that contain these words.

368 In determining whether competition is likely to be *lessened*, the more particular focus of the assessment is upon whether the merger is likely to facilitate the exercise of new or increased market power by the merged entity, acting alone or interdependently with one or more rivals. In determining whether competition is likely to be *prevented*, that more particular focus is upon whether the merger is likely to preserve the existing market power of one or both of the merging parties, by preventing the erosion of such market power that otherwise likely would have taken place if the merger did not occur.

369 In making its assessment in the latter context, and with respect to a proposed merger, the Tribunal compares (i) the state of competition that would likely exist if the merger were to proceed, with (ii) the state of competition that would likely exist if the merger did not proceed. Scenario (ii) typically is referred to as the "but for", or "counterfactual", scenario. In the case of a completed merger, that "but for" scenario is the market situation that would have been most likely to emerge had the merger not occurred.

370 When the Tribunal determines that a merger is not likely to enable the merged entity to exercise greater market power than in the absence of the merger, the Tribunal generally will conclude that the merger is not likely to prevent or lessen competition at all, let alone substantially. With respect to allegations that competition is likely to be *lessened*, this conclusion generally will flow from a finding that the merger is not likely to enable the merged entity to *enhance existing, or to create new*, market power. With respect to allegations that competition is likely to be *prevented*, this conclusion generally will flow from a finding that the merger in question is not likely to enable the merged entity to *maintain* greater existing market power than in the absence of the merger. Once again, the foregoing also applies with respect to other sections of the Act that contain the "prevent or lessen competition substantially" test.

371 With respect to sellers, market power is the ability to profitably maintain prices above the competitive level, or to reduce levels of non-price competition (such as service, quality or innovation), for an economically meaningful period of time. With respect to purchasers, market power is the ability to profitably depress prices below the competitive level, or to reduce levels of non-price competition, for such a period of time.

372 In assessing whether market power is likely to be created, enhanced or maintained by a merger or a reviewable trade practice, the Tribunal assesses the intensity of competition, as reflected in its price and non-price dimensions. Competition is a dynamic, *rivalrous process* through which the exercise of market power is prevented or constrained as firms strive, among other things, to develop, produce, distribute, market and ultimately sell their products in rivalry with other firms. That rivalrous process generates the principal source of pressure on firms to innovate new or better products or business methods, and to deliver those products at competitive prices. In turn, those innovations and competitive prices serve to increase aggregate economic welfare in the economy, the economy's international competitiveness and the average standard of living of people in the economy.

373 In assessing the intensity of price competition, the Tribunal focuses upon whether prices are likely to be higher than in the absence of the merger. In assessing the intensity of non-price competition, the Tribunal focuses upon whether levels of service, quality, innovation, or other important non-price dimensions of competition are likely to be lower than in the absence of the merger. This focus ensures that the assessment of the intensity of price and non-price dimensions of competition is *relative*, rather than *absolute*, in nature (*Canada Pipe Co.*, above, at paras. 36 — 38). In short, the assessment of levels of price and non-price competition is made relative to the levels of price and non-price competition that likely would exist "but for" the merger.

The same approach is taken with respect to non-merger matters that require an assessment of whether competition is likely to be prevented or lessened substantially.

374 Competition may be said to be *prevented* when future competition is hindered or impeded from developing. Common examples of such prevention of competition in the merger context include (i) the acquisition of a potential or recent entrant that was likely to expand or to become a meaningful competitor in the relevant market, (ii) an acquisition of an incumbent firm by a potential entrant that otherwise likely would have entered the relevant market *de novo*, and (iii) an acquisition that prevents what otherwise would have been the likely emergence of an important source of competition from an existing or future rival.

375 In determining whether a prevention or lessening of competition is likely to be *substantial*, the Tribunal typically will assess the likely magnitude, scope and duration of any adverse effects on prices or on non-price levels of competition that it may find are likely to result from the creation, enhancement or maintenance of the merged entity's market power. That is to say, the Tribunal assesses the likely degree of such price and non-price effects, the extent of sales within the relevant market in respect of which such effects are likely to be manifested, and the period of time over which such effects are likely to be sustained.

376 With respect to magnitude or degree, the Tribunal has previously defined substantiality in terms of whether customers are "likely to be faced with *significantly* higher prices or *significantly* less choice over a *significant* period of time than they would be likely to experience in the absence of the acquisitions" (*Southam Inc.*, above, at 285, emphasis added). However, given that the Tribunal has now embraced the hypothetical monopolist framework and the SSNIP test for market definition, it is necessary to revisit this definition of substantiality. This is because if the degree of market power used to define relevant markets is the same as the degree of market power used to assess competitive effects, a merger would not be found to be likely to prevent or lessen competition substantially unless the degree of new, enhanced or maintained market power of the merged entity is the same degree of market power held by as the hypothetical monopolist that was conceptualized for the purposes of market definition.

377 Accordingly, the degree of market power used in assessing whether competition is likely to be prevented or lessened substantially must be recalibrated downwards. That recalibrated degree of market power is a level of market power required to maintain prices *materially* higher, or to depress one or more forms of non-price competition to a level that is *materially* lower, than they likely would be in the absence of the merger. As a practical matter, in the case at bar, this distinction between "material" and "significant" is of little significance, because the Panel has found that prices are likely to be significantly (i.e., at least 10%) higher than they would likely have been in the absence of the Merger.

378 Turning to the scope dimension of "substantiality", the Tribunal will assess whether the merged entity, acting alone or interdependently with other firms, likely would have the ability to impose the above-mentioned effects in a material part of the relevant market, or in a respect of a material volume of sales.

379 With respect to the duration dimension of "substantiality", the Tribunal typically will assess whether the merged entity, acting alone or interdependently with other firms, likely would have the ability to sustain the above-mentioned effects for approximately two years or more, relative to the "but for" scenario. This explains why the Tribunal typically assesses future entry and the expansion of potential rivals to the merged entity by reference to a benchmark of approximately two years.

380 When, as in this case, the merger has already occurred and the Commissioner alleges that the merger is likely to prevent competition substantially, the Tribunal's assessment of the duration dimension of "substantiality" will focus on two things. First, the Tribunal will assess whether the entry or expansion that was prevented or forestalled by the merger likely would have been sufficiently timely, and on a sufficient scale, to have resulted in a material reduction of prices, or a material increase in one or more non-price dimensions of competition, had the merger not occurred. If so, the Tribunal will assess whether the entry or expansion of third parties likely will achieve this result, notwithstanding the fact that the merger has occurred.

381 Before assessing whether a likely prevention of future competition would be "substantial," the Tribunal also will assess whether that future competition likely would have materialized "but for" the merger in question. In this regard, the Tribunal will assess whether such competition likely would have developed within a reasonable period of time.

382 What constitutes a reasonable period of time will vary from case to case and will depend on the business under consideration. In situations where steps towards entry or expansion were being taken by the firm whose entry or expansion was prevented or forestalled by the merger, a reasonable period of time would be somewhere in the range of time that typically is required to complete the remaining steps to enter or expand on the scale described above. Similarly, in situations where the entry or expansion was simply in the planning stage, a reasonable period of time would be somewhere in the range of time that typically is required to complete the plans in question and then to complete the steps required to enter or expand on the scale described above. In situations where entry on such a scale cannot occur for several years because, for example, a new blockbuster drug is still in clinical trials, a reasonable period of time would be approximately the period of time that it typically would take for such trials to be completed, relevant regulatory approvals obtained, and commercial quantities of the drug produced and sold. In situations where entry on the scale described above cannot occur for several years because of long term contracts between customers and suppliers, a reasonable period of time would be approximately one year after a volume of business that is sufficient to permit entry or expansion on that scale becomes available.

383 In all cases, the Tribunal must be satisfied that the future competition that is alleged to be prevented by the merger likely would have materialized within a reasonable period of time. If so, the Tribunal will assess whether the prevention of that competition likely would enable the merged entity to exercise materially greater market power than in the absence of the merger, for a period of approximately two years or more, subsequent to that time.

384 Notwithstanding the foregoing, it is important to underscore that the magnitude, scope and duration dimensions of "substantiality" are interrelated. This means that where the merged entity is likely to have the ability to prevent a particularly large price decrease that likely would occur "but for" the merger, the volume of sales in respect of which the price decrease would have had to be experienced before it will be found to be "material" may be less than would otherwise be the case. The same is true with respect to the period of time in respect of which the likely adverse price effects must be experienced — it may be less than the two year period that typically is used. Likewise, where the volume of sales in respect of which a price decrease is likely to occur is particularly large, (i) the degree of price decrease required to meet the "materiality" threshold may be less than would otherwise be the case, and (ii) the period of time required for a prevention of competition to be considered to be "substantial" may be less than two years.

385 In conducting its assessment of whether a merger is likely to prevent competition substantially, the Tribunal also assesses whether other firms likely would enter or expand on a scale similar to that which was prevented or forestalled by the merger, and in a similar timeframe. Where the Tribunal finds that such entry or expansion likely would occur even if the merger proceeds, it is unlikely to conclude that the merger is likely to prevent competition substantially.

386 In summary, to demonstrate that a merger is likely to prevent competition substantially, the Commissioner must establish, on a balance of probabilities, that "but for" the merger, one of the merging parties likely would have entered or expanded within the relevant market within a reasonable period of time, and on a sufficient scale, to effect either a material reduction of prices or a material increase in one or more levels of non-price competition, in a material part of the market, for approximately two years. Alternatively, the Commissioner must establish a similar likely effect on prices or on levels of non-price dimensions of competition as a result of the development of another type of future competition that likely would have occurred "but for" the merger.

D. When Efficiencies Can be Considered

387 The Tribunal's decision in *Propane*, above, has been interpreted as suggesting that cost reductions and other efficiencies can never be considered prior to the triggering of the defence set forth in section 96. This appears to be a misreading of *Propane*. The source of this misunderstanding appears to be found in paragraph 137 of that decision. The focus of the discussion in that paragraph was on the differences between the Canadian and American approaches to efficiencies, and, specifically, whether section 96 requires the efficiencies likely to result from a merger to be so great as to ensure that there are no adverse price effects of the merger.

388 There may well be situations in which any cost reductions or other efficiencies likely to be attained through a merger will increase rivalry, and thereby increase competition, in certain ways. These include: (i) by enabling the merged entity to better compete with its rivals, for example, by assisting two smaller rivals to achieve economies of scale or scope enjoyed by one or more larger rivals, (ii) by increasing the merged entity's incentive to expand production and to reduce prices, thereby reducing its incentive to coordinate with other firms in the market post-merger, and (iii) by leading to the introduction of new or better products or processes.

389 There is no "double counting" of such efficiencies when it is determined that the merger in question is likely to prevent or lessen competition substantially and a trade-off assessment is then conducted under section 96. This is because, in that assessment, such efficiencies would only be considered on the "efficiencies" side of the balancing process contemplated by section 96. They would not directly or indirectly be considered on the "effects" side of the balancing process, because they would not be part of any cognizable (i) quantitative effects (e.g., the DWL or any portion of the wealth transfer that may be established to represent socially adverse effects), or (ii) qualitative effects (e.g., a reduction in dynamic competition, service or quality). Moreover, at the section 92 stage of the analysis, they typically would not be found to be a source of any new, increased or maintained market power that must be identified in order to conclude that the merger is likely to prevent or lessen competition substantially.

E. The Efficiencies Defence

390 The analytical framework applicable to the assessment of the efficiencies defence has been set forth in significant detail in the Panel's decision. I simply wish to make a few additional observations.

(i) Conceptual framework

391 In broad terms, section 96 contemplates a balancing of (i) the "cost" to the economy that would be associated with making the order that the Tribunal has determined should otherwise be made under section 92 (the "Section 92 Order"), and (ii) the "cost" to the economy of not making the Section 92 Order. The former cost is the aggregate of the lost efficiencies that otherwise would likely be attained as a result of the merger. The latter cost is the aggregate of the effects of any prevention or lessening of competition likely to result from the merger, if the Section 92 Order is not made.

392 Section 96 achieves this balancing of "costs" by (i) confining efficiencies that are cognizable in the trade-off assessment to those that "would not likely be attained if the [Section 92 Order] were made", as contemplated by subsection 96(1), and (ii) confining the effects that may be considered in the trade-off assessment to "the effects of any prevention or lessening of competition that will result or is likely to result from the merger or proposed merger".

393 In short, the efficiencies that are eliminated by this language in subsection 96(1), which is referred to at paragraph 264 of the Panel's decision as the fifth "screen" established by section 96, are not considered in the trade-off assessment because they would not represent a "cost" to society associated with making the Section 92 Order. That is to say, the efficiencies excluded by this screen either would likely be achieved through alternative means in any event, or they would be unaffected by the Section 92 Order. This could occur, for example, because they would be attained in one or more markets or parts of the merged entity's operations that would be unaffected by the Section 92 Order. It is in this sense that the assessment contemplated by section 96 is heavily dependent on the nature of the Section 92 Order.

394 That said, to the extent that there are efficiencies in other markets that are so inextricably linked to the cognizable efficiencies in the relevant market(s) that they would not likely be attained if the Section 92 Order were made, they are cognizable under section 96 and will be included in the trade-off assessment.

395 In assessing whether efficiencies are likely to be achieved through alternative means, the Tribunal will assess the realities of the market(s) concerned, and will not exclude efficiencies from its analysis on the basis of speculation that the efficiencies could *possibly* be achieved through such alternative means.

396 It bears emphasizing that, under section 96, the relevant counterfactual is the scenario in which the Section 92 Order is made. This is not necessarily the scenario in which the merger does not occur.

(ii) Socially adverse effects

397 At paragraph 284 of the Panel's decision, it was observed that the Commissioner adduced no evidence with respect to what the Tribunal in the past has characterized as being *socially adverse* effects. The Panel also observed that the Commissioner conceded that the merger is not likely to result in any such effects. Accordingly, the Panel confined its assessment to the *anti-competitive* effects claimed by the Commissioner.

398 However, given that the Commissioner requested, in her final oral submissions, that the Panel clarify the analytical approach applicable to the efficiencies defence, the following observations will be provided with respect to the potential role of socially adverse effects in the trade-off analysis contemplated by section 96, in future cases.

399 At paragraph 205 of its final argument, CCS characterized the approach established by the Federal Court of Appeal in *Propane*, above, as being the "balancing weights approach." This is the same terminology that was used by Dr. Baye at footnote 14 of his reply report, where he referred to the approach established in *Propane*, above, and *Propane*, above. However, as the Tribunal noted in *Propane*, at para. 336, balancing weights "is incomplete [as an approach] and useful only as a tool to assist in its broader inquiry" under section 96. With this in mind, the Tribunal characterized that broader inquiry mandated by *Propane* in terms of the "socially adverse effects" approach. However, on reflection, the term "weighted surplus" approach would seem to be preferable.

400 As noted at paragraphs 281 — 283 of the Panel's decision, the total surplus approach remains the starting point for assessing the effects contemplated by the efficiencies defence set forth in section 96 of the Act. After the Tribunal has assessed the evidence with respect to the quantifiable (i.e., the DWL) and non-quantifiable anti-competitive effects of the merger in question, it will assess any evidence that has been tendered with respect to socially adverse effects. In other words, if the Commissioner alleges that the merger is likely to give rise to socially adverse effects, the Tribunal will determine how to treat the wealth transfer that is likely to be associated with any adverse price effects of the merger. The wealth transfer is briefly discussed at paragraph 282 of the Panel's decision.

401 As the Tribunal observed in *Propane*, above, at para. 372, "demonstrating significant adverse redistributional effects in merger review will, in most instances, not be an easy task." Among other things, determining how to treat the wealth transfer will require "a value judgment and will depend on the characteristics of [the affected] consumers and shareholders" (*Propane*, above, at para. 329). It will "rarely [be] so clear where or how the redistributive effects are experienced" (*Propane*, above, at para. 329). In general, the exercise "will involve multiple social decisions" and "[f]airness and equity [will] require complete data on socio-economic profiles on [*sic*] consumers and shareholders of producers to know whether the redistributive effects are socially neutral, positive or adverse" (*Propane*, above, at paras. 329 and 333).

402 Where it is determined that the merger likely will result in a socially adverse transfer of wealth from one or more identified lower income group(s) to higher income shareholders of the merged entity, a subjective decision must be made as to how to weigh the relevant part(s) of the wealth transfer. (If the entire wealth transfer will involve a socially adverse transfer, then it would be necessary to decide how to weigh the full transfer.) If the income effect on some purchaser groups would be more severe than on others, different weightings among the groups may be required.

403 It is at this point in the assessment that the balancing weights tool can be of some assistance. As proposed by Professor Peter Townley, one of the Commissioner's experts in *Propane*, above, this tool simply involves determining the weight that would have to be given to the aggregate reduction in consumer surplus (*i.e.*, the sum of the deadweight loss, including any deadweight loss attributable to pre-existing market power, plus the wealth transfer) in order for it to equal the increased producer surplus that would likely result from the merger (*i.e.*, the sum of the efficiency gains and the wealth transfer). (See the Affidavit of Peter G.C. Townley, submitted in *Propane*, above, (available at http://www.ct-tc.gc.ca/CMFiles/CT-1998-002_0115_38LES-1112005-8602.pdf).)

404 For example, in *Propane*, the aggregate reduction in consumer surplus was estimated to be $43.5 million, *i.e.*, the estimated $40.5 million wealth transfer plus the estimated $3 million DWL. By comparison, the aggregate increase in producer surplus was estimated to be $69.7 million, *i.e.*, the sum of the efficiency gains accepted by the Tribunal, namely $29.2 million, plus the wealth transfer of $40.5 million. The balancing weight was therefore represented by *w* in the following formula: 1(69.7) — *w* ($43.5) = 0. Solving for *w* yielded a value of 1.6, which was the weight at which the consumer losses and the producer gains just balanced. (See *Propane*, above, at paras. 102-104.) Accordingly, for consumer losses to outweigh producer gains, they would have had to be given a weight of greater than 1.6, assuming that producer gains were given a weight of 1.

405 Professor Townley's helpful insight was that members of the Tribunal often would be in a position to subjectively determine, even in the absence of substantial information, whether there was any reasonable basis for believing that a weighting greater than the balancing weight ought to be applied to the socially adverse portion(s) of the wealth transfer. If not, then notwithstanding an insufficiency of the information required to accurately calculate a full set of distributional weights, it could be concluded that the efficiencies likely to result from the merger would outweigh the adverse effects on consumer surplus. Unfortunately, there was not sufficient information adduced in *Propane* to permit the Tribunal to assess whether the estimated balancing weight of 1.6 was reasonable, given the socio-economic differences between and among consumers and shareholders (*Propane*, above, at para. 338).

406 Where the balancing weights tool does not facilitate a determination of the weights to be assigned to any identified socially adverse effects, other evidence may be relied upon to assist in this regard. For example, in *Propane*, the Tribunal relied upon Statistics Canada's report entitled *Family Expenditure in Canada, 1996*, which suggested that only 4.7% of purchasers of bottled propane were from the lowest-income quintile, while 29.1% were from the highest-income quintile. The Tribunal ultimately determined that the redistributive effects of the merger on customers in the lowest-income quintile would be socially adverse, and included in its trade-off analysis an estimate of $2.6 million to reflect those adverse effects. Although it found that it had no basis upon which to determine whether the DWL should be weighted equally with adverse redistribution effects, the Tribunal ultimately concluded that, even if the $2.6 million in adverse distribution effects were weighted twice as heavily as the $3 million reduction in DWL and a further $3 million to represent the adverse qualitative effects of the merger, the combined adverse impact on consumer surplus would not exceed $11.2 million (*Propane*, above, at para. 371). Since that estimate was still far below the recognized efficiency gains of $29.2 million, it concluded that the defence in section 96 had been met. This conclusion was upheld on appeal.

(iii) Non-quantifiable/qualitative effects

407 The Panel's assessment of the non-quantifiable effects that were considered in the section 96 trade-off assessment in this case is set forth at paragraphs 305-307 of its reasons.

408 I simply wish to add that where there is not sufficient evidence to quantify, even roughly, effects that ordinarily would be quantifiable, it will remain open to the Tribunal to accord *qualitative* weight to such effects. For example, in the case at bar, it would have been open to accord qualitative weight to the anti-competitive effects of the Merger expected to occur outside the Contestable Area, given that the evidence established that such effects were likely, but could not be calculated due to shortcomings in the evidence. As it turned out, it was unnecessary for the Panel to give those effects any weighting whatsoever.

409 Similarly, had the Panel not accepted the Commissioner's evidence with respect to the quantitative magnitude of the DWL, such that there was then no evidence on this specific matter, it would have been open to the Panel to accord qualitative weight to the fact that there would have been *some* significant DWL associated with the adverse price effects which it determined were likely to result from the Merger. The same will be true in other cases in which either it is not possible to reliably quantify the likely DWL, even in rough terms, or the Commissioner fails to adduce reliable evidence regarding the extent of the likely DWL, at the appropriate time.

***Moldaver, Brown JJ.* (Wagner C.J. and Côté, Rowe and Kasirer JJ. concurring):**

I. Overview

1 Steven Devecseri died in a motorcycle accident. His insurer, Royal & Sun Alliance Insurance Company of Canada ("RSA"), proceeded to defend his estate in two lawsuits started by others injured in the accident, including Jeffrey Bradfield. Three years after the accident, and over a year into litigation, RSA learned Mr. Devecseri had consumed alcohol immediately prior to the accident, putting him in breach of his insurance policy. RSA promptly ceased defending Mr. Devecseri's estate and denied coverage. This reduced the value to Mr. Bradfield (and another third-party claimant) of Mr. Devecseri's policy from the policy limits of $1,000,000 to the statutory minimum coverage of $200,000. Nearly three years later, one of the actions proceeded to trial, resulting in a judgment against Mr. Devecseri's estate and Mr. Bradfield, and a judgment for Mr. Bradfield on a cross-claim against the estate.

2 In enforcing his judgment against Mr. Devecseri's estate, Mr. Bradfield rejected RSA's position that its exposure on behalf of the estate was confined to the statutory minimum of $200,000. He advanced two grounds: first, waiver by conduct, and secondly, promissory estoppel. The trial judge agreed that RSA had waived its right to deny full coverage. The Court of Appeal rejected both grounds. Of particular significance, it found that RSA's conduct could not amount to a "promise or assurance which was intended to affect [the parties'] legal relationship and to be acted on" because RSA lacked knowledge of Mr. Devecseri's policy breach when it provided him with a defence (see *Maracle v. Travellers Indemnity Co. of Canada*, [1991] 2 S.C.R. 50, at p. 57). In so concluding, it saw no basis to fix RSA with imputed knowledge of the policy breach, even though the parties agreed that a coroner's report, available shortly after the accident — and approximately three years before RSA took an off-coverage position — would have provided RSA with evidence of the breach. Mr. Bradfield appealed to this Court, advancing both waiver by conduct and promissory estoppel arguments.

3 We would dismiss the appeal. The appellant now concedes, correctly in our view, that waiver by conduct was precluded by statute at the relevant time. With respect to promissory estoppel, we agree with the Court of Appeal that RSA could not have intended to alter its legal relationship with Mr. Bradfield because it lacked knowledge of the facts which demonstrated (or otherwise put RSA on notice) of Mr. Devecseri's policy breach. Nonetheless, even if this obstacle could be overcome, we would still harbour serious reservations about the availability of any estoppel argument on the facts of this case. A third-party claimant like Mr. Bradfield faces additional hurdles in establishing a successful estoppel argument against an insurer, given the nature of their statutory relationship. Whether and to what extent Ontario's Insurance Act, R.S.O. 1990, c. I.8, permits third parties like Mr. Bradfield to assert estoppel arguments, including on behalf of a first-party insured, raises a number of issues that were not fully or satisfactorily argued but which warrant comment.

4 A preliminary issue also arises. Mr. Bradfield discontinued his appeal after this Court granted leave to appeal because he and RSA reached a settlement agreement. This Court then granted the request of the Trial Lawyers Association of British Columbia to be substituted as the appellant. Although the appeal is moot, Trial Lawyers argues that we ought to exercise our discretion to hear it on the merits in accordance with *Borowski v. Canada (Attorney General)*, [1989] 1 S.C.R. 342. We agree.

II. Background

5 On May 29, 2006, Mr. Bradfield, Mr. Devecseri and several others were riding motorcycles when Mr. Devecseri rode into oncoming traffic, colliding with a car being driven by Jeremy Caton. The collision killed Mr. Devecseri and injured both Mr. Caton and Mr. Bradfield. At the time, Mr. Devecseri had alcohol in his system, in contravention of his motorcycle license and thereby in breach of his standard motor vehicle insurance policy.

6 RSA appointed an adjuster to investigate the accident. He interviewed Mr. Bradfield, who — despite having accompanied Mr. Devecseri prior to the accident — did not mention that Mr. Devecseri had been drinking alcohol. Nor was this fact revealed by the police report which had been provided in a redacted form to the adjuster. The adjuster's report to RSA concluded that, while speed was a factor in the collision, further investigation would be required to know whether drugs or alcohol played any role. The adjuster also expressed confusion about who would normally be responsible for obtaining a coroner's report, although RSA's initial instructions to the adjuster listed a coroner's report as a potential avenue of investigation. Neither he nor anyone else at RSA took steps to obtain a coroner's report.

7 On October 7, 2007, Mr. Bradfield sued Mr. Devecseri's estate. On May 27, 2008, Mr. Caton sued the estate, as well as Mr. Bradfield and another motorcyclist in the group. Pursuant to its insurance policy with Mr. Devecseri, RSA responded to these claims on behalf of the estate. RSA retained counsel and filed a statement of defence in each action on March 5, 2009.

8 On June 25, 2009, examinations for discovery of Mr. Bradfield and the other motorcyclist occurred. The other motorcyclist testified that he had seen Mr. Devecseri and Mr. Bradfield consuming alcohol at a restaurant shortly before the accident. Mr. Bradfield testified that he was at a restaurant with Mr. Devecseri, but said he could not recall if Mr. Devecseri was drinking alcohol. A coroner's report, dated August 29, 2006, was then obtained, confirming that Mr. Devecseri had a modest quantity of alcohol in his system when he died.

9 On July 8, 2009, RSA advised all parties that it was taking an off-coverage position. This change in position meant that if their claims were to succeed, Mr. Bradfield and Mr. Caton would be collectively entitled to no more than the statutory minimum coverage of $200,000 (Insurance Act, s. 251(1)), rather than the $1 million that would have been available under Mr. Devecseri's full policy.

10 Almost three years later, in May 2012, Mr. Bradfield settled his action against Mr. Devecseri's estate. As part of the settlement, RSA paid him $100,000 plus costs, representing half its statutory minimum coverage, while paying the other half to Mr. Caton. The settlement also included a payment to Mr. Bradfield by his own insurer of $750,000 in underinsured coverage.

11 In June 2012, Mr. Caton obtained a judgment for $1.8 million against Mr. Devecseri's estate and Mr. Bradfield. While each was jointly liable to Mr. Caton, several liability was apportioned 90 percent against Mr. Devecseri and 10 percent against

Mr. Bradfield. In the same proceeding, Mr. Bradfield also obtained judgment on a cross-claim for contribution and indemnity against Mr. Devecseri's estate.

12 Following the trial, Mr. Bradfield sought a declaration of entitlement to recover judgment against RSA on the basis that RSA waived Mr. Devecseri's breach or was estopped from denying coverage to Mr. Devecseri's estate. The trial judge granted the declaration, finding that RSA waived its right to deny coverage by failing to take an off-coverage position and by providing a defence to Mr. Devecseri's estate as the litigation progressed (2018 ONSC 4477). Having found waiver by conduct, the trial judge did not consider the estoppel argument.

13 The Court of Appeal allowed RSA's appeal (2019 ONCA 800, 148 O.R. (3d) 161). It rejected Mr. Bradfield's waiver argument, in part because, at that time, s. 131(1) of the Insurance Act precluded recognition of waiver by conduct. Likewise, Mr. Bradfield's promissory estoppel argument failed because RSA lacked knowledge of the policy breach, such knowledge could not be imputed to RSA, and Mr. Bradfield was unable to establish detrimental reliance.

III. Issues

14 Commencing with waiver, the parties before this Court agree that s. 131(1) of the Insurance Act, as it read at the relevant time, required that waiver be given in writing and that RSA did not waive any rights in writing. [1] Accordingly, promissory estoppel is the sole issue before us: was RSA estopped from denying coverage because it responded to the claims against Mr. Devecseri's estate long after it could have discovered evidence of Mr. Devecseri's policy breach?

IV. Analysis

15 Promissory estoppel is an equitable defence whose elements were stated by Sopinka J. for this Court in *Maracle*, at p. 57:

> The principles of promissory estoppel are well settled. The party relying on the doctrine must establish that the other party has, by words or conduct, made a promise or assurance which was <u>intended</u> to affect their <u>legal relationship</u> and <u>to be acted on</u>. Furthermore, the [promisee] must establish that, in reliance on the [promise], he acted on it or in some way changed his position. [Emphasis added.]

The equitable defence therefore requires that (1) the parties be *in a legal relationship* at the time of the promise or assurance; (2) the promise or assurance be *intended* to affect that relationship and to be acted on; and (3) the other party in fact *relied* on the promise or assurance. It is, as we will explain, implicit that such reliance be to the promisee's detriment.

16 Promissory estoppel seeks to protect against the "inequity of allowing the other party to resile from his statement where it has been relied upon to the detriment of the person to whom it was directed" (*Fort Frances v. Boise Cascade Canada Ltd.*, [1983] 1 S.C.R. 171, at p. 202). In the insurance context, estoppel arises most commonly where an insurer, having initially taken steps consistent with coverage, then denies coverage because of the insured's breach of a policy term or its ineligibility for insurance in the first place. To prevent the insurer from denying coverage, the insured will attempt to show that the insurer is estopped from changing its coverage position based on its prior words or conduct.

17 Although the nuances of the relationship between promissory estoppel and other forms of estoppel were not argued before us in this appeal, we observe that Trial Lawyers' arguments may be better framed as supporting estoppel by representation rather than promissory estoppel (see Ryan v. Moore, 2005 SCC 38, [2005] 2 S.C.R. 53, at para. 5; *Page v. Austin*, (1884), 10 S.C.R. 132, at p. 164). While the latter doctrine prevents the promisor from reneging on an assurance to alter the parties' legal relationship, the former doctrine prevents a promisor from denying the truth of a prior representation (see, generally, B. MacDougall, *Estoppel* (2nd ed. 2019), at §§ 5.33 to 5.45). Given the similarities between the doctrines, however, we resolve this appeal applying only the principles of promissory estoppel upon which Trial Lawyers relies, while noting that similar reasoning would apply if the claim were grounded in estoppel by representation.

18 As we will explain, Trial Lawyers' estoppel argument must fail, primarily because RSA gave no promise or assurance intended to affect its legal relationship with Mr. Bradfield. RSA lacked knowledge, at the time it provided a defence to Mr.

Devecseri's estate, of Mr. Devecseri having breached the policy by consuming alcohol. This is fatal to Trial Lawyers' position. Further, and *even if* constructive knowledge of the facts demonstrating a breach were sufficient for purposes of estoppel (which, as we will explain, it is not), RSA cannot be fixed with constructive knowledge of such facts in the circumstances of this case. RSA was under a duty to Mr. Devecseri to investigate the claim against him "fairly", in a "balanced and reasonable manner" (Fidler v. Sun Life Assurance Co. of Canada, 2006 SCC 30, [2006] 2 S.C.R. 3, at para. 63, citing with approval *702535 Ontario Inc. v. Lloyd's London, Non-Marine Underwriters*, (2000), 184 D.L.R. (4th) 687 (Ont. C.A.), at para. 29). It did so. RSA was under no additional duty to Mr. Bradfield or other third-party claimants to investigate policy breaches at all, much less on a different and more rigorous standard than that which it owed to its insured.

19 These points are sufficient to dispose of this appeal. As indicated, however, we propose to canvass some additional difficulties that a third-party claimant like Mr. Bradfield must contend with in raising a successful estoppel argument against an insurer.

A. Intention

20 The parties agree that, for three years — from the date of the accident in May 2006 to discoveries in June 2009 — RSA was ignorant of Mr. Devecseri's alcohol consumption. The issue is whether, *that ignorance notwithstanding*, RSA can be held to an assurance, by words or conduct, that it would not deny coverage on the basis of this policy breach. In our view, RSA's lack of knowledge is fatal to Trial Lawyers' estoppel argument.

21 To ground promissory estoppel, the requirement stated in *Maracle* that a promise or assurance must be *intended* to affect the parties' legal relationship signifies that the promisor must *know* of the facts that are said to give rise to that legal relationship, and of the alteration thereto — in this case, that Mr. Devecseri would be covered to the full policy limits *despite his having breached the policy*. We acknowledge that the jurisprudence from this Court speaks of *intention*, not knowledge (*Maracle*, at pp. 57-59; *John Burrows Ltd. v. Subsurface Surveys Ltd.*, [1968] S.C.R. 607, at p. 615). But the significance of *intention* depends entirely on what the promisor *knows*. A promisor, such as RSA, cannot *intend* to alter a relationship by promising to refrain from acting on information that it does not have. If RSA is to be taken, by having furnished a defence, as having intended to affect a relationship with Mr. Bradfield by extending coverage *notwithstanding* Mr. Devecseri's breach, it must be shown to have known *of the facts* which demonstrate that breach.

22 As we explain below, the requirement that RSA be shown to have known *of the facts* demonstrating a breach leaves a narrow role for *imputed* knowledge in this context. Trial Lawyers seeks to broaden this role, arguing that *constructive* knowledge arising from a breach of a duty to investigate is enough. We disagree. As we explain below, to hold otherwise would be to unwisely and unnecessarily undermine the existing duty on insurers owed to insureds — and not to third-party claimants like Mr. Bradfield — to investigate liability claims fairly, in a balanced and reasonable manner.

23 It is this simple: RSA lacked knowledge of the facts demonstrating Mr. Devecseri's breach. This alone is dispositive of Trial Lawyers' appeal.

(1) Imputed Knowledge

24 As we have explained, promissory estoppel requires that an insurer know the facts demonstrating a breach in order to be bound to any promise to cover, notwithstanding that breach. To be clear, that is all that is required: knowledge of *the facts*. Had, therefore, RSA known of *the fact* that demonstrated Mr. Devecseri's breach (specifically, that he had consumed alcohol prior to the accident) but had failed to appreciate *its legal significance* (specifically, that this *was a breach*), knowledge of that legal significance could have been imputed to RSA. The leading authority from this Court and the jurisprudence developed in lower courts support this view. But, as will be seen, this jurisprudence does not assist Trial Lawyers here.

25 In *Western Canada Accident and Guarantee Insurance Co. v. Parrott*, (1921), 61 S.C.R. 595, an employee was injured while working at her employer's unguarded laundry machine. The employer, whose insurance policy required that all the machines be equipped with a safety guard, sent the insurer a report of the accident that implied that the machine in question was not guarded. Further, two of the insurer's agents either saw or were told that the machine was unguarded. Justice Idington held that, upon

reading the employer's report alone, it would be "inconceivable" that the insurer did not turn its mind to the breach (p. 598). It followed that the insurer was in possession of the relevant fact that demonstrated the breach. While the contention that the insurer did not understand the legal significance of this fact was rejected by Idington J. as *unbelievable* (at p. 600), it was also *irrelevant*: because the insurer knew of the relevant fact, the knowledge of its legal significance could be imputed to the insurer. In separate reasons, other members of this Court agreed that the insurer was taken, by its knowledge of *the fact* of the unguarded machine, to have full knowledge of its rights to deny coverage (at p. 601, per Duff J.; at pp. 602-3, per Anglin J.; at pp. 606-7, per Mignault J.), and the insurer was therefore estopped from denying coverage after having defended the action.

26 *Parrott* demonstrates the narrow operation of imputed knowledge in this context. Where the insurer is shown to have known of the fact demonstrating a breach but has failed to appreciate its legal significance (that is, failed to discern that it indeed demonstrated *a breach*), a trier of fact may infer the insurer knew of its right to withhold coverage while intending to assure the insured that it would not act thereon (see *Maracle*, at p. 59; *John Burrows*, at p. 616). The employer's reliance on the insurer's conduct — in providing a defence and taking the matter to trial — as an assurance of coverage was reasonable in view of the insurer having actual knowledge of the fact of the unguarded machine.

27 This view finds support in the lower courts. In Rosenblood Estate v. Law Society of Upper Canada198937 C.C.L.I. 142 (Ont. H.C.), aff'd 199216 C.C.L.I. (2d) 226 (Ont. C.A.), the very nature of the claim — that a solicitor was aware that a property he was dealing with was over-mortgaged — fell outside the scope of the insurance policy. Again, however, while the insurer knew of the solicitor's awareness, it failed to appreciate its significance as demonstrative of a policy breach. And as in *Parrott*, that did not matter: it was taken, by virtue of its knowledge of *the fact*, as appreciating its significance (p. 156). Whether the insurer actually did appreciate the significance of the fact was irrelevant. In this sense, estoppel differs from waiver, which requires knowledge of the legal significance of the facts (*Saskatchewan River Bungalows Ltd. v. Maritime Life Assurance Co.*, [1994] 2 S.C.R. 490, at p. 500). In *Rosenblood Estate* , the reliance of the solicitor's estate on the insurer providing a defence as an assurance of coverage was reasonable in light of the insurer having actual knowledge of the mere fact that brought the claim outside the scope of the policy.

28 This was echoed recently at the Court of Appeal for Ontario in *The Commonwell Mutual Assurance Group v. Campbell*, 2019 ONCA 668, 95 C.C.L.I. (5th) 344, aff'g 2018 ONSC 5899, 95 C.C.L.I. (5th) 328, at paras. 38 and 40, where, again, the nature of the claim itself fell outside the scope of coverage. The insurer thus had knowledge of facts supporting a denial of coverage from the moment it received a statement of claim. It was irrelevant that the insurer did not turn its mind to the applicable exclusion, and it was estopped from relying on that exclusion later to deny coverage.

29 This point — that the provision of a defence by an insurer, despite its knowledge of a fact demonstrating a breach, supports an inference that the insurer intended to alter its legal relationship with the insured — is widely accepted in our law (see, e.g., Parlee v. Pembridge Insurance Co., 2005 NBCA 49, 283 N.B.R. (2d) 75, at para. 12; Fellowes, McNeil v. Kansa General International Insurance Co.. 200022 C.C.L.I. (3d) 1 (Ont. C.A.), at para. 69; Gilewich v. 3812511 Manitoba Ltd., 2011 MBQB 169, 267 Man. R. (2d) 40, at para. 42; Gillies v. Couty1994100 B.C.L.R. (2d) 115 (B.C. S.C. [In Chambers]) (S.C.), at paras. 5 and 8; *Federal Insurance Co. v. Matthews*, (1956), 3 D.L.R. (2d) 322 (B.C.S.C.), at p. 345; see also *Owen Sound Public Library Board v. Mial Developments Ltd*, (1979), 26 O.R. (2d) 459 (Ont. C.A.), at p. 467). Also widely accepted is the proposition that, where an insurer knows of the facts demonstrating a breach, a failure to appreciate their legal significance *as such* — that is, as demonstrative of a breach — is irrelevant, so that such an appreciation may be imputed to the insurer, and the insurer estopped from denying coverage (see, for instance, Personal Insurance Co. v. Alexander Estate, 2012 NWTSC 19, 30 M.V.R. (6th) 282, at paras. 33-35 and 41-42; *Snair v. Halifax Insurance Nationale-Nederlanden North America Corp*, (1995), 145 N.S.R. (2d) 132 (S.C.), at para. 62; *Rowe v. Mills*, (1986), 72 N.B.R. (2d) 344 (Q.B.), at para. 12; *Hassan v. Toronto General Insurance Co*, (1960), 22 D.L.R. (2d) 360 (Ont. H.C.J.), at pp. 368-69).

30 In sum, where an insurer is shown to be in possession of the facts demonstrating a breach, an inference may be drawn that the insurer, by its conduct, *intended* to alter its legal relationship with the insured — notwithstanding the fact that the insurer did not realize the legal significance of the facts or otherwise failed to appreciate the terms of its policy with the insured.

31 Here, it is undisputed that, when RSA defended Mr. Devecseri's estate, it did not know of the fact of his consumption of alcohol prior to the accident, which fact, if known, would have demonstrated his policy breach. This is not a case where RSA knew of Mr. Devecseri's consumption of alcohol but failed to appreciate it as putting him in breach. On that basis, *Parrott* , *Rosenblood Estate* and *Campbell* are readily distinguishable. Knowledge of the facts demonstrating Mr. Devecseri's breach cannot be imputed to RSA, and RSA therefore cannot be taken to have intended to assure his estate, or Mr. Bradfield, or anyone else, that it would not be relying upon that breach to deny coverage.

(2) Constructive Knowledge

32 Trial Lawyers urges us to find that RSA *constructively* knew of Mr. Devecseri's breach, and is thus taken to know what it ought to or should have known. This submission is premised on what Trial Lawyers says is RSA's breach of a duty to diligently investigate the claim against its insured. We would reject Trial Lawyers' argument, and with it the possibility of recognizing constructive knowledge arising from a breach of a duty to investigate as grounding promissory estoppel, for two reasons.

33 First, this argument entails a significant — and, in our view, unwise and unnecessary — modification of the obligation an insurer owes to the insured in the context of a liability claim. This duty exists because insurers have strong economic incentives to deny coverage, which this Court has sought to moderate in the public interest. As claims arise under a policy of liability insurance, insurers are bound by a duty to the insured to investigate each claim "*fairly*", in a "*balanced and reasonable manner*", and not engage in a relentless search for a policy breach (*Fidler* , at para. 63, citing *702535 Ontario Inc.*, at para. 29). The point bears reiteration: this Court has sought to *temper* the incentives of insurers in order to protect the interests of insureds, who are vulnerable when insurers act with "wilful tunnel vision" to look for policy breaches where there is "nothing to go on" (Whiten v. Pilot Insurance Co., 2002 SCC 18, [2002] 1 S.C.R. 595, at paras. 102-3).

34 The duty owed to the insured to investigate fairly, in a balanced and reasonable manner, as recognized by this Court is at odds with the duty to investigate "thoroughly" and "diligently" urged upon us by Trial Lawyers (A.F., at paras. 121 and 123). Apparently relying on *Coronation Insurance Co. v. Taku Air Transport Ltd.*, [1991] 3 S.C.R. 622, Trial Lawyers submits that the insurer is bound by a duty to "know the things that were within [its] grasp" (transcript, p. 24; see also A.F., at para. 124; *Coronation Insurance*, at p. 640). But *Coronation Insurance* is of minimal assistance here. First, the standard set in that case and in *Canadian Indemnity Co. v. Canadian Johns-Manville Co.*, [1990] 2 S.C.R. 549, related to insurers' presumed knowledge of their own files and of issues of public notoriety. The coroner's report at issue in this case was neither in the possession of the insurer nor notorious. More fundamentally, those cases concerned an insurer's assessment of the risks associated with a prospective insured *before even entering into an insurance contract*. At that pre-contract stage, this Court's concern was to temper the insurer's incentives to enter into a contract while turning a blind eye to the risks posed by the insured, only to then use the non-disclosure of those risks as a basis for denying coverage as claims arose. The incentives operate differently where, as here, we are concerned with claims under an existing contract. At that stage, the insurer has every incentive to search for breaches in relation to a given claim. We fear that, far from tempering these incentives, Trial Lawyers' submission would *augment* them, pushing insurers to go the extra mile to find policy breaches. For this reason, the submission must be rejected.

35 Secondly, there is no basis in law for a third-party claimant such as Mr. Bradfield to be able to ground an estoppel argument in any alleged breaches of an insurer's duty to its insured. In other words, the duty to investigate fairly, in a balanced and reasonable manner, is owed only to the insured, not third parties. Were such a duty owed to third parties, it would sit uneasily, and indeed would undermine, the duties of utmost good faith and fair dealing that govern the relationship between the parties to an insurance contract — in this case, between RSA and Mr. Devecseri. This is because the obligations between the insurer and the insured are reciprocal; while the insurer has the aforementioned duty to investigate fairly, in a balanced and reasonable manner, *the insured* is *also* under a reciprocal duty to disclose facts material to the claim (*Whiten* , at para. 83, citing *Andrusiw v. Aetna Life Insurance Co. of Canada*, (2001), 289 A.R. 1 (Q.B.), at paras. 84-85; Bhasin v. Hrynew, 2014 SCC 71, [2014] 3 S.C.R. 494, at para. 55).

36 This reciprocity of obligation is worth stressing. This Court has taken care to strike a careful balance in stating and developing the duty of utmost good faith and fair dealing between insurer and insured with a view to facilitating the honest,

fair, and expeditious resolution of insurance claims. Here, RSA owed Mr. Devecseri a duty to investigate the claims against his estate fairly, in a balanced and reasonable manner, and without being zealous or relentless in its search for policy breaches. Had he survived, Mr. Devecseri would have owed a reciprocal duty to disclose any information in his possession which might have voided his coverage — in particular, that he had consumed alcohol. If, after having received this disclosure, RSA had continued to provide a defence, Mr. Devecseri could have relied on that continued defence as an assurance of coverage that could prevent RSA from later changing positions. Had, however, Mr. Devecseri failed to disclose to RSA the fact of his having consumed alcohol, the breach of his duty to disclose would foreclose any later assertion by him and against RSA of estoppel.

37 Trial Lawyers asks that we allow third-party claimants to piggy-back onto the relationship between insurer and insured, characterized as it is by mutual duties of utmost good faith and fair dealing, but in a way that strips the new relationship between an insurer and third-party claimants of all such mutuality. So, while Mr. Bradfield claims he does not recall whether Mr. Devecseri consumed alcohol, it is worth bearing in mind that, *had he known*, he would be under no obligation to RSA to disclose that fact. And yet, Trial Lawyers would have this Court burden RSA with a duty *to Mr. Bradfield* to discover that selfsame fact. We see no justice in impressing RSA with such a duty while Mr. Bradfield owes no corresponding obligation. Further, and in any event, we note that promissory estoppel requires that the party seeking the aid of equity come with clean hands, which may also entail an obligation to disclose material facts, particularly in contexts such as insurance where parties are bound by reciprocal duties of utmost good faith (see, e.g., MacDougall, at §§ 5.289 to 5.292).

38 Viewed in light of the reciprocity of obligations between the actual contracting parties — the insurer and the insured — there is a certain absurdity to Trial Lawyers' position. It would effectively mean that a contract of liability insurance provides greater protection to, and imposes fewer (indeed, no) obligations upon, third parties like Mr. Bradfield than it provides to and imposes upon the first-party insured. This result effectively runs contrary to the clear expression of legislative intent in s. 258(11) of the Insurance Act, which provides that an insurer is entitled to assert any defences against the claimant as it could raise against the insured.

39 For these reasons, we must reject Trial Lawyers' argument that RSA can be fixed with constructive knowledge of Mr. Devecseri's policy breach.

B. Further Issues

40 Trial Lawyers says it can assert estoppel on behalf of both Mr. Devecseri's estate and Mr. Bradfield, based on assurances to each, and based on detriment suffered by each. This submission is extraordinary. While these issues were not satisfactorily argued by the parties and we therefore leave their resolution to another day, we highlight below some of the difficulties that Trial Lawyers would face in asserting estoppel in the manner it proposes, given the third-party nature of its claim and the relevant statutory context.

(1) Limits of the Statutory Relationship

41 Promissory estoppel generally requires that the promisor and promisee already have a legal relationship (*Maracle*, at p. 57; *Canadian Superior Oil Ltd. v. Paddon-Hughes Development Co.*, [1970] S.C.R. 932, at p. 938; *Atlantic Steel Buildings Ltd. v. Cayman Group Ltd*, (1982), 50 N.S.R. (2d) 609 (S.C. (App. Div.)); see also MacDougall, at § 5.92). Trial Lawyers says that Mr. Bradfield, as a third-party claimant relative to Mr. Devecseri's insurance policy, was in a legal relationship with RSA by virtue of s. 258 of the Insurance Act. The relevant provisions of s. 258 of the Insurance Act read as follows:

> **Application of insurance money, 3rd party claims, etc.**
>
> **258** (1) Any person who has a claim against an insured for which indemnity is provided by a contract evidenced by a motor vehicle liability policy, even if such person is not a party to the contract, may, upon recovering a judgment therefor in any province or territory of Canada against the insured, have the insurance money payable under the contract applied in or towards satisfaction of the person's judgment and of any other judgments or claims against the insured <u>covered by the contract</u> and may, <u>on the person's own behalf and on behalf of all persons having such judgments or claims</u>, maintain an action against the insurer to have the insurance money so applied.

Defence where excess limits

(11) Where one or more contracts provide for coverage in excess of the limits mentioned in section 251 [i.e. the $200,000 mandatory insurance minimum], ... the insurer may,

(a) with respect to the coverage in excess of those limits; and

(b) as against a claimant,

avail itself of any defence that it is entitled to set up against the insured ....

42 Trial Lawyers submits that this statutory language creates the requisite legal relationship allowing Mr. Bradfield to assert a right of coverage as against RSA, both on his own behalf and by "stand[ing] in the shoes" of Mr. Devecseri's estate (A.F., at para. 102). We agree that s. 258 creates a legal relationship between Mr. Bradfield and RSA. It grants third-party claimants under an insurance policy a cause of action directly against an insurer, thereby bypassing the insured. In this way, and to that extent, it ousts the common law rule of contractual privity which would otherwise bar a third-party claimant from suing an insurer on an insurance contract to which the claimant is not a party. Absent s. 258, the third-party claimant's ability to recover funds from an insurer would be "entirely dependent upon the extent to which the insured [here, Mr. Devecseri's estate] chooses to or is able to enforce its contractual rights against the insurer [here, RSA]" (B. Billingsley, *General Principles of Canadian Insurance Law* (3rd ed. 2020), at p. 295). All other provinces and territories have enacted provisions similar in effect to s. 258.

43 We are, however, far from persuaded that Trial Lawyers accounts correctly for the nature of this relationship or of the rights and responsibilities flowing therefrom, and their implications for the estoppel analysis. This is because the precise nature of this legal relationship, as determined by the statutory text, permits a claimant to sue the insurer only "upon recovering a judgment" against the insured. On the facts of this case, this restriction is significant because RSA abandoned its defence of Mr. Devecseri in 2009, three years before Mr. Bradfield obtained his cross-claim judgment against RSA. This is the first obvious difficulty with Trial Lawyers' position: it relies on conduct by RSA that predates the existence of the relevant legal relationship.

44 The difficulties do not end there. It is unclear to us, based on the text of the statute, whether Mr. Bradfield can assert an estoppel argument on behalf of Mr. Devecseri's estate, as Trial Lawyers proposes. Section 258(1) permits Mr. Bradfield to bring his claim only on his "own behalf and on behalf of all persons having such judgments or claims ... against the insured", which would appear to foreclose claims in which Mr. Bradfield "steps into the shoes" of Mr. Devecseri's estate and asserts an estoppel on that basis. We note, on the other hand, that s. 258(1) states that it applies to judgments against the insured that are "covered by the contract", which language contemplates a judicial determination of whether the first-party insured is, indeed, "covered", in the sense that the insured could estop the insurer from denying coverage.

45 Accordingly, without fuller submissions than we received, we would refrain from definitively concluding whether s. 258(1) allows the type of claim that Mr. Bradfield advanced. But we nevertheless emphasize that these questions require clear answers before a claim like Mr. Bradfield's could succeed.

(2) Assurance Regarding Coverage

46 Even accepting for the purposes of argument that s. 258 operates as Trial Lawyers suggests — by permitting Mr. Bradfield to assert estoppel based on RSA's conduct predating the cross-claim judgment, whether on his own behalf or on behalf of Mr. Devecseri — there are further difficulties to resolve. We are of the view that Trial Lawyers has not identified any conduct by RSA that could amount to a "clear and unequivocal" or "unambiguous" assurance that it would refrain from denying coverage based on a later-revealed policy breach (*Engineered Homes Ltd. v. Mason*, [1983] 1 S.C.R. 641, at pp. 646-47, citing *Halsbury's Laws of England* (4th ed.), vol. 16, at para. 1514).

47 Trial Lawyers relies exclusively on RSA's fulfilment of its various statutory obligations and its duty to defend as such an assurance. At the initial stages of the litigation, Ontario's insurance legislation required RSA to advise plaintiffs of the existence of a policy covering Mr. Devecseri, the liability limits under that policy, and "whether the insurer will respond under the policy

to the claim" (Insurance Act, s. 258.4). In answering the latter question, RSA had to determine whether its duty to defend Mr. Devecseri required it to respond under the policy. Importantly, RSA's duty to defend Mr. Devecseri was triggered *not* by RSA being satisfied that Mr. Devecseri was not in breach, but simply by the receipt of a claim against the insured alleging facts which, "if proven to be true, would require the insurer to indemnify the insured for the claim" (Progressive Homes Ltd. v. Lombard General Insurance Co. of Canada, 2010 SCC 33, [2010] 2 S.C.R. 245, at para. 19; see also Monenco Ltd. v. Commonwealth Insurance Co., 2001 SCC 49, [2001] 2 S.C.R. 699, at para. 29; Non-Marine Underwriters, Lloyd's of London v. Scalera, 2000 SCC 24, [2000] 1 S.C.R. 551, at paras. 74-78; *Nichols v. American Home Assurance Co.*, [1990] 1 S.C.R. 801, at pp. 810-11). Put simply, and absent a known policy breach, at the initial stages of a liability dispute the insurer may decline to defend the insured only where it is clear that the true nature of the facts as pleaded fall outside the scope of the policy (*Scalera* , at paras. 50-55), or the claim is expressly excluded.

48 Where, therefore, an insurer responds to a claim against its insured by defending, it is communicating — to the insured *and* to the third-party claimant — only that the claims against its insured are of a type that fall within the terms of coverage. In no sense can such a limited communication, without more, be taken as a promise *to indemnify* the claimant if the insured is found at fault, irrespective of any later-revealed or later-occurring policy breaches. Trial Lawyers, in short, seeks to imbue RSA's provision of a defence to Mr. Devecseri's estate with greater significance than RSA's conduct in fact signified.

49 Lastly, even were it possible to construe the insurer's assumption of a defence on behalf of its insured as a promise not to deny coverage, the third-party context of this case raises yet more problems for Trial Lawyers. In cases of questionable coverage, insurers often rely on reservation-of-rights letters or non-waiver agreements to preserve their right to deny coverage upon investigating the claim (see, generally, N. P. Kent, "Preventive Paperwork: Non-Waiver Agreements, Reservation-of-Rights Letters and the Defence of Claims in Questionable Coverage Situations" (1995), 17 *Advocates' Q*. 399). It is unclear to us how and whether a third party would ever obtain knowledge of a rights-reserving instrument of this kind, and in the absence of such knowledge, the third party could conceivably argue an estoppel unavailable to the insured. In this way, Trial Lawyers' submission once more appears to give more to the third party than to the first-party insured.

(3) Detrimental Reliance

50 The final hurdle for Trial Lawyers would lie in establishing detrimental reliance. While we need not decide whether detrimental reliance is made out on the facts of this case, we note that the parties advanced arguments on the extent to which detrimental reliance can be presumed in cases where litigation has progressed to an advanced stage (see *Rosenblood Estate*, at pp. 156-57). This Court has never opined on such a presumption of prejudice and we decline to do so here, but we nevertheless highlight that the cases upon which Trial Lawyers relies involved claims by the first-party insured, not third-party claimants. This distinction requires careful consideration in a future case.

51 We also affirm that detrimental reliance by the promisee must be shown to assert promissory estoppel. The Court in *Maracle* did not refer to the requirement of detrimental reliance because the detriment in that case was self-evident: the promisor allegedly stated it would not act on an expired limitation period and the promisee then allowed the limitation period to expire before bringing an action. Detrimental reliance has, however, always been a requirement for asserting promissory estoppel, or for that matter any form of estoppel. This is because, being an equitable doctrine, its goal is to address unconscionable, unjust, or unfair conduct (*Ryan* , at paras. 68 and 74; Cowper-Smith v. Morgan, 2017 SCC 61, [2017] 2 S.C.R. 754, at paras. 20 and 28). And what makes it unconscionable, unjust, or unfair to resile from a promise or assurance is that the promisor has, by intention and effect, induced the promisee to change its position in reliance thereon, *to its detriment*. For that reason, asserting promissory estoppel requires evidence of prejudice, inequity, unfairness or injustice before courts will give hold a promisor to its promise or assurance (see *Hughes v. Metropolitan Railway Co*, (1877), 2 App. Cas. 439 (H.L.), at p. 448, aff'd in *Conwest Exploration Co. v. Letain*, [1964] S.C.R. 20, at pp. 27-28, per Judson J.; *Fort Frances*, at p. 202, and *Ryan* , at para. 51, citing *Amalgamated Investment & Property Co. (In Liquidation) v. Texas Commerce International Bank Ltd.*, [1982] 1 Q.B. 84 (C.A.), at p. 122).

V. Disposition and Costs

52 We would dismiss the appeal.

53 Trial Lawyers says costs should not be awarded against it because it is a public interest litigant and because RSA was not obliged to participate in this appeal. The latter suggestion we find highly unrealistic, given the obligation Trial Lawyers sought to have imposed on insurers in this case. Nevertheless, and while this is a close call, we are of the view that the parties should bear their own costs on the appeal and the motion to substitute Trial Lawyers as a party. Our order in this regard should not be taken as a suggestion to other similarly situated groups that they may in future take up and prosecute appeals arising out of settled litigation without the risk of exposure to a costs order.

***Karakatsanis J.*:**

54 I have read the reasons of Moldaver and Brown JJ. and I agree that the appeal must be dismissed. I also agree with much of their legal analysis. However, in my view, they have added an unnecessary gloss to an element of promissory estoppel, inconsistent with the jurisprudence and inconsistent with the underlying principles of equity. By doing so, they have undermined the protection that this equitable doctrine provides.

55 As my colleagues note, the elements of promissory estoppel were stated by this Court in *Maracle v. Travellers Indemnity Co. of Canada*, [1991] 2 S.C.R. 50, and are well established in the jurisprudence. A basic requirement is that the promisor "has, by words or conduct, made a promise or assurance which was intended to affect their legal relationship and to be acted on" (*Maracle* , at para. 57). Justices Moldaver and Brown interpret this requirement — an intention to vary legal rights — as requiring the promisor's actual knowledge of the facts underlying the legal right. They reason that the promisor cannot intend to affect the legal relationship unless they have actual knowledge of the facts underlying that relationship (para. 21). Nevertheless, because they accept that the jurisprudence does not require actual knowledge of the legal significance of the facts, they conclude that knowledge of the legal significance may be imputed.

56 I cannot agree that actual knowledge is required precisely because the promisor's intent must be analyzed objectively. Subjective intent is unknowable to anyone other than the promisor and is not the appropriate lens for this equitable doctrine. The jurisprudence has long established that the intent of the promisor must be interpreted objectively. A promise is intended to vary legal relations when it would be reasonable for the promisee to interpret it as such. The objective approach is grounded in our jurisprudence — going back to the origins of the doctrine — and aligns with the fundamental purpose of promissory estoppel: preventing inequity.

57 As I shall explain, under an objective approach, knowledge is relevant because it informs the interpretation of the promisor's conduct in the full factual context. The objective approach considers whether, viewed objectively in light of the full context and including all the facts that the promisor knew or reasonably can be taken to have known, the promisor intended to alter legal rights.

58 Because knowledge of the underlying facts is an important part of the context in which an objective assessment is made, my colleagues' additional requirement of actual knowledge may have little practical effect on the result in many cases. As my colleagues observe, even if constructive knowledge were sufficient for the purposes of promissory estoppel, it would not be available on the facts of this case and the appeal could be dismissed on that basis. However, my colleagues' addition of an absolute requirement of actual knowledge of the facts distracts from the true inquiry and unduly constrains the flexibility inherent in equity.

I. Analysis

59 Confusion over the role of the promisor's knowledge in this appeal stems from a failure to properly apply an objective analysis of the promisor's intent. There is no dispute in our jurisprudence that promissory estoppel requires a promise or assurance that was intended by the promisor to alter legal relations and that the promise or assurance must be clear and unequivocal. Importantly, the jurisprudence indicates that the promisor's conduct is analyzed *objectively*. The promisor's intent is discerned from their words or conduct and their knowledge is relevant to the extent that it illuminates how the words or conduct can be reasonably interpreted.

60 Whether the promisor intended the promise to be binding is often the contentious question in promissory estoppel cases (A. Robertson, "Knowledge and Unconscionability in a Unified Estoppel" (1998), 24 Monash U.L. Rev. 115, at pp. 127-28). This requirement of intention did not appear in *Hughes v. Metropolitan Railway Co*, (1877), 2 App. Cas. 439 (H.L.), the case often credited as the source of the modern doctrine. It was Lord Denning's summary of the principle in *Central London Property Trust Ltd. v. High Trees House Ltd.*, [1947] K.B. 130, that added the requirement that the promise be "intended to be binding, intended to be acted upon and in fact acted upon" (p. 134).

61 The interpretive issue is how this intent should be judged: objectively or subjectively (i.e. according to the subjective perspective of the promisor).

62 This issue was addressed by the Court of Appeal for Ontario in *Owen Sound Public Library Board v. Mial Developments Ltd*, (1979), 26 O.R. (2d) 459. The Court of Appeal concluded that "a promise, whether express or inferred from a course of conduct, is intended to be legally binding if it reasonably leads the promisee to believe that a legal stipulation, such as strict time of performance, will not be insisted upon" (p. 465). The Court of Appeal held that intent does not require a direct statement to that effect and determined that "[k]nowledge by the promisor that the *promisee is likely to regard the promise as affecting their legal relations* constitutes an appropriate basis from which the inference of the existence of a sufficient intent can be drawn" (p. 467 (emphasis added)). As Professor McCamus explains, "the court [in *Owen Sound*,] clearly indicated that the fact the contractor may not have intended to signal a willingness to ignore the time limit was irrelevant" (*The Law of Contracts* (3rd ed. 2020), at p. 313).

63 One of the earliest endorsements of this objective analysis was that of Parke B. in *Freeman v. Cooke*, (1848), 2 Ex. 654, 154 E.R. 652, who wrote:

> [I]f whatever a man's real intention may be, he so conducts himself that a reasonable man would take the representation to be true, and believe that it was meant that he should act upon it, and did act upon it as true, the party making the representation would be equally precluded from contesting its truth .... [p. 656]
>
> (See also *Birmingham and District Land Co. v. London and North Western Railway Co*. (1888), 40 Ch. D. 268(C.A.), at p. 287, per Bowen L.J.; *Charles Rickards Ld. v. Oppenheim*, [1950] 1 K.B. 616(C.A.), at p. 623, per Denning L.J.)

64 In addition to the jurisprudence, an objective interpretation of the promisor's words or conduct is strongly supported by commentators. In his treatise, Professor McCamus writes: "The test for whether the undertaking was given is ... objective" (p. 313). Professor MacDougall similarly concludes, "a promise or assurance, whether express or inferred from a course of conduct, is intended to be legally binding if it reasonably leads the promisee to believe that a right or other legal stipulation ... will not be insisted upon" (*Estoppel* (2nd ed. 2019), at § 5.195). Professor Manwaring has observed that, "[s]ubjective intention is unknowable and intention can only be inferred from words and actions or, in other words, the objective manifestations of intent" and that the "case law clearly supports the view that the intentions of the promisor are to be discovered through an objective analysis" ("Promissory Estoppel in the Supreme Court of Canada" (1987), 10 Dal. L.J. 43, at p. 64).

65 There are important doctrinal reasons to focus on the reasonable interpretation of the promisor's conduct, and not on their subjective intent or actual knowledge. Promissory estoppel responds to unconscionability (or inequity or unfairness) and reliance, which are closely linked concepts (see Cowper-Smith v. Morgan, 2017 SCC 61, [2017] 2 S.C.R. 754, at paras. 15-16). As Moldaver and Brown JJ. acknowledge in this appeal, "[p]romissory estoppel seeks to protect against the 'inequity of allowing the other party to resile from his statement where it has been relied upon to the detriment of the person to whom it was directed'" (para. 16, quoting *Fort Frances v. Boise Cascade Canada Ltd.*, [1983] 1 S.C.R. 171, at p. 202). However, inequity is found where the promisor acted in a manner that the promisee reasonably interpreted as a promise and the promisee changed their position as a result. As expressed by Mason C.J. and Wilson J. in Walton Stores (Interstate) Ltd. v. Maher1988164 C.L.R. 387(Australia H.C.) , "equity will come to the relief of a plaintiff who has acted to his detriment on the basis of a basic assumption in relation to which the other party to the transaction has 'played such a part in the adoption of the assumption that

it would be unfair or unjust if he were left free to ignore it'" (p. 404, quoting Grundt v. Great Boulder Property Gold Mines Ltd.. 193759 C.L.R. 641(Australia H.C.) , at p. 675, per Dixon J.).

66 In my view, the role of knowledge in promissory estoppel flows from the nature of this objective analysis, which focuses on whether it was reasonable in the circumstances to interpret the promisor's words or conduct as an intent to change legal relations. Subjective intent — which is unknowable to the promisee — is not the appropriate focus for promissory estoppel. For the same reason, promissory estoppel does not require *actual* knowledge in every case.

67 Proprietary estoppel — unlike promissory estoppel — initially did require the defendant's actual knowledge (of both the existence of the right and the claimant's mistaken belief as to their legal right). The House of Lords in *Thorner v. Major*, [2009] UKHL 18, [2009] 1 W.L.R. 776(Eng. H.L.) , followed by this Court in *Cowper-Smith*, removed the explicit knowledge requirement and endorsed an objective interpretation. Lord Scott of Foscote described the objective analysis as follows:

> If it is reasonable for a representee to whom representations have been made to take the representations at their face value and rely on them, it would not in general be open to the representor to say that he or she had not intended the representee to rely on them .... It could not be thought reasonable for a representee to rely on a representation that, objectively viewed, was not intended by the representor to be relied on. [para. 17]

68 Because equity is concerned with addressing unfairness, the application of the doctrine must be fair to *both* parties and must consider the context from both perspectives. Equity is not just concerned with the subjective intention or the actual knowledge of the promisor. The person who relies on the promisor's words or conduct should be able to rely on the entire context, including what the promisor could reasonably be assumed to know. And the impact of any words or conduct must also be assessed from the perspective of what the promisor could reasonably assume the promisee knew. Therefore, in order to determine whether, viewed objectively, the words or conduct convey an intention to vary legal rights, the fact-finder must look at the entire context, including what the promisor knew or can be taken to have known.

69 As an illustrative example, if it were industry practice to immediately obtain a police report after a motor vehicle accident, and this practice was generally known or the insurer knew that the person relying on the promise had knowledge of this practice, then it would be reasonable to interpret the insured's conduct in light of an assumption that they were aware of the contents of the police report. The fact that an insurer, through mistake or negligence, actually failed to obtain the report would not be decisive to an objective interpretation of their conduct unless the insured knew that the insurer had not obtained the report.

70 For this reason, the objective lens does not mean that there is no role for the knowledge of the promisor (and promisee). *Western Canada Accident and Guarantee Insurance Co. v. Parrott*, (1921), 61 S.C.R. 595, illustrates the role that knowledge plays in the promissory estoppel analysis. The insurance company's conduct could be reasonably interpreted as a promise intended to alter legal relations precisely because it was clear in the context that they knew they had the option to void the policy but chose not to. As Duff J. wrote, the insurance company's conduct in the circumstances provided "ample evidence to support the inference, and that I think is the right inference, that the company agreed to assume responsibility under the policy" (p. 601). Actual knowledge of the facts supported the inference that the promisor intended to change legal relations; but it does not follow that actual knowledge is therefore a requirement of promissory estoppel. *Parrott* did not, therefore, create a unique promissory estoppel test for the insurance context that *requires* knowledge.

71 Importantly, knowledge plays this role *not* because there is a bright-line rule that the promisor must have knowledge of the underlying facts in every case. Knowledge is simply part of the context that informs the reasonable interpretation of the promisor's conduct. There is only one test for promissory estoppel in Canadian law, and the jurisprudence confirms that it is based on an objective interpretation of the promisor's conduct.

72 My colleagues accept that imputed knowledge can be sufficient for promissory estoppel so long as the promisor is aware of the underlying facts; it does not matter if the promisor lacks knowledge about the legal significance of those facts. In other words, a court can "impute" knowledge of legal significance of the facts to the promisor. However, my colleagues reject the idea that "constructive knowledge" arising from a breach of a duty to investigate is sufficient. I find this distinction unhelpful.

Again, promissory estoppel does not depend on a rigid categorization of different types of knowledge, but on the objective assessment of how the promisor's conduct can be interpreted.

73 It is well established that a promisor cannot resist promissory estoppel by claiming that they only had knowledge of the facts but not their legal rights (see *Peyman v. Lanjani*, [1985] 1 Ch. 457 (C.A.), at p. 495, per May L.J.; Parlee v. Pembridge Insurance Co., 2005 NBCA 49, 283 N.B.R. (2d) 75, at para. 12; The Commonwell Mutual Assurance Group v. Campbell, 2018 ONSC 5899, 95 C.C.L.I. (5th) 328, at paras. 38 and 40, aff'd 2019 ONCA 668, 95 C.C.L.I. (5th) 344). This is significant because the knowledge that is relevant *to an intention to change legal relations* is knowledge of legal rights. In other words, if the promisor does not realize the legal significance of the underlying facts, they cannot intend to change legal relations at all. As Professor Manwaring writes: "If the promisor can easily discover what her legal rights are, it would be inequitable to allow her to act without making a reasonable effort to do so" (p. 63). Equity's goal of preventing inequitable conduct is engaged where the promisor could easily have discovered their legal rights, chose not to, and then, through words or conduct, reasonably led the promisee to believe that the promisor would not enforce the legal rights.

74 The jurisprudence "imputes" knowledge of legal rights precisely because it would be inequitable for the promisor to resile where their conduct can reasonably be interpreted as an intention to change legal relations. The same objective analysis applies where the promisor can be *taken to have knowledge of the facts*. What matters is whether the context supports the inference of intent.

75 The objective approach also maintains the proper distinction between waiver — a common law doctrine — and promissory estoppel. Waiver, which requires "full knowledge of rights" and "an unequivocal and conscious intention to abandon them", imposes this strict test because there is no consideration for the promise (*Saskatchewan River Bungalows Ltd. v. Maritime Life Assurance Co.*, [1994] 2 S.C.R. 490, at p. 500). Further, unlike promissory estoppel, waiver does *not* require detrimental reliance. Waiver requires a *conscious intention*; full knowledge is necessary. By contrast, promissory estoppel — which is rooted in equity — does not impose a strict knowledge requirement, but requires detrimental reliance. Equity relieves against the harsh consequences of the application of common law rules.

76 Therefore, whether the promisor has made a promise or assurance with the intent to change legal relations is a factual determination that must be made in light of the full context. A promise or assurance is intended to be legally binding where it would be reasonable for the promisee to rely on it.

77 I agree with my colleagues that in this case, Royal & Sun Alliance Insurance Company of Canada's (RSA) conduct cannot be interpreted as an unequivocal assurance that RSA would continue to provide coverage even if the policy was void. A coroner's report that *none* of the parties had accessed is not relevant to the objective interpretation of RSA's conduct. RSA's continued coverage did not signify any intent to change legal relations: the motor vehicle accident report included no reference to alcohol; none of the motorcyclists told the police about alcohol consumption; Mr. Bradfield never told RSA's investigators or his own insurer about alcohol consumption; and the Durham Regional Police Collision Investigation Unit report did not mention alcohol.

78 I would also reject the idea that RSA is estopped simply because three years passed before it took an off-coverage position. The length of time is not determinative here. Ultimately, there is nothing unique in RSA's conduct to suggest that RSA promised that it would not void coverage if it failed to discover breaches after a specific period of time.

79 Therefore, Mr. Bradfield cannot succeed in establishing promissory estoppel because RSA did not make a promise or assurance that can be reasonably interpreted as intending to alter legal relations. This is sufficient to dispose of this appeal.

II. Conclusion

80 In my view, the promisor's intent in promissory estoppel must be interpreted objectively based upon their words or conduct: a promise is intended to be binding when it would be reasonable for the promisee to interpret it as such. Given that the analysis does not focus on the subjective intent of the promisor, there is no absolute requirement that the promisor have knowledge of their legal rights or the underlying facts giving rise to those rights in every case. Instead, knowledge is relevant because it is part

of the context informing the objective interpretation of the promisor's words or conduct. Because the intention of the words or conduct must be assessed objectively, both what the promisor knew and what they reasonably ought to have known are relevant.

81 I would dismiss the appeal.

Appeal dismissed.

Pourvoi rejeté.

Footnotes

1 Although s. 131(1) has since been amended to allow for recognition of waiver by conduct, the parties agree that the prior legislation applies to deciding this appeal.

833 F.Supp.2d 36
United States District Court, District of Columbia.

UNITED STATES of America, Plaintiff,
v.
H & R BLOCK, INC., et al., Defendants.

Civil Action No. 11–00948 (BAH)
|
Nov. 10, 2011.

Synopsis
Background: United States, through Antitrust Division of Department of Justice, sought to enjoin proposed merger between two companies that offered tax software products on grounds that it violated antitrust laws and would lead to anticompetitive duopoly.

Holdings: The District Court, Beryl A. Howell, J., held that:

relevant product market was that for digital do-it-yourself tax preparation products and did not include other methods in broader industry;

DDIY and assisted products were not sufficiently close substitutes to constrain any anticompetitive digital do-it-yourself tax preparation pricing after proposed merger;

manual tax preparation (or "pen and paper" method) also was not in relevant product market;

court would rely on Internal Revenue Service (IRS) switching data relied on by DOJ expert, rather than simulated diversion data derived from consumer surveys and relied on by defendant's expert;

DOJ made out prima facie case that proposed merger was reasonably likely to cause anticompetitive effects within relevant product market; and

because defendants failed to rebut resulting presumption that merger would substantially lessen competition, proposed acquisition would be enjoined.

Ordered accordingly.

Attorneys and Law Firms

MEMORANDUM OPINION [1]

BERYL A. HOWELL, District Judge.

Last year, approximately 140 million Americans filed tax returns with the Internal Revenue Service ("IRS"). Paying taxes is a fundamental civic duty in our democracy. Taxes pay for the government to carry out its constitutionally mandated functions and enable the government to give force to the laws and policies adopted by the people of the United States through their elected representatives. Despite the necessity of taxes to fund our government and to sustain services that many citizens depend upon, the task of preparing a tax return brings joy to the hearts of few. Many find it to be a complex and tedious exercise. Fortunately, various businesses offer different products and services designed to assist taxpayers with preparing their returns. These tax preparation businesses principally include accountants, retail tax stores, and digital tax software providers—all of which provide important services to the American taxpayer. In this case, the United States, through the Antitrust Division of the Department of Justice, seeks to enjoin a proposed merger between two companies that offer tax software products—H & R Block and TaxACT—on the grounds that the merger violates the antitrust laws and will lead to an anticompetitive duopoly in which the only substantial providers of digital tax software in the marketplace would be H & R Block and Intuit, the maker of the popular "TurboTax" software program. After carefully considering all of the evidence, including documents and factual and expert testimony, the applicable law, and the arguments before the Court, the Court will enjoin the proposed merger for the reasons explained in detail below.

IV. CONCLUSION 92

***43 I. BACKGROUND**

A. Overview

The United States, through the Antitrust Division of the Department of Justice (the "DOJ," the "government," or the "plaintiff"), filed this action on May 23, 2011. The DOJ seeks to enjoin Defendant H & R Block, Inc. from acquiring Defendant 2SS Holdings, Inc. ("TaxACT"), which sells digital do-it-yourself tax preparation products marketed under the brand name TaxACT. Compl. ¶ 10. H & R Block ("HRB") is a Missouri corporation headquartered in Kansas City, Missouri. *Id.* ¶ 9. 2SS Holdings, or TaxACT, is a Delaware corporation headquartered in Cedar Rapids, Iowa. *Id.* ¶ 10. Defendant TA IX, L.P. ("TA"), a Delaware limited partnership headquartered in Boston, Massachusetts, owns a two-thirds interest in TaxACT. *Id.* ¶ 11.

As noted above, approximately 140 million Americans filed tax returns with the IRS in 2010. *Id.* ¶ 1. Broadly speaking, there are three methods for preparing a tax return. The "pen and paper" or "manual" method includes preparation by hand and with free, electronically fillable forms available on the IRS website. A second method, known as "assisted" preparation, involves hiring a tax professional—typically either a certified public accountant ("CPA") or a specialist at a retail tax store. HRB operates the largest retail tax store chain in the United States. Cobb, TT, 9/19/11 a.m., at 37. The companies Jackson–Hewitt and Liberty Tax Service also operate well-known retail tax stores. Finally, many taxpayers now prepare their returns using digital do-it-yourself tax preparation products ("DDIY"), such as the popular software product "TurboTax." DDIY preparation is becoming increasingly popular and an estimated 35 to 40 million taxpayers used DDIY in 2010. GX 19 at 3; *see also* GX 27.[2]

***44** The three most popular DDIY providers are HRB, TaxACT, and Intuit, the maker of TurboTax. According to IRS data, these three firms accounted for approximately 90 percent of the DDIY-prepared federal returns filed in tax season 2010.[3] GX 27. The next largest firm is TaxHawk, also known as FreeTaxUSA, with 3.2 percent market share, followed by TaxSlayer, with 2.7 percent. *Id.* The remainder of the market is divided among numerous smaller firms. *Id.* Intuit accounted for 62.2 percent of DDIY returns, HRB for 15.6 percent, and TaxACT for 12.8 percent. *Id.* DDIY products are offered to consumers through three channels: (1) online through an internet browser; (2) personal computer software downloaded from a website; and (3) personal computer software installed from a disk, which is either sent directly to the consumer or purchased by the consumer from a third-party retailer. GX 629 at 11. In industry parlance, DDIY products provided through an internet browser are called "online" products, while software applications downloaded onto the user's computer via the web or installed from a disk are referred to as "software" products. *See id.*

The proposed acquisition challenged in this case would combine HRB and TaxACT, the second and third most popular providers of DDIY products, respectively. According to the government, this combination would result in an effective duopoly between HRB and Intuit in the DDIY market, in which the next nearest competitor will have an approximately 3 percent market share, and most other competitors will have less than a 1 percent share. GX 27. The government also alleges that unilateral anticompetitive effects would result from the elimination of head-to-head competition between the merging parties. Compl. ¶ 45.

Thus, the DOJ alleges that because the proposed acquisition would reduce competition in the DDIY industry by eliminating head-to-head competition between the merging parties and by making anticompetitive coordination between the two major remaining market participants substantially more likely, the proposed acquisition violates Section 7 of the Clayton Act, 15 U.S.C. § 18. *Id.* ¶¶ 40–49. Accordingly, the government seeks a permanent injunction blocking HRB from acquiring TaxACT. *Id.* ¶¶ 53–55.

On July 6, 2011, the Court entered a scheduling order in this case that provided for an expedited schedule of fact and expert discovery and briefing on the government's anticipated motion to enjoin the transaction. Joint Scheduling and Case Mgmt. Order, ECF No. 30. On August 1, 2011, the DOJ filed a motion for preliminary injunction against the merger, which was fully briefed by August 18, 2011. The parties subsequently agreed to forego the preliminary injunction phase and proceed directly to a trial on the merits of this action. TT, 9/6/11 a.m., at 8–9.

On September 2, 2011, the Court held a pre-trial conference. On September 6, the Court began a nine-day bench trial that was held on September 6, 7, 8, 9, 12, 13, 15, 19, and 20. Eight fact witnesses and ***45** three expert witnesses testified at the hearing. The parties presented testimony from additional witnesses by affidavit and deposition. Each side submitted over 800 exhibits, totaling many thousands of pages. Following the conclusion of the evidentiary phase of the trial, the Court gave the parties approximately two weeks to submit post-trial memoranda and proposed findings of fact, which were filed on September 28, 2011. ECF Nos. 98–99. The Court then heard closing arguments on October 3, 2011.

The government's motion to enjoin HRB's acquisition of TaxACT is presently before the Court. For the reasons explained in this opinion, the Court grants the government's motion.

Before proceeding to a discussion of the relevant legal standards governing this case, the Court will provide additional background regarding the parties, their proposed transaction, and the tax preparation industry in general.

B. The Merging Parties

HRB is a Missouri corporation with its principal place of business in Kansas City, Missouri. Compl. ¶ 9; Defs.' Answer, ECF No. 31, ¶ 9. HRB provides both assisted tax preparation services and DDIY products through separate business units. Bennett, TT, 9/6/11 a.m., at 106. HRB offers its DDIY products for consumers under the brand name “H & R Block At Home” (formerly known as “TaxCut”). GX 629 at 9.

In 2011, HRB's DDIY products generated {significant} revenue. GX 296–2. For the same period, HRB sold approximately 6.69 million DDIY units to consumers. GX 296–2. Separately, in 2011, HRB's assisted tax preparation business generated approximately $2.7 billion in revenue (based on 14,756,000 U.S. tax returns at an average fee of $182.96, as reported in HRB's 2011 Annual Report). GX 532 (Cobb Dep.) at 32; GX 565 at 19.

2SS Holdings, Inc. (“2SS”) is a Delaware corporation with its principal place of business in Cedar Rapids, Iowa. Compl. ¶ 10; Defs.' Answer ¶ 10. 2SS owns 2nd Story Software, Inc., which offers DDIY products under the brand name “TaxACT.” GX 629 at 8–9.

In the fiscal year ending April 30, 2011, TaxACT products generated approximately {half as much revenue as H & R Block}. GX 151 at 6. In the same year, consumers used TaxACT to electronically file approximately 5 million federal tax returns. GX 151 at 3–4.

TA IX, L.P. (“TA”) is a private equity firm organized under the laws of Delaware with its headquarters in Boston, Massachusetts. Compl. ¶ 11; Defs.' Answer ¶ 11. In December of 2004, TA purchased a majority interest in 2SS for $85 million, and as a result TA has majority control of 2SS Holdings and 2nd Story Software. GX 55 (Greif Dep.) at 72–73; GX 28–3.

C. The History Of TaxACT And The Proposed Transaction

TaxACT was founded in 1998 by Lance Dunn and three others, with Mr. Dunn serving as president. Dunn, TT, 9/7/11 p.m., at 49–52. Before founding TaxACT, Mr. Dunn and the other co-founders of the company had worked at Parsons Technology, a software company that had created a DDIY tax preparation product called “Personal Tax Edge.” *Id.* at 49–52. In 1994, Intuit acquired Parsons Technology and continued to operate Personal Tax Edge as a separate product for approximately two years before merging it into its TurboTax product line. *Id.* at 51. Mr. Dunn testified that the business objective of founding TaxACT was “to make money selling value tax software which ... was a category that ***46** did not exist at that time” because Intuit's acquisition of Parsons Technology had eliminated Personal Tax Edge, which had previously occupied a value tax software niche. *Id.* at 52. Thus, TaxACT “recreated” the category or “niche that the Personal Tax Edge product line filled when it existed.” *Id.*

Over the years, TaxACT has emphasized high-quality free product offerings as part of its business strategy. *Id.* at 53. TaxACT initially offered a DDIY tax preparation product that made it free to prepare and print a federal tax return, but TaxACT charged a fee for electronic filing (“e-filing”) or preparation of a state tax return. *Id.* at 54. Thus, from the beginning, TaxACT's business strategy relied on promoting “free” or “freemium” products, in which a basic part of the service is offered for free and add-ons and extra features are sold for a price.[4] As Mr. Dunn put it, “Free is an integral part of the value model. And the beauty of it is it has universal appeal. Everybody likes something for free.” *Id.*

Currently, TaxACT's free product offering allows customers to prepare, print, and e-file a federal tax return completely for free. *Id.* at 54; GX 28–10 at 5–7. TaxACT's “Deluxe” edition, which costs $9.95, contains additional features, such as the ability to import data from a return filed the prior year through TaxACT. GX 55–26; Dunn, TT, 9/7/11 p.m., at 91–92; GX 28–10 at 5–7; GX 28 (Dunn. Dep.) at 219. Customers who use TaxACT to prepare a state tax return in addition to a federal return pay either $14.95 for the state return in combination with the free federal product or $17.95 for the state return in combination with the “Deluxe” federal product. GX 55–26; Dunn, TT, 9/8/11 a.m., at 49. TaxACT's prices have generally remained unchanged for the past decade. Dunn, TT, 9/7/11 p.m., at 91.

The parties first began discussing the potential acquisition of TaxACT by HRB in July 2009. Bowen, TT, 9/15/11 p.m., at 14. During the fall of 2009, teams from HRB and TaxACT met to discuss the possibilities for the potential acquisition and HRB performed due diligence on TaxACT. *See* DX 244 at 8–9; Bowen, TT, 9/15/11 p.m., at 19–23, 26; DX 9527 at 35.

Negotiations between the parties stalled in December 2009 and the proposed deal collapsed. Bowen, TT, 9/15/11 p.m., at 33. The CEOs of the two companies continued to discuss a potential acquisition through the spring of 2010, however. *Id.* at 34. Serious merger talks resumed in July 2010. *Id.* at 38–39; DX1005.

In October 2010, the HRB Board of Directors approved a plan for HRB to acquire TaxACT. DX 600 at 12–13; Bowen, TT, 9/15/11 p.m., at 59–60. On October 13, 2010, HRB entered into a merger agreement with 2SS and TA. GX 120 at 1. Under this agreement, HRB would acquire control of 2SS for $287.5 million. GX 120 at 6; GX 119 at 1. HRB's stated post-merger plan is to maintain both the HRB and TaxACT brands—with the HRB-brand focusing on higher priced-products and the TaxACT brand focusing on the lower-priced products. *See* Bennett, TT, 9/6/11 a.m., at 101–102; DX 1005 at 1. HRB plans {redacted} ultimately to rely on TaxACT's current technological platform and intends to give Mr. Dunn responsibility for running the combined firm's ***47** entire DDIY business operation from Cedar Rapids, Iowa. Dunn, TT, 9/8/11 p.m. (sealed), at 14–16; *see also* Bennett, TT, 9/6/11 a.m., at 110.

D. Free Products And The Free File Alliance

The evolution of TaxACT's free product offerings and the other free offerings in the DDIY market is important for understanding the claims in this case. The players in the DDIY market offer various "free" tax preparation products, but the features and functionality offered in these free products vary significantly, as do the ways in which these free products are ultimately combined with paid products to earn revenue. While the availability of some types of free product offers has long been a feature of the DDIY market, a spike in free offerings occurred during the last decade in parallel with the growth of e-filing.

As a matter of public policy, the IRS actively promotes e-filing because it has an interest in efficient and accessible tax return preparation and filing. The Internal Revenue Service Restructuring and Reform Act of 1998 set a goal of having eighty percent of individual taxpayers e-filing their returns by 2007. IRS Stip., ECF No. 80, ¶ 2. The IRS is close to achieving that goal and the IRS Oversight Board has recommended that the 80 percent benchmark be achieved by 2012. *Id.* According to stipulated facts attested to by IRS employees, in 2001, the IRS adopted an initiative "to decrease the tax preparation and filing burden of wage earners by providing greater access to free online tax preparation and filing options for a significant number of taxpayers." *Id.* ¶ 4. The IRS also determined that it could save a substantial amount of public money by encouraging filers to switch to e-filing, since e-filed returns are cheaper for the IRS to process. *Id.* ¶ 5.

The IRS determined that the most effective and efficient way to accomplish its goal of promoting access to free online tax preparation and filing options was to partner with a consortium of companies in the electronic tax preparation and filing industry. *Id.* ¶ 6; GX 297–D7 at E–2. In 2002, this consortium of companies formed Free File Alliance, LLC ("FFA") in order to partner with the IRS on this initiative to promote free filing. IRS Stip. ¶ 6; GX 297–D7 at E–2. HRB, TaxACT, and Intuit are all members of the FFA, as are approximately fifteen smaller companies. *See* IRS Stip. ¶ 8; DX 328. On October 30, 2002, the IRS and the FFA entered into a "Free On–Line Electronic Tax Filing Agreement" to provide free online tax return preparation and filing to individual taxpayers. IRS Stip. ¶ 9. Pursuant to this agreement, members of the FFA would offer free, online tax preparation and filing services to taxpayers, and the IRS would provide taxpayers with links to those free services through a web page, hosted at irs.gov and accessible through another government website. *Id.* ¶ 12. HRB, TaxACT, and Intuit were among the original members to make free offers through the FFA. *Id.* ¶ 8.

"In 2003, the first year in which free services were available to taxpayers through the FFA, none of the FFA members offered free services to all taxpayers." *Id.* ¶ 14. Rather, each "member set eligibility criteria. Most members, including H & R Block, TaxACT, and Intuit, used adjusted gross income ('AGI') as a way to define which taxpayers were eligible" for their offers of free federal tax return preparation services. *Id.* "For example, H & R Block offered free services to taxpayers with an AGI of $28,000 or less." *Id.* Some members that offered free federal return ***48** preparation services based on AGI also offered free services to taxpayers who met other conditions, such as eligibility to file a Form 1040EZ. *Id.* "Several members did not define eligibility based on AGI. Of the eleven FFA members that offered free services based on AGI, only TaxACT's AGI-based offering was available to individuals with AGI over $33,000." *Id.* Specifically, TaxACT made its free federal services available exclusively to taxpayers who had AGI over $100,000 or were eligible to file a Form 1040EZ. *Id.*

In 2004, the second year in which free services for federal returns were available to taxpayers through the FFA, TaxACT introduced a new offer through the FFA that offered free preparation and e-filing of federal returns for all taxpayers regardless of AGI or other limitations ("free for all"). *See id.* ¶ 15; Dunn, TT, 9/7/11 p.m., at 65, 78. After TaxACT introduced a free-for-all offer through the FFA, other companies followed by introducing federal free-for-all offers of their own. Dunn, TT, 9/7/11 p.m., at 78 ("After we offered free for everyone in 2003, in 2004, a lot of companies offered free for everyone on the FFA.").

According to Mr. Dunn's testimony, after TaxACT made its FFA offer of a free federal product for all taxpayers, without any AGI or other limitations, other companies made efforts to restrict the wide availability of free offers on the FFA. *Id.* at 79. Specifically, according to Mr. Dunn, Intuit proposed that companies in the FFA collude by agreeing to restrict free offers. *Id.* Mr. Dunn and TaxACT opposed Intuit's proposal and believed that it was "probably not legal for that group to restrain trade." *Id.*

Subsequently, HRB, Intuit and others successfully lobbied the IRS to implement restrictions on the number of taxpayers that could be covered by a free offer through the FFA website. GX 28 (Dunn Dep.) at 114–15; GX 28–4; GX 35 at HRB–DOJ–00912870; GX 569 (DuMars Dep.) at 108, 112–113; Ernst, TT, 9/7/11 a.m., 26–27; GX 41 at 4; GX 25 (TaxHawk Decl.) ¶ 16. HRB desired these restrictions because, among other things, it was concerned about how free-for-all offers would affect the pricing structure for the industry and believed that such offers might undermine the company's ability to generate money through the paid side of its DDIY business. Ernst, TT, 9/7/11 a.m., at 26–27; GX 531 (Ciaramitaro Dep.) at 60–62; *see also* GX 41 at 4; GX 25 (TaxHawk Decl.) ¶ 16.

The IRS amended the FFA rules in October 2005 to prevent FFA members from making free-for-all offers. Dunn, TT, 9/7/11 p.m., at 78–79; Ernst, TT, 9/7/11 a.m., at 29; GX 42; GX 25 (TaxHawk Decl.) ¶ 16; GX 29 (Intuit Decl.) ¶ 9. Therefore, TaxACT could no longer make its free-for-all offer through the FFA.

In tax year 2005, in response to restrictions that the IRS imposed on the scope of offers that could be made through the FFA, TaxACT became the first DDIY company to offer all tax payers a free DDIY product for preparation of federal returns directly on its website. Dunn, TT, 9/7/11 p.m., at 79–80; GX 28 (Dunn Dep.) at 122–23. Today, free offers in various forms are an entrenched part of the DDIY market. Dunn, TT, 9/8/11 a.m., 85; Defs.' Opening Stmt., TT, 9/6/11 a.m., at 86–87.

II. STANDARD OF REVIEW

"Section 7 of the Clayton Act, 15 U.S.C. § 18, prohibits a corporation from acquiring 'the whole or any part of the assets of another [corporation] engaged also in commerce or in any activity affecting commerce, where in any line of commerce or in any activity affecting commerce in any section of the country, the ***49** effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly.' " *United States v. Sungard Data Sys., Inc.,* 172 F.Supp.2d 172, 180 (D.D.C.2001) (quoting 15 U.S.C. § 18). "The United States is authorized by Section 15 of the Clayton Act to seek an injunction to block a pending acquisition." *Id.* (citing 15 U.S.C. § 25). "The United States has the ultimate burden of proving a Section 7 violation by a preponderance of the evidence." *Id.*

"To establish a Section 7 violation, plaintiff must show that a pending acquisition is reasonably likely to cause anticompetitive effects." *Id.* (citing *United States v. Penn–Olin Chem. Co.,* 378 U.S. 158, 171, 84 S.Ct. 1710, 12 L.Ed.2d 775 (1964)); *see also United States v. Oracle Corp.,* 331 F.Supp.2d 1098, 1109 (N.D.Cal.2004). "Congress used the words 'may be substantially to lessen competition' (emphasis supplied), to indicate that its concern was with probabilities, not certainties." *FTC v. H.J. Heinz Co.,* 246 F.3d 708, 713 (D.C.Cir.2001) (quoting *Brown Shoe Co. v. United States,* 370 U.S. 294, 323, 82 S.Ct. 1502, 8 L.Ed.2d 510 (1962)). "Section 7 does not require proof that a merger or other acquisition has caused higher prices in the affected market. All that is necessary is that the merger create an appreciable danger of such consequences in the future." *Hosp. Corp. of Am. v. FTC,* 807 F.2d 1381, 1389 (7th Cir.1986).

"As this Circuit explained in *Heinz,* 246 F.3d at 715, the decision in *United States v. Baker Hughes Inc.,* 908 F.2d 981 (D.C.Cir.1990), sets forth the analytical approach for establishing a Section 7 violation."[5] *Sungard,* 172 F.Supp.2d at 180.[6] "The basic outline of a section 7 horizontal acquisition case is familiar. By showing that a transaction will lead to undue concentration in the market for a particular product in a particular geographic area, the government establishes a presumption that the transaction will substantially lessen competition." *Baker Hughes,* 908 F.2d at 982. To establish this presumption, the government must "show that the merger would produce 'a firm controlling an undue percentage share of the relevant market, and [would] result [ ] in a significant increase in the concentration of firms in that market.' " *Heinz,* 246 F.3d at 715 (quoting *United States v. Philadelphia Nat'l Bank,* 374 U.S. 321, 363, 83 S.Ct. 1715, 10 L.Ed.2d 915 (1963)) (alterations in original). Once the government has established this presumption, the burden shifts to the defendants to rebut the presumption by "show[ing] that the market-share statistics give an inaccurate account of the merger's probable effects on ***50** competition in the relevant market." *Heinz,* 246 F.3d at 715 (internal quotation omitted). " 'If the defendant successfully rebuts the presumption [of illegality], the burden of producing additional evidence of anticompetitive effect shifts to the government, and merges with the ultimate burden of persuasion, which remains with the government at all times.' " *Id.* (quoting *Baker Hughes,* 908 F.2d at 983). Ultimately, "[t]he Supreme Court has adopted a totality-of-the-circumstances approach to the statute, weighing a variety of factors to determine the effects of particular transactions on competition." *Baker Hughes,* 908 F.2d at 984.

III. DISCUSSION

A. The Relevant Product Market

"Merger analysis begins with defining the relevant product market." *FTC v. Swedish Match,* 131 F.Supp.2d 151, 156 (D.D.C.2000) (citing *Brown Shoe,* 370 U.S. 294, 324, 82 S.Ct. 1502 (1962)). "Defining the relevant market is critical in an antitrust case because the legality of the proposed merger [ ] in question almost always depends upon the market power of the parties involved." *Id.* (quoting *FTC v. Cardinal Health, Inc.,* 12 F.Supp.2d 34, 45 (D.D.C.1998)). Indeed, the relevant market definition is often "the key to the ultimate resolution of this type of case because of the relative implications of market power."[7] *Id.*

The government argues that the relevant market in this case consists of all DDIY products, but does not include assisted tax preparation or pen-and-paper. Under this view of the market, the acquisition in this case would result in a DDIY market that is dominated by two large players—H & R Block and Intuit—that together control approximately 90 percent of the market share, with the remaining 10 percent of the market divided amongst a plethora of smaller companies. In contrast, the defendants argue for a broader market that includes all tax preparation methods ("all methods"), comprised of DDIY, assisted, and pen-and-paper. Under this view of the market, the market concentration effects of this acquisition would be much smaller and would not lead to a situation in which two firms control 90 percent of the market. This broader view of the market rests primarily on the premise that providers of all methods of tax preparation compete with each other for the patronage of the same pool of customers—U.S. taxpayers. After carefully considering the evidence and arguments presented by all parties, the Court has concluded that the relevant market in this case is, as the DOJ contends, the market for digital do-it-yourself tax preparation products.

A "relevant product market" is a term of art in antitrust analysis. The Supreme Court has set forth the general rule for defining a relevant product market: "The outer boundaries of a product market are determined by the reasonable interchangeability of use [by consumers] ***51** or the cross-elasticity of demand between the product itself and substitutes for it." *Brown Shoe,* 370 U.S. at 325, 82 S.Ct. 1502; *see also United States v. E.I. du Pont de Nemours & Co.,* 351 U.S. 377, 395, 76 S.Ct. 994, 100 L.Ed. 1264 (1956). In other words, courts look at "whether two products can be used for the same purpose, and, if so, whether and to what extent purchasers are willing to substitute one for the other." *FTC v. Staples, Inc.,* 970 F.Supp. 1066, 1074 (D.D.C.1997) (citation omitted); *see also Bon–Ton Stores, Inc. v. May Dep't Stores Co.,* 881 F.Supp. 860, 868 (W.D.N.Y.1994) (citing *Hayden Pub. Co. v. Cox Broad. Corp.,* 730 F.2d 64, 71 (2d Cir.1984)).

A broad, overall market may contain smaller markets which themselves "constitute product markets for antitrust purposes."[8] *Brown Shoe,* 370 U.S. at 325, 82 S.Ct. 1502. "[T]he mere fact that a firm may be termed a competitor in the overall marketplace does not necessarily require that it be included in the relevant product market for antitrust purposes." *Staples,* 970 F.Supp. at 1075. Traditionally, courts have held that the boundaries of a relevant product market within a broader market "may be determined by examining such practical indicia as industry or public recognition of the [relevant market] as a separate economic entity, the product's peculiar characteristics and uses, unique production facilities, distinct customers, distinct prices, sensitivity to price changes, and specialized vendors." *FTC v. Whole Foods Market, Inc.* 548 F.3d 1028, 1037–38 (D.C.Cir.2008) (Brown, J.) (quoting *Brown Shoe,* 370 U.S. at 325, 82 S.Ct. 1502).[9] *See also FTC v. CCC Holdings, Inc.,* 605 F.Supp.2d 26, 38 (D.D.C.2009). These "practical indicia" of market boundaries may be viewed as evidentiary proxies for proof of substitutability and cross-elasticities of supply and demand.

Rothery Storage & Van Co. v. Atlas Van Lines, Inc., 792 F.2d 210, 218 (D.C.Cir.1986).

An analytical method often used by courts to define a relevant market is to ask hypothetically whether it would be profitable to have a monopoly over a given set of substitutable products. If so, those products may constitute a relevant market. *See* 5C Phillip E. Areeda & Herbert Hovenkamp, Antitrust Law (hereinafter, "Areeda & Hovenkamp"), ¶ 530a, at 226 (3d ed. 2007) ("[A] market can be seen as the array of producers of substitute products that could control price if united in a hypothetical cartel or as a hypothetical monopoly."). This approach—sometimes ***52** called the "hypothetical monopolist test"—is endorsed by the Horizontal Merger Guidelines issued by the DOJ and Federal Trade Commission. *See Fed. Trade Comm'n & U.S. Dep't of Justice Horizontal Merger Guidelines* (2010) (hereinafter, "Merger Guidelines"), § 4.1.1.[10] In the merger context, this inquiry boils down to whether "a hypothetical profit-maximizing firm, not subject to price regulation, that was the only present and future seller of those products ... likely would impose at least a small but significant and non-transitory increase in price ("SSNIP") on at least one product in the market, including at least one product sold by one of the merging firms." *Id.* The "small but significant and non-transitory increase in price," or SSNIP, is typically assumed to be five percent or more. *Id.* § 4.1.2.

Thus, the question here is whether it would be hypothetically useful to have a monopoly over all DDIY tax preparation products because the monopolist could then profitably raise prices for those products by five percent or more; or whether, to the contrary, there would be no reason to monopolize all DDIY tax preparation products because substitution and price competition with other methods of tax preparation would restrain any potential DDIY monopolist from profitably raising prices. In other words, would enough DDIY users switch to the assisted or pen-and-paper methods of tax preparation in response to a five-to-ten percent increase in DDIY prices to make such a price increase unprofitable?

In evaluating the relevant product market here, the Court considers business documents from the defendants and others, the testimony of the fact witnesses, and the analyses of the parties' expert economists. This evidence demonstrates that DDIY is the relevant product market in this case.

1. The Defendants' Documents Show That DDIY Is The Relevant Product Market.

When determining the relevant product market, courts often pay close attention to the defendants' ordinary course of business documents. *See, e.g., Staples,* 970 F.Supp. at 1076; *CCC Holdings,* 605 F.Supp.2d at 41–42. The government argues that the defendants' ordinary course of business documents in this case "conclusively demonstrate that competition with other [DDIY] firms drive Defendants' pricing decisions, quality improvements, and corporate strategy" for their own DDIY products—thus supporting the government's view of the relevant market. Pl.'s Post–Trial Mem. at 7. The defendants contend that the government has relied on "select, 'out-of-context' snippets from documents," and that the documents as a whole support the defendants' view that the relevant product market is all methods of tax preparation. Defs.' Post–Trial Mem. at 1. The Court finds that the documentary evidence in this case supports the conclusion that DDIY is the relevant product market.

Internal TaxACT documents establish that TaxACT has viewed DDIY offerings by HRB and TurboTax as its primary competitors, that it has tracked their marketing, product offerings, and pricing, and that it has determined its own pricing and business strategy in relation to those companies' DDIY products. *See* GX 295–16 ("Competitive Analysis" comparing the three companies); GX 102 (email explaining TaxACT is a "direct competitor" with HRB and Intuit's products); GX 55 (Greif Dep.) at 137–38 (describing TaxACT's ***53** compilation of a routine, end-of-season competitive analysis that "typically" covers Intuit, HRB, and TaxACT). Confidential memoranda prepared by TaxACT's investment bankers for potential private equity buyers of TaxACT identify HRB and TurboTax as TaxACT's primary competitors in a DDIY market. *See* GX 7 (Greene Holcomb & Fisher "Confidential Memorandum") at 14 ("The Company's major competitors for both desktop and Internet-based income tax software and e-filing services include Intuit (the makers of TurboTax software) and H & R Block (the makers of TaxCut software)."); GX 134 (Deutsche Bank "Confidential Information Memorandum") at 17 ("The Company's two main competitors, Intuit and H & R Block ..."); *see also* Dunn, TT, 9/7/11 p.m., at 97–104. These documents also recognize that TaxACT's strategy for competing with Intuit and HRB is to offer a lower price for what it deems a superior product. GX 7 at 14 ("Relative to its two major competitors, 2nd Story has positioned its product offerings as being of equal or higher quality, and completely fulfilling the needs of a vast portion of the potential market. It also pursues a pricing strategy that positions its products and services meaningfully below either Intuit or H & R Block, in some instances free.").

While, as defendants point out, parts of these TaxACT documents also discuss the broader tax preparation industry, these documents make clear that TaxACT's own view—and that conveyed by its investment bankers to potential buyers—is that the company primarily competes in a DDIY market against Intuit and HRB and that it develops its pricing and business strategy with that market and those competitors in mind. These documents are strong evidence that DDIY is the relevant product market. *See Whole Foods,* 548 F.3d at 1045 (Tatel, J.) ("[E]vidence of industry or public recognition of the submarket as a separate economic unit matters because we assume that economic actors usually have accurate perceptions of economic realities.") (internal quotation omitted).

Internal HRB documents also evidence HRB's perception of a discrete DDIY market or market segment. HRB and its outside consultants have tracked its digital competitors' activities, prices, and product offerings. *See* GX 28–19 ("2009 Competitive Price Comparison"); GX 118 (independent analyst's report analyzing digital competitors as one of three separate categories of competitors); GX 61–8 at 1 (slide on competition in "digital market" identifying TurboTax and TaxACT as competitors); GX 199 (HRB "digital strategy update" Powerpoint tracking features and prices for TurboTax and TaxACT); GX 188 (HRB spreadsheet comparing HRB, TurboTax, and TaxACT prices for various product offerings). Documents from HRB's DDIY business have also referred to HRB, TaxACT, and TurboTax as the "Big Three" competitors in the DDIY market. GX 61–3 ("OCS Offsite Competitive Intelligence Review of TS07") at 5; GX 61–4 at 1 (email referencing request for data from consultant regarding "big 3 digital tax prep companies"); *see also* GX 70 (email from head of HRB's digital business stating its "only real direct competitors are turbotax in san diego and taxact in cedar rapids" [sic]); Ernst, TT, 9/7/11 a.m., at 13–14. Finally, the documents show that, in connection with a proposed acquisition of TaxACT, HRB identified the proposed transaction as a way to grow its digital "market share" and has measured TaxACT's market share in a DDIY market. GX 130 at 96–99; GX 21–37 (projections from 2009 for different potential scenarios for acquisition of TaxACT, including their effect on DDIY market share); *see also* Newkirk, TT, 9/7/11 a.m., at 95–96 (explaining GX 21–37). All of these documents ***54** also provide evidence that DDIY is a relevant product market.

The defendants acknowledge that "the merging parties certainly have documents that discuss each other and digital competitors generally, and even reference a digital market and the 'Big Three,' " but contend this evidence is insufficient to prove a market. Defs.' Post–Trial Mem. at 9. Rather, the defendants argue that the documents show that the relevant market is all methods of tax preparation, especially in light of documented competition between DDIY providers and assisted providers for the same overall pool of U.S. taxpayers who are potential customers. *See id.* 9–10; *see, e.g.,* DX 78 at 4 (Intuit document explaining 2011 strategic goal of acquiring tax store customers); GX 650 at 41 (Intuit document noting goal of acquiring tax store customers and specifically mentioning HRB). As discussed below, the Court disagrees and finds that the relevant product market is DDIY products.

2. The Relevant Product Market Does Not Include Assisted Tax Preparation Or Manual Preparation.

It is beyond debate—and conceded by the plaintiff—that all methods of tax preparation are, to some degree, in competition. Pl.'s Post–Trial Mem. at 8. All tax preparation methods provide taxpayers with a means to perform the task of completing a tax return, but each method is starkly different. Thus, while providers of all tax preparation methods may compete at some level, this "does not necessarily require that [they] be included in the relevant product market for antitrust purposes." *Staples,* 970 F.Supp. at 1075. DDIY tax preparation products differ from manual tax preparation and assisted tax preparation products in a number of meaningful ways. As compared to manual and assisted methods, DDIY products involve different technology, price, convenience level, time investment, mental effort and type of interaction by the consumer. Taken together, these different attributes make the consumer experience of using DDIY products quite distinct from other methods of tax preparation. *See Whole Foods,* 548 F.3d at 1037–38 (Brown, J.) (noting that a "product's peculiar characteristics and uses" and "distinct prices" may distinguish a relevant market) (citing *Brown Shoe,* 370 U.S. at 325, 82 S.Ct. 1502); *see also, e.g.,* GX 130 at 140 (HRB internal analysis discussing convenience and price as factors differentiating DDIY and assisted methods for consumers). The question for this court is whether DDIY and other methods of tax preparation are "reasonably interchangeable" so that it would not be profitable to have a monopoly over only DDIY products.

a. Assisted Tax Preparation Is Not In The Relevant Product Market.

Apart from the analysis of their economic expert, the defendants' main argument for inclusion of assisted tax preparation in the relevant market is that DDIY and assisted companies compete for customers.[11] As evidence for this point, the defendants emphasize that Intuit's marketing efforts have targeted HRB's assisted customers. *See* DX 78 at 3 (Intuit document noting strategic goal to "Beat Tax Store[s]"). While the evidence does show that companies in the DDIY and assisted markets all generally compete with each ***55** other for the same overall pool of potential customers—U.S. taxpayers—that fact does not necessarily mean that DDIY and assisted must be viewed as part of the same relevant product market. DDIY provides customers with tax preparation services through an entirely different method, technology, and user experience than assisted preparation. As Judge Tatel explained in *Whole Foods:*

> [W]hen the automobile was first invented, competing auto manufacturers obviously took customers primarily from companies selling horses and buggies, not from other auto manufacturers, but that hardly shows that cars and horse-drawn carriages should be treated as the same product market. That Whole Foods and Wild Oats have attracted many customers away from conventional grocery stores by offering extensive selections of natural and organic products thus tells us nothing about whether Whole Foods and Wild Oats should be treated as operating in the same market as conventional grocery stores. Indeed, courts have often found that sufficiently innovative retailers can constitute a distinct product market even when they take customers from existing retailers.

Whole Foods, 548 F.3d at 1048; *see also Staples,* 970 F.Supp. at 1074–80 (finding a distinct market of office supply superstores despite competition from mail-order catalogues and stores carrying a broader range of merchandise).

The key question for the Court is whether DDIY and assisted products are sufficiently close substitutes to constrain any anticompetitive DDIY pricing after the proposed merger. Evidence of the absence of close price competition between DDIY and assisted products makes clear that the answer to that question is no—and that DDIY is the relevant product market here. *See Swedish Match,* 131 F.Supp.2d at 165 ("Distinct pricing is also a consideration" in determining the relevant product market) (citing *Brown Shoe,* 370 U.S. at 325, 82 S.Ct. 1502). Significantly, despite some DDIY efforts to capture tax store customers, none of the major DDIY competitors sets their prices based on consideration of assisted prices. *See, e.g.,* Ernst, TT, 9/7/11 a.m., at 35 (HRB set its digital and assisted prices separately); {redacted} (Dep.) at 183:18–25 (explaining that {redacted} does not consider assisted pricing in setting prices because its prices are already "substantially less than both tax stores and most professionals"). Indeed, there are quite significant price disparities between the average prices of DDIY and assisted products. The average price of TurboTax, the most popular DDIY brand is approximately $55. GX 293 (Intuit Dep.) at 21. The average price of HRB's DDIY products is approximately $25. GX 296–7 at 6. Overall, the DDIY industry average price is $44.13. GX 121 at 57. In contrast, the typical price of an assisted tax return is significantly higher, in the range of $150–200.[12] A 10 percent or even 20 percent price increase in the average price of DDIY would only move the average price up to $48.54 or $52.96, respectively—still substantially below the average price of assisted tax products. The overall lack of evidence of price competition between DDIY and assisted products supports the conclusion that DDIY is a separate relevant product market for evaluating this transaction, despite the fact that DDIY ***56** and assisted firms target their marketing efforts at the same pool of customers.

The defendants point to some evidence that HRB sets prices for certain assisted products to compete with DDIY. For example, defendants note that in 2009, HRB "reduced prices on its assisted tax preparation services to $39 for federal 1040EZ preparation and $29 for state tax preparation to compete with and {redacted}" to DDIY. DFF ¶ 77a. These are limited product offerings for which prices appear well below even the 25th percentile price for HRB's assisted products. *See* GX 128 (HRB "TS10 Market Dynamics" presentation) at 38 (noting, for Tax Season 2010, that the 25th percentile for prices at HRB stores was {higher than DDIY}). Relatedly, the defendants' claim that prices for assisted and DDIY products "significantly overlap" is not strongly supported and relies on a comparison of the most limited, low-end assisted products with DDIY products generally. *See* DFF ¶ 78b (citing tax year 2009 data that show that 14 percent of customers using name-brand tax stores paid $50 or less and another 20 percent paid between $51–100); *id.* ¶ 78c-d (quoting prices for Jackson Hewitt's preparation of form 1040EZ, a simplified tax form, at Wal–Mart and for HRB's Second Look service, which actually only double-checks an already completed tax return for errors). In sum, while defendants' have identified isolated instances in which assisted product offerings are priced lower than the average prices for typical assisted products, they do not and cannot demonstrate that this is generally the case.

Testimony from HRB executives further supports treating DDIY as a relevant product market in evaluating this transaction. HRB's DDIY and assisted businesses are run as separate business units. Bennett, TT, 9/6/11 a.m., at 106. Alan Bennett, who was the CEO of HRB in 2010 when the parties reached the proposed merger agreement, testified that "net-net," he did not believe that HRB's DDIY business had impacted its assisted business in terms of taking away customers.[13] *Id.* at 108; *see also* GX 1151 at 4 (HRB internal analysis stating "Online is not growing materially at the expense of assisted."). Mark Ernst, HRB's CEO from 2001 to 2007, also explained that, in his opinion based on research he reviewed while at HRB, the primary reason consumers switched between assisted and DDIY was because of "life events" that led to changes in tax status. Ernst, TT, 9/7/11 a.m., at 34–35.

Finally, defendants argue that their broad relevant market is appropriate because there is "industry movement toward 'hybrid' products that combine some elements of both digital and assisted tax preparation." Defs.' Post–Trial Mem. at 11. Based on the evidence presented at the hearing, however, it would be premature for the Court to identify any trend toward hybrid products. In fact, neither Intuit nor TaxACT presently offers a hybrid product and the defendants openly concede that HRB's current hybrid product has had "somewhat limited success," which defendants attribute to "technical issues" and a "lack of consistent marketing." *Id.* at 11 n. 16. {redacted} {T}he Court finds it unlikely that there will be a sufficiently large scale shift into these products in the immediate future to compel the conclusion that DDIY and assisted ***57** products make up the same relevant product market.

b. Manual Tax Preparation Is Not In The Relevant Product Market.

The defendants also argue that manual tax preparation, or pen-and-paper, should be included in the relevant product market. At the outset, the Court notes that pen-and-paper is not a "product" at all; it is the task of filling out a tax return by oneself without any interactive assistance. Even so, the defendants argue pen-and-paper should be included in the relevant product market because it acts as a "significant competitive constraint" on DDIY. Defs.' Post–Trial Mem. at 11. The defendants' argument relies primarily on two factors. First, the defendants' cite the results of a 2011 email survey of TaxACT customers. *See id.* For reasons detailed in the following section, the Court declines to rely on this email survey. Second, the defendants point to documents and testimony indicating that TaxACT has considered possible diversion to pen-and-paper in setting its prices. *See id.* at 11–12.

The Court finds that pen-and-paper is not part of the relevant market because it does not believe a sufficient number of consumers would switch to pen-and-paper in response to a small, but significant increase in DDIY prices. The possibility of preparing one's own tax return necessarily constrains the prices of other methods of preparation at some level. For example, if the price of DDIY and assisted products were raised to $1 million per tax return, surely all but the most well-heeled taxpayers would switch to pen-and-paper. Yet, at the more practical price increase levels that trigger antitrust concern—the typical five to ten percent price increase of the SSNIP test—pen-and-paper preparation is unlikely to provide a meaningful restraint for DDIY products, which currently sell for an average price of $44.13. GX 121 at 57.

The government well illustrated the overly broad nature of defendants' proposed relevant market by posing to the defendants' expert the hypothetical question of whether "sitting at home and drinking chicken soup [would be] part of the market for [manufactured] cold remedies?" Meyer, TT, 9/13/11 a.m., at 65. The defendants' expert responded that the real "question is if the price of cold medicines went up sufficiently, would people turn to chicken soup?" *Id.* As an initial matter, in contrast to the defendants' expert, the Court doubts that it would ever be legally appropriate to define a relevant product market that included manufactured cold remedies and ordinary chicken soup. This conclusion flows from the deep functional differences between those products. Setting that issue aside, however, a price has increased "sufficiently" to trigger antitrust concern at the level of a five to ten percent small, but significant non-transitory increase in price. Just as chicken soup is unlikely to constrain the price of manufactured cold remedies sufficiently, the Court concludes that a SSNIP in DDIY would not be constrained by people turning to pen-and-paper. First, the share of returns prepared via pen-and-paper has dwindled over the past decade, as the DDIY market has grown. Bennett, TT, 9/6/11 a.m., at 118; GX 296 (Houseworth Dep.) at 66–68. Second, while pen-and-paper filers have been a net source of new customers for DDIY companies, both HRB and {redacted} executives have testified that they do not believe their DDIY products compete closely with pen-and-paper methods. {redacted} (Dep.) at 37:20–38:10; *see* GX 296 (Houseworth Dep.) 89–90. Third, courts in antitrust cases frequently exclude similar “self-supply” substitutes from relevant product markets. *See, e.g.,* ***58** *FTC v. H.J. Heinz Co.,* 116 F.Supp.2d 190, 195 (D.D.C.2000), *rev'd on other grounds,* 246 F.3d 708 (D.C.Cir.2001) (noting that homemade baby food and breast milk should not be included in the jarred baby food market even though substitution was possible because “the Supreme Court's interchangeability test refers to *products.*”); *CCC Holdings,* 605 F.Supp.2d at 41–42 (excluding books that can be used to perform insurance loss valuations by hand from market for loss valuation software); *United States v. Visa U.S.A. Inc.,* 163 F.Supp.2d 322, 338 (S.D.N.Y.2001) (excluding cash and checks from general purpose credit card market).

The main case the defendants rely on to show that “self-supply” substitutes should be included in the relevant market involved a consumer market consisting of vertically integrated companies and explicitly distinguished cases, such as this one, involving markets of individual consumers. In *United States v. Sungard Data Systems, Inc.,* Judge Huvelle found that disaster recovery computer systems developed internally by companies were in the same relevant product market as shared data recovery systems provided by outside vendors. *Sungard,* 172 F.Supp.2d at 187–89. The *Sungard* court, however, distinguished the case before it—which involved vertical integration—from the situation in *Heinz,* the case involving the market for jarred baby food, because “homemade baby food is not an aspect of vertical integration ... [and] individual consumers cannot vertically integrate by producing a product that they would otherwise have to purchase.” *Id.* at 187 n. 15. In finding that in-house computer systems were included in its relevant product market, the *Sungard* court cited the following example from Areeda & Hovenkamp ¶ 535e regarding vertical integration:

> If iron ore is the relevant market and if shares are best measured there by sales, then internally used ore—so-called captive output—is part of the ore market even though it is not sold as such.
>
> In measuring the market power of a defendant selling iron ore, the ore used internally by other firms constrains the defendant's ability to profit by raising ore prices to monopoly levels. The higher ore price may induce an integrated firm to expand its ore production—to supply others in direct competition with the alleged monopolist or to expand its own steel production and thereby reduce the demand of other steel makers for ore, or both. Hence, captive output constrains the defendant regardless of whether integrated firms sell their ore to other steel makers previously purchasing from the defendant. In sum, the integrated firm's ore output belongs in the market.

Id. at 186 n. 14. This rationale for including “self-supply” in a relevant product market does not appear to apply to the DDIY market in which the consumers are individuals and not also potential traders or producers.

While some diversion from DDIY to manual filing may occur in response to a SSNIP, the Court finds that it would likely be limited and marginal. The functional experience of using a DDIY product is meaningfully different from the self-service task of filling out tax forms independently. Manual completion of a tax return requires different tools, effort, resources, and time investment by a consumer than use of either DDIY or assisted methods. The following discussion from *United States v. Visa U.S.A. Inc.* regarding why cash and checks should not be included in the credit card market is instructive here:

> [A]lthough it is literally true that, in a general sense, cash and checks compete with general purpose cards as an option for payment by consumers and that ***59** growth in payments via cards takes share from cash and checks in some instances, cash and checks do not drive many of the means of competition in the general purpose card market. In this respect, [the expert's] analogy of the general purpose card market to that for airplane travel is illustrative. [The expert] argues that while it is true that at the margin there is some competition for customers among planes, trains, cars and buses, the reality is that airplane travel is a distinct product in which airlines are the principal drivers of competition. Any airline that had monopoly power over airline travel could raise prices or limit output without significant concern about competition from other forms of transportation. The same holds true for competition among general purpose credit and charge cards.

Visa U.S.A. Inc., 163 F.Supp.2d at 338. Here, the same analogy to airplane travel holds true for competition among DDIY providers, who provide a distinct product for completion of tax returns. Indeed, the pen-and-paper method, in which the consumer essentially relies on his or her own labor to prepare a tax return, is perhaps most analogous to walking as opposed to purchasing a ride on any means of transportation. In sum, filling out a tax return manually is not reasonably interchangeable with DDIY products that effectively fill out the tax return with data input provided by the consumer.

Inclusion of all possible methods of tax preparation, including pen-and-paper, in the relevant product market also violates the principle that the relevant product market should ordinarily be defined as the smallest product market that will satisfy the hypothetical monopolist test. *See* Merger Guidelines § 4.1.1 ("When the Agencies rely on market shares and concentration, they usually do so in the smallest relevant market satisfying the hypothetical monopolist test."); *see also* Warren–Boulton, TT, 9/8/11 p.m., at 35–36. Indeed, the defendants' inclusion of pen-and-paper in the relevant market ignores at least one obvious, smaller market possibility that they might have proposed—the combined market of all DDIY and assisted tax preparation products. It is hardly plausible that a monopolist of this market—to which the only alternative would be pen-and-paper—could not impose a SSNIP.

The defendants' proposed relevant market of all methods of tax return preparation is so broadly defined that, as the plaintiff's expert testified, there are no conceivable alternatives besides going to jail, fleeing to Canada, or not earning any taxable income. Warren–Boulton, TT, 9/8/11 p.m., at 35–36. As the plaintiff's expert put it, "if you're talking about the market for all tax preparation, you're talking about a market where, in economist terms, demand is completely [in]elastic. There are no alternatives." *Id.* at 35. In such circumstances, the usual tools of antitrust analysis—such as the hypothetical monopolist test—cease being useful because it is self-evident that a monopolist of all forms of tax preparation, including self-preparation, could impose a small, but significant price increase. Indeed, a monopolist in that situation could essentially name any price since taxpayers would have no alternative but to pay it. As the plaintiff's expert testified, defining a market that broadly

> negates the entire purpose of defining a relevant market in an antitrust case. You want to define a relevant market in an antitrust case so then [you can calculate] shares and the change in shares makes sense. I don't want to go to infinity ... I want to define a relevant market under ... the smallest market principle, which is I want to define the ***60** relevant market so that if a hypothetical monopolist ... did manage to control all of those products, they would impose a significant price increase, large enough to be of concern but not so large as to make the whole exercise pointless.

Id. at 35–36. The Court agrees with this assessment and finds the defendants' proposed relevant market to be overbroad.

3. The Economic Expert Testimony Tends To Confirm That DDIY Is The Relevant Product Market.

Both the plaintiff and the defendants presented testimony from expert economists to support their view of the relevant product market.[14] In addition to their testimony at the hearing, these expert witnesses also provided a detailed expert report and an affidavit summarizing their analysis and conclusions.

The Court finds that the analysis performed by the plaintiff's expert tends to confirm that DDIY is a relevant product market, although the available data in this case limited the predictive power of the plaintiff's expert's economic models. The Court also finds that it cannot draw any conclusions from defendants' expert's analysis because of severe shortcomings in the underlying consumer survey data upon which the defendants' expert relied.

a. Plaintiff's Expert—Dr. Warren–Boulton

The plaintiff's expert, Dr. Warren–Boulton, found the relevant product market to be DDIY. He determined that a hypothetical monopolist of DDIY products could profitably impose a SSNIP for at least one DDIY product, and that consumer substitution to assisted methods or pen-and-paper would be insufficient to defeat the SSNIP. GX 121 (Warren–Boulton Rep.) at 12.

Dr. Warren–Boulton began his analysis by postulating that DDIY was the relevant product market and then he used two principal analytical tests to confirm the validity of that assumption. He began by testing DDIY as a relevant market for a few reasons. First, he concluded that the parties' DDIY products are substantially similar in terms of functionality. GX 121 (Warren–Boulton Rep.) at 12–18. Second, he concluded from his review of the defendants' business documents that they viewed DDIY as a discrete product market when competing in the ordinary course of business. *Id.* Third, he ruled out including pen-and-paper and assisted products in the relevant product market based on a consideration of various data. *Id.* at 24–32.

Dr. Warren–Boulton's decision to begin the relevant market analysis with DDIY ***61** was appropriate. *See* Areeda & Hovenkamp ¶ 536, at 287 ("[T]wo products are provisionally part of the same market [for hypothetical monopolist analysis] when they employ similar technologies and similar costs and customers use them interchangeably ... In cases of doubt, [products] should generally be excluded from the provisional market, for incorrect exclusions will ultimately be brought into the market via the price increase methodology.”). The parties' DDIY products all provide a fundamentally similar service and a similar user experience for the consumer when compared with other methods of tax preparation. The DDIY consumer sits down at a computer and interacts with the DDIY software, which prompts the consumer for information and ultimately completes the consumer's tax return. This experience is qualitatively different than that of hiring a tax professional or figuring out how to complete one's own tax return manually. Various other evidence in the record also supports the fundamental functional similarity of the technology underlying the parties' DDIY products —perhaps most notably the testimony that post-merger, HRB plans to migrate {redacted} onto TaxACT's software “engine” {redacted}. *See* Dunn, TT, 9/8/11 p.m. (sealed), at 16–17.

As discussed in detail above, various documentary evidence suggests that the parties treat DDIY as a distinct product market in the ordinary course of business.

Dr. Warren–Boulton also considered whether the pen-and-paper and assisted methods should be included in the provisional relevant market, as the defendants contend, and concluded that they should not be.

Dr. Warren–Boulton ruled out including pen-and-paper in the relevant product market, concluding instead that historical tax return data reflects “a gradual migration of customers to [DDIY] from more traditional methods like pen-and paper.” GX 121 (Warren–Boulton Rep.) at 24. The percentage of returns prepared by pen-and-paper has fallen considerably over the last decade, while the percentage of DDIY has grown. *Id.* Changes in the yearly percentage shares of taxpayers using pen-and-paper do not appear correlated to changes in the yearly average price of DDIY. *Id.* at 27. Finally, based on IRS data, Dr. Warren–Boulton observed that taxpayers who switched from DDIY to pen-and-paper for tax seasons 2008 and 2009 on average experienced a decrease in tax return complexity, suggesting that much switching from DDIY products to pen-and-paper is driven by such complexity decreases.[15]

Dr. Warren–Boulton also ruled out including the assisted tax preparation methods in the relevant market based on consideration of several factors. He reviewed HRB documents that conclude that growth in DDIY has not come at the expense of HRB's assisted business. *Id.* at 28. Testimony from HRB employees, including the former CEO, also reinforced the same conclusion. *Id.* at 28–29. He also cited HRB internal studies, which concluded that consumers who have switched from DDIY to assisted are likely to have experienced a change in tax complexity. He found that HRB's internal conclusion was consistent with IRS switching data, which ***62** also indicated a correlation between switching from DDIY to assisted and an increase in tax complexity. *Id.* at 29–30. Finally, Dr. Warren–Boulton noted that, based on data from tax years 2004–2009, increases in the relative price of assisted products were not associated with decreases in the relative market share of assisted products and increases in the relative market share of DDIY, as might be expected if DDIY and assisted prices moved in a single, price-responsive market. *Id.* at 32.

Therefore, having determined that the best provisional relevant market is DDIY and not all methods of tax preparation, Dr. Warren–Boulton then performed two economic tests to confirm that a hypothetical monopolist of all DDIY products could profitably impose a SSNIP. If these economic tests indicated that a hypothetical monopolist could not profitably impose a SSNIP, then the tests would call for the relevant market to be expanded. The tests, however, validated the relevant market as DDIY, as detailed below.

The economic tests Dr. Warren–Boulton applied relied heavily upon switching data from the IRS. Switching refers to the number of consumers who switch between different products for any reason. In any given year, many taxpayers switch from the tax preparation method they used in the prior year to a new method. Since the IRS processes all U.S. tax returns each year and tracks data about the methods of tax preparation that taxpayers used, there is ample, reliable data that market analysts can use to see how many taxpayers switched between methods each year. The IRS data, however, provides little direct insight about *why* any given taxpayer switched methods of preparation. The switch could have been for reasons of price, convenience, changes in the consumer's personal situation, an increase or decrease in tax complexity, a loss of confidence in the prior method of preparation, or any other reason.

As opposed to switching, diversion refers to a consumer's response to a measured increase in the price of a product. In other words, diversion measures to what extent consumers of a given product will switch (or be "diverted") to other products in response to a price increase in the given product. The IRS switching data does not directly measure diversion because switching can occur for any number of reasons, many of which may not involve price.

Unfortunately, no direct, reliable data on diversion exists in this case. The plaintiff's expert argues, however, that the IRS switching data can provide at least some estimate of diversion. While this approach is not without its limitations, as discussed further below, the Court finds that the switching data is at least somewhat indicative of likely diversion ratios. Moreover, the IRS data is highly reliable because (1) the sample size is enormous, since it encompasses over 100 million taxpayers, and (2) the data reflects actual historical tax return filing patterns as opposed to predicted behavior.[16]

***63** The defendant's expert, who criticizes reliance on this switching data, suggests instead that a better analysis can be based upon simulated diversion data derived from consumer surveys commissioned by the defendants. As described more fully below, however, the shortcomings of these survey-derived diversion data are so substantial that the Court cannot rely on them.

i. Critical Loss Analysis

The first economic test Dr. Warren–Boulton performed is known as a "critical loss" analysis. This test attempts to calculate "the largest amount of sales that a monopolist can lose before a price increase becomes unprofitable." *Swedish Match,* 131 F.Supp.2d at 160. Dr. Warren–Boulton calculated that for a 10 percent price increase in DDIY, the price increase would be profitable if the resulting lost sales did not surpass 16.7 percent.[17] GX 121 (Warren–Boulton Rep.) at 34.

Dr. Warren–Boulton then sought to compare this critical loss threshold with "aggregate diversion ratios." The aggregate diversion ratio for any given product represents the proportion of lost sales that are recaptured by all other firms in the proposed market as the result of a price increase. Since these lost sales are recaptured within the proposed market, they are not lost to the hypothetical monopolist. According to Dr. Warren–Boulton, economists have shown that if the aggregate diversion ratio to products inside the proposed relevant market exceeds the critical loss threshold, then the critical loss analysis indicates that a SSNIP at that level would be profitable for a hypothetical monopolist. *Id.* at 34 (citing Michael Katz and Carl Shapiro, *Critical Loss: Let's Tell the Whole Story,* antitrust (Spring 2003) at 49–56); *see also* Warren–Boulton, TT, 9/9/11 p.m., at 33–34.

Because no diversion data is available, Dr. Warren–Boulton relied instead on IRS switching data to estimate aggregate diversion ratios. *Id.* These data show that of the taxpayers who left HRB's DDIY products between tax year 2007 and 2008,[18] 57 percent went to other DDIY providers. Of those who left TaxACT, 53 percent stayed in DDIY, and for TurboTax, 39 percent stayed in DDIY. *Id.* at 34–35. Since these numbers are all well above the 16.7 percent critical loss threshold, Dr. Warren–Boulton concluded a 10 percent SSNIP in the DDIY market would be profitable for a hypothetical monopolist.

In cross-examining Dr. Warren–Boulton, the defendants suggested that the critical loss test is meaningless because it would seem to validate numerous different candidate markets consisting of various assortments of tax preparation businesses. Warren–Boulton, TT, 9/9/11 p.m., at 20–42. For example, the defendants demonstrated that the test could also validate a market consisting of just HRB and Intuit or a market consisting of just TaxACT and Intuit. *See* DX 9802. Dr. Warren–Boulton ***64** noted in his testimony, however, that such markets are "smaller, irrelevant" markets for evaluating the proposed transaction between HRB and TaxACT. Warren–Boulton, TT, 9/9/11 p.m., at 41; *see also* Areeda & Hovenkamp ¶ 533c, at 254 ("[C]ourts correctly search for a 'relevant market'—that is a market relevant to the particular legal issue being litigated."). The fact that critical loss analysis would validate other groupings of businesses does not undermine Dr. Warren–Boulton's reliance on it to validate DDIY as the relevant market in this case.[19] Indeed, rather than urging a smaller relevant market definition, the defendants urged the Court to define the market much more broadly. Nonetheless, the Court appreciates the defendants' point that the critical loss test alone cannot answer the relevant market inquiry. While some inappropriate proposed relevant markets would be ruled out by the critical loss test, the fact that the test could still confirm multiple relevant markets means that the Court must rely on additional evidence in reaching the single, appropriate market definition.

ii. Merger Simulation

In addition to the critical loss analysis, Dr. Warren–Boulton also performed an economic simulation of a merger among the HRB, TaxACT, and Intuit. GX 121 (Warren–Boulton Rep.) at 35. This simulation, known as a Bertrand model, predicted that a monopolist of the DDIY products of these three companies would find it profit-maximizing to raise TaxACT's price by 83 percent, HRB's price by 37 percent and TurboTax's price by 11 percent absent efficiencies. *Id.* Dr. Warren Boulton concluded that this simulation also confirms that DDIY is the relevant product market.[20]

iii. Critiques of Dr. Warren–Boulton's Analysis

The defendants' expert, Dr. Meyer, critiques Dr. Warren–Boulton's analysis in numerous ways. Her most fundamental critique is that his reliance on switching data as a proxy for diversion is flawed because switching can occur for any number of reasons and, therefore, it is not necessarily indicative of what products consumers would switch to in response to a price increase. DX 17 (Meyer Rep.) at 59–60. Dr. Meyer is certainly correct in this critique. Dr. Warren–Boulton, however, testified forthrightly about the limitations involved in relying on switching data as a proxy for diversion:

> Using migration [i.e., switching] doesn't really answer, or it doesn't answer the precise question of [the] merger guidelines, ***65** which of course is, where would you go if there was a small but significant price increase? It basically asks the question, where did you go? And you could go for a lot of reasons. You could go because the price has changed, you could go because the quality changes, you could go because you changed. Complexity changes. And there's a lot of evidence in the record that people switch because of changes in their own complexity. But using migration percentages, or using those gives you, I think, a reasonable second estimate of diversion ratios, because it's really asking the question, you know, if you went to some—if for some reason you decided to go from HRB to TaxACT, for all those reasons, is that roughly about the same percentages if you went due to a price increase?

Warren–Boulton, TT, 9/9/11 a.m., at 13–14. Thus, switching data does not necessarily indicate diversion for the reasons both experts have identified. In light of all the evidence in the record and the general similarity of DDIY products, the Court credits Dr. Warren–Boulton's conclusion that it was reasonable to use switching data as a proxy for diversion, especially since no more refined historical data apparently exists. Bearing in mind the shortcomings of the switching data, the Court will not treat Dr. Warren–Boulton's hypothetical monopolist analysis as conclusive. The Court will treat it as another data point suggesting that DDIY is the correct relevant market, however.

Another major critique of Dr. Warren–Boulton's hypothetical monopolist analysis—and one that the defendants repeatedly emphasized at the hearing—is that Dr. Warren–Boulton decided "arbitrarily to *exclude* some alternatives that are closer substitutes than the products that he *included.*" DX 17 (Meyer Rep.) at 70; *see* Meyer, TT, 9/12/11 p.m., at 20–22. As Dr. Meyer put it at the hearing, "Dr. Warren–Boulton's relevant market is a miscellaneous set of unconnected links, because it doesn't include ... the closest substitute to H & R Block [At Home], which is assisted tax preparation. It doesn't include pen and paper, which is the closest substitute to TaxACT." Meyer, TT, 9/12/11 p.m., at 24–25. Dr. Meyer identified the "closest substitutes" to the merging parties' products using simulated diversion data. As discussed below, the Court finds this data unreliable and declines to rely upon it. Dr. Meyer opines, however, that Dr. Warren–Boulton failed to include the closest substitutes for the defendants' products in his market, even if switching data is treated as a proxy for diversion, as Dr. Warren–Boulton suggests. For example, Dr. Meyer states that "11.2% of TaxACT's customers in TY2007 switched to assisted preparation in TY2008, while only 2.7% switched to H & R Block At Home and 9.1% switched to TurboTax." DX 17 (Meyer Rep.) at 72. Thus, the defendants contend Dr. Warren–Boulton violated the following principle from the Merger Guidelines: "When applying the hypothetical monopolist test to define a market around a product offered by one of the merging firms, if the market includes a second product, the Agencies will normally also include a third product if that third product is a closer substitute for the first product than is the second product." *Id.* at 72 (quoting Merger Guidelines § 4.1.1).

The government persuasively illustrated the key flaw in this critique during the cross-examination of the defendants' expert. *See* Meyer, TT, 9/13/11 a.m., at 90–96. Simply put, when determining the "closest substitutes" for products within the DDIY category, Dr. Meyer looked at diversion to individual DDIY brands, such as TurboTax and H & R Block At Home, ***66** but when assessing substitutes outside the DDIY category, Dr. Meyer lumped all products and methods together into large, aggregated market categories, such as "assisted" or "pen-and-paper." *See id.* If, instead, DDIY products are grouped together as an aggregated category, similar to the treatment of assisted and pen-and-paper in Dr.

Meyer's analysis, then the IRS switching data would indicate that other DDIY products are the closest substitutes for both the DDIY products of HRB and TaxACT. *See* GTX 15, 16 (illustrating this analysis). For HRB, the numbers show 56.8 percent switching to other DDIY, 36.9 percent to assisted, and 6.3 percent to pen-and-paper. GTX 15. For TaxACT, the numbers show 52.7 percent switching to other DDIY, 40.1 percent to assisted, and 7.3 percent to pen-and-paper. GTX 16.

Some of Dr. Meyer's additional critiques have more merit. For example, one datum Dr. Warren–Boulton relied on in his analysis was the outcome of an advertising study showing that HRB's sales {were affected} in cities where TaxACT pursued an advertising campaign. *See* GX 121 (Warren–Boulton Rep.) at 43. The Court accepts Dr. Meyer's critique that few conclusions can be drawn from this observation because the observed correlation could have been due to other variables—for example, the advertising of a third competitor like TurboTax. *See* DX 17 (Meyer Rep.) at 69. Similarly, Dr. Warren–Boulton's observations that changes in relative market share of DDIY, assisted, and pen-and-paper do not appear correlated to changes in relative price could also have been affected by confounding variables. *Id.* at 67.

b. Defendants' Expert—Dr. Meyer

Dr. Meyer found the relevant product market to be all methods of tax preparation, including DDIY, assisted, and pen-and-paper. Her conclusion rested on various factors, including an analysis of documents and testimony. *See, e.g., id.* at 15. This Court, however, has already discussed its own analysis of the relevant documents and testimony above. Therefore, the Court will focus now on Dr. Meyer's analysis of pricing data and, in particular, her use of and reliance on data derived from customer surveys commissioned by the defendants.

Dr. Meyer found that assisted preparation competes with DDIY in part because the assisted method is the most popular method of tax preparation across all complexity levels. *See id.* at 12–13. Dr. Meyer concedes, however, that "taxpayers with the most complex tax returns are the most likely to use [assisted preparation]." *Id.* Indeed, her data show that this effect is pronounced, with approximately 70 percent of filers of complex returns using assisted and approximately 44 percent of filers of simple returns using assisted. *Id.* DDIY, by contrast, accounts for approximately 37 percent of simple returns and 23 percent of complex returns. *Id.* If anything, these data indicate that assisted products are linked to the needs of consumers with complex returns, suggesting a partially different consumer profile from DDIY products.

Dr. Meyer also noted that the pricing of DDIY and assisted products overlaps, but her analysis of this overlap rests primarily on comparing high-end DDIY products, such as HRB's Best of Both product,[21] ***67** with low-end assisted products, such as Jackson Hewitt's offering of limited, simple return preparation at Wal–Mart. *See id.* at 13–14. Dr. Meyer concedes that the median price of assisted is higher than the median DDIY price, *see id.* at 13, and that is the more useful point of comparison.

Apart from these comparisons and her conclusions about how industry participants view the market based on her review of documents and testimony in the record, Dr. Meyer's definition of the relevant market rests primarily on her analysis of simulated diversion data obtained from a "pricing simulator" created for HRB in 2009 and an email survey conducted by TaxACT in 2011. *See id.* at 17–20. These two sources for her conclusions are discussed seriatim below.

i. Pricing Simulator

Dr. Meyer asserts in her report that the pricing simulator "created for HRB in 2009, provides the only direct test of the likely diversion from HRB's [DDIY] products in reaction to a change in price." *Id.* at 17. The simulator itself is a pricing model that runs as a dynamic Excel spreadsheet. *See* Meyer, TT, 9/13/11 a.m., at 42. Dr. Meyer's report in several instances relies upon an internal HRB Powerpoint presentation that reflects the simulator's data output under several different scenarios. *See, e.g.,* DX 17 (Meyer Rep.) at 37 n. 155 (citing the Powerpoint). As Dr. Meyer describes, the "simulator was prepared using a discrete choice survey of 6,119 respondents." *Id.* at 17. She explains that "[t]he respondents were shown five pricing scenarios, and the options included online DIY options, software DIY options, assisted tax preparation options, and other DIY options (including pen-and-paper and friends/family)." *Id.* Dr. Meyer further states that the "pricing of the various options changed across scenarios" and a "conjoint analysis was conducted to analyze the effect of a change in the price of each product on its own sales and the sales of the other tax preparation options." *Id.*

Based on the pricing simulator's results, Dr. Meyer calculated diversion ratios for DDIY products. Dr. Meyer found that "the largest diversion from HRB's [DDIY products], in the event of a price increase, is to CPAs and accountants." *Id.* at 18. She found the "second largest diversion from HRB's [DDIY products]" was to pen-and-paper. *Id.* at 19–20. In addition, "the fourth largest diversion is to HRB retail stores." *Id.* at 18. Accordingly, Dr. Meyer concluded that assisted preparation and pen-and-paper were the closest substitutes to HRB's DDIY products and should be included in the relevant market.

There is a critical flaw in the design of the pricing simulator, however, that renders conclusions based on its output unreliable. Despite Dr. Meyer's assertion that the "pricing of the various options changed across [the] scenarios" presented to the survey respondents, not all of the options in the survey underlying the simulator actually had prices associated with them. *See* Meyer, TT, 9/13/11 a.m., at 27–28. Several "non-priced choice options" were available to the survey respondents and these non-priced options included, importantly, "CPA or Accountant," "H & R Block Retail Office," and "Paper & Pencil." DX 9231 (May 2009 Pricing Simulator Powerpoint) at 4. Thus, while the pricing of the various options changed *for some products* across the different scenarios presented in the survey, no prices at all were associated with these critical "non-priced choice options."

The fact that the pricing simulator survey failed to assign any prices to these ***68** particular products is, of course, especially significant given Dr. Meyer's findings that the highest diversion from HRB DDIY was to CPAs and then to pen-and-paper. DX 17 (Meyer Rep.) at 18. Indeed, the conclusion that the largest diversion from HRB's DDIY products would be to CPAs is puzzling on its face. This outcome is counterintuitive because CPAs in general tend to be the most expensive form of tax preparation assistance, while DDIY tends to be the least expensive. *See* GTX 14. The Court finds that these surprising results are most likely due to the fact that the survey did not, in fact, assign any price at all to the CPA option. Due to this flaw in the survey's design, respondents may well have selected the CPA option and the other non-priced options without even attempting to consider price as a factor in their decision. Accordingly, the Court finds that it simply cannot rely on the diversion ratios predicted by the simulator.

