APPEAL by large telephone and cable companies from decision of Canadian Radio-television and Telecommunications Commission, setting rates they could charge for aggregate wholesale high-speed access services provided to competitors.

***Eleanor R. Dawson J.A.*:**

1. Introduction

1 High-speed Internet is a resource vital to modern communications and participation in the digital economy.

2 In Canada, Internet services are provided to retail customers by large telephone and cable companies or by independent Internet service providers. Small and medium sized independent Internet service providers that do not own their own wireless networks do not possess the required infrastructure to provide high-speed Internet access (HSA) directly to end-users. Therefore, to foster competition, large cable and telephone companies are required to make available parts of their respective networks to independent Internet service providers. These leased parts are referred to as wholesale services and are used by the independent Internet service providers, sometimes referred to as "competitors", to provide high-speed Internet services to their retail customers.

3 The Canadian Radio-television and Telecommunications Commission does not regulate the provision of Internet services to retail customers because the number of service providers is sufficient to bring competition, pricing discipline, innovation and consumer choice to the retail Internet services market. However, the CRTC does regulate the provision of wholesale high-speed access services by large telephone and cable companies to the competitors. In particular, the CRTC sets the rates that the large telephone and cable companies are permitted to charge competitors for wholesale high-speed access services.

4 On August 15, 2019, the CRTC issued *Follow-up to Telecom Orders 2016-396 [*Telecom Order CRTC 2016-396, Re *(October 6, 2016), 2016-396 (C.R.T.C.)] and 2016-448 - [*Bragg Communications Inc., Re *(November 10, 2016), 2016-448 (C.R.T.C.)] hereinafter* 2016-448 *Final rates for aggregated wholesale high-speed access services* (15 August 2019), Telecom Order CRTC 2019-288 (TO 2019-288) [*Telecom Order CRTC 2019-288, Re* (August 15, 2019), 2019-288 (C.R.T.C.)] which set final rates that the large telephone and cable companies may charge for aggregated wholesale high-speed access services provided to competitors. The order provided that the final rates would be applied retroactively.

5 Bell Canada, MTS Inc., and Bell MTS, large telephone companies sometimes referred to as incumbent local exchange carriers or ILECs, sought and obtained leave to appeal TO 2019-288 to this Court. Bragg Communications Incorporated, carrying on business as Eastlink, Cogeco Communications Inc., Rogers Communications Canada Inc., Shaw Cablesystems G.P. and Videotron Limited, large cable carriers referred to in these reasons as the Cable Carriers, also sought and obtained leave to appeal the order to this Court.

6 Here, a brief procedural comment is warranted. On September 27, 2019, orders issued staying TO 2019-288 pending this Court's determination of the motions for leave to appeal. On November 22, 2019, the leave applications were granted and orders issued staying TO 2019-288 until the issuance of the Court's final judgments on the appeals. TO 2019-288 therefore remains stayed until the issuance of the judgments that accompany these reasons. Subsequently, the appeals were consolidated, case managed and set for an early hearing which took place by videoconference. In accordance with the consolidation order, a copy of these reasons shall be placed on each Court file.

7 On this consolidated appeal the telephone companies argue that the CRTC "erred in law or jurisdiction" by:

i. failing to exercise its powers with a view to implementing the Canadian telecommunications policy objectives set out in section 7 of the *Telecommunications Act*, S.C. 1993, c. 38 (Act) and in accordance with a direction given to the CRTC by the Governor in Council, all as required by section 47 of the Act. Particular emphasis is placed on what is asserted to be a statutory reasons requirement imposed by paragraph 1(*b*)(i) of the direction issued by the Governor in Council;

ii. failing to exercise its powers with a view to ensuring that the telephone companies charge "just and reasonable" rates in accordance with section 27 of the Act, and as required by section 47 of the Act; and

iii. imposing an unconstitutional tax, contrary to section 53 of the *Constitution Act, 1867*.

8 For their part, the Cable Carriers argue the CRTC committed "one or more legal or jurisdictional errors, either in issuing TO 2019-288 or during the rate-setting proceeding that culminated in the issuance of that Order". More particularly, the Cable Carriers argue that the CRTC:

(a) failed to consider relevant and cogent evidence submitted by the Cable Carriers;

(b) made decisions on the basis of no evidence, irrelevant evidence or irrelevant considerations, including by preferring its own unsubstantiated "expectations" over the Cable Carriers' evidence, even though that evidence directly contradicted such "expectations";

(c) acted arbitrarily by treating the available evidence in an inconsistent and *ad hoc* fashion, including by (i) endorsing and applying outdated third-party data (from 2011 or earlier) in lieu of company-specific information, while (ii) rejecting without explanation more up-to-date data (from 2016 and 2017) provided by the same third party, and then (iii) criticizing the Cable Carriers for not submitting the very types of company-specific information that the CRTC had previously rejected;

(d) breached core principles of natural justice and procedural fairness by adopting unorthodox and unexpected methodologies that changed the "rules of the game" in a manner that defeated the Cable Carriers' reasonable expectations, without giving the Cable Carriers either timely notice of its intention to do so or an adequate opportunity to meaningfully respond;

(e) disregarded established principles and rate-setting decisions on which the Cable Carriers had reasonably relied on a number of issues, while simultaneously fettering improperly its discretion by adhering to outdated or inapplicable assumptions and guidelines on other issues; and

(f) disregarded a binding Direction issued by Cabinet in 2006 ... and ignored impermissibly the mandatory requirements imposed by sections 7, 27 and 47 of the *Telecommunications Act*.

(memorandum of fact and law, paragraph 4, footnotes and emphasis deleted)

9 The respondents represent, or are, independent Internet service providers that purchase wholesale high-speed access services. They submit that all of the asserted grounds of appeal should be dismissed on their merits. Additionally, they submit that the appellants:

i. rely on post-decision evidence that is inadmissible;

ii. raise grounds of appeal that are not questions of law or jurisdiction and so are outside the scope of the limited right of appeal conferred by subsection 64(1) of the Act; and,

iii. advance a new, unconstitutional tax argument that should not be heard by this Court at first instance.

10 Before turning to consider the issues raised on this appeal it is necessary to situate the impugned order in its proper context. Situating the order in its context requires consideration of the legislative framework in which the decision was made and the prior decisions of the Commission that led to and informed TO 2019-288 — what has been referred to as its policy pedigree.

2. The context in which TO 2019-288 was made and is to be considered by this Court

i. The legislative framework

11 The *Telecommunications Act* sets out the legislative framework that governs the telecommunications industry in Canada. The provisions described immediately below are central to the appellants' argument that the CRTC impermissibly ignored mandatory requirements imposed upon it by the Act.

12 The Act's guiding objectives are enumerated in section 7. Pursuant to subsection 47(*a*), the CRTC must perform its duties with a view to implementing these objectives. Additionally, section 8 of the Act authorizes the Governor in Council "by order" to "issue to the Commission directions of general application on broad policy matters with respect to the Canadian telecommunications policy objectives." An order made under section 8 is binding on the Commission (subsection 11(1); see also subsection 47(*b*)).

13 The Governor in Council has given directions to the CRTC that were binding upon it at the time it issued the decision under appeal: *Order Issuing a Direction to the CRTC on Implementing the Canadian Telecommunications Policy Objectives*, S.O.R./2006-355 (Cabinet Direction). Section 1 of the direction requires the CRTC, when exercising its powers and performing its duties under the Act, to "implement the Canadian telecommunications policy objectives set out in section 7" of the Act in accordance with a number of enumerated criteria. Of particular relevance to this appeal are three obligations:

(i) the obligation when relying on regulation to "use measures that are efficient and proportionate to their purpose and that interfere with the operation of competitive market forces to the minimum extent necessary to meet the policy objectives" (paragraph 1(*a*)(ii));

(ii) the obligation when relying on regulation to use measures that "if they are of an economic nature, neither deter economically efficient competitive entry into the market nor promote economically inefficient entry" (paragraph 1(*b*)(ii)); and,

(iii) the obligation when relying on regulation relating to regimes for access to networks to use measures that "ensure the technological and competitive neutrality of those arrangements or regimes, to the greatest extent possible, to enable competition from new technologies and not to artificially favour either Canadian carriers or resellers" (paragraph 1(*b*)(iv)).

14 Paragraph 1(*b*)(i) of the Cabinet Direction requires the Commission, when relying on regulation, to "specify the telecommunications policy objective that is advanced by those measures and demonstrate their compliance with" the Cabinet Direction. The appellants assert this provision creates a reasons requirement.

15 Subsection 47(*a*) of the Act also requires the Commission to perform its duties with a view to ensuring that Canadian carriers provide telecommunications services and charge rates in accordance with section 27 of the Act. Section 27 requires every rate charged by Canadian carriers to be "just and reasonable". The power to determine and approve just and reasonable rates is a central responsibility of the Commission.

16 To ensure that rates are just and reasonable the Act grants the Commission broad powers to, amongst other things, set and regulate rates for telecommunications services (sections 24 and 25). The Commission may also "determine any matter and make any order relating to the rates, tariffs or telecommunications services of Canadian carriers" (subsection 32(*g*)).

17 Subsection 27(3) empowers the Commission to "determine in any case, as a question of fact, whether a Canadian carrier has complied with" specific provisions of the Act including sections 24, 25, and 27. Subsection 27(5) permits the Commission to "adopt any method or technique that it considers appropriate, whether based on a carrier's return on its rate base or otherwise" when determining whether a rate is just and reasonable. The Commission also has the authority under subsection 37(1) to require a Canadian carrier "to adopt any method of identifying the costs of providing telecommunications services and to adopt any accounting method or system of accounts for the purposes of the administration" of the Act.

18 The Commission's decisions may be challenged in a number of ways. The following provisions are of particular relevance to the respondents' argument that the appellants raise grounds of appeal that are outside the scope of the limited right of appeal conferred by subsection 64(1) of the Act.

19 Subsection 64(1) of the Act permits, with leave of the Court, an appeal to this Court on "any question of law or of jurisdiction". The Commission may determine any question of law or fact, and "its determination on a question of fact is binding and conclusive" (subsection 52(1)). On an appeal to this Court, the Court "may draw any inference that is not inconsistent with the findings of fact made by the Commission and that is necessary for determining a question of law or jurisdiction" (subsection 64(5)).

20 Other avenues of redress exist.

21 The Commission "may, on application or on its own motion, review and rescind or vary any decision made by it" (section 62).

22 Within one year of a decision being made by the Commission, "the Governor in Council may, on petition in writing ... or on the Governor in Council's own motion, by order, vary or rescind the decision or refer it back to the Commission for reconsideration of all or a portion of it." (subsection 12(1)).

23 Significantly, neither section 62 nor subsection 12(1) circumscribe the types of questions that may be raised before the CRTC or the Governor in Council. This stands in contradistinction to the prescription in subsection 64(1) that limits this Court to reviewing questions of law or jurisdiction.

24 In addition to bringing these appeals, the appellants have filed applications with the CRTC asking that the Commission review and vary the order under appeal. The appellants have also filed separate petitions to the Governor in Council seeking the rescission of TO 2019-288. During the hearing, counsel advised that decisions on these requests are outstanding.

25 While this decision was under reserve, counsel for the appellants advised that the Governor in Council had rendered a decision with respect to the petitions filed by the appellants. We were directed to *Order to decline to vary, rescind or refer back for reconsideration Telecom Order CRTC 2019-288*, P.C. 2020-0553. Counsel sought and received permission to file brief, written submissions on Order in Council P.C. 2020-0553. The Order in Council is discussed below when considering the appellants' submissions that the Commission failed to exercise its powers with a view to implementing telecommunications policy objectives and the Cabinet Direction, and this failure was an error in law or jurisdiction.

ii. TO 2019-288's policy pedigree

26 TO 2019-288 did not spring into existence in a factual vacuum; it had antecedents. As this Court has noted, CRTC decisions fit into a "continuum" (*Société Radio-Canada c. Métromédia CMR Montréal Inc.*1999 CanLII 8947(1999), 254 N.R. 266 (Fed. C.A.), at paragraph 14). Indeed, TO 2019-288 is entitled *Follow-up to* Telecom Order CRTC 2016-396, Re *and* 2016-448 - *Final rates for aggregated wholesale high-speed access services*.

27 The decision expressly incorporates as "Related documents" a number of prior decisions of the CRTC including Telecom Regulatory Policies CRTC 2010-632, 2011-703 and 2015-326, Telecom Decisions CRTC 2013-73 [2013 CarswellNat 11720 (C.R.T.C.)], 2013-76 [2013 CarswellNat 12068 (C.R.T.C.)] and 2016-117 [2016 CarswellNat 7468 (C.R.T.C.)] and *Telecom Order CRTC 2016-396, Re* and *2016-448*, discussed and fully cited below. As counsel for the Cable Carriers acknowledged in oral argument, the reasons of the Commission in TO 2019-288 are not to be read in isolation. A reader, and a reviewing court, ought to go beyond the Commission's reasons and read the related documents in order to fairly understand the reasoning of the Commission. Put another way, the related documents are inextricably linked to the decision under appeal.

28 The decision does not reference as a related document *Disposition of review and vary applications with respect to wholesale high-speed access services: Introductory statement* (21 February 2013), Telecom Regulatory Policy CRTC 2013-70 (TRP 2013-70). In this introductory statement, the Commission frames a series of decisions on wholesale high-speed access services issued contemporaneously with it, including Telecom Decisions CRTC 2013-73 and 2013-76. These decisions, specifically listed by the Commission as related documents in TO 2019-288, should be read in the light of TRP 2013-70.

29 A brief review of these policies and orders and Telecom Decision CRTC 2016-117 (TD 2016-117) will situate TO 2019-288.

30 *Wholesale high-speed access services proceeding* (30 August 2010), Telecom Regulatory Policy CRTC 2010-632 (TRP 2010-632) is an early policy statement issued by the CRTC on wholesale high-speed access services. The decision followed what the Commission described to be "a comprehensive public proceeding" commenced in May 2009, to consider whether incumbent local exchange carriers and Cable Carriers should be required to offer certain high-speed access facilities as wholesale services to competitors for resale. The Commission reviewed the evolution of Internet services from low-speed dial-up services to higher speed Internet services facilitated by the construction of more fibre facilities in access networks. The Commission "indicated its intention to apply its essential services framework for wholesale services in this proceeding on a forward-looking basis to provide appropriate incentives for continued investment in broadband infrastructure, encourage competition and innovation, and expand consumer choices."

31 The Commission went on to describe its determinations to be in accordance with the Act, including subsection 27(2), and to be made with a view to implementing the policy objectives found in subsections 7(*a*), (*b*), (*c*), (*f*), and (*h*) of the Act. The Commission also stated that its determinations were in accordance with the Cabinet Direction (TRP 2010-632, paragraphs 26

and 27). The Commission returned to a discussion of the policy objectives advanced by its decision at paragraphs 143 to 149 of its reasons (as quoted later in these reasons at paragraph 193). The Commission ended its decision by directing the major incumbent local exchange carriers and the Cable Carriers to file proposed tariffs with supporting Phase II cost studies, and by reciting the policy objectives advanced by its determinations.

32 Here, it is helpful to provide a brief explanation about Phase II costing principles. Phase II costing principles, or simply Phase II costing, is the costing methodology used by the CRTC when conducting rate-setting proceedings. This methodology has been used, with various modifications, since 1979 for a variety of rate-setting functions performed by the CRTC. In brief, regulated Carriers are required to file Phase II costing manuals which are used to prepare cost studies that are submitted to the CRTC. The CRTC then uses these cost studies, as well as other information and considerations, to set rates. Rates developed pursuant to this methodology are based on the projected, actual costs that a regulated carrier will incur when providing a telecommunications service over a defined future study period, plus a reasonable markup. The markup recognizes overhead and other fixed costs and the need to provide an incentive for continued investment in new network infrastructure (see, for example, TRP 2011-703, paragraph 82 and footnote 30).

33 TRP 2010-632 was followed a few months later by *Billing practices for wholesale residential high-speed access services* (15 November 2011), Telecom Regulatory Policy CRTC 2011-703 (TRP 2011-703) where the Commission reconsidered how large telephone and cable companies should charge competitors for access to, and use of, their HSA wholesale services. The Commission found two billing models to be acceptable: a capacity-based billing model and a flat rate model. The Commission decided that rates for either model should be based on each of the individual, large cable and telephone companies' costs to provide the service plus a reasonable markup; further, the markups should be comparable for all cable and telephone companies. The Commission also addressed other important policy issues: the rate principles to be applied to the selected billing models and the reasonableness of the costs submitted by the network providers. When considering the reasonableness of the costs submitted by the network providers the Commission examined various issues associated with the Phase II cost studies that had been filed, including such things as annual capital unit cost changes (which will be discussed in more detail below). After discussing the implementation of the tariffs set by it establishing final wholesale rates, the Commission reviewed the extent to which its decision complied with the Cabinet Direction. Portions of this analysis are set out at paragraph 194 below.

34 TRP 2011-703 essentially settled the basic form and structure of the wholesale rates at issue in this appeal. The Commission noted that it was important to "ensure that retail Internet service competition is sufficient to protect consumers' interests" and that the services "provided by the independent service providers bring pricing discipline, innovation, and consumer choice to the retail Internet service market."

35 The Commission further clarified billing models and costing issues in TRP 2013-70. The Commission affirmed that it "sought to ensure that there is a competitive wholesale market that accurately compensates each incumbent for the costs incurred to make those wholesale services available to the independent service providers and, at the same time, to allow for effective and efficient competition to the benefit of Canadians." (TRP 2013-703, paragraph 14).

36 In the eight decisions issued with TRP 2013-70, the Commission sought to simplify the implementation of the new wholesale high-speed access service billing models, make adjustments to the wholesale high-speed access service rates to reflect cost adjustments and create a uniform pricing approach for business and residential wholesale high-speed access services. In associated orders, the Commission found errors in the service costs upon which rates set in TRP 2011-703 and TRP 2011-704 were based, and adjusted the 2011 rate accordingly. In some cases it was necessary to apply the rate adjustments retroactively "to ensure that the rates are at all times just and reasonable and in furtherance of the policy objectives set out in the Act." (TD 2013-73, paragraphs 106 to 110, TD 2013-76, paragraph 46).

37 TRP 2013-70 was followed by *Review of wholesale wireline services and associated policies* (22 July 2015), Telecom Regulatory Policy CRTC 2015-326 (TRP 2015-326). This policy is the most recent decision mandating access to the high-speed access services of the large telephone and cable companies. The decision followed a public proceeding conducted to review wholesale wireline services and associated policies. The Commission stated that as part of this proceeding it had "reviewed the existing wholesale services framework, various wholesale wireline services, and the approach it uses to set the

rates for wholesale services to determine whether changes to the existing regulatory landscape are appropriate" (TRP 2015-326, preamble, paragraph 2). The Commission adjusted its mandating criteria for wholesale services and set out the rationale behind its determination to mandate the provision of certain wholesale high-speed access services, stating at paragraph 3:

> Over the years, the Commission has established various policies, rules, and regulations to govern the provision of wholesale services. These regulatory measures are necessary because incumbent carriers have had considerable advantages over competitors. Without wholesale regulation, fewer competitive service options would be available to Canadians.

The Commission also determined the costing methodology to be applied to wholesale services. Rates for wholesale services would continue to be based upon the use of incremental costing supplemented by an approved markup (*i.e*. Phase II costing principles). Alternative costing approaches were rejected because, among other reasons, no evidence suggested that alternative approaches would improve regulatory efficiency (TRP 2015-326, paragraphs 233 to 241).

38 Before leaving TRP 2015-326 I will deal with the Cable Carriers' submission, made in reply argument, that this decision is irrelevant to TO 2019-288 because TRP 2015-326 phased out the mandated provision of aggregated HSA services and TO 2019-288 set final rates for those services.

39 TRP 2015-326 is not irrelevant to the decision at issue. In TRP 2015-326 the Commission determined that aggregated wholesale HSA services would "no longer be mandated for the incumbent carriers under certain conditions and subject to an appropriate transition plan." (TRP 2015-326, paragraph 143). "Incumbent carriers are expected to continue to file tariffs regarding the introduction of or modifications to the provision of aggregated wholesale HSA services until such services have been phased out within their respective serving territories." (TRP 2015-326, paragraph 155). The final rates for aggregated wholesale HSA services set in TO 2019-288 are integral to the transition plan.

40 In *Review of costing inputs and the application process for wholesale high-speed access services* (31 March 2016), Telecom Decision CRTC 2016-117 (TD 2016-117) the Commission made its determinations with two particular objectives in mind: i) to establish a streamlined tariff application process, and ii) to ensure that the inputs to wholesale high-speed access service providers' cost models remained appropriate. To meet the first objective, the Commission adopted a simplified cost-based approach for rate-setting referred to as "speed-banding". More will be said about speed-banding below. To meet the second objective, the Commission made determinations with respect to some components of cost studies. Of relevance to this appeal are determinations made with respect to the annual traffic growth assumption (necessary because the annual growth of Internet traffic had increased significantly since TRPs 2011-703 and 2011-704) and the annual capital unit cost change assumption. More will also be said below about these cost components.

41 The Commission also changed the study period from the then current ten-year period to a shorter five-year study period. This reflected the fact that wholesale HSA service speeds were rapidly changing; many service speed offerings might not have a life span of more than five years. Finally, the Commission converted the then current wholesale rates paid by competitors into interim rates. The Commission's determination that changes were necessary to certain costing assumptions demonstrated to it that "current wholesale HSA service rates are likely not just and reasonable." The HSA service providers were required to submit new cost studies. The Commission stated it would assess whether rates should be set retroactively when the new cost studies were submitted (TD 2016-117, paragraph 105).

42 Generally, Telecom Orders apply established policies to the facts found in the proceeding. They are the practical application of the policy framework set out in TRPs to specific fact situations. Two orders are of particular relevance. After the issuance of TD 2016-117, the Commission considered the new cost studies submitted by the parties and issued *Telecom Order CRTC 2016-396, Re* and *2016-448*. These orders established new interim rates. These interim rates were lower than the rates previously paid by competitors.

43 In *Tariff notice applications concerning aggregated wholesale high-speed access services - Revised interim rates* (6 October 2016), *Telecom Order CRTC 2016-396, Re* (TO 2016-396) the Commission observed, at paragraph 19, that some of the proposed costs submitted by wholesale HSA service providers were "not reasonable due to deviations from Phase II

costing principles, the lack of pertinent costing details, including descriptions of input data variables, and modelling assumptions without supporting rationale. Accordingly, the Commission concludes that the proposed monthly rates for certain wholesale HSA service providers are, on a *prima facie* basis, not based on reasonable costs." Therefore, the Commission set revised, lowered interim rates for aggregated wholesale HSA.

44 In *Bragg Communications Inc., Re, operating as Eastlink - Revised interim rates for aggregated wholesale high-speed access service* (10 November 2016), *2016-448* (TO 2016-448) the Commission concluded, for similar reasons, that "Eastlink's proposed monthly rates are, on a *prima facie* basis, not reasonable" (paragraph 13).

45 In response, new proposed wholesale rates based on updated cost studies were submitted by the telephone and cable companies. This culminated in the issuance of the order under appeal that established final wholesale rates that were lower than the interim rates set in 2016. The rates applied retroactively to March 31, 2016 for Bell Canada, Bell MTS, Cogeco, Eastlink, Sasktel, TCI and Videotron, and to January 31, 2017 for Shaw (TO 2019-288, paragraphs 331 and 332).

46 It is relevant to end this portion of the reasons with the observation that aside from the present appeal none of the policies, decisions and orders described above were appealed.

47 Having situated the appeal in its statutory and historical context, I turn to consider the proper scope of the appeal.

3. Do the appellants raise grounds of appeal that are not questions of law or jurisdiction properly before this Court?

48 In *Canadian National Railway v. Emerson Milling Inc.*, 2017 FCA 79, [2018] 2 F.C.R. 573 (F.C.A.), this Court considered the scope of the statutory appeal authorized under subsection 41(1) of the *Canada Transportation Act*, S.C. 1996, c. 10 (CTA). Subsection 41(1), like subsection 64(1) of the *Telecommunications Act*, permits an appeal to this Court, with leave, on questions of law or jurisdiction. There are other important similarities between the Acts and the limited right of appeal each grants:

i. Both Acts deal with highly specialized, expert regulatory bodies.

ii. Findings of the Canada Transportation Agency on questions of fact, like those of the CRTC, are binding and conclusive (CTA, section 31).

iii. The Agency, like the CRTC, may review, rescind or vary any decision or order made by it (CTA, section 32).

iv. The Governor in Council may also vary or rescind any decision, order, rule or regulation of the Agency (CTA, section 40), in the same manner as it may review decisions of the CRTC.

49 Looking at the text, context and purpose of subsection 41(1) of the CTA, this Court concluded in *Emerson Milling Inc.* that a question of jurisdiction "includes at least issues of procedural fairness, even if those issues are factually suffused" (*Emerson Milling Inc.*, paragraph 19). As to what constitutes a question of law, this Court found that the standard of "extricable questions of law or legal principle" is the applicable standard for determining whether a question of mixed fact and law is a "question of law" appealable under subsection 41(1) of the CTA (*Emerson Milling Inc.*, paragraph 26).

50 In my view, the Court's analysis and conclusion in *Emerson Milling Inc.* are equally apposite to appeals under subsection 64(1) of the *Telecommunications Act*.

51 In *Emerson Milling Inc.* this Court also recognized that the mere say-so of a party that a "legal test" is implicated is insufficient to found an appeal. Grounds of appeal may be expressed in an artful way to make them appear to raise legal questions when they do not. Accordingly, what is required is to look at the substance of what is raised, not the form. The true subject-matter of an appeal may be identified by construing the notice of appeal. As well, an appellant's memorandum of fact and law may be useful in providing a realistic appreciation of the appeal's essential character (*Emerson Milling Inc.*, paragraphs 29 and 30).

52 With this background, I turn to the grounds of appeal presented by the appellants in this case. To summarize briefly, these grounds of appeal are: i) the Commission breached the principles of procedural fairness and engaged in arbitrary

decision-making; ii) the Commission failed to comply with a statutory reasons requirement; iii) the Commission imposed an unconstitutional tax; iv) the Commission failed to exercise its powers with a view to ensuring that the appellants' rates are "just and reasonable"; and, v) the Commission failed to exercise its powers with a view to implementing the Canadian telecommunications policy objectives set out in section 7 of the Act and the Cabinet Direction.

i. Proper grounds of appeal

53 I am satisfied the first three of the profferred grounds of appeal at least on the surface raise questions of law or jurisdiction.

54 This is so because the allegation of breach of procedural fairness was characterized to be a question of jurisdiction in *Emerson Milling Inc.*; the related issue described by the Cable Carriers to be "arbitrary decision-making" (discussed in more detail below) may, as a matter of law, rise to the level of an extricable question of law if, for example, a decision-maker renders a decision in the absence of any evidence (see, for example, *Telus Communications Inc. v. Canadian Radio-Television & Telecommunications Commission*, 2004 FCA 365, [2005] 2 F.C.R. 388 (F.C.A.), at paragraphs 40 to 43). The remaining two issues of a statutory reasons requirement and an unconstitutional tax also raise extricable questions of law.

ii. Improper grounds of appeal

55 The remaining two profferred grounds of appeal are more problematic: the ground that the CRTC failed to exercise its powers with a view to ensuring that the appellants' rates are "just and reasonable" and the ground that it failed to exercise its powers with a view to implementing the Canadian telecommunications policy objectives set out in section 7 of the Act and the Cabinet Direction. Each will be considered in turn.

a) Whether the rates are just and reasonable is not a question of law or jurisdiction

56 As explained above, subsection 47(*a*) of the Act requires the Commission to exercise its powers and perform its duties with a view to ensuring that the rates it sets are "just and reasonable". The appellants argue that:

• A just and reasonable rate must allow a carrier to recover its costs, and the final rates set in the decision do not allow the carriers to recover their costs.

• Nowhere in the reasons does the CRTC advert to the importance of setting rates that ensure a return on investment.

• This error is an error of jurisdiction.

57 I begin consideration of this point by noting that the Cable Carriers do not cite any evidence in support of their submission that the final rates are insufficient to cover their costs (memorandum of fact and law, paragraph 91). The evidence Bell relies upon to argue that the actual cost of providing wholesale HSA services is substantially higher than the CRTC rate is new evidence, found in the affidavit of its Vice-President Regulatory Law. In his affidavit, the officer swore that:

> 28. In short, the process we employed closely mirrors the approach used by the CRTC in reaching the Decision, except that we used Bell's actual capital costs, from Bell's financial records, rather than the theoretical assumed capital costs used in Phase II Costing. Using this methodology, we determined that the per-subscriber per-month cost of FTTN access is **substantially higher** than the $14.78 rate ordered by the CRTC in the Decision.
>
> 29. The Decision thus orders Bell to provide wholesale FTTN Access at **below cost**.
>
> (emphasis in original)

58 The respondents object that this evidence was not before the Commission, and is improperly placed before this Court.

59 I agree.

60 In *Bell Canada v. 7262591 Canada Ltd.*, 2016 FCA 123, 17 Admin. L.R. (6th) 175 (F.C.A.), this Court discussed the purpose of the general rule against allowing new evidence on a statutory appeal:

> [11] The purpose of the general rule is two-fold:
>
> • *To respect the role of the administrative decision-maker*. The administrative decision-maker is the merits decider. It decides what evidence or information it should rely upon, it considers that evidence and information, and it makes findings of fact. That is not the role of the reviewing court. See *Bernard*, *Access Copyright* and *Delios*, all above.
>
> • *To further the role of the reviewing court*. The reviewing court must assess the administrative decision-maker's decision against the evidence and information the administrative decision-maker took into account. If certain of that evidence and information is withheld from the reviewing court, the review may be artificial and lead to inaccurate outcomes. See the discussion in *Canadian Copyright Licensing Agency (Access Copyright) v. Alberta*, 2015 FCA 268at paras. 13-14.

61 I am satisfied that admitting Bell's new evidence about its asserted cost of providing service would violate the CRTC's role as the fact finder and decider of the merits. The cost of providing service was an issue squarely before the Commission.

62 Further, accepting the evidence would not facilitate this Court's review of the CRTC's decision against the evidence before it. As will be seen below when considering the allegations of breach of procedural fairness and arbitrary decision-making, there were instances when the appellants declined to put company-specific evidence before the Commission. It would be particularly inappropriate in this circumstance for this Court to now rely upon evidence that Bell did not put before the Commission.

63 Contrary to the submissions of the Cable Carriers, the affidavit evidence provided by the appellants is generally not profferred to provide general background information to assist the Court or to shed light on the factors identified in *Baker v. Canada (Minister of Citizenship & Immigration)*, [1999] 2 S.C.R. 817, 174 D.L.R. (4th) 193 (S.C.C.). The evidence I have rejected about Bell's asserted costs is intended to add new evidence directly relevant to the merits of the appeal.

64 The result is that the appellants' argument that the Commission committed a jurisdictional error by setting rates that are not just and reasonable is unsupported by an evidentiary basis. However, in any event, I am satisfied that the question of whether the rates in question are just and reasonable is a question of fact — not a question of law or jurisdiction. I reach this conclusion for the following reasons.

65 For ease of reference I set out subsections 27(1), (3) and (5) of the Act:

> **27.**(1) Every rate charged by a Canadian carrier for a telecommunications service shall be just and reasonable.
>
> . . .
>
> (3) The Commission may determine in any case, <u>as a question of fact</u>, whether a Canadian carrier has complied with this section or section 25 or 29, or with any decision made under section 24, 25, 29, 34 or 40.
>
> . . .
>
> (5) In determining whether a rate is just and reasonable, the Commission may adopt any method or technique that it considers appropriate, whether based on a carrier's return on its rate base or otherwise.
>
> (underlining added)
>
> **27.**(1) Tous les tarifs doivent être justes et raisonnables.
>
> [...]

(3) Le Conseil peut déterminer, comme question de fait, si l'entreprise canadienne s'est ou non conformée aux dispositions du présent article ou des articles 25 ou 29 ou à toute décision prise au titre des articles 24, 25, 29, 34 ou 40.

[...]

(5) Pour déterminer si les tarifs de l'entreprise canadienne sont justes et raisonnables, le Conseil peut utiliser la méthode ou la technique qu'il estime appropriée, qu'elle soit ou non fondée sur le taux de rendement par rapport à la base tarifaire de l'entreprise.

(soulignements ajoutés)

66 Reading subsection 27(1) in conjunction with subsection (3) demonstrates that whether rates are "just and reasonable" under the statute is a factually suffused question of mixed law and fact. This type of question cannot be entertained under subsection 64(1) of the Act.

67 This view is reinforced by subsection 27(5). The Commission may adopt any method or technique that it considers appropriate to determine whether a rate is just and reasonable. The Commission enjoys considerable deference in determining the factors to be considered and the methodology that may be adopted for assessing whether rates are just and reasonable (*Bell Canada v. Canadian Radio-Television & Telecommunications Commission*, 2009 SCC 40, [2009] 2 S.C.R. 764 (S.C.C.), at paragraphs 40 and 41). As the CRTC is empowered to choose the method for setting rates, the appellants' arguments are necessarily an assault on the methods selected by the CRTC and its assessment of the evidence. The chosen methods of calculating rates and the CRTC's findings of fact are not subject to appeal under subsection 64(1).

68 This conclusion is demonstrated in the grounds of appeal set out in the notice of appeal filed on behalf of the large telephone companies. At paragraph 17 it is asserted that:

The CRTC's reasoning process contains several fundamental legal errors that are hallmarks of an irrational decision. The CRTC considered irrelevant factors like outdated data, ignored relevant factors like current data, and adopted methodologies that are contrary to its own earlier decisions. It greatly underestimated the costs of Bell's services. It thus erred in law by unreasonably applying its statutory rate-setting power to these facts.

(underlining added)

69 Challenges to the Commission's choice of methodologies and its assessment of evidence relevant to the selected methodologies are not matters of law or jurisdiction properly before this Court. The appellants' avenues for redress on these points lies with the Commission itself and the Governor in Council.

b) The Commission's consideration of policy objectives is not a question of law or jurisdiction

70 I reach a similar conclusion with respect to the appellants' argument that the Commission failed to implement or even consider the policy objectives enumerated in section 7 of the Act, thus committing a jurisdictional error.

71 The appellants argue that:

• Section 47 requires the Commission to exercise its powers with a view to implementing the Act's policy objectives and the Cabinet Direction.

• The Commission failed to do so. The decision not only fails to implement the policy objectives but is directly contrary to the geographic and competitive goals of the policy.

• This error deprived the Commission of jurisdiction.

72 I begin consideration of these submissions by observing that the appellants again point to inadmissible, new evidence to support their submissions. Such inadmissible evidence includes adverse commentary on the decision at issue (for example, the TD Securities Equity Research report, appeal book, tab 136T) and the appellants' own post-decision statements (for example, Cogeco's, Eastlink's, Rogers', Shaw's, Videotron's and Bell's parent company's post-decision announcements). As discussed above beginning at paragraph 60, this new evidence is inadmissible in this proceeding. Receiving this evidence would not respect the differing roles of this reviewing Court and the CRTC.

73 This said, I am satisfied that the appellants' argument that the Commission failed to implement or consider the policy objectives enumerated in section 7 of the Act again is not a question of law or jurisdiction properly before the Court.

74 In *Bell Aliant*, at paragraph 43, the Supreme Court quoted with approval the following passage from the reasons of Justice Sharlow, writing for this Court in the decision then under appeal:

> Because of the combined operation of section 47 and section 7 of the *Telecommunications Act* ..., the CRTC's rating jurisdiction is not limited to considerations that have traditionally been considered relevant to ensuring a fair price for consumers and a fair rate of return to the provider of telecommunication services. Section 47 of the *Telecommunications Act* expressly requires the CRTC to consider, as well, the policy objectives listed in section 7 of the *Telecommunications Act*. What that means, in my view, is that in rating decisions under the *Telecommunications Act*, the CRTC is entitled to consider any or all of the policy objectives listed in section 7.
>
> (underlining added)

75 During oral argument, counsel for the telephone companies conceded that the Commission:

• was not obliged to advance all of the policy objectives enumerated in section 7 of the Act;

• did advance some of the objectives articulated in section 7; and,

• the manner in which the Commission chose to balance policy objectives is not a question of law or jurisdiction.

76 In my view, these proper concessions, coupled with the broad authority of the Commission to consider any or all policy objectives, is fatal to the appellants' assertion that the Commission's treatment of the policy objectives raises questions of law or jurisdiction. Again, any disagreement with the Commission's policy choices is a matter to be pursued with the Commission or the Governor in Council — not this Court.

77 Indeed, in Order in Council P.C. 2020-0553 the Governor in Council considered "that the final rates set by [TO 2019-288] do not, in all instances, appropriately balance the objectives of the wholesale services framework recognized in Order in Council P.C. 2016-332 ... and that they will, in some instances, undermine investment in high-quality networks". This said, the Governor in Council found it premature to vary or refer TO 2019-288 back to the Commission because the Commission has already launched a public proceeding to consider the appellants' applications asking that it review and vary the decision.

78 As the issue of the CRTC's treatment of policy objectives is not properly before this Court it is unnecessary to consider the supplementary written submissions filed by the parties.

4. The issues to be decided

79 Having found the two grounds of appeal discussed above are not questions of law or jurisdiction, and therefore fall outside the scope of subsection 64(1), the remaining issues to be determined are:

i. Did the CRTC breach the principles of procedural fairness or engage in arbitrary decision-making?

ii. Do the reasons of the CRTC fail to comply with a statutory reasons requirement?

iii. Did the CRTC impose an unconstitutional tax?

5. The standards of review to be applied to the issues

80 In *Canada (Minister of Citizenship and Immigration) v. Vavilov*, 2019 SCC 65, 441 D.L.R. (4th) 1 (S.C.C.), the Supreme Court held that where Parliament has provided for an appeal from an administrative decision-maker to a court, the reviewing court is to apply appellate standards of review. Thus, questions of law, including questions concerning the scope of a decision-maker's authority, are reviewable on the standard of correctness (*Vavilov*, paragraph 37).

81 In light of this, the parties all agree that the standard of review for questions of law and jurisdiction is correctness. It follows that the issues of whether the CRTC failed to comply with a statutory reasons requirement and imposed an unconstitutional tax are reviewable on the standard of correctness.

82 The Cable Carriers acknowledge some divergence in the jurisprudence as to how allegations of procedural fairness are to be reviewed (memorandum of fact and law, footnote 94). In my view, in this case it is unnecessary to resolve any uncertainty in the law. For the reasons articulated below, even on the non-deferential standard of correctness the appellants have failed to demonstrate procedural unfairness.

83 I now turn to the application of these standards to the three issues properly before the Court.

6. Did the CRTC breach the principles of procedural fairness or err in law or jurisdiction by engaging in arbitrary decision-making?

i. The nature of the asserted errors of law and jurisdiction

84 As explained at the outset of these reasons, in their notice of appeal and memorandum of fact and law the Cable Carriers assert that the CRTC breached the principles of procedural fairness, impermissibly fettered its discretion, or acted arbitrarily with respect to the following costing factors: the productivity factor, upstream traffic growth rates, the attribution of segmentation fibre costs to Internet services, speed-banding, unrecovered costs, working fill factors, segmentation fibre facilities, coaxial cable facilities and annual development costs.

85 The telephone companies also argue briefly in their memorandum of fact and law that the CRTC ignored relevant factors, relied on irrelevant factors and made findings with no evidence. They allege the same error with respect to the productivity factor as the Cable Carriers assert. Other examples of alleged breaches of procedural fairness were briefly listed but were not well-developed by the telephone companies (memorandum of fact and law, paragraphs 87 to 92).

86 In oral argument the Cable Carriers characterized the asserted errors to be errors of law or jurisdiction falling within two categories: breaches of the duty of fairness and arbitrary decision-making.

87 Three elements of the duty of fairness were said to be breached by the CRTC: i) the right to have the rates determined by a fair, impartial and open-minded decision-maker; ii) the right to know the case the Cable Carriers had to meet and to put forward their case fully and fairly; and, iii) the right to receive reasons that met the requirements of the Act and the Cabinet Direction. The appellants also claim the Commission acted arbitrarily by making findings which were not supported by any evidence or which were made without regard to the relevant evidence actually adduced by the Cable Carriers.

88 After setting out in oral argument the applicable legal frameworks in which breaches of the duty of fairness and arbitrary decision-making are to be considered, the Cable Carriers orally argued that unfairness and arbitrariness were generally present in five cost factors addressed by the CRTC: the productivity factor, upstream traffic growth rates, the attribution of segmentation costs to Internet services, speed-banding and unrecovered costs. The Cable Carriers relied upon their memorandum of fact and law with respect to the remaining cost factors (listed in paragraph 84 above) which were also characterized to be additional examples of breaches of the duty of fairness or arbitrary decision-making. The Bell appellants made no oral submissions on this issue but adopted the submissions of the Cable Carriers.

89 In the oral argument of the five cost factors, the Cable Carriers did not maintain a clear distinction between their "fairness" arguments and their "arbitrariness" arguments. Their submissions delved deeply into the technical record and the CRTC's findings, often only loosely tethered to a legally protected right that could be asserted on these appeals.

90 In my view, nothing turns on the failure to maintain a clear distinction. I have reviewed in detail the submissions made orally and in writing with respect to the nine errors asserted by the Cable Carriers. For the reasons set out below I see no breach of procedural fairness, arbitrary decision-making or disregard of any legitimate expectation as to the conduct of the rate-setting process. The parties knew the issues that were in play and were afforded the opportunity to adduce evidence and make submissions on those issues. The parties' real complaint is that the Commission rejected their submissions.

91 I begin my analysis with the five specific errors that were argued orally and will then conclude with the four remaining asserted errors described in the Cable Carrier's memorandum of fact and law. The issue of the adequacy of the Commission's reasons is dealt with separately below.

ii. The productivity factor

92 The productivity factor, or the annual unit cost change assumption, is used to estimate reductions in per-unit equipment costs due to increases in equipment capacity over the study period (TO 2019-288, paragraph 9; TD 2016-117, paragraph 41). This costing factor is meant to reflect ongoing improvements in productivity that carriers can expect to realize in providing service as a result of communications technology becoming more productive over time (affidavit Lee Bragg, appeal book, tab 137, paragraph 70). The higher the absolute value of the productivity factor, the lower the associated wholesale rates.

93 In TD 2016-117, the CRTC established an annual productivity factor of minus 26.4%. The Cable Carriers assert that this was based on data "from a comprehensive Report published in 2011 by the Dell'Oro Group, an independent market analysis and research firm for the telecommunications industry." (memorandum of fact and law, paragraph 22). At that time, the CRTC is said to have described the Dell'Oro Group as a "reliable source of data from which to determine a revised annual unit cost" (TD 2016-117, paragraph 58 referring to a report which relied upon the Dell'Oro Group data). Subsequent to TD 2016-117, the Dell'Oro Group published updated productivity factors in reports issued in 2016 and 2017. During the rate-setting process that led to the decision at issue, Rogers proposed a productivity factor of minus 9% based on the Dell'Oro Group's 2017 report; four other Cable Carriers proposed a productivity factor of minus 17% based on the Group's 2016 report.

a) The appellants' submissions

94 The Cable Carriers argue that in TO 2019-288 the CRTC refused to consider this updated information. Instead, they submit that the CRTC "adhered rigidly to the minus 26.4% productivity factor that it had established previously ... based on data from the now-seriously outdated 2011 Dell'Oro Group Report." The Cable Carriers submit that the CRTC provided no meaningful explanation "for preferring obsolete data" and unjustifiably criticized the Cable Carriers for relying on the updated data, stating that the Cable Carriers had "selectively chosen data from third-party reports ... instead of relying on company-specific information." (memorandum of fact and law, paragraphs 24 to 25; TO 2019-288, paragraph 21).

b) Context

95 I begin by providing some important context, particularly the Commission's earlier decision in TD 2016-117. In this decision the Commission cited the argument advanced by the Canadian Network Operators Consortium Inc. (CNOC) that unit costs had been declining more rapidly than accounted for by the Commission's then current assumed productivity rate of minus 10%, and that a rate of minus 26.4% was appropriate. CNOC relied upon two reports to demonstrate this point. One of the reports was a report prepared by J. Scott Marcus, referred to as the Scott Report (TD 2016-117, paragraph 48). The Commission determined that the Scott Report constituted a reliable source of data from which to determine a revised productivity factor (TD 2016-117, paragraph 58). The Commission determined that the productivity factor should be changed to minus 26.4% (TD 2016-117, paragraph 63). While the Scott Report was prepared using data from the Dell'Oro Group, it is not accurate to state that the Commission's determination of the productivity factor was based on the report of the Dell'Oro Group.

96 As explained above, the Commission concluded its reasons in TD 2016-117 by reiterating that it had modified the rate-setting approach, adopted new assumptions for annual traffic growth and annual unit cost change, and changed the length of the study period for cost studies. The nature and scope of these changes indicated to the Commission that current wholesale HSA service rates were likely not just and reasonable (TD 2016-117, paragraph 104). Therefore, the Commission made interim all wholesale HSA service rates that were then approved on a final basis. All wholesale HSA service providers were directed to file new tariff applications reflecting the Commission's determinations (TD 2016-117, paragraphs 105 and 106).

97 On March 31, 2016 (the same day TD 2016-117 was issued) the Commission wrote to wholesale HSA service providers advising that the cost studies to be filed pursuant to TD 2016-117 were "to contain the detailed cost information outlined in the Commission staff letter dated 13 September 2013." Both the September 13, 2013 letter and the detailed cost information requirements were attached to the Commission's letter of March 31, 2016.

98 The cost studies submitted in response to TD 2016-117 were considered by the Commission in TO 2016-396 and TO 2016-448. At paragraphs 21 and 22 of TO 2016-396 the Commission referred to its letter of March 31, 2016 and expressed "significant concern that most wholesale HSA service providers chose to disregard Commission staff's guidance, the [Regulatory Economic Studies] Manual, and relevant past Commission determinations." To ensure that the interim rates were based on proper costing principles and reasonable costs the Commission made adjustments to the proposed costs before it, including adjustments to the annual unit cost change assumption for two carriers. The adjustments applied an annual unit cost change assumption of minus 26.4% (TO 2016-396, paragraph 23 and Appendix 2). The Commission approved monthly rates on an interim basis. The establishment of final rates was to be based on a full review and assessment of the relevant cost inputs and costing methodologies (TO 2016-396, paragraph 26).

99 Parenthetically, I note that the reference to a "Manual" is a reference to regulatory manuals prepared by telecommunications service providers and approved by the CRTC. The various manuals describe the basic framework for conducting regulatory economic studies and contain general and company-specific information and procedures to be used in calculating the incumbents' service costs. While originally developed for use by the ILECs, the manuals have been consistently applied to the Cable Carriers (see, for example, *Regulatory Economic Studies Manuals - Follow-up proceeding to Telecom Decision 2008-14* (25 August 2008), Telecom Order CRTC 2008-237, (TO 2008-237), paragraph 1, footnote 1).

100 In respect of "Productivity Improvement Factors", the Manual notes that a regulatory economic study must reflect the impact of productivity changes over the study period in recognition of anticipated operational process improvements. When a company has information about the productivity associated with a particular cost element, this specific level of productivity is to be used and identified in a regulatory economic study. When a company has insufficient information about the productivity associated with a particular cost element, the company may use its corporate average productivity improvement factors.

101 On December 16, 2016, after the issuance of TO 2016-396, the Commission again wrote wholesale HSA service providers advising that in "order for the Commission to approve the wholesale HSA service tariff applications on a final basis, it is necessary for the companies to refile cost studies in the context of their related tariff applications." Such cost studies were to abide by the principles and methodologies outlined in the Manual, abide by previous applicable Commission determinations and include all of the information in the prescribed format as identified in the Commission's letter of March 31, 2016. Any request for deviation from a past Commission determination contained in those items was to be accompanied by a detailed rationale for the request, with supporting evidence. In the absence of supporting rationale and evidence, "Commission staff will be guided by the Commission's adjustments identified in Telecom Order CRTC 2016-396."

102 On March 2, 2018, the Commission wrote wholesale HSA service providers requesting responses to attached requests for information. For example, Rogers was contacted with respect to its proposed annual capital unit cost change assumption which differed from the minus 26.4% annual capital unit cost change assumption approved by the Commission. Rogers was requested to explain "with supporting rationale why the company has not relied on company-specific information to estimate and propose the annual capital unit cost change assumption". If Rogers intended to propose a company-specific annual capital cost unit change assumption, it was to provide actual company-specific information.

103 Rogers responded that its opposition to the annual capital unit cost change assumption of minus 26.4% was based upon "the very data used to inform the Commission's original decision". Rogers advised that it had purchased a recent version of what it referred to as the data set entitled the "2017 Dell'Oro" Report. Rogers restated its opinion that an assumption that the annual capital unit cost change of minus 26.4% was inappropriate. Rogers did not respond to the request that it provide company-specific information to support a proposed company-specific annual capital unit cost change assumption. It simply repeated why it proposed an annual capital cost change assumption which differed from minus 26.4% and insisted that the CRTC accept the information it had provided.

c) The Commission's reasons

104 With this extensive background I now turn to the Commission's reasons; the material parts are found at paragraphs 21 and 24:

> 21. The Commission notes that the ILECs (with the exception of SaskTel and TCI) and cable carriers have selectively chosen data from third-party reports (i.e. the Dell'Oro Router Reports) to estimate company-specific annual capital unit cost change assumptions for use in their cost studies, instead of relying on company-specific information. Given that the wholesale HSA service providers are sophisticated network operators, it is reasonable to expect that they have detailed company-specific equipment prices and capacities for traffic-driven equipment that they acquire on an annual basis. Accordingly, the Commission determines that the approach adopted by these ILECs and cable carriers is not appropriate since it is not consistent with the general use of company-specific data in regulatory cost studies.
>
> . . .
>
> 24. In light of the above, the Commission determines that the previously approved annual capital unit cost change assumption of minus 26.4% continues to be a reasonable estimate for the annual capital unit cost change assumption for all traffic-driven equipment and should be applied accordingly to all wholesale HSA service providers' cost studies.

d) Analysis

105 As stated previously in these reasons, the issue before this Court is not the correctness or reasonableness of a productivity factor of minus 26.4%. The sole issues are whether the Cable Carriers' right to procedural fairness was breached when the Commission selected this productivity factor or whether the Commission arbitrarily, without explanation, preferred obsolete data.

106 The Cable Carriers have not demonstrated any procedural unfairness or arbitrariness. In circumstances where:

> i. in TD 2016-117 the Commission commented on the lack of evidence supporting proposed productivity factors (TD 2016-117, paragraph 53);
>
> ii. the Commission then sought detailed cost information in the cost studies to be filed in response to TD 2016-117;
>
> iii. the Commission expressed significant concern in TO 2016-396 at the lack of proper costing information, notwithstanding staff guidance and the provisions of the Manual, and continued to apply a productivity factor of minus 26.4%;
>
> iv. the Manual requires company-specific information about the impact of productivity changes;
>
> v. the Commission provided further guidance in its letter of December 16, 2016 as to the specific information required in the cost studies and stated that any request for a deviation from a past Commission determination was to include a detailed rationale for the deviation and supporting evidence; and
>
> vi. the Commission again requested company-specific information in its information request of March 2, 2018;

there is no procedural unfairness or arbitrariness.

107 The Commission sought company-specific information, and gave clear and fair warning of the consequence that would follow from a failure to provide such information or a rationale for a deviation that was accompanied by supporting evidence. Reading the reasons in the light of the record, the explanation for the Commission's use of a productivity factor of minus 26.4% is clear. It wished company-specific information, not third-party data.

108 As the record shows, the Cable Carriers had the opportunity to submit the requested information. The choice to require company-specific information may not have been what the Cable Carriers wanted, but the CRTC may select any method it considers appropriate when setting rates (Act, subsection 27(5)).

109 The Cable Carriers chose not to provide the requested information and now complain that they were not accorded fair process. This argument has no merit; the Cable Carriers were given a fair process, which they chose not to follow. In substance, the Cable Carriers object to the reasonableness of the productivity factor determined by the Commission. This is not a question of law or jurisdiction properly before the Court.

iii. Upstream traffic growth rates

110 Growth rates in peak period Internet traffic are used to forecast peak period traffic; in turn, peak period traffic is used to estimate the facilities that will be required to provide service over a study period (TO 2019-288, paragraph 162). Lower growth traffic rates produce lower wholesale rates.

a) The appellants' submissions

111 The Cable Carriers submit that in TD 2016-117, the CRTC directed them to use: i) a growth rate for the first two years of the study period that reflected historical levels of Internet traffic; and, ii) a growth rate of 32% for the remainder of the study period. They say that both Rogers and Cogeco followed "this mandated approach in preparing their cost studies." However, they submit that in the decision under appeal the CRTC "declined to follow the approach that it had previously and specifically prescribed." (memorandum of fact and law, paragraphs 54 and 55). Instead, the CRTC selected the growth rate from the most recent year in which historical data was available and applied that rate over the entirety of the study period.

112 The Cable Carriers say that by relying on what they assert is the lowest annual growth rate experienced by these companies over the past five years, the CRTC artificially depressed the wholesale rates payable by resellers to Rogers and Cogeco. They submit that the CRTC provided no notice to the Cable Carriers of its intention to abandon the approach it had "mandated" only three years earlier. In their submission, the CRTC ignored the evidence it had directed would be determinative while at the same time denying Rogers and Cogeco the opportunity to file additional evidence or make submissions on the issue (memorandum of fact and law, paragraphs 55 and 56). They say that they had a legitimate expectation that the Commission would follow its previous methodology.

b) Context

113 Again, I begin my analysis with TD 2016-117. In this decision the Commission:

> i. described its approach, set out in TD 2006-77 and in TRPs 2011-703 and 2011-704, in which it applied to the first two years of a study period traffic growth rates per retail end-user consistent with historical levels, followed by a constant annual growth rate assumption for the remaining period of the cost study. Most recently, a constant growth rate of 20% had been applied by the Commission (TD 2016-117, paragraphs 27, 28 and 39);
>
> ii. explained that both wholesale HSA service providers and the Internet service providers agreed that annual Internet traffic had been growing at a rate greater then the Commission's then current annual traffic growth assumption of 20%. However, the Internet traffic growth rate estimates submitted to the CRTC varied considerably, with the highest estimate being more than double the lowest estimate (TD 2016-117, paragraph 29);

iii. noted that both Shaw and CNOC referred to the Cisco Systems, Inc. Visual Networking Index White Paper which provided a growth forecast for Internet traffic in Canada, and which indicated that peak period Internet traffic would grow, from 2014 to 2019, at a compound annual growth rate of 32% (TD 2016-117, paragraphs 30 and 31);

iv. noted that no intervener refuted the validity of the Cisco White Paper (TD 2016-117, paragraph 37);

v. found that the Cisco White Paper used sound methodology and provided a proper and principled basis for determining a Canada-wide Internet traffic growth forecast (TD 2016-117, paragraph 38); and,

vi. determined that in the cost studies to be submitted in support of proposed new wholesale HSA service rates, all wholesale HSA service providers were to include, in the first two years of the study period, annual traffic growth rates per retail end-user consistent with historical levels, followed by a constant growth rate of 32% for each of the remaining years of the study period (TD 2016-117, paragraph 40).

114 I pause here to make two observations. First, the parties' submissions and the Commission's determination was premised on the view that the annual growth rate of Internet traffic had increased significantly (see, particularly, the fourth paragraph of the preamble to TD 2016-117) so that the assumption of 20% annual traffic growth was no longer appropriate. Based on the evidence, the CRTC updated the assumed rate of growth but did not revisit the structure of its formula. Second, contrary to the submissions of the Cable Carriers, in this decision the CRTC neither set rates nor mandated any particular rate outcome.

115 Rogers and Cogeco state that they followed the Commission's direction when preparing and submitting their cost studies in support of proposed new wholesale HSA service rates.

116 However, contrary to the Commission's understanding at the time of TD 2016-117, Rogers' and Cogeco's historical annual peak period upstream traffic growth rates had been declining, not increasing.

c) The Commission's reasons

117 Faced with that fact, in TO 2019-288 the Commission concluded that it was not reasonable to expect that annual peak period upstream traffic would increase over the cost study period to the levels proposed by Rogers and Cogeco. In light of the actual declining growth rates, "and having regard to the record before it", the Commission applied the most recent year's values from Rogers' and Cogeco's respective historical annual peak period upstream traffic growth rates as the growth rate to be applied in each year of their cost studies (TO 2019-288, paragraph 168).

d) Analysis

118 Again, I see no procedural unfairness. The 32% growth rate set in TD 2016-117 was a substantive finding of the CRTC, which was revised in TO 2019-288 in the face of new evidence. As the doctrine of legitimate expectation protects procedural, not substantive expectations (*Agraira v. Canada (Minister of Public Safety and Emergency Preparedness)*, 2013 SCC 36, [2013] 2 S.C.R. 559 (S.C.C.), at paragraph 97), neither Rogers nor Cogeco could have any enforceable reasonable expectation that rates would be set on the basis of an assumed 32% annual growth rate.

119 Further, both Rogers and Cogeco must be assumed to have understood the express premise of TD 2016-117 and to have known that their historical annual peak period upstream traffic growth rates had been declining. Armed with that knowledge they were able to make informed submissions to the Commission on an appropriate rate. The fact that the Commission rejected those submissions does not amount to a breach of procedural fairness.

iv. Attribution of segmentation costs

120 Segmentation facilities include segmentation fibre and optical nodes. These facilities transport various services such as Internet and television (TO 2019-288, paragraph 119) and voice calling. In *Cogeco Cable Canada Inc., Re* (21 December 2006), Telecom Decision CRTC 2006-77 (TD 2006-77), [(December 21, 2006), 2006-77 (C.R.T.C.)] the Commission determined

that 75% of the proposed all-carrier node segmentation capital costs would be attributed to wholesale HSA and retail Internet services. This recognized that these facilities were used for other Cable Carrier services, not just Internet services (TO 2019-288, paragraph 136; TD 2006-77, paragraphs 92 and 93). The Commission reached this decision notwithstanding the submissions of the Cable Carriers that high-speed Internet access was the sole driver of node segmentation (TD 2006-77, paragraphs 84 to 88, 90 to 91).

121 In the rate-setting hearing under review, the Cable Carriers again argued that incremental segmentation costs are dedicated exclusively to managing peak Internet traffic volumes. Therefore, they proposed that 100% of the cost associated with segmentation fibre facilities be attributed to Internet services. The CRTC rejected this argument:

> 136. In Telecom Decision 2006-77, the Commission determined that 75% of the proposed all-carrier node segmentation capital costs would be causal to the wholesale HSA and retail Internet services, in recognition of the use of these investments for other cable carrier services such as television and voice.
>
> 137. The Commission remains of the view that these facilities are used to provision a variety of services; therefore, it would not be appropriate to attribute 100% of the costs of these facilities to retail Internet and wholesale HSA services.
>
> 138. In the absence of any evidence, and given that future services are expected to benefit from segmentation facility investments over the cost study period, the Commission determines that an attribution factor of 75% continues to be appropriate.

a) The appellants' submissions

122 The Cable Carriers argue that the Commission reached this conclusion in the absence of any evidence supporting its stated "expectation", and without support in the Manual for the application of such an approach. They submit the Commission had no basis for this 75% attribution of segmentation costs as segmentation facilities are deployed to satisfy demand for new services or increasing demand for existing services and there was no evidence of increasing demand for non-Internet services. The Cable Carriers also argue that in stating that it adopted this approach "in the absence of any evidence" the Commission demonstrated that it disregarded the evidence of the Cable Carriers.

123 In oral argument the Cable Carriers referred only to the submissions to the Commission by Shaw and Rogers.

b) Context

124 In response to an information request from the Commission, Shaw confirmed that its video and voice services also use the facilities associated with optical nodes. It submitted, however, that peak Internet traffic is the cost driver for the major network components, including node segmentation related costs. It submitted that no other traffic on its network reached a level that required Shaw to undertake node splits to alleviate traffic congestion. As a result, Shaw only included in its cost study the incremental causal costs related to Internet service for node segmentation related costs.

125 In response to a similar request for information, Rogers confirmed that its optical node carries radio frequency signals for Internet, television and Rogers home phone services. Plans to add other services were said to be underway. In the submission of Rogers, even if other services benefit from the facilities, costs should not be attributed to these other services unless they cause advancement of the facilities.

126 Thus, both Shaw and Rogers acknowledged that their segmentation equipment and facilities were used by services other than Internet services. Notwithstanding, they argued that no other traffic had reached a level that required them to undertake node splits to alleviate traffic congestion so all segmentation costs should be attributed to Internet services. They elected not to provide evidence of any incremental cost for other services.

c) The Commission's reasons

127 Having received the Cable Carriers' evidence and submissions, the Commission remained of the view that because the facilities were used to provide a variety of services it would not be appropriate to attribute 100% of the cost of these facilities to retail Internet and wholesale HSA services. In the absence of any evidence about any incremental cost for other services the Commission determined that the attribution factor of 75% continued to be appropriate.

d) Analysis

128 I see no procedural unfairness. The Cable Carriers were aware of the issue, filed their evidence, offered their submissions and replied to requests for information. Their complaint is with the Commission's decision not to attribute 100% of the cost of segmentation facilities to Internet services, not with the fairness of the Commission's process.

v. Speed-Banding

129 To understand the speed-banding issue one must understand that the cost model for wholesale HSA services is based upon two broad categories of costs: access costs and usage costs. Access costs consist of costs associated with end users' access to the network. These costs do not vary with changes in usage levels. Usage costs consist of costs incurred to move data through a wholesale HSA service provider's network. These costs do vary with changes in usage levels. Coaxial cable costs are an example of access costs; optical node costs are an example of usage costs (TO 2019-288, paragraph 139; TD 2016-117, paragraph 77).

130 In TD 2016-117 the Commission considered whether usage-sensitive equipment should be assigned to the traffic-driven portion of cost models. The Commission determined:

> 85. The large cable companies have some costs for usage-sensitive equipment in the access portion of their cost models (e.g. the CMTS chassis) that are traffic-driven. <u>These usage-sensitive costs can be identified and removed from the access portion of cost models and assigned to the traffic-driven portion</u>, whether the wholesale HSA service provider is using the CBB model or the flat rate model. <u>This reassignment of costs would aid in the creation of speed-bands</u> by reducing variability in the access costs between the various service speeds within a speed-band.
>
> 86. In light of the above, the <u>Commission determines that wholesale HSA service providers must ensure that all equipment costs accounted for in the access portion of their cost models include costs only for non-usage-sensitive equipment</u>.
>
> (underlining added)

131 To understand the speed-banding issue one must also understand that in the decision at issue the Commission was considering whether segmentation fibre facilities should be accounted for in the access or usage portion of the cost model (*Review of costing inputs and application process for wholesale high-speed access services* (28 May 2015), Telecom Notice of Consultation CRTC 2015-225, paragraph 19; TD 2016-117, paragraph 77). It was this determination that gave rise to what is referred to as the speed-banding issue. With this background, I turn to speed-banding.

132 In TD 2016-117 one of the Commission's key determinations was whether to adopt either the "fixed access" approach or the "speed-banding" approach to rate-setting. The Commission described the "fixed access" approach to involve the creation of a fixed access rate that would apply to all service speeds. The fixed access rate would recover both speed-dependent and speed-independent access costs for all service speeds. The Commission described the "speed-banding" approach to further break down access costs into two access rate components. The first component would consist of a speed-independent, fixed, weighted-average access rate that would apply to all service speed offerings. The second rate component would consist of a speed-dependent access rate per speed-band uniformly applied to all service speeds falling within a given speed-band. Each speed-band would be determined based on service speeds that have similar costs (TD 2016-117, paragraph 12).

133 In TD 2016-117, the Commission determined that rate-setting for all wholesale HSA services would be done in accordance with the speed-banding approach. It did not establish how the various costs would be allocated to different rate components.

a) The appellants' submissions

134 The Cable Carriers say that they relied on this determination and proposed wholesale rates based on the speed-banding approach.

135 The Cable Carriers acknowledge that during the course of the rate-setting proceeding the Commission asked the Cable Carriers to comment on the appropriateness of moving segmentation costs from the "access" rate component of wholesale rates to the "capacity" (or usage) rate component. They responded that this adjustment would be a "radical change in the pricing approach of access services" that would be impossible to reconcile with speed-banding (memorandum of fact and law, paragraph 37). Moreover, they asserted that such a change would require new costing models based on the discredited "fixed access approach". They identified the connection between segmentation fibre facilities and speed-banding, however they did not provide revised proposed rates associated with segmentation fibre costs in the traffic-driven portion of the cost model.

136 Notwithstanding their submissions, the Cable Carriers assert that the CRTC gave them no notice of its intention to abandon speed-banding and gave them no opportunity to file such new costing models based on a fixed access approach. Instead, the Cable Carriers say that the Commission simply imposed a single access rate to be applied across all speeds offered by each Cable Carrier. The Cable Carriers assert that in doing so the Commission: i) ignored their evidence establishing the greater cost of providing higher-speed Internet service independent of the usage; ii) disregarded its own explicit direction to use the speed-banding approach and thereby disregarded the legitimate expectation of the Cable Carriers as to how the rate-setting process would be conducted; and, iii) gave no consideration to the fact that the entirety of the Cable Carriers' cost studies had been premised on the Commission's previous direction to apply speed-banding.

137 Again, I see no error of law or jurisdiction.

b) Context

138 In paragraph 85 of TD 2016-117, quoted above, the CRTC foreshadowed its requirement that usage-sensitive costs be identified and removed from the access portion of the cost models and assigned to the usage-driven portion. The speed-banding approach was premised on the adoption of two access rate components — one consisting of speed-independent costs, the other consisting of speed-dependent costs. In the decision at issue the Commission did not reverse its previous policy. Instead, with the benefit of a full record, it found that most speed-dependent costs were better characterized as usage costs (TO 2019-288, paragraphs 156 to 161). Applying its previous policy to the finding, the Commission reassigned those costs to the usage portion of the model. The impact on speed-banding was a foreseeable consequence of that determination.

139 Further, the Commission specifically solicited submissions from the parties on this issue. In a request for information issued on March 2, 2018 the Commission referenced TD 2016-117 and observed that the addition of fibre facilities to support node segmentation generally occurs as additional facilities are required to meet rising Internet demand. The Commission went on to ask that the parties comment "on the appropriateness of including the costs associated with segmentation fibre in the access portion of the cost model as opposed to the traffic [or usage] driven portion" and were asked to "provide revised proposed rates and cost information using the baseline cost study that includes the costs associated with segmentation fibre and any other usage-sensitive equipment in the traffic driven portion of the cost model", using a specified format.

140 Accordingly, contrary to the submission of the Cable Carriers, new costing models were solicited.

c) Analysis

141 We were not taken to any evidence to suggest that the Cable Carriers provided such cost studies. Indeed, in its Aggregated Final Comments, Rogers simply argued extensively that its method of including certain node segmentation costs in the access portion of the cost model remained appropriate. In response to the information request Cogeco similarly replied that it remained of the view that "it is appropriate to include the costs associated with segmentation fibre in the access portion rather than in the traffic driven portion of Cogeco's proposed cost model." (appeal book, tab 112C.1(I), question 6).

142 The Cable Carriers knew this issue was in play and were given the opportunity to file new costing models. There was no procedural unfairness. The doctrine of legitimate expectations does not protect a substantive expectation that the CRTC would continue to set access rates that vary across speed-bands.

vi. Unrecovered costs

143 As explained above, in TD 2016-117 the CRTC changed the study period from the then current ten year term to a shorter period of five years. The Commission wrote:

> 76. These changes to the study period are to take place immediately, and not after the expiration of the current ten-year study period. When service rates are revisited prior to the end of an original study period, service providers may be unable to recover certain costs that they would have otherwise expected to recover. It is appropriate for service providers to be able to recover these costs. Unrecovered costs that are causal to a service can be recovered according to the methodology outlined in Appendix E-1 of the large telephone companies' Regulatory Economic Studies Manuals, which were approved in Telecom Order 2008-237. For all other unrecovered costs, the Commission requests wholesale HSA service providers to identify and justify the amount, with supporting rationale, and to propose a way to recover these costs.

144 During the rate-setting hearing at issue, Rogers submitted evidence of two categories of unrecovered costs, totalling $52.3 million. The first category of unrecovered costs reflected costs that had not been recovered due to the Commission's decision to update wholesale HSA rates prior to the end of the original study period (Changed Study Period Unrecovered Costs). The Commission had originally approved final rates based on a ten-year cost study that Rogers asserted would have had to run its course in order for cable companies to fully recover their costs. The Commission's decision to truncate that period was said to result in unrecovered costs. Rogers quantified these costs in the amount of $30.1 million. The second category of unrecovered costs were costs that were not recovered due to the difference between interim rates in place since 2012 and what Rogers submitted were the true costs of providing the services (Interim Rates Unrecovered Costs). These costs were quantified in the amount of $22.2 million.

145 At paragraph 38 of its reasons in TO 2019-288, the Commission acknowledged that revisiting wholesale HSA rates prior to the end of the period captured by the original cost study might result in unrecovered costs. This said, the Commission rejected Rogers' claim for unrecovered costs stating:

> 45. RCCI's proposed unrecovered costs were estimated based on interim rates. Given that the rates for the speed tiers for which the company has proposed unrecovered costs were (i) approved on an interim basis, (ii) under review, and (iii) not approved on a final basis, the question of unrecovered costs does not arise. The difference between the interim rates and final rates is resolved through retroactivity. In view of the above, the Commission determines that RCCI's proposed unrecovered costs are not appropriate.

146 On this basis, the Commission excluded Rogers' proposed unrecovered costs from its cost studies.

a) The appellants' submissions

147 Rogers submits that these reasons addressed only the Interim Rates Unrecovered Costs and that no reasons were provided for rejecting the Changed Study Period Unrecovered Costs. It further submits that the Commission's reasons for rejecting the Interim Rates Unrecovered Costs ignored the fact that these costs related to interim rates in place between 2012 and 2016 so that retroactive rates for the period from 2016 to the present cannot address those earlier unrecovered costs.

b) Analysis

148 I see no error of law or jurisdiction.

149 In the rate-setting process at issue, Rogers submitted proposed rates for consideration by the Commission based upon its revised cost study. Included in its proposed rates was Rogers' claim for unrecovered costs. Rogers' proposed rates were

higher than the interim rates set in 2016. In TO 2019-288 the CRTC not only rejected the higher rates proposed by Rogers, but found that the interim rates set in 2016 were not just and reasonable; the Commission set rates that were lower than the then existing interim rates and made such rates retroactive in order to ensure that wholesale HSA service providers applied just and reasonable rates.

150 Read in this light, the Commission's reasons disposed of both parts of Rogers' unrecovered costs claim. Rogers' cost study was rejected because the CRTC found it overestimated how much it actually cost Rogers to provide wholesale HSA services. The embedded claim for unrecovered costs failed when the Commission approved a lower rate than that proposed.

151 There is no valid claim for breach of procedural fairness or arbitrariness. Rogers' real complaint is with the quantum of the tariff approved by the Commission; a complaint that is outside the scope of this Court's reviewing function.

vii. Working fill factors (WFF)

152 As the CRTC explained in TO 2019-288:

> 47. The working fill factor (WFF) is a measure of the utilization of a shared facility and is used to recognize the non-working capacity and to apportion the cost of non-working capacity to the per-unit cost of the working capacity.
>
> 48. Working capacity is the capacity that is available to provide service to customers making use of the relevant facility. This includes all units that are potentially revenue generating, while non-working unit capacity is all other remaining units (e.g. units required for maintenance).

153 The WFF represents the point at which network equipment must be upgraded to handle increased usage. As a "higher WFF implies that a carrier can operate at a much higher capacity before additional costs" must be incurred to upgrade network capacity, a higher WFF produces lower wholesale rates (affidavit Lee Bragg, appeal book, tab 137, paragraph 59).

154 In *Review of the use of company-specific working fill factors and the recovery of past introduction costs not fully recovered* (14 May 2009), Telecom Regulatory Policy CRTC 2009-274 (TRP 2009-274) the Commission determined that companies could propose a company-specific WFF for a particular facility for use in a cost study so long as the company met five enumerated conditions. The Commission also determined that when a company-specific proposed WFF did not meet the enumerated conditions, the Commission-mandated WFFs are to be used (TRP 2009-274; TO 2019-288, paragraphs 49 and 50). For the purpose of this appeal, the relevant condition is the first enumerated condition: the company must satisfy a common definition of the WFF.

155 Throughout the rate-setting proceedings now under review by this Court, the appellants proposed company-specific WFFs. The CRTC found these proposals did not satisfy the relevant conditions and so it rejected them (TO 2019-288, paragraphs 66 to 67, 97).

a) The appellants' submissions

156 The Cable Carriers allege two errors of law with respect to the WFF. First, they allege the CRTC improperly fettered its discretion by following outdated Manuals when the Cable Carriers provided "superior" information. Second, they allege that the CRTC made decisions without evidence based on irrelevant considerations while ignoring relevant evidence. In addition to these errors of law the Cable Carriers also assert that the CRTC breached an explicit undertaking that it would rely on a report from a third-party research and development group (CableLabs Report).

b) Analysis

157 I begin by rejecting the notion that the Commission fettered its discretion. An administrative decision-maker fetters the exercise of their discretion by relying exclusively on an administrative policy without regard to the law (*Stemijon Investments Ltd. v. Canada (Attorney General)*, 2011 FCA 299, 425 N.R. 341 (F.C.A.), at paragraphs 24 and 60). This is not what the Commission did in this case. The Commission did not treat its former determinations as being legally binding; rather, it asked the

parties to explain and support their proposed departure from the determination established in TRP 2009-274 (see, for example, CRTC Request for Information, appeal book, tab 109D, pages 7, 12 to 13, 18, 31, 37 to 38 and 50).

158 I next reject the notion that the CTRC in effect closed its eyes to the evidence. In their responses to a request for information, the appellants asked the CRTC to make a departure from the manner in which it calculated WFF.

159 The appellants submitted that WFF should be based on the "average operational utilization level of the entire access network at steady state". In TRP 2009-274 the Commission defined the company-specific measured WFF to be a function of "working units" and defined "working units" to be those units that are expected to provide service to an end-user (TRP 2009-274, paragraph 22). Instead, in the present case the appellants defined "working units" to be those units used at the moment of measurement. In the view of the Commission, this approach resulted in an underestimation of working units because it did not take into account all working units that could provide service to a customer (TO 2019-288, paragraph 67). It follows that the Commission found the proposed company-specific measured WWFs were not appropriate for use in cost studies. Those WWFs did not satisfy the first enumerated condition for the use of a company-specific WFF. This was a determination open to the Commission. The CRTC did not close its eyes to the evidence.

160 To the extent that the Cable Carriers now complain that it was inappropriate for the CRTC to impose the conditions set in TRP 2009-274 because that policy was designed for ILECs, this is an argument they ought to have advanced before the CRTC. It is too late to raise it on this appeal (*A.T.A. v. Alberta (Information & Privacy Commissioner)*, 2011 SCC 61, [2011] 3 S.C.R. 654 (S.C.C.), at paragraphs 22 to 26).

161 Finally, I reject the submission that the CRTC breached an explicit undertaking that it would rely upon the CableLabs Report. This undertaking is said to have been made by the CRTC in *Bragg Communications Incorporated, operating as Eastlink - Application to review and vary or stay* 2016-448 *regarding wholesale high-speed access service interim rates* (25 May 2017), Telecom Decision CRTC 2017-167 (TD 2017-167) [2017 CarswellNat 4546 (C.R.T.C.)] where it wrote:

> 18. With respect to the CableLabs report filed by Eastlink in support of the application, this report was filed with the Commission after Telecom Order 2016-448 was issued, and thus could not have been considered in the proceeding that led to that order. However, the Commission will consider it in determining the final rates for Eastlink's TPIA service.

162 Context is important. As described above when dealing with the policy pedigree of the decision at issue, after finding that existing wholesale HSA service rates were not just and reasonable in TD 2016-117, the CRTC set revised interim rates for Eastlink in TO 2016-448. The interim rates were lower than the previous rates. The Commission expressed concern that Eastlink had deviated from the established Phase II capacity costing methodology and specifically expressed concern with the working fill factor (TD 2016-117, paragraph 12).

163 Eastlink then applied for a stay, review and variation of the interim rates under section 62 of the Act. In its application, Eastlink made a similar argument to the one raised in this appeal and presented the CableLabs Report as evidence. The CableLabs Report was new evidence that had not been before the CRTC when it set the interim rates under review.

164 In TD 2017-167 the CRTC dismissed Eastlink's application for reconsideration. It commented, at paragraph 17, that Eastlink had the opportunity to submit evidence supporting its proposal before interim rates were set but failed to do so. In this circumstance, it would have been improper for the CRTC to consider the CableLabs Report at that time. It was in this context that the Commission stated that it would consider the report when determining final rates.

165 The Commission's meaning was clear. Eastlink had failed to provide evidence to support its company-specific WFFs during the interim rate-setting process and filing such evidence as part of its application to review and vary did not remedy that failure. This said, the report could be filed as part of the final rate-setting process. In saying this the CRTC made no comment on the contents of the report. The CRTC did not make a binding commitment or undertaking to adopt the CableLabs Report in the final rate-setting order.

166 In its report, CableLabs used the definition of WFF proposed by the appellants but rejected by the Commission (see Report, appeal book, tab 119A(I), paragraph 52). The Commission rejected the CableLabs Report because it relied on an improper definition of WFF.

viii. Segmentation fibre facilities

167 Segmentation facilities transport various services, such as television and Internet, to end-users.

168 The Cable Carriers submitted that the Commission should abandon the technology cost factor methodology set out in the Regulatory Studies Manual at section 3-43 to be used to estimate segmentation fibre facility costs. Instead, the Cable Carriers advocated use of the replacement cost approach (TO 2019-288, paragraphs 120 and 124).

169 The Commission rejected the request of the Cable Carriers:

> 130. The Commission considers that the use of this approach, as proposed, is not appropriate, given that fibre facilities are shared among different services. As per the Manual, a cost factor approach is an appropriate method to use to estimate the costs for such facilities.
>
> 131. With respect to the capacity of segmentation fibre facilities, the Commission is of the view that once they are deployed to a given node, no further augmentation of the deployed fibre facilities is required since the fibre's capacity to serve a given node is, in practice, not subject to exhaustion. Accordingly, the capacity of a given segmentation fibre facility to provision an optical node cannot be said to be limited.

170 During the course of the rate-setting proceeding the CRTC sought submissions about the appropriateness of estimating the costs for segmentation fibre facilities using the technology cost factor in place of the Cable Carriers' proposed approach (March 2, 2018 Request for Information, appeal book, tab 109D, pages 24, 33, 43-44, and 54). The Commission received and considered the submissions it received in response.

171 The Cable Carriers' assertion that the Commission ignored evidence is unfounded. Their real complaint is with how the CRTC interpreted and applied the facts before it.

ix. Coaxial cable facilities

172 In *Terms and rates approved for large cable carriers' high speed access service* (21 August 2000), Order CRTC 2000-789 (Order 2000-789), the Commission determined that it is appropriate to use a proxy monthly cost of $0.152 per channel, per subscriber, to estimate the cost associated with coaxial cable facilities. This rate was meant to reflect the relevant cost categories of depreciation, operating expenses and rate of return. In the rate-setting proceeding at issue, the Cable Carriers submitted that the use of this proxy was no longer appropriate because the information and data used to calculate the proxy was outdated.

173 The Commission's analysis and conclusions are set out in paragraphs 112 through 116 of its reasons:

> 112. The capacity costing approach is generally used when the use of existing shared facilities results in the advancement of future relief of facilities.
>
> 113. With respect to existing coaxial facilities, there is no cost of advancement. This is due to the fact that when wholesale HSA and retail Internet services make use of the facilities, relief is provided by segmenting the facilities. Accordingly, the Commission considers that it is not appropriate to use the capacity costing approach to estimate the costs of existing coaxial facilities.
>
> 114. With regard to the cable carriers' concerns regarding the use of outdated cost information in the proxy approach, the Commission considers that updated cost information should be used to reflect the forward-looking, company-specific costs for existing coaxial facilities.

> 115. With respect to estimating existing coaxial facility costs, the Commission determines that, subject to what follows, it is reasonable to include forward-looking coaxial facility costs associated with the same cost categories as before. The cable carriers provided the depreciation and operating expenses for coaxial facility costs, and the Commission has used these amounts to estimate the coaxial facility costs. The Commission determines, however, that it is not appropriate to include a specific category to account for a rate of return given that the after-tax weighted average cost of capital (AT-WACC) takes into consideration the rate of return.
>
> 116. With respect to estimating new coaxial facility costs, the Commission determines that it is appropriate to do so based on an average cost for provisioning coaxial facilities per new home passed during the cost study period.

a) The appellants' submissions

174 The Cable Carriers state that the relevant Manuals mandate the use of the "capacity costing" methodology to estimate costs associated with shared facilities such as coaxial cable facilities. They complain, however, that the CRTC rejected the use of the capacity costing approach for determining the cost associated with their coaxial cable facilities. Instead, they submit that the Commission "applied a novel and unwarranted methodology that involved estimating these costs based on depreciation and operating expenses." (memorandum of fact and law, paragraph 42). Moreover, the CRTC did not request submissions concerning the appropriateness of using the information solicited from them to estimate the costs associated with their coaxial cable facilities.

175 This submission fails to distinguish between the Commission's determinations with respect to existing and new coaxial facilities.

b) Context

176 At paragraph 112 of its reasons the CRTC confirmed that capacity costing is generally used when the use of existing shared facilities results in the advancement of future relief of facilities. However, in the case of existing coaxial facilities the Commission determined that there was no cost advancement because while segmentation requires the addition of an optical node along with fibre facilities, no additional coaxial facilities are required.

177 The Commission did not reject the application of capacity costing to new coaxial facilities (TO 2019-288, paragraph 113 and footnote 20).

c) Analysis

178 As to the assertion that the Commission applied a "novel and unwarranted methodology", the Commission confirmed that it included depreciation and operating expense amounts provided by the Cable Carriers to estimate coaxial facility costs. The Commission did not include an allowance for a rate of return because, in its view, another calculation takes into account the rate of return (TO 2019-288, paragraph 115). This does not constitute a "novel and unwarranted methodology". The duplicative element of rate of return was simply removed from the relevant cost categories considered when estimating the cost associated with coaxial cable facilities.

179 The Cable Carriers have not demonstrated any breach of procedural fairness.

x. Annual development costs

180 In the rate-setting proceeding below, Rogers sought annual development costs associated with its aggregated wholesale HSA service and annual development costs associated with its wholesale HSA and retail Internet services (TO 2019-288, paragraph 181). At paragraphs 182 and 183 of its decision, the CRTC disallowed most of these costs for the following reasons:

> 182. With respect to annual development costs causal to aggregated wholesale HSA service, development costs are normally incurred only at the beginning of the study period. The Commission considers that RCCI did not provide sufficient

> evidence to support ongoing development costs. Accordingly, the Commission has excluded RCCI's development costs from year two and beyond in its cost studies.
>
> 183. With respect to the separate annual development costs associated with its wholesale HSA and retail Internet services, RCCI did not provide evidence that these initiatives are causal to the provisioning of wholesale HSA service. Therefore, the Commission has excluded these development costs from RCCI's cost studies.

a) The appellants' submissions

181 Rogers now argues that the relevant Manual only requires the provision of detailed supporting evidence in respect of items that account for 20% or more of the total cost sought to be recovered through a proposed rate and the proposed annual development costs represented less than 5% of its total estimated costs. Rogers further complains that the CRTC did not give notice that it required additional evidence supporting Rogers' proposal to recover annual development costs.

b) Context

182 The applicable Regulatory Economic Studies Manual does state that detailed cost information is required for key reporting cost categories only. One exemplar of a key reporting cost category is expressed to be cost categories whose cost is equal to or greater than 20% of the total service cost. However, in *Regulatory Policy - Review of certain Phase II costing issues* (21 February 2008), *Telecom Decision CRTC 2008-14* [2008 CarswellNat 7192 (C.R.T.C.)] (TD 2008-14) the Commission determined that expenses associated with development activities that are not causal to a service are fixed common expenses and are to be excluded from regulatory economic studies (Appendix 1, paragraph 13). Rogers has not established that the quantum of the development costs relieves it from the initial burden of proving that the costs were causal to the provision of services and not a fixed common expense.

c) Analysis

183 I see no breach of procedural fairness in requiring Rogers to demonstrate that claimed costs were causal to the provision of a service.

xi. Conclusion on procedural fairness and arbitrary decision-making

184 The appellants have not demonstrated any error of law or jurisdiction arising out of any breach of procedural fairness or arbitrary decision-making. Their concerns center in largest part on the methods chosen by the Commission and the Commission's conclusions when it applied those methods to the evidence before it. The Commission may adopt and apply any method it considers appropriate for determining rates (Act, subsection 27(5); *Bell Canada v. Canadian Radio-Television & Telecommunications Commission*, 2009 SCC 40, [2009] 2 S.C.R. 764 (S.C.C.), at paragraph 40; *Ontario (Energy Board) v. Ontario Power Generation Inc.*, 2015 SCC 44, [2015] 3 S.C.R. 147 (S.C.C.), at paragraph 81). The proper avenue of recourse lies with the Commission itself by way of a request for reconsideration or by way of an appeal to the Governor in Council.

7. Do the reasons of the CRTC fail to comply with a legislative reasons requirement?

185 Paragraph 1(*b*)(i) of the Cabinet Direction provides:

> 1 In exercising its powers and performing its duties under the *Telecommunications Act*, the ... Commission ... shall implement the Canadian telecommunications policy objectives set out in section 7 of that Act, in accordance with the following:
>
> > . . .
> >
> > (b) the Commission, when relying on regulation, should use measures that satisfy the following criteria, namely, those that

> (i) specify the telecommunications policy objective that is advanced by those measures and demonstrate their compliance with this Order, ...

(underlining added)

186 The appellants assert that:

• This provision imposes a further jurisdictional limit on the Commission. It is an independent jurisdictional error for the CRTC to give reasons that do not comply with the mandatory obligation to specify the objectives advanced by regulatory measures and demonstrate compliance with the Cabinet Direction.

• The Commission's reasons are noncompliant in that they: i) devote only a single sentence to the telecommunications policy objectives the decision purports to advance; ii) fail to explain how the decision will advance these objectives; iii) make no effort to explain how the decision can be reconciled with the numerous policy objectives it will undermine; and, iv) do not demonstrate how or why the asserted policy objectives will be advanced.

• In order to demonstrate that the regulatory measures imposed by it complied with the Cabinet Direction, the Commission was obliged to explain how the measures: i) were efficient and proportionate to their purpose and interfered with the operation of competitive market forces only to the minimum extent necessary; ii) neither deterred economically efficient competitive entry into the market nor promoted economically inefficient entry; and, iii) ensured the technological and competitive neutrality of the wholesale network access regime, to the greatest extent possible, so as to enable competition from new technologies and not artificially favour either Canadian carriers or their competitors.

187 The respondents argue that:

• Neither the Cabinet Direction nor the Act requires the Commission to enumerate policy objectives in every decision — the use of the word "should" in paragraph 1(*b*)(i) of the Cabinet Direction simply encourages the Commission to specify the objective and demonstrate compliance but does not require it.

• In any event, the Commission's decision properly advances telecommunications policy objectives.

188 The Court received competing submissions as to whether the Cabinet Direction imposed a mandatory, as opposed to a directory or permissive requirement. In my view, it is unnecessary to resolve this question. Assuming, without deciding, that the Commission was subject to a mandatory requirement to give reasons explaining its implementation of the telecommunications policy objectives set out in section 7 of the Act and show compliance with the Cabinet Direction, it did so. The reasons of the Commission properly read in light of its policy pedigree, the substantial record before the Commission and the submissions of the parties fulfilled any mandatory requirement. The reasons satisfactorily address the policy objectives and the arguments and issues raised by the parties. I reach this conclusion for the following reasons.

189 To begin, I accept that the exercise of rate-setting consists of two distinct steps.

190 First, the Commission must determine if there is a need to deviate from market forces and, if so, what regulatory measures are necessary. This step is consistent with the direction set out in paragraph 1(*a*)(i) of the Cabinet Direction that when implementing Canadian telecommunications policy objectives the Commission "should ... rely on market forces to the maximum extent feasible". This step primarily involves a policy function.

191 The second step in the process is to determine the rates to be set. This is primarily a fact-finding function.

192 I reviewed TO 2019-288's policy pedigree in some detail above. The decisions that make up the pedigree show that the Commission was mindful throughout of its obligation to perform its duties with a view to implementing the policy objectives enumerated in section 7 of the Act and in accordance with the Cabinet Direction. Two of the Commission's TRPs are particularly relevant to the appellants' submissions.

193 In TRP 2010-632 the CRTC required ILECs and Cable Carriers to offer certain high-speed access facilities as new wholesale services to competitors. The decision shows a focus on the use of market forces when possible and a focus on the three Cabinet obligations of proportionality, efficiency and neutrality. This is particularly evident at paragraphs 143 to 149 of the decision:

> 143. The Commission's determinations in this decision are based on the requirements of the Act, the Order in Council, and the Governor in Council's Policy Direction.
>
> 144. The regulatory measures under consideration in this decision are of an economic nature and deal with network access regimes. Therefore, subparagraphs 1(*b*)(ii) and (iv), paragraph 1(*a*), and subparagraph 1(*b*)(i) of the Policy Direction apply to the Commission's determinations.
>
> 145. Consistent with paragraph 1(*a*) of the Policy Direction, in all cases where the Commission has imposed regulatory requirements on the incumbents, it has done so because market forces cannot be relied upon to achieve the telecommunications policy objectives set out in section 7 of the Act, and it has adopted measures that are efficient and proportionate to their purpose.
>
> 146. The Commission considers that the policy objectives set out in paragraphs 7(*a*), (*b*), (*c*), (*f*), and (*h*) of the Act are advanced by the regulatory measures established in this decision. The Commission considers that the objective in paragraph 7(*f*) of the Act - to foster increased reliance on market forces and ensure that regulation, where required, is efficient and effective - is of particular relevance. The determinations in this decision aim to ensure that retail Internet service markets will remain competitive and continue to deliver high-quality services and respond to users' economic and social requirements.
>
> 147. To ensure that competition in retail Internet service markets, notably in the residential market, remains sufficient to protect the interests of users as service speeds increase, the Commission has modified the basis upon which ILECs may charge wholesale customers for the provision of new higher speed options for aggregated ADSL access services. It has also concluded that a speed-matching requirement is necessary for the ILECs' existing aggregated ADSL access services. The Commission has further concluded that changes to the cable carriers' TPIA services are required. Consistent with its finding in the essential services decision, the Commission considers that the provision of these wholesale services, as modified by this decision, neither deter economically efficient competitive entry into retail Internet service markets nor promote economically inefficient entry.
>
> 148. The Commission has also addressed the matter of equity for the incumbents' relevant wholesale obligations. It considers that its determinations in this decision ensure the technological and competitive neutrality of these obligations to the greatest extent possible, consistent with subparagraph 1(*b*)(iv) of the Policy Direction.
>
> 149. In applying the essential services framework on a forward-looking basis in this decision, the Commission has adopted a cohesive, forward-looking regulatory approach that provides appropriate incentives for continued investment in broadband infrastructure, promotes retail service competition, ensures equity for the incumbents' respective wholesale obligations, and does not unduly impair the ILECs' abilities to offer new converged services.
>
> (underlining added, footnotes omitted)

194 Thereafter, the Commission issued TRP 2011-703. As explained above, in this decision the Commission considered how large telephone and cable companies should charge competitors for access to, and use of, their HSA wholesale services. The Commission explained how rate-setting policy furthers the obligations set out in the Act and the Cabinet Direction:

> 194. The regulatory measures under consideration in this decision are of an economic nature and deal with network access regimes. Therefore, subparagraph 1(*a*)(ii) and subparagraphs 1(*b*)(i), (ii), and (iv) of the Policy Direction apply to the Commission's decisions. Consistent with subparagraph 1(*a*)(ii) of the Policy Direction, in all cases where the Commission

has imposed regulatory requirements on the incumbents, it has adopted measures that are efficient and proportionate to their purpose. In this regard, the Commission has approved billing models that are consistent with how the network providers plan and build their own networks and thus can be implemented with limited billing system changes.

195. Consistent with subparagraph 1(*b*)(i) of the Policy Direction, the Commission considers that the policy objectives set out in paragraphs 7(*a*), (*b*), (*c*), (*f*), and (*h*) of the Act are advanced by the regulatory measures established in this decision. The Commission also considers that the objective in paragraph 7(*c*) of the Act - to enhance the efficiency and competitiveness, at the national and international levels, of Canadian telecommunications - is of particular relevance. This decision ensures that the retail Internet service market will remain competitive, thus allowing the delivery of high-quality services and responding to retail customers' economic and social requirements.

196. To ensure that competition in retail residential Internet service markets remains sufficient to protect the interests of retail customers as service speeds increase, the Commission has approved billing models that significantly increase flexibility as compared to a per-customer wholesale UBB model. These approved models enable independent service providers to design and price their retail services in the manner they find most appropriate for their retail customers. Consistent with its findings in the essential services decision (Telecom Decision 2008-17), the Commission considers that the provision of wholesale high-speed access services, according to the billing models and at the rates established in this decision, neither deters economically efficient competitive entry into retail Internet service markets nor promotes economically inefficient entry.

(underlining added, footnotes omitted)

195 In light of these TRPs, and the other decisions reviewed above, it is understandable that the Commission did not see the need to further elaborate upon its application of the policy objectives that apply generally to the provision of wholesale HSA services.

196 This said, I accept that at the second step of the rate-setting process more is involved than simple math. Issues touching upon telecommunications policy objectives must also be decided at the second step of the process. However, again I am satisfied that the Commission's reasons are adequate. The Commission was plainly alive to the policy objectives the appellants sought to advance and it responded to those submissions.

197 To illustrate, the appellants, including Bell, made submissions expressly referencing the Cabinet Direction and the potential for the rate-setting decision to undermine the policy objectives set out in section 7 of the Act. Bell argued that substantial rate cuts, and any retroactive adjustment, would undermine its network and infrastructure investments. In its May 18, 2018 response to a request for information Bell submitted to the CRTC that:

... [T]o have the Commission change the rates, especially the wholesale rates, part way through the 10-year period that the related costs were based on, will deprive us of the opportunity to recover our up-front costs. It is a departure from the basic arrangement, under which we invest and the Commission gives as a reasonable opportunity to recover that investment.

This is especially the case with a risk of retroactivity. We estimate that the cumulative financial impact of the adjustments based on the RF1s the Commission is asking just on GAS-FTTN access and GAS-CBB from April 2016 until the end of this year would be over #, let alone the impact on a going forward basis. To put the estimated impact of retroactivity into perspective, we recently-announced our investment of more than $100 million to fully fund deployment of our all-fibre optic network to approximately 60,000 homes and business locations throughout the city of Oshawa, Ontario (one of many important FTTP deployments that we are currently moving forward with). There can be no doubt that even a one-time # retroactive adjustment would prevent us from funding, regardless of the strength of the business case, the next Oshawa.

(underlining added)

198 Bell argues that, notwithstanding its submissions, the Commission chose to reduce wholesale HSA rates retroactively and dramatically without any explanation as to why doing so would "promote innovation, competitiveness or access to high speed networks for rural Canadians." (memorandum of fact and law, paragraph 68).

199 Contrary to Bell's submission, the Commission understood and directed its mind to the policy arguments advanced by Bell. At paragraph 316 of TO 2019-288 the Commission summarized the arguments in the following terms:

> Bell Canada submitted that the rates will have been interim for approximately two years by the time the Commission issues a decision on the final rates, and that during that time, industry participants were making investment and marketing decisions based on the interim rates and their individual expectations of how rates may evolve over time.

200 However, on its appreciation of the evidentiary record the Commission rejected Bell's submission for the following reasons:

> 327. In Telecom Decision 2016-117, the Commission adopted a simplified cost-based approach to setting wholesale HSA service rates and made determinations that affected certain components of the cost studies used in setting those rates. In recognition of these changes, the Commission (i) directed the wholesale HSA service providers to file revised cost studies for their wholesale HSA services that incorporated these changes, and (ii) made interim, as of the date of that decision, all wholesale HSA service rates that had previously been approved on a final basis.
>
> 328. In addition, the Commission stated, in both Telecom Decision 2016-117 and Telecom Order 2016-396, that it would assess the extent to which, if at all, retroactive rates would apply when it set wholesale HSA service rates on a final basis.
>
> 329. <u>The Commission considers that to the extent that the interim rates for aggregated wholesale HSA services were based on inappropriate costs and assumptions, those rates are not just and reasonable. Consequently, retroactive application of the final rates is necessary to ensure that wholesale HSA service providers use just and reasonable rates</u>.
>
> 330. The Commission considers, however, that it would not be appropriate to apply rates for the aggregated wholesale HSA services resulting from this proceeding retroactively to a date that is earlier than those captured by the study periods that have informed this proceeding. This is due to the fact that the cost studies submitted in support of the proposed rates, and upon which the Commission is establishing tariffed rates, are based on assumptions that reflect the technologies, costs, and demand for the services over the study period.
>
> 331. In light of the above, the Commission determines that the final rates for aggregated wholesale HSA services should apply retroactively as of 31 March 2016 for Bell Canada, Bell MTS, Cogeco, Eastlink, SaskTel, TCI, and Videotron.
>
> (underlining added)

201 The reasons of the Commission were adequate. Bell's submission that the reasons did not address policy objectives could not succeed in light of the Commission's conclusion that the existing, interim rates were based upon "inappropriate costs and assumptions" that had resulted in rates that were not just and reasonable.