Additional problems with the pricing simulator also render its output unreliable. As Dr. Warren–Boulton noted in his rebuttal of Dr. Meyer's report, the compilation of pricing simulator data which Dr. Meyer relied upon to calculate her diversion ratios contains results that appear to violate what is "[p]erhaps the most fundamental principle in economics." *See* GX 665 (Warren–Boulton Reply Rep.) at 9–10. Increasing the price of one HRB DDIY product in the simulation, TaxCut Online Basic, appears to increase the quantity of the product sold, holding other variables constant. *Id.* This anomaly violates the fundamental economic principle that "demand curves almost always slope downward," which holds that, all other things being equal, consumers buy less of a product when the price goes up. *See id.* In another anomalous result, Dr. Warren–Boulton found that, based on the simulator data, cutting the price of TaxCut Online Basic from $29.95 to $14.95 approximately doubles its predicted market share, but cutting the price only to $19.95 greatly reduces its market share.[22] *Id.* Dr. Warren–Boulton also found that analysis of different print outs of simulator data in the HRB Powerpoint may yield inexplicably different results. For example, relying on the data on one page of the simulator Powerpoint, Dr. Meyer determined that the "the diversion rate from HRB to TaxACT is only 1.6 percent." DX 17 (Meyer Rep.) at 37. Yet, Dr. Warren–Boulton applied the same methodology for calculating the diversion rate to the simulator data reflected on another slide of the same Powerpoint purporting to show the same simulator data as applied to a different scenario. This calculation yielded the "wildly different estimate" of a 32.4 percent diversion rate from HRB to TaxACT. *See* GX 665 (Warren–Boulton Reply Rep.) at 10. These inconsistent and anomalous results provide additional reasons to discredit the diversion ratios Dr. Meyer predicted from the simulator data.

ii. 2011 Email Survey

Dr. Meyer's analysis also relied on a 2011 email survey of TaxACT customers commissioned by the defendants.[23] *See* ***69** DX 17 (Meyer Rep.) at 20, 38. In April 2011, TaxACT and HRB jointly commissioned this survey "to determine to which products TaxACT's customers would switch if those customers were displeased with TaxACT because of price, quality, or functionality." *Id.* at 20. The survey asked one primary question: "If you had become dissatisfied with TaxACT's price, functionality, or quality, which of these products or services would you have considered using to prepare your federal taxes?" GX 604 (Survey Summary) at 1. The survey then offered the respondents a list of other products or services from which to choose and instructed them to select all applicable options. *Id.* The list of options that respondents were given varied somewhat depending on the respondents' filing status and the payments they had made for their 2011 tax returns.[24] *Id.* A follow-up question asked the respondents to narrow their selections to a single choice. *Id.*

The research firm conducting the survey initially sent out 46,899 email requests to TaxACT customers inviting them to participate in the survey and then subsequently targeted 24,898 customers who had purchased a federal tax return product but not a state product. *Id.* Survey respondents were also asked screening questions to determine their membership in one of four categories of customers: (1) those who paid to complete both a federal and state tax return; (2) those who completed a free federal return and paid to complete a state return; (3) those who completed a paid federal return but did not complete a state return; and (4) those who completed a free federal return and did not complete a state return. *Id.*

A total of 1,089 customers responded to the survey. *Id.* at 1–3. The response rates for the four categories of customers were: (1) 2.45 percent for paid federal/paid state filing (422); (2) 2.08 percent for free federal/paid state filing (245); (3) 0.6 percent for paid federal/no state filing (182); and (4) 1.7 percent for free federal/no state filing (240). *Id.*

Dr. Meyer opined that "this survey is closer to the concept of a diversion ratio than are data on overall switching between products." DX 17 (Meyer Rep.) at 20 n. 85. Based on the survey's results, she concluded that the survey "provides direct evidence that digital DIY products compete with pen-and-paper" because the percentage of TaxACT customers who reported that, if they were dissatisfied with TaxACT, they would switch to pen-and-paper in each group ranged from 27 to 34 percent. DX 17 (Meyer Rep.) at 20. Dr. Meyer also noted that the survey showed that few TaxACT customers would switch to H & R Block At Home, since only 4 to 10 percent of respondents selected that option. *Id.* at 38. Accordingly, Dr. Meyer ***70** found this outcome indicative that "HRB is not a particularly close competitor to TaxACT." *Id.*

In response to Dr. Meyer's reliance upon this survey, the government submitted a rebuttal expert report from Dr. Ravi Dhar, a professor of management at Yale University, which credibly critiques the survey on several levels.[25] GX 623 (Dhar Rep.). Most fundamentally, the government points out that the phrasing of the survey question—which asks about dissatisfaction with "TaxACT's price, functionality, or quality"—appears to ask a hypothetical question about *switching,* not diversion based solely on a price change. Since the phrasing of the survey question conflates customer concerns about price, functionality, or quality, the government argues that the survey cannot shed any light on customer reactions to price changes alone. *See id.* at 5. Further, to the extent that the wording of the question addresses price, it does not ask about a change in price, but rather suggests a change in the customer's satisfaction with TaxACT's existing price. *See id.*

At the hearing, Dr. Meyer explained that she viewed the email survey data as "closer to diversion than is pure switching data" because switching could occur for any reason at all, while the survey only asked about potential switching due to dissatisfaction with "price, functionality, or quality." Meyer, TT, 9/13/11 a.m., at 87. Yet the Court finds that almost any reason for switching from a product could be characterized as dissatisfaction with the "functionality" or "quality" offered by the product in some respect. Therefore, the survey question does not come much closer to identifying diversion ratios than pure switching data does. Moreover, since there is extensive IRS data reflecting actual switching behavior in the marketplace—as opposed to the hypothetical switching behavior asked about in the email survey—the Court will not rely on the "diversion ratios" suggested by the 2011 email survey.

Furthermore, additional defects in the 2011 email survey's methodology also render the reliability of its findings questionable. First, the high level of non-response to the defendants' email invitations to participate in the survey could have biased the results. Dr. Dhar explained that the "level of nonresponse ... is extremely high (more than 98%)" and that the "extremely low response rates makes it difficult to determine whether the results were impacted by a certain segment who were systematically more likely to respond to the survey (e.g., those who were price sensitive or time insensitive) in relation to those who did not respond." GX 623 (Dhar Rep.) at 10. The Court agrees that non-response bias is a potential pitfall of the survey. *See University of Kansas v. Sinks,* No. 06–2341, 2008 WL 755065, at *4 (D.Kan. Mar. 19, 2008) (noting, in trademark case, that a consumer survey response rate of "2.16% appears, by any standard, to be quite low."). Second, by providing survey respondents with a pre-selected list of alternative options, rather than letting respondents respond organically, the survey leads respondents to think about the market for tax preparation services in the same terms that the defendants do, which may have led respondents to select options they otherwise would not have selected. Since the survey's question essentially asks about hypothetical switching, and since the actual IRS switching data in this case reflect a much larger ***71** sample size without the methodological deficiencies of the 2011 survey, the Court declines to rely on the purported diversion ratios calculated from the email survey.

On the whole, the Court views Dr. Warren–Boulton's expert analysis as more persuasive than Dr. Meyer's.[26] First, Dr. Warren–Boulton's testimony was generally more credible than Dr. Meyer's.[27] Second, the diversion ratios that Dr. Meyer calculated from the pricing simulator and the 2011 email survey are unreliable, as discussed above. Without these simulated diversion ratios, little remains of Dr. Meyer's expert conclusions apart from her analysis of documents in the record.

Dr. Warren–Boulton's analysis is not without its limitations. The main shortcoming for his approach is that he relied on switching data as a proxy for diversion. Since there is evidence in the record that switching among different products in the broader tax preparation industry occurs for reasons other than price competition, switching cannot serve as a complete proxy for diversion. Even so, the Court credits Dr. Warren–Boulton's conclusion that switching data can provide a "reasonable second estimate" of diversion ratios here. Therefore, the Court finds that Dr. Warren–Boulton's analysis tends to confirm that the relevant market is DDIY, although the Court would not rely on his analysis exclusively. As explained above, however, the full body of evidence in this case makes clear that DDIY is the correct relevant market for evaluating this merger.

B. Likely Effect on Competition

1. The Plaintiff's Prima Facie Case

Having defined the relevant market as DDIY tax preparation products, "the Court must next consider the likely effects of the proposed acquisition on competition within that market." *Swedish Match,* 131 F.Supp.2d at 166. The government must now make out its prima facie case by showing "that the merger would produce 'a firm controlling an undue percentage share of the relevant market, and [would] result[ ] in a significant increase in the concentration of firms in that market.' " *Heinz,* 246 F.3d at 715 (quoting *Philadelphia Nat'l Bank,* 374 U.S. at 363, 83 S.Ct. 1715). "Such a showing establishes a 'presumption' that the merger will substantially lessen competition." *Id.*

"Market concentration, or the lack thereof, is often measured by the Herfindahl–Hirschmann Index ('HHI')." *Id.* at 716. "The HHI is calculated by totaling the squares of the market shares of every firm in the relevant market. For example, a market with ten firms having market shares of 20%, 17%, 13%, 12%, 10%, 10%, 8%, 5%, 3% and 2% has an HHI of 1304 ($20^2 + 17^2 + 13^2 + 12^2 + 10^2 + 10^2 + 8^2 + 5^2 + 3^2 + 2^2$)." *Id.* at 715 n. 9. Sufficiently large HHI figures establish the government's prima facie case that a merger is anticompetitive. *Id.* Under the Horizontal Merger Guidelines, markets with an HHI above 2500 are considered "highly concentrated" and mergers "resulting in highly concentrated markets that involve an increase in the HHI of more than 200 points will be presumed to ***72** be likely to enhance market power." Merger Guidelines § 5.3.

In this case, market concentration as measured by HHI is currently 4,291, indicating a highly concentrated market under the Merger Guidelines. GX 121 (Warren–Boulton Rep.) at 38. The most recent measures of market share show Intuit with 62.2 percent of the market, HRB with 15.6 percent, and TaxACT with 12.8 percent. GX 27. These market share calculations are based on data provided by the IRS for federal tax filings for 2010, the most recent data available.

The defendants argue that market share calculations based exclusively on federal filing data are insufficient to meet the plaintiff's burden in establishing its alleged relevant product market, which includes both federal and state filings. Defs.' Post–Trial Mem. at 12–13. The Court rejects this argument. State tax return products are typically sold as add-ons to or in combination with federal return products and the Court finds that there is little reason to conclude that the market share proportions within the state DDIY segment would be significantly different from federal DDIY. *See* GX 600 at 8 (HRB market research study stating that "[t]he desire to file State and Federal taxes together, and, inherently, for ease/ convenience overruled all other rationales for the method chosen for State taxes."). While, as defendants point out, many customers of federal tax return DDIY products do not also purchase state returns, that may be because they live in states without income tax or because their state returns are simple enough to prepare very easily without assistance. *See* Dunn, TT, 9/8/11 a.m., at 48–49. A reliable, reasonable, close approximation of relevant market share data is sufficient, however. *FTC v. PPG Indus., Inc.,* 798 F.2d 1500, 1505 (D.C.Cir.1986). Further, the defendants' own ordinary course of business documents analyze the market based on IRS federal e-file data, without reference to state filings, even though the defendants' clearly sell state tax return products. *See, e.g.,* GX 27.

The proposed acquisition in this case would give the combined firm a 28.4 percent market share and will increase the HHI by approximately 400, resulting in a post-acquisition HHI of 4,691. *Id.* These HHI levels are high enough to create a presumption of anticompetitive effects. *See, e.g., Heinz,* 246 F.3d at 716 (three-firm to two-firm merger that would have increased HHI by 510 points from 4,775 created presumption of anticompetitive effects by a "wide margin"); *Swedish Match,* 131 F.Supp.2d at 166–67 (60 percent market share and 4,733 HHI established presumption). Accordingly, the government has established a prima facie case of anticompetitive effects.

"Upon the showing of a *prima facie* case, the burden shifts to defendants to show that traditional economic theories of the competitive effects of market concentration are not an accurate indicator of the merger's probable effect on competition in these markets or that the procompetitive effects of the merger are likely to outweigh any potential anticompetitive effects." *CCC Holdings,* 605 F.Supp.2d at 46. "The courts have not established a clear standard that the merging parties must meet in order to rebut a prima facie case, other than to advise that '[t]he more compelling the prima facie case, the more evidence the defendant must present to rebut [the presumption] successfully.' " *Id.* at 46–47 (quoting *Baker Hughes,* 908 F.2d at 991). Even in cases where the government has made a strong prima facie showing:

> [i]mposing a heavy burden of production on a defendant would be particularly anomalous where, as here, it is easy to ***73** establish a prima facie case. The government, after all, can carry its initial burden of production simply by presenting market concentration statistics. To allow the government virtually to rest its case at that point, leaving the defendant to prove the core of the dispute, would grossly inflate the role of statistics in actions brought under section 7. The Herfindahl–Hirschman Index cannot guarantee litigation victories.

Baker Hughes, 908 F.2d at 992. Thus, ultimately, "[t]he Supreme Court has adopted a totality-of-the-circumstances approach to the [Clayton Act], weighing a variety of factors to determine the effects of particular transactions on competition." *Id.* at 984. With these observations in mind, the Court will evaluate the parties' evidence and arguments about the likely effect of the transaction on competition in the DDIY market.

2. Defendants' Rebuttal Arguments

a. Barriers to Entry

Defendants argue that the likelihood of expansion by existing DDIY companies besides Intuit, HRB, and TaxACT will offset any potential anticompetitive effects from the merger. Courts have held that likely entry or expansion by other competitors can counteract anticompetitive effects that would otherwise be expected. *See Heinz,* 246 F.3d at 717 n. 13 ("Barriers to entry are important in evaluating whether market concentration statistics accurately reflect the pre- and likely post-merger competitive picture."); *Baker Hughes,* 908 F.2d at 987 ("In the absence of significant barriers, a company probably cannot maintain supracompetitive pricing for any length of time."). According to the Merger Guidelines, entry or expansion must be "timely, likely, and sufficient in its magnitude, character, and scope to deter or counteract the competitive effects of concern." Merger Guidelines § 9; *see also CCC Holdings,* 605 F.Supp.2d at 47; *United States v. Visa USA, Inc.,* 163 F.Supp.2d 322, 342 (S.D.N.Y.2001) (entry must be "timely, likely, and [of a] sufficient scale to deter or counteract any anticompetitive restraints"). "Determining whether there is ease of entry hinges upon an analysis of barriers to new firms entering the market or existing firms expanding into new regions of the market." *CCC Holdings,* 605 F.Supp.2d at 47 (quoting *FTC v. Cardinal Health, Inc.,* 12 F.Supp.2d 34, 55 (D.D.C.1998)). In this case, the parties essentially agree that the proper focus of this inquiry is on the likelihood of expansion by existing competitors rather than new entry into the market.[28] *See* Defs.' Post–Trial Mem. at 21–22. Since the government has established its prima facie case, the defendants carry the burden to show that ease of expansion is sufficient "to fill the competitive void that will result if [defendants are] permitted to purchase" their acquisition target. *Swedish Match,* 131 F.Supp.2d at 169.

In describing the competitive landscape, the defendants note there are eighteen companies offering various DDIY products through the FFA. Defs.' Post–Trial Mem. at 22. Most of these companies are very small-time operators, however. ***74** The defendants acknowledge this fact, but nevertheless contend that the companies "TaxSlayer and TaxHawk are the two largest and most poised to replicate the scale and strength of TaxACT." *Id.* at 23. Witnesses from TaxSlayer and TaxHawk were the only witnesses from other DDIY companies to testify at the hearing. As such, the Court's ease of expansion analysis will focus on whether these two competitors are poised to expand in a way that is "timely, likely, and sufficient in its magnitude, character, and scope to deter or counteract" any potential anticompetitive effects resulting from the merger.

TaxHawk runs five different websites, including FreeTaxUSA.com, that all market the same underlying DDIY product. Kimber, TT, 9/12/11 a.m., at 12, 40. TaxHawk was founded in 2001, three years after TaxACT, although it has a significantly smaller market share of 3.2 percent. *Id.* at 11; GX 27. TaxHawk's vice-president and co-founder, Mr. Dane Kimber, testified that the company has the technical infrastructure to grow by five to seven times the number of customers in any given year. Kimber, TT, 9/12/11 a.m., at 21. TaxHawk's marketing strategy relies substantially on search engine advertising and search term optimization, including by using the FreeTaxUSA.com domain name, which contains the keywords "free" and "tax." *See id.* at 19–27. Despite having been in business for a decade, its products are functionally more limited than those of Intuit, HRB, and TaxACT in various ways. *See* PFF ¶ 185. Although TaxHawk services the forms that cover most taxpayers, its program does not service all federal forms, it excludes two states' forms in their entirety, and it does not service city income tax forms for major cities that have income taxes—notably, New York City. Kimber, TT, 9/12/11 a.m., at 44. In fact, Mr. Kimber testified that the company would likely need another decade before its DDIY products could fully support all the tax forms. *Id.* at 45. The reason is that TaxHawk is what Mr. Kimber "like[s] to call ... a 'lifestyle' company. We like the lifestyle we have as owners. We want our employees to have a life, if you will. I do feel we have the expertise to [expand functionality] more rapidly, but we choose not to." *Id.* Mr. Kimber also testified that TaxHawk had suddenly experienced an unprecedented growth rate of over 60 percent since April 2011, *id.* at 20–21, but that the company had not done any analysis to attempt to explain this unanticipated (and presumably welcome) growth. *Id.* at 39.

TaxHawk's relaxed attitude toward its business stands in stark contrast to the entrepreneurial verve that was apparent throughout the testimony of Mr. Dunn and that has been rewarded by the impressive growth of TaxACT over the years. In short, TaxHawk is a very different company from TaxACT. TaxHawk is a small company that has developed a string of search-engine-optimized DDIY websites, which deliver a sufficient income stream to sustain its owners' comfortable lifestyle, without requiring maximal effort on their part. While TaxHawk's decision to prioritize a relaxed lifestyle over robust competition and innovation is certainly a valid one, expansion from TaxHawk that would allow it to compete "on the same playing field" as the merged company appears unlikely. *Chicago Bridge & Iron Co. N.V. v. FTC,* 534 F.3d 410, 430 (5th Cir.2008).

After TaxHawk, TaxSlayer is the next largest DDIY competitor, with a 2.7 percent market share. GX 27. TaxSlayer.com launched in 2003, although the same company started selling a software product to tax professionals several years earlier. Rhodes, TT, 9/12/11 a.m., at 71. TaxSlayer is part of the same corporate family as Rhodes Murphy, a tax firm that provides assisted tax preparation through ***75** sixteen retail offices in the Augusta, Georgia area. *Id.* The company is a family business and James Brian Rhodes, the product manager of TaxSlayer and the son of the company's founder, testified at the hearing. *Id.* at 70, 73. Mr. Rhodes testified that, in the event of an increase in TaxACT's prices or a decrease in its quality, he "believe[s] that [TaxSlayer is] poised and ready to take those customers who would want to go elsewhere for lower prices." *Id.* at 81. TaxSlayer's marketing strategy relies heavily on sponsorship of sporting events, including the Gator Bowl and NASCAR. *Id.* at 75. TaxSlayer typically invests {a significant amount of its budget in marketing}. Rhodes, TT, 9/12/11 a.m. (sealed), at 86, 92. For example, TaxSlayer plans to spend ${redacted} on marketing in 2012 based on 2011 revenues of ${redacted}. *Id.* at 84, 87. Despite this {high} level of marketing spending, TaxSlayer's DDIY market share has not changed substantially since 2006, despite steady growth in TaxSlayer's revenue and number of units sold. *See id.* at 94–96; GX 21–7 (IRS e-file share data chart showing 2.5 percent share for TaxSlayer in 2006 and 2.7 percent in 2010). Rather, TaxSlayer's growth in unit sales and revenue has come from maintaining the same slice of an expanding pie—the growing DDIY market. *See* GX 21–7.

TaxSlayer's stable market share despite its {significant} marketing expenditure as a proportion of revenue points to what the government considers the key barrier to entry in this market—the importance of reputation and brand in driving consumer behavior in purchasing DDIY products. Simply put, tax returns are highly personal documents that carry significant financial and legal consequences for consumers. Consumers, therefore, must trust and have confidence in their tax service provider. As one of TaxACT's bankers put it a confidential memorandum, "[t]ax filers must have confidence that sensitive data is being handled with care and that returns are processed in a secure, error-free and timely manner." GX 125 at 12.

Building a reputation that a significant number of consumers will trust requires time and money. As HRB's former CEO noted, it takes millions of dollars and lots of time to develop a brand. Bennett, TT, 9/6/11 p.m., at 30. TaxACT's offering memoranda also point to the difficulty in building a brand in the industry as a barrier to competition. *See* GX 28–24 at 2SSCORPe–2419 (2009 memorandum stating "With over 11 years of building reliable, robust software solutions, 2SS has created a valuable brand within the online tax preparation market which Management believes would take years of competitive investment to replicate."). In the DDIY industry, the Big Three incumbent players spend millions on marketing and advertising each year to build and maintain their brands, dwarfing the combined spending of the smaller companies. For example, in tax year 2009, Intuit, HRB, and TaxACT collectively spent approximately {over $100 million} on marketing and advertising. GX 29 (Intuit Decl.) ¶ 38; GX 61–22 at 3; GX 138 at 37. By contrast, {TaxSlayer and TaxHawk spent a significantly smaller amount}.[29] Rhodes, ***76** TT, 9/12/11 a.m. (sealed), at 95; GX 25 (TaxHawk Decl.) ¶ 14.

Even TaxACT's successful business strategy has been premised on the notion that it cannot outspend Intuit and HRB on marketing. Dunn, TT, 9/7/11 p.m., at 71–72. The massive marketing expenditures of the two major DDIY firms create high per customer acquisition costs and limit the easy marketing channels that are open to smaller competitors. *See, e.g., id.* at 88–89 (noting that "Web advertising is the most competitive ... I think [TaxACT is] going to get shut out on Yahoo [the popular web portal]. I think Intuit is going to buy it lock, stock and barrel," and explaining that this outcome would hurt TaxACT's business if it doesn't find effective alternative advertising venues). Rather than attempting to outspend HRB and Intuit, TaxACT's growth strategy has largely depended on providing "great customer service, a great product, and a great customer experience" and then relying on word-of-mouth referrals to spread the awareness of the brand. *Id.* at 71–72. This process is inherently time-consuming and difficult to replicate.

In support of their argument that TaxSlayer and TaxHawk are poised to expand in response to a price increase, the defendants emphasize that these companies "are at about the same position in terms of customer base as TaxACT was in 2002, which was the year before it did the Free For All [offer on] the FFA." Meyer, TT, 9/12/11 p.m., at 130. The government points out, however, that there are two flaws in this comparison, even assuming that TaxSlayer and TaxHawk were TaxACT's competitive equals. First, while these companies may have a similar number of customers to TaxACT in 2002 in absolute terms, TaxACT's market share at 8 percent was already significantly larger than the market shares of these firms today, despite the fact that TaxACT had been in the market for fewer years. *See* GTX 17.

Second, the DDIY market has matured considerably since 2002, in parallel with the general ripening of various online industries during the past decade. Notably, the pool of pen-and-paper customers has dwindled as DDIY preparation has grown. Thus, the "low hanging fruit" of DDIY customer acquisition may have been plucked. *See* GX 296 (Houseworth Dep.) at 66–68 (noting that "there's probably only two or three years of continued mid teens category growth for online" because of the shrinking pool of new potential customers that can be converted from the pen-and-paper method). This trend suggests existing market shares may become further entrenched and that growing market share may be even harder, especially because there are barriers to switching from one DDIY product to another. For example, the hearing evidence showed that it is difficult to import prior-year tax return data across DDIY brands. If a taxpayer uses, say, TurboTax or TaxACT in one year, then when the taxpayer returns the next year, the program can automatically import the prior year's data, which is not only convenient but can also help the taxpayer identify useful tax information, such as carry forwards and available deductions. Dunn, TT, 9/8/11 a.m., at 111–14. Currently, it is not possible to import much of this data if the taxpayer switches to a competitor's product. *Id.* Thus, this feature lends a "stickiness" to each particular DDIY product once a customer has used it.

Upon consideration of all of the evidence relating to barriers to entry or expansion, the Court cannot find that expansion is likely to avert anticompetitive effects from the transaction. The Court will next consider whether the evidence supports a likelihood ***77** of coordinated or unilateral anticompetitive effects from the merger.

b. Coordinated Effects

Merger law "rests upon the theory that, where rivals are few, firms will be able to coordinate their behavior, either by overt collusion or implicit understanding in order to restrict output and achieve profits above competitive levels." *CCC Holdings,* 605 F.Supp.2d at 60 (quoting *Heinz,* 246 F.3d at 715). The government argues that the "elimination of TaxACT, one of the 'Big 3' Digital DIY firms" will facilitate tacit coordination between Intuit and HRB. Pl.'s Post–Trial Mem. at 15. "Whether a merger will make coordinated interaction more likely depends on whether market conditions, on the whole, are conducive to reaching terms of coordination and detecting and punishing deviations from those terms." *CCC Holdings,* 605 F.Supp.2d at 60 (internal quotation omitted). Since the government has established its prima facie case, the burden is on the defendants to produce evidence of "structural market barriers to collusion" specific to this industry that would defeat the "ordinary presumption of collusion" that attaches to a merger in a highly concentrated market. *See Heinz,* 246 F.3d at 725.

The defendants argue the primary reason that coordinated effects will be unlikely is that Intuit will have no incentive to compete any less vigorously post-merger. The defendants assert that the competition between Intuit and HRB's retail stores would be "fundamentally nullified if Intuit decided to reduce the competitiveness of TurboTax." Defs.' Post–Trial Mem. at 17. Further, defendants contend that Intuit has no incentive to reduce the competitiveness of its free product because it views its free product as a critical driver of new customers. *Id.* at 17–18 Therefore, the defendants conclude that if HRB does not compete as aggressively as possible with its post-merger products, it will lose customers to Intuit. *Id.* at 18.

The most compelling evidence the defendants marshal in support of these arguments consists of documents and testimony indicating that Intuit engaged in a series of "war games" designed to anticipate and defuse new competitive threats that might emerge from HRB post-merger. *See* GX 293 (Intuit Dep.) at 98–101; DX 84. The documents and testimony do indicate that Intuit and HRB will continue to compete for taxpayers' patronage after the merger—indeed, in the DDIY market, they would be the only major competitors. This conclusion, however, is not necessarily inconsistent with some coordination. As the Merger Guidelines explain, coordinated interaction involves a range of conduct, including unspoken understandings about *how* firms will compete or refrain from competing. *See* Merger Guidelines § 7.

In this case, the government contends that coordination would likely take the form of mutual recognition that neither firm has an interest in an overall "race to free" in which high-quality tax preparation software is provided for free or very low prices. Indeed, the government points to an outline created as part of the Intuit "war games" regarding post-merger competition with HRB that also indicates an Intuit employee's perception that part of HRB's post-merger strategy would be to "not escalate free war: Make free the starting point not the end point for customers." GX 293–13 at INT–DOJ0015942.[30] Since, as defendants point ***78** out, DDIY companies have found "free" offers to be a useful marketing tool, it is unlikely that free offers would be eliminated. Rather, the government argues, it is more likely that HRB and Intuit may find it "in their mutual interest to reduce the quality of their free offerings ... offer a lower quality free product and maintain higher prices for paid products...." PFF ¶ 141.

The government points to a highly persuasive historical act of cooperation between HRB and Intuit that supports this theory. *Cf.* Merger Guidelines § 7.2 ("[M]arket conditions are conducive to coordinated interaction if firms representing a substantial share in the relevant market appear to have previously engaged in express collusion."). After TaxACT launched its free-for-all offer in the FFA, Intuit proposed that the firms in the market limit their free FFA offers, a move which TaxACT opposed and which Mr. Dunn believed was an illegal restraint on trade. Dunn, TT, 9/7/11 p.m., at 79. HRB, Intuit, and others then joined together and successfully lobbied the IRS for limitations on the scope of the free offers through the FFA—limitations that remain in place today. Ernst, TT, 9/7/11 a.m., at 26–27; Warren–Boulton, TT, 9/9/11 p.m., at 78. This action illustrates how the pricing incentives of HRB and Intuit differ from those of TaxACT and it also shows that HRB and Intuit, although otherwise competitors, are capable of acting in concert to protect their common interests.

The defendants also argue that coordinated effects are unlikely because the DDIY market consists of differentiated products and has low price transparency. *See CCC Holdings,* 605 F.Supp.2d at 62 (recognizing the importance of price transparency to the likelihood of coordinated effects). To the contrary, the record clearly demonstrates that the players in the DDIY industry are well aware of the prices and features offered by competitors. Since DDIY products are marketed to a large swath of the American population and available via the Internet, DDIY firms can easily monitor their competitors' offerings and pricing. The fact that competitors may offer various discounts and coupons to some customers via email hardly renders industry pricing "not transparent," as defendants submit. *See* Defs.' Post–Trial Mem. at 21. Moreover, while collusion may, in some instances, be more likely in markets for homogenous products than differentiated products, product differentiation in this market would not necessarily make collusion more difficult. *See Heinz,* 246 F.3d at 716–17, 724–25 (finding likelihood of coordinated effects in product market differentiated by brand); *see also CCC Holdings,* 605 F.Supp.2d at 65 n. 42 ("[T]acit collusion may be easier when products are differentiated.") (quoting Lawrence A. Sullivan & Warren S. Grimes, *The Law of Antitrust: An Integrated Handbook,* § 11.2e1, at 635 (2d ed. 2006)).

Other indicia of likely coordination are also present in the DDIY market. Transactions ***79** in the market are small, numerous, and spread among a mass of individual consumers, each of whom has low bargaining power; prices can be changed easily; and there are barriers to switching due to the "stickiness" of the DDIY products. *See CCC Holdings,* 605 F.Supp.2d at 65–66 (discussing these factors as characteristic of markets conducive to coordination); *see also supra* Section III.B.2.a (discussing the difficulty of importing data as a barrier to switching from one DDIY product to another).

Finally, the Court notes that the "merger would result in the elimination of a particularly aggressive competitor in a highly concentrated market, a factor which is certainly an important consideration when analyzing possible anti-competitive effects." *Staples,* 970 F.Supp. at 1083; *see also FTC v. Libbey,* 211 F.Supp.2d 34, 47 (D.D.C.2002). The evidence presented at the hearing from all parties demonstrated TaxACT's impressive history of innovation and competition in the DDIY market. Mr. Dunn's trial testimony revealed him to be a dedicated and talented entrepreneur and businessman, with deep knowledge and passion for providing high-quality, low-cost tax solutions. TaxACT's history of expanding the scope of its high-quality, free product offerings has pushed the industry toward lower pricing, even when the two major players were not yet ready to follow—most notably in TaxACT's introduction of free-for-all into the market.

The government presses the argument that TaxACT's role as an aggressive competitor is particularly important by urging this Court to find that TaxACT is a "maverick." *See* Pl.'s Post–Trial Mem. at 18–19. In the context of antitrust law, a maverick has been defined as a particularly aggressive competitor that "plays a disruptive role in the market to the benefit of customers." Merger Guidelines § 2.1.5. The most recent revision of the Merger Guidelines endorses this concept and gives a few examples of firms that may be industry mavericks, such as where "one of the merging firms may have the incentive to take the lead in price cutting or ... a firm that has often resisted otherwise prevailing industry norms to cooperate on price setting or other terms of competition." *Id.*

The parties have spilled substantial ink debating TaxACT's maverick status. The arguments over whether TaxACT is or is not a "maverick"—or whether perhaps it once was a maverick but has not been a maverick recently—have not been particularly helpful to the Court's analysis. The government even put forward as supposed evidence a TaxACT promotional press release in which the company described itself as a "maverick." *See* GX 28–6. This type of evidence amounts to little more than a game of semantic gotcha. Here, the record is clear that while TaxACT has been an aggressive and innovative competitor in the market, as defendants admit, TaxACT is not unique in this role. Other competitors, including HRB and Intuit, have also been aggressive and innovative in forcing companies in the DDIY market to respond to new product offerings to the benefit of consumers. *See* Defs.' Post–Trial Mem. at 20.

The government has not set out a clear standard, based on functional or economic considerations, to distinguish a maverick from any other aggressive competitor. At times, the government has emphasized TaxACT's low pricing as evidence of its maverick status, while, at other times, the government seems to suggest that almost any competitive activity on TaxACT's part is a "disruptive" indicator of a maverick. For example, the government claims that "[m]ost recently, TaxACT continued to disrupt the Digital DIY market by entering the boxed retail software segment of the ***80** market, which had belonged solely to HRB and [Intuit]." Pl.'s Post–Trial Mem. at 19. Credible evidence at the hearing, however, showed {otherwise}. *See* Dunn, TT, 9/8/11 p.m. (sealed), at 4. Moreover, the Court credits Mr. Dunn's explanation that TaxACT has little interest in selling boxed retail software because he believes this market segment is {redacted} not particularly significant. *See* Dunn, TT, 9/7/11 p.m. (sealed), at 123 ({redacted}).

What the Court finds particularly germane for the "maverick" or "particularly aggressive competitor" analysis in this case is this question: Does TaxACT consistently play a role within the competitive structure of this market that constrains prices? *See Staples,* 970 F.Supp. at 1083 (finding "merger would result in the elimination of a particularly aggressive competitor in a highly concentrated market" where the merger would remove competition between "the two lowest cost and lowest priced firms" in the market); Merger Guidelines § 2.1.5 (noting maverick concerns may arise where "one of the merging firms may have the incentive to take the lead in price cutting or [with] ... a firm that has often resisted otherwise prevailing industry norms to cooperate on price setting or other terms of competition."). The Court finds that TaxACT's competition does play a special role in this market that constrains prices. Not only did TaxACT buck prevailing pricing norms by introducing the free-for-all offer, which others later matched, it has remained the only competitor with significant market share to embrace a business strategy that relies primarily on offering high-quality, full-featured products for free with associated products at low prices.

Moreover, as the plaintiff's expert, Dr. Warren–Boulton, explained, the pricing incentives of the merged firm will differ from those of TaxACT pre-merger because the merged firm's opportunity cost for offering free or very low-priced products will increase as compared to TaxACT now. *See* Warren–Boulton, 9/9/11 p.m., at 14–16. In other words, the merged firm will have a greater incentive to migrate customers into its higher-priced offerings—for example, by limiting the breadth of features available in the free or low-priced offerings or only offering innovative new features in the higher-priced products. *See* Commentary on the Horizontal Merger Guidelines (2006) at 24 (noting the importance of asking "whether the acquired firm has behaved as a maverick and whether the incentives that are expected to guide the merged firm's behavior likely would be different.").

While the defendants oppose the government's maverick theory, they do not deny that TaxACT has been an aggressive competitor. Indeed, they submit that "that's why H & R Block wants to buy them." Defs.' Closing Argument, TT, 10/3/11 a.m., at 132. HRB contends that the acquisition of TaxACT will result in efficiencies and management improvements that "will lead to better, more effective, and/or cheaper H & R Block digital products post-merger" that are better able to compete with Intuit. Defs.' Post–Trial Mem. at 17. This argument is quite similar to the argument of the defendants in *Heinz,* which some commentators have described as arguing that the merger would create a maverick. *Heinz,* 246 F.3d at 720–22; *see* Jonathan B. Baker, *Mavericks, Mergers, and Exclusion: Proving Coordinated Competitive Effects Under the Antitrust Laws,* 77 N.Y.U. L.Rev. 135, 184 (2002). While the district court in *Heinz* accepted this argument that the merger would enhance rather than stifle competition, the D.C. Circuit reversed, finding that the "district court's analysis [fell] short of the findings necessary for a successful efficiencies defense" in that case. *Heinz,* 246 F.3d at 721. As ***81** explained more fully in Section III.B.2.d below, the defendants' efficiency arguments fail here for some of the same reasons the D.C. Circuit identified in *Heinz.*

Finally, the defendants suggest that coordinated effects are unlikely because of the ease of expansion for other competitors in the market. As detailed above in the Court's discussion of barriers to entry and expansion, the Court does not find that ease of expansion would counteract likely anticompetitive effects.

Accordingly, the defendants have not rebutted the presumption that anticompetitive coordinated effects would result from the merger. To the contrary, the preponderance of the evidence suggests the acquisition is reasonably likely to cause such effects. *See id.* at 711–12 (finding, in market characterized by high barriers to entry and high HHI figures, that "no court has ever approved a merger to duopoly under similar circumstances.").

c. Unilateral Effects

A merger is likely to have unilateral anticompetitive effect if the acquiring firm will have the incentive to raise prices or reduce quality after the acquisition, independent of competitive responses from other firms. *See Swedish Match,* 131 F.Supp.2d at 169; Merger Guidelines § 6 ("The elimination of competition between two firms that results from their merger may alone constitute a substantial lessening of competition."). "The extent of direct competition between the products sold by the merging parties is central to the evaluation of unilateral price effects." Merger Guidelines § 6.1. As Judge Collyer in *CCC Holdings* explained:

> Unilateral effects in a differentiated product market are likely to be profitable under the following conditions: (1) the products must be differentiated; (2) the products controlled by the *merging* firms must be close substitutes, *i.e.,* "a substantial number of the customers of one firm would turn to the other in response to a price increase"; (3) other products must be sufficiently different from the products offered by the merging firms that a merger would make a small but significant and non-transitory price increase profitable for the merging firm; and (4) repositioning must be unlikely.

605 F.Supp.2d at 68 (citing *Oracle,* 331 F.Supp.2d at 1117–18).[31] Since the Court has already found that the preponderance of the evidence shows a reasonable likelihood

of coordinated effects, the Court need not reach the issue of unilateral effects. *See id.* at 67. The Court will discuss it, however, since there has been substantial argument on this topic and the Court's findings regarding unilateral effects bolster the conclusion that this proposed merger would violate Section 7 of the Clayton Act. As with coordinated effects, since the government has established its prima facie case, the burden is on the defendants to produce evidence showing that the presumption of anticompetitive effects that attaches to a merger in a highly concentrated market is unfounded, but the ultimate burden of proof remains with the government.

i. Elimination of Direct Competition Between the Merging Parties

The government argues that unilateral effects are likely because the merger will eliminate head-to-head competition between HRB and TaxACT that has benefited taxpaying American consumers. Much ***82** of the evidence indicating direct competition between HRB and TaxACT is discussed above in relation to the market definition. *See supra* Section III.A. The government emphasizes that HRB has lowered its DDIY prices to better compete with free online products, the category pioneered by TaxACT, and has directly considered TaxACT's prices in setting its own prices. *See* GX 53 at 2, 8; GX 188; GX 199 at 5–9. HRB has also determined the nature of its free offerings in response to competitive activity from TaxACT. *See, e.g.,* GX 304 at 5 (HRB changed timing of FFA offering in response to TaxACT's offer); GX 44 (recognizing need to compete with TaxACT offerings); GX 79 (comparing contemplated free product description on HRB's website with TaxACT's website); GX 51 at 4 (noting launch of free online products intended "[t]o match competitor offerings and stem online share loss to Intuit and TaxACT"). The government also points to HRB documents that appear to acknowledge that TaxACT has put downward pressure on HRB's pricing ability. *See* GX 296–16 at 20–21 (noting TaxACT's association with the "commoditization of online space" and downward price pressure from commoditization); GX 20 at 11 ({redacted}). From all of this evidence, and the additional evidence discussed in this opinion, it is clear that HRB and TaxACT are head-to-head competitors.

ii. Pledge to Maintain TaxACT's Current Prices

Defendants press a few different arguments against a finding of likely unilateral anticompetitive effects. First, the defendants have pledged to maintain TaxACT's current prices for three years.[32] While the Court has no reason to doubt that defendants would honor their promise, this type of guarantee cannot rebut a likelihood of anticompetitive effects in this case. *See Cardinal Health,* 12 F.Supp.2d at 64 (finding that "even with such guarantees [to maintain prices], the mergers would likely result in anti-competitive prices."). Even if TaxACT's list price remains the same, the merged firm could accomplish what amounts to a price increase through other means. For example, instead of raising TaxACT's prices, it could limit the functionality of TaxACT's products, reserving special features or innovations for higher priced, HRB-branded products. The merged firm could also limit the availability of TaxACT to consumers by marketing it more selectively and less vigorously. Indeed, the defendants concede that one immediate effect of the merger will be the removal of TaxACT from the IRS-sponsored FFA website, a marketing channel whose importance the defendants themselves emphasize in their argument regarding barriers to expansion. *See* Dunn, TT, 9/7/11 p.m., at 76–77; Defs.' Post–Trial Mem. at 22.

iii. Value Versus Premium Market Segments

Second, defendants argue that HRB and TaxACT are not particularly close competitors. The defendants contend that HRB and TaxACT largely compete in distinct segments of the market—with HRB in the higher-priced, "premium" segment and TaxACT in the lower-priced, "value" segment.[33] The defendants also argue that ***83** there can be no unilateral effects because the evidence shows that both TaxACT and HRB are closer competitors to TurboTax than to each other. Defs.' Post–Trial Mem. at 15.

As part of the argument that HRB and TaxACT focus on separate value and premium segments, the defendants argued that for several years in the mid–2000s, HRB was trapped in the "murky middle" between TaxACT's value offerings and Intuit's premium offerings. *See* DX 17 (Meyer Rep.) at 29; Meyer, TT, 9/13/2011 a.m., at 103–107. The defendants argue that, in recent years, HRB has positioned itself more clearly as a premium provider, as evidenced by the fact that the list price of its online federal plus state DDIY product has tracked Intuit's price more closely since 2010. *See* DX 17 (Meyer Rep.) at 29. This comparison is misleading because it focuses solely on the comparison of the list prices for the companies' highest-priced products. *See id.* at 29 n. 116. During the past few years, while HRB has increased the list price of its top-priced DDIY offering, it has also more heavily marketed free products. *See* GX 51 at 4; *see also* Meyer, TT, 9/13/2011 a.m., at 105–106. Accordingly, since 2008, HRB's average DDIY sales price has declined, while the average revenue per paid customer has remained roughly the same. *See* GX 296–7 ("Digital Tax Solutions FY11 Actual Deep Dive") at 1; Meyer, TT, 9/13/11 a.m., at 107–108.

Further, the evidence discussed above indicating direct price and feature competition between HRB and TaxACT negates the conclusion that they operate in separate value and premium segments of the market. There are certainly occasional references to different pricing levels in the defendants' documents. *See* GX 20 at 11 (HRB document noting {redacted}) (emphasis added). This hardly means that the companies are not in close competition, however. Rather, as Mr. Dunn's testimony reflects, TaxACT competes with capital-rich HRB and Intuit by offering high-quality products at substantially lower prices. *See* Dunn, TT, 9/7/11 p.m., at 71–72 (noting that rather than attempting to outspend its richer competitors on marketing, TaxACT's growth strategy has depended on providing "great customer service, a great product, and a great customer experience" for a much lower price, including free). *Id.* This type of healthy competition benefits taxpaying consumers.

The fact that Intuit may be the closest competitor for both HRB and TaxACT also does not necessarily prevent a finding of unilateral effects for this merger. *See* Areeda & Hovenkamp, ¶ 914, 77–80 (explaining that the merging parties need not be the closest rivals for there to be unilateral anticompetitive effects); *see also* Commentary on the Horizontal Merger Guidelines (2006) at 28 ("A merger may produce significant unilateral effects even though a non-merging product is the 'closest' substitute for every merging product ..."). Using a simple estimate of diversion based on market share would indeed suggest that HRB and TaxACT are each other's second closest rivals after Intuit.[34] ***84** *See* GX 121 (Warren–Boulton Rep.) at 44 (explaining that using market share to estimate diversion is a "benchmark" assumption in standard empirical models of consumer demand).

iv. Merged Company's Combined Market Share

Another argument that the defendants present against a likelihood of unilateral effects is that, in their view, unilateral effects cannot be demonstrated where the combined firm's market share does not surpass a certain threshold. The defendants point out that in *Oracle,* the court stated that "[a] presumption of anticompetitive effects from a combined share of 35% in a differentiated products market is unwarranted. Indeed, the opposite is likely true." 331 F.Supp.2d at 1123. The *Oracle* court stated that "[t]o prevail on a differentiated products unilateral effects claim, a plaintiff must prove a relevant market in which the merging parties would have essentially a monopoly or dominant position." *Id.* Some commentators have criticized this standard, however, because "impermissible price increases ... can be achieved on far lower market shares" than *Oracle's* standard evidently requires. Areeda & Hovenkamp ¶ 914, at 84. Indeed, Judge Brown's subsequent opinion from this Circuit in *Whole Foods* implied that a market definition itself may not even be required for proving a Section 7 violation based on unilateral effects. *See* *Whole Foods,* 548 F.3d at 1036. In a footnote, Judge Brown explained that "a merger between two close competitors can sometimes raise antitrust concerns due to unilateral effects in highly differentiated markets. In such a situation, it might not be necessary to understand the market definition to conclude a preliminary injunction should issue."[35] ***85** *Id.* at n. 1 (citation omitted). The Court therefore declines the defendants' invitation, in reliance on *Oracle,* to impose a market share threshold for proving a unilateral effects claim.[36]

v. Post–Merger Dual Brand Strategy

HRB's plans for the post-merger company raise anticompetitive questions. Post-merger, HRB's stated plan is to maintain both the HRB and TaxACT brands—with the HRB-brand focusing on higher priced—products and the TaxACT brand focusing on the lower-priced products. *See* Bennett, TT, 9/6/11 a.m., 101–102; DX 1005 at 1. HRB's general pre-merger pricing strategy has been to price its products a bit below Intuit's products. Bennett, TT, 9/6/11 a.m., at 99. Part of HRB's post-merger strategy, however, appears to involve raising prices on HRB-branded products. Under this two-brand strategy, HRB would price its "premium" HRB-branded products equal to or above Intuit's prices. *See* Bennett, TT, 9/6/11 a.m., 101–102; DX 1005 at 1. At the same time, the company would "offer TaxACT as its free and value brand." DX 17 (Meyer Rep.) at 78. Yet, the defendants have never convincingly explained how this two-brand strategy would work in practice because defendants have repeatedly emphasized how important "free" product offerings are for all DDIY brands. *See* DFF ¶ 185 ("Free is a highly profitable method of acquiring customers for H & R

Block."); DX 600 at 10 (HRB Board of Directors presentation for merger approval stating that after the merger TaxACT would be the "low cost value provider focused on free" but that the company would "[c]ontinue to offer a free product in the HRB brand to drive client acquisition").

Part of the government's concern with HRB's two-brand strategy is that the incentives for the combined firm in marketing and developing the TaxACT product would be quite different from the incentives that exist in the current market. HRB may feel comfortable raising its "premium" prices because it knows that consumers looking for lower-cost DDIY options would be most likely to migrate to TaxACT, the established "value leader" in the market. Since HRB will also control TaxACT post-merger, however, HRB can still ensure that TaxACT's value proposition does not get "too good" and undermine the paid HRB products with the highest profit margins. For example, HRB might restrict the features of TaxACT's free and low-cost products to ensure they do not cannibalize sales of HRB's higher priced offerings. Indeed, assuming that there are high barriers to entry and expansion, this strategy would appear logical because it would maximize HRB's profit per customer. Post-merger, TaxACT will not have the same incentives it has today to develop robust free and low-cost offerings that can compete with the functionality offered by HRB and Intuit. *See* Warren–Boulton, TT, 9/8/11 p.m., at 32–33. Thus, this merger could potentially have the effect of stifling price and feature competition compared with maintaining TaxACT as an independent firm.

***86 vi. Merger Simulation Shows Likely Unilateral Price Increase**

The government's expert economist, Dr. Warren–Boulton, did a merger simulation analysis that suggests a unilateral price increase is likely. Warren–Boulton, TT, 9/9/11 a.m., at 5–11; GX 121 (Warren–Boulton Rep.) at 52. The key factors in this simulation are HRB and TaxACT's price-cost margins and the diversion ratios between their products. *Cf.* Swedish Match, 131 F.Supp.2d at 169 ("High margins and high diversion ratios support large price increases, a tenet endorsed by most economists.").

(a). Diversion Ratios Between the Merging Parties' DDIY Products

As explained above, the diversion rate from TaxACT to HRB measures the proportion of customers that would leave TaxACT in response to a price increase and switch to HRB. Dr. Warren–Boulton's report explains that higher diversion rates between merging parties "allow the firms to recapture more lost sales following a price increase, and therefore lead to greater upward pricing pressure and post-merger unilateral price increases." GX 121 (Warren–Boulton Rep.) at 44. Dr. Warren–Boulton estimated diversion ratios from two sources: the parties' DDIY market share data and the IRS switching data.[37] *Id.* at 44–48.

By assuming diversion rates in accordance with market share, Dr. Warren–Boulton estimated the diversion rate from TaxACT to HRB to be 12 percent and from HRB to TaxACT to be 14 percent. *Id.* at 44–45. Dr. Warren–Boulton notes that these diversion estimates likely underestimate what the actual post-merger diversion rates will be since the merged company will likely implement marketing strategies to keep customers within the umbrella of the combined company. *Id.* at 45.

Dr. Warren–Boulton estimated diversion ratios using IRS switching data as well. As discussed above in Section III.A.3.a, he also used this switching data to test the relevant market definition. As previously noted in that prior discussion, switching data is not equivalent to diversion, since diversion measures switching in response to a price increase as opposed to all switching generally. In particular, Dr. Warren–Boulton found that switching data is especially likely to overstate diversion from DDIY products to assisted preparation. *Id.* at 46–47. Therefore, Dr. Warren–Boulton discounted the switching rates from DDIY to assisted by half to correct for this effect.[38] *Id.* After this correction, Dr. Warren–Boulton calculated estimated diversion rates from TaxACT to HRB and from HRB to TaxACT of 12 percent. *Id.* at 47–48.

(b). Price–Cost Margins

The next step in his analysis was to estimate the firms' price-cost margins. "All else equal, higher margins lead to greater unilateral price increases because ***87** the value of recaptured sales is higher." *Id.* at 48. Using a procedure described in his report, Dr. Warren–Boulton estimated {that the merging parties have high margins}. *Id.* at 49. The merger simulation also required quantities of units sold and average revenue per unit. Dr. Warren–Boulton obtained this data from the companies' submissions. *Id.* at 50.

(c). Simulation Results

Using all of these data, Dr. Warren–Boulton performed a linear demand Bertrand model simulation. *Id.* at 51. Unless there are significant efficiencies from the merger that are passed on to consumers, this simulation predicts a unilateral price increase.[39] *Id.* at 52. Assuming diversion ratios according to market share, the model predicts TaxACT's price will increase by 12.2 percent and HRB's price by 2.5 percent. *Id.* Assuming diversion ratios based on the IRS switching data as discussed above, the model predicts TaxACT's price will increase by 10.5 percent and HRB's price by 2.2 percent. *Id.*

(d). Critique of the Simulation's Unilateral Effects Results

The defendants attack Dr. Warren–Boulton's simulation on several grounds. The defendants reiterate their critique that switching data is an inappropriate proxy for diversion data. Further, defendants criticize the way in which Dr. Warren–Boulton discounted the switching rates from DDIY products to assisted preparation. *See* Warren–Boulton, TT, 9/9/9 p.m., at 60–65. In addition, the defendants contend that Dr. Warren–Boulton's simulator model is flawed because it will always predict a price increase with any positive diversion and because the model is "static," does not take various factors into account, such as the parties' different products, innovation, and marketing, and would never predict that a firm would offer free products, even though free products are a staple of the industry. DX 17 (Meyer Rep.) at 74–75.

The Court agrees that Dr. Warren–Boulton's discounting by half of the switching data from DDIY to assisted appears imprecise. Dr. Warren–Boulton clarified in his report, however, that "the model still predicts significant unilateral harm when non-discounted switching rates are used to approximate diversion rates." GX 121 (Warren–Boulton Rep.) at 47. Further, and more importantly, Dr. Warren–Boulton also estimated diversion ratios based on market share and the Court has concluded above that DDIY is the appropriate relevant product market.[40]

As for the defendants' critiques about Dr. Warren–Boulton's economic model itself, Dr. Warren–Boulton addressed these directly. First, insofar as the model will predict at least some price increase absent efficiencies with any positive diversion ratios, Dr. Warren–Boulton explained that outcome is fully consistent with correct economic theory. GX 665 (Warren–Boulton Reply Rep.) at 14 ("Economic theory concludes that absent merger specific efficiencies, a merger between competing firms will cause the merging firms to increase their prices by at least some ***88** amount. Thus, it is not a deficiency, but a strength, of merger simulation models that they reflect this aspect of economic reality."). In response to the critique that his "static" model would never predict that companies would offer free products, Dr. Warren–Boulton contends that because free DDIY products are often packaged with other paid products, these "free" products actually provide the companies with a positive average revenue per free unit, which his model does take into account. *See id.* at 14–15. As for the remaining critiques that the model does not factor in marketing or innovation, Dr. Warren–Boulton replies that any model is inherently a simplification of the real world, but there is no reason to assume these factors negate the price effect findings of the model. *Id.*

The Court finds that the merger simulation model used by the government's expert is an imprecise tool, but nonetheless has some probative value in predicting the likelihood of a potential price increase after the merger. The results of the merger simulation tend to confirm the Court's conclusions based upon the documents, testimony, and other evidence in this case that HRB and TaxACT are head-to-head competitors, that TaxACT's competition has constrained HRB's pricing, and that, post-merger, overall prices in the DDIY products of the merged firms are likely to increase to the detriment of the American taxpayer.

vii. Repositioning Unlikely to Defeat Unilateral Price Increase

Repositioning by smaller competitors in response to a unilateral price increase is unlikely for the same reasons discussed above regarding barriers to entry and expansion. *See* Merger Guidelines § 6.1 ("Repositioning is a supply-side response that is evaluated much like entry, with consideration given to timeliness, likelihood, and sufficiency.").

Repositioning by Intuit is also unlikely due to the coordinated effects incentives discussed above. The Merger Guidelines make clear that a unilateral price increase may be defeated where "non-merging firms [are] able to reposition their products to offer close substitutes for the products offered by the merging firms." Merger Guidelines § 6.1. Since the Court has already found that HRB and Intuit would have coordinated pricing incentives post-merger, that finding implies that repositioning by Intuit would not prevent HRB from raising prices. By relying on its finding of coordinated effects to predict the likelihood of repositioning by Intuit, the Court acknowledges that its unilateral effects finding is not strictly "unilateral" in the sense that it does take coordination into account. The case law and the Merger Guidelines, however, require that "repositioning" be considered in assessing unilateral effects, and the repositioning inquiry necessarily entails a consideration of the likely actions of other competitors in response to a price increase. *See CCC Holdings, Inc.,* 605 F.Supp.2d at 67 (noting that the distinction between coordinated and unilateral effects "has more significance in law than it does in economics" and citing expert testimony describing the distinction as "artificial").

viii. Finding Unilateral Anticompetitive Effects Likely

On balance, and considering the evidence as a whole, the Court finds that, absent efficiencies, the plaintiff has demonstrated a reasonable likelihood of unilateral effects by a preponderance of the evidence. *See Swedish Match,* 131 F.Supp.2d at 169 (finding likelihood of unilateral price increase where merger would eliminate one of the larger merging firm's "primary ***89** direct competitors," "the third largest selling" brand "that has consistently played a role in constraining the price" of the larger firm's products); *see also Staples,* 970 F.Supp. at 1083 (finding anticompetitive effects where the "merger would eliminate significant head-to-head competition between the two lowest cost and lowest priced firms in the ... market.").

The Court will now turn to the defendants' final rebuttal argument—the existence of significant, merger-specific efficiencies.

d. Post–Merger Efficiencies

One of the key benefits of a merger to the economy is its potential to generate efficiencies. *See Heinz,* 246 F.3d at 720. As the Merger Guidelines recognize, merger-generated efficiencies can "enhance the merged firm's ability and incentive to compete, which may result in lower prices, improved quality, enhanced service, or new products." Merger Guidelines § 10. Courts have recognized that a showing of sufficient efficiencies may rebut the government's showing of likely anticompetitive effects. *Heinz,* 246 F.3d at 720. High market concentration levels require "proof of extraordinary efficiencies," however, and courts "generally have found inadequate proof of efficiencies to sustain a rebuttal of the government's case." *Id.* (citation omitted).

"[T]he court must undertake a rigorous analysis of the kinds of efficiencies being urged by the parties in order to ensure that those 'efficiencies' represent more than mere speculation and promises about post-merger behavior." *Id.* at 721. As the Merger Guidelines explain, "[c]ognizable efficiencies are merger-specific efficiencies that have been verified and do not arise from anticompetitive reductions in output or service." Merger Guidelines § 10. Efficiencies are inherently "difficult to verify and quantify" and "it is incumbent upon the merging firms to substantiate efficiency claims" so that it is possible to "verify by reasonable means the likelihood and magnitude of each asserted efficiency, how and when each would be achieved (and any costs of doing so), how each would enhance the merged firm's ability and incentive to compete, and why each would be merger-specific." *Id.* In other words, a "cognizable" efficiency claim must represent a type of cost saving that could not be achieved without the merger and the estimate of the predicted saving must be reasonably verifiable by an independent party.

The defendants claim that "H & R Block's primary motivation for the TaxACT acquisition is to achieve significant synergies that will enable H & R Block to provide better products at a lower price and to compete more effectively."[41] Defs.' Post–Trial Mem. at 24. The defendants predict that they will achieve over ${redacted} million in annual efficiencies in ten different areas.[42] *Id.* at 24–25.

The chart below summarizes the defendants' claimed efficiencies and predicted annual cost savings:

Efficiency	Description	Estimated Annual Cost Saving
1. Online IT	{redacted}	${redacted} million

2. Emerald Card	Allowing TaxACT's prepaid debit card offerings to be fulfilled through HRB's bank	${redacted} million
3. H & R Block Bank Refund Anticipation Checks	Funding TaxACT's refund anticipation checks through HRB's bank	${redacted} million
4. {redacted}	{redacted}	${redacted} million
5. {redacted}	{redacted}	${redacted} million
6. {redacted}	{redacted}	${redacted} million
7. Corporate Website	{redacted}	${redacted} million
8. Software IT	{redacted}	${redacted} million
9. Download Fulfillment	{redacted}	${redacted} million
10. {redacted}	{redacted}	${redacted} million

***90** DFF ¶ 292; *see also* DX236–007.

Dr. Mark E. Zmijewski, an expert witness for the government, analyzed the defendants' alleged efficiencies and concluded that—with the exception of {one efficiency related to eliminating third-party contracts}—the proposed efficiencies identified by the defendants are either not merger-specific or not verifiable.[43] *See generally* GX 664 (Zmijewski Rep.).

The Court agrees with Dr. Zmijewski that the defendants have not demonstrated that their claimed efficiencies are merger-specific. If a company could achieve certain cost savings without any merger at all, then those stand-alone cost savings cannot be credited as merger-specific efficiencies. The defendants must show that their "efficiencies ... cannot be achieved by either company alone because, if they can, the merger's asserted benefits can be achieved without the concomitant loss of a competitor." *Heinz,* 246 F.3d at 722. For example, if HRB's {redacted} are not running in the most efficient, cost-effective manner, it is hard to see why a merger with TaxACT is necessary to improve their cost structure. The reasons HRB claims it has higher {redacted} costs than TaxACT include (1) that TaxACT has lower labor costs in Cedar Rapids than HRB has in Kansas City and (2) that TaxACT is simply more cost conscious. Bowen, TT, 9/15/11 p.m., (sealed), at 104–105. Plainly, then, HRB could therefore achieve at least some of the {redacted} cost savings on its own—by relocating {redacted} and taking a more cost conscious attitude toward them. Likewise, the efficiencies related to bringing HRB's outsourced {redacted} functions in-house are unlikely to be wholly merger-specific.

Similarly, the defendants' IT-related efficiencies, which account for the largest efficiency claims, are not entirely merger-specific either. Both TaxACT and HRB witnesses testified that {redacted}—suggesting that the platform consolidation would result in at least some merger-specific efficiencies. *See* Dunn, TT, 9/8/11 p.m. (sealed), at 16–17; Bowen, TT, 9/15/11 p.m. (sealed), at 67–68. One way in which {redacted}. Dunn, TT, 9/8/11 p.m. (sealed), at 16–17; Bowen, TT, 9/15/11 p.m. (sealed), at 67–68; Bowen, TT, 9/19/11 a.m., at 12. Thus, the IT consolidation efficiency actually can be thought of as entailing two distinct consolidations: (1) ***91** {redacted} and (2) HRB's platform will be merged with TaxACT's platform. Bowen, TT, 9/19/11 a.m., at 12. Yet the claimed IT efficiency is not discounted for whatever savings HRB could obtain by {performing the first consolidation} on its own—an option the company considered in the past but did not adopt—and the defendants did not present evidence explaining why, as a technical matter, {performing the first consolidation} would not be feasible or, in fact, would not be more feasible than {the double consolidation}. Bowen, TT, 9/19/11 a.m., at 12; 9/15/11 p.m. (sealed) at 75. The IT efficiencies also apparently account for cost reductions associated with TaxACT's more cost-conscious culture and practices. *See* Dunn, TT, 9/8/11 a.m. (sealed), at 5 ("for Block to achieve these [efficiencies] would require them to come up with an entirely different corporate culture {redacted}.").

Even if the efficiencies were entirely merger-specific, many of them are also not independently verifiable. As Dr. Zmijewski explained, for the various efficiencies that involve the activities now performed by HRB or its vendors that are proposed to be transferred to TaxACT, TaxACT's predicted cost figures for taking over these activities were not based on an analysis of facts that could be verified by a third party. Instead, TaxACT based its cost estimates on management judgments. GX 664 (Zmijewski Rep.) at 22–25. By comparison, HRB's estimated costs for the relevant activities were rooted in accounting and planning documents prepared in the ordinary course of business.

The testimony at the hearing confirmed that TaxACT's recurring cost estimates were largely premised on its managers experiential judgment about likely costs, rather than a detailed analysis of historical accounting data. *See, e.g.,* Dunn, TT, 9/8/11 p.m. (sealed), at 28–31. While reliance on the estimation and judgment of experienced executives about costs may be perfectly sensible as a business matter, the lack of a verifiable method of factual analysis resulting in the cost estimates renders them not cognizable by the Court. If this were not so, then the efficiencies defense might well swallow the whole of Section 7 of the Clayton Act because management would be able to present large efficiencies based on its own judgment and the Court would be hard pressed to find otherwise. The difficulty in substantiating efficiency claims in a verifiable way is one reason why courts "generally have found inadequate proof of efficiencies to sustain a rebuttal of the government's case." *Heinz,* 246 F.3d at 720 (citation omitted); *see also Staples,* 970 F.Supp. at 1089 (finding "defendants failed to produce the necessary documentation for verification" of efficiencies).

Particular scrutiny of HRB's efficiencies claims is also warranted in light of HRB's historical acquisitions. In 2006, HRB acquired a software company called TaxWorks, which was renamed "RedGear." Bowen, TT, 9/15/11 p.m. (sealed), at 84. For the RedGear acquisition, which was much smaller in scale than the proposed TaxACT deal, HRB projected a total of $ {redacted} million in efficiencies over three years. GX 1459 (February 2009 "Taxworks Financial Analysis") at 5. HRB failed to achieve these {efficiencies} {redacted}. *Id.* In this case, the efficiency estimates are much more aggressive, in that defendants are claiming approximately ${redacted} million in efficiencies for 2013 and ${redacted} million in annual savings going forward thereafter, as opposed to ${redacted} million over three years. *See* Bowen, TT, 9/15/11 p.m. (sealed), at 77–78. While HRB has attempted to learn from the mistakes of the RedGear acquisition, *id.* at 85–87, the Court finds that this history only underscores ***92** the need for any claimed efficiencies to be independently verifiable in order to constitute evidence that can rebut the government's presumption of anticompetitive effects.

Considering all of the evidence regarding efficiencies, the Court finds that most of the defendants' claimed efficiencies are not cognizable because the defendants have not demonstrated that they are merger-specific and verifiable.[44]

IV. CONCLUSION

The Court concludes that the proposed merger between HRB and TaxACT violates Section 7 of the Clayton Act because it is reasonably likely to cause anticompetitive effects. The law of this Circuit supports this conclusion. In *Heinz,* the Court of Appeals reversed a district court's denial of a preliminary injunction against a merger involving the second- and third-largest jarred baby food companies. 246 F.3d at 711–12. After noting the high barriers to entry and high HHI figures that characterized the market, the D.C. Circuit observed that "[a]s far as we can determine, no court has ever approved a merger to duopoly under similar circumstances." *Id.* at 717. The situation in this case is similar. The government established a prima facie case indicating that anticompetitive effects are likely to result from the merger. The defendants have not made a showing of evidence that rebuts the presumption of anticompetitive effects by demonstrating that the government's market share statistics give an inaccurate account of the merger's probable effects on competition in the relevant market. To the contrary, the totality of the evidence confirms that anticompetitive effects are a likely result of the merger, which would give H & R Block and Intuit control over 90 percent of the market for digital do-it-yourself tax preparation products.

Accordingly, the Court will enjoin H & R Block's proposed acquisition of TaxACT. An appropriate Order will accompany this Memorandum Opinion.

Footnotes

1 The Court provided this Memorandum Opinion to the parties in final form on October 31, 2011, but public release was delayed to ensure that no confidential business information that had been submitted under seal was released. Based on input from the parties, confidential business information has been redacted from the opinion, with such redactions reflected by the insertion of the text "{redacted}." In some instances, redacted confidential business information has been replaced by more general language that reflects the same underlying concepts without revealing the confidential business information. Such substitutions are indicated by braces surrounding the substituted text.

2 In this opinion, the Court will use the abbreviations "GX", "GTX", "DX", and "DTX" to refer to the government's exhibits, the government's trial exhibits, the defendants' exhibits, and the defendants' trial exhibits, respectively. "TT" refers to trial testimony. "PFF" refers the plaintiff's proposed findings of fact. "DFF" refers to the defendants' proposed findings of fact.

3 The denomination of different years in the tax industry can be somewhat confusing. Tax returns are typically due in the month of April following the relevant tax year. Thus, each "tax season" refers to the period when returns for the prior "tax year" are generally completed. For example, "tax season 2010" refers to returns filed primarily in early 2010, corresponding to income earned in "tax year 2009."

4 The business model of offering free products and then soliciting customers to purchase additional, related features or services is sometimes referred to as "freemium." *See* GX 130 ("H & R Block Strategic Planning Working Session, April 16 & 17, 2010") at 103 (" 'Freemium' is a known market dynamic that has arisen in multiple product categories and will continue to grow.").

5 Two current Supreme Court justices, in their prior capacities as judges on the Court of Appeals, participated in the D.C. Circuit's ruling in *Baker Hughes.* Then–Judge Clarence Thomas wrote the opinion and then-Judge Ruth Bader Ginsburg joined in it.

6 In their closing argument, the defendants chided the government for citing Clayton Act Section 7 cases brought by the Federal Trade Commission for the relevant standard to apply in this case rather than citing to *United States v. Baker Hughes Inc.,* 908 F.2d 981, 982–83 (D.C.Cir.1990), a case brought by the DOJ. Since this Circuit's FTC precedents themselves rely heavily on the analytical approach set forth in *Baker Hughes,* the defendants' distinction on this point is ultimately of little import. *See FTC v. H.J. Heinz Co.,* 246 F.3d 708, 715 (D.C.Cir.2001) ("In *United States v. Baker Hughes Inc.,* 908 F.2d 981, 982–83 (D.C.Cir.1990), we explained the analytical approach by which the government establishes a section 7 violation."). While a lesser showing is required to obtain preliminary relief in an FTC preliminary injunction case, as opposed to a full merits trial like this case, the Court must apply the *Baker Hughes* analytical framework in either type of Section 7 case.

7 "A relevant market has two components: (1) the relevant product market and (2) the relevant geographic market.... The 'relevant geographic market' identifies the geographic area in which the defendants compete in marketing their products or services." *FTC v. CCC Holdings, Inc.,* 605 F.Supp.2d 26, 37 (D.D.C.2009). The parties have stipulated that the relevant geographic market in this case is worldwide. Joint Pre–Hearing Statement ¶ IX, C, 12. DDIY products are provided online and can be used by any individual worldwide—either within the United States or abroad—who needs to prepare and file a U.S. tax return. The products at issue in this case are not used for preparation of foreign tax returns. *See* Pl.'s Mot. For Prelim. Inj. at 29–30. The Court accepts the parties' stipulation as to the relevant geographic market.

8 Courts have sometimes referred to such markets-within-markets as "submarkets." *See Brown Shoe,* 370 U.S. at 325, 82 S.Ct. 1502; *Whole Foods,* 548 F.3d at 1037–38 (Brown, J.). Other courts and commentators have criticized this "submarket" terminology as unduly confusing, however. *See* 5C Phillip E. Areeda & Herbert Hovenkamp, Antitrust Law ¶ 533, at 251 (3d ed. 2007) ("Courts sometimes describe the closest substitutes as a 'submarket' within a larger 'market' of less-close substitutes. Although degrees of constraint do in fact vary, the 'market' for antitrust purposes is the *one* relevant to the particular legal issue at hand.") (internal citations omitted); *Geneva Pharms. Tech. Corp. v. Barr Labs., Inc.,* 386 F.3d 485, 496 (2d Cir.2004) ("The term 'submarket' is somewhat of a misnomer, since the 'submarket' analysis simply clarifies whether two products are in fact 'reasonable' substitutes and are therefore part of the same market.").

9 The D.C. Circuit's decision in *Whole Foods* lacked a majority opinion. *See Whole Foods,* 548 F.3d at 1061 n. 8 (Kavanaugh, J., dissenting). Judges Brown and Tatel filed separate opinions concurring in the judgment to reverse the District Court and Judge Kavanaugh, in dissent, would have affirmed. *See id.* at 1032 (Brown, J.); *id.* at 1041 (Tatel, J.); *id.* at 1051 n. 1 (Kavanaugh, J., dissenting). Thus, in referring to the opinions in *Whole Foods,* the Court will indicate the name of the Judge whose opinion is cited.

10 The Merger Guidelines are not binding upon this Court, but courts in antitrust cases often look to them as persuasive authority. *See Staples,* 970 F.Supp. at 1081–82.

11 The defendants' primary argument for inclusion of both assisted and pen-and-paper in the relevant market is based upon their economic expert's analysis of data derived from two consumer surveys commissioned by the defendants. The Court will analyze the arguments of the defendants' expert economist separately below.

12 *See* GX 128 (HRB "TS 10 Market Dynamics" presentation) at 38 { redacted}; *see also id.* {redacted}; GX 293 (Intuit Dep.) at 21:9–14 ("The average price of a tax store is in the range of $200."); Bennett, TT, 9/6/11 p.m., at 100 (estimating $150 range for assisted returns offered at Jackson Hewitt and HRB offices at Wal–Mart locations).

13 By "net-net," Mr. Bennett meant that while there is customer switching between the DDIY and assisted businesses, the total share of customers in each has been relatively stable over the past few years, such that Mr. Bennett could conclude that the two business lines "do not steal customers back and forth net." Bennett, TT, 9/6/11 a.m., at 108.

14 The plaintiff presented expert testimony on market definition from Frederick R. Warren–Boulton, an economist at MiCRA, an economics consulting and research firm. GX 121 (Warren–Boulton Rep.) at 1. Dr. Warren–Boulton holds a B.A. from Yale University, a Ph.D. in economics from Princeton University, and formerly served as the chief economist for the Antitrust Division of the U.S. Department of Justice. *Id.* Dr. Warren–Boulton has previously served as an expert witness in other antitrust cases, including cases challenging the possible anticompetitive effects of a merger or acquisition. *Id.* (noting involvement in *FTC v. Staples, Inc.,* 970 F.Supp. 1066, 1074 (D.D.C.1997)).

The defendants presented expert testimony from Christine Siegwarth Meyer, an economist at National Economic Research Associates, Inc., an economics consulting and research firm. DX 17 (Meyer Rep.) at 1. Dr. Meyer holds a B.A. from the United States Military Academy at West Point, a Ph.D. in economics from the Massachusetts Institute of Technology, and has taught economics at the university level. *Id.* Dr. Meyer has not previously provided expert testimony regarding the possible anticompetitive effects of a merger or acquisition. Meyer, TT, 9/13/11 a.m., at 39.

15 Switching, as discussed further below, refers to the switching of consumers between different products for any reason. The IRS categorizes tax returns into one of three complexity categories: Simple, Intermediate, and Complex. Accordingly, the IRS data only reflects complexity changes that are sufficient to result in assignment to a different one of the three categories.

16 One limitation in the IRS data set is that if a taxpayer uses a DDIY product to prepare the return, but then prints and mails the return instead of e-filing it, the IRS does not attribute the filing to the DDIY provider and instead lists it in a generic "v-coded" pool of returns. At the hearing, the defendants' criticized the IRS switching data set as problematic on these grounds, suggesting that up to 30 million returns may be "v-coded." *See* Warren–Boulton, TT 9/20/11 a.m., at 21–22. As Dr. Warren–Boulton fully addressed in his expert report, however, a "conservative method for dealing with this issue is to drop all v-coded returns from the analysis," which would still leave well over 100 million returns in the IRS data set. *Id.;* GX 121 (Warren–Boulton Rep.) at 47. The defendants did not identify any reason the v-coded data would be likely to skew the data set. Thus, even if the v-coded data is disregarded, the IRS data set remains extensive and reliable. It is also worth noting that the IRS data does not distinguish between the DDIY providers' various products, so only firm-level switching rates are available. GX 121 (Warren–Boulton Rep.) at 47

17 The formula for critical loss is L = X/(X + M), where L is the critical loss, X is the percentage price increase, and M is the hypothetical monopolist's gross margin. Assuming a 50 percent margin, which Dr. Warren–Boulton claims is a conservative estimate for firms in the DDIY market, then the critical loss for a 10 percent SSNIP is 16.7 percent. 16.7 percent is the result of applying 10 percent and 50 percent in the formula X/(X+M): .167 = .1/(.1+.5).

18 These are the last two years for which this data was available.

19 The defendants also referred obliquely in cross examination to an academic debate surrounding the proper way to perform critical loss analysis. Warren–Boulton, TT, 9/9/11 p.m., at 23. Dr. Warren–Boulton acknowledged his awareness of the existence of this debate and the defendants' counsel did not pursue the topic further. *Id.* The Court has no basis for disputing Dr. Warren–Boulton's application of critical loss analysis based merely on the existence of unspecified academic critiques. The Court notes that the critical loss analysis is specifically endorsed by the Merger Guidelines as a method for implementing the SSNIP test, *see* Merger Guidelines § 4.1.3, and has been accepted by courts as a standard methodology. *See* *FTC v. CCC Holdings Inc.,* 605 F.Supp.2d 26, 40 n. 16 (D.D.C.2009) ("Critical loss analysis is a standard tool used by economists to study potentially relevant markets."). The court in *CCC Holdings* ultimately did not rely on the expert's application of critical loss analysis due to what the court deemed a "gap" or oversight in the expert's reasoning, but the court nonetheless adopted the same relevant product market that the critical loss analysis had validated. *See* *id.* at 40–41.

20 Dr. Warren–Boulton's merger simulation is addressed further below in the Court's discussion of unilateral effects in Section III.B.2.c.

21 The Best of Both product, as the name implies, actually combines aspects of DDIY and assisted. It enables a return completed on HRB's DDIY product to be reviewed by a tax professional. *See* DX 17 (Meyer Rep.) at 13 n. 44. Thus, it is hardly surprising that this "hybrid" product, which features such exhaustive service, is priced more expensively than a typical DDIY product.

22 Dr. Meyer testified at the hearing that these anomalies are not reflected in the underlying simulator Excel data, but rather appear only in the printouts of simulator data contained in the internal HRB Powerpoint. In addition, Dr. Meyer explained that she redid her calculations excluding the anomalous data and came up with the same conclusions. *See* Meyer, TT, 9/12/11 p.m., at 45–47. Dr. Meyer never identified the source or cause of the anomalies, however. *Id.* at 49.

23 Prior to the hearing in this case, the government filed a motion in limine to exclude this survey from evidence and to limit Dr. Meyer's opinion to the extent it relied on the survey. *See* ECF No. 60. The government argued that the survey's wording and methodology made it inherently unreliable and therefore inadmissible. While the Court noted that the government had identified a number of defects in the methodology and wording of the survey, the Court concluded that these defects did not undermine the survey and the expert's reliance on it so overwhelmingly as to render the survey inadmissible, especially in a bench trial. *See* Memorandum Opinion and Order on Motion in Limine, September 6, 2011, ECF No. 84.

24 The response options varied among four different categories of filers, which are discussed further below. For example, the list of options presented to filers who completed a free federal tax return and no state return were: "I would prepare myself without help," "TurboTax Free Edition," "H & R Block at Home Free Edition," "Free TaxUSA Free Edition," "Complete Tax Free Basic," "An Accountant," "I would use a product on FFA [i.e., Free File Alliance]," "TaxSlayer Free Edition," "Jackson Hewitt Free Basic," "Tax$imple Free Basic," and "Other." GX604 at 2.

25 Dr. Dhar did not testify in person at the hearing, but provided an expert report and affidavit.

26 Of course, the Court remains cognizant that the plaintiff bears the burden of proof in demonstrating the relevant market.

27 For example, Dr. Meyer's description of the pricing simulator survey as one in which the "pricing of the various options changed across scenarios" was inaccurate insofar as several of the most significant products for the purposes of Dr. Meyer's analysis did not have any prices associated with them at all. *See* discussion *supra.*

28 New entrants to the market would not only face all of the barriers to expansion already faced by the existing small firms offering DDIY products, they would also have to develop their own products, including a software platform and a sufficient level of tax expertise. For entry to be considered timely, it typically must occur within approximately two years post-merger. *See* Commentary on the Horizontal Merger Guidelines (2006) at 45–46 (discussing prior Merger Guidelines § 3.2, which specified that timely entry should occur within two years). It is unlikely that an entirely new entrant to the market could compete meaningfully with the established DDIY firms within that time frame.

29 The defendants attempt to reframe this disparity by noting that their calculation of TaxSlayer's projected tax season 2015 marketing budget would slightly surpass the amount of TaxACT's actual 2011 marketing budget. Defs.' Post–Trial Mem. at 23. Setting aside the validity of the defendants' aggressive projections of TaxSlayer's 2015 budget, a proper comparison would have to be founded upon a comparable projection of TaxACT's 2015 budget—not TaxACT's actual 2011 numbers, for which the relevant comparison is TaxSlayer's 2011 numbers.

30 The government also cites an informal analysis written by Adam Newkirk, an analyst for HRB's DDIY business. Mr. Newkirk's analysis hypothesized that one possible reason for HRB to acquire TaxACT was that HRB and Intuit would jointly control a large DDIY market share post-merger and would "both obviously have great incentive to keep this channel profitable," while other potential purchasers of TaxACT "could decide to cut prices even further...." *See* Newkirk, TT, 9/7/11 a.m., at 100; GX 18. The Court finds that the government overemphasized the importance and relevance of Mr. Newkirk's analysis. The hearing testimony showed that Mr. Newkirk is a data analyst who had no decision-making role or authority in relation to the merger and that his discussion about the rationales for the merger was informal speculation. *See* Newkirk, TT, 9/7/11 p.m., at 42–44. Even so, this reasoning—independently reached by Intuit—is essentially a précis of the government's coordinated effects concern.

31 The first criterion in this analysis is satisfied because it is undisputed that DDIY products are differentiated.

32 Before the hearing, the plaintiff filed a motion in limine to exclude evidence relating to this guarantee. ECF No. 44. Following oral argument at the pre-hearing conference, the plaintiff withdrew this motion. *See* Minute Entry dated September 2, 2011.

33 In the defendants' submissions to the Antitrust Division of the DOJ prior to this litigation, the defendants appeared to emphasize this "value" and "premium" distinction as the basis for their definition of the relevant market. *See* GX 135 at 14–15; GX 629 at 18–30. As a result, the government accuses the defendants of having "tacked back and forth" regarding their proposed relevant market definition. Pl.'s Post–Trial Mem. at 1–2. While the Court agrees that the import of the hearing testimony about value and premium products was not always clear, the defendants' counsel clarified during closing arguments that the "only real relevance" of the premium versus value distinction was to show that HRB and TaxACT are not closest the competitors for the purposes of unilateral effects analysis. Defs.' Closing Argument, TT, 10/3/2011 a.m., at 93–94.

34 The relevance of the diversion estimates provided by the expert economists to the unilateral effects analysis is discussed more fully below.

35 "As a matter of applied economics, evaluation of unilateral effects does not require a market definition in the traditional sense at all." Areeda & Hovenkamp ¶ 913a, at 66. This is so because unilateral effects analysis focuses on measuring a firm's market power directly by "estimating the change in residual demand facing the post-merger firm. 'Residual demand' refers to the demand for a firm's goods after the output of all other competing firms has been taken into account." *Id.* at 63. If market power itself can be directly measured or estimated reliably, then in theory market definition is superfluous, at least as a matter of economics, because "[i]dentifying a market and computing market shares provide an indirect means for measuring market power." *Id.* ¶ 532a at 242–43; *see also id.* ¶ 521c. The 2010 revisions to the Merger Guidelines also appear to reflect this understanding. *See* Merger Guidelines § 4 ("The Agencies' analysis need not start with market definition. Some of the analytical tools used by the Agencies to assess competitive effects do not rely on market definition, although evaluation of competitive alternatives available to customers is always necessary at some point in the analysis."). As a legal matter, however, a market definition may be required by Section 7 of the Clayton Act. *See Brown Shoe,* 370 U.S. at 324, 82 S.Ct. 1502 ("[D]etermination of the relevant market is a necessary predicate to a finding of a violation of the Clayton Act because the threatened monopoly must be one which will substantially lessen competition 'within the area of effective competition.' Substantiality can be determined only in terms of the market affected. The 'area of effective competition' must be determined by reference to a product market (the 'line of commerce') and a geographic market (the 'section of the country').") (internal citation omitted); *see also Heinz,* 246 F.3d at 719 n. 17 ("Courts interpret 'line of commerce' [in the language of the Clayton Act] as synonymous with the relevant product market."). The Court is not aware of any modern Section 7 case in which the court dispensed with the requirement to define a relevant product market, although Judge Brown's opinion in *Whole Foods* may be read to endorse this possibility in accordance with the evolving understandings in economics. *See Whole Foods,* 548 F.3d at 1036 (Brown, J.) (stating that the *Baker Hughes* analytical

framework, which “rests on defining a market and showing undue concentration in that market,” “does not exhaust the possible ways to prove a § 7 violation on the merits”).

36 The Commentary on the Merger Guidelines, for its part, explains that while “[a]s an empirical matter, the unilateral effects challenges made by the Agencies nearly always have involved combined shares greater than 35%,” “the Agencies may challenge mergers when the combined share falls below 35% if the analysis of the mergers' particular unilateral competitive effects indicates that they would be likely substantially to lessen competition.” Commentary on the Horizontal Merger Guidelines (2006) at 26. “Combined shares less than 35% may be sufficiently high to produce a substantial unilateral anticompetitive effect if the products are differentiated and the merging products are especially close substitutes....” *Id.*

37 Dr. Warren–Boulton declined to rely on the defendants' proposed diversion data, derived from their consumer surveys, for the reasons already discussed *supra* in Section III.A.3.

38 As a basis for this conclusion that switching data overstates diversion and for his choice to discount the DDIY-to-assisted switching rate by half, Dr. Warren–Boulton relies upon HRB documents that suggest that more than half of switching from DDIY to assisted occurs for reasons unrelated to price, such as a change in tax complexity. GX 121 (Warren–Boulton Rep.) at 46 n. 128 (citing GX 635, GX 126). He also relies on IRS data showing that customers switching from DDIY to assisted were twice as likely to have a complexity increase as taxpayers who stayed within DDIY. *Id.* at 47.

39 As discussed in Section III.B.2.d below, the Court finds most of defendants' claimed efficiencies are not merger-specific or unverifiable.

40 The defendants suggest that Dr. Warren–Boulton's reliance on market share as an estimate of diversion ratios is somewhat circular in that his market shares derive from his market definition, which, in turn, relied on his use of switching data as a proxy for diversion ratios. DX 17 (Meyer Rep.) at 76. As discussed above, however, the Court's finding that DDIY is the correct relevant product market is not dependent on Dr. Warren–Boulton's analysis.

41 “Cognizable efficiencies” are a subset of “synergies.” “Synergies” refer more generally to any business performance benefits that result from the merger of two companies. *See* Zmijewski, TT, 9/19/11 a.m., at 99.

42 Originally, the defendants claimed 11 efficiencies, including an efficiency related to {redacted}. This task is “really not an efficiency” but “an additional cost,” Dunn, TT, 9/8/11 p.m. (sealed) at 7, and defendants do not reference it in their proposed findings of fact. DFF ¶ 291.

43 Dr. Zmijewski is a professor of accounting and deputy dean at The University of Chicago Booth School of Business and a founder and principal of Navigant Economics, a consulting firm. GX 664 (Zmijewski Rep.) at 5. He holds a Ph.D. in accounting. *Id.*

44 In addition, the defendants have not addressed how much of the claimed efficiencies would be passed through to consumers. *See Staples,* 970 F.Supp. at 1090 (analyzing projected pass-through rate for claimed efficiencies).

R.S.C., 1985, c. C-34

An Act to provide for the general regulation of trade and commerce in respect of conspiracies, trade practices and mergers affecting competition

Short Title

Short title

1 This Act may be cited as the *Competition Act*.

R.S., 1985, c. C-34, s. 1; R.S., 1985, c. 19 (2nd Supp.), s. 19.

PART I

Purpose and Interpretation

Purpose

Purpose of Act

1.1 The purpose of this Act is to maintain and encourage competition in Canada in order to promote the efficiency and adaptability of the Canadian economy, in order to expand opportunities for Canadian participation in world markets while at the same time recognizing the role of foreign competition in Canada, in order to ensure that small and medium-sized enterprises have an equitable opportunity to participate in the Canadian economy and in order to provide consumers with competitive prices and product choices.

R.S., 1985, c. 19 (2nd Supp.), s. 19.

Interpretation

Definitions

2 (1) In this Act,

article means real and personal property of every description including

(a) money,

L.R.C., 1985, ch. C-34

Loi portant réglementation générale du commerce en matière de complots, de pratiques commerciales et de fusionnements qui touchent à la concurrence

Titre abrégé

Titre abrégé

1 *Loi sur la concurrence*.

L.R. (1985), ch. C-34, art. 1; L.R. (1985), ch. 19 (2^e suppl.), art. 19.

PARTIE I

Objet et définitions

Objet

Objet

1.1 La présente loi a pour objet de préserver et de favoriser la concurrence au Canada dans le but de stimuler l’adaptabilité et l’efficience de l’économie canadienne, d’améliorer les chances de participation canadienne aux marchés mondiaux tout en tenant simultanément compte du rôle de la concurrence étrangère au Canada, d’assurer à la petite et à la moyenne entreprise une chance honnête de participer à l’économie canadienne, de même que dans le but d’assurer aux consommateurs des prix compétitifs et un choix dans les produits.

L.R. (1985), ch. 19 (2^e suppl.), art. 19.

Définitions

Définitions

2 (1) Les définitions qui suivent s’appliquent à la présente loi.

article Biens meubles et immeubles de toute nature, y compris :

(e) the combination does not prevent or lessen or is not likely to prevent or lessen competition except to the extent reasonably required to undertake and complete the project or program.

Limitation

(2) For greater certainty, this section does not apply in respect of the acquisition of assets of a combination.

R.S., 1985, c. 19 (2nd Supp.), s. 45.

Exception where gains in efficiency

96 (1) The Tribunal shall not make an order under section 92 if it finds that the merger or proposed merger in respect of which the application is made has brought about or is likely to bring about gains in efficiency that will be greater than, and will offset, the effects of any prevention or lessening of competition that will result or is likely to result from the merger or proposed merger and that the gains in efficiency would not likely be attained if the order were made.

Factors to be considered

(2) In considering whether a merger or proposed merger is likely to bring about gains in efficiency described in subsection (1), the Tribunal shall consider whether such gains will result in

(a) a significant increase in the real value of exports; or

(b) a significant substitution of domestic products for imported products.

Restriction

(3) For the purposes of this section, the Tribunal shall not find that a merger or proposed merger has brought about or is likely to bring about gains in efficiency by reason only of a redistribution of income between two or more persons.

R.S., 1985, c. 19 (2nd Supp.), s. 45.

Limitation period

97 No application may be made under section 92 in respect of a merger more than one year after the merger has been substantially completed.

R.S., 1985, c. 19 (2nd Supp.), s. 45; 2009, c. 2, s. 430.

e) l’association d’intérêts n’a pas, sauf dans la mesure de ce qui est raisonnablement nécessaire pour que le projet ou programme soit entrepris et complété, l’effet d’empêcher ou de diminuer la concurrence ou n’aura vraisemblablement pas cet effet.

Restriction

(2) Il est entendu que le présent article ne s’applique pas à l’égard de l’acquisition d’éléments d’actif d’une association d’intérêts.

L.R. (1985), ch. 19 (2^e suppl.), art. 45.

Exception dans les cas de gains en efficience

96 (1) Le Tribunal ne rend pas l’ordonnance prévue à l’article 92 dans les cas où il conclut que le fusionnement, réalisé ou proposé, qui fait l’objet de la demande a eu pour effet ou aura vraisemblablement pour effet d’entraîner des gains en efficience, que ces gains surpasseront et neutraliseront les effets de l’empêchement ou de la diminution de la concurrence qui résulteront ou résulteront vraisemblablement du fusionnement réalisé ou proposé et que ces gains ne seraient vraisemblablement pas réalisés si l’ordonnance était rendue.

Facteurs pris en considération

(2) Dans l’étude de la question de savoir si un fusionnement, réalisé ou proposé, entraînera vraisemblablement les gains en efficience visés au paragraphe (1), le Tribunal évalue si ces gains se traduiront :

a) soit en une augmentation relativement importante de la valeur réelle des exportations;

b) soit en une substitution relativement importante de produits nationaux à des produits étrangers.

Restriction

(3) Pour l’application du présent article, le Tribunal ne conclut pas, en raison seulement d’une redistribution de revenu entre plusieurs personnes, qu’un fusionnement réalisé ou proposé a entraîné ou entraînera vraisemblablement des gains en efficience.

L.R. (1985), ch. 19 (2^e suppl.), art. 45.

Prescription

97 Le commissaire ne peut présenter une demande en vertu de l’article 92 à l’égard d’un fusionnement qui est essentiellement complété depuis plus d’un an.

L.R. (1985), ch. 19 (2^e suppl.), art. 45; 2009, ch. 2, art. 430.

(c) the agreement referred to in paragraph (a) restricts the range of activities that may be carried on pursuant to the combination, and contains provisions that would allow for its orderly termination.

R.S., 1985, c. 19 (2nd Supp.), s. 45.

b) aucun changement dans le contrôle respectif sur les parties à l'association d'intérêts ne résulte de l'association en question;

c) l'entente visée à l'alinéa a) restreint l'éventail des activités qui peuvent être exercées en application de l'association d'intérêts et prévoit sa propre expiration selon un mode organisé.

L.R. (1985), ch. 19 (2e suppl.), art. 45.

General

General exemptions

113 The following classes of transactions are exempt from the application of this Part:

(a) a transaction all the parties to which are affiliates of each other;

(a.1) a transaction in respect of which the Minister of Finance has certified to the Commissioner under paragraph 94(b) that it is, or would be, in the public interest;

(b) a transaction in respect of which the Commissioner has issued a certificate under section 102;

(c) a transaction in respect of which the Commissioner or a person authorized by the Commissioner has waived the obligation under this Part to notify the Commissioner and supply information because substantially similar information was previously supplied in relation to a request for a certificate under section 102; and

(d) such other classes of transactions as may be prescribed.

R.S., 1985, c. 19 (2nd Supp.), s. 45; 1991, c. 45, s. 550, c. 46, s. 594, c. 47, s. 717; 1999, c. 2, ss. 30, 37; 2001, c. 9, s. 580.

Dispositions générales

Exceptions d'application générale

113 La présente partie ne s'applique pas aux catégories suivantes de transactions :

a) une transaction impliquant exclusivement des parties qui sont toutes affiliées entre elles;

a.1) une transaction à propos de laquelle le ministre des Finances certifie au commissaire en vertu de l'alinéa 94b) qu'elle est ou serait dans l'intérêt public;

b) une transaction à l'égard de laquelle le commissaire a remis un certificat en vertu de l'article 102;

c) une transaction à l'égard de laquelle le commissaire ou son délégué a renoncé à l'avis et à la fourniture de renseignements prévus par la présente partie parce que des renseignements essentiellement semblables ont été fournis antérieurement relativement à la demande de certificat prévue à l'article 102;

d) toute autre catégorie de transactions que prévoient les règlements.

L.R. (1985), ch. 19 (2e suppl.), art. 45; 1991, ch. 45, art. 550, ch. 46, art. 594, ch. 47, art. 717; 1999, ch. 2, art. 30 et 37; 2001, ch. 9, art. 580.

Anti-avoidance

Application of sections 114 to 123.1

113.1 If a transaction or proposed transaction is designed to avoid the application of this Part, sections 114 to 123.1 apply to the substance of the transaction or proposed transaction.

2022, c. 10, s. 271.

Anti-évitement

Application des articles 114 à 123.1

113.1 Lorsqu'une transaction ou une transaction proposée est conçue dans le but d'éviter l'application de la présente partie, les articles 114 à 123.1 s'appliquent à l'objet de la transaction ou de la transaction proposée.

2022, ch. 10, art. 271.

Notice and Information

Notice of proposed transaction

114 (1) Subject to this Part, the parties to a proposed transaction shall, before the transaction is completed,

Avis et renseignements

Avis relatifs aux transactions proposées

114 (1) Sous réserve de la présente partie, les parties à une transaction proposée sont tenues, avant que celle-ci notify the Commissioner that the transaction is proposed and supply the Commissioner with the prescribed information in accordance with this Part, if

(a) a person, or two or more persons pursuant to an agreement or arrangement, propose to acquire assets in the circumstances set out in subsection 110(2), to acquire shares in the circumstances set out in subsection 110(3) or to acquire an interest in a combination in the circumstances set out in subsection 110(6);

(b) two or more entities propose to amalgamate in the circumstances set out in subsection 110(4); or

(c) two or more persons propose to form a combination in the circumstances set out in subsection 110(5).

soit complétée, d’aviser le commissaire du fait que la transaction est proposée et de fournir à celui-ci les renseignements réglementaires conformément à la présente partie, si :

a) une ou plusieurs personnes, en conséquence d’un accord ou d’un arrangement, se proposent d’acquérir des éléments d’actif dans les circonstances visées au paragraphe 110(2), d’acquérir des actions dans les circonstances visées au paragraphe 110(3) ou d’acquérir des titres de participation dans une association d’intérêts dans les circonstances visées au paragraphe 110(6);

b) au moins deux entités se proposent de fusionner dans les circonstances visées au paragraphe 110(4);

c) au moins deux personnes se proposent de former une association d’intérêts dans les circonstances visées au paragraphe 110(5).

Additional information

(2) The Commissioner or a person authorized by the Commissioner may, within 30 days after receiving the prescribed information, send a notice to the person who supplied the information requiring them to supply additional information that is relevant to the Commissioner’s assessment of the proposed transaction.

Renseignements supplémentaires

(2) Le commissaire ou son délégué peut, dans les trente jours suivant la réception des renseignements réglementaires, envoyer à la personne qui les a fournis un avis exigeant qu’elle lui fournisse des renseignements supplémentaires nécessaires à l’examen par le commissaire de la transaction proposée.

Contents of notice

(2.1) The notice shall specify the particular additional information or classes of additional information that are to be supplied.

Contenu de l’avis

(2.1) L’avis précise les renseignements supplémentaires ou catégories de renseignements supplémentaires à fournir.

Unsolicited bid

(3) If a proposed transaction is an unsolicited or hostile take-over bid in respect of an entity and the Commissioner receives prescribed information supplied under subsection (1) by a person who has commenced or has announced an intention to commence a take-over bid, the Commissioner shall, if he or she has not already received the prescribed information from the entity, immediately notify the entity that the Commissioner has received the prescribed information from that person and the entity shall supply the Commissioner with the prescribed information within 10 days after being so notified.

Offre non sollicitée

(3) Dans le cas où la transaction proposée est une offre d’achat visant à la mainmise non sollicitée ou hostile concernant une entité, si le commissaire reçoit les renseignements réglementaires prévus au paragraphe (1) d’une personne qui a commencé — ou a annoncé son intention de commencer — une offre d’achat visant à la mainmise et qu’il n’a toujours pas reçu de l’entité les renseignements réglementaires, il en avise immédiatement l’entité et celle-ci est alors tenue de les produire auprès de lui dans les dix jours suivant la réception de cet avis.

Notice and information

(4) Any of the persons required to give notice and supply information under this section may

(a) if duly authorized to do so, give notice or supply information on behalf of and in lieu of any of the others who are so required in respect of the same transaction; or

Avis et renseignements

(4) Une des personnes tenues de donner l’avis et de fournir les renseignements prévus par le présent article peut :

a) à condition d’y être valablement autorisée, donner l’avis ou fournir les renseignements pour le compte et au lieu des autres personnes qui y sont tenues à l’égard de la même transaction;

(b) give notice or supply information jointly with any of those others.

R.S., 1985, c. 19 (2nd Supp.), s. 45; 1999, c. 2, s. 31, c. 31, s. 53(F); 2009, c. 2, s. 437; 2018, c. 8, s. 120; 2022, c. 10, s. 272.

Prior notice of acquisitions

115 (1) It is not necessary to comply with section 114 in respect of a proposed acquisition of voting shares or of an interest in a combination where a limit set out in subsection 110(3) or (6) would be exceeded as a result of the proposed acquisition within three years immediately following a previous compliance with section 114 required in relation to the same limit.

Notice of future acquisition

(2) Where a person or persons who propose to acquire voting shares or an interest in a combination are required to comply with section 114 because the twenty or thirty-five per cent limit set out in subsection 110(3) or the thirty-five per cent limit set out in subsection 110(6) would be exceeded as a result of the acquisition, the person or persons may, at the time of the compliance, give notice to the Commissioner of a proposed further acquisition of voting shares or of an interest in a combination that would result in a fifty per cent limit set out in that subsection being exceeded, and supply the Commissioner with a detailed description in writing of the steps to be carried out in the further acquisition.

Exemption for further acquisitions of voting shares

(3) It is not necessary to comply with section 114 in respect of a proposed further acquisition referred to in subsection (2) if

(a) notice of the further acquisition is given to the Commissioner under subsection (2) and it is carried out in accordance with the description supplied under that subsection; and

(b) an additional notice of the further acquisition is given to the Commissioner in writing within twenty-one, and at least seven, days before the further acquisition.

b) donner l’avis ou fournir les renseignements conjointement avec l’une des autres personnes.

L.R. (1985), ch. 19 (2e suppl.), art. 45; 1999, ch. 2, art. 31, ch. 31, art. 53(F); 2009, ch. 2, art. 437; 2018, ch. 8, art. 120; 2022, ch. 10, art. 272.

Avis d’acquisition antérieure

115 (1) Il n’est pas nécessaire de se conformer à l’article 114 à l’égard d’une acquisition proposée d’actions comportant droit de vote ou de titres de participation dans une association d’intérêts dans les cas où une limite prévue aux paragraphes 110(3) ou (6) serait dépassée en conséquence de l’acquisition proposée dans les trois ans qui suivent le moment où l’on s’est conformé à l’article 114 à l’égard de la même limite.

Avis d’acquisition future

(2) Dans les cas où une ou des personnes qui proposent d’acquérir des actions comportant droit de vote ou des titres de participation dans une association d’intérêts sont tenues de se conformer à l’article 114 en raison du fait que la limite de vingt ou de trente-cinq pour cent fixée au paragraphe 110(3) ou la limite de trente-cinq pour cent fixée au paragraphe 110(6) serait dépassée en conséquence de l’acquisition, cette ou ces personnes peuvent, au moment de répondre aux exigences de cet article, aviser le commissaire d’une acquisition additionnelle proposée d’actions comportant droit de vote ou des titres de participation dans une association d’intérêts dans les cas où la conséquence de cette acquisition additionnelle serait le dépassement d’une limite de cinquante pour cent prévue à ce paragraphe, ainsi que lui fournir, par écrit, une description détaillée des démarches qui seront entreprises dans le cadre de l’acquisition additionnelle.

Exception : acquisitions ultérieures d’actions comportant droit de vote

(3) Il n’est pas obligatoire de se conformer à l’article 114 à l’égard d’une acquisition additionnelle proposée visée au paragraphe (2) si :

a) un avis de l’acquisition additionnelle proposée est donné au commissaire aux termes du paragraphe (2) et si celle-ci est mise en œuvre conformément à la description fournie en application de ce paragraphe;

b) un avis supplémentaire écrit de l’acquisition additionnelle est, dans les vingt et un jours de cette acquisition, mais au moins sept jours avant celle-ci, donné par écrit au commissaire lors de cette acquisition.

Limitation

(4) Subsection (3) does not apply in respect of a further acquisition unless the further acquisition is completed within one year after notice of it is given under subsection (2).

R.S., 1985, c. 19 (2nd Supp.), s. 45; 1999, c. 2, ss. 32, 37.

If information cannot be supplied

116 (1) If any of the information required under section 114 is not known or reasonably obtainable, or cannot be supplied because of the privilege that exists in respect of lawyers and notaries and their clients or because of a confidentiality requirement established by law, the entity or individual who is supplying the information may, instead of supplying the information, inform the Commissioner under oath or solemn affirmation of the matters in respect of which information has not been supplied and the reason why it has not been supplied.

If information not relevant

(2) If any of the information required under section 114 could not, on any reasonable basis, be considered to be relevant to an assessment by the Commissioner as to whether the proposed transaction would or would be likely to prevent or lessen competition substantially, the entity or individual who is supplying the information may, instead of supplying the information, inform the Commissioner under oath or solemn affirmation of the matters in respect of which information has not been supplied and why the information was not considered relevant.

If information previously supplied

(2.1) If any of the information required under section 114 has previously been supplied to the Commissioner, the entity or individual who is supplying the information may, instead of supplying it, inform the Commissioner under oath or solemn affirmation of the matters in respect of which information has previously been supplied and when it was supplied.

Commissioner may require information

(3) If an entity or individual chooses not to supply the Commissioner with information required under section 114 and so informs the Commissioner in accordance with subsection (2) or (2.1) and the Commissioner or a person authorized by the Commissioner notifies that entity or individual, within seven days after the Commissioner is so informed, that the information is required, the entity

Restrictions

(4) Le paragraphe (3) ne s'applique pas à l'égard d'une acquisition additionnelle sauf si cette dernière est complétée dans un délai de un an à compter de l'avis donné à son égard aux termes du paragraphe (2).

L.R. (1985), ch. 19 (2e suppl.), art. 45; 1999, ch. 2, art. 32 et 37.

Cas où les renseignements ne peuvent être fournis

116 (1) Dans les cas où l'un ou l'autre des renseignements exigés en vertu de l'article 114 n'est pas connu, ne peut pas être obtenu raisonnablement ou ne peut pas être fourni en raison du secret professionnel de l'avocat ou du notaire et de son client ou d'une norme de confidentialité établie par le droit, l'entité ou la personne physique qui fournit les renseignements peut, au lieu de fournir les renseignements en question, faire connaître au commissaire, sous serment ou affirmation solennelle, les questions au sujet desquelles des renseignements n'ont pas été fournis ainsi que les motifs pour lesquels ils ne l'ont pas été.

Cas où les renseignements ne sont pas pertinents

(2) Dans les cas où l'un ou l'autre des renseignements exigés en vertu de l'article 114 ne pouvaient, en toute raison, être jugés pertinents aux fins de l'examen que fait le commissaire de la question de savoir si la transaction proposée empêcherait ou diminuerait sensiblement la concurrence ou aurait vraisemblablement cet effet, l'entité ou la personne physique qui fournit les renseignements peut, au lieu de fournir les renseignements en question, aviser le commissaire, sous serment ou affirmation solennelle, des questions au sujet desquelles des renseignements n'ont pas été fournis ainsi que des motifs pour lesquels ils n'ont pas été considérés comme pertinents.

Cas où les renseignements ont été fournis antérieurement

(2.1) L'entité ou la personne physique qui a fourni antérieurement au commissaire des renseignements exigés en vertu de l'article 114 peut, au lieu de les fournir, informer celui-ci de ce fait, sous serment ou affirmation solennelle, en lui indiquant l'objet de ces renseignements et la date à laquelle ils ont été fournis.

Demande de renseignements par le commissaire

(3) L'entité ou la personne physique qui choisit de ne pas fournir au commissaire les renseignements exigés en vertu de l'article 114 et qui l'informe de ce fait en conformité avec les paragraphes (2) ou (2.1) est néanmoins tenue de or individual shall supply the Commissioner with the information.

R.S., 1985, c. 19 (2nd Supp.), s. 45; 1999, c. 2, ss. 33, 37; 2009, c. 2, s. 438; 2018, c. 8, s. 121.

Saving

117 (1) Nothing in section 114 requires

(a) any individual who is a director of a corporation to supply information that is known to that individual by virtue only of their position as a director of an affiliate of the corporation that is neither a wholly-owned affiliate nor a wholly-owning affiliate of the corporation; or

(b) any individual who, in respect of an entity other than a corporation, serves in a capacity similar to that of a director to supply information that is known to that individual by virtue only of their serving in that capacity with respect to an affiliate of the entity that is neither a wholly-owned affiliate nor a wholly-owning affiliate of the entity.

Wholly-owned affiliate

(2) For the purposes of subsection (1), one corporation is the wholly-owned affiliate of another corporation if all its outstanding voting shares, other than shares necessary to qualify persons as directors, are beneficially owned by that other corporation directly, or indirectly through one or more affiliates where all the outstanding voting shares of the affiliates, other than shares necessary to qualify persons as directors, are beneficially owned by that other corporation or each other.

Wholly-owning affiliate

(3) For the purposes of subsection (1), one corporation is the wholly-owning affiliate of another corporation if it beneficially owns all the outstanding voting shares of that other corporation, other than shares necessary to qualify persons as directors, directly, or indirectly through one or more affiliates where all the outstanding voting shares of the affiliates, other than shares necessary to qualify persons as directors, are beneficially owned by the corporation or each other.

R.S., 1985, c. 19 (2nd Supp.), s. 45; 2018, c. 8, s. 122.

le faire si le commissaire ou son délégué exige les renseignements dans les sept jours suivant la date à laquelle il est informé de ce choix.

L.R. (1985), ch. 19 (2e suppl.), art. 45; 1999, ch. 2, art. 33 et 37; 2009, ch. 2, art. 438; 2018, ch. 8, art. 121.

Exclusion

117 (1) L'article 114 n'a pas pour effet d'imposer :

a) à la personne physique qui est administrateur d'une personne morale l'obligation de fournir des renseignements qui sont parvenus à sa connaissance uniquement parce qu'elle occupe le poste d'administrateur d'une affiliée de la personne morale en question, à condition que cette affiliée ne soit pas une affiliée en propriété exclusive ou une affiliée-propriétaire exclusive de cette personne morale;

b) à la personne physique qui exerce des fonctions semblables à celles d'un administrateur à l'égard d'une entité autre qu'une personne morale l'obligation de fournir des renseignements qui sont parvenus à sa connaissance uniquement parce qu'elle exerce de telles fonctions à l'égard d'une affiliée de l'entité en question, à condition que cette affiliée ne soit pas une affiliée en propriété exclusive ou une affiliée-propriétaire exclusive de cette entité.

Affiliée en propriété exclusive

(2) Pour l'application du paragraphe (1), une personne morale est une affiliée en propriété exclusive d'une autre personne morale si cette autre personne morale est, directement, la véritable propriétaire de l'ensemble des actions comportant droit de vote en circulation de cette personne morale, à l'exclusion des actions qu'il faut détenir pour devenir administrateur, ou si elle l'est, indirectement, par l'intermédiaire d'une ou de plusieurs affiliées dans les cas où, à l'exclusion des actions qu'il faut détenir pour devenir administrateur, l'ensemble des actions comportant droit de vote en circulation de ces affiliées sont détenues en véritable propriété par cette autre personne morale ou par ces affiliées entre elles.

Affiliée-propriétaire exclusive

(3) Pour l'application du paragraphe (1), une personne morale est l'affiliée-propriétaire exclusive d'une autre personne morale si elle est, directement, la véritable propriétaire de l'ensemble des actions comportant droit de vote en circulation de cette autre personne morale, à l'exclusion des actions qu'il faut détenir pour devenir administrateur, ou, si elle l'est, indirectement, par l'intermédiaire d'une ou de plusieurs affiliées dans les cas où l'ensemble des actions comportant droit de vote en circulation de ces affiliées, à l'exclusion des actions qu'il faut détenir pour devenir administrateur, sont détenues en véritable propriété par la personne morale ou par ces affiliées entre elles.

L.R. (1985), ch. 19 (2e suppl.), art. 45; 2018, ch. 8, art. 122.

Information to be certified

118 The information supplied to the Commissioner under section 114 shall be certified on oath or solemn affirmation as having been examined by one of the following individuals and as being, to the best of that individual's knowledge and belief, correct and complete in all material respects:

(a) in the case of a corporation supplying the information, by an officer of the corporation or other person duly authorized by the board of directors or other governing body of the corporation;

(b) in the case of an entity other than a corporation supplying the information, by an individual who serves in a capacity similar to that of an officer of a corporation or other individual duly authorized by the governing body of that entity;

(c) in the case of an individual supplying the information, by that individual.

R.S., 1985, c. 19 (2nd Supp.), s. 45; 1999, c. 2, s. 37; 2018, c. 8, s. 123.

Attestation des renseignements

118 Les renseignements fournis au commissaire en application de l'article 114 sont attestés sous serment ou affirmation solennelle comme ayant été examinés par l'une ou l'autre des personnes physiques ci-après et comme étant, à leur connaissance, exacts et complets sur toute question pertinente :

a) dans le cas où une personne morale les fournit, par un de ses dirigeants ou par toute autre personne physique dûment autorisée par le conseil d'administration ou tout autre organisme dirigeant de la personne morale;

b) dans le cas où une entité non constituée en personne morale les fournit, par une personne physique qui y exerce des fonctions semblables à celles d'un dirigeant d'une personne morale ou par toute autre personne physique dûment autorisée par l'organisme dirigeant de l'entité;

c) dans le cas où une personne physique les fournit, par la personne elle-même.

L.R. (1985), ch. 19 (2e suppl.), art. 45; 1999, ch. 2, art. 37; 2018, ch. 8, art. 123.

Where transaction not completed

119 Where notice is given and information supplied in respect of a proposed transaction under section 114 but the transaction is not completed within one year thereafter or such longer period as the Commissioner may specify in any particular case, section 114 applies as if no notice were given or information supplied.

R.S., 1985, c. 19 (2nd Supp.), s. 45; 1999, c. 2, s. 37.

Cas où la transaction n'est pas réalisée

119 Lorsqu'un avis est donné et que des renseignements sont fournis à l'égard d'une transaction proposée en vertu de l'article 114 mais que la transaction n'est pas complétée dans l'année qui suit ou dans tout délai, supérieur à un an, que peut préciser le commissaire dans chaque cas, l'article 114 s'applique comme si aucun avis n'avait été donné et aucun renseignement fourni.

L.R. (1985), ch. 19 (2e suppl.), art. 45; 1999, ch. 2, art. 37.

120 to 122 [Repealed, 1999, c. 2, s. 34]

120 à 122 [Abrogés, 1999, ch. 2, art. 34]

Completion of Proposed Transactions

Parachèvement des transactions proposées

Time when transaction may not proceed

123 (1) A proposed transaction referred to in section 114 shall not be completed before the end of

(a) 30 days after the day on which the information required under subsection 114(1) has been received by the Commissioner, if the Commissioner has not, within that time, required additional information to be supplied under subsection 114(2); or

Suspension de la transaction

123 (1) La transaction proposée visée à l'article 114 ne peut être complétée avant :

a) l'expiration d'un délai de trente jours à compter de la réception par le commissaire des renseignements exigés en vertu du paragraphe 114(1), si le commissaire n'a pas, avant l'expiration de ce délai, exigé des renseignements supplémentaires en vertu du paragraphe 114(2);

(b) 30 days after the day on which the information required under subsection 114(2) has been received by the Commissioner, if the Commissioner has within the 30-day period referred to in paragraph (a) required additional information to be supplied under subsection 114(2).

b) si le commissaire a, avant l'expiration du délai de trente jours prévu à l'alinéa a), exigé des renseignements supplémentaires en vertu du paragraphe 114(2), l'expiration d'un délai de trente jours à compter de leur réception.

Waiving of waiting period

(2) A proposed transaction referred to in section 114 may be completed before the end of a period referred to in subsection (1) if, before the end of that period, the Commissioner or a person authorized by the Commissioner notifies the parties to the transaction that the Commissioner does not, at that time, intend to make an application under section 92 in respect of that proposed transaction.

Inapplication des délais

(2) La transaction proposée visée à l'article 114 peut être complétée avant l'expiration d'un délai prévu au paragraphe (1) dans les cas où le commissaire ou son délégué, avant l'expiration du délai, avise les parties à la transaction qu'il n'envisage pas, pour le moment, de présenter une demande en vertu de l'article 92 à l'égard de celle-ci.

Acquisition of equity interests

(3) In the case of an acquisition of equity interests to which subsection 114(3) applies, the periods referred to in subsection (1) shall be determined without reference to the day on which the information required under section 114 is received by the Commissioner from the entity whose equity interests are being acquired.

R.S., 1985, c. 19 (2nd Supp.), s. 45; 1999, c. 2, s. 35; 2009, c. 2, s. 439; 2018, c. 8, s. 124; 2022, c. 10, s. 273(E).

Acquisition d'intérêts relatifs à des capitaux propres

(3) Dans le cas d'une acquisition d'intérêts relatifs à des capitaux propres d'une entité à laquelle le paragraphe 114(3) s'applique, les délais prévus au paragraphe (1) sont fixés compte non tenu de la date à laquelle le commissaire reçoit les renseignements exigés en vertu de l'article 114 de l'entité dont les intérêts relatifs à ses capitaux propres font l'objet de l'acquisition.

L.R. (1985), ch. 19 (2e suppl.), art. 45; 1999, ch. 2, art. 35; 2009, ch. 2, art. 439; 2018, ch. 8, art. 124; 2022, ch. 10, art. 273(A).

Failure to comply

123.1 (1) If, on application by the Commissioner, the court determines that a person, without good and sufficient cause, the proof of which lies on the person, has completed or is likely to complete a proposed transaction before the end of the applicable period referred to in section 123, the court may

(a) order the person to submit information required under subsection 114(2);

(b) issue an interim order prohibiting any person from doing anything that it appears to the court may constitute or be directed toward the completion or implementation of the proposed transaction;

(c) in the case of a completed transaction, order any party to the transaction or any other person, in any manner that the court directs, to dissolve the merger or to dispose of assets or shares designated by the court;

(d) in the case of a completed transaction, order the person to pay, in any manner that the court specifies, an administrative monetary penalty in an amount not exceeding $10,000 for each day on which they have failed to comply with section 123, determined by the

Défaut de respecter le délai

123.1 (1) S'il conclut, à la suite d'une demande du commissaire, qu'une personne, sans motif valable et suffisant dont la preuve lui incombe, a complété ou complétera vraisemblablement une transaction proposée avant l'expiration du délai applicable prévu à l'article 123, le tribunal peut :

a) ordonner à la personne de fournir des renseignements exigés en vertu du paragraphe 114(2);

b) rendre une ordonnance provisoire interdisant à toute personne d'accomplir un acte qui, à son avis, pourrait constituer la réalisation ou la mise en œuvre de la transaction proposée ou y tendre;

c) dans le cas d'une transaction complétée, rendre une ordonnance enjoignant à toute personne, que celle-ci soit partie à la transaction ou non, de dissoudre le fusionnement ou de se départir des éléments d'actif et des actions qu'il indique conformément à ses directives;

d) dans le cas d'une transaction complétée, ordonner à la personne de payer, selon les modalités qu'il prévoit, une sanction administrative pécuniaire maximale de 10 000 $ pour chacun des jours au cours duquel elle

Publication of proposed orders

(3) Any order proposed to be made under this section shall be published in the *Canada Gazette* at least sixty days before its proposed effective date, and a reasonable opportunity shall be given to interested persons to make representations to the Minister with respect to the proposed order.

Modification after publication

(4) A proposed order that is modified after publication need not be published again under subsection (3).

PART II

Eligibility to Operate

Canadian Ownership and Control

Definitions

16 (1) The following definitions apply in this section.

entity means a corporation, partnership, trust or joint venture. (*entité*)

joint venture means an association of two or more entities, if the relationship among those associated entities does not, under the laws in Canada, constitute a corporation, a partnership or a trust and if all the undivided ownership interests in the assets of the Canadian carrier or in the voting interests of the Canadian carrier are or will be owned by all the entities that are so associated. (*coentreprise*)

voting interest, with respect to

(a) a corporation with share capital, means a voting share;

(b) a corporation without share capital, means an ownership interest in the assets of the corporation that entitles the owner to rights similar to those enjoyed by the owner of a voting share; and

(c) a partnership, trust or joint venture, means an ownership interest in the assets of the partnership, trust or joint venture that entitles the owner to receive a share of the profits and to share in the assets on dissolution. (*intérêt avec droit de vote*)

Eligibility

(2) A Canadian carrier is eligible to operate as a telecommunications common carrier if

Publication des projets d'arrêté

(3) Les projets d'arrêté visés au présent article sont publiés dans la *Gazette du Canada* au moins soixante jours avant la date prévue pour leur entrée en vigueur, les intéressés se voyant accorder la possibilité de présenter au ministre leurs observations à cet égard.

Idem

(4) Une seule publication suffit, que le projet ait ou non été modifié.

PARTIE II

Admissibilité

Propriété et contrôle canadiens

Définitions

16 (1) Les définitions qui suivent s'appliquent au présent article.

coentreprise Association d'entités dans le cas où leurs rapports ne constituent pas, en vertu des lois canadiennes, une personne morale, une société de personnes ou une fiducie et si les droits de participation indivise à la propriété des actifs de l'entreprise canadienne ou des intérêts avec droit de vote de l'entreprise canadienne appartiennent ou appartiendront à celles-ci. (*joint venture*)

entité Personne morale, société de personnes, fiducie ou coentreprise. (*entity*)

intérêt avec droit de vote

a) Action avec droit de vote d'une personne morale avec capital social;

b) titre de participation d'une personne morale sans capital social qui accorde à son propriétaire des droits semblables à ceux du propriétaire d'une action avec droit de vote;

c) titre de participation d'une société de personnes, d'une fiducie ou d'une coentreprise qui permet à son propriétaire de recevoir une partie des profits et, en cas de dissolution, une partie des actifs. (*voting interest*)

Admissibilité

(2) Est admise à agir comme entreprise de télécommunication l'entreprise canadienne, selon le cas :

(a) it is an entity incorporated, organized or continued under the laws of Canada or a province and is Canadian-owned and controlled;

(b) it owns or operates only a transmission facility that is referred to in subsection (5); or

(c) it has annual revenues from the provision of telecommunications services in Canada that represent less than 10% of the total annual revenues, as determined by the Commission, from the provision of telecommunications services in Canada.

Canadian ownership and control

(3) For the purposes of paragraph (2)(a), an entity is Canadian-owned and controlled if

(a) in the case of a corporation, not less than 80% of the members of the board of directors are individual Canadians;

(b) Canadians beneficially own, directly or indirectly, in the aggregate and otherwise than by way of security only, not less than 80% of the entity's voting interests; and

(c) the entity is not otherwise controlled by persons that are not Canadians.

Prohibition

(4) No Canadian carrier shall operate as a telecommunications common carrier unless it is eligible under this section to operate as such.

Exemption

(5) Paragraph (2)(a) and subsection (4) do not apply in respect of the ownership or operation of

(a) international submarine cables;

(b) earth stations that provide telecommunications services by means of satellites; or

(c) satellites.

Exception

(6) A Canadian carrier that is eligible to operate under paragraph (2)(c) remains eligible to operate even if it has annual revenues from the provision of telecommunications services in Canada that represent 10% or more of the total annual revenues from the provision of telecommunications services in Canada as long as the increase in its annual revenues from the provision of telecommunications services in Canada to 10% or more of the total

a) qui est une entité constituée, organisée ou prorogée sous le régime des lois fédérales ou provinciales et qui est la propriété de Canadiens et sous contrôle canadien;

b) qui n'est propriétaire ou exploitante que d'une installation de transmission visée au paragraphe (5);

c) dont les revenus annuels provenant de la fourniture de services de télécommunication au Canada représentent moins de dix pour cent de l'ensemble des revenus pour l'année, déterminé par le Conseil, provenant de la fourniture de ces services au Canada.

Contrôle et propriété canadiens

(3) Pour l'application de l'alinéa (2)a), est la propriété de Canadiens et est contrôlée par ceux-ci l'entité :

a) dans le cas d'une personne morale, dont au moins quatre-vingts pour cent des administrateurs sont des Canadiens;

b) dont au moins quatre-vingts pour cent des intérêts avec droit de vote sont la propriété effective, directe ou indirecte, de Canadiens, à l'exception de ceux qui sont détenus à titre de sûreté uniquement;

c) qui n'est pas par ailleurs contrôlée par des non-Canadiens.

Interdiction

(4) Il est interdit à l'entreprise canadienne d'agir comme entreprise de télécommunication si elle n'y est pas admise aux termes du présent article.

Exclusion

(5) L'alinéa (2)a) et le paragraphe (4) ne s'appliquent pas en ce qui touche la propriété ou l'exploitation :

a) de câbles sous-marins internationaux;

b) de stations terriennes qui assurent des services de télécommunication par satellites;

c) de satellites.

Exception

(6) L'entreprise canadienne admise à agir comme entreprise de télécommunication au titre de l'alinéa (2)c) demeure ainsi admise même si ses revenus annuels provenant de la fourniture de services de télécommunication au Canada représentent dix pour cent ou plus de l'ensemble des revenus pour l'année provenant de la fourniture de ces services au Canada si l'augmentation de ses revenus annuels provenant de la fourniture de ces annual revenues from the provision of telecommunications services in Canada did not result from the acquisition of control of another Canadian carrier or from the acquisition of assets used by another Canadian carrier to provide telecommunications services.

services au Canada à dix pour cent ou plus de l'ensemble des revenus pour l'année provenant de la fourniture de ces services au Canada ne découlait pas de l'acquisition du contrôle d'une autre entreprise canadienne ni de l'acquisition d'actifs utilisés par une autre entreprise canadienne pour la fourniture de service de télécommunication.

Acquisition

(7) A Canadian carrier to which subsection (6) applies is not authorized to acquire control of a Canadian carrier or acquire assets used by another Canadian carrier to provide telecommunications services.

Acquisition

(7) L'entreprise canadienne visée au paragraphe (6) ne peut acquérir le contrôle d'une autre entreprise canadienne ni acquérir des actifs utilisés par une autre entreprise canadienne pour la fourniture de service de télécommunication.

Notice

(8) A Canadian carrier that is eligible to operate under paragraph (2)(c) shall notify the Commission when it acquires control of another Canadian carrier or acquires assets used by another Canadian carrier to provide telecommunications services.

Avis

(8) L'entreprise canadienne admise à agir comme entreprise de télécommunication au titre de l'alinéa (2)c) avise le Conseil de l'acquisition du contrôle de toute entreprise canadienne ou de l'acquisition des actifs utilisés par une autre entreprise canadienne pour la fourniture de service de télécommunication.

Affiliates

(9) For the purposes of determining annual revenues from the provision of telecommunications services in Canada under this section, the annual revenues of a Canadian carrier include the annual revenues from the provision of telecommunications services in Canada of its affiliates as defined in subsection 35(3).

1993, c. 38, s. 16; 1998, c. 8, s. 2; 2010, c. 12, s. 2184; 2012, c. 19, s. 595.

Affilié

(9) Pour déterminer les revenus annuels provenant de la fourniture de services de télécommunication au Canada pour l'application du présent article, sont également visés les revenus provenant de la fourniture de tels services au Canada par tout affilié — au sens prévu au paragraphe 35(3) — de l'entreprise canadienne.

1993, ch. 38, art. 16; 1998, ch. 8, art. 2; 2010, ch. 12, art. 2184; 2012, ch. 19, art. 595.

International Telecommunications Services Licences

Licence required — classes of telecommunications service providers

16.1 (1) No telecommunications service provider that is of a class specified by the Commission shall provide international telecommunications services except in accordance with an international telecommunications service licence.

Licence required — classes of service

(2) No telecommunications service provider shall, except in accordance with an international telecommunications service licence, provide international telecommunications services that are within a class of telecommunications services specified by the Commission.

1998, c. 8, s. 3.

Licences de services de télécommunication internationale

Licence obligatoire — fournisseurs de services de télécommunication

16.1 (1) Les fournisseurs de services de télécommunication, quand ils appartiennent aux catégories précisées par le Conseil, ne peuvent fournir des services de télécommunication internationale sans une licence de services de télécommunication internationale.

Licence obligatoire — services de télécommunication

(2) Les fournisseurs de services de télécommunication ne peuvent fournir les services de télécommunication internationale d'une catégorie précisée par le Conseil, sauf en conformité avec une licence de services de télécommunication internationale.

1998, ch. 8, art. 3.

Application

16.2 An application for the issuance, renewal or amendment of an international telecommunications service licence must be made in the form and manner and with the information specified by the Commission, and be accompanied by the fee prescribed under subsection 68(1).

1998, c. 8, s. 3.

Issuance of licences

16.3 (1) The Commission may, on application, issue an international telecommunications service licence.

Conditions

(2) The Commission may, in respect of international telecommunications services,

(a) establish licence conditions in respect of classes of telecommunications service providers or classes of international telecommunications services; and

(b) include in a licence conditions that are related to the circumstances of the licensee and that the Commission considers appropriate.

Amendment

(3) The Commission may, on application by any interested person or on its own motion, amend any conditions of a licence.

Term

(4) The term of a licence may not exceed ten years on its issuance or renewal.

Renewal

(5) A licence may be renewed on application by the licensee.

Transfer

(6) A licence is not transferable except with the consent of the Commission.

1998, c. 8, s. 3.

Suspension and revocation of telecommunications service licences

16.4 (1) The Commission may suspend or revoke an international telecommunications service licence whenever the Commission believes on reasonable grounds that the licensee has contravened this Act, the regulations or any condition of the licence, but the licensee must first be given notice in writing of the reasons for the suspension or revocation and a reasonable opportunity to make representations to the Commission.

Demandes

16.2 Les demandes d’attribution, de renouvellement ou de modification d’une licence de services de télécommunication internationale se font selon les modalités prévues par le Conseil et doivent être accompagnées des renseignements exigés par celui-ci ainsi que du paiement des droits fixés aux termes du paragraphe 68(1).

1998, ch. 8, art. 3.

Attribution

16.3 (1) Le Conseil peut attribuer une licence de services de télécommunication internationale sur demande.

Conditions

(2) Il peut, en ce qui concerne les services de télécommunication internationale :

a) prévoir des conditions de la licence pour une catégorie de fournisseurs de services de télécommunication ou une catégorie de services de télécommunication internationale;

b) assortir toute licence des conditions liées à la situation du titulaire qu’il estime indiquées.

Modification

(3) Les conditions peuvent être modifiées soit sur demande d’un intéressé, soit de la propre initiative du Conseil.

Période de validité

(4) La période de validité de la licence délivrée ou renouvelée ne peut excéder dix ans.

Renouvellement

(5) Le renouvellement se fait sur demande du titulaire.

Incessibilité

(6) Sauf sur consentement du Conseil, la licence n’est pas transférable.

1998, ch. 8, art. 3.

Suspension et révocation de licences

16.4 (1) S’il a des motifs raisonnables de croire que le titulaire d’une licence de services de télécommunication internationale a contrevenu à la présente loi, à ses règlements ou aux conditions de la licence, le Conseil peut suspendre ou révoquer celle-ci après, d’une part, avoir donné au titulaire un avis écrit motivant la prise de cette mesure et, d’autre part, lui avoir accordé la possibilité de présenter ses observations.

Consent of licensee

(2) The Commission may suspend or revoke a licence with the consent of, or on application by, the licensee.

1998, c. 8, s. 3.

International Submarine Cable Licences

Licence required

17 No person shall construct or operate an international submarine cable or construct or operate any works or facilities for the purpose of operating an international submarine cable except in accordance with an international submarine cable licence that has been issued to the person and that the person remains eligible under the regulations to hold.

Application

18 An application for the issuance, renewal or amendment of an international submarine cable licence must be made in the prescribed form and manner and be accompanied by the prescribed information and the prescribed fee or a fee calculated in the prescribed manner.

1993, c. 38, s. 18; 1999, c. 31, s. 197(F).

Issuance of licences

19 (1) The Minister may, on application, issue an international submarine cable licence to a person who is eligible under the regulations to hold the licence.

Conditions

(2) An international submarine cable licence may contain such conditions as the Minister considers are consistent with the Canadian telecommunications policy objectives.

Term

(3) The term of an international submarine cable licence may not exceed ten years on issuance of the licence or on renewal.

Amendment, renewal and transfer

(4) An international submarine cable licence may be amended or renewed on application by the licensee, but a licence is not transferable except with the consent of the Minister.

1993, c. 38, s. 19; 1998, c. 8, s. 4.

Consentement du titulaire

(2) Il peut en outre suspendre ou révoquer la licence sur demande du titulaire ou avec son consentement.

1998, ch. 8, art. 3.

Licences de câble sous-marin international

Licence obligatoire

17 Il est interdit d’exploiter ou de construire un câble sous-marin international ou des ouvrages ou installations en vue de son exploitation, sans une licence de câble sous-marin international attribuée par le ministre; l’entreprise doit en outre continuer à demeurer admissible en vertu des règlements.

Demandes

18 Les demandes d’attribution, de renouvellement ou de modification d’une licence de câble sous-marin international sont à faire selon les modalités réglementaires et doivent être accompagnées des renseignements réglementaires et du paiement des droits fixés par règlement ou, le cas échéant, calculés selon le mode de calcul réglementaire.

1993, ch. 38, art. 18; 1999, ch. 31, art. 197(F).

Attribution

19 (1) Le ministre peut attribuer une licence de câble sous-marin international à toute personne admissible en vertu des règlements.

Conditions

(2) Le ministre peut assortir les licences de câble sous-marin international des conditions qu’il estime compatibles avec les objectifs de la politique canadienne de télécommunication.

Période de validité

(3) La période de validité d’une licence de câble sous-marin international ne peut excéder dix ans lors de son attribution ou de son renouvellement.

Modification, renouvellement et incessibilité

(4) La licence de câble sous-marin international peut être modifiée ou renouvelée sur demande du titulaire, mais, sauf sur consentement du ministre, elle n’est pas transférable.

1993, ch. 38, art. 19; 1998, ch. 8, art. 4.

Suspension and revocation of licences

20 (1) The Minister may suspend or revoke an international submarine cable licence whenever the Minister believes on reasonable grounds that the licensee has ceased to be eligible under the regulations or has contravened this Act, the regulations or any condition of the licence but the licensee must first be given notice in writing of the reasons for the suspension or revocation and a reasonable opportunity to make representations to the Minister.

Idem

(2) The Minister may suspend or revoke an international submarine cable licence on application made by or with the consent of the licensee.

Documentary Evidence

Supporting affidavit

21 The Minister may require the furnishing of an affidavit or a solemn declaration attesting to the authenticity of any document provided under this Part or the regulations, or to the truth of any fact stated in any such document or in any application submitted under this Part.

Regulations

Regulations

22 (1) The Governor in Council may, in relation to Canadian carriers' eligibility under section 16 to operate as telecommunications common carriers, make regulations

(a) respecting information that is to be provided, the persons by whom and to whom it is to be provided, the manner in which and the time within which it is to be provided and the consequences of failing to provide it;

(b) respecting the circumstances and the manner in which a Canadian carrier, in order to maintain its eligibility, may control the acquisition and ownership of its voting shares, restrict, suspend or refuse to recognize ownership rights in respect of those shares and require holders of those shares to dispose of them;

(c) authorizing the board of directors of a Canadian carrier to pay a dividend or to make any other distribution with respect to voting shares that would otherwise be prohibited because the shares were held in contravention of section 16 or any regulations made under this subsection where, in the board's opinion, the contravention was inadvertent or of a technical

Suspension et révocation de licences

20 (1) Le ministre peut suspendre ou révoquer une licence de câble sous-marin international s'il a des motifs raisonnables de croire que le titulaire n'est plus admissible en vertu des règlements ou a contrevenu à la présente loi, à ses règlements ou aux conditions de la licence après d'une part, lui avoir donné un préavis écrit qui motive la prise de cette mesure et, d'autre part, lui avoir accordé la possibilité de présenter ses observations.

Idem

(2) Le ministre peut suspendre ou révoquer la licence sur demande du titulaire ou avec son consentement.

Preuve documentaire

Affidavit

21 Le ministre peut exiger, à l'appui de toute demande présentée au titre de la présente partie ou de tout document fourni sous le régime de celle-ci ou des règlements, un affidavit ou une déclaration solennelle attestant la véracité des faits qui y sont relatés ou l'authenticité du document.

Règlements

Règlements

22 (1) Le gouverneur en conseil peut prendre des règlements concernant l'admissibilité des entreprises canadiennes prévue à l'article 16. Il peut notamment prendre des règlements :

a) sur les renseignements à fournir, les personnes par qui et à qui ils doivent être fournis, les modalités de temps ou autres de leur fourniture et les conséquences du défaut de les fournir;

b) sur les circonstances dans lesquelles l'entreprise canadienne peut, pour maintenir son admissibilité, contrôler l'acquisition et la propriété de ses actions avec droit de vote, ainsi que limiter, suspendre ou refuser de reconnaître des droits de propriété à l'égard de celles-ci ou obliger ses actionnaires à en disposer, ainsi que sur les modalités afférentes à la prise de ces mesures;

c) autorisant le conseil d'administration de l'entreprise canadienne à procéder, à l'égard des actions avec droit de vote, à un versement de dividendes ou à toute autre distribution qui seraient par ailleurs interdits en raison de la détention de celles-ci en violation de nature or it would be otherwise inequitable not to pay the dividend or make the distribution;

(d) respecting the circumstances and the manner in which a Canadian carrier may restrict voting rights attached to shares, or suspend or void the exercise of those rights, in order to maintain its eligibility;

(e) respecting the circumstances and the manner in which a Canadian carrier may

(i) sell, redeem or purchase shares held contrary to section 16 or any regulations made under this subsection, and

(ii) deal with the proceeds of sale and reimburse any purchasers of the shares in good faith;

(f) respecting the powers of a Canadian carrier to require disclosure of the beneficial ownership of its shares, the right of the carrier and its directors, officers and employees, and its agents or mandataries, to rely on any required disclosure and the effects of their reliance;

(g) respecting the verification by the Commission of a Canadian carrier's eligibility, the measures the Commission may take to maintain the carrier's eligibility, including exercising the powers of the carrier's board of directors and countermanding its decisions, and the circumstances and manner in which the Commission may take those measures;

(h) respecting the circumstances and manner in which the Commission and its members, officers or employees, or its agents or mandataries, or a Canadian carrier and its directors, officers and employees, and its agents or mandataries, may be protected from liability for actions taken by them in order to maintain the carrier's eligibility;

(i) defining the words *successor* and *Canadian* for the purposes of section 16; and

(j) prescribing anything that is to be prescribed and generally for carrying out the purposes and provisions of section 16 and this subsection.

l'article 16 ou des règlements d'application du présent paragraphe, dans les cas où, selon le Conseil, soit la violation est involontaire ou de nature technique, soit il serait injuste de ne pas procéder au versement ou à la distribution;

d) sur les circonstances dans lesquelles l'entreprise canadienne peut limiter les droits de vote afférents aux actions — ou suspendre ou annuler leur exercice — pour maintenir son admissibilité, ainsi que sur les modalités afférentes à la prise de ces mesures;

e) sur les circonstances dans lesquelles l'entreprise canadienne peut vendre ou racheter les actions détenues en violation de l'article 16 ou des règlements d'application du présent paragraphe, disposer du produit de la vente et rembourser les acheteurs de bonne foi, ainsi que sur les modalités afférentes à la prise de ces mesures;

f) sur les pouvoirs de l'entreprise canadienne lui permettant d'exiger la divulgation de l'identité des véritables propriétaires de ses actions, sur le droit de l'entreprise et de ses administrateurs, dirigeants, employés et mandataires de se fier à cette divulgation, ainsi que sur les effets qui peuvent en résulter;

g) sur la vérification par le Conseil de l'admissibilité de l'entreprise canadienne, ainsi que sur les mesures que celui-ci peut prendre pour maintenir cette admissibilité, notamment l'exercice des pouvoirs du conseil d'administration de l'entreprise et l'annulation des décisions de celui-ci, ainsi que sur les circonstances justifiant la prise de ces mesures et les modalités afférentes à celle-ci;

h) sur les circonstances dans lesquelles le Conseil et ses conseillers, dirigeants, employés ou mandataires ou l'entreprise canadienne et ses administrateurs, dirigeants, employés ou mandataires peuvent être exemptés de toute responsabilité pour les mesures qu'ils ont prises afin de maintenir l'admissibilité de l'entreprise, ainsi que sur les modalités afférentes à l'octroi de cette exemption;

i) en vue de définir les termes *ayant droit* et *Canadiens* pour l'application de l'article 16;

j) en vue de prendre toute mesure d'ordre réglementaire et, d'une façon générale, toute mesure d'application de l'article 16 et du présent paragraphe.

Idem

(2) The Governor in Council may, in relation to international submarine cable licences, make regulations

Idem

(2) Le gouverneur en conseil peut, par règlement relatif aux licences de câble sous-marin international :

Acquisition by a Competitively Preferable Purchaser 47
Retrenchment/Restructuring 48
Liquidation 48

HOW TO CONTACT THE COMPETITION BUREAU 49

FOREWORD

The Competition Bureau ("the Bureau") has issued these guidelines to provide general direction on its analytical approach to merger review. The guidelines describe, to the extent possible, how the Bureau analyzes merger transactions. Given that merger law applies to a wide variety of factual circumstances, these guidelines are not applied rigidly. As such, this document sets out the Bureau's general approach to merger review and is not a binding statement of how the analysis is carried out in any particular case. The specific facts of a case, as well as the nature of the information and data available, determine how the Bureau assesses a proposed transaction and may sometimes require methodologies other than those noted here.

Merging parties are encouraged to contact the Bureau at an early stage to discuss proposed transactions, and should obtain appropriate legal advice when contemplating a merger.[1] The final interpretation of the *Competition Act* (the "Act") rests with the Competition Tribunal ("the Tribunal") and the courts.[2]

These guidelines supersede previous merger enforcement guidelines and statements made by the Commissioner of Competition ("the Commissioner") or other Bureau officials. These guidelines also supersede the Bureau's *Bulletin on Efficiencies in Merger Review*. The Bureau may revisit certain aspects of these guidelines in the future based on amendments to the Act, decisions of the Tribunal and the courts, developments in the economic literature and the Bureau's case experience.

PART 1: DEFINITION OF MERGER

1.1 Section 91 of the Act defines a "merger" as "...the acquisition or establishment, direct or indirect, by one or more persons, whether by purchase or lease of shares or assets, by amalgamation or by combination or otherwise, of control over or significant interest in the whole or a part of a business of a competitor, supplier, buyer or other person."

1.21 This definition covers any manner in which control over, or a significant interest in, the whole or a part of a business of another person is acquired or established.[3] While these guidelines focus primarily on mergers of firms that supply competing products (horizontal mergers), section 91 also captures mergers of firms that do not compete (non-horizontal mergers, addressed in Part 11, below).

1 See also the Bureau's *Merger Review Process Guidelines*, *Procedures Guide for Notifiable Transactions and Advance Ruling Certificates under the* Competition Act and *Fee and Service Standards Handbook for Mergers and Merger-Related Matters*.

2 *Competition Act*, R.S.C. 1985, c. C-34.

3 As outlined in the Bureau's Competitor Collaboration Guidelines, paragraph 1.2(*a*), a transaction that does not fall within the definition of "merger" may in some instances be subject to review under the civil provision in section 90.1 of the Act. Parties who are uncertain as to whether an agreement will be assessed as a merger or a competitor collaboration are encouraged to consult the *Competitor Collaboration Guidelines* and to contact the Bureau at the earliest opportunity to discuss how the Bureau is likely to assess such an agreement if pursued.

Control

1.3 Acquisition of control constitutes a merger under section 91. With respect to corporations, section 2(4) of the Act defines "control" to mean *de jure* (legal) control—that is, a direct or indirect holding of more than 50 percent of the votes that may be cast to elect directors of the corporation, and which are sufficient to elect a majority of such directors. With respect to partnerships, section 2(4) provides that a partnership is controlled by a person when the person holds an interest in the partnership that entitles the person to receive more than 50 percent of the profits of the partnership or more than 50 percent of its assets on dissolution.

Significant Interest

1.4 The Act does not define what constitutes a "significant interest," as referenced in section 91, leaving this concept to be construed within the broader context of the Act as a whole.

1.5 When determining whether an interest is significant, the Bureau considers both the quantitative nature and qualitative impact of the acquisition or establishment of the interest. Given that the Act is concerned with firms' competitive market behaviour, a "significant interest" in the whole or a part of a business is held qualitatively when the person acquiring or establishing the interest (the "acquirer") obtains the ability to materially influence the economic behaviour of the target business, including but not limited to decisions relating to pricing, purchasing, distribution, marketing, investment, financing and the licensing of intellectual property rights.

1.6 The factors that may be relevant to the Bureau's analysis of whether a particular minority shareholding, an interest in a combination, agreement or other relationship or interest confers material influence (as per paragraph 1.5) include the following:

- voting rights attached to the acquirer's shareholdings or interest in a combination;
- the status of the acquirer of partnership interests (e.g., general or limited partner) and the nature of the rights and powers attached to the partnership interest;
- the holders and distribution of the remaining shares or interests (whether the target business is widely or closely held, and whether the acquirer will be the largest shareholder);
- board composition[4] and board meeting quorum, attendance and historical voting patterns (whether the acquirer will be able to carry or block votes in a typical meeting);
- the existence of any special voting or veto rights attached to the acquirer's shares or interests (e.g., the extent of shareholder approval rights for non-ordinary-course transactions);
- the terms of any shareholder or voting agreements;

4 This includes both the total number of directors and the number of directors who are the acquirer's nominees.

- the dividend or profit share of the minority interest as compared to the acquirer's equity ownership share;
- the extent, if any, of the acquirer's influence over the selection of management or of members of key board committees;
- the status and expertise of the acquirer relative to that of other shareholders;
- the services (management, advisory or other) the acquirer is providing to the business, if any;
- the put, call or other liquidity rights, if any, that the acquirer has and may use to influence other shareholders or management;
- the access the acquirer has, if any, to confidential information about the business; and
- the practical extent to which the acquirer can otherwise impose pressure on the business's decision-making processes.

It is generally the combination of factors – not the presence or absence of a single factor – that is determinative in the Bureau's assessment of material influence.

Notifiable Transactions

1.7 In the absence of any evidence to the contrary, the Bureau presumes that notifiable transactions described in Part IX of the Act constitute the acquisition or establishment of a significant interest in the whole or a part of a business. A transaction is notifiable where the relevant transaction-size and party-size thresholds are exceeded and, in the case of a share acquisition[5], where the shareholding threshold (voting interest of more than 35% for a private corporation or more than 20% for a public corporation) is also exceeded.

Share Acquisitions

1.8 Share acquisitions (whether or not they are notifiable) fall within the scope of section 91 when the acquirer obtains the ability to materially influence the economic behaviour of a business by purchasing shares or other securities. When assessing whether a particular minority shareholding confers material influence, the Bureau conducts a case-by-case analysis of the relationship between the acquirer and the target business, and of the various mechanisms through which the acquirer might exercise influence.

1.9 In the case of *voting shares*, the Bureau considers that a significant interest in a corporation exists when one or more persons directly or indirectly hold enough voting shares

5 Where the transaction involves the acquisition of an interest in a combination, a further threshold also applies. Such a transaction will be notifiable only if the person or persons acquiring the interest, together with their affiliates, would be entitled to receive more than 35% of the profits of the combination (more than 50% if they are already entitled to more than 35%), or 35% of its assets on dissolution (more than 50% if they are already entitled to more than 35%).

- to obtain a sufficient level of representation on the board of directors to materially influence that board, with reference to the factors outlined in paragraph 1.6 and any other relevant factors; or
- to block special or ordinary resolutions of the corporation.

1.10 The Bureau will also consider whether voting shares give the person or persons who hold them the ability to exercise material influence through other mechanisms, with reference to the factors outlined in paragraph 1.6 and any other relevant factors. In the absence of other relationships, direct or indirect ownership of less than 10 percent of the voting interests in a business does not generally constitute ownership of a significant interest.[6] While inferences about situations that result in a direct or indirect holding of between 10 percent and 50 percent of voting interests are more difficult to draw, a larger voting interest is ordinarily required to materially influence a private company than a widely held public company. The merger notification requirements in Part IX of the Act, referred to in paragraph 1.7 above, are triggered at a voting interest of more than 35 percent for private corporations and of more than 20 percent for public corporations.[7]

1.11 When a transaction involves the purchase of *non-voting* shares,[8] the Bureau examines whether the holder of the minority interest can materially influence the economic behaviour of the business despite its inability to vote its shares, with reference to the factors outlined in paragraph 1.6 and any other relevant factors.

1.12 In the case of *convertible securities* or *options*, a significant interest may be acquired or established when these securities are first purchased or created, or at the time they are converted or exercised.[9] To determine whether a purchase constitutes a significant interest, the Bureau examines the nature of and circumstances in which the rights (or potential rights) attached to these securities may be exercised, and the influence that the acquirer may possess through their exercise, or threat of exercise, with reference to the factors outlined in paragraph 1.6 and any other relevant factors.

6 This position is consistent with other Canadian statutes. See, for example, *Bank Act*, S.C. 1991, c. 46, s. 8. (See also *Cooperative Credit Associations Act*, S.C. 1991, c. 48, s. 9; *Insurance Companies Act*, S.C. 1991, c. 47, s. 8; and *Trust and Loan Companies Act*, S.C. 1991, c. 45, s. 8.) The Bureau typically requires disclosure of all holdings that account for 10 percent or more of the voting interests in a business, and may seek information respecting other minority holdings in the course of a merger review.

7 The pre-merger notification provisions are discussed in the Bureau's *Procedures Guide for Notifiable Transactions and Advance Ruling Certificates under the* Competition Act and the *Interpretation Guidelines for Notifiable Transactions under Part IX of the* Competition Act.

8 When *non-voting* shares are convertible (for example, into voting shares), they will also be assessed under paragraph 1.12.

9 A convertible security is a bond, debenture, preferred share or other security that may be exchanged by the owner, usually for common shares of the same company, in accordance with specified conversion terms. An option is a right to buy or sell specific securities or properties at a specified price within a specified time.

Asset Acquisitions

1.13 Asset transactions (whether or not they are notifiable) that generally fall within the scope of section 91 include the purchase or lease of an unincorporated division, plant, distribution facilities, retail outlet, brand name or intellectual property rights from the target company. The Bureau treats the acquisition of any of these essential assets, in whole or in part, as the acquisition or establishment of a significant interest in that business. Further, acquiring a subset of the assets of a business that is capable of being used to carry on a separate business is also considered to be the acquisition or establishment of a significant interest in the business.