202 A second illustration relates to the Commission's determination about whether a supplementary markup should be maintained. By way of background, as previously explained, when the Commission establishes a rate for a wholesale service it typically adds a percentage markup to the cost of the service. The markup is intended to contribute to the recovery of the carrier's fixed and common costs. In TRP 2010-632, the Commission recognized that significant up-front investment was required to construct the facilities that the ILECs used to provide new higher-speed wholesale service options over fibre facilities (referred to as FTTN facilities). Therefore, the rate for those services included, in addition to the markup that would otherwise be applied, a supplementary markup of 10%.

203 In the present case, Bell advanced policy-based arguments as to why the supplementary markup should be maintained. In TO 2019-288, the Commission summarized the arguments as follows:

> 288. Bell Canada and SaskTel submitted that eliminating the supplementary markup for aggregated FTTN services would be contrary to the Commission's determination in Telecom Regulatory Policy 2015-326. They added that reducing the rates for aggregated FTTN services would discourage the migration from those services to next-generation technologies, to the detriment of investment in those technologies.
>
> 289. Bell Canada added that the rollout of retail and wholesale FTTN services was predicated on the rates approved by the Commission in Telecom Regulatory Policy 2010-632. Investments in plant and equipment were based on a 10-year period, and the terms and conditions approved by the Commission to be in effect during that period. In granting the supplementary 10% markup on the wholesale use of Bell Canada's FTTN plant and facilities, the Commission noted that the cost of capital used in the company's cost studies for aggregated FTTN services was significantly lower than the cost of capital used by the cable carriers in their cost studies. The supplementary markup of 10% applied to Bell Canada's services was also intended to equalize these costs of capital.
>
> 290. Bell Canada submitted that, given that (i) the above considerations apply to both the transport and the access components, and (ii) these components are tightly integrated, the supplementary markup of 10% should continue to apply to both the transport and the access components.
>
> (underlining added)

204 The Commission rejected these arguments for the following reasons:

> 306. In Telecom Regulatory Policy 2010-632, the Commission recognized that significant upfront investment was required to construct the facilities that ILECs use to provision new higher-speed wholesale service options over fibre facilities (i.e. FTTN facilities). Therefore, the rates for these service options include, in addition to the markup on costs that would otherwise be used, a supplementary markup of 10%.
>
> 307. The Commission considers that the ILECs' focus has shifted from expanding their FTTN networks to growing their FTTP footprints as much as possible, given the important benefits associated with higher speeds and long-term service reliability. In this regard, the Commission notes that the ILECs' volume of new FTTN builds has become minimal and is dropping significantly each year, particularly when compared to new FTTP builds.
>
> 308. In light of this, the Commission considers that the rationale set out in Telecom Regulatory Policy 2010-632, in which the Commission considered that the investment risk associated with the construction of FTTN facilities is greater than the risk associated with other ILEC facilities, is no longer supported. Consequently, the Commission considers that the 10% supplementary markup that has applied to both the access and the transport components of aggregated wholesale HSA services should not be maintained.
>
> (underlining added)

205 Again, the reasons of the Commission are adequate. The reasons explain and demonstrate that Bell's policy argument was not supported by the evidentiary record.

206 To conclude on this point, the Commission was aware of the policy concerns identified by the appellants. I am satisfied that it engaged with those concerns and addressed them adequately in its reasons.

207 I would add, however, that in the event some genuine doubt exists as to whether some policy concern was adequately addressed by the Commission, the appellants may seek further clarification from the Commission in the Commission's pending, public proceeding to review TO 2019-288. The Commission's decision will be informed by Order in Council P.C. 2020-0553.

8. Did the CRTC impose an unconstitutional tax?

208 The Bell appellants rely upon their written submissions to argue that the retroactive payments constitute a tax, which the CRTC is not empowered to levy. In their submission, the retroactive payments that they are required to pay to the competitors are an unconstitutional and *ultra vires* tax because the payments meet all of the four criteria applied in *620 Connaught Ltd. v. Canada (Attorney General)*, 2008 SCC 7, [2008] 1 S.C.R. 131 (S.C.C.), at paragraph 22, to determine whether a levy is a tax as opposed to a regulatory charge.

209 The respondents submit that Bell is precluded from raising this issue on this appeal because it did not raise the issue before the Commission. In the alternative, and in any event, the respondents submit that the retroactive payments are not a tax. Rather, the retroactive payments effect a correction for an unjust enrichment that accrued to the appellants as a consequence of the application of rates that were not just and reasonable.

210 I begin my analysis by noting that Parliament authorized the Commission "to determine any question of law" (subsection 52(1) of the Act). This includes constitutional issues. The appellants well-knew that an issue before the Commission was whether final rates should be set retroactively; they have provided no explanation as to why the unconstitutional tax issue was not raised before the Commission.

211 In *Forest Ethics Advocacy Assn. v. National Energy Board*, 2014 FCA 245, [2015] 4 F.C.R. 75 (F.C.A.) this Court considered whether a constitutional issue not raised before the National Energy Board could be raised for the first time on judicial review. The Court found it could not, for the following reasons:

> 43. <u>The approach of placing the constitutional issues before the Board at first instance respects the fundamental difference between an administrative decision-maker and a reviewing court</u>: here, the Board and this Court. Parliament has assigned the responsibility of determining the merits of factual and legal issues - including the merits of constitutional issues - to the Board, not this Court. Evidentiary records are built before the Board, not this Court. As a general rule, this Court is restricted to reviewing the Board's decisions through the lens of the standard of review using the evidentiary record developed before the Board and passed to it. See generally *Association of Universities and Colleges of Canada v. Canadian Copyright Licensing Agency (Access Copyright)*, 2012 FCA 22, 428 N.R. 297.
>
> 44. <u>Were it otherwise, if administrative decision-makers could be bypassed on issues such as this, they would never be able to weigh in</u>. On a judicial review, administrative decision-makers do not have full participatory rights as parties or interveners. They cannot make submissions to the reviewing court with a view to bolstering or supplementing their reasons. They face real restrictions on the submissions they can make. See generally *Canada (Attorney General) v. Quadrini*, 2010 FCA 246, [2012] 2 F.C.R. 3at paragraphs 16-17. As a result, often their only opportunity to supply relevant information bearing upon the issue - such as factual appreciations, insights from specialization and policy understandings - is in their reasons.
>
> 45. <u>If administrative decision-makers could be bypassed on issues such as this, those appreciations, insights and understandings would never be placed before the reviewing court. In constitutional matters, this is most serious. Constitutional issues should only be decided on the basis of a full, rich factual record</u>: *Mackay v. Manitoba*, [1989] 2 S.C.R. 357 at pages 361-363. Within an important regulatory sector such as this, a record is neither full nor rich if the insights of the regulator are missing.
>
> 46. <u>The Supreme Court has strongly endorsed the need for constitutional issues to be placed first before an administrative decision-maker who can hear them</u>: *Okwuobi v. Lester B. Pearson School Board*; *Casimir v. Quebec (Attorney General)*; *Zorrilla v. Quebec (Attorney General)*, 2005 SCC 16, [2005] 1 S.C.R. 257at paragraphs 38-40. <u>Where, as here, an administrative decision-maker can hear and decide constitutional issues, that jurisdiction should not be bypassed by raising the constitutional issues for the first time on judicial review</u>. Parliament's grant of jurisdiction to the Board to decide such issues must be respected.
>
> (underlining added)

212 In my view, these considerations are equally apposite to this statutory appeal, based as it is on the record before the Commission. The Bell appellants ought not to be permitted to raise this issue for the first time on appeal.

9. Conclusion and costs

213 For the above reasons, I would dismiss the appeals and order the appellants to pay the costs of the appeals to each of the Canadian Network Operators Consortium Inc. and Teksavvy Solutions Inc.

214 As for the quantum of the costs, if not agreed I would direct that the costs be assessed at the mid-point of Column V of the table to Tariff B. While Rule 407 provides that unless otherwise ordered, costs are to be assessed in accordance with Column III, this award reflects the number and complexity of the issues, a good number of dubious merit, which the appellants chose to put in play. The award also reflects the fact that the appellants succeeded on none of these issues.

***David Stratas J.A.*:**

I agree.

***Judith Woods J.A.*:**

I agree.

Appeal dismissed.

Commissioner of Competition, Appellant and Canada Pipe Company Ltd./Tuyauteries CanadaLtée, Respondent

A. Desjardins J.A., G. Létourneau J.A., J.D.D. Pelletier J.A.

Heard: February 7-8, 2006
Judgment: June 23, 2006
Docket: A-106-05

Proceedings: reversing *Canada (Commissioner of Competition) v. Canada Pipe Co.* (2005), 2005 Comp. Trib. 3, 40 C.P.R. (4th) 453, 2005 CarswellNat 2348 (Competition Trib.)

Counsel: Mr. Randall Hofley, Ms Leslie Milton, for Appellant
Mr. Kent Thomson, Mr. James Doris, Mr. Charles Tingley, for Respondent

***A. Desjardins J.A.*:**

1 This is an appeal from a decision of the Competition Tribunal ("Tribunal"), dated February 3, 2005, dismissing the application by the Commissioner of Competition ("Commissioner" or appellant) under sections 77 and 79 of the *Competition Act* (reported as 2005 Comp. Trib. 3). The Commissioner sought an order against Canada Pipe Company Ltd. ("Canada Pipe" or respondent), to prohibit the respondent from engaging in the practice of several purported anti-competitive acts leading to an abuse of dominant position under section 79, as well as to prohibit the respondent from continuing to engage in the practice of exclusive dealing under section 77. This case also involves a cross-appeal by Canada Pipe, which is dealt with in separate reasons.

2 This is the first time this Court has the opportunity to consider the tests for exclusive dealing and abuse of dominant position established respectively by sections 77 and 79 of the *Act*. Both of these provisions, generally speaking, authorize the Tribunal to make orders prohibiting a dominant firm from engaging in conduct that has had, is having or is likely to have the effect of substantially lessening competition. While the *Act* has been in force since 1986, and the Tribunal has elaborated its perspective on the requirements of sections 77 and 79 in several cases, these provisions have not to date been interpreted by any Canadian court.

3 The conduct at issue in this case consists of a "loyalty rebate" program offered by the respondent and known as the Stocking Distributor Program (SDP). Under the SDP, distributors of the respondent's cast iron drain, waste and vent (DWV) products obtain significant rebates and discounts in return for stocking only cast iron products produced by the respondent. These distributors are free to stock other companies' DWV products which are not made of cast iron.

4 According to the Commissioner, Canada Pipe is a dominant firm with respect to the product markets relevant in this case. Furthermore, the Commissioner asserts, the SDP constitutes both a practice of exclusive dealing with exclusionary effects and a practice of anti-competitive acts, and it is likely to have the effect of substantially lessening competition in the markets for DWV products by impeding the entry and expansion of competitors. The respondent contends, by contrast, that it exercises no market power in relation to the relevant product markets, when the latter are properly defined. Moreover, according to the respondent,

the SDP is neither exclusionary nor anti-competitive, but rather is a voluntary, non-exclusive, incentive-based program which encourages competition between DWV distributors, is compatible with competition on the merits between suppliers and is supported by valid business justifications.

5 The Tribunal dismissed the Commissioner's application, based upon the following findings. With respect to the alleged abuse of dominant position under section 79, the Tribunal held that: (i) there are three relevant product markets, and six geographic markets, and the respondent substantially controls all these markets; (ii) the Stocking Distributor Program (SDP) is a practice, but does not qualify as an "anti-competitive act"; and (iii) the Commissioner had not demonstrated that the SDP had substantially lessened or prevented competition. With respect to the allegation of exclusive dealing contrary to section 77, the Tribunal found that: (i) the SDP can be characterized as a practice of exclusive dealing; (ii) the respondent is a major supplier of the products in the relevant markets; and (iii) there was insufficient evidence to establish that the SDP had impeded entry or expansion of firms, or that it is having any other exclusionary effect on the market, or that it has caused or is likely to cause a substantial lessening of competition.

6 The Commissioner appeals from the Tribunal's decision.

7 Broadly stated, the appeal challenges two aspects of the Tribunal's conclusions: first, the finding with respect to substantial lessening of competition for the purposes of both sections 77 and 79, and second, the finding concerning exclusionary effects under section 77 or anti-competitive acts under section 79. The cross-appeal by Canada Pipe, which concerns the Tribunal's conclusions as to the definition of the relevant product markets and the issue of market power for the purpose of paragraph 79(1)(a), is discussed in separate reasons, as stated earlier.

8 In order to facilitate the reading of these reasons, I include the following table of contents:

(4) Conclusion with respect to paragraph 79(1)(*b*)	[92]
(C) For the purposes of subsection 77(2), did the Tribunal err in its determination with respect to whether the SDP has the result that competition is or is likely to be lessened substantially?	[93]
(D) For the purposes of subsection 77(2), did the Tribunal err in its determination with respect to whether the SDP is likely to impede entry or expansion of a firm or a product in a market or have any other exclusionary effect in a market?	[96]
V. Conclusion	[100]

I. Facts

9 The respondent is a Canadian company based in Hamilton, Ontario, which produces and sells through its Bibby Ste-Croix division ("Bibby") cast iron drain, waste and vent (DWV) products. DWV products are used in a wide variety of structures

to carry waste and drain water, and to vent plumbing systems. There are three components to a cast iron DWV system: pipe, fittings and mechanical joint (MJ) couplings (collectively, "DWV products").

10 There are currently two domestic manufacturers of cast iron DWV products: Bibby and Vandem Industries ("Vandem"). Bibby manufactures cast iron DWV pipe and fittings, and imports MJ couplings from its sister companies in the United States. Vandem, which was founded in 1997 (according to the Tribunal; the respondent claims it was 1999, but little turns on this fact) by two former officers of Bibby, manufactures DWV pipe and imports fittings and couplings. The only Canadian manufacturer of MJ couplings is Rollee Industrial Products (1987) Ltd., but it is not a major player. In addition, there are a limited number of other Canadian importers of cast iron DWV products, who generally import from the United States and the Far East (mainly China and India). Imports of cast iron DWV products for all of Canada, including imports by Bibby and Vandem, represented 5% of total sales in 2002. The respondent is the only company in Canada that manufactures and sells a full range of cast iron DWV products.

11 Distributors buy DWV products from the suppliers (either manufacturers or importers), and in turn sell to the building, mechanical or plumbing contractors involved in construction or renovation projects. Distributors generally carry DWV pipe and fittings made of various materials; cast iron DWV products usually represent only a small proportion of their inventory and sales. In Canada, there are three major distributors, all with national presence: Wolseley Canada Inc., EMCO Ltd, and Crane Supply. There are also small distributors, some of whom are members of buying groups in order to improve their bargaining power and obtain volume discount advantages.

12 Contractors buy DWV products from distributors for construction projects upon which they bid. The bidding process is highly competitive, and contractors will try to obtain the best price possible in order to make their bids attractive. Although contractors may have some leeway in deciding what material to use in construction they will generally buy the type of DWV product that has been specified by the architect or mechanical engineer.

13 The SDP was introduced by Bibby in January 1998. In contrast to the volume-based rebate programs typical in the industry, the SDP is premised on exclusivity, not the volume of purchases. Under the SDP, distributors of Bibby's DWV products obtain quarterly and yearly rebates as well as significant point-of-purchase discounts, in return for stocking only Bibby-supplied cast-iron DWV products. These distributors are free to stock other companies' DWV products which are not made of cast iron, but must purchase all three cast iron DWV products exclusively from the respondent. There are no signed contracts for the SDP: distributors can join at any time, and receive the quarterly and yearly rebates for each completed calendar quarter or year. Distributors who choose not to participate in the SDP are permitted to purchase products from Bibby, albeit at higher prices. There are no restrictions on the resale of cast iron DWV products purchased by distributors who participate in the SDP.

14 The SDP discounts consist of point-of-sale discounts (for example, 55% of list price for stocking distributors, compared to 94% for non-stocking distributors), as well as quarterly and annual rebates (in 2002, the quarterly rebates were 7, 15 and 9 percent on pipe, fittings and MJ couplings respectively, and the annual rebate was 4 percent for all products). The point-of-sale discount and the rebates vary from one region to another. Any distributor can participate in the SDP, so long as a threshold minimum purchase is made; once this threshold is met, the rebates and discounts are the same for the given region, regardless of the size of the distributor's purchase. As a result, the SDP allows small- and medium-sized distributors to access the same prices as large distributors. The discount is applied at the time of purchase, so long as the distributor has committed to participating in the program, and is not reimbursable even if the distributor leaves the program. Except for losing the rebates, there are therefore no penalties attached to opting out of the SDP.

II. Legislative Framework

15 Three legislative provisions govern the issues to be decided in this appeal, namely sections 77, 78 and 79 of the *Act*. These sections set out the various elements that must be proven by the Commissioner to establish exclusive dealing and abuse of dominant position, and provide some relevant statutory definitions.

16 With respect to an alleged abuse of dominant position, the requisite elements for an order are described in subsection 79(1):

Prohibition where abuse of dominant position

79. (1) Where, on application by the Commissioner, the Tribunal finds that

(a) one or more persons substantially or completely control, throughout Canada or any area thereof, a class or species of business,

(b) that person or those persons have engaged in or are engaging in a practice of anti-competitive acts, and

(c) the practice has had, is having or is likely to have the effect of preventing or lessening competition substantially in a market,

the Tribunal may make an order prohibiting all or any of those persons from engaging in that practice.

Ordonnance d'interdiction dans les cas d'abus de position dominante

79. (1) Lorsque, à la suite d'une demande du commissaire, il conclut à l'existence de la situation suivante:

a) une ou plusieurs personnes contrôlent sensiblement ou complètement une catégorie ou espèce d'entreprises à la grandeur du Canada ou d'une de ses régions;

b) cette personne ou ces personnes se livrent ou se sont livrées à une pratique d'agissements anti-concurrentiels;

c) la pratique a, a eu ou aura vraisemblablement pour effet d'empêcher ou de diminuer sensiblement la concurrence dans un marché,

le Tribunal peut rendre une ordonnance interdisant à ces personnes ou à l'une ou l'autre d'entre elles de se livrer à une telle pratique.

17 Subsection 79(4) further specifies that possible superior competitive performance must be considered in making the requisite determination under subsection 79(1) concerning competition:

Superior competitive performance

79. (4) In determining, for the purposes of subsection (1), whether a practice has had, is having or is likely to have the effect of preventing or lessening competition substantially in a market, the Tribunal shall consider whether the practice is a result of superior competitive performance.

Efficience économique supérieure

79. (4) Pour l'application du paragraphe (1), lorsque le Tribunal décide de la question de savoir si une pratique a eu, a ou aura vraisemblablement pour effet d'empêcher ou de diminuer sensiblement la concurrence dans un marché, il doit évaluer si la pratique résulte du rendement concurrentiel supérieur.

18 The term "anti-competitive act", which is a requisite element pursuant to paragraph 79(1)(*b*), is not defined in the *Act*. However, section 78 provides, under the heading "Definition", a non-exhaustive illustrative list of eleven anti-competitive acts:

Definition of "anti-competitive act"

78. (1) For the purposes of section 79, "anti-competitive act", without restricting the generality of the term, includes any of the following acts:

(a) squeezing, by a vertically integrated supplier, of the margin available to an unintegrated customer who competes with the supplier, for the purpose of impeding or preventing the customer's entry into, or expansion in, a market;

(b) acquisition by a supplier of a customer who would otherwise be available to a competitor of the supplier, or acquisition by a customer of a supplier who would otherwise be available to a competitor of the customer, for the purpose of impeding or preventing the competitor's entry into, or eliminating the competitor from, a market;

(c) freight equalization on the plant of a competitor for the purpose of impeding or preventing the competitor's entry into, or eliminating the competitor from, a market;

(d) use of fighting brands introduced selectively on a temporary basis to discipline or eliminate a competitor;

(e) pre-emption of scarce facilities or resources required by a competitor for the operation of a business, with the object of withholding the facilities or resources from a market;

(f) buying up of products to prevent the erosion of existing price levels;

(g) adoption of product specifications that are incompatible with products produced by any other person and are designed to prevent his entry into, or to eliminate him from, a market;

(h) requiring or inducing a supplier to sell only or primarily to certain customers, or to refrain from selling to a competitor, with the object of preventing a competitor's entry into, or expansion in, a market;

(i) selling articles at a price lower than the acquisition cost for the purpose of disciplining or eliminating a competitor;

(j) acts or conduct of a person operating a domestic service, as defined in subsection 55(1) of the *Canada Transportation Act*, that are specified under paragraph (2)(*a*); and

(k) the denial by a person operating a domestic service, as defined in subsection 55(1) of the *Canada Transportation Act*, of access on reasonable commercial terms to facilities or services that are essential to the operation in a market of an air service, as defined in that subsection, or refusal by such a person to supply such facilities or services on such terms.

Définition de « agissement anti-concurrentiel »

78. (1) Pour l'application de l'article 79, « agissement anti-concurrentiel » s'entend notamment des agissements suivants:

a) la compression, par un fournisseur intégré verticalement, de la marge bénéficiaire accessible à un client non intégré qui est en concurrence avec ce fournisseur, dans les cas où cette compression a pour but d'empêcher l'entrée ou la participation accrue du client dans un marché ou encore de faire obstacle à cette entrée ou à cette participation accrue;

b) l'acquisition par un fournisseur d'un client qui serait par ailleurs accessible à un concurrent du fournisseur, ou l'acquisition par un client d'un fournisseur qui serait par ailleurs accessible à un concurrent du client, dans le but d'empêcher ce concurrent d'entrer dans un marché, dans le but de faire obstacle à cette entrée ou encore dans le but de l'éliminer d'un marché;

c) la péréquation du fret en utilisant comme base l'établissement d'un concurrent dans le but d'empêcher son entrée dans un marché ou d'y faire obstacle ou encore de l'éliminer d'un marché;

d) l'utilisation sélective et temporaire de marques de combat destinées à mettre au pas ou à éliminer un concurrent;

e) la préemption d'installations ou de ressources rares nécessaires à un concurrent pour l'exploitation d'une entreprise, dans le but de retenir ces installations ou ces ressources hors d'un marché;

f) l'achat de produits dans le but d'empêcher l'érosion des structures de prix existantes;

g) l'adoption, pour des produits, de normes incompatibles avec les produits fabriqués par une autre personne et destinées à empêcher l'entrée de cette dernière dans un marché ou à l'éliminer d'un marché;

h) le fait d'inciter un fournisseur à ne vendre uniquement ou principalement qu'à certains clients, ou à ne pas vendre à un concurrent ou encore le fait d'exiger l'une ou l'autre de ces attitudes de la part de ce fournisseur, afin d'empêcher l'entrée ou la participation accrue d'un concurrent dans un marché;

i) le fait de vendre des articles à un prix inférieur au coût d'acquisition de ces articles dans le but de discipliner ou d'éliminer un concurrent;

j) à l'égard des exploitants d'un service intérieur, au sens du paragraphe 55(1) de la *Loi sur les transports au Canada*, les agissements précisés à l'alinéa (2)*a*);

k) le fait pour l'exploitant d'un service intérieur, au sens du paragraphe 55(1) de la *Loi sur les transports au Canada*, de ne pas donner accès, à des conditions raisonnables dans l'industrie, à des installations ou services essentiels à l'exploitation dans un marché d'un service aérien, au sens de ce paragraphe, ou de refuser de fournir ces installations ou services à de telles conditions.

19 With respect to exclusive dealing, a statutory definition is provided in sub-section 77(1):

Definitions

77. (1) For the purposes of this section,

"exclusive dealing" means

(a) any practice whereby a supplier of a product, as a condition of supplying the product to a customer, requires that customer to

(i) deal only or primarily in products supplied by or designated by the supplier or the supplier's nominee, or

(ii) refrain from dealing in a specified class or kind of product except as supplied by the supplier or the nominee, and

(b) any practice whereby a supplier of a product induces a customer to meet a condition set out in subparagraph (*a*)(i) or (ii) by offering to supply the product to the customer on more favourable terms or conditions if the customer agrees to meet the condition set out in either of those subparagraphs;

Définition

77. (1) Les définitions qui suivent s'appliquent au présent article.

« exclusivité »

a) Toute pratique par laquelle le fournisseur d'un produit exige d'un client, comme condition à ce qu'il lui fournisse ce produit, que ce client:

(i) soit fasse, seulement ou à titre principal, le commerce de produits fournis ou indiqués par le fournisseur ou la personne qu'il désigne,

(ii) soit s'abstienne de faire le commerce d'une catégorie ou sorte spécifiée de produits, sauf ceux qui sont fournis par le fournisseur ou la personne qu'il désigne;

b) toute pratique par laquelle le fournisseur d'un produit incite un client à se conformer à une condition énoncée au sous-alinéa *a*)(i) ou (ii) en offrant de lui fournir le produit selon des modalités et conditions plus favorables s'il convient de se conformer à une condition énoncée à l'un ou l'autre de ces sous-alinéas.

20 Sub-section 77(2) sets out the elements required to be proven for an order to issue with respect to a practice of exclusive dealing:

Exclusive dealing or tied selling

77. (2) Where, on application by the Commissioner or a person granted leave under section 103.1, the Tribunal finds that exclusive dealing or tied selling, because it is engaged in by a major supplier of a product in a market or because it is widespread in a market, is likely to

(a) impede entry into or expansion of a firm in a market,

(b) impede introduction of a product into or expansion of sales of a product in a market, or

(c) have any other exclusionary effect in a market, with the result that competition is or is likely to be lessened substantially, the Tribunal may make an order directed to all or any of the suppliers against whom an order is sought prohibiting them from continuing to engage in that exclusive dealing or tied selling and containing any other requirement that, in its opinion, is necessary to overcome the effects thereof in the market or to restore or stimulate competition in the market.

Exclusivité ou ventes liées

77. (2) Lorsque le Tribunal, à la suite d'une demande du commissaire ou d'une personne autorisée en vertu de l'article 103.1, conclut que l'exclusivité ou les ventes liées, parce que pratiquées par un fournisseur important d'un produit sur un marché ou très répandues sur un marché, auront vraisemblablement:

a) soit pour effet de faire obstacle à l'entrée ou au développement d'une firme sur un marché;

b) soit pour effet de faire obstacle au lancement d'un produit sur un marché ou à l'expansion des ventes d'un produit sur un marché;

c) soit sur un marché quelque autre effet tendant à exclure, et qu'en conséquence la concurrence est ou sera vraisemblablement réduite sensiblement, le Tribunal peut, par ordonnance, interdire à l'ensemble ou à l'un quelconque des fournisseurs contre lesquels une ordonnance est demandée de pratiquer désormais l'exclusivité ou les ventes liées et prescrire toute autre mesure nécessaire, à son avis, pour supprimer les effets de ces activités sur le marché en question ou pour y rétablir ou y favoriser la concurrence.

21 A parallel structure and logic is readily apparent between the requisite elements for exclusive dealing under ss.77(2) and abuse of dominant position under ss.79(1). First, both provisions require an initial determination that the firm in question occupies a position of dominance: subsection 77(2) refers to a "major supplier of a product in a market", while paragraph 79(1)(*a*) requires that "one or more persons substantially or completely control... a class or species of business". Second, both provisions call for the identification of a particular type of conduct, namely a practice of exclusive dealing with an exclusionary effect in the case of ss.77(2), and a practice of anti-competitive acts in the case of ss.79(1). Third, both provisions require a finding of actual or likely substantial lessening of competition.

22 While I would not conclude that the legal tests applicable under these two provisions would necessarily produce identical results in all cases, this parallel structure suggests that an overlapping analysis is to be expected.

III. Issues

23 This appeal raises the following four issues:

(A) For the purposes of paragraph 79(1)(*c*), did the Tribunal err in its determination with respect to whether the SDP has had, is having or is likely to have the effect of preventing or lessening competition substantially?

(B) For the purposes of paragraph 79(1)(*b*), did the Tribunal err in its determination with respect to whether the SDP constitutes an "anti-competitive act"?

(C) For the purposes of subsection 77(2), did the Tribunal err in its determination with respect to whether the SDP has the result that competition is or is likely to be lessened substantially?

(D) For the purposes of subsection 77(2), did the Tribunal err in its determination with respect to whether the SDP is likely to impede entry or expansion of a firm or a product in a market or have any other exclusionary effect in a market?

24 I will address each of these issues in turn. As the analysis of each issue depends heavily upon the Tribunal's particular findings and approach, I will summarize the Tribunal's decision in the context of my analysis of each question.

IV. Analysis

25 Before proceeding to an analysis of the issues listed above, a preliminary observation concerning analytic methodology and evidentiary limitations in the competition law context might be helpful. Each of the legislative provisions governing this appeal define a series of elements that must be proven in order to ground the particular order that is sought; if any of these elements is not established, the Commissioner's application must fail. Both section 77 and section 79 specify three distinct elements, and each of these elements is at issue in the appeal or cross-appeal in this case.

26 The multi-element structures of sections 77 and 79 suggest that the applicable legal tests consist of several discrete sub-tests, each corresponding to a different requisite element. Indeed, this interpretation appears necessary to give effect to the "well-accepted principle of statutory interpretation that no legislative provision should be interpreted so as to render it mere surplusage" (*R. v. Proulx*, [2000] 1 S.C.R. 61 (S.C.C.) at para. 28; see also *Rizzo & Rizzo Shoes Ltd., Re*, [1998] 1 S.C.R. 27 (S.C.C.) at para. 27). Each statutory element must give rise to a distinct legal test, for otherwise the interpretation risks rendering a portion of the statute meaningless or redundant.

27 The difficulty arises, however, when the necessary distinct sub-tests are examined in light of the available evidence in a given case. In the abuse of dominance context, the economic concepts upon which the legal tests are based often cannot be readily extracted from the available evidence. For example, in many cases the foundational concept of market power cannot be established directly; instead, one must look to relevant indirect indicators. However, these indirect indicators are often relevant with respect to more than one element. As a result, the same evidence - for example, concerning barriers to entry, or market share - is potentially and unavoidably relied upon at several points in the analysis, in respect of different requisite elements. In its first abuse of dominance case, *Canada (Director of Investigation & Research) v. NutraSweet Co.* (1990), 32 C.P.R. (3d) 1 (Competition Trib.) [*NutraSweet*], the Competition Tribunal noted that this difficulty "is pervasive in competition law because the relevant factors in the different statutory elements are rarely distinct and it is impossible not to draw on common factors whenever required" (p. 28).

28 However, it is important that the correct approach to the overlapping use of supporting evidence in the competition context be properly understood, so as to avoid the interpretive danger of impermissible erosion or conflation of the discrete underlying statutory tests. Although a particular piece of supporting evidence may be employed as an indirect indicator in respect of more than one element, the elements themselves must remain conceptually distinct. I will return to this point in my analysis of the questions at issue in the appeal at bar.

(A) For the purposes of paragraph 79(1)(c), did the Tribunal err in its determination with respect to whether the SDP has had, is having or is likely to have the effect of preventing or lessening competition substantially?

29 I begin my analysis with the issue of substantial lessening of competition for the purposes of paragraph 79(1)(*c*), for it is on this question that I am most clearly convinced that this Court's intervention is required. My conclusion in this regard follows directly from an interpretation of the governing statutory language. In short, I have concluded that the Tribunal erred in law in its analytic approach with respect to the legal test applicable under paragraph 79(1)(*c*).

30 Before this Court, the appellant argued that the Tribunal erred in law in its interpretation of paragraph 79(1)(*c*) and failed to apply the correct legal test. The appellant argued that the statutory language - and in particular the use of the relative concept "lessening" - mandates an assessment of the effect of the impugned practice on competition in the relevant markets, which can only be properly accomplished by comparing the competitiveness of the relevant markets in the presence and absence of the impugned practice. The appellant submitted that the correct legal test for assessing competitive effects therefore involves a "but for" analysis: would markets - in the past, present or future - be substantially more competitive *but for* the impugned practice? Or, in other words, *but for* the impugned practice, would markets be characterized by greater price competition, choice, service or innovation than exists in the presence of this practice? The Tribunal thus erred, the appellant contended, in that its assessment of substantial lessening of competition focussed virtually exclusively on the narrow question of whether the SDP prevented entry or switching of suppliers, or in other words, whether a substantial level of competition continued to exist in the relevant market. Rather, the Tribunal should have considered the broader question of whether the SDP impeded or hindered the competition that would otherwise exist if the program were absent from the market.

31 In response, the respondent submitted two main arguments challenging the Commissioner's proposed "but for" test. First, the respondent argued that the "but for" test was a "novel approach", which the Commissioner had never before advocated before the Tribunal, either in this case or in prior proceedings under section 79. As a result, the respondent contended, the appellant is precluded from introducing this new argument at the appellate level. In this regard, the respondent cited this Court's comments in *Gravel & Lake Services Ltd. v. Bay Ocean Management Inc.* (2002), 298 N.R. 369, 2002 FCA 465 (Fed. C.A.) at para. 8, *SMX Shopping Centre Ltd. v. R.* (2003), 314 N.R. 365, 2003 FCA 479 (F.C.A.) at para. 32, and *Naguib v. R.* (2004), 317 N.R. 88, 2004 FCA 40 (F.C.A.) at para. 7 for the proposition that a new argument may not be raised for the first time on appeal if the responding party would be prejudiced by having had no opportunity to adduce evidence that could, if accepted, defeat the argument. In this case, the respondent maintained that the record contains little or no evidence to establish the likely characteristics of the necessary hypothetical "but for" market. Moreover, Canada Pipe would have argued its case very differently had it had notice at the Tribunal level of the Commissioner's new "but for" test; in particular, it would have retained experts to model the hypothetical comparator markets that would exist "but for" the SDP.

32 Second, or in the alternative, the respondent asserted that the Tribunal adopted the correct, well-established approach in its determination under paragraph 79(1)(*c*), and properly considered all relevant factors. The Tribunal reached its conclusion by carefully exercising its considerable expertise in appraising and weighing the relevant factors, and the respondent argued that since its conclusion on this question of mixed law and fact was not unreasonable, this Court should not interfere.

33 Although initially appealing, the respondent's first argument cannot be sustained, for several reasons. The legal principle cited by the respondent, with respect to the impropriety of an appellate court considering an entirely new argument which had not been raised below and in relation to which additional evidence is required, is indeed well-established: see, for example, *"Tordenskjold" (The) v. "Euphemia" (The)* (1908), 41 S.C.R. 154 (S.C.C.); *Perka v. R.*, [1984] 2 S.C.R. 232 (S.C.C.), at 240; *R. v. Keegstra*, [1995] 2 S.C.R. 381 (S.C.C.) at para. 26; *Bell ExpressVu Ltd. Partnership v. Rex*, [2002] 2 S.C.R. 559 (S.C.C.) at para. 58. However, this principle is inapplicable in the instant case, for the appellant's argument is not in fact "entirely new" (*Perka* , *supra* at 240). As I explain further below, although the Competition Tribunal has not used the "but for" wording in its previous cases, this wording appears in *Enforcement Guidelines on the Abuse of Dominance Provisions* issued by the appellant, and the substance of this legal test has been articulated and applied by the Tribunal in prior decisions. The respondent thus had ample notice of this argument. Moreover, the primary concern underlying the general prohibition - namely, that the evidentiary record is insufficient to support the new argument (*Keegstra* , *supra* at para. 26) - also does not apply in this case, for the Commissioner bears the burden of establishing each statutory element; if insufficient evidence exists to meet the "but for" test, no order will issue.

34 As to the respondent's second argument, I am not persuaded that the Tribunal's error with respect to its determination under paragraph 79(1)(*c*) is one of mixed law and fact. The appellant's argument calls for an exercise of statutory interpretation, to determine whether the statutory language indeed mandates a particular analytic approach. As the Supreme Court of Canada noted in *Canada (Director of Investigation & Research) v. Southam Inc.*, [1997] 1 S.C.R. 748 (S.C.C.) at para. 36 [*Southam*], questions of statutory interpretation "are generally questions of law", as such questions have "the potential to apply widely to many cases". In the case at bar, the Tribunal's actual appraisal and weighting of different factors - that is, the question of mixed law and fact - is a secondary question, arising only once it has been determined whether the correct legal test was applied. While the Tribunal has economics and competition law expertise in relation to the determinations of fact and mixed law and fact required for the *application* of the correct legal test, this is not sufficient to displace the expertise of this Court with respect to statutory interpretation itself. As this Court has previously determined - and indeed, the parties do not dispute - the Tribunal's conclusions on questions of law are to be reviewed on the standard of correctness: *Canada (Commissioner of Competition) v. Superior Propane Inc.*, [2001] 3 F.C. 185 (Fed. C.A.) at para. 88 [*Superior Propane*].

(1) The legal test under paragraph 79(1)(c)

35 In light of the appellant's argument, I must consider the correct statutory interpretation of paragraph 79(1)(*c*), which, for convenience's sake, I set out again:

> 79. (1) Where, on application by the Commissioner, the Tribunal finds that
>
> . . .
>
> > (c) the practice has had, is having or is likely to have the effect of preventing or lessening competition substantially in a market,
>
> 79. (1) Lorsque, à la suite d'une demande du commissaire, il conclut à l'existence de la situation suivante:
>
> . . .
>
> > c) la pratique a, a eu ou aura vraisemblablement pour effet d'empêcher ou de diminuer sensiblement la concurrence dans un marché,

36 Two aspects of the scope of paragraph 79(1)(*c*) are immediately evident from the wording. First, the effect on competition is to be assessed by reference to up to three different time frames: actual effects in the past or present, and likely effects in the future. Second, the effect on competition which must be proven to ground an order prohibiting an abuse of dominance is one of substantial preventing or lessening. The requisite assessment is thus a relative one: it is not the absolute level of competition in a market which must be substantial, but rather the preventing or lessening of competition that results from the impugned practice must be substantial.

37 The test mandated by paragraph 79(1)(*c*) is not whether the relevant markets would or did attain a certain level of competitiveness in the absence of the impugned practice, or whether the level of competitiveness observed in the presence of the impugned practice is "high enough" or otherwise acceptable. These are absolute evaluations, while the statutory language of "effect of preventing or lessening... substantially" clearly demands a relative and comparative assessment. In order to achieve the inquiry dictated by the statutory language of paragraph 79(1)(*c*), the Tribunal must compare the level of competitiveness in the presence of the impugned practice with that which would exist in the absence of the practice, and then determine whether the preventing or lessening of competition, if any, is "substantial". This comparison must be done with reference to actual effects in the past and present, as well as likely future effects. Only through such a comparative approach can the Tribunal determine, as the statutory provision requires, whether the impugned practice "has had, is having or is likely to have the effect of preventing or lessening competition substantially".

38 The comparative interpretation described above is in my view equivalent to the "but for" test proposed by the appellant. Apart from its arguments concerning the evidentiary difficulties involved in the application of such a test at the appeal stage in

this case, the respondent did not advance any reasons of principle or statutory interpretation as to why this approach to paragraph 79(1)(*c*) is incorrect or inappropriate. I would therefore endorse the formulation of the legal test proposed by the appellant: the question that must be assessed for the purposes of paragraph 79(1)(*c*) is, would the relevant markets - in the past, present or future - be substantially more competitive but for the impugned practice of anti-competitive acts?

39 It is important to note that the "but for" wording appears in the *Enforcement Guidelines on the Abuse of Dominance Provisions* issued by the appellant, which *Guidelines* are expressly intended to "help the general public, business people and their legal and economic advisors to better understand... the general approach taken by the Competition Bureau to enforce these provisions" (see Competition Bureau, *Enforcement Guidelines on the Abuse of Dominance Provisions* (Industry Canada: Ottawa, 2001) at page 5). In describing the Commissioner's approach to assessing the effects of anti-competitive acts for the purposes of paragraph 79(1)(*c*), the *Guidelines* employ the "but for" wording (see page 19).

40 The expression "but for" has also appeared in American antitrust jurisprudence. In *Concord Boat Corp. v. Brunswick Corp.*, 207 F.3d 1039 (U.S. C.A. 8th Cir. 2000), at 1055, the Court referred to the difficulty of constructing a hypothetical market:

> Notwithstanding the complex nature of the conduct at issue, Dr. Hall was required to construct a hypothetical market, a <u>"but for" market, free of the restraints and conduct alleged to be anticompetitive</u>. The difficulty of such a task has long been recognized by courts in antitrust cases.

41 In substance, the "but for" interpretation of paragraph 79(1)(*c*) is also accordant with the Tribunal's interpretations in earlier abuse of dominance cases. Although the "but for" wording does not appear in the statutory provision or in previous Tribunal decisions, this legal test does not, as the respondent alleges, "amount[...] to an attempt by the Commissioner to re-write the Act at the appellate stage of this proceeding" (respondent's Memorandum of Fact and Law, para. 102). Rather, the "but for" test reflects the plain meaning of the statutory language of paragraph 79(1)(*c*), and corresponds to the Tribunal's analysis in its previous decisions with respect to this provision.

42 The Tribunal's use of a comparative and relative test for paragraph 79(1)(*c*) is evident in its descriptions, in previous abuse of dominance cases, of the appropriate analytic approach for determining whether there exists an actual or likely substantial lessening of competition. In *Canada (Director of Investigation & Research) v. Laidlaw Waste Systems Ltd.* (1992), 40 C.P.R. (3d) 289 (Competition Trib.) [*Laidlaw*], the Tribunal specifically endorsed an assessment based upon comparison of the competitiveness of the relevant markets with and without the impugned practice (at p. 344-346):

> Laidlaw argues that the Director has not demonstrated that there has been any substantial lessening of competition in the relevant markets. It is argued that no analysis has been done of the state of competition in the markets before Laidlaw entered compared to what exists now... It is not just the number of competitors and comparative market shares which are relevant in considering whether a substantial lessening of competition has occurred... <u>[T]he substantial lessening which is to be assessed need not necessarily be proved by weighing the competitiveness of the market in the past with its competitiveness at present. Substantial lessening can also be assessed by reference to the competitiveness of the market in the presence of the anti-competitive acts and its likely competitiveness in their absence.</u>
>
> [Emphasis added.]

Similarly, in *Canada (Director of Investigation & Research) v. D & B Co. of Canada* (1995), 64 C.P.R. (3d) 216 (Competition Trib.) [*D & B*], the Tribunal described as follows the appropriate approach to assessing the existence of a substantial lessening of competition (at p. 267):

> First, we must establish what the conditions of entry would be without the exclusives [the impugned practice of anti-competitive acts] and, then, determine how the anti-competitive acts altered the prospects for economically feasible entry.

The correspondence between these formulations and the "but for" test described above is readily apparent.

43 The Tribunal's previous abuse of dominance decisions also highlight the centrality of *relative* comparison in the test mandated by paragraph 79(1)(*c*). The test for substantial lessening of competition articulated by the Tribunal in *NutraSweet*, *supra*, *Laidlaw*, *supra*, and *D & B*, *supra*, in all cases depends upon this relative comparative aspect:

> The factors to be considered in deciding whether competition has been or is likely to be substantially lessened are similar to those that were discussed in concluding that NSC [NutraSweet Co.] has market power [that is, market share and entry barriers]. In essence, the question to be decided is whether the anti-competitive acts engaged in by NSC preserve or add to NSC's market power. The issue with respect to the contract terms associated with exclusivity and the use of the United States patent as leverage in competing for Canadian customers is the degree to which these anti-competitive acts add to the entry barriers into the Canadian market and, additionally therefore, into the industry.
>
> (*NutraSweet*, *supra* at p. 47, emphasis added)
>
> There is no reason to doubt that based solely on the economics of lift-on-board service that these should be highly competitive markets. The evidence shows, however, that the effect of the contracts is to make entry sufficiently difficult so that it no longer effectively polices the market. The evidence demonstrates that a new firm can acquire a certain number of customers but that it cannot establish a customer base with sufficient rapidity to make entry attractive. In the markets in question there is no doubt that acquisition practices of Laidlaw buttressed by the creation of artificial barriers to entry through the contracts have resulted in a substantial lessening of competition.
>
> (*Laidlaw*, *supra* at p. 347-348, emphasis added)
>
> The central issue to be decided in determining whether the Director has satisfied this third element [of sub-section 79(1)] is the effect of the exclusives with retailers and the long-term contracts with customers on the conditions of entry into the market. Or, to paraphrase the words of the tribunal in *Nutrasweet*, in essence, the question to be decided is whether the anti-competitive acts engaged in by Nielsen [D & B] preserve or add to Nielsen's market power.
>
> (*D & B*, *supra* at p. 266-267, emphasis added).
>
> Clearly, the assessment envisaged and undertaken by the Tribunal in all these cases was not merely an absolute evaluation of the level of competition in the relevant markets, but rather a relative comparison: did the impugned practice result in a *preventing or lessening* of competition as compared to the conditions governing in the absence of the practice, and was this lessening of a degree sufficient to be considered *substantial*?

44 Based upon the plain meaning of the statutory language, and supported by the interpretation advanced by the Tribunal in its earlier cases, I conclude therefore that paragraph 79(1)(*c*) mandates an approach that properly accentuates these comparative and relative aspects, and enables this analysis to be undertaken in respect of each of the three specified time frames (past, present and future). As I have explained, the "but for" test is one such approach. I must emphasize, however, as the Tribunal rightly implied in the passage from *Laidlaw* quoted in paragraph 39 above, that the "but for" test is not necessarily the only correct approach. I therefore expressly leave open the possibility that the Tribunal might in a future abuse of dominance case find evidence corresponding to a different test sufficient to discharge the burden placed upon the Commissioner by virtue of paragraph 79(1)(*c*). However, as the "but for" test describes an approach that corresponds to the requirements mandated by the statutory language of paragraph 79(1)(*c*), it is one that the Tribunal must consider in all cases - although it may in future cases choose to consider other appropriate tests as well.

(2) Application of the statutory test for paragraph 79(1)(c)

45 In practice, the application of the "but for" test, and in particular, determination of the appropriate methodology in any given case, is a matter for which the Tribunal is better qualified than this Court. This Court should not attempt to prescribe in the abstract the "correct" methodology, for "[s]uch a task is beyond the limits of the Court's competence" (*Superior Propane*, supra at para. 159). As the Supreme Court of Canada observed in *Southam*, *supra* at para. 52, for the questions of mixed law

and fact involved in the application of the legal tests set out in the *Competition Act*, "what is required in the end is an assessment of the economic significance of the evidence; and to this task an economist is almost by definition better suited than is a judge".

46 As suggested by the parties in the case at bar, application of the "but for" test could conceivably involve the construction of a hypothetical comparator model, a market identical to reality in all respects except that the impugned practice is absent. In appropriate circumstances, the "but for" test might also be applied by comparing the competitiveness of the market across time, and treating the market conditions before and after the introduction of the impugned practice as proxies for the market with and without the practice. However, I would not want to be seen to suggest that any particular type of evidence would necessarily be required. Ultimately, the Commissioner bears the burden of proof for each requisite element, and the Tribunal must be convinced on the balance of probabilities. The evidence required to meet this burden can only be determined by the Tribunal on a case-by-case basis.

47 The *Act* does, however, provide some guidelines which should be borne in mind in undertaking the assessment mandated by paragraph 79(1)(*c*). In this regard, I would adopt *mutatis mutandis* the advice provided by Evans JA in *Superior Propane*, *supra* with respect to the methodology appropriate for determining the anti-competitive "effects" of a merger under section 96 of the *Act*:

> Whatever standard is selected (and, for all I know, the same standard may not be equally apposite for all mergers) must be more reflective than the total surplus standard [the methodology adopted by the Tribunal in that case] of the different objectives of the *Competition Act*. It should also be sufficiently flexible in its application to enable the Tribunal fully to assess the particular fact situation before it.
>
> Similarly, whatever methodology the Tribunal chooses in any given case in its application of the "but for" analysis required under paragraph 79(1)(*c*) must be sufficiently flexible to allow a full assessment of all factors relevant in the particular fact situation at issue, and must be reflective of the different objectives of the *Act*.

48 In *Superior Propane*, *supra*, at paras. 104-112, this Court looked to the purposes provision of the *Act*, section 1.1, to inform its analysis of the meaning of the word "effects" in section 96. Similarly, for the purposes of paragraph 79(1)(*c*), in undertaking its assessment of whether there is an actual or likely substantial preventing or lessening of competition, the Tribunal must ensure that the methodology chosen to apply the "but for" test reflects the multiple purposes or objectives set out in section 1.1. Four different purposes are described in section 1.1:

> **Purpose of Act**
>
> 1.1 The purpose of this Act is to maintain and encourage competition in Canada in order to promote the efficiency and adaptability of the Canadian economy, in order to expand opportunities for Canadian participation in world markets while at the same time recognizing the role of foreign competition in Canada, in order to ensure that small and medium-sized enterprises have an equitable opportunity to participate in the Canadian economy and in order to provide consumers with competitive prices and product choices.
>
> **Objet**
>
> 1.1 La présente loi a pour objet de préserver et de favoriser la concurrence au Canada dans le but de stimuler l'adaptabilité et l'efficience de l'économie canadienne, d'améliorer les chances de participation canadienne aux marchés mondiaux tout en tenant simultanément compte du rôle de la concurrence étrangère au Canada, d'assurer à la petite et à la moyenne entreprise une chance honnête de participer à l'économie canadienne, de même que dans le but d'assurer aux consommateurs des prix compétitifs et un choix dans les produits.

All of these purposes must be reflected in the methodology adopted by the Tribunal to assess the existence of an actual or likely substantial lessening of competition for the purposes of paragraph 79(1)(*c*).

(3) The Tribunal's paragraph 79(1)(c) decision

49 Having articulated the legal test for paragraph 79(1)(*c*), I turn now to an analysis of what the Tribunal actually did in the case at bar. The Tribunal's analysis directly concerning paragraph 79(1)(*c*) is brief, and I will therefore quote it in its entirety:

> 263 The Tribunal, as stated above, is satisfied that Bibby does exercise market control. This can be traced to a number of factors and specifically to the fact that Bibby is the only Canadian supplier able to supply full product lines. The SDP is certainly an instrument that helps Bibby market its products, but the Tribunal is not satisfied that the SDP has been shown to be a practice of anti-competitive acts. If, however, the Tribunal has erred in this assessment, the Tribunal is also of the view that the SDP has not been shown to be a practice that has substantially lessened or prevented competition, for the reasons that follow.
>
> 264 The Tribunal has accepted the Commissioner's submission that there are three distinct product markets, and six geographic markets. Therefore, the Commissioner has the onus of establishing a substantial lessening or prevention of competition in eighteen separate markets. Yet the Commissioner has not established to the Tribunal's satisfaction that the SDP has led to substantial lessening or prevention of competition in any of these markets.
>
> 265 In Western Canada and in Ontario, which represent approximately 75 percent of Bibby's market, there is significant evidence of competitive pricing, notwithstanding the SDP. This competitive pricing is due to imports and to the emergence of a new manufacturer. Although imports still represent a relatively small portion of the cast iron DWV markets, they have been steadily increasing and have had a noticeable impact on prices of cast iron DWV products. In addition, a new competing manufacturer has emerged for the first time in thirty years and has succeeded in capturing 10 percent of the market in Canada within four years, while the SDP was in effect. There is clearly effective entry in the market by Vandem, as evidenced by the lowering of prices for cast iron DWV products in Ontario. As discussed earlier, in these reasons, its viability remains to be determined. It is the Tribunal's view, however, that the evidence shows that a number of factors, unrelated to the SDP, will bear on Vandem's future. In consequence, the Tribunal is of the view that the SDP has not brought about a substantial lessening or prevention of competition for the Ontario and Western markets.
>
> 266 The Tribunal acknowledges that for Quebec and the Maritimes, which represent 25 percent of the market, prices appear not to have been constrained by competition. This, however, does not necessarily lead to a conclusion that the SDP has caused the lack of competition. The data provided by the Commissioner relate only to the period of time when the SDP was operating. Dr. Ross based his arguments concerning market power on pricing information covering the period of January 1998 to September 2003. The Tribunal has no historical data which would allow it to measure the state of competition before and after the SDP came into effect. Canada Pipe bought the assets of Canada's only manufacturer of cast iron DWV products, the Gooding foundries, a well-established player with no significant rivals. As well, Bibby has been and continues to be the only producer of a full line of products. The Tribunal therefore finds that there is insufficient evidence for it to conclude that the SDP is responsible for a substantial lessening or prevention of competition.

50 The Tribunal's substantive analysis for the purpose of paragraph 79(1)(*c*) is contained in two paragraphs, 265 and 266. Paragraph 265 considers the evidence with respect to the geographic markets of Western Canada and Ontario, and paragraph 266 considers that with respect to Quebec and the Maritimes. The Tribunal's stated reasons for concluding that substantial lessening of competition had not been established are very different for the two geographic groupings. In both cases, however, the Tribunal's reasoning evinces errors of law.

51 For Western Canada and Ontario, the reasons show that the Tribunal's conclusion was based upon its appreciation of three main factors: the existence of competitive pricing, the increasing presence of imported cast iron DWV products, and the effective entry of a new cast iron DWV manufacturer, Vandem. The Tribunal emphasized that these significant features have been observed "notwithstanding the SDP" and "while the SDP was in effect" (para. 265), and thus concluded that the SDP had not brought about a substantial lessening or prevention of competition in Western Canada or Ontario.

52 The occurrence of entry, both by importers and a new manufacturer, was evidently the key consideration in the Tribunal's analysis with respect to the absence of substantial lessening of competition. In the context of its direct analysis of paragraph

79(1)(*c*), the Tribunal's explanation of its use, for the purposes of paragraph 79(1)(*c*), of the evidence concerning entry is very brief: it merely noted that "a new competing manufacturer has emerged for the first time in thirty years and has succeeded in capturing 10 percent of the market in Canada within four years, while the SDP was in effect", and concluded that "[t]here is clearly effective entry in the market by Vandem" (para. 265). The Tribunal also noted the "steadily increasing" presence of imports, which "although still represent[ing] a relatively small portion of the cast iron DWV markets", are said to "have had a noticeable impact on prices" (para. 265).

53 This analysis of the occurrence of entry in the Western Canada and Ontario markets provides no indication that the Tribunal considered expressly whether the SDP was responsible for a *substantial increase* in the difficulty of gaining entry in the market, and hence a *substantial lessening* of competition. The occurrence of entry and the consequent existence of a certain level of competition relate to an absolute evaluation of the state of the market in the presence of the SDP, which is neither an equivalent of nor a substitute for the relative and comparative assessment that is required by the statutory language of paragraph 79(1)(*c*). The fact that entry has been observed in the presence of the SDP, and that barriers to entry are therefore not total, does not by itself address the question of whether, in the absence of the SDP, there would be substantially more competition in the relevant markets, in the past, present or future. In short, the Tribunal's analysis with respect to these geographic markets does not address the "but for" question.

54 The Tribunal provided different reasoning for its conclusion in this regard concerning the Quebec and Maritimes markets (at para. 266). In these geographic markets, the Tribunal acknowledged that competitive pricing is absent, but cautioned that this "does not necessarily lead to a conclusion that the SDP has caused the lack of competition", as the Commissioner had not led any evidence concerning the period before the SDP was in effect. Without "historical data which would allow it to measure the state of competition before and after the SDP came into effect", and in light of other markets considerations (Canada Pipe's acquisition of the assets of another cast iron DWV manufacturer, and Bibby's status as the only full-line supplier), the Tribunal concluded that "there is insufficient evidence for it to conclude that the SDP is responsible for a substantial lessening or prevention of competition" (para. 266).

55 The legal error inherent in this portion of the Tribunal's paragraph 79(1)(*c*) analysis is manifest. As the Tribunal itself recognized in *Laidlaw*, *supra*, substantial lessening "need not necessarily be proved by weighing the competitiveness of the market in the past with its competitiveness as present", for "substantial lessening can also be assessed by reference to the competitiveness of the market in the presence of the anti-competitive acts and its likely competitiveness in their absence" (p. 346). For the purposes of paragraph 79(1)(*c*), it is insufficient to conclude that the Commissioner had not met her burden because no historical data was provided, for the Tribunal was required to also consider whether the evidence on record demonstrated that the SDP had the effect of substantially lessening competition in the past, present or future, as compared to the markets' *likely* competitiveness in the absence of the practice. The failure to consider this possibility in this case constitutes an error of law.

56 Can it be argued, as the respondent suggests, that the Tribunal implicitly took into account the relative and comparative considerations required under paragraph 79(1)(*c*)? In this vein, it could be argued that the Tribunal's paragraph 79(1)(*c*) reasoning depends implicitly upon its analysis undertaken in earlier sections of its decision, for the purposes of its determinations under paragraphs 79(1)(*a*) and (*b*), of the evidence concerning entry conditions and the effects of the SDP (paras. 141-156, and 204-254 and 260-261, respectively).

57 However, the Tribunal's treatment in these earlier sections of its decision of the evidence concerning entry and effects reinforces my conclusion that it erred in law in its paragraph 79(1)(*c*) analysis. In general, this earlier analysis treats the question of entry in an absolute sense, and appears to be guided by such questions as, has entry been prevented completely, or is a certain level of competition observed in the presence of the SDP. The evidence of actual entry is explicitly accorded a dominant and even preeminent role in the Tribunal's analysis (see, for example, paras. 149, 156 and 161). Throughout the Tribunal's decision, evidence concerning entry or the effects of the SDP is considered against the standard of "prevention" in an absolute sense, rather than a more relative standard such as that implied by the words "impeding" or "lessening" (see paras. 150, 155, 207, 225-226, 237, 241, 245, 254-255, 260-261). The decision does employ the words "impede" or "lessening" at several points (see paras. 2, 6, 53, 113, 162, 263-266, 280, 282), but these occur when the Tribunal is citing the text of the statutory provisions or paraphrasing the Commissioner's submissions, and not in the context of the Tribunal's own conclusions or analysis. In short, these earlier

sections of the decision provide little if any support for the argument that the Tribunal implicitly took into account the relative and comparative considerations required under paragraph 79(1)(*c*). To the contrary, a careful reading of the Tribunal's reasons indicates that the analysis throughout was conducted from the narrow, absolute perspective of preventing entry and competition, and not from the broader, relative and comparative perspective of "impeding" or "lessening".

(4) Conclusion with respect to paragraph 79(1)(c)

58 In summary, the Tribunal should have turned its mind to the question of whether, in each of the relevant markets, competitiveness was substantially lessened in the presence of the SDP, as compared to the likely state of competition in the absence of this practice. In other words, the Tribunal should have considered whether, without the SDP, the relevant product market would be substantially more competitive. Proper examination of this question might include the following considerations: whether entry or expansion might be substantially faster, more frequent or more significant without the SDP; whether switching between products and suppliers might be substantially more frequent; whether prices might be substantially lower; and whether the quality of products might be substantially greater. In this regard, identification of the occurrence of entry, or reference to evidence of competition subsisting in the presence of the impugned practice, is insufficient. I conclude therefore that the Tribunal erred in law in its analysis, for the purposes of paragraph 79(1)(*c*), as to whether the SDP has had, is having or is likely to have the effect of preventing or lessening competition substantially in the relevant markets.

(B) For the purposes of paragraph 79(1)(b), did the Tribunal err in its determination with respect to whether the SDP constitutes an "anti-competitive act"?

59 The statutory test for an abuse of dominant position set out in section 79 is a conjunctive one: each of the three distinct elements must be found if an order is to issue. The Tribunal found that the market control element required under paragraph 79(1)(*a*) was established, and this finding, which is the subject of the cross-appeal, is upheld by this Court in separate reasons. This Court must also determine whether the Tribunal erred in its findings with respect to paragraph 79(1)(*b*).

60 Paragraph 79(1)(*b*) calls for a determination as to whether the respondent, through the SDP, "ha[s] engaged in or [is] engaging in a practice of anti-competitive acts". The Tribunal had no difficulty recognizing the SDP as a "practice". It wrote, at para. 171, that the term entails more than an isolated act but may be one occurrence that is sustained and systemic, or that has had a lasting impact on competition. It explained at para. 200 of its reasons that the SDP is structured, organized and applied throughout Canada, albeit with some variations in the multiplier and rebates in the different regions and that the various components of the program add up to a practice. The respondent does not appear to contest this particular finding. The dispute arises with respect to whether the SDP can be characterized as composed of "anti-competitive acts" (« agissements anti-concurrentiels »).

61 The Commissioner argued that while the Tribunal stated the correct legal test for anti-competitive acts, which was established in previous Tribunal decisions, this was not the test that it ultimately applied in its analysis of the SDP. The Tribunal erred in law, the Commissioner asserts, by requiring proof of a link between the SDP and a decrease in competition, and by improperly extending the scope of the valid business justification doctrine. As a result, according to the Commissioner, the approach to paragraph 79(1)(*b*) adopted by the Tribunal conflated the discrete statutory tests established by paragraphs 79(1)(*b*) and 79(1)(*c*).

62 This question is further complicated in the case at bar by the fact that this appeal represents the first time that a court has considered the legal test applicable for the purposes of paragraph 79(1)(*b*). The Tribunal has considered, in prior abuse of dominance cases, the legal test and analytic methodology applicable in ascertaining the existence of an "anti-competitive act". The Tribunal's jurisprudence on these questions cannot by itself be determinative in the current case, as its views on questions of law are not binding on this Court. The Tribunal's jurisprudence may however be indicative of what makes sense and what has been working in the past - if, at the same time, it corresponds to the wording of the Act.

(1) The legal test under paragraph 79(1)(b)

63 The *Act* does not provide an express definition of "anti-competitive act". Section 78 provides a list of eleven anti-competitive acts, expressly "without restricting the generality of the term". These examples are thus illustrative only, and indeed the Tribunal has recognized in its previous decisions that conduct not specifically mentioned in section 78 can constitute an anti-competitive act (*Nutrasweet*, *supra* at p. 34; *Laidlaw*, *supra* at p. 331-332; *D & B*, *supra* at p. 257; *Canada (Director of Investigation & Research) v. Tele-Direct (Publications) Inc.* (1997), 73 C.P.R. (3d) 1 (Competition Trib.), at 180 [*Tele-Direct (Publications) Inc.*]). While clearly non-exhaustive, the illustrative list in section 78 provides direction as to the type of conduct that is intended to be captured by paragraph 79(1)(*b*): reasoning by analogy, a non-enumerated anti-competitive act will exhibit the shared essential characteristics of the examples listed in section 78.

64 In *Nutrasweet*, *supra*, the Tribunal applied this interpretive approach to paragraph 79(1)(*b*), and suggested (at p. 34) the following working definition of "anti-competitive act":

> A number of the acts [mentioned in section 78] share common features but... only one feature is common to all: an anti-competitive act must be performed for a purpose, and evidence of this purpose is a necessary ingredient. The purpose common to all acts, save that found in paragraph 78(*f*), is an intended negative effect on a competitor that is predatory, exclusionary or disciplinary.
>
> (Emphasis added.)

65 I adopt the above definition, which is very close in substance to the core characteristic of the enumerated list of section 78, save at paragraph 78(*f*). This exception was noted by the Tribunal in *Nutrasweet*, *supra*.

66 Two aspects of this definition should be noted. First, an anti-competitive act is identified by reference to its *purpose*. Second, the requisite purpose is an *intended predatory, exclusionary or disciplinary negative effect on a competitor*. I will elaborate on each of these aspects in turn.

67 First, the meaning of the term *purpose* deserves some comment. As the Tribunal observed in *Tele-Direct (Publications) Inc.* , *supra* at p. 180, "'purpose' is used in this context in a broader sense than merely subjective intent on the part of the respondent... it might be more apt to speak of the *overall character* of the act in question" (emphasis added). In order to apply paragraph 79(1)(*b*), the purpose or character of the impugned conduct must therefore be determined. Relevant factors to be considered and weighed to determine this overarching "purpose" include the reasonably foreseeable or expected objective effects of the act (from which intention may be deemed, as I explain further below), any business justification, and any evidence of subjective intent, if available (see *Tele-Direct (Publications) Inc.* , *supra* at p. 180).

68 The second aspect describes the *type of purpose* required in the context of paragraph 79(1)(*b*): to be considered "anti-competitive" under paragraph 79(1)(*b*), an act must have an intended predatory, exclusionary or disciplinary negative effect on a competitor. The paragraph 79(1)(*b*) inquiry is thus focused upon the intended effects of the act *on a competitor*. As a result, some types of effects on competit*ion* in the market might be irrelevant for the purposes of paragraph 79(1)(*b*), if these effects do not manifest through a negative effect on a competitor. It is important to recognize that "anti-competitive" therefore has a restricted meaning within the context of paragraph 79(1)(*b*). While, for the *Act* as a whole, "competition" has many facets as enumerated in section 1.1, for the particular purposes of paragraph 79(1)(*b*), "anti-competitive" refers to an act whose purpose is a negative effect on a competit*or*.

69 Adopting this interpretive approach to section 79, it is conceivable that a practice might be found to be composed of anti-competitive acts within the meaning of paragraph 79(1)(*b*), but at the same time, for the purposes of paragraph 79(1)(*c*), be held not to have the effect of preventing or lessening competition substantially in the market in question.

70 A final comment should be made with respect to the evidence required to establish an anti-competitive purpose within the meaning of paragraph 79(1)(*b*). It is clear from the legislative history of paragraph 79(1)(*b*) that evidence of subjective intent, although certainly probative if available, is not required in order to find that a given act is anti-competitive within the meaning

of paragraph 79(1)(*b*). When Bill C-91, which eventually became the *Competition Act*, was first introduced in Parliament in December 1985, the text of paragraph (*b*) of the abuse of dominance provision (then section 51) read as follows:

> 51. (1) Where, on application by the Commissioner, the Tribunal finds that
>
> . . .
>
> > (b) that person or those persons have engaged in or are engaging in a practice of anti-competitive acts, <u>and the object of the practice is to lessen competition,</u> and
>
> 51. (1) Lorsque le Tribunal, à la suite d'une demande du directeur, conclut:
>
> . . .
>
> > b) que cette personne ou ces personnes se livrent ou se sont livrées à une practique d'agissements anti-concurrentiels <u>dont le but est de réduire la concurrence,</u> et

Perceived problems with the subjective intent requirement implied by the latter part of the proposed paragraph (*b*) were frequently raised in testimony before the House of Commons Legislative Committee on Bill C-91 (see Canada, House of Commons, *Minutes of Proceedings and Evidence of the Legislative Committee on Bill C-91*, First session of 33 rd Parliament, 1986 at pages 2:8-9, 3:7-9, 3:17, 5:13, 5:15, 5:63-64, 6:9-10; 9:20-21; note also the contrary view expressed at 4:55-56, 6:57-58; 7:55-57, 7:60-63 [*Minutes of Committee on Bill C-91*]). In response, the reference to "the object of the practice" was deleted in paragraph (*b*), in order to remove any subjective intent requirement from the statutory test for abuse of dominant position (see *Minutes of Committee on Bill C-91*, *supra* at pages 11:3 and 11:32-33).

71 On the basis of this legislative history, I would endorse the following comment by the Tribunal in *Laidlaw*, *supra* at p. 342, with respect to the proper role of evidence concerning subjective intent within paragraph 79(1)(*b*):

> Proof of subjective intention on the part of a respondent is not necessary in order to find that a practice of anti-competitive acts has occurred. Such intention is almost impossible of proof in many cases involving corporate entities unless one stumbles upon what is known as a "smoking gun". (A document which makes it clear that the purpose of the conduct in question was to exclude competitors from the market.) Section 79 of the Act provides for a civil proceeding and civil remedies. In that context corporate actors and individuals are deemed to intend the effects of their actions.

72 Proof of the intended nature of the negative effect on a competitor can thus be established directly through evidence of subjective intent, or indirectly by reference to the reasonably foreseeable consequences of the acts themselves and the circumstances surrounding their commission, or both.

73 Even though evidence of subjective intent is neither required nor determinative, intention remains an important ingredient of paragraph 79(1)(*b*). In particular, intention is relevant in the sense that while a respondent cannot disavow responsibility for the reasonably foreseeable consequences of its acts, a respondent might nevertheless be able to establish that such consequences should not, in the context of the paragraph 79(1)(*b*) inquiry, be considered the intended "purpose" or "overall character" of the acts in question. In appropriate circumstances, proof of a valid business justification for the conduct in question can overcome the deemed intention arising from the actual or foreseeable effects of the conduct, by showing that such anti-competitive effects are not in fact the overriding purpose of the conduct in question. In essence, a valid business justification provides an alternative explanation as to why the impugned act was performed. To be relevant in the context of paragraph 79(1)(*b*), a business justification must be a credible efficiency or pro-competitive rationale for the conduct in question, attributable to the respondent, which relates to and counterbalances the anti-competitive effects and/or subjective intent of the acts. The appropriate application of the valid business justification doctrine in the context of paragraph 79(1)(*b*) will be further considered below, in my discussion of the Tribunal's analysis in the case at bar.

(2) The Tribunal's paragraph 79(1)(b) decision

74 In the case at bar, it would appear that the Tribunal correctly articulated the legal test. At para. 171 of its reasons, at the outset of its review of the Tribunal's definition of "anti-competitive acts" in its previous cases, the Tribunal stated:

> 171 ... In order to determine whether acts are anti-competitive, the Tribunal must consider the nature and purpose of the acts in question, as well as the impact they have or may have on the relevant market. [Note: *Nielsen* at 257; *Laidlaw* at 333; *Nutrasweet* at 34] In both *Tele-Direct* and *Laidlaw*, the Tribunal assessed the alleged anti-competitive practices by taking into account what effect they had had on competitors.
>
> [Emphasis added]

In the course of quoting a longer passage from *Tele-Direct (Publications) Inc.* , the Tribunal reproduced (at para. 178) the key sentence from *Nutrasweet*, *supra* at p. 34, to the effect that the feature common to anti-competitive acts is that they are all performed for a "purpose", namely "an intended negative effect on a competitor that is predatory, exclusionary or disciplinary". This formulation was also repeated in the concluding section of the Tribunal's decision (at para. 284).

75 However, despite this correct articulation of the test, the Tribunal's analysis of the salient features of the applicable legal test is a cause for concern. At the end of the portion of its paragraph 79(1)(*b*) analysis entitled "The Law", the Tribunal summarized as follows its understanding of key aspects of the legal test (at para. 191):

> The Tribunal [in *Tele-Direct*] has stated that there must be a link between the impugned practice and a decrease in competition. Moreover, if a practice does not appear to have an exclusionary effect or cause detriment to the consumer, it cannot be said to be anti-competitive.
>
> [Emphasis added.]

76 This statement is incorrect, in at least two respects.

77 First, for the purposes of paragraph 79(1)(*b*), a link need not be proven between the impugned practice and a decrease in competit*ion*. Quite simply, such a causal link is not part of the legal test for an anti-competitive act. Moreover, an emphasis upon evidence of this type runs the risk of obscuring the correct focus of the paragraph 79(1)(*b*) test. An anti-competitive act is one whose purpose is an intended negative effect on a competit*or* that is predatory, exclusionary or disciplinary. The focus of analysis is thus on the act itself, to discern its purpose. The questions as to whether a decrease in competit*ion* in the market is evident, or whether any such decrease can be causally attributed to the impugned practice, are not directly relevant for this task. Certainly, such findings are not requisite elements of the test for an anti-competitive act.

78 Obviously, if an act is to be found anti-competitive, there must be evidence linking the impugned practice to the requisite intended negative effect *on a competitor*: the practice must be found to cause or at least contribute to the intended negative effect. Such a negative effect on a competitor must also be found to be the "purpose" of the practice in question, and to this end, all relevant factors must be taken into account and weighed to determine if the requisite purpose is established. One must remember, however, that in the context of paragraph 79(1)(*b*), evidentiary factors are relevant only insofar as they shed light upon the paragraph 79(1)(*b*) statutory test, that is upon the *purpose of the act vis-à-vis competitors*. Evidence concerning other types of effects of the impugned act that are not related to competitors - while perhaps pertinent in respect of the paragraph 79(1)(*c*) assessment of competition - are not directly relevant for paragraph 79(1)(*b*). Similarly, evidence concerning the general competitive state and structure of the relevant market, and whether such features can be causally attributed to the impugned act, are not the direct focus of the paragraph 79(1)(*b*) analysis, and are more properly considered under paragraph 79(1)(*c*). In short, paragraph 79(1)(*b*) simply concerns whether the act displays the requisite intended effect on competit*ors*; it is not directly concerned with the state of competit*ion* in the market or the general causes thereof. In directing itself to the contrary, and requiring proof of a causal link between the impugned act and a decrease in competition, the Tribunal erred.

79 Second, the Tribunal appears mistakenly to suggest in the above-quoted passage that the impugned practice's effects on the consumer should or could be considered within the paragraph 79(1)(*b*) analysis. However, contrary to what the Tribunal

implies in the above quotation, "detriment to the consumer" is not a relevant independent consideration for the purposes of paragraph 79(1)(*b*), as evidence of this type does not relate directly to whether an act has the requisite defining characteristic of an intended negative effect on a competitor. The effect of an act on consumers may in some circumstances be relevant in assessing the credibility and weight of a proffered business justification, as I explain further below. Otherwise, however, such evidence is largely irrelevant for the purposes of the paragraph 79(1)(*b*) assessment, and is more appropriately considered under paragraph 79(1)(*c*). To the extent that the Tribunal suggests in the above-quoted sentence that "detriment to the consumer" is an independently relevant consideration for the purposes of paragraph 79(1)(*b*), the Tribunal therefore erred.

80 The Tribunal thus embarked on its paragraph 79(1)(*b*) analysis from an incorrect foundation: it erroneously believed itself obliged to consider factors which are not relevant in the correct legal test. The Supreme Court stated in *Southam*, *supra* at para. 41 that "[i]f the Tribunal did ignore items of evidence that the law requires it to consider, then the Tribunal erred in law". Logically, this statement can be extended to encompass the situation of the case at bar: if the Tribunal considered items of evidence that the law requires it not to consider, then the Tribunal also erred in law. Moreover, these irrelevant factors may well have played a decisive role in this case: according to the Tribunal's own articulation, evidence of a link between the practice and a decrease in competition was considered to be *required* for the purposes of paragraph 79(1)(*b*). Thus, to the extent that the Tribunal misdirected itself as to the applicable legal test, and as a consequence considered irrelevant factors in making its paragraph 79(1)(*b*) determination, the Tribunal committed a reversible error of law.

81 The Tribunal's erroneous interpretation of the paragraph 79(1)(*b*) test played a significant role in its analysis of the SDP. It is clear that in concluding that the SDP was not anti-competitive, the Tribunal relied heavily upon its mistaken understanding that a demonstrable link must exist between the impugned act and a decrease in competition. Indeed, the Tribunal expressly stated that this factor was "the most striking" basis for its conclusion:

> 261 The most striking argument against the alleged anti-competitive effect of the SDP is the fact that it has not prevented entry nor competition in certain regions. The SDP has not prevented an increase in imports, nor has it prevented the emergence, for the first time in thirty years, of a new manufacturer of cast iron DWV products. For a practice to be found anti-competitive, it must have a negative effect on competition. As was stated in *Tele-Direct*, there has to be a link between the practice and its alleged anti-competitive effect. In the instant case, the link has not been established to the Tribunal's satisfaction. The Tribunal recognizes that entry may be difficult, but this appears unrelated to the SDP. Several other factors come into play: Bibby is a known manufacturer that offers a complete line of products; the market is not a growth market, thus limiting investment potential. Yet, it has been possible for competitors to match Bibby's price and offer a reliable supply, to the point of making it an interesting proposition for distributors or contractors to change suppliers. This has occurred, notwithstanding the SDP, as illustrated by new entrants such as Sierra and Vandem, and by new arrangements such as Wolseley's change of suppliers.

82 As this passage shows, the Tribunal's incorrect assumption that a link to a reduction in competition was required under paragraph 79(1)(*b*) critically influenced its reasoning. Instead of enquiring as to whether the SDP's purpose was an intended negative effect on competitors, the Tribunal asked whether there was evidence of a decrease in competition in the relevant market, in the abstract, and whether the identified competitive problems could be causally attributed to the SDP and hence be considered its "effects". This approach, of focussing on the general state of competition in the market rather than on the purpose of the impugned act, led the Tribunal to adopt an unwarrantedly and incorrectly narrow test for paragraph 79(1)(*b*): essentially, the Tribunal's reasoning would imply that unless an impugned act *prevents* entry of competitors or otherwise *prevents* competition, or unless it is the (predominant) *cause* of the uncompetitive attributes observed in the market, the act cannot be considered anti-competitive. This result is clearly incorrect.

83 In my view, the Tribunal's error of law with respect to paragraph 79(1)(*b*) is partly attributable to a conflation of the legal test for paragraph 79(1)(*c*) with that applicable for paragraph 79(1)(*b*). As I mentioned above at the outset of my analysis, the multi-element structure of section 79 suggests that upon proper interpretation, each statutory element must give rise to a distinct legal test. To repeat, paragraph 79(1)(*b*) relates to whether the impugned act exhibits the requisite anti-competitive purpose vis-à-vis competitors, while paragraph 79(1)(*c*) concerns the broader state of competition, and whether the practice has the effect of substantially lessening competition in the relevant market. A particular indirect evidentiary indicator may serve subtly different

- yet importantly distinct - purposes in regards to paragraph 79(1)(*b*) as compared to paragraph 79(1)(*c*). Since paragraph 79(1)(*b*) focuses on whether the impugned act was performed for a particular purpose with respect to competitors, the relevant factors - that is, evidence concerning its foreseeable effects on competitors, business justifications for its adoption, and subjective intent - are to be interpreted in this particular light. By contrast, paragraph 79(1)(*c*) mandates an assessment of the substantiality of the practice's actual or likely effects on competition in the relevant market(s), a task that proceeds from the vantage point of the market as a whole and invites consideration of a wider range of effects of the practice in question. The approach adopted by the Tribunal in this case does not properly recognize or maintain these important conceptual distinctions between the statutory elements of paragraph 79(1)(*b*) and 79(1)(*c*).

(3) The valid business justification and paragraph 79(1)(b)

84 The Tribunal's conflation of the legal tests for paragraph 79(1)(*b*) and 79(1)(*c*) is also apparent in its discussion of the business justification arguments proffered by the respondent. The Tribunal noted two business justifications suggested by the respondent: first, that the SDP's uniform rebate structure encourages competition, by creating a level playing field between small and large distributors; and second, that the SDP makes possible the high-volume sales necessary to enable Bibby to maintain a full line of products.

85 The Tribunal rejected the first business justification proposed by the respondent, but was persuaded by the second. With respect to the first justification, the Tribunal concluded (at para. 209) that although the creation of equitable opportunities for small- and medium-sized enterprises to participate in the Canadian economy is an objective of the *Act* set out in section 1.1, this is not a relevant consideration for the purposes of section 79:

> While the Tribunal acknowledges this to be an enunciated purpose of the Act, the Tribunal is of the view that this purpose is unrelated to the issue of abuse of dominance. Competition between distributors is not at issue. Rather, the case is about competition between Bibby and other suppliers of cast iron DWV products. The equitable characteristics of the SDP as it relates to distributors have little to do with whether Bibby is exercising its market power in a way that precludes competition between suppliers of the product. In consequence, this argument of business justification must fail.

86 The Tribunal was persuaded, however, by the second business justification put forward by the respondent. It explained its reasoning as follows (at paras. 212 and 259):

> High volume sales are also important to a business which is volume-driven, as Mr. Leonard, General Manager of Bibby, explained. Bibby argues that it needs the sales to ensure efficiencies and to lower its cost of production; the Commissioner did not challenge this assertion. The rebate structure provided for in the SDP does encourage distributors to deal with Bibby for all three products if they choose Bibby to supply one of them and in consequence Bibby's sales are increased. As was stated in *Laidlaw*, the self-interest justification is not sufficient. However, in this case, the Tribunal accepts, based on Mr. Leonard's evidence, that high volumes allow Bibby to maintain in inventory smaller, less profitable but nevertheless important products. As a result, items that are used less often remain available in the market. This availability serves the interests of distributors and contractors, whether or not they belong to the SDP, and ultimately benefits the consumer.
>
> The respondent's business argument that Bibby needs to sell a certain volume in all three products to be able to maintain full production of all product lines is valid. There are certainly recognizable advantages in having a reliable source able to manufacture and supply a full line of cast iron pipe DWV products for the Canadian market.

87 This analysis is problematic, as the Tribunal appears to have lost sight of the role of the valid business justification doctrine *within paragraph 79(1)(b)*, and instead seems to grant it an independent role. A business justification for an impugned act is properly relevant only insofar as it is pertinent and probative in relation to the determination required by paragraph 79(1)(*b*), namely the determination as to whether the purpose for which the act was performed was a predatory, exclusionary or disciplinary negative effect on a competitor. As I explained above in the discussion of the intentionality aspect of the paragraph 79(1)(*b*) test, a valid business justification can, in appropriate circumstances, overcome the deemed intention arising from the actual or foreseeable negative effects of the conduct on competitors, by demonstrating that such anti-competitive effects are

not in fact the overriding purpose of the conduct in question. In this way, a valid business justification essentially provides an alternative explanation as to why the impugned act was performed, which in the right circumstances might be sufficient to counterbalance the evidence of negative effects on competitors or subjective intent in this vein.

88 The valid business justification doctrine is not an absolute defence for paragraph 79(1)(*b*). Rather, a business justification is properly employed to counterbalance or neutralize other evidence of an anti-competitive purpose, prior to making a determination under 79(1)(*b*). As the Tribunal observed in *D & B*, *supra*, a business justification proffered by a respondent must therefore be "weigh[ed]... in light of any anti-competitive effects to establish the overriding purpose" of the impugned act (at p. 262, also quoted in *Tele-Direct (Publications) Inc.* , *supra* at p. 180). In *D & B*, *supra*, the Tribunal properly emphasized this balancing exercise (at p. 265):

> Proof of the existence of a business motive for long-term contracts [the impugned conduct] that was unrelated to an anti-competitive purpose would undoubtedly be relevant to an evaluation of an allegation of anti-competitive acts. The mere proof of some legitimate business purpose would be, however, hardly sufficient to support a finding that there is no anti-competitive act. All known factors must be taken into account in assessing the nature and purpose of the acts alleged to be anti-competitive.

89 In the case at bar, the Commissioner argued that the business justification accepted by the Tribunal is actually a self-interest argument based on selling more product, and therefore cannot qualify as a business justification for the purposes of paragraph 79(1)(*b*). The respondent countered that this was a mischaracterization of the Tribunal's reasons, as in its view the business justification actually accepted by the Tribunal related to the maintenance of a full product line and the consequent benefits for consumers: according to the respondent, "it is crystal clear from the Tribunal's reasons that the Tribunal accepted the SDP's business purpose on the basis of its benefits to *customers* and *end consumers*, rather than Canada Pipe" (Respondent's Memorandum of Fact and Law at para. 83, original emphasis).

90 In my view, the respondent's interpretation of the Tribunal's reasons with respect to the second business justification is apt. However, this reasoning, which relies solely upon consumer welfare benefits to establish the business justification, is at the core of the Tribunal's error. Simply stated, improved consumer welfare is on its own insufficient to establish a valid business justification for the purposes of paragraph 79(1)(*b*). A valid business justification must provide a credible efficiency or pro-competitive explanation, unrelated to an anti-competitive purpose, for why the dominant firm engaged in the conduct alleged to be anti-competitive. The business justification must therefore be attributable to the respondent, for it is the latter's allegedly anti-competitive conduct which is sought to be explained.

91 In the case at bar, the Tribunal's reasons do not establish the requisite efficiency-related link between the SDP and the respondent, and hence do not supply a legitimate explanation for the latter's choice to engage in the impugned conduct, unrelated to an anti-competitive purpose. Without such a link, self-interest remains as the only justification for the SDP which is attributable to the respondent for the purposes of paragraph 79(1)(*b*). The Tribunal thus erred in concluding, on the basis of the reasoning provided in its decision, that the respondent had established a valid business justification for the SDP. While this error may not ultimately have been determinative, in that a valid business justification is at most a factor to be balanced within the paragraph 79(1)(*b*) determination, it may well have played an important supporting role in the Tribunal's decision with respect to paragraph 79(1)(*b*).

(4) Conclusion with respect to paragraph 79(1)(b)

92 In sum, the aspects of the Tribunal's decision discussed above admittedly represent short extracts of a long and complex analysis. However, the identified errors suggest a basic misapprehension and misapplication of the legal test for paragraph 79(1)(*b*), and a troubling conflation between paragraphs 79(1)(*b*) and (*c*). Thus, at the very least, the extracts highlighted above render suspect the Tribunal's analysis of the relevant factors in the context of paragraph 79(1)(*b*). I can only conclude that the matter should be returned to the Tribunal for a reconsideration of its paragraph 79(1)(*b*) determination in light of the correct legal test.

(C) For the purposes of subsection 77(2), did the Tribunal err in its determination with respect to whether the SDP has the result that competition is or is likely to be lessened substantially?

93 As I described above at paragraph 21 of these reasons, there is a parallel structure and logic between the requisite statutory elements for exclusive dealing under subsection 77(2) and abuse of dominant position under subsection 79(1). The parties did not present separate arguments with respect to the substantial lessening of competition element of subsection 77(2), and instead simply referred the Court to their arguments concerning this element in the context of section 79. This same approach was adopted by the Tribunal, which concluded, "[f]or the same reasons... as in our analysis under section 79," that the Commissioner had failed to establish that the exclusive dealing practice has lessened competition substantially (para. 282).

94 In *Nutrasweet*, *supra*, the Tribunal observed that "the fundamental test of substantial lessening of competition is the same in both sections of the Act [section 79 and subsection 77(2)]" (p. 56). The similarity between this element in section 79 and subsection 77(2) is indeed strong, in that both provisions employ the key concepts of substantial lessening and competition. However, the two provisions also contain some differences in wording. In particular, the scope of section 79 appears to include events of the past, which are not expressly included for the purposes of subsection 77(2): paragraph 79(1)(*c*) encompasses three time frames ("has had, is having or is likely to have"), while subsection 77(2) refers to only two ("is or is likely to").

95 For the purposes of this appeal, I need not consider whether the differences in wording between paragraph 79(1)(*c*) and subsection 77(2) might in particular cases properly yield substantively different results with respect to the substantial lessening of competition element. In the case at bar, it is clear that the Tribunal simply adopted the same legal test and analysis in respect of the substantial lessening of competition element for both section 79 and subsection 77(2). To the extent that the Tribunal erred in law in the context of paragraph 79(1)(*c*) in its interpretation of the test for substantial lessening of competition, the same errors of law apply with respect to subsection 77(2).

(D) For the purposes of subsection 77(2), did the Tribunal err in its determination with respect to whether the SDP is likely to impede entry or expansion of a firm or a product in a market or have any other exclusionary effect in a market?

96 The parallel structure of subsection 77(2) and 79(1) is also apparent in comparing the second elements required by the two statutory provisions: both provisions call for the identification of a particular type of impugned conduct, namely a practice of exclusive dealing with an exclusionary effect in the case of subsection 77(2), and a practice of anti-competitive acts in the case of paragraph 79(1)(*b*). The parties did not present separate arguments concerning this element of subsection 77(2), but rather appear to have assimilated this element into their arguments concerning section 79.

97 The Tribunal was satisfied that the SDP was a practice of exclusive dealing according to the statutory definition provided in paragraph 77(1)(*b*) (para. 279). However, the Tribunal concluded that an exclusionary effect had not been established, based on its analysis under section 79:

> 281 We have concluded under section 79 that the SDP is not an anti-competitive practice because we found insufficient evidence to show that the SDP in itself had an exclusionary effect...
>
> 282 For the same reasons therefore as in our analysis under section 79, we find that the Commissioner has failed to establish that the exclusive dealing practice impedes or is likely to impede entry of a new competitor or have any exclusionary effect...

98 For the purposes of this appeal, I need not decide the precise scope or nature of the similarity between the statutory element of subsection 77(2) concerning exclusionary effects, and paragraph 79(1)(*b*). There may well be differences between the two provisions, which could prove pertinent in a future case. However, it is sufficient in the circumstances of this case to note that the exclusionary effects required under subsection 77(2) are clearly of a relative nature, as indicated by use of the word "impede" in paragraph 77(2)(*a*) and (*b*), rather than a more categorical verb, such as "prevent". I have already considered in detail the Tribunal's treatment of the evidence concerning barriers to entry and the effects of the SDP, and it is unnecessary to repeat this analysis here. My conclusion, stated above at paragraph 58, is equally applicable for the purposes of the Tribunal's determination with respect to the exclusionary effects element of subsection 77(2): the Tribunal's analysis of the evidence concerning barriers

to entry and the effects of the SDP was conducted from the narrow perspective of prevention, and not the broader perspective implied by the word "impede". The adoption of this unduly narrow perspective constitutes reversible error.

99 Moreover, it should be noted that like subsection 79(1), subsection 77(2) establishes distinct statutory elements, each of which must be established before an order prohibiting exclusive dealing can issue. These distinct statutory elements must not be conflated: the existence of the various exclusionary effects described in paragraph 77(2)(*a*), (*b*) and (*c*) must be considered separately from the question of whether there has been a substantial lessening of competition. Since the Tribunal relied, for the purpose of its subsection 77(2) determination concerning exclusionary effects, upon its erroneous paragraph 79(1)(*b*) reasoning, its conclusion in this regard cannot stand.

V. Conclusion

100 For the above reasons, I would allow the appeal with costs, I would set aside the Tribunal's decision in this regard, and I would refer the matter back to the Tribunal for a redetermination in accordance with these reasons and on the basis of the evidence currently on record.

Decision of the Board:

I. Introduction

1 These reasons and decision are issued pursuant to the Tribunal's Reasons and Order of March 28, 2001 (the "Reasons"), and the remedy hearing that took place on June 20, 21 and 22, 2001. In its earlier decision, the Tribunal found that the acquisition of the Ridge Landfill ("Ridge") by Canadian Waste Services Inc. ("CWS") would likely substantially prevent and lessen competition for the disposal of institutional, commercial and industrial waste ("ICI Waste") in two Southern Ontario markets: the Greater Toronto Area ("GTA") and the Chatham-Kent area (Reasons, paragraphs 204, 205, 224 and 234). As requested by the parties, the Tribunal ordered that counsel appear for a further hearing on an appropriate remedy.

2 The relevant background information is provided in the Reasons of March 28, 2001. For present purposes it is sufficient to note that the application brought by the Commissioner of Competition (the "Commissioner") arose from the acquisition by CWS on March 31, 2000, of parts of the solid waste business of Browning-Ferris Industries, Inc. in Canada through the acquisition of certain assets and shares held by the latter. As part of this merger, CWS acquired the Ridge located in Blenheim, Ontario. Prior to this acquisition, the respondents already owned or controlled six landfill facilities in Southern Ontario. The Commissioner alleged in the application that the merger was likely to prevent and lessen competition substantially in the disposal of ICI Waste in the GTA and the Chatham-Kent area due mainly to high barriers to entry and to the lack of effective remaining competition. The Tribunal found that if CWS would have been permitted to keep the Ridge, it would have controlled over 70 percent of the Southern Ontario landfill capacity for ICI Waste from the GTA in 2002 and 100 percent of the capacity for this type of waste from the Municipality of Chatham-Kent ("Chatham-Kent").

3 The issue at this stage of the proceedings is to determine which remedy should be ordered by the Tribunal to eliminate, in all likelihood, the substantial prevention and lessening of competition. When deciding the appropriate remedy, the Tribunal must be satisfied that it is available and effective in restoring competition to the point at which it can no longer be said to be substantially less than it was before the merger.

4 Two alternative orders were put forward by the parties and argued before the Tribunal at the remedy hearing. The Commissioner submits that the divestiture of the Ridge is the only effective remedy. The respondents propose that one or more Disposal Capacity Agreements ("DCAs") at the Ridge in an aggregate maximum amount of 163,000 tonnes will eliminate any substantial prevention or lessening of competition found by the Tribunal for the disposal of ICI Waste from the GTA and the disposal of ICI Waste from Chatham-Kent.

5 The new evidence introduced at this hearing consisted of the affidavit and rebuttal affidavit of Michael R. Baye, the Commissioner's expert, and the affidavit and the rebuttal affidavit of Christopher Vellturo, the respondents' expert. Both provided their opinions regarding the appropriate remedy. While Professor Baye appeared on behalf of the Commissioner in the hearing regarding the allegation of a substantial prevention and substantial lessening of competition in this case, Dr. Vellturo appeared for the first time at the stage of the remedy hearing.

6 No issue was raised before the Tribunal as to whether the divestiture of the Ridge would be an effective remedy. The Commissioner's proposal is very straightforward. However, the availability and the effectiveness of the respondents' proposed remedy is in dispute. The respondents' proposal is more complex and is set out in their draft remedial order.

7 Both the Commissioner's draft divestiture order and the respondents' draft remedial order were filed as confidential documents. However, it is necessary to refer to the contents of these documents in order to meaningfully discuss the respondents' proposal. The following is a summary of the arguments advanced by the parties and by the intervenor.

II. Remedies Proposed by the Parties

A. Commissioner

8 The Commissioner submits that divestiture of the Ridge is appropriate to remedy the substantial lessening and prevention of competition for ICI Waste from the GTA and Chatham-Kent for the following reasons: 1) it is available to the Tribunal under section 92 of the *Competition Act*, R.S.C. 1985, c. C-34 (the "Act"); 2) it is effective because it creates competition to CWS landfills; and, 3) it is proportionate because it is an asset which formed a part of the merger.

(1) Divestiture of the Ridge Landfill

(a) Availability of remedies

9 The Commissioner submits that the proposed remedy must be available under the Act. He argues that paragraph 92(1)(e) of the Act sets out the remedies available to the Tribunal once a finding has been made that the merger substantially prevents and lessens competition.

10 The Commissioner argues that absent the consent of both parties, the Tribunal's authority is limited to the "blunt instruments" of dissolution or divestiture. Further, the Commissioner argues that the "airspace agreements" proposed by CWS are not available remedies because they do not constitute a dissolution of the merger or a divestiture of assets or shares as dictated by paragraph 92(1)(e) of the Act.

(b) Effectiveness of remedies

11 It is the Commissioner's submission that the proposed remedy must be effective and that each party bears the onus of showing that the remedy they propose meets that requirement.

12 According to the Commissioner, the Tribunal's findings make divestiture of the Ridge the appropriate remedy for the following reasons: 1) the Tribunal found that CWS's acquisition of the Ridge substantially prevents and lessens competition; 2) the Ridge is a vigorous and effective competitor in the ICI Waste disposal market; 3) it will discipline the Tipping Fees CWS charges for ICI Waste from the GTA and Chatham-Kent; 4) the Ridge is the closest competitor to CWS's landfills; and, 5) it constrains the exercise of market power by CWS.

13 The Tribunal found in its Reasons, at paragraph 136, that if the Ridge remains independent, the Ridge and CWS's Warwick landfill will be each other's closest competitors. In that respect, the Commissioner submits that divestiture of the Ridge would maintain competition among the Ridge and CWS landfills that are similar distances from the GTA such as the Warwick and the Richmond landfills.

14 Moreover, the Commissioner suggests that divestiture of the Ridge is a proportionate remedy to the Tribunal's finding that the merger substantially prevents and lessens competition because: 1) it directly addresses the Tribunal's concerns; 2) CWS will enjoy as much disposal space as it did pre-merger; 3) the Ridge represents only part of a larger transaction that was allowed to proceed; and, 4) even after divestiture, CWS will retain ownership and control of nearly 50 percent of the Southern Ontario capacity for ICI Waste from the GTA.

15 He relies on his expert, Professor Baye, who concludes that divestiture of the Ridge does not suffer from the shortcomings identified in the airspace agreements proposed by the respondents and would ensure that a landfill that is geographically and economically positioned to compete with other CWS landfills for ICI Waste remains independent.

16 The Commissioner points out that even CWS's new expert in this case, Dr. Christopher Vellturo acknowledges that the divestiture of the Ridge would be an effective remedy and that CWS has proposed divestiture of the Ridge as the alternative remedy in its draft order (CWS's Draft Remedial Order, under cover of June 5, 2001, at paragraphs 11-14, Joint Book of Pleadings, Tab 10. Expert affidavit of Christopher Vellturo (May 24, 2001): exhibit 424).

17 While Dr. Vellturo, the respondents' expert, maintains that full divestiture of the Ridge would impose a social cost of reduced efficiency, the Commissioner points out that there is no evidence from which the Tribunal could find that divestiture of the Ridge is excessive. Further, there is no evidence of any efficiencies arising from this merger nor any evidence of a business rationale for the merger.

18 In response, the respondents submit that the combined divestitures required to discipline both a price increase and to ensure that an anticipated price decrease is not prevented with respect to ICI Waste from the GTA and Chatham-Kent are relatively small. It is their position that requiring a full divestiture of the Ridge would go beyond the purpose of section 92 of the Act and would unnecessarily punish the respondents. They rely on Dr. Vellturo's conclusions and submit that requiring a full divestiture of the Ridge to alleviate the competitive harm found by the Tribunal would be a far more drastic remedy than what is necessary to eliminate the substantial lessening and prevention of competition found by the Tribunal.

B. Respondents

(1) Airspace agreements

19 The respondents propose that a sale to one or more third parties of the right to dispose of a specified volume of waste on an annual and daily basis at the Ridge will be sufficient to eliminate the substantial lessening and prevention of competition found by the Tribunal. Counsel for the respondents filed a draft remedial order including a draft DCA.

20 More specifically, they argue that one or more airspace agreements for the divestiture of a maximum of 155,647 tonnes (assuming the maximum price increases) of capacity at the Ridge will eliminate any likely substantial lessening or prevention of competition in the disposal of ICI Waste from the GTA, and a divestiture of a maximum of 7,154 tonnes of capacity at the Ridge will eliminate any likely substantial lessening or prevention of competition in the disposal of ICI Waste from the region of Chatham-Kent, resulting from the acquisition of the landfill by the respondents. Adding these tonnages, the maximum tonnage to be divested through airspace agreements is approximately 163,000 tonnes.