Increasing an Existing Interest in a Business

1.14 Persons already holding a significant interest in the whole or a part of a business may trigger the merger provisions of the Act by acquiring or establishing a materially greater ability to influence the economic behaviour of the business.

Interlocking Directorates

1.15 An interlocking directorate may arise where a director of one firm is an employee, executive, partner, owner or member of the board of directors of a second firm, or has another interest in the business of the second firm. An interlocking directorate is generally of interest under section 92 of the Act only when the interlocked firms are competitors, are vertically related, or produce complementary or related products.

1.16 Interlocking directorates may be features of transactions that otherwise qualify as mergers. For example, an interlock results from the merger of firms A and B when an executive of A sits on the board of firm C, and C competes with B. Interlocking directorates may be features of minority interest transactions; for example, a firm that acquires a minority interest in its competitor may also obtain rights to nominate one or more directors to its competitor's board. An interlocking directorate would rarely qualify, in and of itself, as the establishment of a significant interest.

1.17 When assessing whether an interlocked director has the ability to materially influence the economic behaviour of the interlocked firm(s), the Bureau's focus is typically on the access that an interlocked director has to confidential information, and on the director's voting and veto rights in the context of the board composition, quorum and voting rules, including attendance and historical voting patterns.

Other Considerations

1.18 A significant interest can be acquired or established under shareholder agreements, management contracts, franchise agreements and other contractual arrangements involving corporations, partnerships, joint ventures, combinations and other entities, depending on the terms of the arrangements. In addition, loan, supply and distribution arrangements that are not ordinary-course transactions and that confer the ability to materially influence the economic behaviour of the target business (for example, financing arrangements and terms of default relating to such arrangements; long-term contractual arrangements or pre-existing long-term business relationships) may constitute a merger within the meaning of section 91.

1.19 When determining whether an acquisition or establishment of a significant interest constitutes a merger, the Bureau examines the relationship between the parties prior to the transaction or event establishing the interest, the likely subsequent relationship between the parties, the access that an acquirer has and obtains to confidential business information of the target business, and evidence of the acquirer's intentions to affect the behaviour of that business.

PART 2: THE ANTI-COMPETITIVE THRESHOLD

Overview

2.1 As set out in section 92(1) of the Act, the Tribunal may make an order when it finds that a merger "prevents or lessens, or is likely to prevent or lessen, competition substantially." A substantial prevention or lessening of competition results only from mergers that are likely to create, maintain or enhance the ability of the merged entity, unilaterally or in coordination with other firms, to exercise market power.

2.2 In general, when evaluating the competitive effects of a merger, the Bureau's primary concerns are price and output. The Bureau also assesses the effects of the merger on other dimensions of competition, such as quality, product choice, service, innovation and advertising—especially in markets in which there is significant non-price competition. To simplify the discussion, unless otherwise indicated, the term "price" in these guidelines refers to all aspects of firms' actions that affect the interests of buyers. References to an increase in price encompass an increase in the nominal price, but may also refer to a reduction in quality, product choice, service, innovation or other dimensions of competition that buyers value.

2.3 These guidelines describe the analytical framework for assessing market power from the perspective of a seller of a product or service ("product," as defined in section 2(1) of the Act). Market power of sellers is the ability of a firm or group of firms to profitably maintain prices above the competitive level for a significant period of time. The jurisprudence establishes that it is the *ability* to raise prices, not whether a price increase is likely, that is determinative.

2.4 The Bureau also applies this analytical framework to its assessment of the market power of the buyers of a product. Market power of buyers is the ability of a single firm (monopsony power) or a group of firms (oligopsony power)[10] to profitably depress prices paid to sellers (by reducing the purchase of inputs, for example) to a level that is below the competitive price for a significant period of time. Part 9, below, sets out the Bureau's approach to situations of monopsony power.

10 Oligopsony power occurs where market power in the relevant purchasing market is exercised by a coordinated group of buyers. Except where otherwise indicated in these guidelines, the term "monopsony" includes situations of oligopsony.

2.5 The Bureau analyzes competitive effects under two broad headings: unilateral exercise of market power and coordinated exercise of market power. The same merger may involve both a unilateral and a coordinated exercise of market power.

2.6 A unilateral exercise of market power can occur when a merger enables the merged firm to profitably sustain higher prices than those that would exist in the absence of the merger, without relying on competitors' accommodating responses.

2.7 A coordinated exercise of market power can occur when a merger reduces the competitive vigour in a market by, for example, removing a particularly aggressive competitor or otherwise enabling or enhancing the ability of the merged firm to coordinate its behaviour with that of its competitors. In these situations, higher post-merger prices are profitable and sustainable because other competitors in the market have accommodating responses.

2.8 When a merger is not likely to have market power effects, it is generally not possible to demonstrate that the transaction will likely prevent or lessen competition substantially, even though the merger might have implications for other industrial policy objectives that are beyond the scope of the Act.

Lessening of Competition

2.9 A merger may substantially lessen competition when it enables the merged firm, unilaterally or in coordination with other firms, to sustain materially higher prices than would exist in the absence of the merger by diminishing existing competition. This typically occurs with horizontal mergers when there is direct or existing overlap between the operations of the merging firms. This can also occur with non-horizontal mergers, such as those that foreclose rivals from accessing inputs to production.

Prevention of Competition

2.10 Competition may be substantially prevented when a merger enables the merged firm, unilaterally or in coordination with other firms, to sustain materially higher prices than would exist in the absence of the merger by hindering the development of anticipated future competition. This typically occurs when there is no or limited direct overlap between the merging firms' existing businesses, but direct competition between those businesses was expected to develop or increase in the absence of the merger. It may also occur when there is direct overlap between the merging parties' existing business(es) and the competitive effectiveness of one of the merging firms was expected to increase absent the merger, for example, because of the introduction of an improved product.

2.11 In these circumstances, the Bureau examines whether, absent the merger, timely entry or expansion[11] by either of the merging firms would likely occur on a sufficient scale and with sufficient scope to prevent incumbents from exercising market power.[12] "Timely"

11 Throughout these guidelines, the term "entry" also refers to expansion by existing firms.

12 The terms "timely," "likely" and "sufficient" are discussed in further detail in Part 7, below.

means that such entry would have occurred within a reasonable period of time, given the characteristics and dynamics of the market in question.[13] "Likely" refers to the expectation that entry by one of the merging firms would occur. The Bureau also considers whether effective entry by rival firms is likely, and the impact of such rival entry or expansion on prices. "Sufficient" means that, in the absence of the merger, entry by one of the merging firms would have caused prices to materially decrease. It also encompasses a scenario in which the threat of such entry has prevented a material price increase from occurring. The Bureau may examine a merger in terms of prevention of competition when the merger forestalls the entry plans of the acquirer, the target or a potential competitor, or when the merger removes independent control of capacity or an asset that provides or was likely to provide an important source of competitive discipline.

2.12 The following are examples of mergers that may result in a substantial prevention of competition:

- the acquisition of a potential entrant or of a recent entrant that was likely to expand or become a more vigorous competitor;
- an acquisition by the market leader that pre-empts a likely acquisition of the same target by a competitor;
- the acquisition of an existing business that would likely have entered the market in the absence of the merger;
- an acquisition that prevents expansion into new geographic markets;
- an acquisition that prevents the pro-competitive effects associated with new capacity; and
- an acquisition that prevents or limits the introduction of new products.

Substantiality

2.13 When the Bureau assesses whether a merger is likely to prevent or lessen competition substantially, it evaluates whether the merger is likely to provide the merged firm, unilaterally or in coordination with other firms, with the ability to materially influence price. The Bureau considers the likely magnitude and duration of any price increase that is anticipated to follow from the merger. Generally speaking, the prevention or lessening of competition is considered to be "substantial" in two circumstances:

- the price of the relevant product(s) would likely be materially higher in the relevant market than it would be in the absence of the merger ("material price increase"); and
- sufficient new entry would not occur rapidly enough to prevent the material price increase, or to counteract the effects of any such price increase.

---

13 Since the harm occasioned by a merger that substantially prevents competition may be sustained over the long term, the Bureau may consider longer time frames when assessing the effects of a prevention of competition than it does when assessing post-merger entry (see Part 7, below).

2.14 The Bureau does not consider a numerical threshold for the material price increase.[14] Instead, it bases its conclusions about whether the prevention or lessening of competition is substantial on an assessment of market-specific factors that could have a constraining influence on price following the merger. Additionally, where the merging firms, individually or collectively, have pre-existing market power, smaller impacts on competition resulting from the merger will meet the test of being substantial.

PART 3: ANALYTICAL FRAMEWORK

3.1 In determining whether a merger is likely to create, maintain or enhance market power, the Bureau must examine the competitive effects of the merger. This exercise generally involves defining the relevant markets and assessing the competitive effects of the merger in those markets. Market definition is not necessarily the initial step, or a required step, but generally is undertaken. The same evidence may be relevant and contribute to both the definition of relevant markets and the assessment of competitive effects. Merger review is often an iterative process in which evidence respecting the relevant market and market shares is considered alongside other evidence of competitive effects, with the analysis of each informing and complementing the other.

3.2 The overall objective of market definition in merger analysis is to identify the set of products that customers consider to be substitutes for those produced by the merging firms and the set or sets of buyers that could potentially face increased market power owing to the merger. Market definition, and the measurement of market share and concentration in the relevant market, is not an end in itself. Consistent with this, section 92(2) of the Act precludes the Tribunal from concluding that a merger is likely to prevent or lessen competition substantially solely on the basis of evidence of concentration or market share. The ultimate inquiry is not about market definition, which is merely an analytical tool – one that defies precision and can thus vary in its usefulness – to assist in evaluating effects. Rather, the ultimate inquiry is about whether a merger prevents or lessens competition substantially. That said, when reviewing a merger, market definition generally sets the context for the Bureau's assessment of the likely competitive effects of a merger.

3.3 In some cases, it may be clear that a merger will not create, preserve or enhance market power under any plausible market definition. Alternatively, it may be clear that anti-competitive effects would result under all plausible market definitions. In both such circumstances, the Bureau need not reach a firm conclusion on the precise metes and bounds of the relevant market(s). Additionally, when a completed merger has resulted in a material price increase, the Bureau may rely on evidence of that increase, taking into account other relevant factors. Cases may also arise in which the choice among several plausible market definitions may have a significant impact on

14 A material price increase is distinct from (and will generally be less than) the "significant and non-transitory price increase" that is used to define relevant markets, as described in Part 4, below. What constitutes a "materially greater" price varies with the industry and the context. For purposes of the statement above, materiality includes not only the magnitude and scope but also the sustainability of the price increase.

market share. In such cases, there may be a greater need for evidence regarding likely competitive effects that is not based on market share and concentration. While the Bureau may elect not to define markets in cases in which other reliable evidence of competitive effects is available, the Bureau will normally identify one or more relevant markets in which competition is prevented or lessened, in any merger enforcement action.

3.4 Section 93 of the Act sets out a non-exhaustive list of discretionary factors that the Tribunal may consider when determining whether a merger prevents or lessens competition substantially, or is likely to do so.[15] These factors, which are largely qualitative, may be relevant to the Bureau's assessment of market definition or of the competitive effects of a merger, or both. These factors are discussed in detail in Parts 4 and 6, below.[16]

3.5 The Bureau may also assess competitive effects from a quantitative perspective using various economic tools. The Bureau has discretion in determining which economic and other analytical tools it uses in particular cases. As the economic tools evolve, so will the Bureau's analytical approach.

3.6 The tools the Bureau uses to assess competitive effects also depend heavily on the facts of each case as well as on the availability of qualitative and quantitative evidence. Qualitative evidence may come from documents created by the merging parties in the ordinary course of business or from first-hand observations of the industry by customers or other market participants. Quantitative evidence may be derived from statistical analyses of price, quantity, costs or other data maintained by the merging parties and/or third parties. In all cases, the Bureau assesses the reliability, robustness and probative value of the evidence gathered.

15 Section 93 provides that the Tribunal "may" have regard to the listed factors, while section 93(*h*) permits the Tribunal to consider any other relevant factor. The Bureau does not consider the section 93 factors in a linear fashion. Rather, these factors form part of the analysis of competitive effects, to the extent they are relevant in a particular case. The Bureau encourages parties in their submissions to focus only on the factors and evidence that are relevant to the assessment of the impact of their merger on competition, rather than to treat the section 93 factors as a "checklist" to address in every case.

16 See also Part 7 on barriers to entry (section 93(*d*)) and Part 13 on "failing firm" (section 93(*b*)).

PART 4: MARKET DEFINITION

Overview

4.1 When the Bureau assesses relevant markets, it does so from two perspectives: the product dimension and the geographic dimension. As a general principle, the Bureau does not assume that the merging parties operate in the same relevant market(s), even when there appears to be some overlap between their products and the geographic areas in which they conduct business. In addition, the relevant market(s) being analyzed for competitive effects may not necessarily correspond to the product categories or service areas established by the merging firms or their rivals for operational purposes.

4.2 Market definition is based on substitutability, and focuses on demand responses to changes in relative prices after the merger. The ability of a firm or group of firms to raise prices without losing sufficient sales to make the price increase unprofitable ultimately depends on buyers' willingness to pay the higher price.[17] The ability of competitive suppliers to respond to a price increase is also important when assessing the potential for the exercise of market power, but the Bureau examines such responses later in the analysis—either when identifying the participants in the relevant market or when examining entry into the relevant market.

4.3 Conceptually, a relevant market is defined as the smallest group of products, including at least one product of the merging parties, and the smallest geographic area, in which a sole profit-maximizing seller (a "hypothetical monopolist") would impose and sustain a small but significant and non-transitory increase in price ("SSNIP") above levels that would likely exist in the absence of the merger.[18] In most cases, the Bureau considers a five percent price increase to be significant and a one-year period to be non-transitory. Market characteristics may support using a different price increase or time period.

4.4 The market definition analysis begins by postulating a candidate market for each product of the merging parties. For each candidate market, the analysis proceeds by determining whether a hypothetical monopolist controlling the group of products in that candidate market would profitably impose a SSNIP, assuming the terms of sale of all other products remained constant.[19] If the price increase would likely cause buyers to switch their purchases to other products in sufficient quantity to render the price increase unprofitable, the postulated candidate market is not the relevant market, and the next-best substitute is added to the candidate market.[20] The analysis

17 The Bureau typically considers product and geographic substitutes that are included in a single relevant market to be "acceptable" within the meaning of section 93(*c*) of the Act. When products within a relevant market are differentiated, some may be closer substitutes than others.

18 A market may consist of a single homogeneous product or a group of differentiated products.

19 Changes in terms of sale of other products in response to the merger are accounted for in the analysis of competitive effects and entry.

20 The next-best substitute is the product that would account for the greatest diversion in demand by buyers

then repeats by determining whether a hypothetical monopolist controlling the set of products in the expanded candidate market would profitably impose a SSNIP. This process continues until the point at which the hypothetical monopolist would impose and sustain the price increase for at least one product of the merging parties in the candidate market. In general, the smallest set of products in which the price increase can be sustained is defined as the relevant product market.

4.5 The same general approach applies to assessing the geographic scope of the market. In this case, an initial candidate market is proposed for each location where a merging party produces or sells the relevant products. As above, if buyers are likely to switch their purchases to sellers in more distant locations in sufficient quantities to render a SSNIP by a hypothetical monopolist unprofitable, the location that is the next-best substitute is added to the candidate market. This process continues until the smallest set of areas over which a hypothetical monopolist would impose and sustain the price increase is identified.

4.6 The base price used to postulate a price increase is typically the prevailing price in the relevant market. The Bureau may elect not to use the prevailing price when market conditions (absent the merger) would likely result in a lower or higher price in the future.[21]

4.7 In general, the base price used to postulate a price increase is whatever is ordinarily considered to be the price of the product in the sector of the industry (e.g., manufacturing, wholesale, retail) being examined.

4.8 In some circumstances, sellers may identify and charge different prices to various targeted sets of buyers ("price discrimination"). Sellers are able to price discriminate when targeted buyers cannot effectively switch to other products or geographic locations, and cannot engage in arbitrage with other buyers by taking advantage of price differences. When price discrimination is feasible, it may be appropriate to define relevant markets with reference to the characteristics of the buyers who purchase the product (assuming they can be delineated) or to the particular locations of the targeted buyers.

4.9 The factors the Bureau considers when analyzing the product and geographic dimensions of market definition are set out below.

in response to the postulated price increase, assuming that the product is available in unlimited quantities at constant prices.

21 When the evidence suggests a change in the future price (absent the merger) can be predicted with confidence, the Bureau may delineate markets based on the likely future price, even when that future price cannot be predicted precisely.

Product Market Definition

4.10 For the purpose of product market definition, what matters is not the identity of sellers, but the characteristics of the products and buyers' ability or willingness to switch from one product to another in response to changes in relative prices.[22] A relevant product market consists of a given product of the merging parties and all substitutes required for a SSNIP to be profitable.

4.11 When detailed data on the prices and quantities of the relevant products and their substitutes are available, statistical measures may be used to define relevant product markets. Demand elasticities indicate how buyers change their consumption of a product in response to changes in the product's price (own-price elasticity) or in response to changes in the price of another identified product (cross-price elasticity). While cross-price elasticities do not in themselves directly measure the ability of a firm to profitably raise prices, they are particularly useful when determining whether differentiated products are substitutes for one another and whether such products are part of the same relevant market.

4.12 Whether or not reliable statistical evidence on demand elasticities is available, the Bureau considers factors that provide evidence of substitutability, including evidence from market participants and the functional indicators highlighted below.

4.13 The views, strategies and behaviour of buyers are often reliable indicators of whether buyers would likely switch to other products in response to a SSNIP. For example, the Bureau examines what buyers have done in the past and what they are likely to do in the future as options become available, for instance, through advances in technology. Information from industry surveys and industry participants, such as competitors and manufacturers of the relevant product, is also taken into account. This information advances the analysis by providing details on historical developments (including the past behaviour of the merging parties and their rivals) and likely future developments in the industry. Pre-existing documents prepared by the merging parties in the ordinary course of business can also be very useful in this regard.

4.14 Various functional indicators help to determine what products are considered substitutes, including end use, physical and technical characteristics, price relationships and relative price levels, as well as buyer switching costs, as discussed below. Buyers may not view products purchased for similar end uses as substitutes. Therefore, functional interchangeability is not sufficient to warrant inclusion of two products in the same relevant market. In general, when buyers place a high value on the actual or perceived unique physical or technical characteristics of a product (including warranties, post-sales service and order turnaround time), it may be necessary to define distinct relevant markets based on these characteristics.

22 In this context, switching refers to "economic substitutability," defined as a change in consumption patterns in response to a price change, holding all other factors constant.

4.15 Switching costs may discourage a sufficient number of buyers from purchasing products that are functionally interchangeable, thereby allowing a hypothetical monopolist to impose a SSNIP. Products are not included in the same relevant market when costs that must be incurred by buyers are sufficient to render switching unlikely in response to a SSNIP. Examples include costs for buyers to retool, re-package, undertake product testing, adapt marketing materials and strategies, terminate a supply contract, learn new procedures or convert essential equipment. Other costs include the expense (and risk) buyers must incur when a product fails to satisfy expectations, which may damage a buyer's reputation as a reseller, or require the shutdown of a production line.

4.16 A relevant market may consist of a group of diverse products that are not themselves substitutes for each other. This occurs when a sole profit-maximizing seller would increase the price of the group of products because a sufficient number of buyers would not respond to the price increase by purchasing the various components separately from different sellers. This reaction may occur when there are significant transaction costs associated with using a number of sellers, including transportation costs and the time required to negotiate with multiple sellers. In these circumstances, the Bureau's examination includes an assessment of these transaction costs, as well as buyers' propensity to purchase a number of products from a single seller and the extent to which they have in the past broken up their purchases of a group of products in response to relative price changes.

Geographic Market Definition

4.17 For the purpose of geographic market definition, what matters is not the identity of the sellers, but buyers' ability or willingness to switch their purchases in sufficient quantity from suppliers in one location to suppliers in another, in response to changes in relative prices. A relevant geographic market consists of all supply points that would have to be included for a SSNIP to be profitable, assuming that there is no price discrimination (as described in paragraph 4.8 above). When price discrimination is present (and buyers and third parties are unable to arbitrage between low and high price areas), geographic markets are defined according to the location of each targeted group of buyers.

4.18 When defining the boundaries of geographic markets, the Bureau generally relies on evidence of substitutability, including evidence from market participants and the functional indicators described below and, when available, empirical analysis.

4.19 The views, strategies and behaviour of buyers in a given geographic area are often reliable indicators of whether buyers would likely switch their purchases to sellers located in other geographic areas in the event of a SSNIP. For example, the Bureau examines what buyers have done in the past and what they are likely to do in the future as options become available through, for instance, advances in technology. Industry surveys and the views, strategies and behaviour of industry participants also inform the analysis by providing information on how buyers of a relevant product in one geographic area respond or have responded to changes in the price, packaging or servicing of the relevant product in another geographic area. The extent to which merging parties and other sellers take distant sellers into account in their business plans, marketing strategies and other documentation can also be a useful indicator for geographic market definition.

4.20 Various functional indicators can assist in determining whether geographic areas are considered to be substitutes, including particular characteristics of the product, switching costs, transportation costs, price relationships and relative price levels, shipment patterns and foreign competition.

4.21 Several price and non-price factors could affect buyers' ability or willingness to consider distant options. Non-price factors include the fragility or perishability of the relevant product, convenience, frequency of delivery, and the reliability of service or delivery.

4.22 As with product market definition, high switching costs may discourage buyers from substituting between geographic areas. In addition, transportation costs play a central role in defining the geographic scope of relevant markets because they directly affect price. For example, when the price of the relevant product in a distant area plus the cost of transporting it to a candidate geographic market exceeds the price in the candidate market including a SSNIP, the relevant market does not generally include the products of sellers located in the distant area.[23]

4.23 Evidence that prices in a distant area have historically either exceeded or been lower than prices in the candidate geographic market by more than the transportation costs may indicate that the two areas are in separate relevant markets, for reasons that go beyond transportation costs.[24] However, before reaching this conclusion, the Bureau determines whether a SSNIP in the candidate geographic market may change the pricing differential to the point that distant sellers may be able to constrain a SSNIP.

4.24 Significant shipments of the relevant product from a distant area into an area in which a price increase is being postulated may suggest that the distant area is in the relevant geographic market. However, pre-merger shipment patterns do not, by themselves, establish the constraining effect of distant sellers and may be insufficient to justify broadening the geographic market. The Bureau undertakes further analysis to determine whether shipments from the distant area would make the SSNIP unprofitable.

23 However, distant firms that have excess capacity may in certain circumstances be willing to ship to another market, even when the net price received is less than the price in their own market.

24 For example, the existence of tariffs or other trade-related factors may create price differentials.

Foreign Competition

4.25 Buyers' willingness or ability to turn to foreign sellers may be affected by buyers' tastes and preferences, and by border-related considerations. Buyers may be less willing or able to switch to foreign substitutes when faced with factors such as exchange rate risk, local licensing and product approval regulations, industry-imposed standards, or initiatives to "buy local" owing to difficulties or uncertainties when crossing the border. Conversely, buyers may be more willing to turn to foreign substitutes when they have ample information about foreign products and how to source them, when foreign sellers or their products have already been placed on approved sourcing lists, or when technology licensing agreements, strategic alliances or other affiliations exist between domestic buyers and foreign firms.

4.26 When it is clear that the sales area of the merging parties and that of foreign sellers both belong in the relevant market (because sufficient buyers would be willing to respond to a SSNIP by turning to these sellers), the boundaries of the market are expanded beyond Canada to include the locations of foreign sellers.[25]

Delineating Geographic Boundaries

4.27 The geographic locations of buyers and sellers are relevant to delineating boundaries, particularly when markets are local or regional in nature. The underlying assumption is that profit-maximizing firms make decisions about where to locate based on the density of their buyer base and try to avoid cannibalizing their own sales when they have two or more locations in close proximity. In this way, demand responses are still key determinants of market boundaries. The Bureau may use spatial competition analysis to help delineate the boundaries of localized geographic markets.[26] The methodology for applying spatial competition analysis depends on the characteristics of the industry and the market under consideration.

4.28 It is important to emphasize that market boundaries in respect of either product or geographic markets are not precise in many instances. In addition, constraints on a merged firm's pricing behaviour can come from both inside and outside the relevant market as defined. These issues are discussed further below.

---

25 See section 93(*a*) of the Act. In addition to its relevance to market definition, the extent to which foreign products or foreign competitors provide or are likely to provide effective competition is evaluated in the context of the analysis described in Parts 5, 6 and 7, below.

26 When using spatial competition analysis, the Bureau identifies all locations (such as stores, branches, hubs and outlets) of both the merging parties and their product market competitors, to determine how firms' physical locations are situated relative to one another.

PART 5: MARKET SHARES AND CONCENTRATION

5.1 When engaged in a market definition exercise, the Bureau identifies participants in a relevant market to determine market shares and concentration levels. Such participants include (1) current sellers of the relevant products in the relevant geographic markets and (2) sellers that would begin selling the relevant products in the relevant geographic markets if the price were to rise by a SSNIP. In the latter case, the Bureau considers a firm to be a participant in a relevant market when it does not require significant sunk investments to enter or exit the market and would be able to rapidly and profitably divert existing sales or capacity to begin supplying the market in response to a SSNIP (a "supply response").[27] The Bureau considers situations in which competitive sellers would need to incur significant sunk investments, or would not be able to respond rapidly, in the analysis of entry (see Part 7, below).

Calculating Market Shares

5.2 The Bureau calculates market shares for all sellers who have been identified as participants in the relevant market.

5.3 Market shares can be measured in various ways, for example in terms of dollar sales, unit sales, capacity or, in certain natural resource industries, reserves.[28] When calculating market shares, the Bureau uses the best indicators of sellers' future competitive significance. In cases in which products are undifferentiated or homogeneous (i.e., have no unique physical characteristics or perceived attributes), and firms are all operating at full capacity, market shares based on dollar sales, unit sales and capacity should yield similar results. In such situations, the basis of measurement depends largely on the availability of data.

5.4 When firms producing homogeneous products have excess capacity, market shares based on capacity may best reflect a firm's relative market position and competitive influence in the market. Excess capacity may be less relevant to calculating market shares when it is clear that some of a firm's unused capacity does not have a constraining influence in the relevant market (e.g., because the capacity is high-cost capacity or the firm is not effective in marketing its product). When a regulated or historical incumbent firm is facing deregulation or enhanced competition, shares based on new customer acquisitions may be a better indicator of competitive vigor than are shares based on existing customers.

5.5 As the level of product differentiation in a relevant market increases, market shares calculated on the basis of dollar sales, unit sales and capacity increasingly differ. For

27 When merging firms compete across several markets and face the same competitors in each, the Bureau may use an aggregate description of these markets simply as a matter of convenience.

28 Throughout these guidelines, the term "capacity" means the ability to *produce* or *sell* a product. Capacity to sell refers to marketing and distribution capabilities, such as a sales force, distribution networks and other related infrastructure.

example, if most of the excess capacity in the relevant market were held by discount sellers in a highly differentiated market, the market shares of these sellers calculated on the basis of total capacity would be greater than if they were calculated on the basis of actual unit or dollar sales. In this case, market shares based on total capacity would be a misleading indicator of the relative market position of the discount sellers.[29] In such circumstances, dollar sales may be the better indicator of the size of the total market and of the relative positions of individual firms. Because unit sales may also provide important information about relative market positions, the Bureau often requests both dollar sales and unit sales data from the merging parties and other sellers.[30]

5.6 The Bureau generally includes the total output or total capacity of current sellers located within the relevant market in the calculation of the total size of the market and the shares of individual competitors. However, when a significant proportion of output or capacity is committed to business outside the relevant market and is not likely to be available to the relevant market in response to a SSNIP, the Bureau generally does not include this output or capacity in its calculations.

5.7 For firms that participate in the market through a supply response, the Bureau only includes in the market share calculations the output or capacity that would likely become available to the relevant market without incurring significant sunk investments.

Market Share and Concentration Thresholds

5.8 Consistent with section 92(2) of the Act, information that demonstrates that market share or concentration is likely to be high is not, in and of itself, sufficient to justify a conclusion that a merger is likely to prevent or lessen competition substantially. However, information about market share and concentration can inform the analysis of competitive effects when it reflects the market position of the merged firm relative to that of its rivals. In the absence of high post-merger market share and concentration, effective competition in the relevant market is generally likely to constrain the creation, maintenance or enhancement of market power by reason of the merger.

5.9 The Bureau has established the following thresholds to identify and distinguish mergers that are unlikely to have anti-competitive consequences from those that require a more detailed analysis:

29 Similar results occur as the level of differentiation between sellers increases. For instance, two firms may operate with the same capacity (e.g., number of trucks) but have significantly different revenue streams (because one firm may have many buyers along a truck route, i.e., route density). In such cases, market shares based on capacity and revenues provide different information about relative market positions.

30 While publicly available or readily observable information may be useful for estimating market shares, when credible and possible, the Bureau relies on transaction-level data from individual market participants as the most accurate measure of market shares.

- The Commissioner generally will not challenge a merger on the basis of a concern related to the unilateral exercise of market power when the post-merger market share of the merged firm would be less than 35 percent.
- The Commissioner generally will not challenge a merger on the basis of a concern related to a coordinated exercise of market power when
  - the post-merger market share accounted for by the four largest firms in the market (known as the four-firm concentration ratio or CR4) would be less than 65 percent; or
  - the post-merger market share of the merged firm would be less than 10 percent.

5.10 Mergers that give rise to market shares or concentration that exceed these thresholds are not necessarily anti-competitive. Under these circumstances, the Bureau examines various factors to determine whether such mergers would likely create, maintain or enhance market power, and thereby prevent or lessen competition substantially.

5.11 When other information suggests that current market shares do not reflect the competitive role of one of the merging parties relative to its rivals, the Bureau considers this information when determining whether a merger is likely to prevent or lessen competition substantially. In all cases, examining market shares and concentration is only one part of the Bureau's analysis of competitive effects.

5.12 In addition to the level of market shares or concentration in the relevant market, the Bureau examines the distribution of market shares across competitors and the extent to which market shares have changed or remained the same over a significant period of time.

5.13 All else being equal, the likelihood that a number of firms may be able to bring about a price increase through coordinated behaviour increases as the level of concentration in a market rises and as the number of firms declines.[31] In contrast, coordinated behaviour becomes increasingly difficult as the number or size of firms that have the ability to increase output increases.

5.14 When evaluating market share information, the Bureau considers the nature of the market and the impact of forthcoming change and innovation on the stability of existing market shares.[32] While a small incremental increase in concentration following a merger may suggest that the merger is not likely to have a significant impact on the

31 In addition to the CR4, the Bureau may examine changes in the Herfindahl-Hirschman Index ("HHI") (calculated by summing the squares of the individual market shares of all market participants) to observe the relative change in concentration before and after a merger. While the change in HHIs may provide useful information about changes in the market structure, the Bureau does not use HHI levels to delineate any safe harbour threshold.

32 For example, historical or existing market shares may be less relevant in bidding markets in which rapid fluctuations in market shares are more common. In such cases, the analysis focuses on the likely future effectiveness of independent sources of competition, regardless of their current shares. Bidding and bargaining markets are discussed in additional detail under "Unilateral Effects" in Part 6.

market, the Bureau assesses the growth expectations for one or both of the merging parties to determine whether the merger may eliminate an important competitive force.

PART 6: ANTI-COMPETITIVE EFFECTS

6.1 As noted in Part 3, above, the Bureau may consider market definition and competitive effects concurrently in a dynamic and iterative analytical process. When the market share and concentration thresholds listed in paragraph 5.9, above, are exceeded or when other information suggests that a merger may prevent or lessen competition substantially, the Bureau's assessment of competitive effects based on quantitative analysis and the application of relevant factors, including the factors listed in section 93 of the Act, takes on greater importance. Such an assessment falls under the broad categories of unilateral effects and coordinated effects, as described below.

6.2 When it is clear that the level of effective competition that is to remain in the relevant market is not likely to be reduced as a result of the merger, this alone generally justifies a conclusion not to challenge the merger.

6.3 To determine the ability and effectiveness of remaining competitors to constrain an exercise of market power by the merged firm, the Bureau examines existing forms of rivalry, such as discounting and other pricing strategies, distribution and marketing methods, product and package positioning, and service offerings. Whether the market shares of firms are stable or fluctuate over time is also relevant, as is the extent to which product differentiation affects the degree of direct competition among firms. Further, the Bureau assesses whether competitors are likely to remain as vigorous and effective as they were prior to the merger.

6.4 The extent and quality of excess capacity held by merging and non-merging firms provides useful information about whether the merger could result in the exercise of market power. Excess capacity held by rivals to the merged firm improves their ability to expand output should the merged firm attempt to exercise market power. On the other hand, when the merged firm holds a significant share of excess capacity in the relevant market, this may discourage rivals from expanding.

6.5 The Bureau assesses the competitive attributes of the target business to determine whether the merger will likely result in the removal of a vigorous and effective competitor.[33] In addition to the forms of rivalry discussed above, the Bureau's assessment includes consideration of whether one of the merging parties:

33 See section 93(*f*) of the Act. A firm that is a vigorous and effective competitor often plays an important role in pressuring other firms to compete more intensely with respect to existing products or in the development of new products. A firm does not have to be among the larger competitors in a market in order to be a vigorous and effective competitor. Small firms can exercise an influence on competition that is disproportionate to their size. Mavericks (described in "Coordinated Effects," in Part 6, below) are one type of vigorous and effective competitor.

- has a history of not following price increases or market stabilizing initiatives by competitors, or of leading price reductions;
- provides unique service, warranty or other terms to the market;
- has recently expanded capacity or has plans to do so;
- has recently made gains in market share or is in a position to do so; or
- has recently acquired intellectual property rights or other inputs, or has developed product features that enhance its ability to compete in the market, or will soon do so.

6.6 While the removal of a vigorous and effective competitor through a merger is likely to prevent or lessen competition to some degree, it may not, in itself, provide a sufficient basis for a decision to challenge the merger. Additionally, when a firm removed through a merger is not a vigorous or effective competitor (e.g., owing to financial distress, or declining technologies or markets), this fact is relevant to, but not determinative of, a decision not to challenge a merger.

6.7 The Bureau evaluates the general nature and extent of change and innovation in a market.[34] In addition to assessing the competitive impact of technological developments in products and processes, the Bureau examines change and innovation in relation to distribution, service, sales, marketing, packaging, buyer tastes, purchase patterns, firm structure, the regulatory environment and the economy as a whole.

6.8 The pressures exerted by change and innovation on competitors in a market (including the merging parties) may be such that a material price increase is unlikely to be sustainable, especially when technology or a merger reduces barriers to entry or stimulates or accelerates the change or innovation in question. Such pressures may have important implications for efficient markets in the medium to long term.

6.9 A merger may facilitate the exercise of market power by impeding the process of change and innovation. For example, when a merger eliminates an innovative firm that presents a serious threat to incumbents, the merger may hinder or delay the introduction of new products, processes, marketing approaches, and aggressive research and development initiatives or business methods.

Unilateral Effects

6.10 By placing pricing and supply decisions under common control, a merger can create an incentive to increase price and restrict supply or limit other dimensions of competition. A unilateral exercise of market power occurs when the merged firm can profitably sustain a material price increase without effective discipline from competitive responses by rivals.

6.11 When buyers can choose from among many sellers offering comparable products, a firm's ability to profitably increase its price is limited by buyers diverting their

34 See section 93(*g*) of the Act.

purchases to substitute products in response to the price increase. When two firms in a market merge and the price of one firm's product(s) rises, some demand may be diverted to product(s) of the firm's merger partner, thereby increasing the overall profitability of the price increase and providing the impetus to raise the price. As such, the elimination of competition between firms as a result of a merger may lessen competition substantially.

6.12 Unilateral effects can occur in various market environments, defined by the primary characteristics that distinguish the firms within those markets and determine the nature of their competition. Three types of market environment are described below.

Firms in Differentiated Product Industries

6.13 In markets in which products are differentiated, a merger may create, enhance or maintain the ability of the merged firm to exercise market power unilaterally when the product offerings of the merging parties are close substitutes for one another. In such circumstances, the Bureau assesses how the merger may change the pricing incentives of the individual firms.

6.14 Any firm considering increasing the prices for its products faces a trade-off between higher profits on the sales that it continues to make following the price increase and the profits that it loses on sales that it no longer makes following the price increase, as buyers switch to other firms and/or other products. Any sales that were previously lost to the firm's merging partner will be captured by the merged firm ("diverted sales"). Thus, the incentives to raise prices after the merger are greater the more closely the products of the merging firms compete with each other, and the larger the profit margins on these diverted sales.

6.15 The closeness of competition between the merging firms' products may be measured by the diversion ratio between them.[35] The value of the diverted sales from one merging firm depends on the volume of diverted sales and the profit margin on the diverted sales. The greater the value of the diverted sales, the greater the incentive the merged firm has to raise prices.

6.16 The incentive to raise prices following the merger will typically be greater when the products of the merging firms are close substitutes for a significant number[36] of buyers, when the merger removes a vigorous and effective competitor from the market, or when buyers are not very sensitive to price increases.[37] These are not the only circumstances, however, when the Bureau may be concerned with potential unilateral effects post-merger.

35 The diversion ratio between firm A's product and firm B's product is equal to the fraction of sales lost by firm A to firm B when firm A raises the price of its product. Similarly, the diversion ratio between firm B's product and firm A's product is equal to the fraction of sales lost by firm B to firm A when firm B raises the price of its product. The diversion ratios between firms A and B need not be symmetric.

36 A significant number" in this context need not approach a majority.

37 Buyer sensitivity to price increases may but need not be measured by the own-price elasticity of demand.

6.17 Even when the merging firms are found to have an incentive to increase price after the merger, the likelihood of the merger preventing or lessening competition substantially also depends on the responses of buyers and rival firms. In addition to considering the value of sales currently diverted to rivals, the Bureau evaluates the likely competitive responses of rivals, including whether rivals in the market are likely to expand production, reposition their products or extend their product line to discipline unilateral market power that would otherwise occur as a result of the merger.[38] The Bureau also considers existing sellers that may only occupy a particular niche within the relevant market and whether they provide an alternative for a sufficient number of buyers. In addition, the likelihood and likely impact of entry is considered.

6.18 When assessing the extent of competition between the products of the merging firms, the Bureau examines, among other possible factors, past buyer-switching behaviour in response to changes in relative prices, information based on buyer preference surveys, win-loss records, and estimates of own-price and cross-price elasticities.[39]

Firms in Homogeneous Product Industries

6.19 A post-merger price increase may be profitable if the merger were to remove a seller to whom buyers would otherwise turn in response to a price increase. In markets in which products are relatively undifferentiated (that is, they are homogeneous), such a price increase is more likely to be profitable

- the greater the share of the relevant market the merged firm accounts for;
- the lower the margin on the output that the merged firm withholds from the market to raise price;
- the less sensitive buyers are to price increases; and
- the smaller the response of other sellers offering close substitutes.

6.20 The response of other sellers will be smaller when they have insufficient capacity to increase sales to replace the output withheld by the merged firm post-merger, or substantial amounts of capacity are committed to other buyers under long-term contracts, and capacity cannot be expanded quickly and at relatively low cost. Therefore, the Bureau examines, among other factors, whether capacity constraints limit the effectiveness of remaining sellers by impeding their ability to make their products available in sufficient quantities to counter an exercise of market power by the merged firm.

Bidding and Bargaining Markets

6.21 In some markets, sellers may interact with buyers through bidding or bargaining for the right to supply. Buyers may negotiate with multiple sellers as a means of using one seller to obtain a better price from another seller. Such interactions may take the form of a pure auction or involve repeated rounds of negotiation with a select group

38 This requires a determination of whether expansion, repositioning or product line extension will likely be deterred by risk, sunk costs or other entry barriers.

39 Refer to definitions of own-price and cross-price elasticity in paragraph 4.11, above.

of sellers. A merger between two sellers will prevent buyers from playing these two sellers off against each other to obtain a better price.

6.22 The extent to which this loss of competition will affect the price paid by the buyer depends on how close the merging firms are to each other relative to other bidders and potential suppliers in meeting the buyer's requirements. When there are many bidders or potential suppliers that are equally or similarly situated as the merging parties, a merger involving two sellers is unlikely to prevent or lessen competition substantially.[40]

Coordinated Effects

6.23 A merger may prevent or lessen competition substantially when it facilitates or encourages coordinated behaviour among firms after the merger. The Bureau's analysis of these coordinated effects entails determining how the merger is likely to change the competitive dynamic in the market such that coordination is substantially more likely or effective. A lessening or prevention of competition may result from coordinated behaviour even when the coordination does not involve all the firms in the market.

6.24 Coordination involves interaction by a group of firms (including the merged firm) that is profitable for each firm because of each firm's accommodating reactions to the conduct of the others. Coordinated behaviour may relate to price, service levels, allocation of customers or territories, or any other dimension of competition.

6.25 Coordinated behaviour may involve tacit understandings that are not explicitly negotiated or communicated among firms. Tacit understandings arise from mutual yet independent recognition that firms can, under certain market conditions, benefit from competing less aggressively with one another. Coordinated behaviour may also involve express agreements among firms to compete less vigorously or to refrain from competing. Such agreements may raise concerns under the conspiracy and bid-rigging provisions of the Act.

6.26 Coordinated behaviour is likely to be sustainable only in the following circumstances:

- when firms are able to
    - individually recognize mutually beneficial terms of coordination;
    - monitor one another's conduct and detect deviations from the terms of coordination; and
    - respond to any deviations from the terms of coordination through credible deterrent mechanisms;[41] and

40 As noted in footnote 32 above, historical or existing market shares may be less relevant in bidding markets.

41 These responses, typically known as punishments, may take the form of lowering prices in the relevant market or in other markets.

- when coordination will not be threatened by external factors, such as the reactions of existing and potential competitors not part of the coordinating group of firms or the reactions of buyers.

6.27 Competition is likely to be prevented or lessened substantially when a merger materially increases the likelihood of coordinated behaviour when none existed before, or materially increases the extent or effectiveness of coordination beyond that which already exists. When making this assessment, the Bureau considers a number of factors, including the presence of factors necessary for successful coordination and those that are conducive to coordination. The mere presence of such factors, however, is not sufficient to conclude that there are competition concerns. Rather, at issue is whether the merger impacts these factors in such a way that makes coordination or more effective coordination more likely.

Market Concentration and Entry Barriers

6.28 Market power typically arises in markets characterized by concentration and high barriers to entry. Market concentration is generally a necessary but not sufficient condition for a merger to prevent or lessen competition substantially through coordinated effects. Firms in a concentrated market typically find it easier and less costly to engage in coordinated behaviour because it is easier for members of a small group of firms to recognize terms of coordination, and to monitor one another's conduct and detect and respond to deviations. Barriers to entry are also relevant, since coordinated behaviour among competitors in a concentrated market would unlikely be sustainable if raising prices were to lead to significant effective entry.

Indicia Suggesting that Market Conditions are Conducive to Coordination

6.29 In its analysis of competitive effects, the Bureau examines whether market conditions would likely allow coordinated behaviour to be sustainable after the merger, with reference to the criteria outlined in paragraph 6.26, above. While the presence of certain market conditions (often referred to as facilitating factors) may suggest the ability of firms to overcome impediments to coordinated behaviour, neither the absence nor the presence of any single factor or group of factors determines whether competition is likely to be prevented or lessened substantially.

6.30 When examining whether firms are likely able to independently recognize mutually beneficial terms of coordination, the Bureau considers, among other factors, the degree of product differentiation and cost symmetries among firms. Recognizing terms of coordination that all firms find profitable is easier when products are less differentiated and when firms have similar cost structures. Complex products and differences in product offerings and cost structure tend to make it more difficult for firms to reach profitable terms of coordination. Similarly, markets with rapid and frequent product innovations, or that are in a period of rapid growth, are less conducive to coordinated behaviour.

6.31 Profit-maximizing firms have an incentive to deviate from coordinated behaviour when the expected profits from deviating are greater than the expected profits from engaging in coordination. Therefore, when evaluating whether coordination is likely, the Bureau considers whether certain firms have stronger incentives to deviate as well as factors that could affect incentives to deviate, such as the size and frequency of transactions. When individual transactions are large and infrequent relative to total market demand, deviations from coordinated behaviour are more profitable, making effective coordinated behaviour less likely. Additionally, when individual transactions are large relative to a single firm's total output, this will increase that firm's incentive to deviate from coordinated behaviour.[42]

6.32 The Bureau also considers whether firms can monitor and detect deviations from coordinated behaviour. When so doing, the Bureau evaluates the degree of market transparency that exists. When information about prices, rival firms and market conditions is readily available to market participants, it is easier for rivals to monitor one another's behaviour, which in turn makes effective coordination more likely. The existence of industry organizations that facilitate communication and dissemination of information among market participants may also make it easier for firms to coordinate their behaviour. A complex, multi-stage procurement process may affect the ability of firms to detect deviations from coordinated agreements. Also relevant to the analysis is the stability of firms' underlying costs, as well as the predictability of demand. When costs fluctuate, it may be difficult to detect whether a price change represents a deviation from coordinated behaviour or whether it is a response to a change in cost conditions, which, in turn, makes effective coordination less likely. It may similarly be difficult to detect whether a price change represents a deviation from coordinated behaviour when demand fluctuates unexpectedly.

6.33 The Bureau's evaluation of whether firms can impose credible punishments includes assessing the degree of multi-market exposure among firms and of excess capacity.[43] When firms participate in multiple geographic or product markets, there are greater opportunities for them to discourage deviation from coordinated behaviour because there is broader scope for punishing deviations. Similarly, excess capacity held by firms within the coordinating group can allow such firms to oversupply the market when they detect deviations from the coordinated price, thereby discouraging deviations and making coordination more likely. However, excess capacity may also provide firms with an incentive and an ability to deviate from coordinated behaviour by selling products at lower prices. This could, in turn, make coordinated behaviour less likely. It is therefore important to consider which firms, if any, hold excess capacity as well as their individual economic incentives. A firm may also adopt pricing policies, such

42 These examples assume that coordination does not involve a customer allocation scheme.

43 This includes information about levels of service, innovation initiatives, product quality, product choice and levels of advertising. Market transparency is typically increased by posted pricing, circulation of price books, product, service or packaging standardization, exchanges of information regarding matters such as pricing, output, innovation, bids won and lost, and advertising levels, through a trade association, trade publication or otherwise, public disclosure of this information by buyers or through government sources, and "meet the competition" or "most favoured customer" clauses in contracts.

as most-favoured customer clauses, that commit it to following a low-pricing strategy when other firms reduce their prices.

6.34 A history of collusion or coordination in the market is also relevant to the Bureau's analysis, because previous and sustained collusive or coordinated behaviour indicates that firms have successfully overcome the hurdles to effective coordinated behaviour in the past.

Impact of the Merger on Coordinated Behaviour

6.35 When assessing whether a merger increases the likelihood of coordination, the Bureau considers whether the merger changes the competitive dynamic in a market so as to make coordinated behaviour among firms more likely or effective. A merger that changes the competitive dynamic among firms may lead to coordinated behaviour when none existed prior to the merger, or may materially increase the extent or effectiveness of coordination beyond that which already exists in a market. The Bureau determines whether market conditions are conducive to coordination before the merger and whether the merger is likely to increase the likelihood of coordination. The Bureau also identifies the constraints on coordinated behaviour that existed before the merger to determine whether the merger reduces or eliminates those constraints.

6.36 In highly concentrated markets, effective coordination may be constrained by the number of firms that exist before the merger. A merger could remove this constraint by reducing the number of rivals to the point that the profitability of coordination makes coordination a more achievable strategy than it was prior to the merger.

6.37 When firms differ greatly from one another, effective coordination may be constrained by their inability to behave in a way that each finds profitable. When the effect of the merger is to reduce or eliminate asymmetries between the merged firm and its key rivals, firms may find it easier to coordinate their behaviour in a way that is profitable for each coordinating firm after the merger. Conversely, a merger may increase asymmetries between the merged firm and its rivals, thereby making coordinated behaviour less profitable and therefore less likely.

6.38 Effective coordination may be constrained before the merger by the activities of a particularly vigorous and effective competitor (a "maverick"). A maverick is a firm that plays a disruptive role and provides a stimulus to competition in the market. An acquisition of a maverick may remove this constraint on coordination and, as such, increase the likelihood that coordinated behaviour will be effective.

6.39 Alternatively, a merger may not remove a maverick but may instead inhibit a maverick's ability to expand or enter, or otherwise marginalize its competitive significance, thereby increasing the likelihood of effective coordination.

PART 7: ENTRY

7.1 A key component of the Bureau's analysis of competitive effects is whether timely entry[44] by potential competitors would likely occur on a sufficient scale and with sufficient scope to constrain a material price increase in the relevant market. In the absence of impediments to entry, a merged firm's attempt to exercise market power, either unilaterally or through coordinated behaviour with its rivals, is likely to be thwarted by entry of firms that

- are already in the relevant market and can profitably expand production or sales;
- are not in the relevant market but operate in other product or geographic markets and can profitably switch production or sales into the relevant market; or
- can profitably begin production or sales into the relevant market de novo.

Conditions of Entry

7.2 Entry is only effective in constraining the exercise of market power when it is viable. When entry is likely, timely and sufficient in scale and scope, an attempt to increase prices is not likely to be sustainable as buyers of the product in question are able to turn to the new entrant as an alternative source of supply.

Timeliness

7.3 The Bureau's assessment of the conditions of entry involves determining the time that it would take for a potential entrant to become an effective competitor in response to a material price increase that is anticipated to arise as a result of the merger. In general, the longer it takes for potential entrants to become effective competitors, the less likely it is that incumbent firms will be deterred from exercising market power. For that deterrent effect to occur, entrants must react and have an impact on price in a reasonable period of time. In the Bureau's analysis, the beneficial effects of entry on prices in this market must occur quickly enough to deter or counteract any material price increase owing to the merger, such that competition is not likely to be substantially harmed.

Likelihood

7.4 When determining whether future entry is likely to occur, the Bureau generally starts by assessing firms that appear to have an entry advantage. While other potential sources of competition may also be relevant, typically the most important sources of potential competition are the following:

- fringe firms already in the market;
- firms that sell the relevant product in adjacent geographic areas;

44 As noted previously, throughout these guidelines, the term "entry" also refers to expansion by existing firms. The same factors that constrain new entrants also often constrain significant expansion by fringe firms, even though in many cases expansion costs for existing firms may be lower than entry costs for a new entrant.

- firms that produce products with machinery or technology that is similar to that used to produce the relevant product;
- firms that sell in related upstream or downstream markets;
- firms that sell through similar distribution channels; and
- firms that employ similar marketing and promotional methods.

7.5 A history of entry into and exit from a particular market provides insight into the likelihood of entry occurring in a timely manner and on a sufficient scale to counteract an exercise of market power by a merged firm. It is, however, not the sole determinant of whether this would likely occur.

7.6 The Bureau seeks to determine the extent that entry is likely, given the commitments that potential entrants must make, the time required to become effective competitors, the risks involved and the likely rewards. The Bureau considers any delay or loss that potential entrants expect to encounter before becoming effective competitors, and the resulting sunk costs and risk associated with such entry that reduce the likelihood that entry will occur or be successful. The Bureau also considers the expectations that potential entrants may have of incumbent responses to entry, as well as the likelihood that customers will support an entrant's investments or guarantee it a needed volume of sales. When assessing the likelihood of entry, the Bureau evaluates profitability at post-entry prices, taking into account the effect that new supply would have on market prices. These prices are often the pre-merger price levels. For instance, if a competitor was able to enter a market only on a scale that is below the minimum viable scale, the Bureau would not consider such entry to be likely, since the entrant would be unable to achieve the annual level of sales necessary to achieve profitability at post-entry prices.

Sufficiency

7.7 When considering whether entry is likely to be on a scale and scope that would be sufficient to deter or counteract a material price increase, the Bureau examines what would be required from potential competitors who choose to enter. The Bureau will also consider any constraints or limitations on new entrants' capacities or competitive effectiveness. Entry by firms that seek to differentiate themselves by establishing a niche to avoid direct competition with the merged firm may also not be sufficient to constrain an exercise of market power.

Types of Barriers to Entry

7.8 Barriers to entry affect the timeliness, likelihood and sufficiency of entry. They can take many forms, ranging from absolute restrictions that preclude entry, to sunk costs and other factors that raise the costs and risks associated with entry and thereby deter it.[45] While, in some cases, each individual "barrier" may be insufficient alone to impede entry, the Bureau considers the collective influence of all barriers which, when taken together, can effectively deter entry.

45 While commencing a business may in some cases be easy, new entrants may find it difficult to survive for a variety of reasons, including the strategic behaviour of incumbents.

Regulatory Barriers

7.9 The types of barriers identified in section 93(*d*) of the Act—namely tariff and non-tariff barriers to international trade, interprovincial barriers to trade and regulatory control over entry—can provide incumbents with absolute cost advantages over potential entrants, presenting considerable and, in some cases, insurmountable impediments to entry.

Sunk Costs

7.10 Substantial sunk costs directly affect the likelihood of entry and constitute a significant barrier to entry. Costs are sunk when they are not recoverable if the firm exits the market. In general, since entry decisions are typically made in an environment in which success is uncertain, the likelihood of significant future entry decreases as the absolute amount of sunk entry costs relative to the estimated rewards of entry increases. The Bureau's assessment of sunk costs also focuses on the time required to become an effective competitor and the probability of success, and whether these factors justify making the required investments.

7.11 New entrants must often incur various start-up sunk costs, such as acquiring market information, developing and testing product designs, installing equipment, engaging personnel and setting up distribution systems. New entrants may also face significant sunk costs owing to the need to

- make investments in market-specific assets and in learning how to optimize the use of these assets;
- overcome product differentiation-related advantages enjoyed by incumbents; or
- overcome disadvantages presented by the strategic behaviour of incumbents.

7.12 These potential sources of sunk costs can create significant impediments to entry when they require that potential entrants factor greater costs into their decision-making relative to incumbents who can ignore such costs in their pricing decisions because they have already made their sunk cost commitment.

7.13 The investment required to establish a reputation as a reliable or quality seller is also a sunk cost, constituting a barrier to entry when it is an important element in attracting buyers, particularly in industries in which services are an important element of the product. Under these circumstances, the time to establish a good reputation may make profitable entry more difficult, and therefore delay the competitive impact that an entrant may have in the marketplace.

7.14 Long-term exclusive contracts with automatic renewals, rights of first refusal, most favoured customer or "meet or release" clauses or termination fees may constitute barriers to entry. Contracts with attributes that limit buyer switching may make it difficult for firms to gain a sufficient buyer base to be profitable in one or more markets (even when barriers to entry in the industry are otherwise relatively low) and can thus make entry unattractive. The deterring effects of such contracts are more pronounced when, for example, economies of density or scale are important and make it difficult for new or smaller firms to achieve a minimum efficient scale of operations.

Other Factors That Deter Entry

7.15 In markets in which economies of scale are significant, entry on a small scale may be difficult unless the entrant can successfully exploit a niche. Conversely, entry in such markets on a large scale may expand available capacity to supply beyond market demand, thereby depressing market prices and making entry less attractive.

7.16 Market maturity can also impede entry. Entry may be less difficult and time-consuming in the start-up and growth stages of a market, when the dynamics of competition generally change more rapidly. Mature markets exhibit flat or declining demand, making it more difficult for potential entrants to profitably enter the business because the entrants' sales have to come from existing rivals.

7.17 Other cost advantages for incumbents that may deter entry include those related to transportation costs, control over access to scarce or non-duplicable resources such as technology, land, natural resources and distribution channels, network effects, and capital costs.[46]

PART 8: COUNTERVAILING POWER

8.1 When determining whether a merger is likely to result in a material price increase, the Bureau assesses whether buyers are able to constrain the ability of a seller to exercise market power. This may occur when, for example,

- they can self-supply through vertical integration into the upstream market;
- the promise of substantial orders can induce expansion of an existing smaller supplier and/or can sponsor entry by a potential supplier not currently in the market;
- they can refuse to buy other products produced by the seller;
- they can refuse to purchase the seller's products in other geographic markets where the competitive conditions are different; or
- they can impose costs on the seller (for example, by giving less favourable retail placement to the merged entity's products).

8.2 The Bureau does not presume that a buyer has the ability to exercise countervailing power merely by virtue of its size. There must be evidence that a buyer, regardless of size, will have the ability and incentive to constrain an exercise of market power by the merged firm. Evidence of prior dealings between the buyer and one or more of the merging parties that tends to demonstrate the buyer's relative bargaining strength is of particular relevance. The Bureau also considers the extent to which

46 The need to raise capital may have a significant impact on the likelihood and timeliness of entry.

the merger affects the buyer's ability and incentive to exercise countervailing power. When a merger eliminates a supplier whose presence contributed significantly to a buyer's historical bargaining strength, the buyer may no longer be able to exercise countervailing power after the merger.

8.3 When price discrimination is a feature of the relevant market, it may be possible for some but not all buyers to counter the effects of an exercise of market power. For example, a merged firm may be able to increase prices to buyers that do not have the option to vertically integrate their operations, while other buyers with this option may be able to resist such a price increase. Where only a subset of buyers is able to counter a price increase or other exercise of market power, the Bureau will generally find that countervailing power is insufficient to prevent the merged firm from exercising market power in the relevant market.

PART 9: MONOPSONY POWER

9.1 A merger of competing buyers may create or enhance the ability of the merged firm, unilaterally or in coordination with other firms, to exercise monopsony power. The Bureau is generally concerned with monopsony power when a buyer holds market power in the relevant purchasing market, such that it has the ability to decrease the price of a relevant product below competitive levels with a corresponding reduction in the overall quantity of the input produced or supplied in a relevant market, or a corresponding reduction in any other dimension of competition.[47]

9.2 Consistent with its general analytical framework for merger review, the Bureau considers both market definition-based and other evidence of competitive effects in monopsony cases. The conceptual basis used for defining relevant markets is, mirroring the selling side, the hypothetical monopsonist test. A relevant market is defined as the smallest group of products and the smallest geographic area in which a sole profit-maximizing buyer (a "hypothetical monopsonist") would impose and sustain a significant and non-transitory price decrease below levels that would likely exist in the absence of the merger. The relevant product market definition question is thus whether suppliers, in response to a decrease in the price of an input, would switch to alternative buyers or reposition or modify the product they sell in sufficient quantity to render the hypothetical monopsonist's price decrease unprofitable.

9.3 In order to determine market shares and concentration levels, the Bureau compares the size of the purchases of the relevant product by the merging parties with the total sales of the relevant product. When the merging parties represent only a small percentage of the total purchases of the relevant product, the Bureau generally considers the suppliers to be well-placed to forego sales to the merging parties in

47 Cases where the supply curve is perfectly inelastic, such that a price decrease below competitive levels does not result in a decrease in output but only a wealth transfer, may also give rise to concerns. This scenario should be understood to be generally included in the category of monopsony. Similarly, an output effect is not required in monopoly cases.

favour of other buyers when faced with an attempt to lower prices. As a general rule, the Bureau will not challenge a merger based on monopsony (or oligopsony) power concerns where shares of the relevant upstream market held by the merging parties (and their competitors, in an oligopsony case) fall below the market share safe harbours set out in Part 5 of these guidelines. When the merging parties account for a significant portion of purchases of the relevant product and exceed these market share safe harbours, then it is more likely that the merging parties could exercise monopsony power. In this case, the Bureau considers barriers to entry that may limit or negate the ability of a new buyer to purchase the product, or of an existing buyer to expand its purchases (see Part 7 for a detailed discussion of the Bureau's approach to assessing entry).

9.4 When the merged firm accounts for a significant portion of purchases of the relevant product, and barriers to buying the input are high, the factors that the Bureau considers when attempting to determine whether the merged firm is likely to have the ability to exercise monopsony power include the following:

- whether the merged firm can restrict its purchases by an amount that is large enough to reduce the relevant product's price in the market;
- whether upstream supply of the relevant product is characterized by a large number of sellers and low barriers to entry into buying such that the normal selling price of a supplier is likely competitive;
- whether it seems likely that certain suppliers will exit the market or otherwise reduce production, or will reduce investments in new products and processes in response to the anticipated price decrease;
- whether a reduction in the merged firm's purchases of the relevant (input) product is likely to reduce the profits earned by the merged firm in downstream output markets, and, if so, whether the downstream output profit reduction is large enough to reduce the merged firm's incentive to restrict its purchases; and
- whether a reduction in the merged firm's purchases of the relevant product is likely to reduce its access to adequate supply of the relevant product in the long run.

9.5 When available, the Bureau considers empirical evidence to analyze the effect of historical changes in supply on price and quantity as part of the assessment of whether the merging parties would have the ability to exercise monopsony power.

PART 10: MINORITY INTEREST TRANSACTIONS AND INTERLOCKING DIRECTORATES

10.1 Part 1, above, outlines the factors the Bureau considers when determining whether a minority interest transaction or interlocking directorate confers the requisite level of influence to constitute a merger. Additionally, a minority interest or interlocking directorate may be ancillary to a merger that the Bureau is otherwise reviewing (e.g., when one of the merging parties holds a minority interest in a third competitor prior to the merger).[48] This Part outlines the Bureau's approach to minority interest transactions where the Bureau has jurisdiction under the merger provisions of the Act.

10.2 The Bureau's analysis of minority interests and interlocks that are determined to be mergers under Part 1 of these guidelines involves two distinct steps:

- First, the Bureau conducts a preliminary examination of the transaction as a full merger between the acquirer and the target firm. This exercise is used to screen out benign cases. When the Bureau concludes that a full merger would not likely prevent or lessen competition substantially[49], then a more detailed analysis of the minority interest or interlocking directorate is not generally required.
- When, based on its preliminary examination, the Bureau determines that a full merger would raise possible competition concerns, it then moves to the second step in its analysis, in which it (1) examines the specific nature and impact of the minority shareholding and/or interlocking directorate; and (2) conducts a detailed examination of the likely competitive effects arising from the minority shareholding and/or interlocking directorate.

10.3 A minority interest or interlocking directorate may impact competition by affecting the pricing or other competitive incentives of the target, the acquirer or both. Note that, with respect to interlocking directorates, the Bureau is not generally concerned when board representation in these circumstances occurs solely through "independent" directors when the businesses do not compete.

48 As noted in paragraph 1.16, above, an interlocking directorate alone would rarely constitute a merger although it could; however, interlocks are often features of partial interest transactions that otherwise qualify as a merger. The Bureau considers features of any interlock in its assessment of the competitive effects of a merger. Of particular relevance are the following factors: relationship between the interlocked firms, the role and duty of the interlocked director toward the interlocked firms, board composition and the position of the interlocked director on the boards, information to which the interlocked director has access, any special powers of the interlocked director, including voting or veto rights, and any contractual or practical mechanisms that the interlocked director might use to influence firm policies or decision-making.

49 As noted below in paragraph 12.3, in reviewing a full merger the Bureau may make an assessment of whether the efficiency gains that are likely to be brought about by the merger will be greater than and will offset the anti-competitive effects of that merger. By contrast, minority interest transactions typically do not involve the integration of firms and therefore efficiency gains are not typically considered by the Bureau in reviewing minority interests.

10.4 When assessing the target's pricing or other competitive incentives, the Bureau first considers whether, by virtue of its ability to materially influence the economic behaviour of the target business, the acquirer or interlocked director may induce the target business to compete less aggressively. The Bureau also considers the extent of such influence and the likelihood that competition will be prevented or lessened as a result of its exercise.

10.5 Second, the Bureau considers whether the transaction provides the acquirer or the firm with the interlocked director access to confidential information about the target business. In particular, the Bureau examines the likelihood that such access may facilitate coordination between the two firms, may affect the unilateral competitive conduct of the firm that receives the information, or both.

10.6 With respect to the acquirer, the Bureau considers whether a minority interest or interlock may result in a change to the acquirer's pricing or other competitive incentives. A firm that holds a minority position in a target business that is a competitor might have a reduced incentive to compete with the target business because if the acquirer raises its price and consequently loses sales, it will benefit, through its minority interest, from sales that flow to the target business. In effect, the acquirer will recapture some of the sales diverted to the target business and may thus have a greater incentive to raise its own price than it would absent the minority interest. In its assessment, the Bureau considers the extent of diversion between the acquiring and target firms' products and the profits earned on these diverted sales. The Bureau also examines the likelihood, significance and impact of any such change to the incentives of the acquirer.

PART 11: NON-HORIZONTAL MERGERS

11.1 A horizontal merger is a merger between firms that supply competing products. By contrast, non-horizontal mergers involve firms that do not supply competing products. The two main types of non-horizontal mergers are vertical mergers and conglomerate mergers. A vertical merger is a merger between firms that produce products at different levels of a supply chain (e.g., a merger between a supplier and a customer). A conglomerate merger is a merger between parties whose products do not compete, actually or potentially[50], and are not vertically related. Conglomerate mergers may involve products that are related because they are complementary (e.g., printers and ink cartridges),[51] or because customers buy them together owing to purchasing economies of scale or scope.

50 Mergers between potential competitors are dealt with as prevention of competition cases. See paragraphs 2.10-2.12 above.

51 That is, the goods are economic complements, such that the quantity demanded of one product decreases as the price of the other increases.

11.2 Non-horizontal mergers are generally less likely to prevent or lessen competition substantially than are horizontal mergers. This is because non-horizontal mergers may not entail the loss of competition between the merging firms in a relevant market. Non-horizontal mergers also frequently create significant efficiencies.[52] However, non-horizontal mergers may reduce competition in some circumstances, as outlined below.

11.3 The civil provisions of the Act may be available to address conduct by the merged firm that constitutes a refusal to deal, an abuse of dominance or other reviewable conduct. However, where the Bureau is able to remedy or enjoin a merger that is likely to substantially prevent or lessen competition, it will generally do so in preference to pursuing post-merger remedies under other provisions of the Act.

Unilateral Effects of Non-Horizontal Mergers

11.4 A non-horizontal merger may harm competition if the merged firm is able to limit or eliminate rival firms' access to inputs or markets, thereby reducing or eliminating rival firms' ability or incentive to compete. The ability to affect rivals (and, by extension, competition) in this manner is referred to in these guidelines as "foreclosure."

11.5 Foreclosure may be partial when the merged firm, for example, raises its price to a downstream competitor, thereby raising its rival's costs. Foreclosure may be complete when the merged firm, for example, refuses to supply a downstream competitor.

11.6 When examining the likely foreclosure effects of a non-horizontal merger transaction, the Bureau considers three inter-related questions: (1) whether the merged firm has the ability to harm rivals; (2) whether the merged firm has the incentive (i.e., whether it is profitable) to do so; and (3) whether the merged firm's actions would be sufficient to prevent or lessen competition substantially.

11.7 In the case of vertical mergers, the Bureau looks at four main categories of foreclosure:

- total input foreclosure, which occurs when the merged firm refuses to supply an input to rival manufacturers that compete with it in the downstream market;
- partial input foreclosure, which occurs when the merged firm increases the price it charges to supply an input to rival manufacturers that compete with it in the downstream market;[53]

52 For example, a vertical merger may allow the merged firm to remove or "internalize" existing double marginalization, since there is no longer any need for a mark-up on goods from the upstream firm to its downstream merger partner. With conglomerate mergers, the merged firm may be able to internalize the positive effect of a decrease in the price of one complementary product on the sales of another complementary product. This in turn may increase the output of both products, which is, all other things being equal, pro-competitive.

53 Foreclosure may also be accomplished through non-price means. For example, a merged firm may adopt product standards that are incompatible with those used by rivals, thus requiring rivals to invest in new standards in order to continue to purchase the merged firm's product or making it impossible for rivals to use

- total customer foreclosure, which occurs when the merged firm refuses to purchase inputs from an upstream rival; and
- partial customer foreclosure, which occurs when the merged firm is a distributor and can disadvantage upstream rivals in the distribution/resale of their products.

11.8 In the case of a conglomerate merger, the Bureau considers whether the combination of products in related markets will confer upon the merged firm the ability and incentive to leverage a strong market position from one market to another by means of tying products together. For example, the merged firm may harm its rivals by refusing to sell one product to customers unless customers also buy a second product from it. Assuming that rivals do not sell the same range of products as the merged firm, such tying may foreclose rivals by reducing their ability to compete, thereby preventing or lessening competition substantially.

Coordinated Effects of Non-Horizontal Mergers

11.9 The Bureau also considers whether a non-horizontal merger increases the likelihood of coordinated interaction among firms:

- A merger that leads to a high degree of vertical integration between an upstream market and a downstream retail market, or increases the degree of existing vertical integration, can facilitate coordinated behaviour by firms in the upstream market by making it easier to monitor the prices rivals charge upstream. Vertical mergers could also facilitate coordinated behaviour by firms in a downstream market by increasing transparency (by enabling firms to observe increased purchases of inputs) or by providing additional ways to discourage or punish deviations (by limiting the supply of inputs).
- A conglomerate merger may facilitate coordination by increasing the degree of multi-market exposure among firms (see paragraph 6.33, above).

PART 12: THE EFFICIENCY EXCEPTION

Overview

12.1 Section 96 of the Act provides an efficiency exception to the provisions of section 92. When a merger creates, maintains or enhances market power, section 96(1) creates a trade-off framework in which efficiency gains that are likely to be brought about by a merger are evaluated against the anti-competitive effects that are likely to result. It should be noted that the Bureau's approach is to expeditiously identify those few transactions that may raise material competition concerns and provide quick clearance for remaining transactions to provide commercial certainty and allow parties to achieve any efficiencies as quickly as possible. Consistent with that approach, a thorough assessment of efficiency claims is unnecessary in the vast majority of the Bureau's merger reviews.

the merged firm's product altogether.

12.2 As the starting point, when determining the relevant anti-competitive effects for the purpose of performing the trade-off, the Bureau recognizes the significance of all of the objectives set out in the statutory purpose clause contained in section 1.1 of the Act.

12.3 The Bureau, in appropriate cases and when provided in a timely manner with the parties' evidence substantiating their case, makes an assessment of whether the efficiency gains that are likely to be brought about by a merger will be greater than and will offset the anti-competitive effects arising from that merger, and will not necessarily resort to the Tribunal for adjudication of the issue. However, the parties must be able to validate efficiency claims to allow the Bureau to ascertain the nature, magnitude, likelihood and timeliness of the asserted gains, and to credit (or not) the basis on which the claims are being made.

12.4 In general, categories of efficiencies that are relevant to the trade-off analysis in merger review include the following:

- allocative efficiency: the degree to which resources available to society are allocated to their most valuable use;
- technical (productive) efficiency: the creation of a given volume of output at the lowest possible resource cost; and
- dynamic efficiency: the optimal introduction of new products and production processes over time.

12.5 These categories are examined in reference to both gains in efficiency and anti-competitive effects (which include losses in efficiency).

12.6 For the purpose of the trade-off analysis in litigated proceedings before the Tribunal, the Bureau must show the anti-competitive effects of a merger. As outlined in more detail in paragraph 12.13 below, the merging parties must show all other aspects of the trade-off, including the nature, magnitude, likelihood and timeliness of efficiency gains, and whether such gains are greater than and offset the anti-competitive effects. Whether or not a case proceeds to litigation, the Bureau seeks information from the merging parties and other sources to evaluate gains in efficiencies and anti-competitive effects.

12.7 By incorporating an explicit exception for efficiency gains, Parliament has indicated that the assessment of the competitive effects of the merger under section 92 of the Act is to be segregated from the evaluation of efficiency gains under section 96. That said, cost savings from substantiated efficiency gains may be relevant to the analysis under section 92 of whether the merger is likely to prevent or lessen competition substantially in the following limited sense: the Bureau considers whether, as a result of true cost savings (discussed below under "Types of Efficiencies Generally Included in the Trade-Off"), the parties to the merger are better positioned to compete in a competitive market or are less likely to engage in coordinated behaviour.[54]

12.8 Where efficiencies may be material, merging parties are encouraged to make their efficiency submissions to the Bureau as early as possible in the merger review process. This facilitates an expeditious assessment of the nature, magnitude, likelihood and timeliness of the efficiency gains and of the trade-off between relevant efficiency gains and anti-competitive effects. Having detailed information regarding efficiency claims at an early stage of the process will facilitate the preparation of focused follow-up information requests and/or the targeted use of other information-gathering mechanisms and, subject to confidentiality restrictions, enable the Bureau to test the claims during its market contacts regarding the merger. Submissions regarding anticipated efficiency gains may also assist the Bureau in understanding the rationale underlying the proposed transaction.

Gains in Efficiency

12.9 To be considered under section 96(1), it must be demonstrated that the efficiency gains "would not likely be attained if the order (before the Tribunal) were made." This involves considering the nature of potential orders that may be made, including those that may apply to the merger in its entirety or are limited to parts of the merger. Each of the anticipated efficiency gains is then assessed to determine whether these gains would likely be attained by alternative means if the potential orders are made. Where the order sought is limited to parts of a merger, efficiency gains that are not affected by the order are not included in the trade-off analysis.

12.10 To facilitate the Bureau's review of efficiency claims, parties should provide detailed and comprehensive information that substantiates the precise nature, magnitude, likelihood and timeliness of their alleged efficiency gains, as well as information relating to deductions from gains in efficiency, such as the costs associated with implementing the merger. The information should specifically address the likelihood that such gains would be achieved and why those gains would not likely be achieved if the potential Tribunal orders were made.

12.11 Typically, the Bureau uses industry experts to assist in its evaluation of efficiency claims. To assess efficiency claims, Bureau officers and economists, as well as experts retained by the Bureau, require access to detailed financial and other information.[55] To enable the objective verification of anticipated efficiency gains, efficiency claims should be substantiated by documentation prepared in the ordinary course of business, wherever possible. This includes plant and firm-level accounting statements, internal

54 The impact of efficiencies on a firm's cost structure may render coordination more difficult by enhancing its incentive to compete more vigorously.

55 This includes all pre-existing merger planning documents. Additional information that may be relevant includes (1) information on efficiencies realized from previous mergers involving similar assets; (2) pre-merger documents relating to product and process innovation; and (3) information related to economies of scale, including minimum efficient scale, and economies of scope in production.

studies, strategic plans, integration plans, management consultant studies and other available data. The Bureau may also require physical access to certain facilities and will likely require documents and information from operations-level personnel who can address, among other matters, how their business is currently run and areas where efficiencies would likely be realized.

12.12 Section 96(2) requires the Tribunal to consider whether the merger is likely to bring about gains in efficiency described in section 96(1) that will result in (1) a significant increase in the real value of exports; or (2) a significant substitution of domestic products for imported products. To assist this analysis, firms operating in markets that involve international trade should provide the Bureau with information that establishes that the merger will lead them to increase output owing to greater exports or import substitution.[56]

Burden on the Parties

12.13 The parties' burden includes proving that the gains in efficiency

- are likely to occur. In other words, the parties must provide a detailed explanation of how the merger or proposed merger would allow the merged firm to achieve the gains in efficiency. In doing so, the parties must specify the steps they anticipate taking to achieve the gains in efficiency, the risks involved in achieving these gains and the time and costs required to achieve them.
- are brought about by the merger or proposed merger (i.e., that they are merger-specific). The test under section 96(1) is whether the efficiency gains would likely be realized in the absence of the merger. Thus, if certain gains in efficiency would likely be achieved absent the merger, those gains are not counted for the purposes of the trade-off.
- are greater than and offset the anti-competitive effects. The parties must provide a quantification of the gains in efficiency and a detailed and robust explanation of how the quantification was calculated. They should also, to the extent relevant, provide any information on qualitative efficiencies. While the burden is ultimately on the parties to establish that the gains in efficiency are greater than and offset the anti-competitive effects, in appropriate cases and when provided in a timely manner with the parties' evidence substantiating their case, the Bureau undertakes its own internal assessment of the trade-off before deciding whether to challenge a merger at the Tribunal.
- would not likely be attained if an order under section 92 were made. Gains in efficiency that would likely be achieved, even if an order prohibiting all or part of the merger were made, are not counted for the purposes of section 96.[57]

56 Increased output in this context is generally only possible with an associated decrease in price.

57 For example, if remedying a substantial prevention or lessening of competition required divestitures only in certain markets, cost savings resulting from the rationalization of head office facilities would not be included in the trade-off, assuming that such savings would be achievable despite the divestitures. A portion of head office cost savings may be relevant in this example only if the parties can clearly demonstrate that those cost savings

Types of Efficiencies Generally Included in the Trade-Off: Gains in Productive Efficiency

12.14 Productive efficiencies result from real cost savings in resources, which permit firms to produce more output or better quality output from the same amount of input. In many cases, such efficiencies can be quantifiably measured, objectively ascertained, and supported by engineering, accounting or other data, subject to a discount, as appropriate, for likelihood in practice. Timing differences in the realization of these savings are accounted for by discounting to the present value.

12.15 Productive efficiencies include the following:

- cost savings at the product, plant and multi-plant levels;
- savings associated with integrating new activities within the firm;[58] and
- savings arising from transferring superior production techniques and know-how from one of the merging parties to the other.[59]

12.16 Information respecting gains in efficiency that relate to cost savings should be broken down according to whether they are one-time savings or a recurring savings. When considering cost savings, the Bureau examines claims related to the following:

- economies of scale: savings that arise from product- and plant-level reductions in the average unit cost of a product through increased production;
- economies of scope: savings that arise when the cost of producing more than one product at a given level of output is reduced by producing the products together rather than separately;
- economies of density: savings that arise from more intensive use of a given network infrastructure;
- savings that flow from specialization, the elimination of duplication, reduced downtime, a smaller base of spare parts, smaller inventory requirements and the avoidance of capital expenditures that would otherwise have been required;
- savings that arise from plant specialization, the rationalization of various administrative and management functions (e.g., sales, marketing, accounting, purchasing, finance, production), and the rationalization of research and development activities; and
- savings that relate to distribution, advertising and raising capital.

---

would not be achievable if the proposed remedy is granted. Only those gains in efficiency that will be forgone as a result of the remedy will be counted.

58 These include reduced transaction costs associated with contracting for inputs, distribution and services that were previously performed by third parties, but exclude pecuniary savings such as those related to bringing idle equipment into use if such idle capacity will be transferred from the merged firm to third parties.

59 While such legitimate production-related savings may exist, it will generally be difficult to demonstrate that efficiencies will arise owing to "superior management," that savings are specifically attributable to management performance or that they would not likely be sought and attained through alternative means.

Types of Efficiencies Generally Included in the Trade-Off: Gains in Dynamic Efficiency

12.17 The Bureau also examines claims that the merger has or is likely to result in gains in dynamic efficiency, including those attained through the optimal introduction of new products, the development of more efficient productive processes, and the improvement of product quality and service. When possible, the assessment of dynamic efficiencies is conducted on a quantitative basis. This is generally the case if there is information presented by the parties to suggest that a decrease in production costs as a result of an innovation in production technology or an increase in demand for the parties' products as a result of product innovation (leading to a new or improved product) is likely. To supplement quantitative information or where quantitative information is absent, the Bureau conducts a qualitative assessment.

12.18 The specific environment of the industry in question is important in the Bureau's analysis of the competitive effects of a merger on innovation. In light of the complexities and uncertainties associated with the assessment of dynamic efficiency claims, irrespective of the industry, certain types of industry information (in addition to that considered in paragraphs 12.10 and 12.11, above) can be particularly beneficial to the Bureau's assessment of a merger's impact on innovation as they relate to, for example, verifiability, likelihood of success and timeliness. Historical information on the effect of previous mergers in the industry on innovation may be insightful.[60] Such information may relate to a merger's impact on the nature and scope of research and development activities, innovation successes relating to new or existing products or production processes, and the enhancement of dynamic competition.[61] In addition, and only when applicable, the Bureau encourages parties to provide detailed explanations regarding plans to utilize substitute or complementary technologies so as to increase innovation.

Types of Efficiencies Generally Included in the Trade-Off: Deductions to Gains

12.19 Once all efficiency claims have been valued, the costs of retooling and other costs that must be incurred to achieve efficiency gains are deducted from the total value of the efficiency gains that are considered pursuant to section 96(1). Integrating two complex, ongoing operations with different organizational cultures can be a costly undertaking and ultimately may be unsuccessful. Integration costs are deducted from the efficiency gains.[62]

Types of Efficiencies Generally Excluded from the Trade-Off

12.20 Not all efficiency claims qualify for the trade-off analysis. The Bureau excludes the following:

60 Such information may be useful even when previous mergers did not necessarily involve any of the merging parties, since Bureau staff will examine the effect of past industry mergers on innovation through various sources of information, including industry experts and interviews with competitors.

61 In this context, dynamic competition refers to competition based on the successive introduction of new or better products over time.

62 Losses in dynamic efficiency described in paragraph 12.31, below, may also be deducted from gains in efficiency at this stage of the analysis, provided they are not double-counted.

- gains that would likely be attained in any event through alternative means if the potential orders were made (examples include internal growth, a merger with a third party,[63] a joint venture, a specialization agreement, and a licensing, lease or other contractual arrangement);[64]
- gains that would not be affected by an order, when the order sought is limited to part of a merger;
- gains that are redistributive in nature, as provided in section 96(3) of the Act (examples include gains anticipated to arise from increased bargaining leverage that enables the merging parties to extract wage concessions or discounts from suppliers that are not cost-justified, and tax-related gains);[65]
- gains that are achieved outside Canada (examples include productive efficiency gains arising from the rationalization of the parties' facilities located outside Canada that do not benefit the Canadian economy);[66] and
- savings resulting from a reduction in output, service, quality or product choice.

Anti-Competitive Effects

12.21 Section 96(1) requires efficiency gains to be evaluated against "the effects of any prevention or lessening of competition that will result or is likely to result from the merger or proposed merger." The effects to be considered are not limited to resource allocation effects and include all the anti-competitive effects that are likely to arise from a merger, having regard to all of the objectives of the Act. Determination of the relevant anti-competitive effects depends upon the particular circumstances of the merger in question and the markets affected by the merger.

12.22 The Bureau examines all relevant price and non-price effects, including negative effects on allocative, productive and dynamic efficiency; redistributive effects; and effects on service, quality and product choice.

12.23 In addition to direct effects in the relevant market, the Bureau also considers price and non-price effects in interrelated markets. For example, mergers that are likely to

63 Consideration will only be given to alternative merger proposals that could reasonably be considered practical given the business realities faced by the merging firms.

64 The market realities of the industry in question will be considered in determining whether particular efficiencies could reasonably be expected to be achieved through non-merger alternatives. This includes growth prospects for the market in question, the extent of excess capacity in the market, and the extent to which the expansion can be carried out in increments.

65 Discounts from a supplier resulting from larger orders that would enable the supplier to achieve economies of scale, reduced transaction costs or other savings may qualify, to the extent that the savings by the supplier can be substantiated. Mere redistribution of income from the supplier to the merged firm in the form of volume or other discounts is not an efficiency.

66 A rationalization of the parties' facilities located outside of Canada where it could be established that these efficiencies would likely result in lower prices in Canada is an example of how such gains in efficiency from non-Canadian sources could accrue to the Canadian economy. The issue is whether the efficiency gains will benefit the Canadian economy rather than the nationality of ownership of the company.

result in increased prices and lower output can impair industries that use the merged firm's products as inputs.

12.24 Some examples of potential anti-competitive effects that can result from a merger are described below. This list is not intended to be exhaustive. While, in some cases, the negative impacts of a merger may be difficult to measure, all of the relevant anti-competitive effects of a merger are considered for the purposes of the trade-off. When anti-competitive effects (such as redistributive effects and non-price effects) cannot be quantified, they are considered from a qualitative perspective.

Price Effects: Loss of Allocative Efficiency (Deadweight Loss)

12.25 A merger that results in a price increase generally brings about a negative resource allocation effect (referred to as "deadweight loss"), which is a reduction in total consumer and producer surplus within Canada. This reflects a loss of allocative efficiency that is contrary to promoting the efficiency and adaptability of the Canadian economy.

12.26 In view of the difficulties associated with estimating the magnitude of a material price increase that is likely to be brought about by a merger and other variables, various estimates of the deadweight loss are usually prepared over a range of price increases and market demand elasticities.

12.27 The estimate of deadweight loss generally includes the following:

- losses to consumer surplus resulting from reductions in output owing to the merger;
- losses in producer surplus that arise when market power is being exercised in the relevant market prior to the merger[67]; and
- losses to consumer and producer surplus anticipated to result in interrelated markets.[68]

Price Effects: Redistributive Effects

12.28 Price increases resulting from an anti-competitive merger cause a redistributive effect ("wealth transfer") from buyers to sellers. Providing buyers with competitive prices and product choices is an objective of the Act.

Non-Price Effects: Reduction in Service, Quality, Choice

12.29 A substantial prevention or lessening of competition resulting from a merger can have a negative impact on service, quality, product choice and other dimensions of

67 When pre-merger conditions are not competitive, the deadweight loss arising from a merger may be significantly understated if this loss to producer surplus is not taken into account.

68 For example, when the products produced by the merged firm include intermediate goods that are used as inputs in other products, price increases in the intermediate goods can contribute to allocative inefficiency in interrelated markets.

competition that buyers value. Considering these effects is consistent with ensuring that buyers are provided with competitive prices and product choices.

Non-Price Effects: Loss of Productive Efficiency

12.30 Mergers that prevent or lessen competition substantially can also reduce productive efficiency, as resources are dissipated through x-inefficiency[69] and other distortions.[70] For instance, x-inefficiency may arise when firms, particularly in monopoly or near monopoly markets, are insulated from competitive market pressure to exert maximum efforts to be efficient.

Non-Price Effects: Loss of Dynamic Efficiency

12.31 Mergers that result in a highly concentrated market may reduce the rate of innovation, technological change and the dissemination of new technologies with a resulting opportunity loss of economic surplus.[71]

The Trade-Off

12.32 To satisfy the section 96 trade-off, the efficiency gains must both "be greater than and offset" the relevant anti-competitive effects.

12.33 The "greater than" aspect of the test requires that the efficiency gains be more extensive or of a larger magnitude than the anti-competitive effects. The "offset" aspect requires that efficiency gains compensate for the anti-competitive effects. The additional requirement to "offset" makes it clear that it is not sufficient for parties to show that efficiency gains merely, marginally or numerically exceed the anti-competitive effects to satisfy the section 96 trade-off. How significant this additional requirement may be has yet to be tested by the Tribunal and the courts.

12.34 Both the efficiency gains and the anti-competitive effects can have quantitative (measured) and qualitative aspects to them, and both the "greater than" and "offset" standards apply to all anti-competitive effects. To enable appropriate comparisons to be made, timing differences between measured future anticipated efficiency gains and measured anti-competitive effects are addressed by discounting to the present value.

12.35 Merging parties intending to invoke the efficiencies exception are encouraged to address how they propose that qualitative and quantitative gains and effects be evaluated for the purpose of performing the "greater than and offset" aspect of the

69 "X-inefficiency" typically refers to the difference between the maximum (or theoretical) productive efficiency achievable by a firm and actual productive efficiency attained.

70 For example, increased market power can lead to rent-seeking behaviour (such as lobbying) which can cause real economic resources to be consumed in activities directed towards redistributing income, rather than used in producing real output.

71 Losses in dynamic efficiency may be considered under anti-competitive effects or may be deducted from gains in efficiency at the outset, as indicated in paragraph 12.20.

trade-off; and to explain how and why the gains "compensate for" the anti-competitive effects.[72]

PART 13: FAILING FIRMS AND EXITING ASSETS

Business Failure and Exiting Assets

13.1 Among the factors that are relevant to an analysis of a merger and its effects on competition, section 93(*b*) lists "whether the business, or a part of the business, of a party to the merger or proposed merger has failed or is likely to fail." The opening clause of section 93 makes it clear that this information is to be considered "in determining, for the purpose of section 92, whether or not a merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially." The impact that a firm's exit can have in terms of matters other than competition is generally beyond the scope of the assessment contemplated by section 93(*b*).

13.2 Probable business failure does not provide a defence for a merger that is likely to prevent or lessen competition substantially. Rather, the loss of the actual or future competitive influence of a failing firm is not attributed to the merger if imminent failure is probable and, in the absence of a merger, the assets of the firm are likely to exit the relevant market. Merging parties intending to invoke the failing firm rationale are encouraged to make their submissions in this regard as early as possible.

13.3 A firm is considered to be failing if:

- it is insolvent or is likely to become insolvent;[73]
- it has initiated or is likely to initiate voluntary bankruptcy proceedings; or
- it has been, or is likely to be, petitioned into bankruptcy or receivership.

13.4 In assessing the extent to which a firm is likely to fail, the Bureau typically seeks the following information:

- the most recent, audited, financial statements, including notes and qualifications in the auditor's report;
- projected cash flows;
- whether any of the firm's loans have been called, or further loans/line of credit advances at viable rates have been denied and are unobtainable elsewhere;
- whether suppliers have curtailed or eliminated trade credit;

72 The burden is ultimately on the parties to undertake the entire trade-off analysis and establish that the gains in efficiency are greater than and offset the anti-competitive effects.

73 Technical insolvency occurs when liabilities exceed the realizable value of assets, or when a firm is unable to pay its liabilities as they come due.

- whether there have been persistent operating losses or a serious decline in net worth or in the firm's assets;[74]
- whether such losses have been accompanied by an erosion of the firm's relative position in the market;
- the extent to which the firm engages in "off-balance-sheet" financing (such as leasing);
- whether the value of publicly-traded debt of the firm has significantly dropped;
- whether the firm is unlikely to be able to successfully reorganize pursuant to Canadian or foreign bankruptcy legislation, the Companies' Creditors Arrangement Act, or through a voluntary arrangement with its creditors.

13.5 These considerations are equally applicable to failure-related claims concerning a division or a wholly-owned subsidiary of a larger enterprise. However, in assessing submissions relating to the failure of a division or subsidiary, particular attention is paid to transfer pricing within the larger enterprise, intra-corporate cost allocations, management fees, royalty fees, and other matters that may be relevant in this context. The value of such payments or charges is generally assessed in relation to the value of equivalent arm's-length transactions.

13.6 Matters addressed in financial statements are ordinarily considered to be objectively verified when these statements have been audited or prepared by a person who is independent of the firm that is alleging failure. The Bureau's assessment of financial information includes a review of historic, current and projected income statements and balance sheets. The reasonableness of the assumptions underlying financial projections is also reviewed in light of historic results, current business conditions and the performance of other businesses in the industry.

Alternatives to the Merger

13.7 Before concluding that a merger involving a failing firm or division is not likely to result in a substantial lessening or prevention of competition, the Bureau assesses whether any of the following alternatives to the merger exist and are likely to result in a materially greater level of competition than if the proposed merger proceeds.

Acquisition by a Competitively Preferable Purchaser

13.8 The Bureau assesses whether there exists a third party whose purchase of the failing firm, division or productive assets is likely to result in a materially higher level of competition in the market.[75] In addition, such a third party ("competitively preferable purchaser") must be willing to pay a price which, net of the costs associated with

74 Persistent operating losses may not be indicative of failure, particularly in a "start-up" situation, in which such losses may be normal and indeed anticipated.

75 The Bureau considers whether the third party is capable of exercising a meaningful influence in the market. When an alternative buyer does not intend to keep the failing firm's assets in the relevant market, the Bureau assesses the extent to which the market power arising from the original merger proposal is likely to be less than if the alternative merger proceeds.

making the sale,[76] would be greater than the proceeds that would flow from liquidation, less the costs associated with such liquidation (referred to as the "net price above liquidation value").[77] Where it is determined that a competitively preferable purchaser exists, it can generally be expected that, if the proposed merger under review cannot be completed, the target will either seek to merge with that competitively preferable purchaser, or remain in the market. If the Bureau is not satisfied that a thorough search for a competitively preferable purchaser has been conducted, the Bureau will require the involvement of an independent third party (such as an investment dealer, trustee or broker who has no material interest in either of the merging parties or the proposal in question) to conduct such a search before the failing firm rationale is accepted.

Retrenchment/Restructuring

13.9 Where it appears that the firm is likely to remain in the market rather than sell to a competitively preferable purchaser or liquidate, it is necessary to determine whether this alternative to the proposed merger is likely to result in a materially greater level of competition than if the proposed merger proceeds. The retrenchment or restructuring of a failing firm may prevent failure and enable it to survive as a meaningful competitor by narrowing the scope of its operations, for instance, by downsizing or withdrawing from the sale of certain products or from certain geographic areas.

Liquidation

13.10 Where the Bureau is able to confirm that there are no competitively preferable purchasers for the failing firm and that there are no feasible and likely retrenchment scenarios, it assesses whether liquidation of the firm is likely to result in a materially higher level of competition in the market than if the merger in question proceeds. In some cases, liquidation can facilitate entry into a market by enabling actual or potential competitors to compete for the failing firm's customers or assets to a greater degree than if the failing firm merged with the proposed acquirer.

76 These costs include matters such as ongoing environmental liabilities, tax liabilities, commissions relating to the sale and severance and other labour-related costs.

77 Liquidation value is defined as the sale price of assets as a result of bankruptcy or foreclosure proceedings.

HOW TO CONTACT THE COMPETITION BUREAU

Anyone wishing to obtain additional information about the *Competition Act*, the *Consumer Packaging and Labelling Act* (except as it relates to food), the *Textile Labelling Act*, the *Precious Metals Marking Act* or the program of written opinions, or to file a complaint under any of these acts should contact the Competition Bureau's Information Centre:

2. "THE TRIBUNAL SHALL NOT MAKE AN ORDER UNDER SECTION 92 IF IT FINDS"

Although the margin notes beside section 96 refer to this provision as an "exception", they have no legal force.[34] It is therefore pertinent to ask whether section 96 was intended to operate as an exception or, as is more commonly thought to be the case, as a defence.[35] In this regard, an examination of other sections of the Act provides little assistance. While the language of section 96 clearly more closely resembles the three defences of section 45 than the four exceptions of that section, the wording that is used elsewhere in the Act with respect to provisions that are described as "exceptions" and "defences", respectively, is not consistent. That is to say, some[36] provisions that are identified as "exceptions" employ the "shall not make an order/no order shall be made" language that is similar to the "shall not convict" wording of the section 45 "defences",[37] whereas at least two[38] provisions that are identified as "defences" employ the "subsection x does not apply" wording used in most of the provisions that are identified as "exceptions".[39] Similarly, while virtually all of the non-section 96 provisions that are identified as "exceptions" would facilitate the summary disposition of proceedings or a particular issue without requiring an examination of the substantive offence or reviewable matter in question,[40] the same is true of certain provisions that are identified as

Application, *supra*, Introduction, note 46, suggested otherwise, the Director explicitly stated at p. 39 of the Competitive Impact Statement that he filed that he did not believe that the requirements of section 96 had been met, "and therefore, the remedies provided for in the DCO are necessary."

34 *Interpretation Act*, R.S.C. 1985, c. I-21, s.14. Cf. Driedger, *supra*, note 32, at 133.

35 The persons responsible for the development of the 1986 amendments to the Act clearly took the position that this provision is a defence. See statements made to the Legislative Committee on *Bill C-91*, by Mr. Lawson Hunter, former Director of Investigation and Research, at *supra*, Chapter 5, note 145, at 7:27; Mr. Mel Cappe, Assistant Deputy Minister, Policy Coordination, Ministry of Consumer and Corporate Affairs, at *supra*, Chapter 5, note 145, at Issue No. 11 (May 21, 1986) p. 11:41; and Mr. Morris Rosenberg, General Counsel to the Ministry of Consumer and Corporate Affairs, at *supra*, Chapter 5, note 145, at Issue No. 11 (May 21, 1986), p. 11:46. Cf. note 43 *infra*.

36 Cf. ss.81(2), 81(3), 94, 95 and 96.

37 Cf. ss.45(3), (5) and (7).

38 Cf. ss.57(3) and 60.

39 Cf. ss.29(2), 45(4), 45(6), 45(7.1), 45(8), 49(2), 60(3), 61(2), and 61(5). See also ss. 124(3) and 128(3), which appear to operate more like these provisions than like a "shall not make an order" provision".

40 For example, a substantive or collateral matter in question can be disposed of upon a simple preliminary demonstration of "affiliation" with a particular person, [ss.45(8), 47(3) and 61(2)]; that a matter has already been made public [s.29(2)]; that a price has been affixed to a package, [cf. s.61(5)] or that the transaction in question involves a certain

defences.[41] Clearly, the way in which the notions "exception" and "defence" are employed throughout the Act is not consistent.

There are two aspects of section 96 which suggest that Parliament intended that it be employed as a defence: (i) the fact that an assessment of the anticompetitive effects of a merger must be made before the balancing process can begin; and (ii) the fact that the Tribunal must "find" that the efficiencies meet the test therein set forth.[42] With respect to the latter point, while it could be argued that the Director has a responsibility for placing evidence with respect to efficiencies before the Tribunal, he has on several occasions indicated that this burden lies with the parties.[43] Given that "the data are distributed unevenly to the strategic advantage of the (merging parties)"[44] and considering that the merging parties have "far better access to the relevant data and can use this advantage to disclose and argue the economies involved selectively,"[45] this position makes good sense. It is also widely shared.[46] In any event, it makes greater sense to

type of persons [s.60(3)] or subject matter [ss.45(4) and 49(2)]. Cf. ss.81(2), 81(3), 94(a), 94(b) and 95(1), 124(3) and 128(3).

41 See for example ss.45(3), (5) and (7).

42 As a practical matter, the fact that parties will typically wish to avoid the significant time and expense that is ordinarily associated with documenting and demonstrating the precise nature and extent of expected efficiency gains will also deter parties from invoking this provision unless they believe that there is a serious possibility that their transaction will be found to contravene s.92.

43 Consider for example the following passage from his speech to the Fordham Corporate Law Institute, *supra*, Chapter 6, note 14, at 18: "The efficiency provision is similar to a defence. Thus, the responsibility for establishing the existence of efficiency gains lies with the merging parties." Cf. Goldman, *supra*, Introduction, note 30, at p. 14.

44 Williamson II, *supra*, Chapter 2, note 220, at 703. Elsewhere, (Williamson I, *supra*, note 19, at 24) Williamson elaborates in the following terms:

> But if efficiencies are to be a defense at all, it is clear that the companies — which are, presumably, sensitive to the relevant economies in proposing the merger in the first place — must be prepared to make the case for them in court. They have the data and these must be supplied. Otherwise the mixed case which involves both scale economy and market power effects can only be handled arbitrarily — and this is satisfactory to no one.

45 Rogers, *supra*, note 11, at 518.

46 In addition to Rogers and Williamson, see Fisher & Lande, *supra*, note 13, at 1694; Warren-Boulton, "Merger Policy and Enforcement at the Antitrust Division: The Economist's View", (1985), 54 *Antit. L.J.* 109, at 113; and Fisher, *supra*, Chapter 4, note 60, at 36. It is significant to note that in no jurisdiction reviewed in this work do the enforcement authorities bear the burden of establishing efficiency gains or rebutting gains that are prima facie established. Merging parties everywhere bear the burden of establishing efficiency gains (or other offsetting benefits) from beginning to end. With respect to U.S. practice, see U.S. Department of Justice *Merger Guidelines*, *supra*, Chapter 2, note 277, at § 3.5; and FTC 1982 *Statement on Horizontal Mergers*, *supra*, Chapter 2, note

1. Overview

These Guidelines outline the principal analytical techniques, practices, and the enforcement policy of the Department of Justice and the Federal Trade Commission (the "Agencies") with respect to mergers and acquisitions involving actual or potential competitors ("horizontal mergers") under the federal antitrust laws.[1] The relevant statutory provisions include Section 7 of the Clayton Act, 15 U.S.C. § 18, Sections 1 and 2 of the Sherman Act, 15 U.S.C. §§ 1, 2, and Section 5 of the Federal Trade Commission Act, 15 U.S.C. § 45. Most particularly, Section 7 of the Clayton Act prohibits mergers if "in any line of commerce or in any activity affecting commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly."

The Agencies seek to identify and challenge competitively harmful mergers while avoiding unnecessary interference with mergers that are either competitively beneficial or neutral. Most merger analysis is necessarily predictive, requiring an assessment of what will likely happen if a merger proceeds as compared to what will likely happen if it does not. Given this inherent need for prediction, these Guidelines reflect the congressional intent that merger enforcement should interdict competitive problems in their incipiency and that certainty about anticompetitive effect is seldom possible and not required for a merger to be illegal.

These Guidelines describe the principal analytical techniques and the main types of evidence on which the Agencies usually rely to predict whether a horizontal merger may substantially lessen competition. They are not intended to describe how the Agencies analyze cases other than horizontal mergers. These Guidelines are intended to assist the business community and antitrust practitioners by increasing the transparency of the analytical process underlying the Agencies' enforcement decisions. They may also assist the courts in developing an appropriate framework for interpreting and applying the antitrust laws in the horizontal merger context.

These Guidelines should be read with the awareness that merger analysis does not consist of uniform application of a single methodology. Rather, it is a fact-specific process through which the Agencies, guided by their extensive experience, apply a range of analytical tools to the reasonably available and reliable evidence to evaluate competitive concerns in a limited period of time. Where these Guidelines provide examples, they are illustrative and do not exhaust the applications of the relevant principle.[2]

---

1 These Guidelines replace the Horizontal Merger Guidelines issued in 1992, revised in 1997. They reflect the ongoing accumulation of experience at the Agencies. The Commentary on the Horizontal Merger Guidelines issued by the Agencies in 2006 remains a valuable supplement to these Guidelines. These Guidelines may be revised from time to time as necessary to reflect significant changes in enforcement policy, to clarify existing policy, or to reflect new learning. These Guidelines do not cover vertical or other types of non-horizontal acquisitions.

2 These Guidelines are not intended to describe how the Agencies will conduct the litigation of cases they decide to bring. Although relevant in that context, these Guidelines neither dictate nor exhaust the range of evidence the Agencies may introduce in litigation.

The unifying theme of these Guidelines is that mergers should not be permitted to create, enhance, or entrench market power or to facilitate its exercise. For simplicity of exposition, these Guidelines generally refer to all of these effects as enhancing market power. A merger enhances market power if it is likely to encourage one or more firms to raise price, reduce output, diminish innovation, or otherwise harm customers as a result of diminished competitive constraints or incentives. In evaluating how a merger will likely change a firm's behavior, the Agencies focus primarily on how the merger affects conduct that would be most profitable for the firm.

A merger can enhance market power simply by eliminating competition between the merging parties. This effect can arise even if the merger causes no changes in the way other firms behave. Adverse competitive effects arising in this manner are referred to as "unilateral effects." A merger also can enhance market power by increasing the risk of coordinated, accommodating, or interdependent behavior among rivals. Adverse competitive effects arising in this manner are referred to as "coordinated effects." In any given case, either or both types of effects may be present, and the distinction between them may be blurred.

These Guidelines principally describe how the Agencies analyze mergers between rival suppliers that may enhance their market power as sellers. Enhancement of market power by sellers often elevates the prices charged to customers. For simplicity of exposition, these Guidelines generally discuss the analysis in terms of such price effects. Enhanced market power can also be manifested in non-price terms and conditions that adversely affect customers, including reduced product quality, reduced product variety, reduced service, or diminished innovation. Such non-price effects may coexist with price effects, or can arise in their absence. When the Agencies investigate whether a merger may lead to a substantial lessening of non-price competition, they employ an approach analogous to that used to evaluate price competition. Enhanced market power may also make it more likely that the merged entity can profitably and effectively engage in exclusionary conduct. Regardless of how enhanced market power likely would be manifested, the Agencies normally evaluate mergers based on their impact on customers. The Agencies examine effects on either or both of the direct customers and the final consumers. The Agencies presume, absent convincing evidence to the contrary, that adverse effects on direct customers also cause adverse effects on final consumers.

Enhancement of market power by buyers, sometimes called "monopsony power," has adverse effects comparable to enhancement of market power by sellers. The Agencies employ an analogous framework to analyze mergers between rival purchasers that may enhance their market power as buyers. See Section 12.

2. Evidence of Adverse Competitive Effects

The Agencies consider any reasonably available and reliable evidence to address the central question of whether a merger may substantially lessen competition. This section discusses several categories and sources of evidence that the Agencies, in their experience, have found most informative in predicting the likely competitive effects of mergers. The list provided here is not exhaustive. In any given case, reliable evidence may be available in only some categories or from some sources. For each category of evidence, the Agencies consider evidence indicating that the merger may enhance competition as well as evidence indicating that it may lessen competition.

2.1 Types of Evidence

2.1.1 Actual Effects Observed in Consummated Mergers

When evaluating a consummated merger, the ultimate issue is not only whether adverse competitive effects have already resulted from the merger, but also whether such effects are likely to arise in the future. Evidence of observed post-merger price increases or other changes adverse to customers is given substantial weight. The Agencies evaluate whether such changes are anticompetitive effects resulting from the merger, in which case they can be dispositive. However, a consummated merger may be anticompetitive even if such effects have not yet been observed, perhaps because the merged firm may be aware of the possibility of post-merger antitrust review and moderating its conduct. Consequently, the Agencies also consider the same types of evidence they consider when evaluating unconsummated mergers.

2.1.2 Direct Comparisons Based on Experience

The Agencies look for historical events, or "natural experiments," that are informative regarding the competitive effects of the merger. For example, the Agencies may examine the impact of recent mergers, entry, expansion, or exit in the relevant market. Effects of analogous events in similar markets may also be informative.

The Agencies also look for reliable evidence based on variations among similar markets. For example, if the merging firms compete in some locales but not others, comparisons of prices charged in regions where they do and do not compete may be informative regarding post-merger prices. In some cases, however, prices are set on such a broad geographic basis that such comparisons are not informative. The Agencies also may examine how prices in similar markets vary with the number of significant competitors in those markets.

2.1.3 Market Shares and Concentration in a Relevant Market

The Agencies give weight to the merging parties' market shares in a relevant market, the level of concentration, and the change in concentration caused by the merger. See Sections 4 and 5. Mergers that cause a significant increase in concentration and result in highly concentrated markets are presumed to be likely to enhance market power, but this presumption can be rebutted by persuasive evidence showing that the merger is unlikely to enhance market power.

2.1.4 Substantial Head-to-Head Competition

The Agencies consider whether the merging firms have been, or likely will become absent the merger, substantial head-to-head competitors. Such evidence can be especially relevant for evaluating adverse unilateral effects, which result directly from the loss of that competition. See Section 6. This evidence can also inform market definition. See Section 4.

2.1.5 Disruptive Role of a Merging Party

The Agencies consider whether a merger may lessen competition by eliminating a "maverick" firm, i.e., a firm that plays a disruptive role in the market to the benefit of customers. For example, if one of the merging firms has a strong incumbency position and the other merging firm threatens to disrupt market conditions with a new technology or business model, their merger can involve the loss of actual or potential competition. Likewise, one of the merging firms may have the incentive to take the lead in price cutting or other competitive conduct or to resist increases in industry prices. A firm that may discipline prices based on its ability and incentive to expand production rapidly using available capacity also can be a maverick, as can a firm that has often resisted otherwise prevailing industry norms to cooperate on price setting or other terms of competition.

2.2 Sources of Evidence

The Agencies consider many sources of evidence in their merger analysis. The most common sources of reasonably available and reliable evidence are the merging parties, customers, other industry participants, and industry observers.

2.2.1 Merging Parties

The Agencies typically obtain substantial information from the merging parties. This information can take the form of documents, testimony, or data, and can consist of descriptions of competitively relevant conditions or reflect actual business conduct and decisions. Documents created in the normal course are more probative than documents created as advocacy materials in merger review. Documents describing industry conditions can be informative regarding the operation of the market and how a firm identifies and assesses its rivals, particularly when business decisions are made in reliance on the accuracy of those descriptions. The business decisions taken by the merging firms also can be informative about industry conditions. For example, if a firm sets price well above incremental cost, that normally indicates either that the firm believes its customers are not highly sensitive to price (not in itself of antitrust concern, see Section 4.1.3[3]) or that the firm and its rivals are engaged in coordinated interaction (see Section 7). Incremental cost depends on the relevant increment in output as well as on the time period involved, and in the case of large increments and sustained changes in output it may include some costs that would be fixed for smaller increments of output or shorter time periods.

Explicit or implicit evidence that the merging parties intend to raise prices, reduce output or capacity, reduce product quality or variety, withdraw products or delay their introduction, or curtail research and development efforts after the merger, or explicit or implicit evidence that the ability to engage in such conduct motivated the merger, can be highly informative in evaluating the likely effects of a merger. Likewise, the Agencies look for reliable evidence that the merger is likely to result in efficiencies. The Agencies give careful consideration to the views of individuals whose responsibilities, expertise, and experience relating to the issues in question provide particular indicia of reliability. The financial terms of the transaction may also be informative regarding competitive effects. For example, a purchase price in excess of the acquired firm’s stand-alone market value may indicate that the acquiring firm is paying a premium because it expects to be able to reduce competition or to achieve efficiencies.

---

[3] High margins commonly arise for products that are significantly differentiated. Products involving substantial fixed costs typically will be developed only if suppliers expect there to be enough differentiation to support margins sufficient to cover those fixed costs. High margins can be consistent with incumbent firms earning competitive returns.

2.2.2 Customers

Customers can provide a variety of information to the Agencies, ranging from information about their own purchasing behavior and choices to their views about the effects of the merger itself.

Information from customers about how they would likely respond to a price increase, and the relative attractiveness of different products or suppliers, may be highly relevant, especially when corroborated by other evidence such as historical purchasing patterns and practices. Customers also can provide valuable information about the impact of historical events such as entry by a new supplier.

The conclusions of well-informed and sophisticated customers on the likely impact of the merger itself can also help the Agencies investigate competitive effects, because customers typically feel the consequences of both competitively beneficial and competitively harmful mergers. In evaluating such evidence, the Agencies are mindful that customers may oppose, or favor, a merger for reasons unrelated to the antitrust issues raised by that merger.

When some customers express concerns about the competitive effects of a merger while others view the merger as beneficial or neutral, the Agencies take account of this divergence in using the information provided by customers and consider the likely reasons for such divergence of views. For example, if for regulatory reasons some customers cannot buy imported products, while others can, a merger between domestic suppliers may harm the former customers even if it leaves the more flexible customers unharmed. See Section 3.

When direct customers of the merging firms compete against one another in a downstream market, their interests may not be aligned with the interests of final consumers, especially if the direct customers expect to pass on any anticompetitive price increase. A customer that is protected from adverse competitive effects by a long-term contract, or otherwise relatively immune from the merger's harmful effects, may even welcome an anticompetitive merger that provides that customer with a competitive advantage over its downstream rivals.

> *Example 1:* As a result of the merger, Customer C will experience a price increase for an input used in producing its final product, raising its costs. Customer C's rivals use this input more intensively than Customer C, and the same price increase applied to them will raise their costs more than it raises Customer C's costs. On balance, Customer C may benefit from the merger even though the merger involves a substantial lessening of competition.

2.2.3 Other Industry Participants and Observers

Suppliers, indirect customers, distributors, other industry participants, and industry analysts can also provide information helpful to a merger inquiry. The interests of firms selling products complementary to those offered by the merging firms often are well aligned with those of customers, making their informed views valuable.

Information from firms that are rivals to the merging parties can help illuminate how the market operates. The interests of rival firms often diverge from the interests of customers, since customers normally lose, but rival firms gain, if the merged entity raises its prices. For that reason, the Agencies do not routinely rely on the overall views of rival firms regarding the competitive effects of the merger. However, rival firms may provide relevant facts, and even their overall views may be instructive, especially in cases where the Agencies are concerned that the merged entity may engage in exclusionary conduct.

> *Example 2:* Merging Firms A and B operate in a market in which network effects are significant, implying that any firm's product is significantly more valuable if it commands a large market share or if it is interconnected with others that in aggregate command such a share. Prior to the merger, they and their rivals voluntarily interconnect with one another. The merger would create an entity with a large enough share that a strategy of ending voluntary interconnection would have a dangerous probability of creating monopoly power in this market. The interests of rivals and of consumers would be broadly aligned in preventing such a merger.

3. Targeted Customers and Price Discrimination

When examining possible adverse competitive effects from a merger, the Agencies consider whether those effects vary significantly for different customers purchasing the same or similar products. Such differential impacts are possible when sellers can discriminate, e.g., by profitably raising price to certain targeted customers but not to others. The possibility of price discrimination influences market definition (see Section 4), the measurement of market shares (see Section 5), and the evaluation of competitive effects (see Sections 6 and 7).

When price discrimination is feasible, adverse competitive effects on targeted customers can arise, even if such effects will not arise for other customers. A price increase for targeted customers may be profitable even if a price increase for all customers would not be profitable because too many other customers would substitute away. When discrimination is reasonably likely, the Agencies may evaluate competitive effects separately by type of customer. The Agencies may have access to information unavailable to customers that is relevant to evaluating whether discrimination is reasonably likely.

For price discrimination to be feasible, two conditions typically must be met: differential pricing and limited arbitrage.

First, the suppliers engaging in price discrimination must be able to price differently to targeted customers than to other customers. This may involve identification of individual customers to which different prices are offered or offering different prices to different types of customers based on observable characteristics.

> *Example 3:* Suppliers can distinguish large buyers from small buyers. Large buyers are more likely than small buyers to self-supply in response to a significant price increase. The merger may lead to price discrimination against small buyers, harming them, even if large buyers are not harmed. Such discrimination can occur even if there is no discrete gap in size between the classes of large and small buyers.

In other cases, suppliers may be unable to distinguish among different types of customers but can offer multiple products that sort customers based on their purchase decisions.

Second, the targeted customers must not be able to defeat the price increase of concern by arbitrage, e.g., by purchasing indirectly from or through other customers. Arbitrage may be difficult if it would void warranties or make service more difficult or costly for customers. Arbitrage is inherently impossible for many services. Arbitrage between customers at different geographic locations may be impractical due to transportation costs. Arbitrage on a modest scale may be possible but sufficiently costly or limited that it would not deter or defeat a discriminatory pricing strategy.

4. Market Definition

When the Agencies identify a potential competitive concern with a horizontal merger, market definition plays two roles. First, market definition helps specify the line of commerce and section of the country in which the competitive concern arises. In any merger enforcement action, the Agencies will normally identify one or more relevant markets in which the merger may substantially lessen competition. Second, market definition allows the Agencies to identify market participants and measure market shares and market concentration. See Section 5. The measurement of market shares and market concentration is not an end in itself, but is useful to the extent it illuminates the merger's likely competitive effects.

The Agencies' analysis need not start with market definition. Some of the analytical tools used by the Agencies to assess competitive effects do not rely on market definition, although evaluation of competitive alternatives available to customers is always necessary at some point in the analysis.

Evidence of competitive effects can inform market definition, just as market definition can be informative regarding competitive effects. For example, evidence that a reduction in the number of significant rivals offering a group of products causes prices for those products to rise significantly can itself establish that those products form a relevant market. Such evidence also may more directly predict the competitive effects of a merger, reducing the role of inferences from market definition and market shares.

Where analysis suggests alternative and reasonably plausible candidate markets, and where the resulting market shares lead to very different inferences regarding competitive effects, it is particularly valuable to examine more direct forms of evidence concerning those effects.

Market definition focuses solely on demand substitution factors, i.e., on customers' ability and willingness to substitute away from one product to another in response to a price increase or a corresponding non-price change such as a reduction in product quality or service. The responsive actions of suppliers are also important in competitive analysis. They are considered in these Guidelines in the sections addressing the identification of market participants, the measurement of market shares, the analysis of competitive effects, and entry.

Customers often confront a range of possible substitutes for the products of the merging firms. Some substitutes may be closer, and others more distant, either geographically or in terms of product attributes and perceptions. Additionally, customers may assess the proximity of different products differently. When products or suppliers in different geographic areas are substitutes for one another to varying degrees, defining a market to include some substitutes and exclude others is inevitably a simplification that cannot capture the full variation in the extent to which different products compete against each other. The principles of market definition outlined below seek to make this inevitable simplification as useful and informative as is practically possible. Relevant markets need not have precise metes and bounds.

Defining a market broadly to include relatively distant product or geographic substitutes can lead to misleading market shares. This is because the competitive significance of distant substitutes is unlikely to be commensurate with their shares in a broad market. Although excluding more distant substitutes from the market inevitably understates their competitive significance to some degree, doing so often provides a more accurate indicator of the competitive effects of the merger than would the alternative of including them and overstating their competitive significance as proportional to their shares in an expanded market.

> *Example 4:* Firms A and B, sellers of two leading brands of motorcycles, propose to merge. If Brand A motorcycle prices were to rise, some buyers would substitute to Brand B, and some others would substitute to cars. However, motorcycle buyers see Brand B motorcycles as much more similar to Brand A motorcycles than are cars. Far more cars are sold than motorcycles. Evaluating shares in a market that includes cars would greatly underestimate the competitive significance of Brand B motorcycles in constraining Brand A's prices and greatly overestimate the significance of cars.

Market shares of different products in narrowly defined markets are more likely to capture the relative competitive significance of these products, and often more accurately reflect competition between close substitutes. As a result, properly defined antitrust markets often exclude some substitutes to which some customers might turn in the face of a price increase even if such substitutes provide alternatives for those customers. However, a group of products is too narrow to constitute a relevant market if competition from products outside that group is so ample that even the complete elimination of competition within the group would not significantly harm either direct customers or downstream consumers. The hypothetical monopolist test (see Section 4.1.1) is designed to ensure that candidate markets are not overly narrow in this respect.

The Agencies implement these principles of market definition flexibly when evaluating different possible candidate markets. Relevant antitrust markets defined according to the hypothetical monopolist test are not always intuitive and may not align with how industry members use the term "market."

Section 4.1 describes the principles that apply to product market definition, and gives guidance on how the Agencies most often apply those principles. Section 4.2 describes how the same principles apply to geographic market definition. Although discussed separately for simplicity of exposition, the principles described in Sections 4.1 and 4.2 are combined to define a relevant market, which has both a product and a geographic dimension. In particular, the hypothetical monopolist test is applied to a group of products together with a geographic region to determine a relevant market.

4.1 Product Market Definition

When a product sold by one merging firm (Product A) competes against one or more products sold by the other merging firm, the Agencies define a relevant product market around Product A to evaluate the importance of that competition. Such a relevant product market consists of a group of substitute products including Product A. Multiple relevant product markets may thus be identified.

4.1.1 The Hypothetical Monopolist Test

The Agencies employ the hypothetical monopolist test to evaluate whether groups of products in candidate markets are sufficiently broad to constitute relevant antitrust markets. The Agencies use the hypothetical monopolist test to identify a set of products that are reasonably interchangeable with a product sold by one of the merging firms.

The hypothetical monopolist test requires that a product market contain enough substitute products so that it could be subject to post-merger exercise of market power significantly exceeding that existing absent the merger. Specifically, the test requires that a hypothetical profit-maximizing firm, not subject to price regulation, that was the only present and future seller of those products ("hypothetical monopolist") likely would impose at least a small but significant and non-transitory increase in price ("SSNIP") on at least one product in the market, including at least one product sold by one of the merging firms.[4] For the purpose of analyzing this issue, the terms of sale of products outside the candidate market are held constant. The SSNIP is employed solely as a methodological tool for performing the hypothetical monopolist test; it is not a tolerance level for price increases resulting from a merger.

Groups of products may satisfy the hypothetical monopolist test without including the full range of substitutes from which customers choose. The hypothetical monopolist test may identify a group of products as a relevant market even if customers would substitute significantly to products outside that group in response to a price increase.

> *Example 5:* Products A and B are being tested as a candidate market. Each sells for $100, has an incremental cost of $60, and sells 1200 units. For every dollar increase in the price of Product A, for any given price of Product B, Product A loses twenty units of sales to products outside the candidate market and ten units of sales to Product B, and likewise for Product B. Under these conditions, economic analysis shows that a hypothetical profit-maximizing monopolist controlling Products A and B would raise both of their prices by ten percent, to $110. Therefore, Products A and B satisfy the hypothetical monopolist test using a five percent SSNIP, and indeed for any SSNIP size up to ten percent. This is true even though two-thirds of the sales lost by one product when it raises its price are diverted to products outside the relevant market.

When applying the hypothetical monopolist test to define a market around a product offered by one of the merging firms, if the market includes a second product, the Agencies will normally also include a third product if that third product is a closer substitute for the first product than is the second product. The third product is a closer substitute if, in response to a SSNIP on the first product, greater revenues are diverted to the third product than to the second product.

> *Example 6:* In Example 5, suppose that half of the unit sales lost by Product A when it raises its price are diverted to Product C, which also has a price of $100, while one-third are diverted to Product B. Product C is a closer substitute for Product A than is Product B. Thus Product C will normally be included in the relevant market, even though Products A and B together satisfy the hypothetical monopolist test.

The hypothetical monopolist test ensures that markets are not defined too narrowly, but it does not lead to a single relevant market. The Agencies may evaluate a merger in any relevant market

---

4 If the pricing incentives of the firms supplying the products in the candidate market differ substantially from those of the hypothetical monopolist, for reasons other than the latter's control over a larger group of substitutes, the Agencies may instead employ the concept of a hypothetical profit-maximizing cartel comprised of the firms (with all their products) that sell the products in the candidate market. This approach is most likely to be appropriate if the merging firms sell products outside the candidate market that significantly affect their pricing incentives for products in the candidate market. This could occur, for example, if the candidate market is one for durable equipment and the firms selling that equipment derive substantial net revenues from selling spare parts and service for that equipment.

satisfying the test, guided by the overarching principle that the purpose of defining the market and measuring market shares is to illuminate the evaluation of competitive effects. Because the relative competitive significance of more distant substitutes is apt to be overstated by their share of sales, when the Agencies rely on market shares and concentration, they usually do so in the smallest relevant market satisfying the hypothetical monopolist test.

> *Example 7:* In Example 4, including cars in the market will lead to misleadingly small market shares for motorcycle producers. Unless motorcycles fail the hypothetical monopolist test, the Agencies would not include cars in the market in analyzing this motorcycle merger.

4.1.2 Benchmark Prices and SSNIP Size

The Agencies apply the SSNIP starting from prices that would likely prevail absent the merger. If prices are not likely to change absent the merger, these benchmark prices can reasonably be taken to be the prices prevailing prior to the merger.[5] If prices are likely to change absent the merger, e.g., because of innovation or entry, the Agencies may use anticipated future prices as the benchmark for the test. If prices might fall absent the merger due to the breakdown of pre-merger coordination, the Agencies may use those lower prices as the benchmark for the test. In some cases, the techniques employed by the Agencies to implement the hypothetical monopolist test focus on the difference in incentives between pre-merger firms and the hypothetical monopolist and do not require specifying the benchmark prices.

The SSNIP is intended to represent a "small but significant" increase in the prices charged by firms in the candidate market for the value they contribute to the products or services used by customers. This properly directs attention to the effects of price changes commensurate with those that might result from a significant lessening of competition caused by the merger. This methodology is used because normally it is possible to quantify "small but significant" adverse price effects on customers and analyze their likely reactions, not because price effects are more important than non-price effects.

The Agencies most often use a SSNIP of five percent of the price paid by customers for the products or services to which the merging firms contribute value. However, what constitutes a "small but significant" increase in price, commensurate with a significant loss of competition caused by the merger, depends upon the nature of the industry and the merging firms' positions in it, and the Agencies may accordingly use a price increase that is larger or smaller than five percent. Where explicit or implicit prices for the firms' specific contribution to value can be identified with reasonable clarity, the Agencies may base the SSNIP on those prices.

> *Example 8:* In a merger between two oil pipelines, the SSNIP would be based on the price charged for transporting the oil, not on the price of the oil itself. If pipelines buy the oil at one end and sell it at the other, the price charged for transporting the oil is implicit, equal to the difference between the price paid for oil at the input end and the price charged for oil at the output end. The relevant product sold by the pipelines is better described as "pipeline transportation of oil from point A to point B" than as "oil at point B."

---

[5] Market definition for the evaluation of non-merger antitrust concerns such as monopolization or facilitating practices will differ in this respect if the effects resulting from the conduct of concern are already occurring at the time of evaluation.

Example 9: In a merger between two firms that install computers purchased from third parties, the SSNIP would be based on their fees, not on the price of installed computers. If these firms purchase the computers and charge their customers one package price, the implicit installation fee is equal to the package charge to customers less the price of the computers.

Example 10: In Example 9, suppose that the prices paid by the merging firms to purchase computers are opaque, but account for at least ninety-five percent of the prices they charge for installed computers, with profits or implicit fees making up five percent of those prices at most. A five percent SSNIP on the total price paid by customers would at least double those fees or profits. Even if that would be unprofitable for a hypothetical monopolist, a significant increase in fees might well be profitable. If the SSNIP is based on the total price paid by customers, a lower percentage will be used.

4.1.3 Implementing the Hypothetical Monopolist Test

The hypothetical monopolist's incentive to raise prices depends both on the extent to which customers would likely substitute away from the products in the candidate market in response to such a price increase and on the profit margins earned on those products. The profit margin on incremental units is the difference between price and incremental cost on those units. The Agencies often estimate incremental costs, for example using merging parties' documents or data the merging parties use to make business decisions. Incremental cost is measured over the change in output that would be caused by the price increase under consideration.

In considering customers' likely responses to higher prices, the Agencies take into account any reasonably available and reliable evidence, including, but not limited to:

- how customers have shifted purchases in the past in response to relative changes in price or other terms and conditions;
- information from buyers, including surveys, concerning how they would respond to price changes;
- the conduct of industry participants, notably:
  - sellers' business decisions or business documents indicating sellers' informed beliefs concerning how customers would substitute among products in response to relative changes in price;
  - industry participants' behavior in tracking and responding to price changes by some or all rivals;
- objective information about product characteristics and the costs and delays of switching products, especially switching from products in the candidate market to products outside the candidate market;
- the percentage of sales lost by one product in the candidate market, when its price alone rises, that is recaptured by other products in the candidate market, with a higher recapture percentage making a price increase more profitable for the hypothetical monopolist;
- evidence from other industry participants, such as sellers of complementary products;

- legal or regulatory requirements; and
- the influence of downstream competition faced by customers in their output markets.

When the necessary data are available, the Agencies also may consider a "critical loss analysis" to assess the extent to which it corroborates inferences drawn from the evidence noted above. Critical loss analysis asks whether imposing at least a SSNIP on one or more products in a candidate market would raise or lower the hypothetical monopolist's profits. While this "breakeven" analysis differs from the profit-maximizing analysis called for by the hypothetical monopolist test in Section 4.1.1, merging parties sometimes present this type of analysis to the Agencies. A price increase raises profits on sales made at the higher price, but this will be offset to the extent customers substitute away from products in the candidate market. Critical loss analysis compares the magnitude of these two offsetting effects resulting from the price increase. The "critical loss" is defined as the number of lost unit sales that would leave profits unchanged. The "predicted loss" is defined as the number of unit sales that the hypothetical monopolist is predicted to lose due to the price increase. The price increase raises the hypothetical monopolist's profits if the predicted loss is less than the critical loss.

The Agencies consider all of the evidence of customer substitution noted above in assessing the predicted loss. The Agencies require that estimates of the predicted loss be consistent with that evidence, including the pre-merger margins of products in the candidate market used to calculate the critical loss. Unless the firms are engaging in coordinated interaction (see Section 7), high pre-merger margins normally indicate that each firm's product individually faces demand that is not highly sensitive to price.[6] Higher pre-merger margins thus indicate a smaller predicted loss as well as a smaller critical loss. The higher the pre-merger margin, the smaller the recapture percentage necessary for the candidate market to satisfy the hypothetical monopolist test.

Even when the evidence necessary to perform the hypothetical monopolist test quantitatively is not available, the conceptual framework of the test provides a useful methodological tool for gathering and analyzing evidence pertinent to customer substitution and to market definition. The Agencies follow the hypothetical monopolist test to the extent possible given the available evidence, bearing in mind that the ultimate goal of market definition is to help determine whether the merger may substantially lessen competition.

4.1.4 Product Market Definition with Targeted Customers

If a hypothetical monopolist could profitably target a subset of customers for price increases, the Agencies may identify relevant markets defined around those targeted customers, to whom a hypothetical monopolist would profitably and separately impose at least a SSNIP. Markets to serve targeted customers are also known as price discrimination markets. In practice, the Agencies identify price discrimination markets only where they believe there is a realistic prospect of an adverse competitive effect on a group of targeted customers.

> *Example 11:* Glass containers have many uses. In response to a price increase for glass containers, some users would substitute substantially to plastic or metal containers, but baby food manufacturers would not. If a

---

[6] While margins are important for implementing the hypothetical monopolist test, high margins are not in themselves of antitrust concern.

hypothetical monopolist could price separately and limit arbitrage, baby food manufacturers would be vulnerable to a targeted increase in the price of glass containers. The Agencies could define a distinct market for glass containers used to package baby food.

The Agencies also often consider markets for targeted customers when prices are individually negotiated and suppliers have information about customers that would allow a hypothetical monopolist to identify customers that are likely to pay a higher price for the relevant product. If prices are negotiated individually with customers, the hypothetical monopolist test may suggest relevant markets that are as narrow as individual customers (see also Section 6.2 on bargaining and auctions). Nonetheless, the Agencies often define markets for groups of targeted customers, i.e., by type of customer, rather than by individual customer. By so doing, the Agencies are able to rely on aggregated market shares that can be more helpful in predicting the competitive effects of the merger.

4.2 Geographic Market Definition

The arena of competition affected by the merger may be geographically bounded if geography limits some customers' willingness or ability to substitute to some products, or some suppliers' willingness or ability to serve some customers. Both supplier and customer locations can affect this. The Agencies apply the principles of market definition described here and in Section 4.1 to define a relevant market with a geographic dimension as well as a product dimension.

The scope of geographic markets often depends on transportation costs. Other factors such as language, regulation, tariff and non-tariff trade barriers, custom and familiarity, reputation, and service availability may impede long-distance or international transactions. The competitive significance of foreign firms may be assessed at various exchange rates, especially if exchange rates have fluctuated in the recent past.

In the absence of price discrimination based on customer location, the Agencies normally define geographic markets based on the locations of suppliers, as explained in subsection 4.2.1. In other cases, notably if price discrimination based on customer location is feasible as is often the case when delivered pricing is commonly used in the industry, the Agencies may define geographic markets based on the locations of customers, as explained in subsection 4.2.2.

4.2.1 Geographic Markets Based on the Locations of Suppliers

Geographic markets based on the locations of suppliers encompass the region from which sales are made. Geographic markets of this type often apply when customers receive goods or services at suppliers' locations. Competitors in the market are firms with relevant production, sales, or service facilities in that region. Some customers who buy from these firms may be located outside the boundaries of the geographic market.

The hypothetical monopolist test requires that a hypothetical profit-maximizing firm that was the only present or future producer of the relevant product(s) located in the region would impose at least a SSNIP from at least one location, including at least one location of one of the merging firms. In this exercise the terms of sale for all products produced elsewhere are held constant. A single firm may operate in a number of different geographic markets, even for a single product.

Example 12: The merging parties both have manufacturing plants in City X. The relevant product is expensive to transport and suppliers price their products for pickup at their locations. Rival plants are some distance away in City Y. A hypothetical monopolist controlling all plants in City X could profitably impose a SSNIP at these plants. Competition from more distant plants would not defeat the price increase because supplies coming from more distant plants require expensive transportation. The relevant geographic market is defined around the plants in City X.

When the geographic market is defined based on supplier locations, sales made by suppliers located in the geographic market are counted, regardless of the location of the customer making the purchase.

In considering likely reactions of customers to price increases for the relevant product(s) imposed in a candidate geographic market, the Agencies consider any reasonably available and reliable evidence, including:

- how customers have shifted purchases in the past between different geographic locations in response to relative changes in price or other terms and conditions;
- the cost and difficulty of transporting the product (or the cost and difficulty of a customer traveling to a seller's location), in relation to its price;
- whether suppliers need a presence near customers to provide service or support;
- evidence on whether sellers base business decisions on the prospect of customers switching between geographic locations in response to relative changes in price or other competitive variables;
- the costs and delays of switching from suppliers in the candidate geographic market to suppliers outside the candidate geographic market; and
- the influence of downstream competition faced by customers in their output markets.

4.2.2 Geographic Markets Based on the Locations of Customers

When the hypothetical monopolist could discriminate based on customer location, the Agencies may define geographic markets based on the locations of targeted customers.[7] Geographic markets of this type often apply when suppliers deliver their products or services to customers' locations. Geographic markets of this type encompass the region into which sales are made. Competitors in the market are firms that sell to customers in the specified region. Some suppliers that sell into the relevant market may be located outside the boundaries of the geographic market.

The hypothetical monopolist test requires that a hypothetical profit-maximizing firm that was the only present or future seller of the relevant product(s) to customers in the region would impose at least a SSNIP on some customers in that region. A region forms a relevant geographic market if this price increase would not be defeated by substitution away from the relevant product or by arbitrage,

---

[7] For customers operating in multiple locations, only those customer locations within the targeted zone are included in the market.

e.g., customers in the region travelling outside it to purchase the relevant product. In this exercise, the terms of sale for products sold to all customers outside the region are held constant.

> *Example 13:* Customers require local sales and support. Suppliers have sales and service operations in many geographic areas and can discriminate based on customer location. The geographic market can be defined around the locations of customers.

> *Example 14:* Each merging firm has a single manufacturing plant and delivers the relevant product to customers in City X and in City Y. The relevant product is expensive to transport. The merging firms' plants are by far the closest to City X, but no closer to City Y than are numerous rival plants. This fact pattern suggests that customers in City X may be harmed by the merger even if customers in City Y are not. For that reason, the Agencies consider a relevant geographic market defined around customers in City X. Such a market could be defined even if the region around the merging firms' plants would not be a relevant geographic market defined based on the location of sellers because a hypothetical monopolist controlling all plants in that region would find a SSNIP imposed on all of its customers unprofitable due to the loss of sales to customers in City Y.

When the geographic market is defined based on customer locations, sales made to those customers are counted, regardless of the location of the supplier making those sales.

> *Example 15:* Customers in the United States must use products approved by U.S. regulators. Foreign customers use products not approved by U.S. regulators. The relevant product market consists of products approved by U.S. regulators. The geographic market is defined around U.S. customers. Any sales made to U.S. customers by foreign suppliers are included in the market, and those foreign suppliers are participants in the U.S. market even though located outside it.

5. Market Participants, Market Shares, and Market Concentration

The Agencies normally consider measures of market shares and market concentration as part of their evaluation of competitive effects. The Agencies evaluate market shares and concentration in conjunction with other reasonably available and reliable evidence for the ultimate purpose of determining whether a merger may substantially lessen competition.

Market shares can directly influence firms' competitive incentives. For example, if a price reduction to gain new customers would also apply to a firm's existing customers, a firm with a large market share may be more reluctant to implement a price reduction than one with a small share. Likewise, a firm with a large market share may not feel pressure to reduce price even if a smaller rival does. Market shares also can reflect firms' capabilities. For example, a firm with a large market share may be able to expand output rapidly by a larger absolute amount than can a small firm. Similarly, a large market share tends to indicate low costs, an attractive product, or both.

5.1 Market Participants

All firms that currently earn revenues in the relevant market are considered market participants. Vertically integrated firms are also included to the extent that their inclusion accurately reflects their competitive significance. Firms not currently earning revenues in the relevant market, but that have committed to entering the market in the near future, are also considered market participants.

Firms that are not current producers in a relevant market, but that would very likely provide rapid supply responses with direct competitive impact in the event of a SSNIP, without incurring significant sunk costs, are also considered market participants. These firms are termed “rapid entrants.” Sunk costs are entry or exit costs that cannot be recovered outside the relevant market. Entry that would take place more slowly in response to adverse competitive effects, or that requires firms to incur significant sunk costs, is considered in Section 9.

Firms that produce the relevant product but do not sell it in the relevant geographic market may be rapid entrants. Other things equal, such firms are most likely to be rapid entrants if they are close to the geographic market.

> *Example 16:* Farm A grows tomatoes halfway between Cities X and Y. Currently, it ships its tomatoes to City X because prices there are two percent higher. Previously it has varied the destination of its shipments in response to small price variations. Farm A would likely be a rapid entrant participant in a market for tomatoes in City Y.

> *Example 17:* Firm B has bid multiple times to supply milk to School District S, and actually supplies milk to schools in some adjacent areas. It has never won a bid in School District S, but is well qualified to serve that district and has often nearly won. Firm B would be counted as a rapid entrant in a market for school milk in School District S.

More generally, if the relevant market is defined around targeted customers, firms that produce relevant products but do not sell them to those customers may be rapid entrants if they can easily and rapidly begin selling to the targeted customers.

Firms that clearly possess the necessary assets to supply into the relevant market rapidly may also be rapid entrants. In markets for relatively homogeneous goods where a supplier’s ability to compete depends predominantly on its costs and its capacity, and not on other factors such as experience or reputation in the relevant market, a supplier with efficient idle capacity, or readily available “swing” capacity currently used in adjacent markets that can easily and profitably be shifted to serve the relevant market, may be a rapid entrant.[8] However, idle capacity may be inefficient, and capacity used in adjacent markets may not be available, so a firm’s possession of idle or swing capacity alone does not make that firm a rapid entrant.

5.2 Market Shares

The Agencies normally calculate market shares for all firms that currently produce products in the relevant market, subject to the availability of data. The Agencies also calculate market shares for other market participants if this can be done to reliably reflect their competitive significance.

Market concentration and market share data are normally based on historical evidence. However, recent or ongoing changes in market conditions may indicate that the current market share of a particular firm either understates or overstates the firm’s future competitive significance. The Agencies consider reasonably predictable effects of recent or ongoing changes in market conditions when calculating and interpreting market share data. For example, if a new technology that is important to long-term competitive viability is available to other firms in the market, but is not available to a particular firm, the Agencies may conclude that that firm’s historical market share

---

8 If this type of supply side substitution is nearly universal among the firms selling one or more of a group of products, the Agencies may use an aggregate description of markets for those products as a matter of convenience.

overstates its future competitive significance. The Agencies may project historical market shares into the foreseeable future when this can be done reliably.

The Agencies measure market shares based on the best available indicator of firms' future competitive significance in the relevant market. This may depend upon the type of competitive effect being considered, and on the availability of data. Typically, annual data are used, but where individual transactions are large and infrequent so annual data may be unrepresentative, the Agencies may measure market shares over a longer period of time.

In most contexts, the Agencies measure each firm's market share based on its actual or projected revenues in the relevant market. Revenues in the relevant market tend to be the best measure of attractiveness to customers, since they reflect the real-world ability of firms to surmount all of the obstacles necessary to offer products on terms and conditions that are attractive to customers. In cases where one unit of a low-priced product can substitute for one unit of a higher-priced product, unit sales may measure competitive significance better than revenues. For example, a new, much less expensive product may have great competitive significance if it substantially erodes the revenues earned by older, higher-priced products, even if it earns relatively few revenues. In cases where customers sign long-term contracts, face switching costs, or tend to re-evaluate their suppliers only occasionally, revenues earned from recently acquired customers may better reflect the competitive significance of suppliers than do total revenues.

In markets for homogeneous products, a firm's competitive significance may derive principally from its ability and incentive to rapidly expand production in the relevant market in response to a price increase or output reduction by others in that market. As a result, a firm's competitive significance may depend upon its level of readily available capacity to serve the relevant market if that capacity is efficient enough to make such expansion profitable. In such markets, capacities or reserves may better reflect the future competitive significance of suppliers than revenues, and the Agencies may calculate market shares using those measures. Market participants that are not current producers may then be assigned positive market shares, but only if a measure of their competitive significance properly comparable to that of current producers is available. When market shares are measured based on firms' readily available capacities, the Agencies do not include capacity that is committed or so profitably employed outside the relevant market, or so high-cost, that it would not likely be used to respond to a SSNIP in the relevant market.

> *Example 18:* The geographic market is defined around customers in the United States. Firm X produces the relevant product outside the United States, and most of its sales are made to customers outside the United States. In most contexts, Firm X's market share will be based on its sales to U.S. customers, not its total sales or total capacity. However, if the relevant product is homogeneous, and if Firm X would significantly expand sales to U.S. customers rapidly and without incurring significant sunk costs in response to a SSNIP, the Agencies may base Firm X's market share on its readily available capacity to serve U.S. customers.

When the Agencies define markets serving targeted customers, these same principles are used to measure market shares, as they apply to those customers. In most contexts, each firm's market share is based on its actual or projected revenues from the targeted customers. However, the Agencies may instead measure market shares based on revenues from a broader group of customers if doing so would more accurately reflect the competitive significance of different suppliers in the relevant market. Revenues earned from a broader group of customers may also be used when better data are thereby available.

5.3 Market Concentration

Market concentration is often one useful indicator of likely competitive effects of a merger. In evaluating market concentration, the Agencies consider both the post-merger level of market concentration and the change in concentration resulting from a merger. Market shares may not fully reflect the competitive significance of firms in the market or the impact of a merger. They are used in conjunction with other evidence of competitive effects. See Sections 6 and 7.

In analyzing mergers between an incumbent and a recent or potential entrant, to the extent the Agencies use the change in concentration to evaluate competitive effects, they will do so using projected market shares. A merger between an incumbent and a potential entrant can raise significant competitive concerns. The lessening of competition resulting from such a merger is more likely to be substantial, the larger is the market share of the incumbent, the greater is the competitive significance of the potential entrant, and the greater is the competitive threat posed by this potential entrant relative to others.

The Agencies give more weight to market concentration when market shares have been stable over time, especially in the face of historical changes in relative prices or costs. If a firm has retained its market share even after its price has increased relative to those of its rivals, that firm already faces limited competitive constraints, making it less likely that its remaining rivals will replace the competition lost if one of that firm's important rivals is eliminated due to a merger. By contrast, even a highly concentrated market can be very competitive if market shares fluctuate substantially over short periods of time in response to changes in competitive offerings. However, if competition by one of the merging firms has significantly contributed to these fluctuations, perhaps because it has acted as a maverick, the Agencies will consider whether the merger will enhance market power by combining that firm with one of its significant rivals.

The Agencies may measure market concentration using the number of significant competitors in the market. This measure is most useful when there is a gap in market share between significant competitors and smaller rivals or when it is difficult to measure revenues in the relevant market. The Agencies also may consider the combined market share of the merging firms as an indicator of the extent to which others in the market may not be able readily to replace competition between the merging firms that is lost through the merger.

The Agencies often calculate the Herfindahl-Hirschman Index ("HHI") of market concentration. The HHI is calculated by summing the squares of the individual firms' market shares,[9] and thus gives proportionately greater weight to the larger market shares. When using the HHI, the Agencies

---

[9] For example, a market consisting of four firms with market shares of thirty percent, thirty percent, twenty percent, and twenty percent has an HHI of 2600 ($30^2 + 30^2 + 20^2 + 20^2 = 2600$). The HHI ranges from 10,000 (in the case of a pure monopoly) to a number approaching zero (in the case of an atomistic market). Although it is desirable to include all firms in the calculation, lack of information about firms with small shares is not critical because such firms do not affect the HHI significantly.

consider both the post-merger level of the HHI and the increase in the HHI resulting from the merger. The increase in the HHI is equal to twice the product of the market shares of the merging firms.[10]

Based on their experience, the Agencies generally classify markets into three types:

- Unconcentrated Markets: HHI below 1500
- Moderately Concentrated Markets: HHI between 1500 and 2500
- Highly Concentrated Markets: HHI above 2500

The Agencies employ the following general standards for the relevant markets they have defined:

- *Small Change in Concentration:* Mergers involving an increase in the HHI of less than 100 points are unlikely to have adverse competitive effects and ordinarily require no further analysis.
- *Unconcentrated Markets:* Mergers resulting in unconcentrated markets are unlikely to have adverse competitive effects and ordinarily require no further analysis.
- *Moderately Concentrated Markets:* Mergers resulting in moderately concentrated markets that involve an increase in the HHI of more than 100 points potentially raise significant competitive concerns and often warrant scrutiny.
- *Highly Concentrated Markets:* Mergers resulting in highly concentrated markets that involve an increase in the HHI of between 100 points and 200 points potentially raise significant competitive concerns and often warrant scrutiny. Mergers resulting in highly concentrated markets that involve an increase in the HHI of more than 200 points will be presumed to be likely to enhance market power. The presumption may be rebutted by persuasive evidence showing that the merger is unlikely to enhance market power.

The purpose of these thresholds is not to provide a rigid screen to separate competitively benign mergers from anticompetitive ones, although high levels of concentration do raise concerns. Rather, they provide one way to identify some mergers unlikely to raise competitive concerns and some others for which it is particularly important to examine whether other competitive factors confirm, reinforce, or counteract the potentially harmful effects of increased concentration. The higher the post-merger HHI and the increase in the HHI, the greater are the Agencies' potential competitive concerns and the greater is the likelihood that the Agencies will request additional information to conduct their analysis.

---

10 For example, the merger of firms with shares of five percent and ten percent of the market would increase the HHI by 100 ($5 \times 10 \times 2 = 100$).

6. Unilateral Effects

The elimination of competition between two firms that results from their merger may alone constitute a substantial lessening of competition. Such unilateral effects are most apparent in a merger to monopoly in a relevant market, but are by no means limited to that case. Whether cognizable efficiencies resulting from the merger are likely to reduce or reverse adverse unilateral effects is addressed in Section 10.

Several common types of unilateral effects are discussed in this section. Section 6.1 discusses unilateral price effects in markets with differentiated products. Section 6.2 discusses unilateral effects in markets where sellers negotiate with buyers or prices are determined through auctions. Section 6.3 discusses unilateral effects relating to reductions in output or capacity in markets for relatively homogeneous products. Section 6.4 discusses unilateral effects arising from diminished innovation or reduced product variety. These effects do not exhaust the types of possible unilateral effects; for example, exclusionary unilateral effects also can arise.

A merger may result in different unilateral effects along different dimensions of competition. For example, a merger may increase prices in the short term but not raise longer-term concerns about innovation, either because rivals will provide sufficient innovation competition or because the merger will generate cognizable research and development efficiencies. See Section 10.

6.1 Pricing of Differentiated Products

In differentiated product industries, some products can be very close substitutes and compete strongly with each other, while other products are more distant substitutes and compete less strongly. For example, one high-end product may compete much more directly with another high-end product than with any low-end product.

A merger between firms selling differentiated products may diminish competition by enabling the merged firm to profit by unilaterally raising the price of one or both products above the pre-merger level. Some of the sales lost due to the price rise will merely be diverted to the product of the merger partner and, depending on relative margins, capturing such sales loss through merger may make the price increase profitable even though it would not have been profitable prior to the merger.

The extent of direct competition between the products sold by the merging parties is central to the evaluation of unilateral price effects. Unilateral price effects are greater, the more the buyers of products sold by one merging firm consider products sold by the other merging firm to be their next choice. The Agencies consider any reasonably available and reliable information to evaluate the extent of direct competition between the products sold by the merging firms. This includes documentary and testimonial evidence, win/loss reports and evidence from discount approval processes, customer switching patterns, and customer surveys. The types of evidence relied on often overlap substantially with the types of evidence of customer substitution relevant to the hypothetical monopolist test. See Section 4.1.1.

Substantial unilateral price elevation post-merger for a product formerly sold by one of the merging firms normally requires that a significant fraction of the customers purchasing that product view products formerly sold by the other merging firm as their next-best choice. However, unless pre-merger margins between price and incremental cost are low, that significant fraction need not approach a majority. For this purpose, incremental cost is measured over the change in output that would be caused by the price change considered. A merger may produce significant unilateral effects for a given product even though many more sales are diverted to products sold by non-merging firms than to products previously sold by the merger partner.

> *Example 19:* In Example 5, the merged entity controlling Products A and B would raise prices ten percent, given the product offerings and prices of other firms. In that example, one-third of the sales lost by Product A when its price alone is raised are diverted to Product B. Further analysis is required to account for repositioning, entry, and efficiencies.

In some cases, the Agencies may seek to quantify the extent of direct competition between a product sold by one merging firm and a second product sold by the other merging firm by estimating the diversion ratio from the first product to the second product. The diversion ratio is the fraction of unit sales lost by the first product due to an increase in its price that would be diverted to the second product. Diversion ratios between products sold by one merging firm and products sold by the other merging firm can be very informative for assessing unilateral price effects, with higher diversion ratios indicating a greater likelihood of such effects. Diversion ratios between products sold by merging firms and those sold by non-merging firms have at most secondary predictive value.

Adverse unilateral price effects can arise when the merger gives the merged entity an incentive to raise the price of a product previously sold by one merging firm and thereby divert sales to products previously sold by the other merging firm, boosting the profits on the latter products. Taking as given other prices and product offerings, that boost to profits is equal to the value to the merged firm of the sales diverted to those products. The value of sales diverted to a product is equal to the number of units diverted to that product multiplied by the margin between price and incremental cost on that product. In some cases, where sufficient information is available, the Agencies assess the value of diverted sales, which can serve as an indicator of the upward pricing pressure on the first product resulting from the merger. Diagnosing unilateral price effects based on the value of diverted sales need not rely on market definition or the calculation of market shares and concentration. The Agencies rely much more on the value of diverted sales than on the level of the HHI for diagnosing unilateral price effects in markets with differentiated products. If the value of diverted sales is proportionately small, significant unilateral price effects are unlikely.[11]

Where sufficient data are available, the Agencies may construct economic models designed to quantify the unilateral price effects resulting from the merger. These models often include independent price responses by non-merging firms. They also can incorporate merger-specific efficiencies. These merger simulation methods need not rely on market definition. The Agencies do not treat merger simulation evidence as conclusive in itself, and they place more weight on whether their merger simulations consistently predict substantial price increases than on the precise prediction of any single simulation.

---

[11] For this purpose, the value of diverted sales is measured in proportion to the lost revenues attributable to the reduction in unit sales resulting from the price increase. Those lost revenues equal the reduction in the number of units sold of that product multiplied by that product’s price.

A merger is unlikely to generate substantial unilateral price increases if non-merging parties offer very close substitutes for the products offered by the merging firms. In some cases, non-merging firms may be able to reposition their products to offer close substitutes for the products offered by the merging firms. Repositioning is a supply-side response that is evaluated much like entry, with consideration given to timeliness, likelihood, and sufficiency. See Section 9. The Agencies consider whether repositioning would be sufficient to deter or counteract what otherwise would be significant anticompetitive unilateral effects from a differentiated products merger.

6.2 Bargaining and Auctions

In many industries, especially those involving intermediate goods and services, buyers and sellers negotiate to determine prices and other terms of trade. In that process, buyers commonly negotiate with more than one seller, and may play sellers off against one another. Some highly structured forms of such competition are known as auctions. Negotiations often combine aspects of an auction with aspects of one-on-one negotiation, although pure auctions are sometimes used in government procurement and elsewhere.

A merger between two competing sellers prevents buyers from playing those sellers off against each other in negotiations. This alone can significantly enhance the ability and incentive of the merged entity to obtain a result more favorable to it, and less favorable to the buyer, than the merging firms would have offered separately absent the merger. The Agencies analyze unilateral effects of this type using similar approaches to those described in Section 6.1.

Anticompetitive unilateral effects in these settings are likely in proportion to the frequency or probability with which, prior to the merger, one of the merging sellers had been the runner-up when the other won the business. These effects also are likely to be greater, the greater advantage the runner-up merging firm has over other suppliers in meeting customers' needs. These effects also tend to be greater, the more profitable were the pre-merger winning bids. All of these factors are likely to be small if there are many equally placed bidders.

The mechanisms of these anticompetitive unilateral effects, and the indicia of their likelihood, differ somewhat according to the bargaining practices used, the auction format, and the sellers' information about one another's costs and about buyers' preferences. For example, when the merging sellers are likely to know which buyers they are best and second best placed to serve, any anticompetitive unilateral effects are apt to be targeted at those buyers; when sellers are less well informed, such effects are more apt to be spread over a broader class of buyers.

6.3 Capacity and Output for Homogeneous Products

In markets involving relatively undifferentiated products, the Agencies may evaluate whether the merged firm will find it profitable unilaterally to suppress output and elevate the market price. A firm may leave capacity idle, refrain from building or obtaining capacity that would have been obtained absent the merger, or eliminate pre-existing production capabilities. A firm may also divert the use of capacity away from one relevant market and into another so as to raise the price in the former market. The competitive analyses of these alternative modes of output suppression may differ.

A unilateral output suppression strategy is more likely to be profitable when (1) the merged firm's market share is relatively high; (2) the share of the merged firm's output already committed for sale at prices unaffected by the output suppression is relatively low; (3) the margin on the suppressed output is relatively low; (4) the supply responses of rivals are relatively small; and (5) the market elasticity of demand is relatively low.

A merger may provide the merged firm a larger base of sales on which to benefit from the resulting price rise, or it may eliminate a competitor that otherwise could have expanded its output in response to the price rise.

> *Example 20:* Firms A and B both produce an industrial commodity and propose to merge. The demand for this commodity is insensitive to price. Firm A is the market leader. Firm B produces substantial output, but its operating margins are low because it operates high-cost plants. The other suppliers are operating very near capacity. The merged firm has an incentive to reduce output at the high-cost plants, perhaps shutting down some of that capacity, thus driving up the price it receives on the remainder of its output. The merger harms customers, notwithstanding that the merged firm shifts some output from high-cost plants to low-cost plants.

In some cases, a merger between a firm with a substantial share of the sales in the market and a firm with significant excess capacity to serve that market can make an output suppression strategy profitable.[12] This can occur even if the firm with the excess capacity has a relatively small share of sales, if that firm's ability to expand, and thus keep price from rising, has been making an output suppression strategy unprofitable for the firm with the larger market share.

6.4 Innovation and Product Variety

Competition often spurs firms to innovate. The Agencies may consider whether a merger is likely to diminish innovation competition by encouraging the merged firm to curtail its innovative efforts below the level that would prevail in the absence of the merger. That curtailment of innovation could take the form of reduced incentive to continue with an existing product-development effort or reduced incentive to initiate development of new products.

The first of these effects is most likely to occur if at least one of the merging firms is engaging in efforts to introduce new products that would capture substantial revenues from the other merging firm. The second, longer-run effect is most likely to occur if at least one of the merging firms has capabilities that are likely to lead it to develop new products in the future that would capture substantial revenues from the other merging firm. The Agencies therefore also consider whether a merger will diminish innovation competition by combining two of a very small number of firms with the strongest capabilities to successfully innovate in a specific direction.

The Agencies evaluate the extent to which successful innovation by one merging firm is likely to take sales from the other, and the extent to which post-merger incentives for future innovation will be lower than those that would prevail in the absence of the merger. The Agencies also consider whether the merger is likely to enable innovation that would not otherwise take place, by bringing together

---

12 Such a merger also can cause adverse coordinated effects, especially if the acquired firm with excess capacity was disrupting effective coordination.

complementary capabilities that cannot be otherwise combined or for some other merger-specific reason. See Section 10.

The Agencies also consider whether a merger is likely to give the merged firm an incentive to cease offering one of the relevant products sold by the merging parties. Reductions in variety following a merger may or may not be anticompetitive. Mergers can lead to the efficient consolidation of products when variety offers little in value to customers. In other cases, a merger may increase variety by encouraging the merged firm to reposition its products to be more differentiated from one another.

If the merged firm would withdraw a product that a significant number of customers strongly prefer to those products that would remain available, this can constitute a harm to customers over and above any effects on the price or quality of any given product. If there is evidence of such an effect, the Agencies may inquire whether the reduction in variety is largely due to a loss of competitive incentives attributable to the merger. An anticompetitive incentive to eliminate a product as a result of the merger is greater and more likely, the larger is the share of profits from that product coming at the expense of profits from products sold by the merger partner. Where a merger substantially reduces competition by bringing two close substitute products under common ownership, and one of those products is eliminated, the merger will often also lead to a price increase on the remaining product, but that is not a necessary condition for anticompetitive effect.

> *Example 21:* Firm A sells a high-end product at a premium price. Firm B sells a mid-range product at a lower price, serving customers who are more price sensitive. Several other firms have low-end products. Firms A and B together have a large share of the relevant market. Firm A proposes to acquire Firm B and discontinue Firm B's product. Firm A expects to retain most of Firm B's customers. Firm A may not find it profitable to raise the price of its high-end product after the merger, because doing so would reduce its ability to retain Firm B's more price-sensitive customers. The Agencies may conclude that the withdrawal of Firm B's product results from a loss of competition and materially harms customers.

7. Coordinated Effects

A merger may diminish competition by enabling or encouraging post-merger coordinated interaction among firms in the relevant market that harms customers. Coordinated interaction involves conduct by multiple firms that is profitable for each of them only as a result of the accommodating reactions of the others. These reactions can blunt a firm's incentive to offer customers better deals by undercutting the extent to which such a move would win business away from rivals. They also can enhance a firm's incentive to raise prices, by assuaging the fear that such a move would lose customers to rivals.

Coordinated interaction includes a range of conduct. Coordinated interaction can involve the explicit negotiation of a common understanding of how firms will compete or refrain from competing. Such conduct typically would itself violate the antitrust laws. Coordinated interaction also can involve a similar common understanding that is not explicitly negotiated but would be enforced by the detection and punishment of deviations that would undermine the coordinated interaction. Coordinated interaction alternatively can involve parallel accommodating conduct not pursuant to a prior understanding. Parallel accommodating conduct includes situations in which each rival's response to competitive moves made by others is individually rational, and not motivated by retaliation or deterrence nor intended to sustain an agreed-upon market outcome, but nevertheless emboldens price increases and weakens competitive incentives to reduce prices or offer customers better terms. Coordinated interaction includes conduct not otherwise condemned by the antitrust laws.

The ability of rival firms to engage in coordinated conduct depends on the strength and predictability of rivals' responses to a price change or other competitive initiative. Under some circumstances, a merger can result in market concentration sufficient to strengthen such responses or enable multiple firms in the market to predict them more confidently, thereby affecting the competitive incentives of multiple firms in the market, not just the merged firm.

7.1 Impact of Merger on Coordinated Interaction

The Agencies examine whether a merger is likely to change the manner in which market participants interact, inducing substantially more coordinated interaction. The Agencies seek to identify how a merger might significantly weaken competitive incentives through an increase in the strength, extent, or likelihood of coordinated conduct. There are, however, numerous forms of coordination, and the risk that a merger will induce adverse coordinated effects may not be susceptible to quantification or detailed proof. Therefore, the Agencies evaluate the risk of coordinated effects using measures of market concentration (see Section 5) in conjunction with an assessment of whether a market is vulnerable to coordinated conduct. See Section 7.2. The analysis in Section 7.2 applies to moderately and highly concentrated markets, as unconcentrated markets are unlikely to be vulnerable to coordinated conduct.

Pursuant to the Clayton Act's incipiency standard, the Agencies may challenge mergers that in their judgment pose a real danger of harm through coordinated effects, even without specific evidence showing precisely how the coordination likely would take place. The Agencies are likely to challenge a merger if the following three conditions are all met: (1) the merger would significantly increase concentration and lead to a moderately or highly concentrated market; (2) that market shows signs of vulnerability to coordinated conduct (see Section 7.2); and (3) the Agencies have a credible basis on which to conclude that the merger may enhance that vulnerability. An acquisition eliminating a maverick firm (see Section 2.1.5) in a market vulnerable to coordinated conduct is likely to cause adverse coordinated effects.

7.2 Evidence a Market is Vulnerable to Coordinated Conduct

The Agencies presume that market conditions are conducive to coordinated interaction if firms representing a substantial share in the relevant market appear to have previously engaged in express collusion affecting the relevant market, unless competitive conditions in the market have since changed significantly. Previous express collusion in another geographic market will have the same weight if the salient characteristics of that other market at the time of the collusion are comparable to those in the relevant market. Failed previous attempts at collusion in the relevant market suggest that successful collusion was difficult pre-merger but not so difficult as to deter attempts, and a merger may tend to make success more likely. Previous collusion or attempted collusion in another product market may also be given substantial weight if the salient characteristics of that other market at the time of the collusion are closely comparable to those in the relevant market.

A market typically is more vulnerable to coordinated conduct if each competitively important firm's significant competitive initiatives can be promptly and confidently observed by that firm's rivals. This is more likely to be the case if the terms offered to customers are relatively transparent. Price transparency can be greater for relatively homogeneous products. Even if terms of dealing are not transparent, transparency regarding the identities of the firms serving particular customers can give rise to coordination, e.g., through customer or territorial allocation. Regular monitoring by suppliers of one another's prices or customers can indicate that the terms offered to customers are relatively transparent.

A market typically is more vulnerable to coordinated conduct if a firm's prospective competitive reward from attracting customers away from its rivals will be significantly diminished by likely responses of those rivals. This is more likely to be the case, the stronger and faster are the responses the firm anticipates from its rivals. The firm is more likely to anticipate strong responses if there are few significant competitors, if products in the relevant market are relatively homogeneous, if customers find it relatively easy to switch between suppliers, or if suppliers use meeting-competition clauses.

A firm is more likely to be deterred from making competitive initiatives by whatever responses occur if sales are small and frequent rather than via occasional large and long-term contracts or if relatively few customers will switch to it before rivals are able to respond. A firm is less likely to be deterred by whatever responses occur if the firm has little stake in the status quo. For example, a firm with a small market share that can quickly and dramatically expand, constrained neither by limits on production nor by customer reluctance to switch providers or to entrust business to a historically small provider, is unlikely to be deterred. Firms are also less likely to be deterred by whatever responses occur if competition in the relevant market is marked by leapfrogging technological innovation, so that responses by competitors leave the gains from successful innovation largely intact.

A market is more apt to be vulnerable to coordinated conduct if the firm initiating a price increase will lose relatively few customers after rivals respond to the increase. Similarly, a market is more apt to be vulnerable to coordinated conduct if a firm that first offers a lower price or improved product to customers will retain relatively few customers thus attracted away from its rivals after those rivals respond.

The Agencies regard coordinated interaction as more likely, the more the participants stand to gain from successful coordination. Coordination generally is more profitable, the lower is the market elasticity of demand.

Coordinated conduct can harm customers even if not all firms in the relevant market engage in the coordination, but significant harm normally is likely only if a substantial part of the market is subject to such conduct. The prospect of harm depends on the collective market power, in the relevant market, of firms whose incentives to compete are substantially weakened by coordinated conduct. This collective market power is greater, the lower is the market elasticity of demand. This collective market power is diminished by the presence of other market participants with small market shares and little stake in the outcome resulting from the coordinated conduct, if these firms can rapidly expand their sales in the relevant market.

Buyer characteristics and the nature of the procurement process can affect coordination. For example, sellers may have the incentive to bid aggressively for a large contract even if they expect strong responses by rivals. This is especially the case for sellers with small market shares, if they can realistically win such large contracts. In some cases, a large buyer may be able to strategically undermine coordinated conduct, at least as it pertains to that buyer's needs, by choosing to put up for bid a few large contracts rather than many smaller ones, and by making its procurement decisions opaque to suppliers.

8. Powerful Buyers

Powerful buyers are often able to negotiate favorable terms with their suppliers. Such terms may reflect the lower costs of serving these buyers, but they also can reflect price discrimination in their favor.

The Agencies consider the possibility that powerful buyers may constrain the ability of the merging parties to raise prices. This can occur, for example, if powerful buyers have the ability and incentive to vertically integrate upstream or sponsor entry, or if the conduct or presence of large buyers undermines coordinated effects. However, the Agencies do not presume that the presence of powerful buyers alone forestalls adverse competitive effects flowing from the merger. Even buyers that can negotiate favorable terms may be harmed by an increase in market power. The Agencies examine the choices available to powerful buyers and how those choices likely would change due to the merger. Normally, a merger that eliminates a supplier whose presence contributed significantly to a buyer's negotiating leverage will harm that buyer.

> *Example 22:* Customer C has been able to negotiate lower pre-merger prices than other customers by threatening to shift its large volume of purchases from one merging firm to the other. No other suppliers are as well placed to meet Customer C's needs for volume and reliability. The merger is likely to harm Customer C. In this situation, the Agencies could identify a price discrimination market consisting of Customer C and similarly placed customers. The merger threatens to end previous price discrimination in their favor.

Furthermore, even if some powerful buyers could protect themselves, the Agencies also consider whether market power can be exercised against other buyers.

> *Example 23:* In Example 22, if Customer C instead obtained the lower pre-merger prices based on a credible threat to supply its own needs, or to sponsor new entry, Customer C might not be harmed. However, even in this case, other customers may still be harmed.

9. Entry

The analysis of competitive effects in Sections 6 and 7 focuses on current participants in the relevant market. That analysis may also include some forms of entry. Firms that would rapidly and easily enter the market in response to a SSNIP are market participants and may be assigned market shares. See Sections 5.1 and 5.2. Firms that have, prior to the merger, committed to entering the market also will normally be treated as market participants. See Section 5.1. This section concerns entry or adjustments to pre-existing entry plans that are induced by the merger.

As part of their full assessment of competitive effects, the Agencies consider entry into the relevant market. The prospect of entry into the relevant market will alleviate concerns about adverse competitive effects only if such entry will deter or counteract any competitive effects of concern so the merger will not substantially harm customers.

The Agencies consider the actual history of entry into the relevant market and give substantial weight to this evidence. Lack of successful and effective entry in the face of non-transitory increases in the margins earned on products in the relevant market tends to suggest that successful entry is slow or difficult. Market values of incumbent firms greatly exceeding the replacement costs of their tangible assets may indicate that these firms have valuable intangible assets, which may be difficult or time consuming for an entrant to replicate.

A merger is not likely to enhance market power if entry into the market is so easy that the merged firm and its remaining rivals in the market, either unilaterally or collectively, could not profitably raise price or otherwise reduce competition compared to the level that would prevail in the absence of the merger. Entry is that easy if entry would be timely, likely, and sufficient in its magnitude, character, and scope to deter or counteract the competitive effects of concern.

The Agencies examine the timeliness, likelihood, and sufficiency of the entry efforts an entrant might practically employ. An entry effort is defined by the actions the firm must undertake to produce and sell in the market. Various elements of the entry effort will be considered. These elements can include: planning, design, and management; permitting, licensing, or other approvals; construction, debugging, and operation of production facilities; and promotion (including necessary introductory discounts), marketing, distribution, and satisfaction of customer testing and qualification requirements. Recent examples of entry, whether successful or unsuccessful, generally provide the starting point for identifying the elements of practical entry efforts. They also can be informative regarding the scale necessary for an entrant to be successful, the presence or absence of entry barriers, the factors that influence the timing of entry, the costs and risk associated with entry, and the sales opportunities realistically available to entrants.

If the assets necessary for an effective and profitable entry effort are widely available, the Agencies will not necessarily attempt to identify which firms might enter. Where an identifiable set of firms appears to have necessary assets that others lack, or to have particularly strong incentives to enter, the Agencies focus their entry analysis on those firms. Firms operating in adjacent or complementary markets, or large customers themselves, may be best placed to enter. However, the Agencies will not presume that a powerful firm in an adjacent market or a large customer will enter the relevant market unless there is reliable evidence supporting that conclusion.

In assessing whether entry will be timely, likely, and sufficient, the Agencies recognize that precise and detailed information may be difficult or impossible to obtain. The Agencies consider reasonably available and reliable evidence bearing on whether entry will satisfy the conditions of timeliness, likelihood, and sufficiency.

9.1 Timeliness

In order to deter the competitive effects of concern, entry must be rapid enough to make unprofitable overall the actions causing those effects and thus leading to entry, even though those actions would be profitable until entry takes effect.

Even if the prospect of entry does not deter the competitive effects of concern, post-merger entry may counteract them. This requires that the impact of entrants in the relevant market be rapid enough that customers are not significantly harmed by the merger, despite any anticompetitive harm that occurs prior to the entry.

The Agencies will not presume that an entrant can have a significant impact on prices before that entrant is ready to provide the relevant product to customers unless there is reliable evidence that anticipated future entry would have such an effect on prices.

9.2 Likelihood

Entry is likely if it would be profitable, accounting for the assets, capabilities, and capital needed and the risks involved, including the need for the entrant to incur costs that would not be recovered if the entrant later exits. Profitability depends upon (a) the output level the entrant is likely to obtain, accounting for the obstacles facing new entrants; (b) the price the entrant would likely obtain in the post-merger market, accounting for the impact of that entry itself on prices; and (c) the cost per unit the entrant would likely incur, which may depend upon the scale at which the entrant would operate.

9.3 Sufficiency

Even where timely and likely, entry may not be sufficient to deter or counteract the competitive effects of concern. For example, in a differentiated product industry, entry may be insufficient because the products offered by entrants are not close enough substitutes to the products offered by the merged firm to render a price increase by the merged firm unprofitable. Entry may also be insufficient due to constraints that limit entrants' competitive effectiveness, such as limitations on the capabilities of the firms best placed to enter or reputational barriers to rapid expansion by new entrants. Entry by a single firm that will replicate at least the scale and strength of one of the merging firms is sufficient. Entry by one or more firms operating at a smaller scale may be sufficient if such firms are not at a significant competitive disadvantage.

10. Efficiencies

Competition usually spurs firms to achieve efficiencies internally. Nevertheless, a primary benefit of mergers to the economy is their potential to generate significant efficiencies and thus enhance the merged firm's ability and incentive to compete, which may result in lower prices, improved quality, enhanced service, or new products. For example, merger-generated efficiencies may enhance competition by permitting two ineffective competitors to form a more effective competitor, e.g., by combining complementary assets. In a unilateral effects context, incremental cost reductions may reduce or reverse any increases in the merged firm's incentive to elevate price. Efficiencies also may lead to new or improved products, even if they do not immediately and directly affect price. In a coordinated effects context, incremental cost reductions may make coordination less likely or effective by enhancing the incentive of a maverick to lower price or by creating a new maverick firm. Even when efficiencies generated through a merger enhance a firm's ability to compete, however, a merger may have other effects that may lessen competition and make the merger anticompetitive.

The Agencies credit only those efficiencies likely to be accomplished with the proposed merger and unlikely to be accomplished in the absence of either the proposed merger or another means having comparable anticompetitive effects. These are termed merger-specific efficiencies.[13] Only alternatives that are practical in the business situation faced by the merging firms are considered in making this determination. The Agencies do not insist upon a less restrictive alternative that is merely theoretical.

Efficiencies are difficult to verify and quantify, in part because much of the information relating to efficiencies is uniquely in the possession of the merging firms. Moreover, efficiencies projected reasonably and in good faith by the merging firms may not be realized. Therefore, it is incumbent upon the merging firms to substantiate efficiency claims so that the Agencies can verify by reasonable means the likelihood and magnitude of each asserted efficiency, how and when each would be achieved (and any costs of doing so), how each would enhance the merged firm's ability and incentive to compete, and why each would be merger-specific.

Efficiency claims will not be considered if they are vague, speculative, or otherwise cannot be verified by reasonable means. Projections of efficiencies may be viewed with skepticism, particularly when generated outside of the usual business planning process. By contrast, efficiency claims substantiated by analogous past experience are those most likely to be credited.

Cognizable efficiencies are merger-specific efficiencies that have been verified and do not arise from anticompetitive reductions in output or service. Cognizable efficiencies are assessed net of costs produced by the merger or incurred in achieving those efficiencies.

The Agencies will not challenge a merger if cognizable efficiencies are of a character and magnitude such that the merger is not likely to be anticompetitive in any relevant market.[14] To make the requisite determination, the Agencies consider whether cognizable efficiencies likely would be sufficient to reverse the merger's potential to harm customers in the relevant market, e.g., by preventing price

---

13 The Agencies will not deem efficiencies to be merger-specific if they could be attained by practical alternatives that mitigate competitive concerns, such as divestiture or licensing. If a merger affects not whether but only when an efficiency would be achieved, only the timing advantage is a merger-specific efficiency.

14 The Agencies normally assess competition in each relevant market affected by a merger independently and normally will challenge the merger if it is likely to be anticompetitive in any relevant market. In some cases, however, the Agencies in their prosecutorial discretion will consider efficiencies not strictly in the relevant market, but so inextricably linked with it that a partial divestiture or other remedy could not feasibly eliminate the anticompetitive effect in the relevant market without sacrificing the efficiencies in the other market(s). Inextricably linked efficiencies are most likely to make a difference when they are great and the likely anticompetitive effect in the relevant market(s) is small so the merger is likely to benefit customers overall.

increases in that market.[15] In conducting this analysis, the Agencies will not simply compare the magnitude of the cognizable efficiencies with the magnitude of the likely harm to competition absent the efficiencies. The greater the potential adverse competitive effect of a merger, the greater must be the cognizable efficiencies, and the more they must be passed through to customers, for the Agencies to conclude that the merger will not have an anticompetitive effect in the relevant market. When the potential adverse competitive effect of a merger is likely to be particularly substantial, extraordinarily great cognizable efficiencies would be necessary to prevent the merger from being anticompetitive. In adhering to this approach, the Agencies are mindful that the antitrust laws give competition, not internal operational efficiency, primacy in protecting customers.

In the Agencies' experience, efficiencies are most likely to make a difference in merger analysis when the likely adverse competitive effects, absent the efficiencies, are not great. Efficiencies almost never justify a merger to monopoly or near-monopoly. Just as adverse competitive effects can arise along multiple dimensions of conduct, such as pricing and new product development, so too can efficiencies operate along multiple dimensions. Similarly, purported efficiency claims based on lower prices can be undermined if they rest on reductions in product quality or variety that customers value.

The Agencies have found that certain types of efficiencies are more likely to be cognizable and substantial than others. For example, efficiencies resulting from shifting production among facilities formerly owned separately, which enable the merging firms to reduce the incremental cost of production, are more likely to be susceptible to verification and are less likely to result from anticompetitive reductions in output. Other efficiencies, such as those relating to research and development, are potentially substantial but are generally less susceptible to verification and may be the result of anticompetitive output reductions. Yet others, such as those relating to procurement, management, or capital cost, are less likely to be merger-specific or substantial, or may not be cognizable for other reasons.

When evaluating the effects of a merger on innovation, the Agencies consider the ability of the merged firm to conduct research or development more effectively. Such efficiencies may spur innovation but not affect short-term pricing. The Agencies also consider the ability of the merged firm to appropriate a greater fraction of the benefits resulting from its innovations. Licensing and intellectual property conditions may be important to this enquiry, as they affect the ability of a firm to appropriate the benefits of its innovation. Research and development cost savings may be substantial and yet not be cognizable efficiencies because they are difficult to verify or result from anticompetitive reductions in innovative activities.

[15] The Agencies normally give the most weight to the results of this analysis over the short term. The Agencies also may consider the effects of cognizable efficiencies with no short-term, direct effect on prices in the relevant market. Delayed benefits from efficiencies (due to delay in the achievement of, or the realization of customer benefits from, the efficiencies) will be given less weight because they are less proximate and more difficult to predict. Efficiencies relating to costs that are fixed in the short term are unlikely to benefit customers in the short term, but can benefit customers in the longer run, e.g., if they make new product introduction less expensive.

11. Failure and Exiting Assets

Notwithstanding the analysis above, a merger is not likely to enhance market power if imminent failure, as defined below, of one of the merging firms would cause the assets of that firm to exit the relevant market. This is an extreme instance of the more general circumstance in which the competitive significance of one of the merging firms is declining: the projected market share and significance of the exiting firm is zero. If the relevant assets would otherwise exit the market, customers are not worse off after the merger than they would have been had the merger been enjoined.

The Agencies do not normally credit claims that the assets of the failing firm would exit the relevant market unless all of the following circumstances are met: (1) the allegedly failing firm would be unable to meet its financial obligations in the near future; (2) it would not be able to reorganize successfully under Chapter 11 of the Bankruptcy Act; and (3) it has made unsuccessful good-faith efforts to elicit reasonable alternative offers that would keep its tangible and intangible assets in the relevant market and pose a less severe danger to competition than does the proposed merger.[16]

Similarly, a merger is unlikely to cause competitive harm if the risks to competition arise from the acquisition of a failing division. The Agencies do not normally credit claims that the assets of a division would exit the relevant market in the near future unless both of the following conditions are met: (1) applying cost allocation rules that reflect true economic costs, the division has a persistently negative cash flow on an operating basis, and such negative cash flow is not economically justified for the firm by benefits such as added sales in complementary markets or enhanced customer goodwill;[17] and (2) the owner of the failing division has made unsuccessful good-faith efforts to elicit reasonable alternative offers that would keep its tangible and intangible assets in the relevant market and pose a less severe danger to competition than does the proposed acquisition.

12. Mergers of Competing Buyers

Mergers of competing buyers can enhance market power on the buying side of the market, just as mergers of competing sellers can enhance market power on the selling side of the market. Buyer market power is sometimes called "monopsony power."

To evaluate whether a merger is likely to enhance market power on the buying side of the market, the Agencies employ essentially the framework described above for evaluating whether a merger is likely to enhance market power on the selling side of the market. In defining relevant markets, the Agencies

---

16 Any offer to purchase the assets of the failing firm for a price above the liquidation value of those assets will be regarded as a reasonable alternative offer. Liquidation value is the highest value the assets could command for use outside the relevant market.

17 Because the parent firm can allocate costs, revenues, and intra-company transactions among itself and its subsidiaries and divisions, the Agencies require evidence on these two points that is not solely based on management plans that could have been prepared for the purpose of demonstrating negative cash flow or the prospect of exit from the relevant market.

focus on the alternatives available to sellers in the face of a decrease in the price paid by a hypothetical monopsonist.

Market power on the buying side of the market is not a significant concern if suppliers have numerous attractive outlets for their goods or services. However, when that is not the case, the Agencies may conclude that the merger of competing buyers is likely to lessen competition in a manner harmful to sellers.

The Agencies distinguish between effects on sellers arising from a lessening of competition and effects arising in other ways. A merger that does not enhance market power on the buying side of the market can nevertheless lead to a reduction in prices paid by the merged firm, for example, by reducing transactions costs or allowing the merged firm to take advantage of volume-based discounts. Reduction in prices paid by the merging firms not arising from the enhancement of market power can be significant in the evaluation of efficiencies from a merger, as discussed in Section 10.

The Agencies do not view a short-run reduction in the quantity purchased as the only, or best, indicator of whether a merger enhances buyer market power. Nor do the Agencies evaluate the competitive effects of mergers between competing buyers strictly, or even primarily, on the basis of effects in the downstream markets in which the merging firms sell.

> *Example 24:* Merging Firms A and B are the only two buyers in the relevant geographic market for an agricultural product. Their merger will enhance buyer power and depress the price paid to farmers for this product, causing a transfer of wealth from farmers to the merged firm and inefficiently reducing supply. These effects can arise even if the merger will not lead to any increase in the price charged by the merged firm for its output.

13. Partial Acquisitions

In most horizontal mergers, two competitors come under common ownership and control, completely and permanently eliminating competition between them. This elimination of competition is a basic element of merger analysis. However, the statutory provisions referenced in Section 1 also apply to one firm's partial acquisition of a competitor. The Agencies therefore also review acquisitions of minority positions involving competing firms, even if such minority positions do not necessarily or completely eliminate competition between the parties to the transaction.

When the Agencies determine that a partial acquisition results in effective control of the target firm, or involves substantially all of the relevant assets of the target firm, they analyze the transaction much as they do a merger. Partial acquisitions that do not result in effective control may nevertheless present significant competitive concerns and may require a somewhat distinct analysis from that applied to full mergers or to acquisitions involving effective control. The details of the post-acquisition relationship between the parties, and how those details are likely to affect competition, can be important. While the Agencies will consider any way in which a partial acquisition may affect competition, they generally focus on three principal effects.

First, a partial acquisition can lessen competition by giving the acquiring firm the ability to influence the competitive conduct of the target firm. A voting interest in the target firm or specific governance rights, such as the right to appoint members to the board of directors, can permit such influence. Such influence can lessen competition because the acquiring firm can use its influence to induce the target firm to compete less aggressively or to coordinate its conduct with that of the acquiring firm.

Second, a partial acquisition can lessen competition by reducing the incentive of the acquiring firm to compete. Acquiring a minority position in a rival might significantly blunt the incentive of the acquiring firm to compete aggressively because it shares in the losses thereby inflicted on that rival. This reduction in the incentive of the acquiring firm to compete arises even if cannot influence the conduct of the target firm. As compared with the unilateral competitive effect of a full merger, this effect is likely attenuated by the fact that the ownership is only partial.

Third, a partial acquisition can lessen competition by giving the acquiring firm access to non-public, competitively sensitive information from the target firm. Even absent any ability to influence the conduct of the target firm, access to competitively sensitive information can lead to adverse unilateral or coordinated effects. For example, it can enhance the ability of the two firms to coordinate their behavior, and make other accommodating responses faster and more targeted. The risk of coordinated effects is greater if the transaction also facilitates the flow of competitively sensitive information from the acquiring firm to the target firm.

Partial acquisitions, like mergers, vary greatly in their potential for anticompetitive effects. Accordingly, the specific facts of each case must be examined to assess the likelihood of harm to competition. While partial acquisitions usually do not enable many of the types of efficiencies associated with mergers, the Agencies consider whether a partial acquisition is likely to create cognizable efficiencies.

INFORMATION FROM EUROPEAN UNION INSTITUTIONS AND BODIES

COMMISSION

Commission notice on remedies acceptable under Council Regulation (EC) No 139/2004 and under Commission Regulation (EC) No 802/2004

(Text with EEA relevance)

(2008/C 267/01)

I. INTRODUCTION

1. Council Regulation (EC) No 139/2004 of 20 January 2004 on the control of concentrations between undertakings ([1]) (hereinafter referred to as 'the Merger Regulation') in Articles 6(2) and 8(2) expressly provides that the Commission may decide to declare a concentration compatible with the common market following modification by the parties ([2]), both before and after the initiation of proceedings. To that end, the Commission may attach to its decision conditions and obligations intended to ensure that the undertakings concerned comply with the commitments they have entered into *vis-à-vis* the Commission with a view to rendering the concentration compatible with the common market ([3]).

2. The purpose of this Notice is to provide guidance on modifications to concentrations, in particular commitments by the undertakings concerned to modify a concentration. Such modifications are more commonly described as 'remedies' since their object is to eliminate the competition concerns ([4]) identified by the Commission. The guidance set out in this Notice reflects the Commission's evolving experience with the assessment, acceptance and implementation of remedies under the Merger Regulation since its entry into force on 21 September 1990. The revision of the Commission's 2001 Notice on remedies ([5]) is entailed by the entry into force of the recast Merger Regulation (EC) No 139/2004 ([6])

([1]) OJ L 24, 29.1.2004, p. 1-22.
([2]) The references to 'parties' and 'merging parties' also cover situations with one notifying party.
([3]) Articles 6(2) and 8(2), second subparagraphs respectively. See also Recital 30 of the Merger Regulation which states that 'where the undertakings concerned modify a notified concentration, in particular by offering commitments with a view to rendering the concentration compatible with the common market, the Commission should be able to declare the concentration, as modified, compatible with the common market. Such commitments should be proportionate to the competition problem and entirely eliminate it'. Recital 30 further explains that 'it is also appropriate to accept commitments before the initiation of proceedings where the competition problem is readily identifiable and can easily be remedied'.
([4]) Save where the contrary is indicated, in the following, the term 'competition concerns' corresponds, according to the stage of the procedure, to serious doubts or preliminary findings that the concentration is likely to significantly impede effective competition in the common market or in a substantial part of it, in particular as a result of the creation or strengthening of a dominant position.
([5]) Commission Notice on remedies acceptable under Council Regulation (EEC) No 4064/89 and under Commission Regulation (EC) No 447/98 (OJ C 68, 2.3.2001, p. 3).
([6]) Regulation replacing Council Regulation (EEC) No 4064/89 (OJ L 395, 30.12.1989, corrected version in OJ L 257, 21.9.1990, p. 13.

and of Commission Regulation (EC) No 802/2004 (the 'Implementing Regulation') (1) on 1 May 2004, case-law of the Court of Justice and the Court of First Instance, the conclusions drawn from the systematic *ex post* review of the Commission of past remedies case (2), and decisional practice of the Commission in cases involving remedies in recent years. The principles contained herein will be applied and further developed and refined by the Commission in individual cases. The guidance provided in this Notice is without prejudice to the interpretation which may be given by the Court of Justice or by the Court of First Instance of the European Communities.

3. This Notice sets out the general principles applicable to remedies acceptable to the Commission, the main types of commitments that may be accepted by the Commission in cases under the Merger Regulation, the specific requirements which proposals of commitments need to fulfil in both phases of the procedure, and the main requirements for the implementation of commitments. In any case, the Commission will take due account of the particular circumstances of the individual case.

II. **GENERAL PRINCIPLES**

4. Under the Merger Regulation, the Commission assesses the compatibility of a notified concentration with the common market on the basis of its effect on the structure of competition in the Community (3). The test for compatibility under Article 2(2) and (3) of the Merger Regulation is whether or not a concentration would significantly impede effective competition in the common market or a substantial part of it, in particular as a result of the creation or strengthening of a dominant position. A concentration that significantly impedes effective competition as described above is incompatible with the common market and the Commission is required to prohibit it. For the creation of a joint venture, the Commission will also examine the concentration under Article 2(4) of the Merger Regulation. The principles set out in this Notice will generally also apply to remedies submitted to eliminate competition concerns identified under Article 2(4).

5. Where a concentration raises competition concerns in that it could significantly impede effective competition, in particular as a result of the creation or strengthening of a dominant position, the parties may seek to modify the concentration in order to resolve the competition concerns and thereby gain clearance of their merger. Such modifications may be fully implemented in advance of a clearance decision. However, it is more common that the parties submit commitments with a view to rendering the concentration compatible with the common market and that those commitments are implemented following clearance.

6. Under the structure of the Merger Regulation, it is the responsibility of the Commission to show that a concentration would significantly impede competition (4). The Commission communicates its competition concerns to the parties to allow them to formulate appropriate and corresponding remedies proposals (5). It is then for the parties to the concentration to put forward commitments; the Commission is not in a position to impose unilaterally any conditions to an authorisation decision, but only on the basis of the parties' commitments (6). The Commission will inform the parties about

(1) Commission Regulation (EC) No 802/2004 of 7 April 2004 implementing Council Regulation (EC) No 139/2004 on the control of concentrations between undertakings (OJ L 133, 30.4.2004, p. 1). This Regulation replaces Commission Regulation (EC) No 447/98 implementing Council Regulation (EEC) No 4064/89 on the control of concentrations between undertakings (OJ L 61, 2.3.1998, p. 1).

(2) DG COMP, Merger Remedies Study, October 2005.

(3) Recital 6 of the Merger Regulation.

(4) In phase I and before the issuance of a Statement of Objections, this corresponds to *serious doubts* as to the significant impediment to effective competition.

(5) The Merger Regulation provides for formal steps where the parties are informed of the competition concerns identified by the Commission (Article 6(1)(c) decision, Statement of Objections). In addition, the DG COMPETITION Best Practices on the conduct of EC merger control proceedings foresee that 'state of play' meetings will normally be offered at key stages of the procedure where the Commission will explain its concerns to the parties in order to allow them to respond with remedies proposals.

(6) Judgment of the CFI in Case T-210/01 *General Electric v Commission* [2005] ECR II-5575, paragraph 52; see judgment of the CFI in Case T-87/05 *EDP v Commission* [2005] ECR II-3745, paragraph 105.

its preliminary assessment of remedies proposals. If, however, the parties do not validly propose remedies adequate to eliminate the competition concerns, the only option for the Commission will be to adopt a prohibition decision [1].

7. The Commission has to assess whether the proposed remedies, once implemented, would eliminate the competition concerns identified. Only the parties have all the relevant information necessary for such an assessment, in particular as to the feasibility of the commitments proposed and the viability and competitiveness of the assets proposed for divestiture. It is therefore the responsibility of the parties to provide all such information available that is necessary for the Commission's assessment of the remedies proposal. To this end, the Implementing Regulation obliges the notifying parties to provide, with the commitments, detailed information on the content of the commitments offered, the conditions for their implementation and showing their suitability to remove any significant impediment of effective competition, as set out in the annex to the Implementing Regulation ('Form RM'). For commitments consisting in the divestiture of a business, parties have to describe in detail in particular how the business to be divested is currently operated. This information will enable the Commission to assess the viability, competitiveness and marketability of the business by comparing its current operation to its proposed scope under the commitments. The Commission can adapt the precise requirements to the information necessary in the individual case at hand and will be available to discuss the scope of the information required with the parties in advance of submission of Form RM.

8. Whereas the parties have to propose commitments sufficient to remove the competition concerns and submit the necessary information to assess them, it is for the Commission to establish whether or not a concentration, as modified by commitments validly submitted, must be declared incompatible with the common market because it leads, despite the commitments, to a significant impediment of effective competition. The burden of proof for a prohibition or authorisation of a concentration modified by commitments is therefore subject to the same criteria as an unmodified concentration [2].

Basic conditions for acceptable commitments

9. Under the Merger Regulation, the Commission only has power to accept commitments that are deemed capable of rendering the concentration compatible with the common market so that they will prevent a significant impediment of effective competition. The commitments have to eliminate the competition concerns entirely [3] and have to be comprehensive and effective from all points of view [4]. Furthermore, commitments must be capable of being implemented effectively within a short period of time as the conditions of competition on the market will not be maintained until the commitments have been fulfilled.

10. Structural commitments, in particular divestitures, proposed by the parties will meet these conditions only in so far as the Commission is able to conclude with the requisite degree of certainty that it will be possible to implement them and that it will be likely that the new commercial structures resulting from them will be sufficiently workable and lasting to ensure that the significant impediment to effective competition will not materialise [5].

11. The requisite degree of certainty concerning the implementation of the proposed commitments may in particular be affected by risks in relation to the transfer of a business to be divested, such as conditions attached by the parties to the divestiture, third party rights in relation to the business or the

(3) See recital 30 of the Merger Regulation and judgment of the CFI in Case T-282/02 *Cementbouw v Commission* [2006] ECR II-319, paragraph 307.

(4) CFI, Case T-210/01 *General Electrics v Commission* [2005] ECR II-5575, paragraph 52; Case T-87/05 *EDP v Commission* [2005] ECR II-3745, paragraph 105.

(5) CFI, Case T-210/01 *General Electric v Commission* [2005] ECR II-5575, paragraphs 555, 612.

risks of finding a suitable purchaser, as well as risks in relation to the degradation of the assets until the divestiture has taken place. It is incumbent on the parties to remove such uncertainties as to the implementation of the remedy when submitting it to the Commission (1).

12. In assessing the second condition, whether the proposed commitment will likely eliminate the competition concerns identified, the Commission will consider all relevant factors relating to the proposed remedy itself, including, *inter alia*, the type, scale and scope of the remedy proposed, judged by reference to the structure and particular characteristics of the market in which the competition concerns arise, including the position of the parties and other players on the market.

13. In order for the commitments to comply with these principles, there has to be an effective implementation and ability to monitor the commitments (2). Whereas divestitures, once implemented, do not require any further monitoring measures, other types of commitments require effective monitoring mechanisms in order to ensure that their effect is not reduced or even eliminated by the parties. Otherwise, such commitments would have to be considered as mere declarations of intention by the parties and would not amount to binding obligations, as, due to the lack of effective monitoring mechanisms, any breach of them could not result in the revocation of the decision according to the provisions of the Merger Regulation (3).

14. Where, however, the parties submit remedies proposals that are so extensive and complex that it is not possible for the Commission to determine with the requisite degree of certainty, at the time of its decision, that they will be fully implemented and that they are likely to maintain effective competition in the market, an authorisation decision cannot be granted (4). The Commission may reject such remedies in particular on the grounds that the implementation of the remedies cannot be effectively monitored and that the lack of effective monitoring diminishes, or even eliminates, the effect of the commitments proposed.

Appropriateness of different types of remedies

15. According to the case law of the Court, the basic aim of commitments is to ensure competitive market structures (5). Accordingly, commitments which are structural in nature, such as the commitment to sell a business unit, are, as a rule, preferable from the point of view of the Merger Regulation's objective, inasmuch as such commitments prevent, durably, the competition concerns which would be raised by the merger as notified, and do not, moreover, require medium or long-term monitoring measures. Nevertheless, the possibility cannot automatically be ruled out that other types of commitments may also be capable of preventing the significant impediment of effective competition (6).

16. The Commission stresses that the question of whether a remedy and, more specifically, which type of remedy is suitable to eliminate the competition concerns identified, has to be examined on a case-by-case basis.

17. Nevertheless, a general distinction can be made between divestitures, other structural remedies, such as granting access to key infrastructure or inputs on non-discriminatory terms, and commitments relating to the future behaviour of the merged entity. Divestiture commitments are the best way to eliminate competition concerns resulting from horizontal overlaps, and may also be the best means of resolving

(1) Depending on the nature of the risks, specific safeguards may aim at compensating for them. For example, the risk arising from third party rights in relation to the assets to be divested may be compensated by the proposal of an alternative divestiture. Such safeguards will be discussed in more detail below.

(2) CFI, Case T-177/04 *easyJet v Commission* [2006] ECR II-1931, paragraph 188.

(3) CFI, Case T-177/04 *easyJet v Commission* [2006] ECR II-1931, paragraph 186 *et seq.*; CFI, judgment in Case T-87/05 *EDP v Commission* [2005] ECR II-3745, paragraph 72.

(4) See, as an example for such a complex and inappropriate remedy, Case COMP/M.3440 — ENI/EDP/GDP of 9 December 2004; confirmed by CFI, judgment in Case T-87/05 *EDP v Commission* [2005] ECR II-3745, paragraph 102; Case COMP/M.1672 — Volvo/Scania of 15 March 2000.

(5) See recital 8 of the Merger Regulation; judgment of CFI in Case T-102/96 *Gencor v Commission* [1999] ECR II-753, at paragraph 316; ECJ in Case C-12/03 P *Commission v Tetra Laval* [2005] ECR I-987, paragraph 86; judgment of CFI in Case T-158/00 *ARD v Commission* [2003] ECR II-3825, at paragraphs 192 *et seq*.

(6) ECJ, judgment in Case C-12/03 P *Commission v Tetra Laval* [2005] ECR I-987, paragraph 86; CFI, judgment of 25 March 1999 in Case T-102/96 *Gencor v Commission* [1999] ECR II-753, paragraphs 319 *et seq.*; CFI, judgment of 30 September 2003 in Case T-158/00 *ARD v Commission* [2003] ECR II-3825, paragraph 193; CFI in Case T-177/04 *easyJet v Commission* [2006] ECR II-1931, paragraph 182; CFI, judgment in Case T-87/05 *EDP v Commission* [2005] ECR II-3745, paragraph 101.

problems resulting from vertical or conglomerate concerns ([1]). Other structural commitments may be suitable to resolve all types of concerns if those remedies are equivalent to divestitures in their effects, as explained in more detail below in paragraphs 61 *et seq*. Commitments relating to the future behaviour of the merged entity may be acceptable only exceptionally in very specific circumstances ([2]). In particular, commitments in the form of undertakings not to raise prices, to reduce product ranges or to remove brands, etc., will generally not eliminate competition concerns resulting from horizontal overlaps. In any case, those types of remedies can only exceptionally be accepted if their workability is fully ensured by effective implementation and monitoring in line with the considerations set out in paragraphs 13-14, 66, 69, and if they do not risk leading to distorting effects on competition ([3]).

Procedure

18. The Commission may accept commitments in either phase of the procedure ([4]). However, given the fact that an in-depth market investigation is only carried out in phase II, commitments submitted to the Commission in phase I must be sufficient to clearly rule out 'serious doubts' within the meaning of Article 6(1)(c) of the Merger Regulation ([5]). Pursuant to Article 10(2) of the Merger Regulation, the Commission has to take a clearance decision as soon as the serious doubts referred to in Article 6(1)(c) of the Merger Regulation are removed as a result of commitments submitted by the parties. This rule applies to commitments proposed in phase II-proceedings before the Commission issues a Statement of Objections ([6]). If the Commission reaches the preliminary view that the merger leads to a significant impediment to effective competition and issues a Statement of Objections, the commitments must be sufficient to eliminate such a significant impediment to effective competition.

19. Whilst commitments have to be offered by the parties, the Commission will ensure the enforceability of commitments by making the authorisation of the merger subject to compliance with the commitments. A distinction must be made between conditions and obligations. The requirement for achievement of the structural change of the market is a condition — for example, that a business is to be divested. The implementing steps which are necessary to achieve this result are generally obligations on the parties, e.g. such as the appointment of a trustee with an irrevocable mandate to sell the business.

20. Where the undertakings concerned commit a breach of an obligation, the Commission may revoke clearance decisions issued either under Article 6(2) or Article 8(2) of the Merger Regulation, acting pursuant to Article 6(3) or Article 8(6), respectively. In case of a breach of an obligation, the parties may also be subject to fines and periodic penalty payments as provided in Article 14(2)(d) and 15(1)(c) respectively of the Merger Regulation. Where, however, a condition is breached, e.g. a business is not divested in the time-frame foreseen in the commitments or afterwards re-acquired, the compatibility decision is no longer applicable. In such circumstances, the Commission may, first, take interim measures appropriate to maintain conditions of effective competition pursuant to Article 8(5)(b) of the Merger Regulation. Second, it may, if the conditions of Article 8(4)(b) are met, order any appropriate measure to ensure that the undertakings concerned dissolve the concentration or take other restorative measures or, according to Article 8(7), take a decision pursuant to Article 8(1)-(3). In addition, the parties may also be subject to fines as provided in Article 14(2)(d).

([1]) See divestiture of storage facilities in Case COMP/M.3868 — DONG/Elsam/Energi E2 of 14 March 2006, paragraphs 170 *et seq*.; Case COMP/M.3696 — E.ON/MOL of 21 December 2005, paragraphs 735 *et seq*., for an example of 'ownership unbundling' to eliminate structural links between the parties in the gas storage sector; further Case COMP/M.4314 — Johnson&Johnson/Pfizer of 11 December 2006, Case COMP/M.4494 — Evraz/Highveld of 20 February 2007.

([2]) See, in relation to conglomerate effects of a concentration, ECJ, judgment of 15 February 2005 in Case C-12/03 P *Commission v Tetra Laval* [2005] ECR I-987, paragraphs 85, 89.

([3]) For example, commitments regarding a certain pricing behaviour such as price caps which contain the risk to lead to an anticompetitive alignment of prices among competitors.

([4]) As foreseen in recital 30 of the Merger Regulation, the Commission will ensure transparency and effective consultation of Member States in both phases of the procedure.

([5]) Commitments in phase I can only be accepted in certain types of situations; see below in paragraph 81.

([6]) See, *inter alia*, Case COMP/M.2972 — DSM/Roche Vitamins of 23 July 2003; Case COMP/M.2861 — Siemens/Drägerwerk/JV of 30 April 2003; Case IV/JV.15 — BT/AT & T of 30 March 1999; Case IV/M.1532 — BP Amoco/Arco of 29 September 1999.

Model Texts for divestiture commitments

21. The Commission services have issued Best Practice Guidelines for divestiture commitments, consisting of a Model Text for Divestiture Commitments and a Model Text for Trustee Mandates [1]. These model texts are neither intended to provide an exhaustive coverage of all issues that may become relevant in all cases, nor are they legally binding upon parties in a merger procedure. They complement the present Notice as they outline the typical arrangements for divestiture commitments in a format which can be used by the parties. At the same time, the model texts leave the flexibility to adapt them to the requirements of the specific case.

III. DIFFERENT TYPES OF REMEDIES

1. Divestiture of a business to a suitable purchaser

22. Where a proposed concentration threatens to significantly impede effective competition the most effective way to maintain effective competition, apart from prohibition, is to create the conditions for the emergence of a new competitive entity or for the strengthening of existing competitors via divestiture by the merging parties.

1.1. *Divestiture of a viable and competitive business*

23. The divested activities must consist of a viable business that, if operated by a suitable purchaser, can compete effectively with the merged entity on a lasting basis and that is divested as a going concern [2]. For the business to be viable, it may also be necessary to include activities which are related to markets where the Commission did not identify competition concerns if this is required to create an effective competitor in the affected markets [3].

24. In proposing a viable business for divestiture, it is necessary to take into account the uncertainties and risks related to the transfer of a business to a new owner. These risks may limit the competitive impact of the divested business, and, therefore, may lead to a market situation where the competition concerns at stake will not necessarily be eliminated.

Scope of the business to be divested

25. The business has to include all the assets which contribute to its current operation or which are necessary to ensure its viability and competitiveness and all personnel which is currently employed or which is necessary to ensure the business' viability and competitiveness [4].

26. Personnel and assets which are currently shared between the business to be divested and other businesses of the parties, but which contribute to the operation of the business or which are necessary to ensure its viability and competitiveness, also have to be included. Otherwise, the viability and competitiveness of the business to be divested would be endangered. Therefore, the divested business has to contain the personnel providing essential functions for the business such as, for instance, group R & D and information technology staff even where such personnel is currently employed by another business unit of the parties — at least in a sufficient proportion to meet the on-going needs of the divested business. In the same way shared assets have to be included even if those assets are owned by or allocated to another business unit.

(1) See website of DG COMP, released in May 2003, available at: http://ec.europa.eu/comm/competition/mergers/legislation/legislation.html. The model texts may be continuously up-dated and, if there should be a need, further best practice guidelines in the field of remedies may be issued.
(2) This includes, under certain conditions, businesses that have to be carved out from a party's business or individual assets; see below paragraphs 35 ff.
(3) Case IV/M.913 — Siemens/Elektrowatt of 18 November 1997; Case IV/M.1578 — Sanitec/Sphinx of 1 December 1999, at paragraph 255; Case COMP/M.1802 — Unilever/Amora-Maille of 8 March 2000; Case COMP/M.1990 — Unilever/Bestfoods of 28 September 2000.
(4) Notifying parties will have to undertake in the commitments that the business to be divested includes all those assets and personnel. Where the detailed description of the business, to be provided by the parties as set out in paragraph 27, will at a later point in time appear to be incomplete in that respect and the parties do not complement the business with the necessary additional assets or personnel, the Commission may consider revoking the conditional clearance decision.

27. In order for the Commission to be able to identify the scope of the business to be divested, the parties have to include a precise definition of the scope of the divested business in the commitments (the 'description of the business'). The description of the business has to be adapted to the individual case at hand and should contain all the elements that are part of the business to be divested: tangible (e.g. R & D, production, distribution, sales and marketing activities) and intangible assets (such as intellectual property rights, know-how and goodwill); licences, permits and authorisations by governmental organisations granted to the business; contracts, leases and commitments (e.g. arrangements with suppliers and customers) for the benefit of the business to be divested; and customer, credit and other records. In the description of the business, the parties have to include the personnel to be transferred in general terms, including staff seconded and temporary employees, and to insert a list of the key personnel, i.e. the personnel essential for the viability and competitiveness of the business. The transfer of those employees is without prejudice to the application of the Council Directives on collective redundancies ([1]); on safeguarding employees' rights in the event of transfers of undertakings ([2]); and on informing and consulting employees ([3]) as well as national provisions implementing those Directives and other national laws. The remedy has to include a non-solicitation commitment by the parties with regard to the key personnel.

28. In the description of the business, the parties also have to set out the arrangements for the supply of products and services by them to the divested business or by the divested business to them. Such on-going relationships of the divested business may be necessary to maintain the full economic viability and competitiveness of the divested business for a transitional basis. The Commission will only accept such arrangements if they do not affect the independence of the divested business from the parties.

29. In order to avoid any misunderstanding about the business to be divested, assets or personnel that are used within or employed by the business but that should not, according to the parties, be transferred with the divestiture, have to be expressly excluded by the parties in the commitments text. The Commission will only be able to accept such exclusion of assets or personnel if the parties can clearly show that this does not affect the viability and competitiveness of the business.

30. The business to be divested has to be viable as such. Therefore, the resources of a possible or even presumed future purchaser are not taken into account by the Commission at the stage of assessing the remedy. The situation is different if already during the procedure a sale and purchase agreement with a specific purchaser is concluded whose resources can be taken into account at the time of the assessment of the commitment. This situation will be dealt with in more detail below in paragraphs 56 ff.

31. Once a purchaser is identified after adoption of an authorisation decision, some of the assets or personnel included in the divested business may not be needed by the proposed purchaser. In the purchaser approval process, the Commission may, upon request by the parties, approve the divestiture of the business to the proposed purchaser without one or more assets or parts of the personnel if this does not affect the viability and competitiveness of the business to be divested after the sale, taking account of the resources of the proposed purchaser.

1.2. *Stand-alone business and conditions for acceptability of alternatives*

32. Normally, a viable business is a business that can operate on a stand-alone-basis, which means independently of the merging parties as regards the supply of input materials or other forms of cooperation other than during a transitory period.

(1) Council Directive 98/59/EC of 20 July 1998 on the approximation of the laws of the Member States relating to collective redundancies (OJ L 225, 12.8.1998, p. 16).
(2) Council Directive 2001/23/EC of 12 March 2001 on the approximation of the laws of the Member States relating to the safeguarding of employees' rights in the event of transfers of undertakings, businesses or parts of undertakings or businesses (OJ L 82, 22.3.2001, p. 16).
(3) Council Directive 94/45/EC of 22 September 1994 on the establishment of a European Works Council or a procedure in Community-scale undertakings and Community-scale groups of undertakings for the purposes of informing and consulting employees (OJ L 254, 30.9.1994, p. 64); Directive 2002/14/EC of the European Parliament and of the Council of 11 March 2002 establishing a general framework for informing and consulting employees in the European Community (OJ L 80, 23.3.2002, p. 29).

33. The Commission has a clear preference for an existing stand-alone business. This may take the form of a pre-existing company or group of companies, or of a business division which was not previously legally incorporated as such.

34. Where the competition concern results from a horizontal overlap, the parties may be able to choose between two businesses. In cases involving a hostile bid, a commitment to divest activities of the target company may, in such circumstances of limited information available to the notifying parties about the business to be divested, increase the risk that this business might not, after a divestiture, result in a viable competitor which could effectively compete in the market on a lasting basis. It may therefore be more appropriate for the parties to propose to divest activities of the acquiring company in such scenarios.

Carve-outs

35. Even though normally the divestiture of an existing viable stand-alone business is required, the Commission, taking into account the principle of proportionality, may also consider the divestiture of businesses which have existing strong links or are partially integrated with businesses retained by the parties and therefore need to be 'carved out' in those respects. In order to reduce the risks for the viability and competitiveness to a minimum in such circumstances, an option for the parties is to submit commitments proposing to carve out those parts of an existing business which do not necessarily have to be divested. In effect, an existing, stand-alone business is being divested in those circumstances although, by way of a 'reverse carve-out', the parties may carve-out the limited parts which they may keep.

36. In any case, the Commission will only be able to accept commitments which require the carve-out of a business if it can be certain that, at least at the time when the business is transferred to the purchaser, a viable business on a stand-alone basis will be divested and the risks for the viability and competitiveness caused by the carve-out will thereby be reduced to a minimum. The parties therefore have to ensure, as set out in detail below in paragraph 113, that the carve-out is started in the interim period, i.e. the period between the adoption of the Commission decision up to the completion of the divestiture (meaning the legal and factual transfer of the business to the purchaser). Consequently, at the end of this period, a viable business on a stand-alone basis will be divested. If this should not be possible or if the carve-out should be particularly difficult, parties may provide the requisite degree of certainty for the Commission by proposing an up-front buyer solution, as further detailed below in paragraph 55.

Divestiture of assets, in particular of brands and licences

37. A divestiture consisting of a combination of certain assets which did not form a uniform and viable business in the past creates risks as to the viability and competitiveness of the resulting business. This is in particular the case if assets from more than one party are involved. Such an approach may be accepted by the Commission only if the viability of the business is ensured notwithstanding the fact that the assets did not form a uniform business in the past. This may be the case if the individual assets can already be considered a viable and competitive business ([1]). Similarly, only in exceptional cases a divestiture package including only brands and supporting production and/or distribution assets may be sufficient to create the conditions for effective competition ([2]). In such circumstances, the package consisting of brands and assets must be sufficient to allow the Commission to conclude that the resulting business will be immediately viable in the hands of a suitable purchaser.

38. Divestitures of a business generally appear preferable to the granting of licenses to IP rights, as the granting of a license involve more uncertainties, will not enable the licensee to compete immediately in the market, requires an on-going relationship with the parties which may allow the licensor to influence the licensee in its competitive behaviour and may give rise to disputes between the licensor

([1]) Case COMP/M.1806 — AstraZeneca/Novartis of 26 July 2000; COMP/M.1628 — TotalFina/Elf of 9 February 2000; Case IV/M.603 — Crown Cork & Seal/CarnaudMetalbox of 14 November 1995.

([2]) Case COMP/M.2544 — Masterfoods/Royal Canin of 15 February 2002; Case COMP/M.2337 — Nestlé/Ralston Purina of 27 July 2001; Case IV/M.623 — Kimberly-Clark/Scott Paper of 16 January 1996; Case COMP/M.3779 — Pernod Ricard/Allied Domecq of 24 June 2005.

and the licensee over the scope and the terms and conditions of the license. The granting of a license will therefore generally not be considered appropriate where a divestiture of a business seems feasible. Where the competition concerns arise from the market position held for such a technology or such IP rights, a divestiture of the technology or the IP rights is the preferable remedy as it eliminates a lasting relationship between the merged entity and its competitors ([1]). However, the Commission may accept licensing arrangements as an alternative to divestiture where, for instance, a divestiture would impede efficient, on-going research or where a divestiture would be impossible due to the nature of the business ([2]). Such licences will have to enable the licensee to compete effectively with the parties in a similar way as if a divestiture had taken place. They will normally be exclusive licences and have to be without any field-of-use and any geographical restrictions on the licensee. Where there might be any uncertainty as regards the scope of the licence or its terms and conditions, the parties will have to divest the underlying IP right, but may obtain a licence back. If there is uncertainty that the license will actually be granted to a suitable licensee, the parties may consider to propose an up-front licensee or a fix-it-first solution according to the considerations set out below in paragraphs 56, in order to enable the Commission to conclude with the requisite degree of certainty that the remedy will be implemented ([3]).

Re-branding

39. In exceptional cases, the Commission has accepted commitments to grant an exclusive, time-limited licence for a brand with the purpose of allowing the licensee to re-brand the product in the period foreseen. After the first licence phase of these so-called re-branding commitments, the parties commit in a second phase to abstain from any use of the brand (blackout phase). The goal of such commitments is to allow the licensee to transfer the customers from the licensed brand to its own brand in order to create a viable competitor, without the licensed brand being permanently divested.

40. A re-branding remedy carries substantially higher risks for restoring effective competition than a divestiture, including the divestiture of a brand as there is considerable uncertainty whether the licensee will succeed in establishing itself as an active competitor in the market on the basis of the re-branded product. A re-branding remedy may be acceptable in circumstances where the brand at stake is widely used and a high proportion of its turnover is generated in markets outside those in which competition concerns have been identified ([4]). In those circumstances, a re-branding remedy has to be defined in such a way as to ensure that the granting of the licence will effectively maintain competition in the market on a lasting basis and that the licensee will be an effective competitor after re-branding the products.

41. As the success of re-branding commitments is substantially linked to the viability of the licensed brand a number of preconditions have to be met for the design of such commitments. Firstly, the brand to be transferred must be well-known and one of considerable strength to guarantee both immediate viability of the licensed brand and its economic survival in the re-branding period. Secondly, part of the assets related to the production or the distribution of the products marketed under the licensed brand or the transfer of know-how may be necessary to ensure the viability of the remedy ([5]). Thirdly, the licence has to be exclusive and normally comprehensive, i.e. not limited to a

([1]) See Case COMP/M.2972 — DSM/Roche Vitamins of 23 July 2003; Case IV/M.1378 — Hoechst/Rhône-Poulenc of 9 August 1999; Case COMP/M.1601 — Allied Signal/Honeywell of 1 December 1999; Case COMP/M.1671 — Dow/UCC of 3 May 2000.

([2]) Case COMP/M.2949 — Finmeccanica/Alenia Telespazio of 30 October 2002; Case COMP/M.3593 — Apollo/Bakelite of 11 April 2005, commitment on carbon bond refractory licence; for cases from the pharmaceutical industry see Case COMP/M.2972 — DSM/Roche Vitamins of 23 July 2003; Case IV/M.555 — Glaxo/Wellcome of 28 February 1995.

([3]) Case COMP/M.2972 — DSM/Roche Vitamins of 23 July 2003.

([4]) However, even in these conditions a divestiture of the brand may be more appropriate, especially if the resulting split in the ownership of the brand corresponds to common practice in the industry, see for the pharmaceutical industry Case COMP/M.3544 — Bayer Healthcare/Roche (OTC) of 19 November 2004, paragraph 59 concerning the divestiture of the Desenex brand.

([5]) COMP/M.3149 — Procter&Gamble/Wella paragraph 60; IV/M.623 — Kimberly-Clark/Scott Paper of 16 January 1996, paragraph 236(i). This is particularly important during the licence phase in which the licensee has to prepare for the launch of a new competitive brand. Such a launch of a new brand appears to not be feasible if the purchaser had to spend considerable resources on the production process, marketing and distribution of the licensed brand; COMP/M.2337 — Nestlé/Ralston Purina of 27 July 2001, paragraphs 67 *et seq.*; COMP/M.2621 — SEB/Moulinex of 8 January 2002, paragraph 140.

certain range of products within a specific market, and has to include the intellectual property rights to ensure that customers will acknowledge the familiarity of the re-branded product. The parties will not be allowed to use similar words or signs as this could undermine the effect of the re-branding exercise ([1]). Fourthly, both the licence and the black-out period have to be sufficiently long, account being taken of the particularities of the case, so that the re-branding remedy is in its effects similar to a divestiture ([2]).

42. The identity of the potential licensee will be a key factor for the success of the commitment. If there is uncertainty that a number of suitable licensees are available, being able and having strong incentives to carry out the re-branding exercise, the parties may consider proposing an up-front or fix-it-first solution, in line with the considerations set out in paragraph 53 below.

1.3. *Non-reacquisition clause*

43. In order to maintain the structural effect of a remedy, the commitments have to foresee that the merged entity cannot subsequently acquire influence ([3]) over the whole or parts of the divested business. The commitments will normally have to foresee that no re-acquisition of material influence is possible for a significant period, generally of 10 years. However, the commitments can also provide for a waiver allowing the Commission to relieve the parties from this obligation if it subsequently finds that the structure of the market has changed to such an extent that the absence of influence over the divested business is no longer necessary to render the concentration compatible with the common market. Even in the absence of an explicit clause, a re-acquisition of the business would violate an implicit obligation on the parties under the commitments as this would affect the effectiveness of the remedies.

1.4. *Alternative divestiture commitments: Crown Jewels*

44. In certain cases, the implementation of the parties' preferred divestiture option (of a viable business solving the competition concerns) might be uncertain in view, for example, of third parties' pre-emption rights or uncertainty as to the transferability of key contracts, intellectual property rights, or the uncertainty of finding a suitable purchaser. Nevertheless, the parties may consider that they would be able to divest this business to a suitable purchaser within a very short time period.

45. In such circumstances, the Commission cannot take the risk that, in the end, effective competition will not be maintained. Accordingly, the Commission will only accept such divestiture commitments under the following conditions: (a) absent the uncertainty, the first divestiture proposed in the commitments would consist of a viable business, and (b) the parties will have to propose a second alternative divestiture which the parties will be obliged to implement if they are not able to implement the first commitment within the given time frame for the first divestiture ([4]). Such an alternative commitment normally has to be a 'crown jewel' ([5]), i.e. it should be as least as good as the first proposed divestiture in terms of creating a viable competitor once implemented, it should not involve any uncertainties as to its implementation and it should be capable of being implemented quickly in order to avoid that the overall implementation period exceeds what would normally be regarded as acceptable in the conditions of the market in question. In order to limit the risks in the interim period, it is indispensable that interim preservation and holding separate measures apply to all assets included in both divestiture alternatives. Furthermore, the commitment has to establish clear criteria and a strict timetable as to how and when the alternative divestiture obligation will become effective and the Commission will require shorter periods for its implementation.

([1]) COMP/M.3149 — Procter&Gamble/Wella of 30 July 2003, paragraph 61; COMP/M.2337 — Nestlé/Ralstone Purina of 27 July 2001, paragraph 68; COMP/M.2621 — SEB/Moulinex of 8 January 2002, paragraph 141; IV/M.623 — Kimberly-Clark/Scott Paper of 16 January 1996, paragraph 236(ii).

([2]) For example taking into account the life cycle of products, c.f. COMP/M.2621 — SEB/Moulinex of 8 January 2002, paragraph 141, where effectively the duration of the commitments covered a period equal to about three product life cycles; confirmed by judgment of CFI in Case T-119/02 *Royal Philips Electronics NV v Commission* [2003] ECR II-1433, paragraphs 112 *et seq*.

([3]) An influence by the previous owner of the business in the competitive behaviour of the divested business risking to frustrate the objective of the remedy.

([4]) See judgment of the CFI in Case T-210/01 *General Electric v Commission* [2005] ECR II-5575, paragraph 617; COMP/M.1453 — AXA/GRE of 8 April 1999.

([5]) The alternative may consist of an entirely different business or, in case of uncertainty as to finding a suitable buyer, of additional businesses and assets that are added to the initial package.

46. If there is uncertainty as to the implementation of the divestiture due to third party rights or as to finding a suitable purchaser crown jewel commitments and up-front buyers as discussed below in paragraphs 54 address the same concerns, and the parties may therefore choose between both structures.

1.5. *Transfer to a suitable purchaser*

47. The intended effect of the divestiture will only be achieved if and once the business is transferred to a suitable purchaser in whose hands it will become an active competitive force in the market. The potential of a business to attract a suitable purchaser is an important element already of the Commission's assessment of the appropriateness of the proposed commitment ([1]). In order to ensure that the business is divested to a suitable purchaser, the commitments have to include criteria to define its suitability which will allow the Commission to conclude that the divestiture of the business to such a purchaser will likely remove the competition concerns identified.

(a) Suitability of a purchaser

48. The standard purchaser requirements are the following:

— the purchaser is required to be independent of and unconnected to the parties,

— the purchaser must possess the financial resources, proven relevant expertise and have the incentive and ability to maintain and develop the divested business as a viable and active competitive force in competition with the parties and other competitors, and

— the acquisition of the business by a proposed purchaser must neither be likely to create new competition problems nor give rise to a risk that the implementation of the commitments will be delayed. Therefore, the proposed purchaser must reasonably be expected to obtain all necessary approvals from the relevant regulatory authorities for the acquisition of the business to be divested.

49. The standard purchaser requirements may have to be supplemented on a case-by-case basis. An example is the requirement, where appropriate, that the purchaser should be an industrial, rather than a financial purchaser ([2]). The commitments will normally contain such a clause where, due to the specific circumstances of the case, a financial buyer might not be able or might not have the incentives to develop the business as a viable and competitive force in the market even considering that it could obtain the necessary management expertise (e.g. by recruiting managers experienced in the sector at stake) and therefore the acquisition by a financial buyer would not remove the competition concerns with sufficient certainty.

(b) Identification of a suitable purchaser

50. In general, there are three ways to ensure that the business is transferred to a suitable purchaser. First, the business is transferred within a fixed time-limit after adoption of the decision to a purchaser which is approved by the Commission on the basis of the purchaser requirements. Second, in addition to the conditions set out for the first category, the commitments foresee that the parties may not complete the notified operation before having entered into a binding agreement with a purchaser for the business, approved by the Commission (so-called 'up-front-buyer'). Third, the parties identify a purchaser for the business and enter into a binding agreement already during the Commission's procedure ([3]) (so-called 'fix-it-first' ([4]) remedy). The main difference between the two latter options is that in the case of an up-front buyer, the identity of the purchaser is not known to the Commission prior to the authorisation decision.

51. The choice of the category depends on the risks involved in the case and therefore on the measures which enable the Commission to conclude with the requisite degree of certainty that the commitment will be implemented. This will depend on the nature and the scope of the business to be divested, the risks of degradation of the business in the interim period up to divestiture and any uncertainties inherent in the transfer and implementation, in particular the risks of finding a suitable purchaser.

(1) Case IV/M.913 — Siemens/Elektrowatt of 18 November 1997.
(2) See commitments in Case COMP/M.2621 — SEB/Moulinex of 8 January 2002, which foresee that the licensee needs to have its own trademark used in the sector concerned. Certain markets may require a sufficient degree of recognition by customers for a purchaser to be able to translate the business to be divested into a competitive force on the market.
(3) The transfer of the business may be implemented after the Commission decision.
(4) This terminology might be used differently in other jurisdictions.

1. Sale of the divested business within a fixed time-limit after the decision

52. In the first category, the parties may proceed with the sale of the divested business on the basis of the purchaser requirements within a fixed time-limit after the adoption of the decision. This procedure is likely to be appropriate in the majority of cases, provided that a number of purchasers can be envisaged for a viable business and that no specific issues complicate or stand in the way of the divestiture. Where the purchaser needs to have special qualifications, this procedure may be appropriate if there are sufficient interested potential purchasers available which fulfil the specific purchaser requirements to be included in the commitments in such cases. In these circumstances the Commission may be able to conclude that the divestiture will be implemented and that there are no reasons for the implementation of the notified concentration to be suspended after the Commission decision.

2. Up-front buyer

53. There are cases where only the proposal of an up-front buyer will allow the Commission to conclude with the requisite degree of certainty that the business will be effectively divested to a suitable purchaser. The parties therefore have to undertake in the commitments that they are not going to complete the notified operation before having entered into a binding agreement with a purchaser for the divested business, approved by the Commission ([1]).

54. First, this concerns cases where there are considerable obstacles for a divestiture, such as third party rights, or uncertainties as to finding a suitable purchaser ([2]). In such cases, an up-front buyer will allow the Commission to conclude with the requisite degree of certainty that the commitments will be implemented, as such a commitment creates greater incentives for the parties to close the divestiture in order to be able to complete their own concentration. In these circumstances, parties may choose between proposing an up-front buyer and an alternative divestiture commitment, as set out above in paragraph 46.

55. Second, an up-front buyer may be necessary in cases which cause considerable risks of preserving the competitiveness and saleability of the divestment business in the interim period until divestiture. This category comprises cases where the risks of a degradation of the divestment business appear to be high, in particular due to a risk of losing employees being key for the business, or where the interim risks are increased as the parties are not able to undertake the carve-out process in the interim period, but the carve-out process can only take place once a sales and purchase agreement with a purchaser is entered into. The up-front buyer provision may accelerate the transfer of the business to be divested — given the increased incentives for the parties to close the divestiture in order to be able to complete their own concentration — to such an extent that the commitments may allow the Commission to conclude with the requisite degree of certainty that those risks are limited and the divestiture will be effectively implemented ([3]).

3. Fix-it-first remedies

56. The third category involves cases where the parties identify and enter into a legally binding agreement with a buyer outlining the essentials of the purchase during the Commission procedure ([4]). The Commission will be able to decide in the final decision whether the transfer of the divested business to the identified purchaser will remove the competition concerns. If the Commission authorises the notified concentration, no additional Commission decision for the purchaser approval will be needed and the closing of the sale of the divested business may take place shortly afterwards.

57. The Commission welcomes fix-it-first remedies in particular in cases where the identity of the purchaser is crucial for the effectiveness of the proposed remedy. This concerns cases where, given the circumstances, only very few potential purchasers can be considered suitable, in particular as the divested business is not a viable business in itself, but its viability will only be ensured by specific

([1]) Case COMP/M.3796 — Omya/Huber PCC of 19 July 2006; Case COMP/M.2972 — DSM/Roche Vitamins of 23 July 2003; Case COMP/M.2060 — Bosch/Rexroth of 13 December 2000; Case COMP/M.2337 — Nestlé/Ralston Purina of 27 July 2001; Case COMP/M.2544 — Masterfoods/Royal Canin of 15 February 2002; Case COMP/M.2947 — Verbund/Energie Allianz of 11 June 2003.

([2]) See Case COMP/M.2060 — Bosch/Rexroth of 13 December 2000, paragraph 92.

([3]) See Case COMP/M.2060 — Bosch/Rexroth of 13 December 2000, paragraph 95.

([4]) Such agreements are normally conditional to the final Commission decision accepting the remedy in question.

assets of the purchaser, or where the purchaser needs to have specific characteristics in order for the remedy to solve the competition concerns ([1]). If the parties choose to enter into a binding agreement with a suitable purchaser during the procedure by way of a fix-it-first solution, the Commission can in those circumstances conclude with the requisite degree of certainty that the commitments will be implemented with a sale to a suitable purchaser. In these situations, an 'upfront buyer' solution containing specific requirements as to the suitability of a buyer will generally be considered equivalent and acceptable.

2. **Removal of links with competitors**

58. Divestiture commitments may also be used for removing links between the parties and competitors in cases where these links contribute to the competition concerns raised by the merger. The divestiture of a minority shareholding in a joint venture may be necessary in order to sever a structural link with a major competitor ([2]), or, similarly, the divestiture of a minority shareholding in a competitor ([3]).

59. Although the divestiture of such stakes is the preferable solution, the Commission may exceptionally accept the waiving of rights linked to minority stakes in a competitor where it can be excluded, given the specific circumstances of the case, that the financial gains derived from a minority shareholding in a competitor would in themselves raise competition concerns ([4]). In such circumstances, the parties have to waive all the rights linked to such a shareholding which were relevant for behaviour in terms of competition, such as representations on the board, veto rights and also information rights ([5]). The Commission may only be able to accept such a severing of the link with a competitor if those rights are waived comprehensively and in a permanent way ([6]).

60. Where competition concerns result from agreements with companies supplying the same products or providing the same services, a suitable remedy may be the termination of the respective agreement, such as distribution agreements with competitors ([7]) or agreements resulting in the coordination of certain commercial behaviour ([8]). However, the termination of a distribution agreement alone will only remove the competition concerns if it is ensured that the product of a competitor will also be distributed in the future and exercise effective competitive pressure on the parties.

3. **Other remedies**

61. Whilst being the preferred remedy, divestitures or the removal of links with competitors are not the only remedy possible to eliminate certain competition concerns. However, divestitures are the benchmark for other remedies in terms of effectiveness and efficiency. The Commission therefore may accept other types of commitments, but only in circumstances where the other remedy proposed is at least equivalent in its effects to a divestiture ([9]).

([1]) See Case COMP/M.3916 — T-Mobile Austria/tele.ring of April 2006, the divestiture of certain mobile telephony sites and frequencies, not constituting a viable business, could only take place to a competitor which was likely to play a similar role in the market as tele.ring; Case COMP/M.4000 — Inco/Falconbridge of 4 July 2006, the divestiture of a nickel processing business could only take place to a competitor vertically integrated into the supply of nickel; Case COMP/M.4187 — Metso/Aker Kvaerner of 12 December 2006, only one purchaser was suitable for acquiring the businesses to be divested as it was the only one with the necessary know-how and the necessary presence in neighbouring markets; Case COMP/M.3436 — Continental/Phoenix of 26 October 2004, only the partner in the distribution joint venture was able to render the divested business viable; Case COMP/M.3136 — GE/Agfa of 5 December 2003.

([2]) Case IV/M.942 — VEBA/Degussa of 3 December 1997.

([3]) Case COMP/M.3653 — Siemens/VA Tech of 13 July 2005, paragraphs 491, 493 ff.

([4]) See Case COMP/M.3653 — Siemens/VA Tech of 13 July 2005, paragraphs 327 ff., where effects from the minority stake in financial respect could be excluded as a put option for the sale of this stake had already been exercised.

([5]) Case COMP/M.4153 — Toshiba/Westinghouse of 19 September 2006.

([6]) See Case COMP/M.3440 — ENI/EDP/GDP of 9 December 2004, paragraphs 648 f., 672.

([7]) See for the termination of distribution agreements Case COMP/M.3779 — Pernod Ricard/Allied Domecq of 24 June 2005; Case COMP/M.3658 — Orkla/Chips of 3 March 2005.

([8]) See particularly the sea transport sector, Case COMP/M.3829 — Maersk/PONL of 29 July 2005 and Case COMP/M.3863 — TUI/CP Ships of 12 October 2005. In those cases, the parties committed to withdraw from certain liner conferences and consortia.

([9]) Case COMP/M.3680 — Alcatel/Finmeccanica/Alcatel Alenia Space & Telespazio of 28 April 2005, where a divestiture was impossible.

Access remedies

62. In a number of cases, the Commission has accepted remedies foreseeing the granting of access to key infrastructure, networks, key technology, including patents, know-how or other intellectual property rights, and essential inputs. Normally, the parties grant such access to third parties on a non-discriminatory and transparent basis.

63. Commitments granting access to infrastructure and networks may be submitted in order to facilitate market entry by competitors. They may be acceptable to the Commission in circumstances where it is sufficiently clear that there will be actual entry of new competitors that would eliminate any significant impediment to effective competition ([1]). Other examples of access commitments are commitments granting access to pay-TV platforms ([2]) and to energy via gas release programs ([3]). Often, a sufficient reduction of entry barriers is not achieved by individual measures, but by a package comprising a combination of divestiture remedies and access commitments or a commitments package aimed at overall facilitating entry of competitors by a whole range of different measures. If those commitments actually make the entry of sufficient new competitors timely and likely, they can be considered to have a similar effect on competition in the market as a divestiture. If it cannot be concluded that the lowering of the entry barriers by the proposed commitments will likely lead to the entry of new competitors in the market, the Commission will reject such a remedies package ([4]).

64. Commitments granting non-discriminatory access to infrastructure or networks of the merging parties may also be submitted in order to ensure that competition is not significantly impeded as a result of foreclosure. In past Commission decisions, commitments have foreseen the granting of access to pipelines ([5]) and to telecom or similar networks ([6]). The Commission will only accept such commitments if it can be concluded that these commitments will be effective and competitors will likely use them so that foreclosure concerns will be eliminated. In specific cases, it may be appropriate to link such a commitment with an up-front or fix-it-first provision in order to allow the Commission to conclude with the requisite degree of certainty that the commitment will be implemented ([7]).

65. Similarly, the control of key technology or IP rights may lead to concerns of foreclosure of competitors which depend on the technology or IP rights as essential input for the activities in a downstream market. This, for example, concerns cases where competition problems arise as the parties may withhold information necessary for the interoperability of different equipment. In such circumstances, commitments to grant competitors access to the necessary information may eliminate the competition concerns ([8]). Similarly, in sectors where players commonly have to cooperate by licensing patents to each other, concerns that the merged entity would no longer have the incentive to provide licences to the same extent and under the same conditions as before may be eliminated by commitments to grant

([1]) See judgment of the CFI in Case T-177/04 *easyJet v Commission* [2006] ECR II-1931, at paragraphs 197 *et seq*.
([2]) See Case COMP/M.2876 — Newscorp/Telepiù of 2 April 2003, paragraphs 225 *et seq*., where the commitments package included access of competitors to all essential elements of a pay-TV network, such as 1. access to the necessary content; 2. access to the technical platform as well as 3. access to the necessary technical services. Similarly, in Case COMP/JV.37 — BskyB/Kirch Pay TV of 21 March 2000, confirmed by judgment of CFI in Case T-158/00 *ARD v Commission* [2003] ECR II-3825, the Commission accepted a commitments package which allowed other operators comprehensive access to the pay-TV market.
([3]) See Case COMP/M.3696 — E.ON/MOL of 21 December 2005; Case COMP/M.3868 — DONG/Elsam/Energi E2 of 14 March 2006.
([4]) In air transport mergers, a mere reduction of barriers to entry by a commitment of the parties to offer slots on specific airports may not always be sufficient to ensure the entry of new competitors on those routes where competition problems arise and to render the remedy equivalent in its effects to a divestiture.
([5]) Case COMP/M.2533 — BP/E.ON of 20 December 2001, access to pipelines in addition to divestiture of shares in a pipeline company; Case COMP/M.2389 — Shell/DEA of 20 December 2001, access to an ethylene import terminal.
([6]) For access to telecom networks, see Case COMP/M.2803 — Telia/Sonera of 10 July 2002; Case IV/M.1439 — Telia/Telenor of 13 October 1999; Case COMP/M.1795 — Vodafone/Mannesmann of 12 April 2000. See also Case COMP/M.2903 — DaimlerChrysler/Deutsche Telekom/JV of 30 April 2003, where the Commission accepted a commitments package to grant third parties access to a telematics network and to reduce the entry barriers by allowing them to use parts of a telematics device, designed for toll collection, provided by the parties.
([7]) See the 'qualitative moratorium' in Case COMP/M.2903 — DaimlerChrysler/Deutsche Telekom/JV of 30 April 2003, paragraph 76.
([8]) Case COMP/M.3083 — GE/Instrumentarium of 2 September 2003; Case COMP/M.2861 — Siemens/Draegerwerk of 30 April 2003.

licenses on the same basis also in the future (1). In those cases, commitments should foresee non-exclusive licences or the disclosure of information on a non-exclusive basis to all third parties which depend on the IP rights or information for their activities. It has to be further ensured that the terms and conditions under which the licenses are granted do not impede the effective implementation of such a license remedy. If no clearly determined terms and conditions for the granting of licenses exist in the market at stake, the terms and conditions, including the pricing, should be clearly apparent from the commitments (e.g. by way of pricing formulas). An alternative solution may be to rely on royalty-free licences. Furthermore, depending on the case, the granting of licenses may also transmit sensitive information to the licensor on the competitive behaviour of the licensees which are active as competitors in the downstream market, e.g. by transmitting the number of licenses used in the down-stream market. In such cases, in order for the remedy to be suitable, the commitments will have to exclude such confidentiality problems. Generally, as set out in the preceding paragraph, the Commission will only accept such commitments if it can be concluded that they will be effective and competitors will likely use them.

66. Access commitments are often complex in nature and necessarily include general terms for determining the terms and conditions under which access is granted. In order to render them effective, those commitments have to contain the procedural requirements necessary for monitoring them, such as the requirement of separate accounts for the infrastructure in order to allow a review of the costs involved (2), and suitable monitoring devices. Normally, such monitoring has to be done by the market participants themselves, e.g. by those undertakings wishing to benefit from the commitments. Measures allowing third parties themselves to enforce the commitments are in particular access to a fast dispute resolution mechanism via arbitration proceedings (together with trustees) (3) or via arbitration proceedings involving national regulatory authorities if existing for the markets concerned (4). If the Commission can conclude that the mechanisms foreseen in the commitments will allow the market participants themselves to effectively enforce them in a timely manner, no permanent monitoring of the commitments by the Commission is required. In those cases, an intervention by the Commission would only be necessary in cases where the parties do not comply with the solutions found by those dispute resolution mechanisms (5). However, the Commission will only be able to accept such commitments where the complexity does not lead to a risk of their effectiveness from the outset and where the monitoring devices proposed ensure that those commitments will be effectively implemented and the enforcement mechanism will lead to timely results (6).

Change of long-term exclusive contracts

67. The change in the market structure resulting from a proposed concentration can cause existing contractual arrangements to be inimical to effective competition. This is in particular true for exclusive long-term supply agreements if such agreements foreclose either, up-stream, the input for competitors or, down-stream, their access to customers. Where the merged entity will have the ability and the incentives to foreclose competitors in this way, the foreclosure effects resulting from existing exclusive agreements may contribute to significantly impeding effective competition (7).

68. In such circumstances, the termination or change of existing exclusive agreements may be considered appropriate to eliminate the competition concerns (8). However, the available evidence must allow the

(2) See e.g. Case COMP/M.2803 — Telia/Sonera of 10 July 2002; Case COMP/M.2903 — DaimlerChrysler/Deutsche Telekom/JV of 30 April 2003.
(3) As to the effects of arbitration clauses, see judgment of CFI in Case T-158/00 *ARD v Commission* [2003] ECR II-3825, paragraphs 212, 295, 352; CFI judgment in Case T-177/04 *easyJet v Commission* [2006] ECR II-1931, paragraph 186.
(4) See Case COMP/M.2876 — Newscorp/Telepiù; Case COMP/M.3916 — T-Mobile Austria/tele.ring.
(5) CFI, judgment in Case T-158/00 *ARD v Commission* [2003] ECR II-3825, paragraphs 212, 295, 352.
(6) See judgments of the CFI in Case T-87/05 *EDP v Commission* [2005] ECR II-3745, at paragraphs 102 *et seq.*; and Case T-177/04 *easyJet v Commission* [2006] ECR II-1931, at paragraph 188.
(7) See Commission Notice on non-horizontal mergers […]; Case IV/M.986 — AGFA Gevaert/DuPont of 11 February 1998.
(8) Case COMP/M.2876 — Newscorp/Telepiù of 2 April 2003, paragraphs 225 *et seq.*, granting unilateral termination rights to suppliers of TV content, limiting the scope of the exclusivity clauses and limiting the duration of future exclusive agreements relating to supply of content; Case COMP/M.2822 — ENI/EnBW/GVS of 17 December 2002, granting of early termination rights to all local gas distributors concerning long-term gas supply agreements; Case IV/M.1571 — New Holland of 28 October 1999; Case IV/M.1467 — Rohm and Haas/Morton of 19 April 1999.

Commission to clearly determine that no *de facto* exclusivity will be maintained. Furthermore, such change of long-term agreements will normally only be sufficient as part of a remedies package to remove the competition concerns identified.

Other non-divestiture remedies

69. As indicated above in paragraph 17, non-structural types of remedies, such as promises by the parties to abstain from certain commercial behaviour (e.g. bundling products), will generally not eliminate the competition concerns resulting from horizontal overlaps. In any case, it may be difficult to achieve the required degree of effectiveness of such a remedy due to the absence of effective monitoring of its implementation, as already set out above in paragraph 13(f) ([1]). Indeed, it may be impossible for the Commission to verify whether or not the commitment is complied with and even other market participants, such as competitors, may not be able to establish at all or with the requisite degree of certainty whether the parties meet the conditions of the commitment in practice. In addition, competitors may also not have an incentive to alert the Commission as they do not directly benefit from the commitments. Therefore, the Commission may examine other types of non-divestiture remedies, such as behavioural promises, only exceptionally in specific circumstances, such as in respect of competition concerns arising in conglomerate structures ([2]).

Time limit for non-divestiture remedies

70. The Commission may accept that non-divestiture remedies are limited in their duration. The acceptability of a time limit and the duration will depend on the individual circumstances of the case and cannot be pre-defined in a general manner in the present Notice.

4. **Review Clause**

71. Irrespective of the type of remedy, commitments will usually include a review clause ([3]). This may allow the Commission, upon request by the parties showing good cause, to grant an extension of deadlines or, in exceptional circumstances, to waive, modify or substitute the commitments.

72. Modifying commitments by extending the deadlines is in particular relevant for divestiture commitments. Parties have to submit a request for an extension within the deadline. Where parties apply for an extension for the first divestiture period, the Commission will only accept that they have shown good cause if the parties were not able to meet the deadline for reasons outside their responsibility and if it can be expected that the parties subsequently will succeed in divesting the business within a short time-frame. Otherwise, the divestiture trustee may be better placed to undertake the divestiture and to fulfil the commitments for the parties.

73. The Commission may grant waivers or accept modifications or substitutions of the commitments only in exceptional circumstances. This will very rarely be relevant for divestiture commitments. As divestiture commitments have to be implemented within a short time-frame after the decision, it is very unlikely that changes of market circumstances will have occurred in such a short time-frame and the Commission will normally not accept any modifications under the general review clause. For specific situations the commitments normally foresee more targeted review clauses ([4]).

([1]) See, as an example for such remedies, Case COMP/M.3440 — ENI/EDP/GDP of 9 December 2004, paragraphs 663, 719.

([2]) See, in relation to conglomerate effects of a concentration, ECJ, judgment of 15 February 2005 in Case C-12/03 P *Commission v Tetra Laval* [2005] ECR I-987, paragraphs 85, 89.

([3]) However, the review clause is of particular relevance for access remedies, which systematically should include such a clause; see below paragraph 74.

([4]) As mentioned in paragraph 30, the Commission may approve a purchaser without some of the assets or personnel foreseen if this does not affect the competitiveness and viability of the divested business. Similarly, the non-requisition clause, as explained in paragraph 43, prohibits the re-acquisition of control over the assets divested only if the Commission has not previously found that that the market structure has changed to such an extent that the divestiture is no longer necessary.

74. A waiver, modification or substitution of commitments may be more relevant for non-divestiture commitments, such as access commitments, which may be on-going for a number of years and for which not all contingencies can be predicted at the time of the adoption of the Commission decision. Exceptional circumstances justifying a waiver, modification or substitution may, first, be accepted for such commitments if parties show that market circumstances have changed significantly and on a permanent basis. For showing this, a sufficient long time-span, normally at least several years, between the Commission decision and a request by the parties is required. Second, exceptional circumstances may also be present if the parties can show that the experience gained in the application of the remedy demonstrates that the objective pursued with the remedy will be better achieved if modalities of the commitment are changed. For any waiver, modification or substitution of commitments, the Commission will also take into account the view of third parties and the impact a modification may have on the position of third parties and thereby on the overall effectiveness of the remedy. In this regard, the Commission will also consider whether modifications affect the right already acquired by third parties after implementation of the remedy ([1]).

75. If at the time of the adoption of the decision the Commission for particular reasons cannot anticipate all contingencies in relation to the implementation of such commitments, it may also be appropriate for the parties to include a clause in the commitments, allowing the Commission to trigger a limited modification to the commitments. Such modifications may be necessary if the original commitments do not achieve the envisaged results set out in those commitments, and therefore do not effectively remove the competition concerns. Procedurally, the parties may be obliged in such cases to propose a change to the commitments in order to achieve the result defined in those commitments, or the Commission may itself, after hearing the parties, modify the conditions and obligations to this end. This type of clause will typically be limited to cases where specific modalities risk to jeopardise effective implementation of the commitments. Such clauses have been used, for example, in relation to the modalities of gas release programs ([2]).

76. The Commission may, upon request, adopt a formal decision for any waiver, modification or substitution of commitments or simply take note of satisfactory amendments of the remedy by the parties, where such amendments improve the effectiveness of the remedy and result in legally binding obligations of the parties, e.g. by contractual arrangements. A change of the commitments will normally only be effective *ex nunc*. Consequently, a modification of the commitments will not heal retroactively any breach of the commitments which has been committed before the time of the modification. The Commission may therefore, where appropriate, further pursue a breach under Articles 14, 15 of the Merger Regulation.

IV. **ASPECTS OF PROCEDURE FOR SUBMISSION OF COMMITMENTS**

1. **Phase I**

77. Pursuant to Article 6(2) of the Merger Regulation the Commission may declare a concentration compatible with the common market also before the initiation of proceedings, where it is confident that following modification a notified concentration no longer raises serious doubts within the meaning of paragraph 1(c).

78. Parties can submit proposals for commitments to the Commission on an informal basis, even before notification. Parties have to submit commitments within not more than 20 working days from the date of the receipt of the notification ([3]). The Commission informs the parties about its serious doubts in due time before that deadline ([4]). Where the parties submit commitments, the deadline for the Commission's decision pursuant to Article 6(1) of the Merger Regulation is extended from 25 to 35 working days ([5]).

([1]) See examples in judgment of CFI in Case T-119/02 *Royal Philips Electronics NV v Commission* [2003] ECR II-1433, paragraph 184.
([2]) See Case COMP/M.3868 — DONG/Elsam/Energi E2 of 14 March 2006, paragraph 24 of the Annex.
([3]) Article 19(1) of the Implementing Regulation.
([4]) The notifying parties will normally be offered the opportunity of attending a state of play meeting in such circumstances, see point 33 of the DG COMPETITION Best Practices on the conduct of EC merger control proceedings.
([5]) Article 10(1), subparagraph 2 of the Merger Regulation.

79. In order to form the basis of a decision pursuant to Article 6(2), proposals for commitments must meet the following requirements:

(a) they shall fully specify the substantive and implementing commitments entered into by the parties;

(b) they shall be signed by a person duly authorised to do so;

(c) they shall be accompanied by the information on the commitments offered as provided for in the Implementing Regulation (as explained above in paragraph 7); and

(d) they shall be accompanied by a non-confidential version of the commitments ([1]) for the purposes of market testing them with third parties. The non-confidential version of the commitments must allow third parties to fully assess the workability and the effectiveness of the proposed remedies to remove the competition concerns.

80. Proposals submitted by the parties in accordance with these requirements will be assessed by the Commission. The Commission will consult the authorities of the Member States on the proposed commitments and, when considered appropriate, also third parties in the form of a market test, including in particular those third parties and the recognised representatives ([2]) of those employees whose positions are directly affected by the proposed remedies. In markets with national regulatory authorities the Commission may also, if appropriate, consult the competent national regulatory authorities ([3]). In addition, in cases involving a geographic market that is wider than the European Economic Area ('EEA') or where, for reasons related to the viability of the business, the scope of the business to be divested is wider than the EEA territory, the non-confidential version of the proposed remedies may also be discussed with non-EEA competition authorities in the framework of the Community's bilateral cooperation agreements with these countries.

81. Commitments in phase I can only be accepted where the competition problem is readily identifiable and can easily be remedied ([4]). The competition problem therefore needs to be so straightforward and the remedies so clear-cut that it is not necessary to enter into an in-depth investigation and that the commitments are sufficient to clearly rule out 'serious doubts' within the meaning of Article 6(1)(c) of the Merger Regulation ([5]). Where the assessment confirms that the proposed commitments remove the grounds for serious doubts on this basis, the Commission clears the merger in phase I.

82. Due to the time-constraints in phase I, it is particularly important for the parties to submit in a timely manner to the Commission the information required in the Implementing Regulation to properly assess the content and workability of the commitments and their suitability to maintain conditions of effective competition in the common market on a permanent basis. If the parties do not comply with the obligation in the Implementing Regulation, the Commission may not be able to conclude that the proposed commitments will remove the grounds for serious doubts.

83. Where the assessment shows that the commitments offered are not sufficient to remove the competition concerns raised by the concentration, the parties will be informed accordingly. Given that phase I remedies are designed to provide a clear-cut answer to a readily identifiable competition concern, only limited modifications can be accepted to the proposed commitments. Such modifications, presented as an immediate response to the result of the consultations, may include clarifications, refinements and/or other improvements designed to ensure that the commitments are workable and effective. However, such modifications may only be accepted in circumstances where it is ensured that the Commission can carry out a proper assessment of those commitments ([6]).

([1]) Article 20(2) of the Implementing Regulation.

([2]) Cf. Article 2(1)(c) of Council Directive 2001/23/EC of 12 March 2001 on the approximation of the laws of the Member States relating to the safeguarding of employees' rights in the event of transfers of undertakings, businesses or parts of undertakings or businesses (OJ L 82, 22.3.2001, p. 16). See also Article 2(1)(g) of Council Directive 94/45/EC of 22 September 1994 on the establishment of a European Works Council or a procedure in Community-scale undertakings and Community-scale groups of undertakings for the purposes of informing and consulting employees (OJ L 254, 30.9.1994, p. 64).

([3]) For the role of national regulatory authorities in a dispute resolution mechanism, see paragraph 66.

([4]) See recital 30 of the Merger Regulation.

([5]) See judgment of CFI in Case T-119/02 *Royal Philips Electronics NV v Commission* [2003] ECR II-1433, paragraphs 79 *et seq.*

([6]) See recital 17 of the Implementing Regulation and judgment of the CFI, Case T-119/02 *Royal Philips Electronics NV v Commission* [2003] ECR II-1433, paragraphs 237 *et seq.*

84. If the Commission's final assessment of a case shows that there are no competition concerns in one or more markets, the parties will be informed accordingly and may withdraw the unnecessary commitments for such markets. If the parties do not withdraw them, the Commission will normally ignore them in the decision. In any event, such commitment proposals do not constitute a condition for clearance.

85. Where the parties are informed that the Commission intends to maintain in its final decision that the transaction raises competition concerns for a specific market, it is for the parties to propose commitments. The Commission is not in a position to impose unilaterally any conditions to an authorisation decision, but only on the basis of the parties' commitments ([1]). However, the Commission will review whether the commitments submitted by the parties are proportionate to the competition problem when assessing whether to attach them as conditions or obligations to its final decision ([2]). Nevertheless, it has to be stressed that, in a commitments proposal, all those elements which are required to fulfil the basic conditions for acceptable commitments as set out above in paragraphs 9 *et seq*. will be considered necessary. This paragraph as well as the previous one also applies to commitments in phase II.

86. If the Commission concludes that the commitments offered by the parties do not remove the serious doubts, it will issue an Article 6(1)(c) decision and open proceedings.

2. **Phase II**

87. Pursuant to Article 8(2) of the Merger Regulation, the Commission must declare a concentration compatible with the common market, where following modification a notified concentration does no longer significantly impede effective competition within the meaning of Article 2(3) of the Merger Regulation.

88. Commitments proposed to the Commission pursuant to Article 8(2) must be submitted to the Commission within not more than 65 working days from the day on which proceedings were initiated. Where the deadlines for the final decision have been extended according to Article 10(3) of the Merger Regulation, also the deadline for remedies is automatically extended by the same number of days ([3]). Only in exceptional circumstances, the Commission may accept that commitments are submitted for the first time after the expiry of this period. The request by the parties for an extension of the deadline must be received within the period and has to set forth the exceptional circumstances which, according to the parties, justify it. In addition to the existence of exceptional circumstances, an extension is only possible where there is sufficient time to make a proper assessment of the proposal by the Commission and to allow adequate consultation with Member States and third parties ([4]).

89. The question whether or not submitting remedies will extend the deadline for the Commission to take a final decision depends on the time in the procedure when the commitments are submitted. Where the parties submit commitments within less than 55 working days after the initiation of proceedings, the Commission has to take a final decision within not more than 90 working days of the date of initiation of proceedings ([5]). Where the parties submit commitments on working day 55 or afterwards (even after working day 65, if those commitments should be acceptable due to exceptional circumstances as described above in paragraph 88), the period for the Commission to take a final decision is increased to 105 working days according to Article 10(3), subparagraph 2. Where the parties submit commitments within less than 55 working days, but submit a modified version on day 55 or thereafter, the period to take a final decision will also be extended to 105 working days.

([1]) See above paragraph 6.
([2]) See judgment of ECJ of 18 December 2007 in Case C-202/06 P *Cementbouw v Commission* [2007], paragraph 54.
([3]) Article 19(2), subparagraph 2 of the Implementing Regulation.
([4]) Article 19(2), subparagraph 3 of the Implementing Regulation. See Case COMP/M.1439 — Telia/Telenor of 13 October 1999; Case IV/M.754 — Anglo American Corporation/Lonrho of 23 April 1997.
([5]) Where the deadlines for the final decision have been extended according to Article 10(3) subparagraph 2 of the Merger Regulation before working day 55, this period is also extended.

90. The Commission is available to discuss suitable commitments well in advance of the end of the 65 working day period. The parties are encouraged to submit draft proposals dealing with both substantive and implementation aspects which are necessary to ensure that the commitments are fully workable. If the parties are of the opinion that more time is needed for the investigation of the competition concerns and for the corresponding design of appropriate commitments, they may also suggest to the Commission to extend the final deadline under Article 10(3), subparagraph 1. Such a request will have to be made before the end of the 65 working day period. Indeed, the Commission will normally not extend the period for adopting a final decision according to Article 10(3), subparagraph 1 where the request for extension is presented after the deadline for submitting remedies foreseen in the Implementing Regulation, i.e. after working day 65 (1).

91. In order to meet the requirements for a decision pursuant to Article 8(2), commitments must meet the following requirements:

(a) they shall address all competition concerns raised by the concentration and shall fully specify the substantive and implementing commitments entered into by the parties;

(b) they shall be signed by a person duly authorised to do so;

(c) they shall by accompanied by the information on the commitments offered as provided for in the Implementing Regulation (as explained above in paragraph 7); and

(d) they shall be accompanied by a non-confidential version of the commitments (2) for the purposes of market testing them with third parties, fulfilling the requirements set out above in paragraph 79.

92. Proposals submitted by the parties in accordance with these requirements will be assessed by the Commission. If the assessment confirms that the proposed commitments remove the serious doubts (if no Statement of Objection has been issued yet by the Commission) or the competition concerns raised in the Statement of Objections, following the consultations as set out in paragraph 80 above, the Commission will adopt a conditional clearance decision.

93. Conversely, where the assessment leads to the conclusion that the proposed commitments appear not to be sufficient to resolve the competition concerns raised by the concentration, the parties will be informed accordingly (3).

94. The Merger Regulation does not impose any obligation on the Commission to accept commitments after the legal deadline for remedies, unless the Commission voluntarily undertakes to assess commitments in specific circumstances (4). In view of this, where parties subsequently modify the proposed commitments after the deadline of 65 working days, the Commission will only accept these modified commitments where it can clearly determine — on the basis of its assessment of information already received in the course of the investigation, including the results of prior market testing, and without the need for any other market test — that such commitments, once implemented, fully and unambiguously resolve the competition concerns identified and where there is sufficient time to allow for an adequate assessment by the Commission and for proper consultation with Member States (5) (6). The Commission will normally reject modified commitments which do not fulfil those conditions (7).

(1) The Court of First Instance confirmed that the Merger Regulation and the Implementing Regulation do not impose any obligations on the Commission to accept commitments which are submitted after the legal deadline, as set out below in paragraph 94, see Case T-87/05 *EDP v Commission* [2005] ECR II-3745, at paragraph 161. Therefore, the Commission is not bound to consider any remedies which are submitted by the parties after the deadline for remedies, even if the parties were to agree to extend the final deadline. Moreover, this would not correspond to the purpose, as explained in recital 35 of the Merger Regulation, of the extensions foreseen in Article 10(3). The extension foreseen in Article 10(3), subparagraph 1 is to allow for sufficient time for the investigation of the competitive concerns, whereas it is the purpose of the extension laid down in Article 10(3), subparagraph 2 to allow for sufficient time for the analysis and market testing of commitments.

(2) Article 20(2) of the Implementing Regulation.

(3) See paragraphs 30 ff. of the DG Competition Best Practices on the conduct of EC merger proceedings which provide for several state of play meetings between the Commission and the parties throughout the procedure.

(4) See judgment of CFI in Case T-87/05 *EDP v Commission* [2005] ECR II-3745, at paragraphs 161 *et seq*. See also judgement of CFI in case T-290/94 *Kaysersberg SA v Commission* [1997] ECR II-2137.

(5) Case COMP/M.3440 — ENI/EDP/GDP of 9 December 2004, paragraphs 855 *et seq*.; confirmed by Judgment of CFI in Case T-87/05 *EDP v Commission* [2005] ECR II-3745, at paragraphs 162 *et seq*.; Case COMP/M.1628 — TotalFina/Elf of 9 March 2000, at paragraph 345.

(6) This consultation normally requires that the Commission has to be able to send a draft of the final decision, including an assessment of the modified commitments, to the Member States not less than 10 working days before the Advisory Committee with Member States. This period may only be shortened in exceptional circumstances (Article 19(5) of the Merger Regulation).

(7) See Case COMP/M.3440 — ENI/EDP/GDP of 9 December 2004, paragraph 913.

V. REQUIREMENTS FOR IMPLEMENTATION OF COMMITMENTS

95. Commitments are offered as a means of securing a clearance, with the implementation normally taking place after the decision. Commitments therefore require safeguards to ensure their effective and timely implementation. These implementing provisions will normally form part of the commitments entered into by the parties *vis-à-vis* the Commission.

96. In the following, detailed guidance is given on the implementation of divestiture commitments, as the most typical commitment. Afterwards, some aspects of the implementation of other types of commitments are discussed.

1. Divestiture process

97. The divestiture has to be completed within a fixed time period agreed between the parties and the Commission. In the Commission's practice, the total time period is divided into a period for entering into a final agreement and a further period for the closing, the transfer of legal title, of the transaction. The period for entering into a binding agreement is further normally divided into a first period in which the parties can look for a suitable purchaser (the 'first divestiture period') and, if the parties do not succeed to divest the business, a second period in which a divestiture trustee obtains the mandate to divest the business at no minimum price (the 'trustee divestiture period').

98. The Commission's experience has shown that short divestiture periods contribute largely to the success of the divestiture as, otherwise, the business to be divested will be exposed to an extended period of uncertainty. The time periods should therefore be as short as feasible. The Commission will normally consider a period of around six months for the first divestiture period and an additional period of three months for the trustee divestiture period as appropriate. A period of further three months is normally foreseen for closing the transaction. These periods may be modified on a case-by-case basis. In particular, they may have to be shortened if there is a high risk of degradation of the business' viability in the interim period.

99. The deadline for the divestiture shall normally start on the day of the adoption of the Commission decision. An exception might be justified for a transaction via public bid where the parties commit to divest a business belonging to the target. Where in such circumstances the parties cannot prepare for the divestiture of the target's business before closing of the notified concentration, the Commission might accept that the periods for such a divestiture only start with the date of closing the notified transaction. Similarly, such a solution may be considered if the date of closing of the concentration is not under the control of the parties as it, e.g. requires state approval ([1]). In return, it may be appropriate to shorten the deadlines in order to reduce the time of uncertainty for the business to be divested.

100. Whereas for up-front buyer solutions the above-described procedure applies, the procedure will be different for fix-it-first solutions. In general, a binding agreement with a purchaser will already be entered into during the procedure so that after the decision only a further period for the closing of the transaction has to be foreseen. If before the decision only a framework agreement has been concluded with the purchaser, the periods to be foreseen for entering into a full agreement and the closing afterwards will have to be decided on a case-by-case basis ([2]).

2. Approval of the purchaser and of the sale and purchase agreement

101. In order to ensure the effectiveness of the commitment, the sale to a proposed purchaser is subject to prior approval by the Commission. When the parties (or the divestiture trustee) have reached a final agreement with a purchaser, they have to submit a reasoned and documented proposal to the Commission. The parties or the divestiture trustee, as the case may be, will be required to demonstrate to the satisfaction of the Commission that the proposed purchaser meets the purchaser requirements, and that the business is divested in a manner consistent with the Commission's decision and the commitments. Where the commitments allow that different purchasers are being proposed for different parts of the package, the Commission will assess whether each individual proposed purchaser is acceptable and that the total package solves the competition concern.

([1]) However, also in those circumstances, other provisions in the commitments, in particular the provisions establishing the safeguards in the interim period, should start running on the date of the adoption of the decision.

([2]) See Case COMP/M.3916 — T-Mobile Austria/tele.ring of 20 April 2006.

102. In assessing any proposed purchaser, the Commission will interpret the purchaser requirements in the light of the purpose of the commitments, to immediately maintain effective competition in the market where competition concerns had been found, and of the market circumstances as set out in the decision [1]. Generally, the basis for the Commission's assessment of the purchaser requirements will be the submission of the parties, the assessment of the monitoring trustee and, in particular, discussions with the proposed purchaser and its business plan. The Commission will further analyse whether the underlying assumptions of the purchaser appear plausible according to the market circumstances.

103. The requirement that the purchaser has to have the necessary financial resources extends in particular to the way the acquisition is financed by the proposed purchaser. The Commission will normally not accept any financing of the divestiture by the seller, and, in particular, any seller financing if this were to give the seller a share in the profits of the divested business in the future.

104. In assessing whether the proposed purchaser threatens to create competition problems, the Commission will undertake a prima facie assessment in the light of the information available to the Commission in the purchaser approval process. Where the purchase results in a concentration that has a Community dimension, this new operation will have to be notified under the Merger Regulation and cleared under normal procedures [2]. Where this is not the case, the Commission's approval of a proposed purchaser is without prejudice to the merger control jurisdiction of national authorities. In addition, the proposed purchaser must be expected to obtain all other necessary approvals from the relevant regulatory authorities. Where it can be foreseen, in the light of the information available to the Commission, that difficulties in obtaining merger control clearance or other approvals may unduly delay the timely implementation of the commitment, it will be considered that the proposed purchaser does not meet the purchaser requirements. Otherwise, the competition concerns identified by the Commission would not be removed in the appropriate time-frame.

105. The requirement for an approval by the Commission does usually not only extend to the identity of the purchaser, but also to the sale and purchase agreement and any other agreement entered into between the parties and the proposed purchaser, including transitory agreements. The Commission will verify whether the divestiture according to the agreements is in line with the commitments [3].

106. The Commission will communicate its view as to the suitability of the proposed purchaser to the parties. If the Commission concludes that the proposed purchaser does not meet the purchaser requirements, it will adopt a decision that the proposed purchaser is not a purchaser under the commitments [4]. If the Commission concludes that the sale and purchase agreement (or any ancillary agreements) does not foresee a divestiture in line with the commitments, the Commission will communicate this to the parties without necessarily rejecting the purchaser as such. If the Commission concludes that the purchaser is suitable under the commitments and that the contracts agree a divestiture in line with the commitments, the Commission will approve the divestiture to the proposed purchaser [5]. The Commission will issue the necessary approvals as expeditiously as possible.

3. **Obligations of the parties in the interim period**

107. Parties have to fulfil certain obligations in the interim period (as defined above in paragraph 36). The following should normally be included in the commitments in this respect: (i) safeguards for the interim preservation of the viability to the business; (ii) the necessary steps for a carve-out process, if relevant; and (iii) the necessary steps to prepare the divestiture of the business.

(1) See judgment of the CFI in Case T-342/00 *Petrolessence v Commission* [2003] ECR II-1161.

(2) Case IV/M.1383 — Exxon/Mobil of 29 September 1999 and the follow-up Cases COMP/M.1820 — BP/JV Dissolution of 2 February 2000 and COMP/M.1822 — Mobil/JV Dissolution of 2 February 2000.

(3) As discussed above, the parties may apply to the Commission to approve the divestiture of the business to the proposed purchaser without one or more assets or parts of the personnel if this does not affect the viability and competitiveness of the Divestment Business after the sale, taking account of the resources of the proposed purchaser.

(4) COMP/M.1628 — TotalFina/Elf of 9 February 2000, motorway service stations; confirmed by judgment of the CFI in Case T-342/00 *Petrolessence v Commission* [2003] ECR II-1161.

(5) Depending on the circumstances of the divestiture, the parties may also have to ensure, for example through appropriate provisions in the purchase agreement, that the purchaser will maintain the divested business as a competitive force in the market and will not sell on the business within a short time-span.

Interim preservation of the divested business

108. It is the parties' responsibility to reduce to the minimum any possible risk of loss of competitive potential of the business to be divested resulting from the uncertainties inherent in the transfer of a business. Up to the transfer of the business to the purchaser, the Commission will require the parties to offer commitments to maintain the independence, economic viability, marketability and competitiveness of the business. Only such commitments will allow the Commission to conclude with the requisite degree of certainty that the divestiture of the business will be implemented in the way as proposed by the parties in the commitments.

109. Generally, these commitments should be designed to keep the business separate from the business retained by the parties, and to ensure that it is managed as a distinct and saleable business in its best interest, with a view to ensuring its continued economic viability, marketability and competitiveness and its independence from the businesses retained by the parties.

110. The parties will be required to ensure that all assets of the business are maintained, pursuant to good business practice and in the ordinary course of business, and that no acts which might have a significant adverse impact on the business are carried out. This relates in particular to the maintenance of fixed assets, know-how or commercial information of a confidential or proprietary nature, the customer base and the technical and commercial competence of the employees. Furthermore, the parties must maintain the business in the same conditions as before the concentration, in particular provide sufficient resources, such as capital or a line of credit, on the basis and continuation of existing business plans, the same administrative and management functions, or other factors relevant for maintaining competition in the specific sector. The commitments also have to foresee that the parties should take all reasonable steps, including appropriate incentive schemes, to encourage all key personnel to remain with the business, and that the parties may not solicit or move any personnel to their remaining businesses.

111. The parties should further hold the business separate from its retained business and ensure that the key personnel of the business to be divested do not have any involvement into the retained businesses and *vice versa*. If the business to be divested is in corporate form and a strict separation of the corporate structure appears necessary, the parties' rights as shareholders, in particular the voting rights, should be exercised by the monitoring trustee which should also have the power to replace the board members appointed on behalf of the parties. In relation to information, the parties must ring-fence the business to be divested and take all necessary measures to ensure that the parties do not obtain any business secrets or other confidential information. Any documents or information confidential to the business obtained by the parties before adoption of the decision have to be returned to the business or destroyed.

112. The parties are further generally required to appoint a hold-separate manager with the necessary expertise, who will be responsible for the management of the business and the implementation of the hold-separate and ring-fencing obligations. The hold-separate manager should act under the supervision of the monitoring trustee who may issue instructions to the hold-separate manager. The commitments have to provide that the appointment should take place immediately after the adoption of the decision and even before the parties may close the notified concentration. Whereas the parties can appoint the hold-separate manager on their own, the commitments have to foresee that the monitoring trustee is able to remove the hold-separate manager if s/he does not act in line with the commitments or endangers their timely and proper implementation. A new appointment of a hold-separate manager afterwards will be subject to the approval of the monitoring trustee.

Steps for a carve-out

113. As outlined above in paragraph 35, the Commission may accept in appropriate circumstances that the divestiture of a business which needs to be carved out from the remaining businesses of the parties can be considered a suitable remedy. Nevertheless, also in such circumstances only the transfer of a viable business to a purchaser which can maintain and develop this business as an active competitive force in the market will remove the Commission's competition concerns. Therefore, the parties have

to commit to a result-oriented obligation to carry out, in the interim period, a carve-out of the assets that contribute to the divested business. The result has to be that a viable and competitive business, which is stand-alone and separate from the other businesses of the parties, can be transferred to a suitable purchaser at the end of the interim period. The parties will have to bear the costs and risks of such a carve-out in the interim period.

114. The carve-out will need to be carried out by the parties under the supervision of the trustee and in cooperation with the hold-separate manager. First, those assets and parts of the personnel which are shared between the business to be divested and remaining businesses of the parties have to be allocated to the business to the extent that this is not excluded in the commitments [1]. The allocation of the assets and the personnel will be monitored and has to be approved by the monitoring trustee. Second, the carve-out process may also require a replication for the business of assets held or functions performed by other parts of the parties' businesses if this is necessary to ensure the viability and competitiveness of the business to be divested. An example is the termination of the business' participation in a central information technology network and an installation of a separate IT system for the business. In general, the major steps of such a carve-out process and the functions to be replicated should be decided on a case-by-case basis and described in the commitments.

115. At the same time, it has to be ensured that the viability of the business to be divested is not affected by such measures. In the interim period, the parties therefore have to maintain the use of shared assets by and to continue to provide services to the business to the same extent as in the past as long as the business is not yet viable on a stand-alone basis.

Specific obligations of the parties concerning the divestiture process

116. For the divestiture process, the commitments should foresee that potential purchasers can carry out a due diligence exercise and obtain, dependent on the stage of the procedure, sufficient information concerning the divested business to allow the purchaser to fully asses the value, scope and commercial potential of the business, and have direct access to its personnel. The parties further have to submit periodic reports on potential purchasers and developments in the negotiations. The divestiture will only be implemented once the transaction is closed, that is the legal title has passed to the approved purchaser, and the assets have been actually transferred. At the end of the process, the parties will have to send a final report, confirming the closing and the transfer of the assets.

4. **The monitoring and the divestiture trustee**

Role of the monitoring trustee

117. As the Commission cannot, on a daily basis, be directly involved in overseeing the implementation of the commitments, the parties have to propose the appointment of a trustee to oversee the parties' compliance with the commitments, in particular with their obligations in the interim period and the divestiture process (the so-called 'monitoring trustee'). Thereby, the parties guarantee the effectiveness of the commitments submitted by them and allow the Commission to ensure that the modification of the notified concentration, as proposed by the parties, will be carried out with the requisite degree of certainty.

118. The monitoring trustee will carry out its tasks under the supervision of the Commission and is to be considered the Commission's 'eyes and ears'. It shall be the guardian that the business is managed and kept properly on a stand-alone basis in the interim period. The Commission may therefore give any orders and instructions to the monitoring trustee in order to ensure compliance with the commitments, and the trustee may propose to the parties any measures it considers necessary for carrying out its tasks. The parties, however, may not issue any instructions to the trustee without approval by the Commission.

[1] See paragraph 26 above for the question how shared assets have to be dealt with in commitments.

119. The Commitments will generally set out the tasks of the monitoring trustee. Its duties and obligations will be specified in detail in the trustee mandate, to be concluded between the parties and the trustee, and its tasks shall be further detailed in a work-plan. The tasks of the monitoring trustee will normally start immediately after the adoption of the Commission decision and last until the legal and actual transfer of the business to the approved purchaser. Five main, non-exhaustive tasks can be distinguished which the monitoring trustee should carry out under the supervision of the Commission:

— first, the monitoring trustee will be called upon to oversee the safeguards for the business to be divested in the interim period,

— second, in carve-out cases, the monitoring trustee has to monitor the splitting of assets and the allocation of the personnel between the divested business and retained businesses by the parties as well as the replication of assets and functions in the business previously provided by the parties,

— third, the monitoring trustee shall be responsible for overseeing the parties' efforts to find a potential purchaser and to transfer the business. In general, it shall review the progress of the divestiture process and the potential purchasers included in the process. It shall verify that potential purchasers receive sufficient information relating to the business — in particular by reviewing the information memorandum (if available), the data room or the due diligence process. Once a purchaser is proposed, the monitoring trustee shall submit to the Commission a reasoned opinion as to whether the proposed purchaser fulfils the purchaser requirements in the commitments and whether the business is sold in a manner consistent with the commitments. At the end of the process, the monitoring trustee has to oversee the legal and actual transfer of the business to the purchaser and make a final report, confirming the transfer,

— fourth, the monitoring trustee shall act as a contact point for any requests by third parties, in particular potential purchasers, in relation to the commitments. The parties shall inform interested third parties of the identity and the tasks of the monitoring trustee, including any potential purchasers. In case of disagreement between the parties and third parties in relation to matters dealt with by the commitments, the monitoring trustee shall discuss those matters with both sides and report to the Commission. In order to be able to carry out its role, the monitoring trustee will keep confidential any business secrets of the parties and third parties,

— fifth, the monitoring trustee shall report on these issues to the Commission in periodic compliance reports and shall also submit additional reports upon request by the Commission.

120. The commitments will also comprehensively set out the monitoring trustee's needs for support by and cooperation with the parties; the Commission will supervise the relationship between the parties and the trustee also in this respect. In order to fulfil its tasks, the trustee shall have access to books and records of the parties and of the divested business, insofar and as long as this is relevant for the implementation of the commitments, may ask for managerial and administrative support by the parties, shall be informed of potential purchasers and all developments in the divestiture process, and shall be provided with the information submitted to potential purchasers. In addition, the parties shall indemnify the trustee and allow the trustee to appoint advisors, if appropriate for the fulfilment of its tasks under the commitments. The commitments will also enable the Commission to share the parties' information with the monitoring trustee in order to allow the monitoring trustee to fulfil its tasks. The monitoring trustee will be bound to keep this information confidential.

Role of the divestiture trustee

121. As for the monitoring trustee, the parties have to propose to appoint a divestiture trustee in order to make the commitments submitted by them effective and allow the Commission to ensure that the modification of the notified concentration, as proposed by them, will be carried out. If the parties do not succeed in finding a suitable purchaser within the first divestiture period, then in the trustee divestiture period, the divestiture trustee will be given an irrevocable and exclusive mandate to dispose of the business, under the supervision of the Commission, within a specific deadline at no minimum price to a suitable purchaser. The commitments shall allow the divestiture trustee to include in the sale and purchase agreement such terms and conditions as it considers appropriate for an expedient sale, in particular customary representations, warranties and indemnities. The sale of the business by the divestiture trustee is in the same way subject to the prior approval of the Commission as the sale by the parties.

122. The commitments will set out that the parties shall support and inform the divestiture trustee and cooperate with the trustee in the same way as this is foreseen for the monitoring trustee. For the divestiture, the parties have to grant to the divestiture trustee comprehensive powers of attorney, covering all stages of the divestiture.

Approval of the trustee and the trustee mandate

123. Depending on the commitment, the monitoring trustee may or may not be the same person or institution as the divestiture trustee. The parties shall propose one or several potential trustees to the Commission, including the full terms of the mandate and an outline of a work-plan. It is of the essence that the monitoring trustee is in place immediately after the Commission decision. Therefore, the parties should propose a suitable trustee immediately after the Commission decision ([1]) and the commitments normally have to foresee that the notified concentration can only be implemented once the monitoring trustee is appointed, after being approved by the Commission ([2]). The situation is different for the divestiture trustee who should be appointed well ahead of the end of the first divestiture period ([3]) so that its mandate can take effect with the beginning of the trustee divestiture period.

124. Both types of trustees will be appointed by the parties on the basis of a trustee mandate, entered into by the parties and the trustee. The appointment and the mandate will be subject to the approval by the Commission which will have discretion in the selection of the trustee and will assess whether the proposed candidate is suitable for the tasks in the specific case. The trustee shall be independent of the parties, possess the necessary qualifications to carry out its mandate and shall not be, or become, exposed to a conflict of interests.

125. The Commission will assess the necessary qualifications in the light of the requirements of the specific case, including the geographic area and the sector concerned. According to the Commission's experience, auditing firms and other consulting firms may be particularly well placed to fulfil the tasks of a monitoring trustee. Individuals who have worked in the specific industry may also be suitable candidates for performing such a role if they have the necessary resources available to deal with the tasks at stake. Investment banks seem to be particularly suitable for the role of a divestiture trustee. The independence of the trustee is crucial in order to enable the trustee to properly fulfil its role of monitoring the parties' compliance for the Commission and to ensure its credibility *vis-à-vis* third parties. In particular, the Commission will not accept persons or institutions as trustees which are at the same time the parties' auditors or their investment advisors in the divestiture. However, no conflicts of interests will arise by relations of the trustee with the parties if those relations will not impair the Trustee's objectivity and independence in discharging its tasks. It is the parties' responsibility to supply the Commission with adequate information for it to verify that the trustee fulfils the requirements. The appointment of the trustee after approval by the parties is irrevocable unless the trustee is replaced with the approval of or upon request by the Commission.

126. The trustee mandate shall define the tasks as specified in the commitments further and shall include all provisions necessary to enable the trustee to fulfil its tasks under the commitments accepted by the Commission. The parties are responsible for remuneration of the trustee under the mandate, and the remuneration structure must be such as to not impede the trustee's independence and effectiveness in fulfilling the mandate. The Commission will approve a trustee only together with a suitable mandate. In appropriate cases, it may publish the identity of the trustee and a summary of its tasks.

127. When the specific commitments with which the trustee has been entrusted have been implemented — that is to say, when legal title for the business to be divested has passed, the assets have been actually transferred to the purchaser and specific arrangements which may continue post-divestiture have been fulfilled — the mandate will provide for the trustee to request the Commission for a discharge from further responsibilities. Even after the discharge has been given, it may be necessary for the Commission to require the reappointment of the trustee on the basis of the commitments, if it appears subsequently to the Commission that the relevant commitments might not have been fully and properly implemented.

([1]) Normally, the commitments should foresee that a monitoring trustee is proposed within two weeks of the date of the decision.

([2]) See Case COMP/M.4180 — GdF/Suez of 14 November 2006; Case COMP/M.4187 — Metso/Aker Kvaerner of 12 December 2006; Case COMP/M.3916 — T-Mobile/tele.ring of 20 April 2006.

([3]) The Commission will normally require an appointment at least one month ahead of the end of the first divestiture period.

5. **Obligations of the parties following implementation of the divestiture**

128. The Commitments also have to foresee that for a period of 10 years after the adoption of the decision accepting the commitments the Commission may request information from the parties. This will allow the Commission to monitor the effective implementation of the remedy.

6. **Implementation of other commitments**

129. Many of the principles discussed above for the implementation of divestiture commitments can equally be applied to other types of commitments if those commitments need to be implemented subsequent to the Commission decision. For example, if it is foreseen that the beneficiary of a licence needs to be approved by the Commission, the considerations regarding the purchaser approval can be applied. Given the wide range of non-divestiture commitments, no general and comprehensive requirements for the implementation of non-divestiture commitments can be set out.

130. However, given the long duration of non-divestiture commitments and their frequent complexity, they often require a very high monitoring effort and specific monitoring tools in order to allow the Commission to conclude that they will effectively be implemented. Therefore, the Commission will often require the involvement of a trustee to oversee the implementation of such commitments and the establishment of a fast-track arbitration procedure in order to provide for a dispute resolution mechanism and to render the commitments enforceable by the market participants themselves. In past cases, the Commission has often required both the appointment of a trustee and an arbitration clause [1]. In those circumstances, the trustee will oversee the implementation of the commitments, but will also be able to assist in arbitral proceedings to the effect that they may be finalised in a short period of time.

---

[1] Such an approach of combined monitoring by arbitration and a monitoring trustee was, e.g. used in Case COMP/M.2803 — Telia/Sonera of 10 July 2002; Case COMP/M.3083 — GE/Instrumentarium of 2 September 2003; and Case COMP/M.3225 — Alcan/Pechiney II of 29 September 2003.

Merger Guidelines

Foreword

The Australian Competition and Consumer Commission's (ACCC's) approach to merger assessment has evolved significantly since the ACCC last published analytical guidelines in the area of mergers in 1999. The changes in the ACCC's approach have been developed in line with international best practice, contemporary views on anti-trust analysis and the ACCC's experience since 1999. These revised guidelines have benefited from valuable input from the business and trade practices advisory community on an earlier draft, which was released for consultation in February 2008.

These revised guidelines outline the general principles underpinning the ACCC's merger analysis under s. 50 of the *Competition and Consumer Act 2010* (the Act), formerly the *Trade Practices Act 1974*. It is important to note that the approach taken in the revised guidelines is not radically different from the approach contained in the 1999 guidelines — the competition test is the same and analysis of the market and merger factors remains a vital element in merger assessment.

However, the approach to merger assessment has been developed with an increased emphasis on the competitive theories of harm and the effect of constraints, which facilitates a more integrated analysis. The changes to the guidelines do not represent a new approach by the ACCC but are rather a better reflection of the approach being undertaken by the ACCC to merger reviews.

The ACCC will continue to assess each merger on its merits according to the specific nature of the transaction, the industry and the particular competitive impact likely to result in each case. The general principles set out in these guidelines provide a framework within which mergers will be reviewed. Importantly, the application of those principles to different facts and situations may give rise to different results.

It is not possible for these guidelines to cover every issue or circumstance that may arise in a merger review. In practice, individual mergers involve a great variety of facts and situations, and the analysis of particular issues may need to be tailored to the specific circumstances of a merger or deal with competition issues not specifically considered in these guidelines. Therefore the ACCC proposes to apply the revised guidelines flexibly.

The ACCC's case-by-case approach to merger analysis is reflected in both the public competition assessments issued for mergers considered to be of major public interest and in the shorter summaries of reasons for merger decisions, which are available on the ACCC website for all public merger reviews. These guidelines, supplemented with the growing body of public competition assessments and reasons for decisions, should provide an enhanced level of predictability and certainty to merger parties, their advisers, the business community and the public.

1. Introduction

1.1. Mergers and acquisitions are important for the efficient functioning of the economy. They allow firms to achieve efficiencies, such as economies of scale or scope, and diversify risk across a range of activities. They also provide a mechanism to replace the managers of underperforming firms.

1.2. In the vast majority of mergers, sufficient competitive tension remains after the merger to ensure that consumers and suppliers are no worse off. Indeed, in many cases consumers or suppliers benefit from mergers. In some cases, however, mergers have anti-competitive effects. By altering the structure of markets and the incentives for firms to behave in a competitive manner, some mergers can result in significant consumer detriment.

Section 50 of the Act

1.3. Section 50 of the Act prohibits mergers that would have the effect, or be likely to have the effect, of substantially lessening competition in a market.

1.4. Section 50(3) requires the following non-exhaustive list of matters (or 'merger factors') to be taken into account when assessing whether a merger would be likely to substantially lessen competition:

(a) the actual and potential level of import competition in the market

(b) the height of barriers to entry to the market

(c) the level of concentration in the market

(d) the degree of countervailing power in the market

(e) the likelihood that the acquisition would result in the acquirer being able to significantly and sustainably increase prices or profit margins

(f) the extent to which substitutes are available in the market or are likely to be available in the market

(g) the dynamic characteristics of the market, including growth, innovation and product differentiation

(h) the likelihood that the acquisition would result in the removal from the market of a vigorous and effective competitor

(i) the nature and extent of vertical integration in the market.

1.5. These matters or 'merger factors' illuminate the policy intent underlying s. 50.[1] In particular, they highlight key potential constraints on a merged firm (for example, new entry and imports) and identify market characteristics that could potentially affect the impact of a merger on competition (for example, growth in demand, innovation or the level of vertical integration). Other factors not listed in s. 50 may also be relevant to a merger assessment.

Types of s. 50 merger assessments

1.6. Merger parties have two avenues available to have a merger considered and assessed:[2]

---

[1] Australia, House of Representatives 1992, *Debates*, vol. HR186, p. 2406.

[2] A reference to a 'merger' in these guidelines includes a proposed merger, unless the context otherwise specifies.

- the ACCC assesses the merger on an informal basis applying a substantial lessening of competition test or
- applicants apply to the ACCC for merger authorisation for a proposed acquisition which will be assessed under test outlined in paragraph 1.10.

1.7. As merger parties are not legally required to notify the ACCC of a merger, they also have the option of proceeding with the merger without seeking any regulatory consideration.[3] However, this will not prevent the ACCC from subsequently investigating the merger, including making public inquiries to assist its investigation and, if necessary, taking legal action. Proceeding without regulatory approval may put merger parties at risk of the ACCC or other interested parties taking legal action on the basis that the merger would have the effect, or be likely to have the effect, of substantially lessening competition in one or more substantial markets in contravention of s. 50.

Informal review

1.8. The informal review process enables merger parties to seek the ACCC's view on whether it will seek an injunction under s. 50 to stop a merger from proceeding. Information on the procedural aspects of informal clearances can be found in the ACCC's *Informal Merger Review Process Guidelines*.

1.9. If the ACCC forms the view that a merger proposal is likely to contravene s. 50, the merger parties may decide:

- not to proceed with the merger
- to provide a court enforceable undertaking to address ACCC concerns
- to apply to the ACCC for merger authorisation, or
- to proceed and defend court action under s. 50.

If the merger parties seek to proceed with the proposal, the ACCC can apply to the Federal Court of Australia for an injunction to prevent the merger from proceeding, as well as divestiture or penalties.[4]

Merger authorisation

1.10. Merger parties may also seek legal protection from court action under s. 50 by applying to the ACCC for merger authorisation. Pursuant to s. 90(7), the ACCC can grant merger authorisation if it is satisfied that either:

- the proposed acquisition would not be likely to substantially lessen competition or
- the likely public benefit from the proposed acquisition outweighs the likely public detriment.

1.11. Information on the procedural and analytical aspects of applications for merger authorisation are set out in the *Merger Authorisation Guidelines*.

[3] Parties may also seek a declaration from the Federal Court that the acquisition will not contravene s. 50.

[4] Other parties (such as customers, competitors or other interested parties) may also apply to the Federal Court for a declaration (that the acquisition will not contravene s. 50) and/or divestiture, and any person suffering loss or damage as a result of a merger that breaches s. 50 can apply for damages.

Types of mergers

1.12. As outlined in appendix 2, s. 50 applies to a wide variety of mergers and acquisitions. A ‘merger’ involves the shareholders of two companies becoming the shareholders of a new merged company. An ‘acquisition’ occurs when one company acquires a shareholding in, or the assets of, another company. Generally, when assessing its impact on competition, little turns on whether a transaction is, strictly speaking, a ‘merger’ or an ‘acquisition’. For convenience, these guidelines refer to ‘mergers’ and ‘merger parties’.

1.13. These guidelines discuss three types of merger — in each, the merger may involve firms that are either actual or potential competitors:

- horizontal mergers — involving actual or potential suppliers of substitutable goods or services
- vertical mergers — involving firms operating or potentially operating at different functional levels of the same vertical supply chain
- conglomerate mergers — involving firms that interact or potentially interact across several separate markets and supply goods or services that are in some way related to each other, for example, products that are complementary in either demand or supply.

1.14. Each type of merger has the potential to affect competition in a different way and will therefore be analysed differently. While some competition issues and theories of competitive harm are presented separately in these guidelines, the ACCC will adopt an approach tailored to the particular nature of the merger.

Acquisition markets

1.15. These guidelines focus on potential competition concerns in supply markets into which the merged firm supplies goods and services. However, there could also be competition concerns in acquisition markets in which the merged firm acquires goods and services. In particular, the merged firm may be able to depress the price paid for the inputs below their competitive price by restricting its purchase of those inputs. The ACCC will apply an approach to acquisition markets that is analogous to that set out in these guidelines for supply markets.

Purpose of these guidelines

1.16. These guidelines provide an outline of the broad analytical framework applied by the ACCC when assessing whether a merger is likely to substantially lessen competition under s. 50. These guidelines have been developed by the ACCC in relation to its functions under s. 50.

1.17. These guidelines are designed to provide reliable, comprehensive and detailed information that merger parties, the business community, their advisers and the public can draw on to:

- assess the likely level of scrutiny a merger will receive from the ACCC — in particular, guidance is provided on when merger parties should notify the ACCC of a merger (the threshold for notification is outlined in chapter 2)
- increase understanding of the application of s. 50
- assist in structuring (or restructuring) mergers to avoid raising competition concerns

- identify the types of information that will assist the ACCC to reach a view on how a merger is likely to affect competition — to make informed and timely decisions, the ACCC relies on the cooperation of the merger parties, customers, competitors, suppliers and any other persons or bodies holding relevant information
- identify the ACCC's broad approach to remedying possible anti-competitive mergers through undertakings (see appendix 3).

1.18. These guidelines do not have any legal force in determining whether a merger is likely to contravene the Act — final determination of the issues is a matter for the courts.

1.19. It is not possible for these guidelines to cover every issue or circumstance that may arise in a merger review. In practice, individual mergers involve a great variety of facts and situations, and the analysis of particular issues may need to be tailored to the specific circumstances of a merger or deal with competition issues not specifically considered in these guidelines. Therefore the ACCC will apply these guidelines flexibly and may adapt the framework to specific issues where appropriate.

1.20. These guidelines are supplemented by public competition assessments published by the ACCC. These competition assessments outline how the principles contained in the guidelines have been applied to specific mergers.

1.21. These guidelines replace the 1999 *Merger Guidelines*. They reflect the ACCC's analytical approach at the time of publication and may be revised periodically, as necessary, on the basis of new legal precedent, evolving insight and best practice. The latest version of the guidelines will be the version published on the ACCC website. In developing these guidelines, the ACCC has considered guidelines issued by overseas competition authorities and the work done by the International Competition Network.

Contact with the ACCC

Fax: (02) 6243 1212

2. Notification threshold

2.1. While there is no compulsory pre-notification requirement for mergers in Australia, it is recommended that certain mergers that may be subject to the Act (see appendix 2) be voluntarily notified to the ACCC for review, well in advance of completion.

2.2. To assist merger parties and their advisers to determine whether they should notify the ACCC, the ACCC has developed a notification threshold, outlined below. This threshold has been established by the ACCC to filter and thereby limit the merger reviews it conducts to those mergers which, in its view, may potentially raise competition concerns. The notification threshold is set at a level that reflects the ACCC's experience in determining which mergers are more likely to raise competition concerns and therefore require further investigation.[5]

2.3. If merger parties believe their merger proposal will meet the notification threshold, they are encouraged to approach the ACCC on a confidential and informal basis as soon as there is a real likelihood that the merger may proceed to discuss possible competition issues and options for having the matter considered.

2.4. Merger parties are also encouraged to approach the ACCC where the ACCC has indicated to a firm or industry that notification of mergers by that firm or in that industry would be advisable.

2.5. Parties may choose to seek informal review or merger authorisation from the ACCC. The informal review process provides flexibility in terms of timeframes, information requirements and confidentiality, while the merger authorisation process has mandated timeframes and transparency requirements.

2.6. If mergers that raise competition concerns are not notified to the ACCC in adequate time for it to conduct a review, the ACCC may seek to use its formal information-gathering powers and/or injunctive relief, to enable it to properly consider such mergers to ensure no anti-competitive harm arises.

2.7. Mergers that fall outside the notification threshold will rarely require investigation by the ACCC. However, the notification threshold is indicative only. It is intended to provide a starting point for identifying those mergers that may raise competition concerns and therefore require investigation in accordance with these guidelines. Importantly, the notification threshold should not be confused with the concentration threshold (set out in chapter 7) which the ACCC has regard to as part of an overall assessment of whether a merger is likely to substantially lessen competition under s. 50.

2.8. As market shares are an imprecise indicator of likely competition effects, a merger that does not meet the notification threshold may still raise competition concerns. The ACCC may therefore investigate such mergers, even if they have not been notified to it.

2.9. For simplicity, the notification threshold is based on market shares. The calculation of market shares depends critically on market definition. If there is uncertainty as to the relevant market, it is preferable that market shares be calculated on the basis of the market definition most likely to raise competition concerns. This will usually mean

[5] The ACCC determined the level of the notification threshold based on an analysis of all previous merger reviews where the ACCC released a statement of issues. A statement of issues is released by the ACCC where, after an initial assessment, it believes the merger requires further detailed assessment. The notification threshold is based on the market shares of the merged firm in matters that proceeded to this stage.

adopting a conservative rather than broad definition of the market, unless doing so would reduce or eliminate the overlap between the merger parties.

Notification threshold

Merger parties are encouraged to notify the ACCC well in advance of completing a merger where both of the following apply:

- the products of the merger parties are either substitutes or complements
- the merged firm will have a post-merger market share of greater than 20 per cent in the relevant market/s.

3. The competition test

3.1. Competition is a state of ongoing rivalry between firms — rivalry in terms of price, service, technology and quality. Market participants are mutually constrained in their pricing, output and related commercial decisions to some extent by the activity of other market participants (or potential market participants). In other words, the greater the degree of competition in a market, the less market power each market participant will possess.

3.2. Mergers can alter the level of competition in a market. Some mergers enable the merged firm to meet customer demand in a way that facilitates more intense competition. Many mergers do not affect the level of competition at all because there are sufficient substitution possibilities to effectively constrain the merged firm.

3.3. Other mergers, however, lessen competition by reducing or weakening the competitive constraints or reducing the incentives for competitive rivalry.[6] Mergers that increase the market power of one or more market participants may be detrimental to consumers because they may lead to an increase in price, or deterioration in some other aspect of the service offering (see the text box below) — the level of market power will be dependent on whether alternative actual or potential supply options are available post-merger to effectively constrain the merged firm. If market structure and circumstances mean that there is limited potential for alternative supply options or substitution possibilities to constrain the merged firm, then it will be profitable for the merged firm to raise prices despite the potential for lost sales to alternative suppliers.

3.4. Further, mergers that increase market power may decrease economic efficiency (because transactions at the margin are deterred) thereby reducing gains from trade and total welfare.

Market power and increases in price

The most obvious and direct manifestation of an increase in market power is the ability of one or more firms to profitably raise prices post-merger for a sustained period. Market power can, however, be exercised in other ways. For example, a firm with market power may:

- lower the quality of its products without a compensating reduction in price
- reduce the range or variety of its products
- lower customer service standards, and/or
- change any other parameter relevant to how it competes in the market.

While the exact nature of competitive detriment caused by a merged firm's increased market power will vary depending on the particular circumstances of the matter, the ACCC often characterises an increase in market power as the ability to raise prices. References to 'raising prices' in these guidelines should therefore be read as implicitly incorporating the exercise of market power in other non-price ways.

[6] For convenience the guidelines refer to any increase in market power as accruing to sellers in a relevant market. A merger can also lead to a substantial lessening of competition among buyers in a market. In such a situation, the increased market power of a buyer may enable it to profitably reduce prices or otherwise engage in behaviour that is detrimental to suppliers.