21 Further, they propose that the DCAs commence on January 1, 2003, or such other date as the Tribunal finds appropriate in the circumstances. The respondents propose that the DCAs terminate in 2010 or 2011 or at such other time as deemed appropriate by the Tribunal. With respect to the tipping fee to be charged, they propose that the per tonne disposal fee to be paid by the purchaser of the rights under the DCAs be set at the marginal cost of the Ridge.

22 The respondents submit that the only limitation on any prospective purchaser of these rights is that it be an arm's length third party with the expressed intention of carrying on the business of waste disposal in the province of Ontario and that it has the managerial, operational and financial capability to engage in the business of waste disposal services.

(a) Availability of remedies

23 As stated above, the remedy proposed by the respondents contemplates the sale of the right to dispose of waste at the Ridge for a specified period of time. The respondents argue that these rights constitute an asset for the purposes of subparagraph 92(1)(e)(ii) of the Act. Hence, they submit that the Tribunal clearly has the jurisdiction to order the remedy proposed by the respondents by virtue of paragraph 92(1)(e) of the Act.

24 The respondents argue that the rights under the airspace agreement have economic value to the owner. They submit that the case law supports a similarly broad definition of the word asset. In *Philips v. 707739 Alberta Ltd.* (2000), 77 Alta L.R. (3d) 302 at 332 (Alta.Q.B.), the term asset was found to mean "any owned physical object (tangible) or right (intangible) having economic value to its owner(...)" Further, they rely on *A.G. Canada v. Gordon*, [1925] 1 D.L.R. 654 (Ont. Sup. Ct.), where the expression "assets" was found to be "(...)frequently used and is well understood as including all kinds of property."

25 They rely on the definition of "asset" found in The Dictionary of Canadian Law, Second Edition:

> 1. Any real or personal property or legal or equitable interest therein including money, accounts receivable or inventory.

In addition, they refer to Black's Law Dictionary with Pronunciations, (Sixth Edition) which provides that assets are:

> Property of all kinds, real and personal, tangible and intangible, including, *inter alia*, for certain purposes, patents and causes of action which belong to any person including a corporation and the estate of a decedent. The entire property of a person, association, corporation, or estate that is applicable or subject to the payment of his or her or its debts.

26 They also suggest that an examination of certain definitions of assets from an accounting perspective illustrates that the agreements proposed by the respondents are clearly assets:

> Assets are economic resources controlled by an entity as a result of past transactions or events from which future economic benefits may be obtained.
>
> Assets have three essential characteristics:
>
> > (a) they embody a future benefit that involves a capacity, singly or in combination with other assets, in the case of profit oriented enterprises, to contribute directly or indirectly to future net cash flows,...;
> >
> > (b) the entity can control access to the benefit; and
> >
> > (c) the transaction or event giving rise to the entity's right to, or control of, the benefit has already occurred. (CICA Handbook-Accounting, Canadian Institute of Chartered Accountants March 1999.)

27 The respondents referred the Tribunal to another accounting text that defines asset as:

> ...anything of use to future operations of the enterprise, the beneficial interest in which runs to the enterprise. Assets may be monetary or nonmonetary, tangible or intangible, owned or not owned. So long as they can make a contribution to future operations of the company and the company has the right to so use them without additional cost in excess of the anticipated amount of that contribution, they constitute assets and are so treated in accounting. (S. Davidson and R. L. Weil, Handbook of Modern Accounting 2nd Ed., McGraw-Hill Book Company, 1977, p.1-6.)

28 Further, the respondents submit that section 12 of the *Interpretation Act*, R.S.C. 1985, c. I-21, provides that "[e] very enactment is deemed remedial, and shall be given such fair, large and liberal construction and interpretation as best ensures

the attainment of its objects." They argue that the Commissioner's interpretation would not best ensure the attainment of the objectives of the Act. To restrict the definition of assets would lead to overly harsh remedies that go beyond what is necessary to achieve the purposes of the Act.

29 The Commissioner has also alleged that the proposed remedy of the respondents does not constitute a "disposal" for the purposes of subparagraph 92(1)(e)(ii) of the Act. Black's Law Dictionary with Pronunciations (Sixth Edition) defines disposal as:

> Sale, pledge, giving away, use, consumption or any other disposition of a thing. To exercise control over; to direct or assign for a use; to pass over into the control of someone else; to alienate, bestow, or part with.

30 The respondents submit that a narrow interpretation of the words "asset" and "disposal" will not serve the purpose of subparagraph 92(1)(e)(ii) of the Act which is to provide the Tribunal with the authority to order a remedy which eliminates the substantial lessening or prevention of competition. It is the respondents' position that the proposed remedy of a divestiture of airspace clearly contemplates the disposal of an asset for the purposes of subparagraph 92(1)(e)(ii) of the Act and that the Tribunal clearly has the jurisdiction to order the proposed remedy.

(b) Effectiveness of remedies

31 The respondents submit that, as illustrated in Dr. Vellturo's expert report, the "combined divestitures" required to discipline both a price increase and to ensure that any anticipated price decrease is not thwarted with respect to ICI Waste from the GTA and Chatham-Kent are relatively small. Hence, they submit that a DCA in an aggregate maximum amount of approximately 163,000 tonnes will eliminate any substantial prevention or lessening of competition found by the Tribunal for the disposal of ICI Waste from the GTA and the disposal of ICI Waste from Chatham-Kent. The effectiveness of the remedy proposed by the respondents is assessed in detail below under the section entitled "Proposed Airspace Agreements", starting at paragraph 54.

C. Intervenor

32 The Corporation of the Municipality of Chatham-Kent, the sole intervenor in this case, has maintained the position throughout the hearing of neither supporting nor opposing either the respondents or the Commissioner on the merits.

33 At the remedy stage, the intervenor took the position that the Host Community Agreement ("Agreement"), entered into between Chatham-Kent and Browning-Ferris Industries Ltd. ("BFIL") in relation to the Ridge, should be be included in the list of assets of the Ridge to any order that the Tribunal will make. At the hearing, the respondents and the Commissioner consented to the request of Chatham-Kent that the Agreement be included as an asset of the Ridge (transcript at 2325, 22 June, 2001).

III. Test to be Applied to Determine Appropriate Remedy

34 The issue at this stage of the proceedings is to determine which remedy should be ordered by the Tribunal to eliminate, in all likelihood, the substantial prevention and lessening of competition. The remedy must be available and effective. Subsection 92(1) of the Act sets out the Tribunal's jurisdiction to order a remedy upon a finding that a merger prevents or lessens, or is likely to prevent or lessen competition substantially. Specifically, paragraph 92(1)(e) provides:

> The Tribunal may, subject to sections 94 to 96.
>
> (e) in the case of a completed merger, order any party to the merger or any other person
>
> > (i) to dissolve the merger in such manner as the Tribunal directs,
> >
> > (ii) to dispose of assets or shares designated by the Tribunal in such manner as the Tribunal directs, or
> >
> > (iii) in addition to or in lieu of the action referred to in subparagraph (i) or (ii), with the consent of the person against whom the order is directed and the Commissioner, to take any other action, or

35 The Supreme Court of Canada set out the test to be applied in determining an appropriate remedy to a substantial lessening or prevention of competition in *Director of Investigation and Research v. Southam Inc.*, [1997] 71 C.P.R. (3d) 417 (SCC) at 445-446:

> The evil to which the drafters of the *Competition Act* addressed themselves is substantial lessening of competition. See *Competition Act*, s. 92(1). It hardly needs arguing that *the appropriate remedy for a substantial lessening of competition is to restore competition to the point at which it can no longer be said to be substantially less than it was before the merger*(...)
>
> (Emphasis added)

Further, the Supreme Court stated at page 446:

> (...) If the choice is between a remedy that goes farther than is strictly necessary to restore competition to an acceptable level and a remedy that does not go far enough even to reach the acceptable level, then surely the former option must be preferred. At the very least, a remedy must be effective. If the least intrusive of the possible effective remedies overshoots the mark, that is perhaps unfortunate but, from a legal point of view, such a remedy is not defective(...)

A. Availability of the Proposed Remedies Under the Act

(1) Proposed "airspace agreements" are not a "dissolution" of the merger

36 When the Tribunal makes a finding that a merger prevents or lessens competition substantially, the Tribunal may choose, as an appropriate remedy, to "dissolve" the merger pursuant to subparagraph 92(1)(e)(i) of the Act. The term "dissolve" undoubtedly connotes the undoing, separation or destruction of something. Such an interpretation is common to the everyday use of the term "dissolve", and the meaning attributed to it in some federal statutes. For instance, corporations that are dissolved cease to exist; Parliament is dissolved before an election; and marriages that end in divorce are "dissolved".

37 When a merger is dissolved, the merger no longer exists and the parties are separated as before the merger. In this case, the merger consists of CWS's acquisition of a substantial portion of the assets and business of BFIL, one of which is the Ridge. The Tribunal is of the view that the remedy proposed by CWS does not dissolve the merger since CWS would retain ownership and control of all of its Ontario landfills and would have an ongoing contractual relationship with the contractor for airspace.

(2) Proposed "airspace agreements" are not a "disposal of assets or shares

38 Further, pursuant to subparagraph 92(e)(ii) of the Act, the Tribunal may order a party to "dispose of assets or shares". The disposition of assets or shares contemplates the transfer of ownership over property. In *Harman v. Gray-Campbell Ltd.*, [1925] 2 D.L.R. 904 at 908 (Sask.C.A.) the Court of Appeal states:

> The words "dispose of" are giving [sic] the following meaning in Murray's New English Dictionary :-"(b) To put or get off one's hands; to get rid of; and (c) To make over or part with by way of sale or bargain"; and in Bouvier's Law Dictionary :-"To alienate or direct the ownership of."

39 The respondents are not proposing to dispose of assets or shares but rather, to enter into an ongoing contractual relationship for the supply of disposal services at a landfill. The proposed "airspace agreements" are contracts that CWS proposes to enter into. The disposal services that would be contracted are not pre-existing assets that could be divested. They are new rights that CWS proposes to create.

40 While CWS describes its proposed remedy as a "divestiture" of "airspace", its draft DCA does not, on its face, purport to "sell" either "airspace" or disposal "capacity". It merely creates a contractual right to deliver an amount of waste to a landfill.

41 CWS's draft "airspace agreements" do not transfer ownership over property or even create an interest in property. Rather, they expressly negate the possibility that they create any proprietary interest in the following terms. Section 9 of CWS's draft DCA (Joint Book of Pleadings, Tab 10) states:

> (...)Hauler shall have a limited, non-exclusive license to enter the Facility for the limited purpose of, and only to the extent necessary for (i) off-loading Acceptable Waste at the location and in the manner directed by CWS, and (ii) removing or causing to be removed, Non-Conforming Waste(...)
>
> Except for the limited, non-exclusive license granted by CWS to the Hauler in Subsection 9(1) above, *Hauler acknowledges, agrees and confirms that it has no interest or rights whatsoever in respect of the Facility*.
>
> (emphasis added)

42 One of the characteristics of an asset is that it can be bought and sold. However, section 17 of CWS's draft DCA (Joint Book of Pleadings, Tab 10) states that the proposed "airspace agreements" would not be transferable without the consent of CWS:

> Hauler may not assign, transfer or otherwise vest in any other Person any of its rights or obligations under this Agreement without the prior written consent of CWS(...)

43 Under the proposed "airspace agreements", CWS would keep ownership and control of 70 percent of the capacity for the disposal of ICI Waste in the GTA and 100 percent of the capacity for the disposal of ICI Waste in Chatham-Kent (expert affidavit of Michael Baye, (May 23, 2001): exhibit 421, paragraph 13).

44 The airspace agreements are not a "disposal" of assets. Rather, they are the creation of a disposal right on the part of the contracting party. They are agreements between CWS and a hauler that provides the hauler, over a period of time, a right to dispose of certain amounts of waste at the Ridge and a limited right of access to the facility. It does not have for effect of disposing of any part of the Ridge. It does not provide the contracting party any right in the Ridge. It simply gives the contracting party the right to dispose of some amount of waste at the Ridge over some period of time. The term "dispose of" connotes "getting rid of" some thing that is owned, as opposed to creating some right of access.

45 Further, the Tribunal can only order divestiture of assets that are acquired as part of the merger, or that one of the parties to the merger may already have. That does not mean that, post-merger, creating a contract or entering into a contract to create a right constitutes the disposal of that right. In the Tribunal's view, the creation of a contract, post-merger, to provide a service to somebody does not constitute disposal of an asset.

46 In *Director of Investigation and Research v. Air Canada et al.* (1993), 49 C.P.R. (3d) 417, the Federal Court of Appeal confirmed that, in a contested proceeding as opposed to a consent proceeding, the authority of the Tribunal is limited to the "blunt instruments" of dissolution or divestiture. Anything beyond that can only be done, as is shown in subparagraph 92(1)(e)(iii) of the Act, on a consent basis. The Court stated at page 430:

> Section 92(1)(e)(iii) by contrast allows the consent of the parties to expand the type of order that the Tribunal can make in merger cases. The power of the Tribunal to make the expanded order, however, is conditioned by and dependent upon the consent.
>
> Without consent, the Tribunal is limited to ordering the dissolution of the merger (subpara. (i)) or the divestiture of assets or shares (subpara. (ii)). These are important and even drastic powers, but in the hands of either the Director or the Tribunal, they constitute a rather blunt instrument for the implementation of Canada's competition policy. Indeed, it is the very bluntness of that instrument and the all-or-nothing nature of the orders that can be given under subparas. (i) and (ii) which no doubt give subpara. (iii) its vitality and increase its utility(...)

47 Unlike dissolution or divestiture, the proposed "airspace agreements" involve behavioural components, since they create an ongoing contractual relationship involving mutual promises to be performed over a period of time. The proposed "airspace

agreements" constitute a behavioural remedy and not a disposition of assets as suggested by the respondents. The Tribunal cannot order behavioural remedies under subparagraph 92(1)(e)(iii) of the Act, absent consent of both the respondent and the Commissioner.

48 In *Director of Investigation and Research v. Southam Inc.* (1992), 47 C.P.R. (3d) 240 (C.T.) at 250-251, the Tribunal held that it did not have authority to order proposed service contracts in aid of a proposed divestiture of assets without the consent of the Commissioner:

> The Director's first objection to the respondents' proposal is that it would require the tribunal to exceed its jurisdiction, since the proposed order would go beyond the dissolution of the merger or the divestiture of shares or assets as contemplated in s. 92(1)(e)(i) and (ii). In his view, the terms that would require the respondents to offer such agreements to a purchaser fall within s. 92(1)(e)(iii). The tribunal can only make an order under that subparagraph on the consent of the parties. As previously stated, the Director does not consent. The respondents are of the view that the tribunal has considerable latitude in ordering the disposition of assets under s. 92(1)(e)(ii) "in such a manner as the Tribunal directs" and could issue the suggested order. The tribunal does not agree that requiring the respondents to provide would-be purchasers with an option to contract for services from the North Shore News or LMPL can be considered to fall within the terms it may place on the disposition of assets pursuant to s. 92(1)(e)(ii).

49 Further at page 252, the Tribunal states:

> Without adopting any particular characterization such as "tame competitor", the tribunal agrees that a remedy that depends, for its possible success, on supply contracts between the only competitors in the market is somewhat suspect. While the nature of the proposed remedy necessarily precludes a detailed assessment of its terms and conditions, the tribunal considers that the small accommodations and goodwill that are required to make a long-run supply relationship work would not create the kind of climate that is desirable and necessary to restore the competitive situation disrupted by the merger(...)

50 The Tribunal is of the view that the same reasoning applies in this case.

B. Effectiveness of the Proposed Remedies

51 The Commissioner and the respondents submitted expert economic evidence regarding the effectiveness of each of their proposed remedies. The Tribunal assesses that evidence below.

(1) Proposed "Airspace Agreements"

52 The respondents' remedy is to require CWS to enter into agreements with third parties to dispose of ICI Waste at the Ridge. In these agreements, CWS would sell, for an unspecified up-front payment to be negotiated, rights to dispose of such waste at the Ridge at this landfill's marginal cost of disposal. The third-party purchasers of these rights could be haulers or transfer stations that seek to dispose of ICI Waste from the GTA or from Chatham-Kent at the Ridge. Third parties might also be entities in the business of selling disposal services at the Ridge to haulers and transfer stations of that ICI Waste.

53 During the term of these airspace agreements, CWS would continue to wholly-own the Ridge landfill and operate all aspects of waste disposal there. The respondents propose specific dates for the term of the airspace agreements and they indicate that the Tribunal may wish to establish different dates based on its assessment of the onset and termination of the condition of excess capacity.

54 The respondents' expert, Dr. Vellturo, uses the critical sales loss procedure to assess remedies for the substantial prevention and lessening of competition found by the Tribunal regarding the disposal of ICI Waste generated in the GTA and in Chatham-Kent. As a result of his critical sales loss analysis, he finds that relatively small reductions in waste volumes at the Ridge are required (2,400 tonnes -163,000 tonnes) to eliminate the substantial lessening and prevention of competition found by the Tribunal with respect to both the GTA and Chatham-Kent allegations. He concludes that airspace agreements covering

such volumes are the appropriate remedy and that the total divestiture of the Ridge landfill sought by the Commissioner is unnecessary.

55 Dr. Vellturo also states that total divestiture would prevent the attainment of efficiencies that would result from the acquisition of the Ridge by CWS, and on this basis he criticizes the Commissioner's proposed remedy as inappropriate (expert affidavit of Christopher Vellturo (June 13, 2001): exhibit 426).

56 The Commissioner's economic expert, Professor Baye, opines that the airspace agreements are insufficient to alleviate the substantial lessening and prevention of competition. He concludes that they would likely lead to collusion, and would create a "trivial non-competitive fringe" of third parties with too little volumes to compete with CWS at the Ridge; he is also critical of Dr. Vellturo's critical sales loss analysis. His criticisms are directed mainly to Dr. Vellturo's analysis of the remedy regarding the GTA allegations (expert affidavit of Michael Baye (June 13, 2001): exhibit 422).

57 As Dr. Vellturo's analysis of remedies for the GTA requires him to a undertake a spatial competition analysis, his assessment is more complicated than that for Chatham-Kent. In order to focus on the critical sales loss procedure, the Tribunal first addresses the remedies Dr. Vellturo advances for Chatham-Kent.

(a) Critical Sales Loss Analysis

58 In his expert report, Dr. Vellturo defines the critical sales loss procedure as follows:

> The critical loss required to ensure that a firm would not have an incentive to raise price is determined by solving for the minimum volume loss that would render a price increase (or, correspondingly, a failure to decrease price) unprofitable to the firm. (expert report of Christopher Vellturo (May 24, 2001): exhibit 423, at page 6, item 2)

59 Dr. Vellturo illustrates the procedure by positing a firm with a current output of 100 units, marginal cost of $2/unit and selling price of $5/unit. Accordingly, gross profit per unit (or margin) is $3 and gross profit is $3 × 100 units = $300 in the *status quo*. The firm determines whether to increase the price by 10 percent to $5.50 by considering the impact on gross profit. If the firm expects the price increase to reduce sales by 10 units, the gross profit per unit increases to $3.50 and gross profit will increase to $315; hence, the increase will be profitable as compared to the *status quo*. However, if the firm expects a loss in sales of 20 units, gross profit will be $280 and the increase will be unprofitable (transcript at 1988 and 1989 (21 June, 2001)).

60 In this example, the critical sales loss for a 10 percent price increase is that loss in unit sales that maintains gross profit at $300. With elementary algebra, the critical sales loss is found to be approximately 14 units. The firm will raise the price by 10 percent if the expected sales loss is less than 14 units, and it will not raise the price by 10 percent if the expected sales loss is greater than 14 units. Accordingly, as long as the firm can produce and sell at least 86 units after the price increase, that increase will be profitable as compared to the *status quo* (transcript at 1989 and 1990 (21 June, 2001)).

61 The magnitude of the critical sales loss depends on the particular price increase being considered and the margin in the status quo. The critical sales loss procedure calls for a comparison of the loss of unit sales that the firm expects to result from a posited price increase with the critical sales loss. If the expected loss of unit sales is less than the critical sales loss, the price increase is profitable.

62 The Tribunal notes that in this procedure, the marginal cost is presumed to be constant. In Dr. Vellturo's example, whether the firm's output is 100 units, 86 units, or some other figure, the increase in the firm's total cost due to the additional unit of output remains $2. As a broad indication or rule of thumb, this presumption is the usual one, although it should be refutable in a particular fact situation, particularly in situations involving large changes in output and/or price.

63 The Tribunal notes that Dr. Velluro uses critical sales loss analysis to examine the competitive effect of the transaction directly. However, the critical sales loss procedure is also used to delineate relevant markets and is an alternative to the hypothetical monopolist approach. In the hypothetical monopolist approach, the key question is whether demand is so elastic

that even a monopolist would not raise price by at least a small but significant and non-transitory amount. If demand is that elastic, a relevant market has not been identified and the candidate market must be expanded to include another product.

64 The critical sales loss procedure delineates a market by asking whether a monopoly could increase the price by up to a given amount and be no worse off in terms of profit than before the price increase. If the monopoly would lose so much business that the price increase would not be profitable in this sense, then a relevant market has not been identified.

65 While the two procedures share certain features, the hypothetical monopolist approach is consistent with conventional profit-maximization while the critical sales loss approach is not. Moreover, the hypothetical monopolist approach requires knowledge of, or an explicit assumption about, the demand curve while the latter does not. While there is debate in the American antitrust literature whether one procedure is to be preferred for delineating relevant markets, it appears that both procedures are widely used. The Tribunal relied heavily on the hypothetical monopolist approach when it decided the relevant market at the hearing on the merits.

66 The Tribunal also observes that the lost sales volume that makes a 10 percent price increase unprofitable also makes any lesser price increase unprofitable. However, that critical sales loss does not indicate that even larger price increases of 20 percent, 50 percent or even 100 percent would also be unprofitable. Thus, a small price increase may be unprofitable based on a critical sales loss analysis but a larger increase may be profitable.

(b) Critical Sales Loss Analysis for Chatham-Kent

67 In evaluating the airspace remedies proposed in regard to the disposal of ICI Waste from the GTA and to the disposal of ICI Waste from Chatham-Kent, Dr. Vellturo writes:

> The appropriate remedy for the competitive harm envisioned by the Tribunal...is to require divestitures that provide third parties with the right to dispose of ICI volumes. Sufficient volumes would be divested so that the amount of ICI volume that the Respondents stand to lose following a unilateral price increase (or a failure to decrease price from current market levels) would render the price increase unprofitable.
>
> . . .
>
> If third parties did control such volumes, any unilateral price increase by the Respondents would result in the loss of volumes at least equal to the critical loss. Customers would dispose of their ICI waste with the third party who controlled the divested volume rather than with the Respondents. By design, this third party would be able to serve sufficient volume that the Respondents would face lower profits by having implemented the price increase. As a result, the Respondents would not implement the price increase in the first instance, since it would not be in their profit-maximizing interest to do so. (expert report of Christopher Vellturo (May 24, 2001): exhibit 423, at pages 6-7)

68 As shown in Table 6 of Dr. Vellturo's expert report, he uses the total volume of ICI Waste from Chatham-Kent disposed of at the Ridge and Gore landfills per year. Using the pre-merger tipping fee at the Gore landfill and marginal cost at the Ridge, he calculates the gross profit per tonne and finds the post-acquisition, total gross profits at those landfills are $900,676 absent any decline in tipping fees due to expansion of capacity. This calculation assumes that both landfills would charge the same tipping fee for local ICI Waste and incur the same marginal cost.

69 As the Tribunal noted in its decision, the annual permitted capacity at the Ridge will expand from 220,000 tonnes in 1999 to 680,000 tonnes in 2002. Accordingly, the capacity of landfills in Chatham-Kent to accept local ICI Waste will rise dramatically until the Gore closes. In Table 6 of his expert report, Dr. Vellturo examines three scenarios in which post-expansion price decreases of 5 percent, 10 percent, and 15 percent are thwarted by CWS after the acquisition of the Ridge. He analyzes these scenarios by asking what price increases would be needed to restore the original price and finds that increases of 5.3 percent, 11.1 percent and 17.6 percent would be needed respectively.

70 In the first scenario, Dr. Vellturo hypothesizes that the expansion of capacity would lead to a 5 percent decline in tipping fees. Accordingly, gross profit per tonne would decline and total gross profit would then be $842,988. Absent a remedy, CWS would thwart this decline by restoring the tipping fee through an increase of approximately 5.3 percent in the post-expansion price. In so doing, it would, or could expect to, lose volumes.

71 He determines the annual disposal tonnage that would make CWS's gross profit from the Ridge and Gore sites following its price increase equal to the post-expansion level of $842,988. Since the price increase restores the profit margin per tonne, the critical annual volume is found to be approximately 35, 000 tonnes. If CWS's annual disposal tonnages exceed this level, the price increase would be profitable and hence would be imposed unilaterally.

72 Accordingly, the critical sales loss is 2,384 tonnes. By taking slightly more than 2,384 tonnes of capacity out of CWS's control, Dr. Vellturo concludes that it would not be profitable for CWS to thwart the hypothesized 5 percent decline in tipping fees for ICI Waste from Chatham-Kent. In his testimony, Dr. Vellturo states that the tonnage required to be taken away is 2,500 tonnes (transcript at 2029, lines 19-21 (21 June, 2001)).

73 On this basis, he concludes that the remedy for the substantial prevention and lessening of competition in the disposal of ICI Waste from Chatham-Kent is the divestiture, through airspace agreements to third parties, of 2,500 tonnes, in the event of a 5 percent decline in tipping fees due to capacity expansion. The respondents indicate that the airspace agreements would cover space at the Ridge.

74 He repeats this analysis for hypothesized price declines of 10 percent and 15 percent. The required price increases needed to thwart these declines are 11.1 percent and 17.6 percent respectively, and the required divestitures are minimally 4,770 tonnes and 7,154 tonnes respectively.

(c) Tribunal's Assessment of Chatham-Kent Analysis

75 The Commissioner's case regarding the Chatham-Kent allegation is premised on the assessment that, following its acquisition of the Ridge, CWS would be able to prevent the decline in tipping fees on locally-generated ICI Waste that excess capacity would bring about. The Tribunal accepted this position (Reasons, paragraph 205).

76 According to Dr. Vellturo's analysis, CWS would, post-merger, stand to lose volumes of such waste, but increase gross profits if it were to raise the tipping fee, or equivalently if it failed to decrease the tipping fee, in response to excess capacity in Chatham-Kent. He regards either action as an effective increase in the tipping fee. His remedy, premised on the critical sales loss analysis, is to remove business volumes equal to the critical sales loss so as to make the effective price increase unprofitable.

77 However, it is not clear to the Tribunal that, absent a remedy, CWS would lose any volume of locally-generated ICI Waste. First, the only capacity-expansion in Chatham-Kent will occur at the Ridge itself.

78 Second, in its decision, the Tribunal noted that since the Gore landfill is owned by CWS, the acquisition of the Ridge by CWS would prevent competition between them. The Tribunal also found that there is no effective remaining competition and little prospect of entry, and that CWS will control 100 percent of the Chatham-Kent disposal market for ICI Waste. It appears to the Tribunal that in this situation of inelastic demand, a remedy would have to remove very large volumes to make a small effective price increase unprofitable. While Dr. Vellturo's critical sales loss for a 5.3 percent price increase is 2,384 tonnes, this is only 6.4 percent of tonnages of locally-generated ICI Waste delivered to the Ridge and Gore landfills and nothing in the record indicates that CWS would lose, or expects to lose, even that amount of business.

79 These considerations lead the Tribunal to doubt the effectiveness of airspace agreements in constraining any anti-competitive pricing policy of CWS in respect of ICI Waste generated in Chatham-Kent following the acquisition of the Ridge.

80 However, even accepting Dr. Vellturo's critical sales loss analysis, on his figures, the gross profit per tonne at the lowest tipping fee at the Gore for local ICI Waste exceeds 70 percent of price and exceeds 300 percent of marginal cost at the Ridge. It appears to the Tribunal that there is considerable room for tipping fees to fall much farther than the 5 to 15 percent range that

he analyzes, even if they do not fall to marginal cost. Accordingly, the Tribunal is of the view that Dr. Vellturo's critical sales loss estimates and remedies regarding Chatham-Kent are very likely too low.

81 In this regard, the Tribunal notes that while Dr. Vellturo's remedies are designed to make the complete thwarting of price declines of 5 percent, 10 percent and 15 percent unprofitable, it cannot be concluded that a larger increase would not be profitable. Moreover, he does not predict a particular price decline for locally-generated ICI Waste in Chatham-Kent. He states only that, in that event of a decline in the 5 to 15 percent range, the remedies are the divestitures of airspace that he has found.

82 Dr. Vellturo does not address how many different competitors need to be established in Chatham-Kent by airspace agreements. Professor Baye is concerned, in the GTA context, that the divestitures of airspace suggested by Dr. Vellturo would, at best, create a non-competitive fringe. Given the competitive situation in Chatham-Kent, the Tribunal shares this concern.

83 Since Dr. Vellturo does not indicate which price decline might be expected, he puts the onus on the Tribunal to do so and to select from among his various remedies. In the Tribunal's view, this is inadequate. The Tribunal did not identify a specific price decline in its reasons regarding the Chatham-Kent allegation because no specific percentage decline was advocated or contested in the hearing on the merits. The Tribunal concluded that excess capacity at the Ridge would lead to greater competition and lower tipping fees for ICI Waste from Chatham-Kent and that the acquisition of the Ridge by CWS would prevent such competition from occurring (Reasons, paragraph 205).

84 Without expert opinion evidence and rebuttal evidence thereon, the Tribunal has no basis for adopting a particular price decline and consequential remedy that Dr. Vellturo has advanced.

85 In view of its previous findings that, after the acquisition of the Ridge, CWS would control all of the disposal capacity for locally-generated ICI Waste in Chatham-Kent and that there would be no effective competition to CWS for the disposal of such waste, and in light of its concern about the critical sales loss methodology, and in light of the limited range of price changes that Dr. Vellturo has analyzed, the Tribunal is not satisfied that the remedies analyzed by Dr. Vellturo for Chatham-Kent would be effective.

(d) Critical Sales Loss Analysis for GTA

86 Dr. Vellturo employs a spatial analysis of competition of disposal of ICI Waste from the GTA in the expected environment of substantial excess capacity. His procedure allocates ICI Waste from the GTA to a landfill in Southern Ontario based on its distance from the GTA, and its effective price per tonne, which is its minimum tipping fee plus the transportation cost per tonne from the GTA. In this framework, which he asserts is broadly similar to the analysis submitted by the Commissioner and accepted by the Tribunal, the last landfill to receive ICI Waste from the GTA is the "last active landfill". It sets its tipping fee in relation to that charged by the next distant landfill, the "marginal landfill", to the extent that the latter has excess capacity. The price charged by a landfill is the tipping fee that makes the transfer station indifferent between disposing there and hauling it to the next distant landfill. Accordingly, the tipping fee at the marginal landfill determines the tipping fees charged by all landfills closer to the GTA.

87 Having established the tipping fees at each landfill, Dr. Vellturo allocates ICI Waste from the GTA to those landfills according to their distance from the GTA. He finds that the last active landfill is GreenLane, whose minimum tipping fee is just below that of the marginal landfill, the Essex-Windsor Solid Waste Authority. Dr. Vellturo concludes that since the marginal landfill is not owned by CWS, then whether or not CWS acquires the Ridge it will not be able to influence prices for ICI Waste from the GTA in Southern Ontario. On this basis, he cannot conclude that post-expansion prices will be lower than those currently prevailing and he opines:

> As a result, no remedy is needed in order to prevent the realization of assumed decreases in price that are less than 5 [percent] below currently prevailing prices, since Green Lane [sic] will continue to have sufficient excess capacity to discipline the Respondents from seeking such price increases (or correspondingly, failing to decrease price). (expert affidavit of Christopher Vellturo (May 24, 2001): exhibit 423, at p.8)

88 During his examination and cross-examination, Dr. Vellturo restates and clarifies his opinion. It is that the model of spatial competition that the Tribunal has accepted does not, in his formulation using data from the record, lead to a forecast of declining tipping fees. Accordingly, the only price decline that could be expected is a small one.

89 Using the critical sales loss procedure, Dr. Vellturo determines the volumes of waste capacity that, if taken out of CWS's control, would make it unprofitable for it to thwart small price decreases of 5 percent, 10 percent and 15 percent that might be expected absent its acquisition of the Ridge. To thwart these declines, CWS would have to raise the post-acquisition price by 5.3 percent, 11.1 percent and 17.6 percent respectively.

90 Assuming a 5 percent price decrease, Dr. Vellturo finds that no divestiture of any volume is needed to make the thwarting thereof unprofitable. For decreases of 10 percent and 15 percent, he estimates that divestiture of 53,225 tonnes and 155,647 tonnes would suffice.

91 In his rebuttal report, Dr. Vellturo conditions his conclusions by noting that all such volumes be divested at the Ridge and that the divested volumes must be done at CWS's marginal cost at the Ridge. He concludes that airspace agreements covering these volumes would accomplish the goal of eliminating the substantial lessening and prevention of competition that results from the acquisition of the Ridge in respect of ICI Waste from the GTA (expert rebuttal affidavit of Christopher Vellturo (June 13, 2001): exhibit 426).

(e) Tribunal's Assessment of GTA Analysis

92 It appears to the Tribunal that Dr. Vellturo agrees with the Tribunal's conclusion from Professor Baye's evidence, that each landfill accepting ICI Waste from the GTA views demand as highly elastic. Even a small increase in its tipping fee would lead to a significant loss of business to competing landfills. Thus, in the Tribunal's view, the relatively small critical sales volumes found by Dr. Vellturo are not surprising. His estimate of gross profit per tonne at the Ridge is high: exceeding approximately 70 percent of sales and exceeding approximately 300 percent of cost. This means that even small reductions in output (i.e. tonnes disposed) will reduce gross profit significantly at the Ridge. CWS would not willingly impose such losses on itself and would hence refrain from small price increases that occasion large volume reductions. As a result, the critical sales loss volumes are small.

93 However, the Tribunal cannot conclude that CWS views large price increases in the same way. As the Tribunal observed in its decision, after it acquires the Ridge, CWS would own 70 percent of total disposal capacity available for ICI Waste from the GTA after 2002. Moreover, it would own 85.8 percent of the excess capacity available for such waste. The Tribunal found that CWS would be able to affect the level of tipping fees in the relevant geographic market. In light of Dr. Vellturo's analysis, the Tribunal's concern is heightened by the evidence that the marginal and last active landfills have been weak competitors for ICI Waste from the GTA.

94 The Tribunal accepted the evidence that the GreenLane site (i.e. the last active landfill) was not competitive on tipping fees; hence it received little ICI Waste from the GTA. As the Tribunal noted in its decision, GreenLane's high tipping fee is due, at least in part, to the significant community host fee that it must pay on every tonne of waste it receives (Reasons, paragraph 149). There is no indication on the record to suggest that GreenLane's pricing would change.

95 Moreover, Essex-Windsor (i.e. the marginal landfill) had received no ICI Waste from the GTA in 1999 due to restrictions on its service area, though its board of directors had since authorized 100,000 tonnes of annual capacity to be marketed outside the municipality. As a result, there is no tipping fee for such waste in the record. To complete his analysis, Dr. Vellturo needed to make an assumption about the tipping fee that Essex-Windsor would have charged had it been able to accept such waste:

> Remember, the Essex-Windsor price I have here is an imputed price based on historical information (transcript at 2057, lines 9-11 (21 June, 2001)).

Thus, it appears to the Tribunal that a critical part of his analysis, the tipping fee that Essex-Windsor would have charged, and would have constrained the tipping fee at GreenLane, is a construct not based on actual tipping fee evidence for Essex-Windsor.

96 Moreover, he implicitly assumes that while some Essex-Windsor capacity would be offered to transfer stations in the GTA seeking to dispose of ICI Waste, Essex-Windsor would receive none. In this regard, the practice of price discrimination may be relevant, but, by referring only to the lowest tipping fee charged by a landfill, Dr. Vellturo's allocation procedure does not take this practice into account. Given the widespread practice of price discrimination by landfills seeking to obtain ICI Waste from the GTA, the Tribunal is reluctant to conclude without better evidence that Essex-Windsor would not receive any such waste.

97 As the last active landfill and marginal landfill respectively, the GreenLane and the Essex-Windsor landfills are crucial to Dr. Vellturo's analysis of remedies. In the Tribunal's view, there is insufficient evidence on the record for it to be confident that these sites would exert the discipline that he attributes to them.

98 Professor Baye criticized the airspace remedy in the GTA context as likely to create a competitively insignificant fringe of parties that would collude with, rather than compete with, CWS. The respondents argue that any such collusion would be short-lived in light of the benefits a party would derive from cheating on any implicit agreement on price by even a very small amount. The Tribunal notes that airspace rights at the Ridge would place the parties and CWS literally side-by-side, and CWS would be able to observe the conduct of parties easily. Professor Baye notes that CWS would be able to disrupt the operations of the parties at the Ridge by requiring unnecessary inspections and tests of waste delivered to the Ridge. As a result, the Tribunal is concerned that CWS has the ability to punish any deviations from an implied collusive agreement.

99 Dr. Vellturo noted that, to be effective, a collusive agreement would require the cooperation of other landfills, specifically GreenLane and Walker, that have disparate interests. Having noted its concern about the competitiveness of GreenLane above, the Tribunal also refers to its decision wherein it noted that the Walker landfill is already at capacity, and that a significant amount of the volume of waste received at the Walker landfill is brought in by CWS (Reasons, paragraph 148). It is not clear to the Tribunal that Walker's interests would diverge in a collusive environment.

100 The Commissioner notes that while the proposed airspace agreements makes provision for compensation in the event of disproportionate inspections by CWS, the administration of this contractual provision is itself problematic and could potentially lead to dispute resolution by the Tribunal. Third party rights must be clear in any order. The Tribunal does not favor ongoing monitoring particularly when, as in the case before it, there is a clear structural remedy which will be effective, that is the divestiture of the Ridge. The proposed airspace agreements could not detail the amount of compensation to be awarded in a variety of circumstances. CWS would have an incentive to oppose compensation or reasonable compensation given that these agreements are designed to be unprofitable for CWS. There is reason to doubt the effectiveness of the airspace agreements.

101 Similar concerns arise with respect to the provision of the airspace agreement that allows CWS to adjust price terms in the event of an unforeseen change in applicable law. Although the provision calls for the fair application of any such increase to all users of the facility, it places the Tribunal in the position of deciding whether the price adjustment was reasonable and fairly applied. Again, the Tribunal is reluctant to place itself in such a position. The force majeure clause and the restriction on assignment raise similar concerns.

102 These contractual considerations, in conjunction with CWS's market share and the lack of effective remaining competition and entry, and its concerns with Dr. Vellturo's emphasis on GreenLane and Essex-Windsor sites, lead the Tribunal to believe that airspace agreements will not likely be effective remedies.

(2) Divestiture of the Ridge

103 The Commissioner advocates that the only effective remedy is the total divestiture of the Ridge by CWS, and relies on the opinion evidence of Professor Baye. Professor Baye based his analysis of the remedy on the theory of spatial competition that he introduced at the hearing on the merits.

104 In his expert report, Professor Baye noted that any effective remedy must maintain vigorous competition among the Ridge, Warwick and Richmond landfills, all of which are similar distance from the GTA. While the divestiture of any one of these landfills could, in his opinion, remedy the anti-competitive effects of the transaction on the disposal of ICI Waste from

the GTA, he concludes that the divestiture of the Ridge is the appropriate remedy. He notes, *inter alia*, that unlike the Warwick or Richmond sites, the Ridge is not part of the CWS infrastructure and that divestiture of either of these other sites would not address the anti-competitive concern regarding the disposal of locally-generated ICI Waste in Chatham-Kent; hence another remedy would be required to address that concern (expert affidavit of Michael Baye (May 23, 2001): exhibit 421).

105 In his expert rebuttal report, Dr. Vellturo suggests that total divestiture of the Ridge is excessive in light of the statutory goal of eliminating the substantial lessening or prevention of competition. In this connection, he states that Professor Baye's analysis of competition among similarly situated landfills is incorrect and that the airspace remedy restores such competition. In addition, he concludes that full divestiture of the Ridge will result in the loss of potential pro-competitive operational efficiencies (expert rebuttal affidavit of Christopher Velluturo (June 13, 2001): exhibit 426).

106 With regard to efficiencies, Dr. Vellturo, relying on his experience, states that logistics savings are available to an operator who reallocates waste streams optimally when expanding its network of landfills. In addition, such expansion offers opportunities for specialization of facilities, hence creating additional operational efficiencies. Finally, a larger landfill network creates greater incentives for the owner or operator to consider investments in new technologies or procedures because the payout to such developments can be enjoyed across a greater range of facilities. He concludes that a full divestiture would impose the social cost of reduced efficiency without any corresponding benefit in restoring competition.

(3) Tribunal's Assessment

107 There is no issue about the effectiveness of divestiture of the Ridge as a remedy. There are, however, significant concerns about the effectiveness of these airspace agreements. CWS had the burden of establishing that these agreements would be effective to remedy the anti-competitive effects the Tribunal has found.

108 As noted above, the Tribunal is not convinced that the airspace agreements proposed by the respondents, and analyzed by Dr. Vellturo, constitute an effective remedy. Moreover, in its decision, the Tribunal accepted that the Ridge competes with Warwick and Richmond landfills for ICI Waste from the GTA and that the present transaction prevents such competition (Reasons, paragraph 204).

109 Regarding gains in efficiency, the Tribunal observes that no evidence of such gains from the present transaction was presented at the hearing on the merits; indeed, such gains were not even alleged. Accordingly, the Tribunal regards Dr. Vellturo's efficiency claims as speculative.

110 As stated above, the remedy proposed by the respondents is not available under the Act. Since the Tribunal has found that the divestiture of the Ridge is an available and effective remedy and complies with the provisions of the Act, the Tribunal is not obliged to consider alternative submissions. However, the Tribunal is of the view that even if these airspace agreements constituted a remedy available under the Act, contractual arrangements of that nature would be of some concern. Indeed, once there has been a finding that a merger is likely to substantially prevent or lessen competition, a remedy that permanently constrains that market power should be preferred over behavioural remedies that last over a limited period of time and require continuous monitoring of performance. This is not to say that, in cases where both the respondents and the Commissioner consent, behavioural remedies cannot be effective. However, the Tribunal notes that enforcing the remedy proposed by the respondents would have the potential of being cumbersome and time-consuming and that monitoring such order would involve the Commissioner in commercial conduct more than would the administration of the divestiture order.

111 In *United States v. E.I. Du Pont de Nemours et al.*, 366 U.S. 316 (1961), the court rejected Du Pont's proposed behavioural remedy under which Du Pont would retain the shares whose purchase gave rise to the violation, but would "pass through" the voting rights to Du Pont shareholders. The Supreme Court held, at page 6 (QL) paragraph 24, that divestiture is the appropriate remedy for mergers that violate the *Clayton Act* (15 U.S.C.):

> Divestiture or dissolution has traditionally been the remedy for Sherman Act violations whose heart is intercorporate combination and control [...]. Divestiture has been called the most important of antitrust remedies. It is simple, relatively easy to administer, and sure. It should always be in the forefront of a court's mind when a violation of [s] 7 has been found.

112 Similarly, in *Community Publishers Inc. et al. v. NAT et al.*, 892 F. Supp. 1146 at 1176 (West. Dist. Ark., 1995) at 36 (QL), the United States District Court rejected a form of permanent hold separate order proposed by NAT.

113 Further, as noted in Table 1 of its decision, the Tribunal found that CWS would own 70 percent of the available capacity for ICI Waste from the GTA if it did not divest the Ridge landfill, and 48 percent if it did. The Tribunal also accepted Professor Baye's estimates that CWS would control 85.8 percent of total excess capacity if it did not divest the Ridge, and 63.6 percent if it did (Reasons, paragraph 196). When these shares of capacity are considered in light of the various factors stated in section 93 of the Act, the Tribunal does not accept that the total divestiture of the Ridge constitutes an excessive remedy.

114 Divestiture of the Ridge is the appropriate remedy to deal with the problem that the Tribunal has found and it is likely to be effective. It is neither excessive nor disproportionate. Indeed, in this case, the Commissioner is not asking the Tribunal to either dissolve a merger or order divestiture which goes beyond the specific assets which are the root of the problem. It is not, for instance, the situation that occurred in the *Southam* case (referred to above at paragraph 48), where the divestiture proposed by the Commissioner went beyond what was necessary to address the anti-competitive effects, but was nevertheless ordered because no other effective remedy was available. In this case, CWS will enjoy as much disposal space as it did pre-merger. Furthermore, the Ridge is only part of a larger transaction that was allowed by the Commissioner to proceed. Even after divestiture, CWS will retain ownership and control of nearly 50 percent of the Southern Ontario capacity for ICI Waste from the GTA. There is no evidence of hardship or anything of that nature that arises out of proposed divestiture. The Commissioner's remedy clearly meets the test of eliminating the substantial prevention and lessening of competition resulting from the acquisition of the Ridge.

115 The Tribunal notes that the draft divestiture order incorporates terms and conditions with respect to the sale of the Ridge that are necessary and reasonable, including a deadline for effecting the sale and provision for the appointment of a trustee in default of a sale within that time limit. The draft divestiture order proposed by the Commissioner provides that CWS would have 90 days to divest the Ridge, failing which it would pass into the hands of a trustee for sale. The respondents argue that 90 days is too short a period of time.

116 The Commissioner suggests that Deloitte & Touche be the trustee, in the event that a trustee is required. The reason for this is that Deloitte & Touche has been the monitor under the Consent Interim Order dated April 28, 2000. The Tribunal accepts counsel for the Commissioner's suggestion that Deloitte & Touche be the trustee. The respondents did not raise any objection in that regard following the remedy hearing. The Tribunal notes that the draft divestiture order contains usual terms expected to be found in a divestiture order.

IV. Order

117 For these reasons, the Tribunal orders that the respondents divest the Ridge in accordance with the divestiture order attached hereto.

Decision of the Board:

118 WHEREAS the Tribunal has determined that the acquisition by Canadian Waste Services Inc. of the Ridge Landfill is likely to result in a substantial lessening and substantial prevention of competition in the disposal of industrial, commercial and institutional waste ("ICI Waste") from the Greater Toronto Area ("GTA") as well as for the disposal of ICI Waste from the Chatham-Kent Area;

119 AND WHEREAS the Tribunal has determined that the respondents are required to divest the Ridge Landfill;

120 UPON HEARING counsel for the parties and for the intervenor with respect to the terms of the divestiture;

121 AND FURTHER TO the Reasons and Order dated March 28, 2001, and the Reasons and decision regarding the remedy dated October 3, 2001:

THE TRIBUNAL ORDERS THAT:

Definitions

122 For the purposes of this order:

(a) definitions used in the Notice of Application and Statement of Grounds and Material Facts dated April 26, 2000, the Interim Consent Order dated April 28, 2000, the Statement of Agreed Facts dated October 2, 2000, and the Supplementary Statement of Agreed Facts dated November 20, 2000, shall apply herein except where otherwise defined in this order;

(b) "Ridge Landfill" shall mean the Ridge Landfill facility at Blenheim, Ontario, together with all associated business, shares and assets, including the Host Community Agreement entered into between the Municipality of Chatham-Kent and Browning-Ferris Industries Ltd.;

(c) "Purchaser" shall mean the person or entity who purchases the Ridge Landfill in accordance with the procedure for divestiture set out in this order.

Application

123 The provisions of this order shall apply to the respondents and to:

(a) each division, subsidiary or other person controlled by the respondents and each officer, director, employee, agent or other person acting for or on behalf of the respondents with respect to any of the matters referred to in this order;

(b) the respondents' successors and assigns;

(c) the Trustee;

(d) Hugh Thomas Consulting Ltd. as independent manager of the Ridge pursuant to the Interim Consent Order, and each employee, agent or other person acting for or on behalf of Hugh Thomas Consulting Ltd. with respect to any matter referred to in this order; and

(e) Deloitte & Touche Inc. as monitor pursuant to the Interim Consent Order, and each employee, agent or other person acting for or on behalf of Deloitte & Touche Inc. with respect to any matter referred to in this order.

Divestiture of the Ridge Landfill

124 The respondents shall promptly commence their efforts to divest, and shall use best efforts to complete the divestiture of the Ridge Landfill within 180 days from the date of this order, in accordance with the procedure for divestiture set out herein.

125 If the divestiture of the Ridge Landfill is not completed within 180 days from the date of this order or such further time as specified by the Tribunal, the divestiture shall be carried out by a trustee in accordance with the procedure for a Trustee Sale set out herein.

126 The respondents shall not, without the consent of the Commissioner, provide financing for all or any part of the divestiture under this order which would permit the respondents to influence or control directly or indirectly the operations of Ridge Landfill after the divestiture.

Divestiture Procedure

127 The divestiture of the Ridge Landfill shall be completed on the following terms:

(a) by sale, assignment, transfer, sale of shares or other disposition necessary to ensure that, by completion of the divestiture, the respondents have, directly or indirectly, no remaining title, right or interest in the Ridge Landfill;

(b) by way of disposition of the Ridge Landfill for use as a going concern;

(c) to a Purchaser who is at arm's length to each of the respondents and meet the following objective criteria:

(i) the Purchaser shall effect the purchase with the expressed intention of carrying on the business and competing effectively in the market for the disposal of ICI Waste from the GTA as well as the disposal of solid waste from the Chatham-Kent area; and

(ii) the Purchaser shall have the managerial, operational and financial capability to compete effectively in the market for the disposal of ICI Waste from the GTA as well as the disposal of solid waste from the Chatham-Kent area;

(iii) the Purchaser shall have agreed to accept the assignment of and assume the obligations set out in the Host Community Agreement entered into between the Municipality of Chatham-Kent and Browning-Ferris Industries Ltd.

(d) by way of a commercially reasonable public tender, bidding or other procedure instituted in a manner to allow a fair opportunity for one or more *bona fide* prospective purchasers to obtain notice of the prospective divestiture and to make an offer to acquire the Ridge Landfill; and

(e) on usual commercial terms for transactions of the size and nature of those contemplated in this order.

128 Any person making a *bona fide* inquiry of the respondents or their agent regarding the possible purchase by that person or its principal of the Ridge Landfill shall be notified that the divestiture is being made pursuant to this order and provided with a copy of this order. Any *bona fide* prospective Purchaser shall be furnished, subject to the execution of a customary confidentiality agreement, with all pertinent information regarding the Ridge Landfill. Such information shall be provided to the Commissioner upon written request. Any *bona fide* prospective Purchaser shall be permitted, subject to the execution of a customary confidentiality agreement, to make such inspection of the Ridge Landfill and of all financial, operational or other documents and information as may be relevant to the divestiture.

129 The respondents may request that the Commissioner review a preliminary list of proposed Purchasers. The Commissioner shall, within eight business days after the request, communicate to the respondents any objection to a person on the list. Failure to object to a person pursuant to this paragraph does not prejudice the right of the Commissioner to refuse to approve the eventual proposed Purchaser.

130 The respondents shall, within three business days after a request by the Commissioner, provide the Commissioner with a written report on the progress of their efforts to accomplish the divestiture. The report shall include a description of contacts, negotiations and offers regarding the business to be divested and the identity of all parties contacted and prospective Purchasers who have come forward, all with reasonable detail.

131 The respondents may, with the consent of the Commissioner, have a further 60 days to complete the divestiture if:

(a) the respondents have entered into a binding agreement to divest the Ridge Landfill to a Purchaser within 180 days of the date of this order; and

(b) the respondents and the Purchaser require more time to complete the divestiture transaction.

Trustee Sale

132 If the respondents have not completed the divestiture within 180 days or such further time as ordered by the Tribunal, Deloitte & Touche Inc., the monitor of the Ridge Landfill pursuant to the Interim Consent Order, shall be appointed as Trustee.

133 If Deloitte & Touche Inc. is unable or unwilling to act as Trustee, another person agreed to by the parties shall be appointed as Trustee. Should the parties fail to agree on the appointment of such other person, the Tribunal, on the application of the Commissioner, shall appoint the Trustee.

134 The respondents shall transfer to the Trustee the authority to dispose of the Ridge Landfill.

135 The Trustee shall carry out the sale of the Ridge Landfill on the following terms (the "Trustee Sale"):

(a) after the appointment of the Trustee becomes effective, only the Trustee shall have the right to effect the divestiture of the Ridge Landfill, subject to the approval of the purchaser by the Commissioner;

(b) the Trustee shall have the full power and authority to effect the Trustee Sale and shall use all reasonable efforts to do so;

(c) the Ridge Landfill shall be sold by the Trustee within 90 days of the Trustee's appointment at the most favourable price and on the most favourable terms and conditions available;

(d) the Trustee Sale shall be accomplished in accordance with paragraphs 10 and 11 of this order;

(e) the respondents shall use their best efforts to assist the Trustee in accomplishing the Trustee Sale. In connection therewith, the Trustee shall have full and complete access as is reasonable in the circumstances, subject to an appropriate confidentiality agreement, to the personnel, books, records and facilities of the respondents relating to the Ridge Landfill and the respondents shall take no action to interfere with or impede the Trustee's accomplishment of the Trustee Sale;

(f) after appointment, the Trustee shall, every 30 days, file written reports with the respondents and the Commissioner setting out the Trustee's efforts to sell the Ridge Landfill. The reports shall include a description of contacts, negotiations and offers regarding the business to be divested and the identity of all parties contacted and prospective Purchasers who have come forward, all with reasonable detail;

(g) all expenses and fees reasonably and properly incurred by the Trustee in the course of the Trustee Sale shall be paid by the respondents and the proceeds of the Trustee Sale shall be paid to the respondents;

(h) the Trustee shall promptly notify the respondents and the Commissioner of any negotiations with a prospective purchaser that, in the opinion of the Trustee, may lead to a Trustee Sale; and

(i) on application by either the Commissioner or the respondents, the Tribunal may confer any other power on the Trustee that it deems appropriate.

136 The respondents may not object to the Trustee Sale on any grounds other than the Trustee's malfeasance, gross misconduct or breach of this order and any such objection shall be made in accordance with the provisions of paragraph 25.

137 If the Trustee has not accomplished the Trustee Sale within 60 days of its appointment, the Trustee shall promptly file with the Tribunal, on a confidential basis, and shall at the same time provide a copy to the Commissioner and the respondents, a report setting forth:

(a) the Trustee's efforts to accomplish the required divestiture;

(b) the reasons, in the Trustee's judgement, why the required divestiture has not been accomplished; and

(c) the Trustee's recommendations.

138 After receiving the report of the Trustee, the Commissioner or respondents may apply to the Tribunal for any further order to carry out the purpose of the divestiture.

Commissioner's Approval

139 The divestiture of the Ridge Landfill by the respondents or the Trustee is subject to the approval of the Commissioner, who shall take into account the competitive impact of the acquisition by the proposed Purchaser, and which shall be based on

the criteria outlined in paragraph 10 and shall be obtained in accordance with the notification procedure set out in paragraphs 23 to 29.

Notification

140 The respondents or the Trustee, whichever is then responsible for effecting the divestiture of the Ridge Landfill, shall give a written notice ("Divestiture Notice") to the Commissioner of any proposed divestiture or Trustee Sale. If the Trustee is responsible, the Trustee shall similarly notify the respondents. The Divestiture Notice shall include:

(a) the identity of the proposed Purchaser;

(b) the details of the proposed transaction, including the proposed agreement;

(c) information concerning whether the proposed Purchaser would satisfy the terms of paragraph 10(c);

(d) an update to the last report provided pursuant to paragraphs 13 and 18(f); and

(e) the agreement of the proposed Purchaser that it will respond within seven days of a request by the Commissioner for additional information regarding the proposed divestiture or Trustee Sale.

141 Within seven days after receipt of the Divestiture Notice, the Commissioner, and in the case of a Trustee Sale, the respondents, may request additional information concerning the proposed divestiture or Trustee Sale, the proposed Purchaser or any other potential purchaser. The respondents, the Trustee or the proposed Purchaser, as the case may be, shall provide the additional information within seven days of the receipt of the request, unless the Commissioner agrees in writing to extend the time.

142 Within 15 days after receipt of the Divestiture Notice or, if additional information is requested by the Commissioner or the respondents within the time specified in paragraph 24, within 15 days after receipt of the additional information, the Commissioner shall notify the respondents, and, in the case of a Trustee Sale, the Commissioner or the respondents shall notify the Trustee, in writing, of any objections they may have to the proposed divestiture or Trustee Sale on the ground that it does not conform to the terms of this order, and the reasons for the objections.

143 Where the Commissioner or the respondents object to any of the terms of the proposed divestiture or Trustee Sale pursuant to paragraph 25, the proposed divestiture shall not be completed without the approval of the Tribunal.

144 If the Commissioner fails to object within the period set out in paragraph 25 and on the grounds set out in paragraph 22, or if the Commissioner notifies the respondents and the Trustee, if there is one, in writing that he does not object, then the divestiture of the Ridge Landfill shall be completed, subject to paragraph 26.

145 If the respondents fail to object within the period set out in paragraph 25, then the divestiture of the Ridge Landfill shall be completed, subject to paragraph 26.

146 The respondents or the Trustee, as the case may be, shall notify the Commissioner forthwith after the divestiture of the Ridge Landfill, required by this order, has been completed.

Continuation of Interim Consent Order

147 The terms of the Interim Consent Order dated April 28, 2000, are hereby continued until the completion of the divestiture or Trustee Sale as defined in paragraph 33 below, of the Ridge Landfill by the Purchaser from the respondents.

Notice

148 Notices and reports required to be given pursuant to any of the terms of this order shall be considered given if dispatched by personal delivery, registered mail or facsimile transmission to the parties listed in Schedule A.

149 Any such notice or other document shall, if delivered or transmitted by facsimile, be deemed to have been given and received on the business day next following the date of sending, and if mailed, be deemed to have been given and received on the third business day following the date of mailing.

Completion of divestiture

150 The divestiture or Trustee Sale shall be considered to be completed when all right, title and interest of the respondents in the Ridge Landfill has been conveyed to a Purchaser in accordance with the terms of this order.

Statement by Commissioner

151 Once divestiture or Trustee Sale has taken place in accordance with this order, the Commissioner shall file with the Registrar of the Tribunal a statement identifying the purchaser and setting out the date on which the divestiture or Trustee Sale was accomplished.

Post Divestiture

152 Following divestiture by the respondents or the Trustee Sale, none of the respondents, their affiliates, their agents or representatives shall acquire the Ridge Landfill, any interest therein, or any part of the business of the Ridge Landfill for a period of 10 years.

Confidentiality

153 The Commissioner, the respondents and the Trustee, if any, shall keep confidential among the Commissioner, the respondents and the Trustee, if any, and their respective advisors, the identities of all prospective Purchasers and all persons expressing an interest in purchasing the business to be divested or sold, as well as the details of their offers and expressions of interest.

Jurisdiction

154 Either the respondents or the Commissioner may apply to the Tribunal at any stage of the divestiture or Trustee Sale for directions or such other order as may be appropriate.

155 The Tribunal shall retain jurisdiction in this matter for the purpose of addressing any matters in this order where specific reference is made to the Tribunal, for purposes of variation and for any other purposes provided for in the *Competition Act*.

***Denis Gascon J. Chair, Andrew D. Little J. Member, Ramaz Samrout Member*:**

I. EXECUTIVE SUMMARY

1 On December 19, 2019, the Commissioner of Competition ("*Commissioner*") filed a Notice of Application ("*Application*") against the Respondent Parrish & Heimbecker, Limited ("*P&H*"), pursuant to section 92 of the Competition Act, RSC 1985, c C-34 ("Act"), following the acquisition by P&H of 10 primary grain elevators ("*Elevators*") located in Western Canada ("*Transaction*"). Prior to the Transaction, these 10 Elevators were owned and operated by Louis Dreyfus Company Canada ULC ("*LDC*"), one of P&H's competitors in the grain business. In his Application, the Commissioner challenges the acquisition by P&H of one of these Elevators, namely, the LDC Elevator located on the Trans-Canada Highway in Virden, Manitoba ("*Virden Elevator*"), near the Manitoba-Saskatchewan border.

2 The Commissioner claims that by acquiring the Virden Elevator ("*Virden Acquisition*" or "*Acquisition*"), P&H causes or is likely to cause a substantial reduction of competition in the supply of grain handling services ("*GHS*") for wheat and canola for those farms that benefited from competition between the Virden Elevator and the nearby elevator owned by P&H and located in Moosomin, Saskatchewan, also on the Trans-Canada Highway ("*Moosomin Elevator*"). The Virden Acquisition is the only portion of the Transaction challenged by the Commissioner in this Application.

3 The Commissioner's Application alleges that the anti-competitive effects caused by the Virden Acquisition require a remedy under section 92 of the Act. The Commissioner submits that farms in the area which had previously benefited from the competition between P&H and LDC are likely to pay materially more to obtain GHS from the Moosomin and Virden Elevators, and will thus receive less money for their wheat and canola. The Commissioner maintains that canola crushing plants ("*Crushers*") and more distant Elevators are not sufficient to constrain an exercise of market power by P&H, due to higher transportation costs for farms to deliver their grain to these competitors.

4 P&H disputes the Commissioner's position. P&H submits that the Commissioner's Application improperly defines both the relevant product market and the relevant geographic market affected by the Virden Acquisition. According to P&H, the relevant product market is the purchase of wheat or canola from the farms, as P&H does not supply GHS. As to the relevant geographic

market, P&H submits that it is much broader than the Commissioner alleges since the purchase prices set by the Moosomin and Virden Elevators are influenced by rival Elevators and Crushers located far beyond the respective individual draw areas of these two Elevators. P&H contends that in the face of vigorous and effective competition from competing Elevators, as well as from canola Crushers and other direct purchasers of wheat and canola, P&H's control of the Virden Elevator gives it neither the ability nor the incentive to exercise monopsony power in any properly defined market. Hence, says P&H, the Virden Acquisition does not lessen competition substantially in any relevant market, and is not likely to do so. Moreover, P&H argues that in any event, the efficiencies that the Virden Acquisition is likely to bring about will be greater than, and will offset, the effects of any alleged lessening or prevention of competition.

5 For the reasons that follow, the Tribunal will dismiss the Application brought by the Commissioner. The Commissioner has failed to establish, on a balance of probabilities, that the elements of section 92 have been satisfied.

6 The Tribunal [1] first concludes that in the circumstances of this case, the relevant product is not the sale of GHS to farms, as alleged by the Commissioner, but the purchase of wheat and canola by P&H. The definition of the relevant product market was a fundamental point of disagreement between the parties, and was highly influential in the Tribunal's overall analysis. The Tribunal finds that the Commissioner's proposed product market is not grounded in commercial reality and in the evidence. Moreover, in this case, the "value-added" approach to product market definition advanced by the Commissioner fails on the facts, from a precedential and legal standpoint, and from a conceptual and economic perspective. Turning to the geographic market, the Tribunal is of the view that the relevant geographic market for the purchase of wheat is more likely than not to be comprised of at least the Virden, Moosomin, Fairlight, Whitewood, Oakner, Elva, and Shoal Lake Elevators. As to the relevant geographic market for the purchase of canola, it includes at least the Moosomin, Virden, Fairlight, Oakner, Whitewood, Brandon (Richardson), Melville, Souris East, Shoal Lake, and Elva Elevators, as well as the Crushers at Harrowby, Yorkton (LDC), Velva, and Yorkton (Richardson). These relevant markets are somewhat closer to the geographic markets proposed by the Commissioner but are larger than the narrow "corridor of concern" between the Moosomin and Virden Elevators that he originally identified (discussed below).

7 The Tribunal also finds that the Commissioner has not established that the Acquisition lessens competition substantially in any relevant market, or is likely to do so. The Tribunal reaches that conclusion after finding that the Virden Acquisition does not materially reduce, and is not likely to reduce materially, the degree of price or non-price competition in the purchase of wheat and canola in the relevant geographic markets, relative to the degree that would likely have existed in the absence of the merger. In particular, the evidence shows that the price effects of the Acquisition are immaterial for the purchase of both wheat and canola, that several effective remaining competitors will remain to constrain P&H's ability to exercise market power, and that the post-merger market shares are below the 35% safe harbour threshold. The Tribunal finds that the Virden Acquisition causes *some* lessening of competition for the purchase of wheat, but the evidence does not allow it to conclude that such lessening reaches the substantiality level required by section 92.

8 In light of those conclusions, the Tribunal does not need to determine the issue of efficiencies claimed by P&H. However, considering the extensive submissions made by the parties on efficiencies and the nature of the issues raised, the Tribunal addresses the matter. The Tribunal concludes that P&H has not proven, with clear and convincing evidence, that the Virden Acquisition is likely to bring about cognizable gains in efficiency. As a result, P&H would not have met its burden of demonstrating, on a balance of probabilities, that its claimed gains in efficiency would be greater than, and would offset, the anti-competitive effects of any lessening of competition resulting from the Acquisition.

II. INTRODUCTION AND OVERVIEW

A. The parties

9 The Commissioner is the public official appointed by the Governor in Council under section 7 of the Act and is responsible for the enforcement and administration of the Act.

10 P&H is a private, family-owned Canadian agribusiness headquartered in Winnipeg, Manitoba. P&H buys many varieties of grain, including wheat and canola, from farms and sells them to customers located in Canada, Europe, Asia, and South America. P&H has vertically integrated operations spanning across Canada in grain trading, handling, and merchandising, as well as in crop inputs retail, flour milling, and feed mills. It employs over 1,500 people with customers in 24 countries. Prior to the Transaction, P&H owned 19 Elevators in Western Canada. It also has ownership interests in a number of export terminals at Canadian ports located near Vancouver, British Columbia and in Thunder Bay, Ontario.

B. The Transaction

11 Pursuant to an asset purchase agreement dated September 3, 2019, P&H agreed to purchase from LDC 10 Elevators and related assets in Western Canada, including the Virden Elevator. On December 10, 2019, P&H and LDC closed the Transaction, bringing the total number of Elevators owned by P&H to 29. The grain volumes purchased through the former LDC Elevators in the last full crop year when they were owned and operated by LDC was 1.6 million metric tonnes ("*MT*").

12 The Transaction is part of P&H's growth strategy. P&H claims that it will improve its efficiency and effectiveness in competing with other grain companies in Western Canada.

C. The merger provisions of the Act

13 A merger is defined by section 91 of the Act as referring to the acquisition or establishment, by one or more persons, of "control over or significant interest in the whole or a part of a business of a competitor, supplier, customer, or other person." It is not disputed that the Transaction is a merger covered by the Act.

14 Mergers, along with matters such as restrictive trade practices, are reviewable by the Tribunal under Part VIII of the Act if they have anti-competitive effects (Tervita Corp v Canada (Commissioner of Competition), 2015 SCC 3 (" at para 43). With respect to mergers, section 92 identifies these anti-competitive effects as either substantially lessening competition or substantially preventing competition. More specifically, subsection 92(1) allows the Tribunal to intervene with respect to a merger or proposed merger if it finds that the merger prevents or lessens, or is likely to prevent or lessen, competition substantially "(*a*) in a trade, industry or profession; (*b*) among the sources from which a trade, industry or profession obtains a product; (*c*) among the outlets through which a trade, industry or profession disposes of a product; or (*d*) otherwise than as described in paragraphs (*a*) to (*c*)." The Tribunal is empowered to make a remedial order when a merger is found to either lessen or prevent competition substantially.

15 Subsection 92(2) provides that the Tribunal shall not find that a merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially "solely on the basis of evidence of concentration or market share." However, the Tribunal has found that these two factors nonetheless may help in assessing whether or not a merger or proposed merger could result in a substantial lessening or prevention of competition (The Commissioner of Competition v CCS Corporation et al, 2012 Comp Trib 14 (" at para 360, rev'd 2013 FCA 28, rev'd 2015 SCC 3; The Commissioner of Competition v Superior Propane Inc, 2000 Comp Trib 15 (" at paras 126, 304-313; Director of Investigation and Research v Hillsdown Holdings (Canada) Ltd(1992), 41 CPR (3d) 289 (Comp Trib) ("*Hillsdown*") at pp 315-316, 318).

16 Section 93 sets out a non-exhaustive list of market-specific factors that the Tribunal may consider in determining whether a merger prevents or lessens, or is likely to prevent or lessen, competition substantially. These factors include the following: foreign products as effective competition; failing firm considerations; availability of acceptable substitutes; removal of a vigorous and effective competitor; barriers to entry; remaining effective competitors; and change and innovation. The list is open-ended, as it includes at paragraph (*h*) "any other factor that is relevant to competition in a market that is or would be affected by the merger or proposed merger."

17 The Act also carves out certain exceptions to the application of the Tribunal's section 92 remedial powers. One such exception, which is relevant in this case, is what is commonly named the "efficiencies defence," in section 96 of the Act. This exception provides that the Tribunal shall not make an order under section 92 if it finds that the merger in respect of which

the application is made is likely to bring about efficiency gains which are greater than and likely to offset the anti-competitive effects resulting from the merger.

18 The Commissioner bears the burden of satisfying the elements of section 92, and the Tribunal must make a positive determination in respect of those elements before it may issue a remedial order. However, as will be discussed in more detail below, P&H bears most of the burden of proof under the efficiencies defence in section 96.

19 The burden of proof is the civil standard, that is, the balance of probabilities. In that respect, the Tribunal remains guided by the principles established in FH v McDougall, 2008 SCC 53 (“, where the Supreme Court of Canada ("*SCC*") held that there is only one civil standard of proof in Canada, the balance of probabilities (see also *Tervita SCC* at para 66). Speaking for a unanimous court, Justice Rothstein stated in his reasons that the only legal rule in all cases is that "evidence must be scrutinized with care by the trial judge" and that "evidence must always be sufficiently clear, convincing and cogent to satisfy the balance of probabilities test" (*McDougall* at paras 45-46). In all civil cases, the trier of fact "must scrutinize the relevant evidence with care to determine whether it is more likely than not that an alleged event occurred" (*McDougall* at para 49).

20 The full text of the relevant provisions of the Act is reproduced in Schedule "A" to these Reasons.

D. The parties' pleadings

21 In his Application, the Commissioner seeks an order requiring P&H to divest either the Virden Elevator or the Moosomin Elevator, as well as an order prohibiting P&H from acquiring any Elevator in the relevant markets for a certain period of time.

22 The Commissioner submits that the relevant product is the supply of GHS. According to the Commissioner, GHS includes the following services: the elevation, grading, and segregation of the grain performed by the Elevators, as well as the cleaning, drying, blending, and storage that may be offered. The Commissioner pleads that the relevant markets should be defined as "the supply of [GHS] for wheat and the supply of [GHS] for canola for the aggregated locations of farmers that benefited from competition between the Virden Elevator and Moosomin Elevator." The Commissioner says that there are no functional substitutes for these GHS.

23 Turning to the geographic dimension of the relevant markets, the Commissioner pleads that the wheat and canola purchased by an Elevator usually originate from nearby farms, and that the relevant geographic market is therefore local due to transportation costs, with the most affected farms being located in a narrow corridor between the Virden and Moosomin Elevators, within a one-hour drive of each Elevator.

24 The Commissioner contends that the Virden Acquisition causes, or is likely to cause, a substantial lessening of competition in the relevant markets, due to the elimination of an important competitor [2] . The Commissioner alleges that, with the acquisition of the Virden Elevator, P&H can unilaterally exercise enhanced market power in the relevant markets, at the expense of farms located in certain parts of Saskatchewan and Manitoba. According to the Commissioner, P&H will be able to materially raise the implicit price that farms pay for GHS for wheat and canola in the Virden-Moosomin corridor, and farmers will be paid less for their wheat and canola.

25 The Commissioner maintains that canola Crushers and more distant Elevators are not sufficient to constrain an exercise of market power by P&H owing to higher transportation costs for farms to deliver their grain.

26 The Commissioner further claims that several section 93 factors support these conclusions, in that: 1) Elevators and direct purchasers in other countries cannot compete directly for the purchase of wheat and canola from farms in the relevant markets because of transportation costs; 2) for the vast majority of farms in the relevant markets, there are no viable substitutes; 3) barriers to entry and expansion are high, owing to significant capital costs and difficulty finding a suitable location to build an Elevator and accompanying access to rail transportation; 4) P&H no longer intends to expand the rail car capacity at the Moosomin Elevator, which would have increased this Elevator's ability to handle more wheat and canola and the level of competition in the relevant markets; 5) the closest remaining Elevator to the Virden and Moosomin Elevators is an Elevator owned by Viterra Inc. ("*Viterra*") in Fairlight, Saskatchewan ("*Fairlight Elevator*"), but it is insufficient to constrain an exercise

of market power by P&H due to its location on a secondary road, 35 kilometers south of the Trans-Canada Highway; 6) the Virden Elevator, which has now been removed as a competitor, was previously a vigorous and effective competitor to P&H; and 7) the market for the delivery of GHS is not subject to material change through innovation.

27 The Commissioner adds that, even if the relevant product markets were more broadly defined to be the purchase by Elevators of wheat and canola from farms, the Acquisition still causes, or is likely to cause, a substantial lessening of competition in these product markets due to P&H's ability to materially decrease the price of wheat and canola paid to farms.

28 P&H opposes the Commissioner's Application and asks the Tribunal to dismiss it with costs. In P&H's view, the Commissioner improperly defines both the relevant product market and the relevant geographic market. Furthermore, P&H submits that the Acquisition does not enable it to materially lower the prices it pays to farms for their wheat or canola, nor does it lead to a substantial lessening of competition in any relevant and properly defined market.

29 P&H submits that the relevant product market is the purchase of wheat or canola. It states that, contrary to what the Commissioner advances, it does not supply GHS to farms.

30 P&H argues that the prices it pays for grain at the Virden or Moosomin Elevators are largely dependent on global prices, which are independent of changes to the local competitive landscape around the Virden and Moosomin Elevators. According to P&H, the prices that it offers to pay farms for grain are centrally set: they are derived from the demand and prices it receives from its sales to customers in international and domestic markets, as well as by the costs to transport grain from its network of Elevators to export terminals or to domestic buyers.

31 P&H also disagrees with the relevant geographic market as defined by the Commissioner. P&H maintains that Elevators purchase grain from farms located farther away than what the Commissioner alleges. P&H contends that the Virden and Moosomin Elevators each purchase grain from hundreds of farms mostly located outside the geographic area between these two Elevators along the Trans-Canada Highway, well beyond a one-hour drive. According to P&H, the Virden and Moosomin Elevators must purchase grain at competitive prices against many other rival Elevators whose draw areas extend farther than the narrow "corridor of concern" and the proposed geographic markets identified by the Commissioner. Therefore, in P&H's view, the relevant geographic market is much broader than the Commissioner alleges since the purchase prices set by the Moosomin and Virden Elevators are influenced by rival Elevators located far beyond the respective individual draw areas of the two Elevators at issue. P&H claims that it does not hold or exercise monopsony power in a relevant geographic market as alleged by the Commissioner, or even in the broader area of Southeastern Saskatchewan and Southwestern Manitoba.

32 P&H contends that in the face of vigorous and effective competition from competing Elevators, as well as from canola Crushers and other direct purchasers of wheat and canola, P&H's control of the Virden Elevator gives it neither the ability nor the incentive to exercise monopsony power in any properly defined market. Rival Elevators and other purchasers within and beyond the draw areas of the Virden and Moosomin Elevators already purchase grain from farms that also sell to the Virden and Moosomin Elevators, have significant excess capacity to purchase additional grain, and can increase their purchases from those farms at low cost. In other words, says P&H, the Virden Acquisition will not substantially lessen competition.

33 P&H further argues that barriers to entry and expansion are low, with the result that P&H's ability to exercise any monopsony power would be constrained by the expansion of existing Elevators' purchases and/or by new entry.

34 Moreover, even if the Virden Acquisition were found to substantially lessen competition, P&H argues that the gains in efficiency that the Acquisition is likely to bring about will be greater than, and will offset, the effects of any alleged lessening of competition. According to P&H, it will not likely attain such gains in efficiency if the Tribunal makes the orders sought by the Commissioner. The efficiencies claimed by P&H from the Acquisition include the following: improved scale economies and cost savings at the Fraser Grain Terminal ("*FGT*") located in British Columbia; elimination of the margin that LDC formerly paid to use the Vancouver export terminal owned by Kinder Morgan; output expansion and improved scale economies at the Virden Elevator; and administrative synergies.

35 In his reply, the Commissioner opposes P&H on this last point and submits that the Virden Acquisition will not generate cognizable gains in efficiencies to the extent alleged by P&H. The Commissioner further maintains that, if the Tribunal makes the orders sought, P&H's ability to achieve the alleged efficiencies being claimed would not be impacted. In any event, the Commissioner holds that any cognizable efficiencies that P&H may obtain through the Virden Acquisition and that would be lost if the orders sought were made will not be greater than or offset the anti-competitive effects of the Acquisition.

E. Procedural history

36 Around the time the Commissioner filed the Application in December 2019, he stated that he would request an expedited scheduling order in accordance with the Tribunal's *Practice Direction regarding an Expedited Proceeding Process before the Tribunal*, dated January 2019. Under an expedited scheduling order, an application will typically be heard by the Tribunal within five to six months after the filing of the notice of application.

37 P&H opposed the Commissioner's request and asserted that procedural fairness concerns would arise under an expedited process. P&H proposed an alternative schedule pursuant to which the hearing would take place approximately three to four months later than the hearing dates contemplated under the expedited process.

38 On January 13, 2020, the Tribunal denied the Commissioner's request for an expedited process (Canada (Commissioner of Competition) v Parrish & Heimbecker, Limited, 2020 Comp Trib 1). The Tribunal was not persuaded that in the absence of P&H's consent, the expedited process was a reasonable option given the circumstances and fairness considerations arising in this case. Moreover, the period of three to four months that could be gained with the expedited process did not justify the imposition of the process over P&H's strong objections. The Tribunal adopted the alternative schedule proposed by P&H and issued a scheduling order in early March 2020, pursuant to which the hearing of the Commissioner's Application would start in November 2020 (Canada (Commissioner of Competition) v Parrish & Heimbecker, Limited, 2020 Comp Trib 2 (“). Adjustments were subsequently made to various steps of the Scheduling Order as a result of the COVID-19 pandemic. The parties nonetheless continued to work towards the November 2020 hearing dates.

39 In October 2020, P&H advised the Tribunal that its expert was no longer available in November because of unforeseen personal circumstances. The Tribunal agreed to adjourn the hearing with the consent of both parties. Eventually, the Tribunal issued an amended Scheduling Order, pursuant to which the hearing would now proceed in early January 2021 (Canada (Commissioner of Competition) v Parrish & Heimbecker, Limited, 2020 Comp Trib 13).

40 In the course of the proceedings leading up to the hearing, counsel for P&H insisted on various occasions on an in-person hearing notwithstanding the COVID-19 pandemic and the implementation of various lockdowns. While counsel for the Commissioner initially accommodated P&H's request and agreed to a hybrid hearing, the Commissioner eventually opposed the request as the pandemic worsened. In December 2020 and early January 2021, the Tribunal ordered that the hearing would take place remotely by way of videoconference using the Zoom platform (Canada (Commissioner of Competition) v Parrish & Heimbecker, Limited, 2020 Comp Trib 14; Canada (Commissioner of Competition) v Parrish & Heimbecker, Limited, 2021 Comp Trib 1).

41 In anticipation of the hearing, the parties exchanged witness statements in accordance with the schedule fixed by the Tribunal. These witness statements included statements from farmers in Western Canada, as well as initial and reply witness statements by John Heimbecker, the Chief Executive Officer ("*CEO*") of P&H.

42 On November 27, 2020, the Commissioner moved to strike some paragraphs of the initial witness statement of Mr. Heimbecker on the basis that it contained inadmissible hearsay and inadmissible lay opinion evidence. In December 2020, the Tribunal granted this motion in part and ordered P&H to prepare a revised witness statement from Mr. Heimbecker (Canada (Commissioner of Competition) v Parrish & Heimbecker, Limited, 2020 Comp Trib 15 (“).

43 Initially, both parties agreed to designate the identity of their respective farmer witnesses as Confidential Level B in accordance with the Confidentiality Order issued by the Tribunal (Canada (Commissioner of Competition) v Parrish &

Heimbecker, Limited, 2020 Comp Trib 3). As the hearing approached, however, P&H revised its position. By way of letter, P&H advised the Tribunal at the end of November 2020 that witness statements prepared by three farmers on behalf of P&H would no longer be designated confidential. Moreover, P&H expressed doubts about the merits of the Commissioner's confidentiality designations and eventually asserted that the Commissioner should file a formal motion to designate as confidential the identities of his farmer witnesses. On December 7, 2020, the Commissioner moved for an order designating the identities of five farmers as confidential.

44 On December 29, 2020, the Tribunal dismissed the Commissioner's motion and reasons for this decision were issued in early January 2021 (Canada (Commissioner of Competition) v Parrish & Heimbecker, Limited, 2021 Comp Trib 2). The Tribunal found that the Commissioner had failed to present clear and convincing evidence sufficient to satisfy the Tribunal that the requirements for the confidentiality designations were met. Further to that decision, only three of the five farmer witnesses originally identified by the Commissioner appeared at the hearing in a public setting.

45 The hearing was held virtually between January 6 and February 4, 2021, and the witnesses testified by videoconference in accordance with a witness protocol that was developed by the Tribunal with the parties' input.

46 Not only was this the first virtual hearing for the Tribunal, but this was also the first time that experts testified together as part of a panel of expert witnesses formed in accordance with Rules 75 and 76 of the Competition Tribunal Rules, SOR/2008-141 ("*CT Rules*"). CT Rule 76 provides that the Tribunal "shall direct the manner in which the panel [of witnesses] shall testify" and that counsel can cross-examine and re-examine the witnesses. The protocol for this concurrent expert evidence session (also known as "hot-tubbing") was set out in a specific Direction issued by the Tribunal with the parties' consent.

47 The purpose of this "hot-tubbing" process is to streamline the testimonies of expert witnesses, and to allow experts to ask questions from each other and highlight their areas of agreement and disagreement. Pursuant to the Tribunal's Direction, the experts and counsel for the parties agreed on a list of five main issues to be addressed by the experts at the concurrent evidence session, and the experts identified their areas of agreement and disagreement on each issue. The parties also exchanged short statements of each expert's proposed expertise. Each expert was granted a full and fair opportunity to present and explain their respective position on each issue, and opposing counsel were able to cross-examine the experts. A significant benefit that flowed from this concurrent evidence session was that experts were able to rapidly focus on the key areas of disagreement between them. In the view of all members of the Tribunal, the process worked well and helped the Tribunal to have a solid understanding of each expert's position, while allowing the Tribunal and the parties to narrow the disputed issues between the experts.

III. FACTUAL BACKGROUND

A. The Canadian grain industry

48 The grain supply chain in Canada involves an interconnected network of businesses and infrastructure that moves grain from individual farms to end customers, such as companies that manufacture food or feeds. The main participants include farmers who produce grain, grain companies that purchase grain from farmers, railways that transport grain from Elevators to export terminals or to domestic customers, and export terminals where the grain is delivered for storage and shipping.

49 Canadian farmers grow a variety of grains such as wheat, barley, soybeans, peas, and canola. The Commissioner's Application in this case focuses solely on two types of grain, namely, wheat and canola. Wheat and canola are both commodity products.

50 Farmers can sell their wheat to Elevators, and their canola to Elevators or Crushers. For many years before 2012, when the Canadian Wheat Board ("*CWB*") was in existence, grain companies bought wheat and barley on behalf of the CWB on a toll basis. At the time, the CWB was, by law, the sole marketer of wheat and barley for export and domestic human consumption. Grain companies then acted as the agents of and service providers to the CWB. Grain companies purchased other grains such as canola directly from farmers, without the intervention of the CWB. However, in August 2012, the CWB's role ended and grain companies ceased being service providers to the CWB. The grain companies now purchase and sell wheat and barley from farmers on their own account for sale to their own customers, as they do for other types of grain. With the end of the

CWB's role as a sole purchaser of certain grain, the historical tariffs and fees that had been in place for the service provided by grain companies ended. But, as will be discussed below, the heritage from the CWB days has an impact on certain purchasing and selling practices in the grain business.

51 Canadian grain companies sell grain domestically or to overseas customers by transporting it by rail to export terminals located at Canadian ports. At the export terminals (and at some local Elevators), grain is segregated by type and quality attributes, stored, blended, and loaded onto vessels.

52 In addition to P&H, there are several major grain companies that purchase wheat and canola in competition with P&H in Western Canada. The two largest are Viterra and Richardson International Limited ("*Richardson*"). Viterra is a privately-held subsidiary of Glencore, a British-Swiss multinational corporation; it has 79 Elevators and six port facilities across Canada and parts of the United States ("*U.S.*"). Richardson is a privately-held Canadian subsidiary of James Richardson & Sons, Limited which owns 73 grain Elevators and has ownership or partnership interests in the largest three grain terminals in Canada.

53 Other major grain companies operating in Western Canada include Cargill Limited ("*Cargill*"), Paterson Grain Limited ("*Paterson*"), Ceres Global Ag Corp. ("*Ceres*"), Bunge Ltd ("*Bunge*"), Archer-Daniels-Midland Limited ("*ADM*"), and G3 Canada Limited ("*G3*"). Cargill is a vertically-integrated company with 31 Elevators and port terminals across Canada. Paterson operates more than 40 Elevators whereas G3 has 17 Elevators and four export terminals.

54 In addition to these major players, other local grain companies such as GrainsConnect Canada also compete in Western Canada.

B. Elevators and Crushers

55 Elevators are designed to stockpile and store the grain they purchase from spatially dispersed farms. The Elevators, upon receiving the grain from a farm, will grade it, elevate it, and segregate it; they may also clean, blend, dry, and store the grain at the Elevator until a railcar or a truck comes to take the grain to its next destination. This is what the Commissioner refers to as GHS. Elevators' staff will typically examine grain samples from the farms' trucks, assess for dockage as needed, grade the grain, unload the trucks delivering the grain, elevate the grain to the appropriate storage bins, store the grain and keep it in condition, blend the grain as appropriate, assist with weighover (i.e., inventory counts), dry the grain as needed, prepare cash settlements for farms, and load the grain into railcars for shipment to a port terminal or to a further processing mill such as flour mills. Grain companies incur costs for those activities, such as costs related to any cleaning or drying, transportation from Elevators to export terminals or domestic locations, developing export and domestic customers, and managing risk with respect to fluctuations in exchange rates and commodity prices.

56 Grain is graded in accordance with the Official Grain Grading Guide published by the Canadian Grain Commission ("*CGC*"). A grading factor is a physical condition of grain that indicates a certain quality level. For wheat, the highest quality grade under the CGC's classification system is grade 1 Canadian Western Red Spring Wheat ("*1CWRS*"). Turning to canola, the most common grade for harvested canola is 1CAN CANOLA. In the case of wheat, the protein content also affects the price. The base protein content commonly used by grain companies is 13.5%, and a higher protein wheat commands a higher price relative to 1CWRS 13.5. Protein spreads reflect the cash price adjustments (either up or down from the cash price for 1CWRS 13.5) based on the protein content of the wheat.

57 Elevators have varying grain storage capacities. The storage capacity of P&H's Elevators ranges from 22,000 MT at the Glossop Elevator (located in Glossop, Manitoba) to 106,000 MT at the Weyburn Elevator (located in Weyburn, Saskatchewan).

58 Elevators are often located close to railways, as the grain is typically loaded onto railcars and transported by rail. The term "rail car spots" is commonly used within the industry and refers to the number of railcars at an Elevator that can be accommodated for loading on a sidetrack (or spur line) off the main track line.

C. Farms

59 Even though some farms will have storage and elevating capacity, farms typically rely on Elevators as they could not achieve the same efficiencies in moving their grain from the farm to the domestic customers or to export terminals for delivery to international end customers. Farms can sell their wheat and canola to multiple grain companies and are offered prices by Elevators and Crushers for their grain.

60 In most instances, farms are responsible for hauling their grain to the Elevators. Some farms have their own trucks to transport their grain, while others employ commercial trucking companies to load, ship, and unload their grain. In certain circumstances, some Elevators or Crushers might offer pick-up service, which is charged to farms through a trucking allowance.

61 The transportation costs incurred by farms to bring their grain to an Elevator will vary with distance but also with travel time, road conditions, and seasonal road weight restrictions that may affect certain secondary roads. All else being equal, most farms prefer to sell their grain to closer Elevators.

D. Pricing and contracts

62 Grain companies such as P&H buy wheat or canola at their Elevators by paying farms a "net" or "cash" price for their grain ("*Cash Price*" or "*CP*"). The Cash Price is also sometimes referred to as the "flat" or "bid" price for the grain. No matter how it is worded or expressed, the Cash Price represents the actual amount of money (per MT or per bushel) received by a farm for the net quantity of grain delivered and sold at an Elevator. P&H posts its Cash Price for grain for each of its Elevators. Farms can also use P&H's mobile application, named "P&H Direct," to see the Cash Prices at each of P&H's Elevators across Western Canada.

63 The price of grain can be expressed in terms of dollars per MT or dollars per bushel. There are 36.744 bushels of wheat to the MT and 44.092 bushels of canola to the MT.

64 The Cash Price that a farmer receives for grain is comprised of two components: the futures price ("*Futures Price*" or "*FP*") and what is commonly known in the grain industry as the "basis." The term "basis" refers to the difference between the Futures Price and the Cash Price ("*Basis*" or "*B*") [3] .

65 The Futures Price reflects the global commodity market price for the grain, set by global supply and demand forces. Neither the farms nor the Elevators have control over the Futures Prices, as these are global commodity prices. The world Futures Prices for wheat and canola are determinative of P&H's prices for those commodities. For wheat, P&H uses the Minneapolis Hard Red Spring wheat futures contract price for CWRS. This price trades in U.S. dollars ("*USD*") per MT. For canola, P&H uses the Intercontinental Exchange futures price for canola in Saskatchewan. This price trades in Canadian dollars ("*CAD*") per MT. Grain companies (including P&H) typically use 1CWRS as their base grade for wheat pricing and 1CAN CANOLA as their base grade for canola pricing.

66 While both the Commissioner and P&H agree that the Cash Price, the Futures Price and the Basis are the three components of the pricing process for grain, they fundamentally disagree on the interrelation between these three components. The Commissioner claims that P&H has no control over the Futures Price and sets the Basis, and that the Cash Price paid to farms is the resulting amount. In other words, the Commissioner argues that FP - B = CP. P&H instead argues that the Basis numerically results from the difference between the Cash Price it sets and the Futures Price over which it has no control. In sum, P&H submits that FP - CP = B. The Commissioner claims that the relevant price for the purposes of a competition analysis is the price for GHS — which, he says, equates to the Basis — , whereas P&H is of the view that the relevant price is the Cash Price effectively paid to the farms.

67 Farms can sell and deliver their grain at different times throughout the year and they can sell a portion of their crop before it is harvested. Some farms can store some or all of their grain on their farm if they have the proper elevating capacity, which allows them to sell their grain at a time of their choosing.

68 The Cash Price ultimately received by the farms can sometimes be adjusted upwards when Elevators offer limited-tonne or limited-time pricing "specials" to fill remaining space in a train or a vessel or to obtain additional grain supplies to meet sales

commitments. From time to time, the Cash Price or the Basis can also be adjusted to reflect individual negotiations between farms and the Elevators. P&H estimates that this occurs in approximately [text omitted] of its grain purchase transactions.

69 In terms of contracts with Elevators and Crushers, farms can enter into different types of agreements to sell their grain. They can enter into fixed price contracts, grain pricing order agreements ("*GPOs*") — also known as grain purchase orders or target contracts — , and basis contracts.

70 Under a fixed price contract, the Cash Price, Futures Price and Basis are fixed. Similarly, the quantity and quality of grain to be delivered, as well as the delivery period, are determined in the fixed price contract. Fixed price contracts are used for forward or deferred delivery purchase transactions as well as for spot purchase transactions. Forward or deferred delivery refers to a delivery of grain at some point in the future. Farms can enter into forward or deferred delivery contracts to deliver a specific quantity and quality of grain to an Elevator for an agreed Cash Price within a prescribed delivery window in the future. In P&H's fixed price contracts, the Cash Price appears as the "net" price.

71 Under a GPO, a farm sets a targeted Cash Price above an Elevator's posted Cash Price ("*Target Cash Price*") at which the farm agrees to sell and deliver to that Elevator a specific type of grain in a specified delivery month. If the Elevator's posted Cash Price reaches a farm's Target Cash Price, the GPO is triggered and the Elevator must purchase the farm's grain at the Target Cash Price. If a GPO is triggered, it becomes a fixed price contract. Farms always keep the option to amend or cancel a GPO at any time before it is triggered. A farm chooses the expiry date for the GPO, which may be in effect for days, weeks, or months.

72 The third type of agreement that farms can enter into is a basis contract. Under such a contract, the Basis is agreed upon and fixed in the contract, but the Futures Price for contracting purposes is taken from the international markets and fixed by the farms' actions at a later date. Such agreements allow farms to lock in what they consider to be a favorable Basis. Under a basis contract, the quantity and quality of grain to be delivered, as well as the delivery period, are set, but the Cash Price is determined once the farm triggers the basis contract, which sets the Futures Price.

73 When P&H buys wheat or canola from a farm, it takes title to the grain at the time the farm delivers the grain to the Elevator. At that point in time, the farm receives the contracted Cash Price for its grain and ownership of the grain then passes to P&H. The Cash Price may be adjusted at the time of delivery of the grain to the Elevator if the quality of the wheat or canola delivered is different from the quality the parties had agreed upon in the contract.

E. P&H's business

74 P&H operates within the grain business by buying and selling grain for its own account throughout the crop year, which spans from August 1 to July 31 of the following year.

75 P&H buys wheat and canola from farmers via a network of 29 Elevators located throughout Western Canada, including the Moosomin Elevator and the 10 Elevators purchased from LDC in December 2019. P&H's 29 Elevators are the entry points to its grain network in Western Canada.

76 P&H sells the varieties of grain it purchases, such as wheat and canola, to customers located in Canada, Europe, Asia, and South America. Just over half of P&H's total wheat and canola sales are for export. P&H's export customers pay for wheat and canola at the Canadian port.

77 In order to move the wheat and canola it sells to its customers located overseas, P&H utilizes the rail network to ship grain from its Elevators in Western Canada to its export terminals located on the West Coast and in Thunder Bay, Ontario.

78 P&H has an interest in three export terminals located near Vancouver in British Columbia, namely, the Alliance Grain Terminal ("*AGT*"), the Fraser Surrey Docks ("*FSD*"), and the FGT, where P&H has recently invested [text omitted]. P&H also has an interest in the Superior terminal located in the port of Thunder Bay in Ontario ("*Superior*"). The vast majority of grain exported by P&H moves through its export terminals. The storage capacities are 102,000 MT at AGT, 18,000 MT at FSD, 176,000 MT at Superior, and 92,000 MT at FGT, where P&H has a partial entitlement to storage and throughput capacity.

79 Export terminals are used to receive grain from rail, segregate and store grain by type and quality attributes, clean grain when required, blend grain, and load grain onto vessels. As with other commodities, wheat and canola of the same grade received from different P&H Elevators are commingled at the terminals. The cleaning and blending of grain occur principally at P&H's export terminals, rather than at its Elevators, given the greater economies of scale available at these terminals.

80 P&H also operates a milling group that sources Canadian wheat to produce flour and cereal products. P&H moves the wheat supplied to its milling group by rail or truck from its Elevators to its mills in Western and Eastern Canada.

81 Additionally, P&H operates a Crop Inputs and Services business, which supplies fertilizer, seed, and pesticides as well as agronomic services to farms through dual crop inputs and grain facilities at its Elevators across Canada. P&H has a "one-stop-shop" crop inputs retail and grain purchase business model. The former LDC Elevators purchased by P&H did not offer crop inputs services.

82 P&H's audited consolidated financial statements for the 2018 fiscal year indicate that, across all of its lines of businesses, it generated consolidated revenues of approximately [text omitted] and gross profit of [text omitted]. By comparison, P&H reported consolidated revenues of approximately [text omitted] and gross profit of [text omitted] for the 2017 fiscal year.

83 In March of every year, P&H sets its annual grain-purchasing budget for Western Canada for the upcoming fiscal year, which begins on May 1 of each year. Its grain purchase targets aim to increase P&H's total grain volumes and share over time.

F. The Moosomin and Virden Elevators

84 Prior to the Transaction, P&H and LDC respectively owned and operated the Moosomin Elevator and the Virden Elevator, located in proximity to one another near the Manitoba-Saskatchewan border. Then, LDC would send grain from the Virden Elevator westward by rail to its export terminals on the West Coast. Following the Transaction, these two Elevators were re-assigned to P&H's Thunder Bay catchment area, meaning that the grain purchased by these Elevators is shipped to the Superior terminal in Thunder Bay. However, the Moosomin Elevator, which is located west of the Virden Elevator, is also in a position to ship grain to P&H's West Coast terminals.

85 For rail transportation, the Moosomin Elevator has 56-car spots while the Virden Elevator has 112-car spots. In terms of storage capacity, the Moosomin Elevator has a capacity of 26,000 MT and an annual throughput capacity in the range of [text omitted] MT. For its part, the Virden Elevator has a storage capacity of 46,000 MT and an annual throughput capacity in the same range of [text omitted] MT.

IV. EVIDENCE — OVERVIEW

86 Over the course of the hearing, the Tribunal heard from 16 lay witnesses and three expert witnesses. Over 250 exhibits were filed.

A. Fact witnesses

(1) The Commissioner

87 The Commissioner led evidence from three farmer witnesses located in Manitoba or Saskatchewan, namely:

- Alistair Pethick: Mr. Pethick and his brother operate a farm located in McAuley, Manitoba. They mainly grow wheat and canola, but also soybeans, oats, and hay as well as other speciality crops in some years. Mr. Pethick sold his wheat to the Moosomin, Virden, and Fairlight Elevators, as well as to the Ceres Elevator located in Northgate, Manitoba;

- Chris Lincoln: Mr. Lincoln and his family own and operate two farms located in Maryfield and Wawota, Saskatchewan. They grow wheat and canola. Mr. Lincoln's farms have the capacity to store 80-85% of his grain. The Fairlight Elevator operated by Viterra is the closest Elevator to Mr. Lincoln's farms. Since harvesting his crops in November 2019, Mr.