Substantial lessening of competition

3.5. Not all mergers that lessen competition are prohibited by s. 50 of the Act; only those that lessen competition **substantially** are prohibited.[7] The term 'substantial' has been variously interpreted as meaning real or of substance,[8] not merely discernible but material in a relative sense[9] and meaningful.[10] The precise threshold between a lessening of competition and a substantial lessening of competition is a matter of judgement and will always depend on the particular facts of the merger under investigation. Generally, the ACCC takes the view that a lessening of competition is substantial if it confers an increase in market power on the merged firm that is significant and sustainable. For example, a merger will substantially lessen competition if it results in the merged firm being able to significantly and sustainably increase prices.

3.6. The level at which an increase in market power is likely to become significant and sustainable will vary from merger to merger. For example, an increase in price that is very small in magnitude might also be significant. The ACCC considers that firms would generally be deterred from instituting a price increase, or only be able to institute it for a transitory period, where effective competitive constraints exist or where constraints are likely to become effective within a period of one to two years.

3.7. In some markets, particular characteristics, such as the prevalence of certain types of long-term contracts between buyers and sellers, may prevent a merged firm from exercising any market power it gains through the merger until some point in the future — for example, at contract renewal. If the exercise of market power is likely to be delayed in this way, the ACCC will focus on the period commencing at the point where market power would be exercised (for example, at contract negotiations).

3.8. As outlined in chapter 4, a substantial lessening of competition must arise in a market to contravene s. 50. However, this does not imply that a lessening of competition must apply to the entire market or to all aspects of competition in the relevant market.[11]

Competitive constraints and the 'merger factors'

3.9. In assessing whether a merger is likely to result in a significant and sustainable increase in market power, the ACCC must consider each of the 'merger factors' set out in s. 50(3) as well as any other relevant factors (see paragraph 1.4). These merger factors provide insight as to the likely competitive pressure the merged firm will face following the merger and the possible competitive effects of the merger. The assessment of the competitive effects is based on the theories of competitive harm — namely, unilateral and coordinated effects. Mergers result in unilateral and/or coordinated effects when they weaken or remove the competitive pressure on firms in a market. In cases where unilateral and/or coordinated effects amount to a significant and sustainable increase in the market power of the merged firm and/or other firms in a market, the merger is likely to substantially lessen competition in contravention of the Act.

---

[7] Under s. 4G, a lessening of competition includes, but is not limited to, preventing or hindering competition. Mergers likely to have the effect of substantially preventing or hindering competition are therefore also prohibited by s. 50.

[11] *Dandy Power Equipment Pty Ltd v Mercury Marine Pty Ltd* (1982) ATPR 40–315 at 43,888.

3.10. The merger factors cover a broad range of possible actual and potential competitive constraints[12] faced by the merged firm — some assist in identifying the presence of direct constraints[13] while others provide insight into less direct forms of constraint relating to either the structure and characteristics of the market[14] or the behaviour of actual and potential participants in a market.[15]

3.11. The ACCC recognises that competitive constraints are not static and strategic behaviour by market participants can affect competition. The significance of the merger factors, and the weight that is placed on them, will depend on the actual matter under investigation.

3.12. The likely presence of effective competitive constraints post-merger is a key indicator that a merger is unlikely to result in a substantial lessening of competition. While all the merger factors must be taken into consideration, it may not be necessary for all factors to indicate that the merged firm would face effective competitive constraints. In some cases a single effective constraint can be sufficient to prevent a significant and sustained increase in the market power of the merged firm, while in other cases the collective effect of several constraints may be required. Conversely, the absence of a single particular constraint is unlikely to be indicative of an increase in market power as a result of a merger.

3.13. Unilateral and coordinated effects are discussed in chapters 5 and 6 of these guidelines, while chapter 7 sets out in more detail the relevance of each merger factor in deciding whether a merger is likely to result in a substantial lessening of competition in a market.

The forward-looking nature of the competition test

3.14. Section 50 requires a forward-looking analysis into the effects or likely effects of a merger, since analysis is generally conducted before the impact of a merger on competition can be observed. The ACCC therefore focuses on the foreseeable future (generally within one to two years) when considering market definition and each of the merger factors to determine whether a substantial lessening of competition is likely to occur. This raises a number of issues.

Likely effect

3.15. Mergers are prohibited under s. 50 if they would have the effect, or be **likely** to have the effect, of substantially lessening competition. Clearly a substantial lessening of competition must be more than speculation or a mere possibility for it to be likely, but it does not need to be a certainty. Importantly, a substantial lessening of competition need not be 'more probable than not', for the merger to contravene s. 50. Mergers are prohibited when there is a 'real chance' that a substantial lessening of competition will occur. However, a 'mere possibility' would be insufficient.[16] Ultimately, the determination of whether a substantial lessening of competition is likely will depend on the facts of the particular matter.

[12] In these guidelines, the term 'competitive constraints' refers to both actual and potential competitive constraints.

[13] For example, the level of actual and potential imports, the height of barriers to entry, the degree of countervailing power and the availability of substitutes.

[14] For example, the dynamic characteristics of the market, the level of concentration in the market, and the nature and extent of vertical integration.

[15] For example, the likelihood that the acquirer would be able to significantly and sustainably increase prices or profit margins, whether the acquisition will result in the removal of a vigorous and effective competitor and other relevant factors.

[16] *Australian Gas Light Company (ACN 052 167 405) v Australian Competition and Consumer Commission (No 3)* [2003] FCA 1525, at [348].

With and without test

3.16. Merger analysis requires comparing likely future states — the future **with** the merger and the future **without** the merger. This comparison isolates the merger's impact on competition. For this reason, the competition test in s. 50 is sometimes referred to as a future 'with and without' test.[17]

3.17. The likely future state of competition without the merger (the counterfactual) will generally be similar to the state of competition prevailing at the time of the merger. However, in some cases taking the state of competition prevailing at the time of the merger as the benchmark for analysis could risk attributing a change in the level of competition to a merger, when the real cause is some other development that is unrelated to the merger and likely to occur regardless of the merger. Focusing on the state of competition prevailing at the time of the merger might also disguise a substantial lessening of competition in situations where a merger hinders or prevents competition that would otherwise have emerged.

3.18. The ACCC therefore uses information about the state of competition prevailing at the time of the merger to inform its assessment of the likely future state of competition without the merger. This applies to market definition and all the merger factors outlined in chapter 7. It also applies to likely developments involving the merger parties — in particular, mergers involving firms that are likely to be more effective competitors in the future and those involving failing firms.

3.19. However, the ACCC will not take into account counterfactuals it considers have been manipulated for the purposes of making clearance more likely. Signs that a counterfactual may have been manipulated include:

- a change of policy or intention by the merger parties that occurs after the merger is proposed
- any course of action by the merger parties which cannot be demonstrated to be profit maximising and/or in the interests of shareholders (for example, refusing to sell the business to a strong competitor if the proposed merger does not proceed).

Expected competition

3.20. The state of competition prevailing at the time of a merger will **understate** the future state of competition without the merger in situations where the merger parties are not presently constraining one another but would be likely to constrain one another in the foreseeable future. For example, the target firm may be on the verge of entering the relevant market or may already operate in the relevant market but be likely within the next one to two years to benefit from new technology or intellectual property that would enhance its competitiveness with the acquiring firm. Alternatively, if it can be established with strong and credible evidence that, in the absence of the merger, a particular alternative firm would acquire the target, the relevant counterfactual may involve a competitive outcome that differs from the status quo. The ACCC notes that such circumstances are likely to be rare.

3.21. As specified in s. 4G of the Act, a lessening of competition includes preventing or hindering competition. Mergers likely to eliminate the prospect of more aggressive competition in the future may therefore result in a substantial lessening of competition.

---

[17] See, for example, *Australian Gas Light Company (ACN 052 167 405) v Australian Competition and Consumer Commission (No 3)* [2003] FCA 1525, at [352].

The following are examples of the types of information the ACCC may require to assess whether the merger parties are likely to be effective competitors in the relevant market in the future:

- board papers and internal plans demonstrating that the target firm has the capability and intention to vigorously compete in the future
- evidence of vigorous entry in the past that may be replicated on a broader scale
- evidence of similar successful entry in other markets either in Australia or overseas.

The range and extent of information and documents required by the ACCC will be assessed on a case-by-case basis and will depend on the complexity of the matter and the potential competition concerns raised.

Failing firms

3.22. The state of competition prevailing at the time of a merger will overstate the future state of competition without the merger in situations where one of the merger parties is likely to exit the market in the foreseeable future (generally within one to two years). In such situations, the merger party that is likely to exit is referred to as a 'failing firm'. Although the likely state of competition with the merger may be substantially less than the state of competition prevailing at the time of the merger, the relevant test is whether the future state of competition with the merger would be substantially less than the future state of competition without the merger (where the firm fails).

3.23. Mere speculation that the target firm will exit in the near future or evidence of a recent decline in profitability is insufficient to establish that an absence of competition between the merger parties is the counterfactual. In general, to demonstrate that a merger will not substantially lessen competition due to the prospective failure of one of the merger parties, it is necessary to show that:

- the relevant firm is in imminent danger of failure and is unlikely to be successfully restructured without the merger
- in the absence of the merger, the assets associated with the relevant firm, including its brands, will leave the industry
- the likely state of competition with the merger would not be substantially less than the likely state of competition after the target has exited and the target's customers have moved their business to alternative sources of supply.

4. Market definition

4.1. Section 50 of the Act requires that a substantial lessening of competition occur in a substantial market for goods and services in Australia, or a state, territory or region of Australia.[18] Accordingly, in assessing whether a merger substantially lessens competition, the ACCC will examine the competitive impact of the transaction in the context of the markets relevant to the merger.

4.2. Market definition establishes the relevant 'field of inquiry' for merger analysis, identifying those sellers and buyers that may potentially constrain the commercial decisions of the merger parties and the merged firm, and those participants, particularly customers, that may be affected if the merger lessens competition.

4.3. While market definition is a useful tool for merger analysis, by itself it cannot determine or establish a merger's impact on competition. Accordingly, market definition should not obscure factors relevant to competition that fall outside the relevant markets. Similarly, there is no presumption that other firms within a relevant market necessarily provide an effective competitive constraint on the merged firm. Other factors also relevant to merger analysis are outlined in chapters 5, 6 and 7.

4.4. It is rarely possible to draw a clear line around fields of rivalry. Indeed, it is often possible to determine a merger's likely impact on competition without precisely defining the boundaries of the relevant market. For example, if the consolidation of the merger parties' activities is unlikely to substantially lessen competition in a narrow product and geographic area, then it is also unlikely to do so in a more broadly defined product and geographic area and, therefore, a conclusive view on the relevant market may not be necessary. Similarly, when a merger is likely to substantially lessen competition in any number of potential markets, it may be unnecessary to define the precise market boundaries.

4.5. This chapter explains the concept of a market and the ACCC's approach to identifying and defining the scope of markets that are relevant to assessing a merger under s. 50 of the Act.

The concept of a market

4.6. A market is the product and geographic space in which rivalry and competition take place.

4.7. Section 4E of the Act provides that a market includes goods or services that are substitutable for, or otherwise competitive with, the goods or services under analysis. Accordingly, substitution is key to market definition.

4.8. The ACCC focuses on two key dimensions of substitution in characterising markets: the product dimension[19] and the geographic dimension. In some cases, market definition requires close attention to the functional levels of the supply chain that are relevant to a merger or the particular timeframe over which substitution possibilities should be assessed. Generally, however, these functional and temporal considerations form part of the product and geographic dimension analysis. Consistent with the forward-looking nature of merger analysis, the ACCC focuses on the foreseeable future when considering the likely product and geographic dimensions of a market.

[18] Section 50(6).

[19] The term 'product' encompasses both goods and service for the purpose of discussion in these guidelines.

4.9. Market definition is purposive, which means that the definition of a relevant market cannot be separated from the particular merger under investigation. Market definition always depends on the specific facts and circumstances of a merger, and current evidence from market participants will often be critical. Decisions relating to market definition in previous, albeit similar, merger inquiries will provide only limited guidance.

The ACCC approach to defining a market

4.10. The ACCC's starting point for delineating relevant markets to assess a merger under s. 50 of the Act is identifying the products and geographic regions actually or potentially supplied by the merger parties.[20] The ACCC then focuses on defining markets in areas of activity where competitive harm could occur. This must be assessed on a case-by-case basis. Generally, the ACCC focuses on overlaps between the products or geographic regions supplied by the merger parties, or some other meaningful economic relationship — such as an actual or potential vertical relationship or where the products supplied by the merger parties are complementary in nature. It is not uncommon for more than one market to be identified in any particular merger review.

4.11. The ACCC then considers what other products and geographic regions, if any, constitute relevant close substitutes in defining the market.[21] Importantly, the ACCC defines markets by reference to products and regions not by reference to the firms actually supplying those products or regions at the time of the merger.

Substitution

4.12. As outlined above, identifying relevant substitutes is key to defining a market. Substitution involves switching from one product to another in response to a change in the relative price, service or quality of two products (holding unchanged all other relevant factors, such as income, advertising or prices of third products). Market definition begins by selecting a product supplied by one or both of the merger parties in a particular geographic area and incrementally broadening the market to include the next closest substitute until all close substitutes for the initial product are included.

4.13. There are two types of substitution: demand-side substitution, which involves customer-switching; and supply-side substitution, which involves supplier-switching.

Demand-side substitution

4.14. Whether or not a product or region is a close substitute for a product supplied by one or more of the merger parties, depends on likely switching behaviour in response to an increase in the price, or decrease in the service or quality of that product. The likelihood that a product (or group of products) will be a **demand-side** substitute for a product of one of the merger parties will be assessed according to:

- the characteristics or functions of the product (the **product** dimension of a market). Comparable product characteristics and functionality will often be indicative but are not sufficient to determine whether products are demand-side substitutes. Demand-side substitution depends on the willingness of customers to switch from one product to another in response to a price increase

[20] There need not be trade in a product for a separate market to exist — the potential for exchange can be sufficient. See, for example, *Queensland Wire Industries Pty. Ltd v The Broken Hill Proprietary Company Limited & Anor* [1989] HCA 6; (1989) 167 CLR 177 F.C. 89/004; ATPR 40–925, Deane J at p. 50,013 (ATPR).

[21] Note: there are some circumstances where the approach to market definition does not depend solely on the analysis of substitution possibilities. Some of these circumstances are discussed in paragraphs 4.41 to 4.44.

- the availability of the product for purchase, and use, at the present location of the merger party's customers, or within a wider geographic area (the **geographic** dimension of a market). Demand-side substitution depends on the willingness of customers to switch from a product supplied in one location to the same product supplied in another location in response to a price increase.

4.15. It will often be possible on the demand-side, in some degree, to substitute a wide variety of products in various geographic regions for the products of the merger parties. Not all of these substitutes will be included in the relevant market. For instance, some customers might view seemingly remote products as substitutes under some circumstances. This simply illustrates that an economy is essentially 'a network of substitution possibilities'.[22]

4.16. On the other hand, substitution does not have to be complete or instantaneous, and products do not have to be 'perfect' substitutes to form part of the same market. To be included in the relevant market, the ACCC's view is that a product in a particular geographic region (or a group of products or regions) must be a close substitute in demand.

4.17. A product in a particular geographic region (or a group of products or regions) is a close demand-side substitute if a significant proportion of sales would be likely to switch in response to a small but significant increase in the price of the merger party's product, quickly and without significant switching costs. In cases where only a small proportion of sales is likely to switch, the ACCC's view is that the alternative product or geographic region (or group of alternative products or regions) is not part of the relevant market.

4.18. Qualitative and quantitative information may be requested from the merger parties and market participants to examine substitution possibilities. The ACCC draws on the conceptual framework provided by the hypothetical monopolist test (HMT) to define the relevant markets, particularly in relation to demand-side substitution.

The hypothetical monopolist test

4.19. The HMT determines the smallest area in product and geographic space within which a hypothetical current and future profit-maximising monopolist could effectively exercise market power. In general, the exercise of market power by the hypothetical monopolist is characterised by the imposition of a small but significant and non-transitory increase in price (SSNIP) above the price level that would prevail without the merger, assuming the terms of sale of all other products are held constant.

4.20. The process of applying the HMT starts with one of the products and geographic areas supplied by one or both of the merger parties. If a hypothetical monopolist supplier of this product cannot profitably institute a SSNIP because of customers switching to alternative products, the next closest demand substitute is added. If a hypothetical monopolist supplier of this extended group of products cannot profitably institute such a price increase because of customers switching to alternative products, the next best substitute is added. The collection of products is expanded until a hypothetical monopoly supplier of all those products could profitably institute a SSNIP.

4.21. A SSNIP in the context of the HMT usually consists of a price rise for the foreseeable future of at least 5 per cent above the price level that would prevail without the merger.

[22] *Re Tooth & Co. Ltd* (1978) ATPR 40-065, in *Re Tooheys Ltd* (1979), ATPR 40–113, at pp. 18,196–18,197.

4.22. While the HMT is a useful tool for analysis, it is rarely strictly applied to factual circumstances in a merger review because of its onerous data requirement. Consequently, the ACCC will generally take a qualitative approach to market definition, using the HMT as an 'intellectual aid to focus the exercise'.[23]

Supply-side substitution

4.23. In defining the product and geographic dimensions of the market the ACCC will also consider supply-side substitutes. A product (or group of products) may be a **supply-side** substitute for a product of one of the merger parties if in response to an increase in the price of the product:

- the production facilities and marketing efforts used for that product can be switched quickly and without significant investment to supply a demand-side substitute for the product of the merger party (the product dimension of the market)
- the distribution network used by the product can be modified quickly and without significant investment to supply the merger party's customers at their present location or within a distance they would likely travel (the geographic dimension of a market)
- it would be profitable for the current suppliers of the product to make these changes — that is, the profits earned on the assets in their current use would be less than if they were switched to supply a demand-side substitute for the product of the merger party.

4.24. The ACCC will treat one product as a supply-side substitute for another in cases where all (or virtually all) of the capacity for producing that product could profitably be switched to supply an effective substitute to the other product quickly and without significant investment in response to a price increase.

4.25. For some products, only a proportion of total supply capacity could feasibly be switched quickly and at minimal cost (for example, because firms producing this product use different technologies). In these cases, the capacity that could be switched will be considered as potential new entry when conducting the competition analysis rather than included in the market definition.

4.26. While a distinction is made between supply-side substitution and new entry for market definition purposes, the relevant consideration in establishing a substantial lessening of competition is the degree of competitive constraint imposed on the merged firm by either firms in the market or new entrants.

Useful information in identifying demand-side and supply-side substitutes

4.27. The ACCC relies on information from the merger parties and third parties to identify and assess the strength of substitution possibilities.

Identifying products that may be close substitutes

The following are examples of the types of information the ACCC may require to identify close substitutes of the relevant product:

- the function or end use of the product
- physical and technical characteristics of the product

[23] *Seven Network Limited v News Limited* [2007] FCA 1062, at [1786].

- costs of switching purchases between the product and potential substitutes
- views and past behaviour of buyers regarding the likelihood of substitution between products
- evidence of buyers switching to other products in response to price increases in the recent past
- evidence of producers redeploying their production capacity in response to price increases in the recent past
- costs of switching production and distribution systems from another product line to a product that is closely substitutable with the relevant product
- views, business records and past behaviour of suppliers of the relevant products regarding the impact of price and marketing decisions by suppliers of potential substitute products on their own pricing and marketing decisions
- relative price levels and price movements of the product compared to potential substitutes.

In an informal merger review, providing a base level of information to the ACCC will, in non-controversial cases, usually be sufficient to satisfy the ACCC of whether or not a substantial lessening of competition is likely. Whether a wider range of information will be required by the ACCC will be assessed on a case-by-case basis and will depend on the complexity of the matter and the potential competition concerns raised.

Identifying geographic regions that may be close substitutes

The following are examples of the types of information the ACCC may require to identify close substitutes of the relevant geographic region:

- the portability of the relevant product as determined by its perishability, weight, etc.
- transportation costs to move the relevant product between regions (particularly the transportation costs as a proportion of total value of the product)
- the costs to customers of obtaining supply from alternative regions
- any limitations on the ability of customers to access alternative sources of supply in alternative regions
- the costs of extending or switching production and distribution systems to supply the customers in alternative regions
- any regulatory or other practical constraints on suppliers selling to alternative regions
- records relating to trade flows and the actual movement of customers and/or suppliers between geographic regions, especially related to changes in relative prices across regions in the recent past
- views and business records of buyers and suppliers regarding the likelihood of switching between geographic sources of supply
- the relative price levels and price movements of different geographic sources of supply.

In an informal merger review, providing a base level of information will, in non-controversial cases, usually be sufficient to satisfy the ACCC of whether or not a substantial lessening of competition is likely. Whether a wider range of information will be required by the ACCC will be assessed on a case-by-case basis and will depend on the complexity of the matter and the potential competition concerns raised.

Substantial market in Australia, a state, territory or region of Australia

4.28. Section 50(6) of the Act states that 'market' means a substantial market in Australia, or in a state, a territory or a region of Australia.

4.29. The ACCC's view is that the substantiality criteria could be satisfied in many ways including by reference to the size of the market in terms of number of customers, total sales or geographic size. A market that is 'small' in some sense may still be substantial.

4.30. In particular, substantiality of a market is not necessarily related to geographic size. A market may be small geographically (for example, a local market) but may also be substantial within the region in which it is located. Alternatively, a market for the supply of a product that is an essential but small ingredient in the production of one or more other products sold in large markets may be considered substantial.

4.31. Section 50(6) also states that 'market' means a market for goods or services in Australia, or in a state, a territory or region of Australia. In addition, s. 4E specifies that 'market' is a market in Australia. The ACCC's view is that this does not preclude it from analysing a merger proposal in the context of a geographically broader market — for example, a trans-Tasman market or even a global market — provided that at least some part of it is located in Australia.[24] In most cases the ACCC will define the relevant market to be Australia or a part of Australia, and take full account of any competitive constraint provided by suppliers located outside Australia when considering import competition (as required by the merger factors — see paragraphs 7.33 to 7.37).

Issues that may arise in market definition

Asymmetric substitution

4.32. Substitution possibilities are not necessarily symmetric. Asymmetric demand-side substitution occurs when substitution between two products only occurs in one direction. For example, buyers of luxury cars may substitute to more 'standard' cars in response to an increase in the price of luxury cars, but the opposite may not be the case. Asymmetric supply-side substitution may occur when one group of suppliers has the same production facilities as another group of suppliers, but also has additional facilities for supplying a slightly different good or service. For example, suppliers of scheduled travel services might be able to redeploy their facilities to provide charter travel services, but suppliers of charter travel services might face significant investment or obstacles to supply scheduled travel services (such as building terminal facilities).

Product differentiation

4.33. Market definition establishes the boundaries for competitive analysis but within those boundaries the degree of substitution can vary. Indeed it is extremely rare for a uniform level of substitution to exist across all products, services or regions within a relevant market. For example, products that serve similar functions may be differentiated rather than homogenous. Product differentiation often limits substitution at the margins because certain customers do not view differentiated products as comparable. For example, brand loyalty may limit the extent of both demand- and

[24] See, for example, *Riverstone Computer Services Pty Limited v IBM Global Financing Australia Limited* [2002] FCA 1608, at [21].

supply-side substitution. However, it is important to note that differentiated products may still be part of the same market.

4.34. The extent to which product differentiation affects the constraint provided by actual or potential competitors in the market is taken into account when assessing the competitive effects of a merger (often by reference to different 'segments' of the market). While a substantial lessening of competition must arise in a market to contravene s. 50, this does not imply that the lessening of competition must apply to the entire market or to all aspects of competition in the relevant market.[25]

Discrimination and captive customers

4.35. In certain cases where substitution possibilities are not uniform across consumer groups, it may be appropriate to define separate markets for different consumer groups. For example, some consumers may view two products to be highly substitutable while other consumers may consider the products to be, at best, weak substitutes. In such situations, the relative number and importance of each customer class and the ability of suppliers (including the merger parties) to discriminate between the customer classes will be important when determining the appropriate product and/or geographic dimension of the market.

4.36. The ability of suppliers to discriminate between customer classes will depend on their ability to:

- distinguish between those customers that have the option of substitution and those who lack that option
- prevent resale or arbitrage between the customer classes.

4.37. If suppliers can discriminate, a customer that has limited substitution possibilities receives different terms and conditions from suppliers to a customer that has strong substitution possibilities. In this situation it may be appropriate to consider two separate markets for merger analysis. One market would include the relevant product and the alternative product, and would focus on those consumers who have the option of substitution. The second market would not include the alternative product and would focus on those consumers who are 'captive' or do not have the option of substitution.

4.38. If suppliers are unable to discriminate between customer classes, they will provide similar, if not identical, prices and levels of service to each customer, regardless of their substitution possibilities. In this situation, there are unlikely to be multiple markets based on different customer classes. Customers that are unable to substitute to the alternative product would be protected to the extent that suppliers cannot distinguish them from customers that are able to switch.

Indirect substitution

4.39. In some limited circumstances, a relevant market may include products that are only indirect substitutes for a product of one of the merger parties (that is, a substitute for a substitute of the relevant product). Indirect substitution occurs when there is a 'chain' of products in the product dimension or a 'chain' of regions in the geographic dimension. There are at least three significant limitations on the extent to which an indirect substitute can provide an alternative to the product or region under investigation and thereby be included in the relevant market:

---

[25] *Dandy Power Equipment Pty Ltd v Mercury Marine Pty Ltd* (1982) ATPR 40–315, at 43,888.

- chains of substitution often have a break such that products on one side of the break are not close substitutes for those on the other side of the break (for example, breaks caused by obstacles to travel)
- as a chain of substitution expands, the proportion of customers that can switch to neighbouring links in the chain (marginal customers) will tend to decrease and at some point a hypothetical monopolist controlling the chain would find a SSNIP profitable regardless of those switching customers
- where price discrimination is possible, a market may be limited to the captive customers at the centre of a chain or circle of substitution.

4.40. While analysis depends on the particular circumstances under examination, in general, the further removed from the product or region under investigation, the less likely it is that an indirect substitute will be included in the relevant market. The ACCC draws on whatever quantitative and qualitative information is available to determine the boundary of a market where chains of substitution exist.

Integration and aggregation[26]

4.41. The purposive nature of market definition can require the product or geographic dimension of a market to be extended beyond what can be substituted for products of the merger parties to include other **functional** levels in the vertical supply chain or other products that are typically purchased or supplied together with those of the merger parties.

4.42. Where merger parties are vertically integrated or compete against vertically integrated firms, the ACCC must determine whether competition analysis is best conducted in the context of one relevant market encompassing the whole vertical supply chain or a series of separate markets each comprising one or more stages of the chain. This delineation depends on the economics of integration. Importantly, there need not be trade between the relevant stages of the vertical supply chain for there to be separate markets — the potential for exchange can be sufficient.[27] However, where there are overwhelming efficiencies of vertical integration between two or more stages in the vertical supply chain, the ACCC will define one market encompassing all those stages.

4.43. To define the relevant markets where vertical integration exists, the ACCC considers, among other things:

- the actual patterns of exchange between firms at different vertical levels
- the split between internal transfers of each relevant product and third party transactions
- the costs involved in trading the product between firms at different vertical levels
- any obstacles to trade between firms at different vertical levels
- any assets or specialisation required to supply each product within the vertical chain.

4.44. In some cases, a product that the merger parties supply is part of a package of several distinct products that are generally purchased or supplied together. Such

---

[26] This includes considerations that have hitherto been categorised as the ‘functional dimension’ of the market. In practice, issues relating to integration and aggregation tend to inform the appropriate product and geographic characterisation of the market.

[27] *Queensland Wire Industries Pty Ltd v The Broken Hill Proprietary Company Limited & Anor* [1989] HCA 6; (1989) 167 CLR 177 F.C 89/004; ATPR 40-925, Deane J at p. 50,013(ATPR).

products may belong to several separate disaggregated markets and/or one aggregated market consisting of a suite of goods and services generally supplied together (sometimes referred to as a ‘cluster market’). To define the relevant markets in these cases, the ACCC considers, among other things:

- the split between products purchased or supplied separately, and products purchased or supplied together
- the costs involved in purchasing or supplying the product separately
- any obstacles to purchasing or supplying the product separately
- any assets or specialisation required to supply each product.

5. Unilateral effects

5.1. One of the main ways in which mergers can lessen competition is through unilateral effects. Mergers have unilateral effects when they remove or weaken competitive constraints in such a way that the merged firm's unilateral market power is increased. That is, as a result of the merger the merged firm finds it profitable to raise prices, reduce output or otherwise exercise market power it has gained, and can do so, even given the expected response of other market participants to the resulting change in market conditions.[28]

5.2. Where unilateral effects occur, other market participants' responses may vary. In some situations other market participants may respond in a pro-competitive way and (at least partially) attempt to offset the merged firm's behaviour. Alternatively, it may be more profitable for other market participants to simply support the merged firm's conduct — for example, if a merged firm exercises unilateral market power by raising the price of its products, other firms supplying substitutes may respond by also raising their prices, thereby exacerbating the competitive impact of the unilateral exercise of market power. As this example illustrates, a unilateral exercise of market power may make it profitable for both the merged firm and its competitors to raise prices.

5.3. In determining whether unilateral effects arise and whether they are likely to result in a substantial lessening of competition, the ACCC considers all of the merger factors contained in s. 50(3) of the Act and any other relevant factors. In particular, it considers whether the broader actual and potential competitive constraints — such as new entrants, imports or countervailing power — will limit any increase in the unilateral market power of each remaining market participant. These factors are discussed in more detail in chapter 7.

5.4. Although horizontal, vertical and conglomerate mergers can all potentially give rise to unilateral effects, it is recognised that vertical and conglomerate mergers are generally less likely than horizontal mergers to raise competition concerns. Since much of the general guidance on horizontal mergers is also relevant to vertical and conglomerate mergers, this section also identifies those competition issues that are specific to non-horizontal mergers that the ACCC will take into account. Mergers that involve both horizontal and non-horizontal effects will be assessed based on the combined horizontal and non-horizontal impact on competition.

Horizontal mergers

5.5. Horizontal mergers involve firms that operate in the same relevant market or markets. Horizontal mergers may give rise to unilateral effects by eliminating the actual or potential competitive constraint that the merger parties exerted on each other pre-merger. Two competing firms may constrain each other, including via the (actual or potential) transfer of sales from one to the other as customers switch, or threaten to switch, between them. If these two firms merge, the merger 'internalises' any such transfers within the merged firm, thereby removing this constraining effect. Where there are limited effective constraints from other sources, this unilateral effect can amount to a substantial lessening of competition.

5.6. Unilateral effects may arise in different ways depending on the characteristics of the market — some, but not all are outlined below. The most obvious way is when no

[28] This may be contrasted to coordinated effects arising from a merger where it may be profitable for the merged firm to raise prices, reduce output or otherwise exercise market power because it considers that the responses of its rivals will be directly influenced by its own actions. This may manifest as either tacit or explicit collusion (see chapter 6).

rivals[29] remain post-merger (i.e. merger to monopoly). In the absence of effective competitive constraints from other sources, such as future entrants, imports or countervailing power, a merger that leaves no rivals to the merged firm will likely result in unilateral effects amounting to a substantial lessening of competition.

5.7. Unilateral effects may also arise where a merger results in markets characterised by a single firm with market power and numerous other smaller competitors that can supply only a small portion of the total market demand because of factors limiting their ability to significantly expand output. In these circumstances, consideration will be given to whether the merged firm would have the ability and incentive to raise prices for the segment of the market that the smaller competitors are unable to supply — taking into account, amongst other factors, the ability and incentives of these smaller competitors to expand capacity.

5.8. In markets involving homogeneous products with no dominant firm, competition analysis will focus on the strategic interaction between rivals competing on output or capacity. Unilateral effects may arise where the merged firm sets its post-merger output level significantly below the level of output that would have prevailed absent the merger and, despite the response of competitors, brings about a higher price than would have prevailed absent the merger.

5.9. In contrast, in markets where competition between firms selling differentiated products is based on price, unilateral effects may arise where a merger between firms previously supplying close substitutes is able to increase the price of either or both of the close substitutes. In this case, consideration will be given to the proportion of substitution that would occur.

5.10. Outlined below are some of the relevant factors that the ACCC will take into account, in addition to those specified in s. 50(3) of the Act, to determine whether unilateral effects are likely to arise from a merger.

Significance of the merger parties to the competitive process

5.11. While some firms may be relatively small in terms of size and market share, they may nevertheless have a significant influence on the competitiveness of the market. Mergers involving such firms may result in unilateral effects by impeding or removing significant aspects of competition, such as innovation or product development.

Closeness of merger parties

5.12. The ACCC will take into consideration the extent of competitive constraint that the merger parties exert on each other pre-merger. Merger parties are more likely to be close competitors — and therefore provide each other with an effective constraint that may be lost post-merger — if they differ from rivals in respect of characteristics such as:

- product features and function
- customer loyalty
- production capacity
- breadth of product line and level of specialisation
- distribution channel coverage
- geographic presence

[29] In these guidelines, the term 'rival' includes both actual and potential rivals, unless the context otherwise specifies.

- cost structures
- level of vertical integration.

5.13. The degree of rivalry between the merger parties pre-merger can be an important factor in the analysis of mergers in differentiated product markets. Mergers between firms supplying competing differentiated products may result in unilateral effects when the merger parties are considered close competitors by a sufficient number of customers, which thereby alters the incentives of the merger parties. Merger parties are likely to have an incentive to increase the price of one or both products if the sales lost due to the price increase would be recaptured by an increase in sales of the other product. That is, the greater the number of customers that regard the merger parties as particularly close competitors (for example, their first and second choices), the greater the potential for the merger parties to impose a unilateral increase in price post-merger. Unilateral effects may arise even where the merger parties are not one another's 'closest' competitor pre-merger or would not be the dominant firm post-merger based on market shares.

5.14. Competitors supplying the relevant market with products that are less likely to be substituted for, or repositioned to compete with, the merger parties' products may only be able to offer a competitive alternative to marginal customers; the loss of such marginal customers would not prevent the merged firm's actions being profitable. Such competitors may also decide to simply follow the merged firm's price increase to profit from the less competitive environment.

Rivals' responses

5.15. Unilateral effects are unlikely if rivals have the incentive and ability to respond to a price increase by the merged firm such that they are able to capture sales and replace competition lost by the merger.

5.16. In some cases, rivals in differentiated product markets that are less direct competitors at the time of a merger may potentially overcome differences between themselves and the merged firm to become closer competitors. This may occur where rivals have the ability and incentive to reposition or extend their product range relatively easily and without significant cost in response to the merged firm increasing its prices. If the competition lost through the merger would likely be replaced by other rivals in the market or new entrants within a one- to two-year period, a merger is less likely to result in an increase in unilateral market power.

5.17. In non-differentiated product markets, other factors that may influence the abilities and incentives of rivals to constrain the merged firm from unilaterally increasing prices post-merger include whether:

- rival firms have sufficient capacity or are able to profitably expand capacity
- the merged firm is able to hinder entry or expansion by rivals through various means (for example, by controlling inputs, distribution channels and patents/other IP and access to, or pricing of, different platforms)
- the relevant products are sold under terms and conditions likely to limit or curtail the ability of rivals to compete effectively for the customers of the merged firm post-merger
- customers are constrained in their ability to switch to rival suppliers of the merged firm post-merger.

Non-horizontal mergers

5.18. Non-horizontal mergers include vertical mergers and conglomerate mergers.

5.19. Vertical mergers involve combining firms that operate at different stages of a single vertical supply chain — that is, a merger between an 'upstream' firm and a 'downstream' firm (for example, an upstream manufacturer and a downstream distributor) where the upstream firm is an actual or potential supplier of an input into the production process of the downstream firm. It is often the case that vertical mergers will promote efficiency by combining complementary assets/services which may benefit consumers.

5.20. Conglomerate mergers involve firms that interact across several separate markets and supply products that are typically in some way related to each other — for example, products that are in neighbouring markets or products that are complementary in either demand or supply, such as staples and staplers.[30] Often, conglomerate mergers will allow firms to achieve efficiencies and result in better integration, increased convenience and reduced transaction costs.

5.21. In the majority of cases, non-horizontal mergers will raise no competition concerns. However, where insufficient competitive constraints remain in the relevant market post-merger, some non-horizontal mergers will raise competition concerns when the merged firm is able to increase its unilateral market power. One way in which this can occur is through the merged firm 'foreclosing' rivals, but non-horizontal mergers can also increase unilateral market power in other ways. In some cases, a non-horizontal transaction, either alone or in conjunction with a horizontal transaction, may amount to a substantial lessening of competition in a market.

Foreclosure

5.22. Recognising that not all forms of foreclosure are anti-competitive, the ACCC is only concerned with non-horizontal mergers where the merged firm has the ability and incentive to use its position in one market to anti-competitively foreclose rivals in another market in a way that lessens competition.

5.23. In determining whether foreclosure is likely to increase the unilateral market power of the merged firm, the ACCC will consider the following three issues:

- the merged firm's ability to foreclose
- any incentive the merged firm may have to foreclose
- the likely effect of any such foreclosure.

Vertical mergers

5.24. The particular anti-competitive foreclosure strategies that a vertically integrated merged firm might adopt will depend on the circumstances of each case, but some examples include:

- charging a higher price for an important input into the production processes of downstream (non-integrated) rivals

[30] Conglomerate mergers may also arise in markets that are unrelated or independent of one another.

- limiting,[31] or denying access by, downstream (non-integrated) rivals to important inputs (thereby forcing them, for example, to use more expensive or inferior quality alternatives)
- limiting, or denying access by, upstream (non-integrated) rivals to a sufficient customer base
- raising the cost of access by upstream (non-integrated) rivals to a sufficient customer base.

Conglomerate mergers

5.25. Conglomerate mergers provide a merged firm with the opportunity to bundle or tie products in related or independent markets. The practice of bundling or tying product offerings is common and is undertaken by firms for a variety reasons, often with no anti-competitive consequences under s. 50.[32]

5.26. However, in some cases conglomerate mergers can raise competition concerns where they enable the merged firm to alter its operations or product offerings in a way that forecloses the merged firm's rivals and ultimately reduces the competitive constraint they provide. For example, the merged firm's rivals may be foreclosed if the merged firm chooses to bundle or tie complementary products, such that:

- no product can be purchased or used separately
- at least one product cannot be purchased or used separately, or
- customers receive additional benefits when they purchase or use the merged firm's products together (for example, due to discounts, rebates or design features).

5.27. The adoption of such strategies can limit or raise the cost of rival firms' access to a sufficient customer base and in some circumstances deny rival firms access to customers altogether.

Ability to foreclose

5.28. An integrated or conglomerate firm will generally only be able to engage in foreclosure if it has sufficient market power at one or more functional levels within the vertical supply chain, or in one or more of the related markets post-acquisition.

5.29. The ACCC will determine whether an integrated or conglomerate firm has market power in the relevant markets by assessing whether there are effective competitive constraints, such as those discussed in chapter 7.

Vertical mergers

5.30. An integrated merged firm would only be able to engage in foreclosure strategies against rival downstream firms if it had sufficient market power in the upstream market — that is, where its downstream rivals faced insufficient viable supply alternatives. This might occur for a variety of reasons including capacity constraints faced by rival upstream suppliers, barriers to entry or product differentiation between the products and/or services offered by the integrated firm and its rivals.

[31] Limiting access may involve reducing the quality of the good or service supplied.

[32] Tying or bundling may however raise competition concerns under other provisions of the Act.

5.31. Similarly, an integrated merged firm would only be able to engage in foreclosure strategies against rival upstream firms if it had sufficient market power in the downstream market — that is, where its upstream rivals lacked sufficient actual or potential economic alternatives in the downstream market to sell their output. The ability of upstream rivals to sell their output is especially likely to be prevented or impeded where the downstream division of the merged firm is an important customer in that market and where there are significant economies of scale or scope in the input market.

Conglomerate mergers

5.32. In the context of conglomerate mergers, market power may arise where products are considered by customers to be especially important or a 'must have' because of factors such as superior functionality (product differentiation) or brand loyalty. Where the merged firm supplies customers that on-sell its products to end customers, the market power of the merged firm may be reflected in its ability to influence the product-stocking decisions of its customers. This will depend on the specifics of the industry, but can include supplier involvement in category management and the supply of in-store distribution assets to retailers on condition of certain stocking requirements.

Incentive to foreclose

5.33. While possession of market power by the merged firm in one or more of the relevant markets is a necessary consideration, it is not determinative in itself. Even if a vertically integrated or conglomerate firm has the ability, it may not have the economic incentive to foreclose rivals. A firm is unlikely to exercise its ability to foreclose unless it is profitable to do so, which will depend on the nature of competition in each of the relevant markets and the particular means available to the firm to foreclose rivals.[33]

5.34. An integrated or conglomerate firm will only have an incentive to engage in foreclosure strategies with rivals if the benefit it receives from doing so outweighs potential lost sales resulting from the foreclosure. In assessing whether the merged firm has the incentive to engage in foreclosure, the ACCC will weigh likely short-term costs against likely gains and the relative size and importance of each market to the merged firm.

5.35. For example, in vertical mergers foreclosing independent downstream rivals may simply close off a good source of upstream revenue without providing any significant boost to the integrated merged firm's own downstream sales or other benefits. Similarly, an integrated firm will only have an incentive to limit the downstream sales of its non-integrated upstream rivals if it receives sufficient benefits to offset any increased costs or decreased custom associated with the foreclosure.

5.36. In conglomerate mergers, the merged firm may be able to take advantage of economies of scale in a market by increasing sales in that market and, where there is commonality in operations (such as in manufacturing, distribution and/or marketing), may also be able to gain economies in a related market.

5.37. In assessing the merged firm's likely incentives, the ACCC will take into account a range of quantitative and qualitative information.

[33] For example, a conglomerate firm implementing a tie may involve risking the loss of customers that are not interested in purchasing the bundle, depending on the closeness of the products in question. In addition, the profitability of discounting a bundle may depend on the relative value of the products being united and the value of the markets in which they are supplied.

Likely effect of foreclosure

5.38. The ability and incentive of the merged firm to foreclose rivals may not of itself increase the merged firm's unilateral market power to the extent that there is a substantial lessening of competition. Consideration must also be given to the effect of foreclosure on competition in the relevant market/s.

5.39. Foreclosure need not result in rivals being forced to exit the market to have a detrimental effect on competition. Actual rivals may simply be forced to use more expensive alternatives to those offered by the merged firm or may be discouraged from expanding their operations. Potential rivals may be discouraged from entering the market. Foreclosure lessens competition when the merged firm — and, in some cases, certain of its rivals — finds it profitable to increase the price charged to intermediate and end consumers or decrease the price paid to upstream suppliers below competitive levels.

5.40. In determining whether a merger is likely to result in a substantial lessening of competition, the ACCC considers all the merger factors contained in s. 50(3) of the Act and other relevant factors. In particular, the following factors inform the ACCC's assessment as to whether the merged firm's unilateral market power is likely to increase to the extent that there is a substantial lessening of competition:

- the proportion and significance of the firms that are foreclosed as a result of the merger
- the proportion and significance of other firms still able to provide a constraint over the merged firm
- the potential for the merger to raise barriers to entry by foreclosure or the threat of foreclosure to rivals in related markets.

5.41. Two further factors that may be relevant in the context of vertical mergers are:

- the significance of the input to the production process of downstream rivals
- the presence of countervailing power, particularly the ability of firms to integrate to avoid foreclosure.

5.42. An additional factor that may be relevant in the context of conglomerate mergers is the proportion of customers likely to purchase the relevant products from the merged firm. This must be sufficiently large to cause independent rivals to face a significant decline in sales, resulting in increased costs. The level of competitive constraint imposed by rivals may be detrimentally affected where economies of scale or network effects[34] are important features of the relevant markets, since foreclosure may prevent the merged firm's rivals from achieving minimum efficient scale.

5.43. However, where a significant proportion of customers continue to purchase products from independent rivals, a conglomerate firm is likely to continue to be constrained post-merger. For example, where rivals are able to replicate the merged firm's offering through assembly of their own competing bundle, and therefore reap similar cost savings and/or retain economies of scale or scope, they may be able to avoid or minimise foreclosure and thereby continue to constrain the merged firm. This may be through organic growth, counter-merger or joint supply arrangements with suppliers of the related product. Depending on the nature of the merged firm's market power, however, it may be difficult or impossible for rivals to replicate the merged firm's

[34] Network effects arise when a product becomes more valuable as the number of customers consuming it increases, thus providing an advantage to firms that have an existing customer base over rivals and prospective entrants that do not.

bundle. If rivals are able to avoid foreclosure by supplying a competitive bundle, a conglomerate merger is unlikely to substantially lessen competition.

Other unilateral effects

5.44. Other unilateral effects that may arise from vertical mergers and conglomerate mergers include raising structural and/or strategic barriers to entry and access to commercially sensitive information.

Barriers to entry

5.45. A vertical merger may raise barriers to entry if, as a result of the merger, new entrants would have to enter at multiple stages of the vertical supply chain instead of just one. In some cases, the increase in unilateral market power accruing to the merged firm as a result of increased barriers to entry constitutes a substantial lessening of competition.

5.46. By creating strategic links between related products, a conglomerate merger may result in formerly separate markets becoming part of one integrated market in which suppliers must offer the full range of complementary products to compete. Future entry may therefore require an offering of the full range of products, potentially increasing the sunk costs associated with entry or exit.

Access to commercially sensitive information

5.47. A vertical merger may also result in unilateral effects if the integrated merged firm would, through its supply of an input or distribution services to firms that are otherwise rivals, obtain competitively sensitive information such as costs or planned product launches. This may distort the dynamics of competition.

6. Coordinated effects

6.1. In addition to unilateral effects, mergers can lessen competition through coordinated effects. Mergers have coordinated effects when they assist firms in the market in implicitly or explicitly coordinating their pricing, output or related commercial decisions. A merger may do so simply by reducing the number of firms among which to coordinate, by removing or weakening competitive constraints or by altering certain market conditions that make coordination more likely. Coordinated effects may occur in addition to unilateral effects so that the merged firm is able to achieve even higher prices than it would on its own. In some cases, coordinated effects, either alone or in conjunction with unilateral effects, may amount to a substantial lessening of competition.

6.2. Horizontal, vertical and conglomerate mergers may give rise to coordinated effects in a number of different ways. Some of these are discussed below, but coordinated effects may also arise in ways that are not discussed here. Competitive constraints and other factors relevant to coordinated effects are discussed in chapter 7. Rather than presenting horizontal, vertical and conglomerate mergers separately, this section discusses the issues that the ACCC considers relevant across all three types of merger.

Coordinated conduct

6.3. Mergers have coordinated effects when they alter the nature of interdependence between rivals such that coordinated conduct is more likely, more complete or more sustainable. Interdependence arises when a market is characterised by a small number of firms (an oligopoly or a duopoly), with each firm anticipating the response of the other firms and devising their commercial strategies accordingly. If the oligopolistic structure of a market persists over time — for instance, because barriers to entry and expansion shield incumbents from new competitors — the repeated nature of the competitive interaction can result in a range of coordinated conduct, from muted competition through to tacit or explicit agreement between firms not to compete. Although firms may have the ability to engage in effective competition, they may not have the incentive if they recognise that any short-term benefits from competing will likely be eroded by lost sales once other firms respond. Coordinated conduct can in some cases involve contravention of other provisions of the Act.

6.4. In some cases, a change in the nature of the interdependence among competitors may lead to an implicit agreement among them to refrain from competing. This behaviour is sometimes referred to as tacit collusion, since it involves active coordination but no explicit agreement between firms. Firms may signal to each other that they will not compete on price, output, customer allocation or indeed any other parameter of competition. Where the products are relatively homogenous, coordinated terms are more likely to be based on price or output in markets, whereas differentiated products may be more conducive to division of a market by customer type or region. In certain circumstances, interdependence may result in explicit collusion between firms, whereby firms explicitly agree to refrain from competing.

Conditions facilitating coordinated conduct

6.5. When assessing whether a merger is likely to give rise to coordinated effects, the ACCC first assesses whether conditions in the relevant market are likely to be conducive to coordinated conduct. Generally, the potential for sustainable coordination is greatest where:

- firms have the ability and incentive to settle on terms[35] that are profitable for all
- firms can detect deviations from the consensus
- the threat of retaliation from other firms involved is sufficiently costly to act as a deterrent to deviation
- the consensus is not undermined by competitive constraints in the market (discussed further in chapter 7).

6.6. It is impossible to be prescriptive about the conditions in which coordinated conduct is likely to arise or the types of mergers that would increase the likelihood of coordinated conduct. However, settling on and maintaining a profitable consensus will often be easier where certain conditions exist post-merger. Some of these conditions are discussed below. The non-existence of one or more of these conditions may not necessarily make coordinated effects less likely and there may be other factors not discussed here which are relevant.

6.7. Importantly, a merger will only result in coordinated effects if it increases the likelihood of coordinated conduct, or it results in more complete or sustainable coordination post-merger. As noted above, a merger may do this by reducing the number of firms among which to coordinate (thereby reducing the likelihood of deviation from the consensus), by removing or weakening competitive constraints or by altering certain market conditions that make coordination more likely.

Observing other firms

6.8. Each firm must be aware of the behaviour of other firms for coordinated conduct to arise. This is easiest when the number of firms in the market is small (that is, concentration is high) and firms can quickly and readily observe other firms' activities and general market conditions. Information may be readily available if, for example, firms actively publish their prices to consumers, firms hold cross-shareholdings in each other, or trade associations collate and publish recent market information. Markets need not be fully transparent for coordinated conduct to arise, but firms must have some mechanism for detecting the behaviour of their competitors.

6.9. In addition, where product innovation or fluctuations in costs or demand are common, it may be difficult for firms to know whether a change in their rivals' pricing arises from such a fluctuation or constitutes a deviation from the settled terms. Market stability therefore facilitates coordination.

Retaliation and incentives

6.10. Coordinated effects are more likely when firms are likely to interact regularly post-merger, either in the relevant market where coordination could occur or in other separate markets, and for a considerable period. The sustainability of coordination rests upon repeated interaction, since the prospect of future retaliation discourages firms from pursuing more competitive strategies.

6.11. Firms in a market will have an incentive to deviate from the consensus unless they fear punishment that would outweigh the potential short-term gains from cheating on the terms of coordination. Punishment may simply involve a return to competitive conditions or, for example, a 'price war'. The incentive to cheat is increased if the imposition of punishment is likely to be significantly delayed (for example, because

[35] In these guidelines, 'settle on terms' and 'consensus' do not necessarily involve communication or active coordination but are intended to reflect muted competition, tacit collusion and explicit collusion.

market transactions are infrequent). The credible threat of effective punishment alone may be sufficient to deter cheating.

6.12. The ability of coordinating firms to punish deviations is often increased where:

- firms have similar cost structures — low-cost firms may not fear retaliation by higher cost firms
- firms compete against each other in more than one market — this provides additional markets in which to punish deviating firms
- some firms have excess capacity, which enables them to increase output and reduce prices in response to a deviation from the terms of coordination.

6.13. Interdependence and coordination may therefore be facilitated by a merger that creates firms with similar market shares, cost structures, production capacities and levels of vertical integration. Where there is firm asymmetry, smaller firms or firms with lower cost structures may have more to gain from competing rather than refraining from competition. In this regard, a vigorous and effective competitor may be instrumental in disrupting interdependence and ensuring effective competition (see paragraph 7.56).

Competitive constraints

6.14. Coordination is unlikely to be sustained if it induces new entry or expansion by firms in the relevant market that are not engaging in coordination. Such competitive constraints are discussed further in chapter 7.

6.15. Generally, assessing whether a merger is likely to give rise to coordinated effects requires a close examination of the conditions prevailing in the relevant market and the likely effect of the merger on these conditions. This generally requires a detailed qualitative assessment of a range of factors (including those noted above), some of which may suggest conflicting conclusions. For example, a merger may decrease the number of firms in a market, while increasing the level of asymmetry between firms (or it might increase the level of symmetry). Given the potential complexity of the assessment required, evidence of prior coordinated conduct between firms in the relevant market may be highly relevant, particularly if the merger is likely to reduce the number of participants without undermining the conditions that facilitate coordinated conduct.

7. Merger factors

7.1. Mergers result in unilateral and/or coordinated effects when they weaken or remove the competitive pressure on firms in a market. Where unilateral and/or coordinated effects amount to a significant and sustainable increase in the market power of the merged firm and/or other firms in a market, the merger is likely to substantially lessen competition in contravention of the Act.

7.2. In assessing whether a merger is likely to result in a significant and sustainable increase in market power, the ACCC must consider each of the merger factors set out in s. 50(3) as well as any other relevant factors (see paragraph 1.4). These merger factors provide insight about the likely competitive constraints that the merged firm will face post-merger. The merger factors cover a broad range of possible competitive constraints faced by the merged firm — some assist in identifying the presence of direct constraints,[36] while others provide insight into less direct forms of constraint relating to either the structure and characteristics of the market[37] or the behaviour of actual and potential participants in the market.[38]

7.3. The ACCC recognises that competitive constraints are not static and strategic behaviour by market participants can affect competition. The significance of the merger factors and the weight placed on them will depend on the actual matter under investigation.

7.4. The likely presence of effective competitive constraints post-merger is a key indicator that a merger is unlikely to result in a substantial lessening of competition. While all the merger factors must be taken into consideration, it may not be necessary for all factors to indicate that the merged firm would face effective competitive constraints. In some cases a single constraint can be sufficient to prevent a significant and sustainable increase in the market power of the merged firm while in other cases the collective effect of several constraints may be required. Conversely, the absence of a single particular constraint is unlikely to be indicative of an increase in market power as a result of the merger.

7.5. The order in which the merger factors and other sources of constraint are considered below reflects the order in which the ACCC generally undertakes its analysis and does not reflect the priority or weight given to any particular factor. Indeed, many of the factors are interrelated and the ACCC adopts an integrated approach, taking into account all potential competitive constraints.

Concentration and market shares[39]

7.6. Market concentration refers to the number and size of participants in the market. It provides a snapshot of market structure as well as an approximation of the size of the merger parties, which can assist when considering the other merger factors. Changes in market concentration over time can also reveal the frequency of new entry and provide insight into the ability of new entrants and smaller competitors to attract custom and expand.

---

[36] For example, the level of actual and potential imports, height of barriers to entry, degree of countervailing power and the availability of substitutes.

[37] For example, the dynamic characteristics of the market, level of concentration in the market and nature and extent of vertical integration.

[38] For example, the likelihood that the acquirer would be able to significantly and sustainably increase prices or profit margins, whether the acquisition will result in the removal of a vigorous and effective competitor and other relevant factors.

[39] Refers to the merger factor contained in s. 50(3)(c).

7.7. However, market concentration is not determinative in itself. For example, firms can gain a high market share by adopting more efficient technology, lowering costs and reducing prices. In such cases, high levels of market concentration are not necessarily reflective of a non-competitive market. Measures of concentration in markets characterised by product differentiation may also obscure the closeness of competitors.

7.8. Notwithstanding these limitations, market concentration can help to determine whether a merger is likely to result in unilateral and/or coordinated effects. It is the link between concentration and the strength of competition that is important for merger analysis and this ultimately requires consideration of all relevant factors before a final conclusion can be reached.

Measuring market concentration

7.9. The ACCC typically measures concentration with reference to market shares, concentration ratios and the Herfindahl-Hirschman Index (HHI).

Market shares

7.10. Market shares are a key input when determining concentration. The ACCC will generally calculate market shares according to sales, volume and capacity using information from a variety of sources, such as:

- the merger parties
- competitors
- customers
- suppliers
- trade associations
- market research reports.

7.11. Consistent with the forward-looking nature of the competition test, the ACCC considers the extent to which current market shares are likely to accurately reflect future market share patterns. For example, there may be evidence that substantial new capacity is due to come on- stream in a manufactured product market, new licences are about to be issued in a broadcasting market or some firms are running out of reserves in a primary product market. Where such evidence exists, the ACCC adapts current market shares accordingly.

Concentration and market shares

The ACCC will generally require information from the merger parties to calculate market shares based on the most appropriate measure from one of the following:

- sales by volume (for each competitor) in at least three recent annual periods
- sales by value (for each competitor) in those periods
- capacity (for each competitor) over the previous three years.

In some cases the ACCC may request additional information to calculate market shares based on an alternative measure to that provided by the merger parties. Whether a wider range of information will be required by the ACCC will be assessed on a case-by-case basis.

Market share information should be supported by details of how the data was compiled, the source of the estimates and any assumptions used. Where actual figures are not available, best estimates will be considered — for example, where there are a number of smaller firms in the market, an approximation may be appropriate.

In markets where actual or potential imports are relevant, these should be clearly identified (indicating whether these imports are independent of the merger parties) and included in the market share and concentration metric calculations. Similarly, supply-side substitutes should be included in these calculations.

Measures of concentration

7.12. In assessing market concentration, the ACCC takes into account the pre- and post-merger market shares of the merged firm and its rivals and the actual increase in concentration, as well as the level of symmetry between rival firms' market shares. Concentration metrics such as the HHI and the x-firm concentration ratio (CRx) may provide useful summary statistics by combining some or all of the market share data for individual firms. Different concentration metrics may highlight different aspects of the market share data.

7.13. The HHI is calculated by adding the sum of the squares of the post-merger market share of the merged firm and each rival firm in the relevant market, thereby giving greater weight to the market shares of the larger firms. The HHI therefore requires the market shares, or estimates of them, for all the participants in the relevant market. The HHI indicates the level of market concentration while the change in the HHI (or 'delta') reflects the change in market concentration as a result of the merger.

HHI threshold

7.14. As part of its overall assessment of a merger, the ACCC will take into account the HHI, as a preliminary indicator of the likelihood that the merger will raise competition concerns requiring more extensive analysis. The ACCC will generally be less likely to identify horizontal competition concerns when the post-merger HHI is:

- less than 2000, or
- greater than 2000 with a delta less than 100.

7.15. These HHI levels should not be taken to imply a presumption as to whether or not a merger will be likely to result in a substantial lessening of competition. Only by considering the merger factors can this assessment be made. To illustrate this point, a merger that falls below the HHI threshold may still raise competition concerns if any of the following are relevant:

- a substantial number of customers consider the products of the merger parties to be particularly close substitutes — for example, the merger parties represent their first and second choices
- the target firm has shown a recent rapid increase in market share, has driven innovation or has tended to charge lower prices than its competitors in one or more markets (properly defined) in which the merged firm would operate.

7.16. The HHI threshold is not interchangeable with, or a substitute for, the notification threshold (see chapter 2). Mergers that meet the notification threshold should be notified to the ACCC regardless of the specific HHI and delta.

Height of barriers to entry[40]

7.17. The entry of new firms into a market can provide an important source of competitive constraint on incumbents. If new entrants are able to offer customers an appropriate alternative source of supply at the right time, any attempt by incumbents to exercise market power will be unsustainable since their customers will simply switch to the new entrants. A credible threat of new entry alone may prevent any attempt to exercise market power in the first place.

7.18. If there is a high likelihood of timely and sufficient entry in all relevant markets post-merger, the merged firm is unlikely to have market power either pre- or post-merger and therefore the merger is unlikely to result in a substantial lessening of competition. In some markets, however, there are barriers to entry that either prevent firms from entering the market altogether or delay and impede entry to such a degree that the merged firm is sheltered from competitive constraint for a significant period.[41] A barrier to entry is any factor that prevents or hinders effective new entry that would otherwise be capable of defeating a price increase caused by a merger.[42]

7.19. The ACCC takes the view that new entry must be timely, likely and sufficient in scope and nature to be effective. This test will be based on an assessment of the height of barriers to entry taking into account whether actual or threatened entry post-merger is both possible and likely in response to an attempted exercise of market power by the merged firm — this will generally depend on the profitability of entering the market.

7.20. It is not necessary for a merger to increase barriers to entry for it to be anti-competitive — only that significant barriers exist and provide the merged firm with discretion over its pricing and other conduct. If the merger also increases barriers to entry, the effect on competition is likely to be more severe because new entry that may have been possible before the merger is likely to be prevented or impeded post-merger — that is, the gap between the future states with and without the merger will be widened.

Timeliness of entry

7.21. When considering the degree of competitive constraint provided by new entry, it is necessary to assess the time it would take a new firm to enter the relevant market and offer customers a competitive alternative to the merged firm. The evaluation of whether entry will be timely necessarily varies with each specific merger and the dynamics of the market.

7.22. Entry will generally provide an effective competitive constraint post-merger if actual or threatened entry would occur in an appropriate time to deter or defeat any non-transitory exercise of increased market power by the merged firm. While the ACCC's starting point for timely entry is entry within one to two years, the appropriate timeframe will depend on the particular market under consideration.

7.23. When determining whether potential entry is likely to be timely the ACCC considers the barriers outlined in paragraphs 7.30 to 7.32, as well as factors such as the frequency of transactions, the nature and duration of contracts between buyers and

[40] Refers to the merger factor contained in s. 50(3)(b).

[41] The analysis would apply in matters involving unilateral effects and also matters involving coordinated effects (in particular the possibility of new entry constraining the ability and incentive of a small group of firms to engage in coordinated conduct).

[42] Note that some barriers to entry may technically be barriers to **exit**. Nevertheless, the effect is the same if such barriers to exit increase the risk to prospective entrants and ultimately discourage entry.

sellers, lead times for production and the time required to achieve the necessary scale.

Likelihood of entry

7.24. The ACCC needs to be satisfied that actual or threatened entry post-merger is not just possible but likely in response to an attempted exercise of market power by the merged firm. The likelihood of entry generally depends on the profitability of entering the market. The ACCC will assess whether a new entrant could expect to make a commercial return on its investment taking into account the price effects the additional output may have on the market and the likely responses of the incumbent firms and other costs/risks associated with entry.

7.25. Factors likely to affect the profitability of entry include the examples of barriers outlined in paragraphs 7.30 to 7.32. Evidence of the past success or failure of new entrants in establishing themselves as effective competitors in the relevant market may also provide insight into the profitability of entry into particular markets but will not necessarily indicate ease of entry. To test the likelihood of entry where it is not possible to identify potential new entrants, the ACCC requires identification of the likely categories of entrants that could potentially enter.

Sufficiency of entry

7.26. Entry must be of sufficient scale with a sufficient range of products to provide an effective competitive constraint. In differentiated product markets, the sufficiency of entry will critically depend on the ability and incentive[43] of entrants to supply a sufficiently close substitute to that of the merged firm. Entry at the fringe of the market is unlikely to constrain any attempted exercise of market power by incumbents if incumbents are unlikely to lose significant sales to those fringe entrants. Therefore individual entry that is small-scale, localised or targeted at niche segments is unlikely to be an effective constraint post-merger.

7.27. Sufficiency does not require in all circumstances that one new entrant alone duplicates the scale and all the relevant activities of the merged firm. Timely entry by multiple firms may be sufficient if the combined effect of their entry would defeat or deter the exercise of increased market power by the merged firm.

7.28. The ACCC's assessment of the timeliness, likelihood and sufficiency of entry will depend on the circumstances of each particular merger under consideration. However, the underlying test is always whether the potential for entry provides an effective competitive constraint that would prevent a significant and sustainable increase in the market power of market participants post-merger.

Types of barriers to entry

7.29. In assessing the potential for entry to act as a competitive constraint, the ACCC considers the costs of entry and incumbency advantages under the following categories:

7.30. **Legal or regulatory barriers**, including but not limited to:

- licensing conditions, tariffs, explicit restrictions on the number of market participants and other government regulations

[43] The ACCC will take into account a range of factors including whether new entry that targets the products of the merged firm would be profitable.

- legally enforceable intellectual property rights
- environmental regulations that raise the costs of entry or limit the ability for customers to switch suppliers.

7.31. **Structural or technological barriers**, including but not limited to:

- the existence of sunk costs, which increase the risks of, and costs associated with, failed entry and include factors such as product development, advertising or promotion to establish a sufficient reputation in the market and construction of specialised facilities — the high risk and costs associated with failed entry may deter new entry
- substantial economies of scale, which may limit the viability of entry below a certain minimum efficient scale
- high customer switching costs, such as search costs, transaction costs and market specific behaviour (including customer inertia to switching suppliers)
- mature markets or markets with declining levels of demand growth
- access to key production or supply assets, important technologies or distribution channels
- the existence of significant network effects.

7.32. **Strategic barriers** that arise because of actions or threatened actions by incumbents to deter new entry, including but not limited to:

- risk of retaliatory action by incumbents against new entry, such as price wars or temporarily pricing below cost
- creation and maintenance of excess capacity by incumbents that can be deployed against new entry
- creation of strategic customer switching costs through contracting, such as exclusive long-term contracts and termination fees
- brand proliferation by incumbents, which may crowd out the product space leaving insufficient opportunities for new firms to recover any sunk entry costs.

Height of barriers to entry

The following are examples of the types of information the ACCC may require to assess the height of any barriers to entry:

- the ability of producers that are not current competitors to switch production to competing products or services
- the market conditions that may affect the ability of existing firms to expand
- the size and extent of any investment, particularly sunk investment, that producers would need to make to either enter the relevant market/s or to expand production significantly in these market/s
- the extent of brand loyalty in the relevant market/s
- the existence and nature of any long-term supply contracts in the relevant market/s
- any relevant ‘switching costs’ (such as product compatibility issues, product bundling, contract termination charges) that may prevent buyers in the relevant market/s from changing suppliers or sellers in the relevant market/s from changing buyers, in the short to medium term

- evidence of any growth or decline in the relevant market/s.

In an informal merger review, providing a base level of information to the ACCC will, in non-controversial cases, usually be sufficient to satisfy the ACCC of whether or not a substantial lessening of competition is likely. Whether a wider range of information will be required by the ACCC will be assessed on a case-by-case basis and will depend on the complexity of the matter and the potential competition concerns raised.

Actual and potential import competition[44]

7.33. Actual or potential direct competition from imported goods or services can provide an important competitive discipline on domestic firms. Where the ACCC can be satisfied that import competition — or the potential for import competition — provides an effective constraint on domestic suppliers, it is unlikely that a merger would result in a substantial lessening of competition.

7.34. While the current or historic levels of imports may indicate the competitive role of imports in the relevant market, the ACCC will consider the potential for imports to expand if the merged firm[45] attempted to exercise increased market power post-merger.

7.35. Imports are most likely to provide an effective and direct competitive constraint in circumstances where all of the following conditions are met:

- independent imports (that is, imports distributed by parties that are independent of the merger parties) represent at least 10 per cent of total sales in each of the previous three years
- there are no barriers to the quantity of independent imports rapidly increasing that would prevent suppliers of the imported product from competing effectively against the merged firm within a period of one to two years (for example, government regulations, the likelihood and impact of anti-dumping applications on imports, customer-switching costs or the need to establish or expand distribution networks)
- the (actual or potential) imported product is a strong substitute in all respects (that is, quality, range, price, etc.) for the relevant product of the merged firm, taking into account factors including the need to meet any relevant Australian or industry standards, any increase in the complexity of customers' logistical arrangements, increased transport times and costs, and the risk of adverse currency exchange rate fluctuations
- the price of actual or potential landed imports, including any tariffs or other import-specific taxes and charges, (that is, the import parity price) is close to the domestic price of the relevant product that would prevail in the absence of the merger
- importers are able to readily increase the supply volume of the product they import with minimal or no increase in the price paid
- the merged firm and other major domestic suppliers do not have a direct interest in, are not controlled by, and do not otherwise interact with, actual or potential import suppliers.

[44] Refers to the merger factor contained in s. 50(3)(a).

[45] The analysis would apply in matters involving unilateral effects and also matters involving coordinated effects (in particular the possibility of import competition constraining the ability and incentive of a small number of firms to engage in coordinated conduct).

Barriers to import expansion

7.36. The ability of imports to expand (import supply elasticity) will be a key consideration in the ACCC's competition analysis. If the supply of imports is either unable to respond, or only able to respond slowly, to an increase in demand by Australian consumers, imports are unlikely to effectively counteract any increased market power of the merged firm. For example, where there are production capacity or supply constraints, or where imports targeted to niche segments would not be profitable on a wider scale given their cost structures, import competition is unlikely to be sufficient to prevent a substantial lessening of competition.

7.37. The barriers to import expansion that the ACCC considers when assessing the supply elasticity of imports include:

- the existence of capacity constraints overseas and the resulting impact on the potential for expansion of imports into Australia
- the level and impact of transport costs and logistics (particularly the impact of transport costs as a percentage of the value of the good or service being imported)
- the cost and delay associated with the need to establish or expand effective distribution networks
- the cost and delay associated with any specialised facilities required by importers to supply domestic customers
- the level and effect of tariffs, quotas and other government regulations (both in Australia and the country of origin)
- the likelihood and impact of anti-dumping applications on imports
- the presence of exclusive licensing arrangements on imports
- the existence of impediments to customers choosing imports rather than the domestic product post-merger, such as switching costs, lock-in contracts, compatibility problems, importance of an Australian agent and local service and supply, or consistency and timeliness of supply.

Actual and potential import competition

The following are examples of the types of information the ACCC may require to determine the competitive constraint provided by imports:

- which products are imported into the relevant market/s
- who undertakes the importation and their relative share of the market/s
- estimates of the actual and potential level of import competition in the market/s
- historical importation figures
- details of any barriers to entry to importing, including access to distribution facilities, transport costs and customs restrictions
- details of the price of imports as opposed to domestic production in the relevant market/s and an explanation of any divergence in these prices
- the extent to which imports provide a constraint on domestic suppliers, including the merger parties, in the relevant market/s post-merger.

In an informal merger review, providing a base level of information to the ACCC will, in non-controversial cases, usually be sufficient to satisfy the ACCC of whether or not a substantial lessening of competition is likely. Whether a wider range of information will be required by the ACCC will be assessed on a case-by-case basis and will depend on the complexity of the matter and the potential competition concerns raised.

Availability of substitutes[46]

7.38. In assessing the competitive implications of a merger, the ACCC considers both the range of available or potentially available substitutes in each relevant market and the relative intensity of rivalry between different products within those markets. The existence of comparable alternatives to the merged firm that are available in plentiful supply to the entire market can, in the absence of coordinated effects, indicate that a merger is unlikely to substantially lessen competition.

7.39. The analysis of the likely competitive constraints provided by alternatives focuses on two issues:

- rivalry within the market, given the likely closeness of rivalry between the merger parties and
- between the merged firm and its rivals
- barriers to expansion (elasticity of supply).

Rivalry within the market

7.40. When analysing the competitive effects of a merger, the ACCC assesses the closeness of rivalry between the merger parties and between the merger parties and other market participants. This analysis goes beyond the process of defining the market based on whether products are close substitutes — it also considers the relative degree of substitution or rivalry between alternative suppliers of products in the relevant market and the merged firm.

7.41. As discussed in chapter 5, unilateral effects in differentiated product markets are more likely if the merger parties are relatively close competitors pre-merger and other market participants, while providing alternatives to consumers, are relatively more distant competitors for the products of the merged firm. The ACCC therefore considers the extent of product differentiation by assessing whether the merger parties differ from rivals in terms of:

- product features and function
- customer loyalty
- brand loyalty
- whether a substantial number of customers consider the products of the merger parties to be particularly close substitutes — for example, the merger parties represent their first and second choices
- production capacity
- breadth of product line and level of specialization
- distribution channel coverage
- geographic presence

---

[46] Refers to the merger factor contained in s. 50(3)(f).

- cost structures
- the level of vertical integration.

7.42. If, for a significant number of customers, the merger parties are each other's closest competitor and there would be no close competitors to the merged firm in one or more relevant markets, the ACCC then explores the ability and incentives of rivals in the relevant market/s to move into the merged firm's product or geographic space post-merger. This analysis involves considering any barriers to mobility across the product or geographic space within a market and taking into account relevant factors such as those listed below in the context of barriers to expansion. Impediments may include the costs of altering the mix of products, the costs of introducing a new type of product, brand loyalty to the relevant products, the profitability of entry targeting the products of the merged firm or the costs of establishing or expanding distribution channels for the relevant types of product.

7.43. Conversely, if the merger parties are relatively distant competitors in the relevant market pre-merger, and several of the merged firm's remaining rivals would be close competitors to the merged firm, the merger is less likely to result in a substantial lessening of competition in that market.

Barriers to expansion

7.44. The degree of competitive constraint provided by rivals to the merged firm also depends on their ability to profitably increase production in the event that the merged firm attempts to exercise market power (the elasticity of supply).[47] The ability of rivals to expand depends on the existence of any features of the market that either prevent firms from expanding altogether or delay or impede expansion to such a degree that rivals are unable to expand in an appropriate time to defer or defeat any non-transitory exercise of increased market power by the merged firm. While the ACCC's starting point for timely expansion is within one to two years, the appropriate timeframe will depend on the particular matter under consideration. For example, the appropriate timeframe may be longer than one to two years in industries where supply arrangements are subject to long-term contracts.

7.45. The abilities and incentives of the merged firm's rivals to increase output and sales if the merged firm attempts to exercise increased market power post-merger depend on, among other things:

- the level of excess capacity that non-merger parties could deploy to take sales away from the merged firm
- the cost to non-merger parties of expanding their output
- the ability of non-merger parties to source increased inputs and their ability to distribute increased output to customers
- the level of excess capacity held by the merged firm that could be deployed to prevent non-merger parties from capturing sales.

7.46. The ACCC will consider similar factors to those set out in paragraphs 7.30 to 7.32 in relation to new entry. For example, if non-merger parties face difficulties in distributing increased output because of logistical bottlenecks, the availability of substitutes may be limited post-merger. However, the costs of expansion can sometimes differ significantly from the costs of new entry.

[47] The analysis would apply in matters involving unilateral effects and also matters involving coordinated effects (in particular the possibility of smaller rivals expanding production in response to coordinated conduct).

7.47. If non-merger parties are capacity constrained post-merger, they will have a reduced ability to steal customers from the merged firm if it attempts to exercise market power. As a result, if non- merger parties in the relevant market are capacity constrained, the merger is more likely to result in a substantial lessening of competition.

The availability of substitutes

The following are examples of the types of information the ACCC may require to assess the relative degree of rivalry both between the merger parties themselves and between the merger parties and other market participants:

- internal company strategy, marketing and sales documents
- information about advertising campaigns and other information that highlights how firms in the market perceive the competitive constraint created by other market participants
- past history of customers switching between suppliers
- whether market features exist that prevent or hinder customers changing suppliers — for example, switching costs resulting from the use of exclusive long-term contracts and termination fees
- studies and information regarding consumer preferences
- estimates of cross elasticities of supply and demand[i]
- the diversion ratios between the merger parties[ii]
- estimates of the own-price elasticity of supply of non-merger parties[iii]
- the production capacity of firms in the market, including any capacity constraints or excess capacity
- the costs to rival firms of expanding their output
- impediments to firms altering or expanding their product mix to compete more closely with the products of the merged firm
- whether the merged firm controls inputs/distribution channels, patents/other IP and access to, or pricing of, different platforms
- the degree of homogeneity of products.

In an informal merger review, providing a base level of information to the ACCC will, in non-controversial cases, usually be sufficient to satisfy the ACCC of whether or not a substantial lessening of competition is likely. Whether a wider range of information will be required by the ACCC will be assessed on a case-by-case basis and will depend on the complexity of the matter and the potential competition concerns raised.

---

i The cross-elasticity of supply (demand) is the percentage change in the supply (demand) for one firm's output in response to a 1 per cent change in the price of the product sold by a second firm.

ii A diversion ratio measures the proportion of consumers that switch to another firm's product if a particular firm increases the price of its product.

iii The own-price elasticity of supply of a firm is the percentage change in the firm's output in response to a 1 per cent change in the price the firm sells its product for.

Countervailing power[48]

7.48. In addition to considering supply-side sources of competitive constraint, the ACCC also considers whether one or more buyers would have sufficient countervailing power to constrain any attempted increase in market power by a supplier.[49] Countervailing power exists when buyers have special characteristics that enable them to credibly threaten to bypass the merged firm,[50] such as by vertically integrating into the upstream market, establishing importing operations or sponsoring new entry.

7.49. Countervailing power is more than the ability of buyers to switch to alternative domestic or imported products. As discussed above, the availability of substitutes and import competition are important considerations in assessing whether a merger is likely to result in a substantial lessening of competition. The availability of effective alternatives to the merged firm provides all buyers with a means of bypassing the merged firm. Countervailing power, however, exists when the specific characteristics of a buyer — such as its size, its commercial significance to suppliers or the manner in which it purchases from suppliers — provide the buyer with additional negotiating leverage. In some cases, a buyer may have countervailing power because they have market power.[51]

7.50. Importantly, the size and commercial significance of customers (sometimes referred to as 'buyer power') is not sufficient to constitute countervailing power. A large buyer that accounts for a significant proportion of the merged firm's sales may be able to negotiate favourable terms and price relative to other buyers in the market. However, buyers need more than size to constrain the exercise of market power by a supplier. For example, if the supplier's product is an essential input for the buyer, the only way the buyer can defeat any attempted increase in market power is if it can credibly threaten to bypass the supplier.

7.51. In assessing whether countervailing power is likely to prevent a substantial lessening of competition by constraining any attempt by the merged firm to increase market power, the ACCC considers the following factors, among others:

- **Whether the threat to bypass is credible on commercial grounds** Evidence of this will often include the size of the buyer's purchases and the efficient scale of production of the product. For sponsored entry to be commercially viable, the entrant will have to operate at an efficient scale of production. If the purchases of the sponsoring firm are insufficient to underpin such a production scale, the ACCC needs to be convinced that the entrant could readily find other sales in the relevant market.

---

[48] Refers to the merger factor contained in s. 50(3)(d).

[49] In a merger between buyers, countervailing power may also be exerted by one or more suppliers if they are able to bypass the merged firm and establish alternative supply channels. In line with the approach adopted throughout these guidelines, consideration is directed towards the case where the merged firm is a seller in the relevant market under analysis. As previously noted, all guidance provided here needs to be appropriately adjusted when merger analysis involves a merger of competing purchasers.

[50] The analysis would apply in matters involving unilateral effects and also matters involving coordinated effects (in particular the possibility of countervailing power constraining the ability and incentive of a small number of firms to engage in coordinated conduct).

[51] The existence of buyer market power may offset the merged firm's market power on the supply side (see the Trade Practices Legislation Amendment Bill 1992, explanatory memorandum, paragraph 23). However, the ACCC notes that the outcomes of mergers that 'pit' market power against market power are difficult to determine. When firms in both markets have market power, a broad range of prices and price structures are possible and there is a risk that the merger will result in monopoly prices being charged for both the input (in the upstream market) and the final output (in the downstream market). Such a 'double-monopoly' can be particularly damaging to consumers.

- **Whether the buyer is likely to bypass the supplier** Evidence of this could include plans or other documents suggesting such a strategy is commercial, as well as instances and circumstances when the buyer or other buyers of the relevant input have previously sponsored entry or vertically integrated. The ACCC places greater weight on evidence that such strategies form part of the firm's business model. Also, if the relevant input does not account for a significant proportion of the buyer's total input costs, sponsored entry or backward integration may be less likely.
- **The proportion of the downstream market able to wield a credible threat** For the countervailing power to offset or limit any market power arising from a merger, it will usually not be sufficient if only one buyer or category of customers is able to bypass the merged firm post-merger. For example, the merged firm may be able to increase prices charged to smaller buyers that are unable to bypass the supplier while larger buyers with countervailing power are able to avoid the increase. A significant proportion of customers must be shielded from the effects of market power if countervailing power is to prevent a substantial lessening of competition in the relevant market/s.

Countervailing power

The following are examples of the types of information the ACCC may require to ascertain the degree of countervailing power in the relevant market/s:

- the relative strength of bargaining power possessed by customers of the products in the relevant market/s
- the extent to which it is possible for customers to bypass the merger parties by importing or producing the product themselves, vertically integrating, or using an alternative supplier.

In an informal merger review, providing a base level of information to the ACCC will, in non-controversial cases, usually be sufficient to satisfy the ACCC of whether or not a substantial lessening of competition is likely. Whether a wider range of information will be required by the ACCC will be assessed on a case-by-case basis and will depend on the complexity of the matter and the potential competition concerns raised.

Dynamic characteristics of the market[52]

7.52. The forward-looking nature of merger analysis means that the ACCC, when analysing the competitive effect of a merger, must take into account the changing nature of the market in the future. Dynamic changes may result from a range of factors including market growth, innovation, product differentiation and technological changes. The analysis of the effects of dynamic changes in the market is closely linked with analysis of the other merger factors discussed in this chapter. The changes in the market will be considered from two perspectives:

- the extent to which the dynamic features of the market affect the likely competitive impact of the merger
- whether the merger itself impacts on the dynamic features of the market.

7.53. Whether a market is growing or declining can have significant implications for the competitiveness of the market in the future. Markets that are growing rapidly may offer both greater scope for new entry and the erosion of market shares over time.

[52] Refers to the merger factor contained in s. 50(3)(g).

Similarly, markets that are characterised by rapid product innovation may be unstable so that any increased market power gained through a merger is transitory.

7.54. In general, a merger is less likely to substantially lessen competition in a market that is rapidly evolving.

7.55. When considering how a merger will influence future competition in a dynamic market, the ACCC places more weight on robust evidence about likely future developments in the relevant market. The ACCC will give significantly less weight to predictions about the future state of competition that are speculative or have little chance of developing for some considerable time in the future.

Dynamic characteristics of the market

The ACCC may require information on dynamic characteristics such as growth, innovation and product and/or service differentiation. In an informal merger review, providing a base level of information to the ACCC will, in non-controversial cases, usually be sufficient to satisfy the ACCC of whether or not a substantial lessening of competition is likely. Whether a wider range of information will be required by the ACCC will be assessed on a case-by-case basis and will depend on the complexity of the matter and the potential competition concerns raised.

Removal of a vigorous and effective competitor[53]

7.56. Mergers involving a vigorous and effective competitor (sometimes referred to as a maverick firm) are more likely to result in a significant and sustainable increase in the unilateral market power of the merged firm or increase the ability and incentive of a small number of firms to engage in coordinated conduct. Vigorous and effective competitors may drive significant aspects of competition, such as pricing, innovation or product development, even though their own market share may be modest. These firms tend to be less predictable in their behaviour and deliver benefits to consumers beyond their own immediate supply, by forcing other market participants to deliver better and cheaper products. They also tend to undermine attempts to coordinate the exercise of market power.

7.57. A merger that removes a vigorous and effective competitor may therefore remove one of the most effective competitive constraints on market participants and thereby result in a substantial lessening of competition.

Removal of a vigorous and effective competitor

The following are examples of the types of information the ACCC may require to ascertain the extent to which each party to the transaction would separately be considered as a vigorous and effective competitor in the relevant market/s:

- evidence of past competitive pricing behaviour, for example discounting and promotions
- levels of point-of-sale service (for example opening hours and store format) and after-sales service
- past and expected innovation, for example in design or production technology
- past evidence of leadership in non-price competition, for example product quality and loyalty programs.

[53] Refers to the merger factor contained in s. 50(3)(h).

In an informal merger review, providing a base level of information to the ACCC will, in non-controversial cases, usually be sufficient to satisfy the ACCC of whether or not a substantial lessening of competition is likely. Whether a wider range of information will be required by the ACCC will be assessed on a case-by-case basis and will depend on the complexity of the matter and the potential competition concerns raised.

Vertical integration[54]

7.58. It is recognised that some horizontal mergers can be affected by vertical integration or vertical relationships in the market — for example, horizontal competition issues may be exacerbated by vertical aspects of a merger and vice versa. Where a merger involves both horizontal and vertical competition issues, the ACCC will assess the merger based on the combined horizontal and vertical impact on competition.

7.59. The nature and extent of vertical relationships between firms in separate areas of activity along a vertical supply chain can affect the competitive implications of consolidation in any one of those areas. For example, a horizontal merger can increase the likelihood of coordination in cases where downstream integration increases the visibility of pricing. Generally, horizontal mergers involving a vertically integrated firm are unlikely to lessen competition provided effective competition remains at all levels of the vertical supply chain post-merger.

Vertical integration

The following are examples of the types of information the ACCC may require to ascertain whether vertical integration is likely to be relevant to the competition assessment:

- whether the merger will result in vertical integration between firms involved at different functional levels of the relevant market/s
- whether the merger is likely to increase the risk of limiting the supply of inputs or access to distribution, such that downstream or upstream rivals face higher costs post-merger or risks of full or partial foreclosure of key inputs or distribution channels
- the extent of existing vertical integration, noting in particular where either merger party currently operates as a customer or supplier to competitors in the relevant market/s.

In an informal merger review, providing a base level of information to the ACCC will, in non-controversial cases, usually be sufficient to satisfy the ACCC of whether or not a substantial lessening of competition is likely. Whether a wider range of information will be required by the ACCC will be assessed on a case-by-case basis and will depend on the complexity of the matter and the potential competition concerns raised.

Ability to increase prices or profit margins[55]

7.60. As discussed in paragraph 3.5, a merger that results in the merged firm[56] being able to significantly and sustainably increase prices (or exercise market power in other non-price ways) will substantially lessen competition. In general, an increase in price will result in a corresponding increase in profit margins. In some cases, the merged firm's ability to significantly and sustainably increase profit margins may also indicate a substantial lessening of competition. For example, following a vertical merger that achieves control over essential inputs, the merged firm may be able to raise the

[54] Refers to the merger factor contained in s. 50(3)(i).

[55] Refers to the merger factor contained in s. 50(3)(e).

[56] The analysis would apply in matters involving unilateral effects and also matters involving coordinated effects (in particular whether a small number of firms could significantly and sustainably increase prices post-merger.

prices at which it sells to competitors in intermediate markets, thereby increasing its revenue and accordingly its profit margins, while raising the input costs of its competitors above its own.[57] However, several factors influence profit margins and the ACCC recognises that increased profitability may not be a conclusive indicator of a substantial lessening of competition. Assessing the likelihood of a significant and sustainable increase in prices or profit margins requires an analysis of all sources of competitive constraint.

7.61. The ACCC considers both qualitative and quantitative evidence relating to the likelihood that the merger will lead to a significant and sustainable increase in prices or profit margins. Qualitative evidence may include relevant internal firm documents, industry studies and other information provided by market participants, including the merging parties.

Ability to increase prices or profit margins

The following are examples of the types of information the ACCC may require to determine the extent to which merger parties may be able to increase prices or profit margins:

- details of recent and current levels of pricing in the relevant market/s, including the use of rebates and discounts
- details of supply costs of goods and services supplied by the merger parties including manufacturing, marketing and distribution costs in the relevant market/s
- a description of any competitive constraints likely to prevent the merger parties from significantly and sustainably increasing the prices paid by their customers, or lowering the prices paid to their suppliers post-merger in the relevant market/s
- a description of the likely effect of the merger on the profit margins of the merger parties post-merger and the expected cause of any change.

In an informal merger review, providing a base level of information to the ACCC will, in non-controversial cases, usually be sufficient to satisfy the ACCC of whether or not a substantial lessening of competition is likely. Whether a wider range of information will be required by the ACCC will be assessed on a case-by-case basis and will depend on the complexity of the matter and the potential competition concerns raised.

Other factors

7.62. The list of merger factors contained in s. 50(3) is not exhaustive. Particular mergers may involve other factors that affect the likely competitive outcome of the merger. It is not possible in these guidelines to foresee every possible factor that may be relevant in a particular merger assessment, but other factors such as merger-related efficiencies, effect of export markets and government regulation may be relevant.

Efficiencies

7.63. The potential for improved efficiency is a common motivation for firms to merge. Merger-related efficiencies include greater economies of scale and scope from combining production, distribution and marketing activities, greater innovation yields from combining investment in research and development and reduced transaction

[57] Trade Practices Legislation Amendment Bill 1992, explanatory memorandum, paragraph 26.

costs.[58] The ACCC recognises that a reduction in marginal costs post-merger may increase competitive tension. However, the ACCC's focus in s. 50 merger analyses is the effect of the merger on competition, competitive constraints and the efficiency of markets, rather than the efficiency of individual firms. A merger that removes or weakens competitive constraints to the extent that a substantial lessening of competition results, will (unless authorised) contravene s. 50 — even if the merger results in a more efficient firm with a lower cost structure.

7.64. While competitive constraints are generally external to a firm, the likely internal cost structure of a firm (which, for a merged firm, is in part determined by the efficiencies it has gained through merging) is often relevant to competition. For instance, the cost structure of firms in a duopoly or oligopoly market is one of many factors relevant to the likelihood of coordinated conduct. Symmetry between firms may be conducive to coordinated conduct and strategic interdependence, whereas the presence of a firm with a lower cost structure than that of its rivals might cause coordination to break down. Similarly, changes in the level of excess capacity in a market may alter the intensity of competition. The competitive impact of a merged firm's likely cost structure depends on the circumstances of the merger.

7.65. If efficiencies are likely to result in lower (or not significantly higher) prices, increased output and/or higher quality goods or services, the merger may not substantially lessen competition. The ACCC generally only considers merger-related efficiencies to be relevant to s. 50 merger analyses when it involves a significant reduction in the marginal production cost of the merged firm and there is clear and compelling evidence that the resulting efficiencies directly affect the level of competition in a market and these efficiencies will not be dissipated post-merger.

7.66. In cases where a merger is likely to achieve significant efficiencies, but the efficiencies do not prevent a substantial lessening of competition, the merger may only proceed if the acquirer applies for, and the ACCC grants, authorisation for the proposed merger. As part of the statutory test, the ACCC may consider whether gains in efficiency constitute a public benefit that outweighs the public detriment from the substantial lessening of competition.

Potential effect of exports on domestic markets

7.67. While competition in overseas markets may prevent the merged firm from raising its export prices, the ACCC generally focuses on whether the merged firm[59] is able to significantly and sustainably raise prices in a market in Australia post-merger.[60] Generally, the merged firm's export operations do not limit its ability to exercise market power in a market in Australia. In some limited circumstances, however, exports can play a similar role in constraining the market power of domestic suppliers to the role played by imports in constraining the market power of domestic suppliers.

7.68. The merged firm may be constrained in its domestic activities by competition in export markets if:

---

[58] Larger firms also typically achieve lower input prices because of enhanced bargaining power and bulk discounts. Such cost reductions are pecuniary benefits, not efficiency gains. In some cases a merger of two significant acquirers of an input can substantially lessen competition for the acquisition of that input. The ACCC will explore such issues separately from the impact of efficiencies on competitive constraints in the relevant supply market.

[59] Either unilaterally or in conjunction with other suppliers.

[60] Exports may provide a competitive constraint when a merger involves firms that are buyers in the relevant market. In line with the approach adopted throughout these guidelines, consideration is directed towards the case where the merged firm is a seller in the relevant market under analysis. As previously noted, all guidance provided here needs to be appropriately adjusted when merger analysis involves a merger of competing purchasers.

- the merged firm's foreign sales (exports) represent a significant proportion of the merged firm's total sales and
- the merged firm is unable to discriminate in price (or other characteristics) between foreign and domestic sales.

7.69. Under these circumstances, the merged firm may be limited in its ability to exercise market power in the relevant market in Australia without losing export sales. Any increased profit from the domestic market may be offset by the fall in profits from export sales.

Government regulation

7.70. The ACCC considers the effect of any state or federal government regulation that affects competition. For example, firms may be restricted in the range or features of products they can supply, or a price cap might prevent increases in price. However, the ACCC does not regard speculation about future alterations to the regulatory environment, or the mere ability of government to regulate, as an effective competitive constraint.

Appendix 1: Relevant provisions of the Act

1. The merger and acquisition provisions are part of the competition provisions of Part IV of the Act. Some of the relevant provisions of the Act are summarised below for ease of reading. However, the Act is complex legislation and, while the ACCC believes such summaries are accurate, the nature of the Act requires the actual provisions to be consulted in specific cases.

The substantive mergers test (s. 50)

2. Section 50 of the Act prohibits acquisitions that would have the effect, or be likely to have the effect, of substantially lessening competition in a substantial market in Australia or a state, territory or region of Australia.
3. Section 50 of the Act provides that:

    1) A corporation must not directly or indirectly:

        (a) acquire shares in the capital of a body corporate, or

        (b) acquire assets of a person

    if the acquisition would have the effect, or be likely to have the effect, of substantially lessening competition in a market.

    2) A person must not directly or indirectly:

        (a) acquire shares in the capital of a corporation, or

        (b) acquire any assets of a corporation

    if the acquisition would have the effect, or be likely to have the effect, of substantially lessening competition in a market.

    3) Without limiting the matters that may be taken into account for the purposes of subsections (1) and (2) in determining whether the acquisition would have the effect, or be likely to have the effect, of substantially lessening competition in a market, the following matters must be taken into account:

        (a) the actual and potential level of import competition in the market

        (b) the height of barriers to entry to the market

        (c) the level of concentration in the market

        (d) the degree of countervailing power in the market

        (e) the likelihood that the acquisition would result in the acquirer being able to significantly and sustainably increase prices or profit margins

        (f) the extent to which substitutes are available in the market or are likely to be available in the market

        (g) the dynamic characteristics of the market, including growth, innovation and product differentiation

        (h) the likelihood that the acquisition would result in the removal from the market of a vigorous and effective competitor

        (i) the nature and extent of vertical integration in the market.

4. Foreign acquisitions for which an acquirer is not considered to be carrying on a business within Australia may fall under s. 50A of the Act for consideration.

5. Section 4G provides:

> For the purposes of this Act, references to the lessening of competition shall be read as including references to preventing or hindering competition.

6. Section 4E of the Act provides:

> For the purposes of this Act, unless the contrary intention appears, market' means a market in Australia and, when used in relation to any goods or services, includes a market for those goods or services and other goods or services that are substitutable for, or otherwise competitive with, the first mentioned goods or services.

7. Sections 50 and 50A relate only to substantial markets for goods and services in Australia, a state, a territory or a region (ss. 50(6) and 50A(9)).
8. The terms 'substantial lessening of competition', 'market' and 'substantial market' are discussed in paragraphs 3.5, 4.6 and 4.28 respectively.

Clearance processes and authorisations provisions

9. The ACCC investigates and reviews those mergers it becomes aware of that have the potential to raise concerns under s. 50 of the Act. The ACCC's approach to informal merger reviews is contained in its *Informal Merger Review Process Guidelines* (available at www.accc.gov.au).
10. Alternatively, parties may seek legal protection from court action under s. 50 by applying to the ACCC for authorisation of a proposed merger. Sections 88 to 90 of the Act provide for the ACCC, upon application by the acquirer, to grant authorisation for a proposed merger if it is satisfied that:
    - the proposed acquisition would not be likely to substantially lessen competition or
    - the likely public benefit from the proposed acquisition outweighs the likely public detriment.

    Further detail about the merger authorisation process may be found in the ACCC's *Merger Authorisation Guidelines* (available at www.accc.gov.au).

Enforcement and undertakings provisions

11. Under s. 87B of the Act, the ACCC may accept a written undertaking in connection with a matter in relation to which it has a power or function under the Act, except Part X. If the undertaking is breached, the ACCC may seek orders from the court directing compliance with the undertaking, the giving up of any financial benefit gained from the breach, compensation for any other loss or damage as a result of the breach, or any other appropriate orders. Section 87B provides:

    1) The ACCC may accept a written undertaking given by a person for the purposes of this section in connection with a matter in relation to which the ACCC has a power or function under this Act (other than Part X).
    2) The person may withdraw or vary the undertaking at any time, but only with the consent of the ACCC.
    3) If the ACCC considers that the person who gave the undertaking has breached any of its terms, the ACCC may apply to the court for an order under subsection (4).
    4) If the court is satisfied that the person has breached a term of the undertaking, the court may make all or any of the following orders:

(a) an order directing the person to comply with that term of the undertaking;

(b) an order directing the person to pay to the Commonwealth an amount up to the amount of any financial benefit that the person has obtained directly or indirectly and that is reasonably attributable to the breach;

(c) any order that the court considers appropriate directing the person to compensate any other person who has suffered loss or damage as a result of the breach;

(d) any other order that the court considers appropriate.

12. Under s. 80 of the Act, only the ACCC may seek injunctive relief from the Federal Court to prevent a merger from proceeding (s. 80(1A)). Other persons may institute declaration proceedings in respect of an acquisition (s. 163A) but may not seek an injunction.

13. Under s. 81(1) of the Act, the court may, on the application of the ACCC or any other person, if it finds or has in another proceeding under the Act found that a person has contravened s. 50, give directions to secure disposal of all or any of the shares or assets acquired in contravention of s. 50. Under s. 81(1A) the court may declare such an acquisition void where it finds that the vendor was involved in the contravention. Section 81(1C) provides for the court to accept as an alternative an undertaking from the person to dispose of other shares or assets owned by the person. An application under s. 81(1) or 81(1A) may be made at any time within three years after the date on which the contravention occurred.

14. In certain circumstances, as provided for in ss. 76(1A) and 76(1B) of the Act, the court may impose a penalty for a contravention of s. 50 of up to $500,000 for an individual and, for a corporation, up to the greatest of:

- $10 million
- three times the value of the benefit to the corporation that is reasonably attributable to the contravention
- 10 per cent of the corporation’s annual turnover.

15. In summary, the provisions of the Act relevant to mergers include:

- mergers and acquisitions — s. 50
- extraterritorial operation — s. 5(1)
- overseas share acquisitions — s. 50A
- anti-competitive agreements — s. 45
- definition of acquisition of shares or assets — s. 4(4)
- market definition — s. 4E
- lessening of competition includes preventing or hindering — s. 4G
- injunctions — s. 80
- divestiture and setting aside acquisitions — s. 81
- pecuniary penalty — s. 76
- enforceable undertakings — s. 87B
- ability to grant authorisation – s. 88(1)
- ability to grant authorisation subject to conditions – s. 88(3)
- procedure for applications and the keeping of a register – s. 89
- determination of an application for authorisation – s. 90.

Appendix 2: Acquisitions subject to the Act

1. The following provides guidance about the types of transactions that are subject to the Act. Nevertheless, the Act is complex legislation, and parties should consult the actual provisions of the Act to determine whether a particular transaction falls within the scope of the Act.

Territorial jurisdiction

2. The Act applies to the following acquisitions:

    (a) acquisitions of property within Australia are covered by virtue of s. 50, including (but not limited to):

    - shares in Australian companies, wherever the transaction is entered into, as the shares are domestically situated
    - domestic businesses
    - local intellectual property such as trademarks
    - local plant and equipment.

    (b) acquisitions of property wherever situated are covered by virtue of ss. 50 and 5(1) if the acquirer is:

    - incorporated in Australia
    - carries on business in Australia
    - an Australian citizen, or
    - ordinarily resident in Australia.

    (c) if (a) and (b) above do not apply, acquisitions of a controlling interest (presumably shares in almost all cases) in a body corporate where that body corporate has a controlling interest in a corporation are covered by virtue of s. 50A.

Acquirers subject to the Act

3. Section 50 of the Act applies to corporations (s. 50(1)) and persons (s. 50(2)).
4. Acquisitions involving both incorporated and non-incorporated entities are subject to the Act through Part XIA (the Competition Code). Each Australian state and territory government has, under clause 5 of the Conduct Code Agreement between the Australian Government and state and territory governments, passed legislation implementing the Competition Code.
5. The merger provisions of the Act also apply to the Commonwealth and to the state and territory governments insofar as they are carrying on business (ss. 2A and 2B respectively). Pecuniary penalties do not, however, apply to activities of the Crown.

Types of acquisitions

6. The Act applies to both direct and indirect acquisitions. Section 4(1) of the Act makes it clear that ‘acquire’ is not limited to acquisition by way of purchase but also includes exchange, lease, hire or hire purchase.

7. Section 4(4) of the Act provides that joint acquisitions and acquisitions of equitable as well as legal interests are acquisitions subject to s. 50,[61] but that in the case of assets, an acquisition by way of a charge and an acquisition in the ordinary course of business are not acquisitions to which s. 50 applies.

Exceptions

8. Section 51(1) of the Act provides for exceptions from s. 50 and s. 50A for conduct that is specified in and specifically authorised by Commonwealth legislation. As with all exceptions under s. 51, the relevant Commonwealth law must specify the excepted acquisition and specifically authorize it (s. 51(1)(a)(i)). Acquisitions cannot be exempted from s. 50 and s. 50A by state or territory laws (s. 51(1C)(b)).

Partial shareholdings and minority interests

9. Mergers often involve one or more firms being completely subsumed by another firm. However, mergers and acquisitions may also involve parties acquiring a partial shareholding in another firm. There is no threshold shareholding for the purposes of s. 50 and all acquisitions are therefore subject to the Act.

10. For the purposes of competition analysis, acquisition by one company of a controlling interest in another company will be treated in the same way as an acquisition of all the shares of the target company. While a majority shareholding would in many cases ensure control, much lower shareholdings with or without other non-shareholding interests might also be sufficient. Factors that the ACCC takes into account when considering whether a shareholding and/or other interest is sufficient to deliver control of a company include, among other things:
    - the ownership distribution of the remaining shares and securities, including ordinary and preference shares and any special shares
    - the distribution of voting rights, including any special voting rights
    - whether other shareholders are active or passive participants at company meetings
    - any restrictive covenants or special benefits attaching to shares
    - any pre-emption rights in relation to the sale of shares or assets
    - any other contracts or arrangements between the parties
    - the rights and influence of any significant debt holders
    - the composition of the board of directors
    - the company's constitution.

11. In any event, a level of ownership less than a controlling interest that nevertheless alters the incentives of all parties may give rise to a contravention of s. 50 of the Act. The Act does not refer to control but rather to the effect on competition. The following are some of the potential anti-competitive effects of shareholdings below a level delivering control:
    - horizontal acquisitions may increase interdependence between rivals and lead to muted competition or coordinated conduct (see chapter 6)
    - joint acquisitions of assets by rivals may have coordinated effects

[61] In *Trade Practices Commission v Arnotts Ltd & Ors* (1990) ATPR 41–002, at 51,044, creation of an option over shares was found to create an equitable interest in those shares and therefore constituted an acquisition subject to s. 50.

- vertical or conglomerate acquisitions may increase the acquirer's incentive to foreclose rival suppliers
- acquisitions may provide access to commercially sensitive information in relation to competitors
- acquisitions may block potentially pro-competitive mergers and rationalisation.

Horizontal minority acquisitions

12. If a firm has a significant shareholding in a rival firm, it may be less inclined to compete head-to-head with that firm, since to do so would result in a transfer of revenue between commonly held assets and would likely reduce overall profitability. Refraining from competition to maximise joint profits becomes more attractive. Where the incentives lie in particular circumstances depends on the relative value of the assets as well as the percentage shareholding. Partial shareholdings and directorships may result in coordinated effects by reducing the incentives for 'cheating', making departures from the consensus harder to conceal and facilitating the exchange of information between firms.

Third party minority acquisitions

13. Two parties that compete in one market may acquire shares in a company or participate in a joint venture in another market. This may result in coordinated effects in the first market.
14. Minority interests may raise competition concerns when the same party has an interest in a number of otherwise independent competitors. For example, if a party acquires a minority interest in two competitors, that acquisition may substantially lessen competition if it results in coordinated effects. Such coordination need not be explicit but may simply reflect the mutual benefits to be gained by the relevant firms in limiting competition, together with the requirement for each competitor's directors to act in the interests of the company as a whole. In such circumstances, the ACCC may also consider whether overlapping directorships create opportunities to limit competition between rivals.

Vertical minority acquisitions

15. Minority interests may also raise competition concerns when the same party has an interest in vertically related firms or firms supplying complementary products. If an acquisition creates a relationship between a firm with significant market power in one market and another firm operating in a market upstream or downstream, the acquisition may create an incentive for the firm with market power to discriminate in favour of the related firm.
16. In addition to analysing the effect that the acquisition of the minority interest will have on the incentives of the relevant firms, the ACCC will take into consideration the legal responsibilities of company directors under the *Corporations Act 2001* and at common law.

Minority acquisitions and information flows

17. Firms could gain access to commercially sensitive information about their rivals through either horizontal or vertical acquisitions. Debt holders may also have access to significant information. Information such as costs, revenues, bids, contracts, forward supply estimates, marketing campaigns and new product plans may be available. The level of available information depends on the nature and level of the shareholding. If the shareholding is sufficient to secure a position on the board of directors, more information is likely to be available.

Blocking stakes

18. A shareholding of over 10 per cent in a company is sufficient to block the compulsory acquisition of all the shares by another party. This in turn may allow the minority shareholder to prevent rationalisation of two weak rivals and the creation of a more competitive firm, thereby hindering or preventing competition.

ACCC's assessment

19. The framework for competition analysis set out in these guidelines is relevant for all share acquisitions, whether or not they deliver control of the target firm. Where share acquisitions do not deliver control, the ACCC will take into consideration inter-company relationships, director's duties, and a range of other factors including:

    - the actual ownership share of the minority interest
    - the existence of any contractual or other arrangements that may enhance the influence of the minority interest
    - the size, concentration, dispersion and rights of the remaining ownership shares
    - the board representation and voting rights of the minority interests.

Appendix 3: Undertakings

1. During the course of its competition assessment, the ACCC may identify competition concerns that support the view that an acquisition is likely to substantially lessen competition in contravention of the Act. If these competition concerns cannot be resolved and the merger parties continue to pursue the acquisition, the ACCC will, along with other orders, seek an injunction in the Federal Court to stop the merger proceeding.
2. In some cases, however, merger parties can provide the ACCC with a court enforceable undertaking under s. 87B of the Act to implement structural, behavioural or other measures that assuage the competition concerns identified by the ACCC.[62] Undertakings of this type are also referred to as 'remedies.' If the ACCC is satisfied that the proposed measures will address the competition concerns identified, it may accept the undertaking and allow the merger to proceed. Merger parties therefore have strong incentives for proposing effective and enforceable remedies in the form of s. 87B undertakings to remedy identified competition concerns.
3. Undertakings that remedy a likely contravention of the Act prevent the detriment that would otherwise result from the transaction, while at the same time allowing any benefits arising from the transaction to be realised. In the merger context, undertakings can address the competition concerns while at the same time permitting the realisation of merger benefits, such as efficiencies or improvements in management. In this context, s. 87B undertakings are a flexible alternative to simply opposing an acquisition when the ACCC believes that a merger or acquisition is likely to substantially lessen competition.
4. The provision of undertakings is at the discretion of the party giving the undertaking. The structure and content of undertakings offered to the ACCC will therefore be a matter for the party offering the undertaking to determine. However, the ACCC will not accept undertakings if it is not satisfied they address its competition concerns. The ACCC encourages merger parties to carefully consider ACCC feedback on the form and content of proposed undertakings.

General principles

5. The ACCC's approach to the substance of s. 87B undertakings will depend on the merits and circumstances of each matter. However, it is possible to identify certain general principles that underpin effective undertakings.
6. In accepting an undertaking the ACCC does not seek to improve competition beyond the pre-merger level of competition, but the remedy needs to adequately address the potential harm identified. There will be instances when only an outright rejection of the merger can address the ACCC's competition concerns.
7. To determine whether the undertaking is acceptable, the ACCC will consider a range of factors — in particular the effectiveness of the remedy to address the ACCC's competition concerns, how difficult the proposal will be to administer, the ability of the merged firm to deliver the required outcomes, monitoring and compliance costs and any risk to competition associated with the implementation of the undertaking (or failure to do so).
8. Before accepting an undertaking, the ACCC will need to be satisfied that:
   - the proposed undertaking is customised to the particular nature of the relevant merger, the competition concerns raised, and the industry or industries involved

[62] In some circumstances, the ACCC may seek an undertaking from merger parties not to proceed until the ACCC has completed an informal merger review. This is distinct from the enforceable undertakings under discussion in this appendix 3.

- the core obligations in the proposed undertaking (for example, a divesture) specifically, comprehensively and effectively address the ACCC's competition concerns
- the proposed undertaking would impose clear and unambiguous obligations on the party giving the undertaking, including clear delineation of assets and businesses covered by the remedy, the terms under which the remedy is to be carried out, timeframes for actions to be completed, and the consequences of non-performance within those timeframes
- the party offering the undertaking is capable of meeting its obligations as set out in the undertaking, and the remedy cannot be frustrated by the actions (or inaction) of third parties (for example, there may be matters where minority shareholders remain following the acquisition of a firm, who may be able to prevent the acquirer from meeting its obligations under a proposed undertaking)
- for international mergers involving firms operating in jurisdictions other than Australia, any remedies provided to the ACCC are capable of being enforced by the ACCC and coordinated with any of the other relevant jurisdictions involved.

9. Importantly, the ACCC will be unlikely to accept an undertaking when, in its view:
    - there are risks that the undertaking will not be effective in preventing a substantial lessening of competition as a result of the merger, and/or
    - there are risks that the undertaking cannot be implemented in practice and (where necessary) properly monitored and/or enforced.

Types of undertakings

10. Undertaking remedies are conventionally classified as either structural or behavioural. Structural remedies generally change the structure of the merged firm and/or the market, typically through divestiture of part or all of a business, and, in satisfying the ACCC's competition concerns, are generally aimed at restoring or maintaining the level of competition prevailing before the acquisition. Behavioural remedies are normally ongoing remedies designed to modify or constrain the behaviour of the merged firms, by mandating the price, quality or output of the merged firm's goods or services, or otherwise modifying their dealings with other firms.
11. The ACCC has a strong preference for structural undertakings — that is, undertakings to divest part of the merged firm to address competition concerns. Structural undertakings provide an enduring remedy with relatively low monitoring and compliance costs.
12. On occasion, behavioural undertakings — that is, undertakings by the merged firm to do, or not do, certain acts (for example, meet specified service levels) — may be appropriate as an adjunct to a structural remedy. Behavioural remedies are rarely appropriate on their own to address competition concerns.

Structural undertakings — divestitures

13. Divestiture is generally the most common form of structural remedy accepted by the ACCC. In essence, a divestiture seeks to remedy the competitive detriments of a merger by either:
    - creating a new source of competition through the disposal of shares, interests, a business or a set of assets to a new, competitive market participant, or
    - strengthening an existing source of competition through disposal to an existing market participant independent of the merging parties.

14. As a general rule, divestiture undertakings aim to ensure that the ultimate purchaser of the divestiture assets will be a viable, long-term, independent and effective competitor to the merged firm, in a way that addresses the ACCC's competition concerns with the merger.

15. Key elements of a divestiture are the scope of the divestiture package, the purchaser selection and the disposal process. While merger parties will generally seek to offer divestiture remedies that satisfy the ACCC's requirements so that the merger is not opposed, they may have a conflicting incentive to undermine the future competitive effect of any divested assets and businesses where those divested assets or business will compete against the merged firm post-merger. Each of the key aspects of the divestiture may be susceptible to a number of risks such as:

    - composition risks — the scope of the divestiture package may not be appropriately configured (or sufficiently wide, say, in product range) to attract a suitable purchaser or allow a suitable purchaser to operate effectively
    - purchaser risks — a suitable purchaser may not be available or the merging firms may attempt to dispose of assets to a weak or otherwise inappropriate purchaser
    - asset risks — the competitive capability of a divestiture package may deteriorate significantly before completion of a divestment, for example through loss of customers or key members of staff, or there may be some impediment to sale such as third party approvals, or minority shareholder actions.

16. The ACCC closely examines the nature and extent of the undertakings offered against such risks in any individual case.

17. Generally, for a structural undertaking to be acceptable to the ACCC, all of the following requirements should be satisfied:

    - the divestiture remedy should be proportionate to the competition concerns or detriments and be effective in restoring or maintaining competition
    - the assets must be sold to a viable, effective and long-term competitor. That is, the part of the merged firm to be divested (for example, a subsidiary or a suite of assets) must facilitate the maintenance or creation of an independent and effective long-term competitor in the market. There should be no need for continuing supply or other arrangements between the merged firm and the purchaser of the divested business
    - there must be procedures for the purchaser to be approved by the ACCC. Generally, purchasers should be independent of the merged firm and possess the necessary expertise, experience and resources to be an effective long-term competitor in the market. The purchaser's acquisition of the divestiture business must not itself raise competition concerns in any market
    - the value and integrity of the divestiture package must be preserved and independently maintained and operated as a going concern, pending divestiture. Wherever practicable, divestiture should occur on or before the completion date of the merger, particularly in cases where there are risks in identifying a (suitable) purchaser or asset-deterioration risks. There will be some specific circumstances where, if the remedy cannot be implemented on or before completion of the main transaction to address the identified competition concerns, no remedy will be acceptable to the ACCC
    - appropriate provisions will apply, should firms fail in their core obligations. For example, an undertaking should provide for the merged firm to appoint an ACCC-approved sales agent to divest the business to an ACCC-approved purchaser if the firm fails to sell the divestiture business itself within the requisite period

- appropriate provisions will apply to enable the ACCC to monitor and investigate compliance with the undertakings and enforce the provisions if necessary. For example, an undertaking may require the appointment of an ACCC-approved independent auditor or other independent expert to monitor certain aspects of the undertakings, contain provisions that require periodic reporting by the undertaking parties or an auditor, and contain provisions to enable the ACCC to obtain information about compliance with the undertakings
- remedies will also be required to be implemented in a timely manner.

18. In each case the specific measures and provisions needed to achieve these requirements (and further requirements if appropriate) may differ, in accordance with the circumstances of each case. Examples of specific provisions found to be acceptable to the ACCC in previous matters and that may assist merger party/parties in developing undertakings proposals can be found on the ACCC website (www.accc.gov.au).

Behavioural undertakings

19. The nature of effective behavioural undertakings will depend on the particular competition concerns they seek to address and the likely future state of competition in the relevant markets. It is therefore difficult to provide clear guidance as to whether behavioural undertakings will be appropriate to remedy the competition issues in any given matter.
20. Generally, behavioural undertakings are only likely to address the ACCC's competition concerns if they foster the development or maintenance of enduring and effective competitive constraints within a short and pre-specified period of time. It is particularly rare for the ACCC to accept behavioural remedies that apply on a permanent basis due to the inherent risk to competition combined with the monitoring and enforcement burden such remedies create.
21. An effective behavioural undertaking must contain an effective mechanism for the on-going monitoring and compliance and investigation of suspected breaches of the undertaking by the merged firm. Commonly, behavioural undertakings provide for the appointment of an ACCC-approved auditor to monitor compliance and report back to the ACCC.

Process

22. The *Informal Merger Review Process Guidelines* and *Merger Authorisation Guidelines* explain the ACCC's processes when considering a proposed undertaking.
23. To the greatest extent possible, subject to the legitimate confidentiality concerns of the parties, the ACCC will seek to ensure that the reasons for accepting an undertaking are publicly available and that undertakings accepted for one merger are broadly consistent with the undertakings accepted in other merger cases.
24. A party to an undertaking may withdraw or vary their undertaking at any time but only with the consent of the ACCC.

Enforcement

25. The ACCC considers that s. 87B undertakings play a critical role in administering and enforcing s. 50 of the Act. Accordingly, the ACCC carefully monitors compliance with all undertakings it accepts and will investigate if it identifies any potential non-compliance. The ACCC will not hesitate to take enforcement action if it considers that an undertaking has been breached, and that court action is the appropriate response in the circumstances.

26. In the event of non-compliance with an undertaking the ACCC may make an application to the Federal Court for an order under s. 87B(4), and the court may, if it is satisfied that the party to the undertaking has contravened a term of the undertaking, make all or any of the following orders:

- an order directing the person to comply with that term of the undertaking
- an order directing the person to pay to the Commonwealth an amount up to the amount of any financial benefit that the person has obtained directly or indirectly and that is reasonably attributable to the breach
- any order that the court considers appropriate directing the person to compensate any other person who has suffered loss or damage as a result of the breach any other order that the court considers appropriate.

27. Further, the ACCC will generally not cede the legal right to take action in an undertaking. An undertaking accepted by the ACCC does not preclude the ACCC from taking legal action under s. 50, particularly if the undertaking is not properly implemented or the decision to accept the undertaking was based on inaccurate information.

Glossary and shortened forms

Note: in these guidelines, the term ‘product’ encompasses both goods and services.

ACCC	Australian Competition and Consumer Commission
Act (the)	*Competition and Consumer Act 2010* (Cth) formerly the *Trade Practices Act 1974*
behavioural undertakings	An undertaking that prescribes conduct to be carried out, directed or avoided by the merged firm on an ongoing basis to minimise its ability to exercise anti-competitive market power.
complementary products	Products are complementary in either demand or supply where a change in the demand for one generates demand for the other. If the price of one product rises, demand for both products may fall. Similarly, if the price of one product falls, demand for both products may increase.
conglomerate mergers	Mergers involving firms that interact or potentially interact across several separate markets and supply products that are in some way related to each other — for example, products that are complementary in either demand or supply.
court (the)	Federal Court of Australia
CRx	The x firm concentration ratio. This ratio is the fraction of market shares possessed by the ‘x’ largest firms in a given market. The higher the concentration ratio, the greater the level of concentration in that market.
differentiation	Differences in the features of a range of products that all serve the same function.
economies of scale	The economic principle whereby a firm’s long-run average total cost of production is decreased as the quantity of that firm’s output is increased.
economies of scope	The economic principle whereby a firm’s long-run average total cost of production is decreased as the quantity of different goods produced by that firm is increased.
failing firm	A firm that is likely to exit a particular market in the foreseeable future (generally within one to two years) with its productive capacity leaving the market — that is, not simply a change in ownership.
foreclosure	Refers to when a firm prevents or impedes a rival firm from competing.
guidelines (the)	*ACCC Merger Guidelines 2008*
HHI	Herfindahl-Hirschman Index — a metric used to estimate the post-merger level of concentration of markets, as well as changes in the concentration of markets as a result of a merger. The HHI is calculated by adding the sum of the squares of the market share of each firm in a particular market.
HMT	Hypothetical monopolist test — the HMT identifies the smallest area in product and geographic space within which a hypothetical current and future profit-maximising monopolist could effectively exercise market power.
horizontal mergers	The merging of firms operating in the same market or markets.
ICN	International Competition Network
market participant	A firm that operates in a particular market or markets, such as a supplier or customer.
maverick firm	A firm with a relatively small market share in a particular industry that is considered a vigorous and effective competitor and which generally drive

	significant aspects of competition, such as pricing, innovation and/or product development.
merger factors	The non-exhaustive list of factors set out in s. 50(3) of the Act that must be taken into account when assessing whether a merger will contravene the Act, as well as any other factors relevant to the effect of a merger on competition.
minimum efficient scale	The minimum size (typically in terms of output, capacity or customer base) that a firm requires to compete effectively with incumbent suppliers in a market.
niche segment	Refers to a portion of a differentiated market serviced by small, specialised suppliers and often involving products that are in some way distinct from the products of larger suppliers.
notification threshold	The threshold established by the ACCC to identify mergers that should be notified to it (see chapter 2 of these guidelines)
public competition assessment	This outlines the basis for the ACCC reaching its final conclusion on a merger when: the merger is rejected; the merger is subject to enforceable undertakings; the merger parties seek such disclosure; or the merger is approved but raises important issues that the ACCC considers should be made public (published at www.accc.gov.au).
section 87B undertaking	A court enforceable undertaking under s. 87B of the Act that may be accepted by the ACCC to assuage any competition concerns identified.
SSNIP	A small but significant and non-transitory increase in price.
statement of issues	This provides the ACCC's preliminary views on a merger which raises competition concerns requiring further investigation.
structural undertakings	An undertaking that provides for one-off actions that alter the entry conditions, or the vertical or the horizontal relationships in a particular industry. Structural undertakings will typically involve the divestment of part of a merged firm.
sunk costs	Costs that have already been committed by a firm to its business and cannot be recovered on exiting the market.
supply elasticity	This is a measure of how much the quantity of product supplied by a firm responds to specific changes in its particular market (for example, a change in the price of the product, a fall in input prices, or an improvement in production technology).
switching cost	Refers to the cost for customers to switch suppliers (for example, including search costs, transaction costs and market specific behaviour).
Tribunal (the)	Australian Competition Tribunal
undertaking	See section 87B undertaking.
vertical mergers	A merger involving firms operating or potentially operating at different functional levels of the same vertical supply chain.

Joint statement on merger control enforcement

Competition and Markets Authority (CMA), Australian Competition and Consumer Commission (ACCC) and Bundeskartellamt

Purpose of this statement

1. The CMA, ACCC and Bundeskartellamt release this joint statement to highlight to businesses, advisers, courts and governments that there is a common understanding across competition agencies on the need for rigorous and effective merger enforcement. This statement is made in the face of high levels of concentration across various markets in the UK, Australia and Germany and a marked increase in the number of merger reviews involving dynamic and fast-paced markets. The need for effective merger control remains important where our economies are weakened, including as a result of the Coronavirus (Covid-19) pandemic.

2. The combination of the uncertainty inherent in the forward-looking nature of merger control and changes in the nature and complexity of the mergers under review presents challenges to preventing further concentration from anticompetitive mergers over the longer term. It is important that the decisions by competition agencies, the courts and tribunals give due credence to the importance of competition and the economic principles underlying merger control, so as to ensure good outcomes for consumers and the economy.

Purpose of merger control

3. The purpose of merger control is to ensure that relevant transactions are assessed, and anticompetitive mergers are prevented so that consumers benefit from the lower prices, higher quality products and services, greater choice and innovation that effective competition brings. Competition increases consumer trust in markets and drives the functioning of market economies and economic prosperity.

4. Without strong merger control regimes, there is a risk that mergers will proceed that lessen the level of competition by weakening competitive constraints and in some cases strengthening dominant positions. An effective regime therefore seeks to prevent companies from gaining market power

through acquisitions. Firms are typically motivated to use gains in market power to increase shareholder returns at the expense of consumers.

5. Given the long-term structural effects of mergers, ineffective merger control that does not properly scrutinise mergers can cause long-term negative consequences for businesses and end consumers. It can be very difficult, and in some cases impossible, to reverse the loss of competition by taking enforcement action after a merger has taken place. Equally, it can take considerable time for markets to adjust to recover the competition lost through a merger.

The impact of the Coronavirus (Covid-19) pandemic

6. Companies are facing difficult times as a result of the pandemic, which may result in more takeovers and acquisitions. However, these weakened economic conditions and the greater struggles companies may face does not mean that consumers should bear the costs of the loss of competition that can arise from anticompetitive mergers.

7. The pandemic should not be used to bring about a relaxation of the standards against which mergers are ultimately assessed. It is important that merger assessments remain focused on the long-term consequences of a merger and do not unduly focus on short-term market features. For instance, while it is conceivable that the pandemic could lead to an increase in valid failing firm claims, the pandemic is not a reason to lower the standard for accepting such claims. While in some circumstances it may be necessary to factor the short-term impact of the pandemic into merger assessments, this will need to consider the impact on all firms in the market and competition agencies' assessments must remain rigorous and evidence-based. In particular, competition agencies cannot base assessments on speculation or unfounded claims as to the impact of the pandemic.

Challenges for merger control

8. Competition agencies face a difficult challenge when taking a view on future market positions and company actions, and the forward-looking nature of merger control review will always mean competition agencies face some uncertainty when making such decisions. However, uncertainty as to the future should not necessarily mean that potentially anticompetitive mergers are cleared because of that uncertainty: a seemingly small transaction can cause a competitive market to tip in an anticompetitive direction. For example, an acquisition of a small start-up could in reality be the acquisition of what would have been a major competitive threat to the purchaser in the longer term.

9. When faced with uncertainty, it is therefore important that competition agencies are willing to challenge the presumption often promoted by merging firms and their advisers that mergers are generally efficiency-enhancing and should only be restrained where there is certainty that serious detriment will result.

10. Competition agencies are increasingly reviewing mergers in dynamic and fast-paced markets. These mergers can involve hundreds of products or services in related markets, as well as products and services in earlier research and development stages. In addition, the last decade has seen the rise of acquisitive tech giants with activities across multiple current or future markets. Anticompetitive mergers in these markets can cause significant harm given the increased importance of these products and services and the aggregation of data over time across various services. Technology markets can also be examples of highly concentrated markets with features such as high barriers to entry due to network effects. This can result in high market concentration, such that market power is easily created or entrenched, and is likely long-lived.

11. Harm to consumers may arise where incumbents seek to protect their market position by acquiring potential competitors in the form of smaller firms or potential entrants in adjacent markets. This is relevant where, absent the merger, entry or expansion by either or both merger firms may have resulted in new or increased competition between them. Even if the likelihood of entry is not high, the threat of entry can still constrain incumbent firms. This is particularly the case if entry, in the event it occurred, would likely have a substantial impact on the profits of incumbent firms.

12. Merging firms and their advisers often assert that their merger will increase competition. This is generally based on claims that the merger will generate synergies or other efficiencies. Our experience suggests that merging firms often overstate the apparent efficiency benefits of mergers and how these will translate into more competitive outcomes for markets. Given the long-term structural change and clear loss of rivalry that can result from a merger, protecting competition may require the prevention of problematic mergers rather than the acceptance of submissions relating to purportedly procompetitive benefits that are difficult to verify and predict.

13. Companies are often advised and represented by law firms and economists that strongly advocate for their views of the market. Competition agencies (and courts and tribunals where appropriate) are tasked with reviewing and testing that advocacy to examine the evidence, particularly documents and data, and decide whether these claims are supported.

14. The merger review process relies on competitors and customers (who are often unrepresented or not heavily engaged in the review) to make available any evidence that could support or counter the claims of the merging companies. However, it is not uncommon for some firms (whether suppliers, competitors or customers) to be reluctant to provide information that may jeopardise their commercial relationship with the merged firm, particularly if the merged firm is a key customer or supplier. It is also relevant that individual consumers are a disparate and disaggregated group that are often not well placed to coordinate to represent their interests. Because of this, competition agencies, courts and tribunals need to be aware of the risk of accepting the merger firm's views over those of competitors, customers and consumers simply because the merger firms are more engaged in the merger review process.

Remedies

15. In view of the challenges to ensuring effective merger control, competition agencies have an opportunity to reassess their approach so that a degree of uncertainty about future developments in the relevant markets does not lead, by default, to a clearance decision. In practice, this may mean intervening in a merger to seek remedies to maintain competition or, where that is not possible, prohibiting the merger.

16. The increasing complexity of dynamic markets and the need to undertake forward-looking assessments require competition agencies to favour structural over behavioural remedies. It is widely acknowledged that complex behavioural remedies that create continuing economic links and dependencies are unlikely to recreate the pre-merger competitive intensity of the market, can raise significant circumvention risks, and can quickly become outdated as market conditions change. In some circumstances they can also distort the natural development of the market.[1] Behavioural remedies also place a burden on competition agencies and businesses by necessitating extensive post-merger monitoring of companies and their conduct.

17. Structural remedies – whether prohibition or divestment of a standalone business – are more likely to preserve competition and lead to an optimal solution for stakeholders and are therefore in the best interests of consumers. Importantly, the threshold of proof required to prohibit a merger is not higher when no divestment would be effective in restoring the lost competition;

1 CMA109 (18 June 2019), Merger remedy evaluations: Report on case study research.

indeed, protecting competition and consumer welfare can sometimes only be achieved by blocking a merger outright.

The way forward

18. Effective merger control is vital to ensuring competitive markets exist in a free market economy. Competition drives prices down; quality, choice and service up; and pushes companies to innovate. Competition can only be maintained by ensuring anticompetitive mergers do not happen. This is even more so in a fast-developing digital world impacted by the Coronavirus (Covid-19) pandemic. We believe that in the world today there is a real need for strong merger enforcement from competition agencies globally to ensure that high concentration levels do not become the accepted norm, and to maintain and promote competition for the benefit of consumers. To achieve this, competition agencies, courts and tribunals are strongly encouraged to protect competition also when there is uncertainty raised by contentious mergers and ensure the interests of consumers are promoted over the profits of the merging firms.

GLOSSARY OF TERMS

BASING-POINT PRICING. A system of product pricing adopted by an industry under which buyers are under compulsion to accept identical prices in a given market regardless of the location of the production facilities of the various suppliers.

> The delivered price to the buyer is made up of the price at a given place, known as the "basing point", plus freight to the point of delivery.... [These freight] ... charges are obtained from freight books prepared by leading companies or trade associations.... A buyer is not allowed to take delivery of the goods F.O.B. plant and transport them by any means he desires.... Under the single basing-point system, one producing center is taken as the base from which all F.O.B. prices are quoted, the delivered price of the product being this F.O.B. price plus freight from the base point to destination. Producers not located at the basing point quote the same delivered price as the firm at that place.... The multiple basing-point system is simply an extension of the single basing-point idea. A number of producing centers become basing points which quote F.O.B. prices, and the delivered price at any given destination will be the lowest combination of base price plus transportation to point of delivery....
>
> Dudley F. Pegrum, *Public Regulation of Business*, rev. ed., Homewood, Ill., Richard D. Irwin, 1965, p. 215.

CARTELS. Arrangements whereby independent business enterprises enter into agreements that have the purpose of restricting competition among them. Most cartels involve an agreement on the prices to be charged and/or a division of a market or markets. International cartels are those cartels which include the enterprises of more than one country.

CONCENTRATION. The proportion of an industry's output accounted for by a specified number of the largest firms.

CONGLOMERATE MERGER. A merger that is neither horizontal (no competitive market relationship) nor vertical (no customer-supplier relationship).

Conglomerate firm -- a firm that has diversified operations.

CONSIGNMENT SELLING. A distributor acts as an agent in selling the products of a manufacturer, with the title to the goods remaining with the manufacturer.

DIRECTED BUYING. See Exclusive Arrangements.

EXCLUSIVE ARRANGEMENTS. These undertakings serve to foreclose the part of the market covered by the agreement from the supplier's competitors. However, it should be noted that the contracts or other arrangements may serve legitimate business needs and need not involve any detriment to the public. Exclusive arrangements include:

a) *Directed Buying*. A form of exclusive dealing under which a supplier may require a distributor of his product to buy other products from a stipulated firm or firms. Directed buying will ordinarily imply a *market-access arrangement* (see below).

b) *Exclusive Dealing*. A contractual undertaking between a supplier and a purchaser under which the purchaser agrees not to handle a product or products sold by competitors of the supplier. (The contract may also obligate the supplier not to make the product available to other purchasers in the relevant market, in which case there is said to be a "bilateral exclusive agreement".) *Franchise agreements* are a form of exclusive dealing.

c) *Full-Line Forcing*. An obligation imposed on a firm wishing to distribute a particular product to handle the entire line of the supplier of that product.

d) *Market-Access Arrangement*. An agreement between a firm that controls access to a group of outlets and one or more suppliers, which gives exclusive or preferred access to the outlets in return for a commission to the firm on sales to such outlets.

e) *Reciprocal Buying*. A practice that may occur when two multiproduct firms, A and B, are in a customer-supplier relationship for some products and a supplier-customer relationship for others. Firm A may agree to obtain all or most of its requirements of product X from firm B on condition that firm B obtain all or most of its requirements of product Y from firm A. Other competitors are thus wholly or partly excluded from the markets for products X and Y.

f) *Requirements Contract*. An obligation that requires the purchaser to obtain his total requirements of a product or service from a single supplier over a given period.

g) *Tying Arrangement (Contract)*. An obligation between a supplier and a buyer that obligates the latter to buy from the supplier a product or service (tied good/tied service) in addition to the one the distributor wants to obtain (tying good/tying service).

EXCLUSIVE DEALING. See Exclusive Arrangements.

FRANCHISE AGREEMENTS. See Exclusive Arrangements -- Exclusive Dealing.

FULL-LINE FORCING. See Exclusive Arrangements.

GEOGRAPHIC MARKET EXTENSION. A term used to describe the extension by a firm (via internal expansion or merger) into geographical markets where it was not previously represented either in the production and/or distribution of its products or services.

HORIZONTAL MARKET RELATIONSHIP. A market relationship in which two firms are in direct competition with each other, such as two suppliers of a similar product or service. (This definition has been further refined in Appendix III of this Report to distinguish between "ordinary" horizontal relationships, in which two firms sell the same product in the same market, and "other" horizontal in which the area of common activity is too small for the firms to be considered as direct competitors.)

INTERLOCKING DIRECTORATES. A situation under which two or more companies have overlapping Boards of Directors.

MARKET-ACCESS arrangements. See Exclusive Arrangements.

MARKET POWER. The ability to earn profits, over a long period of time, higher than those which would have to be earned by efficient firms in order to attract and maintain sufficient capital to stay in business.

MERGER. A union of two previously separate firms through the acquisition by one of the whole or part of the assets or voting stock of the other; or the union of two or more firms through share exchange. Mergers may be described as vertical, horizontal or conglomerate.

MONOPOLY. Strictly speaking, under "monopoly", there is a sole supplier of a good or service to a market. In reality there is more likely to be a firm with virtually complete, but not wholly complete, control over the supply of the good or service to that market.

MONOPSONY. The converse to monopoly. Under monopsony, there is in theory a sole buyer of a good or service from a market. However in reality there is more likely to be a firm with virtually complete but not wholly complete control over the demand for the good or service from that market.

OLIGOPOLY. A condition under which the supply of a good or service to a market is controlled by a relatively small number of firms.

OLIGOPSONY. The converse to oligopoly. A condition under which the demand for a good or service is controlled by a relatively small number of firms.

PER SE OFFENCE. An offence subject to an unconditional ban.

PREDATORY PRACTICE. The activities of a firm or firms directed to the object of eliminating a competitor. These activities are such that they would not normally be expected to be profitable unless they had the prospect of disciplining or eliminating a competitor.

PRICE DISCRIMINATION. A pricing policy whereby products or services are offered by a manufacturer or distributor to customers at different prices not justified by cost differences; or at the same prices where there are different costs.

PRODUCT EXTENSION. A term used here to designate the entry (by internal expansion or merger) by a manufacturer into a product line that is complementary to the line he is already producing.

RECIPROCAL BUYING. See Exclusive Arrangements.

REFUSAL TO DEAL. The practice by a seller of refusing to deal with particular buyers or with a particular class of buyers.

REQUIREMENTS CONTRACT. See Exclusive Arrangements.

RESALE PRICE MAINTENANCE. An obligation imposed on a distributor to sell a product at the price (or minimum price) specified by the supplier. The practice may often result from pressure applied by the distributors on the supplier.

RESTRICTIVE AGREEMENT. See Cartels.

TYING ARRANGEMENT (CONTRACT). See Exclusive Arrangements.

VERTICAL MARKET RELATIONSHIP. *Vertical forward* integration brings a firm (via internal expansion or merger) a step closer to the final consumer -- such as a manufacturer moving into wholesaling. *Vertical backward* integration brings a firm (via internal expansion or merger) closer to its source of supply.

CHAPTER 1

INTRODUCTION

This is the Council's second Report in response to a special Reference from the federal government, dated July 22, 1966, requesting the Council,

> "In the light of the Government's long-term economic objectives, to study and advise regarding:
>
> (a) the interests of the consumer particularly as they relate to the functions of the Department of the Registrar General [now the Department of Consumer and Corporate Affairs];
>
> (b) combines, mergers, monopolies and restraint of trade;
>
> (c) patents, trade marks, copyrights and registered industrial designs."

The first part of the Reference was treated in the Council's *Interim Report on Consumer Affairs*, published in 1967. The present Report deals with the second part -- that is, with "combines, mergers, monopolies and restraint of trade" or, as we prefer to call it, competition policy. It is designated an *interim* document to indicate: (a) that further reports are to be issued, and (b) that these reports are likely to include further discussion of combines, mergers, monopolies and restraint of trade. The Council's next report will discuss patents, copyrights, trademarks and registered industrial designs. A fourth and final report will then be issued containing further observations and recommendations, notably on the subject of consumer affairs, and a general summing-up of the interrelations between the three main elements of the Reference and their place in the broader spectrum of government economic policies.

The last substantial revisions to Canadian anticombines law took place in 1960. Even more time has elapsed since the law as a whole was last subjected to thoroughgoing study -- by the MacQuarrie Committee in 1951-52. Over the intervening period, much has happened to the Canadian economy, both in terms of particular events and in terms of less dramatic but sometimes more fundamental underlying trends. Among the events may be mentioned the following:

-- the resources boom of the mid-1950's;

-- the North American economic slowdown of the late 1950's and early 1960's;

-- the devaluation of the Canadian dollar in 1960-62 and the return to a fixed exchange rate in April 1962;

-- the defence-sharing and automobile-production arrangements with the United States;

-- a series of tariff reductions culminating in the Kennedy Round;

-- the "Great Expansion" of the economy in the 1960's.

Among the trends have been the continuing industrialization and urbanization of Canada, the persisting decline in agricultural employment, the relative rise in employment in service industries to a point where they now account for more than half of total employment, and the sharp increase (though from a low starting point) in the share of manufactured goods in total exports.

Meanwhile, the external economic environment has been altering in important ways. Of the various changes that were by no means readily foreseeable in 1951-52, three in particular may be mentioned as having major long-term significance for Canadian industrial organization and structure: the successful postwar recovery and subsequent rapid growth of the economies of Western Europe as a whole and of Japan, the strong absolute and relative increase in world trade in manufactured products, and the rise of the international corporation.

The above lists are far from exhaustive; their purpose is merely to recall how different, in certain respects other than sheer size, is the Canadian economy of 1969 from the entity with which the MacQuarrie Committee was concerned. There are of course many similarities also, and not all of the changes that have occurred since 1952 have been such as to affect greatly the appropriateness or inappropriateness of anticombines policies. Perhaps the most significant change has been less a measurable, physical one than a shift in attitudes regarding the likely future course of Canada's economic development. In the early 1950's, such a forward look would typically have laid much emphasis on the growth of primary resource-based industries and their supporting infrastructure. A similar look today would still devote a good deal of attention to these industries, but would allot a larger proportionate place than before to secondary and tertiary industry, and to certain particular matters such as the desirability of developing greater scale, specialization and export-orientation in Canadian manufacturing, with all that this would imply in the way of manpower training, technological change, and policies to smooth and promote industrial adjustment.

Enough has therefore happened, both to the Canadian economy and to attitudes regarding its future, to make timely a general reappraisal of anticombines legislation. This timeliness is reinforced by the persistence since 1952 of discussion and argument regarding various features of the legislation. No policy in this field will ever be uncontroversial, and certain basic dilemmas are bound to persist and be a continuing subject of discussion. But it is our impression that too much of the debate in Canada has settled into a stock pattern -- has involved opposing positions that have existed so long as to become almost a national tradition. Anything that could be done towards resolving some of these set-piece controversies would liberate mental energies for much-needed consideration of newer problems.

Finally, it may be noted that a reappraisal of this branch of economic policy is also rendered timely by the administrative transfer of the Combines Branch from the Department of Justice to what has since become the Department of Consumer and Corporate Affairs. Even apart from other considerations, this transfer would have made it desirable to examine the functions of the Branch and how they might best be integrated with the new Department's other responsibilities.

In its Reference to the Council, the Government made clear that the review of combines, mergers, monopolies and restraint of trade should be fundamental in character:

> Mr. Favreau further stated that the importance of this study cannot be over-estimated as a first and necessary step in the determination of a cohesive economic policy in relation to these important matters considered as a whole and in relation to each other with a view to bringing the policy in these matters into harmony with the overall economic policy of Canada and the needs of the consumer and other important segments of the economy.[1]

The sequential treatment of the three main sections of the Government's Reference of 1966 has been adopted as the best means of taking account, on the one hand, of the inherent complexity of the subject matter and, on the other, of the Government's desire to proceed to legislative proposals in certain areas without undue delay. While, therefore, some work has gone forward from the beginning on all three sections of the Reference, research resources have deliberately been concentrated on each section in turn. This research will ultimately give rise not only to reports such as the present one, but also to staff and other studies designed for a more specialized audience.

Shortly after receiving the Reference, the Economic Council advertised across Canada its readiness to receive written submissions from individuals and organizations regarding any of the areas to be studied. Nearly 40 such submissions have been received. They have proved of value in identifying problems and issues and in pointing to appropriate fields of inquiry for the Council's research program. We are grateful to those who expended time and effort on the preparation of submissions.

Notes and References

[1] Press Release of July 22, 1966, issued by the President of the Privy Council, Ottawa. See Appendix I.

CHAPTER 2

PHILOSOPHY AND PROBLEMS OF COMPETITION POLICY

This Chapter will set forth what we believe should be the basic objective of Canadian government policy relating to combines, mergers, monopolies and restraint of trade. It will place this objective in a broader context of economic goals and policies for the achievement of such goals, and indicate some of the more important problems that arise in the practical implementation of competition policy.

The Council's view, in brief, is that the objective of legislation such as the Combines Investigation Act should be the promotion of dynamic efficiency, flexibility and good all-round performance in the Canadian economy. Competition is regarded as only a means, though an important means, to this end. Conceived in this fashion, "competition policy" can be readily related to the goals for the Canadian economy elaborated by this Council in successive Annual Reviews. It can also be related to policies such as tariff policy, manpower policy, and patent policy which strongly condition how favourable or otherwise the economic environment is likely to be for the strengthening of effective competition and the achievement of high levels of efficiency.

But while the establishment of these linkages makes possible a clearer and more consistent view of the place of competition policy in the total spectrum of economic policies, there must also be discussed certain special difficulties of policy administration and enforcement. In some areas of competition policy, reliance can be placed on relatively broad prohibitions of anticompetitive behaviour, but in other areas more discretion must be exercised and more analysis of probable economic effects brought to bear on individual cases.

It is useful for some purposes to think of competition as one form (the most impersonal form) of social control of industry. Where competition is such as to promote the efficient use of manpower, capital and natural resources, it obviates or lessens the need for other forms of control such as more or less detailed public regulation or public ownership of industry.

Competition Policy

There are of course sectors of the economy, such as the post office, telephones, and other natural monopolies, in which other forms of control are needed. This does not mean, however, that competition policy should never apply to such sectors. On the contrary, a comprehensive and broadly conceived competition policy should concern itself with promoting efficiency in *all* parts of the economy, by whatever means are most appropriate in each particular case. It should include periodic assessments of publicly owned and publicly regulated sectors to see whether the arrangements there are truly furthering the public interest in efficient economic performance. In some cases, it may be found, as it was recently in the case of the railways, that conditions are ripe for more market competition and less direct regulation.

Objectives of Competition Policy

In the past, the major objective of Canadian competition policy has usually been expressed in such terms as "the protection of the public interest in free competition". But it is necessary to go behind this and ask what the preservation of competition was intended to accomplish. One would be unwise to assume that what the legislators aimed at was a single, simple end such as economic efficiency. At least some role was likely played by considerations such as the desire to diffuse economic power (and thus, by implication, political power), sympathy for the plight of the small enterprise and entrepreneur, suspicion of big business, and concern for the fairness of competitive behaviour.

On the whole, however, competition policy in Canada appears to have been directed towards more strictly economic ends. Two such ends may be distinguished, one being concerned with the distribution of income, the other with the allocation of real resources in the economy.

Popular thinking about competition policy has tended to stress the first, or income, objective. Opposition to noncompetitive situations such as outright monopoly (to take the extreme example, although less extreme cases of imperfect competition would serve the turn as well) has traditionally centred on the transfer of income from the buyer to the monopoly seller. The abnormal monopoly profit may be regarded as an unnecessary exaction -- as a privately imposed tax. This point was no doubt uppermost in the minds of the farm interests who were among the stronger supporters of early anticombines and antitrust legislation in Canada and the United States before the turn of the century. They, like others, wanted to recover some of the income which they believed had been transferred from themselves to the tariff-protected and in some cases quite highly concentrated manufacturing industries from which they bought. (They also had grievances against the railroads, which then dominated land transport to a far greater extent than today, but in this case the chief mode of social control adopted was public regulation.)

Professional economists, while not ignoring income distribution effects, have tended to be more concerned with the second objective of competition policy -- the resource-allocation objective. This is a less obvious objective, but a highly relevant one for broad economic goals such as productivity growth. To many economists, the greatest objection to monopoly (again using the extreme example) is that it distorts the way scarce human and physical resources are brought together and used to meet the many demands of consumers. It leads, in other words, to inefficiency. The monopolist's prices are too high, relative to other prices, and because the usual adjustment machinery is not operative, they remain so. As a result, "relative prices become unreliable as indexes of relative scarcities and relative demands ... too little will be produced and too few resources utilized in [monopolistic] industries with high margins; and too much will be produced and too many resources utilized in industries with low margins."[1] These distortions may occur primarily in final consumer markets, such as the market for some kinds of household appliances, or they may originate further back, say in the market where the appliance-maker buys his steel. They may include distortions of production methods, as for example where a high monopoly price for a certain kind of production machinery may cause the appliance-maker to use less of it than he ideally should. But wherever in the production and distribution process the distortion occurs, it will have an adverse effect on the quantities and varieties of products reaching the consumer and on the prices he pays for them.

When the statement is made that monopoly results in inefficiency, a different and broader standard of efficiency is being applied than might well be used by an investor deciding whether or not to put his money into a company. To him, a large and growing sales volume and a consistent record of well-maintained earnings and dividends will seem conclusive evidence of efficiency. But the "efficiency" that is relevant for problems of competition and monopoly is a different, economy-wide concept. It poses the question of how well the economy is doing one of its basic jobs -- that of allocating resources between different tasks, and in this way determining what goods and services get produced, how they are produced, and for whom they are produced. Viewed in this light, the investor's hypothetical company may not look so good. The conclusion may emerge that, from the standpoint of the general public interest, and having regard to all the marketing and production opportunities and other circumstances that were present, the sales volume of the industry to which the company belongs should have grown twice as fast, with lower prices and profit margins.

It would be wrong, however, to leave the impression that the consequences for efficiency of a relative absence of competitive pressure are invariably an esoteric matter, beyond the capacity of an ordinary intelligent person to discern. As everyday observation will confirm, lack of strong competition in a company's product market increases the risk of sloppiness, poor use of productive resources, and excessive production and distribution costs. An environment is created in which both waste and a comfortable, if not necessarily spectacular, profit margin can persist, undisturbed by clear and urgent signals from the market.