Lincoln has sold all his crop to the Fairlight Elevator. In 2018, he sold 20% of his commodity crop to the Virden Elevator and the balance to the Fairlight Elevator; and

• Ian Wagstaff: Mr. Wagstaff owns a 6,000-acre farm approximately two miles south of Manson, Manitoba. He is a wheat and canola farmer. He harvests approximately 100,000 bushels of wheat and canola per year. Mr. Wagstaff can store 60,000 to 70,000 bushels of wheat at his farm, meaning that he must sell approximately 25-30% of his crop at harvest time. In the past two years, he has sold most of his crop to the Virden Elevator.

88 The Commissioner had two other farmer witnesses, [text omitted] and [text omitted], who decided not to testify in public at the hearing. However, the parties filed an agreed statement of facts regarding the testimonies of these two farmer witnesses.

89 The Commissioner also led evidence from Harvey Brooks, who is the General Manager of the Saskatchewan Wheat Development Commission ("*Sask Wheat*"). Sask Wheat is a producer-led organization established to grow Saskatchewan's wheat industry through research, market development, and advocacy. Mr. Brooks has been General Manager of Sask Wheat since 2014. Prior to joining Sask Wheat, Mr. Brooks served as Deputy Minister of Agriculture for the Government of Saskatchewan, Director of Policy and Economic research with the Saskatchewan Wheat Pool, and Head of Corporate Policy at the CWB. He holds a Ph.D. in Economics from Iowa State University and a Masters degree in Agricultural Economics from the University of Saskatchewan.

90 Eight representatives of grain companies other than P&H also testified before the Tribunal for the Commissioner. These companies had provided data to the Commissioner during his investigation of the Transaction. These witnesses were:

• Dean McQueen: Mr. McQueen is the Vice President, Grain Merchandising and Transportation (North America) at Viterra. Viterra markets and handles grain, oilseeds, and pulses. It operates grain elevators and special crop facilities, port terminals, and processing facilities. Mr. McQueen is responsible for overseeing the merchandising and transportation of grain, oilseeds, and pulses, including procurement, through the Viterra country grain Elevator network;

• Ray Elliot: Mr. Elliot is a Manager for Seed Procurement at Bunge's Harrowby Crusher facility located in Russell, Manitoba. Bunge is an agribusiness and food company that buys oilseeds and softseeds from producers and sells finished products to customers. Mr. Elliot is responsible for managing all the seed purchases for Bunge's crushing plants in Western Canada;

• Brett Malkoske: Mr. Malkoske is the Chief Financial Officer of G3. He previously was the Vice President of Business Development and Communications at G3, where he was responsible for external communications and facilitating the development and execution of G3's strategic plans in Canada;

• Darcy Jordan: Ms. Jordan has been a Management Accounting and Reporting Senior Analyst at Cargill since 2019. Cargill is a merchandiser and processor involved in crop inputs product retailing, grain handling, milling, salt distribution, and merchandising. In her role, Ms. Jordan is responsible for Cargill's management reporting, supporting the Manitoba region for margins, and implementing the controls framework and profit and loss statements;

• Kara Hawryluk: Ms. Hawryluk is the Canada Operational Controller at LDC. Along with its parent company Louis Dreyfus Company B.V., LDC is a global merchant and processor of agricultural goods. Ms. Hawryluk is responsible for working with LDC's commercial and operational teams to ensure timely and accurate reporting of Elevator and trading information;

• Jeff Wildeman: Mr. Wildeman is the Origination and Supply Chain Solutions Manager at Ceres. Ceres is involved in the procurement and provision of North American agricultural commodities, industrial products, fertilizers, energy products, and supply chain logistics services. Mr. Wildeman is responsible for the origination of Canadian agricultural commodities for Ceres's grain merchandising operations;

- Mark Irons: Mr. Irons is the Vice-President, Softseed Crush for ADM, an American global food processing and commodities trading corporation. Mr. Irons oversees the management of commercial activities related to ADM's softseed crush assets in North America; and

- Bryce Geddes: Mr. Geddes is a Marketing Specialist at Richardson, a worldwide handler and merchandiser of major grains and oilseeds, and a vertically integrated processor and manufacturer of oats and canola-based products. Mr. Geddes is responsible for collecting and analyzing transactional data for Western Canadian markets in which Richardson conducts its grain and crop inputs businesses.

91 The Tribunal notes that the Commissioner obtained data from nine grain handling companies including 15 Elevators and five Crushers. This data was used in the preparation of the expert evidence filed by the Commissioner.

92 The Tribunal generally found the Commissioner's farmer witnesses and Mr. Brooks to be credible, forthright, helpful, and impartial. They were knowledgeable about their respective businesses and farm operations. With respect to the representatives of competing grain companies and Crushers, the Tribunal found that these witnesses were reliable and gave no reasons to doubt the accuracy of the transaction data they provided.

(2) P&H

93 Turning to P&H, it led evidence from the following three farmer witnesses, who are all based within the Commissioner's proposed geographic market and his narrower "corridor of concern" in Manitoba and Saskatchewan:

- Kristjan Hebert: Mr. Hebert owns a 22,000-acre farm located in Fairlight, Saskatchewan, which is operated through Hebert Grain Ventures. Mr. Hebert grows wheat and canola as well as malt barley, hybrid rye, and yellow peas;

- Tim Duncan: Mr. Duncan owns and operates an approximately 3,000-acre farm located west of Cromer, Manitoba. He grows wheat, canola, and oats. From year-to-year, he will also grow barley, peas, and/or soybeans; and

- Edward Paull: Mr. Paull owns and operates an approximately 3,400-acre farm located 4.5 miles outside of Elkhorn, Manitoba, a town located between the Moosomin and Virden Elevators. He grows wheat and canola every year.

94 Mr. Heimbecker, the CEO of P&H, also testified at the hearing and was the only witness representing P&H itself. In addition to being CEO, Mr. Heimbecker is the President of P&H's Grain Division Canada. Mr. Heimbecker has been at P&H and in the grain business for his entire professional career, which started in May 1987. He was named CEO of P&H in September 2019. As President of Grain Division Canada, he is in charge of P&H's grain business for all of Canada. Mr. Heimbecker also acted as P&H's main witness on the issue of efficiencies.

95 As was the case for the Commissioner's farmer witnesses, the Tribunal generally found P&H's farmer witnesses to be credible, forthcoming, helpful, and impartial. As to Mr. Heimbecker, the Tribunal also found him forthcoming and knowledgeable about P&H's business. The Tribunal, however, observes that Mr. Heimbecker was not close to the day-to-day operations of P&H's Elevators, and was of more limited assistance to the panel in this respect. In addition, some of his evidence was distinctly oriented towards a successful outcome for P&H in this proceeding and was therefore less helpful to the Tribunal in such instances.

B. Expert witnesses

96 Three expert witnesses provided expert reports and testified at the hearing.

(1) The Commissioner

97 Dr. Nathan Miller and Mr. Andrew Harington testified on behalf of the Commissioner.

(a) Dr. Miller

98 Dr. Miller is the Saleh Romeih Associate Professor at the McDonough School of Business at Georgetown University in Washington, DC. He holds a B.A. in Economics and History from the University of Virginia and a Ph.D. in Economics from the University of California at Berkeley. He served as a Visiting Professor at Toulouse School of Economics in 2019-2020. Prior to joining Georgetown University in 2013, he served as a Staff Economist in the U.S. Department of Justice from 2008 to 2013. Dr. Miller's area of expertise is in industrial organization, with a specialization in antitrust economics and a focus on collusion and the competitive effects of mergers.

99 The Commissioner asked Dr. Miller to prepare a report examining the competitive effects and the deadweight loss ("*DWL*"), if any, with respect to the acquisition of grain Elevators and related assets from LDC by P&H (namely, the Transaction). His report focused specifically on the Virden Acquisition. Dr. Miller was also asked to reply to the report filed by P&H's expert, Ms. Margaret Sanderson, in response to his initial expert report.

100 With the parties' agreement, Dr. Miller was accepted as an expert qualified to give opinion evidence in industrial organization and competition law economics. The Tribunal generally found Dr. Miller to be credible, forthright, objective, and impartial. Dr. Miller was a cooperative witness and explained his models and analyses with clarity.

(b) Mr. Harington

101 Mr. Harington is a Chartered Professional Accountant, a Chartered Financial Analyst charterholder, and a Chartered Business Valuator. He is a Principal in the Toronto office of The Brattle Group, an economic consulting firm with offices around the world. Mr. Harington has provided business and intellectual property valuation and merger and acquisition advisory services for over 25 years.

102 Mr. Harington's mandate was to comment on the witness statements of Mr. Heimbecker as they relate to an assessment of efficiencies under section 96 of the Act. Mr. Harington was asked in particular to comment on whether, and if so the extent to which, the efficiencies that Mr. Heimbecker identified are cognizable under section 96 of the Act and would likely be lost if the Tribunal made the orders sought by the Commissioner.

103 At the hearing, Mr. Harington was qualified as an expert in the quantification of efficiencies. The Tribunal found Mr. Harington to be credible, forthright, objective, and impartial, as well as willing to acknowledge the weaknesses/shortcomings in his own evidence or in the Commissioner's case. He was a reliable and knowledgeable expert.

(2) P&H

104 Ms. Margaret Sanderson appeared on behalf of P&H as an expert witness.

105 Ms. Sanderson is the Vice President and the global practice leader of the Competition and Antitrust Economics practice for the consulting firm Charles River Associates International Limited, a multinational firm that provides economic, financial, and business strategy consulting. She holds a M.A. in Economics and a B.Sc. in Economics and Quantitative Methods from the University of Toronto. Prior to joining Charles River Associates, Ms. Sanderson was Assistant Deputy Director of Investigation and Research within the Economics and International Affairs Branch of the Competition Bureau. She has 30 years of experience addressing the competitive effects of mergers and other firm conduct.

106 Ms. Sanderson's mandate was to provide her opinion on the likely anti-competitive effects of P&H's Acquisition of the Virden Elevator and to respond to the initial expert report of Dr. Miller.

107 With the parties' agreement, Ms. Sanderson was accepted as an expert qualified to give opinion evidence in industrial organization and competition law economics. The Tribunal generally found Ms. Sanderson to be credible, forthright, objective, and impartial. Ms. Sanderson was helpful to the panel in her explanations.

C. Documentary evidence

108 The list of exhibits that were admitted in this proceeding is attached as Schedule "B" to these Reasons.

V. PRELIMINARY ISSUES

109 At the hearing, counsel for P&H raised issues regarding the Commissioner's evidence and obligations in these proceedings. These preliminary matters must be addressed before dealing with the main issues in dispute in the Commissioner's Application. They are as follows: 1) challenges to the evidence provided by the Commissioner's experts; 2) adverse inferences and the Commissioner's duty of fairness and obligations regarding the gathering of evidence; and 3) the legal burden of proof in this Application. Each will be dealt with in turn.

A. Challenges to the Commissioner's experts

(1) Mr. Harington's evidence

110 At the hearing, P&H challenged a number of paragraphs found in Mr. Harington's expert report on the issue of efficiencies. In particular, P&H asked the Tribunal to strike or give no weight to approximately 49 paragraphs of Mr. Harington's report, on the basis that they express opinions of law related to statutory construction or the interpretation of cases. P&H further asserted that a number of other paragraphs of Mr. Harington's expert report constitute inappropriate legal opinion evidence or inappropriate hearsay evidence related to the grain industry.

111 The Commissioner responds that none of the challenged paragraphs should be struck. He submits that Mr. Harington set out his understanding of the legal framework as it informed his opinion on efficiencies. With respect to P&H's claim that some paragraphs of Mr. Harington's report should be struck because they constitute opinion evidence related to the grain industry, the Commissioner explains that efficiencies and economic experts need to set out their factual understanding of the industry before they can give their opinion. The Commissioner further notes that in this case, Mr. Harington cited all sources in support of the factual statements contained in his report.

112 For the reasons that follow, the Tribunal agrees in part with P&H and will give limited weight to the legal opinions expressed by Mr. Harington as part of his expert report.

113 As the Tribunal noted in The Commissioner of Competition v Vancouver Airport Authority, 2019 Comp Trib 6 (“, it has consistently applied the principles articulated by the SCC in R v Mohan, [1994] 2 SCR 9 (“ and its progeny when it is tasked with determining the admissibility of expert evidence (*VAA CT* at para 107). In White Burgess Langille Inman v Abbott and Haliburton Co, 2015 SCC 23 (“, the SCC set out a two-step test for determining the admissibility of expert evidence. It held that in order to be admissible, expert opinion evidence must first meet the four threshold requirements established in *Mohan*, namely, relevance, necessity in assisting the trier of fact, absence of any exclusionary rule, and a properly qualified expert. At the second step, the decision maker engages in a balancing exercise and weighs the potential benefits of admitting the proposed evidence against the risks.

114 It is well recognized that, under the principle of "necessity," expert evidence must provide the courts with information that is considered as being "outside the experience and knowledge of a judge" (Mohanat p 23). The proposed expert opinion evidence must be necessary to assist the trier of fact, bearing in mind that necessity should not be judged strictly. This is notably the case where the expert evidence is needed to assist a court or a tribunal due to the technical nature of the issues at stake, or where the expertise is required to enable the decision maker to appreciate a matter at issue and to help it form a judgment on a matter where ordinary persons are unlikely to do so without the help of those with special knowledge.

115 Experts, however, must not substitute themselves for the trier of fact (Mohanat p 24). As the Tribunal stated in *VAA CT*, "evidence that provides legal conclusions or opinions on issues and questions of fact to be decided by the court is inadmissible because it is unnecessary and usurps the role and functions of the trier of fact" (*VAA CT* at para 109, referring to Quebec (Attorney General) v Canada, 2008 FC 713 at para 161, aff'd 2009 FCA 361, 2011 SCC 11 and to Mohanat p 24). In sum, expert witnesses are not entitled to opine on legal matters, which fall within the scope of the court or Tribunal's experience

and knowledge. An expert opinion that is analogous to a memorandum of fact and law can become inadmissible as it "merely summarizes legal decisions, offers legal submissions on those decisions, and then expresses the author's personal views on the ultimate issue that is for this Court to decide" (Es-Sayyid v Canada (Public Safety and Emergency Preparedness), 2012 FCA 59 at para 41). The closer the expert evidence approaches an opinion on the ultimate issue to be decided, the stricter the application of the principle will be.

116 In many paragraphs of his expert report, Mr. Harington examines in detail the framework for quantifying cognizable efficiencies under section 96 of the Act. He does an extensive review of the provisions of the Act, of the case law, and of the Competition Bureau's 2011 Merger Enforcement Guidelines, Competition Bureau Canada, October 6, 2011 ("*2011 MEGs*")[4]. Relying on these legal sources, he provides his interpretation of section 96 of the Act dealing with efficiencies.

117 It is not disputed that Mr. Harington is not a legal expert. The Tribunal agrees with P&H that the impugned paragraphs of his report constitute legal conclusions and opinion on an important issue that is up to the Tribunal to decide upon, namely, efficiencies. There is no doubt that the interpretation of section 96 and the determination of the proper legal framework to assess the efficiencies defence advanced by P&H falls within the Tribunal's experience, expertise, and knowledge. The legal opinion expressed by Mr. Harington on this issue, strictly speaking, intrudes on the role and functions of the Tribunal.

118 At the same time, the Tribunal acknowledges the extensive and well-recognized experience and expertise of Mr. Harington regarding the complex issue of efficiencies in merger reviews. Section 96 of the Act is a very technical provision and the Tribunal appreciates that Mr. Harington's comments on how the jurisprudence has been thought through were made to provide the background of his analysis and to help the panel understand his reasoning. The Tribunal accepts that it would have been difficult for Mr. Harington to prepare his expert report and offer his opinion on P&H's claimed efficiencies without providing some legal assumptions or basis to anchor his assessment of the particular facts in this case. In these circumstances, the Tribunal will not declare the impugned paragraphs of Mr. Harington's report inadmissible as they are necessary to understand his opinion on efficiencies, but it will give them limited weight in the determination that the Tribunal is called upon to make on the appropriate legal framework under section 96 of the Act.

119 Turning to P&H's complaint about Mr. Harington's comments on the Canadian grain industry, the Tribunal accepts that Mr. Harington is not a grain industry expert. The Commissioner was indeed not offering Mr. Harington's evidence as such. However, the Tribunal is satisfied that, in making comments on the grain industry in his expert report, Mr. Harington was simply providing his factual understanding of the grain industry based on the documents contained in the evidence. P&H also had an opportunity to cross-examine him to expose the limits of his knowledge on this front. The factual references to the grain industry made by Mr. Harington are grounded on various portions of the evidence, and the Tribunal is not convinced that they should be declared inadmissible or given no weight. The Tribunal is not accepting what Mr. Harington says on the grain industry as a fact. It is simply taking note of the factual sources Mr. Harington relied on for his opinions.

(2) Objectivity of the Commissioner's experts

120 P&H also asserted in its closing submissions that Dr. Miller failed to provide his expert opinion in an objective manner because he advanced a product market based on GHS, without examining the possibility of alternative product markets. P&H further submitted that neither Dr. Miller nor Mr. Harington opined objectively in their expert reports because of what it termed "their speculative approach" to what has occurred since the Transaction was completed. Echoing an observation made by Justice Moldaver (then at the Ontario Court (General Division)) in R v Clarke Transport Canada Inc, 1995 CanLII 7327, P&H claimed that the Commissioner's experts were "hired guns."

121 The Tribunal does not agree.

122 Nothing in Dr. Miller's and Mr. Harington's expert reports and testimonies, including in their respective cross-examinations, allows the Tribunal to conclude that these two experts did not provide their evidence objectively and in an impartial manner. Experts have a duty to provide independent assistance to a court at common law (*White Burgess* at para 26). Like many courts at the federal level and in provinces and territories, the Tribunal has also provided explicit guidance on the duty

of experts by issuing its *Notice on Acknowledgement of Expert Witnesses* in December 2010. Pursuant to that Notice, experts appearing before the Tribunal have the obligation to sign a form acknowledging that they will comply with the Tribunal's code of conduct for expert witnesses.

123 The Tribunal's code of conduct provides that experts must assist the Tribunal impartially, that they must be independent and objective, and that their role should not be conflated with that of an advocate for a party. In the Tribunal's opinion, this is exactly what both Dr. Miller and Mr. Harington have done in this case. P&H's claim that they were "hired guns" is entirely without merit and finds no support in the evidence heard by the Tribunal in this case.

B. The Commissioner's duty of fairness and adverse inferences

124 A second area of preliminary issues relates to the Commissioner's duty of fairness and his obligations regarding the gathering of evidence in the context of this Application. More specifically, P&H asked the Tribunal to draw adverse inferences against the Commissioner. P&H's position is two-fold. First, P&H submitted that the Tribunal should draw an adverse inference against the Commissioner "generally" in this proceeding. Second, P&H argued that an adverse inference should be drawn against the Commissioner because he failed to obtain and produce evidence that was "peculiarly" within his power with respect to subsection 96(3) of the Act on efficiencies and the counterfactual test established in subsection 96(1).

125 In its written submissions, P&H submitted that there are some circumstances in which a party who bears a burden of proof is not the party best situated to adduce the evidence related to the issue at stake, because the relevant facts lie particularly within the knowledge of the other party. The failure of a party to adduce evidence within its power may be considered as a matter of evidentiary weight and can lead to an adverse inference against it. In support of its position, P&H relied on the SCC's decision in R v Jolivet, 2000 SCC 29 (“.

126 P&H argued that in weighing the evidence in the record in this Application generally, and more specifically under section 96, the Tribunal must be "alive to what evidence is *not* in the record." P&H maintained that, if there are gaps in the evidence, and the missing evidence was uniquely within the ability of the Commissioner to obtain, the Tribunal should weigh this consideration and be prepared to draw an adverse inference that such evidence, had it been produced, would not support the Commissioner's position with respect to the Application generally and to efficiencies under section 96.

127 In addition to the legal principles set out in *Jolivet*, P&H also referred to Tribunal decisions which, according to P&H, established a general duty of fairness owed by the Commissioner during proceedings under the Act (Commissioner of Competition v Canada Pipe Company, 2004 Comp Trib 2 (“ at paras 60-64, aff'd 2004 FCA 76; see also Commissioner of Competition v Canada Pipe Company, 2003 Comp Trib 15 (“ at para 53).

128 During cross-examination of the Commissioner's witnesses, counsel for P&H posed questions designed to show that the witnesses had additional documents, or information, or both, that the Commissioner had not elected to obtain and disclose, or had not included in the individual's witness statement.

129 During oral argument at the hearing, P&H further submitted that while the Commissioner had collected documents from the merging parties, made market contacts, and collected data from grain companies and Crushers prior to commencing this proceeding, the more important question was what the Commissioner did *not* obtain and file before the Tribunal. P&H contended that the Commissioner did not request nor obtain, from the grain companies or Crushers, any contemporary business documents related to market shares, markets, rail capacity and expansions, excess capacity, barriers to entry, or competition generally. According to P&H, it was incumbent on the Commissioner, acting in the public interest, to investigate the matter fully before commencing this proceeding and to put a full and proper evidentiary record before the Tribunal. The Commissioner having failed to ask for and obtain the evidence, P&H claims that an adverse inference should be drawn by the Tribunal against him.

130 Not surprisingly, the Commissioner disagrees with P&H's submissions. During the hearing, the Commissioner submitted that he had complied with his obligations. The Commissioner disagreed with P&H's characterization of Justice Blanchard's reasons in *Canada Pipe* *2004* because in that case, the Tribunal considered the 1994 Competition Tribunal Rules, SOR/94-290,

which are no longer in effect. Relying on McIlvenna v Viebig, 2012 BCSC 218, aff'd 2013 BCCA 411, the Commissioner argued that the decision to draw an adverse inference is discretionary and should not occur unless it is warranted in all the circumstances.

131 At the hearing, the Commissioner further argued that *Jolivet* was a criminal case about whether the Crown's failure to call a witness at a criminal trial could be the subject of comment in the address to a jury by defence counsel. In the Commissioner's submission, the decision in *Jolivet* confirmed that the Crown was under no obligation to call a witness it considered unnecessary to its case.

132 The Commissioner also countered P&H's arguments about best evidence with his own submission, stating that the best evidence of how P&H competes on a day-to-day basis at an Elevator through pricing should have come from grain merchants such as P&H's employees, rather than relying solely on the evidence of Mr. Heimbecker, a senior executive of P&H. The Commissioner noted that two specific P&H employees were exclusively within the control of P&H and that there was no legitimate explanation for not calling them as witnesses.

(1) Legal principles

(a) Adverse inferences

133 The drawing of an adverse inference from the *absence* of evidence relies on the reasoning that the failure by a party to call certain evidence may, depending on the circumstances, amount to an implied admission that the evidence would be contrary to the party's case, or at least would not support it (*Jolivet* at para 28).

134 In *Jolivet*, the SCC considered whether a jury was entitled to draw an adverse inference from the Crown's failure to call a witness. During the trial, the Crown had indicated to the jury, twice, that it would be calling the witness to corroborate important admissions allegedly made by the accused. Just prior to the close of the prosecution's case, the Crown advised the court that it no longer intended to call that witness and provided an explanation for this decision. Speaking for the SCC, Justice Binnie referred to the general rule developed in civil cases about adverse inferences from the failure to tender a witness, noting that a party may provide a satisfactory explanation for not doing so. A party may have no special access to the potential witness, or the missing proof may lie in the peculiar power of the party against whom the adverse inference is proposed — in which case the argument for an adverse inference is stronger (*Jolivet* at paras 25 - 27). The SCC also held that one "must be precise about the exact nature" of the adverse inference to be drawn. The SCC concluded that, because Crown counsel had announced to the jury its intention to call the allegedly corroborative witness, an adverse inference of "unhelpfulness" would have been a fair result owing to the Crown's failure to substantiate its assertion of the existence of corroborative evidence (*Jolivet* at paras 29-30).

135 The authors of Sopinka, Lederman & Bryant, *The Law of Evidence in Canada*, 5th ed (LexisNexis Canada Inc, 2018) describe the situations in which an adverse inference may be drawn as follows:

> §6.471 In civil cases, an unfavourable inference can be drawn when, in the absence of an explanation, a party litigant does not testify, or fails to provide affidavit evidence on an application, or fails to call a witness who would have knowledge of the facts and would be assumed to be willing to assist that party. In the same vein, an adverse inference may be drawn against a party who does not call a material witness over whom he or she has exclusive control and does not explain it away. The inference should only be drawn in circumstances where the evidence of the person who was not called would have been superior to other similar evidence. The failure to call a material witness amounts to an implied admission that the evidence of the absent witness would be contrary to the party's case, or at least would not support it.
>
> §6.472 An adverse inference should be drawn only after a prima facie case has been established by the party bearing the burden of proof.

136 The Federal Court of Appeal ("*FCA*") has applied this passage in Deyab v Canada, 2020 FCA 222 at para 46 and Caron Transport Ltd v Williams, 2020 FCA 106 at para 10.

137 The FCA also considered adverse inferences in Toronto Real Estate Board v Commissioner of Competition, 2017 FCA 236 (" and Apotex Inc v Canada (Health), 2018 FCA 147 (". In *TREB FCA*, the court concluded that the Tribunal made no error in declining to draw an adverse inference against the Commissioner in the circumstances. The FCA held that the requested inference was tantamount to finding that the Commissioner had a legal obligation to quantify anti-competitive effects under section 92, which he had not because of the binding precedent issued by the SCC in *Tervita SCC*. In addition, the FCA stated as follows with respect to the Commissioner's and the Tribunal's roles in the proceeding:

> [104] Considering that the Commissioner had no such legal obligation, he, like any other plaintiff, had to decide what evidence he had to put forward to prove his case. As we know, he chose to do so by way of qualitative evidence and in so doing, he took the risk of failing to persuade the Tribunal that the anti-competitive effects of TREB's practice resulted in a substantial prevention of competition. As it turned out, the Tribunal was persuaded by the qualitative evidence adduced by the Commissioner.
>
> [105] We have carefully considered the case law and cannot see any basis to accept TREB's and CREA's proposition that the Tribunal ought to have drawn an adverse inference against the Commissioner for failing to conduct an empirical assessment of markets in the United States and in Nova Scotia, or for that matter in the GTA. That, in our respectful view, would be akin to giving the Tribunal the power to dictate to the Commissioner how he should present his case. There is no authority for such a proposition.
>
> [Emphasis added.]

138 In *Apotex*, the FCA confirmed that recent decisions have treated the drawing of an adverse inference as a matter of discretion, to be exercised only where warranted in all of the circumstances. The court identified two reasons for this evolution. First, court rules now go a long way towards rendering witnesses and documents available to both sides, through discovery and other procedural mechanisms. Second, courts have recognized that whether or not an adverse inference is warranted on particular facts is bound up inextricably with the adjudication of the facts (*Apotex* at para 68, citing *TREB FCA* at para 107).

(b) Discovery under the current CT Rules

139 Pursuant to Rule 60 of the CT Rules, a party to a proceeding has to serve an affidavit of documents on each other party, identifying the documents that are "relevant" to any matter in issue and that are or were in the possession, power, or control of the party. CT Rule 60 does not distinguish between the Commissioner and the other parties for the purposes of discovery, and parties are all subject to the requirement of disclosing what is "relevant." CT Rule 65 adds that access to what is disclosed must be provided.

140 Relevance is determined by the way the issues are framed in the pleadings. A document of a party is considered relevant if the party intends to rely on it, if the document tends to adversely affect or support another party's case, or if the document might fairly lead a party to a "train of inquiry" that could have either of these consequences (Antonio Di Domenico, *Competition Enforcement and Litigation in Canada*, (Toronto: Emond Montgomery Publications Limited, 2019) ("*Di Domenico*") at p 736, referring to subsection 222(2) of the Federal Courts Rules, SOR/98-106 ("*FC Rules*")). The definition of relevance is therefore quite broad and applies to all parties.

141 FC Rule 226 further provides that the disclosure obligation is continuous. This requirement has been imported by the Tribunal in its proceedings (Tervita v Canada (Commissioner of Competition), 2013 FCA 28 (" at para 74; The Commissioner of Competition v Air Canada, 2012 Comp Trib 20 at para 22). The continuous disclosure obligation entails that the initial disclosure affidavit must be updated any time a party becomes aware that it is deficient.

142 The most recent court decision to have considered the Commissioner's disclosure obligations is Vancouver Airport Authority v Commissioner of Competition, 2018 FCA 24 (", in which the FCA said the following:

[30] The procedural fairness obligations require the Commissioner of Competition to disclose to the Airport Authority evidence that is relevant to issues in the proceedings. This is necessary for the Airport Authority to know the case it has to meet and to fairly defend itself against the allegations. Often — as the Commissioner has recognized in this case by releasing roughly 8,300 documents from his investigatory file — this includes exculpatory material or other material resting in the investigatory file that could assist the party whose conduct is impugned in testing the evidence called by the Commissioner or in building its own case. [...] In some cases, there may be limits on the obligation to disclose based on materiality, proportionality, applicable legislative standards and the nature of the proceedings. [...]

[Citations omitted.]

143 The FCA further noted that the Tribunal proceedings are adjudicative in nature, which typically commanded high procedural fairness requirements (*VAA FCA* at para 29).

(c) Disclosure and the Commissioner's duty of fairness

144 In light of P&H's submissions, it is also important to consider the issue of adverse inferences in the context of the more general legal principles governing the Commissioner's disclosure obligations and duty of fairness. These go back to the Tribunal's decision in *Canada Pipe 2004*.

145 In *Canada Pipe 2004*, the respondent had requested additional disclosure from the Commissioner and to examine witnesses before the hearing. The procedural rules governing Tribunal proceedings back then were different from today's; they applied a standard of *reliance* for the Commissioner's general disclosure obligations, as opposed to the standard of *relevance* currently in place. In that case, the Tribunal dismissed the motion for additional discovery of documents and persons.

146 In the Tribunal's reasons, Justice Blanchard addressed the "duty of fairness" of the Commissioner (*Canada Pipe 2004* at paras 60-64). He found that, although the Commissioner's disclosure obligation was dictated by a standard of reliance under the then-rules, the Commissioner was "nonetheless required to act fairly in the exercise of her duties." He noted that the Commissioner is a public officer with significant statutory powers to gather information and exercise public interest privilege, and there was a presumption that the Commissioner was acting in good faith. He further found that in those proceedings, the Commissioner was not a normal adversary, but rather a public officer with a statutory obligation to act fairly (*Canada Pipe 2004* at para 62; see also *Canada Pipe 2003* at para 53). Justice Blanchard likened the Commissioner's obligations to that of a prosecutor who must act fairly, referring to the criminal law decisions in Boucher v The Queen, [1955] SCR 16 (“ and R v O'Connor, [1995] 4 SCR 411 (“. He then stated:

[64] It naturally follows that just as the Crown prosecutor must be motivated by fairness and not the notion of winning or losing, so too the Commissioner must be motivated by goals of fundamental fairness and not by achieving strategic advantage on the proceeding. This is not to say that the duties articulated in such landmark criminal cases as *Boucher*, *supra*, or *O'Connor*, *supra*, should be directly imported into an administrative law setting. The Tribunal is an administrative Tribunal with an administrative process and procedural fairness must be customized to accommodate the expedited process required by the legislation and rules which govern its proceedings. Though the standard of disclosure may justifiably be different in proceedings before the Tribunal than in criminal proceedings, the underlying notion of fairness must remain constant for both. It is in this context that the reliance standard is to be applied.

147 The Tribunal pauses to note that Justice Rand's opinion in *Boucher* made comments about all available proof of facts being presented in a criminal matter. The passage from Justice L'Heureux-Dubé's reasons for the SCC in *O'Connor* further referred to "full and fair disclosure as a fundamental aspect of the Crown's duty to serve the Court as a faithful public agent, entrusted not with winning or losing trials but rather with seeing that justice is served" (*O'Connor* at para 101).

148 P&H's arguments in this proceeding do not concern *disclosure* obligations of the Commissioner so much as whether the Commissioner has an obligation to *collect* evidence (*i.e.*, information, documents, and data) from third parties during an investigation or inquiry, and then to present that evidence fully to the Tribunal during proceedings commenced under section

92. The Tribunal observes that P&H cited no case dealing specifically with the Commissioner's obligation to gather evidence during an investigation or inquiry, nor about whether the Commissioner may have an obligation to obtain an order under section 11 of the Act before a hearing, in order to assist a respondent with its case. P&H also did not refer to any cases involving other statutory officers' or law enforcement officials' obligations to carry out full and fair investigations or to obtain court orders to gather information for a party whose transaction or conduct is under review.

149 Neither party referred to any prior determination of the Tribunal or appellate courts about the scope of the Commissioner's obligation to present a full evidentiary record to the Tribunal, nor the obligations of any comparable statutory or law enforcement official (other than *Boucher*). Indeed, neither party referred to the remarks made by the FCA in *TREB FCA* at paragraphs 104 - 105, about the Commissioner's decisions in presenting a case to the Tribunal.

150 In addition, since Justice Blanchard's decision, the procedural landscape during Tribunal proceedings, including disclosure rules, has changed. The Tribunal's procedural rules passed in 2002 have been replaced by the CT Rules issued in 2008, which now contemplate a relevance-based approach to documentary discovery of the Commissioner. Since *Canada Pipe 2004*, the FCA has also revised the characteristics of the public interest privilege that existed in 2004 and examined procedural fairness obligations during Tribunal proceedings (*VAA FCA* at paras 28-35).

151 In this context, it is fair to consider whether, and how, the Commissioner's duty of fairness may have changed since *Canada Pipe 2004*, owing to a respondent's right to disclosure and production of all non-privileged records in the possession or control of the Commissioner under the current CT Rules and the respondent's ability to make its own comprehensive submissions and call its own evidence based on that same body of evidence. The Tribunal did not receive meaningful legal submissions on that question, nor does it have submissions on how the absence of the third party evidence in the present case adversely affected P&H's already-vigorous defence against the Commissioner's case — apart from general submissions criticizing the Commissioner's efforts to collect the evidence and examples of what else could have been requested.

(2) Tribunal's assessment

152 With these considerations in mind, the Tribunal will now consider the adverse inferences requested by P&H.

(a) The "general" adverse inference

153 For the following reasons, the Tribunal declines P&H's request to draw an adverse inference against the Commissioner "generally" in this proceeding.

154 First, P&H provided no specifics as to the exact nature of the adverse inference to be drawn. During the hearing, it made submissions that criticized the Commissioner's investigation and lack of document production and data gathering, and it added generalized submissions of the same nature in oral argument. However, it did not specify that, because a particular piece of evidence was not tendered to the Tribunal or because a certain witness did not testify, the Tribunal should infer that some particular fact did occur, or that the Tribunal should draw an adverse inference of a specific nature against the Commissioner.

155 The Tribunal finds it preferable to be asked much more precisely what inference to draw and on what basis, before deciding whether to draw an adverse inference (*Jolivet* at para 28). In the Tribunal's view, such specificity is particularly important when a party asks the Tribunal to draw an inference against a party based on the absence of evidence or the absence of a witness. In the case at bar, the generalized adverse inference requested by P&H is too amorphous for meaningful adjudication.

156 Second, the Tribunal is unaware of anything that prevented P&H from attempting to obtain documents or information itself (setting aside additional data, discussed separately below). P&H could have interviewed the farmer witnesses and could have attempted to interview or send written questions to the grain companies' witnesses in advance of the hearing (or even while the merger review was occurring), and could have asked them for documents. There was no suggestion that P&H attempted to do so and was rebuffed, or that the Commissioner tried to interfere with any such attempts.

157 Third, the Commissioner does not bear the exclusive or entire burden of adducing evidence for the Tribunal. In litigation in respect of a merger under section 92, the Commissioner is not required to present every bit of evidence at the hearing. Contested proceedings under section 92 are adversarial by nature. The Commissioner called some farmer witnesses to support his case under section 92 in relation to issues for which he had the evidentiary and legal burden of proof. It was the Commissioner's risk not to obtain and present specific evidence from them (*TREB FCA* at paras 104-105).

158 This is also not a situation where the witnesses were not called to testify at all. P&H had the opportunity to cross-examine each of the Commissioner's farmer witnesses to expose missing or incomplete information, and it did so in several respects. The cross-examination revealed that there were additional inquiries that *could* have been made to the farmer witnesses and there were documents that *could* have been requested from them.

159 In these circumstances, the Tribunal prefers a more surgical alternative instead of a general adverse inference against the party that called the witness to testify. Incomplete evidence gathered from or presented by a witness during examination-in-chief may adversely affect the credibility or reliability of the witness's testimony. Exposed during cross-examination at a hearing, it can sometimes be damaging to a party's case. Given that P&H could also have easily sought the same information and documents, apparently did not do so, but exposed the issues at the hearing, the Tribunal concludes that the Commissioner took on the risk of failing to discharge his burden under section 92 and of having adverse reliability or credibility findings made by the Tribunal against the witnesses.

160 Fourth, the absence of data from rival Elevators is addressed separately, below. That analysis supports the Tribunal's conclusions on the requested general adverse inference.

161 Finally, having considered the parties' submissions, the Tribunal is disinclined in this case to make a legal ruling with potentially far-reaching consequences concerning the Commissioner's general duty of fairness as it concerns either gathering evidence for a proceeding under section 92 or presenting that evidence. The Tribunal notes that P&H's pleading in response to the Application ("*Response*") did not express any concerns about the Commissioner's investigation or inquiry into the proposed merger. P&H did not later seek to amend its pleading after it received the Commissioner's Affidavit of Documents or after its oral discovery of the Commissioner. Nor did P&H raise any concerns to the Tribunal on receipt of the witness statements, or else seek any further order before the hearing. Considering how and when P&H raised the issue and the scope of the parties' submissions, the Tribunal considers it unnecessary and inappropriate to make more detailed comments.

162 In light of the foregoing, the Tribunal exercises its discretion not to make a generalized adverse inference against the Commissioner. In stating this conclusion, the Tribunal should not be understood to express a view on the scope of the Commissioner's fairness duties as submitted by P&H and denied by the Commissioner in this case. Resolving issues related to the Commissioner's general fairness obligations in the disclosure process will be for another day.

(b) The adverse inferences related to efficiencies under section 96

163 P&H also argued that the Tribunal should draw a more specific adverse inference against the Commissioner for his failure to obtain certain data from third-party grain companies that compete with it at the Virden Elevator, and which had an impact on the evidence relating to the efficiencies defence.

164 P&H took the position that the Transaction would increase throughput at the Virden Elevator, resulting in cognizable efficiencies for the purposes of section 96. During the cross-examination of Mr. Harington, the Commissioner's expert on efficiencies, P&H drew attention to paragraph 130 of Mr. Harington's expert report. In that paragraph, Mr. Harington stated that the only way a redistribution of throughput between competing Elevators would result in an efficiency to the Canadian economy is if "the entity from which the increased throughput is being taken operates at a higher per unit variable operating cost" than P&H (Exhibits P-A-195, CA-A-196 and CB-A-197, Expert Report of Mr. Andrew Harington ("*Mr. Harington Report*"), at para 130). Mr. Harington testified under cross-examination that he did not have the variable operating costs of the rival Elevators to the Virden Elevator. Without that, he said, he could not do the comparison contemplated by his paragraph 130. Because his mandate was to respond to the alleged efficiencies claimed by P&H in Mr. Heimbecker's initial witness statement

on efficiencies, rather than to determine the efficiencies himself, Mr. Harington did not request or obtain the variable operating cost data of the rival Elevators.

165 Mr. Harington testified that in fact, he would have required a lot more than the variable operating costs data: he would have needed all of the data on locations of farms that shifted volumes of grain from one Elevator to another, and what the transportation costs were for those farms. He would have looked at the efficiencies implications for all of Canada. Mr. Harington further noted that he would not reasonably expect P&H to have its competitors' variable cost data. However, Mr. Harington testified that he had all of the evidence he needed to do the job he was asked to do (*i.e.*, to respond to P&H's position on increased throughput at the Virden Elevator as an efficiency under section 96).

166 P&H submitted that the Tribunal should draw an adverse inference against the Commissioner owing to the Commissioner's failure to request and obtain the variable operating costs data from rival Elevators because, without the data, a precise assessment could not be completed for the purposes of the counterfactual test contemplated in subsection 96(1) of the Act and the redistribution analysis under subsection 96(3). According to P&H, the Commissioner could have obtained the required data either by request or by obtaining an order under section 11 of the Act.

167 The Commissioner responded that he had no such burden under section 96. Referring to paragraph 122 of the SCC's decision in *Tervita SCC*, the Commissioner observed that the merging parties bear the onus of establishing all elements of the efficiencies defence after the Commissioner has discharged his initial burden to prove the anti-competitive effects and the DWL for the purposes of section 96. A respondent's burden includes proof of the extent of the efficiency gains and whether the gains are greater than and offset the anti-competitive effects. The Commissioner noted that P&H's position, according to which the Commissioner did not collect evidence enabling it to prove an efficiency claim, was not raised in its own initial Response pleading. The Commissioner noted that P&H could have sought, but did not seek, discovery from third parties to obtain the information it now requires. P&H decided to discharge its burden to quantify cognizable efficiencies through a witness statement from Mr. Heimbecker, rather than from an expert witness. According to the Commissioner, P&H cannot shift the burden onto the Commissioner for its own failure to discharge its burden.

168 The Tribunal agrees with the Commissioner and will not draw the specific adverse inferences requested by P&H against the Commissioner in relation to efficiencies. There are three reasons for this determination.

169 First, it is not clear what exactly P&H seeks from the Tribunal by way of adverse inference. Again, P&H did not specify which rival Elevators' data were at issue, who owed them, what the variable costs data would necessarily or could reveal (by itself or in combination with other unidentified data), or what the outcome would be under subsections 96(1) or (3) following analysis and quantification.

170 For example, P&H did not explain how the absence of variable operating costs data at one or more unnamed Elevators constitutes an implied admission against the Commissioner that the data will lead to a cognizable and quantifiable efficiency under section 96. It would be speculative to find that such an implied admission follows from the sole absence of unknown data. To do so would require making several assumptions about the contents of the data and the outcome of calculations using those data. As Mr. Harington's testimony confirmed, significant additional data would be required to do the analysis he envisioned. Accordingly, no inference is warranted based on an absence of the variable operating costs data.

171 Second, P&H has not demonstrated that the Commissioner had an obligation to obtain the data. It has cited no case nor pointed to a principled basis for such an obligation. Apart from the initial burden on the Commissioner under section 96 to show and quantify anti-competitive effects as established in *Tervita SCC*, the legal burden under section 96 is on the respondent. While P&H sought to argue that *Tervita SCC* did not settle the evidentiary burden under section 96, it provided no compelling legal or factual reason to shift a further burden onto the Commissioner on the facts of this case.

172 Third and relatedly, P&H has not shown that the Commissioner knew or should have known that P&H needed the data in the present case. There is no evidence that P&H made any efforts itself to request or obtain the variable operating costs data.

While P&H may well be correct that its competitors would not voluntarily provide that data to a rival, it did not try to obtain the data by way of request to them or by filing a motion with the Tribunal.

173 On the evidence, the Tribunal does not accept that the Commissioner should (or even could) have known that P&H required the data. P&H acknowledged during argument that it did not ask the Commissioner to obtain it. When asked by the Tribunal how the Commissioner would have known that P&H needed it, or whether the Commissioner should have filed an application for an order under section 11 of the Act to obtain it, P&H did not provide a clear answer.

174 Moreover, based on the events leading up to the hearing, the Tribunal sees no realistic basis on which the Commissioner could have known that he should obtain the impugned data:

• At the pleadings stage in this proceeding, P&H did not raise possible efficiencies arising from increased throughput at the Virden Elevator, nor anything specific about subsection 96(3) of the Act. Its Response pleaded that the efficiencies from the Transaction "include: improved [FGT] scale economies and cost savings, elimination of the margin that [LDC] formerly paid to use the Vancouver export terminal owned by Kinder Morgan, outlay expansion and improved scale economies at the former [LDC] elevator and administrative synergies;"

• There was no suggestion that P&H noted the absence of the data and raised it after receiving the Commissioner's Affidavit of Documents;

• At the oral examinations for discovery, P&H declined to provide the Commissioner with any specific insight about its efficiencies defence. Counsel for the Commissioner asked several questions requesting information about efficiencies to Mr. Heimbecker. The answers provided by P&H's counsel were essentially that it was a matter for an expert report to be filed later and that otherwise, no substantive answers would be provided at discovery;

• Mr. Heimbecker repeated that position in his subsequent responses to undertakings and questions taken under advisement;

• However, P&H did not file an expert report concerning efficiencies;

• Mr. Heimbecker's reply witness statement, delivered over two months before the hearing started, set out evidence to advance P&H's position on efficiencies. However, it made no reference to any need for variable operating costs data from rival Elevators;

• P&H also did not raise any need for data after it received a copy of Mr. Harington Report, also more than two months before the hearing commenced. As noted above, this expert report referred directly to variable operating costs of other entities;

• P&H did not file a motion to the Tribunal seeking an order to compel the Commissioner to obtain the data; and

• The issue did not come to light until Mr. Harington's cross-examination, near the end of the hearing.

175 In these circumstances, the Tribunal finds it unrealistic to expect that the Commissioner would be or could have been aware that P&H required variable operating costs data of rival Elevators for its efficiencies defence. It was equally unrealistic to expect the Commissioner to be aware that P&H expected him to attempt to obtain that data either by request or under section 11 of the Act. Rather, the Tribunal finds P&H's position on the need for this data to be late-blooming and tactical, rather than based on a substantive need to support its position on efficiencies arising at the Virden Elevator.

176 Exercising its discretion based on the evidence and arguments made, the Tribunal therefore declines to make any specific adverse inferences on issues related to efficiencies. To draw an adverse inference against the Commissioner in the present circumstances would be demonstrably unfair.

C. Legal and evidentiary burden applicable to sections 92 and 96 of the Act

177 The last preliminary issue that needs to be briefly addressed is the legal burden of proof in this Application. In its submissions, P&H suggested that the allocation of the burden of proof established by the SCC in *Tervita SCC* has left some questions unanswered regarding the Commissioner's burden under section 96 of the Act.

178 With respect, the Tribunal disagrees.

179 It is not disputed that, under section 92, the Commissioner bears the burden of proving that the merger will create, maintain, or enhance market power through the merged entity's ability to profitably influence price, quality, service, or other dimensions of competition. However, there is no requirement for the Commissioner to prove that the merged entity will, in fact, exercise these powers (The Commissioner of Competition v Canadian Waste Services Holdings Inc, 2001 Comp Trib 3 (“ at para 108, aff'd 2003 FCA 131, leave to appeal refused, [2004] 1 SCR vii; *Superior Propane I* at para 258). In determining whether the Commissioner has met his burden on this point, a forward-looking analysis of whether the merger will give the merged entity the ability to prevent or lessen competition substantially compared to the pre-merger benchmark — or "but for" world — must be conducted (*Tervita SCC* at para 51).

180 With respect to section 96, Justice Rothstein in *Tervita SCC* clearly stated that "the [*Superior Propane* cases] established that the Commissioner has the burden under s. 96 to prove the anti-competitive effects" of a merger (*Tervita SCC* at para 122). Conversely, the merging parties bear the onus of establishing all the other elements of the efficiencies defence, including the extent of the efficiency gains and whether the gains are greater than and offset the merger's anti-competitive effects (*Tervita SCC* at para 122). To meet his burden, the Commissioner must quantify the quantifiable anti-competitive effects he relies upon. Where these effects are measurable, they must be calculated or at least estimated, and a failure to quantify quantifiable effects will not result in such effects being considered qualitatively or remaining undetermined (*Tervita SCC* at paras 125-133). Justice Rothstein explained that an approach that would permit the Commissioner to meet his burden without at least establishing estimates of the quantifiable anti-competitive effects would fail to provide the merging parties with the information they need to know the case they have to meet (*Tervita SCC* at para 124). Qualitative anti-competitive effects which are not quantifiable can also be taken into account, provided they are supported by the evidence and the reasoning for the reliance on the qualitative aspects is clearly articulated by the Tribunal (*Tervita SCC* at para 147).

181 In the Tribunal's view, there is at present no legal precedent for the Commissioner to have any additional burden under section 96 beyond that established by the SCC in *Tervita SCC*. P&H has not provided any argument or sufficient supporting evidence that could allow the Tribunal to revisit, revise or enlarge the clear standard set out in *Tervita SCC* on the legal and evidentiary burden of the Commissioner under the merger provisions of the Act.

VI. ISSUES

182 The following broad issues are raised in this proceeding:

- What is or are the relevant product market(s) for the purposes of this proceeding?;

- What is or are the relevant geographic market(s) for the purposes of this proceeding?;

- Has the Commissioner established, on a balance of probabilities, that the Virden Acquisition lessens, or is likely to lessen, competition substantially?;

- If the Commissioner has established that the Virden Acquisition lessens, or is likely to lessen, competition substantially, what is the remedy to be ordered?;

- Has P&H established, on a balance of probabilities, that the gains in efficiency will be greater than, and will likely offset, the effects of any lessening of competition pursuant to section 96 of the Act?;

- What costs should be awarded?

183 Each of these issues will be discussed in turn.

VII. ANALYSIS

A. What is or are the relevant product market(s) for the purposes of this proceeding?

184 In order to determine whether the Virden Acquisition lessens competition substantially, or is likely to do so, the Tribunal must first identify the product and geographic dimensions of the relevant market(s) for the purposes of this proceeding. In this case, the fundamental dispute between the parties is how to properly characterize the product market — and more specifically, the relevant *product* and the relevant *price* — in a situation where the merging firms' alleged specific contribution of value is only a component of the final price of the product. The Commissioner claims that P&H supplies GHS for wheat and canola to farmers, whereas P&H submits that it purchases wheat and canola from farmers. The Commissioner submits that the relevant price is the "imputed" price for GHS — which, he says, approximates the Basis — , while P&H argues that it is the Cash Price charged to farmers for their grain.

185 As acknowledged by both Dr. Miller and Ms. Sanderson during their respective testimony, the definition of the relevant product market is a key element that has an impact on the rest of the Tribunal's analysis in this case (*i.e.*, the geographic market, the competitive effects analysis, the market shares, the surplus calculations, etc.).

(1) Analytical framework

(a) The purpose of market definition

186 In assessing whether, under section 92 of the Act, a merger lessens competition substantially or is likely to do so, the focus is on whether the merger is likely to create, maintain or enhance the ability of the merged entity to exercise market power, unilaterally or in coordination with other firms (*Tervita SCC* at para 44).

187 Market power is not defined in the Act. Market power has been described by the Tribunal as the ability to "profitably influence price, quality, variety, service, advertising, innovation or other dimensions of competition" (*Canadian Waste* at para 7) or as "the ability to maintain prices above the competitive level for a considerable period of time without such action being unprofitable" (Hillsdownat p 314). Both of these descriptions were cited with approval in *Tervita SCC*, at paragraph 44.

188 The first step in measuring market power is to define the relevant market. Put differently, the purpose of identifying the relevant product (or geographic) market is to identify the possibility for the exercise of market power (*Canadian Waste* at para 39; *Superior Propane I* at para 47; Director of Investigation and Research v Southam(1992), 43 CPR (3d) 161 (Comp Trib) at pp 177-178). Market definition is often considered a critical component in assessing market power because it frames the context within which competitive effects can be analyzed (*Di Domenico* at p 408).

189 The Tribunal and the courts have traditionally considered it necessary to define a relevant market before proceeding to assess the competitive effects of mergers under the Act (Canada (Director of Investigation and Research) v Southam Inc, [1997] 1 SCR 748 at para 79; *Tervita CT* at paras 92, 360-364; *Superior Propane I* at para 56; Hillsdownat p 297). The relevant market is typically a predicate to a finding of substantial lessening or prevention of competition in merger cases because the merger must be one that will substantially lessen or prevent competition, or is likely to do so, within an area of actual or potential competition.

190 However, the Tribunal has cautioned against losing sight of the ultimate inquiry and task of the Tribunal, which is to determine whether the merger being assessed prevents or lessens, or is likely to prevent or lessen, competition *substantially* (*Superior Propane 1* at para 48). Market definition is not an end in itself: it is merely an analytical tool to assist in evaluating anti-competitive effects (*Superior Propane I* at para 48; 2011 MEGs at para 3.2).

191 It is further important to note that a competition market is an analytical construct, and neither the product market nor the geographic market needs to coincide with the market as it is considered by a business or industry (*Superior Propane I* at

paras 67, 85, 101, 106). Relevant markets for the purpose of a merger analysis are not always intuitive and may not align with how industry participants use the term "market" or view their "market."

192 Market definition is typically the subject of contested submissions and can often be outcome-determinative in merger matters under section 92.

(b) Rationale and tools for market definition

193 When defining relevant markets in proceedings brought under section 92 of the Act, the Tribunal considers whether there are close substitutes for the product at issue. Market definition is based in part on substitutability, and it focuses primarily on demand responses to changes in relative prices after the merger. The ability of a firm to raise prices without losing sufficient sales to make the price increase unprofitable ultimately depends on the purchasers' willingness to pay the higher price. This is determined by analyzing evidence of the ability of purchasers to switch their purchases to substitute products and locations in response to a price increase (*Tervita CT* at paras 58-60). Close substitutes have been defined in terms of whether "buyers are willing to switch from one product to another in response to a relative change in price, *i.e.*, if there is buyer price sensitivity" (Canada (Commissioner of Competition) v Tele-Direct Publications Inc(1997), 73 CPR (3d) 1 (Comp Trib) ("*Tele-Direct*") at p 35, citing the test adopted by the FCA in Canada (Director of Investigation and Research) v Southam Inc, [1995] 3 FC 557, 63 CPR (3d) 1 (FCA) ("*Southam FCA*"), rev'd on other grounds [1997] 1 SCR 748).

194 In assessing the extent of the product (and geographic) dimensions of relevant markets in the context of proceedings under the Act, the Tribunal has generally followed the well-established hypothetical monopolist analytical framework, or hypothetical monopolist test ("*HMT*") (*VAA CT* at para 300; The Commissioner of Competition v The Toronto Real Estate Board, 2016 Comp Trib 7 (" at paras 121-124; The Commissioner of Competition v Visa Canada Corporation and MasterCard International Incorporated, 2013 Comp Trib 10 (" at para 173; *Tervita CT* at para 58; *Superior Propane I* at para 57).

195 In *Tervita CT* and *Superior Propane I*, two merger cases, the Tribunal embraced the description of that framework set forth in the Competition Bureau's MEGs (see, for example, 2011 MEGs at para 4.3). Under this approach, a relevant product market is defined as the smallest group of products (including at least one product of the merging parties) in respect of which a sole profit-maximizing seller — the hypothetical monopolist — controlling all suppliers in the proposed market would find it profitable to impose and sustain a small but significant and non-transitory increase in price ("*SSNIP*") above levels that would likely exist in the absence of the merger. The purpose of the HMT is to determine the extent to which customers in the candidate market will switch to other products in response to a SSNIP (*Visa Canada* at para 198). In the determination of whether a SSNIP would be profitable, the HMT makes use of demand elasticity and cross-elasticity evidence as well as what are known as practical indicia. If a small price increase would drive purchasers to an alternative product, then that product must be reasonably substitutable for those in the proposed market and must therefore be part of the market, properly defined. The conceptual exercise is repeated to include a broader array of products until it defines a product set over which a hypothetical monopolist could profitably impose a SSNIP (Brian A. Facey and Cassandra Brown, *Competition and Antitrust Laws in Canada: Mergers, Joint Ventures and Competitor Collaborations*, 3rd ed (Toronto: LexisNexis Canada Inc, 2020) ("*Facey and Brown*") at p 205).

196 Pursuant to the HMT framework, the product dimension of a relevant market is defined in terms of the *smallest* group of products in respect of which a hypothetical monopolist would have the ability to impose and sustain a SSNIP above levels that would likely exist in the absence of the merger. The "smallest group" principle is an important component of the test because, without it, there would be no objective basis upon which to draw a distinction between a smaller group of products in respect of which a hypothetical monopolist would have the ability to profitably impose a SSNIP and a larger group of products in respect of which that monopolist may also have such an ability (*VAA CT* at para 326; *TREB CT* at para 124).

197 The SSNIP will be applied to the price that is being paid by the purchasers of the candidate product (*Visa Canada* at para 198), often referred to as the "base price" (see, for example, 2011 MEGs at para 4.6).

198 Generally, for the purposes of determining the SSNIP, the objective benchmarks are as follows (and are reflected as such in the 2011 MEGs): an "increase in price" is typically one of 5% or more, and a "non-transitory" price increase is typically one

that is maintained for at least one year. This 5%/one-year approach is generally treated as a "threshold" used to identify market power at the market definition stage, where the objective is to define the smallest market in which a substantial lessening of competition would be possible. If sellers of a product or of a group of products in a provisionally defined market, acting as a hypothetical monopolist, would not have the ability to profitably impose and sustain a 5% price increase lasting one year, the product bounds of the relevant market will be progressively expanded until the point at which a hypothetical monopolist would have that ability and degree of market power. Essentially the same approach is applied to identify both the product and geographic dimensions of relevant markets.

199 Indeed, the Commissioner and P&H both acknowledged that a 5% increase and a one-year time frame are the standard thresholds for a SSNIP, here in Canada and in many other jurisdictions. However, these benchmarks can be adjusted to reflect the specific realities of a given industry or business.

200 The Tribunal agrees that the HMT approach adopted in previous Tribunal cases, consistent with the 2011 MEGs, should continue to be used in this case.

201 Given the practical challenges associated with determining the base price in respect of which the SSNIP assessment must be conducted in a proceeding brought under section 92 of the Act, market definition will often include not only the analysis of prices through the HMT framework but also other evidence of substitutability or customer switching. Market definition may therefore involve assessing indirect evidence of substitutability, including factors such as: functional interchangeability in end-use of the products; switching costs; the views, strategies, behaviour and identity of buyers; trade views, strategies and behaviours of other market participants; physical and technical characteristics; and price relationships and relative price levels.

(c) The language of section 92

202 During final argument, the Tribunal raised an issue related to the interpretation of section 92. The Tribunal observed that, contrary to other provisions of the Act such as civil agreements between competitors (section 90.1), section 92 on mergers does not expressly refer to a substantial lessening or prevention of competition "in a market." Subsection 92(1) rather uses broader language incorporating the phrase "trade, industry or profession" in four paragraphs referring to the effect of the merger on competition: "(*a*) in a trade, industry or profession; (*b*) among the sources from which a trade, industry or profession obtains a product; (*c*) among the outlets through which a trade, industry or profession disposes of a product; or (*d*) otherwise than as described in paragraphs (*a*) to (*c*)."

203 Both parties expressed the view that the absence of the word "market" in subsection 92(1) makes no difference, that the merger provision clearly relates to a substantial lessening or prevention of competition "in a market," and that determining the relevant "market" forms part of the analysis to be conducted by the Tribunal.

204 The Tribunal agrees and finds that the absence of the word "market" in the opening part of section 92 should not be interpreted as implying that a relevant *competition market* does not need to be defined or utilized in merger analysis.

205 The principled approach to statutory interpretation requires that section 92 be read in its entire context, in its grammatical and ordinary sense, harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament (see, for example, Bell ExpressVu Limited Partnership v Rex, 2002 SCC 42 (“ at para 26).

206 Looking first at the wording of section 92, the Tribunal agrees with P&H that a merger as defined in section 92 clearly encompasses the concept of market or markets. A merger is defined in section 91 as the taking of control of a "business." The word "business" is in turn defined broadly in section 2 of the Act as "the business of (a) manufacturing, producing, transporting, acquiring, supplying, storing and *otherwise dealing* in articles, and (b) acquiring, supplying and *otherwise dealing* in services" [emphasis added]. The French version of the Act uses the words "tout autre commerce" to translate the expression "otherwise dealing." The use of the word "business" in the definition of "merger" therefore makes it clear that a merger for the purposes of a section 92 assessment is with respect to the market or commercial activity of the "business." Moreover, since a "business" is defined in terms of activities dealing in articles or services, the definition must concern one or more articles or services (as each are defined in subsection 2(1)) that are bought or sold as part of a commercial activity.

207 Importantly, there are also express references to the notion of "market" in subsection 92(2) and section 93 of the Act, which provide direction on how to assess whether a merger lessens or prevents competition substantially. Subsection 92(2) prohibits the Tribunal from making a finding and exercising its discretionary power to impose a remedy under subsection 92(1) solely on the basis of evidence of "concentration or market share." The assessment under section 92 is further informed and limited by section 93, which sets out factors that may be considered in determining whether a merger affects competition in a significant way for the purposes of section 92. Section 93 contains sustained references to the concept of "market" in paragraphs 93(d), (e), (g), (g.1), (g.2), and (*h*), and implies that such a market has been defined to make the competitive assessment. For example, paragraph (*h*) refers to "any [...] factor that is relevant to competition in a market that is or would be affected by the merger or proposed merger."

208 Turning to the object and purpose of section 92, there is no doubt that the Tribunal's focus is on assessing the degree to which *market power* is created, maintained or enhanced by the merger at issue. The concept of a competition or antitrust *market* is implicit in many provisions of the Act for the identification of anti-competitive conduct and for the substantiality threshold that must be applied to the assessment of anti-competitive effects.

209 The Tribunal further observes that since the Tribunal's first decision in a contested merger proceeding (*i.e.*, *Hillsdown*), subsection 92(1) has consistently been interpreted as synonymous with "market" by the Tribunal and the courts (*Tervita SCC* at para 44; Hillsdownat pp 297-314), and by the Commissioner. In *Tervita SCC*, the SCC made it clear that the assessment of the substantial effect on competition was an effect on the "market": it "involves assessing the degree and duration of any effect it would have on the *market*" [emphasis added] (*Tervita SCC* at para 78).

210 In sum, section 92 does not have a different scope in its relationship to the substantial lessening of competition even if it refers to the effect of competition in a "trade, industry or profession," as opposed to a "market." Given the definition of "merger" and the fact that several factors listed in subsection 92(2) and section 93 expressly contemplate an evaluation made in relation to a "market," the Tribunal is satisfied that, even though section 92 does not expressly refer to a substantial lessening or prevention of competition in a market, "Parliament intended that competition must be shown to be likely to be prevented or lessened substantially in a competition law or antitrust market" (Paul S. Crampton, *Mergers and the* Competition Act, (Carswell, 1990) ("*Crampton 1990*") at p 261).

(d) HMT and monopsony

211 Finally, the Tribunal observes that the approach to market power and to market definition, which has mostly developed in matters involving the *sale* of a product, is similar in the context of the *purchase* of a product: the market power of buyers is the "ability of a single firm (monopsony power) [...] to profitably depress prices paid to sellers [...] to a level that is below the competitive price for a significant period of time" (2011 MEGs at para 2.4).

212 The HMT framework therefore applies to define relevant markets for both the sale and the purchase of a product. For monopsony power, the 2011 MEGs describe the analytical process as follows, at paragraph 9.2:

> [...] The conceptual basis used for defining relevant markets is, mirroring the selling side, the hypothetical monopsonist test. A relevant market is defined as the smallest group of products and the smallest geographic area in which a sole profit-maximizing buyer (a "hypothetical monopsonist") would impose and sustain a significant and non-transitory price decrease below levels that would likely exist in the absence of the merger. The relevant product market definition question is thus whether suppliers, in response to a decrease in the price of an input, would switch to alternative buyers or reposition or modify the product they sell in sufficient quantity to render the hypothetical monopsonist's price decrease unprofitable.

213 In such cases, the SSNIP becomes "a small but significant and non-transitory decrease in price" ("*SSNDP*") below levels that would likely exist in the absence of the merger[5] .

(2) Parties' positions

(a) The Commissioner

214 The Commissioner submits that the proper way to characterize the relevant product market is to define it as the provision of GHS for wheat and canola to farmers who, prior to the Acquisition, benefited from competition between the Virden and Moosomin Elevators. He argues that the supply of GHS for wheat is a relevant product market and that the supply of GHS for canola is a separate one. According to the Commissioner, a hypothetical monopolist of GHS for each of wheat and canola could profitably impose a 5% SSNIP. Moreover, says the Commissioner, there are no functional substitutes for GHS for wheat or canola.

215 The Commissioner maintains that local competition between Elevators for wheat or canola manifests itself through the Basis, and not through the final Cash Price that an Elevator pays to the farmer. He submits that, because P&H has no control over the Futures Price, the only component of the Cash Price it can control is the Basis, and that only the Basis component of the Cash Price is affected by local competition between the Elevators. The Basis, or the "imputed" price for GHS calculated by Dr. Miller, adds the Commissioner, represents the Elevators' specific contribution of value in the final Cash Price paid to farmers. The Commissioner argues that the relevant product market should therefore reflect an economic framework that analyzes the competition actually impacted by the Virden Acquisition.

216 The Commissioner contends that P&H's approach to the product market allows it to mask and obscure the anti-competitive effects of its Acquisition by focusing on the grain itself and on the Cash Price it pays to the farmers, whereas the services effectively provided by P&H are only a small part of the overall value of the grain they purchase from the farmers and resell to their end customers.

217 By the end of the hearing, both the Commissioner and Dr. Miller agreed that their proposed approach to the product market definition could be qualified or described as a "value-added" approach, even though the Commissioner did not use these specific terms in his pleadings or even in his opening submissions at the hearing, and even though Dr. Miller did not describe his analytical approach as such in his initial expert report.

218 The Commissioner maintains that economics, the facts, and the law support his "value-added" approach to product market definition.

219 With respect to economics, the Commissioner submits that defining the product market as the sale of GHS by P&H "facilitates" an economic analysis focused on the competition affected by the Virden Acquisition and the Elevators' contribution of value. On this point, the Commissioner mostly relies on Dr. Miller's initial and reply expert reports and on his testimony. Using common features of the market definition exercise, such as the HMT, diversion ratios, and upward pricing pressure ("*UPP*") calculations, Dr. Miller testified that he relied on the "imputed" price of GHS because, in his view, this aligns with the service that the Elevators effectively give to farmers. Dr. Miller opined that receiving GHS from Elevators is what is enabling the farmers to access the worldwide market. According to Dr. Miller, the price for GHS is an important factor in a farm's choice of Elevators, and price competition between Elevators is reflected in the Basis and the "imputed" price he calculated for GHS.

220 With respect to facts, the Commissioner relies on four main elements to support his proposed product market: 1) P&H recognizes the role of the Basis in competition between Elevators, and as one of the two components of the Cash Price, along with the Futures Price; 2) the only component of the price of grain that P&H can set is the Basis. P&H claims that it uses its "*Workback Algorithm*" to determine its Cash Prices but, according to the Commissioner, this algorithm sets the Basis and not the Cash Price, which can fluctuate during the day with the variations of the Futures Price. Moreover, P&H sends mass communications about the Basis on a daily basis, through emails and on its P&H Direct application; 3) the Basis is also carried over to the contracts concluded between Elevators and farmers, and this is done by all grain companies with the exception of LDC; and 4) farmers are affected by local competition and they use the Basis to make comparisons between Elevators. In sum, argues the Commissioner, the provision of GHS is how the industry operates, and the Basis is an important industry-wide practice.

221 Turning to the law, the Commissioner submits that characterizing the product market as GHS is consistent with the purpose clause of the Act, with previous merger cases, and with the 2011 MEGs. With respect to the so-called "value-added" approach, he claims that the U.S. Horizontal Merger Guidelines issued in 2010 (U.S. Department of Justice and the Federal Trade Commission, Horizontal Merger Guidelines, August 19, 2010 ("*US HMEGs*")) actually recognize that in situations where the price of a merging firm's contribution to value can be identified with "reasonable clarity," the price used to assess the merger can be a component of the final price of the product that the firms effectively compete on.

(b) P&H

222 P&H responds that GHS is not a product supplied by P&H and the other grain companies. The relevant products, says P&H, are the wheat and canola purchased from farmers by P&H, for which the farmers receive the Cash Price. According to P&H, the so-called GHS are only internal processes that the grain companies may apply to the grain after the title to the grain has passed from the farmer to the grain company: in other words, the GHS claimed by the Commissioner are merely costs to the grain companies. Furthermore, it is export terminals that are used to do the following: to receive grain from rail; to grade, segregate, and store grains by type and quality attributes; to clean when required and blend; and to load grain onto vessels. Therefore, many of the GHS claimed by the Commissioner are not services that are performed at the Elevator level.

223 P&H argues that the documentary and *viva voce* evidence shows that GHS are not actually transacted, contracted, or discussed between farms and P&H or other grain companies. P&H adds that Mr. Heimbecker's testimony and evidence clearly establishes that P&H does not supply any GHS, and this evidence was unchallenged on cross-examination.

224 P&H further submits that there are no precedents in Canadian law for utilizing an imputed price for the merging firms' specific contribution to the value of a product and for determining the relevant market and the applicable SSNIP on the basis of the so-called "value-added" approach. In fact, adds P&H, the Commissioner has never publicly endorsed the "value-added" approach he is suddenly advancing in this case. Moreover, the Commissioner's approach would suffer from numerous flaws identified by economists with respect to the "value-added" approach advocated in the US HMEGs.

225 While Dr. Miller asserts that the price for GHS drives the farmers' decisions, P&H points to the fact that the testimonies of farmer witnesses on both sides make it clear that farmers base their sale decisions on the posted Cash Price, which is what the grain companies actually compete on.

(3) Tribunal's assessment

226 As the Commissioner rightly indicated, the fundamental disagreement in this case is how to define the product market, and more specifically the relevant product that is being exchanged when the farmers sell their grain to an Elevator. Ms. Sanderson indeed acknowledged that the main issue to be determined by the Tribunal is the choice between the Cash Price for grain and the "imputed" price for GHS.

227 For the reasons set below, the Tribunal agrees with P&H on this issue and concludes that there are two relevant product markets in the present case, namely, the purchase of wheat and the purchase of canola by P&H.

228 The Tribunal finds that the Commissioner's proposed product market (*i.e.*, the sale of GHS) is not grounded in commercial reality and in the evidence, and that in this case, the "value-added" approach advanced by the Commissioner fails on three fronts: on the facts, from a precedential and legal standpoint, and from a conceptual and economic perspective. It fails factually, because there is no clear and convincing evidence to conclude, on a balance of probabilities, that GHS effectively exist as a relevant "value-add" product or "add on feature" that is transacted and to which a price can be attached. The Commissioner created an analytical price for operational activities associated with the purchase of grain by Elevators. It further fails as a legal argument, because the Commissioner's position finds no support in the authorities he cites, including the US HMEGs, cases in Canada and elsewhere, and his own MEGs. Finally, it fails conceptually, because the Commissioner did not address the issue of the appropriate SSNIP threshold, as described by the current MEGs, despite the fact that adopting a "value-added" approach would profoundly change the HMT framework and the effective SSNIP level used for market definition purposes.

(a) The product and the price at issue

229 At its core, four critical elements determine the characteristics and boundaries of a relevant competition market: 1) a product for which there is a source of demand and a source of supply; 2) a price at which the product is transacted; 3) a geography within which the product is transacted; and 4) the extent of available substitution between different sources of demand or supply for the product if there is a sufficient price incentive.

230 Since products can be said to be in the same *market* if they are close substitutes (Tele-Directat p 36), the debate around the product market definition has typically revolved around the issue of substitutability. However, this is not the case here, as the parties are not debating the extent to which there are functional substitutes to selling GHS to the farmers or to purchasing grain by the Elevators. The parties instead agree that there are *no* substitute products for either GHS or for grain (namely, each of wheat and canola).

231 The debate around the product market definition in this case is about how to characterize what occurs when a farmer sells grain to an Elevator. The debate does not center on the definition of the product *market*, but rather on the definition of the relevant *product* itself, and of the relevant *price* attached to it.

232 Before dealing with the product market — or the geographic market — , the Tribunal must first determine what the product at issue is and what its price is. It is important to distinguish the "product" and the "price" from the product "market." The Tribunal does not dispute that the *product market* is an analytical framework and an artificial construct, where the Tribunal needs to determine the presence and extent of substitutes (*Superior Propane I* at para 101). However, the underlying product or the underlying price for it are not analytical or theoretical constructs themselves. The product and the price attached to a product need to be anchored in the evidence and, indeed, tied to commercial reality. Determining the relevant product and the relevant price is an inquiry that must be based on the evidence of each case.

233 On the facts of this case, the relevant product is not the sale of GHS, but the purchase of grain.

(i) The notions of product and price

234 In the legal and economic context relevant to merger analysis, the term "product" refers to the output that a producer (seller) provides to a purchasing customer, or the input that a producer (purchaser) acquires from a supplying customer.

235 To identify the relevant product for the purpose of defining a relevant competition market, the starting point is to determine what the customer actually buys or sells, and at what price. In the context of a merger, it starts with the product(s) in respect of which, prior to the merger, the merging entities were competitors. In other words, what is the product that P&H and LDC sold or purchased in the marketplace, in competition with one another, prior to the Transaction?

236 For a product to exist in the economic sense and in the context of the relevant market definition for the purpose of an application under section 92 of the Act, there must be a separate and identifiable supply and demand for it. It must be transacted and it must have a *price* attached to it. Product market definition is based on substitutability and focuses on demand responses to changes in prices. The SSNIP must therefore be applied to the price that is being received by the sellers or paid by the purchasers of the candidate product (*Visa Canada* at para 198). In fact, in order to apply the HMT, a relevant price for the relevant product must be identified. The focus is on the price of the good or service effectively being sold or bought. There can be no product, and no price for such product, if the product has no independent existence and market presence. The Tribunal further accepts P&H's view that an article or a service which would be neither bought nor sold cannot fall within the definition of a "business" under the Act (and hence, the definition of a merger in section 91), because it would not be a product that is acquired, supplied, or otherwise dealt in.

237 According to the MEGs, the "base price" to be used for market definition purposes and to postulate a price increase in the HMT framework "is typically the prevailing price in the relevant market" (2011 MEGS at para 4.6). This, once again, refers to a price observed in a market. The base price is the price used in the normal course of business, namely, whatever price "is

ordinarily considered to be the price of the product in the sector of the industry (e.g., manufacturing, wholesale, retail) being examined" (2011 MEGs at para 4.7). The MEGs therefore make it clear that the relevant price must echo what is effectively occurring in the industry being considered.

238 The price that has been typically employed in the standard approach to market definition and in the HMT analysis is the "cumulative price," namely, "the total value of the product when it leaves the stage of the industry in question. This simply represents the sum of input costs plus value added" (*Crampton 1990* at p 265, fn 11). The author Crampton (now a judicial member of the Tribunal) also referred to alternative "prices" such as the "value added price" representing the difference between the cost of all inputs and the cumulative price, and he specified that this price "has been employed in situations where the value added is billed as a separate fee, with no mark-up being applied to the product in relation to when the service is performed" (*Crampton 1990* at p 265).

239 However, the Tribunal underlines that price and cost are two different notions. A price is the amount that a customer buying a product or a person supplying one is willing to pay or receive for it. The price is ascertained from the perspective of the customer or the purchaser. On the other hand, a cost is the expense incurred for making a product or offering a service that is sold. It is ascertained from the perspective of the producer. A cost cannot simply be equated with a price, though there is evidently a relationship between the two, since costs have a direct impact on the price of a product.

240 The Tribunal has found no precedent, and the Commissioner has not referred to any, where it was recognized by the courts or by the economic literature that there can be a "market" for a product that is not sold and purchased as such, but is only a cost component of a final product. The Tribunal accepts that a specific part can be categorized as a separate product and can constitute the basis for a separate product market (see, for example, Canada (Director of Investigation and Research) v Xerox Canada Inc(1990), 33 CPR (3d) 83 (Comp Trib) ("*Xerox*")). But a product must have a price attached to it. In other words, the notion of product for market definition purposes and the calculation of a SSNIP implies a transacted price, not solely a theoretical price derived from allocating revenue to the cost of selected activities associated with the purchase or sale of a product.

(ii) GHS is not a transacted product

241 The evidence indicates that GHS, as defined by the Commissioner, is not a product that actually exists in the grain industry or that is being supplied by the Elevators and purchased by the farmers: GHS are not transacted or contracted between the farms and the grain companies.

242 The Tribunal has found no reference to GHS in P&H's materials nor a description of any service provided by P&H or other grain companies under the label of GHS. Neither the Elevators, the Crushers, nor even the farmers themselves recognize GHS as a separate, identifiable product. It is not even a term of art used in the grain industry. There is no evidence that farmers and grain companies transact on the basis of the sale and purchase of GHS.

243 More specifically, none of the six farmer witnesses who testified at the hearing on behalf of either the Commissioner or P&H referred to GHS as an actual service they receive from the Elevators and pay for. Farmers do not talk in terms of GHS.

244 Similarly, the Elevators do not refer to the notion of GHS. Mr. Heimbecker, for P&H, and the witness from Cargill, Ms. Jordan, both confirmed that in the industry, grain companies do not charge farmers for GHS and rather consider the services covered by the Commissioner's definition of GHS as costs. At one point in his submissions, the Commissioner mentioned the fact that P&H refers to its grain handling and trading business in its own financial reporting documents. However, the Commissioner has pointed to no evidence, whether from P&H or from any other grain company, containing a reference to grain handling *services*. The "grain handling business and trading" is not to be confused with "grain handling services" (as a product). P&H purchases grain for the purpose of trading it in national and international markets and grain handling is an operational process in the purchase and resale of the grain.

245 While the Tribunal agrees with Dr. Miller that the participants and competitive constraints at each stage of an industry are distinct, the Tribunal finds that GHS is not a product that is transacted as such between farmers and Elevators, at any stage of the

grain handling and trading business. It is an artificial bundle of services that the Commissioner and Dr. Miller have constructed for the purposes of this proceeding.

246 Mr. Heimbecker testified that P&H does not supply GHS in the post-CWB era (Exhibits CA-R-115 and P-R-116, Witness Statement of Mr. John Heimbecker ("*Heimbecker Statement*"), at para 115). This evidence was not contradicted and the Tribunal accepts the evidence of Mr. Heimbecker on this point.

247 In sum, GHS, or the "value-added" product identified by the Commissioner in this case, is not a product that farms and grain companies recognize and effectively buy and sell. Moreover, GHS is not a separate value-added product that farms transact separately from the grain, and for which they could find substitute sources of supply (*i.e.*, sellers offering just the GHS value-added service).

248 The Tribunal pauses to observe that, from an industry perspective, the notion of GHS advanced by the Commissioner corresponds to a historical nomenclature that disappeared when the CWB was dismantled on July 31, 2012 (Heimbecker Statement at paras 113-117). Before its dismantling, the CWB purchased certain types of grain — including wheat — from farms and grain companies handled that grain on behalf of the CWB on a "toll basis," effectively providing the type of services included by the Commissioner in his definition of GHS. However, with the end of the CWB, grain companies are no longer intermediaries between the CWB and farmers, and the market interrelation between the farmers and the grain companies has changed. As a result, grain companies have assumed part of the role of the CWB in the supply chain, namely, as purchaser of grain with the risks attached to the marketing and sale of the product. With the end of the CWB, the historical tariffs and fees that used to be charged for a service also came to an end. In the post-CWB world, P&H (like other grain companies) buys wheat and canola from farms, taking title to the grain at the time the farm delivers it to the Elevator. At that point in time, the farm receives the contracted Cash Price for its grain and ownership of the grain passes to P&H or the other Elevators. From that point on, the farm has no right or interest in the grain and bears no risk in relation to the purchase transaction. Instead, P&H is fully responsible for the costs, risks, and rewards of aggregating, transporting, and selling the grain to a customer.

249 True, as will be discussed below, the farmers and Elevators sometimes negotiate on one component of the Cash Price (namely, the Basis) because information on the Basis is provided by the Elevators. The Tribunal is satisfied that this reflects a historical heritage from the CWB days (or, as argued by P&H, a linguistic vestige of the CWB era). But what were services at the time of the CWB are now costs to the Elevators, not GHS to which a price can be attached.

250 For the purpose of this Application, the only products that are exchanged and transacted between the farms and the Elevators are wheat and canola.

(iii) There is no price for GHS

251 Furthermore, the Tribunal concludes that there is no "price" associated with GHS.

252 As was the case for GHS as a product, the Tribunal finds no evidence of a "price" for GHS. The evidence from the farmer witnesses indicates that they do not talk about receiving GHS and are not charged any fees or price for GHS. All farmer witnesses testified that there are no separate charges for GHS. In addition, no price exists for GHS in the contracts or agreements concluded by P&H and other grain companies with the farmers.

253 Nor is a price for GHS recorded or kept in the transaction data reported by the grain companies in the usual course of business. The transaction data obtained from the grain companies provides address information for farms delivering canola or wheat to the Elevators and Crushers, with some exceptions. The farm address information allowed Dr. Miller and Ms. Sanderson to identify deliveries to the Elevators from farms with addresses in the various regions used in their respective analyses, as well as any other location. The transaction data report Cash Prices and deliveries to each grain company but they do not include any information on GHS or on a price for such alleged bundle of services.

254 It is of note that, just as they do not consider GHS to be a separate product offered for purchase and sale, the grain companies do not keep an amount representing the price of GHS — or even the Basis, as will be discussed below — in

their transaction data set. If GHS were meaningful for the Elevators or the farmers from a transactional perspective, the grain companies would likely keep track of its price in their transaction data.

255 Indeed, the Commissioner recognized at the hearing and in his written submissions that the farmers are not charged for GHS as a separate, added service to the purchase of grain. Moreover, a witness for the Commissioner in the discovery process and Dr. Miller in his testimony each confirmed that the price for GHS had to be "imputed" and that it is a constructed price.

256 As GHS is neither observed as an added service feature nor transacted as such, Dr. Miller had to create a measure for the price of it. In his expert report, Dr. Miller imputed the price of GHS for each transaction as the difference between the Cash Price and the Futures Price from the financial market, as of the transaction date, adjusting for exchange rates in the case of wheat. Dr. Miller sometimes referred to the price of GHS as the Basis, although he admitted that his constructed price of GHS is not equal to the Basis used by Elevators for wheat or canola for each transaction. Dr. Miller's transaction-level prices of GHS were estimated with error, in part because the contract date (which often determines the relevant Futures Price) is unobserved in the transaction data.

257 In sum, there is no observed or observable added feature for GHS, no price is attached to it, and none appears in the transaction data or can be otherwise identified. The evidence from the Commissioner reveals that the "imputed" price for GHS is a constructed price, and not an explicit or implicit price transacted between buyer and seller. Here, there is no doubt that it is not a situation where a farmer pays a price for an actual specific service, such as delivery, transportation or processing fees.

258 The farmer witnesses (*i.e.*, Mr. Lincoln, Mr. Wagstaff, Mr. Pethick, Mr. Paull, Mr. Duncan, and Mr. Hebert) all testified that the Cash Price they ultimately receive for their grain drives their decisions to sell their grain to an Elevator. As admitted by the Commissioner, farmers care about the money they receive from the sale of their grain, and they never talk about GHS as separately transacted.

259 In his witness statement, Mr. Pethick stated that he considers the "basis price" but also the overall price (*i.e.*, the Cash Price) communicated by the Elevators when deciding where to deliver his grain (Exhibit P-A-001, Witness Statement of Mr. Alistair Pethick ("*Pethick Statement*"), at paras 19-20). Similarly, Mr. Lincoln also referred to the importance of "competitive prices" and to being offered a "higher price," generally, without suggesting that this was limited to the Basis (Exhibits CB-A-025 and P-A-026, Witness Statement of Mr. Chris Lincoln ("*Lincoln Statement*"), at paras 13, 15). The Agreed Statement of Facts for the two farmer witnesses who did not testify at the hearing indicates that [text omitted] "regularly checks the prices" at various Elevators, without limiting his comment to the Basis (Exhibits CA-R-242 and P-R-243, Compilation of Additional Documents Added to Agreed Book, Agreed Statement of Facts re [text omitted] and [text omitted]). For their part, each of Mr. Hebert, Mr. Paull, and Mr. Duncan said in their respective witness statements that the Cash Price is what drives their decisions to sell to Elevators or Crushers.

260 The evidence from Mr. Heimbecker also reveals that most pricing-related communications made by P&H to farmers refer to the Cash Price, with no mention of the Basis (Heimbecker Statement at para 61; Exhibits CB-A-134 and P-A-135, Read-in Brief of the Commissioner ("*Commissioner Read-In*")). Industry participants also use the Basis and the Cash Price interchangeably, to refer to the net final price that farmers effectively receive for their grain. Mr. Hebert, for example, testified that when he is using the Basis, he is "calculating it back to the cash price that [he is] going to deposit" (Consolidated Transcript, Confidential B, at p 870). In short, he is using the Basis to compare the Elevators' net prices for the grain.

261 In the Tribunal's view, on the facts of this case, the only "base price" for market definition purposes is the Cash Price paid to farmers to purchase their wheat or canola, not the "imputed" price of GHS that is never separately or identifiably charged to farmers by Elevators to handle their grain. Farms sell grain to Elevators and Crushers for a single Cash Price. Elevators and Crushers purchase grain from farms for a single Cash Price. The Cash Price paid to farms to purchase grain is the ordinary and prevailing price in the relevant markets.

(iv) The Basis differs from GHS and is not the price of GHS

262 In his submissions on the product market and on GHS, the Commissioner relied heavily on the Basis and on the evidence related to it.

263 The Commissioner argues that the Basis is a component of the Cash Price, along with the Futures Price. Both combine to form the Cash Price paid to the farms. According to the Commissioner, the Basis component of the Cash Price is the mechanism that P&H uses to ensure that the price at which it buys the grain from the farmers is a price that allows it to cover the expenses of operating the Elevator where the farmers deliver their grain. The Commissioner maintains that the Basis "is an amount subtracted from the Futures Price in the case of canola (and added to the Futures Price in the case of wheat to account for exchange rate differences) that covers the grain company's costs to operate the Elevator while also providing the grain company with a margin." He claims that it is not a simple mathematical construct, as alleged by P&H and Mr. Heimbecker. According to Dr. Miller, the Basis covers the costs of the Elevators and allows for a profit. Dr. Miller claims that it is the relevant price "in terms of how competition plays out" in the grain industry, "in terms of the value added" by the Elevators, and "in terms of just the profitability of the [grain handling] business" (Consolidated Transcript, Public, at p 1430).

264 The Commissioner further submits that all contracts entered into by the Elevators and the farms refer to the Basis, or even to the "basis price," and that farmers use the Basis in their dealings with the Elevators. The Commissioner adds that the problem with GHS and the Basis is an "implementation issue" as neither the Basis nor the price of GHS appear in the transaction data of the grain companies. In sum, throughout his submissions, the Commissioner effectively equates GHS to the Basis to justify his approach to the product market definition.

265 The Tribunal is not persuaded by the Commissioner's arguments and finds that the existence of the Basis is not sufficient to transform GHS into a relevant product to which a relevant and reliable base price can be attached. The evidence does not support that the Basis can be equated with the notion of GHS advanced by the Commissioner and Dr. Miller. There is a distinction and a difference between the use of the Basis by farmers and grain companies in the sale and purchase of grain on the one hand, and GHS as an operational cost to the grain companies on the other.

266 The Tribunal acknowledges that the Basis is an industry benchmark, recognized and used by the participants in the grain handling business. But the Basis is not a product that is transacted as such. The Basis is not a price either. Despite the repeated references made by the Commissioner to a "basis price" in his oral and written submissions, the Tribunal is not persuaded that, on a balance of probabilities, the evidence supports a conclusion that the Basis represents a price attached to a product. Mr. Heimbecker testified that the Basis is not a price expressed in dollar terms, even though there is often a dollar sign apposed to its numerical figure in some of P&H's own documents. In the Tribunal's view, the Basis is best described as the numerical difference between the Cash Price and the Futures Price, as determined by P&H's Workback Algorithm. The Workback Algorithm is only run once a day by P&H, but the Cash Price that a farmer sees in P&H Direct will adjust instantaneously to reflect any changes in the Futures Price. This evidence has not been contradicted, and was confirmed by farmers such as Mr. Duncan and Mr. Hebert in their respective testimony (see, for example, Consolidated Transcript, Confidential B, at p 929). Yes, the Basis is a metric used in the grain business, but it is not a price for a product.

267 One of the farmer witnesses, Mr. Paull, testified that the Basis is just a tool used to track or monitor the Cash Price that he will receive when he delivers his grain to the Elevators. One of P&H's customer service representatives, since promoted to managing an Elevator, explained the Basis in emails sent to hundreds of customers as follows: "[t]his premium or discount to the futures value is commonly referred to as a basis. The basis reflects each grain company's own particular handling, transportation and marketing costs, combined with the bid values from their own-end use customers" (Exhibit CB-A-149, P&H Email Subject: Gain From You Grain, dated February 16, 2017).

268 The Tribunal observes that the Basis is not identified by the farms or the grain companies as a price associated with GHS or with any specific service. The grain industry participants instead refer to the Basis, without more. It is never the "Basis for GHS" or for any other specific product. Nowhere in the evidence is there a reference to a Basis *for something*. It is a concept and a notion used in the grain industry, but there is no evidence that the Basis refers to or is attached to a particular product.

As is the case for GHS, and even though it is an information communicated by the Elevators in their dealings with the farms, the Basis is not recorded in the transaction data by the grain companies.

269 Moreover, when the farmers refer to the effect of changes in the Basis, they always refer to changes expressed in terms of cents *per bushel or per MT*. The bushel or the MT is a unit of measurement for the grain, not for GHS. In other words, the farms always refer to the impact that a change in the Basis will have on the price for the grain itself, expressed in terms of a dollar value per bushel or MT. The changes to the Basis are never expressed in terms of cents for GHS or for any type of service provided by an Elevator.

270 Even if a change to the Basis offered is the subject of negotiations between grain companies and farmers, what ultimately changes is the Cash Price from which the Basis is derived. What changes is the price expressed in dollars and cents per bushel or MT, for the grain being purchased by the Elevator and sold by the farmer.

271 Further to its review of the evidence, the Tribunal therefore concludes that the Basis is best described as a component of the price of *grain*, not as a price attached to a specific product or a separate value added. In fact, the Tribunal finds that the evidence from P&H and the grain companies establishes that the Basis is not a price of a product by itself but a cost element for the Elevators.

272 The Tribunal adds that merely displaying the components of a price, itemizing the price of a product, or providing the breakdown of the components of a product being sold or purchased, does not have the effect of creating a separate product if such an itemized component does not have an economic life of its own, and is not transacted in a market for a price. This is exactly the case for the Basis and the GHS.

273 In his final argument, the Commissioner submitted that this is not even a case where the price for GHS is implicit. He claims that there is nothing implicit about GHS and that its price or value appears in the contracts that P&H and other grain companies enter into with farmers. The Commissioner claims that the price for GHS is in fact explicit and only appears to be implicit because the Basis is not subsequently recorded in the transaction data of the grain companies. The Commissioner argues that the explicit price underlying his product market is the Basis being charged to the farmers by the Elevators. And that the problem is strictly one of implementation because the Basis sets the price for GHS.

274 The Tribunal does not agree. This is not a situation where there is an explicit price for GHS that is part of the contract price between the farmers and the Elevators.

275 First, the Commissioner confuses the price of GHS and the Basis. The evidence clearly establishes that the Elevators do not post a price for GHS; they post a Basis. The Basis sometimes shows up in the information posted by P&H and other grain companies, as well as on some invoices and in some contracts. But not GHS. The Basis and GHS are not the same thing, and Dr. Miller clearly acknowledged that he had to "impute" the price of GHS from the Basis information (Exhibits P-A-169, CA-A-170 and CB-A-171, Expert Report of Dr. Nathan Miller ("*Dr. Miller Report*"), at para 173). Dr. Miller used a computed price as a proxy for the Basis, because neither the Basis, nor a price for GHS, appears in the transaction data. Dr. Miller and a representative of the Commissioner indeed acknowledged, in their testimony and on discovery, that the imputed price for GHS is a "subset of the Basis" (Exhibits CA-R-242 and P-R-243, Compilation of Additional Documents Added to the Agreed Book, P&H Read-in Brief ("*P&H Read-In*"), at pp 21-22). Dr. Miller further admitted that the imputed price for GHS does not always correspond to what the Basis component of the Cash Price actually is.

276 Second, a calculated or imputed price is not a price that can be correctly described as being observed or observable. Here, Dr. Miller has not used the observed Basis; he has estimated a price for GHS (which he sometimes refers to as a Basis) for each transaction from the difference between the Cash Price and an assumed Futures Price at a given date. Dr. Miller testified that at a transaction level, the estimation leads to variance between the observed Basis of which a corresponding Cash Price was transacted and the constructed price for GHS for that transaction.

277 The Commissioner submits that the price of GHS imputed by Dr. Miller is a good approximation of the Basis. For the Virden and Moosomin Elevators, Dr. Miller takes the median of the transaction-level prices of GHS and he uses the Virden

Elevator median price to calculate his mark-up. The median prices calculated by Dr. Miller are the benchmark prices he uses in his HMT analysis.

278 Dr. Miller and Ms. Sanderson agree that taking a median over thousands of observations measured with error reduces the measurement error. However, they disagree about whether the median prices for GHS obtained by Dr. Miller for the Virden and Moosomin Elevators are reliable estimates for the Basis.

279 Referring to the contracts of [text omitted], a farmer, Dr. Miller said that the difference between his computed median price of CAD $31.02 per MT for GHS for wheat and the corresponding value of the Basis in [text omitted] contracts of CAD $34.83 per MT was "reasonably close," using 37 deliveries made by [text omitted]. The Tribunal observes that it is still a significant difference of 12% — namely, CAD $3.76 per MT or 10.23 cents per bushel of wheat. And that difference is a variance of only a few transactions out of thousands. However, when Dr. Miller compares the median for all wheat transactions at the Moosomin Elevator, calculated by his own model as being CAD $34.78 per MT, to the actual Basis in the contracts of [text omitted] (*i.e.*, CAD $ 34.83), the two values are very similar. In light of that, the Commissioner claims that the price for GHS imputed by Dr. Miller represents a good approximation of the actual Basis found in the contracts.

280 Ms. Sanderson testified that the large difference in the median between the Moosomin and Virden Elevators for both wheat and canola is likely due to a larger error between Dr. Miller's predicted median and the median of the actual Basis. Ms. Sanderson points to the fact that for wheat, the GHS median value is 20% lower at the Virden Elevator than at the Moosomin Elevator, whereas in the case of canola, the Virden Elevator median value is 60% higher than the Moosomin Elevator value, in a situation where the Virden Elevator had larger sales than Moosomin. Ms. Sanderson attributed these differences to the uncertainties in the methodology used by Dr. Miller.

281 Like Ms. Sanderson, the Tribunal does not share the Commissioner's confidence in Dr. Miller's calculations. The Tribunal is not persuaded that using a median to correct for the error terms between the estimated and the actual values is sufficient, in this case, to correct for the high uncertainty in the estimated values. The median calculated by Dr. Miller includes several sources of uncertainty stemming from the fluctuation of the Futures Price and exchange rates within a day that may not be correlated with the actual transactions, the choice for delivery dates, and negotiations on delivery. The Tribunal agrees that in theory, using the median of a very large data set (in this case, thousands of transaction data) provides a much smaller error than the error of each observation. However, in his attempt to correlate a Futures Price for an estimated delivery date for each transaction, Dr. Miller did not provide convincing evidence to give the Tribunal the level of confidence or precision needed to conclude that the median predicts the actual Basis. The Tribunal adds that if the measurement errors are systematically skewed from actual delivery periods or Futures Price and exchange rates spot price reflected in the application at the time of sale, the results will also be skewed. Dr. Miller did not provide the Tribunal with evidence that this did not occur.

282 In any event, whether Dr. Miller's "imputed" price of GHS is a good or not so good approximation of the Basis is not a determinative issue in this case. The Tribunal finds that neither the "imputed" price of GHS nor the Basis can be used as the foundation of a product market definition since neither is a transacted price attached to an identifiable product.

283 The Tribunal pauses to note that, if in a given case, the evidence enabled it to isolate or identify a value-added component or feature of a product with sufficient precision, and to find a value-added price from business records, the Tribunal may conclude that the computed price is the price of that value-added component. In this case, the evidence does not permit to make such a conclusion.

(v) The Basis plays a role in competition

284 That being said, the Tribunal appreciates that the Basis is a touchstone of competition between the Elevators, and that it is an important factor to understand the rivalry between Elevators as well as the competitive dynamics in the grain industry. One cannot ignore what is going on at the Elevator's level (including competition on the Basis) when determining whether there is an increase in market power and a substantial lessening of competition.

285 The evidence supports a conclusion that the Basis component of the price of grain is affected by local competition. Farmers such as Mr. Pethick, Mr. Paull, and Mr. Hebert testified that they can play Elevators against each other based, among other things, on the Basis. Mr. Paull and Mr. Hebert admitted on cross-examination that they use not only the Cash Price to compare Elevators, but also the Basis. Even Mr. Heimbecker admitted that farmers use the Basis to compare grain prices between Elevators. There was also evidence that P&H sends email blasts to customers containing references to the Basis. The vast majority of grain companies also incorporate references to the Basis as well as the Futures Price and the Cash Price in their contracts with farmers. Farmers can also enter into Basis contracts, though Mr. Heimbecker testified that these were rare in the grain industry. Furthermore, P&H can and does adjust the Basis to account for local competition from Elevators: P&H and other grain companies will offer limited-time or limited-tonnage specials to farms to attract their grain, and such premiums above the posted Cash Price are sometimes expressed through changes in the Basis.

286 The Tribunal accepts that the Basis captures an aspect of competition between the Elevators. The Basis is one part of competition between the Elevators and, as will be discussed below, it is an element to consider in the substantial lessening of competition analysis. However, this does not mean that the Basis, or Dr. Miller's "imputed" price for GHS, can constitute the base price for market definition purposes, or that the existence of the Basis is sufficient to transform GHS into a relevant product.

287 The Commissioner is urging the Tribunal to adopt, for its product market definition, an economic framework that allows for and facilitates an analysis focused on the local competition allegedly impacted by the Acquisition. This is what led the Commissioner and Dr. Miller to identify GHS as a product and to "impute" a price for it, derived from the Basis. Dr. Miller opined that, economically, constructing an imputed price to approximate the Basis was the right way to analyze the "effects" of the Virden Acquisition. However, in an effort to define a relevant product market, the Commissioner developed a theoretical framework that does not reflect the commercial reality of the grain industry, where GHS does not exist as a product, does not have a "price," and is not transacted. In short, the Commissioner's position ignored the fundamental premise of product market definition, which requires the existence of a transacted product whose price is the ordinary price in the sector of the industry being examined.

288 In sum, the Tribunal finds that the evidence does not support the existence of a separate relevant "market" for the sale of GHS. GHS is an artificial product, with an artificial price, that cannot form the foundation of an acceptable relevant product market for the purpose of the Tribunal's analysis. On the facts of this case, the relevant products are the purchase of wheat and canola and the relevant price is the Cash Price.

(b) The "value-added" approach

289 The Commissioner submits that the law acknowledges it can be appropriate to define the relevant product market around a component of the price of the final product which represents the specific value provided at an intermediary level by the merging firms. In this case, the Commissioner maintains that an Elevator's specific contribution of value, namely, providing GHS as part of the Cash Price farmers receive for their grain, can be identified with reasonable clarity. According to the Commissioner, a product market definition focused on the competition affected by the merger and on the merging firms' contribution to value is an approach supported by the jurisprudence from Canada, the U.S., and the European Union.

290 The Tribunal disagrees. Further to its analysis, the Tribunal instead concludes that there are no precedents, in Canada or in any other jurisdiction, where the "value-added" approach referred to in the US HMEGs has actually been used and applied by an adjudicating court or tribunal to define a relevant product market in a merger case. Moreover, the "value-added" approach advocated by the Commissioner cannot be reconciled with the history of the MEGs and the current 2011 MEGs issued by the Commissioner himself.

(i) The US HMEGs

291 In support of his "valued-added" approach to the product market definition, the Commissioner relies heavily on the US HMEGs. These guidelines describe the approach to merger review by the U.S. antitrust agencies and were adopted in 2010. In his reply expert report, Dr. Miller referred specifically to them, drawing an analogy between the present case and the examples

used in the US HMEGs (Exhibits P-A-172, CA-A-173 and CB-A-174, Reply Expert Report of Dr. Nathan Miller ("*Dr. Miller Reply Report*"), at paras 34-36 and fn 33).

292 In its section 4 on "Market Definition", the US HMEGs contemplate that in certain situations, the benchmark price used for analyzing a product market — *i.e.*, the base price — can be different from the price effectively charged for a final product. The US HMEGs indicate that, in a situation where explicit or implicit prices for the merging firms' contribution to the value of the final product can be identified with reasonable clarity, the price used to assess the merger and define the relevant market can be the component of the price that the firms compete on. Similarly, the SSNIP threshold can also be adjusted. In paragraph 4.1.2 on "Benchmark Prices and SSNIP Size," the US HMEGs state as follows:

> The Agencies most often use a SSNIP of five percent of the price paid by customers for the products or services to which the merging firms contribute value. However, what constitutes a "small but significant" increase in price, commensurate with a significant loss of competition caused by the merger, depends upon the nature of the industry and the merging firms' positions in it, and the Agencies may accordingly use a price increase that is larger or smaller than five percent. Where explicit or implicit prices for the firms' specific contribution to value can be identified with reasonable clarity, the Agencies <u>may base</u> the SSNIP on those prices.
>
> [Emphasis added.]

293 The US HMEGs then refer to three specific examples, illustrating situations where implicit prices for the firms' specific contribution to value can be identified. These examples read as follows:

> *Example 8:* In a merger between two oil pipelines, the SSNIP would be based on the price charged for transporting the oil, not on the price of the oil itself. If pipelines buy the oil at one end and sell it at the other, the price charged for transporting the oil is implicit, equal to the difference between the price paid for oil at the input end and the price charged for oil at the output end. The relevant product sold by the pipelines is better described as "pipeline transportation of oil from point A to point B" than as "oil at point B."
>
> *Example 9:* In a merger between two firms that install computers purchased from third parties, the SSNIP would be based on their fees, not on the price of installed computers. If these firms purchase the computers and charge their customers one package price, the implicit installation fee is equal to the package charge to customers less the price of the computers.
>
> *Example 10:* In Example 9, suppose that the prices paid by the merging firms to purchase computers are opaque, but account for at least ninety-five percent of the prices they charge for installed computers, with profits or implicit fees making up five percent of those prices at most. A five percent SSNIP on the total price paid by customers would at least double those fees or profits. Even if that would be unprofitable for a hypothetical monopolist, a significant increase in fees might well be profitable. If the SSNIP is based on the total price paid by customers, a lower percentage will be used.

294 The US HMEGs therefore contemplate two situations where the usual base price and/or SSNIP threshold could be modified. The first one looks at the explicit or implicit price of the value added by the merging firms and, in cases where the value-added component can be identified with reasonable certainty, a base price other than the usual total price of the product may be used. The second refers to situations where the SSNIP remains based on the total price paid for the product, but the usual 5% SSNIP threshold is adjusted to deal with the realities of an industry.

295 However, the US HMEGs provide no guidance as to when the contribution to value, as opposed to the total price of a product, would be appropriate for the purposes of the relevant market definition. Nor do they contain any guidance on how and when the usual 5% SSNIP threshold should be adjusted. The Tribunal finally notes that the US HMEGs simply mention that the U.S. antitrust agencies "may base" the SSNIP and the HMT analysis on the price for the value added by the merging firms.

(ii) No court or tribunal has ever applied the "value-added" approach

296 As correctly pointed out by P&H in its submissions, a review of the existing jurisprudence reveals that, contrary to the Commissioner's submissions, there are no legal precedents, in Canada, in the U.S., or in any other jurisdiction, where a court or a tribunal has effectively applied or recognized the "value-added" approach set out in the US HMEGs. While the concept advanced by the Commissioner has been argued in a few cases in the U.S., the European Union and Australia, it has either been rejected by the courts or applied by competition agencies to facts which are distinguishable from the facts of this case. The Tribunal further observes that the "value-added" approach has never been considered or applied in respect of an "imputed" price. In other words, the Tribunal has not found any situation where a court or tribunal has accepted and retained an implicit price for the merging firms' specific contribution to the value of a product to determine the relevant product, the relevant price, the SSNIP, and the relevant market in a merger case.

297 In essence, on this issue of the "value-added" approach, the Commissioner is asking the Tribunal to go where no other court or tribunal has yet agreed to go.

• *Canada*

298 As far as Canadian cases are concerned, the Commissioner relies on *Hillsdown* and *Xerox*. He claims that these cases both demonstrate that the value added by the merging firms can form the basis of a product market definition and that, to define the relevant product market, the Tribunal can focus on the portion of the final price that is impacted by the merger.

299 The Tribunal is not persuaded by the Commissioner's arguments.

300 In *Hillsdown*, the first contested merger review proceeding under section 92, the Tribunal analyzed the merger of two companies that operated rendering businesses for the by-products from slaughterhouses and other entities. On the product market definition, the Tribunal had to decide whether to characterize the relevant market as the supply of "renderable material" from slaughterhouses to the renderers, or as the provision of the specific services that contribute to the end product's value, namely, "rendering services" offered by the renderer to the slaughterhouses, meat processing plants, grocery stores, etc. Since the Tribunal decided to characterize the market as the provision of rendering services, claims the Commissioner, it recognized that the product market can be limited to the services capturing the value provided by an intermediary.

301 The Tribunal considers that *Hillsdown* is of no assistance to the Commissioner on the "value-added" approach since in that case, the Tribunal expressly said that there was *no difference* between the two contemplated approaches to the product market, even though it decided to characterize the market as the provision of rendering services. If the first characterization was used, then the analysis for competition purposes would have focused on the possible monopsony power of the renderers as buyers of the raw materials. If the second characterization was used, then the analysis would have focused on the possible market power of the renderers as sellers of the rendering services. But, said the Tribunal, no significant difference resulted from the two characterizations. Moreover, there was clearly a price paid for the renderable materials or for the services provided (Hillsdownat pp 293 d-h, 299). In light of the foregoing, the panel finds that the *Hillsdown* decision is at best inconclusive on the issue of the "value-added" approach.

302 In *Xerox*, a non-merger case, the Tribunal found that the relevant product market was the provision of intermediary services, namely, servicing copier parts that were not constrained by the sale of copiers to end customers. It is true that the Tribunal then recognized that a subset of a final product (*i.e.*, the servicing of parts for copiers) can constitute a relevant product. However, in that case, there was a specific price charged for the specific service offered by the parties. Again, this precedent therefore offers at best weak support to the "value-added" approach contemplated by the Commissioner in this case, as no specific price is charged for GHS.

• *U.S.*

303 Turning to the U.S., even though the US HMEGs were adopted more than 12 years ago in August 2010, the Commissioner has not referred the Tribunal to any decision of a U.S. court where the "value-added" approach set out in the US HMEGs was accepted and actually applied.

304 In his submissions to the Tribunal, the Commissioner referred to a matter involving Conagra Foods (*United States of America v Conagra Foods, Inc, et al*, 14-CV-000823 "*Conagra*")) and to FTC v Whole Foods Market, Inc, 502 F.Supp. 2d 1 (2007) ("*Whole Foods*"). The Tribunal concludes that neither of these matters constitutes a convincing precedent to assist the Commissioner on the "valued-added" approach.

305 The *Conagra* example was a case in the flour business, where a fee was charged by the millers for converting wheat into flour. The Commissioner claims that this was a situation where the U.S. Department of Justice applied the SSNIP to a component of the final price for the flour, namely, the converting fee, because this component was the subject of the effective competition at issue between the merging flour mills. However, this precedent is of no value to the Tribunal as the Commissioner was strictly relying on the argument presented to the court by the U.S. antitrust agency itself, and not on a decision issued by a U.S. court. This case is therefore not a legal authority but instead solely reflects the position taken by another competition authority on the "value-added" approach.

306 With respect to *Whole Foods*, it was not a case where a "value-added" approach was applied or even considered by the U.S. court. It was instead a matter where the court mentioned that in the context of the HMT framework, lower SSNIP levels may be more appropriate for mergers in markets or industries characterized by high-volume sales but low-profit margins (Whole Foods at pp 9-11). This case therefore did not involve the application of a "value-added" approach to a component of a product but turned instead on the possible use of a smaller SSNIP threshold on the final product sold by the grocers. The Tribunal points out that in *Whole Foods*, the U.S. court did not analyze nor provide any guidance on the factors to take into account or the evidence required in order to determine the appropriate level of such a lower SSNIP level.

• *European Union*

307 The Commissioner also referred to two cases issued by the European Commission ("*EC*") in the European Union, where the US HMEGs were approved and followed by the EC. These decisions dealt with extruded metals and, according to the Commissioner, recognized the value-added by an intermediary as a relevant and separate product market.

308 In *Norsk Hydro/Orkla/JV* (Case No COMP/M.6756), 13 May 2013 ("*Norsk Hydro*"), two companies had operations in the aluminum sector where extrusion premia were charged. The extrusion premia represent the price paid by customers for the value added by companies that extrude the aluminum. In *Norsk Hydro*, the EC noted that there was a significant and persistent difference in the extrusion premia charged by soft-alloy extrusion suppliers in two different geographic markets. Therefore, in analyzing the merger between extruders, the EC considered that the relevant benchmark price was the actual price for the premium charged for the extruding process, and not the full price of the aluminum eventually sold to customers. The EC concluded that "in the presence of a similar price structure, it seems appropriate to take as a relevant benchmark price the extrusion premia rather than the full price" — citing with approval the US HMEGs (*Norsk Hydro* at paras 66-67). The EC found that the price negotiations were only on the extrusion premium, as other factors such as the price of aluminum or the billet conversion costs were typically fixed.

309 The second European Union case relied on by the Commissioner is *Inco/Falconbridge*, (Case No COMP/M.4000), 4 July 2006 ("*Inco*"). In that case, the EC considered the market for high-purity nickel, stating that "the price increase must be seen in relation to the added value provided by the firms in the relevant market" (*Inco* at para 379). The EC observed that a price increase of an input good may have only a minor effect on the price of the final product (depending on the share of total input cost represented by the input good), but can nonetheless be considered significant from a competition perspective. Since the premium charged was directly negotiated with the customers, the EC determined that it was a separate product, with a separate price.

310 The Tribunal pauses to note that P&H also referred to a third similar EC matter, also dealing with extruded metals, namely, *Glencore/Xstrata* (Case No COMP/M.6541), 22 November 2012. In that case, a premium applicable to the extruded metal differentiated the extruded product from the raw metal price, and was also the main element of the price negotiated between buyers and sellers.

311 The Tribunal finds that these European Union cases are of no real precedential value. In any event, they are clearly distinguishable from the present case.

312 Regarding their precedential value, the Tribunal underlines that these three matters are decisions issued by the EC, which is the European competition agency and the equivalent of the Commissioner in the European Union. These EC decisions are not decisions issued by an independent adjudicative court or tribunal. Under the European Union competition law regime, and in merger matters in particular, the EC is not strictly an investigator and law enforcer as is the Commissioner under the Act. The EC has the dual role of being not only the investigative authority but also the first-instance decision-maker. The EC decisions relied on by the Commissioner thus represent the position of the competition authority itself, as opposed to a decision by an independent judicial body like the courts or the Tribunal. The Tribunal is thus of the view that such decisions of the EC, while informative, carry less persuasive weight. They can certainly not be qualified as legal precedents on the issue of the "value-added" approach.

313 The Tribunal further concludes that the *Norsk Hydro* and *Inco* precedents are of limited assistance to the Commissioner as they are distinguishable from the present case: according to the evidence in those cases, the premia were a separate price charged for a separate product, and were openly negotiated between the suppliers and the customers. These were situations where there was a specific price for the premia at issue. In other words, the price of the value-added product was not constructed or implicit. It was explicit and transacted.

• *Australia*

314 In its final submissions, P&H referred to an Australian case, Australian Competition and Consumer Commission v Metcash Trading Limited, [2011] FCA 967 (“Metcash”), aff'd [2011] FCAFC 151. This was in response to a Direction the Tribunal had issued prior to final oral argument, where it notably invited counsel for both parties to identify legal precedents in which a court or tribunal considered situations where it was proposed that an implicit price for the merging firms' specific contribution to the value of a product should be used to determine the SSNIP and the relevant market, as well as legal precedents which considered situations where in applying the HMT and in defining the relevant market, a SSNIP smaller or larger than 5% should be used, and/or reviewed the factors to take into account in determining the appropriate level of the SSNIP.

315 In the *Metcash* case, the Australian Competition and Consumer Commission ("*ACCC*") challenged a merger of wholesale grocery suppliers. The ACCC sought to use an imputed price purporting to represent the value added by grocery wholesalers at their stage in the supply chain as the basis for considering the impact of a SSNIP in defining markets. The ACCC's approach, which echoed the US HMEGs, was soundly rejected by the Federal Court of Australia (and affirmed on appeal). The Australian court found that the purported value-added services for which the ACCC sought to use an imputed price were not the extent of what the wholesaler actually provided, and that an imputed price solely for these services could therefore not be used as the basis for defining the relevant market. The court noted that "the associated services provided by [the wholesaler] are not available in the absence of the acquisition by a retailer of packaged groceries from [the wholesaler]" (*Metcash* at para 196).

316 The Commissioner argues that this case is distinguishable as it involves a considerably more complex market structure, in an industry characterized by a mixture of self-supplying retailers and independent retailers, and involving different categories and types of products across multiple levels of the supply chain.

317 The Tribunal does not share the Commissioner's view. As admitted by counsel for the Commissioner at the hearing, *Metcash* is the sole judicial precedent identified by the parties that actually dealt directly with the so-called "value-added" approach exposed in the US HMEGs and advocated by the Commissioner in the present case. In *Metcash*, the Australian courts clearly rejected the "value-added" approach to product market definition and the use of an imputed price covering only a subset of the product effectively sold by the merging parties, as it did not reflect the commercial activity of the merging firms. Moreover, the alleged value added by the grocery wholesalers was not independently transacted.

318 In the Tribunal's view, this Australian case bears a number of striking similarities with the present case: like the situation in *Metcash*, the so-called value-added for GHS does not have a commercial life of its own, and the "imputed" price for GHS

— or the Basis — is not the price ordinarily used in the grain industry for the product being transacted between the farmers and the Elevators. The Tribunal considers that the reasoning in this Australian decision, while not binding, is persuasive and is generally consistent with the Tribunal's analysis in the present case.

(iii) The "value-added" approach is not supported by the Commissioner's own MEGs

319 The Commissioner finally submits that the "value-added" approach he is proposing finds support in his own MEGs.

320 With respect, the Tribunal again does not agree. The Tribunal instead finds that the Commissioner's proposed approach to the application of the HMT and the choice of the price of GHS for market definition purposes cannot be reconciled with the removal, in 2004, of the "value-added" language that existed before then and the continued absence of such language in the current 2011 MEGs.

321 It is worth reminding that the MEGs articulate the analytical framework that the Competition Bureau and the Commissioner apply in determining whether a merger is likely to substantially lessen or prevent competition. The MEGs were first introduced in 1991 to provide guidance to the Competition Bureau's enforcement approach to the new merger provisions enacted in 1986 ("*1991 MEGs*"). The Competition Bureau's 1991 MEGs were superseded in September 2004 with the release of the 2004 MEGs, which were themselves replaced by new, revised guidelines in October 2011, when the 2011 MEGs were issued. The Tribunal pauses to note that the 2011 MEGs followed the issuance of the revised US HMEGs in August 2010.

322 Since the first adoption of the MEGs in 1991, several important changes have been made to the product market approach presented by the Commissioner. More specifically, the "value-added" approach, which the Commissioner is apparently attempting to resuscitate in this case, was expressly abandoned in the most recent iterations of the MEGs.

323 In the 1991 MEGs, the Commissioner discussed the conceptual framework for market definition. With respect to the base price, the 1991 MEGs stated the following (1991 MEGs at p 9):

> In general, the base price that is employed in postulating a significant and non-transitory price increase is whatever is ordinarily considered to be the price of the product at the stage of the industry (e.g., manufacturing, wholesale, retail) being examined. This is typically the <u>cumulative value</u> of the product, inclusive of the value added (mark-up) at the industry level in question. However, in certain industries, the <u>value added is billed as a separate fee</u>, and no mark-up is applied to the product in relation to which the service (or other value added) is performed. In such cases, the price increase will usually be postulated in relation to the fee.
>
> [Emphasis added.]

324 The 1991 MEGs therefore made an express distinction between the "cumulative price" and the "value added" price. They specifically identified a "value added" approach as an exception to the typical approach of using the cumulative price, and specified that this exception would apply if two conditions were met: "the value added is billed as a separate fee, and no mark-up is applied to the product in relation to which the service (or other value added) is performed." The 1991 MEGs thus established that the value-added price could "be employed where it is billed as a separate fee and no mark-up is applied to the product in relation to which the value-added is applied" (Paul S. Crampton, Canada's New Enforcement Guidelines*: a "Nuts and Bolts" Review*, 36 Antitrust Bulletin 883, 1991) ("Crampton 1991") at p 914), The author, who was the drafter of the 1991 MEGs, used a pipeline example — similar to what the US HMEGs would use some 20 years later — to illustrate a situation where the value-added price could be used as the base price for market definition purposes: when two pipeline operators simply charge a tariff for transporting the oil, such billed fee can be used as the base price for the HMT analysis (*Crampton 1991* at p 914).

325 However, it is clear from the 1991 MEGs that the mainstream approach was to use the "cumulative value of the product" as the base price to postulate a SSNIP: the 1991 MEGs adopted the "common sense approach of using cumulative prices except where it is industry practice to bill the value added as a separate fee" (A. Neil Campbell, Merger Law and Practice: The Regulation *of Mergers under the* Competition Act, (Scarborough, Ontario: Carswell, 1997) ("*Campbell*") at p 61).

326 In the 2004 and 2011 MEGs, this reference to the alternative value-added price approach was taken out of the MEGs, and the sole reference to the base price remained the price "ordinarily considered to be the price of the product at the stage of the industry (e.g., manufacturing, wholesale, retail) being examined." The Tribunal underlines that, even though the 2011 MEGs were adopted 14 months after the US HMEGs, they did not revive the value-added price abandoned in 2004 or echo the "implicit or explicit price" exceptions described in the US HMEGs.

327 The Tribunal further understands that, before the present case, not a single merger was judicially contested by the Commissioner on the basis of a value-added price or the "value-added" approach.

328 On March 10, 2021, the Tribunal sent a Direction to counsel inviting the parties to provide submissions regarding the specific reference that was contained in the 1991 MEGs to a "value-added" price and its absence from the subsequent iterations of the MEGs published by the Competition Bureau in 2004 and 2011.

329 In his submissions to the Tribunal, the Commissioner did not identify a particular reason why the paragraph discussing the value-added approach was not explicitly retained in subsequent iterations of the MEGs. He noted that most commentators remained silent on the issue when the new version of the 2004 MEGs was discussed in draft form. The Commissioner submitted that even though the explicit reference to the value-added price was removed, the concept remains embedded in the subsequent versions of the MEGs. He added that a significant change in the 2004 MEGs was to explain that market definition is based on substitutability and focuses on demand responses to changes in relative prices, and that the focus of the market definition exercise is on those dimensions of competition that purchasers of the product value.

330 The Commissioner further argued that, despite their silence on the "value-added" approach, the 2011 MEGs define the notion of price in a way that encompasses such a "value-added" approach, and that the language of the MEGs provides "latitude on what price is analyzed in a merger." According to the Commissioner, the 2011 MEGs contemplate flexibility on the SSNIP test to be applied and on the 5% threshold. He added that in paragraph 4.2 of the 2011 MEGs, the reference to price is intended to capture any market that may be anti-competitive, and that the guidelines are agnostic as to how the price to supply the product is defined. The Commissioner also relied on the fact that the MEGs are also clear that in terms of the SSNIP, 5% is generally appropriate but "market characteristics may support using a different price increase" (2011 MEGS at para 4.3).

331 The Tribunal is not convinced by the Commissioner's arguments.

332 The Tribunal first observes that the Commissioner's references to the apparent flexibility in the 2011 MEGs language strictly relate to the level of the SSNIP threshold, not to the definition of the base price. In the 2011 MEGs, the Competition Bureau refers to the notion of "base price" at paragraphs 4.6 and 4.7. It expressly states that the base price used to postulate a price increase is "typically the prevailing price in the relevant market" (2011 MEGs at para 4.6). The Competition Bureau may elect not to use the prevailing price when market conditions (absent the merger) would likely result in a lower or higher price in the future. It then states that "[i]n general, the base price used to postulate a price increase is whatever is ordinarily considered to be the price of the product in the sector of the industry (e.g., manufacturing, wholesale, retail) being examined" (2011 MEGs at para 4.7). The Tribunal is unable to read in those provisions any direct, oblique, or implied reference to a value-added price or to the situations alluded to in the US HMEGs.

333 Furthermore, the Tribunal does not accept the Commissioner's disconcerting contention that the 2011 MEGs could or should somehow continue to be read as implicitly containing the express language of the 1991 MEGs that the Commissioner explicitly removed and abandoned in 2004, and did not re-insert when he issued his revised MEGs in 2011.

334 In fact, as the panel indicated at the hearing, the Tribunal is left with the distinct impression that the Commissioner is urging the Tribunal to follow the US HMEGs and to prefer them to his own 2011 MEGs. This is not a path that the Tribunal will follow.

335 The Tribunal instead agrees with P&H that the evolution of the MEGs since 1991 reinforces its position that the base price to be used for purposes of market definition is "whatever is ordinarily considered to be the price of the product at the

stage of the industry [...] being examined," which is "typically the cumulative value of the product, inclusive of the value added (mark-up) at the industry level in question" (1991 MEGs at p 9; see also 2004 MEGs at para 3.8 and 2011 MEGs at para 4.7). In the present case, what is ordinarily considered to be the price of the product in the sector of the industry being examined, and what is the cumulative value of the product, is the Cash Price received by the farmers for their grain, be it wheat or canola.

336 What is more, the conditions of the "value added" price once recognized by the Commissioner in the 1991 MEGs — namely, that the value added be "billed as a separate fee" with "no mark-up [...] applied to the product in relation to which the [...] value added is performed" — would not be met in this case. These conditions speak of a separate price attached to the value-added product and imply that the value-added element must be more than a simple cost component and must be transacted. Here, the Commissioner's proposed price for GHS is founded on an imputed price equal to only a fraction of the total value-added provided by grain companies, there is no separate fee (either explicit or implicit) for the alleged value-added provided by grain companies for GHS, and P&H does not charge and bill a separate fee for GHS, or even for the Basis.

337 The Tribunal is mindful of the fact that the MEGs are neither sacrosanct nor legally binding (*Southam* FCAat p 41). The MEGs do not restate or revise the law, nor do they substitute for professional advice (Canada (Commissioner of Competition) v Superior Propane Inc, 2001 FCA 104 (" at paras 144-146). However, published guidelines such as the MEGs do provide guidance and notice to the public of how the Commissioner interprets the Act (Canada (Commissioner of Competition) v Canada Pipe Co, 2006 FCA 233, at paras 33, 39; JD Irving Ltd v General Longshore Workers, Checkers and Shipliners of the Port of Saint John, 2003 FCA 266 (" at para 37). The Tribunal agrees with P&H that the MEGs serve as an important tool for the public and the business community to understand the application of the Act. While not legally binding, they serve as a meaningful element to delineate legal and economic principles that are not fully reflected in the Act itself, and they may be considered as an aid to the Act's interpretation (Eli Lilly and Co v Apotex Inc, 2005 FCA 361 at para 33). The Tribunal has indeed often noted that the MEGs provide "important enforcement guidelines reflecting the Commissioner's view on how the Act should be interpreted" (*Superior Propane I* at para 393).

338 It is worth repeating the comments made by the Tribunal at paragraph 397 of *Superior Propane I*:

> It must not be forgotten that the point of view put forward in the MEGs represents the considered opinion of the Commissioner, the official appointed by the Governor in Council to administer and enforce the Act. That view, it goes without saying, is the view arrived at by the Commissioner following careful advice given to him by his legal and economic advisers regarding the meaning of the various provisions of the Act. Although the Commissioner is not bound by the MEGs nor are they binding upon this Tribunal, the MEGs should be given very serious consideration by this Tribunal. Needless to say, the Tribunal can disagree and in fact should disagree if it is of the opinion that the interpretation proposed in the MEGs is wrong. However, when referring and considering the MEGs, one should bear in mind the comments in the preface to the MEGs made by Howard Wetston, then Director of Investigation and Research. He stated that the MEGs were published to promote a better understanding of the Director's merger enforcement policy and to facilitate business planning. He also noted the extensive consultation process which was followed in their preparation.

339 It cannot be said that the Commissioner was unaware of the fact that the "value-added" approach was expressly removed from the 2004 MEGs and is absent from 2011 MEGs, even if this most recent iteration was issued after the US HMEGs had been adopted in the U.S.

340 The Commissioner provided no satisfactory explanation or compelling argument to convince the Tribunal that it should now depart from the 2011 MEGs, revive a "value-added" approach the Commissioner abandoned and removed from the MEGs in 2004, and embrace a new standard for product market definition that no longer forms part of the MEGs and the Commissioner has not publicly endorsed since at least 2004.

341 The Tribunal is of the view that parties to transactions in Canada should be able to rely reasonably on statements of principle made by the Commissioner in published enforcement guidelines, including the MEGs, in order to know the rules applicable to their future activities and planned transactions. As the official responsible for the administration and enforcement of the Act, the Commissioner has a particular responsibility to provide guidance to parties through the publication

and consistent application of relevant principles and approaches. Although the MEGs are not legally binding on the Tribunal or the Commissioner, if the Commissioner proposes to depart materially from them in litigated proceedings, the departure should be recognized, explained and justified (for example, by noting an amendment to the Act, or a recent Tribunal or court decision on point, or an advance in economic thinking or methodology) (see also *JD Irving* at para 37). The Commissioner did not do so with respect to the proposed new "value-added" approach to product market definition that he is inviting the Tribunal to adopt.

342 In sum, from a legal standpoint, the Tribunal finds no support in adjudicated precedents or in the MEGs for the "value-added" approach to product market definition advocated by the Commissioner in this case. If anything, both the existing precedents and the MEGs instead reinforce the conclusion that, in this case, the relevant products are the purchase of wheat and canola and the relevant price is the Cash Price.

(iv) The US HMEGs do not apply to this case

343 The Tribunal makes one last observation on the US HMEGs. In his submissions, the Commissioner tries to draw a parallel between the present case and the hypothetical situations described in those guidelines. He argues that, just as in the US HMEGs, the Elevators' specific contribution to value can be "identified with reasonable clarity," through the Basis.

344 The Tribunal is not persuaded that, even if they were retained, the US HMEGs' requirements would be met in this case.

345 The US HMEGs expressly require that in order to base a SSNIP on the value added by the merging firms, the firms' specific contribution to value must be identifiable with reasonable clarity. In the Tribunal's view, this is not a situation where an Elevator's specific contribution of value (by providing GHS) to the Cash Price farmers receive for their wheat or canola can be identified with reasonable clarity. As discussed above, the evidence indicates that the price of GHS, as "imputed" by Dr. Miller, cannot be identified explicitly by the grain companies or the farmers, nor is it implicitly observable by industry participants, as it is not the actual Basis. And if the price for GHS is neither observed nor observable, the "value-added" approach must fail.

346 The Commissioner's price for GHS is neither implicit nor explicit; it is a constructed price. In the present case, the two observed or observable prices are the Futures Price and the Cash Price. Not the price for GHS. Moreover, the US HMEGs' "value-added" approach requires a transacted price, not only a cost component.

(c) The HMT framework and the SSNIP test

347 The "value-added" approach proposed by the Commissioner also raises concerns from a conceptual perspective. As proposed, applying a 5% price increase as part of the SSNIP test *only to the value-added portion* of the price of a product would effectively alter the price change that a hypothetical monopolist must be able to sustain. That alteration to the HMT, without more, would have the effect of seriously modifying the current well-accepted economic analysis underlying market definition and the HMT framework. Since no consideration was given by the Commissioner to whether or how the applicable SSNIP threshold would have to be modified in a value-added scenario, adopting his proposed approach to the product market definition would imprint a profound change to the review of mergers and would significantly recalibrate the current HMT framework governing the market definition exercise.

348 The Tribunal points out that such impact can be significant. Where the value-added component of a product accounts for 10% of the final price, applying a 5% SSNIP threshold to the value-added component is equivalent to applying a *de minimis* 0.5% SSNIP to the final price of the product. Conversely, in order to keep the usual well-accepted 5% SSNIP benchmark applied to the final transacted product, it would require applying a 50% SSNIP threshold when considering a component representing a 10% value-added to the final transacted product.

349 As demonstrated by Ms. Sanderson in her testimony and by P&H in its final argument, the 5% SSNIP threshold used by Dr. Miller in his HMT analysis based on the "imputed" price of GHS (as a proxy for the Basis) translates into an unprecedentedly low SSNIP level when transposed to the total price of grain: the "value-added" approach of the Commissioner would mean that the equivalent SSNIP percentage calculated by Dr. Miller would vary between 0.6% and 0.8% for the purchase of wheat when expressed in terms of the Cash Price, and between 0.1% and 0.2% for the purchase of canola.

350 The Tribunal is not convinced that in the circumstances of this case, the Commissioner has provided clear and convincing evidence, or arguments, supporting such a fundamental change to the market definition exercise. The Commissioner provided no submissions nor evidence on what the appropriate SSNIP threshold should be in the context of his "value-added" approach, or why it should nonetheless be kept at 5% when a smaller component of the final price is used as the base price. The Commissioner's position simply assumed that the usual 5% SSNIP threshold should remain, and he applied it in the HMT analysis. These gaps in the conceptual framework undermine the approach he is proposing in this case.

351 Antitrust economists in the U.S. have voiced concerns about the revised US HMEGs, pointing out that the "value-added" approach would lead to fewer potential substitutes and to lower effective SSNIP thresholds. In response to the draft version of the US HMEGs, some economists identified a fundamental flaw in the "value-added" approach to product market definition proposed in the guidelines, indicating that in many cases, "the value-added service is not actually purchased by customers on a standalone basis" and "customers are not able to substitute to sellers of just the value-added service" (E.M. Bailey, G.K. Leonard and L. Wu, "Comments on the 2010 Proposed Horizontal Merger Guidelines", *HMG Revision Project — Comment*, Project No. P092900, June 3, 2010 at p 5). This is precisely the case here with GHS or the Basis. Other economists observed that "one implication of applying the [HMT] using a value-added approach is that it will tend to produce more narrowly defined markets whenever the threshold used for the value added test is *not sufficiently increased to account for the ratio of value added to prices*" [emphasis added] (P Davis and U Haegler, "Should competition agencies focus on 'value added' instead of final prices?", March 1, 2016 http://ssrn.com/abstract=2740706 at p 16). Again, in the present case, neither the Commissioner nor Dr. Miller turned their mind to the impact of their proposed "value-added" approach on the effective SSNIP threshold.

352 In *Metcash*, the Federal Court of Australia noted that on the facts of that case, applying a 5% SSNIP to the imputed value-added price (*i.e.*, the wholesaler profit margin) would reflect approximately a 0.26% increase in the final retail price. The Australian court did not accept that such a small price increase could be used to define a product market, and refused the proposed "value-added" approach.

353 The Tribunal is unaware of any precedent — and the Commissioner has not mentioned any — where a price increase of less than 5% has been utilized as the SSNIP threshold in applying the HMT analysis. The Tribunal finds that the "value-added" approach as proposed would profoundly change the current HMT framework, and it is not ready to accept that minimal price increases of less than 1% can become the yardstick to justify an intervention in the market. Lower effective SSNIP thresholds lead to narrower product markets, and to a higher likelihood of intervention in mergers.

354 The Tribunal notes that in response to a question from the panel, Dr. Miller acknowledged that the "value-added" approach, whereby a component of the final price of a product is used as the base or benchmark price for a HMT analysis, is not really addressed in the broader empirical industrial organization literature (Consolidated Transcript, Public, at pp 1431-1432).

355 In the Tribunal's view, espousing the "value-added" approach cannot simply be a question of modifying the base price that will be used for the product market definition. Given its impact on the effective price increase it entails for the final product, it also implies, at a minimum, a consideration of the appropriate SSNIP threshold that should be used and an explanation or justification for the selected SSNIP threshold. One cannot dissociate the issue of the "value-added" approach from the issue of the SSNIP threshold. Here, the Commissioner has not presented any evidence nor any economic analysis or authority that would support keeping the 5% SSNIP threshold in the context of his "value-added" approach. Even though the scientific or economic foundation for adopting and using a 5% level remains unclear, the Tribunal underlines that this 5% SSNIP threshold was developed in a context where the base or benchmark price was the cumulative price for the final product sold or purchased. In this case, Dr. Miller and the Commissioner simply transposed this 5% threshold to a value-added price and to their HMT analysis, without explaining or justifying why such threshold could be imported as is in this different context.

356 In light of this shortcoming in the Commissioner's economic analysis and evidence, the Tribunal is not persuaded that the Commissioner's proposed "value-added" approach can be sustained in the circumstances.

357 The Tribunal makes one other observation.

358 As acknowledged by Dr. Miller at the hearing, the US HMEGs refer to two possibilities for dealing with market definition in situations where the value added by the supplier of a product allegedly relates to a small portion of the total price of the product. The first option is resorting to a smaller component of the final price corresponding to the value-added to determine the base price, when the explicit or implicit price of the value-added can be identified with reasonable clarity, with an appropriate SSNIP threshold. The second option, when the merging firms' specific contribution to value is not an implicit or explicit price, is to keep the overall final price of the product as the base price, but use a lower SSNIP threshold in the HMT analysis, adapted to the realities of the industry being examined.

359 Since the constructed price for GHS, or the Basis, is a small component of the total price of grain that is not transacted in itself, the Commissioner could therefore have argued — as was alluded to in *Whole Foods* — that a lower SSNIP should be used in a HMT analysis based on the final price of the grain. However, this second option was not considered by the Commissioner nor by Dr. Miller in this case. At the hearing, the Tribunal asked Dr. Miller and Ms. Sanderson about the issue of using a smaller SSNIP threshold on the Cash Price, but did not receive clear answers from either expert.

360 Resorting to this second option would have required evidence and some economic analysis supporting the different SSNIP threshold to be used. The Tribunal notes that no legal precedent has been identified where, in applying the HMT and in defining the relevant market, a court or a tribunal has discussed the factors or the evidence to be taken into account in order to adjust the appropriate level of the SSNIP threshold in light of the realities of a particular industry. Similarly, the Commissioner has not provided economic or antitrust literature pointing to analyses that could have been done to determine the appropriate SSNIP threshold to be used in the context of a small value added by the supplier or purchaser of a product.

361 Given the profound change that adopting the "value-added" approach would entail for the current well-accepted HMT analysis underlying market definition, the Tribunal is of the view that no change can be adopted without addressing the SSNIP threshold, in one form or another. The failure to address the SSNIP threshold leaves the Tribunal with no clear and convincing evidence to assess whether either of the two options mentioned in the US HMEGs (*i.e.*, the "value-added price component" or the "reduced SSNIP") should or could be retained and applied in this case.

(4) Conclusion on relevant product market(s)

362 For all the reasons detailed above, the Tribunal concludes that the relevant product markets for the purpose of these proceedings are the purchase of wheat and the purchase of canola. Considering the evidence on the record in this proceeding, the Commissioner has not established, on a balance of probabilities, that there is a distinct relevant market for the supply of GHS for each of wheat and canola. When it comes to the value added by P&H and other Elevators further to their purchase of grain from farmers, there is no separate relevant "market" associated with it in which to conduct the necessary quantitative analysis.

363 The main considerations weighing in favour of a conclusion that there are distinct relevant markets for the purchase of wheat and canola include the factual evidence as well as the absence of legal foundation or SSNIP threshold analysis supporting the "value-added" approach argued by the Commissioner.

364 For greater clarity, the Tribunal is not saying that a "value-added" approach to product market definition could never be contemplated or applied. But if the Commissioner intends to resort to such an approach in future cases, he should first clarify the MEGs in that respect. Furthermore, for the Tribunal to be in a position to assess the merits of a "value-added" approach in any given case, the Commissioner would need to present clear and convincing evidence and submissions showing that the contemplated component of a final product is transacted, that it has a price attached to it or a measurable one, and that consideration is given to the SSNIP threshold to be used.

365 As will be discussed below, this product market issue significantly influences many elements in the remainder of the Tribunal's analysis.

B. What is or are the relevant geographic market(s) for the purposes of this proceeding?

366 The parties took different approaches to the geographic scope of their respective proposed competition markets. The Commissioner initially proposed a local geographic market in which the Virden, Moosomin, and Fairlight Elevators provided GHS to farmers for their wheat and canola. In its pleadings, P&H submitted that in the competition markets for the purchase of wheat and/or canola, the proper geographic area was at least Southeastern Saskatchewan and Southwestern Manitoba, comprising more than 20 Elevators and Crushers.

(1) Analytical framework

367 When identifying the geographic dimension of a competition market, the Tribunal typically applies the HMT, as it does for the product dimension. The HMT is designed to assist the Tribunal in identifying the smallest geographic area in which the merged entity, acting as a hypothetical monopolist or monopsonist, may profitably impose a SSNIP or SSNDP respectively — that is, the smallest geographic area over which it could exercise market power (*Tervita CT* at para 94; *Canadian Waste* at paras 61, 68, 69, 73; *Superior Propane I* at paras 84-85; see also *VAA CT* at paras 300-301; *TREB CT* at paras 121-124; *Facey and Brown* at pp 226-230; John S. Tyhurst, *Canadian Competition Law and Policy*, (Toronto: Irwin Law Inc., 2021) at pp 172-180).

368 Given the practical challenges associated with determining the base price in respect of which the SSNIP or SSNDP assessment must be conducted, the market definition exercise will sometimes need to go beyond the analysis of prices through the HMT framework and to consider other evidence of substitutability or customer switching. Geographic market definition may therefore involve assessing indirect evidence of substitutability, including factors such as: switching costs; transportation costs; the views, strategies, behaviour and identity of buyers; trade views, strategies, and behaviours of other market participants; price relationships and relative price levels; and shipment patterns (2011 MEGs at paras 4.17-4.24).

369 In defining the geographic scope of the relevant competition market, the Tribunal has previously concluded that it may be neither possible nor necessary to establish geographic boundaries with precision. The boundaries may well overlap with adjacent markets and be indistinct from those adjacent markets at many geographic points (*VAA CT* at para 305; Hillsdownat pp 301-302, 310; Canada (Director of Investigation and Research) v Laidlaw Waste Systems Ltd(1992), 40 CPR (3d) 289 (Comp Trib) at p 324). The Tribunal has also held, in particular, that there may be restraints on a merged firm's market power that come from both inside and outside the defined geographic market (*VAA CT* at para 305; Hillsdownat p 310).

370 It should once again be emphasized that business markets, service or trade areas, or operational areas used by company management, are not necessarily the same as a geographic market for the purposes of a competition analysis (*Canadian Waste* at para 72; *Superior Propane I* at paras 85, 101, 106).

(2) Parties' positions

(a) The Commissioner

371 Supported by expert testimony from Dr. Miller, the Commissioner submitted that the relevant geographic market is local in nature. The Commissioner's principal position was that the Moosomin, Virden, and Fairlight Elevators constituted a relevant market. More precisely, the Commissioner proposed a geographic market around these three Elevators in which a hypothetical monopolist could impose a SSNIP for GHS. Dr. Miller's expert evidence included a HMT analysis (for the purposes of the Commissioner's proposed product market for the delivery of GHS) and concluded that the Moosomin, Virden, and Fairlight Elevators, acting as a hypothetical monopolist, would have the ability and incentive to impose a SSNIP for GHS in the geographic area served by these three Elevators. Dr. Miller used a 5% SSNIP threshold in his analysis.

372 In addition, at the hearing and in response to Ms. Sanderson's critique on the product market definition, Dr. Miller testified that the geographic area around the Virden, Moosomin, Fairlight, and Whitewood Elevators could serve as the relevant geographic dimension of a competition market for the cash sale of wheat, again based on his HMT analysis (Exhibits CA-A-192 and P-A-193, Relevant Results from Ms. Sanderson's HMT Calculations ("*Dr. Miller Revised HMT*").

373 To support the argument for a local market, the Commissioner emphasized the importance to farmers of the distance between their farm and the point of delivery, and the associated transportation costs, when deciding on an Elevator or Crusher for the sale of their grain. The Commissioner submitted that most farms analysed by Dr. Miller deliver their grain to Elevators located less than 100 kilometers away. The Commissioner submitted that the size of the service areas from which the Moosomin and Virden Elevators draw at least 90% of the wheat or canola they handle demonstrated that most of the volumes are drawn from farms located near each of those Elevators.

374 Dr. Miller developed a model of demand to understand how farms make decisions as between Elevators and Crushers to sell their grain. In his expert report, Dr. Miller relied on four qualitative elements, namely, a review of case documents, the distances that farms tend to send their grain, the distances between the Elevators, and the profit margins. He also relied on his HMT analysis (Dr. Miller Report at para 4).

375 Dr. Miller testified that in his opinion, proximity is an important factor in a farm's choice of a "primary" Elevator for the sale of its grain. Dr. Miller considered the driving distance between the Moosomin and Virden Elevators, and calculated the drive time and drive distance from farms to Elevators using various data, including data from the Elevator operators.

376 During his analysis, Dr. Miller identified farms that were customers of the three Elevators (*i.e.*, Moosomin, Virden, and Fairlight) in his proposed geographic market for the delivery of GHS. In developing a model for demand, Dr. Miller considered the "draw areas" for the Elevators and used available data to determine each Elevator's "service area" — described as the set of closest Census Consolidated Subdivisions from which each Elevator draws at least 90% of its total wheat or canola intake. Dr. Miller used the service areas for these three Elevators to define a "Farmer Region," namely, a collection of farms useful for understanding the pricing incentives at the three Elevators and how their current and prospective customers would respond to price changes ("*Farmer Region*") [6] .

377 In Dr. Miller's analysis, the respective service areas for the Moosomin and Virden Elevators were contiguous with each Elevator. In addition, the service areas for the two Elevators substantially overlapped, suggesting that both Elevators expect to purchase grain from similar or geographically clustered farms. After determining the service areas for other Elevators and for more distant Crushers, Dr. Miller's analysis of service areas also found that the median farm selling canola may be more willing to travel longer distances to sell to Crushers.

378 Dr. Miller also quantified the role of distance in his demand model and considered internal documents from the merging parties to support a conclusion that the Moosomin, Virden, and Fairlight Elevators were close competitors. He also observed the margin (or mark-up) earned by the Virden Elevator, both for wheat and for canola, which supported a conclusion that the Virden Elevator faced a relatively small set of competitors.

379 Turning to his HMT analysis, Dr. Miller determined that a HMT using a merger simulation model showed that the Moosomin, Virden, and Fairlight Elevators comprised a relevant geographic competition market where a hypothetical monopolist would find it profitable to impose a SSNIP on the price of GHS. For GHS for wheat, Dr. Miller's predicted price increase of a hypothetical monopolist was CAD $9.03 per MT at the Moosomin Elevator and CAD $5.88 per MT at the Virden Elevator, representing changes in price (compared to his constructed pre-Acquisition price for GHS at each Elevator) of 26.0% at Moosomin and 21.6% at Virden. With respect to GHS for canola including Crushers, his predicted price increase of a hypothetical monopolist was CAD $2.76 per MT at the Moosomin Elevator and CAD $1.51 per MT at the Virden Elevator, representing changes in price (compared to his constructed pre-Acquisition price for GHS) of 22.2% at Moosomin and 7.6% at Virden (Dr. Miller Report at paras 74-79 and Exhibit 9). According to Dr. Miller, his simulation and the resulting projected price changes demonstrated that a hypothetical monopolist of the Moosomin, Virden and Fairlight Elevators would "increase price by far more than a typical SSNIP" (*i.e.*, 5%) (Dr. Miller Report at para 79).

(b) P&H

380 P&H submitted that the relevant geographic area for competition market purposes was much larger. P&H submitted that all farmer witnesses can and do haul their wheat and canola significant distances to Elevators and (for canola) to Crushers because it is financially worthwhile to do so. P&H submitted that farms closer to a particular Elevator receive a premium for their products, because they do not have high costs associated with hauling their grain to that Elevator. In P&H's submission, transportation costs do not provide any kind of constraint on competition in the relevant geographic market that shields the Virden and Moosomin Elevators from competition.

381 P&H first relied on Mr. Heimbecker's evidence. Mr. Heimbecker testified that in the area surrounding the Virden and Moosomin Elevators, P&H competes with numerous Elevators and Crushers to purchase wheat and canola from farms. For wheat in that area, Mr. Heimbecker identified over 20 rival Elevators owned by six competing grain companies. For canola in that area, he identified at least 27 rival purchasing locations owned by nine grain companies. Mr. Heimbecker also referred to P&H's internal documents, including business plans, internal emails, and the competitors identified in "Draw Analysis Reports" prepared by third party consultants for P&H.

382 P&H also relied on the expert evidence provided by Ms. Sanderson. Ms. Sanderson initially proposed a geographic market of "(at least) southeastern Saskatchewan and southwestern Manitoba" (Exhibits P-R-180 and CA-R-181, Expert report of Ms. Margaret Sanderson ("*Ms. Sanderson Report*"), at para 14). She adopted a monopsony framework, analysing the market for the purchase of wheat or canola by Elevators and Crushers. Ms. Sanderson's view was that the Virden and Moosomin Elevators were small buyers in an unconcentrated market or industry and, specifically, that the geographic market is wider than merely the area around the Moosomin, Virden, and Fairlight Elevators. She did not conduct a formal HMT analysis to support her broad proposed geographic market but relied on other quantitative and qualitative evidence and draw areas.

383 However, Ms. Sanderson did comment on hypothetical monopolist issues in responding to Dr. Miller's HMT analysis in her hearing slides and during her testimony (Exhibits P-R-182, CA-R-183 and CB-R-184, Slides of Ms. Sanderson ("*Ms. Sanderson Slides*"), at pp 72, 74-75). While she did not do her own HMT analysis, Ms. Sanderson did a recalculation of Dr. Miller's model to generate new values based on a different denominator — namely, the Cash Price instead of the constructed price for GHS — , using Dr. Miller's diversion ratios and his Virden margin. Ms. Sanderson's revised HMT analysis resulted in the same absolute price changes calculated by Dr. Miller, but with different relative price variations in light of the different denominator she used.

384 Ms. Sanderson's recalculation of Dr. Miller's HMT analysis suggested that when the Cash Price is used as the denominator, a market made up of the Moosomin, Virden, Fairlight, Oakner, Whitewood, Elva, Shoal Lake, and Carnduff Elevators would be a relevant geographic competition market for wheat. The relevant geographic market for canola would be larger and would include other Elevators as well as several Crushers such as Bunge Harrowby and LDC Yorkton (Ms. Sanderson Slides at pp 74-75). Ms. Sanderson based her HMT results on the same diversion ratios as Dr. Miller and on the weighted average price changes for the Moosomin and Virden Elevators (as calculated by Dr. Miller), but she used the wheat prices prevailing at the Virden Elevator as the reference price to calculate her relative price decreases. Ms. Sanderson indicated in her testimony that she used the Virden prices because Virden was the Elevator from which Dr. Miller had calculated the margin he used in his economic model (Consolidated Transcript, Confidential A, at p 1782).

385 In addition to her HMT recalculations, Ms. Sanderson studied the evidence in the transaction data and witness testimonies to provide an opinion on the relevant geographic market based on the number of competing buyers (Elevators and Crushers) P&H faced in purchasing wheat or canola, farms' switching alternatives amongst the Elevators and Crushers, and the distance farms were prepared to travel to sell their products.

386 Ms. Sanderson prepared "draw area" maps for the Elevators in Southeastern Saskatchewan and Southwestern Manitoba, and so-called "heat maps" derived from the overlapping draw areas. The draw areas for the Moosomin and Virden Elevators substantially overlapped.

387 Ms. Sanderson also studied the Farmer Region identified by Dr. Miller as well as the "corridor of concern" identified by the Commissioner prior to the commencement of this proceeding. As described by Ms. Sanderson, the corridor of concern was a geographic polygon focused on approximately 80 farms located between the Virden and Moosomin Elevators on either side of the Trans-Canada Highway. (By definition, the "corridor of concern" included farms within a one-hour driving distance from both Elevators using commercial trucking roads. It included two small non-contiguous areas south of the main polygon.) The Moosomin and Virden Elevators' draw areas both covered this "corridor of concern."

388 Ms. Sanderson observed that given the range of options available to farms for the sale of their crops, the Cash Prices set by P&H to purchase wheat and canola must be competitive with the Cash Prices set by numerous Elevators operated by many competitors, because they are all buying from the same farms.

389 Ms. Sanderson also referred to internal documents of P&H and LDC. Ms. Sanderson's report noted that P&H and its customer service representatives at the Moosomin Elevator referred to and tracked prices of more than a dozen other Elevators and Crushers, in addition to the Virden Elevator. LDC's documents also showed that the Virden Elevator competed with almost a dozen other competitor purchase locations in addition to the Moosomin and Fairlight Elevators. Ms. Sanderson made specific reference to Elevators and Crushers identified by P&H before the Virden Acquisition in its fiscal 2019 and fiscal 2020 business plans for the Moosomin Elevator.

390 Ms. Sanderson concluded that the transaction data, testimonies and documentary evidence demonstrated that there was a large set of relevant competing Elevators buying as much or more volume than the Moosomin or Virden Elevators from farms within Dr. Miller's Farmer Region, that the geographic market had many participants, and that P&H had a small share of that market.

391 In his reply expert report, Dr. Miller addressed the geographic market analysis of Ms. Sanderson. He testified that farms in the towns close to the Moosomin, Virden, and Fairlight Elevators were particularly likely to rely on those Elevators for the sale of their grain. Dr. Miller concluded that the desirability of travelling to a particular Elevator differs for farms located at different points within each Elevator's draw area. Looking at the percentage of MT sold and the quantity sold on a town-by-town basis, Dr. Miller found that farms close to the centre of the geographic area served by the three Elevators had a "distinct preference" for working with the Moosomin, Virden, and Fairlight Elevators. He also found that while it was rare for a farm located directly between the Moosomin and Virden Elevators to choose a more distant Elevator, the frequency increases for farms farther from this centralized location — both for wheat and for canola, including Crushers.

392 During the experts' concurrent evidence session at the hearing, Ms. Sanderson agreed that distance matters to an individual farm and that farms preferred to sell closer and to travel a shorter distance to sell their wheat and canola. She also agreed that the transaction data, supported by the testimony of the farmer witnesses, were helpful in understanding what makes an Elevator attractive to a farm for the sale of wheat or canola. Dr. Miller and Ms. Sanderson agreed that the diversion ratios summarized the information about farmers' sale behaviour in relation to the Elevators available and the relative distance to be travelled for delivery.

393 As mentioned above, at the hearing and in response to Ms. Sanderson's recalculation of his HMT analysis using the Cash Price, Dr. Miller also testified that the geographic area around the Virden, Moosomin, Fairlight, and Whitewood Elevators could serve as the geographic dimension of a competition market for the "cash sale of wheat." In response, Ms. Sanderson observed that her analysis of the purchases from farms within Dr. Miller's Farmer Region concluded that several other Elevators had higher wheat purchases than the Whitewood Elevator from the farms in that Farmer Region, and that two other Elevators (in addition to Whitewood) were located within it. Ms. Sanderson testified that an application of the HMT in Dr. Miller's alternative geographic market would engage a larger set of Elevators than just the Moosomin, Virden, and Fairlight Elevators, but that the question was how many more.

394 Both experts agreed that neither the Moosomin nor the Virden Elevator have any special or unusual competitive significance in the marketplace.

(3) Tribunal's assessment

395 After considering all the evidence in this case, the Tribunal is able to describe the geographic dimension of the relevant competition markets based on the factual and expert evidence.

396 Although Dr. Miller's proposed product market (i.e., the delivery of GHS to farms by Elevators and Crushers) has not been accepted by the Tribunal, the panel nonetheless found his geographic market analysis to be helpful and persuasive in understanding certain aspects of the behaviour of farms in selecting an Elevator or Crusher to sell their grain. The panel also found Ms. Sanderson's evidence useful, including her recalculation of Dr. Miller's HMT analysis on the basis of the Cash Price, and incorporated it into its assessment.

397 In addition to the evidence on the HMT analyses conducted by the two experts, the Tribunal also assessed a number of factors in determining the geographic scope of the relevant competition markets. The salient evidence concerned the purchases of wheat and canola by the Moosomin and Virden Elevators and other Elevators and Crushers in the area, and the corresponding selling behaviour of farms. It included the following: the experts' analysis of transaction data in relation to the purchase and sale of wheat and canola to those Elevators and Crushers, and the oral testimony of the farmer witnesses; the evidence related to the distance that must be travelled to deliver grain to an Elevator or Crusher (and relatedly, the transportation costs and time it takes to travel that distance) and the volume and frequency of those purchases by Elevators from farms; expert evidence as to draw areas, heat maps, and diversion ratios; evidence as to prices paid to farms at the Elevators, including price-setting and prices that are negotiated and therefore depart from the Cash Price or Basis offered for each Elevator; and internal documents from the merging parties suggesting the perceived scope of the geographic market, including communications with farms about the purchase of their crops.

398 In the result, the Tribunal's analysis of the geographic dimension of the competition markets is not restricted to the geographic area identified in Dr. Miller's analysis. However, the Tribunal does not agree with the much wider region initially advocated by P&H and described in Ms. Sanderson's testimony (*i.e.*, Southeastern Saskatchewan and Southwestern Manitoba). Like certain aspects of both Dr. Miller's and Ms. Sanderson's analyses, the Tribunal finds that the geographic area relevant to a competition analysis for wheat is different from the relevant geographic area for canola.

399 The Tribunal concludes that, in general, Elevators that are closer to a farmer's crop are more attractive to farms for the purchase of their wheat. Considering in particular the farmers' testimonies concerning their selection of purchaser Elevators and the role of transportation costs, the setting and negotiation of prices, and the expert evidence, the Tribunal finds that the key competitors to the Moosomin and Virden Elevators are rival Elevators nearby to them, particularly the Fairlight Elevator. By contrast, Elevators that are farther away are not part of the relevant geographic market for competition purposes. Although more distant Elevators may purchase some quantity of grain and may provide some degree of competitive discipline on the Cash Price (including specifically, on the Basis) offered to farms by the Moosomin and Virden Elevators, that does not necessarily lead to the conclusion that those Elevators are all within the relevant competition market.

(a) HMT analyses

400 Three different HMT analyses have been presented to the Tribunal by Dr. Miller and Ms. Sanderson.

401 Dr. Miller's initial HMT analysis, summarized at Exhibit 9 of his expert report, concluded that the Moosomin, Virden, and Fairlight Elevators formed a relevant geographic competition market where a hypothetical monopolist would find it profitable to impose a SSNIP on the price of GHS. For GHS for wheat, Dr. Miller's model predicted that a hypothetical monopolist could impose an increase of 26.0% on the constructed pre-Acquisition price for GHS for wheat at the Moosomin Elevator, and of 21.6% on the price for GHS for wheat at Virden. With respect to GHS for canola including Crushers, Dr. Miller's predicted price increase of a hypothetical monopolist was 22.2% at the Moosomin Elevator and 7.6% at the Virden Elevator. In each case, Dr. Miller compared his projected price increase to his computed price for GHS prevailing at each of the Moosomin and Virden Elevators. Since all of his projected price increases clearly exceeded the typical 5% SSNIP threshold — they ranged from 7.6% to 26.0% — , Dr. Miller arguably did not have to calculate weighted average reference prices for GHS for wheat or canola,

or weighted average price increases representing the combined average price increase for the Moosomin and Virden Elevators (which, in the Tribunal's view, would be a more accurate basis for price change analysis under the HMT framework).

402 Given the Tribunal's finding on the relevant product market, and its conclusion that the relevant products are the purchase of wheat and canola and that the relevant base prices are the Cash Prices of wheat and canola paid to the farms by P&H, the Tribunal cannot entirely retain Dr. Miller's initial HMT analysis: his projected price increases, expressed in terms of percentages, are based on the wrong base price, namely, the computed prices for GHS for wheat and canola.

403 The second HMT analysis is the recalculation of Dr. Miller's model done by Ms. Sanderson as part of her presentation at the hearing (Ms. Sanderson Slides at pp 72-75). This recalculation replicated Dr. Miller's model, including the diversion ratios and the Virden Elevator margin calculated by Dr. Miller, but determined the relative values of the projected price changes based on a different denominator, namely, the Cash Prices instead of the constructed prices for GHS. The Tribunal observes that both experts agree on the absolute figures of the predicted price variations for each of wheat and canola (expressed in dollars per MT) coming from Dr. Miller's HMT analysis (Consolidated Transcript, Confidential A, at p 1795).

404 Ms. Sanderson's revised HMT analysis used the same absolute price changes as those calculated by Dr. Miller but resulted in different relative price variations in light of the different denominator she used. Ms. Sanderson's recalculation concluded that a hypothetical monopsonist controlling each of the Moosomin, Virden, and Fairlight Elevators could impose a price change of only 3.9% on the pre-Acquisition Cash Price for wheat at the Moosomin Elevator (*i.e.*, CAD $9.03 on CAD $229.73 per MT), and of 2.5% on the Cash Price for wheat at the Virden Elevator (*i.e.*, CAD $5.88 on CAD $239.11 per MT) (Ms. Sanderson Slides at p 72; Ms. Sanderson Report at Figure 49). As the price variations would be in the purchase of grain, these would be price *decreases*. With respect to canola including Crushers, Ms. Sanderson's predicted price decrease was 0.6% on the pre-Acquisition Cash Price at the Moosomin Elevator (*i.e.*, CAD $2.76 on CAD $461.46 per MT), and 0.3% to the Cash Price at the Virden Elevator (*i.e.*, CAD $1.51 on CAD $452.80 per MT). None of the resulting price decreases exceeded the usual 5% SSNIP or SSNDP threshold, which led Ms. Sanderson to conclude that, based on her revised HMT analysis using Cash Prices, the relevant geographic market had to be larger than the Moosomin, Virden, and Fairlight Elevators.

405 In her presentation at the hearing, Ms. Sanderson provided results for more Elevators than in Dr. Miller's HMT analysis, using the Cash Prices (Ms. Sanderson Slides at pp 74-75). She concluded that, when the Cash Price is used as the denominator, a market made up of the Moosomin, Virden, Fairlight, Oakner, Whitewood, Elva, Shoal Lake, and Carnduff Elevators would be a relevant geographic competition market for the purchase of wheat. The relevant geographic market for the purchase of canola would be larger and would include the Moosomin, Virden, Fairlight, Oakner, Whitewood, Brandon (Richardson), Melville, Souris East, Shoal Lake, and Elva Elevators as well as the Crushers at Harrowby (Bunge), Yorkton (LDC), Velva (ADM), and Yorkton (Richardson). Ms. Sanderson based her HMT results on the same diversion ratios as Dr. Miller and on the weighted average absolute price changes for each of wheat and canola. In terms of average relative price changes, she expressed the price variations as a percentage of the weighted average wheat and canola prices calculated for the Virden Elevator (*i.e.*, CAD $239.11 per MT and CAD $452.80 per MT, respectively).

406 The third iteration of the HMT analyses prepared by the experts is Dr. Miller's response to Ms. Sanderson's recalculation, presented at the concurrent evidence session and summarized in Dr. Miller Revised HMT. This Revised HMT analysis only looked at the geographic market for the purchase of wheat, and did not consider canola. Since the HMT framework dictates that additional candidates for market definition purposes must be ordered by their diversion ratios, Dr. Miller determined that, for wheat, the next closest competitor Elevator to the Moosomin and Virden Elevators (other than the Fairlight Elevator) was the Whitewood Elevator. Dr. Miller testified that, based on his analysis, the diversion ratios for wheat were higher at the Whitewood Elevator than at the Oakner Elevator, when these ratios are weighted by sales from the Virden and Moosomin Elevators, or weighted by sales from the Virden, Moosomin, and Fairlight Elevators. Dr. Miller concluded that, even using the Cash Price as a denominator in his Revised HMT analysis, the relevant geographic market for wheat would be a smaller market comprising only the Moosomin, Virden, Fairlight, and Whitewood Elevators, as such relevant market would reach the 5% SSNIP threshold.

407 The Tribunal pauses to note that Dr. Miller did not discard the recalculated HMT analysis made by Ms. Sanderson based on his data, model, and framework but using the Cash Prices — as opposed to his constructed price for GHS — as a

denominator. On the contrary, in his Revised HMT analysis, Dr. Miller simply redid Ms. Sanderson's recalculation by looking at additional Elevators using their respective weighted averaged diversion ratios (Consolidated Transcript, Confidential A, at pp 1787 ff). He also used a different "reference price" as the basis to calculate the relative price changes he observed: instead of solely using the prevailing pre-Acquisition price for wheat at the Virden Elevator as Ms. Sanderson did, he developed the weighted average HMT price change relative to the pre-Acquisition price for each of the Moosomin Elevator (CAD $229.73 per MT) and the Virden Elevator (CAD $239.11 per MT). He then selected the Moosomin Elevator price change and this led him to conclude that a geographic market comprised of the Moosomin, Virden, Fairlight, and Whitewood Elevators would meet the 5% SSNIP threshold, since his relative price change based on the lower Moosomin Elevator price was 5.06%. Dr. Miller's table reproduced in his Revised HMT analysis indicates that, had he used the higher prevailing wheat price at the Virden Elevator, the relative price change would have been 4.86% and would thus have been below the 5% SSNIP threshold.

408 It thus appears that the two experts disagree on the "reference price" to use for the calculation of the relative HMT price variations: Dr. Miller relied on the lower Moosomin Elevator price in his Revised HMT analysis, whereas Ms. Sanderson used the higher Virden Elevator price in her recalculation. Neither Dr. Miller nor Ms. Sanderson apparently considered using a weighted average of the Moosomin and Virden Elevators prices, which would be a more accurate base for price change analysis under the HMT framework. This is especially true in a case like the present one, where the results of adding candidate markets in the HMT analysis are each very close to the 5% benchmark. The purpose of the HMT analytical framework is to assess how a "hypothetical monopolist" (or "hypothetical monopsonist") controlling a hypothetical group of entities would behave; as such, the proper relevant "reference price" of a product has to be the weighted average price of all entities controlled by such hypothetical monopolist or monopsonist that are supplying or purchasing the product. The Tribunal notes that in this particular case, changing the "reference price" has a direct impact on the conclusions to be drawn from the HMT analyses based on the Cash Price, as it significantly modifies the group of Elevators needed to meet the 5% SSNIP/SSNDP threshold. The Tribunal further observes that, even though Dr. Miller opted to calculate a weighted average of the Moosomin and Virden Elevators to determine the appropriate diversion ratios to the rival Elevators and used weighted average dollar price changes in his Revised HMT analysis, he relied solely on the lower Moosomin price for wheat as a denominator to determine his estimated price variations. During the concurrent evidence session, Dr. Miller provided no explanation for not also using a weighted average reference price in his calculations.

409 At the hearing, Dr. Miller relied on his reading of paragraph 4.4 of the 2011 MEGs to state that the HMT is satisfied "if any price of the merging firms goes up by five per cent" (Consolidated Transcript, Confidential A, at p 1784). With respect, the Tribunal does not agree with Dr. Miller's interpretation of the MEGs. What the 2011 MEGs say is that the HMT is met when "the price increase of at least *one product* of the merging parties" [emphasis added] exceeds the SSNIP threshold (2011 MEGs at para 4.4). It does not say the price of a product of *one* of the merging firms. Here, all the Elevators purchase the same product, namely, wheat or canola. And what the Tribunal needs to assess is the predicted price variation for wheat or canola for the selected Elevators acting as a hypothetical monopolist. In the Tribunal's view, this has to be measured in relation to the weighted average price variation of wheat and canola for all Elevators involved — not to the price of just one of the merging firms.

410 The Tribunal has not found in the evidence what the weighted pre-Acquisition average price for wheat would be for the Moosomin and Virden Elevators taken together, or for any larger group of Elevators. However, the Tribunal underlines that the simple arithmetical average between the weighted average base price for wheat at the Moosomin and Virden Elevators would be CAD $234.42 per MT (*i.e.*, ($229.73 + $239.11) ÷ 2). Moreover, since the evidence indicates that, pre-Acquisition, the Virden Elevator handled relatively more wheat than the Moosomin Elevator (see, for example, Ms. Sanderson Report at Figure 62 and Consolidated Transcript, Confidential A, at p 1789), it is a mathematical certainty that the weighed average price for wheat for the Moosomin and Virden Elevators would be higher than the straight arithmetical average mentioned above, since the Virden Elevator has both the higher weighted average price and the higher volume quantity. Had Dr. Miller used a weighted pre-Acquisition average price for wheat, or even the more conservative arithmetical average of CAD $234.42 per MT, in his Revised HMT analysis, it is clear from his evidence that the results of his Revised HMT analysis for wheat using the Cash Prices would have concluded that even a geographic market made up of the Moosomin, Virden, Fairlight, Whitewood, and Oakner Elevators would not be large enough to satisfy the 5% SSNIP/SSNDP threshold: using the more conservative arithmetical average, the

predicted price changes would not have exceeded 4.96% in a geographic market including the Whitewood Elevator, and 4.90% in a market including both the Whitewood and Oakner Elevators.

411 Turning to Ms. Sanderson's HMT analysis, had she used a weighted pre-Acquisition average price for wheat as a "reference price," instead of the higher Virden Elevator price, the results of her recalculated HMT analysis for wheat using the Cash Prices would have yielded slightly higher relative changes. For example, for the group of seven Elevators ending with the Shoal Lake Elevator, her estimated price change of 4.86% would have been 4.96% (i.e. CAD $11.63 / CAD $234.42) and suggest that the 5% SSNIP/SSNDP threshold would have been close to be met with one less Elevator (i.e., without the need of adding the Carnduff Elevator).

412 The Tribunal is mindful of the fact that Dr. Miller's (and Ms. Sanderson's) calculations twirl around the 5% threshold as soon as four or five Elevators are included in the geographic competition market for wheat, and that there are margins of error in these calculations.

413 In light of the foregoing, based on the evidence before it regarding the HMT analyses using the Cash Prices, and considering possible margins of error regarding the median of the Basis, the Tribunal concludes that a geographic market for wheat including only the Moosomin, Virden, Fairlight, and Whitewood Elevators, or even those four Elevators plus the Oakner Elevator, has not been established on the evidence. In sum, in his HMT analyses, the Commissioner has not adduced clear and convincing evidence that the relevant geographic market for wheat could be limited to those four or five Elevators. Thus, further to its review of the HMT analyses, the Tribunal is of the view that, on a balance of probabilities, the relevant geographic market for wheat is more likely than not to include at least the following Elevators listed in Ms. Sanderson's recalculated HMT analysis: the Moosomin, Virden, Fairlight, Oakner, Whitewood, Elva, and Shoal Lake Elevators. The Tribunal says "at least" because determining whether the Carnduff Elevator identified by Ms. Sanderson should also be included in the relevant geographic market is too close to call in light of the above discussion on the weighted pre-Acquisition average price for wheat.

414 In the competition market for the purchase of canola, the Tribunal accepts that Crushers play a more significant role in the competitive process and reduce the likelihood that the Moosomin and Virden Elevators, acting as a hypothetical monopsonist, could impose a SSNDP in the purchase of canola. The evidence suggests that Crushers are able to attract some canola purchases from a longer distance than Elevators and that some canola deliveries to Crushers by-pass Elevators that are closer in distance to a farm. A Crusher may therefore have greater competitive impact on the merged entity's prices and limit its ability to impose a SSNDP than would have an Elevator that buys canola. Furthermore, the Tribunal notes that in the concurrent evidence session, Dr. Miller did not respond to Ms. Sanderson's recalculation HMT analysis for canola using the Cash Prices, found at page 75 of Ms. Sanderson Slides. In her analysis, Ms. Sanderson concluded that the relevant geographic market for the purchase of canola would include at least the Moosomin, Virden, Fairlight, Oakner, Whitewood, Brandon (Richardson), Melville, Souris East, Shoal Lake, and Elva Elevators as well as the Crushers at Harrowby (Bunge), Yorkton (LDC), Velva (ADM), and Yorkton (Richardson). Even for this larger group of Elevators and Crushers, Ms. Sanderson's predicted price decrease of a hypothetical monopsonist would only be 3.08% (*i.e.*, a weighted average price change of CAD $13.94 per MT on the pre-Acquisition price of CAD $452.80 at the Virden Elevator), significantly below the usual 5% threshold for market definition purposes. Here, the pre-Acquisition price for canola at the Moosomin Elevator (*i.e.*, CAD $461.46) is higher than at Virden, and Virden's purchases of canola are much higher than Moosomin's (Ms. Sanderson Report at Figure 62). In light of the foregoing, and based on the evidence before it regarding the HMT analyses using the Cash Prices, the Tribunal concludes that, on a balance of probabilities, the relevant geographic market for canola is more likely than not to include at least all the Elevators and Crushers listed in Ms. Sanderson's recalculated HMT analysis. Again, the Tribunal says "at least" because Ms. Sanderson's HMT analysis stopped at a 3.08% SSNIP level, and it is uncertain how many other Elevators and/or Crushers would need to be added to reach the typical 5% SSNIP threshold.

(b) Distance, transportation costs, and farms' preferences

415 Turning to other factors, the Tribunal accepts that most farms deliver grain to Elevators located less than 100 kilometers from the location of their crops. Like both Dr. Miller and Ms. Sanderson, the Tribunal finds that farms prefer to travel shorter distances to sell their grain. Most of the volume of grain purchased by the Moosomin and Virden Elevators comes from farms

located in proximity to them. The Tribunal also finds, based on Ms. Sanderson's data, that in the "corridor of concern," a significant number of farms sell their wheat exclusively or substantially to the Moosomin, Virden, and Fairlight Elevators.

416 At the hearing, several farmers testified about the sales of their grain to Elevators and Crushers. In general, they expressed a preference to sell to Elevators closer to their farms unless a more distant Elevator or Crusher made it worthwhile financially to travel the extra distance. The three farmers called to testify by the Commissioner generally stated their preference to sell most of their grain to the Virden and Moosomin Elevators, and sometimes to the Fairlight Elevator, rather than to more distant Elevators and Crushers. In several cases, the witnesses acknowledged in cross-examination that they have also delivered some proportion of their wheat and canola crops to purchasers more distant than the Moosomin, Virden, and Fairlight Elevators. When selling canola to Crushers, their canola crops would also travel past a number of possible Elevators to which they could have sold while en route to a Crusher location.

417 When selecting an Elevator or Crusher for a shipment of their grain, the farmers' principal considerations were price, timing (*i.e.*, when grain could be accepted by the Elevator), the grade of the grain to be sold, and the travel distance to the purchase point. Additional factors included the farmers' business relationship with each Elevator, each farmer's ability to store grain at their own farm, road conditions including restrictions on the use of some highways in the springtime, and whether an Elevator was located on a main or a secondary highway (which affects the number of trips, speed of the truck en route, and the wear and tear on the vehicle).

418 The testifying farmers called by the Commissioner and P&H generally indicated that a higher price is necessary to cause them to sell to a more distant location — to make it worthwhile to travel the extra distance to deliver the crop. Mr. Lincoln advised that his transportation cost was approximately CAD $8 per MT, with each additional 15 minutes drive costing CAD $1 per MT. Mr. Paull testified that he would not leave a local Elevator for a few pennies per bushel, but would do so for CAD $0.10, $0.15 or $0.20 per bushel. Sometimes, he could even get CAD $0.30 or $0.40 more per bushel to go a longer distance. He would sell to a more distant Elevator if there was "enough profit" in it. Mr. Wagstaff testified that his decision to do so also depended on his own time and the efficiency of deliveries. From his farm, he could deliver four loads per day with his own trailer to the Virden Elevator, but could only make one trip per day to the Crusher located in Bloom, Manitoba, which is much farther away from his farm. Mr. Duncan, Mr. Paull, and Mr. Hebert all testified that Crushers made it financially worthwhile to sell canola at a longer distance away from their respective farms.

419 The Tribunal found Dr. Miller's evidence concerning farms' behaviour in selecting a purchaser to be helpful in assessing the geographic dimension of the markets for the purchase of wheat and canola by Elevators and Crushers. Dr. Miller's analysis found that farms select anElevator for the sale of their grain based on proximity to the farm, because it decreases delivery costs and because they may have a relationship with personnel responsible for the Elevator. The farms' travel time and cost to deliver the grain to the purchase point were important factors in the choice, together with price. Farms incur delivery costs by crop weight and by kilometre, whether they deliver themselves or hire commercial trucks to do so.

420 Dr. Miller's analysis considered travel distance and time between Elevators and from farms to the Moosomin and Virden Elevators, to identify close competitors to the merged entity. He used data collected from the merging parties and several other grain companies comprising over 20 Elevators, as well as census data and other source data. Dr. Miller found that the Fairlight Elevator was the most proximate competitor to the Moosomin and Virden Elevators.

421 Dr. Miller also calculated the range of travel time for the delivery of each of wheat and canola, representing a percentage of deliveries. In general, the range of travel time for 50% of deliveries was longer for canola than for wheat. Based on travel distance and time, and weighted by quantity of grain sold, Dr. Miller analysed the range of time taken by 90% of farms to travel to each of the Moosomin, Virden, and Fairlight Elevators, all other Elevators, and Crushers. Dr. Miller's analysis showed that the median, representing 50% of farms, was approximately half an hour drive time for both wheat and canola. Dr. Miller's analysis also showed that 90% of farms travelled from four to 79 minutes to deliver wheat to all chosen Elevators in the model and from four to 75 minutes to deliver canola to Elevators. The time range to canola Crushers increased to 44 minutes up to a maximum of 147 minutes. Recognizing that this analysis occurred over one crop year, the Tribunal accepts Dr. Miller's evidence to show that close proximity of a delivery point is important to farms when selling wheat and canola.

(c) Draw areas and heat maps

422 As noted, both Dr. Miller and Ms. Sanderson used draw areas (or service areas) for Elevators in their analyses. Both indicated that Elevators and Crushers draw the grain they purchase from areas surrounding them, creating a geographic cluster of supplier farms.

423 Dr. Miller's review found that proximity was an important factor in the farms' choice of an Elevator for the sale of their grain. He also noted that some Crushers attract supply from greater distances than Elevators. He found, for example, that the median farm selling to the Moosomin Elevator is just five kilometers from its location and the median farm selling to the Virden Elevator is about 20 kilometers from it, whereas the median farm selling to the Yorkton Crusher is over 100 kilometers away from it. To Dr. Miller, this suggested that farms might be more willing to travel farther distances to sell to Crushers.

424 Ms. Sanderson's draw area maps displayed the geographic area for 95% of an Elevator's purchases from farms, using the address of each farm. In these maps, the draw areas for the Moosomin and Virden Elevators could be compared to the draw areas for other Elevators and for Crushers that could be competitors for a farm's sales. In this way, Ms. Sanderson's analysis could indicate the number of farms that switch between buyers and the distance travelled to deliver their crops.

425 Ms. Sanderson's expert report found that for the crop year 2018-2019, the Moosomin Elevator purchased canola from [text omitted] farms and the Virden Elevator purchased from [text omitted] farms. The Moosomin Elevator drew [text omitted] of its canola from a distance as far as [text omitted] kilometers while the Virden Elevator drew [text omitted] of its canola from farms located as far as [text omitted] kilometers. Both were based on commercial trucking travelling those distances. As for wheat, the draw area for the Moosomin Elevator included [text omitted] farms, while the draw area for the Virden Elevator comprised [text omitted] farms. The Moosomin Elevator drew [text omitted] of its wheat from a distance as far as [text omitted] kilometers while the Virden Elevator drew [text omitted] of its wheat from farms located as far as [text omitted] kilometers.

426 Ms. Sanderson found that approximately two-thirds of the farms closest to the Moosomin and Virden Elevators (*i.e.*, in the "corridor of concern") sold crops to other rival Elevators and Crushers. Only four farms sold exclusively to the Moosomin and Virden Elevators in the last three crop years combined. Seven farms sold only to the Moosomin Elevator, while 17 farms sold only to the Virden Elevator. In addition, farms in the corridor of concern sold to more distant Elevators and Crushers. Ms. Sanderson's written testimony included details for each of the 82 farms within the corridor of concern for both canola and wheat. Ms. Sanderson noted significant deliveries from those farms to Elevators and Crushers outside of Dr. Miller's proposed geographic market.

427 Ms. Sanderson prepared heat maps by overlapping all of the draw area maps cumulatively. The heat maps showed areas in darker colours where a higher number of Elevators and Crushers buy grain. Ms. Sanderson concluded that all farm locations within the draw areas for the Moosomin and Virden Elevators had more than six Elevators/Crushers bidding for their wheat and for their canola.

428 Dr. Miller observed in his reply expert report that Ms. Sanderson's use of overlapping draw areas did not present any evident consideration of what factors affect a farm's choice of Elevator or, most importantly, how the farms would likely respond to a price change. Dr. Miller agreed with Ms. Sanderson that some farms scattered throughout the geographic region may elect to work with a more distant Elevator. Dr. Miller observed, however, that the overlap analysis masked that the desirability of travelling to a particular Elevator will differ for farms located at different points. In Dr. Miller's view, Ms. Sanderson's draw area maps assumed that every farm customer inside the boundary of the Elevator's draw area is equally willing to choose that Elevator, which does not address the question posed by geographic market definition, *i.e.*, where those farms would likely turn in reaction to a price increase.

429 Specifically, Ms. Sanderson submits that what she referred to as "heat maps" provide a count of farms and their locations supplying canola and wheat to Elevators within the overlapping draw areas. However, the Tribunal observes that the overlapping draw areas do not incorporate the volume density supplied, frequency, and the respective geographic locations of those volumes.

Such presentation does not assist the Tribunal in visually understanding the concentration of grain supply and corresponding distance to each Elevator as provided by the transaction data.

430 The Tribunal recognizes that overlapping draw area maps may be useful in initially identifying the possible range of geographic scope of one or more candidate competition markets. They also may identify suppliers or customers who could be affected by a proposed transaction. However, they may be of less help in more precisely defining the scope of the relevant geographic competition market, unless they are coupled with evidence about the reaction of affected suppliers or customers to a change in price or another dimension of competition.

431 In this case, the panel agrees with Dr. Miller's concerns that the draw area maps and heat maps have less value on their own, insofar as they treat farms at different distances from an Elevator as likely to react the same way to a change in price. Draw area maps and heat maps may, together, suggest that farms have more ability to switch in the overlapping areas but must be taken as a non-definitive factor in the assessment of a geographic area for competition purposes. In this case, Ms. Sanderson's draw area maps, on their face, give equal weight to each farm having sold grain to an Elevator regardless of frequency of sales and volumes sold. In sum, the heat maps provided additional information but, on their own, they are of limited assistance because they do not account for volume and the location of the farms from which those volumes are drawn. Both must be weighed with the evidence concerning farms' behaviour, including from the farmers' testimonies, the diversion ratio evidence, and other data and information as to preferences and switching.

432 On this issue, the Tribunal finds Dr. Miller's observations in his reply expert report to be compelling. Dr. Miller analyzed the percentage of MT of wheat and canola sold to the Moosomin, Virden, and Fairlight Elevators by town. The analysis showed that a farm close to an Elevator is more likely to rely on that Elevator and that more distant farms are less likely to do so. He found that farms close to the centre of the area around the Moosomin, Virden, and Fairlight Elevators had a distinct preference to work with those Elevators. This analysis is consistent with the testimonies of farmers. It also provides some more nuanced insight to assist in understanding the likely behaviour of customers in response to a price change — specifically, whether they are likely to switch Elevators.

433 The Tribunal further finds that farms, as sellers of grain to Elevators, are less likely to switch to more distant rivals if the farm is near the centre of the geographic market, and more likely to switch as the location moves away from the centre and, the Tribunal infers, away from each of the Moosomin, Virden, and Fairlight Elevators. Consistent with this conclusion and with Dr. Miller's report, the Tribunal finds that the closer farms are to the Moosomin and Virden Elevators, the more volumes they sell to those Elevators. Conversely, farms located farther away are delivering less to these two Elevators and more to other Elevators.

434 The Tribunal has considered the "corridor of concern." Ms. Sanderson's analysis of the deliveries of wheat and canola from those farms to the Moosomin and Virden Elevators over three crop years showed that many farms sell all, or a very substantial proportion, of those crops to the Moosomin and Virden Elevators. In her report, Ms. Sanderson noted that 54 of the 82 farms in the "corridor of concern" (*i.e.*, about two-thirds) sold wheat or canola to Elevators or Crushers that compete with the Moosomin and Virden Elevators at different points in the three successive crop years used in her analysis (Ms. Sanderson Report at Figures 19-21). She also noted that farms located in proximity adopted different approaches during that period (i.e., decide to sell at least once to a rival, or not). The Tribunal finds this analysis to be highly sensitive to change — a single sale (above the minimum volume Ms. Sanderson used) of either wheat or grain to a rival over the three crop years would change the classification of a farm. Ms. Sanderson's observation also implies that a substantial number of the farms in the corridor of concern (*i.e.*, 28 of 82, or a third) did not sell to a rival and therefore sold their wheat and canola only to the Moosomin or Virden Elevators (or to both) over three successive crop years. Ms. Sanderson also noted that the Fairlight Elevator is frequently listed as a purchaser from the corridor farms.

435 As the Commissioner observed during final argument, Ms. Sanderson's data effectively showed that 75% of the farms in the corridor of concern (*i.e.*, 60 farms out of 80 [7]) sold all of their wheat exclusively to the Moosomin, Virden, and Fairlight Elevators in any given year. For canola, the corresponding percentage was 55% of the farms selling canola only to those Elevators. The Tribunal notes that for the vast majority of the farms in the corridor, the Whitewood Elevator was not a purchaser

over that time period. Finally, for canola, the corridor farms taken as a group sometimes sold to Crushers (*e.g.*, to Bunge at Harrowby).

436 There are some examples of switching behaviour by farms in the corridor of concern, through the sale of wheat or canola to Elevators or Crushers other than the Moosomin, Virden, and Fairlight Elevators. However, the weight of the evidence is that these farms rely acutely on the Moosomin and Virden Elevators, as well as the Fairlight Elevator, for the sale of their grain, particularly wheat.

(d) Diversion ratios

437 Both Dr. Miller and Ms. Sanderson provided diversion ratio calculations. Diversion ratios are calculated to estimate the proportion of a competitor's customers lost to one or more rivals if that competitor raises its price. Higher diversion ratios imply more substitution between two competitors. That is, in a HMT analysis, if competitor A raises its price for the supply of a product, the diversion ratios calculation shows the resulting switching (*i.e.*, diversion) of customers to the product offered by competitors B, C, and D. Diversion ratios are expressed as a percentage, namely, the proportion of customers diverted to the products of each of competitors B, C, and D, as a percentage of the overall number of diverted customers. The same type of calculation may be done for diversions caused by a monopsonist that lowers its price.

438 Diversion ratios assist in the assessment of how close two or more competitors may be. As part of a larger model, diversion and information about profit margins may be used to understand the dollar value of diverted sales and specifically, the dollar value of customer purchases that may be recaptured by a merged entity (for example, after the merger of competitors A and B in the example above). The results assist to understand the incentive of a merged entity to raise prices and the predicted price effects of a proposed merger (2011 MEGs at para 6.15).

439 Dr. Miller's estimated diversion ratios indicated that many farms viewed the Moosomin and Virden Elevators as substitutes. For wheat, Dr. Miller calculated the diversion ratios from the Moosomin Elevator to the Virden Elevator to be 23.8%, and 16.8% from Virden to Moosomin. In Dr. Miller's view, the diversion ratios for wheat between the Moosomin and Virden Elevators indicated that they were "relatively close competitors" (Dr. Miller Report at para 114 and Exhibit 11). For canola, the diversion ratios between the Moosomin and Virden Elevators were smaller, at 13.1% and 5.3% respectively. However, the Fairlight Elevator had large diversion ratios with both Elevators, suggesting to Dr. Miller that there was likely indirect competition between the Moosomin and Virden Elevators, through the Fairlight Elevator, for both wheat and canola.

440 Ms. Sanderson also presented diversion ratios. Methodologically, Ms. Sanderson reran diversion ratios using the formulas in Dr. Miller's expert report based on farm data within the union of the 90% service areas for the Moosomin, Virden, and Fairlight Elevators.

441 In that context, Ms. Sanderson did not dispute Dr. Miller's estimates of the diversion from the Moosomin Elevator to the Virden Elevator for each of wheat, canola including Crushers, and canola excluding Crushers, and the diversion from Virden to Moosomin in the same categories. Ms. Sanderson also presented diversion ratios from each of the Moosomin, Virden, and Fairlight Elevators to many other Elevators and Crushers, in several figures attached to her expert report (Ms. Sanderson Report at Figures 47, 48, 50).

442 The Tribunal finds that Ms. Sanderson's diversion ratios indicated, generally, that the Moosomin, Virden, and Fairlight Elevators were relatively close competitors, more so for wheat than for canola. As Ms. Sanderson observed in her expert report, there were smaller diversion ratios for canola from the Virden Elevator to the Moosomin Elevator than from Virden to several other Elevators and Crushers. The same was true for the canola diversion ratios from the Moosomin Elevator to the Virden Elevator. Ms. Sanderson's diversion ratios to rival Elevators beyond the Moosomin, Virden, and Fairlight Elevators also showed, as she testified, that estimated diversions from both the Moosomin Elevator and the Virden Elevator to all other rivals (in the aggregate) were high for both wheat and canola. For wheat, the diversion ratios found by Dr. Miller were 23.8% from the Moosomin Elevator to the Virden Elevator, and 36.3% to the Fairlight Elevator, for a total of 60.1%. This means that 40% of the sales of wheat diverted from the Moosomin Elevator would go to rival Elevators other than Virden or Fairlight. Conversely, for

the Virden Elevator, the diversion ratios for wheat were 16.8% to the Moosomin Elevator and 20.3% to the Fairlight Elevator, for a total of 37.1% of the sales to these two Elevators. This, observed Ms. Sanderson, means that 63% of the diverted sales of wheat from the Virden Elevator would go to Elevators other than Moosomin or Fairlight. In the case of canola, 65% of the sales diverted from the Moosomin Elevator would go to rival Elevators other than Virden or Fairlight, and 77% of the sales diverted from the Virden Elevator would be absorbed by Elevators other than Moosomin or Fairlight. In light of these figures, Ms. Sanderson opined that the diversion ratios to rival Elevators other than Moosomin, Virden, or Fairlight are significant, with many other Elevators and Crushers having diversion ratios similar or higher than those calculated for the Moosomin and Virden Elevators.

443 In his reply to Ms. Sanderson's opinion that the geographic market should include more Elevators given their large diversion ratios, Dr Miller referred to the extract from the 2011 MEGs stating that a relevant market is defined as the "smallest group of products" including at least one product of the merging parties, and the "smallest geographic area," in which a sole profit-maximizing seller would impose and sustain a SSNIP above levels that would likely exist in the absence of the merger. Dr. Miller further explained that defining a relevant market is important because it is impractical to consider all sources of competition. Indeed, doing so would significantly increase the burden of antitrust inquiry, while shedding very little light on the competitive effects of the Transaction.

444 The Tribunal observes that, in aggregate, 60.1% of switched volumes of wheat are diverted from Moosomin to Virden and Fairlight, and 37.1% are diverted from Virden to Moosomin and Fairlight. The Tribunal finds that the magnitude of these diversions signals a meaningful potential impact of the Acquisition on reducing alternatives for local wheat farms residing in the corridor of concern. But the diversion ratios also reflect the fact that Elevators other than Moosomin, Virden, and Fairlight represent alternatives for the purchase of wheat.

445 The Tribunal takes less certain direction concerning the purchase of canola, as the diversion ratio data are much less convincing. The Tribunal does not agree with the position, advanced by Ms. Sanderson in her expert report, that higher comparative diversion ratios *necessarily* leads to the inclusion of *all* additional Elevators or Crushers on the periphery of the service areas for the Moosomin and Virden Elevators. However, the diversion ratios for canola suggest that it is less likely that the Moosomin and Virden Elevators, acting as a hypothetical monopsonist, would be able to exercise market power in a market defined geographically around the Moosomin, Virden, and Fairlight Elevators. The panel notes that the diversion data suggest that the Whitewood Elevator and the Harrowby Crusher are the next closest competitors to the Moosomin, Virden, and Fairlight Elevators for the purchase of canola, and that other Crushers and Elevators offer alternatives to the farmers for their canola.

(e) Evidence related to prices and price negotiations

446 P&H emphasized that its posted prices were set on a centralized basis, and that the vast majority of its sales were at the Cash Price offered each day based on the Basis set each morning and the fluctuating Futures Price.

447 Dr. Miller testified that he found evidence that farms may sometimes individually negotiate prices with Elevators. Such negotiations may depend on long-standing relationships and revenue dependence, as well as subjective assessments of whether a farm could credibly purchase GHS from another, competing Elevator. Dr. Miller also found documentary evidence that farms negotiate prices that deviate from posted prices in a number of ways, including price matching by Elevators of their competitors' prices, not charging for certain services, and purchasing grain on the basis of a higher grade price with the intent to blend the grain for later sale. Dr. Miller also noted that a farm's commitment to purchase crop input products from the Elevator could also affect price.

448 While the Tribunal agrees that uniformity of prices may be indicative of a geographic competition market, the evidence disclosed that there was a material proportion of transactions that involved a negotiated price. Specifically, P&H confirmed that approximately [text omitted] of its transactions occurred at a price set as a result of a successful negotiation of a Cash Price between a farm and the company through its representatives at a particular Elevator. (There was no percentage provided in respect of unsuccessful or attempted price negotiations.)

449 There was also some evidence that, while negotiating a price to be offered to a farm, P&H representatives were aware of the specific distance from specific farms to the company's Elevators and to competitor Elevators, and that this information affected the assessment of whether a rival Elevator's offered price would be matched or not. In determining a potential purchase price for grain, representatives of the Elevator were able to closely analyze circumstances affecting price that were material to an individual farm. Knowledge of the location of the farm, and thus the distance from the farm to each Elevator bidding for the crop, was a key factor in deciding whether to raise the price to be offered for the crop. The internal correspondence recognized that a farm located closer to a rival Elevator would find the rival more attractive as a purchaser at the same price; a higher price would be required to attract volumes of grain away from the rival in order to make up for the time and cost of transportation.

450 This evidence is indicative of an ability by P&H to discriminate on price when departing from the Basis determined by using its Workback Algorithm. It also further demonstrates the salience of distance (and associated transportation costs) and shows the sophistication of the buy-side analysis of price.

(f) Mr. Heimbecker's testimony and P&H business records identifying competitors

451 The Tribunal appreciates that Mr. Heimbecker identified many competitors to the Moosomin and Virden Elevators during his testimony, and that there are documents to support the view that those Elevators and Crushers are competitors in a business sense. Those competitors were principally those within the draw areas of the Elevators. Like Mr. Heimbecker's testimony, the parties' submissions both referred to documents from the files of the merging parties that identified various competitors. Those documents included reports for planning purposes, emails that identified a rival Elevator to which a farm's sale was lost, and emails for bidding or individual price negotiation purposes (*i.e.*, to obtain supply from a farm).

452 The Tribunal has considered this documentary evidence and Mr. Heimbecker's testimony. For the purposes of a competition analysis and geographic market definition, not all business competitors are equal: different competitors may have different abilities to affect the competitive process. Some may have considerable ability to constrain a price increase by the merged entity (or otherwise discipline key dimensions of competition in a market), while others have little or no ability to do so. In this case, applying an HMT approach, the panel finds that the competitive rivals that can constrain a SSNDP by the merged entity do not correspond with competitors from a business perspective. The evidence of internal documents and from Mr. Heimbecker identifying business rivals is relevant but, overall, is a less weighty factor in the Tribunal's assessment of the geographic scope of the competition markets.

(4) Conclusion on relevant geographic market(s)

453 Having considered all the quantitative and qualitative factors described above, the Tribunal concludes that the relevant geographic markets for the purchase of each of wheat and canola are not likely to be smaller or larger than those resulting from the HMT analyses. The Tribunal acknowledges that factors such as the price negotiations on a non-negligible proportion of grain purchases, the diversion ratios between the Moosomin, Virden, and Fairlight Elevators on wheat, the purchases of farmers in the "corridor of concern," and the evidence on distance travelled by farmers suggest a geographic market definition that would be more localized. Conversely, the Tribunal is not persuaded that the evidence flowing from heat maps or business records identifying numerous competitors is sufficient to justify an expansion of the relevant geographic markets resulting from the HMT analyses. In the end, the Tribunal finds that the evidence related to the geographic markets does not amount to clear and convincing evidence allowing the Tribunal to move away from the results coming from the HMT analyses.

454 Therefore, on a balance of probabilities, the Tribunal is of the view that the relevant geographic market for the purchase of wheat is more likely than not to include at least the Moosomin, Virden, Fairlight, Oakner (Cargill), Whitewood (Richardson), Elva (Cargill), and Shoal Lake (Richardson) Elevators. With respect to the relevant geographic market for the purchase of canola, it includes at least the Moosomin, Virden, Fairlight, Oakner (Cargill), Whitewood (Richardson), Brandon (Richardson), Melville (G3), Souris East (Viterra), Shoal Lake (Richardson), and Elva (Cargill) Elevators, as well as the Crushers at Harrowby (Bunge), Yorkton (LDC), Velva (ADM), and Yorkton (Richardson).

C. Has the Commissioner established, on a balance of probabilities, that the Virden Acquisition lessens, or is likely to lessen, competition substantially?

455 The Tribunal now turns to the main element of the merger provisions, namely, whether the Virden Acquisition lessens competition substantially, or is likely to have that effect.

(1) Analytical framework

(a) The statutory language

456 Subsection 92(1) of the Act provides that the Tribunal may make a remedial order if it finds that a merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially.

457 The anti-competitive threshold is directly linked to the concept of market power. As discussed above, market power is the ability to profitably influence the price or non-price dimensions of competition in the market for the supply or purchase of a product. The price and non-price dimensions of competition show the intensity of rivalry between or among competitors in a market (*Tervita SCC* at para 44; *Tervita CT* at paras 371-373). A merger will only be found to lessen or prevent competition substantially if it is likely to create, maintain, or enhance the ability of the merged entity to exercise market power, whether unilaterally or in coordination with other firms. The market power analysis in respect of a merger centres on the question of whether the merged entity is able, or is likely to be able, to exercise more market power than it could have exercised in the absence of the merger. When a merger is not likely to have market power effects, "it is generally not possible to demonstrate that the transaction will likely prevent or lessen competition substantially" (2011 MEGs at para 2.8). Without market power effects, section 92 will not generally be engaged (*Tervita SCC* at para 44).

458 If there are no market power implications of a merger, there can be no anti-competitive implications. If there are market power implications of a merger, competition can be taken to be lessened or prevented to some extent (see *Facey and Brown* at p 181; *Campbell* at p 100). However, it is only where the prevention or lessening of competition is *substantial* that the Tribunal can intervene under section 92. There can therefore be situations where market power is created, maintained or increased without necessarily resulting in a substantial lessening or prevention of competition.