This brings us to a fundamental tenet relating to competition policy. The institution and maintenance of a competition policy such as presently exists in Canada may be taken to reflect a belief that, over the greater part of the economy, competitive market forces are potentially capable of allocating resources better and more cheaply, with a less cumbersome administrative overhead, than any alternative arrangement such as wholesale public ownership and control, detailed government regulation of enterprise, or self-regulation by large industrial units within a corporate state. The function of competition policy is not to bring about a textbook regime of "perfect" competition in all the various markets making up the system, but rather to encourage the liberation of the system's maximum competitive potential, "imperfect" though this may be. The resulting competition is valued not for itself, but for what it can accomplish in putting resources to work efficiently and effectively. Thus the market does the job, and the government's main responsibility, so far as efficiency in resource allocation is concerned, is to see that the market is free to do the best job of which it is capable. Competition is relied upon as the prime mechanism of social control:

> The legislation postulates the continuing existence of a free enterprise economy, actuated by the profit motive, in which those who wish to compete for economic gain should, to the largest extent possible, be allowed to compete free from artificial restraints imposed upon them by their competitors or other members of trade or industry. What Parliament contemplates, as expressed in this legislation, is the regulation of industry by the forces of competition rather than regulation by members of industry itself.[2]

Competition and Efficiency

It will be a recurrent theme of this Report that Canadian competition policy should aim primarily at bringing about more efficient performance by the economy as a whole. *Competition should not itself be the objective* but rather the most important single *means* by which efficiency is achieved. First, however, it is necessary to say something about the nature of competition in a modern economy and its relationship to efficiency.

As is well known, the great majority of markets do not fulfil the conditions of the economist's abstract model of "perfect" competition, wherein there are many fully informed producers and consumers, the market operates with exceptional swiftness and efficiency, and no individual seller or buyer has any significant leverage or market power. At the other end of the scale, the case of pure monopoly is also very rare in real life, especially if one is inclined to take a broad view of the possibilities of product substitution. Most markets (the North American market for automobiles is a good example) fall between these limits, in the grey zone of imperfect competition. Sellers are sometimes relatively few, and some of them may be big and powerful. The moves made by any one seller may be much affected by his expectation of how the others will react, in which case the situation may be described as one of "oligopoly". Many variants and degrees of imperfect competition are to be found, with factors such as the amount of import competition exerting an important influence. In some cases, the imperfection of competition may partly reflect successful efforts by firms to differentiate their products -- to use product features and design, packaging and advertising, to persuade the consumer that what he is buying is significantly different from what the firm's competitors are offering.

Most markets thus being in one way or another imperfect, the model of perfect competition remains essentially an abstraction, useful for purposes of formal economic analysis because it is one end of a range, providing a point of reference and standard of comparison. (Moreover, it is not wholly without some predictive power in real-life situations.) But it cannot be and has not been a simple guide for the application of competition policy. Whatever deficiencies may be laid at the door of Canadian competition policy, any allegation that it has amounted to a systematic, if futile, attempt to impose perfect competition on the economy cannot be sustained on the evidence of reports and cases under the Combines Investigation Act.

To note the abstract quality of the perfectly competitive model, however, is very far from saying that economic analysis has little to contribute to competition policy. The nature and characteristics of imperfectly competitive markets have been extensively studied, and while this process has as yet failed to produce a satisfactory model or set of models that can be relied upon to predict what will happen in each of the many varieties of imperfectly competitive situations that are found in real life, a number of useful inferences have been drawn. Principles and concepts have been evolved that have a strong appeal to common sense and can be utilized to good effect in practical policy administration. One such principle is the desirability of keeping open for the buyer an adequate number of real options. However, what is deemed adequate in any particular case must inevitably be tempered by other considerations such as the technological conditions of production in an industry, which may make the optimal situation one of a relatively small number of plants producing on a large scale.[3] Subject to this qualification, a buyer will generally prefer to have three or four actual or potential suppliers of an item rather than only one. A typical concern of competition policy is to look into situations where real options available to the customer are in the process of being unjustifiably reduced.

Another concept highly relevant to competition policy in a world of imperfect competition is that of the ease of entry into an industry.[4] For customers to be faced with only one or two suppliers of an item may be a tolerable situation if it would be relatively easy for other firms (including importers) to enter the business. The possibility of this occurring will tend to make the existing suppliers less tempted to exploit their customers to the point where their profit levels might attract new firms into the industry. But where it is very difficult and expensive for outsiders to break in (they might, for example, have to put very large sums into initial plant and equipment outlays and advertising), the customer is likely to be more vulnerable.

Still other concepts and principles are useful for assessing product differentiation and the many types of nonprice competition that are encountered in imperfectly competitive markets -- for example, competition in respect of product features and after-sales service. A basic principle here is that competition is to be valued according to the real net benefit it yields to the ultimate consumer. Some types and degrees of nonprice competition may pass this test while some may not. For example, the net benefit to the consumer of trading stamps and some other promotional devices has frequently been called into question. Despite such criticisms, it is still too widely assumed that *any* form of vigorous business rivalry amounts to healthy competition and is therefore good for the economy.

It must be added that imperfections of competition do not always arise primarily on the selling side of the market. Buyers, too, (supermarket and department store chains, for example) can wield substantial market power in their dealings with suppliers, as was pointed out forcefully in some of the briefs submitted to us. Assessment of such situations can often be peculiarly difficult, not least because of the natural tendency of most people to sympathize with any underdog. But while it may seem hard, here again analysis and policy are likely to be soundest if the primary consideration continues to be the interest of the consumer rather than that of any particular producer. This means, for one thing, that relations between, say, retailers and suppliers should never be considered independently of the state of affairs in the final market where retailers meet consumers. Where that final market is characterized by vigorous competition of a type beneficial to consumers, a "squeeze" being experienced by suppliers may largely represent a normal "upstream" transmission of competitive pressures, perhaps exacerbated in some cases by the temporarily disturbing introduction of more efficient production and distribution techniques. Where, on the other hand, the final market is not notably competitive, the squeezing of suppliers may be more in the nature of an exercise of market power, possibly tending towards an eventual elimination of independent suppliers and a backward extension of noncompetitiveness through vertical integration. Even here, however, the real crux of the situation remains the noncompetitiveness of the final market. Only those policy actions that in one way or another correct this (such as by reducing barriers to the entry of new retailers) are likely to have much beneficial effect.

"Dynamic" Competition

In using economic analysis for purposes of competition policy, it is important to view competition and efficiency in dynamic rather than purely static terms. That is, they must be seen in a context of economic change over time, with new products, industries and methods of distribution constantly coming forward and old ones dying off.

This point, which over the course of a generation has come to be widely recognized by economists and administrators, was first made in a major way by the late Joseph Schumpeter. Schumpeter's study of the historical rise of capitalism led him to the belief that the central impulse of economic progress was "the perennial gale of creative destruction", incessantly revolutionizing the economic structure from within. This, in his view, necessitated the rejection of:

> ... the traditional conception of the *modus operandi* of competition. Economists are at long last emerging from the stage in which price competition was all they saw. As soon as quality competition and sales effort are admitted into the sacred precincts of theory, the price variable is ousted from its dominant position. However, it is still competition within a rigid pattern of invariant conditions, methods of production and forms of industrial organization in particular, that practically monopolizes attention. But in capitalist reality as distinguished from its textbook picture, it is not that kind of competition which counts but the competition from the new commodity, the new technology, the new source of supply, the new type of organization (the largest-scale unit of control for instance) -- competition which commands a decisive cost or quality advantage and which strikes not at the margins of the profits and the outputs of the existing firms but at their foundations and their very lives. This kind of competition is as much more effective than the other as a bombardment is in comparison with forcing a door, and so much more important that it becomes a matter of comparative indifference whether competition in the ordinary sense functions more or less promptly....[5]

Not only did Schumpeter find invention and innovation, in a very broad sense, to be the key to progress; he also made a case that some degree of monopoly and restrictive practice was necessary to "steady the ship" and provide the sort of environment in which technical progress and innovation could occur. At the same time, however, he did not conclude from his analysis that all competition policy should be discontinued. He was prepared to recognize, for example, that some restrictive business practices were less an essential safeguard for the early stages of new product development than they were an ultimately futile but temporarily disrupting effort to fight inevitable change. What he did urge was a more flexible and discriminating approach to competition policy:

> Even as now extended however, our argument does not cover all cases of restrictive or regulating strategy, many of which no doubt have that injurious effect on the long-run development of output which

> is uncritically attributed to all of them. And even in the cases our argument does cover, the net effect is a question of the circumstances and of the way in which and the degree to which industry regulates itself in each individual case. It is certainly as conceivable that an all-pervading cartel system might sabotage all progress as it is that it might realize, with smaller social and private costs, all that perfect competition is supposed to realize. This is why our argument does not amount to a case against state regulation. It does show that there is no general case for indiscriminate "trust-busting" or for the prosecution of everything that qualifies as a restraint of trade.[6]

The Schumpeter hypothesis, which was originally developed on a basis of extensive but relatively crude empirical observation, has remained a rich source of controversy and a spur to further economic research and testing up to the present day. It has, for example, been a major stimulus to the large volume of factual investigation, either completed or under way, into relationships between research and innovative activity on the one hand and the size and other characteristics of companies on the other -- a matter touched on in Chapter 5 of this Report. This and other evidence have been variously interpreted, and the present state of the argument is difficult to summarize. It is not necessarily inconsistent to feel that, while certain degrees of corporate bigness and associated phenomena are appropriate in some industries as a means of helping to bring about socially desirable levels of research, invention and innovation, too *little* competition would remove one of the most important spurs to these types of activity. One American authority, Richard Caves, has reached the conclusion that "some degree of concentration is needed to promote research and innovation, but whether existing structures provide too much or too little remains debatable".[7] Another, Jesse W. Markham, suggests that Schumpeter's theory ought to be treated as a "threshold theory", which states that "some departure from a state of perfect competition (or the presence of some monopoly) is a necessary concomitant of innovation, but it does not follow that twice this volume of departures, somehow measured, should lead to twice the volume of innovations". He goes on to say that the intensive statistical analysis of invention that has occurred since Schumpeter "provides no basis for either condemning or beating the drums for bigness or for concentration on the grounds that they either stifle or promote technical progress ... corporate size and market power in excess of Schumpeterian threshold levels appear to be with us, and for this and other reasons are still legitimate concerns of public policy."[8]

Where there would probably be a wide measure of agreement would be on the proposition that competition must be seen in its dynamic dimension. To the greatest extent possible, competition policy should be administered in such a way that due account is taken of the competitive impact of, and the desire for, new products and new methods of production and distribution.

The New Industrial State

A much more recent work than Schumpeter's, dealing with matters of industrial organization, is J. K. Galbraith's *The New Industrial State*. This book has already been widely read and discussed, and for this reason should be mentioned at least briefly here. It covers, of course, a considerably wider territory than competition policy. It is nothing less than an attempt to discern, on the basis of developments observable in certain sectors of the U.S. economy, some central tendencies of modern industrial societies. Walter Adams, at the outset of what later becomes a distinctly critical article, summarizes Galbraith's main argument thus:

> He finds that the giant corporation has achieved such dominance of American industry that it can control its environment and immunize itself from the discipline of all exogenous control mechanisms -- especially the competitive market. Through separation of ownership from management, it has emancipated itself from the control of stockholders. By reinvestment of profits (internal financing), it has eliminated the influence of the financier and the capital market. By brainwashing its clientele, it has insulated itself from consumer sovereignty. By possession of market power, it has come to dominate both suppliers and customers. By judicious identification with and manipulation of the state, it has achieved autonomy. Whatever

> it cannot do for itself to assure survival and growth, a compliant government does on its behalf -- assuring the maintenance of full employment, eliminating the risk of and subsidizing the investment in research and development, and assuring the supply of scientific and technical skills required by the modern technostructure. In return for this privileged autonomy, the industrial giant performs society's planning function. And this, according to Galbraith, is not only inevitable (because technological imperatives dictate it); it is also good. To be sure, Galbraith recognizes that the industrial state poses a grave problem for the esthetic and other non-economic values of our civilization. But this is simply a matter for future negotiation between our intellectuals and the technostructure. So far as the economic system is concerned, the only remaining task, it seems, is to recognize the trend, to accept it as inexorable necessity, and, presumably, not to stand in its way.[9]

So far as competition policy is concerned, the essential issue raised by Galbraith is whether the U.S. economy has gone, or soon will have gone, so far along the lines he describes that any attempt to strengthen competition and market forces would be largely an exercise in futility. He concedes that antitrust policy still has a marginal usefulness in some areas, but for the most part he appears to regard it as a piece of harmless deception. In the sectors of the economy with which he is principally concerned, he sees no value in it:

> It follows that the antitrust laws, in seeking to preserve the market, are an anachronism in the larger world of industrial planning.[10]

It is clearly apparent that, as in some of his previous works, Galbraith in *The New Industrial State* deliberately set out to be provocative. It is equally apparent that he has been successful. Economists, in particular, have taken up the challenge in respect of several of the major arguments. A recurring criticism is that of excessive generalization. There seems little doubt that the tendencies described in the book may be found in certain parts of the U.S. economy. The vital question for public policy is how pervasive these tendencies are -- how representative they are of what is going on or soon will be going on in the American economy as a whole. Many critics believe them to be a great deal more special and less representative than does Galbraith.

What of the relevance of the book for Canada? Is market competition in Canada dying and beyond resuscitation? Bits and pieces of evidence relating to this matter are available -- for example, the industrial concentration data referred to in Chapter 5. There are, however, large gaps, and answers to the questions posed above must be in part impressionistic. On this basis, it would be our conclusion that, over the greater part of the Canadian economy, and provided they are supported by adequate competition policy and other appropriate policies, competitive market forces can be an important factor making for efficient economic performance. We would note in passing that a substantial proportion of the American industrial landscape painted by Galbraith appears to involve industries much of whose output flows into defence and space programs. It is not really surprising if in such industries the managerial role of the "technostructure" is very significant, relations with government are close, and the role of market forces is attenuated. Somewhat similar situations are to be found in Canada, but as might be expected from the relatively smaller size and complexity of Canadian defence and space programs, they bulk less large in the economy.

The above is not meant to be an out-of-hand dismissal of the importance for Canada of *The New Industrial State*. On the contrary, the issues raised by Galbraith are worthy of consideration in all industrialized countries. One issue suggested by the book is the general role of the corporation (particularly the large corporation) in a democratic state. What is the chief goal of large corporations? Is it still, in the final analysis, some kind of profit-maximization (perhaps on a very long-run basis); or has it, as Galbraith suggests, become something decidedly different? Is it desirable, in the interests of society as a whole, that large corporate organizations should concentrate their resources and energies primarily on the achievement of their own business goals? How far should they go into what might be described as "extracurricular activities" -- assuming community leadership, setting up foundations, contributing to educational and charitable causes, and in other ways endeavouring to live up to codes of good corporate citizenship? These are not idle speculations, for, unlike most individuals, many "corporate citizens", in both their main and their subsidiary activities, determine the use of very large amounts of resources. How well these resources are used, from the point of view of the total society, is of much significance. So too, therefore, are the social responsibilities of corporations and the locus of decision-making power within them.

We earlier characterized competition as a means of social control of the economy, contrasting it with alternative means such as public ownership and public-utility-type regulation. A further question suggested by a reading of *The New Industrial State* is whether, in cases where competition was seen to be no longer effective as a means of social control, inexorable pressure would not fairly soon develop for the institution of other means. Even the most intelligent policies for the preservation and encouragement of competition are bound to be seen by businessmen subject to them as something of a nuisance and a harassment. But this view should be tempered by considering the other policy options that might well be exercised in the absence of effective competition.

In the case of an oligopolistic and product-differentiating industry selling directly to consumers, one policy option that may need to be exercised, even if matters have not yet reached the stage where major alternative means of social control are being considered, is a heightened emphasis on consumer protection and consumer information. Policies in these areas may, to some extent, remedy a lack of competitiveness (particularly price competitiveness) in a market. For example, better product information from an unbiased source may enable the consumer to form a lower and more realistic estimate of how much a particular piece of product differentiation is really worth to him. Acting on this estimate, he may bring about a shift in the market towards a more even confrontation of products and sharper price competition.

Competition Policy and Economic Goals

The discussion to this point of the objectives of competition policy may be recapitulated as follows:

-- the main objective of competition policy should be that of obtaining the most efficient possible performance from the economy;

-- at any given moment, the economy should be using the resources available to it in ways that most contribute to raising total output in accordance with consumer demands;

-- the efficiency of resource use must, however, be seen in dynamic as well as static terms, which implies among other things the recognition of the importance of research, invention and innovation;

-- but the dynamic view also implies that as demands change and technology advances, resources should move freely into new and better patterns of use, and it is important therefore that monopoly and restrictive practices should not be allowed to get in the way of this process and prevent the economy from deploying its resources to better advantage in a changing world.

Essentially, we are advocating the adoption of a single objective for competition policy: the improvement of economic efficiency and the avoidance of economic waste, with a view to enhancing the well-being of Canadians. In conjunction with other policies, competition policy should seek to develop an economic environment in which beneficial change will be initiated and carried through, and in which real income will be maximized.

This concentration on one objective is not meant to imply any necessary disparagement of other objectives, such as more equitable distribution of income and the diffusion of economic power, which have been entertained for competition policy in the past. It is simply that we believe:

(1) that a competition policy concentrated on the efficiency objective is likely to be applied more consistently and effectively; and

(2) that there exist more comprehensive and faster-working instruments, particularly the tax system and the structure of transfer payments, for accomplishing the deliberate redistribution of income and the diffusion of economic power, to whatever extent these are thought to be desirable.

On the point of consistency, it may be explained by way of example that a competition policy that assigned equal importance to maximizing economic efficiency and diffusing economic power would be likely on occasion to run into a conflict of goals. It is a stern reality of a competitive market system that from time to time some competitors go to the wall. If this occurs mainly because of predatory or exclusionary tactics practised by other competitors, there may well be a good case for competition policy to intervene. But if the squeezing out of competitors appears to be part of a process likely to produce increased efficiency and lower costs and prices (if, for instance, a number of small corner stores are being forced out of business by the entry of new, low-cost, mass distributors) then a dilemma is faced. The economic efficiency goal might well suggest letting the process work itself out; the goal of diffusing economic power would call for intervention. By recommending that efficiency be the sole objective of competition policy, we are in effect saying that no individual competitor, corporate or otherwise, has an inherent right to stay in business.

It must not be thought, however, that the single-minded pursuit of efficiency would invariably work against the diffusion of economic power, or indeed against the achievement of more equal income distribution. Most of the time, action to promote efficiency would also result in some progress towards the other goals mentioned. For example, while we do not believe that an efficiency-oriented competition policy would necessarily be concerned to guarantee the survival of already-established enterprises in an industry, we do strongly believe that such a policy would be very much concerned with eliminating barriers to the entry of new enterprises, some of which would often be relatively small enterprises.

If, then, the objective of competition policy can be taken to be the promotion of economic efficiency and the reduction of economic waste, how may this be related to the five economic goals for Canada elaborated by the Economic Council in successive Annual Reviews? These goals, it will be recalled, are full employment, a high rate of economic growth, reasonable stability of prices, a viable balance of international payments, and an equitable distribution of rising incomes.

Some economic policies are capable, at least upon occasion, of facilitating the attainment of more than one goal. At the same time, however, policies tend to be specialized in their application, and to be more relevant for one goal than for others (hence the need for a skilful blending of policies in order to work towards all goals simultaneously). This is clearly true of competition policy which, though it has at least some bearing on all five goals, is most relevant for the goal of rapid economic growth. To the extent that the policy works as it should, it opens the way for market forces to operate more freely at all stages of the productive process and improves the prospects of rapid productivity growth. A specific example will illustrate this. As has already been mentioned, one of the typical preoccupations of competition policy is to lower unnecessary barriers to the entry of new firms into industries. In other words, there should be no unneeded roadblocks in the way of the person who thinks that he can come in and do the job better and cheaper. Thus an important element in the 1951 decision to ban resale price maintenance in Canada was the view that there should be nothing to prevent a retailer from trying to operate on a basis of high volume and low mark-up. It is just such a basis of operation that has made possible the retailing revolution of the last 40 years and the increase in productivity that has accompanied it.

The liberation of market forces, which competition policy seeks to achieve, helps to produce a pattern of output more closely related to consumer needs. This point was made in the Council's *Interim Report on Consumer Affairs:*

> High standards of performance in the Canadian economy -- including particularly the maintenance of high employment, strong productivity growth and

> reasonable price stability -- will provide a basis for achieving important and continuing improvements in consumer welfare and real living standards. However, these improvements will only be realized fully and effectively if adequate attention is paid to the process of relating productive efforts as closely as possible to the needs and aspirations of consumers. To a large extent this can be achieved by the operation of flexible markets sensitive to changing consumer preferences.[11]

A competition policy aiming at economic efficiency can be fairly readily related to a second major goal of the Canadian economy, that of a viable balance of international payments. In general, a policy that strives to maintain an adequate degree of competition in the domestic market will tend to harden the economy's muscles and render it better able to meet the tests of international competition. From time to time, however, certain conflicts may occur -- for example, where conditions in foreign markets make it appropriate for exporting enterprises to form consortia or other types of intercompany association. It may be difficult to prevent these consortia from impinging back upon the domestic market and running afoul of competition policy there. The Webb-Pomerene Act in the United States and some of the 1960 amendments to the Canadian Combines Investigation Act were attempts to resolve this type of conflict.

There is also some relationship between competition policy and the goal of reasonable price stability. Under postwar conditions, a virtually universal problem of industrial countries has been to keep the general level of prices from rising, even at times of substantial unemployment.[12] On balance, over a succession of relatively soft and relatively buoyant phases of economic activity, an effective competition policy helps to slow the longer-term upward price rise. To the extent that opportunities for the exercise of market power are reduced, the ability to pass cost increases on into price increases is diminished, with the result that a greater incentive is created to seek efficiencies and ways of keeping costs and prices down. This in turn eases the task of the monetary authorities, who are less likely to have their hand forced by situations where monetary action can only decelerate the rise in the general price level by bringing about an unacceptably high level of unemployment.

Turning now to the goal of full employment, there is no direct and obvious relationship between this and competition policy. The prime requisite for full employment is an adequate level of aggregate demand, and the "big levers" of fiscal and monetary policy can in principle provide this equally well under monopolistic or competitive conditions. As has been suggested, however, there is an indirect relationship. If full employment is to be well sustained, there must be good performance in respect of other goals, notably that of reasonable price stability and of the productivity component of rapid economic growth. To the extent that competition policy assists the attainment of these other goals, it contributes indirectly to the attainment of full employment. For example, in so far as competition policy makes stability in the general price level any easier to achieve, it mitigates the policy problem of the "trade-off" between the goals of full employment and reasonable price stability, thus making it possible to press more vigorously towards the attainment of full employment.

The fifth of the Council's goals is an equitable distribution of rising incomes. The desire to prevent or lessen the income transfer that occurs between buyer and monopoly seller has provided one of the reasons for instituting competition policy in the past. The position has already been taken, however, that deliberate changes in the distribution of income are best brought about by relying mainly on policies other than competition policy.

We are left, then, with the proposition that while there is some relationship between competition policy and all five of the goals, the main link is by way of the encouragement of efficiency and rapid economic growth. This leads to a further proposition, to the effect that the most significant relationships between competition policy and other economic policies are with those policies (usually of a somewhat longer-term nature) that have a major bearing on the efficiency and productivity of the Canadian economy, and on the state of competition within it. This group includes tariff policy and other commercial policies, policies such as manpower mobility programs designed to facilitate the transfer of resources in the economy, and other policies aiming at restructuring the Canadian economy -- for example, in the direction of greater scale and specialization of production.

Competition Policy

It is important to appreciate both the potentialities and the limitations of competition policy. How much it can accomplish in the way of improving economic efficiency is heavily conditioned by the setting of other economic policies and other aspects of the general economic environment. In Canada, the intensity of import competition in domestic markets is crucial. To a considerable degree, Canadian competition policy has represented an attempt to provide a partial substitute for the greater intensity of competition that would have prevailed in the absence of tariffs.

The future effectiveness of competition policy in Canada will depend very much on how well it can be co-ordinated with other economic policies. The present situation in this respect could be greatly improved. Agreement on policy objectives will be a first essential. If the objective of maximizing economic efficiency can be kept well to the fore in respect both of competition policy and of other policies to which it is closely related, it should be possible to put an end to the unhealthy situation whereby, despite the stepped-up informational efforts of its administrators, competition policy is still too frequently regarded as a highly specialized and esoteric activity whose ultimate goals are wrapped in legal enigmas. While there will always be certain legal complexities to be faced, there is no reason that we can see why competition policy should not take its place as part of an interrelated structure of policies directed towards common economic ends.

Problems in Applying Competition Policy

Even where there was a consensus on the objectives of competition policy, however, the practical application of the policy would pose some special problems. If economic efficiency is taken as the basic objective, the policy should in principle be applied in such a way as to take account of all the important factors that bear upon efficiency in each individual case. Yet the law should be clear, give fair warning, and lend itself to reasonably speedy application. These principles are not always easy to reconcile in practice, and much criticism of competition policy reflects this underlying dilemma.

Why, it is frequently asked, should there be, in the application of competition policy, so much preoccupation with competition as such? We stated above that the ultimate objective should be economic efficiency rather than competition for its own sake. Why then should public policy in this area be concentrated on removing impediments to competition -- on restraining certain types of market *conduct* such as collusive price-fixing, or on trying to prevent the emergence of certain types of market *structure* such as monopoly? Why not by-pass all this, go to the heart of the matter, and focus directly on the efficiency of business *performance?*[13] If the consumer is obtaining efficient and otherwise satisfactory performance from industry, why should it matter what structures and patterns of business conduct, what conditions of competition, lie behind that performance?

These questions have been posed, not only by businessmen, but also by some economists. The general notion of replacing the complex legal trappings of competition policy by something more in the nature of an expert review panel that would simply address itself to the question of whether an industry's or firm's performance was generally progressive and efficient is an eternally seductive one. The great difficulties involved only become apparent when one gets down to the details of turning it into practical public policy:

> What will be lacking is any basis for deciding whether the firm's performance was good or bad in light of its opportunities. The record may reveal that output has grown ten times in the period under study; it will not reveal whether or not output could have grown fifteen times if price policy had been different or if more vigorous efforts had been made in product development, in foreign marketing, or in cost reduction. The record may show that expenditures of money and of the time of trained men on research and development were large and continuous, and that the decrease of inputs per unit of output as well as the flow of new and improved products were great; it will not in general show whether returns per dollars or per professional man-hour were high or low, or would have been higher or lower had the situation or conduct of the firm been different than it in fact was. True, there may be exceptional situations in which the spectacular quality of the results overwhelms question, or in which the almost total

> lack of effort speaks for itself. Yet even in such cases the problem is not completely solved. Would a big research effort in the poorly performing industry pay for itself? Could the excellent performer have bettered even its own spectacular record if it had operated under different market conditions?[14]

There is also the problem that good performance in the past gives no necessary assurance of similar performance in the future. To be really meaningful, enforcement of the policy would have to be continuous, with a large bureaucracy to second-guess all important managerial decisions. Such a system would be virtually indistinguishable from detailed public regulation of industry.

As against this, a competition policy more or less like Canada's present one, which places emphasis on market conduct and to a lesser degree on market structure, can be seen to have important advantages of simplicity and low overhead. In principle, at any rate, it should only be necessary to ensure that market conduct and market structure are such as to provide an acceptable degree of competition. The attainment of efficient industrial performance can then be left to market forces, without any need for vast supervisory efforts and detailed bureaucratic surveillance.

There are important choices and "trade-offs" to be made in the application of competition policy. To obtain certain advantages, it is sometimes necessary to make certain sacrifices. Thus it may be thought desirable to apply the policy in such a way as to examine in some depth the economics of individual cases, with much attention being devoted to past business performance and likely future performance. But this will tend to slow up proceedings and to render their outcome less predictable. If, by contrast, a high value is placed on speed and certainty, it may be decided to go another route and to promulgate clear bans on specific kinds of business conduct, with the courts not required to engage in comprehensive economic analysis of individual cases.

Between these two extremes, there are of course many intermediate positions. Also, the application of competition policy need not be all of a piece. In one sector, such as merger policy, there may be a leaning towards a discretionary approach, with speed and certainty being sacrificed in favour of greater economic analysis of individual cases. In another sector, such as policy towards collusive price-fixing, detailed depth-analysis of individual cases may be judged less necessary, with the result that the law can be given more the form of an outright prohibition. The policy recommendations to be made later in this Report embody just such a varied approach.

CHAPTER 3

COMPETITION POLICY IN EUROPE AND THE UNITED STATES

Most of the world's major industrial countries now have significant competition policies, although both the vigour of the policies and the degree of emphasis with which they address themselves to particular business practices and situations vary considerably from one country to another. In most European countries the long-standing tradition of acceptance of restrictive agreements or cartels has, since the Second World War, given way to increasing recognition of the merits of a competitive economy. U.S. competition policy, or antitrust policy as it is more familiarly known, remains, however, unique in the comprehensiveness of its coverage, in the energy given to its enforcement and in the widespread public acceptance of its underlying presumptions regarding the intrinsic virtues of a competitive private-enterprise economy.

Over the years there has grown up around the subject of U.S. antitrust policy and its administration a truly formidable literature addressed to both the economic and legal aspects. In Europe, by contrast, the veins of commentary available for exploration are not as rich or extensive, since much of the European legislation in this field has either been introduced for the first time or substantially amended in the 1950's or 1960's. For this reason, we commissioned a thorough study of competition policy in five European countries (France, Sweden, Denmark, the Federal German Republic and Britain), a report on which will be published in the near future.[1] Only a summary condensation of those aspects of foreign competition policies that are particularly relevant for Canada will be attempted here; the reader interested in pursuing the subject of foreign experience further should refer to the study and to the short list of major works on U.S. antitrust given in Appendix II.

The discussion here will focus on four principal areas of interest for competition policy: restrictive agreements, dominant firms, mergers, and certain business practices. Rather than spell out in detail all the circumstances in which particular business practices and situations may be called into question, the discussion will emphasize national attitudes with regard to each of these areas -- attitudes that are reflected in policy approaches, in the wording of legislation, and (particularly in the United States) in the judicial interpretation of legislation. The concluding section will examine the administrative framework through which foreign competition policy is enforced, and the remedies that are available to bring about any desirable changes in business practices.

Restrictive Agreements

Concern about agreements in restraint of trade among competitors has always been one of the prime reasons for introducing competition policy; yet this area, perhaps more than any other, is illustrative of the range of choices facing policy-makers. On the one hand, there is the American approach whereby restrictive agreements are condemned as criminal offences; on the other hand, there is the European practice of specifying the circumstances under which restrictive agreements may be permitted. However, it must be quickly added that in terms of effects, the two approaches are not as far apart as the above overly simplified statement might suggest. While it is true that in all five of the European countries studied agreements in restraint of trade may be approved and operated, in all of them there is an underlying element of prohibition. With only a few exceptions, the general tendency over the last few years has been to tighten up exemptions and to define more narrowly the circumstances under which restrictive agreements may be operated.

Within the five European countries, however, the treatment of restrictive agreements in relation to the public interest varies considerably. At one end of the scale is Britain, where there is a general presumption that such agreements are not in the public interest, and where those seeking to gain approval of agreements must justify their continuation by passing them through one of the exemption "gateways" specified in the Restrictive Trade Practices Act. These gateways permit a restriction to be defended on the following grounds: protecting consumers against injury, counteracting restrictive measures taken by others, enabling the negotiation of fair terms with a preponderant supplier or customer, preventing a serious and persistent adverse effect on employment, or preventing a reduction in the volume or earnings of export business. However, the most important gateway in practice is the one that allows an agreement to proceed on proof "that the removal of the restriction would deny to the public as purchasers, consumers or users of any goods ... specific and substantial benefits or advantages enjoyed or likely to be enjoyed ... by virtue of the restriction". All gateways give rise to difficulties in interpretation, but none more than this "benefits and advantages" gateway. If an agreement is allowed through a gateway, a balancing test remains: the Restrictive Trade Practices Court must be satisfied that the agreement is, on balance, not contrary to the public interest. This assessment involves the Court in the task of weighing conflicting interests and competing economic analysis and, generally, in making policy decisions.

At the other end of the scale is the position on restrictive agreements taken in Sweden, where there is no general presumption as to whether or not agreements in restraint of trade are in the public interest, and where the key question is whether the agreements produce harmful effects. To be deemed harmful, an agreement between Swedish firms must be one that "unduly affects the formation of prices, restrains productivity in business, or impedes, or prevents the trade of others".

In the United States, restrictive agreements are condemned as a criminal offence under Section 1 of the Sherman Act of 1890. The wording of the Act affords no opportunity for evasion. The courts are only concerned with establishing that an agreement does or does not exist, and have always refused to consider whether the objectives of the agreement or the resultant prices or profits have been "reasonable". The vigorous enforcement of this Section has effectively prevented the appearance in the American economy of the cartelization experienced by numerous European countries, especially in pre-Second-World-War years when there was virtually no competition policy in Europe. The illegality of conspiracy to restrain trade is a firmly established feature of the environment within which U.S. business operates, and business conduct is powerfully influenced by the "relatively large probability that offences in this category will be prosecuted and punished with the full backing of public opinion".[2]

Experience in the five European countries and in the United States indicates that two types of restrictive agreements have usually been accorded favourable treatment. In all of the countries studied, export agreements may be granted exemption from the general prohibition on agreements in restraint of trade. In the United States, the Webb-Pomerene Export Trade Act of 1918 exempts from a ruling of illegality under the Sherman Act agreements between American exporters in respect of matters such as price and market-sharing, provided the agreement does not affect domestic prices of the product in question or otherwise lessen competition, and provided further that the existence of the agreement does not damage exporters of the same product who are not parties to the agreement. Most European countries grant approval to production rationalization agreements; the German legislation spells out in some detail the circumstances under which such approval may be granted, while in France the conditions necessary to obtain approval for a rationalization agreement are left to the discretion of the administrative tribunal. In Britain, agreements designed to promote officially approved productivity or price stability objectives may be removed from the reach of the 1956 Restrictive Trade Practices Act on the authority of a designated government department.

Dominant Firms

In addition to concern with agreements and practices in restraint of competition, the legislation of the five European countries reflects an awareness of the special public interest in the conduct of "dominant firms". The definition of a dominant firm is expressed in the legislation in such imprecise phrases as a firm that possesses the ability to exert "a substantial influence on price, production, distribution or transport conditions" (Denmark), one that has no competitors or is not exposed to "any substantial competition" (Germany), or one that occupies a position characterized by a "monopoly situation or the manifest concentration of economic power" (France). Obviously the impact of public policy based on such vaguely expressed concepts will depend on their interpretation and application to individual cases. Only in Britain is the method of determining market dominance expressly spelled out. The section of the 1948 Monopolies and Restrictive Practices (Inquiry and Control) Act relating to dominant firms applies when "at least one-third of all the goods of that description which are supplied in the United Kingdom or any substantial part thereof are supplied by or to any one person".

In all of the countries but Britain and the United States, there is no power to prevent the emergence of market dominance, such as by a prohibition of mergers, or to destroy an established position of dominance by requiring the splitting-up of large market-dominating firms. Instead, such firms are subject to supervision or regulation, an approach sometimes described as preventing the "abuse of dominant positions". In Denmark, for example, a dominant firm may be requested to register with the Monopolies Control Authority. If the Authority finds "unreasonable prices or business conditions, unreasonable restraint ... unreasonable discrimination", it will attempt, by negotiation, to obtain a satisfactory change in the dominant firm's policies; if negotiations fail, the Authority has the power to issue orders to the dominant firm, including an order to make supplies available to firms whose freedom of trade has been unreasonably restrained by the dominant firm's refusal to sell. Most important of all, a registered dominant firm must obtain permission to increase its prices from the Monopolies Control Authority, unless special exemption is granted. Given the restriction on the firm's freedom of action, it is not surprising that appeals from a finding of market dominance are frequent.

In France and Germany, little use has yet been made of the dominant-firm provisions. The French legislation in this field is of relatively recent date, while the original German legislation, which contained a relatively limited concept of abuse of a position of market dominance, confining it to matters relating to prices, terms of sale and tying arrangements, was amended only in 1966 to a more general concept which allows action to be taken against any firm "not exposed to any substantial competition" if the Cartel Authority believes it is abusing or exploiting its position of market power.

In Britain, the Board of Trade is authorized to refer to the Monopolies Commission situations in which the "one-third of the market" criterion applies. The guidelines given to the Commission for its assessment of whether or not the public interest is adversely affected by the monopoly itself or by practices associated with it are extremely general. Account is to be taken of all relevant matters, including economical production and distribution, efficient organization of industry, encouragement of new enterprise, effective distribution of labour, materials and capacity, technical improvements and market expansion. The Commission's findings, and the recommendations it may make to remedy any adverse effects on the public interest, are published. The Commission's role is an advisory one. The responsible Ministry (normally the Board of Trade) decides what, if any, action to take on the strength of the report. Although the power to issue binding orders is present, the Board of Trade has usually preferred to obtain an assurance from the firms in question that the practices complained of will be discontinued or modified.

The British approach to the dominant firm is thus essentially ad hoc, in contrast to that of the other countries studied. There are no regulations applying to dominant firms as such. Whether a dominant firm is, or is not, subject to some sort of supervision will depend on whether or not it has been the subject of a reference to the Monopolies Commission, a situation that has led to criticisms on the grounds of discrimination. The overall effect of the system depends on the initiative of the Board of Trade in referring cases to the Commission, on the determination with which the Commission's recommendations are pressed, and on the Commission's skill in making its public interest assessment.

The most explicit part of U.S. policy regarding dominant firms is to be found in Section 2 of the Sherman Act and in the body of case law under it. Section 2 states that "every person who shall monopolize, or attempt to monopolize, or combine or conspire with any other person or persons, to monopolize any part of the trade or commerce among the several states, or with foreign nations, shall be deemed guilty of a misdemeanor". Since what is prohibited is the act of *monopolizing*, but not the existence of *monopoly* as a type of economic structure, this Section raises the very complex issue of what sort of conduct constitutes an illegal act. The decisions in some of the earlier court cases, such as United States Steel in 1920, established that neither the existence, attainment nor maintenance of a monopoly position was an offence in the absence of coercive or predatory conduct. However, the conviction of the Aluminum Company of America in 1945 of a Section 2 offence dramatically altered this position. Alcoa's monopoly position had not been achieved by overtly predatory conduct, nor had it been thrust upon it. Rather, practices admittedly normal and prudent, such as building capacity ahead of demand, were found to have had a monopolizing effect and were so condemned. Thus, although the possession of a monopoly position was not, in and of itself, an offence, the Alcoa conviction went "very far in the direction of making large relative size illegal".[3]

The concept of the dominant firm plays some implicit role in other areas of U.S. antitrust policy, in the sense that certain practices such as exclusive-dealing and tying arrangements are, on the whole, more likely to be condemned when they are carried on by a dominant firm. Furthermore, dominance would appear to be a significant criterion in scanning individual mergers, particularly in the light of court decisions and the recent Merger Guidelines issued by the U.S. Justice Department.

Mergers

Only in the United States, Britain and, to a lesser extent, in the Federal German Republic does competition policy deal in a meaningful way with mergers. In Germany, a 1966 amendment expanded the definition of mergers that must be reported to the Cartel Authority but did not affect the basic principle of the German approach to mergers: that mergers need not be expressly granted prior approval, nor should mergers be liable to dissolution.

Merger policy in the United States is principally incorporated in the Clayton Act, passed in 1914 in an attempt to supplement effective antitrust enforcement with mechanisms by which certain business practices likely to promote monopoly may be dealt with in their incipiency, at a stage early enough to prevent the emergence of the monopoly. Unlike the Sherman Act, the Clayton Act is not criminal but civil law. The Act condemns certain business practices employed by individual firms only when their use may "substantially lessen competition or tend to create a monopoly". In other circumstances, the same practices may be considered acceptable. The effect of the legislation clearly depends on the interpretation of certain terms such as "substantially lessen competition", preceded by the equally important "incipiency" doctrine implicit in the term "may be".

Competition Policy

Modern U.S. merger policy effectively dates from the 1950 Celler-Kefauver amendment to Section 7 of the Clayton Act. Prior to 1950, Section 7 was thought to be applicable only to horizontal mergers in which one company acquired the stock or other share capital of one of its competitors.[4] Mergers involving the acquisition of the actual physical assets of a company could and did proceed freely, impeded neither by Section 7 of the Clayton Act, nor by the Sherman Act which had proven ineffective in this role. The 1950 amendment extended the application of Section 7 to nonhorizontal mergers (i.e. to mergers of firms not in a directly competitive relationship to one another) and to mergers carried out via transfer of physical assets. The amendment instructed the courts to strike down all mergers where "in any line of commerce in any section of the country the effect of such acquisition may be to substantially lessen competition, or to create a monopoly".

As interpreted by the Supreme Court, the amended Section 7 has been a powerful instrument in inhibiting mergers. Of overriding importance has been the Supreme Court's view of the nature of the competition and the competitive process Congress desired to protect, especially the part to be played by small independent enterprises. Successful attacks have been conducted against all three types of mergers: horizontal, vertical and conglomerate. The incipiency doctrine has been crucial, with the probable economic consequences of the attacked merger the focus of court concern.

After almost 20 years of experience with Section 7 there now exists a considerable degree of certainty in the United States as to the circumstances in which a merger is likely to run afoul of competition policy. The accumulation of experience in the courts led the Department of Justice in May 1968 to issue its *Merger Guidelines* in which it indicated the type of mergers it intends to challenge in future. The Guidelines set forth percentage shares of markets controlled by the parties proposing to merge: if the actual market shares are at or above these figures, a challenge will likely be issued. There is some variability in the guiding percentages; thus, in the case of a horizontal merger, the market share standards become stricter the higher the degree of concentration in the industry generally. In addition, a horizontal acquisition that swallows up an unusually effective competitor, or even a firm with unusual competitive *potential*, will likely be challenged. Vertical mergers, between firms in a supplier-customer relationship, will be challenged if they significantly raise barriers to the entry of new firms into either market, or if they allow the merged firm to use its access to raw materials or other supplies it controls in such a manner that other firms requiring these supplies are hurt, competition is lessened, and it becomes harder for new firms to enter industries where access to the kind of supplies in question is essential.

The Guidelines are less precise in the case of conglomerate mergers, although the market share holdings of a merger involving a *potential* competitor (i.e. a firm that *might*, left to itself, have entered one of the markets where its merging partner was active) are spelled out, and a merger designed to prevent the entry of a potentially "disruptive" firm will be opposed. Conglomerate mergers that significantly increase the danger of reciprocal buying will be challenged, as may mergers that increase the market power of a leading firm in a relatively concentrated or rapidly concentrating market.[5]

In Britain, the decision to bring mergers within reach of the law dates from 1965 when the Monopolies and Mergers Act introduced the principle that certain mergers should be liable to examination and, in the light of the public interest, either permitted, prohibited, or, if already consummated, dissolved. This gave recognition to the fact that the confines of the 1956 Act, which had created the Restrictive Practices Court to deal with restrictive agreements between separate firms, needed to be widened to encompass mergers between previously separate firms that could produce results very similar to those brought about by restrictive agreements.

The assessment of the implications of the merger for the public interest is made by the Monopolies Commission to whom the Board of Trade is authorized to submit mergers that exceed either a certain absolute size or a certain share of the market. The importance of the Board's role in determining how many of the mergers eligible for reference are actually referred to the Commission is evident from the fact that the

Commission may only examine those mergers which the Board, at its discretion, refers to it. At least one merger proposal which the parties realized might be difficult to justify in terms of the public interest was abandoned when the Board indicated that it planned to submit the matter to the Commission.

In assessing the public interest implications of the merger, the Monopolies Commission will, on the one hand, estimate the possible efficiency benefits to be gained and, on the other hand, make a judgment as to the consequences of the merger for competition. It may, on its own initiative or at the direction of the Board of Trade, examine other matters as well. There is no presumption that mergers referred to the Commission are against the public interest, nor is there any onus on those proposing to merge to convince the Commission that an exemption is justified. The Commission publishes a report stating the reasons for its findings and its recommendations. The Board, while not obligated to follow the Commission's recommendations, has done so in the first seven merger references.

An appreciation of mergers policy in Britain must also take account of two other Acts. The 1966 Industrial Reorganization Corporation Act embodies a positive philosophy of encouraging mergers and other structural changes in sectors of the economy where market forces are considered inadequate to produce those reorganizations thought to be required in order to increase productivity. The concern of the 1966 Act, it seems fair to say, is with industries in which firms are found to be too small to meet international competition. The Industrial Expansion Act of 1968 allows the government to provide financial support to specific projects, industries or sectors of industries to stimulate industrial change (including change coming about by merger) with a view to promoting "efficiency and productive capacity for industry and its technological advance". Thus British policy provides the means by which mergers may be actively encouraged in some areas of the economy and effectively blocked in industries where effects detrimental to the public interest are likely to ensue.

Resale Price Maintenance

The one major exception to the general rule that U.S. competition policy tends to be "tougher" than its European counterpart is to be found in the field of resale price maintenance. Here it is the European law which is more or less prohibitory, while the American is permissive.

Both Denmark and Sweden have prohibited resale price maintenance, in sharp contrast to their negotiatory approach to other restrictive practices. Although exemption from the Scandinavian ban on resale price maintenance is possible and although the wording of the exemption clauses gives substantial discretion to the Swedish Board and to the Danish Control Authority, both have in fact granted exemption sparingly and both have revoked exemptions when the original justification no longer appeared valid. In France, too, where one of the major objectives of competition policy is to encourage the modernization of the distribution sector of the economy, the approach to resale price maintenance is quite strongly prohibitory, with little scope for exemptions.

In Britain, the passage of the Resale Price Act in 1964 marked a dramatic change from the permissive approach of the 1956 Restrictive Trade Practices Act which, while declaring the *collective* enforcement of resale price maintenance to be unlawful, allowed enforcement by *individual* firms. The 1964 Act established a more general prohibition with exemption "gateways". To claim exemption, a seller must come before the Restrictive Practices Court, and a provisional exemption applies until the Court has ruled on the application. The exemption gateways are expressed in terms of the interests of consumers in relation to quality, number of retail establishments, retail prices, health, and post-sale service. If a product passes through a gateway, a balancing public interest test remains. Many products with a long history of resale price maintenance have not been registered for provisional exemption and others have not been defended when the opportunity to do so arose. The Court's refusal to grant the requested permission to practise resale price maintenance, in the first two cases to come before it, strengthened still further the reluctance of firms practising resale price maintenance to seek the Court's approval. It seems likely that in the near future, resale price maintenance will be employed only in the case of a few products possessing sufficiently peculiar characteristics that the Restrictive Practices Court sees its way clear to granting an exemption from the general ban.

In all of the countries studied, advocacy of resale price maintenance appears to come mainly from two quarters: from manufacturers of branded merchandise, who voice their fears that their heavily advertised products will be used as "loss leaders", and from small businesses fearful of the price-cutting tactics of their larger competitors. National policy in Germany and the United States can be said to reflect the influence of these two concerns. In Germany, the law condemns resale price maintenance in general, but the significance of this condemnation has been substantially reduced by the permission granted to producers of "branded articles which are competing in price with similar goods of other producers or dealers" to practise resale price maintenance. Publishing firms are also exempt from the ban. This permission may be withdrawn by the Cartel Authority if the practice is abused. A recent amendment strengthened the abuse provisions by stating that certain practices would henceforth be taken as presumptive evidence that abuses had occurred. The abuses in question were: the causing of an "increase in the prices of the goods affected" or "preventing a lowering of their prices" or "restricting their production or their distribution" in a "manner not justified by general economic conditions", as well as the disappearance of competition with similar goods.

U.S. policy in this field reflects the American tendency sometimes to protect small business even at the expense of economic efficiency -- in this case, primarily, the economic efficiency of the distribution system. This tendency has been a long-standing feature of the "fair-trade" laws passed in the early 1930's by many of the state legislatures under which resale price maintenance could be practised. However where interstate commerce was affected, resale price maintenance could still run afoul of the federal Sherman Act. To prevent such a conflict the Millar-Tydings amendment to the Sherman Act was passed in 1937. This amendment provided that nothing in that Act should render resale price maintenance illegal when agreements of that description are lawful when applied to intrastate transactions. In 1951, however, one of the most controversial features of fair-trade laws was ruled by the Supreme Court to constitute an offence under the Sherman Act. This was the so-called "non-signer" clause, which provided that once a manufacturer's resale price had been prescribed by contracts with one distributor, no other distributor could knowingly undercut that price. To overrule this decision of the Supreme Court, Congress passed the McGuire Act amendment to the Federal Trade Commission Act, clarifying the legality of resale price maintenance. Continued opposition to the enforcement of the non-signer provision and to fair-trade laws in general is reflected in action taken in many of the state Supreme Courts to rule such legislation unconstitutional, as well as in the 1955 Report of the Attorney General's National Committee to Study the Antitrust Laws, which recommended the repeal of both the Millar-Tydings Act and the McGuire Act.

Price Discrimination

Concern for the preservation of small business also figured in the thinking which led, in the United States, to the passage of the Robinson-Patman amendment to the Clayton Act in 1936. Prior to this amendment, Section 2 of the Clayton Act had branded as illegal the use of discriminatory pricing policies as a predatory tactic designed to eliminate competitors. To a considerable extent, the Robinson-Patman amendment was a response to certain retailing developments in the depression years. Large retail chain stores, particularly in the food trade, were putting increasing competitive pressure on small outlets. There was also concern over the ability of large buyers to extract price concessions from their suppliers.

The resulting piece of legislation has been more heavily criticized by informed observers than any other aspect of U.S. antitrust. Among other things, the amendment has been held to embody a confusion of purpose; it cannot, as it were, make up its mind whether price discrimination is to be suppressed where it operates as an anticompetitive device, or whether the objective is rather to protect small business from price disadvantages. Furthermore, enforcement has concentrated on price differences rather than price discrimination, and there have been severe administrative problems.[6]

It is widely maintained that while the amendment may have resulted in the suppression of some anticompetitive pricing practices, it has also prevented acceptable and even desirable forms of differential pricing, e.g. those which can be justified by cost differences, and those which constitute one of the more important ways in which price competition periodically "breaks out", to the benefit of the consumer, in oligopolistic markets. One observer's general verdict is that "no statute better demonstrates the legislative folly of trying to define 'sin' in detail".[7]

Exclusive Dealing, Requirements Contracts and Tied Sales

It is appropriate at this point to refer briefly to the U.S. treatment of exclusive dealing, requirements contracts and tied sales -- trade practices which are found notably in the automobile service station industry in Canada, and which the Economic Council was specifically requested to consider as part of its study of competition policy. The main consideration of them will be found in Chapter 6 of this Report.

In the United States, these practices are principally dealt with under Section 3 of the Clayton Act, although in the case of tied sales, action may also be taken under the Sherman Act and the Federal Trade Commission Act. The Clayton Act condemns these practices when their effect "may be to substantially lessen competition or tend to create a monopoly...."

In determining whether or not competition has been substantially lessened, the courts generally look to the market share of the firm employing the practice, the absolute amount of trade involved, and the availability of alternatives for firms that have been excluded by the contracts or practices under examination. Assessing the competitive impact of a practice in any particular case is a complex matter, and the courts have come to rely on certain relatively easily obtained information as pointing unambiguously to competitive implications. Where certain criteria are satisfied, there is deemed to be a *prima facie* substantial lessening of competition.

The courts ruled in 1922, for example, that a system of exclusive-dealing contracts employed by a manufacturer with 40 per cent of the market did substantially lessen competition and so violate Section 3; in 1923, a Section 3 charge was dismissed on the grounds that the supplier, with 1 per cent of the market, did not substantially lessen competition by his exclusive-dealing contract. The *form of the contract* was similar in the two cases; the *share of the market* as defined in each of the two cases produced the differing verdicts.

In 1949, the Supreme Court, in the important *Standard Stations* decision, found a firm's requirements contracts covering less than 7 per cent of the sales in the relevant area to be in violation of Section 3. The contracts, which required independent service station dealers to purchase from Standard Oil all their requirements of certain products, were renewed from year to year and were similar to contracts used by all six of Standard's competitors. The Court, while agreeing that the duration of the contracts was not excessive and that Standard did not by itself dominate the market, nevertheless held that an offence had been committed because competition had been foreclosed in a substantial share of the market. This decision changed the focus of Section 3 from one that rested on the alleged dominant position of the supplying firm to one that looked, as well, at the volume of business affected by the contract in question.

As to tying arrangements in the United States, it seems fair to state that they are less likely than exclusive-dealing contracts to be considered an acceptable form of business behaviour. They have frequently earned severe condemnation from the courts, with such terms as "pernicious effect on competition" and "lack of any redeeming virtue" being applied. The Supreme Court in 1962 indicated that one of the reasons for antitrust concern with tying agreements was that "they may destroy the free access of competing suppliers of the tied product to the consuming market".

Administration of Competition Policy

The experience of other countries throws useful light on the administrative problem discussed in the concluding section of the previous Chapter: that of determining whether to lean towards *per se* prohibitions of anticompetitive behaviour, or towards a more discretionary procedure involving considerable case-by-case examination of probable economic effects.

The United States uses both techniques. In Europe, some broad prohibitions are to be found, but they are usually subject to more or less important exemptions, and in general the European approach leans much more towards the discretionary end of the spectrum. Such an approach is typically less demanding of policy-makers but more demanding of those who are charged with administering competition policy. To no small extent, indeed, the latter are really called upon to create the policy. Where, for example, there are exemptions to broad prohibitions, the administrators must assess the economic circumstances surrounding the agreement or practice and decide whether, in the light of these circumstances, the agreement or practice should be allowed to continue. As a succession of such decisions occurs, the shape of the policy is gradually clarified, provided of course that the decision-makers have taken care to avoid major inconsistencies.

European countries have tended to avoid the direct use of criminal law in their competition policies, in marked contrast to the situation in Canada and the United States. Instead, the examination of the practices of individual business firms is undertaken and assessed by administrative tribunals such as the British Monopolies Commission and Restrictive Trade Practices Court, the French Technical Commission on Combines and Dominant Positions, the Swedish Freedom of Commerce Board and the Monopolies Control Authority of Denmark. These tribunals are normally composed of business and other interest groups as well as members of the legal profession. Only Germany departs from this procedure, adopting instead the principle of administering competition policy through the Federal Cartel Office, composed entirely of public servants. Although the character of the procedures before the tribunals varies from the somewhat legalistic British examination to the less formal activities of the Swedish Board, the enforcement machinery in European countries appears to be better suited to the examination of the underlying economic evidence and probable economic effects than in the United States. The American courts have, it is true, gone a considerable distance in this direction, but even there a special body in the form of the Federal Trade Commission has been instituted to supplement the work of the courts.

In most of the European countries, the legislation now contains more or less detailed specification of the criteria against which business practices restrictive of competition and exemptions from the prohibition on restrictive agreements are to be assessed. This is particularly true in Britain where the interpretation of exemption gateways has had a considerable deterrent effect, leading as it has to a dismantling of many restrictive agreements of long standing without any attempt at a formal defence. While the value of criteria both to administrators and to the business community must be recognized, such experience as that with the Robinson-Patman Act in the United States warns of the dangers sometimes involved in specifying criteria in too detailed a form. A golden mean must be sought: the administrators have to be given some guidance, but not so much that they are deprived of the flexibility necessary for the successful operation of the discretionary approach.

Remedies to Combat Anticompetitive Practices

The effectiveness of competition policy depends as much on the remedies at the disposal of administrators to bring about appropriate changes in business conduct and industrial structure as it does on the administrative machinery itself. The United States draws upon a wider assortment of alternative remedies than does Canada. Once its investigations uncover evidence that warrants a charge, the U.S. Department of Justice must decide whether to proceed by criminal prosecution or civil action. A criminal case can lead to the punishment of offenders for past offences, and is considered appropriate in those cases where the law is clear and the facts indicate a flagrant offence and plain intent to restrain trade unreasonably. The deterrent efficacy of the Act requires such criminal prosecutions. In order, however, to remedy the situation rather than merely punish the guilty, an additional civil action is often instituted. In the civil case, a decree containing injunctions regulating the industry in the future can be obtained, and it is for this reason that the Department of Justice frequently brings concurrent criminal and civil proceedings.

In the case of a criminal charge under the Sherman Act, the accused firm may plead *nolo contendere* -- a plea that may or may not be accepted by the

U.S. Department of Justice. Such a plea, while not an admission of guilt, enables the court to impose fines or other punishment as if the case had been fought and lost by the defence. In a civil suit under the Clayton Act, the equivalent of *nolo contendere* is to enter into negotiations with the Department to arrive at a consent decree, under which the firm involved agrees to modify or discontinue a particular practice without going through the process of a trial. Where a consent decree is agreed upon, the approval of a court must be obtained; any infringement of the decree then becomes punishable as contempt of court.

When the Federal Trade Commission, the tribunal which administers the civil Federal Trade Commission Act and (concurrently in some areas with the Department of Justice) the Clayton Act, believes that a business practice is in violation of the law and that its termination would be in the public interest, it issues a formal complaint. Thereupon, a Hearing Examiner, who is a legal member of the Commission's staff, acts as a court of first instance. The Hearing Examiner reaches a decision and, if appropriate, issues on behalf of the Commission a cease-and-desist order. The Commission may review the Examiner's decision either on its own account or on appeal by an aggrieved party. The Commission's cease-and-desist order, unless appealed, has the force of law. Any violation is subject to fine. Appeals from the Commission's decisions are restricted to matters of law; its findings of fact are final. The effect of this restriction does, of course, depend on what meaning is given by the Appeal Court to the phrase "matter of law". A company against which a complaint has been issued can negotiate a consent order with the Commission's prosecuting lawyers, without the matter going before a Hearing Examiner. The Commission may accept the settlement arrived at and promulgate the indicated cease-and-desist order, or it can reject the order submitted and refer the case to the Hearing Examiner.

Consent orders have been a particular feature of U.S. merger policy. They may call for total or partial divestiture of the acquired company or, more commonly, for a prohibition on future acquisitions by the acquiring company in fields related to those in which the acquired company operated. A formidable enforcement burden is placed upon the Commission and the Department of Justice by their responsibility for policing cease-and-desist orders, whether obtained by consent or resulting from litigation.

An individual or firm, damaged as a result of a restrictive agreement or anticompetitive practice carried on by another, may, under both the Sherman and Clayton Acts, be able to claim treble damages for the injury. Both *nolo contendere* pleas before the Department of Justice and the acceptance of consent orders by the Federal Trade Commission without a formal case lessen the possibility of a treble-damage suit by private individuals, since there is no court finding of fact on which to base damages. The deterrent effects of a possible treble-damage suit depend on the nature of the offence, the measurability of the damages, and the amount of the damages suffered by individual persons or businesses relative to the cost of suing for damages. Although an antitrust conviction makes available *prima facie* proof of certain facts in a private suit, the courts still face the difficult task of establishing that the private individual or business was injured by the illegal conduct, and of determining the extent of the damage suffered.

It should be emphasized again that where negotiatory procedures are used, or where exceptions are made to broad prohibitions, the enforcement agency will more often than not find itself required to exercise some continuing surveillance over the agreements and practices that have been either modified by negotiation or granted exemption. This task may come to absorb a significant proportion of the time and resources of the agency.

Purely negotiatory enforcement procedures appear to have had some effect, notably in Sweden, where the Freedom of Commerce Board attempts to work out appropriate changes in business conduct with the firm in question. However, Sweden is both an open economy and a unitary state. There has evolved a long tradition of co-operation between business, labour and government with a view to providing aggressive competition in the world economy. In such an environment the mere publicity given to, for example, the registration of cartel arrangements has led in many cases to their abandonment. But where such a tradition has not evolved, and where too, as in Canada, business relates to provincial as well as to federal and local governments, purely negotiatory enforcement is not likely to be as effective. A backstop of stronger remedies must normally be available.

Conclusion

The modest objective of this Chapter has been to indicate briefly certain aspects of foreign experience with competition policy that have exerted a particularly significant influence on the policy recommendations contained in later chapters. There is undoubtedly a great deal more in foreign experience that is relevant for Canada, and as that experience continues to accumulate, it will be important for Canadians to study it.

In drawing lessons from abroad, appropriate allowance must of course be made for differences between the Canadian and foreign economic environments. This has often been pointed out with reference to the United States. Although competition policies in Canada and the United States, as instituted in the late nineteenth century, were in many ways a response to common concerns, their subsequent divergence has been partly a reflection of certain rather deep-seated differences between the two countries. Among these may be mentioned the greater constitutional freedom of the federal government in the United States to enact laws affecting commerce; the stronger feeling of ideological commitment in the United States to private enterprise, competition and the diffusion of economic power; and the smaller size and greater openness and world-trade orientation of the Canadian economy. Perhaps the most important implication of the latter difference is that the Canadian economy is less able than its U.S. counterpart to afford a competition policy that, on occasion, may be prepared to sacrifice economic efficiency for other ends, such as the preservation of small business.

As for European experience, what has to be chiefly remembered is that much of it has been related to a tradition of rather more detailed governmental intervention in the operations of private industry than has existed in Canada. One might make some exception to this statement in the case of Sweden, with its unique degree of industrial self-regulation in certain areas. But here again, the tradition is rather a different one from Canada's, and this affects the range of practicable techniques for competition policy.

All this having been said, however, it remains a fact that with significant competition policies now being practised in many more countries than before the war, there is a richer and more varied experience on which to draw. More than ever, therefore, the continuous observation and analysis of foreign developments should be an important part of the conduct of competition policy in Canada.

[4] In fact, the Dupont decision handed down in 1957 was based on the unamended Clayton Act (i.e. prior to the Celler-Kefauver amendment). In this decision, the Court ruled against Dupont's acquisitions of General Motors stock, thereby interpreting the unamended Act as covering vertical mergers as well as mergers between firms in a horizontal relationship.

[5] Some more recent developments in respect of the Merger Guidelines should be noted. In testimony before the House of Representatives Ways and Means Committee on March 12, 1969, Richard W. McLaren, Assistant Attorney General, Antitrust Division, U.S. Department of Justice, stated as follows:

> At the Senate Judiciary hearing on my confirmation in January, I stated that I was not persuaded that Section 7 will not reach purer types of conglomerate mergers than have been dealt with by the courts thus far. In public statements since that time I have tried to warn businessmen and their lawyers that they cannot rely on the Merger Guidelines issued by my predecessors in this area --

that we may sue even though particular mergers appear to satisfy those Guidelines -- and that, to be safe, firms desiring to merge should learn our enforcement intentions by applying for a Business Review letter.

CHAPTER 4

BRIEF HISTORY AND ASSESSMENT OF CANADIAN COMPETITION POLICY

In contrast both to the discretionary civil law approach which characterizes competition policies in Europe, and to the combination of civil and criminal law used in the United States, Canadian anticombines policy has always been framed in terms of criminal law. The power of the federal government to enact criminal legislation is firmly entrenched in the Constitution and has been upheld by various rulings of the Supreme Court. Among the consequences of the criminal law basis of anticombines policy are the requirements that offences be proceeded against whenever they are believed to have been discovered and that the Crown, to win its case, must prove guilt beyond a reasonable doubt. These requirements have hitherto considerably narrowed the scope in Canada for effective competition policy directed towards economic ends.

In tracing the historical evolution of the policy, the discussion here will touch only lightly on developments prior to 1950, the history of that period having been well summarized in the Report of the MacQuarrie Committee. Much of the Chapter will be given over to an account of changes in the legislation since the MacQuarrie Report, while in the concluding section, a brief assessment of the effectiveness of the legislation will be presented. A more detailed history and assessment of Canadian competition policy will appear in a special study commissioned by the Economic Council, to be published at a later date.[1]

Basic Legislative Provisions to 1950

The cornerstone of Canada's present combines legislation was laid by Parliament in 1889 when it passed an Act prohibiting conspiracies and combinations in restraint of trade. The legislation defined as unlawful any agreement to limit unduly facilities for transporting, producing, storing or selling any article, or to restrain commerce in it, or to unreasonably enhance its price. Also forbidden was any agreement to unduly prevent or lessen competition in relation to an article or to the price of insurance "upon persons or property". With some modification, these provisions were imported into the Criminal Code in 1892 as indictable offences, where they remained until the consolidation of the Combines Investigation Act in 1960.

The first Combines Investigation Act was passed in 1910 in an attempt to remedy a weakness in the original legislation: the lack of any special machinery for investigation of alleged combines offences. In this Act, the definition of the kind of "combine" activity that could be investigated was set out in language similar to the wording of the combination offence in the Criminal Code, with the significant addition of the words "merger, trust or monopoly". A qualification introduced into the Act was that to be unlawful the combination, merger, trust or monopoly must have "operated or be likely to operate to the detriment or against the interest of the public, whether consumers, producers or others". This comprehensive definition was retained in the new 1923 Combines Investigation Act, which, as subsequently amended, is the law today. An interesting feature of the 1923 Act was that it did not restrict itself to trade in "articles" and the price of insurance: in principle, at least, trade in services was also included, although no cases relating to services were brought to court. However, the restriction to articles and the price of insurance reappeared in the legislation of 1937 and has remained to the present day.

In 1935, Section 498 of the Criminal Code was amended to bring price discrimination within the reach of public policy for the first time. Under the shadow of the Great Depression, there had emerged considerable concern about the large spreads between prices received by producers and those paid by consumers. There was disquiet also about price advantages obtained by large buyers that were deemed to discriminate against small competitors. These considerations were reflected in a new prohibition which banned the granting of discriminatory discounts and predatory price-cutting. This provision was transferred from the Criminal Code to the Combines Investigation Act in 1960 and remains in the Statute today.

Machinery for Investigation and Enforcement to 1950

As already noted, the establishment of the machinery required for the detection and investigation of alleged combines, missing from the legislation of 1889, made its first appearance in the Combines Investigation Act of 1910. This Act contained a provision whereby any six citizens could apply to a superior court judge for an order directing an investigation into the activities of parties thought to constitute a combine. On issuance of an order, the Minister of Labour was required to appoint a board composed of one representative of the applicants, one representative of the parties alleged to be a combine and a third member to be designated by the other two. The board was given the necessary powers to permit it to carry out a full inquiry and was required to transmit to the Minister a report of its findings and recommendations. Following publication of the report, continuation of activities by the parties named as a combine in the report constituted an indictable offence. But the legislation still failed to provide any continuity of administration. Since the boards were constituted on an ad hoc basis, they ceased to function once an inquiry had been completed, leaving behind no means to ensure that their recommendations were carried out.

Dissatisfaction with this situation led Parliament to include, in the 1919 Board of Commerce Act, a provision establishing a permanent board of three commissioners charged with the responsibility of administering a second new Act, the Combines and Fair Prices Act. (Together, these two Acts replaced the 1910 Combines Investigation Act, which was repealed.) The board could begin an inquiry on application from one citizen or on its own initiative, and retained the wide powers of investigation held by the previous ad hoc boards. In addition, if a combine were found to exist, the board could issue "cease and desist" orders directed at the cessation of offending practices. Noncompliance with such orders was deemed an indictable offence. This legislation, however, was found *ultra vires* of the federal legislature, for reasons discussed below, and in 1923 a permanent Registrar was appointed to administer the new Combines Investigation Act of that year. This official was empowered to hold a preliminary inquiry on his own initiative, on formal application of six persons, or on ministerial direction. If this preliminary investigation revealed that a formal inquiry was warranted, such an inquiry was conducted either by the Registrar or by an ad hoc commissioner. In 1935, the Dominion Trade and Industry Commission Act transferred the administration of the Combines Investigation Act and the powers of investigation and inquiry to a new three-man commission. However, parts of this Act were declared by the Supreme Court to be unconstitutional, and although the Dominion Trade and Industry Commission continued to have a legal existence until 1949, it did not exercise any functions in the area of combines legislation.

It is worth digressing briefly to note the reasons given for the two findings of unconstitutionality mentioned above. In its 1921 judgment on the Combines and Fair Prices Act and the Board of Commerce Act, the Judicial Committee of the Privy Council attached particular significance to the power of the Board to make orders prohibiting (a) the accumulation of articles that were necessaries, and (b) the withholding of such articles from sale because of sellers' dissatisfaction with prices fixed by the Board. Also, the Board could regulate profits, and deal with cases individually, rather than merely follow principles of general application. It was the view of the Privy Council that this power of a federally appointed board to regulate particular trades and businesses could not be upheld under the constitutional heads of either criminal law or trade and commerce.

In its finding that the 1935 Dominion Trade and Industry Act was *ultra vires* of the federal legislature, the Supreme Court focused notably on a part of the Act that reflected the economic environment and attitudes of the Depression years. The Act empowered the Dominion Trade and Industry Commission, if it found that wasteful and demoralizing competition existed in an industry and that agreements among persons in the industry to modify competition would not unduly restrain trade or operate against the public interest, to recommend approval of such agreements. (Like the National Recovery Act in the United States, the Dominion Trade and Industry Act embodied an attempt to attack some of the major symptoms of the Great Depression, whereas today the principal remedy to any such situation would be judged to lie, not in throwing competition policy into reverse, but in the more fundamental and efficacious step of expanding aggregate demand in the economy through the use of fiscal and monetary policy.) Section 14 of the Act, however, was found unconstitutional by the Supreme Court, and this effectively nullified the main purpose of the legislation even though other parts of the Act were later upheld by the Privy Council. As in 1919, Parliament had attempted to give an administrative tribunal power to regulate the operation of combines and similar business arrangements by administrative direction, and once again the attempt was disallowed.

Following the Supreme Court ruling, Parliament in 1937 again vested the administration of competition policy in a single permanent official (the Commissioner), whose role it was to conduct investigations under the Combines Investigation Act, although a special or ad hoc commissioner could also be appointed. The Commissioner was empowered to compel the attendance of witnesses, secure testimony under oath and require the production of documents. In 1949 the Act was amended to facilitate prosecutions. One amendment resulted from the acquittal of the defendants in the Ash-Temple (Dental Supplies) case on the grounds that there was no proof that actions of company officers had been authorized by their firms. The amendment provided that documents found in the possession of individuals acting as officers, employees, agents or representatives of businesses were admissible as *prima facie* evidence against the company.

Remedies in the Legislation to 1950

The Combines Investigation Act of 1923 stipulated that anyone offending the prohibition against combines was liable to a penalty not exceeding $10,000 or two years' imprisonment for individuals and not over $25,000 for corporations. A further penalty provided for the reduction or removal by executive action of the tariff on an article where the court found that a combination had unduly enhanced prices or denied the public the benefits of reasonable competition. This tariff provision, which continues in effect today, has been a long-standing feature of Canadian competition policy, dating back to an 1897 amendment to the Customs Tariff Act. Finally, a provision first introduced in 1910 and carried forward to the present via the Act of 1923 enables the Exchequer Court to revoke patent protection where exclusive rights are used to limit unduly competition in the market for a particular product.

Publicity has always been considered to be a deterrent against violations of the principles of competition policy. In sponsoring the legislation of 1910, the Honourable W. L. M. King, then Minister of Labour, implied that criminal prosecution was secondary to investigation and publicity in effective public control of combines. In the Act of 1923, the Minister of Labour was required to publish the report issued at the conclusion of a Commissioner's inquiry within 15 days, unless the Commissioner recommended against such action. This provision was retained in subsequent amendments.

The Situation as of 1950

By 1950, then, there existed fairly substantial machinery for the investigation and enforcement of prohibitions against anticompetitive practices and situations, including combinations, mergers, trusts and monopolies, and also certain unfair trading practices. The law provided for prosecution in the courts and gave the Commissioner extensive powers to enter premises, seize documents, and order the attendance of witnesses to testify under oath. Penalties consisted of fines, imprisonment, and the removal of tariff protection or patent rights. Finally, publicizing the results of the Commissioner's inquiries was intended to have a punitive effect, and the fear of publicity was regarded as a deterrent to anticompetitive practices.

The MacQuarrie Report and the Amendments of 1951-52

A controversy involving publicity and the suspension of anticombines activity during the Second World War, when production, the allocation of resources, and the setting of prices were subject to direct control, led to the establishment of the MacQuarrie Committee to review the legislation. In December 1948, the Combines Commissioner, Mr. F. A. McGregor, forwarded to the Minister of Justice the results of his inquiry into the flour-milling industry. In it, Mr. McGregor concluded that the leading milling companies had maintained price-fixing agreements since at least 1936, that these agreements were maintained in force during the war, and that the firms colluded in bidding for government contracts. Despite the requirements of the Act, the Report was still unpublished in October 1949. Mr. McGregor resigned on October 29, calling, in his letter of resignation, for "an even stronger statute than the Act in its present form, and a clear statement of government policy with respect to its enforcement". Tabled in the House of Commons on November 7, the flour-milling report raised, among other things, the issue of an industry being condemned for carrying out policies sanctioned by the Wartime Prices and Trade Board during the war and tacitly allowed by the government in the subsequent period of decontrol.

Faced with a barrage of criticism for its handling of the matter, the Government in 1950 appointed the MacQuarrie Committee to study the purposes and methods of the Combines Investigation Act and related Canadian statutes as well as those of other countries. The Committee was instructed to recommend any amendments desirable to make the Combines Investigation Act "a more effective instrument for the encouraging and safeguarding of our free economy".

After hearing representations from interested parties and conducting studies of its own, the Committee issued its Report in two parts.[2] In response to the Government's specific request for opinions on resale price maintenance, an Interim Report, dated October 1951, dealt exclusively with this matter. The Committee assessed this practice against two standards: the desirability of a free economy and the need for economic efficiency. It concluded that resale price maintenance on the growing scale then practised was not justified. The Committee recommended that it should be made an offence for a manufacturer or other supplier:

"1. To recommend or prescribe minimum resale prices for his product;

2. To refuse to sell, to withdraw a franchise or to take any other form of action as a means of enforcing minimum resale prices."

In connection with its examination of resale price maintenance, the Committee looked also at "loss-leader" selling. The latter practice, though condemned as monopolistic and not conducive to the general welfare of the public, was not viewed as presenting any immediate danger in the then current period of inflation and relative scarcity.

The Interim Report was considered by Parliament in December 1951, and an amendment to the Combines Investigation Act was passed which made it an offence to fix minimum resale prices, although suggested resale prices were still allowed.

The final Report of the Committee was issued in March 1952. Despite strong statements about the need for public policies in support of competition to be "adaptable to complex and rapidly changing problems", the Committee refrained from recommending any substantial change in the concept or direction of the combines law. One impediment to change was the constitutional problem. The Committee stated that publicity and criminal prosecution had been the principal means used against monopolies, "mainly because the legislation has been based on the federal power over criminal law and has been upheld by the courts on this ground". Recognition was given to "another view" to the effect that the federal power over trade and commerce would give Parliament complete jurisdiction in monopoly situations, at least those involving international and interprovincial trade. But, because neither of these views had been sanctioned by judicial decision, the Committee preferred to leave the question of extending the scope of the legislation to some future time. As the Report stated: "Our recommendations are directed to the strengthening and improving of the procedures, organization and remedies laid down in the Act rather than to revolutionizing them."

The chief recommendation of the MacQuarrie Committee was in regard to administration. The Committee proposed that there be a separation of function between investigation and research on the one hand and appraisal and report on the other. The Committee had received representations from the business community that the existing Commissioner was placed in the position of both prosecutor and judge. To effect a separation, the Committee recommended that the duties of the Commissioner be divided and assigned to two separate agencies: an agency for investigation and research, and a board for appraisal and report. The amendments to the Combines Investigation Act introduced in 1952 provided for a Director of Investigation and Research and for a Restrictive Trade Practices Commission consisting of not more than three members appointed by Governor in Council. The Director could initiate inquiries, but the powers needed to pursue an inquiry effectively -- seizure of documents, oral examination of witnesses, and orders for written returns -- could only be exercised after authorization by a member of the Commission. The Commission was to hear and appraise all evidence presented to it by the investigation and research agency as well as such other evidence as was necessary to ensure that persons under investigation had full opportunity to be heard.

The Committee recommended that the board report to the Minister, that the public report be retained for its deterrent effect, and that the scope of the Report be widened. The Committee was also concerned about the various areas of government policy which impinged on competition policy:

> Numerous other aspects of the Federal Government policy may greatly contribute to strengthen or weaken monopoly power. Money lending, currency management, negotiation of international trade agreements, import and export controls, public works, taxation, technological research may all directly or indirectly affect the interests of particular business groups. The way our legislation on banking, insurance companies and corporations is framed and administered may also greatly affect the monopolistic picture of our industry.

To effect the desired co-ordination of government policy, the Committee recommended, first, that administrative procedures be designed to ensure close liaison between the proposed board and other government departments whose activities might affect the competitive structure of the economy, and secondly, that the board should be empowered to recommend any legislative or administrative change within the competence of Parliament if "such change could be used as an effective remedy to correct an undesirable monopolistic situation or practice". Although no administrative procedures to ensure a greater degree of liaison were in fact established, the legislation of 1952 did direct that the report of the Restrictive Trade Practices Commission "review the evidence and material, appraise the effect on the public interest of arrangements and practices disclosed in the evidence and contain recommendations as to the application of remedies provided in this Act or other remedies".

With regard to offences, the Committee proposed no new prohibitions to strengthen the merger or monopoly provisions in the Act or to curb discriminatory or injurious monopolistic practices. In the body of the Report, discriminatory practices were defined to include quantitative price discrimination (via unjustified quantity discounts) and spatial forms of price discrimination such as freight equalization and freight allowance, and zoning or basing-point price systems. Other more injurious practices were said to be "derogatory and harassing practices, price wars, 'loss leaders', threats and spreading of false information". The Government followed the advice of the Committee and, in the legislation of 1952, left the sections dealing with offences virtually unchanged, except that the provision relating to price discrimination was amended so as to prohibit only the systematic practice of price discrimination rather than any single act. The Committee did suggest that the Minister refer the loss-leader practice for review by the proposed new investigation and research agency and by the new board, but the subsequent study by these bodies led to no recommendations for changes in the Act.

The legislation of 1952 also incorporated the Committee's principal recommendation regarding remedies: that existing statutory limits on fines should be abolished and that the fine in each case should be at the discretion of the court. The Committee also suggested further use of supplementary judicial remedies such as the judicial restraining order. Accordingly, a provision was inserted in the Act authorizing the court to issue an order prohibiting the repetition or continuation of an offence. In a conviction under the merger, trust or monopoly clause, the court was empowered to order dissolution of the merger or monopoly "in such manner as the court directs".

The Committee's recommendation that research into monopolistic situations and practices should become "one of the most important assignments of the investigation and research agency" led to the introduction of a new section in the Act. Section 42 provided that the Director of Investigation and Research, on his own initiative, or on direction from the Minister, or at the instance of the Commission, should carry out an investigation of monopolistic situations or restraint of trade in relation to any commodity that might be the subject of trade or commerce. Such a "general inquiry" would be dealt with in the same manner as an inquiry involving a possible infraction of the law. In line with the suggestion of the Committee, the publication of the results of such a general inquiry should await subsequent review of the evidence by the Commission which should then forward the report to the Minister for publication. Since 1952, five such reports have been published, relating to: loss-leader selling; discriminatory pricing practices in the grocery trade; automobile insurance; drugs; and tires, batteries and accessories sold through service stations.

The 1960 Amendments

Only in 1960, when further amendments were introduced into the combines law, did the Government follow the MacQuarrie Committee's recommendation that the Criminal Code provision relating to combinations be brought into the Combines Investigation Act. In this process, the definition of "combine" was dropped, the word "trust" was eliminated, and separate provisions were enacted defining mergers and monopolies and making them offences only where they were likely to be, or to operate, "to the detriment or against the interest of the public".

In addition, Parliament attached certain provisions to the combination or conspiracy section of the Combines Investigation Act. In a rather unusual turn of phrase, one of the new provisions directed that "the court shall not convict the accused if the conspiracy, combination, agreement or arrangement relates only to one or more" of certain matters, including exchange of statistics, defining of trade terms, co-operation in research and development, or restriction of advertising, or some other unobjectionable activity. Nevertheless, by a second new provision, Parliament made it plain that such an agreement must not be used as a device for breaching the fundamental prohibition of combinations or conspiracies.

A further new provision related to export agreements. Parliament provided that "the court shall not convict the accused if the conspiracy, combination, agreement or arrangement relates only to the export of articles from Canada". A qualification was added, however, to the effect that the provision does not apply if the agreement reduces the volume of exports of an article, works to the specific detriment of Canadian exporters or would-be exporters, or lessens competition unduly in the domestic market.

The section banning resale price maintenance was also amended. The law passed in 1952 included a provision making it an offence for a supplier to refuse to sell to a dealer who would not maintain the supplier's prices. In 1960, Parliament provided a group of defences for suppliers charged with refusing to sell. Henceforth no inference unfavourable to the accused could be drawn if he satisfied the court that "he and any one upon whose report he depended had reasonable cause to believe and did believe" that the buyer was using the goods as loss leaders, was making a practice of misleading advertising in regard to such articles, or was not providing the level of servicing that his customers might reasonably expect. While Parliament in this amendment obviously viewed these practices with disfavour, it did not go so far as to prohibit them directly.

Parliament did, however, insert in the Act a provision to outlaw misrepresentation of the ordinary price of an article ("misleading price advertising"). Another new prohibition banned discriminatory promotional allowances. This latter provision had the twofold purpose of preventing discrimination in distribution and of limiting promotional expenditures.

Also in 1960, the prohibition of price discrimination on a territorial basis was strengthened by making it illegal for a seller to engage in a policy of selling articles in any area at lower prices than he exacted elsewhere in Canada if the effect or tendency or design was to substantially lessen competition or eliminate a competitor.

A change was also introduced in the procedure for prosecutions under the Act. Although proceedings in any case under the Act could continue to be launched in any superior court of criminal jurisdiction, they could henceforth also be instituted by the Attorney General of Canada in the Exchequer Court of Canada provided that all the accused consented to this. (An exception to this procedure was made for misleading price advertising, which offence was made punishable on summary conviction.) The new procedure had the advantage of by-passing intermediate appeal and of moving cautiously in the direction of a single, specialized court to hear competition policy cases.

In addition, in 1960 the scope of the injunction provision was extended to grant the courts power to dissolve an offending merger or monopoly without the necessity of first obtaining a conviction.

Assessment of the Present Combines Investigation Act

There exists no neat, scientific method for assessing the economic impact of a piece of legislation such as the Combines Investigation Act. A simple count of the number of cases brought to court over a period and the percentage won or lost tells rather little; indeed, it may be misleading inasmuch as publicity and deterrence have traditionally been supposed to play an important role in Canadian competition policy. The perfect anticombines law, if such a thing could be imagined, would be known to all, and 100 per cent effective in its deterrence, with the result that no cases whatever would occur! But the present law is far from perfect and its actual deterrent effect can only be assessed very impressionistically. Many people are understandably reluctant to discuss how their behaviour may have been influenced by criminal legislation, and the use of some such technique as a "deterrence survey" of Canadian businessmen would be unlikely to yield reliable results.

We have put forward in this Report the view that the encouragement of economic efficiency should be the objective of Canadian competition policy, and it is accordingly in relation to this objective that the present legislation should be assessed. This is a difficult task, however, inasmuch as the state of efficiency of the Canadian economy at any point in time and changes that may have occurred in its efficiency over time reflect the influence of a vast number of factors in addition to the Combines Investigation Act. Much the same thing may be said about the intensities and types of competition prevailing in the Canadian economy: they too are the product of many influences of which the Combines Investigation Act is but one.

Like most assessments of economic policy, therefore, that of Canada's present competition policy must be undertaken on a basis of imperfect knowledge. An initial point worth making is that over the postwar period, the scope of the legislation and the breadth and vigour of its enforcement have on balance increased.

More research has been done; a greater number and a wider range of industrial situations have been investigated; and the legislation has become a more important factor in the minds of businessmen and hence in the operation of the economy. Partly because of this greater volume of activity, and partly also because of greater efforts to publicize the nature and objectives of the legislation, the Act has become better known to important elements of the public, and by virtue of this fact alone may well have increased somewhat in deterrent power.

It must immediately be added, however, that there appear to be few grounds for supposing that the total impact of the legislation on economic efficiency has been more than modest. Certainly, the impact has been uneven. The Act has mainly been effective in restraining only three kinds of business conduct deemed to be detrimental to the public: collusive price-fixing, resale price maintenance, and misleading price advertising. A fair number of instances of each type of practice have been struck down by the courts, and partly because of the examples thus provided, there has probably been an appreciable deterrent effect as well.

It is unlikely that the Act has done much to affect efficiency via changes in the structure of the Canadian economy. The main claim that might be advanced is that the banning of resale price maintenance has probably encouraged the entry into some sectors of price-cutting retailers. It is possible too that other prohibitions of conduct in the Act may have had some indirect effects on economic structure. But in respect of corporate mergers, which are one of the most important means by which changes in industrial concentration and other dimensions of economic structure take place, the Act has been all but inoperative. The only two cases brought to court under the merger provisions (the *Canadian Breweries* and *Western Sugar Refining* cases) were both lost by the Crown, and were not appealed. There may have been certain deterrent effects in this area (the Director's *Annual Reports* indicate that some prospective mergers have been abandoned following consultations under the "program of compliance" discussed below), but the Crown's lack of success in the courts has presumably limited the amount of deterrence achieved.

There have been no court cases in respect of the section of the Act dealing with price discrimination. As to whether this section has exerted any important deterrent effect, opinions differ. One qualified observer has made the following comment:

> Those who are called upon professionally to advise on problems relating to combines legislation are impressed by the importance attached to it by the business community. It is probably equally true to say that the prohibition against predatory pricing has at least eliminated grosser attempts by large organizations to pre-empt a market or to drive competitors out of business.[3]

It should be carefully noted that the economic impact of the Combines Investigation Act is not solely a function of the terms of the law itself and the way in which it has been interpreted by the courts. The resources available for its enforcement, including notably resources consisting of persons skilled in economic analysis, have also been a very important factor. Had these resources been greater, so too would have been the economic effects of the legislation. Still another factor has been the size of fines imposed upon offenders. In general, these have not been such as to contribute greatly to the total deterrent effect of the Act.

Pursuing further the assessment of Canada's present competition policy, it is enlightening to look first at some of the points often raised by those who feel that the policy is not vigorous enough, then to turn to the views of those who feel on the whole that the policy is too vigorous. Some of these differing views are distilled from written submissions that we have received on the subject of combines, mergers, etc., while others are taken from other available literature. Many of the opposing positions in this field are of many years' standing, reflecting in some cases basic underlying dilemmas in the formulation and application of competition policy.

Those who would make Canadian competition policy more vigorous put much of their emphasis on the uneven effectiveness and incomplete coverage of the Combines Investigation Act. It does not, for example, extend to most service industries. Then there is the question of whether, if it be granted that presently illegal price and other agreements tend to have adverse effects on consumers, these same effects may not come about in other ways that the Act does little or nothing to bar. May they not come about, for example, if instead of entering into an agreement, the firms involved simply merge? Even this may not be necessary: in cases where the number of firms in an industry is relatively small, there may exist a sufficient measure of tacit understanding among them that their economic behaviour is not greatly different from what it might be if they had either merged or formed a collusive agreement. The condition of oligopoly, with firms following a price leader or otherwise acting upon "recognition of mutual dependence", appears to be fairly common in the Canadian economy.[4]

In addition to urging that more be done about mergers and oligopoly, some of those who favour a more vigorous competition policy have advocated the extension of the Act to cover a wider range of trade practices. The Act now covers refusal to sell only when used to enforce resale price maintenance. Other practices not now covered by the Act include the exclusive-dealing and tying arrangements described in the "T.B.A." Report of the Restrictive Trade Practices Commission.[5]

But, while some observers have felt that Canadian competition policy is not vigorous enough, others (particularly businessmen) have criticized it in other ways. The business briefs that have been received by the Economic Council in connection with the Government's Reference include most of the criticisms that Canadian businessmen have made of the Act over the last several years. Of criticisms that deal not with detailed procedures under the Act or with the repugnance to businessmen of its criminal law basis, but rather with its general character, philosophy, and approach, the following four would appear to be the most important:

(1) Proceedings under the Act are often extremely drawn-out, leaving accused firms in a state of uncertainty for long periods of time.

(2) Additional uncertainty is produced by failure to spell out offences clearly, with the result that businessmen often do not know whether their contemplated course of action will bring them into contravention of the Act.

(3) Since the main underlying objectives of the Act are economic in nature, it is inappropriate that the courts, in deciding whether an offence has been committed, should not give more attention than they do to the probable economic effects of the business actions complained of. In other words, there should be less relative emphasis on industrial *conduct* and *structure*, and more on economic *performance*.

(4) By the restraints that it exerts on agreements, mergers and monopolies, the Act hampers the achievement of greater "rationalization" and specialization of Canadian industry, the promotion of exports, and the building-up of large-scale, research-based enterprises.

It is worth pausing to consider a little further these four criticisms, for they help to illuminate some basic problems that all countries with competition policies have had to face in the formation and development of such policies.

To begin with, there is a certain incompatibility, already commented upon in previous chapters, between criticisms (1) and (2), which call for greater speed and certainty in the application of competition policy, and criticism (3), which calls for more flexibility, discretion, and consideration of economic effects. Greater speed and certainty could be obtained by redrafting the entire Act as a series of relatively clear and unqualified *per se* offences; this would undoubtedly accelerate procedure and give businessmen a more precise idea of whether their proposed actions were likely to attract a prosecution. But the resulting Act, if it were reasonably free of loopholes and comprehensive in its coverage, would likely be found intolerably rigid.

Conversely, however, a move to have the courts give greater consideration to economic performance and probable economic effects would tend to lengthen procedures and increase uncertainty. As it is, many recent price-fixing cases have taken five years or more to complete from the opening of the initial investigation. How much longer would they have taken if the courts had had to consider, in addition to evidence bearing on whether or not a combine existed, a full range of evidence concerning the alleged economic effects (past, present and future) of the combine? The difficulties that are involved in basing competition policy very largely on economic performance criteria and the analysis of probable economic effects were pointed out in Chapter 2.

Another dilemma is suggested by criticism (4) in the list above, concerning mergers, monopolies, rationalization, and specialization. The typical problem is that whereas a proposed merger or agreement regarding specialization, exports, or both, may give some promise of bringing about longer production runs and lower unit costs, with possible favourable implications for international competitiveness, it may also create a monopoly or near-monopoly in the domestic market, with possible unfavourable implications for the domestic consumer. Much will, of course, depend on other circumstances, such as the extent to which the domestic market is protected from foreign competition by tariffs or transportation costs.

Returning to the matter of uncertainty, it is normally thought desirable for criminal law to be characterized by an especially high degree of certainty and fair warning. The Combines Investigation Act is notable for the use of a large number of qualifying words and phrases such as "unduly" (Section 32 on combinations), and "having the effect or tendency of substantially lessening competition or eliminating a competitor, or designed to have such effect" (Section 33A on price discrimination). On the face of things, these qualifications might seem likely to produce considerable uncertainty. Regard must be had, however, to the jurisprudence as well as to the letter of the Act. Where there has been little jurisprudence, as in the section on price discrimination, much uncertainty does exist; but where the courts have been more active, as in the section on combinations, the state of affairs under the Act has become clearer. Thus the word "unduly" ("to prevent, or lessen, unduly, competition in the production, manufacture, etc....") has acquired a specific quantitative significance. It has been interpreted in such a way that a price agreement covering the whole of the relevant market can now virtually be said to be illegal *per se*, while an agreement covering less than the whole but well over half of the market runs a substantial risk of being held illegal.

An important point about the jurisprudence in this area is that while the courts have been prepared to consider economic evidence relating directly or indirectly to the share of the market covered by agreements, they have steadfastly declined to consider evidence relating to the economic *effects* of agreements. This is well brought out in the decision of Mr. Justice Spence in the *Fine Paper* case:

> Surely the determination of whether or not an agreement to lessen competition was "undue" by a survey of one industry's profits against profits of industry generally, and a survey of the movement of the prices in that one industry against the movement of prices generally, would put the Court to the essentially non-judicial task of judging between conflicting theories of economy and conflicting political theories. It would entail the Court being required to conjecture -- and by a Court it would be nothing more than mere conjecture since a Court is not trained to act as an arbitrator of economics -- whether better or worse results would have occurred to the public if free and untrammelled competition had been permitted to run its course.[6]

The quantitative, share-of-market interpretation that the courts have placed on "undueness" has been such as to allow the striking-down of a considerable number of price agreements. But in respect of mergers, where a similar piece of qualifying language prevails, the effects have been very different. In *Rex v. Canadian Breweries Limited*, the trial judge, Chief Justice McRuer, stated that it was not the motive but the effect of the merger that was important -- "whether it has operated to the detriment or against the interest of the public, or is likely to do so". Chief Justice McRuer asserted that these words, applied to mergers, had substantially the same meaning as "unduly", applied to combinations. It followed that if the effect of a merger was to virtually eliminate competition, an offence had been committed; otherwise not.

To demand that a price agreement, in order to be declared illegal, must embrace most of the relevant market leaves considerable room for successful prosecution by the Crown, since if an agreement had not this characteristic, its prospects of effectiveness would in most cases be too low to induce anyone to enter into it. But to apply a similar market standard to mergers all but rules out successful prosecution by the Crown since few mergers virtually eliminate competition even though some of them have considerable and long-lived effects on competition.

Establishing the share of the market covered by a price-fixing agreement is a relatively simple operation, since the area covered by the agreement itself is of considerable assistance in defining the market. However, the delineation of the relevant market in cases involving mergers and other restrictive practices confronts the Director of Investigation and Research, the Restrictive Trade Practices Commission and the courts with a more difficult task. Sometimes the task is virtually synonymous with that of defining industry boundaries, an industry being thought of as a group of sellers who market a certain product or range of products. But in a world of product differentiation and product substitution, where should market lines be drawn? Should one think in terms of the market for a particular kind of steel product, of the market for all steel products, or of the market for steel, aluminum, plastics and perhaps some other materials? The decision will turn on how readily market buyers can substitute one material or item for another. The geographic extent of markets, transport costs, and the relative costs of producing the substitute products will have to be taken into account. The result is very much a matter of judgment. For purposes of competition policy, market boundaries, if not always industry boundaries, should be drawn as narrowly as is required to ensure that no substantial group of buyers *within* the boundaries should be unable readily to substitute one product for another.

The present situation of Canadian competition policy with respect to mergers provides a good illustration of an area where it has proved impossible, within the confines of criminal court procedure, to provide the sort of examination of complex economic phenomena that would adequately satisfy the protection of the public interest. The MacQuarrie Committee was well aware of this kind of problem and attempted to devise a means of dealing with it while at the same time adhering to the assumption that the criminal law basis of Canadian combines legislation would have to be continued for the time being. In proposing the creation of a board very similar to what shortly thereafter emerged as the Restrictive Trade Practices Commission, the Committee was not only concerned to separate the functions of prosecutor and judge previously lodged with the Commissioner under the Combines Investigation Act; it also hoped to provide a means whereby significant economic issues in matters brought before the Commission could be thoroughly aired and reported on, and remedies other than (or in addition to) criminal prosecution could be proposed.

The task conceived for the Commission was an extremely difficult and challenging one, and if the expectations of the MacQuarrie Committee have not been wholly fulfilled in practice, this should not be taken as any reproach to the diligence and vigour with which members of the Commission have discharged their duties. The Commission has made some highly useful original contributions to the evolution of competition policy in Canada. Examples of such contributions would include the Commission's report on ocean shipping conferences and its active participation in certain general inquiries under Section 42 of the Combines Investigation Act. But it must be said also that, on the whole, the Commission itself has not been able to escape from the criminal law strait jacket to the degree hoped for by the MacQuarrie Committee. For reasons some of which are readily understandable, the Commission has paid close attention to the interpretation of the Combines Act by the courts and, to a considerable extent, has assimilated its role to that of the courts. It has not ventured into broader economic analysis to the extent that was anticipated and has not, by and large, provided an adequate solution to the problem of dealing with practices and situations that do not lend themselves well to treatment via the normal procedures of criminal courts.

Another means that has been utilized in an attempt to overcome some of the rigidities and other disadvantages of the present legislation has been the development of a "program of compliance" by the Director of Investigation and Research under the Combines Investigation Act. Under this program, businessmen have been encouraged to discuss with the Director *in advance* courses of conduct which they are contemplating, in order to determine whether the adoption of such courses would lead him to launch an inquiry under the Act.

Altogether, it is apparent that there are numerous causes for dissatisfaction with the present situation of Canadian competition policy. It cannot be expected that such a policy will ever please everyone. Remedies for undesirable situations must be provided, and those on the receiving end of these remedies will rarely if ever enjoy the experience. But it does appear to us that a point has been reached where competition policy can be restructured to meet, at least partly, some of the more serious and important criticisms that have been made of it, and where it can also be better related to national economic objectives. Thus altered, it should be able to command a wider measure of that public understanding and support that are essential to its successful operation.

CHAPTER 5

SOME STRUCTURAL ASPECTS OF CANADIAN INDUSTRY

The preceding chapters have discussed the appropriate objectives of competition policies and the legislation and administration of these policies both in Canada and abroad. It is of course impossible to draw inferences about appropriate Canadian policy from a comparative study of national policies without having regard to the economic environment within which each set of policies operates. While the Canadian environment clearly has many aspects that are similar to those found elsewhere, it also has a number of distinctive features that need to be taken into account in any assessment of present Canadian policies and proposals for their revision.

How does one obtain information about the features of the Canadian economy that are relevant for competition policies? Unfortunately, much of the information about the structure and practices of Canadian businesses, and about the process of their interaction with other private and public practices and policies has been neither collected nor examined. Neither consumers nor businessmen, nor the designers and administrators of public policies operate in a situation where their information is perfect or anywhere near perfect. Certain salient features of the Canadian economy have, however, been subject to some examination, and it is on the basis of available knowledge of these features that public and private decisions must be made. This information is available from a number of different sources. The major collectors of information are usually, though not always, public bodies such as the Dominion Bureau of Statistics and other federal and provincial government departments and agencies. The documentation of cases under the Combines Investigation Act, reports of the Restrictive Trade Practices Commission and the Canadian Tariff Board are notable sources, as are certain Royal Commission reports, and industry studies carried out under nongovernmental auspices.

For the most part we have been able to rely in this Reference upon the very substantial body of documented analysis of the Canadian economic environment that had accumulated prior to the time our work commenced. To some degree, however, we felt it necessary to expand this knowledge to embrace here and there some sections of hitherto unexplored or inadequately explored territory. Thus, while we have been able to rely on existing work in the area of scale and specialization and the size of Canadian markets, we felt the need to improve and bring up to date knowledge about industrial concentration in Canada and about postwar merger activity. We have also devoted some resources to throwing additional light on aspects of business behaviour directed to the specific activities of research and development. While our contribution within this Reference to existing knowledge about the Canadian economic environment has been modest, and while the sum total of existing knowledge in relation to the size and complexity of the environment is much less than it should be, it is nonetheless adequate to distinguish the desirability and direction of certain changes that should be made in our competition policies. The changes are of two kinds. The first kind involves changes in competition policy based upon long-standing features of the Canadian economy with which our existing policies, for a number of reasons, have never been able to deal adequately. The second kind of change reflects the need to update policies to meet changing technological and other features of the environment that have evolved since the MacQuarrie Report on combines legislation in 1952.

We propose in this Chapter to discuss some of the salient features of the Canadian economic environment, then to proceed in the following Chapter to the policy changes that we recommend.

Market Size, Scale and Specialization

One of the most obvious limits on efficient use of available resources is the size of the market into which the goods and services produced by those resources are channeled. In an open economy such as Canada's, market size is affected to a considerable extent by the tariff policies adopted by both foreign and Canadian governments. Tariffs erected by other countries hamper the efforts of Canadian producers to move beyond national borders and compete for sales in world markets. Tariff barriers set by Canada shelter the domestic market from the inroads of foreign suppliers, and increase the tendency for Canadian manufacturers to try to provide a full range of the requirements of Canadian consumers. Attempts by Canadian manufacturers to supply the wide range of products desired by consumers all too often result in inadequate specialization and short production runs. There are, of course, other impediments limiting market size; in some industries, transportation costs and nontariff barriers such as patents and the valuation placed on imports for customs purposes may have a more powerful impact.

The size of the market for the output of a particular industry in turn determines the number of firms or plants of minimum efficient size required to produce, distribute and market the product. One of the consequences of Canada's economic structure is that the conditions which tend to call for a relatively small number of relatively large firms also generate in many instances small, or at any rate inadequately specialized, plants operating at levels too low for maximum economic efficiency. How does this come about and why does it persist? Part of the answer may lie in the greater urgency of the pressures generated by the Canadian environment to achieve scale economies *other than at the plant level*. These would include economies to a firm in respect of such things as distribution, advertising and possibly in some cases overall management. The drive to capture such economies may help to explain why firms are relatively few and large in many Canadian markets. But this fewness of firms in turn may, over time, tend to lessen competitive pressures to the point where inefficient *plants* are able to persist. Inadequate specialization is especially marked in industries where the distribution system offers marketing advantages to firms producing a "full line" of products. In such cases, while the industry may contain the number and size of *firms* consistent with efficient production of its *total* output, maximum efficiency in terms of individual *products* is unlikely to be achieved because each of the firms is producing a full line instead of specializing in a few items only. It is important to stress at this point that the situation that has been described should not necessarily be attributed to inefficient management. Once a pattern of multiproduct output is established, it is not necessarily in a firm's own interest to specialize. An attempt to do so may not only place a firm at a marketing disadvantage vis-à-vis other firms that still offer a full line of products; it may also expose the firm to a price war if it tries to convert its lower unit costs on specialized items into lower prices.

The evidence on scale and specialization in many industries leaves little room to doubt that existing market forces are often incapable of bringing about minimum cost levels. Eastman and Stykolt's study[1] of 16 widely representative Canadian industries showed that plants of minimum efficient size (taking into consideration both scale and specialization) produced on the average only 43 per cent of the output of these industries. This was in sharp contrast to a similar study by Bain which showed that in the United States the average was 80 per cent.[2] In only four of the Canadian industries was 75 per cent or more of the output produced in plants where full advantage was taken of available production economies. There are still important unanswered questions in this area -- questions that relate to the extent of the gap between minimum efficient size and the average size of plants in each of the industries and to cost differences between plants of different sizes. But it is known that cost differences can be quite large and indications are that the cumulative detrimental effect on the Canadian economy of inadequate plant size across a broad spectrum of industries is considerable.[3]

The proposed changes in competition policy presented in Chapter 6 of this Report have been influenced in two important respects by the evidence on scale and specialization in Canadian industry. This evidence has had a direct bearing on our recommendation that specialization agreements, under appropriate safeguards, should be permitted, and secondly that, in evaluating a merger, weight should be given to the effect on cost levels in addition to other factors. One of the key questions that had to be answered was whether the shortfall between actual and potential performance in the area of scale and specialization was sufficiently important to justify provisions in our recommended policy which could in some cases result in less, rather than more, competition. In reaching an affirmative answer to this question, we hasten to add that the approval of specialization agreements must be on a selective basis -- they are by no means appropriate for all industries. A case-by-case appraisal also appears to be required in dealing with mergers where it is necessary to sort out and evaluate the variety of reasons that may underlie a decision to merge. It is interesting to note that the admittedly imperfect evidence from a survey conducted by the Combines Branch, discussed below, suggests that the exploitation of greater scale and specialization opportunities did not rank among the main factors motivating the extensive merger activity that took place in Canada during the postwar period. This is not to say that the other motives were necessarily inappropriate or that greater efficiency resulting from economies of scale and specialization did not in fact come about as a result of the merger. But it does point up the necessity of a case-by-case appraisal, in the light of surrounding circumstances and taking into account all relevant factors, in order to predict with any degree of confidence both the possible economies and the potential adverse effects on competition that may result from mergers, and indeed from other types of business practices.

The existence of tariff protection on many final products produced in Canada raises important potential obstacles to efficiency. The tariff may act as an effective upper limit on prices; in other words, the laid-down (or tariff-paid) cost of imports into Canada is used in some cases as the limit above which manufacturers may not price their products, regardless of how many other competitors they face or how large a share of the market they control. This limit price is not necessarily a level that affords producers high or excessive profits, but the fact that it does exist and that it is easily recognizable may reduce the need to strive continuously to achieve efficiencies. In a number of manufacturing industries, Canadian producers may in fact be able to hold prices below the upper limit set by the tariff, but they are under little or no pressure to do so. The tariff in these industries provides a margin within which inefficiencies may persist; this is true regardless of whether or not advantage is taken of the full margin of tariff protection. In addition, the fact that the limit price is clearly defined by the laid-down cost of imports may have implications for conduct that are relevant to the analysis of competition policy. It may be less difficult, for example, to achieve a tacit consensus among firms in a Canadian manufacturing industry in respect of their pricing policies than it is in the United States where situations in which similar upper limits exist and appear to play a significant role in business pricing decisions are apparently less widespread. The laid-down cost of imports into Canada can be taken as the price that would be charged if market power was fully exercised in the sheltered Canadian market. This indication of market power may weigh critically in assessing the implications of such things as mergers or specialization agreements which, on the one hand, promise efficiency gains in production but, on the other hand, produce increased industrial concentration or something very similar in its economic effects.

It has been argued that the reduction of tariffs following the Kennedy Round and the change in the Canadian economic environment which these reductions will bring about will be such as to make possible a major dismantling of competition policy. This seems highly unlikely. Nominal tariff rates will still be fairly high -- on the average about 15 per cent. In many industries the effective protection provided by the new tariff rates will be about the same as before the Kennedy Round, because the reduction of the tariffs on inputs used by these industries offsets the decrease in protection on their own output.[4] Nevertheless, the reduction of tariffs on a broad front should result in some inducement for industries to move towards larger scale and increased specialization. Domestic tariff levels *have* come down. Moreover, foreign markets have been made more accessible to domestic producers. The market discipline and the opportunities created by the multilateral tariff reductions should result in a more efficient structure of Canadian industry. But the continuation of substantial tariff and nontariff barriers for some time into the future is another reason behind the need for public policies geared to promote efficiency.

There are of course some industries in which market size, industrial structure and business conduct are not conditioned by the level of tariff barriers. Where the product is perishable, such as milk, or where the bulk or weight of the product is high relative to its value (e.g. cement), the potential area served by a plant is determined by economies of scale, transportation costs, and the geographic distribution of buyers. The markets served by many retail and wholesale distributors and by many service-producing establishments are also, by their nature, local, and are, moreover, a large and growing part of the economy.

A further force influencing the Canadian environment is the presence of factors outside Canada that tend to restrain competition significantly in some industries even in the complete absence of a Canadian tariff. For instance, the main potential foreign competitor might be the corresponding U.S. industry, and this industry might itself be highly oligopolistic and in many ways relatively noncompetitive. The comparative lack of competition in a Canadian industry closely linked to its American counterpart via parent/subsidiary or other affiliate relationships would have to be regarded as due in large measure to the competitive situation in the United States. In such cases all that national competition policy can realistically accomplish is to restrain any attempt to abuse a position of market dominance.

It is obvious from this brief look at some of the elements of Canadian economic structure and associated business conduct that competition policy cannot deal with these aspects on the basis of any universal law. But it is equally clear that in some cases they may be of sufficient importance that policy must be devised to take account of them on an individual basis. For example, while the power to introduce tariff reductions must reside with the government, cases may come up where a lowering of the tariff barrier may be a highly appropriate means to ensure that efficiency gains, such as result from a merger, for example, are passed on to the consuming public.

Concentration

The level of concentration -- the extent to which a small number of firms account for the bulk of an industry's output -- has an important bearing on the state of competition in an industry. Where concentration is high, so too are the risks of strong market power, low competitive pressure, inefficiency and poor resource allocation. One must be very careful however not to be overly simplistic and to translate measures of concentration into indexes of market power, for concentration is only one of the variables helping to produce these undesirable conditions. But the higher the level of concentration, the more likely it is that certain undesirable practices will occur. For instance, more stress is likely to be placed on nonprice forms of competition, and both the ease of reaching joint decisions on pricing and the temptation to do so are likely to be greater. Where, on the other hand, there are 20 or more firms in an industry with no three or four of them highly dominant, the probability of firms being able to reach joint binding decisions on price, either through explicit agreement or through some form of implicit bargaining, is slight. The tendency to engage in secret price-cutting would likely override even a formal agreement. Many studies have proven that there exists on the average a positive relationship between high levels of concentration and high profit levels.[5] The ability to maintain earnings, year after year, over and above the amount required to cover costs plus a reasonable return on invested capital, is an indication that something is amiss in the efficiency of resource use in the economy. (One cannot, however, turn this coin around and infer that where earnings just cover costs plus a reasonable return on capital, efficiency necessarily reigns. As was observed in Chapter 2, lack of competitive pressure in an industry may lead to sloppiness, poor cost control, and merely comfortable profits.)

Changes in the level of concentration in a particular industry can be brought about by a number of factors. Among the most important are the speed at which the industry grows; shifts in the size of plants and firms required to maximize efficiency; the importance of technology embodied in patents held by existing firms; the size and availability of capital investment required for a new firm to break into the industry; other barriers to entry; and the extent of merger activity which has taken place within the industry.

It is obvious from even this very brief list that industrial concentration is *one* of the elements to be taken into account in the design of a competition policy which strives to promote economic efficiency. What is not so obvious is the degree of importance to attach to concentration in the Canadian context. At the outset of our work, the only available empirical evidence was a study by Rosenbluth based on 1948 data for 96 Canadian industries. In order to update this work, the Council commissioned Professor M. Stewart to undertake a study based on various industry bulletins published by the Dominion Bureau of Statistics. The results of this study, which is shortly to be released, are summarized briefly in Appendix III. But for present purposes it is sufficient to note that in more than one-third of Canadian manufacturing industries in 1964 as few as eight firms within each industry accounted for 80 per cent or more of the shipments of that industry. At the other end of the scale, however, in another group of industries again accounting for more than one-third of total manufacturing, 20 or more firms were required to account for 80 per cent of total shipments of their respective industries. A comparison of shifts in aggregate industrial concentration over time suggested that, although more than one-half of the manufacturing industries for which reasonably comparable data were available over the period were more concentrated in 1964 than they had been in 1948, more than one-third had a lower level of concentration.

Thus one can only conclude that in some parts of the Canadian economy certain industries may have a high and increasing degree of concentration. One cannot, however, determine from the figures whether the degree of concentration in these industries is such that full advantage is being taken of economies of scale. Clearly such an assessment must rest on a much more penetrating analysis of individual firms and a finer classification of the industries within which they operate. What one can say is that if concentration levels in each of these industries were lower and falling, there would be less need for concern over mergers and trade practices with a potential for detrimental effects on efficiency. Except in circumstances where there is public control over the entry of new competitors into an industry, high concentration is a necessary, although by no means sufficient, condition for market power. Where there is no significant market power in an industry, then practices of individual firms, such as tied sales and refusals to deal, for example, are not likely to result in detrimental effects on the public interest, because the buyers of the industry's product can turn to other producers for their supplies. Indeed, in the absence of market power it is much less likely that potentially detrimental practices will exist at all.

Mergers

The discussion so far has highlighted the fact that the behaviour of firms is influenced by the structure of the industries within which they operate. But this is not a one-way process. What firms do affects, in turn, the structure of industries. All forms of market behaviour have the capacity to change industrial structure. Policies of existing firms with respect to pricing, advertising, and research and development can exert a powerful influence on what size and other characteristics a new firm must have to enter an industry successfully, and on the capacity to survive of some of the firms already in the industry. These policies ripple out to produce gradual changes in the structure of industries, giving competitors the opportunity to adjust their own policies if they feel this to be necessary. Abrupt changes in structure, brought about by sharp alterations in conduct, are therefore rare.

There is, however, one exception to this general statement: mergers between competitors and between customers and suppliers have an immediate and sometimes substantial impact on the structure of industry.

Mergers are brought about in two principal ways. An acquiring firm may purchase all of the assets of another company, or it may secure enough of the voting stock of the acquired company to ensure effective control. Mergers have two effects, both of which are of concern to efficient resource use and to competition policy. The first relates to the increase in market power brought about by the merger. If the acquired and acquiring companies are in the same industry, a merger will obviously reduce the number of firms, whereas a merger between companies in a customer-supplier relationship leads to an increase in the degree of vertical integration within the industry. Alternatively, in the case of a merger of firms engaged in unrelated activities, the merger will have no necessary impact on those aspects of market structure which have hitherto been most studied and analysed. But the fact that the analysis of such "conglomerate mergers" is still in its relative infancy calls for caution in reaching conclusions on how they affect business structure and conduct.[6] The second effect produced by a merger is that by increasing the volume of assets and sales under the control of individual firms, they increase the rate at which cost-saving opportunities may be exploited. Other effects of mergers, such as changes in the degree of foreign control of Canadian industries, fall outside the ambit of competition policy.[7]

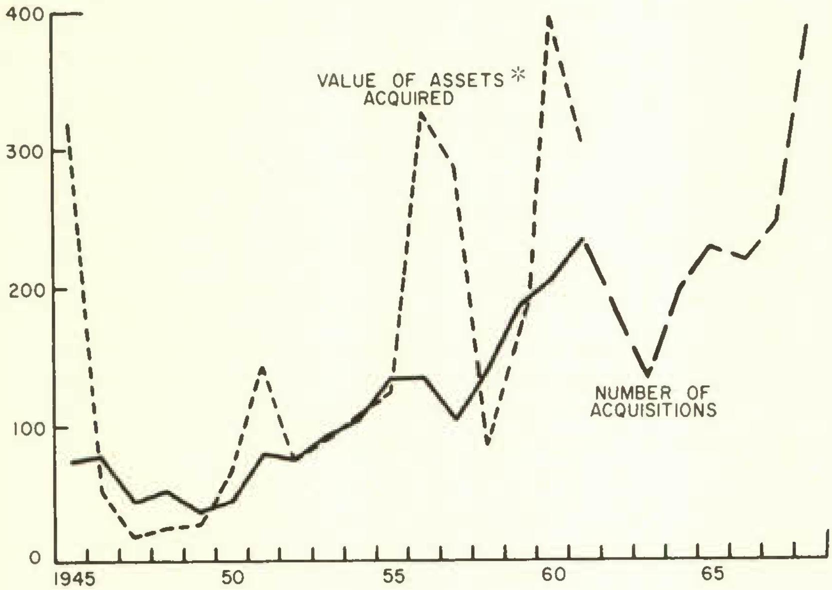
The Combines Branch of the Department of Consumer and Corporate Affairs recently completed a survey of mergers taking place among firms whose activities fell within the jurisdiction of the Combines Investigation Act and which made any publicly recorded acquisitions from the beginning of 1945 to the end of 1961. Coverage of sectors such as manufacturing, mining and trade appears to have been virtually complete. However, there was only fragmentary coverage of acquisitions by firms in the service sectors, such as financial institutions, most utilities, advertising agencies and real estate companies. The survey recorded 1,826 acquisitions over the 16-year period, acquisitions being defined as the purchase of the whole or part of an operating business capable of sustaining an independent operation and costing in excess of $10,000.

The annual breakdown of the number of acquisitions and the volume of assets acquired is shown in Chart 5-1. Two characteristics stand out. The first is that there were some wide fluctuations in both the number and value of acquisitions and, second, that there was a fairly strong upward trend over the period, particularly in the number of acquisitions. As was discovered in the United States,[8] the number of acquisitions bears a fairly close statistical relationship to a number of major economic variables, but particularly to the average level of stock market prices. Since mergers seem to respond positively to generally buoyant economic circumstances, as reflected in stock market prices, and given the apparent determination on the part of Canadian and foreign governments not to permit any prolonged slowdown in economic activity, an environment favouring a high level of merger activity is likely to persist into the foreseeable future.

Other results of this survey are to be found in Appendix III to this Report.

Chart 5-1

MERGER ACTIVITY IN CANADA, 1945-61[(1)]



* MILLIONS OF DOLLARS, DEFLATED TO 1949 BASE

(1) Mergers covered in the survey include only acquisitions made in the period 1945-61 by companies whose activities fall within the Combines Investigation Act. Data pertaining to the number of acquisitions undertaken in 1962 to 1967 were tabulated from published sources.

Source: Questionnaire Survey, Combines Branch; Economic Council of Canada.

In the previous Chapter, attention was drawn to the fact that the Canadian courts' interpretation of the existing merger section of the Combines Investigation Act has been such that acquisitions by firms with substantial market power are not precluded by law. In the light of what has been said about the potential dangers inherent in an overly concentrated industrial structure, and in view of the somewhat rough indications that in some industries in Canada concentration could be approaching a danger point, Canada's stance with regard to mergers gives grounds for concern. On the other hand, there is evidence of a need for greater specialization in some lines of Canadian production so that potential economies of scale can be fully realized. How can Canadian policy resolve this dilemma? Certainly, the state of existing knowledge about industrial concentration, scale and specialization, is not such as to lend itself to any crude, mechanistic formula which weds these factors together. What appears to be needed is some sort of selective approach where certain merger proposals are examined for possible detrimental effects on the public interest in efficient resource use, with careful attention being paid to the circumstances of the particular industry involved. But given the possibility of initiating such a procedure, one may understandably want to ask how many of the mergers that have taken place in this country in the past might have been regarded as appropriate candidates for a public interest examination. Careful note should be taken of the exact question being asked: not "How many mergers should have been disallowed?", but "How many mergers might well have been examined for evidence of possible detrimental effects on the public interest?"

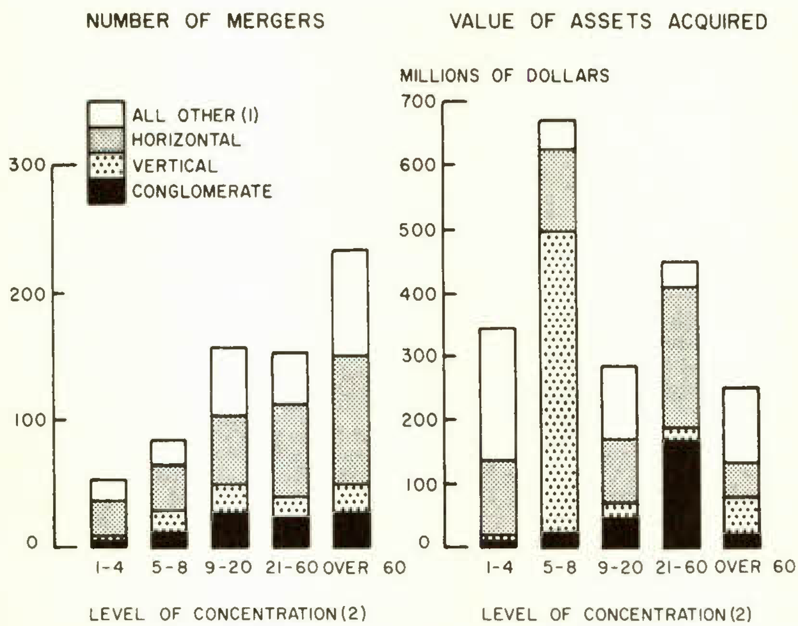
Presumably, the mergers selected for examination would, by and large, be those that appeared to confer substantial increases in market power on the acquiring companies, and particularly those that enhanced an already substantial degree of market power. The identification of market power is often a difficult task. Even in the initial phases of the selection process, an agency charged with screening out mergers for examination would be bound to take account of numerous factors. Here, the procedure employed is necessarily much cruder. Two rough estimates are attempted.

The first of these estimates is based on a cross-classification of 76 per cent of the acquisitions of manufacturing companies during the period 1945-61 (the remaining 24 per cent were not included since the industries in which the acquired firms could be placed were broader than the classification for which concentration data were available). These mergers are classified according to (a) the types of acquisition and (b) the levels of industrial concentration prevailing in each of the manufacturing subclassifications where mergers occurred. It is assumed for purposes of the estimate that only in rather highly concentrated industries would increases in market power resulting from mergers be worrisome enough to call for a public interest examination. If "rather highly concentrated" industries are taken to be those where eight or fewer of the largest firms accounted for 80 per cent of total shipments, this immediately drops the number of possible candidates for examination to 136. If one assumes that the 18 mergers falling into our "catch-all" conglomerate category have no detrimental effect on the public interest, this figure drops to 118. This would represent 17 per cent of the total number of mergers and 49 per cent of total value of assets acquired. The data on which this estimate is based is summarized in Chart 5-2, while the detail may be found in Table A-4 in Appendix III.

A second estimate is somewhat more sophisticated, involving a case-by-case appraisal of 997 acquisitions by manufacturing firms. Various factors bearing on market power are taken into account, including the level of concentration in the industry of both the acquiring and acquired firms, the market relationship and size of the acquired and acquiring firms and where available the size ranking of the firms in their respective industries. Another factor taken into account was the history of merger activity of the acquiring firm. On this basis, it appears that about 8 per cent of acquisitions, accounting for 34 per cent of total acquired assets, might have qualified for a public interest examination.

Chart 5-2

TYPES OF MERGERS AND THE LEVEL OF CONCENTRATION OF THE MANUFACTURING INDUSTRIES WITHIN WHICH THE ACQUIRED FIRMS WERE OPERATING, 1945-61



(1) Includes mergers described as "Geographic Market Extension", "Product Extension" and "Other Horizontal", data for which are shown separately in Table A-4 in Appendix III.

(2) Number of firms required to account for 80 per cent of shipments in 1964. Because levels of concentration were estimated from grouped data, they may be expressed as fractions of firms. In the Chart, wherever such fractions fall between the upper and lower values of two adjacent bars, the industry was placed in the bar with the higher value; for example, an industry with the concentration level of 4.1 appears as part of the concentration interval 5-8.

Once again, it should be emphasized that both of the above estimates are derived by crude methods. Their main value is the very rough indication which they provide that the institution of a procedure for examining mergers which appeared to involve a possibility of detriment to the public interest would probably affect a fairly small proportion of total mergers.

Returning to the merger survey conducted by Combines Branch, the questionnaire attempted to elicit from the acquiring firms the cost savings that resulted from the acquisitions. (This question was raised in the hope of determining what proportion of the mergers effected between 1945 and 1961 were undertaken in order to realize cost reductions through increased scale.) The replies, which are more fully discussed in the Appendix, were somewhat surprising and must be interpreted with caution. One surprising result, for example, was the large percentage of acquisitions that, in the opinion of the acquiring company, yielded negligible or no economies. Another was the fact that administration and management were considered to be far and away the most important source of economies. This is in contrast to expectations that, particularly where the companies involved were selling the same product in the same market, and where, consequently, much attention might be focused on improving scale and specialization, economies achieved through the integration of plants and the use of raw materials might have appeared more frequently. It must be repeated, however, that one should not read too much into these results. It is very evident to us that this area merits a good deal of further exploration and analysis before firm conclusions can be drawn. Determining the approximate size and nature of the economies which may result from a proposed merger will be one of the most difficult tasks to be faced by those charged with administering Canadian competition policy in a way which furthers the objective of efficient resource use.

Industrial Research, Development and Innovation

Discussion in Chapter 2 of this Report indicated that in formulating competition policy with a view to promoting economic efficiency, it is important to conceive of competition in its dynamic dimension -- that dimension which consists of the irruption onto the industrial scene of new and improved products and new methods of production and distribution. As the writings of Schumpeter and others remind us, there are situations in which this can be the most powerful of all forms of competition.

It is important, however, not to proceed from the above to some such oversimplified conclusion as the following: "Industrial research, development and innovation are very good for the economy; we need more of them; large firms typically devote more of their resources to such things than do small firms; therefore competition policy should never stand in the way of the achievement of greater corporate bigness and industrial concentration." Such an unqualified line of reasoning is unacceptable, not only because competition policy must take into account important factors in addition to R&D and the innovative process but also because the relationship between such activity on the one hand and industrial structure on the other is in reality more complex than the statement suggests.

To be sure, it is a generally accepted proposition that a highly fragmented industry like agriculture, producing for the most part very homogeneous products, is unlikely to generate on its own an adequate volume of R&D and innovative activity. The typical production unit is too small to support a volume of activity likely to lead to useful improvement, and even if the unit were large enough, the improvement (whether it were a new strain of wheat or a better method of cultivation) could be too easily and quickly copied by others to make a sustained research program by an individual farmer worth his while: lacking patent protection (no plant patents are granted in Canada), he could not capture an adequate return for his effort. An analogous situation may be found in at least some sectors of the construction industry. There is a strong presumption that industries of this type, left to themselves, would generate much less R&D and innovative activity than would be socially desirable, and this provides the underlying rationale for the considerable volume of activity mounted by Canadian governments in such fields as agricultural and building research.

As one moves away, however, from highly fragmented industries into more concentrated sectors of the economy, the picture begins to change. The inducements for firms to carry on R&D and innovative activities become more powerful, and judgments of the extent if any to which these activities fall short of, or exceed, socially optimal levels grow more difficult. Where an industry is dominated by a few large firms, heavy outlays on research and development and particularly on innovation may play a major role in the competitive strategy or rivalry among the few. This is partly because in such an industry the large firms (often possessing substantial retained earnings) will usually find the financial and other resources required for R&D programs and the application of new technology easier to come by, and partly because an individual large firm that innovates successfully will usually be in an immeasurably better position than an individual farmer or a small firm to capture an adequate return for its outlays. Aided, often, by patents and the possession of detailed technical know-how, it may be able to get a significant "jump" on its rivals, or if not that, then at least to keep technologically more or less abreast of them.

All this may at first glance seem entirely commendable; a certain type of competition among the few has helped to generate a high level of R&D and innovative activity within an industry. And, indeed, great benefit for consumers may result. But a caution is in order. Unless the improvements result in lower unit production costs, at least part of which are passed on to the consumer, then what is occurring is a form of nonprice competition. As was indicated earlier, nonprice competition can sometimes bring tangible benefits to the consumer -- it may for example make more extensive the range of available real alternatives. This is not invariably the case, however. Moreover, in respect of some product and process innovations, account must be taken of adverse "external" effects such as traffic congestion, noise, and air pollution. It cannot safely be presumed that *every* new or partly new product puts the consumer far enough ahead to justify, from the point of view of society as a whole, the heavy use of R&D and other resources that may have been required for the product's creation. Large expenditures may have gone into "inventing around" another firm's patented product. The end result may not be all that new and improved; instead it may be just sufficiently different from what was already on the market to furnish the basis for a heavy advertising campaign and a successful sales promotion. This is not meant to deny the existence of some situations in which "inventing around" may be a very necessary part of the competition strategy of some industries. Where, for example, a patent owner sets unreasonably high licence fees, other firms in the industry may be forced into large research outlays to remain competitive. But in other situations, expenditures on innovation and on advertising may play more similar roles than at first seems apparent; both may serve as important and often closely linked forms of nonprice competition. And where outlays are heavy, both may constitute significant barriers to the entry of new competitors into the industry.

The market situation faced by large firms and the types of competition in which they prefer to engage are not the only factors explaining the proportionately lower R&D expenditures of small firms. Particular inventions and innovations, and occasionally even certain kinds of research programs, may require expensive equipment and a large staff to be carried to a successful conclusion. Also, a firm producing a full line of products is likely to have a better chance of finding a use for the unexpected fruits of its research activity than a more specialized firm. This characteristic is important in industries where diversification of output tends to be greater, the larger the size of the company. Finally, as implied in the foregoing discussion, the discovery-invention-innovation process is risky. Failure as well as unexpected benefits may result from research activities, while the crucial innovation stage may involve heavy costs. One of the advantages accruing to firms able to devote a large amount of resources to these activities is that they can pool their risks by undertaking a number of diverse projects.

What evidence is there with respect to expenditures and other measures of research, development and innovative effort, and what does this evidence tell us about the relationship between the size of a firm and such activity? Unfortunately these questions cannot be answered with any degree of accuracy. For one thing, the available statistical evidence is confined mainly to R&D expenditures, but these figures fail to capture "the costs of the other activities that make up the remaining parts of the innovation process".[9] As was noted in the *Fifth Annual Review* of the Economic Council, innovation involves the coupling of the results of R&D with the engineering, design, financing, tooling-up, production and marketing processes required to bring products, processes and services into use. What the data on R&D do tell us is that the main effect of size is on the decision of companies to initiate research and development. A survey by the U.S. National Science Foundation revealed that the percentage of companies performing research and development in three broad size categories increased very sharply in moving from the smaller to the larger categories.[10] However, once the decision to undertake R&D activities has been made, there does not appear to be a consistent relationship between R&D expenditures and corporate size.[11] When smaller companies undertake R&D at all, they do not necessarily devote a smaller proportion of their resources to it than do larger companies. This conclusion is illustrated below with reference to Canadian statistics.

Because virtually all the available statistics of industrial R&D and innovative activity are expressed in terms of R&D expenditure, there is a danger of jumping to the easy assumption that the larger are expenditures, the correspondingly larger and more useful are the innovative consequences which flow from them. In fact, investigation has shown that useful new products and processes can by no means always be traced to the inventive activity of the big battalions. Important inventions have been created by firms of all sizes, with smaller firms contributing at least a proportionate share of the inventions surveyed.[12] A recent scientific panel study for the U.S. Government listed a number of twentieth century contributions as having originated with independent inventors and small organizations: xerography, DDT, insulin, penicillin, titanium, terylene/dacron, the zipper, the automatic transmission, the jet engine, the FM radio, the helicopter, air conditioning, the Polaroid Land camera, and the oxygen steelmaking process.[13]

Another U.S. investigation compared the contribution of innovations by the four biggest firms and the remaining smaller firms in three industries: iron and steel, petroleum refining, and bituminous coal.

In iron and steel, the share of the four biggest firms in innovations was smaller than their share of the product market. The reverse was true in the petroleum and coal industries.[14] These results suggest two questions which it is important to ask about research, development and innovation in a given industry. The first is: How much, on average, must be invested in R&D and in innovation in this industry in order to bring new products and new processes to the market? The second is: How many firms in this industry are big enough to be able to undertake investments of that size?

Here again the available aggregate industry statistics focus only on R&D, and therefore fail to provide a complete answer. What is known is that overall levels of expenditure on R&D alone are heavily influenced by a relatively small number of firms in a few particular industries. Of 684 companies that had their own "intramural" research programs in 1965, five accounted for one-third of expenditures and 50 for three-quarters. Breaking intramural expenditures down on an industry basis, about 60 per cent of expenditures were made by firms in the electrical, aircraft and chemical industries. Computations performed on behalf of the Economic Council by the Dominion Bureau of Statistics on the relationship between size of companies and R&D in the chemical and electrical products industries indicated that there was some tendency for R&D expenditures as a percentage of sales to increase with company size. However, as is shown in Table A-6 in Appendix III, there are considerable variations from industry to industry.

While "intramural" activities are concerned mainly with the search for new knowledge and new inventions, innovative activity draws heavily on technological information from the existing knowledge base. The fact that approximately 95 per cent of our patents are granted for inventions created outside of Canada is evidence of Canada's dependence on foreign sources for much of our technology. However, statistics on net payments abroad for patents, licences and technical know-how do not necessarily reflect the total cost of importing technology. Parent companies may elect to take higher profits from their subsidiaries in lieu of specifically earmarked payments. With this cautionary warning, it is nevertheless of some interest to note that 825 companies reporting R&D expenditures in 1965 also reported spending $25 million for patents and licences from abroad, most of which went to parent and affiliated companies.[15] Moreover, there has been a movement in recent years towards increased R&D expenditures in Canada relative to payments for R&D outside Canada.[16]

Once again the serious limitations inherent in the data serve to emphasize with what caution the available statistics must be interpreted, and with what care the consideration of R&D and innovative activity must be introduced into the formulation and application of competition policy. One useful conclusion appears to be that firms of many different sizes have important roles to play in the development of inventions and innovations. Small firms do well in the early development of inventions, but large firms may have important advantages in carrying inventions through to the stage of widely used processes and products.

Because of the difficulty of arriving at generalizations about the relationships between R&D and innovative activity, industry structure and firm size, here as in other areas a selective approach on the part of competition policy is required. Scale economies in R&D and innovation will have to be taken into account in merger evaluations. However, given the distribution of such activity by industries, the importance of this factor will probably vary greatly from merger to merger, depending on the industries in which the merging firms operate.

The questions raised in this Chapter about market size, scale and specialization, the role of the tariff, industrial concentration, mergers and research, development and innovation have influenced the formulation of the recommendations outlined in the following Chapter. The fact that no hard and fast answers to these questions have sprung from either the empirical work that had already been done or from such efforts as we were able to make ourselves has led us to one major conclusion: although each of these aspects can have a significant influence on competition and on the degree of efficiency with which resources are used, the sectors of competition policy where decisions turn importantly on these aspects must be based on a case-by-case approach where economic analysis can be brought to bear on the examination of specific factors influencing the behaviour and performance of individual firms. That the present Combines

Investigation Act fails to provide for such an approach is evident from the discussion in the previous Chapter. We turn now to our suggestions for a new approach.

CHAPTER 6

A NEW APPROACH TO COMPETITION POLICY IN CANADA

We come now to a first set of specific proposals for a new approach to competition policy in Canada. These proposals relate only to those aspects of business activity where market forces are an important means of social control. They are further restricted, for the moment, to those lines of economic activity (largely related to the production and distribution of goods) that now come within the ambit of the Combines Investigation Act. Later chapters will deal with competition policy in relation to service industries not now covered by the Combines Act, and with sectors of the economy that are largely or wholly state-owned, or are subject to a major degree of direct state regulation.

The basic philosophy that has guided us in formulating these proposals may be recapitulated. Essentially, we take the position that while historically the shaping of competition policy has been influenced to some extent by noneconomic considerations, it is likely to be clearer, more consistent and more effective in the future if it is treated more exclusively as a branch of economic policy. It should, moreover, be better integrated than in the past into the total structure of economic policies.

Competition policy has some bearing on all the major goals for the Canadian economy elaborated by the Economic Council in its successive Annual Reviews. The strongest and most direct bearing, however, is on the goal of rapid economic growth. A well-conceived competition policy endeavours to further the achievement of this goal by removing impediments to the attainment of maximum dynamic efficiency in the use of resources by the Canadian economy. Fundamentally, of course, efficiency and growth are desired not for their own sake but for the many and varied benefits that they bring to Canadians as consumers of goods and services. The maximization of the flow of benefits to ultimate consumers should accordingly be a key concept in the application of competition policy to particular situations.

Competition Policy

It is important to keep in realistic proportion the potential role of competition policy as an engine for improving the workings of markets and thus promoting efficiency and growth. In the first place, many other factors help to condition the operation of markets. The tariff position, the strength of import competition, whether the industry is also an export industry facing important competition abroad, and government policies at all levels in respect of such matters as taxation, and governmental purchasing may be mentioned. The degrees and types of market competition that prevail are a product of the total economic environment and not of competition policy alone.

In the second place, competition policy cannot itself supply the creative dynamism (one might also speak of "dynamic tension") in both production and distribution that is in the long run the consumer's most powerful ally in a market system. There must exist a set of attitudes and an institutional structure that are conducive to beneficial change -- to the introduction of useful new goods and services, along with better and cheaper methods of producing already established goods and services. Given these preconditions, with which it may creatively interact, competition policy can play a modest but useful facilitating role. It can help to wear down barriers to change, to expose previously sheltered areas of waste and inefficiency to fresh breezes of innovation, and more generally to liberate the creative forces already latent in the system. The principal result, as we have noted, will be a more efficient use of available resources. Economic growth will be speeded up and the pattern of output more closely related to consumer desires.

How can Canadian competition policy be restructured to play this role more effectively? Our proposals amount to an enlargement of the range of available instruments and procedures so that the policy can be better attuned to the various specific problems with which it has to deal. Some of these problems are of such a character that they can best be dealt with by means of broad and relatively unqualified prohibitions; others are not, and it is here, in this second category, that new policy approaches are most needed.

In the sections that follow, we recommend that Canadian competition policy continue to retain certain broad prohibitions of price-fixing and closely related practices, misleading advertising, and resale price maintenance. The definition of these offences and of legal "defences" available to alleged offenders would be altered somewhat, but the offences would remain in large measure *per se* and also criminal. All other matters of relevance for competition policy, including mergers and a wide range of trade practices, would become the responsibility of a new, civil law tribunal. New procedures permitting specialization and export agreements to be operated in certain circumstances would be set up.

If false hopes have been aroused that in the course of our work we would seek to resolve the problems of specific industries whose situations have been brought to our attention, it should be clearly stated that from the outset we decided to confine our attention to devising an improved general framework for competition policy. Given the number of industries in Canada, the number of man-hours required for a thorough study of even one industry, and the Council's lack of the very special expertise required to analyse and adjudicate particular competition policy cases, we believed this general approach to be sound.

Retention of Certain Broad Prohibitions

For competition policy to prohibit a practice *per se*, or to prohibit it subject only to a few clearly defined exceptions, is a course worthy of consideration if the practice in question appears upon analysis to be inimical to the public interest and rarely if ever productive of any substantial public benefit. Where such conditions exist, the cost of striking down those few instances of the practice capable of producing some net benefit to the public may be judged to be outweighed by the greater clarity and certainty of a *per se* ban.

Whether or not to utilize a *per se* ban, or something close to it -- that is, a prohibition with relatively few exemptions or conditions attached -- is thus a question that must usually be decided by a balancing of advantages and disadvantages. Our own consideration of the range of practices and situations that is now, or might be in the future, of interest in relation to competition policy has led us to the view that five practices now dealt with in the Combines

Investigation Act should be subject to essentially *per se* prohibition under criminal law. These practices are as follows:

(1) collusive arrangements between competitors to fix prices (including bid-rigging on tenders);

(2) collusive arrangements between competitors to allocate markets;[1]

(3) collusive arrangements between competitors to prevent the entry into markets of new competitors or the expansion of existing competitors;

(4) resale price maintenance; and

(5) misleading advertising.

All five practices are already subject to something close to *per se* prohibition under Sections 32, 34, 33C and 33D of the Combines Investigation Act. With respect to resale price maintenance (Section 34) and misleading advertising (Sections 33C and 33D), the nature of what is prohibited emerges with reasonable clarity from the language of the statute. This is not true, however, of Section 32. Here, it is necessary to consult the jurisprudence in order to clarify what is prohibited and to discover what the main practical effect of the Section has hitherto been to strike down collusive price agreements embracing all or a substantial proportion of the relevant market.

In recommending that these five practices continue to be treated as, to a considerable extent, they are already treated under the existing law, we are in effect making a judgment that none of them is likely, except possibly on rare and sporadic occasions, to result in appreciable public benefit.

To deal first with collusive arrangements to fix prices, allocate markets or exclude competitors, we would propose that Section 32 of the Combines Investigation Act be rewritten so as to become as much as possible a *per se* ban of these practices. Such a rewriting, it might be hoped, would make clearer the nature of what is being prohibited and invest the Section with a greater degree of those characteristics of certainty and fair warning that are thought to be particularly desirable in a piece of criminal law. The rewriting would reduce the scope of the Section. However, as will shortly be seen, we are proposing other arrangements in respect of undesirable practices that might now be found illegal under Section 32 but might escape prosecution under the Section as revised.

A definitive redrafting of Section 32 will not be attempted here; that is best left to experts. We gave some consideration to whether, in a Section 32 revised along the lines we have proposed, there would still be a need to retain the qualifying word "unduly", but were able only to arrive at an appreciation of the significant arguments that could be made both for and against retention. On the one hand, the retention of "unduly" would preserve a link with an extensive jurisprudence developed over many years. If the word were dropped, one of the problems that might arise would be the possible exposure to prosecution under Section 32 of certain co-operatives and relatively loosely organized chains of grocery supermarkets and auto accessory stores whose emergence on the retail scene has by and large brought about an increase in effective competition. Some other qualifying language, possibly requiring considerable clarification through jurisprudence, might have to be inserted into the Section to exempt the organizations mentioned. Finally, it is argued that "unduly" furnishes some protection against the swamping of the courts and other parts of the enforcement machinery with a host of minor cases.

On the other side, it is argued simply that the retention of "unduly" would compel the courts to continue to engage in the task of measuring markets, and in this and other ways prevent the three criminal offences here being discussed from being as "invested with certainty" as they otherwise might be. There would be some loss of clarity and public understanding, and consequently of deterrence.

If the decision were made to retain "unduly", it would nevertheless perhaps be possible to exempt from its scope the rigging of bids on tenders. This practice could surely be prohibited without any qualification whatever.

Two specific exemptions or "gateways" in a revised Section 32 appear desirable. The first, which would replace the present subsections (4) and (5), would be for "registered export agreements". The second would be for "registered specialization agreements". Such agreements would not give rise to offences under the Combines Investigation Act. Definitions of export and specialization agreements and descriptions of the procedures whereby they would be subjected to public interest tests in order to qualify for registration are given in a later section of this Chapter.

No major change appears to be required in subsections 34(1), (2), (3) and (4) dealing with resale price maintenance, the fourth of the practices recommended for *per se* treatment, although some attention might be given to the possibility of specifically requiring a manufacturer who printed a retail price on a package to indicate clearly that it was a suggested price only. Subsection 34(5), however, might well be given major reconsideration. This subsection, inserted in 1960, provides certain defences against a charge of enforcing resale price maintenance by refusing to sell. It reads as follows:

> Where, in a prosecution under this section, it is proved that the person charged refused or counselled the refusal to sell or supply an article to any other person, no inference unfavourable to the person charged shall be drawn from such evidence if he satisfies the court that he and any one upon whose report he depended had reasonable cause to believe and did believe
>
> (a) that the other person was making a practice of using articles supplied by the person charged as loss-leaders, that is to say, not for the purpose of making a profit thereon but for purposes of advertising;
>
> (b) that the other person was making a practice of using articles supplied by the person charged not for the purpose of selling such articles at a profit but for the purpose of attracting customers to his store in the hope of selling them other articles;

(c) that the other person was making a practice of engaging in misleading advertising in respect of articles supplied by the person charged; or

(d) that the other person made a practice of not providing the level of servicing that purchasers of such articles might reasonably expect from such other person.

The provision of these defences implies that the practices to which they refer (loss-leadering including "bait-and-switch" tactics, misleading advertising and inadequate servicing) are undesirable. If that is in fact the case, consistency and fairness would seem to demand that they be more directly and generally prohibited. To discourage an undesirable practice by weakening the prohibition of another is not a sound principle.

We therefore recommend that misleading advertising be dropped as a defence from Section 34. (Misleading price advertising is already subject to direct prohibition under Section 33C of the Combines Investigation Act, and, as noted below, other misleading advertising would be dealt with under a proposed new Section 33D now before Parliament.) It does not seem possible to deal directly with inadequate servicing, which would be a difficult charge to prove, and which has not figured in any of the jurisprudence on Section 34 since 1960. We recommend that it be dropped as a defence under Section 34 and that no direct governmental attempt be made to enforce adequate servicing on distributors.

Turning now to loss-leadering, this has already been the subject of an inquiry by the Restrictive Trade Practices Commission,[2] but judging from submissions that we have received, many businessmen believe that the practice has lately been having injurious effects in a number of markets. We recommend that this matter be subjected to an early general inquiry by the civil tribunal that we propose in a later section of this Chapter. The purpose of the inquiry would be to determine (a) in what ways and to what degree this practice appears to be detrimental to the public; and (b) to the extent that it does appear detrimental, to recommend to the government appropriate remedies of a more direct and general character than those contained in the present subsection 34(5). At that stage, loss-leadering could appropriately be dropped as a defence against a charge of resale price maintenance.

The question of misleading advertising brings us to the last of the five practices recommended for *per se* prohibition. Misleading price advertising is the subject of Section 33C of the Combines Investigation Act, a Section that does not appear to require any change of wording. The practice in question amounts to a species of fraud, of just the kind that most tends to bring a market system into disrepute. Advertising can of course be misleading with respect to matters other than price, and the amendments to the Criminal Code, recently passed by Parliament, include a provision that brings into the Combines Investigation Act, as a new Section 33D, Section 306 of the Criminal Code which deals with a broad range of misleading advertising. The new Section 33D in conjunction with 33C treats all forms of misleading advertising as *per se* criminal offences, thereby removing any justification that may have existed for making misleading advertising by a distributor a defence against a charge of resale price maintenance.

A word is in order about the general procedure that might be followed in enforcing the five prohibitions here being discussed. The existing Combines Investigation Act gives the Director of Investigation and Research the option, when he has reason to suppose that an offence is being or is about to be committed, of sending the matter to the Restrictive Trade Practices Commission. Alternatively, he may refer the matter directly to the Attorney General of Canada who will consider whether legal proceedings should be instituted. We recommend that in respect of the five *per se* prohibitions, the second course should be the one normally followed in the future. Only on those occasions when a case presents novel economic features that appear to require careful analysis should the more roundabout route be followed. Especially if Section 32 is rewritten as we have suggested, occasions of this sort are likely to be rare, and for the most part there would not appear to be good reasons for retaining in the procedure a stage of hearing, review and appraisal such as may now be carried out by the Restrictive Trade Practices Commission. The main effect of such a retention would be to lengthen procedure unnecessarily. This does not mean that there should not continue to be an important place in other sectors of competition policy for the type of work that has heretofore been performed by the Commission, by way of hearing, review and appraisal, and by way also of the publication of reports. But, as will shortly be seen, we are proposing that these functions of the Commission become part of the duties of the new tribunal.

Proposed Change to a Civil Law Basis

Most of our remaining recommendations for Canadian competition policy rest upon the assumption that it will be possible in this field to enact civil legislation that will be found by the courts to lie within the constitutional powers of the federal government. There can be no certainty concerning this matter until the courts have had an opportunity to pronounce upon it, but on the basis of highly competent advice, we are sufficiently persuaded both of the need for civil legislation and of the improved prospects for obtaining it that we are prepared to make this assumption.

There appear to be two ways in which the road could be opened for the federal government to enact civil legislation. We have no special preference between them, and we leave the choice to those expert in constitutional matters. The first way would be for the federal government to reach agreement with the provinces to make an appropriate change in the constitution. The change might well involve an enlargement of the trade and commerce power. The second way would be, within the existing constitution, to refer proposed legislation to the Supreme Court of Canada for the Court's opinion on its constitutional validity. Again, the issue would perhaps be most likely to turn on whether the legislation lay within the powers of the federal government under the trade and commerce head of Section 91 of the British North America Act.

It could be that the prospects of success via either route would be enhanced if the federal government sought only to enact civil legislation in respect of goods and services affecting international and interprovincial trade. Here again, this is a matter best left to experts.

We would like to make it emphatically clear that in recommending such a test we intend no implication whatever that the federal government should seek exclusive occupancy of the field of competition policy under civil law, or that only the federal government is competent to manage competition policy in Canada. On the contrary, while it is clear that a considerable proportion of Canadian economic activity crosses provincial and international boundaries, and would be impossible to subject effectively to any provincial competition policy, we believe that the provinces could play a most useful role in respect of other lines of activity under their existing constitutional powers. Their assumption of such a role would be a most welcome development. If the recommendations of this Report are largely framed in terms of federal legislation, this is because a federal presence is clearly indispensable and the federal government has hitherto been, to all intents and purposes, the sole active occupant of the field. But the door to provincial participation should be left widely ajar. Such activity by the provinces would be in many ways a natural extension of their already considerable activity in the field of consumer protection. We recommend that before preparing new legislation embodying major changes in competition policy, the federal government should take the initiative in proposing that discussions of competition policy and related policies be arranged between the Minister of Consumer and Corporate Affairs and appropriate provincial ministers.

The best outcome, in our view, would be for the federal government to obtain the advantages of a civil law basis for some of its competition policy and for the provinces also to interest and involve themselves in the field. Having regard to the need for federal civil legislation to pass a constitutional test, we have tried to frame our proposals for such legislation in terms of a concept, which we believe to be valid, of the Canadian economy as a coherent entity, with numerous links of interdependence between its various parts. Evidence to support this concept will be found in Appendix IV. It should also be noted that the rules and criteria incorporated in our proposals are all couched in general terms and are intended to be of general application. At no point do they focus *a priori* upon particular industries, or upon particular regions or provinces of Canada.

The basic reasons for seeking to place some of the federal government's competition policy on a civil law basis would be to improve its relevance to economic goals, its effectiveness, and its acceptability to the general public. The greater flexibility afforded by civil law is especially to be desired in those areas of the policy that do not lend themselves well to relatively unqualified prohibitions and that may in addition call for some case-by-case consideration of the likely economic effects of particular business structures or practices. The unsuitability of criminal law in such areas has been well described as follows:

> The present constitutional foundation for the Combines Investigation Act rests on the power of the Parliament of Canada to enact criminal law. This has contributed to the rigidity and inflexibility of the law and its administration. Criminal offences must be proved beyond a reasonable doubt. Charges must be expressed and proven in the categorical manner specified in the statute. The present provisions for injunctive proceedings against existing or proposed arrangements can only add limited flexibility because they must rest on the capacity of the Crown to meet the rigorous standards of criminal proof. Courts have no latitude to consider all the economic and commercial qualifications which might apply to particular cases and are compelled to adopt an "all or nothing" approach in deciding whether offences have been committed. In addition, the classification of commercial arrangements as criminal has created a bad psychological background for administration, which, as early as 1910, was recognized by Mackenzie King and has undoubtedly militated against whole-hearted acceptance of the legislation by the business community.[3]

Proposed New Tribunal

While the shifting of part of Canada's competition policy onto a basis of civil legislation would be an important and necessary step forward, it would, in our view, be necessary to accompany this step with the formation of a specialized tribunal. Merely to enact civil law in this area, then to leave the ordinary civil courts to cope with it as best they could, would surely impose an unfair burden on those courts. Judges would in principle be required to make, virtually on a continuing basis, difficult balancing judgments founded upon complex economic arguments and analyses.

This problem might be dealt with in one of two ways. The first would be to attach to an existing court such as the Exchequer Court of Canada a panel of lay experts to assist in the adjudication of competition policy cases. The second would be to set up an entirely new tribunal whose members would be so selected as to bring to their work a mixture of relevant expertise in economics, business, and law. Our preference has leaned to the latter alternative on the grounds that this would be more likely to give the elbow-room and flexibility of operation that would appear to be necessary in the hearing and adjudication of complex economic issues. As will be seen, the body that we propose would, like any ordinary civil court, carry out functions of hearing, adjudication and the imposition of remedies. In addition, however, it would engage in economic analysis and in the issuance of reports similar to many of those now issued by the Restrictive Trade Practices Commission so that the important process of public education, the documentation of particular cases or inquiries, and the formulation of recommendations thereon would be continued. The new tribunal would absorb the functions and perhaps also some of the qualified personnel of the Restrictive Trade Practices Commission.

Notwithstanding its special nature, the tribunal would retain some of the characteristics of a court. In particular, it would ensure the right of interested parties to be heard in accordance with the principles of natural justice. It would, for example, make known to the parties all evidence bearing or likely to bear upon its decisions.

On the other hand, the tribunal's proceedings would be less formal than those of a court and, it might be hoped, devoid of any strong sense of crime and punishment. Hearings would ordinarily be public. The prevailing atmosphere would ideally be one of a collective search for understanding of business practice and its economic effects, and for the progressively clearer discernment of the nature of the public interest in particular cases. In line with this objective, the tribunal might wish to give witnesses considerable freedom in their presentation of evidence.

The tribunal might be named the "Competitive Practices Tribunal". Its membership should be large enough to enable it on occasion to sit as two separate panels. There might be as many as seven full-time members, who should possess a blend of experience and qualifications appropriate to the very difficult tasks with which they would be faced, and also be able to take a balanced and unbiased view of economic questions. The individual members would have to take particular care to avoid any conflicts of interest arising out of matters coming before them.

While, as will be indicated in Chapter 9, the tribunal would be able to draw upon the economic expertise of the staff of the Department of Consumer and Corporate Affairs, it should also have, in part as an assurance of independence, a small expert staff of its own. In addition to its ordinary research duties, the staff might on occasion be called upon by the tribunal to provide factual information and analysis which the tribunal considered to be essential for the adjudication of a case or the conduct of a general inquiry, and which was not forthcoming from any other source. Information thus provided by the staff would be made available to other parties to the case or inquiry.

Functions of the Tribunal

All the functions of the tribunal would be exercised in accordance with a general statement of principles, contained in a preamble to the legislation bringing the tribunal into being. The wording that follows is not an attempt at final legal draftsmanship, but only an attempt to suggest the general character of the statement:

> It is hereby declared that whereas competitive market forces provide an important means whereby the total productive resources available to the Canadian economy may be employed as efficiently as possible to maximize real income and the economic welfare of Canadian consumers, whether directly or through the development of mutually beneficial trade with other countries,
>
> (i) there should be established a tribunal to be known as the Competitive Practices Tribunal;

(ii) and this tribunal, acting within the powers hereinafter granted to it, should endeavour to impose and/or recommend means of removing or forestalling impediments to the effective working of competitive market forces (including notably competition with respect to price) for the benefit of the people of Canada.

On the basis of some such statement, and having regard to certain more specific considerations set out at appropriate points in the body of the legislation, the tribunal would perform the following principal functions:

(1) examine certain corporate mergers to determine whether any such mergers were on balance not in the public interest, and in cases where they were judged to be not in the public interest, impose or recommend appropriate remedies;

(2) examine certain types of proposed intercompany agreements respecting exports and the specialization of production to determine whether the agreements were on balance in the public interest, and in cases where they were judged to be in the public interest, place the agreements in a public register and designate them as "registered" export or specialization agreements;

(3) examine the employment of certain trade practices to determine whether such employment was on balance not in the public interest, and in cases where it was judged to be not in the public interest, impose or recommend appropriate remedies; and

(4) sponsor general inquiries similar in character to those now provided for in Section 42 of the Combines Investigation Act, and report on such inquiries.

The remedies that the tribunal itself would be empowered to apply would consist of the issuance of interim and final injunctions. Interim injunctions could be utilized in cases where it appeared desirable to prevent a merger from being consummated or a trade practice from continuing until the tribunal had had an opportunity to determine whether the merger or practice was on balance not in the public interest. Final injunctions could be utilized when a decision had been reached that the merger or practice was not in the public interest. The tribunal would be empowered to recommend other remedies to the Minister of Consumer and Corporate Affairs. Such recommendations might or might not be accompanied by the issuance of an injunction. The tribunal might undertake to remove an injunction if certain other remedies were applied.

All decisions of the tribunal and all reports on general inquiries would of course be made public. It would be expected that, in reporting on matters involving issues not previously confronted, the tribunal would discuss these issues at some length and describe in some detail the economic analysis that it had employed. The furtherance of public education in matters relating to competition policy would be considered one of the important duties of the tribunal. Maximum availability of all information genuinely relevant to a case or inquiry should be one of the tribunal's touchstones.

Appropriate rights of appeal from the tribunal to the courts on questions of law would be authorized.

Procedure Regarding Mergers

The previous Chapter emphasized that the basic reason for public policy to be concerned with mergers is that in the majority of cases they result in permanent changes in the structure of industry -- changes that may have important implications for the future performance of the economy. These implications may be for good or ill or a mixture of both, and can usually be foreseen only very imperfectly. On the good side, mergers may be an important means by which owners who wish to divest themselves of a business or part of a business can do so with a minimum of disruptive economic effects. They may also be the most appropriate means of achieving certain cost savings, or of bringing about industrial reorganizations made necessary by changes in patterns of demand or in the technical conditions of production. On the bad side, mergers may bring about significant increases in market power capable of redounding to the disadvantage of consumers, and that can be extremely difficult to reverse or offset once the merger has been completed.

This is plainly an area where public policy must tread warily, avoiding *per se* rules and simple *a priori* assumptions that mergers are generally good or generally bad. It would not be at all inconsistent, in Canadian circumstances, for public policy to act against certain mergers while positively encouraging certain others -- those which, for example, were regarded as part of a necessary reorganization of an industrial sector to meet changing world trading conditions. We would suggest that in instances where the federal government, through the Department of Industry, Trade and Commerce, might on occasion act as a marriage broker and actively seek to bring about certain mergers deemed to be in the public interest, prior consultations between this Department, the tribunal and the Department of Consumer and Corporate Affairs should take place. Such public sponsorship, provided it were based on adequate study of the particular industrial structures involved, would be entirely in accord with our general philosophy of approach to mergers. The precise machinery by which prior consultation might be arranged, we leave to others; for the present, our immediate concern is to recommend a procedure for safeguarding the public, to the greatest extent possible, against the adverse effects of mergers undertaken on the initiative of a firm or group of firms. The role of the Competitive Practices Tribunal in this regard would be to examine those mergers that appeared to contain a significant potential for harm, and where such a potential was found, to balance this off carefully against any potential for good that was also found (both good and bad potentials to be viewed, of course, from the standpoint of the economy as a whole and the general public interest). Having made its balancing assessment, the tribunal would, according to its findings, make one of three types of decision:

(1) block the merger unconditionally;

(2) allow it to proceed unconditionally; or

(3) allow it to proceed in altered form, or subject to other conditions designed to ensure that potential disadvantages were reduced to the point where they were outweighed by potential good effects.

One of the fundamental tasks of the tribunal would therefore be to keep itself fully informed about merger activity. This would be needed, *not* to investigate every one of the many mergers going forward in Canada each year, but to facilitate the examination of those that appeared to contain a significant potential for harm. As was stated in Chapter 5, it is our impression that the number of mergers that would require examination by the tribunal would constitute a relatively small proportion of the total.

A very important part of the procedure with regard to mergers would be a process of selection. It would be essential that this process ensure timely consideration of all mergers in which there was a significant potential for harm. Appropriate procedures should be initiated to accomplish this objective in a regular and comprehensive way. If necessary, a registration procedure could be implemented.

It might be well to provide the tribunal with the power to issue interim injunctions to stay the "scrambling" of the assets of merging firms while the hearings were in progress. In the light of its early experience, the tribunal would specify a time limit within which it would bind itself to render decisions on mergers.

During the hearings, it would be the responsibility and prerogative of the Director of Legal Proceedings -- an official to whom we will refer in Chapter 9 -- and his staff to place before the tribunal evidence concerning the likely effect of the merger on competition and the public interest. The parties to the merger would also be invited to give evidence. The tribunal might also call for factual evidence from its own professional staff, or any other appropriate source, subject to the proviso that such evidence be made available to the Director and to the parties to the merger.

In its examination of a merger, the tribunal might be expected to have regard to all aspects of the merger that were related in any important way to the tribunal's general terms of reference. It would be primarily concerned with whether the merger was likely to lessen competition to the detriment of final consumers, and whether there were likely to be any offsetting public benefits. In addition, and without restricting the generality of the foregoing, the tribunal would be requested to pay attention to the following matters *in so far as they appeared to be of substantial economic importance in any particular case:*

(1) the degree of effective control over the acquired firm or firms that the merger conferred upon the acquiring individual or firm (in assessing effective control, the tribunal would be expected to look not only to the size of the purchase but also to such matters as the composition of the board of directors of the acquired company, if this seemed relevant);

(2) the history of previous acquisitions by the acquired and acquiring firms and by other firms within the affected industry or industries;

(3) the shares of relevant markets held by the acquired and acquiring firms;

(4) the amount and intensity of domestic and import competition in relevant markets;

(5) the situation, both before and after the merger, regarding financial and other barriers to the entry of new competitors into the relevant markets;

(6) the likelihood that an acquired firm, had it continued its separate existence, would have been a vigorous and effective competitor in relevant markets;

(7) the existence of possible alternative buyers of the acquired firm or firms; and

(8) the likelihood that the merger would be productive of substantial "social savings", i.e. savings in the use of resources (including resources used for such purposes as research and development), viewed from the standpoint of the Canadian economy as a whole.

The process of referring a merger to the tribunal would normally be in the hands of the Director of Legal Proceedings. He would be concerned with the likely effect of the merger on competition, and also, more specifically, with items (1) to (7) inclusive in the above list. He would leave the consideration of item (8), dealing with social savings, to the tribunal, which in many cases would find itself required to perform a balancing assessment between possible detrimental effects on competition and possible beneficial effects in the form of social savings. It should be pointed out in this connection that what appear to be cost savings to individual firms are not always "social savings", i.e. savings for the total economy. Thus, for example, a firm that has grown larger by acquiring another firm may be able to obtain certain supplies more cheaply purely by virtue of its greater bargaining power. There are various possible outcomes in terms of profits and prices, but there is no saving in terms of the real resources (the physical amounts of labour, capital, etc.) required to produce and transport the supplies in question. No real resources are freed for other uses in the economy. On the other hand, an example of a cost saving to a firm that was also a social saving would be the case of a company that had grown through acquisition to the point where it was able to order its raw materials by unit trainloads and so benefit from a lower freight rate. In this instance there would be a social saving arising from the fact, of which the lower freight rate was a reflection, that moving goods in unit trainloads requires lesser total inputs of capital and labour. Thus resources would be freed, and the economy as a whole would gain.

Attention should be drawn to the fact that the list of considerations to be taken into account, where important, in merger cases has been cast in sufficiently general terms that the tribunal would be able to address itself to any class of merger, whether horizontal, vertical or conglomerate. That is to say, there would be no built-in restriction as to the market relationship between acquired and acquiring firms that would have to prevail in order for the tribunal to examine a merger.

Conglomerate mergers between firms that are in neither a competitive nor a customer-supplier relationship to one another have only recently begun to appear in any number in Canada. There is relatively little experience of them and even less analysis of their nature and modes of operation. It is therefore difficult at present to discern what significance they may have in relation to the public interest. But since some of them are, or may soon become, very large enterprises, ramifying into many sectors of the Canadian economy, the tribunal would be expected to examine them as and when any possibilities of adverse effects on the public interest become apparent.

There are means other than mergers (for example, arrangements involving major financial institutions with intercompany links via interlocking directorates) by which the activities of a number of firms can be brought under a significant measure of centralized managerial control. Suitable drafting of the legislation setting up the tribunal would permit it to examine such developments where they seemed of possible significance for competition policy. The power of general inquiry, to be specified later, might be a useful tool in this regard.

It would be open to the tribunal to indicate to the parties involved that whereas a merger appeared to be not in the public interest in its original form, it might be judged acceptable in some other form (for example, if the extent of the total acquisition was reduced). Also, following the same procedure as that employed by the U.S. Federal Trade Commission in the issuance of consent decrees, the tribunal might approve a merger subject to certain conditions being observed, e.g. that the merged firms engage in no further acquisitions within a certain market. Another possibility would be for the tribunal to pronounce against a merger but to indicate that if the situation were to be materially altered in certain ways (for example, by changes in tariffs and/or other trade barriers that had the effect of injecting a new element of foreign competition), the merger would be eligible for reconsideration.

Specialization and Export Agreements

In the discussion in the previous Chapter, reference was made to the opportunities available to Canadian industry for cost reductions based on longer production runs, and to the fact that market forces cannot always be relied upon to bring about the exploitation of these opportunities. It seems to us that firms considering themselves to be in this position should be given a chance to satisfy the proposed tribunal that they could, by means of specialization agreements, achieve longer production runs and lower unit costs. The tribunal would also have to be satisfied that a substantial part of any cost savings realized was likely to be passed on to Canadian consumers of the affected products.

A specialization agreement would be defined as a temporary agreement between firms to accomplish a restructuring of production and distribution with a view to increasing the scale and specialization of Canadian output and, in this way, reducing costs. Those desiring to draw up such an agreement would be required to place an outline proposal before the tribunal. If the tribunal judged that there was a reasonable chance of achieving an agreement likely to be in the public interest, it would direct the prospective parties to confer in the presence of a hearing examiner -- a servant of the tribunal for whom we shall shortly be specifying additional functions -- and to draw up a full draft agreement. This agreement would subsequently be examined by the tribunal and, if approved, entered in a public register. To negotiate, or to attempt to negotiate, a specialization agreement in accordance with the above procedure would not be an offence under the Combines Investigation Act.

During the period that the agreement remained in force, the tribunal would be entitled to satisfy itself that the agreement was being operated in accordance with its original objects and was not being abused in any way. The tribunal might at its discretion specify a time period at the end of which experience under the agreement was to be thoroughly reviewed and a decision reached as to whether the agreement needed to be continued any longer.

A somewhat similar procedure would be provided in respect of export agreements, which would be defined as agreements between firms to form consortia or other selling groups for the purpose of improving the competitive position of Canadian goods in foreign markets. In examining any such agreement, the tribunal would be expected to give consideration to the likely impact of the agreement on the volume and value of exports, on the export business of other Canadian firms not parties to the agreement, on the conditions of entry into the export industry concerned, and most particularly on the state of competition in the Canadian domestic market for the goods in question. An important reason for assigning this matter to the tribunal would be to facilitate the fullest consideration of ways in which any likely adverse effects of export agreements on domestic markets could be mitigated or offset, to the point where the agreements could be judged to be in the public interest.

The procedure for negotiating export agreements would be essentially similar to that already proposed for specialization agreements. Again, negotiation according to the laid-down procedure, with the hearing examiner present, would not be an offence under the Combines Investigation Act. There would be no limit to the term of export agreements, but the tribunal would have the right to satisfy itself that agreements were not being abused. Parties to existing export agreements who wished to avail themselves of the protection of the new procedure would have to apply for registration.

In examining proposed export agreements, the tribunal would have to take cognizance of any international obligations that Canada might assume in respect of competition policy. This question is discussed in Chapter 8.

Procedure Regarding Certain Trade Practices

Another area of activity for the tribunal would be that of certain trade practices not covered by broad prohibitions or by such of the tribunal's proposed functions as have already been described. The philosophy of approach would be essentially the same as what has been suggested for mergers. That is, none of the practices would be treated as undesirable *per se*. Rather, the presumption would be that while the practices could well be harmless or even beneficial to the public in some circumstances, they could be harmful in others. The tribunal's responsibility would be to examine cases where harmful effects were suspected and, upon finding that harm was indeed being done, to impose and/or recommend appropriate remedies. One feature of some importance would be the provision of an interim injunctive procedure whereby, if a practice was before the tribunal for examination, and if it appeared that the continuation of the practice was likely to bring about a significant change in the relevant market circumstances, such as the bankruptcy of a buyer because of a refusal to sell, a temporary suspension of the practice could be promptly ordered by the tribunal pending final disposition of the case.

The tribunal would be given, in the legislation, a list of trade practices, defined in rather broad terms, as well as the criteria to be applied in the examination of these trade practices. In the light of this list and these criteria, it would be expected to establish, as it worked through cases referred to it, the principal types of circumstances under which the designated trade practices were detrimental to the public.

Two routes are proposed for bringing a trade practice to the attention of the tribunal. The first would be for the Director of Legal Proceedings, if he had reason to believe that the practice was within one of the classes of practice listed in the tribunal's terms of reference and was detrimental to the public interest, to request that the tribunal hold hearings regarding the practice. The second route would be for private parties deeming themselves to be affected by the practice to submit a request for a hearing to the hearing examiner. If the examiner determined that there appeared to be public interest grounds for subjecting the practice to a full hearing before the tribunal, he would recommend to the tribunal that hearings be held. If the continuation of the practice threatened to bring about a change in the relevant market circumstances before the tribunal had reached its decision, the Director or the hearing examiner, in referring the trade practice, could recommend to the tribunal the issuance of an interim prohibitory injunction.

As will be noted later, the tribunal would have a general power of inquiry, not linked to its injunctive powers, into any possibly harmful practice or situation relating to competition policy. However, the *particular* classes of trade practice, the employment of which in certain circumstances would be referrable to the tribunal via the procedures outlined above, would include the following:

(1) Refusals to deal, including refusals under franchise arrangements, but excluding refusals to deal connected with the enforcement of resale price maintenance and covered by Section 34 of the Combines Investigation Act;

(2) Basing-point pricing and other horizontal arrangements other than those prohibited by the revised Section 32 of the Combines Investigation Act;

(3) Exclusive-dealing and tying arrangements, including "full-line forcing" and directed buying;

(4) Market-access arrangements;

(5) Predatory practices;

(6) Price discrimination, including discriminatory promotional allowances; and

(7) Consignment selling.

It should be re-emphasized that none of the above classes of practices would be an offence or be banned as such. Only where there was reason to suppose that their use in a particular situation might be having a deleterious effect on the public interest would they become the subject of hearings by the tribunal. Argument and evidence would then be received by the tribunal from the parties involved in the practice and from the Director of Legal Proceedings. Factual evidence could also be requested from the tribunal's professional staff, subject again to the proviso that such evidence be made available to the parties involved in the practice and to the Director of Legal Proceedings.

In examining any trade practice, the tribunal, having regard to its general terms of reference, would, above all, be concerned with whether the practice was likely to lessen competition to the detriment of final consumers. Not the interest of particular competitors but the interest of ultimate purchasers would be paramount. Subject to this overriding consideration, the tribunal would be invited to give attention to the following more specific matters:

(1) whether the practice was being engaged in by person(s) or firm(s) accounting for a substantial share of the relevant market;

(2) the extent to which the practice was likely to foreclose sources of supply or channels of distribution to other participants in the market;

(3) what alternative sources of supply or channels of distribution, if any, were available or could readily be made available to other participants in the market;

(4) whether the practice was likely to encourage or discourage cost-lowering innovation in methods of distribution;

(5) whether the practice could be justified as an effective means of creating a market for a new product, or of introducing an established product into a new market; and

(6) whether the practice was likely to make it possible for one or more competitors to eliminate or exclude other competitors from the market by means other than superior performance, on a sustained basis, in supplying goods and services to the public.

Where a trade practice was found detrimental to the public, the tribunal could itself impose a remedy by issuing a permanent injunction prohibiting the practice. In addition, or alternatively, the tribunal could recommend to the federal government other remedies, including notably the issuance of special licences to import duty-free. Again, as with mergers, the tribunal could undertake to lift a prohibitory injunction if other remedies were applied. A "consent decree" or negotiatory procedure would also be open; i.e. the tribunal might undertake not to issue an injunction prohibiting a practice, provided certain conditions were observed by the parties engaging in the practice. For example, the parties might be required to alter the practice in some respects, so as to prevent certain deleterious effects.

Distribution of Petroleum and Related Products

This is an appropriate point at which to recall that in the press release of July 22, 1966, requesting the Economic Council to study combines, mergers and other matters, the then President of the Privy Council made special mention of the so-called "T.B.A." Report of the Restrictive Trade Practices Commission. The following is the relevant passage:

> Referring to the Report of the Restrictive Trade Practices Commission concerning the Distribution and Sale of Automotive Oils, Greases, Anti-Freeze, Additives, Tires, Batteries, Accessories, and Related Products (1962) (T.B.A. Report), the Minister said that in studying the recommendations of the Commission the Government has viewed most sympathetically the recommendations in that report which are intended, if possible, to improve the situation which has given rise to much concern on the part of the service station dealers in their relations with their oil company suppliers, particularly in relation to the practices of exclusive dealing and tying arrangements, as well as consignment sales. The Government has given a great deal of careful thought to the whole matter and is of the opinion that the recommendations of the Commission, if implemented, would be unlikely to give the relief sought by the service station dealers if the legislation must be drafted in terms of criminal law as is the case at present in view of the constitutional law decisions of the courts. It is therefore the intention of the Government that this particular recommendation for amendment of the legislation should be taken up and considered as part of any revision of the Act as a whole in the light of both the views of the Economic Council and the constitutional position as it may emerge.[4]

In its Report, the Restrictive Trade Practices Commission had recommended that exclusive-dealing and tying arrangements and market-access agreements and arrangements be prohibited under the Combines Investigation Act where such agreements or arrangements were likely to "lessen competition substantially, tend to create a monopoly or exclude competitors from a market to a significant degree".[5] For our part, we do not recommend that these practices be made criminal offences under the Combines Investigation Act. Instead, we have included them in the list of trade practices that would be referrable, under civil law, to the proposed Competitive Practices Tribunal in any case where there was reason to suppose that they might lessen competition to the detriment of final consumers.

Since the appearance of the Report by the Restrictive Trade Practices Commission, three major inquiries into gasoline retailing and associated matters have been carried out in the provinces of British Columbia, Alberta and Nova Scotia.[6]

Our recommendations regarding the work of the Competitive Practices Tribunal in the field of trade practices would cover a good deal of the same territory embraced by these inquiries. The reports, for example, make recommendations in respect of tied sales, exclusive dealing, consignment sales, and basing-point pricing. Under our proposal, it would be open to the tribunal to examine all of these matters, including in its consideration the three provincial reports with all their accompanying published studies, submissions and minutes of evidence. It would be important also that the tribunal consider evidence relating to other provinces, so that in formulating any recommendations it may consider appropriate, account could be taken of the degree to which conditions in the industry varied from province to province.

Some of the matters dealt with in the reports, such as the terms of mortgages, leases and conditional sales contracts, would probably be found to fall under the constitutional powers of the provinces to deal with matters concerning property and civil rights in the provinces. Here again, however, there would be much to be gained in arriving at remedies which were national in their scope, and in avoiding situations in which significantly different ground rules were applied to different parts of Canada. With this in mind, provincial governments might wish to consult regarding these problems and try as much as possible to co-ordinate and make consistent both their diagnosis and their remedies. Such consultation could benefit considerably from the tribunal's analysis and judgment. Using its broad powers of inquiry, to be outlined below, the tribunal would be able to undertake a thorough and careful investigation of all problems in this industry, and where its analysis pointed to the need for action by the provinces, make any recommendations it considered would be effective. If the provinces so requested, the tribunal could work closely with them in arriving at a satisfactory set of remedies.

We would hope that in their analysis and appraisal both the tribunal and the provinces would give particular care to the definition of relevant markets, and would consistently bear in mind the interests of the final consumer of service station products.

Advertising

The general subject of the economic benefits and costs of advertising is both difficult and complicated and only two aspects of it are touched upon in this Report. The practice of misleading advertising was discussed earlier in this Chapter. We come now to a second economic aspect. At issue in recent cases in both the United Kingdom and United States has been the economic power which advertising may confer. The argument centres on the degree to which a firm engaging in extensive advertising impedes or prevents the entry of new firms into the market for that product. New entrants, even those with superior products, may not have access to the resources that will permit them to inform consumers of the merits of their product, given the imperfection of channels of information. Thus inability to achieve an adequate sales level in turn prevents them from achieving those economies of scale in production which are essential to making their product competitive in price with established products. Consumer detriment thus arises from the existence of imperfect information channels and the inability of the challenging firm to acquire funds for advertising or to attain economies of scale at some higher level of output. Barriers to entry in the form of heavy advertising outlays have concerned a number of observers. In the United States, a recent study showed large advertising expenditures to be very closely associated with high levels of concentration and above-average profits.[7]

Advertising as a barrier to entry would be of concern to the Competitive Practices Tribunal under its proposed terms of reference. Where relevant, advertising could be taken into account in both merger and trade practice cases, as well as in general inquiries.

General Inquiries

A final function of the tribunal would be to sponsor and report upon certain types of general inquiry. Its role in this respect would be similar to that provided for the Restrictive Trade Practices Commission in Section 42 of the Combines Investigation Act. We propose that Section 42 be retained in the Act, except that the tribunal should take the place of the Commission. In addition, the legislation setting up the tribunal should provide for similar inquiries into all matters falling within the tribunal's broad field of competence. As under Section 42 of the Combines Investigation Act, such inquiries would be carried out by the Director of Investigation and Research upon his own initiative, upon direction from the Minister of Consumer and Corporate Affairs, or at the instance of the tribunal. The tribunal would have the same responsibility as the Restrictive Trade Practices Commission now has to report on such inquiries to the Minister.

As to the fundamental purpose of general inquiries, this would still be much as it was envisaged by the MacQuarrie Committee in 1952:

> At least our main industries should be the objects of continuing study and observations. Facts should be systematically assembled concerning the behaviour of an industry and its current policies bearing on prices, production, innovation, investment, costs, profits, market areas, business practices, the use of patents, corporate structures and inter-relations as well as any other matter affecting competitive conditions. We need to know much more in detail than we now do the various aspects of the movement of concentration of economic power in Canada. Large business units raise a special problem for public policy but factual knowledge is much too scanty to warrant any specific proposal. Judgment on the giant enterprise cannot be final before extensive empirical research has provided the facts concerning their organization, their processes of business policy formation and their performance. Our knowledge in the wide field of monopolistic practices is just as inadequate. Such practices as discrimination, "loss-leaders", price leadership, tying contracts, combination

> sales, advertising, basing-point systems and probably many others should be subjected to empirical studies in order to know their extent, their operation, their effects and the remedies to cope with them if necessary. Finally, some attention should be given to the field of remedies in order to add to the rather restricted list of weapons we are now using to combat undesirable monopolistic situations and practices.[8]

While a number of important general inquiries have been carried out under Section 42 of the Combines Investigation Act, much remains to be done in order to achieve the objectives set forth by the MacQuarrie Committee. In some instances, general inquiries, some of which might well be of a continuing nature, would no doubt bring to light practices and situations detrimental to the public interest, leading the tribunal to recommend appropriate remedies to the federal government. Among such remedies might be additions to the classes of trade practice referrable to the tribunal. There would also be the possibility that in the light of experience the tribunal might decide that a certain well-defined practice met the rigorous requirements of a *per se* offence under the Combines Investigation Act. In this event, the inclusion of the offence in that Act would be recommended.

It would be essential, however, to conceive the purpose of general inquiries as something much larger than that of simply adjusting the "thou-shalt-not" features of competition policy to changing economic circumstances. The fundamental purpose would be to broaden and deepen understanding of the structure and operation of the Canadian economy, and in so doing to furnish a better basis for the formulation of a wide range of economic policies.

Monopolies and Dominant Firms

It will have been observed that nowhere in our proposals is there any special provision for dealing with monopoly and dominant-firm situations *as such*. But this does not mean that the existence of such situations or of tendencies towards their emergence would be without significance for competition policy. They would, in fact, be of considerable significance for the tribunal's operations with respect to both mergers and trade practices. It would be implicit in the criteria listed earlier that, in examining any merger, the tribunal would place appropriate weight on whether the merger was likely to bring about a situation of market dominance or monopoly. Similarly, in examining a trade practice, the tribunal would have regard to (a) whether the practice was being engaged in by a monopolist or dominant firm (in which case its implications would inevitably be viewed in a different light than if it were only being engaged in by one of a number of strong competitors), and (b) whether the practice was likely to bring about market dominance or monopoly "by means other than superior performance, on a sustained basis, in supplying goods and services to the public".

To put the matter in another way, competition policy would be concerned with monopoly and dominant-firm situations both in their incipiency and in their actuality. There would be no barrier to the achievement of market dominance or monopoly via the route of internal company expansion and superior efficiency. But the achievement of dominance or monopoly via merger or via the employment of "exclusionary" trade practices would be open to examination and questioning. Where market dominance or monopoly had already been achieved, trade practices would tend to be scrutinized more carefully than under other circumstances. If this proved insufficient, resort could be had to the power of general inquiry in order to determine what undesirable practices or situations existed and to recommend how they might best be remedied. In extreme cases of dominance or monopoly, the tribunal might recommend to the government that it reduce the dominance or monopoly by special legislation to divide the enterprise into smaller units. On the other hand, a tariff reduction might obviate the need for so drastic a step. Still a further alternative would be to conclude that the situation was one calling for resort to direct public regulation; as we observe later, this option should be considered very much a last resort.

Conclusion

The main general point to be made about the proposals in the present Chapter is that they embody a new approach to some important areas of competition policy in Canada. Only Sections 32 and 34 of the Combines Act, as revised, and Sections 33C and 33D would be retained as criminal offences, while Sections 33 on mergers and monopolies, 33A on price discrimination, and 33B on promotional allowances would be replaced by the new proposals which involve a shift to a civil law basis. This shift requires that provision be made for a greater use of economic analysis in the consideration of individual cases. As a result, it should prove possible for competition policy to adapt itself more readily to the changing circumstances of the Canadian economy.

If acted upon, our proposal to set up a Competitive Practices Tribunal would be a very significant step. We are fully conscious of the magnitude and complexity of the task that we are proposing for the tribunal. It would be asked to evaluate, from the point of view of the public interest, mergers, specialization agreements, export agreements, and a variety of trade practices. Not only would there be problems of economic analysis; there would also be decisions to be reached requiring comparisons of public benefits and public detriments -- decisions partly reflective of value judgments. Inevitably, the significance of legislation in areas subject to the tribunal's assessment would depend to a considerable extent on the tribunal's judgment. Its task could not be regarded as merely applying clear criteria to the facts of particular cases. It would therefore be most important that the membership of the tribunal and its staff be of the highest calibre. It would also be important, however, that the goals to be achieved and the principal criteria to be applied should be spelled out sufficiently clearly that the tribunal could feel itself to be guided by the considerations regarded as important by Parliament in passing the legislation.

Since the formation of the tribunal would be a distinctly new departure, it would seem wise to make provision for a thoroughgoing review of the tribunal's operations and of Canadian competition policy generally. Following the example of the Bank Act, this review should be decennial, with the first review taking place no more than 10 years after the legislation setting up the tribunal first comes into effect. Given the rapid structural and other changes that are likely to occur in the Canadian and world economies over the next decade, it may be anticipated that even the most flexible and forward-looking set of competition policies will in some measure be overtaken by events and thus require reassessment.

Notes and References

[1] It would probably be necessary to qualify this prohibition sufficiently to allow the continuance of such practices as that whereby a group of drug stores in an area arrange that one or more of their number remain open on Sundays and to permit the operation of formal franchise operations. We later propose that franchise arrangements containing a possibility of damage to the public interest be included in the responsibilities of a civil law tribunal.

CHAPTER 7

COMPETITION POLICY AND THE SERVICE INDUSTRIES

Reference has already been made to the fact that Canadian competition policy as now embodied in the Combines Investigation Act embraces for the most part only goods-producing and some goods-distributing activities. Other activities remain largely outside the Act. This exclusion is indeed an anomaly, especially given the rapid postwar growth of employment in the service sector of the economy. As was noted in the *Fifth Annual Review* of the Economic Council, the greater part of the labour force is now employed in service-producing industries, reflecting a shift that has come about as a result of increased mechanization of most goods production, an absolute decline in employment in agriculture, and a rapid upsurge in demand for services. Consumers today demand a wide range of repair and maintenance services for their larger stocks of durable goods. A fast-growing and capital-intensive economy has given birth to new and expanded financial services to better deploy the pool of savings available for productive investment. The higher qualifications demanded of the labour force have stimulated the growth of educational and training services. Higher incomes have helped to expand requirements for a variety of professional services. Several more items could be added to the list.

Concern about the exclusion of service industries from the anticombines law has been voiced in a number of quarters. The 1967 Report of the Joint Senate-House Committee on Consumer Credit, under the chairmanship of Senator Croll, suggested that the Combines Investigation Act be extended to cover "captive" sales finance companies. The 1968 Report of the Batten Royal Commission on Consumer Problems and Inflation, otherwise known as the Prairie Provinces Cost Study Commission, contained a recommendation that the scope of the Act be extended to embrace at least all financial institutions. The first Minister of Consumer and Corporate Affairs, Mr. Turner, stated in the House of Commons:

> I do not want in any way to anticipate the current study undertaken by the Economic Council of Canada which, by virtue of a reference made by this

> government on July 22, 1966, is reviewing the Combines Investigation Act, but I should like to say that since services amount to about 35 per cent of our gross national product it seems strange to me that goods should fall within the ambit of the act and services should not.[1]

The usual economic definition of "service industries" embraces all industries other than primary resource industries, utilities, manufacturing and construction. Some service industries may be closely allied to particular commodities or classes of commodities (pharmacies, retail and wholesale grocery stores and inland water transport are examples), but their activities are deemed to lie outside the production of tangible goods. Actually, in terms of activities, the statistical separation of service production from goods production can rarely be complete. Production statistics are typically broken down by industries, by firms and by plants or establishments, and these in turn may be classified according to whether their *major* activities are goods production or service production. But many categories of goods production contain a minor element of service production and vice versa. For example, firms that specialize in retailing and financing are deemed to belong to "service industries", but manufacturing firms that provide some of these services for themselves are still classified in "goods industries". Again, lawyers, accountants or economists who set themselves up in specialized partnerships are in "service industries", but if they join the payroll of a large construction firm they are, for most purposes, statistically transferred to "goods industries". Only a detailed cross-classification of employment by industry and occupation will reveal the true state of affairs.

Even in terms of a "standard" statistical breakdown of production into goods and service industries, the bald statement that the Combines Investigation Act does not extend to service industries is not really true. The position is in fact even more anomalous, in that the Act covers some activities carried out by service industries but not others. Basically, it endeavours to protect competition in respect of "articles" and of the price of insurance. But the reference to articles embraces not merely the production and manufacture of articles, but their "purchase, barter, sale, storage, rental, transportation or supply". Thus it is that much of the activity of retail and wholesale trade, of the transportation of physical goods, and of the storage and rental of goods, is covered by the Act. In addition, the major services supplied by hotels, restaurants and taverns are believed to be included, although this has not yet been tested by the courts. Some other parts of the boundary line have, however, been clarified by court decisions. For example, it seems fairly well established that anticompetitive practices carried on in service industries may be thwarted by the Combines Act when the effect of these practices is to limit unduly competition in the market for particular articles. On the other hand, it appears that a completed house or building does not fall within the legal interpretation of an article.

Some of the principles applying in this area are documented in the 1967-68 Report of the Director of Investigation and Research, where the outcome of some recent cases is discussed. In one of these cases, *Regina v. J. W. Mills and Son Limited, et al.*, the services of freight forwarders engaged in assembling small shipments into railway car lots were ruled as being within the purview of the Act even though the forwarders did not own or operate transportation facilities. (This decision is being appealed to the Supreme Court.) In *The Queen v. Canadian Warehousing Association*, the contention that the storage of household goods was not governed by the Act was dismissed on the grounds that the widest meaning of the clause "article ... that may be the subject of trade or commerce" would include even privately owned goods that are not for sale. In *The Queen v. Canadian Coat and Apron Supply Limited*, a charge of price-fixing was sustained against a group of companies in the linen-supply industry whose function was to provide customers with cleaned and ironed towels, uniforms and related articles.

The construction industry offers instances of the confused state of affairs in respect of the applicability of the Act to service activities. What happens, for example, with regard to contractors whose main purpose is to install plumbing or electrical wiring and fixtures or to lay flooring or to pave roads? A case involving the Electrical Contractors Association of Ontario was only one of several which established the rule that these pure service activities were within the Act in so far as they affected unduly competition in the market for various construction materials. But in a more recent case against nine Ontario paving companies *(The Queen v. K. J. Beamish Construction Co. Limited, et al.)*, the Crown was not successful in securing a conviction on alleged price collusion and rigged tendering, even though the court agreed that these practices had been carried on over a period of several years in connection with municipal tenders on road work. Mr. Justice Schroeder stated in his decision on the case:

> Section 32 is concerned only with agreements or arrangements of the kind prohibited with respect to tangible things -- articles or commodities that may be the subject of trade or commerce, and does not touch or concern agreements or arrangements which relate solely to the provision of services.... There is not the slightest doubt that the actions of the respondents were completely devoid of business ethics.... Be that as it may, the Court is here concerned with the legality of the respondents' conduct rather than with its moral aspects.... Viewing the evidence in the present case in its entirety I cannot escape the conclusion that the contracts in question are predominantly contracts for work and labour, in which the materials were supplied only incidentally ... the evidence does not suffice to establish beyond a reasonable doubt that they had entered into a combine to prevent or lessen competition unduly or otherwise in the sale, supply or transportation of 'articles' as defined by the statute.... While the methods employed by the respondents in presenting rigged bids were reprehensible in the highest degree and cannot be condoned, the Court is called upon to determine whether their conduct ... fell within the penal provisions of section 32.... I cannot be persuaded that the Crown has proven anything beyond a conspiracy to prevent or lessen unduly competition in the performance of work and labour in the resurfacing of Provincial and Municipal roadways.... It follows that greatly as one must deplore the conduct of the respondents in hoodwinking the Department of Highways and the municipalities with which they dealt, the offence charged has not been proven and, not without some reluctance, I would dismiss the appeal.[2]

Thus a price-fixing conspiracy in an area of considerable importance escaped a finding of illegality because of the failure of the Act to cover services specifically.

It will be evident that there is no precise answer to the question of which activities carried on by service industries fall within the ambit of the Combines Act and which do not. Although the recent jurisprudence has tightened the link between services and goods, one cannot say that the end result has been to bring all article-related services within the reach of competition policy. The courts must still proceed on the basis of case-by-case examination of the impact of competition-restricting practices in service industries on the market for particular goods.

Exemption from the Combines Act via Regulation

In attempting to measure the economic significance of those areas where Canadian competition policy does not now extend, one must consider the question of whether other forms of social control in these areas are effectively protecting the public interest in efficient resource use. In Chapter 2 of this Report, we noted that competition policy constitutes the most indirect form of social control of industry, obviating or lessening the need for other forms of control. Where competition is weak or moribund, there are likely to be pressures to impose more direct public controls by way of regulation or even public ownership. Such pressures have indeed arisen in service industries, many of which operate under varying degrees of public regulation. Transportation, broadcasting and other forms of communication, public utilities and financial services spring readily to mind. It cannot simply be concluded, however, that the fact that these industries are regulated makes the application of competition policy unnecessary. Great care must be exercised to determine what particular *activities* of an industry are regulated and the extent to which the regulation really takes the place of the kind of social control normally supplied by vigorous competition. Many industries are regulated only in respect of certain parts of their activities and the regulation may or may not bear directly on such matters as price. One does better really to speak of "regulated activities" rather than "regulated industries" and to pay close attention to the nature and scope of the regulation that prevails.

Competition Policy

It is clear from the terms of the Combines Investigation Act, from statements by its administrators, and from certain court decisions, that the existence of regulation does not automatically result in a blanket exemption from the influence of competition policy. Mention has already been made that the transport of commodities, although subject to direct regulation by all three levels of government, is specifically covered by the Act. Some of the activities of regulated monopolies, such as Bell Canada Limited, are also within the scope of the Act. As the Director of Investigation and Research of the Combines Branch noted before the House of Commons Standing Committee on Transport and Communications:

> The telecommunications industry is an example of an industry which is in part subject to regulation by a government agency, in part subject to the Combines Investigation Act, and in part subject to neither of these forms of control.[3]

In the case of Bell, the rates for its telephone services are regulated by the Canadian Transport Commission, while the manufacture and sale of communications equipment is subject to the Combines Act, but the provision of many communications services other than telephones appears to be exempt both from the Combines Act and from specific regulation as to price.

In the jurisprudence to date, there has been only one case, *Regina v. Canadian Breweries Limited*, in which direct regulation was a central point at issue. Chief Justice McRuer of the Ontario Supreme Court addressed himself to the problem of determining how much room was left for competition policy in an industry in which the product was sold at controlled prices through government-supervised outlets. The Crown attempted to uphold its claim that the active program of mergers and acquisitions undertaken by the company constituted an offence under the merger provisions of the Combines Investigation Act. But the Chief Justice ruled that, to constitute an offence, the effect of a merger must be such as to virtually eliminate competition. He stated in part:

> ...when I apply the Combines Act as an act designed to protect the public interest in free competition,

> I am compelled to examine the legislation of the provinces to see how far they have exercised their respective jurisdictions to remove the sale of beer from the competitive field and to see what areas of competition in the market are still open. Having made this examination, I must then decide whether the formation or operation of the merger lessened or is likely to lessen competition to an unlawful degree in the areas where competition is permitted.[4]

His review of the regulations affecting the industry led to the conclusion that the acquisitions did not result in any undue restraint on competition:

> When a Provincial Legislature has conferred on a Commission or Board the power to regulate an industry and fix prices, and the power has been exercised, the Court must assume that the power is exercised in the public interest. In such cases, in order to succeed in a prosecution laid under the Combines Act with respect to the operation of a combine, I think it must be shown that the combine has operated, or is likely to operate, so as to hinder or prevent the Provincial body from effectively exercising the powers given to it to protect the public interest.[5]

The charge was dismissed.

The assumption that the regulation of prices is exercised in the public interest brings us close to a discussion of the economic objectives of regulation -- a subject taken up in the following Chapter. But in passing, it should be noted that the assumption made in the beer decision has not gone unchallenged. One economist, Professor J. C. H. Jones, has pointed to a crucial distinction which he argues should be made in determining the extent to which competition policy is free to operate in "regulated industries". He states:

> Provincial authorities can fix retail prices and not protect the public if all they are doing is putting a standard mark-up to the price the brewer quotes at wholesale, but exerting no influence over this quoted price.[6]

Chief Justice McRuer did examine the questions of which prices were regulated and whether the delegated authority was being exercised by the various provinces concerned, rather than by the industry. His conclusion was that the provincial regulators were setting prices, in addition to regulating advertising and distribution outlets, and that the only areas left open for competition were those affecting quality, taste, services and packaging. In these areas, competition in the brewing industry was judged to be without restraint.

Applicability of the Combines Act: An Industrial Classification

Given the prevailing uncertainty as to which activities of which service industries are now covered by the Combines Investigation Act, and given the further uncertainty regarding the degree to which the existence of direct regulation would in any case remove some service activities from the purview of the Act (the present status of some goods industries being uncertain for the same reason), any attempt to measure the economic significance of activities not now covered by the Act is bound to be arbitrary. Nevertheless, Table 7-1 attempts to show the contribution to 1967 Gross Domestic Product made:

(1) by industries whose activities are *largely* governed by the Combines Act;

(2) by industries where regulation and/or public ownership provide the chief means of social control; and

(3) by industries where there is no "public presence" of any of the three sorts mentioned.

The Table reveals that the Act at present applies to only slightly more than half of total domestic output. Of the balance, approximately 5 per cent reflects agricultural output where in many cases prices and other matters are regulated by marketing boards, while other service industries whose rates are affected by regulation account for another 12 per cent of output.

This leaves a residual group of industries, accounting for 31 per cent of output (see "Other service industries" in the Table), that is subject neither to the Combines Act nor, except in some of the smaller subcategories, to a significant measure of direct public regulation. Some of these residual "industries" are, however, subject to social control in the form of public ownership: the 7 per cent of output accounted for by "public administration and defence" should be deducted for this reason. A further deduction of roughly 4 per cent should be made on account of the mainly noncommercial activities of educational institutions, health and welfare agencies, and religious organizations. This brings the residual down to a final, approximate figure of 20 per cent, representing the output share of a vast array of business, personal and recreational services, as well as real estate and financial services. It would be primarily these services that would be affected by any decision to extend the coverage of the Combines Act by dropping the present restriction to "articles" and the price of insurance. (With regard to the above figures, it is important to bear in mind that they are on a net-value-added basis, and that a compilation based on gross output or sales would show somewhat different results.)

The published history of the present Combines Act and its predecessors yields little explanation as to why the Act is not more comprehensive in its coverage. The inclusion of the price of insurance in the original legislation of 1889 was undoubtedly influenced by the previous discovery of a combine in that industry. During the course of the debate on that Act, criticisms by a member of the House of Commons over the exclusion from the legislation of lawyers and doctors went unanswered by the government. The Combines Investigation Act of 1923 did in fact appear to include most, if not all, services in the definition of a combine, but because most prosecutions during this period were based on the section of the Criminal Code prohibiting combinations rather than on the Combines Investigation Act, the position with regard to services was never clarified by the courts. In the process of amending the Act in 1935, the Bennett government originally introduced a bill which contained the same definition of a combine as did the 1923 Act. Following an unrecorded discussion by the Senate Banking and Commerce Committee, however, the Senate returned to the House, and the House eventually accepted, an amended bill which restricted the scope of the Act to activities pertaining to articles and the price of insurance. In 1949, the question of including services surfaced again, but the then Minister of Justice, Mr. Garson, opposed the move.

Table 7-1

THE CANADIAN ECONOMY BY SECTORS, CLASSIFIED ACCORDING TO THE APPLICABILITY OF THE COMBINES INVESTIGATION ACT

(Gross Domestic Product at factor cost, 1967)

	($ million)	(Per cent)
A. Sectors Largely Subject to the Combines Investigation Act		
Forestry	563	1.04
Fishing and trapping	146	0.27
Mining, quarrying and oil wells	2,212	4.08
Manufacturing	13,606	25.12
Construction	3,304	6.10
Storage other than grain	27 [1]	0.05
Wholesale trade	2,585	4.77
Retail trade	4,776	8.82
Insurance	734 [1]	1.35
Hotels, restaurants and taverns	789 [1]	1.46
Subtotal	28,742	53.06
B. Sectors Largely Exempt from the Combines Investigation Act		
Agriculture	2,479	4.58
Grain storage	102 [2]	0.19
Service industries		
a) Regulated [2]		
Transportation	3,190	5.89
Air transport		
Water transport		
Railway transport		
Truck transport		
Taxicab operations		
Pipeline transport		
Other transport		
Services incidental to transportation		
Communication	1,364	2.52
Radio and television broadcasting		
Telephone systems		
Telegraph and cable systems		
Post office		
Electric power, gas and water utilities	1,757	3.24

Table 7-1 (cont'd.)

	($ million)	(Per cent)
b) Other service industries[2]		
Financial institutions, real estate agencies, and real estate operators	4,782[1]	8.83
Public administration and defence[3]	3,961	7.31
Community, business and personal services	7,789[1]	14.38
Education and related services[3]		
Health and welfare agencies		
Religious organizations		
Motion picture and recreational services		
Services to business management		
Personal services		
Miscellaneous services		
Subtotal	25,424	46.94
Total	54,166	100.00

(1) Estimated on basis of the 1949 weight which this sector had in a larger sector of which it forms a part.

(2) The distinction between regulated and nonregulated industries is of necessity an arbitrary one. Regulated services include only those in which prices are affected by regulation. The nonregulated group includes banks and other financial institutions where regulation is not directed primarily at competitive pricing for financial services.

(3) Mainly government monopolies.

Competition Policy

The present position of services vis-à-vis competition policy in Canada is inconsistent not only with the philosophy of competition policy outlined earlier in this Report, but also with the position taken by other industrial countries. Competition policy in the United States embraces all commercial activities; any exceptions arise either from specific amendments to the legislation or from judicial interpretations as to the authority of federal antitrust laws. In Britain, the Monopolies and Mergers Act of 1965 had the effect of extending the Monopolies and Restrictive Practices (Inquiry and Control) Act of 1948 to services. Acting under the authority of this new legislation, the Board of Trade has given to the Monopolies Commission references to inquire into practices pertaining to insurance, estate agents' fees and the professions. Of the other OECD countries, only Ireland follows the Canadian practice of limiting the scope of antitrust legislation to activities related to goods or commodities.

Competitive and Other Characteristics of Service Industries

Those who argue that competition policy should be extended to service industries at present exempt from the Combines Act might reasonably be asked to answer two questions. First, do the activities in question have characteristics such that the economic efficiency objective of competition policy is not relevant for them? Second, is competition not already functioning in these areas, even without benefit of the Combines Act, in a way that promotes efficiency and protects consumers from exploitation?

The economic characteristics of the group of services with which we are concerned are many and varied. They do, however, have in common certain elements which distinguish them to some extent from tangible goods. To begin with, services are of course intangible, a characteristic that limits the consumer's ability to conduct an informed search for the best value. Because he cannot examine and assess the "product" prior to purchase, he is normally restricted (household repairs are a good example) to a selection based on producers' general reputations and on price estimates. All too often, the latter turn out to be greatly understated. The consumer is often in a much more dependent relationship with suppliers of services than with suppliers of goods. In respect of such things as electricity and gas, he requires the service on a continuing basis, which increases his vulnerability to exploitation. If he is dissatisfied with the price or quality of the service, he cannot easily hold off and haggle or quickly switch to a substitute "product". In addition, once he has purchased a service, the consumer can neither return nor resell it.

In most service markets, too, there is a notable absence of import competition. More than that, the markets are often not national or even regional in scope, but local. This arises primarily from the "nontransportability" of many services. In such fields as repair and maintenance, professional services and the like, the intangible nature of the "product" requires the supplier to deal directly with the final consumer, which in turn limits the geographical extent of the market. Competition may be virtually non-existent in some rural areas where consumers have a much smaller range of choice than city dwellers requiring similar services. The fact is that competition policy may be *more* needed to foster efficiency in service markets, particularly in sparsely populated areas, than it is in goods markets where imports often provide a good deal of competition.

It should be noted, however, that while the market for some service activities not now subject to the Combines Act is confined to local areas, other service industries operate in national markets. This is true, for example, of some of the activities of financial institutions, whose relatively small measurable contribution to Gross Domestic Product understates their central importance to the economy. The need to protect the savings of the public and to pool risks helps to bring about, in some parts of the financial "industry", a large scale of operations and relatively high concentration. Another noteworthy feature of the industry is that in some areas competition which might otherwise be forthcoming from foreign institutions and/or their Canadian branches and subsidiaries has been curtailed by special legislation.

Competition Policy

The kinds and intensities of competition found in service markets vary greatly. Some services, such as those emanating from certain parts of the construction industry, may involve highly competitive suppliers selling to equally competitive and knowledgeable builders. In sharp contrast are situations where suppliers operating under circumstances of limited competition sell services to only one or two buyers. A good example of this is the situation between doctors in Saskatchewan and the provincial government. Under such circumstances of "countervailing power", the price for the provision of the service arrived at in the bargaining process may not be much different from that which would have prevailed under more competitive conditions, but this result can by no means be guaranteed.

The limited geographical size of many service markets, the difficulty which the buyer often has in assessing the product before purchase, and the impossibility of returning the product if it proves unsatisfactory, all combine to produce a situation where price discrimination of a type harmful to the public interest in an efficiently functioning economy can be relatively easily practised. There is of course a place, in service industries as in goods industries, for price differences which are justified by the lower unit cost of servicing large orders. But less benign discrimination, reflecting a misuse of bargaining power that may squeeze small buyers in ways that hinder rather than promote efficiency, may also occur. There is obviously a useful role to be played by competition policy in repressing undesirable price discrimination in service industries.

Thus the conclusion can be drawn that while there are important differences in the nature of the products supplied by goods and service industries respectively, these differences are not such as to render an efficiency-oriented competition policy less relevant for service industries. On the contrary, it may in some ways be more relevant.

This brings us to the second of the two questions raised earlier: Is competition already functioning satisfactorily in service industries to such a degree that the extension of competition policy to such industries is not really required? Our search for answers to this question has taken us not only to those few cases under the Combines Act where service industries were shown to be engaged in price-fixing and market-sharing activities, but also to press reports of anticompetitive practices in the service field. An examination was also undertaken of relevant letters directed to Box 99, the mailing address for consumer complaints to the federal Department of Consumer and Corporate Affairs. It is of course the case that press reports and letters of complaint fall far below courtroom standards of evidence that certain activities in the service sector are reducing competition to the detriment of the public. Such proof positive could in most cases only be obtained by setting up the formal machinery for investigation and analysis that already exists for goods industries. But there is, we believe, sufficient information available to support the contention that markets for some services are not functioning satisfactorily, and to justify the setting up of formal machinery. The information referred to relates to a variety of fields; ambulance services, real estate, television repairs, and medical services are among the examples. Misleading advertising, both as to price and otherwise, appears to be as much of a problem in the service sector as it is in the goods sector. One particular form of misrepresentation -- the provision of highly inaccurate estimates to the potential buyer of such things as removal services and a variety of repair work -- seems indeed to be more rife in the service sector. It may be recalled also that in recent years the service component of the Consumer Price Index has risen a good deal faster than the goods component. Even if the application of competition policy to the full range of service activities contributed only modestly to reducing the rate of increase, the contribution would still be worth having.

Basic Recommendations Regarding Services

There is, in our view, enough evidence pointing to the existence in the service sector of anticompetitive practices detrimental to the public interest to lead to the conclusion that the continued exemption of parts of this sector from competition policy cannot be justified. We therefore recommend, first, that the *per se* provisions of the revised Combines Investigation Act be made applicable to *all commercial activities*, including services provided in connection with the sale or rental of land and buildings and the unregulated activities of "regulated industries". The only major exemptions would be those which already exist in respect of bona fide trade union activities, and arrangements between fishermen in British Columbia and their customers. Some *de facto* exemptions would of course also continue in respect of activities clearly subject to alternate social control in the form of direct regulation or public ownership.

One of the effects of the recommended change would be to bring services related to "articles" immediately and clearly within the scope of the Act, without the protracted and socially wasteful litigation which the wording of the present legislation makes necessary in such cases. Personal services, such as those of hairdressers and travel agencies, would also be included, as would such business services as those provided by advertising agencies, building cleaners and telephone answering firms. The professions, financial institutions, a broad range of communications services, and all recreational services, including professional sports, would also be covered in so far as other types of social control did not apply.

We recommend, secondly, that the purview of the proposed Competitive Practices Tribunal embrace all economic activities, whether goods-producing or service-producing, coming under the head of the constitution which provides the basis for the tribunal's exercise of civil powers.

Professional Services

The extension of competition policy to service industries not now covered by it may meet with some objections and raise some special problems, but none appear insurmountable. The lack of published evidence forces a resort to conjecture, but it is likely that past reluctance to extend the Combines Act to service industries may have stemmed partly from an unwillingness to interfere with the time-honoured custom of allowing professional bodies to fix their own fees and control entry into their professions. More recently, however, such developments as the emergence of new arrangements for financing medical care have drawn public attention to fee-setting and other economically significant practices of professional bodies. It has become highly appropriate to consider anew why these practices should not be subjected to some suitably structured system of checks and balances.

Competition policy provides one such system, but two others (collective bargaining and direct regulation) must also be taken into account. For any given self-employed group, the appropriate arrangement may consist of one of these systems separately, or two or more in combination.

In its recent Report, the [Woods] Task Force on Labour Relations recommended that certain designated groups of self-employed persons be given access to collective bargaining. These groups did not, however, include self-employed professionals. The Task Force took note of the existence of collective economic action by self-employed professionals, but made no recommendation either for or against the recognition of this as collective bargaining, with the protections that such a recognition would imply. It did express concern over the possible use of professional licensing as a restrictive device and suggested further study in this area. The following are the relevant passages of the Report:

> Where self-employed professionals choose to act collectively to establish fee schedules or otherwise to protect their economic interests, a case can be made that they too be required to act through an organization other than their licensing body in order to avoid a temptation to employ licensing as a restrictive device to reduce entry and control market supply. We suggest that this subject receive further investigation; it would be an appropriate assignment for the Incomes and Costs Research Board whose creation we recommend in a later section.
>
> We are concerned about accessibility to collective action by groups of self-employed persons who are economically dependent for the sale of their product or services on a very limited market or who for other reasons may have economic characteristics of employees. We have in mind such groups as fishermen, owner-drivers of taxis, and independent owner-drivers of trucks and delivery vans. We recommend that the Canada Labour Relations Board be given discretion to recognize these groups as bargaining agents within a specified market and

> that upon such recognition they receive the protection of section 410 of the *Criminal Code* and section 4 of the *Combines Investigation Act* from the criminal law of restraint of trade and from the operation of combines legislation, except where there is evidence of a collusive arrangement between such groups and those who employ their services.[7]

In the interests of clarity, we discuss first fee-setting for self-employed groups, leaving for later consideration the question of professional licensing. When may collective bargaining be considered a valid and practicable check-and-balance system for determining the remuneration of a self-employed group, whether professional or not? The answer, it seems to us, is when there is a genuine bargaining situation in which the group in question is confronted with an appropriate amount and kind of countervailing power on the other side of the table. Perhaps the best example of such a situation would be that involving doctors and a government of a province where Medicare is in effect: there is a certain balance of forces, and one of the parties has a strong interest (in this case, a political interest) in restraining increases in the price of services to the public.

It is more difficult to conceive of collective bargaining operating as an effective check-and-balance in the case of, say, lawyers. With whom would such a group as a county or provincial law society bargain? Lawyers' clients are many and varied, and not readily organizable into an "employer" interest for collective bargaining.

A second system would allow professional bodies to set their own rates of remuneration, provided that there was brought to bear upon these decisions, either at the time they were being made, or by way of subsequent governmental review and ratification, an effective "public presence" in order to ensure that the consumer interest was adequately safeguarded. Such arrangements would have to be embodied in provincial statutes or regulations of a kind that would in practice insulate the system from federal competition policy legislation.

The third system would of course be the application of competition policy to self-employed professional groups. Some modification of the policy as it related to such groups might be required; in some areas, for instance, agreement on fees appears to be necessary in order that the operators of private and public insurance plans may forecast likely calls on their funds. The solution to this difficulty might be to provide that designated professional bodies could *suggest* the rates at which their services would be provided to the public, but that attempts to *enforce* these rates on individual members would be banned as illegal price-fixing. Many professions do not now enforce their tariffs; in those that do, there is some reason to believe that many individual members would welcome the freedom to charge below the suggested scale.

As a general rule, arrangements for determining the remuneration of self-employed professional and other groups should be subject to competition policy. Where, however, a group prefers a collective-bargaining or public-regulatory arrangement, and where conditions are such that this arrangement constitutes an adequate check-and-balance system, it would be in order to grant an exemption from competition policy in respect of those matters specifically covered by the alternative arrangement.

Turning now to licensing and other ways in which control may be exercised over the entry of persons into professions and institutions for professional training, it is clearly in the public interest that a close watch be kept on quality standards in professions such as medicine and the law. It is equally clear that this watch must be kept to a large extent by persons who are themselves members of these professions and have the requisite knowledge and experience to perform the task properly. But there is also a public interest in ensuring that the power to regulate the quality of professional services is not used in an unduly restrictive way, and that the size of likely future needs for professional services is kept in mind. This aspect of the public interest is all the more relevant in an age when a large proportion of the cost of professional training is a charge on the general taxpayer.

The question of the licensing of entry into professions was treated in the *Report of the Ontario Royal Commission Inquiry into Civil Rights*, which stated in part:

> We have made it clear that the power to admit a licensee is not conferred to protect the economic welfare of the profession or occupation. Those professions or occupations which have been granted self-governing status are charged with a responsibility not only to see that persons licensed are qualified, but that all qualified applicants are licensed. The public has a genuine and very real interest in knowing that the members of the self-governing bodies are properly trained and have good ethical standards. The technical nature of the services performed by the members of such bodies makes it very difficult for the layman to assess the competence of the practitioner and gauge the value of the services he has received. The public must be able to rely on the judgment of those who are empowered to decide that persons licensed to practise a profession or engage in a self-governing occupation are qualified. That being so, the responsible and experienced members of a profession or occupation on whom the power of self-government is conferred should be in the best position to set the standards to be met and the qualifications of anyone who aspires to enter the profession or occupation. But it must be recognized that each of the self-governing bodies has been given a statutory monopoly through its licensing powers. What has to be guarded against is the use of the power to license for purposes other than establishing and preserving standards of character, competence and skill.[8]

The Commission made a recommendation, which we endorse, that lay members should be appointed to the governing bodies of self-governing professions to represent consumers' interests and to check any tendency towards the exercise of power in the interests of the profession rather than that of the public. This device could be useful in respect not only of licensing but also of other economically significant activities of professional bodies, including that of fee-setting under the public-regulatory option already referred to. There would be some question of lines of responsibility: who would appoint the consumer representatives to the professional body, and to whom would they report? Appointments might perhaps be made by appropriate provincial ministers after consultation with organizations broadly representative of consumer interests. The consumer representatives might then report back both to the government that appointed them and to the consumer organizations. If these arrangements stimulated more widespread and more informed discussion of the public interest in the adequate provision of high-quality professional services, this would be all to the good.

In so far as the affairs of professional bodies are now subject to regulation by statute, these statutes are almost entirely provincial. It follows that this is an area where considerable intergovernmental co-operation is likely to be required in order to arrive at that mixture of competition policy and other policies that best protects the public interest. We urge that this co-operation be forthcoming.

Financial Services

Financial institutions offer an instructive illustration of the fact that whether direct regulation obviates the need for competition policy depends critically on what kind of regulation prevails. Regulation may at times be irrelevant for the achievement of the objectives of competition policy. The chartered banks, for example, operate under the Bank Act which sets out, among other things, the capital requirements necessary to obtain a bank charter and the types of assets in which a bank may invest. These regulations are designed to ensure the protection of savings and the stability of the monetary system; they have little or nothing to do with efficiency in the supply of banking services. Other provisions of the Act, however, have a more direct bearing on competition. The Act spells out, for example, the steps that must be taken by banks contemplating a merger, ending with the requirement that the proposed merger must be approved by the Minister of Finance and by the full Cabinet. But there is no mention of the criteria that the Minister and his advisers should use in deciding whether or not to recommend approval of the merger.

Many of the recent changes in the Bank Act reflect the special emphasis placed by the Royal Commission on Banking and Finance on the need for more competition among financial institutions. Although the Commission did not specifically raise the possibility of applying the Combines Act to all financial institutions, the similarity between its approach and the objectives of competition policy is plainly evident in the following passage taken from its Report:

> To the extent that legislation itself can do so, it should prevent the spread of practices and arrangements which inhibit competition, and to this end we believe that certain prohibitions should be written into the law. First, we recommend that all agreements among banking institutions affecting the terms and conditions of borrowing or lending be prohibited unless specifically approved by the Minister of Finance. While it would be quite impossible to prevent members of a close financial community from discussing matters of common interest, the habit of formal or informal agreement can and should be broken. So far as we can determine, rate agreements serve no useful purpose in the public interest.[9]

A ban on rate agreements on loans and deposits was incorporated into the revised Bank Act of 1967. Other recommendations of the Commission designed to foster competition in the financial area which have since been incorporated into the legislation include the attempt to prevent abuses of market power by limiting to 10 per cent a bank's investment in the voting stock of any one large corporation, including specifically trust and loan companies. Also, no person may now be appointed a director of a chartered bank who is a director of another chartered bank, of a Quebec Savings Bank or of a deposit-accepting trust and loan company, or who is a director of a company owning more than 10 per cent of the voting stock of a bank or trust or loan company.

The present Bank Act therefore reflects two different aspects of policy, both of which are designed to protect the public interest in the activities of the banking system. The primary focus of the legislation is on the need to ensure the stability and solvency of the chartered banks. But as the ban on rate agreements indicates, once this basic requirement is met, then the public is deemed to have a right also to the benefits of effective competition and efficient resource use in the financial system. Nor does there appear to be any reason why the extension of competition policy to all financial institutions cannot be a major factor making for efficiency in this area. Indeed, it is our view that the application of competition policy is as relevant to the provision of financial services as it is to other fields. The Director of Legal Proceedings and the tribunal should be given the authority to investigate and, where appropriate, strike down practices in the financial area that are inimical to the public interest in competition and efficiency.

The principal problem posed by the extension of competition policy to the financial industry concerns administration. The Superintendent of Insurance, now located in the Finance Department, has the responsibility of administering the federal Acts regulating insurance companies, trust companies and mortgage loan companies. He is also the official responsible for the administration of the Small Loans Act, which regulates rates charged by finance and small loan companies on certain of their loans. In reporting under the first head of this Reference, on the subject of consumer affairs, we suggested that at some later date consideration might be given to transferring the Superintendent's functions in respect of small loans to the Department of Consumer and Corporate Affairs.[10] In the light of our present proposal to extend competition policy to financial institutions, it now seems to us that a good case could be made for relocating *all* the functions of the Superintendent in the new Department. These functions have a basic similarity to other functions relating to corporations that are already the responsibility of the Department, and their transfer would ensure greater co-ordination in carrying out the task of protecting consumers' dual interest in the solvency of financial institutions and in competition.

A similar logical case, founded on considerations of administrative co-ordination and efficiency, could be made in favour of transferring to the Department of Consumer and Corporate Affairs the Inspector General of Banks, who is charged with duties of supervision and inspection relating to the chartered banks and the Quebec Savings Banks. The government might feel, however, that certain traditional links between the banks and broad financial policy as administered by the Finance Department were of such a nature that the Inspector General should remain where he is. In that event, arrangements could no doubt be devised whereby the Department of Consumer and Corporate Affairs would assume responsibility for the application of competition policy to those activities of the banks that were not regulated by the Bank Act and subject to surveillance by the Inspector General.

The extension of competition policy to the banks would not appear to create any serious conflicts with the objectives of monetary policy as administered by the Bank of Canada. On those rare occasions when it was found necessary to limit competition for deposits by an interbank agreement on interest rates, a request or approval to this effect by the Minister of Finance, in accordance with the relevant provision of the Bank Act, would appear to be sufficient to protect the agreement from a charge under the Combines Act. For greater certainty, however, and in the interests of public information, the passage of an Order-in-Council setting out details of the ceiling would serve notice that considerations of monetary policy for the time being superseded those of competition policy, and that the banks in complying with the ceiling were temporarily placing themselves under direct regulation in respect of rates.

As stated earlier, our recommendation that competition policy include a *per se* ban on price-fixing agreements is based on the belief that rarely, if ever, do such agreements bring benefit to the economy and to consumers. In the provision of some financial services, price agreements now exist that are tolerated, if not condoned, by federal and provincial regulatory authorities. Among such agreements are those relating to minimum commission rates on stock exchange transactions and to the rates charged by fire and casualty insurance companies belonging to the Canadian Underwriters' Association. If the public is in fact best served by permitting these practices to continue, they should be protected by appropriate regulatory legislation. The regulations should, however, spell out explicitly what sorts of agreements are to be allowed and under what circumstances. It would be a good thing, too, if the promulgation of regulations in this area could be preceded by informed discussion and public debate, in which the views of those responsible for the administration of competition policy and interested members of the public could be elicited. There is a place for the use of regulation as a means of social control -- a considerable part of the next Chapter of this Report is indeed devoted to this matter; but the rationale for the regulation should be well understood, and the boundaries between regulated activities and those subject to competition policy clearly defined.

Summary

There is much to be gained by extending competition policy to all commercial activities including services. The *per se* approach here recommended for price-fixing and market-sharing arrangements is as relevant for service activities as it is for goods. Only in the financial area is there much likelihood that some rate agreements may be found to serve the public interest, and here the existence of legislation and regulation affords the opportunity for such agreements to be subject to government surveillance. The discretionary authority given to the tribunal in examining mergers and trade practices which may in some circumstances be against the public interest in the sale of goods is also well suited to deal with some of the inefficiencies and anticompetitive business practices that are to be found in the sale of services. The power of general inquiry vested in the tribunal would provide opportunities for exploring the existence of practices detrimental to competition and efficiency, for furthering public education about the economic role of service industries, and for pointing out useful directions for policy to take in the future. In this connection, we urge the tribunal and the Department of Consumer and Corporate Affairs to investigate possibilities for improving the quality and quantity of information so that consumers may be better equipped to select alternative suppliers of particular services. The question of estimates could usefully be examined from the viewpoint of encouraging greater accuracy in the estimation of costs to householders and other buyers who are attempting to allocate their resources intelligently.

The recent growth of service industries has been rapid, and it is likely that rising affluence will promote continued relative expansion in this area of the economy. Public policy initiatives to promote more efficient resource use in the service sector will therefore be extremely timely.

CHAPTER 8

SOME SPECIAL PROBLEMS OF COMPETITION POLICY

The purpose of this Chapter is to focus on two problems relating to competition policy that have only been hinted at in earlier parts of this Report. The first of these concerns methods of social control over industry other than the market-oriented method, hitherto the principal subject of discussion. In this Chapter, we examine those areas of industrial activity subject in varying degrees to government regulation or ownership, with particular emphasis on the question of how their operation might be better related to the broad efficiency objective that we have already indicated as appropriate for the so-called "market sector" of the economy. We advocate the application of a suitably modified version of competition policy to regulatory agencies and government-owned enterprises.

Further in this same problem area, we also examine more briefly, from the same standpoint, the impact on industrial efficiency of government subsidy and procurement policies and certain other activities. Our examination is selective; it does not, for instance, extend to broad government policies such as monetary and fiscal policy, even though these may have implications for economic efficiency.

The second major problem considered here is that of the international aspects of competition policy. Hitherto, the aspect that has engaged most public discussion has been that of the extraterritorial reach of one country's competition policy into the domain of another. Recently, however, additional and more important economic aspects have been coming to the fore, suggesting a need for new forms of international co-operation and perhaps eventually for a new international agency or institution.

COMPETITION POLICY IN RELATION TO GOVERNMENT REGULATION AND OWNERSHIP

If efficiency in the use of resources is to be the main objective of competition policy as applied to the "market sector" of the economy, it should be fully as relevant an objective for the government-regulated and government-owned sectors, notwithstanding the different arrangements for social control there in effect. A great deal has been said about the need for efficiency in the ordinary departmental operations of government, although critics have not always made clear whether they desire a contraction of governmental functions, a more efficient discharge of existing functions, or some combination of both. At all events, growing concern over rising governmental expenditures and tightness in capital markets has added impetus to the development within governments of goal-oriented, planned and programmed budgeting systems, whose purpose is to clarify policy objectives and to improve the efficiency with which those objectives are attained. But little attention has thus far been paid to the role that government-owned enterprises and government regulations may play in enhancing or diminishing the efficiency of resource use in the economy as a whole.

Most public discussion of government regulation, for example, has centred on the judicial authority for regulatory decisions, on the relationship between regulatory agencies and the legislature, and on the protection of the civil liberties of those affected by regulation. These are important issues, but so too are the economic effects of regulation. The hidden costs to the economy of poor regulatory performance provide, in our view, a strong justification for applying the underlying principles of competition policy, in suitably modified form, to the regulated sector of the economy, the more so since some parts of this sector, such as regulated communications activities, are likely to grow rapidly in relative economic importance over the next few years.

Objectives of Regulation

Among the most common reasons for instituting economic regulation is the desire to control business conduct and performance in industries with an inherent tendency towards natural monopoly. Presumably, regulation is here introduced in an effort to achieve what the market plus competition policy cannot do in the way of ensuring efficiency in the use of resources, the protection of consumers from exploitation and the preservation of the health and safety of the public. However, not all economically significant regulations are formulated exclusively on economic-efficiency or consumer-protection grounds. At times, governments have imposed regulations designed to achieve other objectives such as safeguarding national culture, ensuring a national presence in institutions considered vital to sovereignty, or limiting hours of work and the number of outlets offering particular goods and services in given locations. These may be valid objectives, but their pursuit may impose economic costs, which should as far as possible be estimated, publicly discussed, and taken continuously into account as the regulatory process goes forward.

At times, regulation may involve a complex mixture of socio-political and economic objectives. For example, much of the widespread regulation in agriculture appears designed to ease the impact on farmers of sharp, short-term price fluctuations and of longer-term structural adjustments. Unfortunately, some though not all of the regulation appears to operate more as symptomatic relief than as an effective means of bringing about, as smoothly as possible, essential changes in the industry. The danger that regulation may work more as a brake than a shock absorber must be constantly guarded against.

Regulatory Agencies

A particular regulatory statute may spell out in some detail the various regulations that are to be imposed on an industry. Alternatively, it may contain only broad guidelines, the details of which are to be filled in by the Governor in Council or by a regulatory agency. The immediate reasons for which a legislature delegates its authority to semi-independent boards and commissions are various. The nature of the activity to be regulated may be so complex that the task must devolve upon experts. Or there may be a need to insulate regulation-making from short-term political pressures, or to relieve government departments from an administrative burden. The delegation of broad and substantial powers to a semi-independent board may be a legitimate response to a situation where regulation is extending into a new and complex area, necessitating an ad hoc approach while experience is being accumulated. On the other hand, it may at times amount to little more than an attempt by the legislature to pass on to someone else awkward political decisions that should really be part of the legislature's own responsibility.

Although regulatory boards may be responsible to a designated minister or to the legislature itself, the regulations they promulgate are seldom subjected to searching scrutiny. Publication of regulations in the appropriate federal or provincial gazette is frequently required, but this normally fails to reach the broad audience necessary for adequate public debate, which should in any case be instituted at an earlier stage, before decisions have hardened. Frequently, the only voice heard is that of the affected industry, which may help to explain the oft-noted tendency for regulatory bodies increasingly to reflect the interests of the industries they regulate. The lack of more generalized and more effective public debate may stem from a widely held but highly questionable assumption that government action always works to the public benefit. As one British writer puts it:

> The situation can be explained by the widespread public belief that the state is the impartial servant of the public good, distinguished from all other economic units by reason of its altruism in a world dominated by self-interest....
> So activities which would be viewed unquestioningly by the public as vices, when encountered in the private sector, are not merely transformed into virtues when practised by the state, but are compounded and extended through the ballot box and the fiscal process.[1]

The absence of clear-cut objectives and the lack of public attention to the regulations themselves have created many problems in the course of the long history of regulation in Canada. One of these involves the relationship between a regulated industry and those nonregulated industries whose goods or services provide close substitutes. In any dynamic economy, new institutions, new industries and new products are constantly springing up, sometimes providing competition in areas previously considered to be the preserve of natural monopolies and therefore subjected to fairly close regulation. Unless a continuing lookout is kept for the emergence of new competition, the regulations may prevent the established firms from responding appropriately to this new competition. Such was the observation of the MacPherson Commission, appointed to inquire primarily into problems afflicting the railways.

The Commission found it necessary at the outset of its study to enlarge the immediate scope of its work and to relate the role of the railways to the competition that emanated from other types of transportation. This was a significant departure from the focus of previous inquiries into the performance of the railways.

Competing modes of transportation that had emerged in response to the development of secondary industry, particularly trucking and water carriers, were not subject to rate regulation "in any real sense" in the words of the Commission. They could set their prices at levels that attracted some of the traffic formerly carried by the railways. Imposed in the mid-nineteenth century when the railways exercised a substantial monopoly, the existing regulation restricted the freedom of the railways to vary rates in the face of competition. In its Report, the Commission noted:

> But the more competition is limited, the more the pricing of any individual movement will tend to be opportunistic, unrelated to the costs properly associated with the service performed. This, as a matter of course, finds its effects in the misallocation of resources in transportation, and distorts to a greater or lesser degree resource allocation in the rest of the community.
>
> Public action, therefore, in developing a National Transportation Policy, must seek to encourage competitive forces where the structure of the industries permits pervasive and effective competition to operate, and to regulate where it does not. In practice this amounts to developing agencies of regulation which recognize that freedom of pricing will bring efficiencies in those sectors of the transportation industry where the firms can be numerous and achieve satisfactory economies with commitments of capital small in relation to the total market.[2]

The Commission then went on to design a policy (subsequently embodied in considerable measure in the National Transportation Act of 1967) that attempted to limit rates only "where evidence of monopoly exists" but which in other areas did nothing to inhibit the "free play of competition or cushion the rough blows of competition in that segment of the whole transportation industry where a large number of firms will bring efficiency and flexibility".

One cannot help but be struck by the similarity between the recommendations advanced by the MacPherson Commission and the Porter Royal Commission on Banking and Finance. Both were established to study the problems faced by particular industries in the 1960's, and both foresaw that by weakening regulatory bonds and allowing competitive market forces to be given their head, governments would help to bring about a situation where these industries would serve the public more efficiently.

The Regulatory Process

The most economically significant direct government regulations that may be imposed on a line of business activity are those bearing on prices or rates, on conditions of entry, and on the amount and standard of services provided. Prices or rates may be fixed directly by the regulatory authority, or indirectly through restrictions on profits or rates of return on investment. The entry of new competitors into a line of activity may be regulated by licensing or other devices. Finally, regulation may require an enterprise to provide services (for example, railroad branch line services or airline feeder services) to a degree and of a standard that would not otherwise be provided.

In Canada, prices and rates are today set by regulatory bodies in such fields as agriculture, transportation, public utilities, telephone services, and publicly operated insurance schemes. To carry out their functions, the regulators must have access to detailed knowledge of the particular industry whose rates are being set: its revenues, its costs and the value of its assets, together with some conception of what might constitute a reasonable rate of return on investment in the industry. They must also have insight into the problems of the industry and be prepared to consider how these problems relate to the public interest. Even where the regulators' expertise and analytical ability are of a high order, however, they are likely to be confronted with substantial difficulties. Regulation of prices and rates of return may reduce the industry's incentive for efficient operation at the lowest possible cost. This is not invariably so; in some cases, the public-spiritedness and progressiveness of the industry's managers may go far to compensate for the lack of the usual market incentives. As a general rule, however, it has to be recognized that so long as a comfortable level of profits is being earned below the ceiling of the fixed price, management may be insufficiently stimulated to install new cost-saving technology.

When profits come to be squeezed, more interest in cost-saving technology naturally becomes apparent, but even then much managerial energy may flow into an attempt to persuade the regulatory authority that a rate increase is needed. The existence of a ceiling may, of course, benefit consumers if prices would otherwise be forced upwards under pressure of rising costs. But such benefits are short-lived and result in misallocation of resources not only in the regulated area, but in other sectors of the economy as well.

Essentially similar problems are encountered when rates of profit or return on investment rather than prices as such are regulated. Often, in situations of this type, much will be said about the "reasonableness" of prices and profits, but it must be asked whether costs are "reasonable" also, and what standards of reasonableness are being employed. Lacking any thoroughly trustworthy standards, one is left only with a suspicion that under more competitive conditions, prices and profits, or costs, or all three, might be appreciably lower than they are.

As was noted earlier, the MacPherson Commission advocated a policy of rate-setting only where competitive pressures were lacking. This seems to us an appropriate guiding light. The imposition of fixed rates by regulatory bodies should normally be considered a last resort, to be employed only where other means of social control appear certain to be ineffective.

Another type of regulation -- that affecting the entry of new competitors into an industry -- commonly involves governmental licensing of participants in certain economic activities. In some instances, the licensing is comparatively routine and permissive, and mainly of significance as a source of government revenue. In other instances, however, it may so operate as to restrict appreciably the number of competitors in a line of activity.

Such restriction is sometimes made necessary by technical considerations. Thus the limited number of radio and television frequencies unavoidably restricts the number of stations that may be allowed to operate (although technological advances may raise the limit from time to time), and competition is to that extent constrained. But restrictive licensing is not confined to this type of case. Municipal licensing of barber shops and taxis is an example of a widespread form of licensing whereby the number of competitors is restricted on grounds that have little or nothing to do with technology. Among these other grounds may be the desire of the licensing authority to ensure that participants in the licensed activity are of good character, adequately trained and capitalized, and generally likely to maintain appropriate standards of competence, cleanliness and vehicle repair. But mixed with this, or independent of it, may be a more general view that in the absence of restrictive licensing, the activity is likely to be characterized by chronic oversupply and a high rate of bankruptcies.

This view finds a certain cautious support in the literature of professional economics. It is recognized that a number of industries, constituting a relatively small proportion of total industry, have a chronic tendency to be overcrowded or "sick". The resulting situation does not necessarily work to the advantage of the consumer nor does it always further the objective of maximizing economic efficiency. Sometimes, for example, numerous small and inefficient producers may charge comparatively high prices and divide the business, rather than compete on a price basis.

There are, then, some few situations, including that of the skilled professions treated in the previous Chapter, where some degree of restrictive licensing can be justified as being in the public interest. But the decision to resort to such licensing should be based on careful observation and analysis of the activity in question. Moreover, the standards by which applicants for licences are to be judged should be clearly and publicly spelled out. Where no health, safety, technology, or "sick industry" considerations are involved, it should be a general policy of licensing authorities to license all comers. Finally, the work of the licensing agency should be subjected to periodic public review in order to ensure that the public interest continues to be promoted.

In addition to imposing rules in respect of rates and entry, regulatory agencies may stipulate that certain services must be provided even on an uneconomic basis. This type of regulation is frequently to be found in the transportation industry where certain privileges may be accorded to railways or airlines on condition that transportation facilities are made available to certain regions at a price that does not cover costs. Since regulatory bodies normally allow industries under their jurisdiction to earn a reasonable rate of return, however defined, on their overall operations, the provision of unprofitable services involves the pricing of other services at levels higher than would otherwise obtain. The users of profitable routes are thereby paying an indirect subsidy to uneconomic lines. Subsidization of this kind, and other more direct subsidies including farm subsidies, depletion allowances and the like, put federal and provincial governments squarely in the field of determining resource allocation among various claimants. There should be a careful and continuing examination of whether such subsidies are provided in a fashion that minimizes the costs involved, maximizes the opportunities for private decision-making, and places the burden of the subsidy where it belongs -- sometimes on the public at large, but sometimes on that part of the public receiving the major benefit from the subsidy.

Mergers in Regulated Sectors

When mergers occur in regulated industries, they may or may not require the approval of the regulatory authority. In the previous Chapter, for example, we noted that under the Bank Act, banks proposing to merge required the approval of the Minister of Finance but that the Act did not specify the criteria to be considered in assessing merger proposals. We believe that the process of arriving at decisions regarding mergers in regulated fields could well be improved if the views of the Department of Consumer and Corporate Affairs and the Competitive Practices Tribunal were sought out.

A provision in the National Transportation Act provides a useful precedent. The Act requires that notice of merger between companies in transportation fields under federal jurisdiction must be given to the Canadian Transport Commission, and the Commission must in turn give notice to the Director of Investigation and Research under the Combines Investigation Act. We strongly urge that this precedent be adopted by all regulatory bodies, and that the procedures be more formalized; the mere giving of notice does not necessarily ensure that the Department of Consumer and Corporate Affairs will have enough time to make an adequate assessment, or that its views will be received by an attentive audience. We recommend that the Department have and be seen to have a major role in respect of all mergers, including those within industries under the jurisdiction of a regulatory agency such as the Canadian Transport Commission, and those involving one company under such jurisdiction and another outside its scope. In many instances, the latter type of merger is not subject to the approval of the regulatory authority, despite the fact that such mergers may frustrate the attempts of the authority to achieve its basic objectives and in this and other ways work to the public detriment.

Economic Assessment of Regulation

On the whole, the process of economic regulation is difficult, cumbersome and time-consuming. These are characteristics that can be very disadvantageous in a fast-growing and fast-developing economy. To regulate an economic activity effectively, in such a way as to encourage a maximum contribution towards the achievement of overall efficiency in the economy, can be a highly demanding task. Precisely for this reason, the regulatory process stands in need of careful outside assessment.

Such an assessment is of course notably required at the very outset, when the question of whether or not to regulate is still being debated. Believing as we do that competitive market forces, where available, provide the surest stimulus to the efficient production of goods and services, we suggest that governments should regulate only those activities where competition would be either extremely feeble or overly wasteful of resources (the natural monopoly and "sick industry" cases); where genuine and important issues of health and safety, standardization, disclosure of information or fraud are involved; or where other well-defined non-economic or quasi-economic objectives are at stake and can only be furthered through regulation. The selection of the particular activities to be regulated should be done with great care and consideration, in such a way as to provide the public with the fullest possible information regarding the criteria to be used with respect to entry and prices and the likely amount of any economic costs that may be incurred.

We especially urge that all legislation setting up economic regulation contain as clear-cut as possible a statement of objectives, both to give guidance to the regulators and to provide a standard against which their performance can be assessed. The excellent preamble to the National Transportation Act of 1967 is a model to be emulated in this regard.

Once regulation has commenced, there should be established a procedure for periodic review to determine, firstly, whether the need for regulation persists, and secondly, if it does persist, whether the regulatory process is working in the direction and conforming to the objectives that the legislators intended, with as little damage as possible to economic efficiency. The prime responsibility for instituting such a review should lie with the legislature itself. With regard to broadcasting, for example, the general nature of the legislature's responsibility for regulations was conceived by the Committee on Broadcasting (1965) in the following terms:

> It is for Parliament to define the goals of the public enterprise and to ensure that the goals assigned to a public agency are achieved. It is not, we believe, possible for Parliament to supervise the details of the productive process or its administration without damaging the performance that Parliament itself has stipulated.
>
> Specifically, for the control of a public broadcasting system -- and in this context, we regard the public control of the privately owned broadcasters and that of the publicly owned agency as equally important -- the first task of Parliament is to set the goals. It must say clearly what it wants the broadcasters to do. In the past, Parliament has not stated the goals and purposes for the Canadian broadcasting system with sufficient clarity and precision, and this has been more responsible than anything else for the confusion

> in the system and the continuing dissatisfaction which has led to an endless series of investigations of it....
>
> Having set clear goals for the broadcasting agencies and delegated to an autonomous agency responsibility for the detailed supervision and control of the broadcasting system, it only remains for Parliament to establish a procedure to ensure that the goals it has set are in fact being met. The delegation of responsibility to the broadcasting agency is not, of course, any permanent surrender of Parliament's jurisdiction. Parliament remains supreme and can at any time redefine the goals or revise the form and powers of the agency. Until it does so by appropriate legislation, the goals remain and the powers of the agency remain, but Parliament should hold the agency accountable for the attainment of the specified goals.[3]

At the federal level, a committee of the House of Commons or Senate, or a joint committee of both, is the device that springs most readily to mind for the purpose of carrying out regular reviews of regulation and regulated activities. The House of Commons Special Committee on Statutory Instruments will no doubt be giving some attention to this matter, inasmuch as its terms of reference direct it to consider "procedures for the Review by this House of instruments made in virtue of any statute of the Parliament of Canada". These terms embrace regulatory activity by government departments as well as by semi-independent agencies.

Various arrangements for the review of regulation are clearly possible, and it will be for Parliament to decide what arrangements best suit particular activities. We would urge only that review arrangements make adequate provision for a consideration of the economic aspects of regulation.

Some industries (the construction industry is a good example) are governed by regulations imposed by all three levels of government, and it would be desirable to find some way of inquiring into the overall effects of existing pyramids of regulation, including their consequences for efficiency and consumer satisfaction. A suitable federal-provincial forum for this purpose might be set up as an ad hoc offshoot of regular federal-provincial meetings on other topics. At the very least, some simplification and rationalization of the three-level regulatory structure might be achieved.

In view of its fields of expertise and its particular interest in the maximization of economic efficiency, it would be logical for the Department of Consumer and Corporate Affairs to be called upon for its views whenever economically important regulatory policies are being formulated or reviewed within the federal government. Further than this, the powers of general inquiry given to the Department and to the Competitive Practices Tribunal under the proposed new legislation should be broad enough to permit study, where appropriate, of government-regulated and government-owned activities in the economy, even though the other clauses in the legislation may not in practice be applicable to these activities. While delicate situations may sometimes arise, the Department and the tribunal should consider it part of their duty to draw attention to remediable situations in respect of government-regulated and government-owned activities that are clearly at variance with the objective of maximizing economic efficiency. The Department should dedicate some specialized part of its research resources to this class of problem.

Government Enterprises

A third type of social control over industrial activities, occurring sometimes in conjunction with and sometimes independently of direct regulation, is the ownership of business enterprises by governments. In Canada, some of these enterprises are in the position of competing with privately owned enterprises in the same industry. Their performance as competitors may exert a significant influence on standards of efficiency in the industry as a whole. In some of their activities they may be pace-setters for the industry; in others they may be followers.

Some of the corporations now operating in Canada under federal or provincial ownership are subject to a certain degree of scrutiny and review with regard to efficiency, but the focus is almost exclusively on expenditures. At the federal level, for example, some enterprises may be required to submit their capital and/or operating budgets to Treasury Board, while a year-end audit of their financial statements is undertaken by the Auditor General. Others may operate with a much greater degree of independence on a purely commercial basis with no particular efficiency requirement by the legislature that has established them other than that they pay their way out of earned revenues.

We strongly urge the federal government to commit itself to the principle that the door be left open as widely as possible for the objectives of competition policy to permeate all of its activities, including those of its own enterprises. How far this door can be pushed open depends of course on the constraints imposed by objectives other than efficiency which influence the conduct of government activities. But to the fullest extent possible, acceptance of such a commitment not only by ministers but by heads of government enterprises and those down the line is highly to be desired.

Unless a federally owned enterprise has been specifically charged by Parliament to act otherwise, its use of practices such as refusals to deal or discriminatory buying (for instance, giving arbitrary preferences to domestic suppliers) should be subjected to the same tests in respect of efficiency as those appropriate for private enterprises. In cases where expenditures of federal government enterprises are scrutinized by Treasury Board and the Auditor General, the responsibility for ensuring that such enterprises do not engage in anticompetitive practices should be shared by these officials and the minister to whom the enterprise reports. The Department of Consumer and Corporate Affairs should draw to the attention of appropriate officials such evidence of the existence of undesirable practices by government enterprises as may come to light through its contacts with businessmen and consumers.

We urge provincial governments to accept a similar commitment and to make appropriate arrangements for ensuring that their enterprises uphold the efficiency objectives of competition policy wherever other objectives specified by the legislature do not intervene.

Government Departmental Activities

Government purchasing policies and contracts have a direct bearing on resource allocation and efficiency within the economy. Here again, certain procedures for review and scrutiny are already in place. Funds required to finance a particular program operated by a federal department go through several stages of examination, beginning with Treasury Board approval of the necessary appropriation, and ending with the Auditor General's examination and report to the Public Accounts Committee. But there is rarely, if ever, a watchful outside eye kept on the intervening period between appropriation and outlay. No one subjects departmental business dealings to the same criteria in respect of anticompetitive practices as apply to the dealings of private businessmen, nor can it be safely assumed that government purchasing policies are at all times bent on the achievement of efficient resource use. Again, objectives other than competition policy may intervene, but it is desirable that these other objectives should be clearly and publicly specified and that their possible detrimental effects in terms of economic efficiency should receive recognition. Subject to whatever constraints these other objectives may impose, it is important to ensure that the effect of departmental expenditure programs is not such as to distort the efficient use of resources. By unjustifiable discrimination among suppliers of goods and services or by favouring the large "reliable" firm to the exclusion of smaller and quite possibly more efficient suppliers (the letting of contracts by tender by no means necessarily guards against such a bias), government purchasing programs may not only impose unnecessary charges on the taxpayer, but also give uncalled-for encouragement to industrial concentration or other structural changes detrimental to the spirit of competition policy.

Treasury Board, the Auditor General and the Public Accounts Committee should actively concern themselves with an examination of the means by which federal departmental purchasing programs are carried out. Departmental officials should not hesitate to call upon the Department of Consumer and Corporate Affairs for whatever assistance that Department might furnish in measuring the effects of particular purchasing policies on economic efficiency. The Department, in turn, should pass on whatever information or complaints it may come across in respect of purchasing programs to the officials of the department concerned.

INTERNATIONAL ASPECTS OF COMPETITION POLICY

No discussion of competition policy would be complete without taking into account economic decisions and activities that are undertaken outside Canada. The relative efficiency of resource allocation in the rest of the world, taken as a whole, influences directly the well-being of Canadians, as does the degree to which our own resources are used to enhance or detract from the possibility of achieving an efficient use of human and physical resources on a world-wide basis. These are difficult questions, bearing not only upon the efficiency with which existing productive resources are now being used, but upon the pattern of production and the geographical location of productive facilities in the future.

The rise of the international corporation, controlling productive and distributive facilities in a number of countries, is an indication that there exists a recognizable entity called the world economy. In its present-day form, the international corporation is able within its own organization to make a variety of choices as to where it will expand production and sell output, and as to which outputs and inputs it will move internationally and in what proportions. Placing notable emphasis on the movement of technical information and other business information, it has become a major vehicle for so-called "technological transfer" between countries.

It is by no means naive to look on the world as such corporations do and to consider issues of the locus of productive and distributive facilities, the maximization of economic efficiency and other matters relating to competition policy from an international as well as a domestic standpoint. The fact is that if nations fail to pursue policies designed to promote more efficient resource use on a world-wide basis, and to act upon a recognition of the many different channels through which goods and services, including information, can with advantage be transferred, they will incur, both individually and collectively, a heavy cost in forgone output.

Obviously, these are questions on a scale and of an importance vastly transcending the typical day-to-day preoccupations of competition policy and the practicable administrative purview of the Department of Consumer and Corporate Affairs. The whole field of trade policy, for example, is involved. For many of the relevant areas, the prime responsibility lies and must continue to lie with other departments and agencies of government. But the Department of Consumer and Corporate Affairs should be kept informed on matters significantly related to its own major policy objectives and should be afforded the opportunity to make a timely and useful contribution to interdepartmental discussion of such matters.

Some of the main policies in respect of which there appears a reasonable prospect of obtaining fruitful international co-operation, and so promoting more efficient international resource use, may be enumerated. Conditioning resource use in a very fundamental way, tariff policies have from the beginning done much to shape the need for competition policy in Canada. What further reciprocal tariff reductions can be negotiated internationally will therefore be crucial. Already, however, the progressive reduction of tariffs in the postwar period has helped to throw into sharper relief the importance of various *non*tariff barriers to the international movement of goods and services. We leave for consideration in later reports of this Reference barriers associated with national patent, trademark and copyright systems, but mention here certain other barriers that might well be the subjects of international negotiation. These include regulations affecting such things as health protection, the grading and labeling of products, and construction standards -- all areas where national governments have legitimate regulatory functions, but where regulation can too often be employed as a protective device against foreign goods and services. The answer to this problem would seem to lie in patiently negotiated *common* international regulations, coupled with understandings that countries would not use such measures restrictively and would consult on the basis of well-defined codes affecting each area of regulation. This aspect of international competition gets little attention, primarily because it is so tedious. But agreement here would make it possible to facilitate competitive international trade flows, by reducing barriers and granting to the buyer a greater degree of assurance that he was not comparing one country's apples with another country's oranges.

Another apt candidate for international negotiation would be the purchasing policies followed by governments and their utilities and other enterprises. It is often the practice for these policies to discriminate in favour of domestic suppliers. The course of negotiations here might run from the provision of information on existing practices to the reaching of standstill agreements, and eventually to the signing of mutual undertakings to reduce domestic preferences.

In this broad landscape of policies affecting the efficiency of resource use on the international scale, national competition policies as usually conceived occupy a significant if hardly dominating part of the picture. They give rise to certain policy problems at the international level, in part because, although competition policies have been more widely adopted in the postwar period, their vigour and comprehensiveness vary markedly from country to country.

Two broad types of international problems in this area may be distinguished:

(1) unwanted extraterritorial impacts of one country's competition policy upon the economy of another; and

(2) problems calling for competition policy action that are beyond the scope of any one country's policy to resolve.

The principal mechanisms by which such problems are or might be dealt with appear to be three in number. The first mechanism involves bilateral consultative arrangements between countries, of which the 1959 Fulton-Rogers agreement between Canada and the United States is an example. Arrangements in effect between countries participating in the OECD Committee of Experts on Restrictive Trade Practices represent a small and tentative first step towards a second type of mechanism: that of multilateral agreements for consultation and co-ordinated policy action. A third mechanism, which a truly international competition policy would call for in dealing with problems beyond the capacity of any one country or even small group of countries to resolve, would be some form of supranational agency. This must realistically be regarded as lying some distance in the future, although some of the elements of such an agency may be discerned in that section of the European Economic Commission which is concerned with the administration of the clauses of the Treaty of Rome dealing with restrictive practices.

With regard to the first type of problem cited above (the unwanted extraterritorial impact of another country's competition policy), this has at various times been examined by Canadians both as a problem of economics and as a problem of national sovereignty, with the United States of course the other country chiefly in mind. We do not feel that we can usefully comment here on the sovereignty aspect; we note only that this aspect was treated in the Report of the [Watkins] Task Force on the Structure of Canadian Industry.[4]

So far as economic considerations are concerned, it may be said that impacts of any significance on the Canadian economy as a result of U.S. antitrust decisions have up to now been few and far between, and that there do not appear to be any strong reasons for supposing that the Fulton-Rogers procedures for advance consultation will not be adequate to head off possible unwanted impacts in the future. One new problem that might conceivably arise would be as a result of a scheme to rationalize one of the "miniature replica" sectors of Canadian secondary industry -- a sector characterized by too many plants and too short production runs in relation to the size of the market. If some of the firms involved in the prospective rationalization were subsidiaries of large U.S. companies, would the parent firms prevent their participation for fear of getting into trouble with U.S. antitrust? No categorical answer is possible to this question, but it has been a practice of U.S. antitrust authorities not to penalize companies for actions they or their subsidiaries undertake abroad at the formal behest of host governments. Assuming the continuation of this practice, a Canadian rationalization scheme that was largely or wholly embodied in a statute or government regulation would seem to be free of U.S. antitrust consequences, although it would no doubt be wise to utilize the Fulton-Rogers procedures if only as a means of demonstrating to U.S. representatives how the scheme made economic sense in Canadian circumstances.

Competition Policy

Turning now to problems calling for competition policy action which may be beyond the capacity of Canadian policy to resolve alone, we pass into an area where lack of solid information and analysis prevents any very firm statements from being made. Indeed, it is precisely this lack of information that would seem to be the first matter requiring international action. Further than that, the two major classes of problems worth discussion, however tentative, are those relating to international cartels and large international corporations.

It is unfortunate that the most recent published information of any comprehensiveness regarding the effect on the Canadian economy of international cartels dates back to 1945, when F. A. MacGregor, Commissioner of the Combines Investigation Act, undertook a study. In it, he documented the effects on Canada of three types of private cartels: arrangements between foreign suppliers of goods imported into Canada, arrangements by which Canadian subsidiaries of foreign companies were allotted exclusive access to the domestic market, and arrangements in which Canadian exporters participated with producers in other countries. Commissioner MacGregor noted that the short-term balance of national advantage and disadvantage from such arrangements was difficult to assess, and added:

> Any such balancing of national advantage and disadvantage from the operation of cartels is, however, misleading. Canada has a more serious interest in the totality of cartelization than in the mere sum of the effects of particular cartels. For cartel agreements are simply one important part of a network of restrictive practices, private and governmental, which spread over the world in the period between the two World Wars. For example, high tariffs, import quotas, discriminatory currency practices, exchange controls, subsidization of exports, contributed to the division of world markets and prevented the efficient use of world resources. National and private restrictive practices which impede the use of new technology, divide up markets and limit output are obstacles in the way of expansion in the flow of goods and services which, in the words of the Lend Lease Agreement, "are the material foundations of liberty and welfare of all peoples". Any narrow gains

> through such restrictive practices are lost in the curtailment of employment and production when such devices are extensively adopted. The interest of Canada in the revival of world trade and in the adoption of policies of expansion transcends any such balancing of possible advantages and disadvantages. The importance of an effective international policy to remove the serious restrictive elements in cartel operations as part of a general attack on all hampering trade restrictions is of much greater significance than the direct effect of the elimination of each separate undesirable cartel agreement.[5]

Although 24 years have passed, and much of the structure of restrictions described by the Commissioner has happily been dismantled, it cannot be assumed that significant international cartel arrangements affecting Canada no longer exist. It does appear that a combination of the increased importance of U.S.-based international companies in world business and the reluctance of such companies to enter into cartels, for fear of U.S. antitrust consequences if not for other reasons, may have reduced the scope for such arrangements. But there is information, including some contained in written briefs to the Economic Council, that suggest the persistence of noteworthy international cartels.

In formulating our recommendations in Chapter 6 on the subject of registered export agreements, we made what we believed to be a realistic assumption: that concerted international action to weaken or break up international cartels will be slow in coming. If and when it does come, the qualifications for registered export agreements will have to be re-examined in the light of whatever obligations Canada assumes as a participant in multicountry competition policy action.

For the immediate future, it would seem well for the Department of Consumer and Corporate Affairs to devote some of its resources to discovering from available sources as much as possible about the effects on Canada of present-day international cartels. The subject might lend itself to a contract study. Once the areas where vital information was lacking had been established, steps could be taken within appropriate international bodies to see if some of the gaps might be filled with the aid of other countries. These bodies would include, as well as GATT and OECD, the United Nations Commission on Trade and Development (UNCTAD) which has evinced an interest in restrictive practices. The launching of a formal general inquiry in Canada by the Competitive Practices Tribunal might also be considered if this seemed likely to add substantially to the stock of available information.

The subject of the large international corporation has only rather recently engaged the attention of serious analysts, and the time is far from ripe to make definitive pronouncements on the nature and behaviour of this class of institution, if indeed it can really be said to constitute a single class. Whatever its true nature, it does appear to have impressive potentials for both good and ill. Its capability for acting as a high-speed mechanism for the transfer of knowledge and as an otherwise useful and efficiency-maximizing component of a truly international economy has already been noted. However, its size and geographical spread naturally raise concerns about the possibilities of market power and abuses of that power on a scale too great to be effectively countered by the competition policy of any one country. Some projections done by Professor J. N. Behrman are quite startling: they suggest that the output of international corporations might rise from about one-eighth of the non-Communist world's GNP in 1967 to about one-third in 1987. By the latter date, the output of the non-Communist world might be about equally divided between international corporations, the United States (excluding international corporations), and other countries.[6] This would indeed seem to imply great market power, and if serious abuses of that power took place, this could well be the circumstance that called into being a supranational agency in the field of competition policy.

In the shorter run, however, the main need would again seem to be for information, including particularly information concerning the extent to which international corporations pose problems for Canadian competition policy significantly different and harder to deal with than problems emanating from domestically owned parts of the economy.

In general, it seems clear that the future holds a likelihood of gradually increasing international action in respect of competition policy -- at first mainly in the realm of consultation and information-gathering, then later perhaps in the domain of agreed action to deal with problems international in their scope. Canada should participate in this development and urge it forward in those areas of particular interest to her. Because of intercountry differences in approaches to competition policy, progress on a broad front may be slow. But this need not prevent smaller groups of like-minded countries from reaching arrangements on problems of concern to them. The nonparticipation of only a few major countries in an international cartel or other anticompetitive practice may be enough to weaken greatly its restrictive effects.

CHAPTER 9

IMPLEMENTATION AND ADMINISTRATION OF COMPETITION POLICY

It would be a misallocation of resources if we attempted to make comprehensive and highly detailed recommendations concerning the administration of competition policy by the Department of Consumer and Corporate Affairs and the proposed Competitive Practices Tribunal. To a very considerable extent, proposals for day-to-day administrative arrangements should be worked out by those who have had long experience in administering this type of policy. We cannot, however, entirely neglect the subject of administration. The point was made earlier that the effective operation of competition policy involves some very special and acute problems of administration and enforcement, problems that are often not adequately appreciated by policy critics. The significant changes in the philosophy, structure and application of Canadian competition policy which we have proposed will clearly require substantially altered administrative arrangements. There is some obligation, therefore, to provide at least a general idea of the possible shape of these arrangements.

To begin with, there should be in the background some reasonably coherent view of the overall mission of the Department of Consumer and Corporate Affairs and its appendages. Taken purely at its face value, the name of the Department might well give rise to an impression that it embraces the larger part of those functions of the federal government that are of major interest to consumers and corporations. Such an impression would be false. In our *Interim Report on Consumer Affairs*, we recognized the impossibility of assigning all federal functions affecting the consumer to the Department of Consumer and Corporate Affairs, and, accordingly, recommended the actual transfer to the new Department of only a small proportion of such functions. However, we did urge most strongly that the Department play, in the field of consumer affairs, "a central co-ordinating role within the federal government".

Would it be a logical extension of this recommendation that the Department should play a similar co-ordinating role in the field of corporate affairs? We think not. Examined closely, most of the functions affecting corporations that have been assigned to the

Department have in common a rather special character. To a large extent, they deal with areas where government intervenes in the relations between corporations and consumers in order to play a mediating and in some instances a policing role. The nature of the role is clear enough in such fields as consumer protection and competition policy, although in the latter area the consumer interest may be at one or more removes, as in a case under the Combines Act involving relations between a manufacturer and a supplier of raw materials. The role is not so evident in respect of such things as the Bankruptcy Act and the Companies Act. Here, surely, the concern is with the relations between corporations, creditors and investors. But the ultimate individual investor and depositor in corporations and their creditors is really none other than the consumer in one of his many economic roles, so that the provisions of the Bankruptcy Act and the Companies Act which endeavour to safeguard the interests of investors and creditors may be regarded as being, in the final analysis, forms of consumer protection. In a similar vein, our later report on patents, copyrights, trademarks and registered industrial designs will attempt to point out the significant relationship between these responsibilities of the Department and the consumer interest.

We continue, therefore, to view the mission of the Department of Consumer and Corporate Affairs as being primarily the advancement of the consumer interest -- conceived, however, in very broad terms. The dominant underlying theme of the present Report has been the desirability of directing competition policy towards the maximization of economic efficiency, real income and consumer welfare. This objective should serve as a guide not merely for competition policy, but for all the activities of the Department of Consumer and Corporate Affairs.

Despite the fact that many federal government functions of great relevance to the consumer are not direct responsibilities of the Department, the Minister and staff of the Department should feel themselves to have, and should be generally recognized to have, a useful and relevant point of view to bring to bear upon Cabinet and other intragovernmental discussions of these functions. Accordingly, when policy is being reviewed or formulated in areas such as tariffs, taxes, subsidies, government purchasing policies, and activities of regulatory agencies and government-owned enterprises, where there are likely to be significant effects on the consumer interest in an efficiently performing Canadian economy, provision should be made for the Department of Consumer and Corporate Affairs (and in appropriate cases, the Competitive Practices Tribunal) to participate in a timely and effective way. The Department of Consumer and Corporate Affairs should take the initiative in suggesting the creation of new machinery of interdepartmental consultation (and in some cases, intergovernmental consultation) wherever this seems to be required.

Internal Organization of the Department of Consumer and Corporate Affairs

Turning now to administrative arrangements within the Department, we propose only to recommend some broad changes designed to bring the structure of the Department more into accord with the concept of a unified departmental mission and with our recommended changes in Canadian competition policy.

For the present, our proposals chiefly concern the types of activity now carried out by the Combines Investigation Branch and the Consumer Affairs Branch. We leave for later reports administrative proposals affecting such other units as the Patent and Copyright Branch; however, our present proposals have been designed to provide a structure to which the other branches of the Department could, in due course, be appropriately related.

Under existing arrangements, the Combines Investigation Branch and the Consumer Affairs Branch have a number of functions in common. Both engage in research and informational activities. Both also have operating functions including the investigation of possible breaches of the law and associated regulations, and the setting in motion, whether through the courts or otherwise, of appropriate enforcement machinery whenever breaches are discovered.

The Consumer Affairs Branch is a relative newcomer to the scene and is still in the process of building, notably on the side of economic research. It will be essential for the effective discharge of consumer affairs functions to have available a strong research base. As for the Combines Investigation Branch, a major implication of our proposals for competition policy is that, here too, there should be some enlargement of the research base, this notwithstanding the provision of some research resources to the Competitive Practices Tribunal. We have opted for a competition policy directed more clearly and predominantly than in the past to the achievement of economic ends, a policy that will require for its success a first-rate job of economic fact-gathering and analysis.

A real danger in the present administrative arrangements, it seems to us, is that the Consumer Affairs Branch may tend to be regarded by people not closely in touch with it as a kind of poor relation (a glorified "hot line" or consumers' complaint bureau), in contrast with a Combines Branch that addresses itself to serious economic and legal problems. This would be a travesty of the conception of consumer affairs that underlay our *Interim Report* on that subject. It would also be completely at variance with our conception of a basic economic mission for the Department. The responsibilities of the present Consumer Affairs Branch and of the Combines Branch are directed towards what in the final analysis are common economic ends, and the means that they employ for attaining those ends have many similarities also.

One way of dissipating this danger would be simply to amalgamate the Consumer Affairs Branch and the Combines Branch. This would have the advantage of pooling available resources of legal and economic talent, with the result that the use made of those resources could be more flexible and efficient. They could be deployed to deal with the most pressing problems of any given time, regardless of the distribution of these problems between the consumer affairs sector and the competition policy sector.

It seems to us, however, that such an amalgamation would create too large and unwieldy a unit. Moreover, it would not deal with a second danger which is apt to threaten any organization in which major research and operational functions must co-exist. This is the danger that research resources will be largely taken up with the day-to-day needs of the operational side for information and analysis, with the result that more basic, longer-term research, ultimately just as necessary for the support of operations, does not receive adequate attention.

We therefore propose a different arrangement under which the present Combines Branch and Consumer Affairs Branch would disappear and be replaced by two new units organized along different functional lines. One unit or branch, to be called the Research and Information Branch and to be headed by a Director, would be concerned with the provision of economic research and informational services in relation to competition policy and other aspects of consumer affairs. It would also furnish economic research and informational services, as required, to the Patent and Copyright Branch and other parts of the Department. An important longer-term aim of the research unit would be the gradual accumulation of a body of knowledge about many aspects of the workings of the Canadian economy at the industry level. Priorities would need to be established and a long-term research plan adhered to which was insulated from the day-to-day needs of the enforcement authorities.

A second branch, to be called the Legal Proceedings Branch and also to be headed by a Director, would be concerned with enforcement functions. It would address itself to all aspects of legal proceedings. Among other things, it would be responsible for the preparation of cases to go before either the Competitive Practices Tribunal or the ordinary courts. Following somewhat the example of its opposite number on the research side, it would provide necessary legal services to other parts of the Department. We would regard it as important so to arrange matters that as many as possible of the Department's competition policy and other cases were handled by government lawyers. Provincial bar regulations in some provinces may stand in the way of this, but it may well be that any such impediments could be discussed at one of the regular federal-provincial meetings of Attorneys General, and appropriate action agreed upon. There appears to be no advantage and considerable inefficiency in the present arrangements whereby lawyers in private practice are briefed to take combines cases. The procedure is not only time-consuming, involving as it does considerable duplication of effort, first inside then outside the Combines Branch, but also tends to inhibit the development of a high degree of specialization and legal expertise in combines cases.

Although most of the Department's economists would be located in the Research and Information Branch, there would have to be some economic expertise in the Legal Proceedings Branch also, in order to provide the necessary economics "back-up" for the immediate preparation of cases. Obviously, there would have to be extremely good co-operation and communication between the two branches, and the structure of their interrelations would have to be worked out with care. Steps would also have to be taken to continue certain public safeguards. The present right and responsibility of the Director of Investigation and Research to publish an annual report, for example, might in future be held jointly by the Directors of the new branches.

The administrative position of the Competitive Practices Tribunal vis-à-vis the Department would have to be thought through in some detail. It would be absolutely essential for the Tribunal to have, and to be seen to have, a high degree of independence in its decision-making. It should be in nobody's pocket -- least of all that of the Department, whose lawyers would be appearing before it. This crucial requirement of independence is one of the reasons why we have recommended that the Tribunal have an adequate economic research staff of its own.

At the same time, independence need not and should not mean isolation. Expertise in the field of competition policy will always be limited, and the Tribunal and its staff should have no hesitation in communicating informally with the available experts, whether these be located in business firms, in universities, in the Research and Information Branch of the Department, or wherever. The proposed civil law basis for the Tribunal's operations and the large content of persuasion and public education in its approach to competition policy problems should make such contacts easier to arrange with propriety. Where a general inquiry was being carried out, a large measure of co-operation between the Tribunal's staff and the Research and Information Branch of the Department would be essential.

Enforcement of the Law: The Primacy of Prevention and Deterrence

The cheapest and most efficient way in which a law can promote the ends envisaged for it by the legislators is for that law to be so administered and enforced, and so understood and accepted by the public, that the fewest possible infractions occur. Prevention and deterrence, rather than convictions, are the elements to be maximized in the long run, even though convictions may make an indispensable contribution to deterrence, particularly during the early history of the law. The only proper way in which to judge how well a law has been administered and enforced is to examine, as best one may, how much progress has been made towards achieving the law's fundamental objectives. The number of cases brought to court, and the percentage of those cases won, may be very unreliable guides to this. Depending on circumstances, high numbers and percentages may just as well be an indication of poor administration and enforcement as they are of good.

Criminal Offences

It will be recalled that we have proposed the following five offences for essentially *per se* treatment under criminal law:

(1) collusive arrangements between competitors to fix prices;

(2) collusive arrangements between competitors to allocate markets;

(3) collusive arrangements between competitors to prevent the entry into markets of new competitors or the expansion of existing competitors;

(4) resale price maintenance; and

(5) misleading advertising.

The problem of obtaining maximum deterrence in respect of these offences should be relatively straightforward. In the first place, the law should be clear and its objectives widely appreciated. What it prohibits and, of equal importance, what it does not prohibit, should be known. Both potential offenders and those who may be injured by offences should be aware of the law and of the remedies and sanctions that it provides.

A continuing program of publicity is obviously desirable if public understanding and acceptance of the purposes of competition policy is to be achieved. The present Director of Investigation and Research under the Combines Investigation Act has done an outstanding job of publicizing the legislation to lawyers and businessmen through the medium of speeches, lectures and seminars. While this program should certainly be continued, more attention now needs to be given to acquainting the general public, partly through the mass media, with the nature and purpose of competition policy and its relation to other policies affecting consumers.

The compliance program conducted by the Director of Investigation and Research has provided an effective means of helping businessmen to avoid infractions of the law. The need for it would not be entirely eliminated by the changes that we have proposed. In continuing such a program, however, care should be exercised to avoid stepping over the fine line which divides stating what the law *is* from a *de facto* creation of new jurisprudence in the course of a private interview. (We have no reason to believe that this line has been transgressed in the past; we note it only as a persisting hazard of any compliance procedure.) Where there exists uncertainty about the boundaries of the criminal part of the Combines Investigation Act as revised, but where the officers of the Crown are convinced that this uncertainty can be reduced, they should bring a case in the boundary area on the first appropriate occasion. It should be a high-priority objective to give the courts full opportunity to clarify the interpretation of the law where it needs clarifying.

Programs of publicity and compliance, then, can do much to help bring about prevention and deterrence. They must, however, be supported by a widespread belief that infractions of the law stand a heavy risk of being detected and proceeded against, and for this to exist there must be a credibly vigorous and comprehensive program of enforcement. From the points of view of both deterrence and equity, it is not good for people to think that either they or others have a considerable chance of "getting away with it". It is to be hoped that strong enforcement in the first instance will fairly quickly produce a state of affairs where chances of flouting the law undetected are generally rated as low, with the result that less enforcement activity will be necessary from that point on.

Sanctions should continue to consist of fines, imprisonment and prohibition orders, the latter being necessary to ensure the discontinuance of the anticompetitive behaviour. Fines, to be meaningful, should be large enough to hurt, having regard to the size of the enterprise or enterprises involved. Where provincial practices permit, the lawyers of the Legal Proceedings Branch should suggest fines rather than wait upon the request of the court. It might be well also to follow the practice of the Food and Drug Directorate, which makes publicly available lists of convicted offenders under the legislation for which it is responsible.

An important element of deterrence in the U.S. antitrust laws is provided by the possibility that conviction on antitrust charges may lead to civil suits by private parties believing themselves to have been injured by the anticompetitive behaviour for which the defendants have been convicted. If successful, complainants in such suits may recover treble the amount of damages which they are judged to have sustained. It would seem to be worth exploring whether the deterrent effect of the criminal law portions of Canadian competition policy could be enhanced by opening up an avenue for single-damage suits by private parties.

Civil Offences

Enforcement of that part of competition policy assigned to the Competitive Practices Tribunal would necessarily evolve somewhat differently. Again, prevention and deterrence would be major long-run objectives, but they could only develop gradually. As of the day on which the tribunal opened its first hearing, no offences, in any strict sense, would exist. Only as the tribunal's decisions accumulated and consistent patterns emerged would it become clear that certain kinds of mergers and trade practices, in certain circumstances, stood a high likelihood of being found undesirable by the tribunal and subjected to injunctive or other remedies. In this fashion, and assuming appropriate diligence on the part of the Directors of Legal Proceedings and of Research and Information in locating and bringing before the tribunal instances of the kinds of merger and practice in question, a deterrent effect would build up.

It is to be hoped that the tribunal would in fact achieve much of its effectiveness through techniques of public education and persuasion. To this end, it would be important that the tribunal put much effort into reporting fully to the public on its decisions and explaining their economic rationale. Some sort of compliance procedures would be very likely to spring up naturally in respect of mergers and trade practices. This could be a useful adjunct to other educative techniques, provided the rule suggested earlier (that a compliance procedure should seek to explain existing law but not in any sense to create new law) was faithfully followed. The tribunal should be expected to feel a strong obligation fully to publicize and explain any important jurisprudential development -- any real or apparent change of line. The device of issuing general guidelines, as advance public notice of the view which the tribunal intended to take in the future in respect of certain types of merger or trade practice, might occasionally be utilized. Here again, the tribunal would be expected to lay out a suitable economic analysis as a basis for its decision.

If, in the face of hopes to the contrary, it became apparent that a practice which the tribunal had found to be undesirable in a number of cases continued to be repeated and that, therefore, deterrence was not operating effectively, the tribunal could inquire more generally into the practice, seeking to determine why it was so prevalent and what more effective remedies might be recommended to the government.

Importance of Adequate Resources

The proper carrying out of the proposals in this Report would require an increase in the annual cost to the federal treasury of administering Canadian competition policy -- now approximately one million dollars. We believe that the potential benefits to the Canadian economy of a competition policy more effectively oriented towards the achievement of economic efficiency would justify an increase of reasonable proportions in the resources available. As a form of social control of industry, well-working competitive markets supported by competition policy are remarkably cheap by comparison with alternatives such as direct regulation.

Review and Assessment of Competition Policy

Law must be kept up to date if the public is to retain respect for it, and to this end we have recommended a decennial review of competition policy. This should not be taken to imply, however, that no interim review should be contemplated. On the contrary, a virtually continuous review should take place, with particular attention being devoted to how new departures in the policy are working out in practice. Some of this review should be internal, within the Department of Consumer and Corporate Affairs, but the greater part should be public and external. Parliament, consumer and producer groups, and interested private citizens should be given every opportunity to observe and understand the workings of the policy. We would particularly commend to the Canadian Association of Consumers and the Canadian Consumer Council the view that competition policy deals with matters of central importance to consumers, and that the administration of the policy by the Department of Consumer and Corporate Affairs and by the Competitive Practices Tribunal should accordingly be subjected to close and critical scrutiny by consumer representatives, assisted as required by economists and other qualified experts. The communications media should make every effort to fulfil their role so that this continuous debate is brought to the attention of all elements of the public. We urge lawyers, academics and other experts to offer constructive criticism of the work of the tribunal, not just to readers of learned journals but also to a broader audience.

Care should be taken to assess the policy in a really meaningful way. It is all too easy to become heavily concerned with conviction statistics and other relative trivia of enforcement. What really counts (and is unfortunately much more difficult to assess) is the extent to which the policy is furthering the public interest in the efficient use of resources by the Canadian economy.

CHAPTER 10

CONCLUSION

In this final Chapter, it is perhaps useful to draw together, even at the risk of repetition, the main principles that have guided us in formulating our recommendations for an effective Canadian competition policy. In the first place, we have taken the view that the general set of competition policy should be one that aims at the achievement of efficient resource use in the Canadian economy. Second, we believe that some form of social control should be exerted over all commercial activities, and that over the greater part of the Canadian economy, efficient resource use will be more readily brought about through policies that maximize the opportunities for the free play of competitive market forces. The use of other forms of social control, namely, government regulation and government ownership, should be brought to bear only on those activities where monopolistic tendencies have all but eliminated competitive market responses, or where the protection of the consumer interest in matters such as health, safety, fraud, disclosure and standardization, among others, requires the implementation of explicit government regulations.

To put at least some flesh on the bones of these principles, we have recommended that an important part of Canada's competition policy legislation be on a civil rather than a criminal base, and that a specialized tribunal be created. Uppermost in our minds in suggesting these changes is the view that certain features of criminal law and procedure, such as the onus of proof beyond a reasonable doubt and the handling of charges by ordinary courts in ways that do not permit a full exploration of economic facts and analyses, are ill-suited to the effective treatment of some situations and practices relevant for competition policy. For this reason, it is suggested that only five business practices should continue to be regarded as criminal offences, and that the language of the statute invest the definition of these offences with a greater degree of certainty and fair warning than is now the case. For the rest, we have made the asssumption that it would prove constitutionally possible for the federal government to establish a civil tribunal, perhaps under the power to regulate trade and commerce. This tribunal would address itself to mergers, business practices and export and specialization agreements. Unlike the five instances where criminal law still appears to be a valid approach, most of the practices to be referred to the tribunal are capable in some circumstances of working to the public advantage, but the distinction between likely good and bad effects may require a difficult weighing of relevant economic circumstances and probabilities, and therefore a kind of expertise that only a body of mixed professional disciplines could provide. The tribunal would be armed with injunctive remedies, with the power to recommend other remedies, and with a power of general inquiry.

Consistent with the principle that some form of social control over commercial activities is highly to be desired, competition policy should be extended to those service industry activities not already covered by it. This area is of increasing economic importance, and it no longer seems logical, if indeed it ever did, to exempt service activities from competition policy.

We have also invited provincial governments to interest themselves in the civil law aspects of competition policy and to participate in its implementation and administration.

These, then, form the major elements of our approach and our recommendations. Some readers of this Report will undoubtedly be disappointed that we have not dealt with all of the suggestions that we have received for detailed changes in the Combines Act, that we have not "solved" such particular competition policy problems as those associated with the relations between oil companies and service stations and with conglomerate mergers, and that we have not tried to fill the large and distressing gaps that presently exist in the stock of thorough and reliable studies of individual Canadian industries. We would indeed like to have done all these things, but given the limitations of time and resources which applied, we felt it best to concentrate our efforts on devising a new framework for competition policy within which matters of the sort mentioned could be more effectively handled.

Some critics, by contrast, may fault us for doing too much by way of extending competition policy well beyond the activities of those private entrepreneurs to whom the Combines Investigation Act now chiefly applies. But our view is that the proper objectives of competition policy extend far beyond the Act and beyond the federal Department of Consumer and Corporate Affairs. A concern for the public interest in efficient resource use should properly extend to other federal government departments, to provincial and municipal governments, and to the great array of government enterprises and regulatory agencies.

Our concept of the role that can usefully be played by an effective and properly administered competition policy has laid great emphasis on efficiency. In doing this, we may have conveyed an exaggerated impression of the power of competition policy to promote efficiency. In fact, sole reliance on competition policy would not be nearly enough. Mention has been made in this Report of the great importance of other policies in promoting efficient resource use. Among such other policies are those relating to taxation, tariff, manpower, government purchasing, and the regulation of transport and other activities. In some of these policies, objectives other than efficiency may at times take a higher priority, and such objectives are by no means necessarily to be disparaged. Nevertheless, all levels of government could well pay increasing attention to the degree to which programs and policies, frequently designed for different purposes and set in place to meet short-run situations, affect the efficiency of resource use. In this Report we have put forward for consideration by governments some possible approaches by which the objectives of competition policy can come to take a more prominent part in their decision-making. In the next Report on this Reference, we will be concerned with another group of government policies -- those relating to patents and copyrights -- which also have a significant part to play in efficient resource allocation and which are closely tied to some elements of competition policy.

The implementation of a new approach to competition policy will require that the public be well informed concerning objectives, methods and limitations. We have made several recommendations in respect of the need for a *continuing* flow of information to the public. Since at the outset there will be no body of case law pertaining to matters coming before the tribunal, close attention will have to be paid to its work if the public is to be informed as to what practices, under what circumstances, are likely to be struck down or altered. To assist in this process of public education, we have invited all sections of the Canadian public to actively interest themselves in the work of the tribunal and have suggested that wide publicity be given to its reports.

The success of our recommendations will depend fundamentally on two things. Reference has been made to the assumption that the proposal for the transfer of a large part of Canada's competition policy to civil law will be found constitutionally valid. But of equal importance, appointments to the tribunal and its staff, and to the professional staff of the Department of Consumer and Corporate Affairs, must be of the highest calibre. Great care must be taken to ensure that appointments are based solely on the high qualifications that the effectiveness of this new body will demand, and that tenure is sufficiently long to enable experience to be built up and an effective unit created. On the other side of the coin, it is of equal importance that those best qualified to serve on this body of experts should be willing to make themselves available and to shoulder the burden of the very difficult tasks which our proposals would place upon them.

APPENDIX I

PRESS RELEASE, PRIVY COUNCIL OFFICE, JULY 22, 1966

The President of the Privy Council, the Honourable Guy Favreau, Q.C., today announced that the Government has requested the Economic Council of Canada to undertake a study of certain important aspects of the responsibilities of the Registrar General of Canada and his department under the Government Organization Act, 1966, which is awaiting proclamation.

The terms of reference are as follows:

"In the light of the Government's long-term economic objectives, to study and advise regarding:

(a) the interests of the consumer particularly as they relate to the functions of the Department of the Registrar General;

(b) combines, mergers, monopolies and restraint of trade;

(c) patents, trade marks, copyrights and registered industrial designs."

In making the announcement, the Minister recalled that on May 24, 1966, on second reading of the Government Organization Bill, the Prime Minister informed the House of the Government's intention to ask the Economic Council of Canada to look at the field of consumer affairs along with some of the other functions now to be undertaken by the Registrar General under the new legislation, with a view to providing advice as to the courses of action that seem best suited to meeting the needs of the Canadian people and the Canadian economy in the consumer field.

The Government has decided that as part of this study, the whole question of combines, mergers, monopolies and restraint of trade should be referred to the Economic Council for a fundamental review in the light of current and prospective needs of the Canadian economy; and furthermore, that another aspect of the work of the new department, namely, patents, trade marks, copyrights and registered industrial designs, should also be included in the fundamental economic study to be undertaken by the Council.

Mr. Favreau further stated that the importance of this study cannot be overestimated as a first and necessary step in the determination of a cohesive economic policy in relation to these important matters considered as a whole and in relation to each other with a view to bringing the policy in these matters into harmony with the overall economic policy of Canada and the needs of the consumer and other important segments of the economy.

The Council will be requested to press forward with this comprehensive study as swiftly as is practicable in order that appropriate legislation may be prepared thereafter with a minimum of delay. To expedite this process it is also the intention that officials shall press forward their study in those aspects of these fields which may be advanced without duplication or interference with the work of the Economic Council. In this way it is the Government's intention that the soundest policy may be developed and translated into legislation as speedily as is possible consistent with the clarification of the constitutional position and the proper role of the federal authorities.

The Economic Council will be free to make interim reports on such particular aspects of the study as the Council deems appropriate to enable the Government to consider taking initial steps consistent with the general review.

With particular reference to proposals for amendments to the Combines Investigation Act that have been the subject of discussion in Parliament and the press, and of submissions by individuals and groups, the Minister stated that it is most important that this legislation should not be amended piecemeal. Any amendments to the legislation ought to be in keeping with its fundamental philosophy and in furtherance of it. When consideration is being given to reviewing the general structure and philosophy of the Act, it would be very unwise to enact immediate temporary and piecemeal amendments to correct particular situations. At a time when a general review is in contemplation, such particular measures ought to be taken up and considered in the context of the whole review and any revision that may take place in the light of the findings and recommendations of the Economic Council.

Referring to the Report of the Restrictive Trade Practices Commission concerning the Distribution and Sale of Automotive Oils, Greases, Anti-Freeze, Additives, Tires, Batteries, Accessories, and Related Products (1962) (T.B.A. Report), the Minister said that in studying the recommendations of the Commission the Government has viewed most sympathetically the recommendations in that report which are intended, if possible, to improve the situation which has given rise to much concern on the part of the service station dealers in their relations with their oil company suppliers, particularly in relation to the practices of exclusive dealing and tying arrangements, as well as consignment sales. The Government has given a great deal of careful thought to the whole matter and is of the opinion that the recommendations of the Commission, if implemented, would be unlikely to give the relief sought by the service station dealers if the legislation must be drafted in terms of criminal law as is the case at present in view of the constitutional law decisions of the courts. It is therefore the intention of the Government that this particular recommendation for amendment of the legislation should be taken up and considered as part of any revision of the Act as a whole in the light of both the views of the Economic Council and the constitutional position as it may emerge.

APPENDIX II

SELECTED READINGS -- U.S. ANTITRUST POLICY

An attempt is made in this list to present a variety of viewpoints. From an economic policy viewpoint some of the most useful writings are to be found in some of the Law Journals of U.S. universities. This list is intended to provide material additional to that cited in the notes and references in this Report.

APPENDIX III

THE STRUCTURE OF THE CANADIAN ECONOMY (CHAPTER 5) --

ADDITIONAL DATA

A. Summary of a Survey of Concentration in Canadian Manufacturing Industries, 1964

In attempting to quantify the degree of concentration that exists in an industry, economists have relied mainly on two kinds of measures, both of which take account of the number of firms and their relative size. The first provides an answer to the question: what percentage of total sales in an industry (or of some other size indicator such as employment, or value of shipments) is accounted for by a specified number of firms? The second approach employs what is called an inverse measure of concentration, and answers the question: how many of the largest firms account for a specified percentage (usually 80) of an industry's sales or employment or shipments? This study uses the latter measure, which was also employed by Rosenbluth in his study "Concentration in Canadian Manufacturing Industries".[1] More than a desire for comparability is reflected in this decision. The number of the largest firms accounting for 80 per cent of shipments is a good indicator of the number of effective competitors; the remaining 20 per cent usually represent fringe competitors.

In this Report, the data on concentration are divided into five classes, with each class consisting of a range of the number of firms required to account for 80 per cent of an industry's shipments. The class intervals are: 1-4; 4.1-8; 8.1-20; 20.1-60; and more than 60 firms. Similar calculations were made for the number of establishments or plants. The results are summarized in Table A-1 below.

A technical note about these calculations is in order here. To obtain concentration levels for firms, the individual industry bulletins of the Dominion Bureau of Statistics, which are on an establishment basis, were examined to obtain the number of establishments in an industry operated by the same company. The calculation was then made on the assumption that in arriving at 80 per cent of shipments for a given industry one must include all the establishments of multi-establishment firms. Although this may result in a downward bias in the number-of-firms figure in some industries, this assumption is consistent with Rosenbluth's findings that establishments operated by multi-establishment firms tend to be larger than those operated by companies with only one plant. Furthermore, in all industries where it was felt that this assumption might be too strong, a check was made by DBS on the basis of unpublished 1962 employment figures. In cases where the employment figures placed the industry in a different concentration category than the calculation based on shipments, the former classification was the one used.

The concentration levels for establishments had, of necessity, to be estimated, since the DBS grouped data could not be disaggregated. The method used was one developed by Rosenbluth whereby maximum and minimum estimates are obtained, then averaged to yield point estimates.

To return to the Table, it is obvious that the level of plant concentration, while fairly high, is considerably lower than the level of firm concentration. The significant differences between plant and firm concentration, particularly in the more concentrated industries, may result from the exploitation of economies of scale arising outside the confines of a single plant. For example, potential economies of scale may be achieved by larger firms in such "extra-plant" areas as marketing, finance, research and development and the use of managerial talent. However, until further research provides more definitive answers, these "extra-plant" economies remain largely uncharted territory. It is also essential to recall at this stage the cautionary statement contained in the body of this Report: that concentration is only one of many determinants of market power. The presence of exports and imports, the narrowness or breadth of the industry delineations, and the division of a number of industries into local and regional markets, all mean that the levels of concentration sometimes overstate and sometimes understate the potential market control of the largest firms. However, the major conclusions are not affected in a significant way when a more carefully selected set of industries is examined.

Table A-1

ESTIMATES OF INDUSTRIAL CONCENTRATION LEVELS:

181 STANDARD INDUSTRIES, 1964

Number of Establishments and Firms Required to Account for 80 Per Cent of Shipments		Cumulative Percentage Distribution of the Number of Industries		Cumulative Percentage Distribution of the Value of Shipments	
		Establishments	Firms	Establishments	Firms
Up to:	4	6.6	14.4	1.4	11.9
	8	25.9	37.0	14.2	33.8
	20	57.4	63.5	42.9	55.2
	60	81.7	82.8	72.7	74.7
More than:	60	100.0	100.0	100.0	100.0

Table A-2

FIRM CONCENTRATION IN 77 INDUSTRIES IN 1948

AND IN 81 INDUSTRIES IN 1964

Number of Firms Required to Account for 80 Per Cent of Employment (1948) or Shipments (1964)		1948	1964
Up to:	4	13.9	17.2
	8	22.5	38.7
	20	37.4	55.1
	60	57.0	73.8
More than:	60	100.0	100.0

Source: The 1948 figures are based on Rosenbluth's study and those for 1964 on the industry bulletins of the Dominion Bureau of Statistics.

The changes in the level of concentration in Canadian manufacturing industries over time are shown in Table A-2. The proportion of economic activity accounted for by the industries with high levels of concentration -- i.e. industries where eight or fewer firms account for 80 per cent of employment or shipments -- increased from 1948 to 1964. However, the comparison is subject to the serious reservation that different size variables were used in the two years. Firm sizes for 77 of the 96 industries investigated by Rosenbluth in 1948 are based on number of employees, while for the 81 industries in 1964 which matched the 77 in 1948 the size variable used was the value of shipments. As Rosenbluth pointed out, using the number of employees to measure firm size as a general rule results in a lower level of concentration than when shipments are used. This deficiency in the data prevents us from arriving at more than a tentative conclusion regarding the trend of concentration over this 16-year period.

Bearing in mind this warning about differences in measurement, the data on concentration were examined to select from the 1964 data those industries that were reasonably comparable with measured industries in 1948, thus permitting an inter-year assessment of change in concentration. These numbered 64. There was an increase in concentration in 36 and a decrease in 23, while in 5 there was virtually no change (within five percentage points). Looking at the value of shipments of these 64 industries in 1964, the 36 industries in which concentration increased accounted for 40 per cent of the total, while 39 per cent came from the 23 industries of decreasing concentration and 21 per cent from the 5 industries in which there was virtually no change.

B. Summary of Merger Activity in Selected Industries in Canada, 1945-61

The Combines Branch of the Department of Consumer and Corporate Affairs conducted a questionnaire survey of publicly reported acquisitions made by corporations whose activities fell within the scope of the Combines Investigation Act. Acquisitions covered the period from 1945-61 and were defined as the purchase of the whole or part of an operating business capable of sustaining an independent operation and costing in excess of $10,000. Coverage of mergers where the acquiring company was engaged in manufacturing, mining and trade was virtually complete but, because of the limited extension of the Act, the survey covered in only a fragmentary way acquisitions by firms in the service industries.

In the body of this Report, mention was made that annual variations in the number of acquisitions undertaken over this 16-year period bore a close statistical relationship to the average level of stock market prices. To be more precise, acquisitions by Canadian-controlled companies were positively related to average Canadian stock prices, and acquisitions by foreign-controlled companies were most closely related to the level of merger activity in the United States, which was in turn positively related to the average level of stock prices in that country.

The distribution of the acquired companies by major industrial sector is shown in Table A-3 below. Because of large differences in the size of acquired companies, the relative importance of various industries as sources of acquisitions depends on whether one looks at the numbers of companies or their values. In either case, the manufacturing sector emerges as being of paramount importance. The trade sector, on the other hand, only merits a large weight when merger activity is measured in terms of the *number* of firms acquired.

Table A-3

PERCENTAGE DISTRIBUTION OF ACQUIRED COMPANIES

BY MAJOR INDUSTRIAL SECTOR, 1945-61

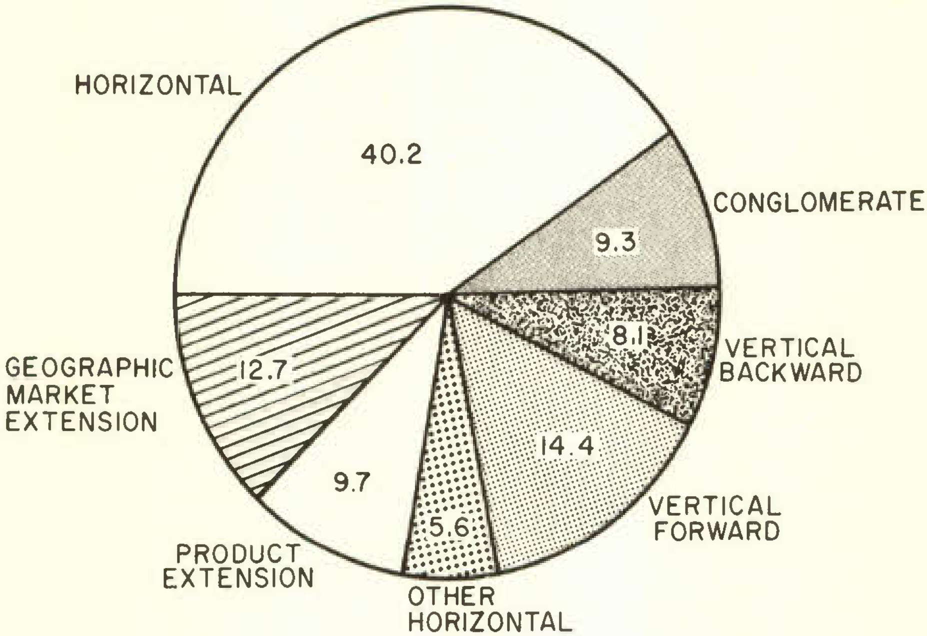
	Number	Assets
	(Per cent)	
Agriculture, forestry, fishing and trapping	1.9	0.9
Mines, quarries and oil wells	6.9	8.2
Manufacturing	49.1	68.3
Transportation, communication and other utilities	7.5	9.6
Trade	29.0	8.7
Finance, insurance and real estate	0.9	2.8
Community, business and research service industries	3.3	0.8
Construction	1.3	0.7

One of the important characteristics of mergers that must be taken into account in gauging their impact on the structure of industries is the market relationship between the merging firms. Chart A-1 summarizes the distribution of the acquisitions by market relationship.

Chart A-1

TYPES OF ACQUISITIONS, 1945-61

(Percentage distribution)



Source: Questionnaire survey carried out by the Director of Investigation and Research, Combines Investigation Act.

The types of acquisitions were established by first examining the market relationship between the main activities of the acquirer and acquired. This relationship was used in all save those cases where no clearly defined relationship -- i.e. where the relationship was conglomerate -- was present. Where, however, there was no clearly defined relationship between firms' *main* activities but one did exist between *subsidiary* activities, the latter relationship was employed as the criterion. The resulting classification of merger activity is of necessity somewhat arbitrary. There is seldom, for example, a clearly defined line between ordinary horizontal relationships, geographic market extension relationships and product extension relationships. Moreover, many of the acquisitions labeled as geographic market extension took place in industries where the acquirer had, in effect, entered the acquired's market area before the acquisition through his sponsorship of national advertising campaigns. Other problems of classification arose in cases where the acquiring firms were already vertically integrated or where they were active in more than one industry.

In Chapter 5 of this Report, attempts were made to estimate, however crudely, the number of mergers undertaken in the 1945-61 period which might have been brought before the proposed Competitive Practices Tribunal, had it been in existence, for examination as to possible detrimental effects on the public interest. It will be recalled that in arriving at a rough figure of 17 per cent out of the total number of takeovers of manufacturing firms that took place in this period, only those mergers that involved the acquisition of firms in highly concentrated industries (industries in which up to eight firms accounted for 80 per cent of the total shipments of the industry) were selected. The relevant data from which this estimate was made and which was depicted in Chart 5-2 are shown in Table A-4.

The questionnaire survey included one question that was put to the acquiring companies in an attempt to elicit the proportion of merger activity that was undertaken in order to realize cost reductions through maximizing economies of scale. The precise question was: "Detail the economies, if any, secured by the merger which were not otherwise obtainable." One possible interpretation of this heading is that only economies resulting from acquisitions that could not be realized by internal growth should be reported. However, the nature of the responses suggests that firms reported on *all* economies, whether or not they could be obtained by other methods of growth.

Table A-4

TYPES OF MERGERS AND LEVEL OF CONCENTRATION (1964) OF MANUFACTURING INDUSTRIES WITHIN WHICH ACQUIRED FIRMS WERE OPERATING,[1] 1945-61

Level of Concentration		Type of Merger: Horizontal	Geographic Market Extension	Product Extension	Other Horizontal	Vertical Forward	Vertical Backward	Conglomerate	Total
1-4	Number	28	9	7	0	1	1	7	53
	Assets in \$ million(2)	*121.2*	*165.6*	*37.1*	*0*	*1.2*	*10.0*	*7.1*	*342.1*
4.1-8		36	9	3	6	11	7	11	83
		125.0	*32.5*	*3.8*	*12.1*	*274.5*	*201.0*	*22.1*	*671.1*
8.1-20		54	17	27	9	9*	13	27	156
		97.3	*55.6*	*51.1*	*9.1*	*9.7*	*14.0*	*45.8*	*282.6*
20.1-60		73	9	22	8	6	10*	23	151
		223.5	*8.4*	*16.5*	*15.4*	*12.1*	*8.5*	*164.8*	*449.2*

Table A-4 (cont'd.)