459 Subsection 92(2) expressly provides that the Tribunal "shall not find" that a merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially "solely on the basis of evidence of concentration or market share." However, depending on the circumstances, post-merger market share may be a useful or reliable indicator of market power (Hillsdownat p 318). In sum, evidence of changes in market shares and concentration levels are relevant and often influential, but not determinative (*The* Commissioner of Competition v Parkland Industries Ltd, 2015 Comp Trib 4 at para 89; *Tervita CT* at para 360; *Canadian Waste* at para 108, 193-195, 204-205, 224; *Superior Propane I* at paras 126, 304-313).

460 Section 93 of the Act provides a non-exhaustive list of factors that the Tribunal may consider when assessing whether a merger substantially lessens or prevents competition or is likely to do so. These factors include whether a party is a failing business, the availability of acceptable substitutes, barriers to entry into the relevant market, the extent to which effective competition remains or would remain after a merger, whether the merger would result in the removal of a vigorous and effective competitor, and the nature and extent of change and innovation in a relevant market.

461 The Tribunal points out that none of the section 93 factors specifically refers to exports or to the pro-competitive dimension or business rationale of a merger. The Tribunal further reaffirms that the intent of the parties is irrelevant in determining whether a merger will likely reduce competition (*Canadian Waste* at para 118).

(b) The "substantial lessening" analysis

462 As the present case solely concerns an alleged substantial lessening of competition, the Tribunal's analysis will focus on that branch of the assessment of anti-competitive effects. In *Tervita SCC*, the SCC confirmed that the language in section 92 concerning anti-competitive effects is very close to the corresponding words in paragraph 79(1)(c) of the Act dealing with

abuse of dominance (*Tervita SCC* at para 50). The legal framework applicable to analysis of effects under the two provisions has common features, so court and Tribunal decisions under both provisions provide guidance in relation to the assessment of a substantial lessening of competition.

463 As the Tribunal discussed in *VAA CT* at paragraphs 632-644 and in *TREB CT* at paragraphs 456-483, there are two dimensions in the Tribunal's substantial lessening of competition analysis. The first considers a forward-looking, counterfactual comparison. The second considers whether the alleged anti-competitive effects are substantial.

464 First, the Tribunal's review under section 92 examines whether the merger will give the merged entity the ability to lessen competition, compared with the pre-merger benchmark or "but for" world. The analysis involves a forward-looking counterfactual scenario where the Tribunal compares the state of competition that exists or would likely exist in the presence of the merger with the state of competition that would have likely existed in the absence of the merger (*Tervita SCC* at paras 51, 54; *Tervita FCA* at para 108). The focus is on whether the merged entity is likely to be able to exercise materially greater market power than in the absence of the merger, through either materially higher prices or materially lower non-price aspects of competition in the market (*Tervita SCC* at paras 15, 50-51, 54, 80-81; *Tervita FCA* at para 108; *VAA CT* at paras 636, 642; *Tervita CT* at paras 123, 229(iv), 377) [8] . The Tribunal's approach thus contemplates an assessment that emphasizes the comparative and *relative* state of competition before and after the merger, as opposed to the absolute state of competition at those two points in time. In a case involving an alleged likely substantial lessening of competition, the Tribunal will assess whether the merger is likely to enable the merged entity to exercise new or enhanced market power (*Tervita SCC* at para 55, citing *Tervita CT* at para 368). That is, the Tribunal will consider whether the merger has likely created a new ability to exercise market power, or enhanced the merged entity's existing ability to exercise market power.

465 In the second part of its analysis, the Tribunal determines whether the difference between the level of competition in the presence of the merger, and the level that would have existed "but for" the merger, is substantial. The extent of a merger's likely effect on market power is what determines whether its effect on competition is likely to be "substantial" (*Tervita SCC* at para 45; *TREB FCA* at paras 82, 86-92). The issue is whether competition would likely be substantially greater, "but for" the implementation of the merger or proposed merger, through the merged entity's ability to profitably influence price, quality, service, advertising, innovation, or other dimensions of competition (*Canadian Waste* at paras 7, 108; *Di Domenico* at p 554). For a merger to be subject to a remedial order by the Tribunal, it is not enough to demonstrate that an actual or likely lessening of competition will result, or the mere creation or enhancement of market power. In a merger review, the Tribunal's assessment focuses on "whether the merged entity is likely to be able to exercise *materially greater market power* than in the absence of the merger" [emphasis added] (*Tervita SCC* at para 54, citing *Tervita CT* at para 367).

466 Again, the test is relative and requires an assessment of the difference between the level of competition in the actual world and in the "but for" world (*TREB FCA* at para 90). What is substantial is not defined in the Act. The Tribunal may consider evidence of market shares and concentration levels, together with the factors listed in paragraphs 93(a) to (g.3) of the Act and, under paragraph 93(h), "any other factor" relevant to competition in a market that is or would be affected by the merger or proposed merger. In each given case, all relevant indicators of market power need to be considered, but the relevance and weight to be assigned to each indicator will vary with the factual context. There is no precise scale by which to measure what is substantial, and this determination will be "highly contextual" (*Facey and Brown* at p 184).

467 In conducting its assessment of substantiality, the Tribunal will look at three key components, namely, the degree, scope, and duration of the lessening of competition (*Tervita SCC* at para 45; *VAA CT* at para 640).

468 With respect to degree, or magnitude, the Tribunal assesses whether the impugned merger is enabling or is likely to enable the merged entity respondent to exercise materially greater market power than in the absence of the merger (*Tervita SCC* at paras 50-51, 54). When assessing whether competition with respect to prices is or is likely to be lessened substantially, the test applied by the Tribunal is to determine whether prices are or likely would be *materially higher* than in the absence of the merger. With respect to non-price dimensions of competition, such as quality, variety, service, or innovation, the test applied is to determine whether the level of one or more of those dimensions of competition is or likely would be *materially lower* than in the absence of the merger (*Tervita SCC* at para 80; *TREB FCA* at paras 89-92; *Tervita CT* at paras 123-125, 376-377; *VAA CT* at para 642).

469 In assessing whether the degree, or magnitude, of lessening of competition is sufficient to be considered "substantial," the Tribunal will consider the overall economic impact of a merger in the relevant market. Proof of a likely post-merger price increase must be assessed in relation to its materiality in the specific market at issue, the nature and extent of pre- and post-merger competition, and the rest of all the quantitative and qualitative evidence related to the affected dimensions of competition.

470 On the price dimension of competition, the Tribunal has not found it useful to apply rigid numerical criteria in conducting this assessment. In short, there is no specific quantum of price variation implying that a merger lessens competition substantially. The Tribunal agrees with the 2011 MEGs that there is no rigid "numerical threshold" for a material price increase (2011 MEGs at para 2.14; see also Hillsdownat p 329). The Tribunal pauses to underline that the use of a 5% increase in price for the purposes of the HMT analysis must not be confused with the materiality of a price increase under the substantial lessening of competition analysis. The conceptual SSNIP threshold of 5% in the HMT analysis for market definition purposes is distinct from the assessment of substantiality of anti-competitive effects. It is therefore incorrect to state that the Commissioner must adduce quantitative evidence showing a 5% variation in post-merger prices in order to establish a lessening of competition that is "substantial." The required magnitude of a "substantial" price increase will instead vary from case to case and will depend on the facts of each case (*Tervita SCC* at para 46; *TREB FCA* at para 88; Hillsdownat pp 328-329). A substantial price variation can be less than 5%.

471 In fact, as Chief Justice Crampton explained in his concurring opinion in *Tervita CT*, the degree of market power used in assessing whether competition is likely to be prevented or lessened substantially must be recalibrated downward when a 5% price increase is used to assess the degree of market power held by a hypothetical monopolist for the purposes of the HMT analysis and the SSNIP threshold. At paragraphs 376-377 of *Tervita CT*, he said:

> [376] [...] However, given that the Tribunal has now embraced the hypothetical monopolist framework and the SSNIP test for market definition, it is necessary to revisit this definition of substantiality. This is because if the degree of market power used to define relevant markets is the same as the degree of market power used to assess competitive effects, a merger would not be found to be likely to prevent or lessen competition substantially unless the degree of new, enhanced or maintained market power of the merged entity is the same degree of market power held by as [*sic*] the hypothetical monopolist that was conceptualized for the purposes of market definition.
>
> [377] Accordingly, the degree of market power used in assessing whether competition is likely to be prevented or lessened substantially must be recalibrated downwards. That recalibrated degree of market power is a level of market power required to maintain prices *materially* higher, or to depress one or more forms of non-price competition to a level that is *materially* lower, than they likely would be in the absence of the merger. [...]
>
> [Emphasis in original.]

472 In sum, the substantiality level contemplated by the "substantial lessening of competition" analysis can be lower than the level under the HMT analysis and the SSNIP threshold.

473 It must also be emphasized that there is no requirement for the Tribunal to find a likely increase in price; it is sufficient for the Tribunal to conclude that the merged entity has the *ability* to increase price or to reduce quality, service, or product choice.

474 Turning to scope, the assessment involves determining whether the lessening of competition affects the entire relevant market or a material part of it. If the alleged anti-competitive effects do not extend throughout the totality of the relevant market, the Tribunal will assess their scope and whether they extend throughout a "material" part of the market, or in respect to a material volume of sales / business (*Tervita FCA* at para 108; *Tervita CT* at paras 375, 378).

475 With respect to duration, the test applied by the Tribunal is whether a material increase in price or material reduction in non-price dimensions of competition resulting from a merger is likely to be maintained for approximately two years (*Tervita SCC* at para 80; *Tervita CT* at para 123).

476 In assessing substantiality and its various components, the Tribunal considers quantitative evidence, qualitative evidence, or both, related to the price and non-price dimensions of competition (*TREB FCA* at para 16; *VAA CT* at paras 124, 639; *TREB CT* at paras 469-471). In *Tervita SCC*, the SCC held that the Commissioner was not, in law, required to quantify any anti-competitive effects under section 92 (*Tervita SCC* at paras 121-122, 166; *TREB FCA* at paras 99 - 100; *TREB CT* at para 469). That said, in all situations, the Commissioner must always adduce sufficiently clear and convincing evidence, and he bears the burden to demonstrate, on a balance of probabilities, that the merger lessens or is likely to lessen competition substantially, as well as the basic facts of the "but for" scenario that are required to make that demonstration (*Tervita SCC* at paras 65-66; *TREB FCA* at paras 87; *Tervita FCA* at paras 107-108; *VAA CT* at para 644).

(2) Parties' positions

(a) The Commissioner

477 The Commissioner submits that the Virden Acquisition is likely to cause a substantial lessening of competition in the relevant markets owing to the elimination of a vigorous and effective competitor, namely, the Virden Elevator. The Commissioner claims that both the quantitative and qualitative evidence demonstrates that farmers in the relevant markets will pay materially more for GHS for wheat and canola over the next two years and will lose other impactful aspects of competition. With the control of the Virden Elevator, says the Commissioner, P&H has the ability and incentive to unilaterally exercise market power in the relevant markets. The Commissioner contends that the lessening of competition is substantial in terms of magnitude, duration, and scope: it adversely impacts competition to a degree that is material, the duration of the anti-competitive effects is substantial, and the anti-competitive effects extend to a substantial part of the relevant markets.

478 In his final submissions, the Commissioner argued that the substantial lessening of competition is demonstrated by the following elements, which echo many of the factors listed in section 93 of the Act: 1) the high margins at the Virden Elevator, which provide direct evidence of P&H's existing market power; 2) P&H's ability to engage in price discrimination; 3) P&H's high market shares in the relevant markets; 4) the removal of the vigorous and effective competition to the Moosomin Elevator that the Virden Elevator provided prior to the Acquisition; 5) the material impact of the Virden Acquisition on the price for GHS for wheat and canola; 6) the postponement of the planned expansion of the Moosomin Elevator that would have made P&H a more effective competitor to the Virden Elevator in the absence of the Acquisition; 7) the inability of Viterra's Fairlight Elevator to constrain an increased exercise of market power by P&H; and 8) the existence of high barriers to entry and expansion.

479 The Commissioner further submitted that other more distant Elevators, canola Crushers, and direct purchasers of wheat or canola are unable to constrain an exercise of market power by P&H as they do not have sufficient capacity and farmers would have to incur higher transportation costs to deliver their wheat and canola to these locations. While the Commissioner's submissions mostly focused on the anti-competitive price effects of the Virden Acquisition, the Commissioner maintains that quantified price effects are only one element of the substantial lessening of competition caused by the Acquisition. According to the Commissioner, there is also significant other evidence demonstrating that the contemplated price effects are material to the farmers.

480 The Commissioner submits that the Tribunal should adopt a framework that allows for an economic analysis that can credibly assess the impact of local competition between Elevators that was lost when P&H acquired the Virden Elevator from LDC. The Commissioner considers that such local competition is expressed through the Basis. He states that the main issue to be determined by the Tribunal can be summarized as follows: when competition effectively takes place on, and affects one component of, the overall final price of a product, as he suggests is the case here, how should the Tribunal assess and measure the magnitude of harm and the materiality required for the lessening of competition to be substantial?

481 In support of his arguments on the substantial lessening of competition, the Commissioner relies on three pillars of evidence: the expert evidence of Dr. Miller (including his merger simulation model), the fact witnesses (notably, the farmers who testified at the hearing), and the documentary evidence.

482 The Commissioner does not dispute that he has the burden to adduce sufficiently clear and convincing evidence to demonstrate, on a balance of probabilities, that competition is or is likely to be lessened substantially as a result of the Virden Acquisition.

(b) P&H

483 P&H responds that the Virden Acquisition does not, and is not likely to, lessen competition substantially in any relevant market. More specifically, P&H submits that the Commissioner has failed to meet his burden to prove, on a balance of probabilities, his alleged substantial lessening of competition. According to P&H, the evidence on the record does not establish that the markets at issue would be substantially more competitive, "but for" the Virden Acquisition.

484 In its Response, P&H denied that the Virden Acquisition creates, enhances, or maintains monopsony power in any properly defined market for the purchase of wheat or canola. P&H argued that it will continue to face vigorous and effective competition from numerous competing Elevators and Crushers located in Manitoba and Saskatchewan. P&H further claimed that barriers to entry and expansion are low and that rival Elevators have excess capacity, allowing them to expand their purchases of wheat and canola and to constrain any attempt by P&H to exercise monopsony power. P&H also submitted that the predicted price variations determined by Dr. Miller are immaterial and unlikely.

485 In its closing submissions, P&H elaborated by focusing on the fact that: 1) barriers to entry and expansion are low; 2) the Virden Elevator has become and will remain a vigorous and effective competitor further to the Transaction; and 3) the Transaction enhances non-price competition.

486 In support of its arguments on the absence of any substantial lessening of competition, P&H relies on Ms. Sanderson's expert evidence, more particularly her critique of the price effects alleged by Dr. Miller and her post-Acquisition price analysis, and on the evidence provided by the farmer witnesses.

(3) Tribunal's assessment

487 The Tribunal notes at the outset that the evidence adduced by the Commissioner on the substantial lessening of competition primarily focused on the quantification of the alleged price effects of the Virden Acquisition. As the Commissioner said in his oral submissions, his demonstration that the lessening of competition is substantial was mostly done through Dr. Miller's quantification work including evidence such as market shares and margins. As part of its assessment, the Tribunal has therefore considered whether the Cash Prices paid by P&H to the farmers for their wheat or canola are or would likely be materially lower, "but for" the Virden Acquisition. The Tribunal also assessed other evaluative factors raised by the Commissioner and covered by section 93 of the Act. These factors notably included likely entry and expansion, excess capacity, and the extent of any remaining vigorous and effective competitors.

488 For the reasons discussed below, the Tribunal concludes that the Commissioner has not demonstrated, on a balance of probabilities, that the Virden Acquisition lessens, or is likely to lessen, competition substantially in the relevant markets. The Tribunal accepts that the joint control of the Virden and Moosomin Elevators by P&H has and will continue to have some limited adverse effects on competition in the purchase of wheat. However, on the evidence before it, the Tribunal is not persuaded that such lessening of competition reaches or is likely to reach the substantiality required by section 92 of the Act.

489 The Tribunal also acknowledges that the materiality level to assess the substantial lessening of competition varies from case to case, and that a lower materiality level could apply in cases, such as this one, where competition between rivals takes place, at least in part, on one more specific component of the overall final price of a product. However, the Tribunal observes that, even though the Commissioner insisted that competition between Elevators and Crushers revolved around the Basis, he has not provided any compelling submissions, nor any clear and convincing evidence, supporting a particular materiality level that the Tribunal should apply in the current circumstances. Moreover, even considering that some competition between Elevators effectively takes place on one component of the overall price of grain, namely, the Basis, the Tribunal finds that the

low magnitude of harm revealed by the evidence is not enough to meet the materiality required for the lessening of competition to be substantial, whether in relation to the Basis or the Cash Price.

(a) P&H's alleged pre-existing market power

490 The Commissioner argues that P&H already had existing market power prior to the Acquisition and now has the ability to increase this market power by virtue of its ownership of the Moosomin and Virden Elevators. He claims that two pieces of evidence demonstrate P&H's pre-existing market power: the high margins prevailing at the Virden Elevator and P&H's ability to price discriminate.

491 In his expert report, Dr. Miller calculated that the Virden Elevator earned a 55.2% margin on GHS for wheat and a 39.3% margin on GHS for canola. In Dr. Miller's opinion and experience, those are relatively high margins "consistent with localized competition rather than significant competition from many distant competitors" (Dr. Miller Report at para 72). Dr. Miller's margins are economic margins. Ms. Sanderson did not provide any specific margin estimates of her own. Apart from Dr. Miller's estimates, no other evidence was provided to the Tribunal with respect to Elevators' margins on the purchase of grain.

492 To calculate his margins for the Virden Elevator, Dr. Miller identified those Virden Elevator costs which are marginal or incremental, and he excluded fixed costs. Ms. Sanderson did not dispute Dr. Miller's categorization of the fixed and marginal costs, but she criticized his estimated margins on the ground that they were overstated and failed to include certain freight costs and other costs relating to export terminal operations.

493 The Tribunal accepts Dr. Miller's estimated margins for the Virden Elevator, based on his allocation of both revenue and costs to Elevators for the purposes of estimating marginal costs. The Tribunal agrees that the marginal costs related to GHS are a satisfactory proxy for the marginal costs associated with the purchase of grain. Although Dr. Miller's allocations were based on variable costs associated with the delivery of GHS, the same operating activities are also closely associated with the purchase of grain. The Tribunal finds that the variable costs allocated by Dr. Miller are properly allocable to the purchase of grain (and respective revenue generated) at an Elevator, in contrast with freight and other costs that are properly attributable to the marginal cost for (and revenue generated by) the sale and distribution of grain downstream at export terminals and other destinations.

494 Turning to price discrimination, the evidence from discovery is clear that P&H knows the location of its customers and has the ability to use that information to engage in price discrimination. To the extent that Elevators sometimes negotiate individual prices with farmers, a price-discrimination framework may thus be more descriptive of the grain industry. However, the evidence on the record indicates that price negotiations between farms and P&H only occur for about [text omitted] of P&H's transactions with farmers, with the vast majority (*i.e.*, the remaining [text omitted]) of transactions between farmers and the Elevator being done on the basis of posted prices. This [text omitted] percentage is arguably conservative, as it does not include those transactions where farms attempted price negotiations but were unsuccessful. The Tribunal also points out that, while there is some evidence of price discrimination, Dr. Miller stated that a posted price model was the appropriate framework to study how prices are set in the grain industry (Dr. Miller Report at paras 140-142). The Tribunal considers that the evidentiary record in this case demonstrates that P&H has some ability to price discriminate based on its customers' locations, and that it can exercise that ability when it is in its interest to do so. However, the evidence shows that P&H's actual use of this ability is limited.

495 The Tribunal agrees that high margins and the ability to price discriminate can constitute direct evidence that P&H has some pre-existing market power. This was recognized by the Tribunal in *Tele-Direct* at paragraphs 286 and 297. In that case, the Tribunal looked at Tele-Direct's behaviour towards consultants and whether it had abused its dominant position. The Tribunal found that "[w]here a firm with a high degree of market power is found to have engaged in anti-competitive conduct, smaller impacts on competition resulting from that conduct will meet the test of being "substantial" than where the market situation was less uncompetitive to begin with" (*Tele-Direct* at para 758). The Tribunal points out that in that case, Tele-Direct was found to have "overwhelming" market power.

496 Based on the evidence before it, the Tribunal is satisfied that the high margins calculated by Dr. Miller at the Virden Elevator constitute clear and convincing evidence of P&H's pre-existing market power. Similarly, while the evidence with

respect to P&H's ability to price discriminate is not as compelling given that the evidence showed a practice affecting only a limited portion of P&H's purchases of wheat and canola, the Tribunal is satisfied that, on a balance of probabilities, this evidence also supports a finding of some pre-existing market power for P&H.

(b) Price effects

497 With respect to the price effects, the Commissioner relied on the expert evidence of Dr. Miller to support his position that prices for GHS are or will likely be materially higher than they would have been in the absence of the Virden Acquisition.

498 In his analysis, Dr. Miller found that the diversion ratios between the Moosomin and Virden Elevators ranged between 15% and 25% for wheat and between 5% and 15% for canola. More detail about these diversion ratios were provided above in the Tribunal's discussion of the geographic market definition. Dr. Miller used these diversion ratios to quantify the UPP created by the Acquisition. The UPP is a tool that is often used in merger review to approximate the incentive for the merging parties to unilaterally increase prices following a merger, and to measure such price effects. Dr. Miller computed several measures of UPP, all of which showed that prices for GHS would likely rise as a result of the Acquisition, for both wheat and canola. His results suggested that the Transaction generates impetus for price increases, with UPPs of over CAD $2.50 per MT for wheat and over CAD $0.30 per MT for canola. He estimated the gross UPP indices ("*GUPPI*") at over 9% for wheat and over 1% for canola.

499 As explained by both Dr. Miller and Ms. Sanderson in the concurrent evidence session, the magnitudes of UPP, GUPPI, and price effects from merger simulations depend on the amount of diversion between the merging firms and on the mark-up (or margin). Holding all else equal, greater diversion ratios between the merging firms and higher margins will increase UPP, GUPPI, and the simulated price effects.

500 Using his diversion ratios and his estimate of the Virden Elevator's margin, Dr. Miller constructed a merger simulation model to quantify the price impact of the Virden Acquisition on farmers. A merger simulation model is a widely accepted econometric method for calculating the predicted price effects from a merger, and to quantify changes to consumer surplus, profit, and the DWL. It is not disputed that the models constructed by Dr. Miller for his farm choice and his merger simulation are standard economic models, and that Dr. Miller's analysis reflects the principles established in the economic literature. The Tribunal pauses to mention that Dr. Miller's merger simulation model was used both for market definition purposes and for measuring the anti-competitive effects of the Acquisition.

501 The Tribunal notes that there was no disagreement between Dr. Miller and Ms. Sanderson on the calculation of the diversion ratios that went into the merger simulation model; those diversion ratios came out of the transaction-level data.

502 For his substantial lessening of competition analysis, Dr. Miller considered a large number of competing entities, namely, 15 Elevators in the case of wheat and, for canola, 15 Elevators and five Crushers. These were Elevators and Crushers to which there are positive deliveries of canola or wheat made by farms located within Dr. Miller's Farmer Region. In sum, Dr. Miller's merger simulation model included Elevators and Crushers that come from both inside and outside the defined geographic markets resulting from his HMT analysis.

503 There was agreement by both experts that they were able to interpret the data provided and that Dr. Miller relied on a rich and robust data set for his merger simulation model. P&H had voiced concerns about the fact that the Commissioner did not collect data from two Paterson Elevators located at Carnduff and Binscarth, nor from the Cargill Elevator at Nesbitt. All six farmers who testified at the hearing said they do not sell to any of these three Elevators and did not produce receipts showing sales to these Elevators. In addition, no reference was made by Ms. Sanderson to these Elevators as a competitor in any of the Moosomin business documents. The Tribunal is therefore satisfied that, in the end, there were no real issues with alleged missing data in Dr. Miller's model.

504 Dr. Miller's merger simulation model provided both relative and absolute values for his predicted price effects. Dr. Miller and Ms. Sanderson agreed on the magnitude, in absolute dollar terms, of the price effects predicted by Dr. Miller's merger simulation model. They however disagreed on the percentage of the price variations, as the relative price changes varied significantly depending on the denominator being used (*i.e.*, the price of GHS or the Cash Price).

505 In light of the foregoing, the Tribunal is satisfied that it can accept Dr. Miller's merger simulation model and its absolute results.

506 Both Dr. Miller and Ms. Sanderson further acknowledged that, if the diversion ratios and the mark-ups are positive, a merger simulation model will always predict price increases whenever efficiencies are not directly modeled (Ms. Sanderson Report at para 78; Consolidated Transcript, Public, at pp 1525-1526, 1529; Consolidated Transcript, Confidential A, at pp 1711, 1718-1719, 1784-1785, 1871-1872). This is a reflection of economic theory, which says that, when there is competition, there will be lower prices. In other words, a merger that reduces competition in the sale of a product will raise prices to some degree. The Tribunal must, however, determine whether the predicted price increases — or, in the case of a monopsony, price decreases — are meaningful and substantial.

507 Further to its review of the evidence, the Tribunal is not persuaded that the Virden Acquisition is decreasing or will likely decrease the Cash Prices for wheat or canola to a material degree in the relevant markets, relative to the prices that likely would have existed "but for" the Acquisition. Stated differently, the Commissioner has not demonstrated that, "but for" the Virden Acquisition, the prices received by farmers for their wheat and canola are or would likely be materially lower. This is the case for both the relative and absolute measures coming out of Dr. Miller's evidence.

(i) Relative measures

508 The Tribunal first considers the relative price changes predicted by Dr. Miller's model, as this is typically how expected price effects are measured and assessed by the Tribunal. The relativity of predicted price changes is an important benchmark, as price effects are not measured in a vacuum, but against a certain reference or base price. Price variations will be material when they represent a meaningful proportion of the reference price.

509 Dr. Miller's merger simulation model based on the farmers' choices of Elevator predicts that the price of GHS for wheat will increase by CAD $2.49 per MT for the Moosomin Elevator, and by CAD $2.07 per MT for the Virden Elevator (Dr. Miller Report at Exhibit 14). This corresponds to 7.1% and 7.6% price increases, respectively, relative to the reference pre-Acquisition price of GHS for wheat at each Elevator. Turning to the price of GHS for canola, Dr. Miller's projected price increases will be between CAD $0.91 per MT and CAD $1.21 per MT at the Moosomin Elevator, and between CAD $0.25 per MT and CAD $0.35 per MT at the Virden Elevator. The range reflects the different values for canola including or excluding Crushers. These observed variations amount to a 7.3% — 9.7% and 1.3% — 1.7% increase in the price of GHS for canola at the Moosomin and Virden Elevators, respectively.

510 Dr. Miller's expert opinion is that the Virden Acquisition allows P&H to charge farmers 7% to 8% more to handle their wheat, and between 1% to 7% more to handle their canola (using the data for canola including Crushers) (Dr. Miller Report at para 6). According to Dr. Miller and the Commissioner, these results from Dr. Miller's merger simulation show a material increase in the price of GHS per MT, for both wheat and canola, when considered against the price farmers pay for GHS.

511 The Tribunal notes that the highest predicted price increase of CAD $2.49 per MT for wheat represents a variation of 6.8 cents per bushel (*i.e.*, CAD $2.49 / 36.7444 bushels). The corresponding highest predicted price increase of CAD $0.91 per MT for canola (including Crushers) equates to 2.1 cents per bushel (*i.e.*, CAD $0.91 / 44.092 bushels). Both of these highest price variations were measured for the Moosomin Elevator.

512 Ms. Sanderson further calculated that, for wheat, the *average* price increase predicted by Dr. Miller for the Moosomin, Virden, and Fairlight Elevators would be CAD $1.39 per MT (or 4 cents per bushel). The average price increase for canola would be CAD $0.23 per MT (or 1 cent per bushel). When expressed as a percentage of the weighted average imputed prices for GHS at the Moosomin, Virden, and Fairlight Elevators, the price effects calculated by Dr. Miller are, on average, 1.51% for canola and 4.62% for wheat (Ms. Sanderson Slides at pp 93-94).

513 However, as Ms. Sanderson points out in her evidence, when the predicted price changes found by Dr. Miller are expressed in relation to the Cash Prices, the picture of the relative price variations is quite different.

514 In the period of reference used by Dr. Miller, the weighted average price for wheat was CAD $229.73 per MT at the Moosomin Elevator, and CAD $239.11 per MT at the Virden Elevator. For its part, the weighted average price for canola was CAD $461.46 per MT at the Moosomin Elevator, and CAD $452.80 per MT at the Virden Elevator. Therefore, for wheat, Dr. Miller's predicted price variations of CAD $2.49 per MT for the Moosomin Elevator and CAD $2.07 per MT for the Virden Elevator represented changes of only 1.1% and 0.9%, respectively, compared to the pre-Acquisition Cash Price for wheat at each Elevator. With respect to canola including Crushers, Dr. Miller's projected price variations of CAD $0.91 per MT for the Moosomin Elevator, and CAD $0.25 per MT for the Virden Elevator amounted to relative changes of 0.2% and 0.05%, respectively, compared to the pre-Acquisition Cash Price for canola at each Elevator. When expressed as a percentage of the average Cash Prices at the Moosomin, Virden, and Fairlight Elevators, the average relative price effects calculated by Dr. Miller are 0.05% for canola and 0.60% for wheat (Ms. Sanderson Slides at p 94).

515 The Commissioner therefore asks the Tribunal to find a substantial lessening of competition in a situation where his expert's average predicted price increases represent 1.51% of his imputed price for GHS for canola, expressed as a percentage of the average price for GHS at the Moosomin, Virden, and Fairlight Elevators, and 4.62% of his imputed price for GHS for wheat at those same Elevators. When they are expressed in relation to the product market and the appropriate reference price identified by the Tribunal — namely, the Cash Price — , Dr. Miller's predicted price changes represent between 0.05% and 0.2% of the Cash Price for canola, and between 0.60% and 1.1% of the Cash Price for wheat. The Commissioner claims that, even if the purchase of grain and Cash Prices should be the denominator, these price effects are still material when viewed against the qualitative evidence.

516 With respect, the Tribunal disagrees. The Tribunal is of the view that price changes of this magnitude (*i.e.*, at most 1.1% of the Cash Price for wheat and at most 0.2% of the Cash Price for canola) cannot be qualified as "material." On the contrary, the Tribunal finds that predicted price variations representing such a small fraction of the pre-Acquisition price for wheat or canola at the Moosomin or Virden Elevators are immaterial, especially in light of the fact that a merger simulation model will always predict a price increase. For the purchase of canola, price variations of 0.2% or less (or between one and two cents a bushel) are *de minimis*. For the purchase of wheat, price variations reaching at most 1.1% (or a maximum of seven cents a bushel) are very minor and far from substantial in this market. Indeed, the Tribunal observes that, in his submissions at the hearing, the Commissioner admitted that such relative price changes were "small" when expressed in terms of percentage. Hence, the Commissioner's focus on the absolute values of the predicted price changes, to which the Tribunal will turn below.

517 The Tribunal accepts that the Basis plays a certain role in the competition between Elevators at the local level. The evidence indicates that there can be adjustments to the Basis or to the Cash Price after or in addition to changes in the Futures Price. In some cases, the Basis fluctuates for reasons other than a change in the Futures Price, such as negotiations between farms and Elevators or limited-tonne and limited-time specials offered by the Elevators. The Tribunal also accepts that the price variation threshold can certainly be lower than 5% (contrary to P&H's argument) in order to meet the substantiality level. The Tribunal is further mindful of the fact that, when a firm has *high* pre-existing market power, smaller impacts on competition can be enough to meet the test of substantiality (*Tele-Direct* at para 758). The Tribunal pauses to note that, while it finds that P&H had "some pre-existing market power" in this case, the facts do not support a conclusion that P&H had "high" market power and certainly not "overwhelming" market power as in *Tele-Direct*.

518 However, the Commissioner has not presented any compelling argument nor any clear and convincing evidence regarding the materiality level (in terms of percentage) that should apply to the substantial lessening of competition analysis in this case. More specifically, the Commissioner has not made submissions regarding the relative materiality level that should apply in a case where competition allegedly takes place on one component of the final price for wheat or canola, namely, the Basis. Similarly, the Commissioner has submitted no analysis nor any evidence to demonstrate that, in the particular circumstances of this case, the acceptable materiality level for a price decrease could be as low as around 1% or less.

519 In fact, the Tribunal is not aware of any merger cases, in Canada or in any other jurisdiction, where a court or tribunal has recognized that a predicted price effect revolving around 1% could be enough to meet the test of substantiality. Indeed, since merger simulation models predict price increases (as discussed above), the Tribunal is of the view that, absent expert evidence

allowing it to conclude differently, relative price variations predicted by a merger simulation model have to be more than 1% in order to have any significance or materiality.

520 For all the above reasons, the Tribunal agrees with P&H and Ms. Sanderson that the relative effect of the Virden Acquisition on the Cash Prices paid by P&H for wheat or canola is not material.

(ii) Absolute measures

521 The Commissioner also takes the position that the absolute price variations observed by Dr. Miller are material. In his submissions, the Commissioner relied on the absolute magnitude of Dr. Miller's predicted price increases and what he claimed was their resulting materiality. The Commissioner argued that, in this case, the Tribunal should prefer and adopt an absolute notion of materiality with respect to the price effects and consider the impact that the Acquisition will have on farmers, in terms of changes in "cents per bushel" they will pay for GHS or receive for their grain. The Commissioner submits that the absolute amount of the effects measured by Dr. Miller is evidence of a substantial lessening of competition. The price increases projected by Dr. Miller, says the Commissioner, are also well above 2 cents per bushel (or, equivalently, CAD $0.73 per MT for wheat and CAD $0.88 per MT for canola), and this is sufficient to demonstrate materiality.

522 As mentioned above, Dr. Miller's highest predicted price variations are 6.8 cents per bushel for wheat and 2.1 cents per bushel for canola. Dr. Miller and Ms. Sanderson agree that these absolute effects are the same regardless of whether the product market is GHS or the purchase of grain. In sum, these price effects are not dependent upon the definition of the relevant market or on the selection of the SSNIP. The relevant market only impacts the computation of the price effects in relative terms, and the experts indeed disagree on the percentage of the price variations (in terms of the imputed price of GHS or the Cash Price).

523 The Commissioner further claims that price increases of 2 cents to 7 cents per bushel are material when viewed against the qualitative evidence and the pre-existing market power of P&H. The Commissioner submits that the materiality of the price effects is enhanced when all of the other evidence of a substantial lessening of competition is considered, namely, P&H's pre-existing high margins, high market shares, and ability to price discriminate, the removal of the Virden Elevator as a vigorous and effective competitor, and the loss of competition between the Virden and Moosomin Elevators as a result of the Moosomin Elevator's delayed expansion.

524 The Tribunal is not persuaded by the Commissioner's submissions and evidence. More specifically, the Tribunal is not convinced that there is evidence showing, on a balance of probabilities, that 2 cents a bushel "matter" to farmers. The evidence is only in respect of amounts much higher than that, and higher than Dr. Miller's predicted price increases. The Tribunal agrees with P&H that arguing that a 2 cents per bushel price increase, or even a 7 cents price increase, is material is inconsistent with the farmers' evidence and with the high volatility of prices in the grain industry, often vacillating by plus or minus 10 cents a bushel in a day.

525 The Commissioner first relies heavily on the so-called "2 cents challenge." The "2 cents challenge" refers to an email sent by [text omitted] to [text omitted] and [text omitted] in the regular course of business (Commissioner Read-In at p 643). In that email, [text omitted] said that 2 cents per bushel translated into CAD $3.2 million in profitability for P&H. The Commissioner claims that this evidence is very important to assessing materiality because [text omitted] posted that if P&H bought each bushel 2 cents cheaper, it would add more than CAD $3 million in profitability to P&H. Moreover, when Mr. Heimbecker was asked on discovery what CAD $3.2 million in profit meant to him, he said that such a sum of money was "not insignificant" (Commissioner Read-In at p 178).

526 The Commissioner adds that 2 cents per bushel is a reasonable threshold for materiality as it represents 2.1% of GHS for wheat and 7.1% of canola handling prices for the Moosomin Elevator, and 2.7% of GHS for wheat and 4.4% of canola handling prices for the Virden Elevator.

527 The Commissioner also refers to another email where [text omitted] from P&H said that he does not need to be [text omitted] per bushel higher than his competitors on wheat, and that the damage of such a discount to P&H's buying program

would be [text omitted] (Commissioner Read-In at p 800). On the basis of this evidence, the Commissioner maintains that P&H cares about pennies on the bushel.

528 The Tribunal does not find this evidence convincing on the issue of materiality of price effects in the context of its substantial lessening of competition analysis. For the purpose of section 92 of the Act and the Tribunal's assessment of anti-competitive effects, materiality is analyzed in relation to a market situation, to the competitive behaviour of market participants as a result of a merger, and to competition in the relevant market. It is not analyzed in relation to a firm's overall profitability or bottom line. In this case, it is analyzed in relation to the situation in the relevant geographic markets for wheat and canola as a result of the Virden Acquisition. The Tribunal appreciates that 2 cents a bushel, when projected on the overall profitability of P&H, may have some significance for P&H. But the fact that 2 cents a bushel may be important to P&H's overall bottom line does not constitute clear and convincing evidence that such an amount is or would likely be "material" with respect to a lessening of competition in the purchase of wheat or canola in the relevant markets defined above.

529 The materiality of predicted price changes, whether relative or absolute, is not to be measured in relation to the general profitability of one specific producer or supplier, or one specific customer. This is even more so when the Commissioner's Application only challenges one specific portion P&H's business, namely, the acquisition of only one Elevator out of an overall network of 29. The issue to be determined by the Tribunal is whether the adverse price effects on competition are material in relation to the market and industry at stake. The "2 cents challenge" email offers no clear and convincing evidence to support the Commissioner's position on the alleged price effects attributable to the Virden Acquisition.

530 The Tribunal further observes that virtually any business person would say that any additional cent of profit per unit of product sold does matter and has some significance for his or her business. In the Tribunal's view, the assessment of materiality was not meant to be reduced, and cannot be reduced, to a single comment such as those made by [text omitted].

531 With respect to the email from [text omitted] the Tribunal notes that the [text omitted] comment was not made in reference to a specific benchmark, let alone to a 2 cents per bushel benchmark. It was generally made in reaction to sales representatives saying that "farmers are getting better prices somewhere" with no information to support such claims. Moreover, when [text omitted] referred to a particular amount P&H should not contemplate, he said that P&H did not need to be [text omitted] per bushel higher than its competitors. [text omitted] per bushel is far higher than the 2 cents or even 7 cents a bushel measured by Dr. Miller.

532 The Commissioner further submits that cents per bushel matter not only to P&H, but also to farmers. In that regard, the Commissioner relies on several extracts and comments made by the farmer witnesses regarding the price changes they face in their business.

533 Again, the Tribunal is not persuaded by the Commissioner's submissions. The Tribunal has not found clear and convincing evidence allowing it to conclude, on a balance of probabilities, that a few cents a bushel matter to farmers and to their behaviour in the market. On the contrary, the evidence from farmers is in respect of amounts much higher than 2 cents a bushel and higher than the predicted price increases of Dr. Miller.

534 It is true, as the Commissioner argues, that Mr. Lincoln (a farmer called by the Commissioner) testified in his witness statement that that he needs "every penny to be able to hit the profitability levels" required to operate his farm (Lincoln Statement at para 16). However, immediately before he made that statement, Mr. Lincoln referred three times to an example of what a material amount meant to him: it was *10 cents* a bushel. He indicated that the Moosomin Elevator would have to offer him 10 cents a bushel above the Fairlight Elevator for it to be worthwhile driving past this Elevator (Lincoln Statement at para 15). When he went on to quantify the adverse impact of a price decrease on his business, he again used the value of 10 cents per bushel (Lincoln Statement at para 16). Nothing in the Lincoln Statement supports the contention that an amount as low as 2 cents a bushel or in the range predicted by Dr. Miller would be material to him and to his competitive behaviour in the sale of his grain.

535 The Commissioner also referred to the testimony of Mr. Hebert, one of P&H's farmer witnesses, singling out his comments and podcasts about the farmers' margins being squeezed. Further to its review of Mr. Hebert's evidence, the Tribunal finds no

support in that evidence for the proposition that 2 cents or a few cents a bushel matter to Mr. Hebert. The documents mentioned by Mr. Hebert in his testimony contained comments he made about his "5% rule" in the context of the farmers' business: for Mr. Hebert, farmers should concentrate on trying to improve certain metrics of their business by 5%. The only references to cents per bushel were to an amount of 50 cents per bushel. Again, this is far above 2 cents or 7 cents per bushel.

536 Mr. Paull, another farmer witness called by P&H, testified that he will only switch to a more distant Elevator if it means receiving more cents a bushel. Regarding the magnitude of the price differential, Mr. Paull testified that he would not leave a local Elevator for "a few pennies a bushel or a few cents a bushel," but if he could make "10 or 15, 20 cents, sometimes 30 or 40 cents by going further," he would (Consolidated Transcript, Confidential B, at p 1020). Mr. Paull added that he would not switch from a local Elevator if the difference in net price is 5 cents a bushel or lower (Consolidated Transcript, Confidential B, at p 1022). He also mentioned that he would not haul his grain 50 or 100 miles away for a few cents a bushel. More distant Elevators would need to offer higher prices than that for him to consider sending his grain farther. In fact, Mr. Paull sold all of his canola in the last four years to Bunge Altona, a Crusher located some 350 kilometers and three and a half hours away from his farm. He did it because it was profitable to do so.

537 In sum, Mr. Paull testified that a few pennies are not material enough for him to change his selling behaviour and to switch Elevators. It starts to matter for him at 10 cents per bushel.

538 As Mr. Duncan, Mr. Paull, and Mr. Hebert all said in their witness statements, the net price or Cash Price they receive from the Elevators is what matters to them as farmers.

539 In his submissions, the Commissioner indicated that farmer witnesses were not meant to be a statistically representative sample and were not the way the Commissioner intended to demonstrate that the lessening of competition is substantial. He said that substantiality flows from Dr. Miller's quantification work and other evidence on market shares and margins. However, even the farmers' examples used by the Commissioner do not support his argument that 2 cents per bushel is a material price impact on the facts of this case.

540 Dr. Miller also testified that the price effects he calculated would represent a loss of about CAD $2,000 per farm in the Elkhorn area, located between the Moosomin and Virden Elevators. However, the Commissioner did not point to any clear evidence allowing the Tribunal to determine how such an amount could be material or not to the farmers, or whether this would change their selling or competitive behaviour in the relevant markets for wheat or canola.

541 The Tribunal makes one other observation in relation to the "2 cents per bushel" issue. P&H pointed out that volatility in the grain industry is often in excess of 10 cents a bushel on any given day. In her expert report, Ms. Sanderson calculated the average of the within-day price variations (Ms. Sanderson Report at para 104 and Figure 30). The average within-day variation is CAD $4.32 per MT for canola and CAD $3.82 per MT for wheat. When expressed in dollars per bushel, these values translate into approximately 10 cents a bushel for each of wheat and canola. Should a farm be successful in timing its grain sale within any given day, it can therefore achieve a purchase price that is 10 cents a bushel higher by selling grain at the right hour of the day. This evidence was not contradicted.

542 In light of this evidence, said Ms. Sanderson, a 2 cents variation that is significantly lower than the typical within-day daily fluctuations in the purchase price of wheat or canola cannot be a material price variation in the grain industry. Furthermore, Ms. Sanderson stated that, during 2018-2019, the average cash purchase price paid at the Moosomin Elevator for canola was CAD $10.47 a bushel (or CAD $461.46 per MT), making 2 cents equal to 0.19% of the Cash Price of canola. During the same period, the average cash purchase price paid at the Moosomin Elevator for wheat was CAD $6.25 CAD a bushel (or CAD $229.73 per MT), making 2 cents equal to 0.32% of the Cash Price of wheat (7 cents would be equal to 1.12%).

543 According to Ms. Sanderson, this evidence suggests that a material change in price cannot be less than 10 cents a bushel. The Tribunal agrees. The weighted average price increases predicted by Dr. Miller's merger simulation model are only 1 cent per bushel in canola and 4 cents per bushel for wheat (in relation to the average price at the Moosomin, Virden, and Fairlight Elevators), which are both well below 10 cents per bushel.

544 In sum, even looking at the absolute price effects measured by Dr. Miller, the Tribunal does not find evidence supporting the Commissioner's position that the projected price variations are material. They are rather of a small magnitude and immaterial, consistent with the fact that P&H faces considerable competition from several rival Elevators and Crushers to constrain material price decreases after the Transaction.

545 The Tribunal pauses to note the following. On this whole issue of P&H's prices, the Tribunal agrees with the Commissioner that little weight should be given to Mr. Heimbecker's evidence on this front, as he was obviously not very familiar with P&H's day-to-day operations in relation to these pricing issues. However, even without taking into account Mr. Heimbecker's evidence, there is no clear and convincing evidence of a material decrease in the price for wheat or canola, in absolute or relative terms.

546 The Tribunal concludes that the evidence of absolute pricing variations does not constitute clear and convincing evidence supporting a conclusion that, "but for" the Virden Acquisition, the prices of wheat or canola paid to farmers by P&H are or would likely be "materially" lower.

(iii) Difference-in-differences analysis

547 As part of her expert report, Ms. Sanderson did a difference-in-differences regression analysis to verify whether, since the closing of the Transaction, P&H has effectively lowered the Cash Prices "it pays farms at Virden or Moosomin post-Acquisition in an economically significant way" (Ms. Sanderson Report at para 110). Ms. Sanderson's difference-in-differences is a retrospective merger analysis based on what actually happened to P&H's post-Acquisition posted prices since the merger.

548 Difference-in-differences regressions can be informative to study the effect of events such as mergers if the facts are consistent with the empirical framework. These analyses are called difference-in-differences because they aim at determining whether the merger has created a difference going above and beyond the other changes that would have occurred in any event, and whether the relative difference will be the same through the review period.

549 In this case, Ms. Sanderson used a difference-in-differences regression analysis of posted prices at the Moosomin and Virden Elevators to test if the Acquisition has effectively reduced P&H's Cash Prices at Moosomin and Virden, relative to the prices prevailing at a benchmark P&H Elevator (namely, the Dutton Elevator) that is unaffected by the Acquisition. Ms. Sanderson considered that the Dutton Elevator was an appropriate comparator Elevator as it was unaffected by the Acquisition and was outside of any acquired LDC Elevator's draw areas, it was subject to the same network dynamics as the Moosomin Elevator, and it had posted prices. The graphs provided in Ms. Sanderson's expert report show that the Dutton Elevator had closely similar behaviour and common trends compared to the Virden and Moosomin Elevators, with no evidence of materially lower purchase prices than the Virden and Moosomin Elevators.

550 Ms. Sanderson calculated a difference-in-differences regression comparing net price changes for the Moosomin and Virden Elevators using the post-Acquisition months from December 10, 2019 to June 30, 2020 and the same months for 2016 to 2019 in the pre-Acquisition period. By using similar months every year, Ms. Sanderson removed added seasonal variations that increase modeling noise, and she chose the Dutton Elevator outside the Transaction's competitive markets to control for impact of market conditions external to the impact of the Transaction.

551 Ms. Sanderson concluded to a minimal decline in the Cash Price of canola and to a posted Cash Price increase of 1.5% for wheat since the Acquisition (Ms. Sanderson Report at para 112 and Figure 33; Ms. Sanderson Slides at p 86). More specifically, for the Moosomin Elevator, her difference-in-differences analysis found that canola prices were 0.5% higher and that wheat prices were 0.6% lower. For the Virden Elevator, she found that canola prices were 0.6% lower and wheat prices 1.5% higher. On that basis, she concluded that her regression analysis constituted further evidence that, as far as price effects are concerned, the Virden Acquisition does not, and is not likely to, lessen competition substantially.

552 Dr. Miller acknowledged that Ms. Sanderson's difference-in-differences methodology was "about as good as you can do" and "as good as the economic literature can get you here" (Consolidated Transcript, Confidential A, at p 1889). However,

Dr. Miller considered that Ms. Sanderson's regression framework does not fit the facts of this case, and is not a good predictor of P&H's pricing in the future.

553 Three concerns were expressed by Dr. Miller about Ms. Sanderson's difference-in-differences analysis. First, Dr. Miller's main issue was about the usefulness of doing such an analysis while a merger review process is still on-going. In other words, he questioned the probative value of a retrospective merger analysis while the merger itself is still under review before the Tribunal, and had serious reservations about it. Second, he questioned the use of posted prices as opposed to realized transactions which could include results of negotiations (bearing in mind that, according to the evidence, [text omitted] of P&H's prices for wheat and canola are negotiated). These negotiations often impact the Basis, and not only the Cash Price. Third, he was concerned about the reliability of the data in the period surrounding the Transaction, which is influenced by an international trade war and the effects of the COVID-19 pandemic. Dr. Miller also submitted that Ms. Sanderson does not have enough data post-merger to do a robust analysis, nor does she have a sufficient control set against which to reliably interpret her results, as she only had one benchmark Elevator, the Dutton Elevator, in her control group.

554 In her presentation at the hearing, Ms. Sanderson took into account the concerns raised by Dr. Miller (Ms. Sanderson Slides at p 87). She responded that she used the Dutton Elevator to counter the impact of factors such as an international trade war or COVID-19. She is comparing the changes at the Moosomin and Virden Elevators to the changes at the Dutton Elevator. All three Elevators were impacted by these exogenous factors, and the assumption was that the broader market effects would be similar on the three Elevators.

555 With respect to the quality of her price data, Ms. Sanderson emphasized that her regression is a difference-in-differences analysis, and that using the posted price data would be suitable for picking up whether there is a difference due to the Acquisition. Approximately [text omitted] of P&H's transactions are at posted prices, and there was no evidence that the situation about negotiated prices is different at the Moosomin and Virden Elevators from what it is at other Elevators, including the Dutton Elevator. More generally, Ms. Sanderson advised that there is no indication that the Dutton Elevator was an outlier or had delivered results different from other Elevators in the P&H network. Ms. Sanderson's model results also indicate that the R-squared variable, which is an indicator measuring how well the variables in the regression predict the dependent variable, is fairly high, thus showing a good fit for her model.

556 The Tribunal notes that Dr. Miller identified a few reasons as to why Ms. Sanderson's methodology could provide inadequate results, but no evidence was provided to show that this occurred with Ms. Sanderson's model in this case.

557 However, the Tribunal agrees with some of Dr. Miller's concerns about Ms. Sanderson's difference-in-differences regression, in that it did not account for autocorrelation in the modeling, which leads to overstating the precision of her results. The Tribunal also notes that the post-Acquisition time period for the data used by Ms. Sanderson, being less than a year, is fairly short and that there were inventory issues at the Virden Elevator towards the end of 2019.

558 One member of the Tribunal, Ms. Samrout, has additional methodological concerns with Ms. Sanderson's analysis. Ms. Samrout is of the view that Ms. Sanderson's regression treated the Futures Price as a control variable that explains a portion of the variation in the observed Cash Price. Although this variable provides the average change in the Cash Price pre- and post-Transaction as the Futures Price changes, while holding all other variables constant, it is unclear whether the model fully or partially explains the magnitude of the variation in the Cash Price since the interaction between the timing of the transaction (pre- and post-Transaction) and the Futures Price was not tested. In other words, a variable should have been included to capture the difference in the magnitude of how well the Cash Price is affected by the Futures Price pre- and post-Transaction.

559 As part of her difference-in-differences analysis, Ms. Sanderson also presented in her testimony (Ms. Sanderson Slides at pp 82-85) the line trends tracking the difference in Cash Price before and after the Acquisition in comparison with the Dutton Elevator's Cash Price, showing that there is little difference between the Moosomin and Virden pricing behaviour in Cash Price in comparison to Dutton. Ms. Samrout notes that Ms. Sanderson compared the Cash Price before and after the Acquisition without any visual linkage to the fluctuation and trending of Futures Prices and their corresponding posted Basis to arrive at the Cash Prices.

560 In the end, the Tribunal is satisfied that Dr. Miller's critiques do not significantly alter Ms. Sanderson's conclusions and agrees that, on a balance of probabilities, it is more likely than not that P&H has not lowered its purchase prices for wheat and canola since the Acquisition. In sum, the Tribunal is of the view that Ms. Sanderson's difference-in-differences analysis is more consistent with P&H's position than the Commissioner's, and that it provides some support for the non-material nature of the price effects resulting or likely to result from the Virden Acquisition. However, the Tribunal finds the analysis to be of more limited assistance given the concerns raised by the limitation of the data and by the fact that it is looking at the behaviour of P&H while the Virden Acquisition was under review. The Tribunal thus concludes that it should be given little weight in its price effects analysis.

(iv) Conclusion on price effects

561 In light of the foregoing, the Tribunal is left with unpersuasive and insufficient evidence regarding the alleged substantiality of the price effects of the Virden Acquisition. The measured price effects are *de minimis* for the purchase of canola. For wheat, the Tribunal finds that the Acquisition is having or is likely to have some very minor price effects on the purchase of wheat but they are far from substantial. In sum, having regard to the evidence presented, the Tribunal finds that the likely price variations due to the Virden Acquisition, whether in absolute terms or in relative terms, are immaterial and are likely to remain immaterial for both the purchase of wheat and the purchase of canola.

562 The Tribunal underlines that, even though farmers located in the "corridor of concern" are arguably the most affected by the Virden Acquisition as a vast majority of them sell their wheat and canola exclusively to the Virden, Moosomin, and Fairlight Elevators, the Commissioner presented no quantitative evidence regarding the predicted price changes in that specific part of the relevant geographic markets for wheat and canola. There is therefore insufficient evidence allowing the Tribunal to determine the relative or absolute magnitude of the predicted price variations for the farmers located in the corridor of concern.

(c) Market concentration and market shares

563 The Tribunal now turns to the effect of the Virden Acquisition on P&H's post-merger market shares. As discussed above, Dr. Miller and Ms. Sanderson disagree as to the number of participants in the relevant geographic markets; hence, they disagree on whether or not the merged firm will have a market share that exceeds 35%, which is considered a "safe harbour" in the Commissioner's 2011 MEGs.

564 Relying on *Tele-Direct* at paragraph 226, the Commissioner submits that high market shares are an indirect indicator that the Virden Acquisition allows P&H to exercise increased market power: in this case, Dr. Miller's calculations indicate that P&H's post-Acquisition market shares are 59.6% for wheat and 53.9% for canola (Dr. Miller Report at Exhibit 10). These calculations are for Dr. Miller's original relevant geographic market based on the "imputed" price for GHS, which was defined by Dr. Miller as including solely the Virden, Moosomin, and Fairlight Elevators.

565 According to Ms. Sanderson, using the geographic markets based on the Cash Prices with a 5% SSNIP threshold, P&H's post-Acquisition market shares would be much lower (Ms. Sanderson Slides at pp 74-75). It would be 31.6% in the relevant geographic market for the purchase of wheat, defined by Ms. Sanderson as including the Moosomin, Virden, Fairlight, Oakner, Whitewood, Elva, Shoal Lake, and Carnduff Elevators, using the average price at the Virden Elevator as the reference price. Based on Ms. Sanderson's figures, this percentage would increase to 34.6% if the Carnduff Elevator is left out of the market. Post-Acquisition market shares would amount to only 16.1% in the relevant geographic market for the purchase of canola, defined by Ms. Sanderson as including the Moosomin, Virden, Fairlight, Oakner, Whitewood, Brandon (Richardson), Melville, Souris East, Shoal Lake, and Elva Elevators as well as the Crushers at Harrowby (Bunge), Yorkton (LDC), Velva (ADM), and Yorkton (Richardson).

566 Ms. Sanderson further opined that what matters for the competitive effects analysis is P&H's post-merger share of purchases, because this determines the competitive alternatives available to farms if P&H were to seek to reduce its purchase prices for wheat and canola post-Acquisition. Ms. Sanderson testified that, post-Acquisition, the Moosomin and Virden

Elevators account for only 15% of total canola purchases and only 26% of total wheat purchases from farms within Dr. Miller's Farmer Region.

567 While subsection 92(2) of the Act expressly precludes the Tribunal from making a finding of substantial lessening of competition "solely on the basis of evidence of concentration or market share," it is not disputed that evidence of changes in market shares and concentration levels are relevant and often influential in the Tribunal's assessment. The Tribunal further agrees with the Commissioner that, in its market share and concentration calculations, it should not take into account the purchases of all Elevators located both inside and outside the relevant markets; the market shares should instead be computed based on the purchases made by those participants that are part of the relevant markets, as these markets are defined by the Tribunal.

568 In this case, based on the evidence before it and considering the geographic market definition discussed above, the Tribunal finds that the post-Acquisition market share of P&H would be at most 16.1% in the relevant geographic market for the purchase of canola. This is a conservative measure, as the relevant geographic market for canola identified by Ms. Sanderson was based on SSNIP level well below 5% — it was 3.08% — and on the lower Virden Elevator price for canola as a reference price. This concentration level is significantly below the 35% safe harbour threshold identified in the MEGs, and cannot be considered indicative of a lessening of competition in the purchase of canola, let alone a substantial one.

569 Turning to wheat, the Tribunal concludes that the post-Acquisition market share of P&H would likely fall within a range corresponding to the potential relevant geographic markets discussed above: these market shares would vary between 31.6% for a relevant geographic market including all Elevators retained by Ms. Sanderson in her analysis and approximately 34.6% if the market is limited to the Moosomin, Virden, Fairlight, Oakner, Whitewood, Elva, and Shoal Lake Elevators (and excludes the Carnduff Elevator). These market share figures approaching 35% provide, in the Tribunal's view, no more than weak evidence of enhanced market power in the purchase of wheat.

(d) Removal of a vigorous and effective competitor

570 The Commissioner submits that the Virden Acquisition eliminates intense rivalry between the two main suppliers of GHS for wheat and canola in the corridor of concern. He asserts that the Moosomin and Virden Elevators competed head-to-head on price and service, and were each other's closest competitors. The removal of a vigorous and effective competitor is one of the factors specifically contemplated by section 93, at paragraph (*f*).

571 The Tribunal agrees with the Commissioner on this point.

572 Three sources of evidence support the Commissioner's arguments: the diversion ratios, the documentary evidence, and the farmers' testimonies.

573 One of the factors that can be relevant when considering the likely competitive effects of a merger is the diversion ratios between the products of the merging parties. This is because such ratios can provide information regarding the closeness of competition between those products. In this case, the diversion ratios calculated by Dr. Miller demonstrate that the Virden and Moosomin Elevators are close competitors. For wheat, the diversion ratios found by Dr. Miller were 23.8% from the Moosomin Elevator to the Virden Elevator, and 36.3% to the Fairlight Elevator. Conversely, for the Virden Elevator, the diversion ratios for wheat were 16.8% to the Moosomin Elevator and 20.3% to the Fairlight Elevator. True, the highest diversion ratios from each of the two Elevators were to the Fairlight Elevator. But the diversion ratios between the Moosomin and Virden Elevators were second, reflecting the fact that the Moosomin and Virden Elevators are relatively close competitors. As will be discussed below, the Tribunal is mindful of the fact that these diversion ratios — being around 20% and far below 50% — are not objectively high, and that there is significant diversion to rival Elevators other than Moosomin, Virden, or Fairlight. However, this does not diminish the fact that, in light of these observed diversion ratios, the Acquisition removes a vigorous and effective competitor.

574 There is also ample documentary evidence of direct, head-to-head competition between the Moosomin and Virden Elevators.

575 Finally, the farmer witnesses who testified on behalf of the Commissioner — Mr. Lincoln, Mr. Pethick, and Mr. Wagstaff — all referred to the fact that they were using the two Elevators and complained about the loss of one competitive option further to the Virden Acquisition.

576 Based on all this evidence, the Tribunal finds that the Acquisition eliminates a vigorous competitor — the Virden Elevator — which was a close rival to the Moosomin Elevator. The Tribunal is satisfied that, in the absence of the Acquisition, the Virden and Moosomin Elevators would have continued to vigorously compete in the relevant markets for the foreseeable future. There is no evidence to indicate that the Virden Elevator would have ceased being a vigorous and effective competitor, but for the Acquisition.

(e) Effective remaining competitors

577 While the removal of a vigorous and effective competitor is a factor that the Tribunal may have regard to, paragraph 93(e) of the Act also directs the Tribunal to consider the "extent to which effective remaining competition remains or would remain" in a market affected by the merger. P&H maintains that there are several remaining Elevators and Crushers which will continue to discipline the Virden and Moosomin Elevators after the Acquisition, in the purchase of both wheat and canola, and that these rivals will be capable of constraining P&H's ability to exercise increased market power after the Acquisition.

578 The Tribunal agrees in part with P&H. The fact that the Moosomin and Virden Elevators went toe-to-toe on several occasions does not mean that they did not also have to go toe-to-toe with other rival Elevators located farther away. At the stage of the substantial lessening of competition, the Tribunal considers whether rivals' purchase locations (including those close to the border of the relevant geographic market) provide competition and constrain the supply/purchase locations that are within the geographic market (*VAA CT* at para 305; Hillsdownat p 330).

579 Dr. Miller and Ms. Sanderson agree that, for the purpose of analyzing anti-competitive effects and the substantial lessening of competition, the Tribunal needs to consider competitors located both inside and outside the defined relevant geographic markets in order to assess their constraining impact on the price and non-price dimensions of competition. In other words, the competitive constraints on a merged firm can come from rivals within and outside the relevant geographic markets (Consolidated Transcript, Public, at p 1831). Indeed, the number of competitors considered by Dr. Miller for his substantial lessening of competition analysis were not limited to those Elevators he had included in his narrow geographic market definition; they instead extended to 15 Elevators for wheat and, for canola, to these same 15 Elevators as well as five Crushers. In sum, Dr. Miller's merger simulation model included Elevators and Crushers that come from outside the defined geographic markets.

580 In her testimony before the Tribunal, Ms. Sanderson stated that, however the geographic market is defined, what matters for anti-competitive effects is P&H's post-merger share of purchases because this determines the competitive alternatives available to farms if P&H were to seek to reduce its purchase prices post-Acquisition. Dr. Miller and Ms. Sanderson did not dispute P&H's share of purchases. As mentioned above, post-Acquisition, the Moosomin and Virden Elevators account only for 15% of canola purchases and 26% of wheat purchases from farms within Dr. Miller's Farmer Region.

581 P&H's evidence indicates that it competes with numerous Elevators and Crushers in the purchase of wheat and canola in Dr. Miller's Farmer Region. According to P&H, its competitors for wheat include the following Elevators and grain companies: Viterra at Fairlight, Brandon, Souris East, Grenfell, Waldron, Binscarth, and Carnduff; Paterson at Binscarth and Carnduff; Richardson at Shoal Lake, Kemnay, Langenburg, Melville, Minnedosa, Estevan, and Whitewood; Ceres at Northgate; Cargill at Oakner, Nesbitt, and Elva; and G3 at Bloom and Melville (Heimbecker Statement at paras 119, 121-124). P&H adds that its competitors for canola include the following Elevators and Crushers, and grain companies: Viterra at Fairlight, Brandon, Souris East, Grenfell, Waldron, Binscarth, and Carnduff; Paterson at Binscarth and Carnduff; Richardson at Shoal Lake, Kemnay, Langenburg, Yorkton, Melville, Minnedosa, Estevan, and Whitewood; Ceres at Northgate; Cargill at Oakner, Nesbitt, and Elva; G3 at Bloom and Melville; LDC at Yorkton; ADM at Velva; and Bunge at Harrowby and Altona (Heimbecker Statement at paras 120-125).

582 According to Ms. Sanderson, there are many other Elevators and Crushers buying canola and wheat from farms in Dr. Miller's Farmer Region. As indicated in Ms. Sanderson's expert report, 11 rival Elevators and Crushers are buying more canola than does the Moosomin Elevator (Ms. Sanderson Report at Figure 24; Ms. Sanderson Slides at pp 77-78). And Viterra's Fairlight Elevator and Bunge's Harrowby Crusher also purchase more canola than the Virden Elevator. For wheat, while the Virden, Moosomin, and Fairlight Elevators are the largest purchasers of wheat, six rival Elevators each have at least a 5% share of total wheat purchases (Ms. Sanderson Report at Figure 25; Ms. Sanderson Slides at pp 79-80).

583 P&H further submits that internal business documents from both its records and LDC's records further show that each of the Moosomin and Virden Elevators compete with and track prices of many other Elevators beyond Moosomin, Virden, and Fairlight (Ms. Sanderson Report at paras 81-82). In her evidence, Ms. Sanderson referred to numerous contemporaneous business documents from P&H and LDC where they referred to competitor pricing, such as Viterra at Carnduff, or Richardson at Whitewood.

584 Ms. Sanderson's analysis of P&H's documents and LDC's Producer Reports showed that individual price negotiations are relatively infrequent, echoing the evidence demonstrating that about [text omitted] of P&H's transactions are at posted prices. In her analysis of those instances where price negotiations actually occurred, Ms. Sanderson found that 72 of the 213 reports referring to negotiations at the Virden Elevator identified farms using rival Elevator prices in a negotiation: only six of those 72 mentioned the Moosomin Elevator, and 27 mentioned Viterra's Fairlight Elevator. Other rival grain companies identified in the reports included G3 (13 times), Cargill (11 times), and Richardson (eight times). Conversely, 17 reports referring to negotiations at the Moosomin Elevator identified farms using rival Elevator prices in a negotiation: five of those mentioned Virden, and the Fairlight Elevator appeared 12 times (Ms. Sanderson Report at paras 116-117, Figures 35a — 35b; Ms. Sanderson Slides at p 88). This evidence, says P&H, reflects the presence of other remaining Elevators and Crushers constraining P&H's pricing behaviour.

585 Turning to the diversion ratios found by Dr. Miller, Ms. Sanderson advises that, for wheat, they show that 40% of the sales diverted from the Moosomin Elevator would go to rival Elevators other than Virden or Fairlight. For the Virden Elevator, 63% of the diverted sales of wheat from the Virden Elevator would go to Elevators other than Moosomin or Fairlight. In the case of canola, these percentages are higher: 65% of the sales diverted from the Moosomin Elevator would go to rival Elevators and Crushers other than the Virden or Fairlight Elevators, and 77% of the sales diverted from the Virden Elevator would be absorbed by Elevators and Crushers other than the Moosomin or Fairlight Elevators (Dr. Miller Report at Exhibit 11; Ms. Sanderson Report at Figure 50). The Tribunal agrees with Ms. Sanderson that these diversion ratios to rival Elevators other than Moosomin, Virden, or Fairlight are not insignificant, with several other Elevators and Crushers having diversion ratios for canola that are similar or higher than those calculated between the Moosomin and Virden Elevators (Ms. Sanderson Report at Figure 47). For wheat, diversion ratios from one of the Moosomin or Virden Elevators exceed 10% to the Fairlight (Viterra), Whitewood (Richardson), Souris East (Viterra), and Oakner (Cargill) Elevators (Ms. Sanderson Report at Figure 48).

586 Distance (and hence trucking costs) between individual farms and Elevators was included in Dr. Miller's farm choice model, which found that the Virden and Moosomin Elevators would lose a significant portion of their wheat or canola sales to rival Elevators other than Moosomin, Virden, and Fairlight.

587 According to Ms. Sanderson, the relatively small price variations predicted by Dr. Miller's merger simulation model reflect the relatively low diversion ratios between the Moosomin and Virden Elevators, compared to the diversion ratios to rival Elevators and Crushers (Ms. Sanderson Slides at p 5). P&H submits that the diversion ratios support a finding that P&H also faces competition from several rival Elevators and Crushers.

588 The evidence from the farmer witnesses also suggests that farmers have numerous alternatives to which they sell their grain, and to which they could sell more, should P&H attempt to reduce its purchase prices for wheat or canola (Ms. Sanderson Report at paras 12-13). Any farm located within the draw areas of the Moosomin and Virden Elevators has at least six other Elevators or Crushers available to it, should it not want to sell its grain to P&H, if the price offered price at those other locations was attractive. According to P&H, the evidence establishes that all farmers in the Commissioner's relevant geographic

market and in the Commissioner's corridor of concern within that geographic market, including each of the farmer witnesses, consistently sell to numerous Elevators and Crushers beyond the Virden, Moosomin, and Fairlight Elevators. P&H also argued that the evidence also establishes that the farmers could easily switch to other Elevators and Crushers without negative financial impact on them in the event that P&H were to attempt to pay them less for their wheat or canola (P&H Read-In at pp 26-27, 52-54, 61-67, 77, 551, 553 — 556, 558).

589 The three farmer witnesses called by the Commissioner (*i.e.*, Mr. Lincoln, Mr. Wagstaff, and Mr. Pethick) have sold their grain to Elevators located farther away when offered an acceptable price from more distant Elevators. Farmer witnesses further confirmed in their testimony that while transportation costs are important to farmers in deciding between competing Elevators and/or Crushers, they do not preclude sales of grain to competing alternatives available to farmers at a greater distance. This is so because rival Elevators and Crushers offer posted Cash Prices that are high enough to cover farmers' hauling costs and make it worthwhile for them to sell to those Elevators and Crushers (Exhibit P-R-14, Witness Statement of Mr. Edward Paull, at para 25; Exhibit P-R-077, Witness Statement of Mr. Kristjan Hebert, at para 26; Exhibit P-R-095, Witness Statement of Mr. Timothy Duncan, at para 21).

590 In light of the foregoing, the Tribunal agrees that there are some effective remaining competitors able to constrain P&H's attempt to increase its market power further by the Virden Acquisition. The more difficult question is to identify how many there is and who they are. The Tribunal is not persuaded that all rival Elevators and Crushers singled out by P&H remain, and are likely to remain, effective competitors post-Acquisition. All competitors are not equal, even if they purchase some grain from the farms located in Dr. Miller's Farmer Region.

591 In the Tribunal's view, the effective remaining competitors certainly include those Elevators and Crushers forming part of the relevant geographic markets accepted by the Tribunal. For wheat, these competitors are the following Elevators (and grain companies): Fairlight (Viterra), Oakner (Cargill), Whitewood (Richardson), Elva (Cargill), and Shoal Lake (Richardson). For canola, this effective remaining competition includes several Elevators — namely, Fairlight (Viterra), Oakner (Cargill), Whitewood (Richardson), Brandon (Richardson), Melville (G3), Souris East (Viterra), Shoal Lake (Richardson), and Elva (Cargill) — as well as four Crushers — namely, Harrowby (Bunge), Yorkton (LDC), Velva (ADM), and Yorkton (Richardson). The Tribunal observes that these competing Elevators and Crushers are all operated by major grain companies that purchase wheat and canola in competition with P&H throughout Western Canada, including Viterra and Richardson, the two largest. They also include most of the Elevators and Crushers having the higher diversion ratios discussed above, as well as all the rivals which buy more canola than the Virden or Moosomin Elevators and four out of the six Elevators having at least a 5% share of total purchases of wheat.

592 One notable exception is the Viterra Elevator in Souris East, which is not part of the relevant geographic market for wheat despite its high diversion ratio from the Virden Elevator (*i.e.*, 12.9%) and its 5.3% share of total wheat purchases. The Tribunal is of the view that, in light of this evidence, this rival Elevator can be considered as an effective remaining competitor in wheat even though it is not part of the relevant geographic market.

593 With respect to other competing Elevators and Crushers located outside the relevant geographic markets identified in these Reasons, the Tribunal accepts that, from time to time, they are purchasing grain from farms located in Dr. Miller's Farmer Region. However, the Tribunal does not find that, on a balance of probabilities, they can be qualified as "effective" remaining competitors able to constrain P&H post-Acquisition.

594 In sum, the Tribunal agrees with P&H that there is and will be several remaining effective competitors in the relevant markets for the purchase of wheat and canola. On a balance of probabilities, there are competitors remaining that are able to discipline P&H's attempts to exercise market power.

(f) Fairlight Elevator

595 The Commissioner claims that, while the Fairlight Elevator will remain as an effective competitor, it is not sufficient to constrain the exercise of market power by P&H post-Acquisition.

596 According to the Commissioner, the simple way to demonstrate this is through Dr. Miller's quantitative evidence. There is also qualitative evidence to support this quantitative evidence: the Virden and Moosomin Elevators are both on the Trans-Canada Highway, while the Fairlight Elevator is located approximately 35 kilometers away down a secondary road. This secondary road is subject to weight restrictions in the spring. Mr. Wagstaff testified that, contrary to the Trans-Canada Highway where one can drive at an average speed, going up highway 41 or down road no. 8 to get to the Fairlight Elevator is more difficult, as the road conditions are worse, and it takes longer to haul the grain.

597 The Tribunal accepts that, in and of itself, the presence of the Fairlight Elevator may not be enough to constrain the exercise of increased market power by P&H post-Acquisition. However, the Tribunal nonetheless observes that the Fairlight Elevator is a very important competitive constraint that will remain after the merger given its market shares and the evidence of diversion ratios. In the geographic market for wheat, the Fairlight Elevator would have the highest market share after the Moosomin-Virden combination. In the geographic market for canola, it would have the second highest market share after the Crusher in Harrowby and Moosomin-Virden. Moreover, the Fairlight Elevator's diversion ratios (at 20.3% and 36.3%) are respectively higher than the Moosomin Elevator (16.8%) and Virden Elevator (23.8%) for diversion of wheat from the Virden Elevator and the Moosomin Elevator. It is also true for canola: the Fairlight Elevator's diversion ratios (at 17.2% and 22.2%) are respectively higher than those of the Moosomin Elevator (5.3%) and the Virden Elevator (13.1%) for diversion of wheat from the Virden Elevator and the Moosomin Elevator.

598 For those reasons, the Tribunal is of the view that the Fairlight Elevator is a significant competitor that, on the evidence, cannot be qualified as being less effective than other remaining Elevators and Crushers.

(g) Moosomin expansion

599 The Commissioner contends that P&H's decision not to expand the Moosomin Elevator's rail capacity is another reflection of the anti-competitive effects caused by the Virden Acquisition. Prior to the Acquisition, P&H had planned to expand railcar access at the Moosomin Elevator, allowing it to load up 112 railcars at once, instead of its current limit of 56. This expansion would have allowed the Moosomin Elevator to access lower bulk rates on its freight, and to be more competitive.

600 Considering the evidence provided by Mr. Heimbecker on the reasons for the delayed expansion at the Moosomin Elevator, the Tribunal is not persuaded by the Commissioner's arguments. In sum, there is no clear and convincing evidence supporting the Commissioner's assertion that the delay in expansion is or could likely be the result of the Virden Acquisition.

601 The evidence before the Tribunal shows that in July 2019, P&H made the decision not to expand rail capacity at the Moosomin Elevator as initially planned before LDC solicited P&H to buy its 10 Elevators, including the Virden Elevator. Mr. Heimbecker further testified that later in 2019, P&H decided to postpone all capital expenditures, including the Moosomin Elevator expansion, for a period of one year, as a matter of prudent financial management, in light of the fact that P&H would be spending more than [text omitted] to purchase the LDC Elevators (Heimbecker Statement at para 138, Exhibit 34). Mr. Heimbecker further confirmed in his testimony that, subject to the outcome of this Application (as a result of which P&H could potentially be ordered to divest the Moosomin Elevator), the P&H Board is expected to approve the 112-car spot expansion at the Moosomin Elevator.

602 The Tribunal accepts Mr. Heimbecker's evidence on that point, which has not been contradicted. The Tribunal does not dispute that if the Moosomin Elevator's rail capacity had been expanded, the Moosomin Elevator would have been a more vigorous competitor. But the evidence before the Tribunal does not allow it to conclude that the delayed Moosomin expansion can be attributed to the Virden Acquisition.

603 This is therefore not a factor supporting the Commissioner's claim of a substantial lessening of competition caused by the Virden Acquisition.

(h) Barriers to entry and expansion

604 In assessing whether competition is or is likely to be substantially lessened by a merger, an important factor to consider is whether entry or expansion into the relevant market likely is or likely would be substantially faster, more frequent, or more significant "but for" the merger (*TREB CT* at para 505). This factor is specifically mentioned at paragraph 93(d) of the Act. As previously noted by the Tribunal, "[t]he conditions of entry into a relevant market can be a decisive factor in the Tribunal's assessment of whether a merger is likely to prevent or lessen competition substantially" (*Tervita CT* at para 216).

605 In assessing whether new entry into, or expansion within, a relevant market can be relied upon to conclude that a substantial lessening of competition is likely to occur, the Tribunal will consider whether such entry or expansion will be timely, likely, and sufficient (*Tervita CT* at para 217). For a new entry to be timely, the assessment is not limited to the actual construction time. The period starts when firms begin considering sites and go through the regulatory approval process.

606 According to the Commissioner, entry or expansion by competitors into the relevant markets is unlikely to occur in a timely and sufficient way because barriers to entry and expansion are high in the grain industry. They include capital costs of CAD $40-50 million to construct an Elevator, as well as having to find a location where there is sufficient demand and a suitable site permitting adequate rail and road access. A potential entrant would further take more than two years to build an Elevator, says the Commissioner.

607 P&H responds that, in terms of entry, there is evidence that at least 20 new high throughput Elevators have been built in Western Canada since 2015, including 10 Elevators by G3, two Elevators by P&H, one by Ceres, and four by GrainsConnect. P&H adds that G3 also has three additional Elevators currently under construction.

608 For the reasons detailed below, the Tribunal finds that the Commissioner has provided credible and persuasive evidence confirming that barriers to entry and expansion are high. This evidence came from G3 and from P&H itself.

609 Mr. Malkoske of G3 testified that, based on his experience with G3's Vermillion site, the total costs to build a new Elevator are approximately [text omitted] (Exhibits P-A-047 and CB-A-048, Witness Statement of Mr. Brett Malkoske, at para 8). He also stated that it typically takes between [text omitted] months from deciding to construct an Elevator to commencing operations.

610 The evidence of G3 was corroborated by P&H's own evidence.

611 When building a new Elevator in Dugald, Manitoba, P&H considered sites in June 2018 and, going through the permit process, regulatory approvals, and construction, it expected the Elevator to be completed in [text omitted], approximately [text omitted] months after its initial consideration. P&H further estimated the cost of building a new Elevator to be in the range of [text omitted] to [text omitted].

612 The Tribunal notes P&H's evidence on its experience that a motivated competitor wishing to construct greenfield Elevators could build a new Elevator in the Virden/Moosomin area in approximately 18 months. However, the Tribunal is not convinced by the general statement of Mr. Heimbecker on this point, in light of the other specific evidence on the record, referring to actual experiences by both G3 and P&H itself in building new Elevators over a much longer timeframe.

613 As a result, the Tribunal is satisfied that there is clear and convincing evidence to support the conclusion that entry or expansion is not likely to occur on a sufficient scale or scope within the next two years and that new entrants are not sufficient to have a material impact on the price and non-price dimensions of competition in the purchase of wheat and canola. Having regard to the foregoing evidence, the Tribunal finds that there are significant barriers to entry into the purchase of wheat and canola. Entry and expansion within the relevant markets is not likely to be sufficient to ensure that the Virden Acquisition does not and will not likely lessen competition substantially, and to prevent P&H from imposing and sustaining decreased prices for its purchase of wheat and canola.

(i) Excess capacity

614 At the Elevator level, the general issue of entry and expansion entails considering the potential of adding capacity through new entry, the possibility of expanding existing capacity, and the existence of excess capacity that already lies dormant in the industry.

615 In his submissions, the Commissioner addresses the first two elements — namely, entry and expansion — but not the last one, excess capacity.

616 P&H claims that the presence of significant excess capacity is and will remain a constraining factor on P&H after the Virden Acquisition. In paragraphs 141 to 147 and 152 of his witness statement, Mr. Heimbecker discussed the maximum observed throughput and actual throughput at P&H and other Elevators in the grain industry. Using publicly available CGC data (Heimbecker Statement at Exhibit 35), Mr. Heimbecker prepared a table setting out the average amount of grain purchased and shipped annually by each of P&H's rival Elevators over a five-year period between the 2014-2015 and 2018-2019 crop years. The table also provided information on each of the Elevators' maximum annual throughput in that five-year period and their average and best turn rates (Heimbecker Statement at paras 143-145).

617 Summing their individual maximum annual throughputs, Mr. Heimbecker testified that the aggregate maximum "capacity" of competing Elevators (*i.e.*, Elevators other than Moosomin and Virden) is at least 4,562,400 MT. In comparison, the five-year average of total throughput of these Elevators was 3,570,700 MT (Heimbecker Statement at para 146). A comparison of these two figures led Mr. Heimbecker to conclude that these rival Elevators are capable of handling at least 991,700 MT more than their average throughput over the five-year period. In his witness statement, Mr. Heimbecker also addressed the rail shipping capacity, at paragraphs 148 to 151, and concluded that the unused car spot capacity added up to 4,765,200 MT.

618 In a preliminary motion objecting to some paragraphs of the Heimbecker Statement, the Commissioner submitted that Mr. Heimbecker cannot opine as to what rival Elevators can do and took exception with Mr. Heimbecker's statements that rival Elevators "could easily increase their purchases of wheat and canola from farms in the Virden/Moosomin area" or "add significant grain purchasing capacity," made at paragraphs 141 and 152 of the Heimbecker Statement.

619 In a decision issued in December 2020, the Tribunal agreed with P&H that those paragraphs on average throughput and capacity generally described Mr. Heimbecker's observations and perceptions from data published by the CGC showing the volume of grain that P&H and rival Elevators purchased and shipped (i.e., their effective and maximum throughput) in the five-year period between the 2014-2015 and 2018-2019 crop years (*Parrish & Heimbecker* at paras 25-30). The Tribunal was satisfied that the statements on the actual measures of capacity and throughput generally reflected Mr. Heimbecker's own observation of data and amounted to simple arithmetical calculations required to establish averages, totals, and differences regarding maximum throughput at Elevators within a five year span. Given his long experience in the grain industry, the Tribunal noted that Mr. Heimbecker was well positioned to assist the Tribunal in this regard. However, the Tribunal held that Mr. Heimbecker was not qualified to form conclusions as to what the rival Elevators would do with their alleged excess capacity. Extrapolating from the throughput data to what rival Elevators could do in their businesses and to their future conduct in terms of purchases of wheat and canola are inferences or conclusions that could be done by experts or argued by counsel, and which will ultimately be for the Tribunal to determine. The Tribunal therefore struck certain passages of the Heimbecker Statement as inadmissible lay opinion evidence.

620 Mr. Heimbecker's evidence on throughput and excess capacity calculations was not contradicted. The Tribunal, however, observes that no evidence has been provided regarding what other Elevators not owned by P&H could or would do with their excess throughput capacity or railcar capacity, and how it could or would translate in terms of their purchases of wheat and canola.

621 In their testimonies, Mr. McQueen from Viterra and Mr. Wildeman from Ceres confirmed the nature of the data and information reported to the CGC regarding Elevators' throughput, which was used by Mr. Heimbecker for his calculations.

622 The Commissioner did not adduce (or obtain) any evidence as to excess capacity nor did he challenge the evidence put forward by P&H in this regard.

623 The Tribunal is not satisfied that the arithmetic calculation presented by Mr. Heimbecker can qualify as a true measurement of excess capacity. Mr. Heimbecker's calculations provide no reference to grain volumes produced during each crop year corresponding to the grain purchased and shipped for that year, as well as to the grain companies' ability to ship and sell those volumes. Nor do they provide a clear understanding of the supply chain capacity and fluidity impacting Elevators' throughput with respect to ships availability, and the capacities of export terminals, Elevators, ports, and rail networks.

624 In previous decisions, the Tribunal has considered excess capacity in its substantial lessening of competition analysis and when considering market power at the market definition stage (see, for example, Hillsdown, at pp 318-321). In *Hillsdown*, the Tribunal noted that if rival firms in a market have excess capacity, they "can respond to a supra-competitive price rise by flooding the market at a lower price level" (Hillsdownat p 318). As a result, "the best question to ask when assessing market power, in some circumstances, is whether the respondents' [merging parties'] current competitors have capacity available to service what otherwise would be the merged firm's customers" (Hillsdownat p 318).

625 The Tribunal in *Hillsdown* considered evidence about the excess capacity of several specific rivals and the merged firm's own excess capacity. At page 320, the Tribunal concluded that in the industry, it was fairly easy for renderers to increase their capacity or, in the case of multi-plant firms, to shift renderable material among different plants to open up capacity at a given plant when it was needed. The Tribunal also found that there appeared to be significant excess capacity in the industry generally, and that the merged firm was not capacity-constrained. The excess capacity of firms both inside and outside the relevant market would provide a degree of competitive pressure on the merged firm and restrain to a considerable degree its ability to raise prices (Hillsdownat p 321).

626 In the present case, the Tribunal accepts that, at an industry level, the Elevators are likely able to move more grain as suggested by Mr. Heimbecker's evidence and to transport it by rail to ports. However, the Tribunal cannot place much weight on this general finding in its substantial lessening of competition assessment. An assessment of excess capacity in the grain industry would have had to consider many additional factors and evidence that is not before the Tribunal. For instance, in the Tribunal's view, there is insufficient evidence about the excess capacity of specific rival Elevators close to the Moosomin and Virden Elevators — namely, how the owners of those rival Elevators could adjust their local grain inventories and rail capacities at different points in the crop year to respond to lower grain purchase prices offered to farmers at those two P&H Elevators. In the absence of additional factual evidence (*e.g.*, from rival Elevator owners) or expert evidence about the industry that assessed capacity issues in more detail, the Tribunal can reach no firm conclusion on the impact of any excess throughput capacity on the intensity of rivalry after the Transaction, or on the ability of P&H to decrease prices for wheat and canola.

(j) Other factors

627 Paragraph 93(h) of the Act also allows the Tribunal to take any other relevant factor in consideration in its assessment of the substantial lessening of competition. The Tribunal is aware that, following the most recent amendments to the Act entered into force after the hearing of this Application, the Act specifically recognizes, at paragraph 93(g.3), that the Tribunal may have regard to any effect of a merger on "price and non-price competition, including quality, choice or consumer privacy."

628 In this case, the non-price effects alleged by the Commissioner are very limited. More specifically, there is no issue of change and innovation being affected by the Virden Acquisition (see paragraph 93(g)).

629 In his final submissions, the Commissioner argued that the evidence also supports the existence of non-price competition. He referred to evidence from Mr. Pethick stating that the ability of an Elevator to accept grain during harvest is important to him (Pethick Statement at para 13). He also mentioned that the ability of an Elevator to quickly and efficiently receive grain, and its capacity to do so, is an aspect of non-price competition that the Tribunal should consider. The Commissioner however added that, while these aspects of competition are not necessarily reflected in the Elevator's posted price, they "ultimately all are reflected in the price paid to the farmers by the Elevator" (Commissioner's Closing Submissions at para 44).

630 The non-price effects alleged by the Commissioner thus appear to be reflected in the transaction data and in the Cash Prices ultimately charged to the farmers by P&H and other Elevators for their wheat and canola. They are part of the price effects on which the Commissioner has focused in his submissions and in the evidence he presented.

631 The Tribunal therefore determines that there is no clear and convincing evidence of separate non-price factors demonstrating, in and of themselves, a lessening of competition, let alone a substantial one.

(k) Magnitude, duration, and scope of the anti-competitive effects

632 Having regard to all of the foregoing, the Tribunal concludes that, "but for" the Virden Acquisition, there are and will likely be some fairly limited adverse effects on competition in the purchase of wheat in the relevant markets, and virtually no proven effects in the purchase of canola. More specifically, there is not, and would likely not be, any new entry or expansion; there is, or likely would be, some very minor price decreases in the amount paid to farmers for their wheat; the Acquisition removes a close competitor to P&H's Moosomin Elevator, as the Virden Elevator provided vigorous and effective competition; and there is also evidence of some pre-existing market power held by P&H. However, those anti-competitive effects are far less than what the Commissioner alleged.

633 The Tribunal finds that the price effects, whether they are measured in relative or absolute terms, are minimal and immaterial in the circumstances, for both wheat and canola. Moreover, there will be several remaining effective rival Elevators and Crushers to compete with the Virden and Moosomin Elevators, and this situation is unlikely to change for the foreseeable future. In addition, the post-merger market shares of P&H would be far below the safe harbour threshold in the 2011 MEGs for purchases of canola; for wheat, the market shares are more likely than not to be slightly lower than the 35% safe harbour. Finally, the postponement of the Moosomin expansion cannot be attributed to the Virden Acquisition, and there appears to be some varying capacity at rival Elevators though the evidence does not allow the Tribunal to assess its constraining impact on P&H.

634 The Tribunal must now determine whether the limited anti-competitive effects attributable to the Virden Acquisition and identified above, taken together, rise to the level of substantiality required by section 92. Further to its assessment of all the evidence before it, and notably the immaterial price effects resulting from the Virden Acquisition, the Tribunal finds that this is not the case. In particular, the Tribunal puts significant weight on the evidence showing an absence of any material price effects resulting from the Virden Acquisition, in the purchase of both wheat and canola, and the continuing presence of several effective remaining competitors in the markets. In brief, the aggregate impact of the limited anti-competitive effects that have been demonstrated to result from the Virden Acquisition does not constitute an actual or likely substantial lessening of competition in the relevant markets.

635 Stated differently, the Tribunal is not persuaded that the evidence regarding the absence of likelihood of additional entry and expansion, the minimal predicted price variations, and the loss of the Virden Elevator as a competitor are sufficient, cumulatively, to enable the Commissioner to discharge his burden under section 92, even in a context where P&H has some pre-existing market power. Without a link between, on the one hand, such evidence and, on the other hand, some material impact on the price or non-price dimensions of competition in a material part of the relevant markets (*Tervita FCA* at para 108), the Commissioner's evidence falls short of the mark. In this regard, when measured against factors such as the immaterial price variations, the effective competitors remaining, and the post-merger market shares below the 35% safe harbour threshold, the Tribunal agrees with P&H that the Commissioner's evidence does not provide clear and compelling evidence that there is, or would likely be, materially lower price or non-price competition "but for" the Acquisition.

636 Regarding scope, the Tribunal typically considers whether the merged entity would likely have the ability to impose the anti-competitive effects in a material part of the relevant market, or in respect of a material volume of sales. The evidence relied on by the Commissioner does not establish that it does.

637 The Tribunal looked more specifically at the evidence regarding farmers located in the corridor of concern, arguably the most affected by the Virden Acquisition as a vast majority of them sell their wheat and canola exclusively to the Virden, Moosomin, and Fairlight Elevators. However, as mentioned above, there was an absence of quantitative and qualitative evidence

regarding the predicted price changes in that specific part of the relevant geographic markets for the purchase of wheat and canola. Similarly, the Commissioner has not presented compelling evidence regarding the particular effects that the removal of the Virden Elevator as a vigorous and effective competitor would have in the corridor of concern. There is therefore insufficient quantitative and qualitative evidence to allow the Tribunal to determine the degree to which the price and non-price effects resulting from the Virden Acquisition would be different for the farmers located in the corridor of concern.

(4) Conclusion on substantial lessening of competition

638 In light of all of the foregoing, the Tribunal is not satisfied that the anti-competitive effects that could be attributable to the Virden Acquisition are, individually or in the aggregate, "substantial" as required by section 92 of the Act. The evidence does not allow the Tribunal to conclude that the Virden Acquisition has adversely affected or is adversely affecting price or non-price competition in the relevant markets, to a degree that is material, or that it is likely to do so in the future. True, the Virden Acquisition allows and is likely to allow P&H to increase its market power in the purchase of wheat; but the evidence does not support a finding that, on a balance of probabilities, it allows P&H to be able to exercise materially greater market power than in the absence of the merger. The Tribunal therefore concludes that the Commissioner has not demonstrated, on a balance of probabilities and with clear and convincing evidence, that the requirements of section 92 are met and that "but for" the Virden Acquisition, purchase prices paid by P&H for wheat and canola are or would likely be materially lower in the relevant markets, or that there are or would likely be materially greater non-price competition in those markets.

D. If the Commissioner has established that the Virden Acquisition lessens, or is likely to lessen, competition substantially, what is the remedy to be ordered?

639 Given the Tribunal's conclusion that the Virden Acquisition does not lessen, and is not likely to lessen, competition substantially in any relevant market, there is no remedy to be ordered.

E. Has P&H established, on a balance of probabilities, that the gains in efficiency will be greater than, and will likely offset, the effects of any lessening of competition pursuant to section 96 of the Act?

640 In light of the Tribunal's findings on the substantial lessening of competition, and since there will be no remedial order under section 92 of the Act, the Tribunal does not need to determine the issue of efficiencies claimed by P&H under section 96. However, considering the extensive submissions made by the parties on the issue of efficiencies and the nature of the issues raised, the Tribunal will address the matter.

(1) Analytical framework

641 The section 96 efficiencies defence is an exception to the application of section 92. It "prohibits the Tribunal from making an order precluding a merger when it finds that the merger is likely to bring about gains in efficiency that would be greater than and would offset the anti-competitive effects of the merger" (*Tervita SCC* at para 17).

(a) The statutory language

642 In the current case, P&H relies on both the general language of section 96 and the more specific provisions of subsection 96(2) to support its efficiency claims. Each will be discussed in turn.

(i) Section 96

643 Section 96 of the Act is reproduced in Schedule "A" to these Reasons. Subsection 96(1) provides in relevant part that the Tribunal shall not make an order under section 92 if it finds that the merger in respect of which the application is made has "brought about or is likely to bring about gains in efficiency that will be greater than, and will offset, the effects of any [...] lessening of competition that will result or is likely to result from the merger [...] and that the gains in efficiency would not likely be attained if the order were made." Subsection 96(3) further instructs the Tribunal not to find that a merger or proposed merger has brought about or is likely to bring about gains in efficiency "by reason only of a redistribution of income between two or more persons."

644 The analysis mandated by subsection 96(1) has three components: 1) an assessment of the anti-competitive effects of any lessening or prevention of competition resulting or likely to result from the merger; 2) an assessment of the gains in efficiency brought about or likely to be brought about by the merger, and that would not likely be attained if the contemplated remedial order is made by the Tribunal; and 3) a trade-off analysis (or balancing test) to determine whether the assessed gains in efficiency will be greater than, and will offset, the assessed anti-competitive effects. The analyses of anti-competitive effects and efficiencies analyses are both forward-looking estimations and are therefore associated with varying degrees of uncertainty.

645 In *Tervita SCC* and *Tervita CT*, the SCC and the Tribunal provided important guidance on the three elements of section 96.

• *Anti-competitive effects*

646 For the purpose of the efficiencies defence and section 96, the anti-competitive effects include all effects of "any" lessening of competition, as long they result or are likely to result from the merger in respect of which the application is made.

647 Anti-competitive effects include the likelihood of price increases, but they are not confined to such resource allocation effects, as the exercise of market power can manifest itself in ways other than an increase in price. Under both sections 92 and 96 of the Act, the anti-competitive effects encompass all relevant price and non-price effects that are likely to arise from a merger, including the following: negative effects on allocative, productive, and dynamic efficiency; redistributive effects; and effects on service, quality, and product choice (2011 MEGs at paras 12.21-12.22).

648 The main anti-competitive effect considered under section 96 is the DWL associated with a likely increase in price. The DWL represents the loss of allocative efficiency and reflects the reduction in total consumer and producer surplus within Canada resulting from a merger. As the SCC stated in *Tervita SCC*, the "total surplus standard involves quantifying the DWL which will result from a merger — 'the amount by which total surplus is reduced under certain market conditions that reduce the quantity of a good that is supplied' (*Facey and Brown* at pp 256-57)" (*Tervita SCC* at para 94). The DWL "results from the fall in demand for the merged entities' products following a post-merger increase in price, and the inefficient allocation of resources that occurs when, as prices rise, consumers purchase a less suitable substitute" (Canada (Commissioner of Competition) v Superior Propane Inc, 2003 FCA 53 (" at para 13). Estimates of the elasticity of demand (*i.e.*, the degree to which demand for a product varies with its price) are necessary to calculate the DWL (*Tervita CT* at para 244). Put differently, a price increase or decrease is not enough to determine the extent of the DWL, if there is no evidence on the price elasticity of demand (*Tervita SCC* at paras 132-133; *Tervita FCA* at para 124).

649 The focus of this DWL approach is on the magnitude of the total surplus. The degree to which total surplus is allocated between producers and consumers is not considered. In other words, the total surplus standard measures the total benefit flowing to the economy and is not concerned with whom the benefits flow to (*Tervita SCC* at para 95; *Superior Propane IV* at para 16).

650 A lessening or prevention of competition resulting from a merger can also lead to non-price effects in the form of a reduction in service, quality, product choice, incentives to innovate, or other dimensions of competition that customers value. While some indicators of quality may be translatable into dollar terms by making use of available statistical or survey data, others may not be expressible in that way. As such, it is not always possible to translate anti-competitive effects related to non-price factors into consumer or producer welfare terms, as can be more easily done with price effects.

651 Anti-competitive effects covered by both sections 92 and 96 are therefore not strictly limited to reductions in price and to the quantified or quantifiable DWL. They may also include unquantifiable non-price effects such as: reduction in service, quality, and product choice; loss of productive efficiency; and loss of dynamic efficiency (2011 MEGs at paras 12.29-12.31). If a non-price anti-competitive effect is not reasonably measurable, it may be assessed using qualitative evidence. The SCC recognized it in *Tervita SCC*, when it noted that "qualitative elements of a merger, including in some cases such things as better or worse service or lower or higher quality, may not be measurable as they are dependent on individual preferences in the market" (*Tervita SCC* at para 100, citing *Superior Propane I* at paras 459-460).