60.1 and more	101* *55.3*	33 *38.2*	40 *69.8*	11 *7.2*	6 *16.6*	16 *42.1*	27 *18.9*	234 *248.1*
Total	292 *622.3*	77 *300.2*	99 *178.4*	34 *43.7*	33 *314.1*	47 *275.6*	95 *258.9*	677 *1,993.1*

* Includes one acquisition for which neither assets nor amount paid was reported.

(1) Only includes those acquisitions where both the acquiring and acquired firms were classified in manufacturing and where the industry within which the acquired firm was operating could be determined at the narrowest industry level for which concentration figures had been estimated. There were numerous instances in which the acquired firm could only be placed in a three-digit industry that contained several four-digit industries. The 677 acquisitions included in the Table capture 76 per cent of all the acquired firms classified in the manufacturing sector.

(2) Where assets were not reported but the amount paid was, the assets were estimated from the amount paid.

Source: Questionnaire survey carried out by the Director of Investigation and Research, Combines Investigation Act.

There is another factor that might explain the rather surprising results that emerged from the tabulation of the responses. The validity of the responses rests on the assumption that responsibility for completing this part of the questionnaire was placed with someone who had the knowledge to give a complete answer or who was willing to do some research. Even the person most familiar with a particular acquisition may have had difficulty remembering the details if it was a small acquisition that had taken place as long as 17 years earlier. Some of these difficulties are reflected in a nonresponse rate of about 36 per cent on this question. In addition, firms that did respond did not try to provide quantitative information. This made their task manageable, since it is much easier to isolate areas where economies had occurred than to estimate their extent. However, this factor is both a strength and a weakness of the tabulation shown in Table A-5. While it may lend some reliability to the responses in those areas reported to be the most important sources of economies, the crucial question of *how* important still remains unanswered.

There was one questionnaire for each acquisition. In tabulating the responses, problems arose quite frequently when more than one economy was mentioned, since the answers were in essay form and were not ranked. In such cases the economies were ranked on the basis of the impression conveyed to the questionnaire editors of their relative importance. The distribution in Table A-5 is based on the economies that were ranked first. This permits a one-to-one correspondence between, on the one hand, the number of times *any* economies were reported and the number of times *no* economies were reported, and, on the other hand, the number of acquisitions covered. The response rate varied among each of the three categories. In the case of mergers involving a horizontal relationship between manufacturing firms, 71 per cent of the questionnaires attempted to detail reported economies; the response rate covering all acquired manufacturing firms fell to 67 per cent while the broader tabulation for all mergers covered by the survey elicited answers on only 64 per cent of the questionnaires. Nonresponses were eliminated from the tabulations.

Table A-5

PERCENTAGE DISTRIBUTION OF REPORTED ECONOMIES IN ALL ACQUISITIONS AND IN THOSE WHERE THE ACQUIRED FIRM WAS CLASSIFIED IN THE MANUFACTURING SECTOR, 1946-61

Reported Economies	Manufacturing Industry Horizontal	Manufacturing Industry All	All Industry All Acquisitions
Administration and management	33.5	27.2	24.7
Integration of plants and use of raw materials	15.2	9.5	6.5
Volume buying	2.7	2.8	5.4
Cheaper to buy than build	2.7	3.5	4.3
Promotion, selling and distribution	3.1	3.3	4.6
Transportation	4.0	3.2	2.9
Improved position in selling	1.8	1.5	1.9
Integration of nonmanufacturing establishments	1.3	0.7	1.8
Cheaper financing	0.0	0.2	0.9
Now cheaper to produce than purchase commodities	0.9	1.2	0.6
Negligible or no realized economies	34.8	46.9	46.4

Several figures in Table A-5 are worth noting. First, there is the large percentage of acquisitions that, in the opinion of the acquiring company, yielded negligible or no economies. However, the percentage of cases where this occurred was substantially lower for horizontal acquisitions within manufacturing. This is to be expected, since the closer the market relationship between the merging firms, the larger is likely to be the number of points where the same or similar operations are carried on and the greater is the potential for economies to be realized. Conversely, one would expect negligible or no economies to be reported where the merger involved firms having no clearly defined market relationship between their main activities. And in fact this was so in almost 60 per cent of the acquisitions of manufacturing firms that fell into our definition of conglomerate. If those conglomerate mergers involving a broadly horizontal or vertical market relationship between the firms' *subsidiary* activities were included, the actual percentage of conglomerate mergers in which no economies were reported would be even higher.

A second point that stands out is that administration and management were considered to be far and away the most important sources of economies. It is of interest that this was the case not only for all acquisitions but for horizontal market relationships within manufacturing. Given the attention that has been focused on scale and specialization in manufacturing, one might have expected, in looking at reasons for horizontal acquisitions, that responses would have clustered more heavily on economies achieved through the integration of plants and the better use of raw materials. That economies in administration and management were reported more frequently must be regarded as a surprising finding.

Some of the difference in the importance attached by the acquiring firms to these two reasons may be due to the difference in the speed with which they yield cost savings. If plants are too small to fully exploit scale economies, placing them under common ownership will not suddenly make them bigger. Only over a period of years may it be possible to consolidate production in larger plants. However, if the merging firms are duplicating the production of more than one product, they may be able to lengthen production runs by specializing output within the different plants. This should take much less time to accomplish than the building of new facilities. But very little detail was offered in the replies when integration of plants was given as a source of economies, and increased specialization was mentioned in only a small number of cases.

We can only repeat that too much should not be read into these results and that a good deal of further exploration and analysis is required in this area.

C. R&D Expenditures by Firm Size

One aspect of corporate behaviour with which public policy has concerned itself in Canada is research and development. But as Chapter 5 pointed out, competition policy cannot and should not be administered on the basis of any such easily conceived assumption that the larger the size of a firm, the greater the amount of R&D and innovation that will be undertaken, or that a larger volume of R&D expenditures will always necessarily produce benefits commensurate with the resources absorbed. Instead, there will be required a case-by-case approach in the examination of those aspects of market structure, behaviour and performance where R&D plays an important role.

Table A-6 presents an analysis of R&D expenditures undertaken intramurally by 684 companies in 21 broadly defined industries in 1965. Again it is necessary to inject a warning about the limitations of this analysis in light of the lumpiness of the industrial categories. But a count of the size classification of the largest spenders serves at least to refute any simple notion that R&D expenditures rise with firm size. As Table A-6 reveals, in nine industries the highest relative R&D expenditures were incurred by the smallest size class, while middle-sized firms predominated in seven industries and the largest is only five industries. Any assessment of the benefits produced by the expenditures undertaken is beyond the scope of this analysis.

Table A-6

CURRENT INTRAMURAL R&D EXPENDITURES
PER ONE HUNDRED DOLLARS OF SALES,
BY INDUSTRY AND COMPANY SALES, 1965

APPENDIX IV

THE INTERDEPENDENCY OF THE CANADIAN ECONOMY

In Chapter 6 of this Report, we recommend that steps be taken to open a road for the federal government to enact civil legislation in the field of competition policy. In doing so, we explicitly disavow any desire to establish exclusive federal occupancy of this field; on the contrary, we express the hope that the provinces will come to play a useful role in the field under the constitutional powers already available to them. But we must recognize at the same time that the federal government has hitherto been the sole *de facto* occupant of the field, that certain industrial activities international and/or interprovincial in their scope would be impossible to subject effectively to any provincial competition policy, and that there exists a valid concept of the Canadian economy as a coherent whole with numerous links of interdependence between its various parts. In the light of these considerations, and of the severe constraints which the exclusively criminal law basis has imposed on Canadian competition policy in the past, we conclude that it is essential to have a federal "presence" in the field based partly on civil law.

The purpose of this Appendix is to document somewhat further the concept of the Canadian economy as an interdependent organism. This is necessarily done in terms of available statistics, which, though highly suggestive, are far from complete and ideal for the purpose. They cannot, for example, be readily adjusted to give greater weight to "basic" industries such as transportation, banking, steel and cement. Such a weighting might well be justified on the grounds that links of interdependence involving such industries are more strategic than other interindustry relationships.

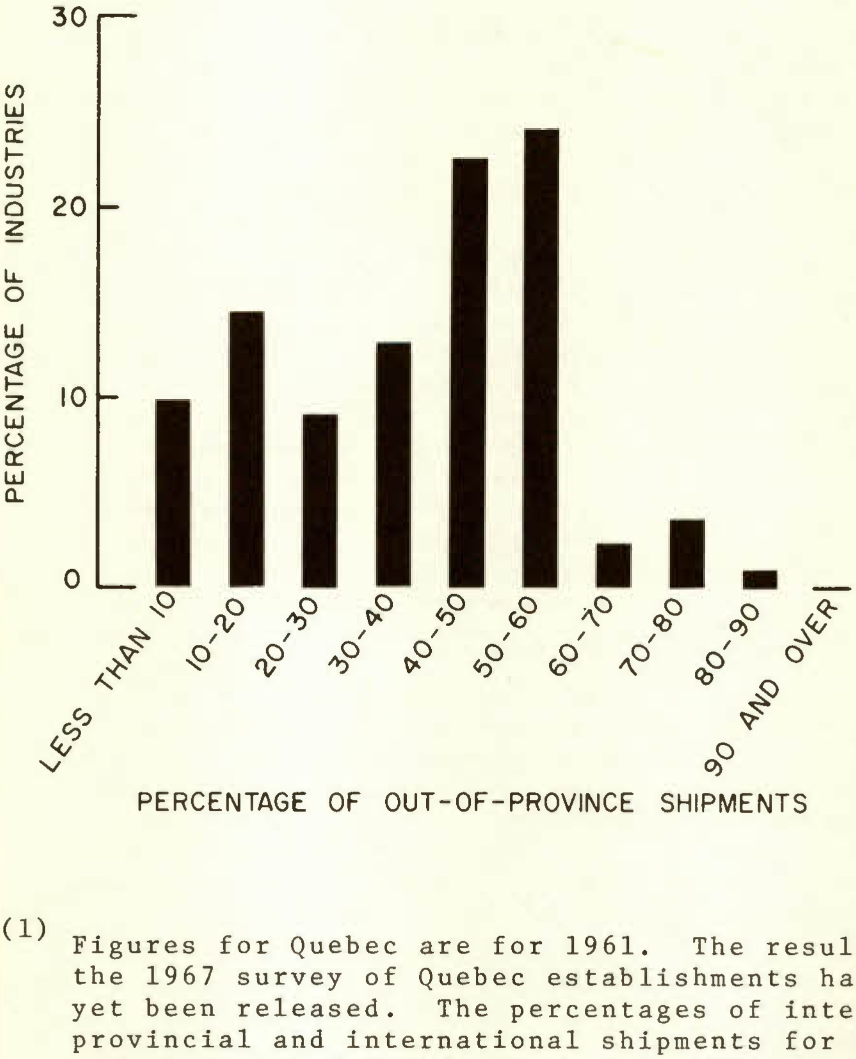
The particular statistical evidence given here related to the extent to which plants in any province or region (a) draw from suppliers, and (b) sell to customers, located in other provinces or regions or in foreign countries. This covers only one aspect of interdependence, and it does not of course clearly isolate the reasons why the degree of interdependence varies from industry to industry. The reasons are many and varied; a few only may be suggested here. A firm's output may be of such a nature that it must locate close to either or both of its sources of supply and its market outlets. As was pointed out in Chapter 5, many service industries, industries producing perishable products, and industries where the bulk or weight of the product is high relative to its value, fall into this category. Some firms not producing for sales direct to consumers may be so strategically located that the bulk of their output may be efficiently produced and distributed within the region in which they are located. Under former tariff and other arrangements, this was to a large extent the situation of the complex of automobile parts and accessory plants serving the major automobile assembly plants in Ontario. Now, however, with the institution of the North American automobile agreement and the growth of assembly operations in Quebec, markets outside Ontario have become relatively more important.

Still other firms may show only a very insignificant degree of reliance on other regions or countries because they are faced with barriers to entry into these areas which frustrate attempts to expand their markets.

It must also be appreciated that the statistics document only what might be called "primary interdependence". They reveal nothing about the secondary effects of firms' purchases and sales. The activities of a firm that buys all its requirements within the region in which its plant is located may still have a very significant, although less direct, impact on other regions from the effect of its purchases on firms that rely on outside sources of supply. Similarly, shipments immediately destined for the same province in which they are produced are often reshipped after further processing to manufacturers outside the province, for use as inputs into their products, or move on directly to consumers in other provinces. Any study of the degree to which industries or parts of industries in any province are related to the economy outside the province should in principle take into account all relationships between industries, both within the province and outside it. Unfortunately, the information with which to make such detailed analysis is not available. The input-output data that are at hand provide, nevertheless, a useful starting point.

Chart A-2

INTERPROVINCIAL AND INTERNATIONAL SHIPMENTS
AS PERCENTAGE OF TOTAL SHIPMENTS BY ESTABLISHMENTS
IN 132 FOUR-DIGIT MANUFACTURING INDUSTRIES
IN CANADA IN 1967(1)



(1) Figures for Quebec are for 1961. The results of the 1967 survey of Quebec establishments have not yet been released. The percentages of interprovincial and international shipments for Quebec and the rest of Canada were combined using the respective shares of each in total Canadian sales in each industry. Where weights were not available, Quebec was given a weight of 35 per cent and the rest of Canada 65 per cent.

The first source of information is data on the destination of shipments made in 1967 by establishments in 132 manufacturing industries in Canada taken from a survey conducted by the Dominion Bureau of Statistics. Based on this tabulation, we have calculated the percentage of the total output of these industries shipped outside the province in which the production facilities were located. As Chart A-2 shows, close to 30 per cent of the manufacturing industries sold over 50 per cent of their output in other provinces and in international markets. In only 10 per cent of the industries tabulated did shipments outside the production region account for less than 10 per cent of the sales of the industry. There were 13 manufacturing industries in this group: feed, wooden boxes, corrugated boxes, engraving and duplicate plates, cement, lime, concrete products, ready-mix concrete, stone products, poultry processing, ice cream, embroidery, and men's clothing contractors. It should be noted that this list is probably incomplete. If the data had incorporated all Canadian manufacturing industries rather than just the 132 manufacturers for which information was available, one might also expect a relatively low percentage of reliance on extraprovincial and international markets to have shown up in such industries as soft drinks, bakeries, flour mills and milk pasteurizing plants. On the other hand, some of the other industries excluded might well have shown above-average degrees of dependency on other regions and other countries.

Table A-7, which supplements Chart A-2, indicates that the picture of dependency on outside markets is not substantially altered if the classification is done on the basis of the *value of shipments* rather than the number of industries.

It is difficult to draw a clear line between "high" and "low" dependence on a purely statistical basis. A firm might sell as little as 5 per cent of its output outside its own province or region; yet the sudden loss of that 5 per cent would be a highly distressing event.

An analysis of the destination of shipments is only one aspect of interdependence. Another concerns the source of raw materials and other inputs used in the productive process. The relevant data on this subject are available only for each of the Atlantic

Provinces. For purposes of a sample presentation here, Nova Scotia -- the largest Atlantic province in terms of economic activity -- has been selected. The basic figures are data for 1960 on the degree to which 58 Nova Scotian firms relied on sources outside the province for their supplies of material inputs. First, however, to provide a reference point for comparisons with Chart A-2, extraprovincial shipments made by these same industries, which include some nonmanufacturing as well as manufacturing industries, are shown in Chart A-3. The higher degree of reliance on interprovincial and international markets shown by manufacturing industries, as compared with nonmanufacturing industries, is one of the significant features of this Chart.

Table A-7

INTERPROVINCIAL AND INTERNATIONAL SHIPMENTS AS PERCENTAGE OF TOTAL SHIPMENTS BY ESTABLISHMENTS IN 132 FOUR-DIGIT MANUFACTURING INDUSTRIES IN CANADA IN 1967(1)

Interprovincial and International Shipments as Percentage of Total Shipments	Percentage of Industries and Shipments Accounted for by Industries in Each Decile Range	
	Industries	Shipments(2)
0- 9.9	9.85	13.52
10- 19.9	14.39	11.34
20- 29.9	9.09	5.53
30- 39.9	12.88	15.06
40- 49.9	22.73	18.26
50- 59.9	24.24	28.94
60- 69.9	2.27	1.16
70- 79.9	3.79	5.33
80- 89.9	0.76	0.79
90-100.0	--	--

M: Manufacturing industries.
P: Primary nonmanufacturing industries.
S: Service industries.

(1) Inputs include only those not produced in Nova Scotia and purchased outside the province.

(2) 37 manufacturing, 7 primary nonmanufacturing and 14 service industries.

Chart A-4 indicates in a rough way the extent to which the materials and equipment required to produce the goods and services of Nova Scotian industry in 1960 came from sources outside the province. This, however, gives only a partial picture of the dependence on outside resources, because the "imported" materials and equipment include only those items that could not also be obtained from competing sources within the province. "Competitive" items obtained partly from within the province and partly outside it are not included, and this feature of the statistics is not readily remediable. Even on this understated basis, the Chart indicates that nearly a third of Nova Scotia manufacturing industries obtained 30 per cent or more of their material inputs wholly from outside the province. As in the case of shipments, the "external dependency" percentage for nonmanufacturing industries was markedly lower.

Table A-8 combines the data on shipments to other provinces and to international markets with the data on the material inputs not produced in Nova Scotia and purchased from outside suppliers. The first box in this input-output matrix shows that only 11 of the 58 industries tabulated here for the year 1960 were relatively independent of *both* outside markets *and* outside sources of supply. ("Relatively independent" is here defined to mean a degree of dependence on extraprovincial supplies and sales equivalent to less than 10 per cent.)

To sum up, these various figures indicate that even in terms of the two dimensions of interdependency for which some sort of statistics exist, it is possible to identify a major sector of interdependent industry in Canada. The concept of a national economy, characterized by important visible trade flows between itself and other national economies, and between its own provinces and major economic regions, is therefore a valid one. There seems no doubt that the concept would be reinforced if it were possible to delineate statistically some of the "invisible" or service flows between regions, including notably flows of banking, financial and federal government services. It is also worth observing, in the present context, that *potential* as well as *actual* flows between regions are of economic significance: the fact, for example, that a Nova Scotian user of steel made within the province could, if he wished, obtain tariff-free steel from outside the province (subject, of course, to a freight rate) is highly likely to influence the price and other conditions under which he obtains steel locally. One could further develop this example to show how the efficacy of competition policy and the strength of competition in one province or region would affect the strength of competition and consumer welfare in other provinces and regions.

All this leads to the conclusion that an effective competition policy in Canada must be organized, at least in part, on a national basis. We have noted that while provincial governments have not hitherto participated to any important extent in competition policy, they could do so under their existing constitutional powers, and we would urge them to follow this course. But even if this were done, a federal component of competition policy, part of it based on civil powers, is clearly indispensable.

APPENDIX V

A. SELECTED SECTIONS OF THE *EXISTING* COMBINES INVESTIGATION ACT REFERRED TO IN THE TEXT OF THIS REPORT

2. In this Act, ...

(e) "merger" means the acquisition by one or more persons, whether by purchase or lease of shares or assets or otherwise, of any control over or interest in the whole or part of the business of a competitor, supplier, customer or any other person, whereby competition

(i) in a trade or industry,

(ii) among the sources of supply of a trade or industry,

(iii) among the outlets for sales of a trade or industry, or

(iv) otherwise than in subparagraphs (i), (ii) and (iii), is or is likely to be lessened to the detriment or against the interest of the public, whether consumers, producers or others;

(f) "monopoly" means a situation where one or more persons either substantially or completely control throughout Canada or any area thereof the class or species of business in which they are engaged and have operated such business or are likely to operate it to the detriment or against the interest of the public, whether consumers, producers or others, but a situation shall not be deemed a monopoly within the meaning of this paragraph by reason only of the exercise of any right or enjoyment of any interest derived under the *Patent Act*, or any other Act of the Parliament of Canada;

29. Whenever, from or as a result of an inquiry under the provisions of this Act, or from or as a result of a judgment of the Supreme Court or Exchequer Court of Canada or of any superior, district or county court in Canada, it appears to the satisfaction of the Governor in Council that with regard to any article there has existed any conspiracy, combination, agreement, arrangement, merger or monopoly to promote unduly the advantage of manufacturers or dealers at the expense of the public, and if it appears to the Governor in Council that such disadvantage to the public is presently being facilitated by the duties of customs imposed on the article, or on any like article, the Governor in Council may direct either that such article be admitted into Canada free of duty, or that the duty thereon be reduced to such amount or rate as will, in the opinion of the Governor in Council, give the public the benefit of reasonable competition.

30. In any case where use has been made of the exclusive rights and privileges conferred by one or more patents for invention or by one or more trade marks so as

(a) unduly to limit the facilities for transporting, producing, manufacturing, supplying, storing or dealing in any article or commodity which may be a subject of trade or commerce; or

(b) unduly to restrain or injure trade or commerce in relation to any such article or commodity; or

(c) unduly to prevent, limit or lessen the manufacture or production of any such article or commodity or unreasonably to enhance the price thereof; or

(d) unduly to prevent or lessen competition in the production, manufacture, purchase, barter, sale, transportation or supply of any such article or commodity;

the Exchequer Court of Canada, on an information exhibited by the Attorney General of Canada, may for the purpose of preventing any use in the manner defined above of the exclusive rights and privileges conferred by any patents or trade marks relating to or affecting the manufacture, use or sale of such article or commodity, make one or more of the following orders:

(i) declaring void, in whole or in part, any agreement, arrangement or licence relating to such use;

(ii) restraining any person from carrying out or exercising any or all of the terms or provisions of such agreement, arrangement or licence;

(iii) directing the grant of licences under any such patent to such persons and on such terms and conditions as the court may deem proper, or, if such grant and other remedies under this section would appear insufficient to prevent such use, revoking such patent;

(iv) directing that the registration of a trade mark in the register of trade marks be expunged or amended; and

(v) directing that such other acts be done or omitted as the Court may deem necessary to prevent any such use;

but no order shall be made under this section which is at variance with any treaty, convention, arrangement or engagement respecting patents or trade marks with any other country to which Canada is a party.

32. (1) Every one who conspires, combines, agrees or arranges with another person

(a) to limit unduly the facilities for transporting, producing, manufacturing, supplying, storing or dealing in any article,

(b) to prevent, limit or lessen, unduly, the manufacture or production of an article, or to enhance unreasonably the price thereof,

(c) to prevent, or lessen, unduly, competition in the production, manufacture, purchase, barter, sale, storage, rental, transportation or supply of an article, or in the price of insurance upon persons or property, or

(d) to restrain or injure trade or commerce in relation to any article,

is guilty of an indictable offence and is liable to imprisonment for two years.

(2) Subject to subsection (3), in a prosecution under subsection (1) the court shall not convict the accused if the conspiracy, combination, agreement or arrangement relates only to one or more of the following:

(a) the exchange of statistics,

(b) the defining of product standards,

(c) the exchange of credit information,

(d) definition of trade terms,

(e) co-operation in research and development,

(f) restriction of advertising, or

(g) some other matter not enumerated in subsection (3).

(3) Subsection (2) does not apply if the conspiracy, combination, agreement or arrangement has lessened or is likely to lessen competition unduly in respect of one of the following:

(a) prices,

(b) quantity or quality of production,

(c) markets or customers, or

(d) channels or methods of distribution, or if the conspiracy, combination, agreement or arrangement has restricted or is likely to restrict any person from entering into or expanding a business in a trade or industry.

(4) Subject to subsection (5), in a prosecution under subsection (1) the court shall not convict the accused if the conspiracy, combination, agreement or arrangement relates only to the export of articles from Canada.

(5) Subsection (4) does not apply if the conspiracy, combination, agreement or arrangement

(a) has resulted or is likely to result in a reduction or limitation of the volume of exports of an article;

(b) has restrained or injured or is likely to restrain or injure the export business of any domestic competitor who is not a party to the conspiracy, combination, agreement or arrangement;

(c) has restricted or is likely to restrict any person from entering into the business of exporting articles from Canada; or

(d) has lessened or is likely to lessen competition unduly in relation to an article in the domestic market.

33. Every person who is a party or privy to or knowingly assists in, or in the formation of, a merger or monopoly is guilty of an indictable offence and is liable to imprisonment for two years.

33A. (1) Every one engaged in a business who

(a) is a party or privy to, or assists in, any sale that discriminates to his knowledge, directly or indirectly, against competitors of a purchaser of articles from him in that any discount, rebate, allowance, price concession or other advantage is granted to the purchaser over and above any discount, rebate, allowance, price concession or other advantage that, at the time the articles are sold to such purchaser, is available to such competitors in respect of a sale of articles of like quality and quantity;

(b) engages in a policy of selling articles in any area of Canada at prices lower than those exacted by him elsewhere in Canada, having the effect or tendency of substantially lessening competition or eliminating a competitor in such part of Canada, or designed to have such effect; or

(c) engages in a policy of selling articles at prices unreasonably low, having the effect or tendency of substantially lessening competition or eliminating a competitor, or designed to have such effect,

is guilty of an indictable offence and is liable to imprisonment for two years.

(2) It is not an offence under paragraph (a) of subsection (1) to be a party or privy to, or assist in any sale mentioned therein unless the discount, rebate, allowance, price concession or other advantage was granted as part of a practice of discriminating as described in that paragraph.

(3) The provisions of paragraph (a) of subsection (1) shall not be construed to prohibit a co-operative society from returning to producers or consumers, or a co-operative wholesale society from returning to its constituent retail or wholesale members, the whole or any part of the net surplus made in its trading operations in proportion to purchases made from or sales made to the society.

33B. (1) In this section "allowance" means any discount, rebate, price concession or other advantage that is or purports to be offered or granted for advertising or display purposes and is collateral to a sale or sales of articles but is not applied directly to the selling price.

(2) Every one engaged in a business who is a party or privy to the granting of an allowance to any purchaser that is not offered on proportionate terms to other purchasers in competition with the first-mentioned purchaser, (which other purchasers are in this section called "competing purchasers"), is guilty of an indictable offence and is liable to imprisonment for two years.

(3) For the purposes of this section, an allowance is offered on proportionate terms only if

(a) the allowance offered to a purchaser is in approximately the same proportion to the value of sales to him as the allowance offered to each competing purchaser is to the total value of sales to such competing purchaser,

(b) in any case where advertising or other expenditures or services are exacted in return therefor, the cost thereof required to be incurred by a purchaser is in approximately the same proportion to the value of sales to him as the cost of such advertising or other expenditures or services required to be incurred by each competing purchaser is to the total value of sales to such competing purchaser, and

(c) in any case where services are exacted in return therefor, the requirements thereof have regard to the kinds of services that competing purchasers at the same or different levels of distribution are ordinarily able to perform or cause to be performed.

33C. (1) Every one who, for the purpose of promoting the sale or use of an article, makes any materially misleading representation to the public, by any means whatever, concerning the price at which such or like articles have been, are, or will be, ordinarily sold, is guilty of an offence punishable on summary conviction.

(2) Subsection (1) does not apply to a person who publishes an advertisement that he accepts in good faith for publication in the ordinary course of his business.

34. (1) In this section "dealer" means a person engaged in the business of manufacturing or supplying or selling any article or commodity.

(2) No dealer shall directly or indirectly by agreement, threat, promise or any other means whatsoever, require or induce or attempt to require or induce any other person to resell an article or commodity

(a) at a price specified by the dealer or established by agreement,

(b) at a price not less than a minimum price specified by the dealer or established by agreement,

(c) at a markup or discount specified by the dealer or established by agreement,

(d) at a markup not less than a minimum markup specified by the dealer or established by agreement, or

(e) at a discount not greater than a maximum discount specified by the dealer or established by agreement,

whether such markup or discount or minimum markup or maximum discount is expressed as a percentage or otherwise.

(3) No dealer shall refuse to sell or supply an article or commodity to any other person for the reason that such other person

(a) has refused to resell or to offer for resale the article or commodity

(i) at a price specified by the dealer or established by agreement,

(ii) at a price not less than a minimum price specified by the dealer or established by agreement,

(iii) at a markup or discount specified by the dealer or established by agreement,

(iv) at a markup not less than a minimum markup specified by the dealer or established by agreement, or

(v) at a discount not greater than a maximum discount specified by the dealer or established by agreement;

(b) has resold or offered to resell the article or commodity

(i) at a price less than a price or minimum price specified by the dealer or established by agreement,

(ii) at a markup less than a markup or minimum markup specified by the dealer or established by agreement, or

(iii) at a discount greater than a discount or maximum discount specified by the dealer or established by agreement.

(4) Every person who violates subsection (2) or (3) is guilty of an indictable offence and is liable on conviction to a fine in the discretion of the court or to imprisonment for a term not exceeding two years or to both.

(5) Where, in a prosecution under this section, it is proved that the person charged refused or counselled the refusal to sell or supply an article to any other person, no inference unfavourable to the person charged shall be drawn from such evidence if he satisfies the court that he and any one upon whose report he depended had reasonable cause to believe and did believe

(a) that the other person was making a practice of using articles supplied by the person charged as loss-leaders, that is to say, not for the purpose of making a profit thereon but for purposes of advertising;

(b) that the other person was making a practice of using articles supplied by the person charged not for the purpose of selling such articles at a profit but for the purpose of attracting customers to his store in the hope of selling them other articles;

(c) that the other person was making a practice of engaging in misleading advertising in respect of articles supplied by the person charged; or

(d) that the other person made a practice of not providing the level of servicing that purchasers of such articles might reasonably expect from such other person.

42. (1) The Director upon his own initiative may and upon direction from the Minister or at the instance of the Commission shall carry out an inquiry concerning the existence and effect of conditions or practices having relation to any commodity which may be the subject of trade or commerce and which conditions or practices are related to monopolistic situations or restraint of trade, and for the purposes of this Act any such inquiry shall be deemed to be an inquiry under section 8.

(2) It is the duty of the Commission to consider any evidence or material brought before it under subsection (1) together with such further evidence or material as the Commission considers advisable and to report thereon in writing to the Minister, and for the purposes of this Act any such report shall be deemed to be a report under section 19.

B. AMENDMENT TO THE COMBINES INVESTIGATION ACT (RE THE TRANSFER OF SECTION 306 OF THE CRIMINAL CODE) AS PASSED BY PARLIAMENT IN JUNE 1969

33D. (1) Every one who publishes or causes to be published an advertisement containing a statement that purports to be a statement of fact but that is untrue, deceptive or misleading or is intentionally so worded or arranged that it is deceptive or misleading, is guilty of an indictable offence and is liable to imprisonment for five years, if the advertisement is published

(a) to promote, directly or indirectly, the sale or disposal of property or any interest therein, or

(b) to promote a business or commercial interest.

(2) Every one who published or causes to be published in an advertisement a statement or guarantee of the performance, efficacy or length of life of anything that is not based upon an adequate and proper test of that thing, the proof of which lies upon the accused, is, if the advertisement is published to promote, directly or indirectly, the sale or disposal of that thing, guilty of an offence punishable on summary conviction.

(3) Subsections (1) and (2) do not apply to a person who publishes an advertisement that he accepts in good faith for publication in the ordinary course of his business.

(4) For the purposes of subsection (2), a test that is made by the National Research Council of Canada or by any other public department is an adequate and proper test, but no reference shall be made in an advertisement to indicate that a test has been made by the National Research Council or other public department unless the advertisement has, before publication, been approved and permission to publish it has been given in writing by the

President of the National Research Council or by the deputy head of the public department, as the case may be.

(5) Nothing in subsection (4) shall be deemed to exclude, for the purposes of this section, any other adequate or proper test.

Alan Riddell, for Intervener, Congres Iberoamerican du Canada

***Iacobucci J.*:**

I. Introduction

1 This appeal involves an issue that has divided courts in our country. It concerns the proper interpretation of s. 9(1)(c) of the RadiocommunicationAct, R.S.C. 1985, c. R-2, as am. by S.C. 1991, c. 11, s. 83. In practical terms, the issue is whether s. 9(1)(c) prohibits the decoding of *all* encrypted satellite signals, with a limited exception, or whether it bars only the unauthorised decoding of signals that emanate from licensed Canadian distributors.

2 The respondents facilitate what is generally referred to as "grey marketing" of foreign broadcast signals. Although there is much debate — indeed rhetoric — about the term, it is not necessary to enter that discussion in these reasons. Rather, the central issue is the much narrower one surrounding the above statutory provision: does s. 9(1)(c) operate on these facts to prohibit the decryption of encrypted signals emanating from U.S. broadcasters? For the reasons that follow, my conclusion is that it does have this effect. Consequently, I would allow the appeal.

II. Background

3 The appellant is a limited partnership engaged in the distribution of direct-to-home ("DTH") television programming. It is one of two current providers licensed by the Canadian Radio-television and Telecommunications Commission ("CRTC") as a DTH distribution undertaking under the Broadcasting Act, S.C. 1991, c. 11. There are two similar DTH satellite television distributors in the United States, neither of which possesses a CRTC licence. The door has effectively been shut on foreign entry into the regulated Canadian broadcast market since April 1996, when the Governor in Council directed the CRTC not to issue, amend or renew broadcasting licences for non-Canadian applicants (SOR/ 96-192). The U.S. companies are, however, licensed by their country's Federal Communications Commission to broadcast their signals within that country. The intervener DIRECTV is the larger of these two U.S. companies.

4 DTH broadcasting makes use of satellite technology to transmit television programming signals to viewers. All DTH broadcasters own or have access to one or more satellites located in geosynchronous orbit, in a fixed position relative to the globe. The satellites are usually separated by a few degrees of Earth longitude, occupying "slots" assigned by international convention to their various countries of affiliation. The DTH broadcasters send their signals from land-based uplink stations to the satellites, which then diffuse the signals over a broad aspect of the Earth's surface, covering an area referred to as a "footprint". The broadcasting range of the satellites is oblivious to international boundaries and often extends over the territory of multiple countries. Any person who is somewhere within the footprint and equipped with the proper reception devices (typically, a small satellite reception dish antenna, amplifier, and receiver) can receive the signal.

5 The appellant makes use of satellites owned and operated by Telesat Canada, a Canadian company. Moreover, like every other DTH broadcaster in Canada and the U.S., the appellant encrypts its signals to control reception. To decode or unscramble the appellant's signals so as to permit intelligible viewing, customers must possess an additional decoding system that is specific to the appellant: the decoding systems used by other DTH broadcasters are not cross-compatible and cannot be used to decode the appellant's signals. The operational component of the decoding system is a computerized "smart card" that bears a unique code and is remotely accessible by the appellant. Through this device, once a customer has chosen and subscribed to a programming package, and rendered the appropriate fee, the appellant can communicate to the decoder that the customer is authorized to decode its signals. The decoder is then activated and the customer receives unscrambled programming.

6 The respondent, Richard Rex, carries on business as Can-Am Satellites. The other respondents are employees of, or independent contractors working for, Can-Am Satellites. The respondents are engaged in the business of selling U.S. DTH decoding systems to Canadian customers who wish to subscribe to the services offered by the U.S. DTH broadcasters, which make use of satellites owned and operated by U.S. companies and parked in orbital slots assigned to the U.S. The footprints pertaining to the U.S. DTH broadcasters are large enough for their signals to be receivable in much of Canada, but because these broadcasters will not knowingly authorize their signals to be decoded by persons outside of the U.S., the respondents also provide U.S. mailing addresses for their customers who do not already have one. The respondents then contact the U.S. DTH broadcasters on behalf of their customers, providing the customer's name, U.S. mailing address, and credit card number. Apparently, this suffices to satisfy the U.S. DTH broadcasters that the subscriber is resident in the U.S., and they then activate the customer's smart card.

7 In the past, the respondents were providing similar services for U.S. residents, so that they could obtain authorization to decode the Canadian appellant's programming signals. The respondents were authorized sales agents for the appellant at the time, but because this constituted a breach of the terms of the agency agreement, the appellant unilaterally terminated the relationship.

8 The present appeal arises from an action brought by the appellant in the Supreme Court of British Columbia. The appellant, as a licensed distribution undertaking, commenced the action pursuant to ss. 9(1)(c) and 18(1) ofthe Radiocommunication Act. As part of the relief it sought, the appellant requested an injunction prohibiting the respondents from assisting resident Canadians in subscribing to and decoding U.S. DTH programming. The chambers judge hearing the matter declined to grant the injunctive relief, and directed that the trial of the matter proceed on an expedited basis. On appeal of the chambers judge's ruling, Huddart J.A. dissenting, the Court of Appeal for British Columbia dismissed the appellant's appeal.

9 The appellant applied for leave to appeal to this Court, which was granted on April 19, 2001, with costs to the applicant in any event of the cause ([2001] 1 S.C.R. vi). The Chief Justice granted the respondents' subsequent motion to state constitutional questions on September 4, 2001.

III. Relevant Statutory Provisions

10 The *Radiocommunication Act* is one of the legislative pillars of Canada's broadcasting framework. It and another of the pillars, the *BroadcastingAct*, provide context that is of central importance to this appeal. I set out the most pertinent provisions below. I will cite other provisions throughout the course of my reasons as they become relevant.

11 Radiocommunication Act, R.S.C. 1985, c. R-2

> **2.** In this Act,
>
> "broadcasting" means any radiocommunication in which the transmissions are intended for direct reception by the general public;
>
> "encrypted" means treated electronically or otherwise for the purpose of preventing intelligible reception;
>
> "lawful distributor" in relation to an encrypted subscription programming signal or encrypted network feed, means a person who has the lawful right in Canada to transmit it and authorize its decoding;
>
> "radiocommunication" or "radio" means any transmission, emission or reception of signs, signals, writing, images, sounds or intelligence of any nature by means of electromagnetic waves of frequencies lower than 3 000 GHz propagated in space without artificial guide;
>
> "subscription programming signal" means radiocommunication that is intended for reception either directly or indirectly by the public in Canada or elsewhere on payment of a subscription fee or other charge;
>
> **9.** (1) No person shall
>
> > (*c*) decode an encrypted subscription programming signal or encrypted network feed otherwise than under and in accordance with an authorization from the lawful distributor of the signal or feed;
>
> **10.** (1) Every person who
>
> > (*b*) without lawful excuse, manufactures, imports, distributes, leases, offers for sale, sells, installs, modifies, operates or possesses any equipment or device, or any component thereof, under circumstances that give rise to a reasonable inference that the equipment, device or component has been used, or is or was intended to be used, for the purpose of contravening section 9,
>
> is guilty of an offence punishable on summary conviction and is liable, in the case of an individual, to a fine not exceeding five thousand dollars or to imprisonment for a term not exceeding one year, or to both, or, in the case of a corporation, to a fine not exceeding twenty-five thousand dollars.

(2.1) Every person who contravenes paragraph 9(1)(*c*) or (*d*) is guilty of an offence punishable on summary conviction and is liable, in the case of an individual, to a fine not exceeding ten thousand dollars or to imprisonment for a term not exceeding six months, or to both, or, in the case of a corporation, to a fine not exceeding twenty-five thousand dollars.

(2.5) No person shall be convicted of an offence under paragraph 9(1)(*c*), (*d*) or (*e*) if the person exercised all due diligence to prevent the commission of the offence.

18. (1) Any person who

(*a*) holds an interest in the content of a subscription programming signal or network feed, by virtue of copyright ownership or a licence granted by a copyright owner,

(*c*) holds a licence to carry on a broadcasting undertaking issued by the Canadian Radio-television and Telecommunications Commission under the *Broadcasting Act*,

may, where the person has suffered loss or damage as a result of conduct that is contrary to paragraph 9(1)(*c*), (*d*) or (*e*) or 10(1)(*b*), in any court of competent jurisdiction, sue for and recover damages from the person who engaged in the conduct, or obtain such other remedy, by way of injunction, accounting or otherwise, as the court considers appropriate.

(6) Nothing in this section affects any right or remedy that an aggrieved person may have under the *Copyright Act*.

Broadcasting Act, S.C. 1991, c. 11

2. (1) In this Act,

"broadcasting" means any transmission of programs, whether or not encrypted, by radio waves or other means of telecommunication for reception by the public by means of broadcasting receiving apparatus, but does not include any such transmission of programs that is made solely for performance or display in a public place;

"broadcasting undertaking" includes a distribution undertaking, a programming undertaking and a network;

"distribution undertaking" means an undertaking for the reception of broadcasting and the retransmission thereof by radio waves or other means of telecommunication to more than one permanent or temporary residence or dwelling unit or to another such undertaking;

(2) For the purposes of this Act, "other means of telecommunication" means any wire, cable, radio, optical or other electromagnetic system, or any similar technical system.

(3) This Act shall be construed and applied in a manner that is consistent with the freedom of expression and journalistic, creative and programming independence enjoyed by broadcasting undertakings.

3. (1) It is hereby declared as the broadcasting policy for Canada that

(*a*) the Canadian broadcasting system shall be effectively owned and controlled by Canadians;

(*b*) the Canadian broadcasting system, operating primarily in the English and French languages and comprising public, private and community elements, makes use of radio frequencies that are public property and provides, through its programming, a public service essential to the maintenance and enhancement of national identity and cultural sovereignty;

(*d*) the Canadian broadcasting system should

(i) serve to safeguard, enrich and strengthen the cultural, political, social and economic fabric of Canada,

(ii) encourage the development of Canadian expression by providing a wide range of programming that reflects Canadian attitudes, opinions, ideas, values and artistic creativity, by displaying Canadian talent in entertainment programming and by offering information and analysis concerning Canada and other countries from a Canadian point of view,

(iii) through its programming and the employment opportunities arising out of its operations, serve the needs and interests, and reflect the circumstances and aspirations, of Canadian men, women and children, including equal rights, the linguistic duality and multicultural and multiracial nature of Canadian society and the special place of aboriginal peoples within that society, and

(iv) be readily adaptable to scientific and technological change;

(*t*) distribution undertakings

(i) should give priority to the carriage of Canadian programming services and, in particular, to the carriage of local Canadian stations,

(ii) should provide efficient delivery of programming at affordable rates, using the most effective technologies available at reasonable cost,

(iii) should, where programming services are supplied to them by broadcasting undertakings pursuant to contractual arrangements, provide reasonable terms for the carriage, packaging and retailing of those programming services, and

(iv) may, where the Commission considers it appropriate, originate programming, including local programming, on such terms as are conducive to the achievement of the objectives of the broadcasting policy set out in this subsection, and in particular provide access for underserved linguistic and cultural minority communities.

(2) It is further declared that the Canadian broadcasting system constitutes a single system and that the objectives of the broadcasting policy set out in subsection (1) can best be achieved by providing for the regulation and supervision of the Canadian broadcasting system by a single independent public authority.

Copyright Act, R.S.C. 1985, c. C-42

21. (1) Subject to subsection (2), a broadcaster has a copyright in the communication signal that it broadcasts, consisting of the sole right to do the following in relation to the communication signal or any substantial part thereof:

(*a*) to fix it,

(*b*) to reproduce any fixation of it that was made without the broadcaster's consent,

(*c*) to authorize another broadcaster to retransmit it to the public simultaneously with its broadcast, and

(*d*) in the case of a television communication signal, to perform it in a place open to the public on payment of an entrance fee,

and to authorize any act described in paragraph (*a*), (*b*) or (*d*).

31. ...

(2) It is not an infringement of copyright to communicate to the public by telecommunication any literary, dramatic, musical or artistic work if

(*a*) the communication is a retransmission of a local or distant signal;

(*b*) the retransmission is lawful under the *Broadcasting Act*;

(*c*) the signal is retransmitted simultaneously and in its entirety, except as otherwise required or permitted by or under the laws of Canada; and

(*d*) in the case of the retransmission of a distant signal, the retransmitter has paid any royalties, and complied with any terms and conditions, fixed under this Act.

IV. Judgments Below

***Supreme Court of British Columbia,* [1999] B.C.J. No. 3092 (B.C. S.C. [In Chambers])**

12 In a judgment delivered orally in chambers, Brenner J. (now C.J.B.C.S.C.) noted that there is conflicting jurisprudence on the interpretation of s. 9(1)(c). It was the chambers judge's opinion, however, that the provision is unambiguous, and that it poses no contradiction to the remainder of the *RadiocommunicationAct*. He interpreted s. 9(1)(c) as applying only to the theft of signals from "lawful distributors" in Canada, and not applying to the "paid subscription by Canadians to signals from distributors outside Canada" (para. 20). He reasoned (at paras. 18-19):

> The offence in that section that was created by the language Parliament chose to use was the offence of stealing encrypted signals from distributors in Canada. In my view, if Parliament had intended in that section to make it an offence in Canada to decode foreign encrypted transmissions originating outside Canada as contended by the [appellant], it would have said so. In s. 9(1)(*c*) Parliament could have used language prohibiting the unauthorized decoding of all or any subscription programming in Canada. This, it chose not to do.
>
> The interpretation of s. 9(1)(*c*) asserted by the [appellant] makes no distinction between those who subscribe and pay for services from non-resident distributors and those who steal the signals of lawful distributors in Canada. That interpretation would create a theft offence applicable to persons in Canada who are nonetheless paying for the services they receive. If Parliament had intended s. 9(1)(*c*) to apply to such conduct, it would have said so in clear language. In my view the *quasi* criminal provisions in the *Radiocommunication Act* should not be interpreted in this manner in the absence of such clear parliamentary language.

13 Brenner J. therefore refused to grant the injunctive relief sought by the appellant. He directed that the trial of the matter proceed on an expedited basis.

***Court of Appeal for British Columbia* (2000)79 B.C.L.R. (3d) 250, 2000 BCCA 493 (B.C. C.A.)**

14 The majority of the Court of Appeal, in a judgment written by Finch J.A. (now C.J.B.C.), identified two divergent strands of case law regarding the proper interpretation of s. 9(1)(c). The majority also noted that judgments representing each side had found the provision to be unambiguous; in its assessment, though, "[l]egislation which can reasonably be said to bear two unambiguous but contradictory, interpretations must, at the very least, be said to be ambiguous" (para. 35). For this reason, and the fact that s.9(1)(c) bears penal consequences, the majority held that the "narrower interpretation adopted by the chambers judge ... must ... prevail" (para. 35). Conflicting authorities aside, however, the majority was prepared to reach the same result through application of the principles of statutory construction.

15 Section 9(1)(c) enjoins the decoding of encrypted signals without the authorization of the "lawful distributor of *the* signal or feed" (emphasis added). The majority interpreted the legislator's choice of the definite article "the", underlined in the above phrase, to mean that the prohibition applies only "to signals broadcast by lawful distributors who are licensed to authorize decoding of that signal" (para. 36). In other words, "[i]f there is no lawful distributor for an encrypted subscription program signal in Canada, there can be no one licensed to authorize its decoding". Consequently, according to the majority, there is no contravention of s. 9(1)(c) where a person decodes unregulated signals such as those broadcast by the U.S. DTH companies.

16 The majority characterized s. 9(1)(c) as being clearly directed at regulation of the recipient rather than the distributor, but stated that Parliament had not chosen language that would prohibit the decoding of encrypted signals regardless of origin. Rather, in the majority's view, Parliament elected to regulate merely in respect of signals transmitted by parties who are authorized by Canadian law to do so. Dismissing the appellant's argument regarding the words "or elsewhere" in the definition of "subscription program signal", the majority held that "the fact that a subscription programming signal originating outside Canada was intended for reception outside Canada, does not avoid the requirement in s. 9(1)(c) that the decoding of such signals is only unlawful if it is done without the authorization of a lawful distributor" (para. 40).

17 Basing its reasons on these considerations, the majority held that it was unnecessary to address "the wider policy issues" or the issues arising from the Charter (para. 44). Finding no error in the chambers judge's interpretation, the majority dismissed the appeal.

18 Dissenting, Huddart J.A. considered the text of s. 9(1)(c) in light of the definitions set out in s. 2, and concluded that Parliamentary intent was evident: the provision "simply render[s] unlawful the decoding in Canada of all encrypted programming signals ... regardless of their source or intended destination", except where authorization is given by a person having the lawful right in Canada to transmit and authorize the decoding of the signals (para. 48). She stressed that the line of cases relied upon by the chambers judge "[a]t most ... provides support for a less inclusive interpretation of s. 9(1)(c) than its wording suggests on its face because it has penal consequences" (para. 54), and proceeded to set out a number of reasons for which these cases should not be followed.

19 For one, "the task of interpreting a statutory provision does not begin with its being typed as penal. The task of interpretation is a search for the intention of Parliament" (para. 55). As well, the more restrictive reading of s. 9(1)(c) "ignores the broader policy objective" of the governing regulatory scheme, this being "the maintenance of a distinctive Canadian broadcasting industry in a large country with a small population within the transmission footprint of arguably the most culturally assertive country in the world with a population ten times larger" (para. 49). Huddart J.A. also referred to the existence of copyright interests, and stated that "[i]t can reasonably be inferred that U.S. distributors have commercial or legal reasons apart from Canadian laws for not seeking a Canadian market. ... Yet only Canada can control the reception of foreign signals in Canada" (para. 50).

20 Huddart J.A. declined the respondents' invitation to read s. 9(1)(c) in a manner that "respect[s] section 2(b) of the Charter" (para. 57), relying on Canada (Attorney General) v. Mossop[1993] 1 S.C.R. 554(S.C.C.), in this regard. She then concluded (at para. 58):

> In summary, I am not persuaded the line of cases on which the chambers judge relied establish the provision is ambiguous or capable of contradictory meanings. I do not consider courts have found two entirely different unambiguous meanings for the provision. The words of section 9(1)(*c*), taken alone, provide a clear basis for the determination of Parliament's intention. That meaning is consistent with the purpose of the entire regulatory scheme in the context of the international copyright agreements, with the purpose of the *Act* within that scheme, and with the scheme of the *Act* itself. Those cases interpreting the provision differently have done so with the purpose of narrowing its application to avoid penal consequences of what Parliament clearly intended to have penal consequences, as at least one of the judges taking that view explicitly acknowledged in his reasons. In my view it takes a convoluted reading of the provision to produce the result reached by the court in *R. v. Love* [(1997), 117 Man. R. (2d) 123(Q.B.)], and the decisions that have followed it.

Huddart J.A. would have allowed the appeal and granted the declaration requested by the appellant.

V. Issues

21 This appeal raises three issues:

1. Does s. 9(1)(*c*) of the *Radiocommunication Act* create an absolute prohibition against decoding, followed by a limited exception, or does it allow all decoding, except for those signals for which there is a lawful distributor who has not granted its authorization?

2. Is s. 9(1)(*c*) of the *Radiocommunication Act* inconsistent with s. 2(*b*) of the *Canadian Charter of Rights and Freedoms*?

3. If the answer to the above question is "yes", can the statutory provision be justified pursuant to s. 1 of the *Charter*?

VI. Analysis

A. Introduction

22 It is no exaggeration to state that s. 9(1)(c) of the federal *Radiocommunication Act* has received inconsistent application in the courts of this country. On one hand, there is a series of cases interpreting the provision (or suggesting that it might be interpreted) so as to create an absolute prohibition, with a limited exception where authorization from a lawful Canadian distributor is received: *R. v. Open Sky Inc.*, [1994] M.J. No. 734(Man. Prov. Ct.), at para. 36, aff'd (*sub nom.* R. v. O'Connor)1995106 Man. R. (2d) 37(Man. Q.B.), at para. 10, leave to appeal refused on other grounds(1996), 110 Man. R. (2d) 153 (Man. C.A.); *King v. Canada (Attorney General)*, [1996] N.B.J. No. 449 (N.B. Q.B.), at paras. 19-20, rev'd on other grounds(1997), 187 N.B.R. (2d) 185 (N.B. C.A.); *R. v. Knibb* (1997), 198 A.R. 161 (Alta. Prov. Ct.), aff'd (*R. v. Quality Electronics (Taber) Ltd.*, [1998] A.J. No. 628 (Alta. Q.B.); *ExpressVu Inc. v. NII Norsat International Inc.* (1997), [1998] 1 F.C. 245 (Fed. T.D.), aff'd(1997), 222 N.R. 213 (Fed. C.A.); *WIC Premium Corp. v. General Instrument Corp.* (2000), 272 A.R. 201, 2000 ABQB 628 (Alta. Q.B.), at para. 72; *Canada (Procureure générale) c. Pearlman*, [2001] R.J.Q. 2026 (C.Q.), at para. 81.

23 On the other hand, there are a number of conflicting cases that have adopted the more restrictive interpretation favoured by the majority of the Court of Appeal for British Columbia in the case at bar: *R. v. Love* (1997), 117 Man. R. (2d) 123 (Man. Q.B.); *R. v. Ereiser* (1997), 156 Sask. R. 71 (Sask. Q.B.); *R. v. LeBlanc*, [1997] N.S.J. No. 476 (N.S. S.C.); *Ryan v. 361779 Alberta Ltd.* (1997), 208 A.R. 396 (Alta. Prov. Ct.), at para. 12; *R. c. Thériault*, [2000] R.J.Q. 2736 (C.Q.); aff'd *R. v. D'Argy* (June 13, 2001), Doc. 405-36-000044-003 (C.S. Que.); *R. c. Gregory Électronique inc.*, [2000] J.Q. No. 4923 (C.Q.), aff'd *R. c. Gregory Électronique inc.*, [2001] J.Q. No. 4925 (C.S. Que.); *R. v. S.D.S. Satellite Inc.* (31 octobre 2000), no C.Q. Laval 540-73-000055-980; *R. c. Scullion*, [2001] R.J.Q. 2018 (C.Q.); *R. v. Branton* (2001), 53 O.R. (3d) 737 (Ont. C.A.).

24 As can be seen, the schism is not explained simply by the adoption of different approaches in different jurisdictions. Although the highest courts in British Columbia and Ontario have now produced decisions that bind the lower courts in those provinces to the restrictive interpretation, and although the Federal Court of Appeal has similarly bound the Trial Division courts under it to the contrary interpretation, the trial courts in Alberta, Manitoba, and Quebec have produced irreconcilable decisions. Those provinces remain without an authoritative determination on the matter. This appeal, therefore, places this Court in a position to harmonize the interpretive dissonance that is echoing throughout Canada.

25 In attempting to steer its way through this maze of cases, the Court of Appeal for British Columbia, in my respectful view, erred in its interpretation of s. 9(1)(c). In my view, there are five aspects of the majority's decision that warrant discussion. First, it commenced analysis from the belief that an ambiguity existed. Second, it placed undue emphasis on the sheer number of judges who had disagreed as to the proper interpretation of s. 9(1)(c). Third, it did not direct sufficient attention to the context of the *RadiocommunicationAct* within the regulatory *régime* for broadcasting in Canada, and did not consider the objectives of that *régime*, feeling that it was unnecessary to address these "wider policy issues". Fourth, the majority did not read s. 9(1)(c) grammatically in accordance with its structure, namely, a prohibition with a limited exception. Finally, the majority of the court effectively inverted the words of the provision, such that the signals for which a lawful distributor could provide authorization to decode (i.e., the exception) defined the very scope of the prohibition.

B. Does s. 9(1)(c) of the Radiocommunication Act create an absolute prohibition against decoding, followed by a limited exception, or does it allow all decoding, except for those signals for which there is a lawful distributor who has not granted its authorization?

(1) Principles of Statutory Interpretation

26 In Elmer Driedger's definitive formulation, found at p. 87 of his *Construction of Statutes* (2nd ed. 1983):

> Today there is only one principle or approach, namely, the words of an Act are to be read in their entire context and in their grammatical and ordinary sense harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament.

Driedger's modern approach has been repeatedly cited by this Court as the preferred approach to statutory interpretation across a wide range of interpretive settings: see, for example, *Stubart Investments Ltd. v. R.*, [1984] 1 S.C.R. 536 (S.C.C.), at p. 578, *per* Estey J.; Québec (Communauté urbaine) c. Notre-Dame de Bonsecours(Corp.)[1994] 3 S.C.R. 3(S.C.C.), at p. 17; Rizzo & Rizzo Shoes Ltd., Re[1998] 1 S.C.R. 27(S.C.C.), at para. 21; *R. v. Gladue*, [1999] 1 S.C.R. 688(S.C.C.), at para. 25; *R. v. Araujo*, [2000] 2 S.C.R. 992, 2000 SCC 65 (S.C.C.), at para. 26; *R. v. Sharpe*, [2001] 1 S.C.R. 45, 2001 SCC 2 (S.C.C.), at para. 33, *per* McLachlin C.J.; *Chieu v. Canada (Minister of Citizenship & Immigration)*, 2002 SCC 3 (S.C.C.), at para. 27. I note as well that, in the federal legislative context, this Court's preferred approach is buttressed by s. 12 of the InterpretationAct, R.S.C. 1985, c. I-21, which provides that every enactment "is deemed remedial, and shall be given such fair, large and liberal construction and interpretation as best ensures the attainment of its objects".

27 The preferred approach recognizes the important role that context must inevitably play when a court construes the written words of a statute: as Professor John Willis incisively noted in his seminal article "Statute Interpretation in a Nutshell" (1938), 16 Can. Bar Rev. 1, at p.6, "words, like people, take their colour from their surroundings". This being the case, where the provision under consideration is found in an Act that is itself a component of a larger statutory scheme, the surroundings that colour the words and the scheme of the Act are more expansive. In such an instance, the application of Driedger's principle gives rise to what was described in *R. v. Ulybel Enterprises Ltd.*, [2001] 2 S.C.R. 867, 2001 SCC 56(S.C.C.), at para. 52, as "the principle of interpretation that presumes a harmony, coherence, and consistency between statutes dealing with the same subject matter". (See also *Murphy v. Welsh*, [1993] 2 S.C.R. 1069(S.C.C.) [a.k.a. *Stoddard v. Watson*], at p. 1079; Pointe-Claire (Ville) c. S.E.P.B., Local 57[1997] 1 S.C.R. 1015(S.C.C.), at para. 61, *per* Lamer C.J.)

28 Other principles of interpretation - such as the strict construction of penal statutes and the "*Charter* values" presumption - only receive application where there is ambiguity as to the meaning of a provision. (On strict construction, see: *Marcotte v. Canada (Deputy Attorney General)* (1974), [1976] 1 S.C.R. 108(S.C.C.), at p. 115, *per* Dickson J. (as he then was); R. v. Goulis198133 O.R. (2d) 55(Ont. C.A.), at pp. 59-60; *R. v. Hasselwander*, [1993] 2 S.C.R. 398(S.C.C.), at p. 413; *R. v. Russell*, [2001] 2 S.C.R. 804, 2001 SCC 53(S.C.C.), at para. 46. I shall discuss the "*Charter* values" principle later in these reasons.)

29 What, then, in law is an ambiguity? To answer, an ambiguity must be "real" (Marcotte, supra, at p. 115). The words of the provision must be "reasonably capable of more than one meaning" (*Westminster Bank Ltd. v. Zang* (1965), [1966] A.C. 182(U.K. H.L.), at p. 222, *per* Lord Reid). By necessity, however, one must consider the "entire context" of a provision before one can determine if it is reasonably capable of multiple interpretations. In this regard, Major J.'s statement in *Canadian Oxy Chemicals Ltd. v. Canada (Attorney General)*, [1999] 1 S.C.R. 743 (S.C.C.), at para. 14, is apposite: "It is only when genuine ambiguity arises between two or more plausible readings, *each equally in accordance with the intentions of the statute*, that the courts need to resort to external interpretive aids" (emphasis added), to which I would add, "including other principles of interpretation".

30 For this reason, ambiguity cannot reside in the mere fact that several courts — or, for that matter, several doctrinal writers — have come to differing conclusions on the interpretation of a given provision. Just as it would be improper for one to engage in a preliminary tallying of the number of decisions supporting competing interpretations and then apply that which receives the "higher score", it is not appropriate to take as one's starting point the premise that differing interpretations reveal an ambiguity. It is necessary, in every case, for the court charged with interpreting a provision to undertake the contextual and purposive

approach set out by Driedger, and *thereafter* to determine if "the words are ambiguous enough to induce two people to spend good money in backing two opposing views as to their meaning" (Willis, *supra*, at pp. 4-5).

(2) Application to this Case

31 The interpretive factors laid out by Driedger need not be canvassed separately in every case, and in any event are closely related and interdependent (Chieu, supra, at para. 28). In the context of the present appeal, I will group my discussion under two broad headings. Before commencing my analysis, however, I wish to highlight a number of issues on these facts. First, there is no dispute surrounding the fact that the signals of the U.S. DTH broadcasters are "encrypted" under the meaning of the Act, nor is there any dispute regarding the fact that the U.S. broadcasters are not "lawful distributors" under the Act. Secondly, all of the DTH broadcasters in Canada and the U.S. require a person to pay "a subscription fee or other charge" for unscrambled reception. Finally, I note that the "encrypted network feed" portion of s. 9(1)(c) is not relevant on these facts and can be ignored for the purposes of analysis.

(a) Grammatical and Ordinary Sense

32 In its basic form, s. 9(1)(c) is structured as a prohibition with a limited exception. Again, with the relevant portions emphasized, it states that:

> No person shall
>
> > (*c*) decode an encrypted subscription programming signal or encrypted network feed otherwise than under and in accordance with authorization from the lawful distributor of the signal or feed. [Emphasis added.]
>
> Il est interdit:
>
> > *c*) de décoder, sans l'autorisation de leur distributeur légitime ou en contravention avec celle-ci, un signal d'abonnement ou une alimentation réseau[.] [Emphasis added.]

The provision opens with the announcement of a broad prohibition ("No person shall"), follows by announcing the nature ("decode") and object ("an encrypted programming signal") of the prohibition, and then announces an exception to it ("otherwise than under and in accordance with authorization from the lawful distributor"). The French version shares the same four features, albeit in a modified order (see Provost C.Q.J. in Pearlman, supra, at p. 2031).

33 The forbidden activity is decoding. Therefore, as noted by the Court of Appeal, the prohibition in s. 9(1)(c) is directed towards the *reception* side of the broadcasting equation. Quite apart from the provenance of the signals at issue, where the impugned decoding occurs within Canada, there can be no issue of the statute's having an extra-territorial reach. In the present case, the reception that the appellant seeks to enjoin occurs entirely within Canada.

34 The object of the prohibition is of central importance to this appeal. What is interdicted by s. 9(1)(c) is the decoding of "*an* encrypted subscription programming signal" (in French, « *un* signal d'abonnement ») (emphasis added). The usage of the indefinite article here is telling: it signifies "one, some [or] any" (*Canadian Oxford Dictionary* (1998)). Thus, what is prohibited is the decoding of *any* encrypted subscription programming signal, subject to the ensuing exception.

35 The definition of "subscription programming signal" suggests that the prohibition extends to signals emanating from other countries. Section2 of the Act defines that term as, "radiocommunication that is intended for reception either directly or indirectly by the public in Canada *or elsewhere* on payment of a subscription fee or other charge" (emphasis added). I respectfully disagree with the respondents and Weiler J.A. in *Branton*, *supra*, at para. 26, "that the wording 'or elsewhere' is limited to the type of situation contemplated in s. 3(3)" of the Act. Subsection 3(3) reads:

> **3.** ...
>
> (3) This Act applies within Canada and on board

(*a*) any ship, vessel or aircraft that is

(i) registered or licensed under an Act of Parliament, or

(ii) owned by, or under the direction or control of, Her Majesty in right of Canada or a province;

(*b*) any spacecraft that is under the direction or control of

(i) Her Majesty in right of Canada or a province,

(ii) a citizen or resident of Canada, or

(iii) a corporation incorporated or resident in Canada; and

(*c*) any platform, rig, structure or formation that is affixed or attached to land situated in the continental shelf of Canada.

36 This provision is directed at an entirely different issue from that which is at play in the definition of "subscription programming signal". Section 3(3) specifies the geographic scope of the *Radiocommunication Act* and all its constituent provisions, as is confirmed by the marginal note accompanying the subsection, which states "*Geographical application*". To phrase this in the context of the present appeal, any person within Canada or on board any of the things enumerated in ss. 3(3)(a) through (c) could potentially be subject to liability for unlawful decoding under s. 9(1)(c); in this way, s. 3(3) addresses the "where" question. On the other hand, the definition of "subscription programming signal" provides meaning to the s. 9(1)(c) liability by setting out the class of signals whose unauthorized decoding will trigger the provision; this addresses the object of the prohibition, or the "what" question. These are two altogether separate issues.

37 Furthermore, it was not necessary for Parliament to include the phrase "or elsewhere" in the s. 2 definition if it merely intended "subscription programming signal" to be interpreted as radiocommunication intended for direct or indirect reception by the public on board any of the s. 3(3) vessels, spacecrafts or rigs. In my view, the words "or elsewhere" were not meant to be tautological. It is sometimes stated, when a court considers the grammatical and ordinary sense of a provision, that "[t]he legislator does not speak in vain". (*Québec (Procureur General) v. Carrières Ste-Thérèse Ltée*, [1985] 1 S.C.R. 831 (S.C.C.), at p. 838.) Parliament has provided express direction to this effect through its enactment of s. 10 of the Interpretation Act, which states in part that "[t]he law shall be considered as always speaking". In any event, "or elsewhere" (« ou ailleurs », in French) suggests a much broader ambit than the particular and limited examples in s.3(3), and I would be reticent to equate the two.

38 In my opinion, therefore, the definition of "subscription programming signal" encompasses signals originating from foreign distributors and intended for reception by a foreign public. Again, because the *RadiocommunicationAct* does not prohibit the broadcasting of subscription programming signals (apart from s. 9(1)(e), which forbids their unauthorized retransmission within Canada) and only concerns decrypting that occurs in the s.3(3) locations, this does not give rise to any extra-territorial exercise of authority. At this stage, what this means is that, contrary to the holdings of the chambers judge and the majority of the Court of Appeal in the instant case, Parliament *did* in fact choose language in s. 9(1)(c) that prohibits the decoding of all encrypted subscription signals, regardless of their origin, "otherwise than under and in accordance with an authorization from the lawful distributor of the signal or feed". I shall now consider this exception.

39 The Court of Appeal relied upon the definite article found in this portion of s. 9(1)(c) ("the signal"), in order to support its narrower reading of the provision. Before this Court, counsel for the respondents submitted as well that the definite article preceding the words "lawful distributor" confirms that the provision "is only intended to operate where there is a lawful distributor". Finally, the respondents draw to our attention the French language version of the provision, and particularly the word « leur » that modifies « distributeur légitime »: a number of cases considering the French version of s. 9(1)(c) have relied upon that word to arrive at the narrower interpretation (see the Court of Quebec judgments in Thériault, supra, at p. 2739; Gregory Électronique inc., supra, at paras. 24-26; and *S.D.S. Satellite*, supra,at p. 7. See also Branton, supra, at para. 25).

40 I do not agree with these opinions. The definite article "the" and the possessive adjective « leur » merely identify the party who can authorize the decoding in accordance with the exception (see Pearlman, supra, at p. 2032). Thus, while I agree with the majority of the Court of Appeal that "[i]f there is no lawful distributor for an encrypted subscription program signal in Canada, there can be no one licensed to authorize its decoding" (para. 36), I cannot see how it necessarily follows that decoding unregulated signals "cannot therefore be in breach of the *Radiocommunication Act*". Such an approach would require one to read words from the exception into the prohibition, which is circular and incorrect. Again, as Provost C.Q.J. stated in Pearlman, supra, at p. 2031: [translation] "To seek the meaning of the exception at the outset, and thereafter to define the rule by reference to the exception, is likely to distort the meaning of the text and misrepresent the intention of its author."

41 In my view, the definite articles are used in the exception portion of s.9(1)(c) in order to identify from amongst the genus of signals captured by the prohibition (*any* encrypted subscription programming signal) that species of signals for which the rule is "otherwise". Grammatically, then, the choice of definite and indefinite articles essentially plays out into the following rendition: No person shall decode any (indefinite) encrypted subscription programming signal unless, for *the* (definite) particular signal that is decoded, the person has received authorization from *the* (definite) lawful distributor. Thus, as might happen, if no lawful distributor exists to grant such authorization, the general prohibition must remain in effect.

42 Although I have already stated that the U.S. DTH distributors in the present case are not "lawful distributors" under the Act, I should discuss this term, because it is important to the interpretive process. Section 2 provides that a "lawful distributor" of an encrypted subscription programming signal is "a person who has the lawful right in Canada to transmit it and authorize its decoding". In this connection, the fact that a person is authorized to transmit programming in another country does not, by that fact alone, qualify as granting the lawful right to do so in Canada. Moreover, the phrase "lawful right" (« légitimement autorisée ») comprehends factors in addition to licences granted by the CRTC. In defining "lawful distributor", Parliament could have made specific reference to a person holding a CRTC licence (as it did in s.18(1)(c)) or a Minister's licence (s. 5(1)(a)). Instead, it deliberately chose broader language. I therefore agree with the opinion of Létourneau J.A. in the Federal Court of Appeal decision in *Norsat*, *supra*, at para. 4, that:

> [t]he concept of "lawful right" refers to the person who possesses the regulatory rights through proper licensing under the *Act*, the authorization of the Canadian Radio-television and Telecommunications Commission as well as the contractual and copyrights necessarily pertaining to the content involved in the transmission of the encrypted subscription programming signal or encrypted network feed.

As pointed out by the Attorney General of Canada, this interpretation means that even where the transmission of subscription programming signals falls outside of the definition of "broadcasting" under the *Broadcasting Act* (i.e., where the transmitted programming is "made solely for performance or display in a public place") and no broadcasting licence is therefore required, additional factors must still be considered before it can be determined whether the transmitter of the signals is a "lawful distributor" for the purposes of the *Radiocommunication Act*.

43 In the end, I conclude that when the words of s. 9(1)(c) are read in their grammatical and ordinary sense, taking into account the definitions provided in s. 2, the provision prohibits the decoding in Canada of any encrypted subscription programming signal, regardless of the signal's origin, unless authorization is received from the person holding the necessary lawful rights under Canadian law.

(b) Broader Context

44 Although the *Radiocommunication Act* is not, unfortunately, equipped with its own statement of purpose, it does not exist in a vacuum. TheAct's focus is upon the allocation of specified radio frequencies, the authorisation to possess and operate radio apparatuses, and the technical regulation of the radio spectrum. The Act also places restrictions on the reception of and interference with radiocommunication, which includes encrypted broadcast programming signals of the sort at issue. S. Handa et al., *Communications Law in Canada* (loose-leaf ed.), at p. 3.8, describe the *RadiocommunicationAct* as one "of the three statutory pillars governing carriage in Canada". These same authors note at p. 3.17 that:

> The *Radiocommunication Act* embraces all private and public use of the radio spectrum. The close relationship between this and the telecommunications and broadcasting Acts is determined by the fact that telecommunications and broadcasting are the two principal users of the radioelectric spectrum.

45 The *Broadcasting Act* came into force in 1991, in an omnibus statute that also brought substantial amendments to the *RadiocommunicationAct*, including the addition thereto of s. 9(1)(c). Its purpose, generally, is to regulate and supervise the transmission of programming to the Canadian public. Of note for the present appeal is that the definition of "broadcasting" in the *Broadcasting Act* captures the encrypted DTH programme transmissions at issue and that DTH broadcasters such as the appellant receive their licences under, and are subject to, that Act. The *Broadcasting Act* also enumerates 20 broad objectives of the broadcasting policy for Canada (in s. 3(1)(a) through (t)). The emphasis of the Act, however, is placed on *broadcasting* and not reception.

46 Ultimately, the Acts operate in tandem. On this point, I agree with the following passage from the judgment of LeGrandeur Prov. Ct. J. in Knibb, supra, at paras. 38-39, which was adopted by Gibson J. in the Federal Court Trial Division decision in Norsat, supra, at para. 35:

> The *Broadcasting Act* and the *Radiocommunication Act* must be seen as operating together as part of a single regulatory scheme. The provisions of each statute must accordingly be read in the context of the other and consideration must be given to each statute's roll [*sic*] in the overall scheme. [Cite to R. Sullivan, *Driedger on the Construction of Statutes* (3rd ed. 1994), at p. 286.]
>
> The addition of s. 9(1)(*c*), (*d*) and (*e*) and other sections to the *Radiocommunication Act* through the provisions of the *Broadcasting Act*, 1991 are supportive of that approach in my view. Subsections 9(1)(*c*), (*d*) and (*e*) of the *Radiocommunication Act* must be seen as part of the mechanism by which the stated policy of regulation of broadcasting in Canada is to be fulfilled.

47 Canada's broadcasting policy has a number of distinguishing features, and evinces a decidedly cultural orientation. It declares that the radio frequencies in Canada are public property, that Canadian ownership and control of the broadcasting system should be a base premise, and that the programming offered through the broadcasting system is "a public service essential to the maintenance and enhancement of national identity and cultural sovereignty". Sections 3(1)(d) and 3(1)(t) enumerate a number of specific developmental goals for, respectively, the broadcasting system as a whole and for distribution undertakings (including DTH distribution undertakings) in particular. Finally, s. 3(2) declares that "the Canadian broadcasting system constitutes a single system" best regulated and supervised "by a single independent public authority".

48 In this context, one finds little support for the restrictive interpretation of s. 9(1)(c). Indeed, as counsel for the Attorney General of Canada argued before us, after consideration of the Canadian broadcasting policy Parliament has chosen to adopt, one may legitimately wonder

> why would Parliament enact a provision like the restrictive interpretation? Why would Parliament provide for Canadian ownership, Canadian production, Canadian content in its broadcasting and then simply leave the door open for unregulated, foreign broadcasting to come in and sweep all of that aside? What purpose would have been served?

49 On the other hand, the interpretation of s. 9(1)(c) that I have determined to result from the grammatical and ordinary sense of the provision accords well with the objectives set out in the *Broadcasting Act*. The fact that DTH broadcasters encrypt their signals, making it possible to concentrate regulatory efforts on the reception/decryption side of the equation, actually assists with attempts to pursue the statutory broadcasting policy objectives and to regulate and supervise the Canadian broadcasting system as a single system. It makes sense in these circumstances that Parliament would seek to encourage broadcasters to go through the regulatory process by providing that they could only grant authorization to have their signal decoded, and thereby collect their subscription fees, after regulatory approval has been granted.

50 There is another contextual factor that, while not in any way determinative, is confirmatory of the interpretation of s. 9(1)(c) as an absolute prohibition with a limited exception. As I have noted above, the concept of "lawful right" in the definition of "lawful distributor" incorporates contractual and copyright issues. According to the evidence in the present record, the commercial agreements between the appellant and its various programme suppliers require the appellant to respect the rights that these suppliers are granted by the persons holding the copyright in the programming content. The rights so acquired by the programme suppliers permit the programmes to be broadcast in specific locations, being all or part of Canada. As such, the appellant would have no *lawful right* to authorise decoding of its programming signals in an area not included in its geographically limited contractual right to exhibit the programming.

51 In this way, the person holding the copyright in the programming can conclude separate licensing deals in different regions, or in different countries (e.g., Canada and the U.S.). Indeed, these arrangements appear typical of the industry: in the present appeal, the U.S. DTH broadcaster DIRECTV has advocated the same interpretation of s. 9(1)(c) as the appellant, in part because of the potential liability it faces towards both U.S. copyright holders and Canadian licencees due to the fact that its programming signals spill across the border and are being decoded in Canada.

52 I also believe that the reading of s. 9(1)(c) as an absolute prohibition with a limited exception complements the scheme of the *CopyrightAct*. Sections 21(1)(c) and 21(1)(d) of the CopyrightAct provide broadcasters with a copyright in the communication signals they transmit, granting them the sole right of retransmission (subject to the exceptions in s. 31(2)) and, in the case of a television communication signal, of performing it on payment of a fee. By reading s. 9(1)(c) as an absolute prohibition against decoding except where authorization is granted by the person with the *lawful right* to transmit and authorize decoding of the signal, the provision extends protection to the holders of the copyright in the programming itself, since it would proscribe the unauthorized reception of signals that violate copyright, even where no retransmission or reproduction occurs: see F. P. Eliadis and S. C. McCormack, "Vanquishing Wizards,Pirates and Musketeers: The Regulation of Encrypted Satellite TV Signals" (1993), 3 *M.C.L.R.* 211, at pp. 213-18. Finally, I note that the civil remedies provided for in ss. 18(1)(a) and 18(6) of the RadiocommunicationAct both illustrate that copyright concerns are of relevance to the scheme of the Act, thus supporting the finding that there is a connection between these two statutes.

(c) Section 9(1)(c) as a "Quasi-Criminal" Provision

53 I wish to comment regarding the respondents' argument regarding the penal effects that the "absolute prohibition" interpretation would bring to bear. Although the present case only arises in the context of a civil remedy the appellant is seeking under s. 18(1) of the Act (as a person who "has suffered loss or damage as a result of conduct that is contrary to paragraph9(1)(c)") and does not therefore directly engage the penal aspects of the *Radiocommunication Act*, the respondents direct our attention to ss. 10(1)(b) and 10(2.1). These provisions, respectively, create summary conviction offences for every person providing equipment for the purposes of contravening s. 9 and for every person who in fact contravenes s.9(1)(c). Respondents' counsel argued before us that, if s. 9(1)(c) is interpreted in the manner suggested by the appellant, "hundreds of thousands of Canadians can expect a knock on their door, because they will be in breach of the statute" and that "the effect of [the appellant's] submissions is to criminalise subscribers even if they pay every cent to which DIRECTV is entitled". The thrust of the respondents' submission is that the presence of ss. 10(1)(b) and 10(2.1) in the RadiocommunicationAct provides context that is important to the interpretation of s. 9(1)(c), and that this context militates in favour of the respondents' position.

54 Section 9(1)(c) does have a "dual aspect", in so far as it gives rise to both civil and criminal penalties. I am not, however, persuaded that this plays an important role in the interpretive process here. In any event, I do not think it correct to insinuate that the decision in this appeal will have the effect of automatically branding every Canadian resident who subscribes to and pays for U.S. DTH broadcasting services as a criminal. The penal offence in s. 10(1)(b) requires that circumstances "give rise to a reasonable inference that the equipment, device or component has been used, or is or was intended to be used, *for the purpose* of contravening section 9" (emphasis added), and allows for a "lawful excuse" defence. Section 10(2.5) further provides that "[n]o person shall be convicted of an offence under paragraph 9(1)(c) ... if the person exercised all due diligence to prevent the commission of the offence". Since it is neither necessary nor appropriate to pursue the meaning of these provisions absent the proper factual context, I refrain from doing so.

(d) Conclusion

55 After considering the entire context of s. 9(1)(c), and after reading its words in their grammatical and ordinary sense in harmony with the legislative framework in which the provision is found, I find no ambiguity. Rather, I can conclude only that Parliament intended to create an absolute bar on Canadian residents decoding encrypted programming signals. The only exception to this prohibition occurs where authorization is acquired from a distributor holding the necessary legal rights in Canada to transmit the signal and provide the required authorization. There is no need in this circumstance to resort to any of the subsidiary principles of statutory interpretation.

C. The Constitutional Questions

56 As I will discuss, I do not propose to answer the constitutional questions that have been stated in this appeal.

57 Rule 32 of the Rules of the Supreme Court of Canada, SOR/83-74 mandates that constitutional questions be stated in every appeal in which the constitutional validity or applicability of legislation is challenged, and sets out the procedural requirements to that end. As recognized by this Court, the purpose of Rule 32 is to ensure that the Attorney General of Canada, the attorneys general of the provinces, and the ministers of justice of the territories are alerted to constitutional challenges, in order that they may decide whether or not to intervene: Corbiere v. Canada (Minister of Indian& Northern Affairs)[1999] 2 S.C.R. 203(S.C.C.), at para. 49, *per* L'Heureux-Dubé J.; see also B.A. Crane and H.S. Brown, *Supreme Court of Canada Practice 2000* (1999), atp. 253. Rule 32 also serves to advise the parties and other potential interveners of the constitutional issues before the Court.

58 On the whole, the parties to an appeal are granted "wide latitude" by the Chief Justice or other judge of this Court in formulating the questions to be stated: Bisaillon c. Keable[1983] 2 S.C.R. 60(S.C.C.), at p. 71; *Corbiere*, *supra*, at para. 48. This wide latitude is especially appropriate in a case like the present, where the motion to state constitutional questions was brought by the respondents: generally, a respondent may advance any argument on appeal that would support the judgment below (Perka v. R.[1984] 2 S.C.R. 232(S.C.C.), at p. 240; Idziak v. Canada (Minister of Justice)[1992] 3 S.C.R. 631(S.C.C.), at pp. 643-44, *per* Cory J.). Like many general rules, however, this one is subject to an exception. A respondent, like any other party, cannot rely upon an entirely new argument that would have required additional evidence to be adduced at trial: Perka, supra; Idziak, supra; R. v. Gayle200154 O.R. (3d) 36(Ont. C.A.), at para. 69, leave to appeal refused January 24, 2002 [R. v. Gayle2002 CarswellOnt 159(S.C.C.)].

59 In like manner, even where constitutional questions are stated under Rule32, it may ultimately turn out that the factual record on appeal provides an insufficient basis for their resolution. The Court is not obliged in such cases to provide answers: Bisaillon, supra; Crane and Brown, supra, at p. 254. In fact, there are compelling reasons not to: while we will not deal with abstract questions in the ordinary course, "[t]his policy ... is of particular importance in constitutional matters" (Moysa v. Alberta (Labour Relations Board)[1989] 1 S.C.R. 1572(S.C.C.), at p. 1580; see also Danson v. Ontario (Attorney General)[1990] 2 S.C.R. 1086(S.C.C.), at p. 1099; Baron v. R.[1993] 1 S.C.R. 416(S.C.C.), at p. 452; R. v. Mills[1999] 3 S.C.R. 668(S.C.C.), at para. 38, *per* McLachlin and Iacobucci JJ.). Thus, as Sopinka J. stated for the Court in *Borowski v. Canada (Attorney General)*, [1989] 1 S.C.R. 342(S.C.C.), at p. 357: "The procedural requirements of Rule 32 of theSupreme Court Rules are not designed to introduce new issues but to define with precision the constitutional points in issue *which emerge from the record*". (Emphasis added.)

60 Respondents' counsel properly conceded during oral argument that there is noCharter record permitting this Court to address the stated questions. Rather, he argued that "*Charter* values" must inform the interpretation given to the *Radiocommunication Act*. This submission, inasmuch as it is presented as a stand alone proposition, must be rejected. Although I have already set out the preferred approach to statutory interpretation above, the manner in which the respondents would have this Court consider and apply the Charter warrants additional attention at this stage.

61 It has long been accepted that, where it will not upset the appropriate balance between judicial and legislative action, courts should apply and develop the rules of the common law in accordance with the values and principles enshrined in the Charter: Dolphin Delivery Ltd. v. R.W.D.S.U., Local 580[1986] 2 S.C.R. 573(S.C.C.), at p. 603, *per* McIntyre J.; Cloutier c.

Langlois[1990] 1 S.C.R. 158(S.C.C.), at p. 184; R. v. Salituro[1991] 3 S.C.R. 654(S.C.C.), at p. 675; R. v. Golden2001 SCC 83(S.C.C.), at para. 86, *per* Iacobucci and Arbour JJ.; *Pepsi-Cola Canada Beverages (West) Ltd. v. R.W.D.S.U., Local 558*, 2002 SCC 8(S.C.C.), at paras. 18-19. One must keep in mind, of course, that the common law is the province of the judiciary: the courts are responsible for its application, and for ensuring that it continues to reflect the basic values of society. The courts do not, however, occupy the same role *vis-à-vis* statute law.

62 Statutory enactments embody legislative will. They supplement, modify or supersede the common law. More pointedly, when a statute comes into play during judicial proceedings, the courts (absent any challenge on constitutional grounds) are charged with interpreting and applying it in accordance with the sovereign intent of the legislator. In this regard, although it is sometimes suggested that "it is appropriate for courts to prefer interpretations that tend to promote those [*Charter*] principles and values over interpretations that do not" (Sullivan, supra, at p. 325), it must be stressed that, to the extent this Court has recognized a "*Charter* values" interpretive principle, such principle can *only* receive application in circumstances of genuine ambiguity, i.e., where a statutory provision is subject to differing, but equally plausible, interpretations.

63 This Court has striven to make this point clear on many occasions: see, e.g., Hills v. Canada (Attorney General)[1988] 1 S.C.R. 513(S.C.C.), at p. 558, *per* L'Heureux-Dubé J.; Slaight Communications Inc. v. Davidson[1989] 1 S.C.R. 1038(S.C.C.), at p. 1078, *per* Lamer J. (as he then was); R. v. Zundel[1992] 2 S.C.R. 731(S.C.C.), at p. 771, *per* McLachlin J. (as she then was); Canada v. Pharmaceutical Society (Nova Scotia)[1992] 2 S.C.R. 606(S.C.C.), at p. 660; *Mossop*, supra, at pp. 581-82, *per* Lamer C.J.; R. v. Lucas[1998] 1 S.C.R. 439(S.C.C.), at para. 66, *per* Cory J.; Mills, supra, at paras. 22 and 56; *R. v. Sharpe*, *supra*, at para. 33.

64 These cases recognize that a blanket presumption of *Charter* consistency could sometimes frustrate true legislative intent, contrary to what is mandated by the preferred approach to statutory construction. Moreover, another rationale for restricting the "*Charter* values" rule was expressed in Symes v. R.[1993] 4 S.C.R. 695(S.C.C.), at p. 752:

> [T]o consult the *Charter* in the absence of such ambiguity is to deprive the *Charter* of a more powerful purpose, namely, the determination of a statute's constitutional validity. If statutory meanings must be made congruent with the *Charter* even in the absence of ambiguity, then it would never be possible to apply, rather than simply consult, the values of the *Charter*. Furthermore, it would never be possible for the government to justify infringements as reasonable limits under s. 1 of the *Charter*, since the interpretive process would preclude one from finding infringements in the first place. [Emphasis in original.]

(See also Willick v. Willick[1994] 3 S.C.R. 670(S.C.C.), at pp. 679-80, *per* Sopinka J.)

65 This last point touches, fundamentally, upon the proper function of the courts within the Canadian democracy. In Vriend v. Alberta[1998] 1 S.C.R. 493(S.C.C.), at paras. 136-42, the Court described the relationship among the legislative, executive, and judicial branches of governance as being one of dialogue and mutual respect. As was stated, judicial review on *Charter* grounds brings a certain measure of vitality to the democratic process, in that it fosters both dynamic interaction and accountability amongst the various branches. "The work of the legislature is reviewed by the courts and the work of the court in its decisions can be reacted to by the legislature in the passing of new legislation (or even overarching laws under s. 33 of the Charter)" (*Vriend*, *supra*, at para. 139).

66 To reiterate what was stated in *Symes* and Willick, supra, if courts were to interpret all statutes such that they conformed to the Charter, this would wrongly upset the dialogic balance. Every time the principle were applied, it would pre-empt judicial review on *Charter* grounds, where resort to the internal checks and balances of s. 1 may be had. In this fashion, the legislatures would be largely shorn of their constitutional power to enact reasonable limits on *Charter* rights and freedoms, which would in turn be inflated to near absolute status. Quite literally, in order to avoid this result a legislature would somehow have to set out its justification for qualifying the Charter right expressly in the statutory text, all without the benefit of judicial discussion regarding the limitations that are permissible in a free and democratic society. Before long, courts would be asked to interpret *this* sort of enactment in light of *Charter* principles. The patent unworkability of such a scheme highlights the importance of

retaining a forum for dialogue among the branches of governance. As such, where a statute is unambiguous, courts must give effect to the clearly expressed legislative intent and avoid using theCharter to achieve a different result.

67 It may well be that, when this matter returns to trial, the respondents' counsel will make an application to have s. 9(1)(c) of the RadiocommunicationAct declared unconstitutional for violating the Charter. At that time, it will be necessary to consider evidence regarding whose expressive rights are engaged, whether these rights are violated by s. 9(1)(c), and, if they are, whether they are justified under s. 1.

VII. Disposition

68 In the result, I would allow the appeal with costs throughout, set aside the judgment of the Court of Appeal for British Columbia, and declare that s. 9(1)(c)of the Radiocommunication Act creates a prohibition against all decoding of encrypted programming signals, followed by an exception where authorization is received from the person holding the lawful right in Canada to transmit and authorize decoding of the signal. No answer is given to the constitutional questions stated by order of the Chief Justice.

Appeal allowed.

Pourvoi accueilli.

***Major, Deschamps JJ.*:**

I. Introduction

1 The principal question raised by this appeal is whether directors of a corporation owe a fiduciary duty to the corporation's creditors comparable to the statutory duty owed to the corporation. For the reasons that follow, we conclude that directors owe a duty of care to creditors, but that duty does not rise to a fiduciary duty. We agree with the disposition of the Quebec Court of Appeal. The appeal is therefore dismissed.

2 As a result of the demise in the mid-1990s of two major retail chains in eastern Canada, Wise Stores Inc. ("Wise") and its wholly-owned subsidiary, Peoples Department Stores Inc. ("Peoples"), the indebtedness of a number of Peoples' creditors went unsatisfied. In the wake of the failure of the two chains, Caron Bélanger Ernst & Young Inc., Peoples' trustee in bankruptcy (the "trustee"), brought an action against the directors of Peoples. To address the trustee's claims, the extent of the duties imposed by s. 122(1) of the *Canada Business Corporations Act*, R.S.C. 1985, c. C-44 ("CBCA"), upon directors with respect to creditors must be determined; we must also identify the purpose and reach of s. 100 of the *Bankruptcy and Insolvency Act*, R.S.C. 1985, c. B-3 ("BIA").

3 In our view, it has not been established that the directors of Peoples violated either the fiduciary duty or the duty of care imposed by s. 122(1) of the CBCA. As for the trustee's submission regarding s. 100 of the BIA, we agree with the Court of

Appeal that the consideration received in the impugned transactions was not "conspicuously" less than fair market value. The BIA claim fails on that basis.

II. Background

4 Wise was founded by Alex Wise in 1930 as a small clothing store on St-Hubert Street in Montreal. By 1992, through expansion effected by a mix of internal growth and acquisitions, it had become an enterprise operating at 50 locations with annual sales of approximately $100 million, and it had been listed on the Montreal Stock Exchange in 1986. The stores were, for the most part, located in urban areas in Quebec. The founder's three sons, Lionel, Ralph and Harold Wise (the "Wise brothers"), were majority shareholders, officers, and directors of Wise. Together, they controlled 75 percent of the firm's equity.

5 In 1992, Peoples had been in business continuously in one form or another for 78 years. It had operated as an unincorporated division of Marks & Spencer Canada Inc. ("M & S") until 1991, when it was incorporated as a separate company. M & S itself was wholly owned by the large British firm, Marks & Spencer plc. ("M & S plc."). Peoples' 81 stores were generally located in rural areas, from Ontario to Newfoundland. Peoples had annual sales of about $160 million, but was struggling financially. Its annual losses were in the neighbourhood of $10 million.

6 Wise and Peoples competed with other chains such as Canadian Tire, Greenberg, Hart, K-Mart, M-Stores, Metropolitan Stores, Rossy, Woolco and Zellers. Retail competition in eastern Canada was intense in the early 1990s. In 1992, M-Stores went bankrupt. In 1994, Greenberg and Metropolitan Stores followed M-Stores into bankruptcy. The 1994 entry of Wal-Mart into the Canadian market, with its acquisition of over 100 Woolco stores from Woolworth Canada Inc., exerted significant additional competitive pressure on retail stores.

7 Lionel Wise, the eldest of the three brothers and Wise's executive vice-president, had expressed an interest in acquiring the ailing Peoples chain from M & S as early as 1988. Initially, M & S did not share Wise's interest for the sale, but by late 1991, M & S plc., the British parent company of M & S, had decided to divest itself of all its Canadian operations. At this point, M & S incorporated each of its three Canadian divisions to facilitate the anticipated divestiture thereof.

8 The new-found desire to sell coincided with Wise's previously expressed interest in acquiring its larger rival. Although M & S had initially hoped to sell Peoples for cash to a large firm in a solid financial condition, it was unable to do so. Consequently, negotiations got underway with representatives of Wise. A formal share purchase agreement was drawn up in early 1992 and executed in June 1992, with July 16, 1992 as its closing date.

9 Wise incorporated a company, 2798832 Canada Inc., for the purpose of acquiring all of the issued and outstanding shares of Peoples from M & S. The $27- million share acquisition proceeded as a fully leveraged buyout. The portion of the purchase price attributable to inventory was discounted by 30 percent. The discount was designed to inject equity into Peoples in the fiscal year following the sale and to make use of some of the tax losses that had accumulated in prior years.

10 The amount of the down payment due to M & S at closing, $5 million, was borrowed from the Toronto Dominion Bank (the "TD Bank"). According to the terms of the share purchase agreement, the $22-million balance of the purchase price would be carried by M & S and would be repaid over a period of eight years. Wise guaranteed all of 2798832 Canada Inc.'s obligations pursuant to the terms of the share purchase agreement.

11 To protect its interests, M & S took the assets of Peoples as security (subject to a priority in favour of the TD Bank) and negotiated strict covenants concerning the financial management and operation of the company. Among other requirements, 2798832 Canada Inc. and Wise were obligated to maintain specific financial ratios, and Peoples was not permitted to provide financial assistance to Wise. In addition, the agreement provided that Peoples could not be amalgamated with Wise until the purchase price had been paid. This prohibition was presumably intended to induce Wise to refinance and pay the remainder of the purchase price as early as possible in order to overcome the strict conditions imposed upon it under the share purchase agreement.

12 On January 31, 1993, 2798832 Canada Inc. was amalgamated with Peoples. The new entity retained Peoples' corporate name. Since 2798832 Canada Inc. had been a wholly-owned subsidiary of Wise, upon amalgamation the new Peoples became a subsidiary directly owned and controlled by Wise. The three Wise brothers were Peoples' only directors.

13 Following the acquisition, Wise had attempted to rationalize its operations by consolidating the overlapping corporate functions of Wise and Peoples, and operating as a group. The consolidation of the administration, accounting, advertising and purchasing departments of the two corporations was completed by the fall of 1993. As a consequence of the changes, many of Wise's employees worked for both firms but were paid solely by Wise. The evidence at trial was that because of the tax losses carried-forward by Peoples, it was advantageous for the group to have more expenses incurred by Wise, which, if the group was profitable as a whole, would increase its after-tax profits. Almost from the outset, the joint operation of Wise and Peoples did not function smoothly. Instead of the expected synergies, the consolidation resulted in dissonance.

14 After the acquisition, the total number of buyers for the two companies was nearly halved. The procurement policy at that point required buyers to deal simultaneously with suppliers on behalf of both Peoples and Wise. For the buyers, this nearly doubled their administrative work. Separate invoices were required for purchases made on behalf of Wise and Peoples. These invoices had to be separately entered into the system, tracked and paid.

15 Inventory, too, was separately recorded and tracked in the system. However, the inventory of each company was handled and stored, often unsegregated, in shared warehouse facilities. The main warehouse for Peoples, on Cousens Street in Ville St-Laurent, was maintained for and used by both firms. The Cousens warehouse saw considerable activity, as it was the central distribution hub for both chains. The facility was open 18 hours a day and employed 150 people on two shifts who handled a total of approximately 30,000 cartons daily through 20 loading docks. It was abuzz with activity.

16 Before long, the parallel bookkeeping combined with the shared warehousing arrangements caused serious problems for both Wise and Peoples. The actual situation in the warehouse often did not mirror the reported state of the inventory in the system. The goods of one company were often inextricably commingled and confused with the goods of the other. As a result, the inventory records of both companies were increasingly incorrect. A physical inventory count was conducted to try to rectify the situation, to little avail. Both Wise and Peoples stores experienced numerous shipping disruptions and delays. The situation, already unsustainable, was worsening.

17 In October 1993, Lionel Wise consulted David Clément, Wise's (and, after the acquisition, Peoples') vice-president of administration and finance, in an attempt to find a solution. In January 1994, Clément recommended and the three Wise brothers agreed that they would implement a joint inventory procurement policy (the "new policy") whereby the two firms would divide responsibility for purchasing. Peoples would make all purchases from North American suppliers and Wise would, in turn, make all purchases from overseas suppliers. Peoples would then transfer to Wise what it had purchased for Wise, charging Wise accordingly, and vice versa. The new policy was implemented on February 1, 1994. It was this arrangement that was later criticized by certain creditors and by the trial judge.

18 Approximately 82 percent of the total inventory of Wise and Peoples was purchased from North American suppliers, which inevitably meant that Peoples would be extending a significant trade credit to Wise. The new policy was known to the directors, but was neither formally implemented in writing nor approved by a board meeting or resolution.

19 On April 27, 1994, Lionel Wise outlined the details of the new policy at a meeting of Wise's audit committee. A partner of Coopers & Lybrand was M & S's representative on Wise's board of directors and a member of the audit committee. He attended the April 27th meeting and raised no objection to the new policy when it was introduced.

20 By June 1994, financial statements prepared to reflect the financial position of Peoples as of April 30, 1994 revealed that Wise owed more than $18 million to Peoples. Approximately $14 million of this amount resulted from a notional transfer of inventory that was cancelled following the period's end. M & S was concerned about the situation and started an investigation, as a result of which M & S insisted that the new procurement policy be rescinded. Wise agreed to M & S's demand but took the position that the former procurement policy could not be reinstated immediately. An agreement was executed on September 27,

1994, effective July 21, 1994, and it provided that the new policy would be abandoned as of January 31, 1995. The agreement also specified that the inventory and records of the two companies would be kept separate, and that the amount owed to Peoples by Wise would not exceed $3 million.

21 Another result of the negotiations was that M & S accepted an increase in the amount of the TD Bank's priority to $15 million and a new repayment schedule for the balance of the purchase price owed to M & S. The parties agreed to revise the schedule to provide for 37 monthly payments beginning in July 1995. Each of the Wise brothers also provided a personal guarantee of $500,000 in favour of M & S.

22 In September 1994, in light of the fragile financial condition of the companies and the competitiveness of the retail market, the TD Bank announced its intention to cease doing business with Wise and Peoples as of the end of December 1994. Following negotiations, however, the bank extended its financial support until the end of July 1995. The Wise brothers promised to extend personal guarantees in favour of the TD Bank, but this did not occur.

23 In December 1994, three days after the Wise brothers presented financial statements showing disappointing results for Peoples in its third fiscal quarter, M & S initiated bankruptcy proceedings against both Wise and Peoples. A notice of intention to make a proposal was filed on behalf of Peoples the same day. Nonetheless, Peoples later consented to the petition by M & S, and both Wise and Peoples were declared bankrupt on January 13, 1995, effective December 9, 1994. The same day, M & S released each of the Wise brothers from their personal guarantees. M & S apparently preferred to proceed with an uncontested petition in bankruptcy rather than attempting to collect on the personal guarantees.

24 The assets of Wise and Peoples were sufficient to cover in full the outstanding debt owed to the TD Bank, satisfy the entire balance of the purchase price owed to M & S, and discharge almost all the landlords' lease claims. The bulk of the unsatisfied claims were those of trade creditors.

25 Following the bankruptcy, Peoples' trustee filed a petition against the Wise brothers. In the petition, the trustee claimed that they had favoured the interests of Wise over Peoples to the detriment of Peoples' creditors, in breach of their duties as directors under s. 122(1) of the CBCA. The trustee also claimed that the Wise brothers had, in the year preceding the bankruptcy, been privy to transactions in which property had been transferred for conspicuously less than fair market value within the meaning of s. 100 of the BIA.

26 Pursuant to art. 2501 of the *Civil Code of Québec*, S.Q. 1991, c. 64 ("C.C.Q."), the trustee named Chubb Insurance Company of Canada ("Chubb"), which had provided directors' insurance to Wise and its subsidiaries, as a defendant in addition to the Wise brothers.

27 The trial judge, Greenberg J., relying on decisions from the United Kingdom, Australia and New Zealand, held that the fiduciary duty and the duty of care under s. 122 (1) of the CBCA extend to a company's creditors when a company is insolvent or in the vicinity of insolvency. Greenberg J. found that the implementation, by the Wise brothers qua directors of Peoples, of a corporate policy that affected both companies, had occurred while the corporation was in the vicinity of insolvency and was detrimental to the interests of the creditors of Peoples. The Wise brothers were therefore found liable and the trustee was awarded $4.44 million in damages. As Chubb had provided insurance coverage for directors, it was also held liable. Greenberg J. also considered the alternative grounds under the BIA advanced by the trustee and found the Wise brothers liable for the same $4.44 million amount on that ground as well. All the parties appealed.

28 The Quebec Court of Appeal, *per* Pelletier J.A., with Robert C.J.Q. and Nuss J.A. concurring, allowed the appeals by Chubb and the Wise brothers. The Court of Appeal expressed reluctance to follow Greenberg J. in equating the interests of creditors with the best interests of the corporation when the corporation was insolvent or in the vicinity of insolvency, stating that an innovation in the law such as this is a policy matter more appropriately dealt with by Parliament than the courts. In considering the trustee's claim under s. 100 of the BIA, Pelletier J.A. held that the trial judge had committed a palpable and overriding error in concluding that the amounts owed by Wise to Peoples in respect of inventory "were neither collected nor collectible". He found that the consideration received for the transactions had been approximately 94 percent of fair market

value, and he was not convinced that this disparity could be characterized as being "conspicuously" less than fair market value. Moreover, he did not accept the broad meaning the trial judge gave to the word "privy". Pelletier J.A. declined to exercise his discretion under s. 100(2) of the BIA to make an order in favour of the trustee. In view of his conclusion that the Wise brothers were not liable, Pelletier J.A. allowed the appeal with respect to Chubb.

III. Analysis

29 At the outset, it should be acknowledged that according to art. 300 of the C.C.Q. and s. 8.1 of the *Interpretation Act*, R.S.C. 1985, c. I-21, the civil law serves as a supplementary source of law to federal legislation such as the CBCA. Since the CBCA does not entitle creditors to sue directors directly for breach of their duties, it is appropriate to have recourse to the *Civil Code of Québec* to determine how rights grounded in a federal statute should be addressed in Quebec, and more specifically how s. 122(1) of the CBCA can be harmonized with the principles of civil liability: see R. Crête and S. Rousseau, *Droit des sociétés par actions: principes fondamentaux* (2002), at p. 58.

30 This case came before our Court on the issue of whether directors owe a duty to creditors. The creditors did not bring a derivative action or an oppression remedy application under the CBCA. Instead, the trustee, representing the interests of the creditors, sued the directors for an alleged breach of the duties imposed by s. 122(1) of the CBCA. The standing of the trustee to sue was not questioned.

31 The primary role of directors is described in s. 102(1) of the CBCA:

> **102.** (1) Subject to any unanimous shareholder agreement, the directors shall manage, or supervise the management of, the business and affairs of a corporation.

As for officers, s. 121 of the CBCA provides that their powers are delegated to them by the directors:

> **121.** Subject to the articles, the by-laws or any unanimous shareholder agreement,
>
> (a) the directors may designate the offices of the corporation, appoint as officers persons of full capacity, specify their duties and delegate to them powers to manage the business and affairs of the corporation, except powers to do anything referred to in subsection 115(3);
>
> (b) a director may be appointed to any office of the corporation; and
>
> (c) two or more offices of the corporation may be held by the same person.

Although the shareholders are commonly said to own the corporation, in the absence of a unanimous shareholder agreement to the contrary, s. 102 of the CBCA provides that it is not the shareholders, but the directors elected by the shareholders, who are responsible for managing it. This clear demarcation between the respective roles of shareholders and directors long predates the 1975 enactment of the CBCA: see *Automatic Self Cleansing Filter Syndicate Co. v. Cunninghame*, [1906] 2 Ch. 34 (Eng. Ch.); see also art. 311, C.C.Q.

32 Subsection 122(1) of the CBCA establishes two distinct duties to be discharged by directors and officers in managing, or supervising the management of, the corporation:

> **122.** (1) Every director and officer of a corporation in exercising their powers and discharging their duties shall
>
> (a) act honestly and in good faith with a view to the best interests of the corporation; and
>
> (b) exercise the care, diligence and skill that a reasonably prudent person would exercise in comparable circumstances.

The first duty has been referred to in this case as the "fiduciary duty". It is better described as the "duty of loyalty". We will use the expression "statutory fiduciary duty" for purposes of clarity when referring to the duty under the CBCA. This duty requires directors and officers to act honestly and in good faith with a view to the best interests of the corporation. The second duty is commonly referred to as the "duty of care". Generally speaking, it imposes a legal obligation upon directors and officers to be diligent in supervising and managing the corporation's affairs.

33 The trial judge did not apply or consider separately the two duties imposed on directors by s. 122(1). As the Court of Appeal observed, the trial judge appears to have confused the two duties. They are, in fact, distinct and are designed to secure different ends. For that reason, they will be addressed separately in these reasons.

A. The Statutory Fiduciary Duty: Section 122(1)(a) of the CBCA

34 Considerable power over the deployment and management of financial, human, and material resources is vested in the directors and officers of corporations. For the directors of CBCA corporations, this power originates in s. 102 of the Act. For officers, this power comes from the powers delegated to them by the directors. In deciding to invest in, lend to or otherwise deal with a corporation, shareholders and creditors transfer control over their assets to the corporation, and hence to the directors and officers, in the expectation that the directors and officers will use the corporation's resources to make reasonable business decisions that are to the corporation's advantage.

35 The statutory fiduciary duty requires directors and officers to act honestly and in good faith *vis-à-vis* the corporation. They must respect the trust and confidence that have been reposed in them to manage the assets of the corporation in pursuit of the realization of the objects of the corporation. They must avoid conflicts of interest with the corporation. They must avoid abusing their position to gain personal benefit. They must maintain the confidentiality of information they acquire by virtue of their position. Directors and officers must serve the corporation selflessly, honestly and loyally: see K.P. McGuinness, *The Law and Practice of Canadian Business Corporations* (1999), at p. 715.

36 The common law concept of fiduciary duty was considered in *B. (K.L.) v. British Columbia*, [2003] 2 S.C.R. 403, 2003 SCC 51 (S.C.C.). In that case, which involved the relationship between the government and foster children, a majority of this Court agreed with McLachlin C.J. who stated, at paras. 40-41 and 49:

> ...Fiduciary duties arise in a number of different contexts, including express trusts, relationships marked by discretionary power and trust, and the special responsibilities of the Crown in dealing with aboriginal interests....
>
> What ... might the content of the fiduciary duty be if it is understood ... as a private law duty arising simply from the relationship of discretionary power and trust between the Superintendent and the foster children? In *Lac Minerals Ltd. v. International Corona Resources Ltd.*, [1989] 2 S.C.R. 574, at pp. 646-47, La Forest J. noted that there are certain common threads running through fiduciary duties that arise from relationships marked by discretionary power and trust, such as loyalty and "the avoidance of a conflict of duty and interest and a duty not to profit at the expense of the beneficiary". <u>However, he also noted that "[t]he obligation imposed may vary in its specific substance depending on the relationship" (p. 646)</u>....
>
> ...concern for the best interests of the child informs the parental fiduciary relationship, as La Forest J. noted in *M. (K.) v. M. (H.), supra*, at p. 65. But the duty imposed is to act loyally, and not to put one's own or others' interests ahead of the child's in a manner that abuses the child's trust.... The parent who exercises undue influence over the child in economic matters for his own gain has put his own interests ahead of the child's, in a manner that abuses the child's trust in him. The same may be said of the parent who uses a child for his sexual gratification or a parent who, wanting to avoid trouble for herself and her household, turns a blind eye to the abuse of a child by her spouse. The parent need not, as the Court of Appeal suggested in the case at bar, be consciously motivated by a desire for profit or personal advantage; nor does it have to be her own interests, rather than those of a third party, that she puts ahead of the child's. It is rather a question of disloyalty -- of putting someone's interests ahead of the child's in a manner that abuses the child's trust. <u>Negligence, even aggravated negligence, will not ground parental fiduciary liability unless it is associated with breach of trust in this sense</u>. [Emphasis added.]

37 The issue to be considered here is the "specific substance" of the fiduciary duty based on the relationship of directors to corporations under the CBCA.

38 It is settled law that the fiduciary duty owed by directors and officers imposes strict obligations: see *Canadian Aero Service Ltd. v. O'Malley* (1973), [1974] S.C.R. 592 (S.C.C.), at pp. 609-10, *per* Laskin J. (as he then was), where it was decided that directors and officers may even have to account to the corporation for profits they make that do not come at the corporation's expense:

> The reaping of a profit by a person at a company's expense while a director thereof is, of course, an adequate ground upon which to hold the director accountable. Yet there may be situations where a profit must be disgorged, although not gained at the expense of the company, on the ground that a director must not be allowed to use his position as such to make a profit even if it was not open to the company, as for example, by reason of legal disability, to participate in the transaction. An analogous situation, albeit not involving a director, existed for all practical purposes in the case of *Phipps v. Boardman* [[1967] 2 A.C. 46], which also supports the view that liability to account does not depend on proof of an actual conflict of duty and self-interest. Another, quite recent, illustration of a liability to account where the company itself had failed to obtain a business contract and hence could not be regarded as having been deprived of a business opportunity is *Industrial Development Consultants Ltd. v. Cooley* [[1972] 2 All E.R. 162], a judgment of a Court of first instance. There, the managing director, who was allowed to resign his position on a false assertion of ill health, subsequently got the contract for himself. That case is thus also illustrative of the situation where a director's resignation is prompted by a decision to obtain for himself the business contract denied to his company and where he does obtain it without disclosing his intention. [Emphasis added.]

A compelling argument for making directors accountable for profits made as a result of their position, though not at the corporation's expense, is presented by J. Brock, "The Propriety of Profitmaking: Fiduciary Duty and Unjust Enrichment" (2000), 58 *U.T. Fac. L. Rev.* 185, at pp. 204-5.

39 However, it is not required that directors and officers in all cases avoid personal gain as a direct or indirect result of their honest and good faith supervision or management of the corporation. In many cases the interests of directors and officers will innocently and genuinely coincide with those of the corporation. If directors and officers are also shareholders, as is often the case, their lot will automatically improve as the corporation's financial condition improves. Another example is the compensation that directors and officers usually draw from the corporations they serve. This benefit, though paid by the corporation, does not, if reasonable, ordinarily place them in breach of their fiduciary duty. Therefore, all the circumstances may be scrutinized to determine whether the directors and officers have acted honestly and in good faith with a view to the best interests of the corporation.

40 In our opinion, the trial judge's determination that there was no fraud or dishonesty in the Wise brothers' attempts to solve the mounting inventory problems of Peoples and Wise stands in the way of a finding that they breached their fiduciary duty. Greenberg J. stated, at para. 180:

> We hasten to add that in the present case, the Wise Brothers derived no direct personal benefit from the new domestic inventory procurement policy, albeit that, as the controlling shareholders of Wise Stores, there was an indirect benefit to them. Moreover, as was conceded by the other parties herein, in deciding to implement the new domestic inventory procurement policy, there was no dishonesty or fraud on their part.

The Court of Appeal relied heavily on this finding by the trial judge, as do we. At para. 84, Pelletier J.A. stated that:

> [TRANSLATION] In regard to fiduciary duty, I would like to point out that the brothers were driven solely by the wish to resolve the problem of inventory procurement affecting both the operations of Peoples Inc. and those of Wise. [This is a] motivation that is in line with the pursuit of the interests of the corporation within the meaning of paragraph 122(1)(*a*) C.B.C.A. and that does not expose them to any justified criticism.

41 As explained above, there is no doubt that both Peoples and Wise were struggling with a serious inventory management problem. The Wise brothers considered the problem and implemented a policy they hoped would solve it. In the absence of evidence of a personal interest or improper purpose in the new policy, and in light of the evidence of a desire to make both Wise

and Peoples "better" corporations, we find that the directors did not breach their fiduciary duty under s. 122(1)(*a*) of the CBCA. See *820099 Ontario Inc. v. Harold E. Ballard Ltd.* (1991), 3 B.L.R. (2d) 123 (Ont. Gen. Div.) (aff'd (1991), 3 B.L.R. (2d) 113 (Ont. Div. Ct.)), in which Farley J., at p. 171, correctly observes that in resolving a conflict between majority and minority shareholders, it is safe for directors and officers to act to make the corporation a "better corporation".

42 This appeal does not relate to the non-statutory duty directors owe to shareholders. It is concerned only with the statutory duties owed under the CBCA. Insofar as the statutory fiduciary duty is concerned, it is clear that the phrase the "best interests of the corporation" should be read not simply as the "best interests of the shareholders". From an economic perspective, the "best interests of the corporation" means the maximization of the value of the corporation: see E.M. Iacobucci, "Directors' Duties in Insolvency: Clarifying What Is at Stake" (2003), 39(3) *Can. Bus. L.J.* 398, at pp. 400-1. However, the courts have long recognized that various other factors may be relevant in determining what directors should consider in soundly managing with a view to the best interests of the corporation. For example, in *Teck Corp. v. Millar* (1972), 33 D.L.R. (3d) 288 (B.C. S.C.), Berger J. stated, at p. 314:

> A classical theory that once was unchallengeable must yield to the facts of modern life. In fact, of course, it has. If today the directors of a company were to consider the interests of its employees no one would argue that in doing so they were not acting *bona fide* in the interests of the company itself. Similarly, if the directors were to consider the consequences to the community of any policy that the company intended to pursue, and were deflected in their commitment to that policy as a result, it could not be said that they had not considered bona fide the interests of the shareholders.
>
> I appreciate that it would be a breach of their duty for directors to disregard entirely the interests of a company's shareholders in order to confer a benefit on its employees: *Parke v. Daily News Ltd.*, [1962] Ch. 927. But if they observe a decent respect for other interests lying beyond those of the company's shareholders in the strict sense, that will not, in my view, leave directors open to the charge that they have failed in their fiduciary duty to the company.

The case of *Olympia & York Enterprises Ltd. v. Hiram Walker Resources Ltd.* (1986), 59 O.R. (2d) 254 (Ont. Div. Ct.), approved, at p. 271, the decision in *Teck, supra*. We accept as an accurate statement of law that in determining whether they are acting with a view to the best interests of the corporation it may be legitimate, given all the circumstances of a given case, for the board of directors to consider, inter alia, the interests of shareholders, employees, suppliers, creditors, consumers, governments and the environment.

43 The various shifts in interests that naturally occur as a corporation's fortunes rise and fall do not, however, affect the content of the fiduciary duty under s. 122(1)(*a*) of the CBCA. At all times, directors and officers owe their fiduciary obligation to the corporation. The interests of the corporation are not to be confused with the interests of the creditors or those of any other stakeholders.

44 The interests of shareholders, those of the creditors and those of the corporation may and will be consistent with each other if the corporation is profitable and well capitalized and has strong prospects. However, this can change if the corporation starts to struggle financially. The residual rights of the shareholders will generally become worthless if a corporation is declared bankrupt. Upon bankruptcy, the directors of the corporation transfer control to a trustee, who administers the corporation's assets for the benefit of creditors.

45 Short of bankruptcy, as the corporation approaches what has been described as the "vicinity of insolvency", the residual claims of shareholders will be nearly exhausted. While shareholders might well prefer that the directors pursue high-risk alternatives with a high potential payoff to maximize the shareholders' expected residual claim, creditors in the same circumstances might prefer that the directors steer a safer course so as to maximize the value of their claims against the assets of the corporation.

46 The directors' fiduciary duty does not change when a corporation is in the nebulous "vicinity of insolvency". That phrase has not been defined; moreover, it is incapable of definition and has no legal meaning. What it is obviously intended to convey is a deterioration in the corporation's financial stability. In assessing the actions of directors it is evident that any honest and good

faith attempt to redress the corporation's financial problems will, if successful, both retain value for shareholders and improve the position of creditors. If unsuccessful, it will not qualify as a breach of the statutory fiduciary duty.

47 For a discussion of the shifting interests and incentives of shareholders and creditors, see W.D. Gray, "*Peoples v. Wise* and *Dylex*: Identifying Stakeholder Interests upon or near Corporate Insolvency — Stasis or Pragmatism?" (2003), 39 *Can. Bus. L.J.* 242, at p. 257; E. M. Iacobucci & K.E. Davis, "Reconciling Derivative Claims and the Oppression Remedy" (2000), 12 *S.C.L.R.* (2d) 87, at p. 114. In resolving these competing interests, it is incumbent upon the directors to act honestly and in good faith with a view to the best interests of the corporation. In using their skills for the benefit of the corporation when it is in troubled waters financially, the directors must be careful to attempt to act in its best interests by creating a "better" corporation, and not to favour the interests of any one group of stakeholders. If the stakeholders cannot avail themselves of the statutory fiduciary duty (the duty of loyalty, *supra*) to sue the directors for failing to take care of their interests, they have other means at their disposal.

48 The Canadian legal landscape with respect to stakeholders is unique. Creditors are only one set of stakeholders, but their interests are protected in a number of ways. Some are specific, as in the case of amalgamation: s. 185 of the CBCA. Others cover a broad range of situations. The oppression remedy of s. 241(2)(*c*) of the CBCA and the similar provisions of provincial legislation regarding corporations grant the broadest rights to creditors of any common law jurisdiction: see D. Thomson, "Directors, Creditors and Insolvency: A Fiduciary Duty or a Duty Not to Oppress?" (2000), 58(1) *U.T. Fac. L. Rev.* 31, at p. 48. One commentator describes the oppression remedy as "the broadest, most comprehensive and most open-ended shareholder remedy in the common law world": S.M. Beck, "Minority Shareholders' Rights in the 1980s" in *Corporate Law in the 80s* (1982), 311, at p. 312. While Beck was concerned with shareholder remedies, his observation applies equally to those of creditors.

49 The fact that creditors' interests increase in relevancy as a corporation's finances deteriorate is apt to be relevant to, *inter alia*, the exercise of discretion by a court in granting standing to a party as a "complainant" under s. 238(*d*) of the CBCA as a "proper person" to bring a derivative action in the name of the corporation under ss. 239 and 240 of the CBCA, or to bring an oppression remedy claim under s. 241 of the CBCA.

50 Section 241(2)(*c*) authorizes a court to grant a remedy

> if the powers of the directors of the corporation or any of its affiliates are or have been exercised in a manner
>
> > that is oppressive or unfairly prejudicial to or that unfairly disregards the interests of any security holder, creditor, director or officer...

A person applying for the oppression remedy must, in the court's opinion, fall within the definition of "complainant" found in s. 238 of the CBCA:

> (a) a registered holder or beneficial owner, and a former registered holder or beneficial owner, of a security of a corporation or any of its affiliates,
>
> (b) a director or an officer or a former director or officer of a corporation or any of its affiliates,
>
> (c) the Director, or
>
> (d) any other person who, in the discretion of a court, is a proper person to make an application under this Part.

Creditors, who are not security holders within the meaning of para. (*a*), may therefore apply for the oppression remedy under para. (*d*) by asking a court to exercise its discretion and grant them status as a "complainant".

51 Section 241 of the CBCA provides a possible mechanism for creditors to protect their interests from the prejudicial conduct of directors. In our view, the availability of such a broad oppression remedy undermines any perceived need to extend the fiduciary duty imposed on directors by s. 122(1)(*a*) of the CBCA to include creditors.

52 The Court of Appeal, at paras. 99-100, referred to *373409 Alberta Ltd. (Receiver of) v. Bank of Montreal*, [2002] 4 S.C.R. 312, 2002 SCC 81 (S.C.C.), as an indication by this Court that the interests of creditors do not have any bearing on the assessment of the conduct of directors. However, the receiver in that case was representing the corporation's rights and not the creditors' rights; therefore, the case has no application in this appeal. *373409 Alberta Ltd.* involved an action taken by the receiver on behalf of the corporation against a bank for the tort of conversion. The sole shareholder, director and officer of 373409 Alberta Ltd., who was also the sole shareholder, director and officer of another corporation, Legacy Holdings Ltd., had deposited a cheque payable to 373409 Alberta Ltd. into the account of Legacy. While it was recognized, at para. 22, that the diversion of money from 373409 Alberta Ltd. to Legacy "may very well have been wrongful vis-à-vis [373409 Alberta Ltd.]'s creditors" (none of whom were involved in the action), no fraud had been committed against the corporation itself and the bank, acting on proper authority, had not wrongfully interfered with the cheque by carrying out the deposit instructions. The statutory duties of the directors were not at issue, nor were they considered, and no assessment of the creditors' rights was made. With respect, Pelletier J.A.'s broad reading of *373409 Alberta Ltd.* was misplaced.

53 In light of the availability both of the oppression remedy and of an action based on the duty of care, which will be discussed below, stakeholders have viable remedies at their disposal. There is no need to read the interests of creditors into the duty set out in s. 122(1)(*a*) of the CBCA. Moreover, in the circumstances of this case, the Wise brothers did not breach the statutory fiduciary duty owed to the corporation.

B. The Statutory Duty of Care: Section 122(1)(b) of the CBCA

54 As mentioned above, the CBCA does not provide for a direct remedy for creditors against directors for breach of their duties and the C.C.Q. is used as suppletive law.

55 In Quebec, directors have been held liable to creditors in respect of either contractual or extra-contractual obligations. Contractual liability arises where the director personally guarantees a contractual obligation of the company. Liability also arises where the director personally acts in a manner that triggers his or her extra-contractual liability. See P. Martel, "Le 'voile corporatif' — l'attitude des tribunaux face à l'article 317 du Code civil du Québec" (1998), 58 R. du B. 95, at pp. 135-36; *Brasserie Labatt ltée c. Lanoue*, [1999] J.Q. No. 1108 (C.A. Que.), *per* Forget J.A., at para. 29. It is clear that the Wise brothers cannot be held contractually liable as they did not guarantee the debts at issue here. Extra-contractual liability is the remaining possibility.

56 To determine the applicability of extra-contractual liability in this appeal, it is necessary to refer to art. 1457 of the C.C.Q.:

> Every person has a duty to abide by the rules of conduct which lie upon him, according to the circumstances, usage or law, so as not to cause injury to another.
>
> Where he is endowed with reason and fails in this duty, he is responsible for any injury he causes to another person by such fault and is liable to reparation for the injury, whether it be bodily, moral or material in nature.
>
> He is also liable, in certain cases, to reparation for injury caused to another by the act or fault of another person or by the act of things in his custody. [Emphasis added]

Three elements of art. 1457 of the C.C.Q. are relevant to the integration of the director's duty of care into the principles of extra-contractual liability: who has the duty ("every person"), to whom is the duty owed ("another") and what breach will trigger liability ("rules of conduct"). It is clear that directors and officers come within the expression "every person". It is equally clear that the word "another" can include the creditors. The reach of art. 1457 of the C.C.Q. is broad and it has been given an open and inclusive meaning. See *Regent Taxi & Transport Co. v. Congrégation des petits frères de Marie*, [1929] S.C.R. 650 (S.C.C.), *per* Anglin C.J., at p. 655 (rev'd on other grounds, [1932] 2 D.L.R. 70 (Que. K.B.)):

> ...to narrow the prima facie scope of art. 1053 C.C. [now art. 1457] is highly dangerous and would necessarily result in most meritorious claims being rejected; many a wrong would be without a remedy.

This liberal interpretation was also affirmed and treated as settled by this Court in *Lister v. McAnulty*, [1944] S.C.R. 317 (S.C.C.), and *Hôpital Notre-Dame de l'Espérance c. Laurent* (1977), [1978] 1 S.C.R. 605 (S.C.C.).

57 This interpretation can be harmoniously integrated with the wording of the CBCA. Indeed, unlike the statement of the fiduciary duty in s. 122(1)(*a*) of the CBCA, which specifies that directors and officers must act with a view to the best interests of the corporation, the statement of the duty of care in s. 122(1)(*b*) of the CBCA does not specifically refer to an identifiable party as the beneficiary of the duty. Instead, it provides that "[e]very director and officer of a corporation in exercising his powers and discharging his duties shall ... exercise the care, diligence and skill that a reasonably prudent person would exercise in comparable circumstances." Thus, the identity of the beneficiary of the duty of care is much more open-ended, and it appears obvious that it must include creditors. This result is clearly consistent with the civil law interpretation of the word "another". Therefore, if breach of the standard of care, causation and damages are established, creditors can resort to art. 1457 to have their rights vindicated. The only issue thus remaining is the determination of the "rules of conduct" likely to trigger extracontractual liability. On this issue, art. 1457 is explicit.

58 The first paragraph of art. 1457 does not set the standard of conduct. Instead, it incorporates by reference s. 122(1)(*b*) of the CBCA. The statutory duty of care is a "duty to abide by [a rule] of conduct which lie[s] upon [them], according to the ... law, so as not to cause injury to another". Thus, for the purpose of determining whether the Wise brothers can be held liable, only the CBCA is relevant. It is therefore necessary to outline the requirements of the duty of care embodied in s. 122(1)(*b*) of the CBCA.

59 That directors must satisfy a duty of care is a long-standing principle of the common law, although the duty of care has been reinforced by statute to become more demanding. Among the earliest English cases establishing the duty of care were *Dovey v. Cory*, [1901] A.C. 477 (Eng. H.L.); *Brazilian Rubber Plantation & Estates Ltd., Re*, [1911] 1 Ch. 425 (Eng. Ch. Div.); and *City Equitable Fire Insurance Co., Re* (1924), [1925] 1 Ch. 407 (Eng. C.A.). In substance, these cases held that the standard of care was a reasonably relaxed, subjective standard. The common law required directors to avoid being grossly negligent with respect to the affairs of the corporation and judged them according to their own personal skills, knowledge, abilities and capacities. See McGuinness, *supra*, at p. 776: "Given the history of case law in this area, and the prevailing standards of competence displayed in commerce generally, it is quite clear that directors were not expected at common law to have any particular business skill or judgment".

60 The 1971 report entitled *Proposals for a New Business Corporations Law for Canada* (1971) ("Dickerson Report") culminated the work of a committee headed by R.W. V. Dickerson which had been appointed by the federal government to study the need for new federal business corporations legislation. This report preceded the enactment of the CBCA by four years and influenced the eventual structure of the CBCA.

61 The standard recommended by the Dickerson Report was objective, requiring directors and officers to meet the standard of a "reasonably prudent person" (vol. II, at p. 74):

> **9.19**
>
> (1) Every director and officer of a corporation in exercising his powers and discharging his duties shall
>
> . . . . .
>
> (b) exercise the care, diligence and skill of a reasonably prudent person.

The report described how this proposed duty of care differed from the prevailing common law duty of care (vol. I, at p. 83):

> **242.** The formulation of the duty of care, diligence and skill owed by directors represents an attempt to upgrade the standard presently required of them. The principal change here is that whereas at present the law seems to be that a director is only required to demonstrate the degree of care, skill and diligence that could reasonably be expected from him, having regard to his knowledge and experience -- *Re City Equitable Fire Insurance Co.*, [1925] Ch. 425 -- under s. 9.19(1)(b) he is required to conform to the standard of a reasonably prudent man. Recent experience has demonstrated how low the prevailing legal standard of care for directors is, and we have sought to raise it significantly.

> We are aware of the argument that raising the standard of conduct for directors may deter people from accepting directorships. The truth of that argument has not been demonstrated and we think it is specious. The duty of care imposed by s. 9.19(1)(b) is exactly the same as that which the common law imposes on every professional person, for example, and there is no evidence that this has dried up the supply of lawyers, accountants, architects, surgeons or anyone else. It is in any event cold comfort to a shareholder to know that there is a steady supply of marginally competent people available under present law to manage his investment. [Emphasis added.]

62 The statutory duty of care in s. 122(1)(*b*) of the CBCA emulates but does not replicate the language proposed by the Dickerson Report. The main difference is that the enacted version includes the words "in comparable circumstances", which modifies the statutory standard by requiring the context in which a given decision was made to be taken into account. This is not the introduction of a subjective element relating to the competence of the director, but rather the introduction of a contextual element into the statutory standard of care. It is clear that s. 122(1)(*b*) requires more of directors and officers than the traditional common law duty of care outlined in, for example, *City Equitable Fire Insurance Co., Re*, *supra*.

63 The standard of care embodied in s. 122(1)(*b*) of the CBCA was described by Robertson J.A. of the Federal Court of Appeal in *Soper v. R.* (1997), [1998] 1 F.C. 124 (Fed. C.A.), at para. 41, as being "objective subjective". Although that case concerned the interpretation of a provision of the *Income Tax Act*, it is relevant here because the language of the provision establishing the standard of care was identical to that of s. 122(1)(*b*) of the CBCA. With respect, we feel that Robertson J.A.'s characterization of the standard as an "objective subjective" one could lead to confusion. We prefer to describe it as an objective standard. To say that the standard is objective makes it clear that the factual aspects of the circumstances surrounding the actions of the director or officer are important in the case of the s. 122(1)(*b*) duty of care, as opposed to the subjective motivation of the director or officer, which is the central focus of the statutory fiduciary duty of s. 122(1)(*a*) of the CBCA.

64 The contextual approach dictated by s.122(1)(*b*) of the CBCA not only emphasizes the primary facts but also permits prevailing socio-economic conditions to be taken into consideration. The emergence of stricter standards puts pressure on corporations to improve the quality of board decisions. The establishment of good corporate governance rules should be a shield that protects directors from allegations that they have breached their duty of care. However, even with good corporate governance rules, directors' decisions can still be open to criticism from outsiders. Canadian courts, like their counterparts in the United States, the United Kingdom, Australia and New Zealand, have tended to take an approach with respect to the enforcement of the duty of care that respects the fact that directors and officers often have business expertise that courts do not. Many decisions made in the course of business, although ultimately unsuccessful, are reasonable and defensible at the time they are made. Business decisions must sometimes be made, with high stakes and under considerable time pressure, in circumstances in which detailed information is not available. It might be tempting for some to see unsuccessful business decisions as unreasonable or imprudent in light of information that becomes available *ex post facto*. Because of this risk of hindsight bias, Canadian courts have developed a rule of deference to business decisions called the "business judgment rule", adopting the American name for the rule.

65 In *Pente Investment Management Ltd. v. Schneider Corp.* (1998), 42 O.R. (3d) 177 (Ont. C.A.), Weiler J.A. stated, at p. 192:

> The law as it has evolved in Ontario and Delaware has the common requirements that the court must be satisfied that the directors have acted reasonably and fairly. The court looks to see that the directors made a *reasonable* decision *not a perfect* decision. Provided the decision taken is within a range of reasonableness, the court ought not to substitute its opinion for that of the board even though subsequent events may have cast doubt on the board's determination. As long as the directors have selected one of several reasonable alternatives, deference is accorded to the board's decision [references omitted]. This formulation of deference to the decision of the Board is known as the "business judgment rule". The fact that alternative transactions were rejected by the directors is irrelevant unless it can be shown that a particular alternative was definitely available and clearly more beneficial to the company than the chosen transaction
>
> [reference omitted]. [Emphasis added; italics in original.]

66 In order for a plaintiff to succeed in challenging a business decision he or she has to establish that the directors acted (i) in breach of the duty of care and (ii) in a way that caused injury to the plaintiff: W.T. Allen, J.B. Jacobs, and L.E. Strine, Jr., "Function Over Form: A Reassessment of Standards of Review in Delaware Corporation Law" (2001), 26 *Del. J. Corp. L.* 859, at p. 892.

67 Directors and officers will not be held to be in breach of the duty of care under s. 122(1)(*b*) of the CBCA if they act prudently and on a reasonably informed basis. The decisions they make must be reasonable business decisions in light of all the circumstances about which the directors or officers knew or ought to have known. In determining whether directors have acted in a manner that breached the duty of care, it is worth repeating that perfection is not demanded. Courts are ill-suited and should be reluctant to second-guess the application of business expertise to the considerations that are involved in corporate decision making, but they are capable, on the facts of any case, of determining whether an appropriate degree of prudence and diligence was brought to bear in reaching what is claimed to be a reasonable business decision at the time it was made.

68 The trustee alleges that the Wise brothers breached their duty of care under s. 122(1)(*b*) of the CBCA by implementing the new procurement policy to the detriment of Peoples' creditors. After considering all the evidence, we agree with the Court of Appeal that the implementation of the new policy was a reasonable business decision that was made with a view to rectifying a serious and urgent business problem in circumstances in which no solution may have been possible. The trial judge's conclusion that the new policy led inexorably to Peoples' failure and bankruptcy was factually incorrect and constituted a palpable and overriding error.

69 In fact, as noted by Pelletier J.A., there were many factors other than the new policy that contributed more directly to Peoples' bankruptcy. Peoples had lost $10 million annually while being operated by M & S. Wise, which was only marginally profitable and solvent with annual sales of $100 million (versus $160 million for Peoples), had hoped to improve the performance of its new acquisition. Given that the transaction was a fully leveraged buyout, for Wise and Peoples to succeed, Peoples' performance needed to improve dramatically. Unfortunately for both Wise and Peoples, the retail market in eastern Canada had become very competitive in the early 1990s, and this trend continued with the arrival of Wal-Mart in 1994. At paras. 153 and 155, Pelletier J.A. stated:

> [TRANSLATION] In reality, it was that particularly unfavourable financial situation in which the two corporations found themselves that caused their downfall, and it was M. & S. that, to protect its own interests, sounded the charge in December, rightly or wrongly judging that Peoples Inc.'s situation would only worsen over time. It is crystal-clear that the bankruptcy occurred at the most propitious time for M. & S.'s interests, when inventories were high and suppliers were unpaid. In fact, M. & S. recovered the entire balance due on the selling price and almost all of the other debts it was owed.
>
> . . . . .
>
> ...the trial judge did not take into account the fact that the brothers derived no direct benefit from the transaction impugned, that they acted in good faith and that their true intention was to find a solution to the serious inventory management problem that each of the two corporations was facing. Because of an assessment error, he also ignored the fact that Peoples Inc. received a sizable [sic]consideration for the goods it delivered to Wise. Lastly, I note that the act for which the brothers were found liable, i.e. <u>the adoption of a new joint inventory procurement policy, is not as serious as the trial judge made it out to be and that, in opposition to his view, the act was also not the true cause of the bankruptcy of Peoples Inc.</u> [Emphasis added.]

70 The Wise brothers treated the implementation of the new policy as a decision made in the ordinary course of business and, while no formal agreement evidenced the arrangement, a monthly record was made of the inventory transfers. Although this may appear to be a loose business practice, by the autumn of 1993, Wise had already consolidated several aspects of the operations of the two companies. Legally they were two separate entities. However, the financial fate of the two companies had become intertwined. In these circumstances, there was little or no economic incentive for the Wise brothers to jeopardize the interests of Peoples in favour of the interests of Wise. In fact, given the tax losses that Peoples had carried forward, the companies had every incentive to keep Peoples profitable in order to reduce their combined tax liabilities.

71 Arguably, the Wise brothers could have been more precise in pursuing a resolution to the intractable inventory management problems, having regard to all the troublesome circumstances involved at the time the new policy was implemented. But we, like the Court of Appeal, are not satisfied that the adoption of the new policy breached the duty of care under s. 122(1)(*b*) of the CBCA. The directors cannot be held liable for a breach of their duty of care in respect of the creditors of Peoples.

72 The Court of Appeal relied on two additional provisions of the CBCA that in its view could rescue the Wise brothers from a finding that they breached the duty of care: ss. 44(2) and 123(4).

73 Section 44 of the CBCA, which was in force at the time of the impugned transactions but has since been repealed, permitted a wholly-owned subsidiary to give financial assistance to its holding body corporate:

> **44.**(1) Subject to subsection (2), a corporation or any corporation with which it is affiliated shall not, directly or indirectly, give financial assistance by means of a loan, guarantee or otherwise
>
> . . . . .
>
> (2) A corporation may give financial assistance by means of a loan, guarantee or otherwise
>
> . . . . .
>
> (c) to a holding body corporate if the corporation is a wholly-owned subsidiary of the holding body corporate;

74 While s. 44(2) as it then read qualified the prohibition under s. 44(1), it did not serve to supplant the duties of the directors under s. 122(1) of the CBCA. The Court of Appeal erred in concluding that s. 44(2) served as a blanket legitimization of financial assistance given by wholly-owned subsidiaries to parent corporations. In our opinion, it is incumbent upon directors and officers to exercise their powers in conformity with the duties of s. 122(1).

75 Although s. 44(2) authorized certain forms of financial assistance between corporations, this cannot exempt directors and officers from potential liability under s. 122(1) for any financial assistance given by subsidiaries to the parent corporation.

76 When faced with the serious inventory management problem, the Wise brothers sought the advice of the vice-president of finance, David Clément. The Wise brothers claimed as an additional argument that in adopting the solution proposed by Clément, they were relying in good faith on the judgment of a person whose profession lent credibility to his statement, in accordance with the defence provided for in s. 123(4)(*b*) (now s. 123(5)) of the CBCA. The Court of Appeal accepted the argument. We disagree.

77 The reality that directors cannot be experts in all aspects of the corporations they manage or supervise shows the relevancy of a provision such as s. 123(4)(*b*). At the relevant time, the text of s. 123(4) read:

> **123.** ...
>
> . . . . .
>
> (4) A director is not liable under section 118, 119 or 122 if he relies in good faith on
>
> (a) financial statements of the corporation represented to him by an officer of the corporation or in a written report of the auditor of the corporation fairly to reflect the financial condition of the corporation; or
>
> (b) a report of a lawyer, accountant, engineer, appraiser or other person whose profession lends credibility to a statement made by him.

78 Although Clément did have a bachelor's degree in commerce and 15 years of experience in administration and finance with Wise, this experience does not correspond to the level of professionalism required to allow the directors to rely on his advice as a bar to a suit under the duty of care. The named professional groups in s. 123(4)(*b*) were lawyers, accountants, engineers, and appraisers. Clément was not an accountant, was not subject to the regulatory overview of any professional organization and did not carry independent insurance coverage for professional negligence. The title of vice-president of finance should not automatically lead to a conclusion that Clément was a person "whose profession lends credibility to a statement made by

him." It is noteworthy that the word "profession" is used, not "position". Clément was simply a non-professional employee of Wise. His judgment on the appropriateness of the solution to the inventory management problem must be regarded in that light. Although we might accept for the sake of argument that Clément was better equipped and positioned than the Wise brothers to devise a plan to solve the inventory management problems, this is not enough. Therefore, in our opinion, the Wise brothers cannot successfully invoke the defence provided by s. 123(4)(*b*) of the CBCA but must rely on the other defences raised.

C. The Claim under Section 100 of the BIA

79 The trustee also claimed against the Wise brothers under s. 100 of the BIA. That section reads:

> **100.**(1) Where a bankrupt sold, purchased, leased, hired, supplied or received property or services in a reviewable transaction within the period beginning on the day that is one year before the date of the initial bankruptcy event and ending on the date of the bankruptcy, both dates included, the court may, on the application of the trustee, inquire into whether the bankrupt gave or received, as the case may be, fair market value in consideration for the property or services concerned in the transaction.
>
> (2) Where the court in proceedings under this section finds that the consideration given or received by the bankrupt in the reviewable transaction was conspicuously greater or less than the fair market value of the property or services concerned in the transaction, the court may give judgment to the trustee against the other party to the transaction, against any other person being privy to the transaction with the bankrupt or against all those persons for the difference between the actual consideration given or received by the bankrupt and the fair market value, as determined by the court, of the property or services concerned in the transaction.

80 The provision has two principal elements. First, subs. (1) requires the transaction to have been conducted within the year preceding the date of bankruptcy. Second, subs. (2) requires that the consideration given or received by the bankrupt be "conspicuously greater or less" than the fair market value of the property concerned.

81 The word "may" is found in both ss. 100(1) and 100(2) of the BIA with respect to the jurisdiction of the court. In *Standard Trustco Ltd. (Trustee of) v. Standard Trust Co.* (1995), 26 O.R. (3d) 1 (Ont. C.A.), a majority of the Ontario Court of Appeal held that, even if the necessary preconditions are present, the exercise of jurisdiction under s. 100(1) to inquire into the transaction, and under s. 100(2) to grant judgment, is discretionary. Equitable principles guide the exercise of discretion. We agree.

82 Referring to s. 100(2) of the BIA, in *Standard Trustco, supra*, at p. 23, Weiler J.A. explained that:

> When a contextual approach is adopted it is apparent that although the conditions of the section have been satisfied the court is not obliged to grant judgment. The court has a residual discretion to exercise. The contextual approach indicates that the good faith of the parties, the intention with which the transaction took place, and whether fair value was given and received in the transaction are important considerations as to whether that discretion should be exercised.

We agree with Weiler J.A. and adopt her position; however, this appeal does not turn on the discretion to ultimately impose liability. In our view, the Court of Appeal did not interfere with the trial judge's exercise of discretion in reviewing the facts and finding a palpable and overriding error.

83 Within the year preceding the date of bankruptcy, Peoples had transferred inventory to Wise for which the trustee claimed Peoples had not received fair market value in consideration. The relevant transactions involved, for the most part, transfers completed in anticipation of the busy holiday season. Given the non-arm's length relationship between Wise and its wholly-owned subsidiary Peoples, there is no question that these inventory transfers could have constituted reviewable transactions.

84 We share the view of the Court of Appeal that it is not only the final transfers that should be considered. In fairness, the inventory transactions should be considered over the entire period from February to December 1994, which was the period when the new policy was in effect.

85 In *Skalbania (Trustee of) v. Wedgewood Village Estates Ltd.* (1989), 37 B.C.L.R. (2d) 88 (B.C. C.A.), the test for determining whether the difference in consideration is "conspicuously greater or less" was held to be not whether it is conspicuous to the parties at the time of the transaction, but whether it is conspicuous to the court having regard to all the relevant factors. This is a sound approach. In that case, a difference of $1.18 million between fair market value and the consideration received by the bankrupt was seen as conspicuous, where the fair market value was $6.6 million, leaving a discrepancy of more than 17 percent. While there is no particular percentage that definitively sets the threshold for a conspicuous difference, the percentage difference is a factor.

86 As for the factors that would be relevant to this determination, the court might consider, inter alia: evidence of the margin of error in valuing the types of assets in question; any appraisals made of the assets in question and evidence of the parties' honestly held beliefs regarding the value of the assets in question; and other circumstances adduced in evidence by the parties to explain the difference between the consideration received and fair market value: see L.W. Houlden and G.B. Morawetz, *Bankruptcy and Insolvency Law of Canada* (3rd ed. (loose-leaf)), vol. 2, at p. 4-114.1.

87 Over the lifespan of the new policy, Peoples transferred to Wise inventory valued at $71.54 million. As of the date of bankruptcy, it had received $59.50 million in property or money from Wise. As explained earlier, the trial judge adjusted the outstanding difference down to a balance of $4.44 million after taking into account, *inter alia*, the reallocation of general and administrative expenses, and adjustments necessitated by imported inventory transferred from Wise to Peoples. Neither party disputed these figures before this Court. We agree with the Court of Appeal's observation that these findings directly conflict with the trial judge's assertion that Peoples had received no consideration for the inventory transfers on the basis that the outstanding accounts were "neither collected nor collectible" from Wise. Like Pelletier J.A., we conclude that the trial judge's finding in this regard was a palpable and overriding error, and we adopt the view of the Court of Appeal.

88 We are not satisfied that, with regard to all the circumstances of this case, a disparity of slightly more than six percent between fair market value and the consideration received constitutes a "conspicuous" difference within the meaning of s. 100(2) of the BIA. Accordingly, we hold that the trustee's claim under the BIA also fails.

89 In addition to permitting the court to give judgment against the other party to the transaction, s. 100(2) of the BIA also permits it to give judgment against someone who was not a party but was "privy" to the transaction. Given our finding that the consideration for the impugned transactions was not "conspicuously less" than fair market value, there is no need to consider whether the Wise brothers would have been "privy" to the transaction for the purpose of holding them liable under s. 100(2). Nonetheless, the disagreement between the trial judge and the Court of Appeal on the interpretation of "privy" in s. 100(2) of the BIA warrants the following observations.

90 The trial judge in this appeal had little difficulty finding that the Wise brothers were privy to the transaction within the meaning of s. 100(2). Pelletier J.A., however, preferred a narrow construction in finding that the Wise brothers were not privy to the transactions. He held, at para. 136, that:

> [TRANSLATION] ... the legislator wanted to provide for the case in which a person other than the co-contracting party of the bankrupt actually received all or part of the benefit resulting from the lack of equality between the respective considerations.

To support this direct benefit requirement, Pelletier J.A. also referred to the French version which uses the term *ayant intérêt*. While he conceded that the respondent brothers received an indirect benefit from the inventory transfers as shareholders of Wise, Pelletier J.A. found this too remote to be considered "privy" to the transactions (paras. 140-41).

91 The primary purpose of s. 100 of the BIA is to reverse the effects of a transaction that stripped value from the estate of a bankrupt person. It makes sense to adopt a more inclusive understanding of the word "privy" to prevent someone who might receive indirect benefits to the detriment of a bankrupt's unsatisfied creditors from frustrating the provision's remedial purpose. The word "privy" should be given a broad reading to include those who benefit directly or indirectly from and have

knowledge of a transaction occurring for less than fair market value. In our opinion, this rationale is particularly apt when those who benefit are the controlling minds behind the transaction.

92 A finding that a person was "privy" to a reviewable transaction does not of course necessarily mean that the court will exercise its discretion to make a remedial order against that person. For liability to be imposed, it must be established that the transaction occurred: (a) within the past year; (b) for consideration conspicuously greater or less than fair market value; (c) with the person's knowledge; and (d) in a way that directly or indirectly benefited the person. In addition, after having considered the context and all the above factors, the judge must conclude that the case is a proper one for holding the person liable. In light of these conditions and of the discretion exercised by the judge, we find that a broad reading of "privy" is appropriate.

IV. Disposition

93 For the foregoing reasons, we would dismiss the appeal with costs to the respondents.

Appeal dismissed.

Pourvoi rejeté.