652 This qualitative assessment of anti-competitive effects may only be resorted to where such effects are not quantifiable: "[q]ualitative anti-competitive effects, including lessening of service or quality reduction, are only assessed on a subjective basis because this analysis involves a weighing of considerations that cannot be quantified because they have no common unit of measure (that is, they are "incommensurable")" (*Tervita SCC* at para 125). However, quantifiable effects which the Commissioner failed to quantify cannot be resurrected as qualitative effects (*Tervita SCC* at para 100). Anti-competitive effects should be quantified wherever reasonably possible, and the weight given to unquantifiable qualitative effects must be reasonable (*Tervita FCA* at para 148).

653 In some circumstances, the anti-competitive effects to be assessed under section 96 may further include redistributive effects, namely, wealth transfers from buyers to sellers which amount to a social loss. These are commonly referred to as a "socially adverse wealth transfer."

654 It may happen that the Tribunal finds a substantial lessening of competition under section 92, but no anti-competitive effects under section 96, as was the case in the *Tervita* matter, a situation characterized by Justice Rothstein as a "paradoxical" result (*Tervita SCC* at para 166). Depending on the evidence available, the statutory scheme under sections 92 and 96 does not bar a finding of likely substantial lessening or prevention of competition where there has been a failure to quantify the DWL. But the test under section 96 does require that quantifiable anti-competitive effects be quantified in order to be considered under the efficiencies defence. In *Tervita SCC*, the SCC determined that the failure to quantify the DWL barred consideration, under section 96, of the quantifiable effects that supported a finding of likely substantial prevention of competition under section 92.

• *Cognizable efficiencies*

655 With respect to efficiencies, section 96 provides that, to be recognized and be qualified as "cognizable," efficiencies must meet three different requirements. First, the gains in efficiency must be brought, or be likely to be brought, by "the merger or proposed merger in respect of which the application is made" (subsection 96(1)). Second, the gains in efficiency would not likely be attained if the order contemplated by the Tribunal to remedy the substantial lessening or prevention of competition were made. Third, the gains in efficiency must not result "by reason only of a redistribution of income between two or more persons" (subsection 96(3)).

656 As is the case for anti-competitive effects, cognizable efficiencies include both efficiencies that can reasonably be quantified as well as those that cannot reasonably be quantified and are therefore qualitative. Since it must be "likely" that the claimed gains in efficiency are achieved because of the merger, there must be evidence of the claimed savings and of the implementation process leading to the materialization of the claimed efficiencies (*Superior Propane I* at paras 347 - 348). As stated in the 2011 MEGs, "the parties must be able to validate efficiency claims to allow the Bureau to ascertain the nature, magnitude, likelihood and timeliness of the asserted gains, and to credit (or not) the basis on which the claims are being made" (2011 MEGs at para 12.3).

657 In *Tervita CT*, the Tribunal adopted five screens to standardize the methodology used to eliminate efficiencies that are not cognizable under subsections 96(1) and 96(3) (*Tervita CT* at paras 261-264). Those screens may be summarized as follows:

1. The claimed gains in efficiency must involve a type of productive or dynamic efficiency or be likely to result in an increase in allocative efficiency (*Tervita SCC* at para 102; *Tervita CT* at para 262).

2. The claimed gains in efficiency must *likely* be brought about by the merger (*Tervita SCC* at para 113; *Tervita CT* at para 262).

3. The claimed gains in efficiency must not be brought about by reason only of a redistribution of income, or amount to a simple wealth transfer between organizations in Canada. This screen serves to discard savings that result solely from a reduction in output, service, quality or product choice, reductions in taxes, and savings from increased bargaining leverage (*Tervita CT* at para 262).

4. The claimed gains in efficiency must not be achieved outside Canada and must instead flow back to Canadian shareholders. Under this fourth screen, savings from operations in Canada that would flow through to foreign shareholders are eliminated (*Tervita CT* at para 262).

5. The claimed gains in efficiency must not (a) be attainable through alternative means even if the Tribunal were to make an order to eliminate the substantial prevention or lessening of competition, or (b) be achievable through the merger even if the remedial order were made (*Tervita CT* at para 264). In sum, the gains in efficiency are evaluated in light of the order contemplated by the Tribunal (*Commissioner of Competition v* Superior Propane Inc, 2002 Comp Trib 16 (" at para 149), and gains that would have occurred irrespective of the merger are not cognizable (*Hillsdown* at p 83).

658 Implicit in these five screens is that, in order to be cognizable under section 96, the claimed gains in efficiency must accrue to the benefit of society — that is, to the Canadian economy (*Tervita SCC* at para 102; *Tervita CT* at para 262; *Superior Propane III* at para 196; *Superior Propane I* at paras 412-413, 429-430).

• *Trade-off analysis or balancing test*

659 Turning to the trade-off analysis, the SCC held that the requirement in section 96 according to which the efficiency gains must be "greater than" and "offset" the anti-competitive effects imports a weighing and balancing of both quantitative and qualitative aspects of the merger. The term "greater than" suggests a numerical comparison of the magnitude of the efficiencies versus the extent of the anti-competitive effects. The term "offset" implies a more subjective analysis related to qualitative considerations — i.e., things that cannot be quantitatively compared because they have no common measure (*Tervita SCC* at paras 144-145; *Superior Propane II* at para 95).

660 In *Tervita SCC*, the SCC also directed the Tribunal to use an analysis that is as objective as possible. As such, the SCC held that in most cases, the qualitative effects of a merger will be of "lesser importance." In addition, the SCC stated that "the statutory requirement that efficiencies be greater than *and* offset the anti-competitive effects would in most cases require a showing that the quantitative efficiencies exceed the quantitative anti-competitive effects as a necessary element of the defence" [emphasis in original] (*Tervita SCC* at para 146).

661 *Tervita SCC* adopted a two-step inquiry for the balancing test in subsection 96(1). First, the quantitative efficiencies of the merger at issue are compared against the quantitative anti-competitive effects to determine whether the quantitative efficiencies are "greater than" the quantitative anti-competitive effects. If the quantitative anti-competitive effects outweigh the quantitative efficiencies, this step will be dispositive in most cases, and the section 96 defence will not apply. Second, the qualitative efficiencies are balanced against the qualitative anti-competitive effects. The Tribunal then makes a final determination as to whether the total efficiencies "offset" the total anti-competitive effects of the merger at issue (*Tervita SCC* at para 147).

662 The SCC further held that the Tribunal should consider "all available quantitative and qualitative evidence" (*Tervita SCC* at para 100, citing *Superior Propane I* at para 461; *Superior Propane III* at para 335). For the Tribunal to give weight to qualitative elements in its analysis, they must be supported by the evidence, and the reasoning for the reliance on the qualitative aspects must be clearly articulated (*Tervita SCC* at para 147).

(ii) Interpretation of subsection 96(2)

663 In this matter, P&H also made specific submissions on the interpretation of subsection 96(2) and relied heavily on this provision in its consideration of the efficiency gains allegedly brought about by the Transaction. This subsection provides in part that in considering whether a merger or proposed merger is likely to bring about gains in efficiency described in subsection 96(1), the Tribunal shall consider whether such gains will result in "(*a*) a significant increase in the real value of exports."

664 P&H argued that the purpose and effect of the Transaction were to increase export sales by P&H and that increased throughput at export terminals was the "uncontroverted objective" of the Transaction. P&H further submitted that increased

throughput at an export facility is a "more efficient utilization of an asset in the purest sense," and that the Transaction as a whole clearly leads to a significant increase in the real value of exports of grain under subsection 96(2).

665 P&H maintained that there were three possible interpretations of subsection 96(2):

- The consideration of efficiencies related to exports is subsumed under the subsection 96(1) analysis, so that all of the tests applied under subsection 96(1) would be applied to exports;

- The consideration of exports under subsection 96(2) is a separate consideration that is not confined to the efficiencies arising in the local or domestic markets. Any efficiencies arising either domestically or in an export market that lead to a significant increase in exports must be separately considered. In this interpretation, the efficiency gains that lead to significant increases in the real value of exports would not be subsumed in the subsection 96(1) analysis including the offset test and the counterfactual but-for test; and

- Subsection 96(2) only deals with efficiency gains that lead to increases in the real value of exports, and exports *per se* should be considered under the broader analysis under sections 92 and 93 of the Act.

666 P&H took the position that the second and third interpretations described above are the correct ones to follow.

667 P&H submitted that the interpretation of subsection 96(2) must accord with Parliamentary intent, as seen in comments made in 1986 by the Parliamentary Secretary to the Minister of Agriculture, the Honourable Pierre Blais, during the House of Commons debates on Bill C-91 (which enacted the Competition Tribunal Act, RSC 1985, c 19 (2nd Supp) ("CTA") and the Act). P&H argued that mergers should be assessed, in Mr. Blais' words, "in such a way as to encourage competition between Canadian businesses at home in Canada, without putting them at a disadvantage when carrying out business dealings in international markets." P&H also referred to the objectives in section 1.1 of the Act, including its references to the expansion of opportunities for Canadian participation in world markets and the promotion of the efficiency of the Canadian economy. In addition, P&H submitted (again citing Mr. Blais) that "when a merger would greatly improve efficiency, thereby increasing exports or substitutions to imports, the Tribunal will have to authorize it." P&H argued that this reflected a focus on efficiencies that lead to increased exports.

668 The Commissioner made no written submissions on subsection 96(2). The Commissioner noted in oral argument that P&H made no reference to any reliance on that provision in its Response filed on February 3, 2020. The Commissioner submitted that P&H had acquired the grain volume at the Virden Elevator which LDC would have exported. In other words, these grain volumes were headed to the port at Vancouver for export, regardless of the Transaction. Therefore, P&H had not demonstrated any substantial increase in the real value of exports under paragraph 96(2)(a). The Commissioner also submitted that P&H had not analyzed why keeping the Virden Elevator in its possession (*i.e.*, if the Tribunal makes no order) would lead to a substantial increase in the real value of exports.

669 This is the first time that the Tribunal has been directly asked to interpret or apply paragraph 96(2)(a) of the Act.

670 Under modern principles of statutory interpretation, the words of paragraph 96(2)(a) must be read in their entire context and in their grammatical and ordinary sense, harmoniously with the scheme and the object of the Act, and the intention of Parliament (Pioneer Corp v Godfrey, 2019 SCC 42 at para 42; Canada Trustco Mortgage Co v Canada, 2005 SCC 54 (" at para 10; *Bell ExpressVu* at para 26; Rizzo & Rizzo Shoes Ltd (Re), [1998] 1 SCR 27 at para 21; *VAA CT* at para 257; The Commissioner of Competition v HarperCollins Publishers LLC and HarperCollins Canada Limited, 2017 Comp Trib 10 at paras 101, 118; Rakuten Kobo Inc v The Commissioner of Competition,2016 Comp Trib 11 at para 108). In *Canada Trustco*, the SCC also held that if the words of a provision are precise and unequivocal, their ordinary meaning plays a dominant role in the interpretive process. If the words can support more than one reasonable meaning, the ordinary meaning of the words plays a lesser role. However, in all cases, the Tribunal must seek to read the provisions of the Act as a harmonious whole (*Canada Trustco* at para 10; 9354-9186 Québec inc v Callidus Capital Corp, 2020 SCC 10 at para 60).

671 When the legislation that would become the Act was introduced in December 1985, the accompanying guide made the following observations:

> The existing merger provision is considered to be unsuitable for the Canadian economy, which is small and open. Canadian firms often have to compete with larger foreign rivals both at home and abroad. In these circumstances, they should not be prevented from obtaining economies of scale which improve their competitive position. An effective merger law for Canada must weight [*sic*] the advantages of economic efficiency against the disadvantages of a lessening of competition.
>
> [...]
>
> The new merger law will also provide a defence in situations where the gains in efficiency that would result from the merger would more than offset the costs due to the lessening of competition. It is important for the performance of the economy that significant cost savings brought about by mergers, for example, through scale economies or other efficiencies, be allowed. Moreover, the Tribunal will be invited to consider whether the gains in efficiency resulted in increased exports or increased import substitution.
>
> Minister of Consumer and Corporate Affairs, *Competition Law Amendments: A Guide*, (1985) at pp 16-17.

672 In *Tervita SCC*, Justice Rothstein, speaking for a majority of the court, observed the following at paras 87 and 167:

> [87] A stand-alone statutory efficiencies defence was considered "particularly appropriate for Canada because a small domestic market often precludes more than a few firms from operating at efficient levels of production and because Canadian firms need to be able to exploit scale economies to remain competitive internationally" (Campbell, [citation below] at p. 152; see also *House of Commons Debates*, vol. VIII, 1st Sess., 33rd Parl., April 7, 1986, at p. 11962; Minister of Consumer and Corporate Affairs, *Competition Law Amendments: A Guide* (1985), at p. 4). <u>In the context of the relatively small Canadian economy, to which international trade is important, the efficiencies defence is Parliamentary recognition that, in some cases, consolidation is more beneficial than competition</u> (*ibid.*, at pp. 15-17).
>
> [...]
>
> [167] While the efficiencies defence applies in this case under the terms of s. 96 as written, this case does not appear to me to reflect the policy considerations that Parliament likely had in mind in creating an exception to the general ban on anti-competitive mergers. As discussed above at para. 84 [*sic*: 87] in the historical examination of s. 96, <u>the evidence suggests that the efficiencies defence was created in recognition of the size of Canada's domestic market and with an eye toward supporting operation at efficient levels of production and the realization of economies of scale, particularly with reference to international competition.</u> [...]
>
> [Emphasis added.]

673 In section 1.1 of the Act, Parliament set out the overall purpose of the statute: "to maintain and encourage competition in Canada." Section 1.1 contains four objectives or benefits of maintaining and encouraging competition in Canada (*Superior Propane I* at paras 407-408, 410), which are listed in the provision:

> **Purpose of Act**
>
> **1.1** The purpose of this Act is to maintain and encourage competition in Canada in order to promote the efficiency and adaptability of the Canadian economy, in order to expand opportunities for Canadian participation in world markets while at the same time recognizing the role of foreign competition in Canada, in order to ensure that small and medium-sized enterprises have an equitable opportunity to participate in the Canadian economy and in order to provide consumers with competitive prices and product choices.
>
> **Objet**

> **1.1** La présente loi a pour objet de préserver et de favoriser la concurrence au Canada dans le but de stimuler l'adaptabilité et l'efficience de l'économie canadienne, d'améliorer les chances de participation canadienne aux marchés mondiaux tout en tenant simultanément compte du rôle de la concurrence étrangère au Canada, d'assurer à la petite et à la moyenne entreprise une chance honnête de participer à l'économie canadienne, de même que dans le but d'assurer aux consommateurs des prix compétitifs et un choix dans les produits.

674 The FCA has held that section 96 as a whole gives primacy to the statutory objective of economic efficiency, because it provides that if efficiency gains exceed and offset the effects of an anti-competitive merger, the merger must be permitted to proceed even though it would otherwise be prohibited by section 92 (*Superior Propane II* at para 90).

675 The commentary on the proper interpretation of the language in subsection 96(2) has not been extensive, despite its presence in the Act since 1986.

676 The Competition Bureau's 1991 MEGs stated that the words "described in subsection (1)":

> make it clear that section 96(2) does not operate to expand the class of efficiency gains that may be considered in the trade-off analysis. Accordingly, this provision is simply considered to draw attention to the fact that, in calculating the merged entity's total output for the purpose of arriving at the sum of unit and other savings brought about by the merger, the output that will likely displace imports, and any increased output that is sold abroad, must be taken into account.

677 The principal drafter of the 1991 MEGs, now a judicial member of the Tribunal, set out the same point in a 1991 article, adding that, "[a]pparently, there was never any intention on the part of the drafters of subsection 96(2) that this section has any significant role in the trade-off assessment" (*Crampton 1991* at pp 967-968).

678 A book by the same author further explained:

> If an increase in the real value of exports [...] cannot be shown to lead to one or more of the types of "gains in efficiency" [in subsection (1)], there is nothing that can be found in subsection 96(2) that will change this fact. In short, this provision simply requires the Tribunal to assess whether any significant increase in the real value of exports [...] *that is attributable to the attainment of efficiencies, will give rise to further efficiency gains*.
>
> *Crampton 1990* at p 548 [Emphasis in original.]

679 On this view, the increased exports are a *source of efficiencies* that must be taken into account under subsection 96(1) and Parliament enacted subsection 96(2) to fulfil a "guidance function" (*Crampton 1990* at p 549).

680 While this approach would not give efficiencies that meet the requirements of subsection 96(2) an independent role, the *Crampton 1990* text offered additional analysis. It noted that there is a reasonable argument that Parliament intended subsection 96(2) to provide more than a guidance function, and that export-related efficiencies merit, and were intended to receive, additional *qualitative* weighting, that should be decisive only if the trade-off analysis under subsection 96(1) "yields an inclusive result." The text listed four possible reasons. The significant increase in the real value of exports may: 1) give rise to other important but unquantifiable benefits to the economy; 2) promote the adaptability of the Canadian economy; 3) expand the opportunities for Canadian participation in world markets; and 4) have been considered to be of such particular importance as to merit specific mention in the legislation. In a footnote, the author referred to remarks by the then-Director of Investigation and Research ("*Director*"), who noted in a speech that information provided by merging parties about efficiency gains that allow the firm to significantly increase the real value of exports would be given "additional weight" in favour of the merging parties under subsection 96(1) (*Crampton 1990* at pp 549-550).

681 At least one commentary has taken a more robust view of subsection 96(2). While recognizing the positions taken in the 1991 MEGs and by the Director, Dr. Neil Campbell remarked that in enacting the provision, Parliament appeared to be creating an "independent category of efficiencies" (*Campbell* at pp 155-156, citing a discussion of "national champions" in

A.N. Campbell and J.W. Rowley, *Industrial Policy, Efficiencies and the Public Interest—the Prospects for International Merger Rules*, (Center for Trade Policy and Law, 8 th Annual Conference on Trade, Investment and Competition, Ottawa, May 1993)).

682 The Competition Bureau's 2004 MEGs and 2011 MEGs both advised merging parties to provide the Bureau with information that "establishes that the merger will lead them to increase output owing to greater exports," noting in a footnote that "increased output in this context is generally only possible with an associated decrease in price" (see 2011 MEGs at para 12.12; 2004 MEGs at para 8.10).

683 The text of subsection 96(2) is situated within section 96. The chapeau language of subsection 96(2) provides that in considering whether a merger or proposed merger is likely to bring about gains in efficiency described in subsection (1), the Tribunal "shall" consider whether "such" gains "will result in" a significant increase in the real value of exports and a significant substitution of domestic products for imported products.

684 With respect to the language in subsections 96(1) and (2), the Tribunal notes that:

- In *Tervita SCC*, Justice Rothstein observed that subsection 96(2) is "logically subservient to" subsection 96(1) (*Tervita SCC* at para 152);

- The analysis of any claimed efficiencies that meet the requirements of paragraphs 96(2)(a) and (b) occurs during the Tribunal's consideration of whether the merger is likely to bring about the gains in efficiency described in subsection 96(1);

- The word "shall" is mandatory or directory, not permissive. The Tribunal is required to consider subsection 96(2) if the evidence supports its relevance in a proceeding;

- The words "*such* gains" [emphasis added] in subsection 96(2) refer to the gains in efficiency in subsection (1); and

- The words "will result in" suggest that the Tribunal consider the causal relationship between the gains in efficiency in subsection (1) and the existence of the two factors in paragraphs 96(2)(a) and (b). Parliament also chose to use "*will* result in" [emphasis added], which implies proof with greater certainty than, for example, "may result in."

685 Paragraph 96(2)(a) contemplates that the Tribunal consider the gains in efficiency in subsection (1) that will result in a significant increase in the "real value" of exports, which suggests that evidence must be adduced as to the quantum, in dollars, of the increase. To engage the provision, the increase must be shown to be "significant," not small, trivial or inconsequential.

686 In light of the foregoing, the Tribunal considers that the proper interpretation of subsection 96(2) should:

- Adhere to the language of subsection 96(2), read in tandem with subsection 96(1);

- Seek to implement the overall purpose and the objectives of the Act, as set out in section 1.1;

- Be compatible with the approach to the trade-off analysis established in *Tervita SCC*, including the two-step quantitative and qualitative assessments described by Justice Rothstein at paragraph 147; and

- Be compatible with the five screens established by the Tribunal in *Tervita CT* to implement the trade-off analysis in subsections 96(1) and (3).

687 The Tribunal further observes that, by creating the efficiency exception enabling parties to avoid the application of section 92 when the elements of section 96 are satisfied, Parliament has in fact "withdrawn efficiency consideration, or at the very least, consideration relating to efficiency *enhancement*, from eligibility in the determination of whether competition has been prevented or substantially lessened" [emphasis in original] (*Crampton 1990* at p 257). Gains in efficiency are thus excluded from the assessment of anti-competitive effects under section 92.

688 In view of the language in subsection 96(2) and the discussion in the various legal sources above, the Tribunal adopts the following framework for the interpretation and application of subsection 96(2):

1. The Tribunal recognizes that a merger may make a firm more competitive in international markets through proven efficiencies realized in Canada (*i.e.*, efficiencies that accrue to the Canadian economy).

2. Such proven efficiencies may be claimed and included in the Tribunal's trade-off analysis, as established in *Tervita SCC* and *Tervita CT*.

3. Efficiencies that are claimed to result in a significant increase in the real value of exports should be analyzed within the established trade-off analysis under subsection 96(1).

4. The language of subsection 96(2) does not alter or expand the types of gains in efficiency under subsection 96(1) that may be considered in the trade-off analysis.

5. If a respondent raises a claim that efficiencies will result in a significant increase in the real value of exports, that respondent has the same burden to prove such efficiencies as with any other claimed efficiencies.

6. Specifically, if such claimed efficiencies are quantifiable, they must be quantified or, at a minimum, estimated, as contemplated by *Tervita SCC*.

7. If proven and quantified, such efficiencies will then be assessed along with other proven quantitative efficiencies in the first step of the trade-off analysis.

8. If such efficiencies are proven but cannot be quantified or estimated, they may be considered and given weight by the Tribunal at step two of the trade-off analysis, as qualitative efficiencies.

689 Not resolved in this framework are the questions of whether and how the Tribunal should provide any *additional* recognition to efficiencies that result in a significant increase in the real value of exports under paragraph 96(2)(a).

690 The Tribunal does not have the benefit of recent legal, economic, or business commentary on the role that subsection 96(2) should play in the efficiencies trade-off analysis established by *Tervita SCC*. The Tribunal also believes that, since the Act came into force in June 1986, there have been material developments affecting the Canadian industrial policy and international trade policies, as well as significant changes in some sectors of the Canadian economy, that could affect the proper approach to paragraphs 96(2)(a) and (b).

691 Given the Tribunal's conclusions elsewhere in these Reasons under section 92 and subsection 96(1), it is not necessary to resolve all questions related to paragraph 96(2)(a) in this proceeding. The Tribunal nonetheless considers that, without limiting other possible options, the following approach to paragraphs 96(2)(a) and (b) could be contemplated.

692 As noted above, the Tribunal is of the view that the language of subsection 96(2) does not alter or expand the types of gains in efficiency under subsection 96(1) that may be considered in the trade-off analysis. However, in order to implement the objectives set out in section 1.1 of the Act and other indications of Parliamentary intent and objectives, the Tribunal could provide additional qualitative recognition to some claimed efficiencies in the trade-off analysis if a firm is able to demonstrate, with clear and cogent evidence, that the specified efficiencies achieved in Canada also meet the requirements of paragraphs 96(2)(a) or (b). Such proven efficiencies could achieve one or more of the objectives listed in section 1.1, *in addition to* the promotion of the efficiency of the Canadian economy inherent in any proven efficiencies under subsection 96(1).

693 For example, a merger could be proven to result in efficiencies that accrue to the Canadian economy which will also result in a significant increase in the real value of exports and expand the opportunities for Canadian participation in world markets. A merger might, for example, enable a firm to enter a new overseas market due to the lower costs of production in Canada that result from the merger. In that type of scenario, the Tribunal could give the proven efficiencies that achieve the

requirements of paragraph 96(2)(a) some *additional, qualitative* weight at stage two of the trade-off analysis under subsection 96(1). Specifically, at stage two, the Tribunal could give some qualitative weight to proven and quantified efficiencies that will result in a significant increase in the real value of exports; or the Tribunal could give additional qualitative weight at stage two to proven qualitative efficiencies. The weight could vary, for example, with the strength of the efficiencies' proven ability to achieve at least one of the objectives of the Act as set out in section 1.1 (other than promoting the efficiency of the Canadian economy). Regardless of how the Tribunal decides to proceed in a future case, the Tribunal will determine how such efficiencies may be weighed at stage two based on the evidence and the applicable law, including *Tervita SCC* and *Tervita CT*.

(b) Evidentiary burden on efficiencies

694 As discussed above, the Commissioner has an initial burden under section 96 to prove the anti-competitive effects, including both quantitative and qualitative effects (*Tervita SCC* at para 122, citing *Superior Propane I* at paras 399, 403, *Superior Propane II* at para 154 and *Superior Propane IV* at para 64; *Tervita CT* at para 232).

695 The SCC in *Tervita SCC* instructed that, to discharge his burden, the Commissioner must quantify any quantifiable anti-competitive effects, at least by estimate (*Tervita SCC* at paras 125, 126, 137, 165; *Tervita FCA* at para 127; *Tervita CT* at para 243). To meet that burden, the Commissioner must ground the calculations or estimates in evidence that can be challenged and weighed (*Tervita SCC* at para 125). If effects are realistically measurable, failure to at least estimate the quantification of those effects will not result in the effects being assessed on a qualitative basis (*Tervita SCC* at para 100, citing *Superior Propane III* at para 233 and *Superior Propane IV* at para 35). Instead, quantifiable effects that are not quantified are considered to be equal to zero and have no weight (*Tervita SCC* at paras 128-129, 137, 140, 142, 151, 157, 159, 165).

696 While the Commissioner has the burden to prove the anti-competitive effects, the merging parties bear the onus of proving the remaining elements of the defence under section 96 (*Tervita SCC* at paras 136, 165; *Superior Propane II* at paras 154, 157; *Tervita CT* at para 233). The merging parties' onus is to prove the extent of the efficiency gains and that those efficiency gains from the merger will be greater than and will offset the effects of any prevention or lessening of competition resulting from the merger (*Tervita SCC* at paras 89, 122; *Superior Propane I* at para 403).

697 In the Tribunal's view, the same requirements imposed on the Commissioner for proof of anti-competitive effects under section 96 should also be imposed on the merging parties (in this case, P&H) to discharge their onus to prove the remaining elements under section 96. Thus, if a claimed efficiency is quantifiable, it must be quantified or at least estimated. That quantification or estimate must be grounded in evidence that can be challenged and weighed. If the claimed efficiency is quantifiable but is not quantified or estimated, then it will be treated as a zero and given no weight. An unquantified claimed efficiency that could have been quantified, but was not, will not be considered as a qualitative efficiency (*Tervita SCC* at para 124; *Superior Propane IV* at para 35). Claimed qualitative efficiencies, if any, must also be supported by evidence that can be challenged and weighed.

(2) Tribunal's assessment

698 In the Tribunal's view, and for the following reasons, P&H has not met its burden of demonstrating, on a balance of probabilities, that the Virden Acquisition is likely to bring about cognizable gains in efficiency. As a result, such gains would not be greater than, and would not offset, the anti-competitive effects of any lessening of competition resulting from the Virden Acquisition.

(a) The anti-competitive effects of any lessening of competition

699 In light of the Tribunal's conclusions on efficiencies, there is no need to deal extensively with the anti-competitive effects of any lessening of competition resulting from the Virden Acquisition.

700 Suffice it to say that there is no fundamental dispute between Dr. Miller and Ms. Sanderson on the magnitude of the consumer surplus loss, suggested to be CAD $540,000 per crop year in wheat and less in canola according to Dr. Miller's model. This estimate is conditional on accepting the diversion ratios and mark-up used by Dr. Miller.

701 Ms. Sanderson only takes issue with Dr. Miller's producer surplus calculations. She claims that it should include profits captured by Elevators and Crushers falling outside the relevant geographic markets. Even accepting Ms. Sanderson's critique, when profits associated with all transfers to rival Elevators and Crushers are included, there is still some DWL in wheat, but not in canola. Taking into account the producer surplus transferred to rival Elevators and Crushers which do not belong to Dr. Miller's geographic market, Dr. Miller's DWL for wheat decreases to some CAD $30,000, while the DWL in respect of canola is eliminated.

702 In sum, no matter how it is defined or calculated, the DWL is certainly greater than zero for wheat.

(b) The gains in efficiencies

(i) P&H's claimed efficiencies

703 At the outset of this proceeding, P&H's Response claimed the following efficiencies from the Acquisition: improved FGT scale efficiencies and cost savings; elimination of the margin that LDC formerly paid to use the Vancouver export terminal owned by Kinder Morgan; output expansion and improved scale economies at the former LDC Elevators; and administrative efficiencies.

704 P&H did not elaborate on its claimed efficiencies during the discovery process.

705 Mr. Heimbecker's initial witness statement identified four areas of claimed efficiencies that became the focus of the parties' submissions at the hearing. They were as follows: 1) increased throughput at the Virden Elevator; 2) network logistics efficiencies arising from optimizing the shipment of grain to "freight-logical" terminals; 3) efficiencies at the Vancouver terminals, particularly the FGT; and 4) efficiencies related to the conversion of local Elevators to include the retail sale of crop inputs.

706 At the hearing, the Commissioner did not cross-examine Mr. Heimbecker on his evidence about these proposed efficiencies. Mr. Heimbecker was not qualified to provide expert evidence on efficiencies and acknowledged that he is not such an expert. He provided P&H's factual foundation for its efficiency claims. As discussed above, on a pre-hearing motion, some of his evidence was struck out (*Parrish & Heimbecker* at paras 72-73). Ultimately, P&H did not file an expert report to support or quantify its position on efficiencies, either initially or in reply to Mr. Harington's expert report. P&H solely relied on the initial and reply witness statements of Mr. Heimbecker.

• *Increased throughput at the Virden Elevator*

707 Regarding the increased throughput at the Virden Elevator, P&H offered Mr. Heimbecker's evidence comparing the throughput at the Virden Elevator in 2019 when it was operated by LDC with Virden's 2020 throughput when operated by P&H. Mr. Heimbecker also explained that P&H's Elevators had a higher "turn rate" than LDC's former Elevators. An Elevator's "turn rate" is calculated as the purchases of grain by an Elevator in a given period divided by the storage capacity. According to Mr. Heimbecker, P&H also forecast a higher turn rate for each of the former LDC Elevators during 2020. He attributed the higher turn rate to four factors: P&H's superior port access (particularly its access to the Superior terminal in Thunder Bay, Ontario, which LDC did not use); port storage and ship loading speed in Vancouver; its larger network of Elevators from which it could source grain; and the fact that P&H purchased a larger variety of grain than LDC did.

708 In his initial witness statement, to which Mr. Harington responded, Mr. Heimbecker compared the Virden Elevator's 2019 results with its actual results from January to July 2020 and P&H's forecast for the balance of 2020. He then applied P&H's grain margins for wheat and canola to the increased volumes to find an annual "efficiency," in dollars, for each of wheat and canola.

709 In his reply witness statement, Mr. Heimbecker reiterated his evidence about P&H's Elevator turn rates, its better port access at both Vancouver and Thunder Bay terminals, and its larger network of Elevators, all compared with LDC. He also updated his initial Virden throughput evidence with actual 2020 results up to October 31, 2020.

710 Mr. Heimbecker also addressed the overall increase in grain production from 2019 to 2020 raised by Mr. Harington in his expert report. He concluded that, even adjusting for the increased production, the Virden Elevator showed increased throughput for wheat and canola when comparing the period from January 1 to October 31, 2019 with the period from January 1 to October 31, 2020. Using the same wheat and canola margins from his initial evidence, Mr. Heimbecker then re-determined the "additional value" created, in dollars, from the increased Virden throughput through to October 31, 2020, adjusting LDC's 2019 numbers for grain industry developments.

• *Network logistics efficiencies*

711 Turning to network logistics efficiencies, Mr. Heimbecker explained in his initial witness statement that Elevators have a natural, "freight logical" terminal. Elevators operated by P&H fall into catchment areas depending on their physical location. Those catchment areas are for terminals in either Vancouver or Thunder Bay. The catchment area determines rail freight costs from an Elevator to a terminal. The Virden Elevator is in the Thunder Bay catchment area. As a result, the wheat and canola purchased from farms and delivered to the Virden Elevator will generally be shipped to P&H's Superior terminal in Thunder Bay for sale to its eastern grain customers.

712 Mr. Heimbecker testified that P&H decided that four of the Elevators it purchased in the Transaction could shift their grain from delivery to West Coast terminals in favour of delivery to the Superior terminal in the east. At the same time, some grain movement from Elevators already owned by P&H could be switched to delivery westward to Vancouver at P&H's two most efficient terminals, namely, AGT and FGT. According to Mr. Heimbecker, the additional eastbound throughput from the addition of the four new Elevators "will now allow P&H to increase the efficiency of its network." In particular, Mr. Heimbecker stated that P&H acquired the Virden and Rathwell Elevators in the Transaction and would shift their grain eastward, enabling additional tonnage to be shipped westward to Vancouver from other Elevators in the P&H network.

713 Mr. Heimbecker advised in his reply witness statement that the addition of the Virden Elevator and its additional volume was a "necessary addition to P&H's elevator network to achieve these logistics benefits" (Exhibits CA-R-121 and P-A-122, Reply Witness Statement of Mr. John Heimbecker ("*Heimbecker Reply Statement*"), at para 43).

• *Efficiencies at West Coast terminals*

714 Mr. Heimbecker also identified efficiencies at the West Coast terminals. He testified that the amount of grain that would be processed through P&H's terminals in Vancouver would increase as a result of the Transaction. In his reply witness statement, Mr. Heimbecker further noted that the FGT's location on Vancouver's South Shore bypasses the congested rail corridors to the West Coast, which move grain from the Prairies to the West Coast terminals. As a result of its location, FGT would provide significant rail cycle time of 50% which many other grain purchasers would not enjoy. Mr. Heimbecker did not provide any evidence supporting his claim in improved rail car cycle time, nor did he provide any explanation or operating plans from the railways that attest to those savings.

• *Crop inputs efficiencies*

715 With respect to crop inputs efficiencies, Mr. Heimbecker testified that the Transaction allows P&H to compete more effectively with rival grain companies by converting the Elevators acquired in the Transaction into dual-purpose facilities. Previously, they were purely grain facilities, whereas P&H would now create a "one-stop shop" location that would include both the delivery of grain for sale and also enable farmers to purchase crop inputs. The sales of crop inputs at the newly acquired Elevators would provide P&H with increased margins. Mr. Heimbecker provided evidence of the cost per Elevator to convert a location into a combined grain/crop inputs facility and, based on his past business experience, he estimated the increased margins at [text omitted]. Mr. Heimbecker acknowledged that some of the crop inputs sales to be made at the Virden Elevator would come from sales made by other grain companies and crop input retailers. Mr. Heimbecker also advised that the expansion of crop inputs would not only benefit P&H through increased sales and margin but would also increase overall grain production.

(ii) The Commissioner's response

716 The Commissioner's Reply filed on February 17, 2020 stated that the Transaction would not generate cognizable gains in efficiencies to the extent claimed by P&H. The Commissioner reminded that his Application to the Tribunal sought the divestiture of just one Elevator, leaving nine others acquired by P&H as part of the Transaction. The contemplated orders requested would therefore not impact P&H's ability to achieve the alleged efficiencies. The Commissioner further denied that any cognizable efficiencies would be greater than or offset the anti-competitive effects of the Virden Acquisition.

717 As already noted, the Commissioner filed Mr. Harington's expert report, which addressed each of the efficiencies claimed in Mr. Heimbecker's initial witness statement. Mr. Harington's report provided his analysis of how the five screens identified in *Tervita CT* applied to each of P&H's claimed efficiencies.

• *Increased throughput at the Virden Elevator*

718 The Commissioner submitted that this claimed efficiency was caught by four of the five *Tervita CT* screens, namely, screens 1, 2, 3, and 5, summarized above in these Reasons. On *Tervita CT* screens 1 and 2, the Commissioner submitted that the increased volumes at the Virden Elevator would have occurred irrespective of the Acquisition, given the overall upward trend in grain production (measured by delivery volumes to Elevators) from 2019 to 2020. The Commissioner also noted that at the end of 2019, inventory levels at the Virden Elevator were low and had to be replenished by P&H after it acquired that Elevator. According to the Commissioner, those additional purchase volumes could partially explain the increase in delivered volume to Virden.

719 The Commissioner further submitted that P&H had failed to demonstrate that the increased volumes at the Virden Elevator were not a redistribution of income between two persons under subsection 96(3) (*Tervita CT* screen 3). He argued that any increases in volume not attributable to the overall industry increase in grain production were merely a wealth transfer from other Elevators and did not represent a cognizable efficiency under section 96. According to the Commissioner, P&H also had not shown that its per unit variable operating costs of the Virden Elevator for the 10 months of 2020 were lower than LDC's operating costs at this Elevator the previous year.

720 The Commissioner further submitted that P&H had not shown that any increase in volume at the Virden Elevator could not have been achieved by an alternative purchaser of that Elevator (*Tervita CT* screen 5).

721 Mr. Harington's expert report concluded that increased throughput at the Virden Elevator was not a cognizable efficiency. In his view, any increase in throughput in P&H's Virden Elevator and terminal network would have to arise from increased Canadian grain production and not be a pecuniary redistribution of throughput between P&H's facilities and other facilities. To be a cognizable efficiency, any increased throughput would have to result from an increase in grain production brought about by the Virden Acquisition that was not "cannibalized" volume from other entities, and would not likely occur in the event of an order under section 92. Mr. Harington concluded that the claimed efficiencies based on an increase in throughput at the Virden Elevator did not qualify as a cognizable efficiency under these criteria.

• *Network logistics efficiencies*

722 Regarding the claimed logistics efficiencies, Mr. Harington noted in his report that P&H did not quantify the cost savings arising from shipping volumes to a more "freight logical" terminal and did not demonstrate that any of the savings would be lost in the event of a remedial order by the Tribunal. In addition, P&H did not show what proportion of any cost savings was attributable to the purchase of the Virden Elevator as opposed to the Rathwell facility.

• *Efficiencies at West Coast terminals*

723 Turning to the claimed efficiencies at the West Coast terminals, Mr. Harington's expert report found that increased volumes at more efficient Vancouver area terminals were not a cognizable efficiency that would be lost in the event of an order of the Tribunal, because the same volume was still going through the less efficient Superior terminal in Thunder Bay; that is, the "only difference is the Elevators from which these volumes to Thunder Bay are coming." Mr. Harington also noted that P&H

did not offer any proof of increased volume of grain production due to the Acquisition and did not provide a comparison of operating costs at the Vancouver terminals with similar costs at another terminal through which the grain previously travelled.

• *Crop inputs efficiencies*

724 On crop input efficiencies, Mr. Harington's expert report opined that the benefit of increased crop inputs sales would be a redistribution of income rather than a real resource saving. Any margin on crop inputs sales earned by P&H by the conversion of facilities was, in his view, a "pecuniary redistribution of income between P&H and farmers," even if some portion of those sales were new sales rather than sales that would otherwise be made by rival retail suppliers.

725 Mr. Harington noted the absence of any evidence (apart from Mr. Heimbecker's opinion) that an additional crop inputs retail location would increase crop inputs sales in the area of the Virden Elevator rather than redistribute sales within the area, or would lead to more use of crop inputs by farmers and increase grain production as a result.

(iii) The gains in efficiency under subsection 96(1)

726 For the following reasons, the Tribunal concludes that P&H has not proven cognizable efficiencies under section 96.

• *Increased throughput at the Virden Elevator*

727 P&H advanced the position that the Acquisition had caused an increase in throughput at the Virden Elevator, by an increase in volume of grain delivered to and processed by that Elevator between 2019 and 2020.

728 Mr. Heimbecker's evidence about Elevators' turn rates was not contradicted, nor did the Commissioner cross-examine him on it. Mr. Heimbecker testified that P&H had access to port terminals both in the Vancouver area and in Thunder Bay, compared with LDC which had no access to Thunder Bay and did not export from the Superior terminal. He also testified that the Virden Elevator is in P&H's catchment area for Thunder Bay and that grain from Virden will generally be shipped east by P&H to its Superior terminal for sale to its eastern grain export customers. He testified that P&H's most efficient port terminals are the AGT and the FGT.

729 The Tribunal accepts that there are likely some time and transportation (*i.e.*, rail) cost savings to move the Virden Elevator grain to the Superior terminal in Thunder Bay rather than to a Vancouver port terminal, which would presumably contribute to a higher turn rate at Virden for P&H than what existed when LDC sent its grain to Vancouver. However, P&H did not adduce evidence of any transportation cost savings. Having said that, Mr. Heimbecker's evidence was also that P&H's Superior terminal is not as efficient as the AGT or FGT in Vancouver. In light of that evidence, the Tribunal is unable to measure any benefits to the Canadian economy that would allegedly result from the change of the Virden Elevator grain being shipped west to the Vancouver port by LDC before the Transaction, to it being shipped east to the Superior terminal in Thunder Bay by P&H afterwards.

730 Mr. Heimbecker provided a forecast that P&H would increase the Virden Elevator's turn rate from historical rates of [text omitted] in 2017 and [text omitted] in 2018 while LDC operated Virden, to a turn rate of [text omitted] in P&H's fiscal year 2021. Mr. Heimbecker did not present turn rates (actual or forecast) for the years 2019 or 2020, as the Virden Elevator was emptied by LDC following the agreement on the Transaction, and P&H needed to replenish it. The Virden Elevator's forecast increase of [text omitted] from 2018 to 2021 ranks just [text omitted] of the 10 former LDC Elevators' forecast increases, and is relatively small compared with some increases at other Elevators (which went up by as much as [text omitted]). The Tribunal further observes that the Virden Elevator's turn rate of [text omitted] in fiscal year 2021 will be the lowest of any of the former LDC Elevators. The Tribunal does not find this evidence about increased turn rates at the Virden Elevator to be particularly compelling or persuasive.

731 The evidence about the relative inventory numbers between 2019 and 2020 must be assessed carefully. Mr. Harington testified that the abnormally lower inventory due to lower purchases by LDC in 2019, as well as the abnormally higher purchases by P&H in 2020 to make up the needed volume for inventory, would essentially have a "two-times" effect on the Tribunal's ability to compare the two years. To compare them, each year would have to be adjusted (2019 upward and 2020 downward).

732 In the Tribunal's view, there are several additional uncertainties and anomalies associated with P&H's evidence that undermine the reliability of any comparison of the change in throughput over these two years. These concerns prevent a sufficiently accurate quantification of any change in throughput following the Transaction and raise considerable doubt about the existence of any increase in throughput brought about by the Virden Acquisition.

733 First, there is uncertainty about the baseline volumes in 2019. Mr. Heimbecker testified that LDC diminished the inventory levels at its Elevators, including at the Virden Elevator, prior to the closing of the Transaction on December 10, 2019. P&H did not provide the Tribunal with the Virden Elevator's inventory level information as of that date. There was no evidence from LDC as to when it began to lessen its grain purchases (or if it simply stopped sometime before the closing), or about how much less grain it acquired at the Virden Elevator or decided not to store. The evidence also does not contain inventory levels or grain delivery volumes to the Virden Elevator in any prior years (*e.g.*, 2018, 2017, or 2016) for historical comparison to 2019.

734 Second, there is uncertainty about which product's inventory decreased in 2019. In his initial witness statement, Mr. Heimbecker testified that there was little or no *canola* inventory at most of the LDC locations, including at the Virden Elevator. He testified that, by summer of 2020, P&H had "significantly increased *canola* purchases at Virden over the levels purchased there previously by LDC." In his reply witness statement, Mr. Heimbecker explained that one reason why P&H missed its three-month throughput forecast for May to July 2020 was "low level of inventory left by LDC. LDC did not have *grain* in the pipeline when P&H purchased the assets which prevented P&H from selling *grain* in the beginning of the year" [emphases added] (Heimbecker Statement at para 51; Heimbecker Reply Statement at para 24).

735 At the hearing, Ms. Sanderson testified, having looked at the Virden Elevator's purchase data, that she did not see any sort of change on the canola side in December 2019 or January 2020 compared to the year prior. She attributed the running down of inventories just to *wheat*.

736 Third, there were anomalous monthly deliveries of both canola and wheat that make 2019 and 2020 harder to compare. Mr. Heimbecker provided monthly MT deliveries of canola to the Virden Elevator from January 1 to October 31, 2020. Of the approximately [text omitted] in those ten months, [text omitted] was delivered in September 2020. That month saw deliveries of [text omitted] in 2019, implying an increase of over [text omitted] comparing September 2019 with September 2020.

737 There was also an anomalous month in the data for wheat. Ms. Sanderson testified that November 2019 wheat purchases by LDC were more than twice larger than October 2019 and were "by far and away the largest" quantity purchased in any month from January 2019 to July 2020 (the period of available actual data when she prepared her report) (Consolidated Transcript, Confidential A, at p 1895). Ms. Sanderson's review of volumes from September to December 2019 allowed her to conclude that LDC increased purchases in November and may have run down inventories in December. As noted, the Transaction closed on December 10, 2019, and the parties did not provide the Tribunal with inventory level information at the Virden Elevator as of that date.

738 Fourth, in order to compare the 2019 and 2020 deliveries to the Virden Elevator, both parties agreed that the 2020 deliveries had to be adjusted for an overall industry increase in grain production over 2019. Mr. Heimbecker used the overall grain production increase in Canada of 13.1% for the crop years ending July 31, 2019 compared with July 31, 2020 to make adjustments. However, Mr. Harington's presentation of the industry evidence on increased deliveries indicated that the increases in both all-wheat production and all-grain production in Saskatchewan and Manitoba were each different from the 13.1% used in the calculations: higher for Saskatchewan (+15.8% and +17.9%, respectively) and noticeably lower for Manitoba (+6.8% and +7.0%, respectively). The Virden Elevator's purchases come from those two provinces.

739 Mr. Heimbecker's revised calculations in his reply witness statement continued to use the 13.1% Canada all-grain increase, referring to the Manitoba increases in all-wheat production and all-grain production and tendering his calculations as a "conservative" approach. However, Mr. Heimbecker acknowledged in cross-examination that overall canola deliveries in Manitoba increased by 18%, comparing January to October 2019 with January to October 2020. At the same time, Mr. Heimbecker was also careful to distinguish between grain or canola production and delivery.

740 The Tribunal finds that an adjustment of 13.1% to account for increased grain production in Canada does not account accurately for grain delivery increases to the Virden Elevator from farms in Saskatchewan and Manitoba from 2019 to 2020, and negatively affects the Tribunal's ability to quantify any increase in throughput at the Virden Elevator over the period.

741 In light of all this evidence, the Tribunal finds that there is considerable uncertainty about the existence and quantum of any actual increase in throughput at the Virden Elevator following the Acquisition. The Tribunal cannot conclude that any specific amount of increased throughput volume of wheat, or canola, or grain, has been demonstrated or satisfactorily quantified for 2020 after the Transaction.

742 The Tribunal is also unable to conclude that any increase or any quantifiable increase in throughput was *brought about by* the Virden Acquisition for the purposes of *Tervita CT* screen 2. P&H offered no expert assistance to assist the Tribunal in identifying and quantifying throughput increases brought about by the Virden Acquisition (if any) and to distinguish it from higher throughput caused by rising overall grain deliveries to replenish inventory (the quantum of which was itself debated, as discussed above).

743 In addition, while the monthly trend comparing 2019 to 2020 for canola was generally rising from March to September 2020, the spike in canola deliveries in September 2020 (comprising nearly half of the delivered volume for the calendar year) is inconsistent with P&H's position that there are sustainable, ongoing efficiencies in throughput at the Virden Elevator. As Mr. Harington testified, one month does not make a trend.

744 The Tribunal concludes that P&H has not demonstrated, with clear and convincing evidence, any section 96 efficiencies with respect to increased throughput at the Virden Elevator.

• *Network logistics efficiencies*

745 With respect to network logistic efficiencies, the Tribunal agrees with the Commissioner that P&H has not quantified its alleged efficiencies arising from the optimization of shipments to "freight logical" terminals in Vancouver. The evidence does not establish how much additional or incremental grain has been or will be diverted to the grain terminals in Vancouver (from other western terminals or from Thunder Bay), nor any of the cost savings that resulted from processing grain at the Vancouver terminals compared with the Superior terminal, nor any cost savings associated with processing and transporting grain a shorter distance from an Elevator to a terminal. While the possibility of a synergy or an efficiency arising from better network logistics has some intuitive attraction, the evidence does not support the existence or any quantification of such an efficiency for the purposes of section 96.

746 Applying the principles articulated in *Tervita SCC*, this proposed efficiency must be considered a zero.

• *Efficiencies at West Coast terminals*

747 The Tribunal also concludes that the evidence does not support any proven efficiencies arising from any additional grain flowing through the terminals in Vancouver used by P&H. Again, P&H did not offer any quantification of the incremental volumes of grain from the Virden Acquisition, or any cost savings as a result of processing such grain, in the Vancouver terminals or by a shift in volumes from other grain terminals to its terminals. Moreover, Mr. Heimbecker did not provide any evidence supporting his claim of improved rail car cycle time nor did he provide any explanation or operating plans from the railways that attest to those savings. Applying the principles set out in *Tervita SCC*, this proposed efficiency must also be considered a zero.

• *Crop inputs efficiencies*

748 Turning finally to the claimed crop inputs efficiencies, the Tribunal concludes that P&H has not proven any section 96 efficiencies related to crop inputs. An increase in margins accruing to P&H is not a benefit to the Canadian economy for the purposes of an efficiency under section 96. In addition, P&H has not measured, quantified, or even estimated any increase in output as alleged (*i.e.*, any increase in the sale of crop inputs in the area around the Virden Elevator, nor any increase in local grain production). Needless to say, such claims in efficiencies were, by their nature, clearly quantifiable.

749 The Tribunal therefore concludes that P&H has not demonstrated any cognizable efficiencies, whether quantitative or qualitative, under subsection 96(1) of the Act. Since P&H failed to meet its burden, the efficiencies are assigned a weight of zero.

(iv) The impact of subsection 96(2)

750 P&H submitted that the Tribunal should also apply subsection 96(2), since its objective in entering the Transaction was to increase its competitiveness in domestic and international export markets and to maximize the profitability of its export business. P&H emphasized that the Transaction served to enhance the return on its investment in the FGT through the expansion of its network, by acquiring access to increased throughput of grain sourced from the acquired LDC Elevators. P&H emphasized that it had no anti-competitive intention. Its intention was not to exercise monopsony power in local input markets, but rather to increase output in export markets.

751 P&H pointed to its focus — and the focus of the industry as a whole — on exporting canola and wheat. It noted that its pricing mechanism (*i.e.*, the Workback Algorithm) tied local prices in the input market to prices in the export market. The acquisition of the grain volumes represented by the LDC Elevators, including the Virden Elevator, enabled large increases in the volume processed by the FGT without displacing any planned volumes from pre-Transaction P&H Elevators. Those increased throughput volumes would be achieved quickly, rather than waiting for [text omitted] years as P&H originally anticipated and planned for the FGT.

752 P&H referred to Mr. Brooks' evidence and to a report from the Saskatchewan Wheat Development Commissioner (found in Exhibits CA-R-240 and P-R-241, Compilation of Miscelleaneous Documents) to support a submission that grain producers' (*i.e.*, farmers') interests in increased production were aligned with grain companies' interests in increasing export capacity.

753 P&H submitted that the Elevators acquired in the Transaction:

> [...] <u>will be capable at full utilization</u> to fill the [text omitted] metric tonnes of capacity at the FGT. This capacity utilization represents a 9% increase in export sales capacity at the West Coast and approximately 6.5% of total Canadian export capacity. The contribution of the LDC Elevators to export sales pre-acquisition was [text omitted] MT. <u>At full capacity</u>, within the P&H network, these elevators will add [text omitted] MT of export throughput to FGT for a net increase of [text omitted]. Hence <u>the transaction as a whole</u> clearly leads to a significant increase in the real [value] exports of grain within the meaning of section 96(2).
>
> [Emphasis added.]

754 The Commissioner responded that there was no evidence to indicate that the Transaction had actually led to a real increase in the value of exports under subsection 96(2). The Commissioner contended that P&H had acquired the grain volume that LDC was exporting through Vancouver terminals, so that P&H could export the same grain volume through its terminals in Vancouver. The grain was all headed for export, regardless of the Transaction. In addition, no analysis had been done to demonstrate that allowing P&H to keep one Elevator (*i.e.*, the Virden Elevator) would lead to a significant increase in the real value of exports.

755 The Tribunal disagrees with P&H's submission that the increase in the real value of exports from the Transaction "as a whole" may be considered under subsection 96(2). That provision refers to the gains in efficiency mentioned in subsection 96(1), which in turn refers to the efficiencies brought about by the merger or proposed merger "in respect of which the application is made." Consideration of a substantial increase in the real value of exports under paragraph 96(2)(a) must therefore focus on the specific merger being challenged by the Commissioner in the proceeding. In this case, the Commissioner's Application is solely made in respect of P&H's Acquisition of the Virden Elevator, not in respect of the Transaction as a whole.

756 During oral argument, the Tribunal asked whether there was anything in the evidence that parsed out the impact of the Virden Elevator on exports. P&H's answer was no. It advised that it would need access to third party information and data about

grain volumes from other grain companies at the port and their efficiencies there, as well as those companies' variable operating costs to reach the port facilities, in order to measure such impact.

757 During argument, the Tribunal requested that P&H specifically refer to the evidence on the additional (incremental) volume attributable to the Virden Elevator that would be exported through the FGT. P&H did not provide a satisfactory answer in substance, pointing to its evidence of increased throughput at the Virden Elevator. However, as noted above, this evidence does not support the quantification of any volume of increased throughput at the Virden Elevator. The Tribunal also notes that volumes of grain from the Virden Elevator were delivered to Thunder Bay (not Vancouver) and that the Superior terminal in Thunder Bay closed during the winter. Because P&H redirected the Virden Elevator grain eastward to Thunder Bay, any increased volume to the FGT that could (in theory) be attributable to the Virden Elevator would have to be sourced from another Elevator(s). P&H did not provide an analysis to support such an attribution.

758 Reduced to its essence, P&H's submission was that more of the FGT's capacity would be used, and sooner, as a result of the Transaction as a whole. The evidence of how much additional capacity would be used (or the value of that grain in dollars), and when, is insufficient to show a significant increase in the real value of exports resulting from the Virden Acquisition. The Tribunal agrees with the Commissioner that it is likely that most of the additional volumes anticipated to be processed at the FGT post-Transaction are volumes that would otherwise have been processed at other terminals but will now be diverted to the FGT because P&H now owns all of the source Elevators. Further, P&H confirmed during argument that the additional volumes are for all types of grains, not just wheat and canola. Lastly, the Tribunal appreciates the logic of Mr. Heimbecker's evidence concerning congested rail lines. Even accounting for that evidence and the general claim that the FGT would be a more efficient terminal (it was scheduled to become fully operational shortly after the hearing), the Tribunal is not satisfied that the evidence demonstrates a significant increase in the real value of exports for the purposes of paragraph 96(2)(a).

759 The Tribunal pauses to again note that P&H's intention or objectives in entering the Transaction are not relevant, or material, to the Tribunal's analysis.

760 Given the analysis above with respect to subsection 96(1), the Tribunal finds that P&H has not shown a causal connection between any proven efficiencies under subsection 96(1) and an increase in the real value of any exports. The Tribunal therefore concludes that the requirements of subsection 96(2) have not been met.

(c) The trade-off analysis

761 In light of the Tribunal' conclusions on efficiencies, there is no need to deal with the trade-off analysis in this case.

(3) Conclusion on efficiencies and section 96

762 For the reasons detailed above, the Tribunal concludes that P&H has not demonstrated, with clear and convincing evidence, its claimed efficiencies and that it would not have met its burden of demonstrating, on a balance of probabilities, that its claimed gains in efficiency would be greater than, and would offset, the anti-competitive effects of any lessening of competition resulting from the Acquisition.

VIII. CONCLUSION

763 For the above detailed reasons, the Commissioner's Application is dismissed. In light of this conclusion, no remedial action will be ordered.

IX. COSTS

764 The parties were unable to come to an agreement as to costs.

765 The Commissioner submits that he should be awarded a lump sum amount of CAD $2 million inclusive of counsel fees and disbursements if he is successful. If the Application is dismissed, then the Commissioner argues that P&H should be awarded CAD $2 million inclusive of counsel fees and disbursements. However, if the Application is dismissed and the Tribunal

finds that P&H's section 96 efficiencies defence would not have been successful, then the Tribunal should, in the Commissioner's view, deduct CAD $500,000 from the lump sum cost award, in recognition of the costs the Commissioner incurred in order to respond to that defence. While the Commissioner recognizes that P&H was entitled to rely on the efficiencies defence, he argues that if a respondent pleads the defence but does not adduce sufficient evidence to make it out, then the Tribunal should use a costs award to recognize the significant costs incurred by the Commissioner (and ultimately, Canadian taxpayers) to respond. If there is no financial deterrent associated with an unsuccessful efficiencies defence, the Commissioner submits that in the future, respondents will claim efficiencies as a matter of course, causing significant financial burden on the Commissioner regardless of whether raising the efficiencies defence was justified.

766 P&H, in turn, seeks costs payable as a lump sum in the amount of CAD $2,206,958.18, inclusive of fees, disbursements and taxes, if the Commissioner's Application is dismissed. This sum represents approximately CAD $209,000 for legal fees and approximately CAD $1,998,000 for disbursements (both inclusive of taxes). Should the Application be allowed, P&H indicates that it takes no position with respect to the Bill of Costs submitted by the Commissioner, save for one item — *i.e.*, the preparation and filing of the Commissioner's motion materials dealing with confidentiality designations — which P&H maintains is an ineligible cost in view of the Tribunal's order dismissing the Commissioner's confidentiality motion without costs. As for the matter of costs relating to the efficiencies defence, P&H submits that the merits of the efficiencies defence becomes moot if a substantial lessening of competition is not found under section 92, and that the result of the case must drive costs, not *obiter dicta*. According to P&H, this is not a case of divided success (citing Allergan Inc v Sandoz Canada Inc, 2021 FC 186 at paras 31, 43).

767 Both parties submitted bills of costs and affidavits in support.

A. Legal principles applicable to costs

768 In *VAA CT*, the Tribunal noted that section 8.1 of the CTA grants jurisdiction to the Tribunal to award costs of proceedings before it in accordance with the provisions governing costs in the FC Rules (*VAA CT* at para 817). Under subsection 400(1) of the FC Rules, the Tribunal has "full discretionary power over the amount and allocation of costs and the determination of by whom they are to be paid." A non-exhaustive list of factors that the Tribunal may consider when exercising its discretion is set out in subsection 400(3).

769 Costs ordinarily follow the outcome of the proceeding, in that the successful party is usually awarded costs (see, for example, Heiltsuk Horizon Maritime Services Ltd v Atlantic Towing Limited, 2021 FCA 26 at para 182; MacFarlane v Day & Ross Inc, 2014 FCA 199 at para 6; *VAA CT* at para 816; FC Rule 400(3)(a)).

770 The costs regime does not indemnify the successful party for all of its legal fees and disbursements, absent very unusual circumstances. Costs are only partial compensation for the actual costs incurred in litigation. As noted in *VAA CT*, an award of costs represents a compromise between compensating a successful party and not unduly burdening an unsuccessful party (*VAA CT* at para 817, citing Apotex Inc v Wellcome Foundation Ltd(1998), 159 FTR 233 (FCTD), 84 CPR (3d) 303, aff'd (2001), 199 FTR 320 (FCA)).

771 The objectives of a costs award include having the unsuccessful party make a "reasonable contribution" to the successful party's costs of litigation, having regard to the Tariff in the FC Rules (NOVA Chemicals Corporation v Dow Chemical Company, 2017 FCA 25 (“ at paras 13, 21). Although the Tariff amounts may be inadequate in complex litigation, nevertheless, an increased costs award cannot be justified solely on the basis that a successful party's actual fees are significantly higher than the Tariff amounts. The burden is on the party seeking increased costs to demonstrate why their particular circumstances warrant an increased award (*NOVA Chemicals* at para 13, citing Wihksne v Canada (Attorney General), 2002 FCA 356 at para 11).

772 The approximation of lump sum costs is a matter of judgment rather than an accounting exercise (Consorzio del Prosciutto di Parma v Maple Leaf Meats Inc, 2002 FCA 417 at para 8). While the costs awarded should have a fair relationship to the actual costs of litigation, the question for the Tribunal is what, in the circumstances, are necessary and reasonable legal costs and disbursements (Nadeau Ferme Avicole Ltée v Groupe Westco Inc, 2010 Comp Trib 1 at para 49).

773 Disbursements must be reasonable, necessary, and justified (*NOVA Chemicals* at para 26; *VAA CT* at para 821). Expert-related costs are not automatically recovered in their entirety and can be adjusted by the Tribunal if they do not appear reasonable (*VAA CT* at para 822).

774 In *VAA CT*, the Tribunal took into account that success on the issues in dispute, particularly the legal issues in dispute, was divided; although the respondent was successful overall, the Commissioner prevailed on certain issues (*VAA CT* at paras 819, 827). The Tribunal reduced the costs award to the respondent to reflect the time spent on issues on which the Commissioner prevailed but the respondent persisted in spending time, and based on the reasonableness and necessity of the disbursements.

775 As paragraph 400(3)(a) of the FC Rules contemplates, success overall in the proceeding remains a principal factor, subject to additional considerations relevant to the circumstances and claims made. The Tribunal may consider the factors in paragraphs 400(3)(b) to (n.1) of the FC Rules and any other matter it considers relevant under subsection 400(3)(o).

776 The Tribunal favours lump sum costs awards (*VAA CT* at para 825).

B. Tribunal's assessment

777 As the successful party, P&H is entitled to an award of costs. The Tribunal will fix the costs payable by the Commissioner in this proceeding.

(1) Legal fees

778 With respect to legal fees, P&H claimed approximately CAD $209,000 in respect of legal fees, calculated based on Tariff B, Column IV. Its claims included time spent for preparation of pleadings, affidavits of documents, preparing for and attending oral examinations for discovery, preparing for and attending case management conferences, preparation of witness statements, and the attendance of two counsel at the hearing. The Commissioner submitted that, if P&H is successful, its quantum of costs should be determined on the usual basis of the middle of column III, and should also be less than the amount fixed by the Tribunal in *VAA CT* (which was CAD $70,000) because the matter occupied fewer hearing days.

779 As noted, both parties took positions to increase or decrease an award of costs by large amounts beyond the Tariff. P&H increased its requested award based on its actual legal fees and the complexity of this proceeding. P&H advised that it believed that an award for legal fees in the amount of CAD $900,000 would be appropriate (its actual legal fees were approximately CAD $3.6 million), but only claimed CAD $209,000 under Tariff B, Column IV. For his part, the Commissioner sought to decrease an award to P&H if it did not succeed on section 96 issues. The Commissioner submitted that P&H's costs award should be reduced by CAD $500,000, which the Commissioner argued represented the amount he paid to respond to P&H's position under section 96 by having to quantify the anti-competitive effects (through Dr. Miller) and file Mr. Harington's expert report on efficiencies under section 96.

780 The parties also argued several novel points — i.e., issues that had not been argued to the Tribunal in previous litigated proceedings. The Commissioner's position on product market raised new issues for the Tribunal's consideration, while P&H raised issues under section 96 that had not been considered previously.

781 The most important overall factor in arriving at a costs award is which party succeeded. Here, the Tribunal dismissed the Commissioner's Application. In addition to the overall result, the Tribunal recognizes that this proceeding involves a public official with a statutory mandate to administer and enforce the Act; both parties are highly sophisticated with very experienced counsel; and the legislative setting contemplates significant pre-litigation disclosure through the merger review process and pre-hearing disclosure, as well as well known elements and burdens of proof under sections 92 and 96 of the Act. The Tribunal also finds that proceedings under section 92 involve complex legal and factual matters that support higher costs awards under the Tariff B, Column IV in the FC Rules (as claimed by P&H).

782 Although the Commissioner succeeded on several preliminary issues, the Tribunal does not find that those arguments diminish P&H's entitlement to an award of costs in this case.

783 The Tribunal does not agree with the Commissioner's position that the costs award to P&H should be reduced by an overall lump sum amount of CAD $500,000 because P&H would not have succeeded on its section 96 defence. Although the cost of Mr. Harington's services are known (*i.e.*, CAD $259,000), the balance to arrive at the claimed amount of CAD $500,000 is merely an assumption or guess without a sufficient evidentiary basis.

784 That said, however, the Tribunal finds it appropriate under FC Rule 400(3)(o) (and by analogy to other paragraphs in FC Rule 400(3)) to take into account the specific circumstances of this proceeding related to the section 96 evidence and arguments in its overall assessment of legal fees, as follows:

- The overall burden of proof under section 96 was on P&H;

- P&H raised efficiencies in its pleading. The Tribunal notes that P&H did not provide details of its position on efficiencies at examinations for discovery and did not file an expert report for the hearing — even though it advised it would do so during the discovery process. It only filed Mr. Heimbecker's fact evidence (which included some efficiencies arguments that P&H did not initially plead);

- The Commissioner did not waste time on section 96 issues during the fact portion of the hearing; he did not cross-examine Mr. Heimbecker on his evidence related to alleged efficiencies;

- The Commissioner prevailed on section 96 issues. Even if the Tribunal's conclusions on section 96 were, strictly speaking, unnecessary for the Tribunal to decide given the outcome of its analysis under section 92, the Commissioner had no practical alternative but to respond to the section 96 efficiencies defence raised by P&H and to do so with an expert report;

- The Commissioner had to prepare for and conduct discovery on section 96 issues, quantify the anti-competitive effects in accordance with the principles established in *Tervita SCC*, file an expert report, address section 96 issues at the hearing, and respond to issues related to the proper interpretation of subsection 96(2), all of which affected the time spent by legal counsel;

- The Tribunal considers that P&H's approach to the section 96 issues in this proceeding tended to unnecessarily increase the Commissioner's costs and increase the time spent on the proceeding. A considerable part of the Commissioner's legal costs in relation to section 96 and its disbursement for Mr. Harington's report could have been avoided.

785 Exercising its discretion, the Tribunal concludes that the appropriate costs award to P&H for legal fees in this matter should be fixed at CAD $157,000, which represents approximately 75% of P&H's legal fees as claimed under Tariff B, Column IV.

(2) Disbursements

786 The Tribunal has considered the positions of both parties with respect to each of the claims made by P&H for the disbursements it incurred in this litigation.

787 P&H claims expert fees in the amount of approximately CAD $1.61 million. Having regard to the Tribunal's positive treatment of Ms. Sanderson's evidence, but also to the overall reasonableness of the quantum claimed by P&H to be reimbursed by the Commissioner, the Tribunal finds CAD $1.2 million to be a reasonable sum in respect of expert fees.

788 The Tribunal recognizes that this hearing was conducted not only electronically (as is standard at the Tribunal) but entirely virtually, and in very unusual circumstances owing to the COVID-19 pandemic. P&H decided that its counsel would travel to Winnipeg, at or close to its witnesses (particularly Mr. Heimbecker), and presumably close to P&H's offices. For the hearing, P&H set up an operations centre at a hotel, necessitating the rental of a large room (to maintain physical distancing and set up the appropriate equipment for a virtual hearing with all the required computers and technical support).

789 P&H claims a disbursement of approximately CAD $126,000 for hotel conference rooms and audio visual display equipment used during examinations for discovery and, later, during the facts portion of the hearing. The Commissioner submitted that these amounts were excessive, noting his own claim for just CAD $2,200. The Tribunal does not accept the Commissioner's comparison of P&H's costs for four witnesses to testify in Manitoba, versus the 10 witnesses called by the Commissioner. Having decided that counsel would travel to Winnipeg (which the Tribunal does not find appropriate to question in this case), the Tribunal finds that the rental of space and equipment was reasonable given the COVID-19 restrictions in Manitoba at the time. Although some charges on the invoices related to food and package deliveries and the amounts charged for space and equipment appear quite high on a daily basis, the Tribunal finds it appropriate that the Commissioner make a reasonable contribution to this expense in the amount of CAD $50,000.

790 P&H claimed payments made for case law searches in third party legal databases in the amount of approximately CAD $32,000. The evidence reveals more than 300 searches, done mostly in the two months leading up to the hearing. It is unclear whether those searches related to two motions argued and decided during the same period, or to the legal issues arising in the hearing itself. (On one motion, costs were awarded in the cause whereas no costs were awarded in the other.) The Tribunal recognizes that most legal research is done online and at the time, the law firm personnel were likely working from home and without a law library. It is also clear that some of the legal issues raised by the Commissioner's position and by P&H (for example, preliminary issues and the interpretation of subsection 92(2)) required legal research. Although the Commissioner did not object in his submissions, the Tribunal finds that the high number of searches and absence of details as to what the searches concerned (motions as opposed to hearing; issues raised by each party) support a reasonable claim for CAD $8,000.

791 P&H sought reimbursement for air travel to and from Winnipeg in the amount of CAD $31,500. Its claim was based on 50% of the actual cost of a private jet for two counsel to travel to Winnipeg and back for discovery, and later for the fact portion of the hearing. Reviewing the invoices, it appears that at both the discovery and hearing stages, the aircraft flew from Winnipeg to Toronto (without passengers on board other than flight crew) to pick up P&H's counsel and returned the same day. The aircraft made a trip to return counsel to Toronto upon completion of both the discoveries or portion of the hearing, and then flew back to Winnipeg without passengers on board other than flight crew. The invoices reflect charges for round-trips even though counsel were on board one way only. The Tribunal will allow a claim for CAD $4,500, which (on the evidence) approximates a full fare economy air ticket for two counsel to fly between Toronto and Winnipeg for discovery and for the fact portion of the hearing.

792 P&H claims approximately CAD $31,600 for transcripts of the examinations for discovery and the hearing and approximately CAD $10,600 for data hosting, which was necessary for the virtual hearing at the Tribunal. The Tribunal allows these claims in their entirety.

793 The Tribunal allows claims for photocopies and printing in the amount of CAD $800 and for hotels and meals during examinations for discovery and at the hearing in the aggregate of the amount of CAD $8,000 (based on a contribution to the cost of hotel rooms for two counsel and a reasonable *per diem* for meals).

794 P&H claimed approximately CAD $6,000 in courier costs attributable, for example, to counsel working from home during the pandemic and materials sent by counsel to the panel members and the Tribunal Registry during the hearing. The Tribunal notes that most (approximately CAD $4,200) of P&H's claim in that regard relates to a single package sent from Winnipeg to Toronto to return materials and equipment after the fact portion of the hearing ended. The Tribunal considers CAD $2,000 as a reasonable contribution towards courier costs.

795 P&H claimed meals in the amount of approximately CAD $1,350 in addition to those claimed by hearing counsel, which the Tribunal notes was not an appropriate claim for costs purposes.

796 A claim for conference calls in the amount of CAD $127 is *de minimis* in this context. The Tribunal notes that certain calls occurred before the litigation began.

C. Conclusion on costs

797 In light of the foregoing, the Tribunal awards costs for legal fees in the lump sum amount of CAD $157,000, inclusive of applicable taxes. The total of all disbursements allowed is CAD $1,315,500, inclusive of applicable taxes.

798 The Tribunal therefore concludes that the Commissioner shall pay an all-inclusive aggregate lump sum amount of CAD $1,472,500 to P&H in respect of costs of this proceeding.

X. ORDER

799 The Application brought by the Commissioner is dismissed.

800 Within 30 days from the date of this Order, the Commissioner shall pay to P&H an amount of CAD $1,472,500.

801 These Reasons are confidential. In order to enable the Tribunal to issue a public version of the Reasons, the Tribunal directs the parties to attempt to reach an agreement regarding the redactions to be made to these Reasons in order to protect confidential evidence and information. The parties are to jointly correspond with the Tribunal Registry by no later than the close of business on November 14, 2022, setting out their agreement and any areas of disagreement concerning the redaction of the confidential version of the Reasons. If there is any disagreement, the parties shall separately correspond with the Tribunal setting out their respective submissions with respect to any proposed, but contested, redactions from these confidential Reasons. Such submissions are to be served and filed with the Tribunal Registry by the close of business on November 14, 2022.

Schedule"A" — Relevant provisions of the Act

Mergers

[...]

Order

92 (1) Where, on application by the Commissioner, the Tribunal finds that a merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially

(a) in a trade, industry or profession,

(b) among the sources from which a trade, industry or profession obtains a product,

(c) among the outlets through which a trade, industry or profession disposes of a product, or

(d) otherwise than as described in paragraphs (a) to (c),

the Tribunal may, subject to sections 94 to 96,

(e) in the case of a completed merger, order any party to the merger or any other person

(i) to dissolve the merger in such manner as the Tribunal directs,

(ii) to dispose of assets or shares designated by the Tribunal in such manner as the Tribunal directs, or

(iii) in addition to or in lieu of the action referred to in subparagraph (i) or (ii), with the consent of the person against whom the order is directed and the Commissioner, to take any other action, or

(f) in the case of a proposed merger, make an order directed against any party to the proposed merger or any other person

(i) ordering the person against whom the order is directed not to proceed with the merger,

(ii) ordering the person against whom the order is directed not to proceed with a part of the merger, or

(iii) in addition to or in lieu of the order referred to in subparagraph (ii), either or both

(A) prohibiting the person against whom the order is directed, should the merger or part thereof be completed, from doing any act or thing the prohibition of which the Tribunal determines to be necessary to ensure that the merger or part thereof does not prevent or lessen competition substantially, or

(B) with the consent of the person against whom the order is directed and the Commissioner, ordering the person to take any other action.

Evidence

(2) For the purpose of this section, the Tribunal shall not find that a merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially solely on the basis of evidence of concentration or market share.

Factors to be considered regarding prevention or lessening of competition

93 In determining, for the purpose of section 92, whether or not a merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially, the Tribunal may have regard to the following factors:

(a) the extent to which foreign products or foreign competitors provide or are likely to provide effective competition to the businesses of the parties to the merger or proposed merger;

(b) whether the business, or a part of the business, of a party to the merger or proposed merger has failed or is likely to fail;

(c) the extent to which acceptable substitutes for products supplied by the parties to the merger or proposed merger are or are likely to be available;

(d) any barriers to entry into a market, including

(i) tariff and non-tariff barriers to international trade,

(ii) interprovincial barriers to trade, and

(iii) regulatory control over entry,

and any effect of the merger or proposed merger on such barriers;

(e) the extent to which effective competition remains or would remain in a market that is or would be affected by the merger or proposed merger;

(f) any likelihood that the merger or proposed merger will or would result in the removal of a vigorous and effective competitor;

(g) the nature and extent of change and innovation in a relevant market;

(g.1) network effects within the market;

(g.2) whether the merger or proposed merger would contribute to the entrenchment of the market position of leading incumbents;

(g.3) any effect of the merger or proposed merger on price or non-price competition, including quality, choice or consumer privacy; and

(h) any other factor that is relevant to competition in a market that is or would be affected by the merger or proposed merger.

[...]

Exception where gains in efficiency

96 (1) The Tribunal shall not make an order under section 92 if it finds that the merger or proposed merger in respect of which the application is made has brought about or is likely to bring about gains in efficiency that will be greater than, and will offset, the effects of any prevention or lessening of competition that will result or is likely to result from the merger or proposed merger and that the gains in efficiency would not likely be attained if the order were made.

Factors to be considered

(2) In considering whether a merger or proposed merger is likely to bring about gains in efficiency described in subsection (1), the Tribunal shall consider whether such gains will result in

(a) a significant increase in the real value of exports; or

(b) a significant substitution of domestic products for imported products.

Restriction

(3) For the purposes of this section, the Tribunal shall not find that a merger or proposed merger has brought about or is likely to bring about gains in efficiency by reason only of a redistribution of income between two or more persons.

Footnotes

1 Where the words "Tribunal" or "panel" are used and the decision relates to a matter of law alone, that decision has been made solely by the judicial members of the Tribunal.

2 The Tribunal pauses to note that the Commissioner is not claiming that the Acquisition substantially *prevents* competition. Hence, in these Reasons, the Tribunal's analysis will be limited to the Commissioner's alleged substantial *lessening* of competition.

3 In his oral and written submissions, the Commissioner often refers to the Basis as the "basis price."

4 In these Reasons, the word "*MEGs*" will also be used to refer to the Competition Bureau's merger guidelines more generally.

5 Throughout these Reasons, all references to a SSNIP are meant to include a SSNDP when the context requires it.

6 To assist the reader of these Reasons, the Tribunal reproduces at Schedule "C" a map representing the location of farms and the location and identity of the Elevators and Crushers operating in Dr. Miller's geography (Exhibit P-R-250, Map with Farm Locations in Dr. Miller's Geography).

7 In the corridor of concern, a total of 80 farms sold wheat, 77 farms sold canola, and 82 farms sold either wheat or canola.

8 In a situation involving the purchase of a product and potential monopsony power, the determination to be made is whether prices are or likely would be *materially lower* than in the absence of the merger. In this discussion on the analytical framework, all references to "price increases" or "material price increases" are meant to relate to mergers involving the sale of a product and potential monopoly power. For mergers involving the purchase of a product and potential monopsony power, all references would be to "price decreases" or "material price decreases."

2022 Comp. Trib. 3
Competition Tribunal

Canada (Commissioner of Competition) v. Secure Energy Services Inc.

2022 CarswellNat 321, 2022 Comp. Trib. 3

IN THE MATTER OF an application by the Commissioner of Competition for one or more orders pursuant to section 92 of the Competition Act, RSC 1985, c C-34 as amended

The Commissioner of Competition (Applicant) and Secure Energy Services Inc. (Respondent)

Michael J. Phelan Member

Heard: January 28, 2022
Judgment: February 15, 2022
Docket: CT-2021-002

Counsel: Jonathan Hood, Paul Klippenstein, Ellé Nekiar, for Applicant, Commissioner of Competition
Robert Kwinter, Nicole Henderson, Brian Facey, for Respondent, Secure Energy Services Inc.

***Michael J. Phelan Member*:**

REASONS FOR ORDER AND ORDER REGARDING THE RESPONDENT'S MOTION TO COMPEL THE COMMISSIONER TO PROVIDE PROPER AND COMPLETE ANSWERS TO REFUSALS ON DISCOVERY

I. NATURE OF MATTER

1 This is Secure Energy Services Inc.'s [Secure/Respondent] motion [Secure's Motion] following the discovery of the Commissioner's representative. It was heard along with the Commissioner's motion to compel Secure to answer certain questions. The Tribunal has ruled on the Commissioner's motion. Ultimately Secure's Motion comes down to whether some or all of the questions identified in Schedule A to Secure's Motion should be answered. This Order will address the specific questions to be answered as well as the applicable principles regarding the types of questions. Many of the disputed questions related to information arising from the Commissioner's investigation of the Tervita/Newalta merger previously described in the Tribunal's decision related to the Commissioner's discovery motion.

2 The Commissioner has taken the position that it is only required to answer questions about facts learned related to the Tervita-Newalta merger whereas Secure takes the position that the Commissioner has a broader obligation to answer questions based on the Commissioner's "information, knowledge and belief" — the usual discovery standard.

3 Secure recognizes, properly I add, that certain types of questions are improper to ask of the Commissioner including those seeking expert opinion and analysis — sometimes a difficult distinction. Secure does not ask for new analyses to be performed but says that the Commissioner's refusals relate to the Commissioner's existing knowledge, information and belief about a completed transaction involving one of the merging parties in (arguably) the same product and geographic market.

4 The Tervita/Newalta merger's relevance or potential relevance to the Secure/Tervita Merger [Merger] is obvious from the facts in issue and from the pleadings in the litigation. The Commissioner does not seriously dispute the relevance of the Tervita/Newalta merger to the issues in this case. It just seeks to shield itself from disclosing some of what it learned from its review of that merger.

II. CONSIDERATIONS

5 Generally Secure's position better reflects the discovery obligations of a party in a Tribunal matter — including the Commissioner's. The Tribunal has taken a broad approach to the discovery obligation and has provided guidance, which I adopt, in The Commissioner of Competition v Live Nation Entertainment, Inc et al, 2019 Comp Trib 3 [, and The Commissioner of Competition v Vancouver Airport Authority, 2017 Comp Trib 16 [.

6 The following quotes from *Live Nation* reflect the Tribunal's approach to the discovery obligation:

> [6] ... It is now well-recognized that a liberal approach to the scope of questioning on discovery should prevail (*Lehigh* at para 30). What the parties and the Tribunal are both trying to achieve with examinations for discovery is a level of disclosure sufficient to allow each side to proceed fairly, efficiently, effectively and expeditiously towards a hearing, with sufficient knowledge of the case each party has to meet (*The Commissioner of Competition v Vancouver Airport Authority*, 2017 Comp Trib 16 ("VAA") at para 46). If a party does not disclose relevant facts or information known to it until trial, the other side will be unfairly disadvantaged.
>
> [7] ... FC Rule 240 provides that a person being examined for discovery must answer, to the best of the person's knowledge, information and belief, any question that is relevant to the unadmitted facts in the pleadings.
>
> [8] ... At the discovery stage, relevance is a generous and flexible standard (*Apotex Inc v Sanofi-Aventis*, 2011 FC 52 at para 19). Doubts on the issue of relevance are to be resolved in favour of disclosure, and questions will typically need to be answered unless they are clearly improper.
>
> . . .
>
> [10] That being said, even when questions do meet the standard of relevance, courts have nonetheless delineated some boundaries to the type of questions that may be asked on examinations for discovery. A party can properly ask for the factual basis of the allegations made by the opposing party and for the facts known by such party, but it cannot ask for the facts or evidence relied on by the party to support an allegation (*VAA* at paras 20, 27; *Montana Band v Canada*, 1999 CanLII 9366 (FC), [2000] 1 FC 267 (FCTD) ("*Montana Band*") at para 27; *Can-Air Services Ltd v British Aviation Insurance Company Limited*, 1988 ABCA 341 at para 19). In *Apotex Inc v Pharmascience Inc*, 2004 FC 1198, aff'd 2005 FCA 144 ("*Apotex*"), the Federal Court further established that witnesses are not to testify on pure questions of law: a fundamental rule is that an examination for discovery may seek only facts, not law. Accordingly, the following types of questions have generally been found not to be proper subject matters for discovery: (i) questions seeking expert opinion, (ii) questions seeking the witness to testify as to questions of law, (iii) questions seeking law or argument, as opposed to facts, and (iv) questions where the witness is being asked "upon what facts do you rely for paragraph x of your pleading" (*Bard Peripheral Vascular, Inc v W.L. Gore & Associates, Inc*, 2015 FC 1176 at para 19).
>
> [11] ... The scope of permissible discovery will ultimately depend "upon the factual and procedural context of the case, informed by an appreciation of the applicable legal principles" (*Lehigh* at paras 24-25; see also *VAA* at paras 41 46).

7 In outlining the broad scope of discovery applicable to parties, it is important to recognize the somewhat unique status of the Commissioner. This was touched upon at *VAA*, paras 43-44:

> [43] **Other factors colour the examination for discovery process in Tribunal matters. First, the Commissioner is a unique litigant in proceedings before the Tribunal. The Commissioner is a non-market participant and his representatives have no independent knowledge of facts regarding the market and behaviour at issue. Rather, all of the facts or information in the Commissioner's possession, power or control arise from what he has gathered from market participants in the course of his investigation of the matter at stake. The Commissioner and his representatives do not have the direct and primary knowledge of the facts supporting the Application. This means that it may typically be more difficult and challenging for a representative of the Commissioner to exhaustively describe "all facts known" to the Commissioner.**

> [44] **Second, expeditiousness and considerations of fairness are two fundamental elements of the Tribunal's approach and proceedings.** Subsection 9(2) of the *Competition Tribunal Act*, RSC 1985, c 19 (2nd Supp) directs the Tribunal to conduct its proceedings "as informally and expeditiously as the circumstances and considerations of fairness permit". Ensuring both expeditious litigation and adequate protection of procedural fairness is thus a statutory exigency central to the Tribunal's functions. The Tribunal endeavours to make its processes quick and efficient and, at the same time, never takes lightly concerns raised with respect to the procedural fairness of its proceedings. Furthermore, as I have indicated in the *VAA Privilege Decision*, since proceedings before the Tribunal are highly "judicialized", they attract a high level of procedural fairness (*VAA Privilege Decision* at para 159). It is well-established that the nature and extent of the duty of procedural fairness will vary with the specific context and the different factual situations dealt with by the Tribunal, as well as the nature of the disputes it must resolve (*Baker v Canada (Minister of Citizenship and Immigration)*, [1999] 2 SCR 817 at paras 25-26; *VAA Privilege Decision* at paras 165-170).
>
> [Tribunal's emphasis]

8 The guiding principles for this discovery obligation are relevance and fairness as reflected in para 46 of *VAA*.

9 While the Tribunal has recognized the limits on the source of the Commissioner's knowledge, information and belief, the Commissioner has the obligation to meet the discovery disclosure standard subject to usual issues of relevance, privilege and proportionality to name a few.

10 In respect of relevance, discovery cannot be used as a tool to review the Commissioner's conduct of another merger investigation. The issue before the Tribunal is not the "reasonableness" of the Commissioner's decision to challenge this merger — it is not judicial review nor is it a review of the Commissioner's decision not to challenge the other related merger or any other merger. It is not about how the Commissioner conducted its investigations or the techniques used in those investigations. Whether they were proper and well conducted or botched is of no relevance to the Tribunal's consideration of the alleged substantial lessening of competition of this Merger.

11 That being said, recognition that the Commissioner is not a typical litigant does not support the proposition that the Commissioner can be insulated from the basic tenets of discovery or of the examination for discovery process (See Canada (Director of Investigation and Research) v NutraSweet, [1989] CCTD No 54 at para 35 []).

12 An important aspect of oral discovery is that of obtaining admissions from the opposing party. This process can involve probing inquiry of matters and issues (*VAA*, para 41).

13 As explained in *NutraSweet* and in *The* Commissioner of Competition v Direct Energy Marketing Limited, 2014 Comp Trib 17, Secure is entitled to be provided with the relevant factual information underlying the Commissioner's application and the allegations therein, to know the case it has to meet, to obtain sufficient information respecting specific facts in issue.

14 As with all motions regarding refusals, one must examine the questions at issue, the context, and their true nature. The Tribunal must determine the true nature of the question posed and ensure that questions are not a disguised manner of trying to obtain that which is not permitted. As acknowledged at para 63 of *VAA*, requiring the Commissioner to outline the facts and sources cannot be a disguised way to requiring disclosure of the "fact relied upon" by the Commissioner.

15 There is no magic formula for determining whether a question should be answered. It requires a review of the question as posed, the subject matter and the context.

16 In keeping with the underlying principles of discovery including that ultimate relevance and weight will be determined by the hearing tribunal, this stage of the litigation favours disclosure.

17 It is not a realistic premise that if there is true surprise by matters which should have been disclosed, an adjournment can be granted to allow the surprised party time to consider their position. While such remedy does exist, in these scheduled

and time managed proceedings, the process of stopping the hearing and restarting is inefficient, disruptive and difficult for the parties and the Tribunal itself. Adjournment is a last resort, not a "going in" proposition.

III. QUESTIONS IN ISSUE

A. Customer based approach

18 Q 156 asks whether the Commissioner used "the customer based" approach and more directly phrased, Secure is seeking an admission as to the Commissioner's knowledge which is a proper line of questions.

19 Q 157, on the other hand, seeks to question the Commissioner's decisions during the inquiry process which is not pertinent and need not be answered.

B. Product/Geographic Markets

20 Q 332 seeks an admission that the Tervita/Newalta merger involves the same products and market as the Secure/Tervita Merger. The question could have been approached in stages of identifying the products of each and then comparing the answers. The question posed is a more efficient way to secure an admission on a relevant issue.

21 Q 332 includes a follow-up question seeking any differences. Both aspects should be answered within the context of the Commissioner's knowledge, information and belief.

22 Q 332 asks questions directed at how the Commissioner dealt with product markets *internally*. As such, it seeks information about how the Commissioner conducted the Tervita/Newalta merger review. The Commissioner's manner of conduct is not the issue in this litigation and the question need not be answered.

23 Q 333: for the same reasons as Q 332, it need not be answered.

24 Q 334: as this relates to geographic markets in the same way Q 332 related to product markets, it must be answered.

25 Q 335 is directed at the internal workings of the Commissioner's office and is irrelevant.

C. Tervita/Newalta Merger

26 Q 339 asks about the Commissioner's post Tervita/Newalta closing conduct and is irrelevant.

27 Q 350 to 354 asks about how the Commissioner conducted his analysis of aspects of the Tervita/Newalta merger. It is not relevant. The current litigation is not a process of comparing investigative activities as between merger reviews.

D. Dead Weight Loss

28 Q 355-358: the series of questions focuses on dead weight loss analysis. Dead weight loss is a key defence in this litigation. Apparently the Commissioner has knowledge, information or belief of aspects of dead weight loss in what is arguably the same product and geographic markets. To the extent that the questions do not require the production of expert opinion or engage privileged communication, the information is producible.

E. Other

29 Q 359 - 361 raises similar questions in respect to demand elasticity and for the same reasons and subject to the same caveats as above, they are to be answered.

30 Q 362 inquires into how the Commissioner conducted the Tervita/Newalta merger review and is irrelevant.

31 Q 363 inquires into efficiencies considered in the Tervita/Newalta merger and to the extent that the Commissioner has knowledge, information and belief on this subject and Secure is seeking an admission, the Commissioner is to answer. The fact that there may be expert opinion on a topic does not, in and of itself, form a valid grounds of refusal.

ORDER

FOR THE REASONS GIVEN, the Tribunal orders the following questions to be answered:

Q 156, 332, 334, 355 to 358, 359 to 361 and 363

2000 Trib. conc. 15, 2000 Comp. Trib. 15
Competition Tribunal

Canada (Commissioner of Competition) v. Superior Propane Inc.

2000 CarswellNat 3449, 2000 CarswellNat 7142, 2000 Trib. conc. 15, 2000 Comp. Trib. 15, [2000] C.C.T.D. No. 15, [2001] S.C.C.A. No. 252, 7 C.P.R. (4th) 385

In the Matter of the Competition Act, R.S.C. 1985, c. C-34, and the Competition Tribunal Rules, SOR/94-290, as Amended

In the Matter of an Inquiry Pursuant to Subsection 10(1)(b) of the Competition Act Relating to the Proposed Acquisition of ICG Propane Inc. by Superior Propane Inc.

In the Matter of an Application by the Commissioner of Competition Under Section 92 of the Competition Act

The Commissioner of Competition, (Applicant) and Superior Propane Inc. ICG Propane Inc., (Respondents)

Lloyd Member, Nadon Member, Schwartz Member

Heard: September 23, 1999 - February 9, 2000
Judgment: August 30, 2000
Docket: CT1998002

Counsel: *William J. Miller*, *Jo'Anne Strekaf*, *Steven T. Robertson*, *Jennifer A. Quaid*, *James E.J. Bocking*, *Ken Davidson*, for Applicant, The Commissioner of Competition
Neil Finkelstein, Melanie L. Aitken, Russell Cohen, Brian Facey, Martha Cook (Student at Law) for Respondents, Superior Propane Inc. and ICG Propane Inc.

Per Curiam:

I. Introduction

1 An application is brought by the Commissioner of Competition ("Commissioner") pursuant to section 92 of the *Competition Act*, R.S.C. 1985, c. C-34, (the "Act") for an order to dissolve the merger of Superior Propane Inc. ("Superior") and ICG Propane Inc. ("ICG") or otherwise remedy the substantial prevention or lessening of competition that is likely to occur in the market for propane in Canada upon the implementation of the said merger.

2 The application arises by reason of Superior's acquisition of ICG on December 7, 1998. Prior to the acquisition, Superior submitted a short-form prenotification filing pursuant to section 121 of the Act to the Competition Bureau regarding its proposed acquisition of all of the shares of The Chancellor Holdings Corporation, a wholly-owned subsidiary of Petro-Canada. The Chancellor Holdings Corporation, in turn, owned ICG. An inquiry into this merger was commenced by the Commissioner on August 14, 1998, pursuant to section 10 of the Act. On December 6, 1998, following two days of hearing, the Tribunal dismissed the Commissioner's application of December 1, 1998 brought under section 100 of the Act for an order forbidding the closing of the transaction for a period of 21 days. Further, on December 11, 1998, a consent interim order was issued by the Tribunal to hold separate the assets of Superior and ICG, excluding the non-overlapping locations situated in areas where Superior had no market presence.

3 Superior is a corporation constituted under the laws of Canada and is engaged primarily in the retailing and wholesaling of propane, as well as in the sale of propane consuming appliances and equipment and related services in all 10 provinces and territories. All of the outstanding shares of Superior are owned by the Superior Income Trust Fund (the "Fund"), a limited

purpose trust established for the purpose of holding debt and equity of Superior. The Fund has issued trust units which are listed on the Toronto Stock Exchange.

4 ICG is a corporation constituted under the laws of Canada and is engaged in selling and distributing propane and providing related services to customers in all Canadian provinces and territories except Prince Edward Island, Newfoundland and to a lesser extent, Nova Scotia. ICG operates through a network of company-owned distribution outlets and independent dealers located throughout its sales and distribution areas. In 1990, Petro-Canada indirectly acquired ICG and combined Petro-Canada's retail propane operations with ICG's business.

5 The Commissioner alleges that the merger will create a dominant national propane marketer and in several markets, a dominant local propane marketer. Both Superior and ICG compete against each other in the same geographic and product markets through their operations of propane distribution systems and wholesale supply of propane to agents and dealers.

6 Interlocutory proceedings in this matter were lengthy and vigorously contested. Upon application by the Commissioner, an interim order was issued on December 11, 1998 to preserve ICG's business as independent and viable pending the Tribunal's decision on the application. Various orders regarding confidentiality of documents and the scope of discovery were issued by the Tribunal.

7 Following the illness and inability of a panel member, Lorne Bolton, to attend the hearing in this matter, an Order Regarding the Constitution of a New Panel was issued on December 13, 1999. This order terminated the hearing before the panel constituted of Mr. Bolton, Dr. Schwartz, and Nadon J. and further constituted a new panel composed of Ms. Christine Lloyd, Dr. Schwartz and Nadon J. pursuant to section 10 and subsection 12(3) of the *Competition Tribunal Act*. The evidence on the record of the previous proceedings, including all the orders and rulings made by the Tribunal, were entered into the record of the hearing before the new panel pursuant to section 70 of the *Competition Tribunal Rules*.

8 The hearing of this matter took 48 days, 91 witnesses including 17 expert witnesses were called and a large number of documents were entered as exhibits.

II. Propane Business

9 Propane is a chemical commodity produced as a by-product of natural gas extraction and of crude oil refining. In Canada, 85 percent of propane production is derived from natural gas and accordingly is produced in the Western Canadian Sedimentary Basin. Propane volumes from crude oil are produced at oil refineries that are generally closer to population centres where the consumption occurs (e.g., Edmonton, Southern Ontario, Montreal, Quebec City).

10 Propane sourced from gas production is extracted and transported mixed with other natural gas liquids to fractionation sites where separation into "specification propane" takes place. In Canada, raw natural gas liquids are transported from producing regions in Alberta and northeast British Columbia via pipelines to "hubs" at Edmonton/Ft. Saskatchewan and at Sarnia, Ontario, where fractionation takes place. Fractionation into specification propane also takes place at straddle plants along pipelines and gas field plants in Alberta for marketing to western Canada.

11 Approximately 63 percent of propane produced in Canada is exported to the United States (expert affidavit of G. Mathieson (18 August 1999): exhibit A-2073 at 15). According to Statistics Canada data which are themselves disputed, total domestic consumption of approximately 77 million barrels per day ("mbpd") in 1998 occurred in the segments of residential/commercial/agricultural for space and water heating, cooking, appliances, crop drying (32 mbpd); industrial uses, e.g., forklifts, heating (17 mbpd), collectively, the "traditional segments"; in transportation, primarily automobile fuel (18 mbpd); and petrochemical feedstock (10 mbpd). Consistent with industry usage, "retail propane" includes total propane consumption less propane consumed as petrochemical feedstock and propane consumed by producers.

12 Although it appears that there are discrepancies in the consumption data published by different sources, autopropane consumption seems to have peaked in 1994 at 23 mbpd, stimulated by government-supported fleet conversions, and then

declined steadily as those programmes of financial assistance were ended along with other factors including the improved efficiency of gasoline engines.

13 Consumption of propane used as a heating fuel is subject to seasonal fluctuation and dropped dramatically from 39 mbpd in 1997 to 32 mbpd in 1998 due to warmer weather. Consumption in the industrial and petrochemical feedstock segments appears to have levelled. It seems that Canadian propane consumption is characterized by stable demand or modest growth at best.

14 There is some dispute as to the number of propane marketers operating in Canada. ICG's amended preliminary prospectus claims approximately 75 propane marketers including Superior, while Superior claims a total of 189 independent propane distributors. These propane marketers obtain propane supplies at refinery racks and at storage facilities owned by the major propane producers at prices based on postings at the Edmonton or Sarnia hubs and varying with the distance between these hubs and the supply point. Large marketers typically purchase their supplies under contracts that specify volume and price, or a pricing formula in terms of price per litre. These buyers may own or rent storage space close to the supply points which allows them to enter into "keep dry" arrangements at lower prices from producers. A keep-dry arrangement requires the buyer to take propane sufficiently regularly so that the producer does not have to maintain storage and, therefore, sells at a lower price to a buyer capable of honouring its commitments.

15 These buyers transport propane by truck or rail to their local storage facilities (primary distribution). Secondary distribution occurs when delivery to customers is made, usually by truck, from these local storage facilities.

16 Smaller propane marketers purchase propane on spot markets from the producers or from the larger marketers. In some cases, a smaller marketer acts as an agent in a local area for a major marketer that does not have a local delivery capability. For such arrangements, the customer contract is held by the major marketer who determines the pricing. Another relationship is the "bulk dealer", whereby a local company purchases propane from a major marketer under an agreement that specifies a territory in which that local dealer will not face competition from the major marketer or any of its other bulk dealers.

17 Propane marketers tend to be local and regional in their operations. At present, only two companies, Superior and ICG, supply end-users across Canada, either directly or through agents and dealers. The merging parties are well suited to supply customers that demand propane at multiple locations across the country.

18 The customer relationship is most frequently contractual. Almost all propane marketers undertake to deliver propane on a regular basis to customer locations at the prevailing price established by the marketer from time to time for a specific term with agreements lasting up to five years. The customer is free to terminate the contract on sufficient notice, but as the contract will often contain "meet or beat" and/or "right of first refusal" clauses, the current supplier may be able to maintain the customer's business.

19 In addition to delivering the propane, particularly to residential customers, the marketer usually provides customer storage tanks on a rental basis and installs and services propane-related equipment. It appears that most marketers do not fill a residential tank that they do not own.

20 Propane delivery is a regulated activity in all jurisdictions. Propane storage tanks and customer tanks must meet various safety standards, and the individuals who handle the propane must be licensed.

21 Although specification propane is a well defined commodity, the propane marketing companies generally differ with respect to reputation, length of time in the business, the terms and conditions they offer to customers, the ability to meet a customer's needs at multiple locations, etc. In addition, some marketers specialize in serving certain segments, while others seek customers in all segments. The result is that the "product" provided by a propane marketer is often differentiated on these dimensions from the offerings of its competitors.

III. Market Definition

A. Product Market

22 With respect to product market definition, the Commissioner submits in final argument that the relevant product market is the supply and delivery of propane, propane equipment and related services to retail and wholesale customers. The Commissioner also submits that the relevant product market can be further broken down into various end-uses and customer classifications including: residential, agricultural, commercial, industrial (collectively, the "traditional" segment), automotive, national and major account customers. As propane and related equipment and services appear to be strong complements, it will be convenient to define one product market rather than consider the three separate business lines mentioned.

23 The Commissioner alleges, in effect, that retail propane constitutes, by itself, a market over which market power can be exercised. Such a market will be referred to as a "competition market". The respondents assert that it is not a competition market because alternate fuels exist and consumers can and do easily switch to these alternatives. Their position is that retail propane is part of a broad energy market and hence that any attempt to exercise market power over retail propane could not be successful.

(1) Commissioner's Position

24 The Commissioner's experts, Richard Schwindt and Steven Globerman, presented a report evaluating the competitive effects of the proposed merger between Superior and ICG. With respect to product market definition, they provided opinion evidence that retail propane is the relevant competition market (expert affidavit of R. Schwindt and S. Globerman (16 August 1999): exhibit A-2056). They conclude that switching from propane to alternate fuels is difficult. For example, regarding residential heating applications, Professors Schwindt and Globerman observe, at page 10 of their report, that while most propane appliances can be readily converted to natural gas, nevertheless "in residential households where the piping from the outside of the house to the furnace is sized for propane and not for natural gas, conversion costs can be quite high". Further, regarding electricity, they observe at page 11 of their report that "at this time and into the foreseeable future, the price of electricity is so high relative to propane in several parts of the country that it is an unlikely substitute".

25 Further, Professors Schwindt and Globerman observe that heating oil could be a substitute for propane although propane is superior to oil with respect to cleanliness, environmental impact and odour. Convenience, storage requirements and capital costs do not differ significantly between the two fuels. However, their estimated costs of converting a residence in the Lower Mainland of British Columbia from a propane to an oil fired forced air furnace range from $4,500 to $5,300. At pages 12 and A-2 of their report, they conclude that it would take very significant price increases, in the range of 50 to 60 percent, to justify a switch to fuel oil. At page A-3, they conduct a similar analysis regarding switching from propane to heating oil in commercial heating and from propane to electricity for forklift trucks which leads to the same conclusion.

26 Regarding autopropane, Professors Schwindt and Globerman note at page 19 of their report that substitutability of alternate fuels, particularly gasoline, depends upon whether the vehicle is dual-fuel or dedicated to propane. They infer from an Imperial Oil Limited ("IOL") document that 95 percent of conversions to propane in British Columbia in the early 1990's were for commercial vehicles and nearly all of those were "propane dedicated" rather than dual-fuel, suggesting that substitution is slight.

27 The Commissioner further submits that switching costs are high and "create a lock-in effect for customers" with the result that cross-elasticity of demand is low.

28 The Commissioner submits that the payback period for changing related equipment and appliances from propane to alternate fuels may be significant. He states that, for instance, the life-cycle for fuel related equipment and appliances for the traditional sector such as residential furnace is on average in the range of 15 to 25 years. Therefore, a customer facing a propane price increase would have to consider this factor before converting this equipment.

29 In this regard, the Commissioner cites a study commissioned by ICG and produced by M. Pass Consulting Ltd. in August 1999, dealing with locations and markets where alternative fuels may pose either a competitive threat or an opportunity for ICG (exhibit A-2099). The study measures customer payback to switching fuel types (i.e., the time it would take for the savings in fuel costs to match the initial outlay for switching) under two scenarios: (a) when the existing appliance has useful life remaining, and (b) where the appliance requires replacement. The study demonstrates that converting from propane to electricity or fuel

oil, for most of the seven end-uses analysed, involves long and, in many cases, infinite payback periods and hence does not make economical sense in the short to mid-term when factoring all the relevant switching costs and not only the cost of the fuel.

30 The Commissioner also called a number of factual witnesses who testified that switching to alternate fuels was impeded by the difficulty and inconvenience of breaking existing contracts for supply and equipment. The inconvenience includes the difficulty in coordinating the removal of existing equipment and the installation of new supplier's equipment in a timely fashion (e.g., to avoid plant shut down or loss of residential heating), the cost of removing the leased equipment and the delays associated with getting a refund for the propane left in the tank. Superior's own public share offering documents (exhibits A-10 at 03890 and A-202 at 03899) emphasize these barriers to customer switching.

31 With respect to conversion costs, the Commissioner presented the evidence of a factual witness, Marilyn Simons, a residential user of propane from Renfrew, Ontario, who evaluated the costs to convert her home furnace from propane to heating oil, her propane stove to an electric stove and to replace her propane fireplace with wood-burning equipment. The total conversion costs amounted to approximately $12,300. Some witnesses testified that conversion costs would prevent them from switching to alternate fuels while others testified that an increase in the price of propane would have to be very significant before such conversion was made.

32 The Commissioner submits that there is only imperfect substitutability of alternate fuels for propane. In particular, he concedes that propane consumers do switch from propane to natural gas when this option is available and that, therefore, natural gas displaces rather than competes with propane.

33 The Commissioner also introduced the expert evidence of David Ryan and André Plourde whose report provides "empirical evidence concerning the role, importance and substitutability of propane as an energy source in Canada" (expert affidavit of D. Ryan and A. Plourde (16 August 1999): exhibit A-2076 at paragraph 1(a)). They studied energy consumption for propane, electricity, natural gas, refined oil products and wood in three sectors (residential, industrial and commercial) for each province or region depending on data availability. Then, using Statistics Canada and other government data from 1982 to 1996, the last year for which all of the relevant data series were available, they estimated short-run and long-run cross-price elasticities and own-price elasticities of propane demand for the years 1990 and 1996.

34 At paragraph 6.3.4(a) of their report, Professors Ryan and Plourde find that in about 35 percent of the cases considered, the own-price elasticity of propane demand is negative and significant, while it is positive and significant in fewer than four percent of the cases. The own price elasticity of demand is the percentage change in quantity of the product consumed that results from a one percent price increase in its price. In all other situations considered, no significant relationship between the quantity of propane demanded and its price can be detected. They conclude that, in general, a change in the price of propane will lead to smaller than proportional reductions in propane consumption, i.e., that propane demand is inelastic.

35 Regarding cross-price elasticity, statistically significant responses to propane price changes were identified in approximately 45 percent of the cases considered with substitution relationships outnumbering complementarity by a factor of about two-to-one. However, with the exception of oil products in Saskatchewan/residential and Quebec/industrial for 1996, all cross-price elasticities reported were less than one in absolute value. Indeed, in only two cases do cross-price elasticities exceed 0.6 in absolute value. They conclude that changes in propane prices induce proportionally smaller changes in the consumption of other energy types and, therefore, that propane and other energy types form different markets in the provinces/regions in Canada.

36 Although arguing for an "all propane" product market, the Commissioner suggests through expert evidence that certain end-use segments constitute relevant markets in themselves. This would indicate that if, for example, market power could be exercised in residential propane but not in the other end-use segments, then it would properly constitute a relevant competition market, and total consumption and market shares would be calculated within that segment.

37 At page 1 of their report (exhibit A-2056), Professors Schwindt and Globerman conclude that "retail propane distribution does constitute a relevant product market", despite the fact that they find evidence of segmentation among suppliers and

customers and they suggest that this segmentation is strong enough to qualify theses segments as separate product markets. They conclude at page 23 of their report as follows:

> ... However, given the limited availability of data with respect to market structure by geographical market, application, and in some cases customer, it would not be possible to determine the differential effects of the merger on competitive conditions across more rigorously and narrowly defined product markets. Moreover, the analysis that follows *would not be fundamentally altered by adopting a more refined product market definition*. (emphasis added)

38 Finally, the Commissioner argues that "national accounts" are a separate category of business in which the merged entity will be in a position to exercise market power. According to the Commissioner, a significant component of the customer base of each of the merging firms is the national and major accounts which have multiple locations spanning one or more regions across Canada.

(2) Respondents' Position

39 The respondents' position on the relevant product market is that propane competes with alternative fuels in the energy market and for each end-use, different alternate fuels are substitutes. They assert that interchangeability of propane and alternate fuels together with the evidence of inter-industry competition and the views of industry participants strongly indicate that propane and alternate fuels compete in the same market.

40 On the matter of customer switching, the respondents referred to the evidence of William Katz, a senior executive of AmeriGas Propane Inc. ("AmeriGas"), who testified that customers would switch to propane when it could be demonstrated that switching was economically attractive for them and not only at the end of the useful life of the equipment (transcript at 15:2602-604 (19 October 1999)). Mr. Katz also indicated that AmeriGas had success in switching customers to propane well before the end of the useful life of their existing equipment.

41 Further, the respondents assert that every year, a substantial number of propane and alternate fuel customers replace their existing equipment or make an initial fuel choice and accordingly choose from among the "entire menu" of fuel choices. The respondents note that customers making an initial fuel choice or replacing existing equipment face no incremental switching costs and, therefore, that customers whose equipment is in mid-life cycle pay the same price as those who are at the end of the cycle.

42 The respondents argue that propane industry views support the substitutability of alternative fuels. They state as an example that Steven Sparling of Sparling's Propane Company Limited ("Sparling") testified that his company considered any energy provider a competitor. This includes electricity, natural gas, fuel oil and propane marketers.

43 The respondents also submit that the Tribunal in the context of denying an injunction to the Commissioner in this case (see *Canada (Director of Investigation & Research) v. Superior Propane Inc.* (1998), 85 C.P.R. (3d) 194, at 207, 208, (Competition Trib.)) acknowledged the statements made by Superior and ICG in their securities filings regarding competition between propane and alternate fuels. At the time, Rothstein J. accepted that they were competing in a wide energy market on the basis that the statements contained in the prospectus and annual reports and in ICG's preliminary prospectus were "of some significance" and something upon which he should "place weight".

44 The respondents also assert that supply substitution is possible and that the relevant market should take account of firms that can easily switch their facilities to propane marketing. They submit that it is appropriate to include upstream industry participants and industrial gas companies as well as other distributors of alternate fuels.

45 Finally, the respondents suggest that the analysis conducted by the Commissioner's experts, Professors Ryan and Plourde, explicitly recognizes that alternate fuels and propane are substitutes in various places at various times for various end-uses.

(3) Analysis

46 There is clearly no commonality in the positions of the parties before the Tribunal on the appropriate definition of the product market. Accordingly, the Tribunal must decide which evidence is the more convincing.

47 The purpose of defining the relevant product market is to identify the possibility for the exercise of market power. This purpose was clearly asserted in the two previous merger cases heard by the Tribunal. In *Canada (Director of Investigation & Research) v. Southam Inc.* (1992), 43 C.P.R. (3d) 161, at 177, 178, (Competition Trib.), the Tribunal reiterated:

> The general issues with respect to the definition of a market in a merger case have been set in the *Hillsdown Holdings (Canada) Ltd.* decision, *supra*. The relevant market for purposes of merger analysis is one in which the merging firms acting alone or in concert with other firms could exercise market power. Market power is the ability of a firm or group of firms to maintain prices above the competitive level. Market power may also be exercised by offering, for example, poor service or quality or by restricting choice. When used in a general context, "price" is thus a shorthand for all aspects of firms' actions that bear on the interest of buyers....
>
> The delineation of the relevant market *is a means to the end of identifying the significant market forces* that constrain or are likely to constrain the merged entity....
>
> The critical issue is to ensure that all factors have been considered that have a bearing on whether there has or is likely to be a prevention or lessening of competition to a substantial degree. (emphasis added)

48 While market definitions should be as precise as possible within the limit of reasonableness to provide a framework within which competition implications of a transaction can be analysed, the Tribunal should not be preoccupied with market definition to the point of losing sight of the purpose of the exercise under the Act which is to determine whether the merger is likely to lead to a substantial prevention or lessening of competition. As stated by the Supreme Court of Canada in *Canada (Director of Investigation & Research) v. Southam Inc.*, [1997] 1 S.C.R. 748 (S.C.C.), at 788:

> ... More generally, I notice that the Tribunal seems to have been preoccupied with the definition of the relevant market. It is possible that the members may occasionally have lost sight of the ultimate inquiry, which is whether the acquisition of the community newspapers by Southam substantially lessened competition.

49 In the Tribunal's view, the factual and expert evidence on substitutability is very important. The Tribunal distinguishes between "switching" in its common sense meaning and substitutability in the economic sense; it is the latter that is important in delineating a relevant product market. It may be, as the respondents claim, that at the end of the useful life of their heating or other energy-using equipment, consumers do switch to propane from alternate fuels depending, in part at least, on differences in fuel prices. However, this behaviour demonstrates *de novo* choice; at the end of their equipment life cycle, those consumers are in the same position as when they first chose a fuel. This behaviour is not evidence of substitutability, which refers to changing a consumption pattern in response to a price change with all other determinants of change, including the age of equipment, held constant.

50 Mr. Katz stated that AmeriGas was successful in attracting customers to propane from other fuels before the end of the useful life of their existing equipment. However, he provided no quantitative evidence as to AmeriGas's success in this regard and accordingly, it is difficult for the Tribunal to judge the extent of such success.

51 Mr. Sparling's testimony is that Sparling is seeking to attract new propane customers in the new housing developments. If Sparling is successful, it is evidence that such customers are making fuel choices as a consequence of a decision to relocate. While this residential location decision may involve a change in fuel, it does not demonstrate that the price of propane was the reason for the move and hence does not provide evidence of substitution.

52 In its 10-K securities filing in the United States, AmeriGas makes similar comments about competition from alternate fuels. However, in the absence of evidence showing significant customer switching during the life of the existing equipment,

the Tribunal is of the view that the evidence of AmeriGas does not support the substitutability of alternate fuels for competition market purposes.

53 As to the views of industry participants, Sparling may well be correct in some long-term sense in its view that propane competes with all alternate fuels. However, no evidence indicates that Sparling's behaviour is affected by inter-fuel competition. According to Mr. Sparling, the company is mainly concerned about "consistent pricing" from customer to customer and not with pricing in relation to alternate fuels (transcript at 12:1731 (14 October 1999)). Moreover, Sparling has not experienced customers switching to other fuels other than natural gas (*ibid.* at 1733).

54 Hence the Tribunal does not accept that propane industry views support the substitutability of alternate fuels in the mind of consumers. Indeed, witnesses consider alternate fuels for the most part at the end of equipment life cycle, rather than in a shorter period of time in which market power could be exercised and which is relevant for merger review.

55 As to the conclusions drawn by Rothstein J. in denying the injunction sought by the Commissioner, it suffices to note that he did not have the benefit of the extensive record and expert opinions that were produced during the 48-day hearing of the application under section 92.

56 The Tribunal notes that the Act does not require that markets be delineated. However, the Tribunal accepts that the delineation of competition markets is one way of demonstrating the likely competitive effect of a merger and that, where such an approach is valid, the competition market adopted must be relevant to the purposes and goals of the merger provisions of the Act, which focus on the creation or enhancement of market power. In this connection, the Tribunal notes that there could be many competition markets containing retail propane. For example, it might be found that market power could be exercised over a product market consisting of retail propane, fuel oil, natural gas and electricity or any sub-group thereof. The share of retail propane in a market becomes larger as products are removed from the definition of the market. It is not clear, however, that any such market is the relevant competition market.

57 The Tribunal believes that it is important to provide a principled basis in this regard in order to avoid gerrymandering of market boundaries. To determine which set of products is the relevant one for the purpose of merger review under the Act, the Tribunal agrees with the approach taken in the *Merger Enforcement Guidelines* ("MEG's") (Consumer and Corporate Affairs Canada, Director of Investigation and Research, *Merger Enforcement Guidelines*, Information Bulletin No. 5 (Supply and Services Canada, March 1991)), which seeks to identify the smallest competition market, in terms of the number of included products, over which market power could be exercised. Thus, if market power can be exercised over a market consisting only of retail propane, then that market is the competition market that is relevant for merger review.

58 In this matter, the Tribunal accepts the statistical evidence of Professors Ryan and Plourde. Their evidence on cross-elasticity of demand clearly establishes that there are only a few areas of the country where substitution has occurred. Moreover, where substitution was found, the extent thereof was found to be small.

59 The cross-price elasticity of demand concept is frequently used in market definition. This measure identifies a product as a substitute if its quantity demanded rises when the price of the good in question rises. For any pair of products A and B there will be two such elasticities (the percentage change in consumption of product A when the price of product B increases by one percent, and the percentage change in the consumption of product B when the price of product A increases by one percent). Absent direct evidence thereto, there is no reason to suppose that these two cross-price elasticities of demand will be equal or even that both will be positive; in short, there is no such thing as *the* cross-price elasticity of demand. Therefore, cross-elasticity evidence showing that B is a substitute for A does not establish that A and B are substitutes for each other and hence is not sufficient to place products A and B in the same competition market. To use cross-elasticity of demand for this purpose would require further evidence that A is also a substitute for B.

60 The respondents' expert witness, Dennis Carlton, agreed in his testimony that both cross-elasticities of demand would be needed in order to place two products in the same competition market. The Commissioner implicitly adopts this approach when stating that, because of its lower price, natural gas "displaces" propane in an area when natural gas becomes available. This

statement indicates the Commissioner's view that once propane users have switched to natural gas, they do not switch back; but since switching in the opposite direction does not occur, therefore, propane and natural gas cannot constitute a competition market. The Tribunal agrees that to show that natural gas and propane are in the same competition market would require evidence that propane customers switch to natural gas when the price of propane increases as well as evidence that natural gas customers switch to propane when the price of natural gas increases. In other words, reciprocal substitutability must be demonstrated. The displacement argument suggests only one-way substitutability between propane and natural gas. Therefore, the Tribunal is not convinced that natural gas and propane constitute a competition market.

61 The more important limitation on the use of the concept of cross-price elasticity of demand to delineate markets is its indirect relevance to the exercise of market power. The definition of the relevant competition market does not depend on identifying particular substitutes in some pairwise fashion. Rather, the important question is whether, on a price increase by a firm, enough of its sales would be lost to all competing products, regardless of their number or identity, to make the price increase unprofitable. If this were the case, then a relevant competition market would not be found; that firm would not be able to exercise market power. A cross-elasticity estimate may identify a substitute and can be helpful in delineating a market, but it does not directly measure the ability of a firm to raise the price.

62 As the Supreme Court of Canada stated in *Southam*, cited above at paragraph [48], at page 760, evidence of demand elasticities when available and reliable can be determinative for market definition. Thus, the Tribunal believes that the own price elasticity of demand is the correct elasticity for defining competition markets and should be preferred over cross-price elasticity of demand for the reasons above.

63 The Tribunal places greater weight on Professors Ryan and Plourde's evidence regarding the "own-price elasticity of demand" as this concept is directly related to the issue of market power and hence to market delineation. The evidence demonstrates that the demand for propane is inelastic with respect to changes in its price, i.e., that consumers reduce their consumption of propane only slightly when the price rises. Although the data did not permit Professors Ryan and Plourde to measure retail propane demand by local market, their results were not challenged on this basis and the Tribunal is satisfied that propane demand is inelastic with respect to price for time periods for which the Act is intended to apply.

64 Thus, consistent with the approach taken in the MEG's, cited above at paragraph [57], if retail propane were hypothetically monopolized, that monopolist would face an inelastic demand curve and, according to conventional monopoly theory, would raise the price at least to the point where demand became elastic. Once the monopolist was operating on the elastic portion of the propane demand curve, further price increases would be imposed only if they were profitable.

65 Accordingly, if retail propane demand is so price-sensitive (i.e., elastic) that a hypothetical monopolist that was the only current and future seller would not impose a significant and non-transitory price increase, then retail propane cannot be a relevant competition market and the market would have to be expanded to include another fuel. However, if the demand curve is sufficiently insensitive (i.e., inelastic) to price increases, then a monopolist would impose a significant price increase and the competition market would not be expanded. Therefore, there is a critical or "cutoff" level for the own-price elasticity of demand at the pre-merger price against which the measured own-price elasticity of the good under review could be compared in order to determine whether the relevant market has been identified. (For a general discussion of elasticities and market delineation, see G.J. Werden, "Demand Elasticities in Antitrust Analysis" (1998) 66 Antitrust L.J. at 363-414.)

66 To counter a claim that a hypothetical monopolist would raise the price would require evidence that the pre-merger price was already above marginal costs. However, the respondents did not present such evidence.

67 Other indicia such as functional interchangeability, inter-industry competition as well as the views of industry participants constitute indirect measures of substitutability and are often used to identify products in the relevant market, particularly when direct evidence on elasticities of demand is not available. However, it must be remembered that the relevant competition market is the smallest set of products over which market power can be exercised and these indirect measures do not identify that set of products for competition purposes. A competition market is defined for the express purpose of measuring market power and

may only loosely be related to markets as defined by business people whose definition is determined by profit maximisation considerations.

68 The respondents' definition of the product market relies heavily on the functional interchangeability of propane and alternate fuels (functional test) and the evidence of inter-industry competition of a few witnesses but does not consider the evidence of elasticities which had been considered by the Supreme Court in the *Southam* decision, cited above at paragraph [48], as determinative when available. While functional interchangeability can indicate something about the possibility of substitution between two or more products, it does not convey any information about the actual or likely consumer behaviour in response to the exercise of market power.

69 In that regard the evidence drawn from actual behaviour (i.e., the elasticities) and the opinions provided by expert witnesses such as Professors Ryan, Plourde, Schwindt and Globerman carry more weight in the Tribunal's opinion as to what products constitute the relevant competition market. Consequently, the Tribunal finds that the relevant competition market is "retail propane" and excludes other fuels.

(4) Segmentation

70 Evidence that propane consumers systematically pay different prices depending on their end-use, and that such differences are not justified on the basis of cost differences, is necessary to support a finding of separate competition markets by end-use. However, no such evidence has been provided. Professors Schwindt and Globerman examined individual end-use categories and seemed to suggest that since market power could be exercised in each segment, therefore, a monopolist of all segments would be able to price-discriminate. While this is certainly possible, one would need to be sure that the price elasticity of demand varied systematically across end-uses so that a monopolist could exploit those differences. Professors Schwindt and Globerman did not present evidence on such differences. Professors Ryan and Plourde's evidence was suggestive in that regard; however, they did not advocate end-use markets.

71 Indeed, Professors Schwindt and Globerman suggest at page 36 of their report (exhibit A-2056) that there are price differences among propane consumers within the same segment; this could reflect perfect price discrimination. However, since demand elasticities are unlikely to vary significantly by consumer in the same end-use segment and geographic market, it is possible that they have identified price dispersion reflecting lack of complete consumer information rather than perfect price discrimination by end-use by a seller with market power.

72 Finally, at page 2 of their report, Professors Schwindt and Globerman consider that supply side segmentation supports separate relevant competition markets by end-use. Their argument, which is premised on product differentiation, is confusing. Differences among suppliers do not indicate differences in price-elasticity of demand by end-use segment. In light of the evidence, the Tribunal is not satisfied that separate competition markets by end-use have been established.

(5) National Accounts

73 The Commissioner alleges that national accounts are a separate category of business in which the merged entity will be in a position to exercise market power and that the appropriate geographic market for analyzing national account competition is Canada.

74 The respondents submit that the Commissioner's experts, Professors Schwindt and Globerman, opined that national accounts did not constitute a separate product market.

75 In the Tribunal's understanding, a national account customer is a consumer of propane at several sites across the country, or at least across a number of widely-dispersed geographic markets, such that the consumer finds it more convenient to contract for propane supply from one marketer with national operations or capabilities rather than from several marketers in local markets. Witnesses indicated a variety of reasons for preferring to obtain supply from a national marketer. John Fisher of U-Haul Ontario stated that one reason was the ability to negotiate a single price, or price formula, that allows U-Haul to charge the same price for propane at all of its 376 locations across the country. Michael Stewart of Canadian Tire emphasized the need for consistency

of delivery, training and safety at all 96 store sites and 40 petroleum sites. Carole Bluteau of CN Rail noted the administrative problems of dealing with multiple local vendors given that propane represents such a small portion of CN's fuel purchases.

76 Claude Massé of CP Rail noted that dealing with several suppliers was inconvenient not only in terms of multiple invoices and cheque handling, but also in problem-solving. In addition to centralized billing, he valued the capability with a national supplier of dealing with only one person to resolve issues at all sites, rather than contacting the local manager for each. Indeed, he allowed that there might even be some savings in direct costs of propane supply by using multiple, lower-priced suppliers because the administration of invoices (currently 100 bills per month) could be handled by existing personnel. However, propane pricing was not his reason for preferring a national supplier:

> ... But the pricing, it's not an issue — it's not the first base of this, the plan to go with one. It was more the product itself, the service.
>
> I would hate to go to a small company who the staff, if it doesn't have the expertise and the training, and then would fuel up a propane tank and then it blows up. The safety of our people is also important. transcript at 10:1506, 1507 (8 October 1999).

77 It appears to the Tribunal that national account purchasers seek the management and administrative efficiencies that arise from doing business with a sole supplier. These efficiencies define a product that might be termed "national account coordination services", the price of which is difficult to observe because the product is bundled with the propane itself.

78 National account coordination services are provided only by those propane marketers with national capabilities, specifically Superior and ICG. Several witnesses noted that when they tendered for a national supplier, they sought bids only from these companies. In addition, when a national account customer had a problem with its national supplier, it approached the other for supply.

79 The evidence is that firms who use a national supplier do so for a variety of reasons largely unrelated to the price of propane. While the possibility exists that lower propane costs could be achieved through multiple suppliers, the evidence of several witnesses is that they did not even bother to investigate the prices and possible savings; Mr. Stewart of Canadian Tire was one such:

> MR. MILLER: Is the dealing with the one person and the one company across the country, is that of value to you?
>
> MR. STEWART: Absolutely.
>
> MR. MILLER: In what sense?
>
> MR. STEWART: Everything gets funneled through one person. I don't have to chase down the person who is responsible for different areas of the business. I can funnel all my questions through one and it gets distributed from there.
>
> MR. MILLER: Can you quantify this value in any fashion?
>
> MR. STEWART: I do not believe so.
>
> THE CHAIRMAN: I take it that you have never tried? Based on your answer, you've never tried to quantify it?
>
> MR. STEWART: No, we haven't.
>
> THE CHAIRMAN: Is that because it doesn't matter?
>
> MR. STEWART: At the time, it doesn't.
>
> THE CHAIRMAN: Very well.

MR. MILLER: In the event of a price increase, how much of a price increase would you sustain before moving to some other arrangement?

MR. STEWART: Well, it's hard to say at this point in time because it would take a lot of investigative work to ascertain costs and the costs involved with using alternate suppliers.

MR. MILLER: Have you examined that at all?

MR. STEWART: No.

MR. MILLER: Thank you, sir. Those are all my questions. transcript at 11:1572, 1573 (13 October 1999).

80 The evidence is that some large propane consumers with multiple sites acquire propane from multiple local suppliers, rather than from a national supplier. These consumers have decided to supply coordination services internally. In the Tribunal's view, it would not be unusual for firms to accomplish their propane supply objectives in different ways. Internal coordination may well be efficient for some firms but not for others. However, the key question is not whether internal coordination is available as an alternative in the event of a small but significant price increase but, rather, whether national account customers would switch to multiple suppliers and internal coordination in that event.

81 Although no expert witness has provided an opinion that national account coordination services constitute a relevant product market, the Tribunal is satisfied, in the light of the totality of the evidence, that national account coordination services constitute a product over which market power could be exercised.

82 In light of comments regarding national accounts by both parties, it should be noted that product markets are defined in terms of products alone. For example, does the market for retail propane include natural gas, electricity, wood, etc.? Neither competitors nor customers can be said to be "in" or "out of" a product market. For this reason, the Tribunal defined a product "national account coordination services" and considered whether market power could be exercised over such product.

B. Geographic Market

(1) Local Markets

83 The geographic market dimension of the relevant product is critical in this case because delivery is an important component of the product. Failure to define the proper geographic boundaries of retail propane markets would lead to the incorrect measure of market shares and hence of the ability to exercise post-merger market power. In this case, both parties submit that the geographic market is local in nature rather than provincial, national or international; but the dispute concerns the actual boundaries of these markets. The Commissioner presents a set of geographic markets based on Douglas West's spatial analysis approach which identifies joint service areas. The respondents criticize these markets as being too small when compared with Superior's actual travel patterns.

84 The geographic boundaries of a market are established by asking what would happen if a hypothetical monopolist at a particular location attempted to impose a small but significant non-transitory price increase. If this price increase would likely cause buyers at that location to switch sufficient quantities of their purchases to products sold at other locations as to render the price increase unprofitable, then the geographic market would be expanded by adding the location to which customers switched their purchases. This question would be asked in relation to the expanded market repeatedly until a set of locations was identified over which a hypothetical monopolist could profitably impose a small but significant and non-transitory price increase. That area would be the smallest area over which market power could be exercised and would constitute the relevant geographic market for competition analysis.

85 This area may bear little resemblance to service areas or trade areas as defined by particular sellers in the conduct of their business activities. These service or trade areas could be helpful in delineating relevant geographic markets but they do not define areas over which market power can be exercised.

86 Professor West states that Superior and ICG had approximately 130 and 110 branches and satellite locations respectively in 1997. Professor West's procedure grouped these locations into 74 local geographic markets. In his opinion, these markets are relevant for the purpose of computing market shares and inferring post-merger market power (expert affidavit of D. West (17 August 1999): confidential exhibit CA-2051).

87 Professor West's methodology, which is set out at pages 21-25 of his report, relies on set theory. First, he plots all branches and satellite locations of all propane dealers in operation in 1997. This accords with the view that the product of this merger is produced at the local storage facility and conforms with the approach that geographic markets should, in general, be delineated based at the point of production rather than at the point of consumption.

88 For an initial Superior location, Professor West finds the "nearest point set". The boundary between that location and another Superior location is the bisector of a straight line joining them. Bisectors for all adjoining Superior locations will completely specify the "market polygon" for that initial location. Similarly, Professor West determines the market polygon for each ICG location.

89 Then, starting with a Superior location, Professor West assumes that the market polygon is part of the relevant market served by the branch at that location. If that polygon contains an ICG branch, then the Superior branch's market polygon is expanded to include the ICG branch's polygon. In essence, the market is defined as the union of the two polygons. If that ICG polygon includes a Superior branch/satellite location, the market is expanded again to include the union of the three polygons. The market is expanded in this way until no further polygons can be added to the union; at that point, Professor West defines a "candidate local market". He then undertakes the analysis for another Superior location.

90 For each candidate local market, Professor West defines a buffer zone of 100 kilometers around the perimeter. He identifies all propane dealers with locations in that zone and considers, based on available information, whether those dealers can, in the event of a post-merger price increase, sell propane to customers located in the candidate market. Branches in the buffer that can compete with locations in the candidate market are included in the market for measuring market shares.

91 Professor West notes that, in densely populated areas with many competing dealers, markets may be difficult to distinguish, particularly where branches of Superior or ICG are found in the buffer zone of a candidate local market. Such markets may be "linked". Accordingly, Professor West combines linked markets and re-estimates the market shares and reports that his market share estimates are not significantly altered in these larger markets.

92 Professor West notes at page 3 of his report that:

> I have concluded that retail propane markets are local in geographic scope. They generally extend around 60 to 100 kms. from the locations of SPI/ICG branches and satellites, depending on specific local market characteristics.

93 The Commissioner further submits that Superior's own documents support Professor West's conclusion that the geographic market spans from 60 to 100 kilometers, as a general matter.

94 With respect to the economical delivery distance, the 1997 Superior Propane Income Fund Annual Report (exhibit A-712) reads at page 07699:

> ... The further propane is transported, the higher the delivered cost, therefore, the competitive operating area is limited to a reasonable radius of *70 to 80* kilometres around the branch or satellite locations. (emphasis added)

95 The 1998 Superior Propane Income Fund Annual Report (exhibit R-111, tab 1) reads at page 01189:

> ... The further propane is transported, the higher the delivered cost. Therefore, the competitive operating area is *generally* limited to a radius of *100 to 400* kilometres around branch or satellite locations. (emphasis added).

96 The Commissioner also notes that, subsequent to the 1998 Superior annual report, the respondents took the position in their response to the Commissioner's application that Superior's appropriate delivery range is 50 to 300 kilometers.

97 The respondents dispute that the relevant geographic market is 60 to 100 kilometers radius around Superior-ICG branches and satellites. They submit that Superior's trading areas have radii of 50 to 620 kilometers and that some competitors have even larger trading areas which contradict Professor West's conclusion that competition between propane distributors is limited to firms within a range of 60 to 100 kilometers of a given branch or satellite.

98 The respondents also submit that Professor West's model has never been used for this type of competition analysis and he has not determined whether his geographic markets "function as markets".

99 Mark Schweitzer, Superior's Chief Executive Officer, indicated that Superior's branches have been reorganized. For example, he testified that 10 branches have been closed, but most have been converted to satellite locations (transcript at 31: 5911, 5912 (3 December 1999)) so that other branches may serve now larger areas with a radius of 100 to 400 kilometers as stated in the 1998 Superior Propane Income Fund Annual Report (exhibit R-111, tab 1).

100 The Tribunal is of the opinion that Professor West's analysis, while it does not follow the hypothetical monopolist approach entirely, nevertheless is similar in certain respects to that approach and can be used to identify relevant geographic markets (transcript at 22:3914 (29 October 1999)). Moreover, the respondents have not demonstrated that Professor West's spatial methodology was flawed in any significant respects. The respondents noted that the computer algorithm produced certain anomalies which led certain market boundaries to extend to the Arctic Ocean, but these criticisms were not crucial to the value of Professor West's approach since these are functions of the computer mapping procedure. In addition, the respondents dispute some of his market share calculations.

101 As to the argument of the respondents that Professor West's markets may not function as markets, the Tribunal is of the view that there is no necessary correspondence between a competition market, which is an analytical construct, and a market defined by management for operational purposes.

102 Further, the Tribunal notes that the respondents did not present an alternate set of geographic markets for the purpose of competition analysis. Rather, they seemed to suggest that the business-service areas of their branches and satellites were appropriate for this purpose.

103 The Tribunal notes that Mr. Schweitzer testified that he knew of no branch which could provide service to customers only as far as 60 kilometers or under 90 kilometers, which contradicts Superior's own evidence in some of the 1998 branch templates (e.g., Calgary 50 kilometers). Further, the Tribunal does not find the explanation of Mr. Schweitzer convincing because many of the branches were converted into satellite locations. Therefore, the Tribunal does not understand why converting branches to satellites would modify the boundaries of a geographic market.

104 The Tribunal notes that there is no evidence that using the furthest distance travelled from a branch constitutes a valid method for defining a relevant geographic market. Further, even if referring to the furthest point of a trading area were appropriate for defining such a market, the Tribunal would be concerned about adopting a method that would be based on the delivery to the exceptional customer located at great distance rather than considering the typical distance travelled for the majority of customers. There is no evidence that a Superior branch whose furthest customer is located 620 kilometers away serves all customers within that distance. Therefore, even if the Tribunal accepted in principle that a branch trading area could be a competition market, it could still not conclude that this trading area would have a radius of 620 kilometers.

105 The respondents submit that some independent firms serve customers in many of Superior's trading areas and that their travel distances are longer because they have fewer branches. However, it is not clear that such firms serve the entire Superior branch trading area. In addition, serving adjacent Superior trading areas does not necessarily mean that these independent firms deliver propane over longer distances than Superior does. Also, if the respondents were correct in their submissions, it would

remain unclear whether these independent firms supply many customers at longer distances; that is, their trading areas may not be measured by the longest distance travelled.

106 As stated above, the Tribunal does not agree that areas over which market power can be exercised are necessarily coincident with existing business or service areas such as those of Superior. Accordingly, the Tribunal concludes that the "candidate local markets" produced by Professor West's methodology are reasonable and appropriate for the purpose of identifying the relevant geographic markets in order to determine whether the merged entity will have the ability to exercise market power.

(2) National Accounts

107 With respect to the geographic market relevant for national accounts, the Commissioner submits that the relevant geographic market for the analysis of the national accounts is Canada. The respondents do not address the relevant geographic dimension for national accounts.

IV. Substantial Prevention or Lessening of Competition

108 The Commissioner submits that there will be a likely substantial lessening of competition in many local retail propane markets, a likely substantial lessening of competition regarding national accounts and a likely prevention of competition in Atlantic Canada. The Commissioner also argues that there will be a likely substantial lessening of competition by virtue of the creation or enhancement of market power by the merged entity which he attempted to demonstrate with expert and factual witnesses. He argues that market power can be inferred from various factors such as high market shares and concentration, the high barriers to entry, the removal of ICG as a vigorous competitor, the lack of foreign competition and the fact that there is no effective remaining competition.

109 The respondents submit that the merger is not likely to result in a substantial lessening of competition. They argue that the terms "likelihood of a substantial lessening of competition" are synonymous with "likely price increase" and that the Commissioner failed to demonstrate a likely post-merger price increase. They dispute the Commissioner's definitions of geographic and product markets, rely on the growth of independents' market share, advocate that ICG is not a vigorous and effective competitor and that barriers to entry in the retail propane business are low.

A. Market Shares and Concentration

110 The Commissioner's expert witness, Professor West, studied the combined market shares of Superior and ICG in 74 local markets for 1997 as stated above. He concludes at page 29 of his report (confidential exhibit CA-2051) that in 17 such markets, the combined market share is between 95 and 100 percent, that 32 markets have combined market shares in excess of 80 percent, that 46 markets have combined market shares of 70 percent, and that 66 markets have combined market shares in excess of 60 percent. In order to get these results, Professor West relies upon a set of completed surveys for the year 1997 that the Commissioner has received from responding propane dealers (the competitor survey) as well as, *inter alia*, internal business plans and data regarding sales volume and market shares of Superior and ICG. Professor West states that he has relied on Superior's data in the absence of sufficient data provided from competitors.

111 The respondents criticize Professor West's market share estimates on the grounds that he uses volume information for 1997 and Superior and ICG branch locations for 1998. The Commissioner points out, however, that Professor West does not mix 1998 locations with 1997 volumes and further refers to page 21 of his report to demonstrate that he identifies all of Superior's, ICG's, and other propane dealers' satellite and branch locations in operation in 1997.

112 Further, the respondents suggested to Professor West during cross-examination that he should have done a "reality check" by aggregating the volumes consumed in his 74 local candidate markets in 1997 with other measures of total consumption for that year. In final argument, they state that there were 200 competitors, only 67 of whom responded to the 1997 competitor survey. They also state that the 1998 volumes of the approximately 140 non-responding competitors would likely be a good estimate of those firms' volumes in 1997 and should have been used. The Commissioner points out that the competitor survey

identified and sought responses from 118 competitors and that the figure of 200 is an internal estimate of Superior that includes agents of Superior and of ICG that Professor West specifically tried to eliminate. Moreover, the Tribunal heard evidence that 1998 volumes declined from 1997 levels due to warmer weather; thus, there would be no reason to assume that the volumes of the non-responding firms would have remained the same in 1998.

113 The respondents also criticize Professor West's estimates because the total of the 1997 volumes by market differs from the Statistics Canada data on total retail propane demand. During Professor West's cross-examination, the respondents pointed out that the aggregate volume calculated from Professor West's individual market analysis differed from the aggregate number provided by Statistics Canada, as cited by the Commissioner's expert witness, Mr. Mathieson. However, the Commissioner pointed out that the 74 markets identified by Professor West did not cover the entire country. For example, they did not include a large part of the Maritimes, Northern Manitoba or the Territories. In addition, Mr. Mathieson noted that errors in the Statistics Canada data meant that it should only be used to establish trends in propane demand rather than accurate annual estimates of consumption by end-use.

114 The respondents' experts, Dennis W. Carlton and Gustavo E. Bamberger, criticize Professor West's 1997 market share estimates as being less reliable than information provided to them by Superior. Professor West replies that Superior's share estimates contained in its 1998 branch templates are based on an internal survey prepared after the commencement of the proceedings and conducted by branch managers who have no actual sales volume information for independents for that year (expert affidavit in reply of D. West (20 September 1999): confidential exhibit CA-2052 at 2).

115 The respondents argue that Professor West does not allocate all of the various independents' volume of propane sold in the relevant geographic markets, as defined by him, and that the allocation is arbitrary. Professor West explained that he used Superior's own market share evaluation when he did not have the sales volume information from other independent competitors (transcript at 22:3931 (29 October 1999)) and that he reduced Superior and ICG's combined market share in some of the geographic markets by several percentage points to reflect the sales volumes of several small competitors for which he did not have specific volume information. The Commissioner states that if Professor West did not have adequate volume data to calculate market share, he did not attempt to invent one in order to allocate some volumes to the market.

116 Professor West's results, set out at page 29 of his report (confidential exhibit CA-2051), are very similar to a frequency distribution of Superior/ICG market shares that Superior has estimated, apparently based on its branch trading areas. For example, Superior's own analysis indicates that 15 out of 116 branches have a market share of between 95 and 100 percent. Although the methodology of the two studies differ, this result is common to both and gives the Tribunal further confidence in Professor West's analysis.

117 In addition, the Tribunal has reviewed the criticisms made by the respondents on a market by market basis of Professor West's market share estimates. After careful review of his explanations and methodology (and having examined certain markets in detail), the Tribunal accepts that Professor West's approach is appropriate for a competition analysis in this case and that his inferences and conclusions about market shares are reasonable given the available data and the limitations therein identified by him. The Tribunal is of the opinion that it can rely on these results and conclusions for the purpose of determining whether the merger will result in a likely substantial prevention or lessening of competition.

118 The Commissioner's experts, Professors Schwindt and Globerman, classify markets on the basis of post-merger market share in their expert report (exhibit A-2056 at 27-41). Using Professor West's relevant geographic markets and market share estimates, they identified 16 local markets in which the merged entity would have combined market shares of 95 percent and higher, which they referred to as "merger to monopoly" markets. At page 28 of their report, they indicate that the merger will substantially increase the probability of a unilateral price increase in these markets.

119 They further identify eight markets ("category 1"), in which the Superior or ICG pre-merger market share is relatively small. In these markets, the merger may have minimal impacts on competition between Superior and fringe competitors and, therefore, the main concern is the removal of ICG as a potential future competitor (*ibid.* at 37). In addition, the merger in these markets would eliminate competition for propane buyers who prefer to deal with one of the major companies.

120 A third set of markets ("category 3") identifies 16 markets in which ICG has a substantial market share prior to the merger but where there are at least three competitors including Superior and ICG. In these markets, Professors Schwindt and Globerman expect that the elimination of ICG is likely to enhance interdependence and reduce competition (*ibid.* at 38, 40).

121 The final set of markets ("category 2") includes 33 local markets in which a relatively fragmented fringe of firms compete against Superior and ICG and where the merging parties are the two largest sellers (*ibid.* at 40). They state that there is a substantial likelihood that the merger will significantly reduce competition in these markets by creating a dominant firm and enhancing interdependence.

122 The respondents criticize Professors Schwindt and Globerman's analysis of the anti-competitive effects of the merger. First, they submit that Professors Schwindt and Globerman provide no opinion regarding the likelihood of a price increase in any market. Secondly, they submit that even Professors Schwindt and Globerman have minimal concerns about the anti-competitive effects of the merger in their category 1 and 2 markets. Thirdly, they argue that existing competitors will continue to compete vigorously in category 3 markets. Finally, they indicate that entry will restrain the merged entity from imposing a unilateral price increase in merger to monopoly markets.

123 Further, the respondents' experts, Professor Carlton and Dr. Bamberger, state at page 4 of their report that Professors Schwindt and Globerman accept that the substantial presence of independent retailers can constrain the merged firm from raising retail propane prices (expert affidavit in reply of D.W. Carlton and G.E. Bamberger (14 September 1999): confidential exhibit CR-121). In the Tribunal's view, this is not an accurate characterization of Professors Schwindt and Globerman's opinion.

124 The Tribunal believes that the respondents have incompletely depicted the opinion evidence of Professors Schwindt and Globerman and it accepts that, although they have not provided a firm opinion on the likelihood or quantum of a price increase, their conclusions regarding the anti-competitive effects of the merger are important and significant for the purpose of determining the likelihood of a substantial lessening of competition. The Tribunal will discuss the entry argument below under the heading "Evidence on Entry".

125 A key issue in this case is the evaluation of the post-acquisition market share of the merged entity by market. The respondents argue strenuously that the post-merger market share on a national basis has been declining and may have reached between 50 and 60 percent in 1998. These national market shares were introduced to establish the significant growth of independent propane marketers over the period between 1990 to 1998. The Tribunal believes that since relevant geographic markets are local, evidence of high market shares on a local basis cannot be defeated by a trend of national market shares purporting to demonstrate that entry can overcome this substantial lessening of competition.

126 Information on high market shares is, therefore, relevant but not determinative in respect of a finding of a likely substantial prevention or lessening of competition. However, the Tribunal notes that these market shares must be measured with respect to relevant product and geographic markets. In this case, since no national product market for retail propane has been demonstrated, information on market shares for Canada as a whole are not informative as to the exercise of market power in local markets.

B. Barriers to Entry

127 As stated by the Tribunal in *Canada (Director of Investigation & Research) v. Hillsdown Holdings (Canada) Ltd.* (1992), 41 C.P.R. (3d) 289, at 324, (Competition Trib.):

> In the absence of significant entry barriers it is unlikely that a merged firm, regardless of market share or concentration, could maintain supra-competitive pricing for any length of time. An attempt to do so would cause competitors to enter the market and the additional supplies created in that manner would drive prices back to the competitive level.

128 This statement emphasises the economic effect of entry. Evidence of commencement of operations, per se, is insufficient to establish the competitive restraint on a supra-competitive price or a likely exercise of market power. Moreover, if the impact on price is delayed beyond a reasonable period, then entry for the purpose of the Act has not occurred even if new businesses

have started their operations. The appropriate length of time for judging the impact of entry is a matter of opinion; however, the Tribunal notes that the MEG's, cited above at paragraph [57], refer to a period of two years.

129 The Commissioner submits that there are high barriers to entry into the propane distribution business. The barriers include the nature and existence of customer contracts and tank ownership, switching costs, minimal required scale, reputation, maturity of the market, the competitive response to entry (including litigation threats), access to propane supply, capital requirements, sunk costs and the time to get the business profitable.

130 The respondents dispute the existence and/or significance of these barriers mainly on the basis of their evidence of alleged entry and expansion by independent retail propane marketers.

(1) Contracts

131 The Commissioner's expert, Michael D. Whinston, conducted an analysis of the customer contracts used by Superior and ICG and the likely competitive effects arising from the merger (expert affidavit of M.D. Whinston (18 August 1999): exhibit A-2063). Professor Whinston reviewed the standard form contracts offered by Superior and ICG and found several provisions that could limit entry and/or expansion. These provisions include long-term exclusivity, automatic renewal, termination fees, right of first refusal (Superior only), and tank ownership.

(a) Contract Duration and Exclusivity

132 It is not disputed that a high percentage of propane customers take delivery under contracts. For example, Superior has estimated that 90 to 95 percent of its customers are under standard form contracts with the remaining 5 to 10 percent under negotiated non-standard contracts (confidential exhibit CA-701 at 06976). The Commissioner's expert, Professor Whinston, provides the same number with respect to ICG. According to Mr. Schweitzer, 70 percent of Superior's propane customers are under five-year term contracts: "Well, our standard that we discussed earlier today has a five-year term in it. My understanding is that about 70 percent of our customers have standard contracts" (transcript at 31:5894 (3 December 1999)).

133 Professor Whinston notes that long-term exclusive contracts can have both efficiency-enhancing and anti-competitive effects. In the case of propane supply contracts, the term can be as long as five years. This duration limits customer switching and can lead the supplier to offer less competitive prices than it would absent the exclusivity provision. Although sophisticated consumers will take into account the impact of exclusivity and will insist on compensation for the lack of choice for the term of the contract, Professor Whinston suggests that most residential customers may not understand the limitation of choice and the impact of loss of competition for their custom.

134 Professor Whinston is more concerned about the entry-deterring effect of long-term exclusive contracts for propane supply. Nothing that economies of scale appear to characterize the propane delivery business, he suggests that a new entrant will have to acquire enough customers to achieve the minimum efficient scale of operation, failing which the entrant will operate at a cost disadvantage compared to incumbents. In light of the exclusive nature of propane contracts, a new entrant will seek to acquire customers whose contracts with incumbents are expiring, but the long terms may limit the number of such "free customers" in any year to a level at which new entry is not profitable. He notes that this problem will be more severe when the contract expiration dates are staggered and when the contract terms are longer.

135 Similar concerns will be raised for existing smaller firms that seek to invest in order to lower operating costs, expand capacity or improve quality. The "free customer" base may not justify such investment.

136 Professor Whinston adopts the observation made by the Commissioner's expert, Terry Kemp, that the minimum efficient scale for a propane marketer is three million litres per year in order to demonstrate, in a general way, the impact of long-term exclusivity on the profitability of entry and expansion. If the average duration of contracts in a market is four years, then 25 percent of the contracted volume can be expected to come off-contract every year. If one new entrant could attract all of these free litres, then the market would require 12 million litres of total annual consumption in order for that new entrant to enter at

the minimum efficient scale. Professor Whinston finds for example that the total consumption in 12 of 71 markets defined by Professor West is less than 12 million litres and concludes that entry will be difficult in these circumstances.

137 The respondents submit that contract exclusivity is not a significant barrier to entry in this merger because only five markets will have less than 2.25 million litres required to support one new entrant. However, this result flows from assumptions that Professor Whinston regards as unrealistic.

138 Professor Whinston recalculates the number of markets with minimum required volumes assuming that declining autopropane volumes will not be available to a new entrant in any markets as defined by Professor West, that the minimum efficient scale is six million litres per year and that all customers are on four-year contracts. On this basis, he finds that 37 out of 73 "West markets" will not be large enough to sustain one new entrant, even if right of first refusal clause and other contractual terms are not effective deterrents to switching.

139 The Tribunal is of the view that the respondents' submission does not represent Professor Whinston's opinion. According to Professor Whinston's estimates, entry and expansion at minimum efficient scale are unlikely in many West markets.

(b) Automatic Renewal

140 With respect to automatic renewal, Professor Whinston notes that the automatic renewal feature of propane customer contracts serves to increase the effective duration of these contracts, as the notice periods are long. For example, ICG's Fuel Supply and Equipment Agreement requires the customer to give notice of termination of 180 days, absent which the contract will be renewed at expiry for the original term of perhaps five years. Thus, in the event that a new entrant is successful in attracting an ICG customer under this contract, it would have to wait six months before commencing service.

(c) Right of First Refusal

141 The right of first refusal clause in Superior's contracts also deters entry in Professor Whinston's opinion. Under this provision, Superior has the right to match the price offered by a competing supplier and the customer is required to provide the name of the competitor and its price. The result is that Superior is fully informed of the identity of any rival who is bidding for its customers and is better able to retaliate against it selectively.

142 The right of first refusal clause greatly reduces the profitability of entry by new firms and expansion by existing firms. Since Superior can retain its customer by matching the new entrant's lower price (i.e., even if the entrant offers better quality service), a rival will have to offer a price that is below Superior's cost to make the offer unprofitable to Superior. Therefore, a rival with higher costs and quality may find a customer interested in switching but it cannot lower its price enough to avoid "matching" by Superior.

143 The respondents do not challenge Professor Whinston's opinion on this point. Accordingly, the Tribunal accepts Professor Whinston's opinion that right of first refusal clauses reduce the profitability of entry and expansion.

(d) Tank Ownership

144 Professor Whinston draws attention to the provisions in Superior and ICG contracts under which they retain ownership of the propane storage tank at the customers' site. This is a feature of all contracts except for Superior's Industrial Agreement to industrial customers and it is a feature of contracts offered by virtually all propane marketers. He concludes that the practice of not selling tanks greatly increases the costs of a customer switching to another supplier. The tank rental requirement makes the customer much less likely to switch than if the tank were owned. Professor Whinston concludes that the rental requirement effectively increases the duration of the long-term exclusive contracts and further reduces the likelihood of new entry or expansion.

145 Based on the evidence on the record, it appears that switching to an alternate propane supplier typically results in direct and indirect costs. The direct costs would include a restocking cost calculated by Superior at 15 percent of the total value of propane in the tank being removed. Indirect costs to switching include important delays between the time the existing supplier

removes its tank and the time when the new supplier installs its equipment. Commercial, industrial, or agricultural customers may have to reduce or stop operations during this period. Residential customers will generally be unwilling to risk the loss of heating, particularly in winter months.

146 The respondents submit that tank ownership by the marketer ensures proper tank inspection, maintenance and safety practices. They also allege that since independents are growing at the expense of Superior and ICG, tank ownership does not constrain independent entry or expansion.

147 The Tribunal notes that there is no evidence that tank inspection, maintenance and safety practices have to be tied to tank ownership. Such services could be provided to a customer that owned the tank. Therefore, the Tribunal is of the view that tank ownership by the propane supplier makes customer switching more difficult and costly, and it accepts that it constitutes a barrier to entry and expansion. As to the alleged entry and growth of independents, the Tribunal will discuss that point below.

(e) Voluntary Undertakings

148 Finally, Professor Whinston notes that Superior has indicated that if the merger is approved it will not enforce term provisions in its existing standard contracts for propane supply, that it will adopt 30-day notice periods in standard form customer agreements, that it will waive liquidated damages terms, and that it will waive right of first refusal provisions. He believes that these voluntary undertakings do not adequately address his concerns about the competition-reducing effects of Superior's and ICG's customer contracts. For example, he notes at paragraphs 97 to 104 of his report (exhibit A-2063) that Superior has not committed to actually advising its customers of these changes.

149 The respondents submit that Superior and ICG do not enforce the provisions of their standard form contracts. Further, the respondents submit that only a few letters have been sent to customers and competitors in the last seven years addressing Superior's and ICG's legal rights but that neither Superior nor ICG has commenced litigation in regard to the matters raised in these letters.

(f) Conclusion on Contracts

150 The Tribunal accepts that the provisions in the contracts, including long-term exclusivity, automatic renewal, termination fees, right of first refusal (Superior only), and tank ownership significantly raise the cost of entry and expansion and hence constitute a barrier to entry.

(2) Competitive Response to Entry

151 An important component in the decision to enter the market is the assessment of the likelihood of a competitive response from the incumbents in the marketplace. The Commissioner introduced evidence in support of his argument that retaliation constitutes a response to competitors who have taken business away from Superior. This competitive response is generally in the form of intense price competition targeted at the entrant in order to affect its ability to compete in the market.

152 The experience of Imperial Oil Limited ("IOL") demonstrates that even very large and sophisticated companies may not be able to enter the propane distribution business profitably. In 1990, IOL, the largest propane producer in Canada (following the Texaco merger), sought to expand its activities into propane distribution. The project manager, Meredith Milne, testified that IOL experienced a vigorous response from competitors following its attempt to enter the propane market. It found that margins were 30 percent lower than planned and 45 percent lower than in 1991. IOL found that incumbent marketers started to charge customers switching to IOL for tank removal and that they removed the tank rental charges.

153 In addition to the competitive price response, IOL also found that it was difficult to get customers to switch due to the multi-year contracts and the "last look on tenders" available to incumbents. These were all elements that either increased IOL's costs or made it difficult to gain new accounts with the result that IOL exited the market (transcript at 13:1976 (15 October 1999)). Based on the evidence, the Tribunal notes that no other entry by companies of similar size or stature has occurred in this industry.

(3) Reputation

154 The lack of a reputation for reliable supply and service can be an entry barrier. Reputation may be a crucial element in gaining customers, especially when services are an important element of the product.

155 The Commissioner submitted evidence that reputation constitutes a barrier to entry in the propane supply and delivery market. In addition, the Commissioner's expert, Professor Globerman, stated that the incumbents had reputational advantages, which means that the entrant is likely to take longer to establish that critical mass in demand. The Canadian Market Research Study commissioned by Superior in October 1997 (confidential exhibit CA-1485) reads at page 17416:

> ... commercial and residential markets display a significant lack of awareness and familiarity with alternative suppliers.

Further, at page 17437:

> Currently, four in ten (39%) Superior [commercial] customers are *not aware* of an alternative propane supplier on an unaided basis .... ICG is the most formidable competitor in Ontario and Quebec .... 64% of competitor customers have unaided awareness of the Superior brand and 29% designate it as the alternative supplier with which they are most familiar.

And at page 17527:

> Residential propane users also exhibit a fundamental lack of awareness and familiarity with the range of alternative suppliers (more pronounced than the commercial market)....
>
> In the shot [*sic*] term, competitive threats may be limited. Currently 58% of Superior customers are *not aware* of an alternative propane supplier on an unaided basis, and 74% say they are not familiar with an alternative.

156 The respondents submit that the existence of a "proven track record", as in the case of Superior and ICG, is not an impediment to competition; rather, it is the natural result of competition.

157 Loyalty is a related consideration. The Commissioner presented witnesses from cooperatives and credit union organizations whose sellers offer propane and give dividends to member customers based on such purchases. These customers have an incentive to continue to be loyal to their propane supplier. Based on the evidence submitted by factual witnesses, the Tribunal accepts that reputation is an important feature of propane suppliers to which customers attach value. It appears that this is particularly true for major account customers whose factual witnesses testified that the reputation of the companies capable of delivering propane is an important factor in their purchasing decision. The Tribunal notes that the time to gain a reputation may make profitable entry more difficult and hence delays the competitive impact that an entrant would have in the marketplace.

(4) Maturity of Market

158 The Commissioner called witnesses who testified that the market was mature and that the demand was flat (see testimony of John A. Osland from Mutual Propane, transcript at 6:833 (4 October 1999) and testimony of Luc Sicotte from Gaz Métropolitain, transcript at 18:3148 (25 October 1999)). Mr. Schweitzer testified that it was a relatively mature market (transcript at 31:5920 (3 December 1999)).

159 The Commissioner's experts, Professors Schwindt and Globerman, testified on the competitive impact of this mature market at page 48 of their report (exhibit A-2056):

> ... the industry is mature and has experienced slowly declining demand in recent years. As noted in the *Merger Enforcement Guidelines*, entry into start-up and growth markets is less difficult and time consuming than it is in relation to mature market.

160 In light of the evidence submitted, the Tribunal is satisfied that the traditional retail propane market place can be qualified as mature.

(5) Access to Propane Supply

161 The Commissioner refers to the opinion of many competitors that the ability to access propane supply is a "critical barrier to entry/expansion". Evidence in this regard consists of the disadvantages that independent firms face in obtaining supply that Superior and ICG do not face. For example, the respondents have established supply relationships and have invested in storage and transportation facilities that provide cost advantages over rivals who may be restricted to local pick-up from refinery racks. These arrangements are apparently valuable for serving branches particularly distant from refinery sites. Superior and ICG also have "scale demand" for propane which gives them an edge over traditional patterns of supply.

162 One of the Commissioner's experts, Terry S. Kemp, observes at pages 15 and 16 of his report (expert affidavit of T.S. Kemp (18 August 1999): exhibit A-2070) that:

> Sup-ICG with the exception of a few selective refineries, will have access to supply at virtually every producing location in the country. Sup-ICG will thus have an implied supply advantage and flexibility that cannot be matched by any other retail propane competitor.
>
> Sup-ICG should be able to selectively choose the most advantageous supply locations and drop others, thereby extracting the most out of supply arrangements. Sup-ICG will also be in a position to leverage supply from location to location for trades and exchanges and, will in essence, be able to create preferential access to supply and location adjustments. These advantages can be utilized in a number of ways:
>
> - Pressuring supplier price location arrangements
> - Using competitive advantages when bidding on new contracts
> - Servicing National accounts
> - Negotiating more favourable bulk transportation rates (volume discounts) with trucking and rail companies.

163 The Commissioner's expert, Mr. Mathieson, notes that the respondents have access to supply at prices more favourable than simply the posted or rack price.

Mr. Kemp pointed out that propane producers generally prefer to supply those who have the ability to lift product on a regular basis. A new entrant would not be able to immediately demonstrate this ability and would be at a disadvantage to the respondents. The Commissioner's witness, Peter Renton of Gulf Midstream Services Ltd., confirmed that his company prefers customers who perform very well over those customers who fail to take a significant portion of their product each year and to whom sales would be reduced and rack prices charged.

164 The Commissioner cites the Ontario Region 5 Year Strategic Plan from Superior (confidential exhibit CA-299) that indicates Superior's view that it creates barriers by "tying-up supply", specifically its ten-year supply arrangement with Shell. The respondents point out that the independent marketer, AutoGas, has a ten-year arrangement with IOL.

165 Mr. Kemp observes at page 15 of his report (exhibit A-2070) that Superior's propane cavern storage allows it to purchase spot volumes at low prices and Mr. Mathieson is concerned that Superior's supply transportation costs are the lowest in the industry.

166 The testimony indicates that in periods of tight demand, producers ration their supplies and give preference to their largest customers, causing some independents to deal with brokers. However, no independent testified that it could not obtain propane. The expert opinion evidence states that the merged entity will have advantages in acquiring propane that smaller competitors will not enjoy. The Tribunal accepts that new entrants and small firms seeking to expand bear the costs of investing in reputation with propane suppliers that incumbents do not have to bear and, to that extent, they face entry barriers. However, these costs are not a result of the merger and are not increased by it. Other advantages that reduce the cost of propane acquisition (such as

buying at low "off season" prices and storing) to the respondents and the merged entity reflect efficiencies and do not create barriers to propane acquisition. The Tribunal does not agree that the new entrants and expanding firms face significant barriers to obtaining propane supply.

(6) Capital Requirements/Sunk Costs and Time to Get Business Profitable

(a) Scale of Entry or Expansion

167 Several of the Commissioner's witnesses (Professors Globerman and Schwindt, Messrs. Kemp and Mathieson) note in their expert reports that entry into the propane business is costly. Mr. Kemp, for example, suggests at page 7 of his report (exhibit A-2070) that the capital costs for a start up greenfield retail propane operation are in the range of $675,000 to $920,000 to support initial sales of two million litres per year which he regards as minimally-required for success. He estimates operating costs, at page 9 of his report, at approximately $300,000 per year. Several fact witnesses mentioned the high costs involved in obtaining storage tanks, transport and delivery trucks and customer tanks, particularly when certain customers have requirements for on-site storage.

168 The respondents have submitted in their amended response that one can enter the propane distribution business for a total investment of $120,000 to $300,000. The Commissioner submits that even if entry of that scale is possible in certain geographic locations, the respondents have understated the costs for the most part. According to the Commissioner, such a small entrant would be an uncommitted entrant, unable to constrain Superior/ICG's market power.

169 The Commissioner argues therefrom that high capital costs are themselves a barrier to entry, ostensibly on the basis that few people had the required financial resources to enter the industry. Competitors in the industry testified to the effect that costs of entry may vary.

It cost Donald J. Edwards $935,000 to construct EDPRO Energy Group Inc.'s facility in London, Ontario, excluding the purchase of tanks for customer use (transcript at 6:1072, 1073 (6 October 1999)). Evidence was also submitted indicating that costs associated with meaningful entry might vary upon the end-use served.

170 The Tribunal does not accept that high capital costs are inherently a barrier to entry. If a potential entrant's equity is insufficient to cover capital costs of entry at minimum efficient scale, then the balance can be obtained through credit markets providing that lenders are satisfied that the project is viable. In the event that lenders deny credit because of their assessment of the project, their reluctance to lend does not indicate that capital is not available. In response to a question from the Tribunal, Professor Schwindt stated that high costs, per se, did not constitute an entry barrier.

171 On this latter point, the Commissioner accepts that high capital costs are not, in absolute dollars, an issue relevant to entry; rather, the relevant costs to be considered are the sunk costs because they represent what the entrant will lose in the event of failure.

(b) Sunk Costs

172 It is generally agreed that the portion of costs that are not recoverable in the event of exit (the sunk costs) can, where they are significant, constitute a barrier to entry. The Commissioner suggests that the retail propane market is characterized by significant sunk costs. There is a dispute between the Commissioner and the respondents as to the proportion of the costs that can be qualified as sunk costs. The extent of these costs depends on a variety of factors.

173 In the propane industry, the sunk costs would include the market development costs, site-preparation costs, and the discounts to purchase price that would be incurred on asset disposals. Mr. Milne of IOL estimated that 50 percent of its costs were non-recoverable when IOL entered the Camrose market. Mr. Katz from AmeriGas indicated that 30 to 80 percent of investment in propane operations would be non-recoverable. As well, salaries and other operating costs incurred to the date of exit would also be non-recoverable. The respondents' experts, Cole Valuation Partners Limited and A.T. Kearney (expert affidavit of C.O'Leary and E. Fergin (17 August 1999): confidential exhibit CR-112), recognize at page 202 of their report that

certain costs are sunk. For example, they assume decommissioning costs of $50,000 per site for locations to be closed, which costs would be non-recoverable.

174 The Commissioner's experts, Professors Schwindt and Globerman, emphasize the sunk cost of time required for a new entrant to develop a reputation for reliability, as well as for obtaining the necessary permits to install storage capacity. They also characterize at page 49 of their report (exhibit A-2056) as sunk the cost penalty of operating below minimum efficient scale.

175 The Tribunal is satisfied that sunk costs are meaningful in the industry and constitute a significant obstacle to a new entrant.

(7) Evidence on Entry

176 The respondents seek to demonstrate that barriers to entry are low by presenting evidence on actual entry over time by independent firms. The respondents have chosen to rely, for the most part, on evidence of growing market shares of independent firms rather than presenting evidence contrary to each of the Commissioner's submissions regarding barriers to entry.

177 The Commissioner submits that barriers to entry are high and that small scale entry is not an unusual event, but that entry occurs at a relatively low scale and expansion of entrants appears to be both modest and slow. Professors Schwindt and Globerman submit at page 53 of their report (exhibit A-2056) that small scale entry has occurred in the marketplace and that there is considerable turnover or "churn" among small scale entrants. They cite the membership list of the Propane Gas Association of Canada and state that there were 41 new memberships from 1994 to May 1999. They also find that 22 of those members had left the association by mid-1999. Further evidence from Superior also suggests that both entry and exit by small firms are high. Superior indicates that 45 new firms have entered the market since 1996. However, there is only one example of large scale entry, which is IOL's entry into the agricultural, commercial, industrial and automotive segment in western Canada. As noted above, this attempted entry failed.

(a) Basic Trend (1988-98)

178 The respondents submit that there have been 45 new entrants across the country in the past three years, that there is no evidence of business failure, and that ICG's volume has declined by 26 percent due to its inefficiency over a period of eight years when the national demand for propane increased and independent volume doubled. The respondents further assert, on the basis of Superior's best estimates, that independents have increased their share of retail propane sales from 17 percent in 1989 to 42 percent in 1998 (exhibit R-111, tab 5). They also submit that independents have grown from 24 percent in 1990 to 46 percent in 1998 based on Statistics Canada data.

179 At the hearing, the respondents introduced numerous calculations of Superior/ICG's combined market share, including a chart handed up in final argument ("Comparison of SPI Estimates Over Time with Statistics Canada Estimates Over Time") comparing Superior's internal market share estimates to market share estimates based on Statistics Canada data from 1988 to 1998. This chart demonstrates that Superior and ICG had a combined market share of 81 percent in 1988. This estimate arises from the market share estimates reported in the Minutes of Norcen Energy Resources Limited Board of Directors meeting on October 11, 1988 (exhibit R-88), in which Superior estimated its market share to be 41 percent, ICG to be 33.1 percent and Premier Propane Inc. ("Premier") to be 6.6 percent. The respondents submit that the Superior/ICG's combined market share was down to 60 percent in 1998 on the basis of market share estimates contained in the 1998 branch templates (exhibit R-111, tab 2).

180 In response to this chart, the Commissioner points out that the 1988 share of 81 percent includes the volumes of Premier despite the fact that Superior did not acquire Premier until 1993. It is not clear to the Tribunal why Premier's volume was included in the respondents' 1988 combined market share estimate as that volume could not have contributed to the market power of a combined Superior and ICG in that year. Excluding that volume would indicate a 1988 combined Superior and ICG volume of approximately 74 percent.

181 With regard to the 1998 estimate of 60 percent, the Commissioner submits that this estimate is not accurate. The Commissioner notes that in order to get to this estimate, the respondents calculated the total volume of each branch trading area

using the Superior branch manager's estimate of Superior's market share in that area and Superior's actual volumes for the branch from the 1998 branch templates. The respondents calculated the volumes of ICG and the independents by using that total volume number and the branch manager's volume estimates for competitors to calculate the market shares of ICG and the independents.

182 According to the Commissioner, in a further adjustment of this 60 percent estimate, the respondents added 133 million litres based on the difference between the total independents' volumes reported in the 1997 competitor survey compiled by the Commissioner and Superior's 1998 estimates of independents' volumes. Adding this 133 million litres to the total volumes estimated by the branch managers led to a combined market share of 58 percent for Superior and ICG in 1998. This adjustment of the estimate assumes that the independents sold as much in 1998 as in 1997 despite the warmer weather and other factors that allegedly depressed the industry wide volumes.

(b) 1998 Branch Templates

183 The Commissioner submits that the data supplied by the 1998 branch templates to arrive at approximately 58 percent are flawed and conflict with the historical and current position taken by Superior and ICG in their public disclosure statements, the industry practice and other data before the Tribunal.

184 The Commissioner submits that the 1998 branch templates are flawed for various reasons. The Tribunal notes that it remains unclear whether Superior's own estimated market share for a branch area includes sales to agents. Indeed, Mr. Schweitzer could not confirm at the hearing which approach was used by the branch managers who prepared the templates; he indicated that different approaches may have been used by Superior's branch managers. Further, according to him, the estimates were reviewed at Superior's corporate office and "followed up where inconsistencies arose" (transcript at 32:6109 (6 December 1999)). This part of the process also remains unclear.

185 In addition, Mr. Schweitzer testified that he expected that the branch managers estimated competitors' volumes by looking at the physical delivery equipment of the competitors which they could observe by driving down the road past the competitors' locations and estimating the number of litres "typically" delivered in a year by those types of vehicles (transcript at 35:7000-02 (9 December 1999)). These estimated volumes were then apparently used to estimate competitors' market shares.

186 The Tribunal is of the view that the apparent capacity of competitors does not provide an appropriate estimate of sales volumes as conditions change. As an example, a competitor with 15 percent of truck delivery capacity in the market would not necessarily reduce that capacity quickly in the event of warmer weather or reduced sales volumes. There is no evidence that there is a direct correlation between the equipment that a competitor may have and the actual volume of propane sold by that competitor in the marketplace. Further, looking at the equipment is not informative of the intensity with which the assets are used. For example, it does not reflect how much propane is contained in a truck or how often it is filled up in a given week.

(c) 1998 Actual Volumes

187 The Commissioner notes that actual volumes for 1998 for Superior and ICG were approximately 1.23 billion litres and 0.92 billion litres, respectively, for a combined total of 2.15 billion litres according to the Commissioner. According to internal Superior documents, Superior's management believed that its market share was unchanged at 40 percent since 1996. Using its stated approach, Superior management would have estimated total propane demand for 1998 as 3.08 billion litres (i.e., 1.23/0.4), and on this basis, would have concluded that the combined market share of Superior and ICG was 70 percent (i.e., 2.15/3.08). Internal Superior documents show that this was in fact the combined share that Superior management believed at the time when it was studying the acquisition of ICG.

188 However, after reviewing its branch templates in 1999, Superior's management concluded that the combined market share for 1998 had declined. For the first time apparently, Superior's management determined that the Statistics Canada estimate of total market demand, 3.95 billion litres in 1998, was the appropriate base for Superior's and ICG's combined share estimate and then calculated a market share of 54 percent using combined actual volumes (i.e., 2.15/3.95).

189 The Commissioner attributes the decline in the 1998 volume to industry-wide factors. Indeed, the 1998 Superior Propane Income Fund Annual Report (exhibit R-111, tab 1) reads at page 01194:

> Gross profits of $203.5 million in 1998 (16.6 cents per litre of propane sold) declined from 1997 levels by 3%. Propane sales volume in 1998 were 14% lower as a result of reduced heating demand due to weather that was on average 12% warmer than 1997, reduced demand for auto propane due to a declining number of propane powered vehicles, lower oil field activity given the dramatic fall in oil prices in early 1998, and lower crop drying volumes in 1998 due to dry weather and low crop prices.

On this basis, the Commissioner disputes the respondents' claim that the decline in volume in 1998 was due to a decline in combined market share.

190 In addition, the Commissioner's expert, Mr. Mathieson, estimated the 1998 retail demand to be three billion litres even though the Statistics Canada estimate for that year was 3.95 billion litres. Mr. Mathieson noted that Statistics Canada numbers were useful for establishing directional trends in demand in the industry, but that its annual consumption figures were distorted due to double counting. Until Superior management reviewed the 1998 branch templates in 1999, it did not accept Statistics Canada data and it believed that the combined market share was approximately 70 percent. Moreover, in the spring of 1999, Superior's management was of the view that Superior's market share was in excess of 40 percent of the estimated Canadian retail propane market and that there was no evidence at the time that Superior was losing market share to independents (see testimony of M. Schweitzer, transcript at 31:5861-84 (3 December 1999)).

191 The Commissioner submits that the respondents have manipulated various data to show that Superior and ICG have been respectively losing market shares since 1989. The Commissioner notes further that Superior did not report this significant decline in its market share to its investors through its quarterly reports. Indeed, in the Commissioner's view, other sources of information for the year 1997, including the competitor survey, the business case and figures prepared by the respondents in preparation for the acquisition of ICG by Superior suggest otherwise.

192 The Commissioner is critical of Superior's upward adjustment of 133 million litres to its estimate of independents' 1998 sales volumes in the 1998 branch templates summary. The Commissioner argues that an accurate estimate would reflect the decline in industry-wide demand in 1998, which was known when the templates were being prepared and analysed in 1999. The Commissioner argues that since the actual volumes of Superior and ICG has fallen by approximately 14 percent in 1998, the estimates of independents' volumes should be reduced by a similar percentage.

193 The Commissioner points out that branch managers estimated 1998 competitor sales volume and market share by observing competitor capacity (e.g., number and size of trucks) in 1999, which likely overestimated 1998 sales volumes. He asserts that, although propane demand generally declined, capacity likely did not.

194 Relying on Statistics Canada annual volume figures showing a decline in demand in 1998 of 511 million litres, the respondents reply that independents' aggregate volumes declined by only six percent. Further, these changes result in an increase in independents' aggregate market share of three percentage points that matches the equivalent decline in the combined market share of Superior and ICG.

195 The Tribunal accepts the expert evidence of Mr. Mathieson that Statistics Canada data do not reflect actual demand for a given year, and hence doubts that propane demand declined by 511 million litres in 1998. As a result, the Tribunal is not persuaded by the respondents' submission that the independents' aggregate market share increased by three full percentage points in 1998 or that the combined share of Superior and ICG declined by three percentage points.

(d) Other Sources Recognizing a Combined 70 Percent Market Share

196 Various sources state that Superior and ICG have had so far a combined market share of 70 percent, that the total Canadian retail propane market has been in the order of 3.5 billion litres per annum and that it has remained stable for about the last 10 years.

197 In 1996, Petro-Canada assisted by a consultant, Arthur D. Little, carried out a valuation of ICG's business. The study entitled "Petro-Canada — ICG Business Valuation" (confidential exhibit CA-1019), dated September 19, 1996, concludes at page 21997 that baseload propane equals 2.4 billion litres (Superior 45 percent, ICG 29 percent, regionals 16 percent, and independents 10 percent), and that autopropane equals 1.2 billion litres (Superior 45 percent, ICG 29 percent, regional 16 percent, and independents 10 percent).

198 In 1998, the ICG prospectus and the information circular all referred to ICG maintaining an approximate 30 percent market share (exhibit R-47, tab 65, at 04373):

> 4.2 Who are your major competitors in the markets you serve?
>
> Superior Propane Inc. is the largest Propane Company in Canada with approximately *40% market share*. Together, *ICG and Superior serve approximately 70% of the market*. In most geographic areas, *ICG has a 35-40% market share* or greater except for Ontario, where ICG is in the 15% range and the Maritimes where ICG is a small player. The rest of the market is served by 10 regional and 60 small independent competitors. Within the smaller participants the industry is very dynamic, with buyouts, startups and exits occurring regularly; however *ICG's and Superior's combined market share has not materially changed in the past five years*. (emphasis added)

199 With respect to Superior's estimates, the Tribunal notes that a detailed analysis of the propane market in 1995-96 was conducted by Superior ("SPI Market Assessment 1995/96": exhibit A-10). This study, which examines each geographic market and end-use across the country, concludes that Superior holds 43 percent, ICG, 29 percent and others, 28 percent of the Canadian retail propane market. This study also states at paragraph 2 on page 00251:

> ... The sum of these Market estimates, which should theoretically be equal to *total retail propane demand in Canada, was 3.45 billion litres, 13% lower than Statistics Canada's latest estimate of 3.95 billion litres*. (emphasis added)

200 In 1996, Mr. Schweitzer attended and participated in the due diligence process which led to the 1996 Superior Propane Income Fund Annual Report. The prospectus, dated September 25, 1996 (exhibit A-202), states at page 03899:

> ... Superior operates in all ten Canadian provinces and one territory and is the country's largest and only national retail propane marketer with *total sales volumes representing in excess of 40% of the total estimated Canadian propane retail market*. Although demand varies within market segments, *overall market demand for propane is stable and Superior's size and breadth have historically resulted in consistent sales volumes*. (emphasis added)

201 The 1997 Superior Propane Income Fund Annual Report (exhibit A-712), which was released in the spring of 1998, confirms at page 07697 that Superior generates sales volumes "in excess of 40 percent of the total estimated Canadian retail propane market".

202 Peter Jones, formerly Vice-President of Western Operations of Superior, prepared a business case document (confidential exhibit CA-193) when he was at Superior in May 1998 after the publication of the ICG prospectus. At pages 03374 and 03380, the document shows a 41 percent market share for Superior and a 32 percent market share for ICG, on the basis of national volumes of 3.321 billion litres of propane in 1997.

203 The 1998 Superior Propane Income Fund Annual Report (exhibit R-5, tab 161) also states at page 01693 that "[t]ogether, Superior and ICG serve approximately 300,000 customers through 250 branches and satellite units, representing *approximately 70 percent of the Canadian retail propane market*" (emphasis added).

204 The Tribunal also notes that even the quarterly report dated October 27, 1999 of Superior Propane Income Fund (exhibit A-3126), which was issued after Mr. Schweitzer became aware of the alleged drop in Superior's market share following Superior's review of the 1998 branch templates, does not report any change to that effect or any correction to the 1998 estimate previously presented. Indeed, page 1 of the quarterly report states:

> ...Results from the operations of Superior and ICG remained soft this quarter, largely due to *lower overall propane demand* experienced during the third quarter and pressure on margins, as wholesale propane costs continued to rise with the upsurge in crude oil pricing. Soft second and third quarter performance is not unusual in the propane business. Over 60% of cash flow is usually generated during the winter October through March heating season. As crude oil prices have recently moderated and economic conditions have improved, *the outlook for 1999 remains unchanged*. (emphasis added)

205 Therefore, it appears to the Tribunal that Superior chose not to report the alleged decline in Superior/ICG's historical 70 percent share of national propane sales to its investors through its quarterly reports.

(e) Conclusion on Market Shares

206 The evidence suggests that the retail demand for propane was approximately 3.5 billion litres per year up to and including 1997. Similarly all the evidence, except Superior's 1998 branch templates summary, indicates that Superior's and ICG's market shares were approximately 40 percent and 30 percent, respectively, up to and including 1998. In contrast to the evidence stated above regarding Superior's and ICG's market shares, the 1998 branch templates estimates suggest that Superior's and ICG's market shares were 34 percent and 26 percent, respectively, in 1998. This single estimate apparently caused Superior's management to conclude that the drop in the 1998 volume resulted from the penetration of independents in the retail propane business rather than to the warmer weather during that year.

207 The Tribunal has considerable doubt about the accuracy and validity of the information contained in the 1998 branch templates and hence in the branch templates summary for 1998. It appears to the Tribunal that the methodology for collecting and compiling the data was unsound. For example, errors by branch managers led particularly to double counting of propane volume sold by agents. Moreover, the branch managers' assessment of market shares of competitors were adjusted at Superior's corporate office so as to achieve agreement with Superior's total market size estimate. It appears that the branch templates and the summary thereof are flawed. Errors were made by some branch managers in completing the survey; the procedure for inferring competitor volume and market share from observed capacity likely overstates volume and sales. The Tribunal finds it surprising that Superior's branch managers were unaware until recently of the significant growth of independents' market shares over a ten-year period, but were able to provide accurate estimates of competitors' volume for 1998. Finally, the Tribunal is of the opinion that Superior's management did not properly design the questionnaires, collect the data, or ensure quality control to the extent needed to ensure reliability. Consequently, the Tribunal does not place any weight on the respondents' evidence regarding market shares from the branch templates.

208 The Tribunal is further concerned about the addition of 133 million litres for the year 1998 to the competitors' aggregate volume in the branch templates summary. This addition was apparently done in recognition that the branch templates summary understated competitor volumes for 1998 in comparison to 1997. The Tribunal believes that such adjustment was inappropriate given that industry-wide volumes declined in 1998.

209 As noted above, the decline appears due to warmer weather and reduced economic activity in certain propane end-use segments. Given its concern about the branch templates, the Tribunal cannot attribute Superior's and ICG's decline in volume to the suggested increased penetration of independents. Indeed, aside from the 1998 branch templates, there is no evidence to support the changes in market shares claimed by the respondents. The evidence submitted for the period 1988 to 1998 and even for the year 1999 supports the stability of Superior and ICG's combined market share.

210 As mentioned earlier, the Tribunal accepts that relevant geographic markets are local. Therefore, evidence of high market shares on a local basis can only be rebutted by evidence that entry on a local basis can constrain the exercise of market power.

No evidence of that nature has been adduced in this case. Instead, the respondents rely for their evidence on entry and expansion on an alleged declining trend in the combined market share of the merging parties.

211 In light of the evidence, the Tribunal cannot accept the assertion of the respondents regarding entry and expansion. The Tribunal is of the view that there have been no significant changes in Superior's and ICG's market shares that would suggest such a penetration by independents.

C. Removal of a Vigorous and Effective Competitor

212 The Commissioner submits that the merger will result in a loss of an effective and vigorous competitor in the market. The Commissioner points out that Superior's own view is that ICG is an important competitor. Based on its internal documents, Superior refers to ICG as its "key-most" important competitor, to ICG's low prices and its low costs, that ICG uses discounted price to acquire new customers, etc. In addition, the Commissioner refers to the affidavit sworn by Mr. Jones in support of the section 100 application in which he said that under his management, ICG would continue as a vigorous competitor to Superior. In his testimony, Mr. Schweitzer also testified that ICG was Superior's most frequent competitor (transcript at 35:6925, 6926 (9 December 1999)).

213 The Commissioner also refers to the prospectus of September 25, 1996 for the 1996 Superior Propane Income Fund (exhibit A-202) which states at page 03897:

> In addition to Superior, ICG Propane Inc. ("ICG"), which is wholly-owned by Petro-Canada, is the only other retail propane marketer with substantial interprovincial operations. Superior and ICG share approximately three quarters of the Canadian retail market with the balance of the market served by local and regional marketers.

214 Finally, the Commissioner submits that innovative programs such as the Cap-It program and the Golf-Max program are not offered by any other competitor. The Commissioner argues that the Cap-It program has given ICG a competitive edge over its competitors, including Superior.

215 The respondents argue that ICG is an ineffective and inefficient competitor. They refer to the testimony of Mr. Sparling who stated that "[i]n the markets where we are we have not seen them as an effective competitor" in support of that argument (confidential transcript at 6:122 (14 October 1999)). They also rely on Mr. Jones's evidence, who described ICG's inefficiency by reference to various cents per litre ("cpl") measures tied to ICG's declining volumes such as operating costs generally and administrative, fleet and delivery costs in particular (transcript at 35:7056-67 (9 December 1999)). They also rely on the expert evidence of Professor Carlton and Dr. Bamberger, who testified that their research was consistent with the evidence that independents, not ICG, constrain Superior's pricing.

216 The Tribunal is not persuaded that ICG is an ineffective competitor. First, Professor Carlton's analysis of gross margin and earnings before interest, taxes, depreciation and amortization ("EBITDA") in his report (expert affidavit of D. Carlton (17 August 1999): confidential exhibit CR-120) shows at table 2 that from 1994 to 1998, ICG's average gross margin, as a percentage of total revenue, was 44.7 while Superior's was 44.5. Similarly, table 3 of his report shows that ICG's average EBITDA, as a percentage of total revenue, was 11.2 and Superior's was 12.9 over the same period. These numbers may indicate that Superior's financial performance was somewhat better than ICG's but do not indicate that ICG was an ineffective competitor.

217 Secondly, at page 12 of their report in rebuttal (expert rebuttal affidavit of R. Schwindt and S. Globerman (15 September 1999): confidential exhibit CA-2078), the Commissioner's experts, Professors Schwindt and Globerman, reviewed Professor Carlton's analysis of customers gained and lost which tends to show that Superior loses more or gains fewer customers to or from independents than to or from ICG. They challenge that conclusion noting the case of Bromont, Quebec, where the average size of an account challenged by ICG is three times greater than the average size of an account challenged by an independent. Thus, while ICG may figure in fewer competitive challenges with Superior compared to independents, it is a strong and aggressive competitor for large volume accounts. Accordingly, what appears to Superior as weak competition from ICG may simply be ICG's strategy of competing more intensively for larger accounts which are smaller in number than smaller accounts.

218 Thirdly, the Tribunal reviewed the answer to undertaking 150 given by ICG on its examination for discovery. It provides a list of 18 services provided by ICG such as the Cap-It program, the Golf-Max program, the Auto-fill program, the SOS Cylinder Delivery and the Aquaculture program. This list also shows which competitors offer or do not offer such services by region. The Tribunal concludes that ICG is an important and aggressive competitor seeking to attract customers with these specialised services.

219 It appears to the Tribunal that the respondents' submission concerns ICG's alleged financial performance rather than ICG's presence as an effective competitor in the market. The evidence before the Tribunal shows that ICG actively solicits customers from among the largest consumers and through specialised programs, that consumers from various end-uses recognize ICG as an alternative, that consumers use ICG to negotiate prices with Superior and that ICG's market share continues to be approximately 30 percent as indicated above. This evidence does not support the argument that ICG is an ineffective competitor. Professor Carlton's remaining evidence in this regard will be reviewed below.

D. Foreign Competition

220 The Commissioner suggests that foreign competitors do not provide effective competition. The respondents' expert, Professor Carlton, suggests at paragraph 21 of his report (confidential exhibit CR-120) that propane distributors in border states can enter the Canadian market in the event of a post-merger price increase and that the 10 largest propane retailers in the United States have over 1,500 retail locations in states that border Canada. However, as the Commissioner points out, entry by propane marketers from the United States has been virtually non-existent in the past.

221 There are three ways in which a propane marketer from the United States could enter the Canadian propane industry: (1) by serving border locations from existing storage points in the Unites States; (2) by establishing branches in Canada; and (3) by acquiring a Canadian propane marketer. The only evidence of any of these alternatives is that of Professor West's reference to the American company, Lake Gas, located in International Falls, Minnesota, which sells a small volume (50,000 litres of propane) directly across the border in Fort Frances, Ontario.

222 There is no evidence that a propane marketer from the United States has ever established a branch in Canada. In early 1998, Gaz Metropolitan Inc. indicated its interest through a partnership with AmeriGas, one of the largest propane marketers in the United States, in acquiring ICG. No transaction was concluded and there is no other evidence of successful entry through acquisition by an American propane distributor.

223 In addition to the barriers to entry discussed above, and for a variety of reasons including billing systems, foreign currency, language and different measurement systems, it appears to the Tribunal that American firms are unlikely to provide effective competition to the merged entity in the Canadian retail propane market.

E. Effective Remaining Competition

224 The Commissioner alleges that competition following this merger will be weak and ineffective. The Commissioner refers in particular to evidence that shows that Superior and ICG are the price leaders and that the independent firms typically follows the prices set by Superior and ICG. Hence the disappearance of ICG would remove the only significant constraint on Superior's ability to set prices.

225 Regarding the effectiveness of independent competitors and the constraining role of ICG, the respondents present the expert testimony and report of Professor Carlton, which will be addressed below. Other evidence suggests that the Commissioner's concern for effective remaining competition is well founded. For example, the merged firm will be the only one in Canada with the capability to serve national accounts at the level of service currently offered by Superior or ICG. None of the remaining firms can offer that level of service effectively and hence will not be effective competitors to the merged firm for the business of national accounts.

226 According to Superior, there are up to 200 independent firms. The Commissioner points out that many of these firms are agents of the merging firms or are associated with them as "bulk dealers". A bulk dealer purchases propane, takes title to the product, and agrees with either ICG or Superior to market in well defined territories. With respect to its bulk dealers, ICG determines the price, holds the customer contract, and bills the client directly. The Tribunal does not regard these agents and bulk dealers as strong competitors to the merging parties, particularly with respect to existing customers.

227 The Commissioner contends that fringe and regional competition exists in some local propane markets, but that sustained or significant competition exists only between the merging parties. The evidence for this submission is that independent propane marketers are price followers, they are in many cases unknown to consumers in their own markets, they differentiate their products and locations to avoid direct competition with the merging parties and they compete mainly among themselves. The latter point leads to Professors Schwindt and Globerman's reference to "churn". For example, Mr. Sparling submitted that Sparling does not actively solicit customers from rivals, particularly from Superior. He testified:

> MR. MILLER: Do you actively solicit customers from your rivals?
>
> MR. SPARLING: No.
>
> MR. MILLER: Do you have any instructions or directions to represent —
>
> MR. SPARLING: We discourage that. We refer to that as cold calling. It's not to say it doesn't happen in this industry, but we certainly discourage it, and we would define that as a sales person driving up and down a given road and wherever they see a tank they simply go in and cold call the customer. We discourage that. transcript at 12:1731 (14 October 1999).

228 He also testified that Sparling does not seek to be a price leader; rather, Sparling emphasizes "consistent pricing" from customer to customer (transcript at 12:1728 (14 October 1999)). In the Tribunal's view, this comment can reflect consciously parallel behaviour that characterizes some oligopoly markets; possibly it reflects only that Superior and Sparling have highly differentiated marketing strategies and hence do not compete directly for this reason. In either case, it suggests that Sparling cannot be viewed as an effective competitor to Superior or to the merged entity.

229 Further evidence of weak remaining competition is provided by Mr. Edwards of EDPRO Energy Group Inc. ("EDPRO") who established his company in June 1997. Mr. Edwards said that he established the business in London, Ontario, because of its proximity to the Sarnia propane supply source and to avoid competing in a market with a dominant firm. Based on his experience in the Maritimes, Mr. Edwards felt that competing with a dominant propane marketer was not likely to yield success. Further, Mr. Edwards explained that after two years in the business, EDPRO's top three customers represent 75 percent of EDPRO's total volume.

230 Moreover, EDPRO's own organization, effectively a franchise, indicates that its own dealer-associates operate as bulk dealers rather than as competitors. The dealer-associates purchase propane from EDPRO and operate under the EDPRO name in exclusive territories established by agreement with EDPRO.

231 It appears to the Tribunal that residential customers are not well informed about alternate propane marketers serving their areas other than the merging parties. For instance, one of the Commissioner's factual witnesses, Ms. Simons, was unable to determine which suitable propane companies were delivering propane in Renfrew, Ontario. During cross-examination by the respondents, she stated that when building her house in Renfrew, she was aware only of Superior and ICG and selected ICG on the basis of price. She had not been solicited by any other propane suppliers and was only familiar with one other propane supplier, Rainbow Propane, which supplies 100-pound tanks to cottages (transcript at 19:3304 (26 October 1999)).

232 The Tribunal also heard evidence that residential customers learn about competitors by word-of-mouth from neighbours. This lack of information regarding competitors suggests to the Tribunal that the independent firms do not market their services as aggressively as ICG or Superior and that customer awareness is weak as the Commissioner asserts.

233 The respondents claim that certain firms could easily enter the retail propane business, and they twice quote part of paragraph 3.2.2.7 of the MEG's, cited above at paragraph [57], which indicates that, under certain conditions, potential competitors are considered at the stage of market delineation. On this basis, the respondents advocate including upstream propane producers, suppliers from distant locations, and suppliers of alternate fuels in the relevant market and they identify certain such firms by name. The respondents' quotation from paragraph 3.2.2.7 of the MEG's includes the following:

> ... Where it can be established that such a seller would likely adapt its existing facilities to produce the relevant product in sufficient quantities to constrain a significant and nontransitory price increase in the relevant market, this source of competition will generally be included within the relevant market.

234 The Tribunal notes that the respondents have not provided any information on the sales of retail propane that the named potential competitors might reasonably be expected to make and, thus, have not established that such sales could exercise a constraining influence on the pricing of products sold within the relevant market.

235 Claiming support from footnote 22 of the MEG's, the respondents also argue that, although market shares could not reasonably be attributed to these potential competitors, the existence of these firms implies that the market shares of actual propane retailers overstate the market position of the actual retailers. In effect, the respondents ask the Tribunal to place less weight on estimated market shares of Superior, ICG and presumably the independent firms because of the presence of potential competitors.

236 In this regard, the Tribunal notes that the respondents have incompletely quoted from the MEG's which, immediately following their quoted passage, also state:

> ... However, potential competition from sellers who could produce the relevant product by adapting facilities that are actually producing another product will not be assessed at the market definition stage of the assessment of the merger where:
>
> > (i) such a seller would likely encounter significant difficulty distributing or marketing the relevant product; or,
> >
> > (ii) new production or distribution facilities would be required to produce and sell on a significant scale.
>
> In these circumstances, this source of competition will instead be considered subsequent to the delineation of the relevant market, in assessment of the likelihood of future entry pursuant to section 93(*d*) of the Act.

237 On the basis of the evidence in this case regarding, *inter alia*, customer contracts and scale economies, the Tribunal believes that the output of the potential entrants cited by the respondents would not be included in the relevant market if the MEG's were applied. As a consequence, there is no reason to believe that the market shares of actual competitors overstate their market positions.

238 On the basis of the evidence submitted, the Tribunal believes that there is insufficient evidence to demonstrate that there will be effective remaining competition capable of constraining the exercise of market power by the merged entity.

239 The respondents' main piece of evidence in this area is Professor Carlton's statistical analysis of Superior's margin. He concludes that, whereas a substantial presence by ICG in Superior's market area does not constrain Superior's pricing, the aggregate of the independents' volumes in that market does provide a competitive restraint on Superior's pricing. The Tribunal will discuss this opinion evidence below.

F. Prevention of Competition

240 In addition to the alleged substantial lessening of competition pursuant to sections 92 and 93 of the Act, the Commissioner submits that the merger will lead to a prevention of competition in the Maritimes that will be substantial.

241 ICG serves the Maritimes provinces from its branch located in Moncton, New Brunswick. The Commissioner points out that ICG had extensive plans, prior to its acquisition by Superior, to expand its business in the Maritimes by establishing branch operations in Sydney, Nova Scotia.

242 The Commissioner submits that Irving Oil Limited and Superior were the principal alternate competitors in this region and that the merger terminates ICG's activity as a competitor in Atlantic Canada. He submits that Superior and Irving Oil had a duopoly in the Maritimes. The Commissioner argues that ICG has developed and pursued competition in the Maritimes and has evident capability and plans to expand its presence in order to increase competition in the Maritimes. He introduced ICG's plans to obtain Canadian Tire's business where ICG stated clearly that they would dedicate a $200,000 tractor-trailer to service the Canadian Tire dealer network in the Atlantic provinces (exhibit A-851 at 10980). The Commissioner submits that the acquisition of ICG by Superior will substantially prevent competition in Atlantic Canada.

243 The respondents did not call any evidence nor made any submissions regarding the Commissioner's allegation that a substantial prevention of competition is likely to occur in Atlantic Canada.

244 The Tribunal recognizes that the concept of prevention of competition has not received much attention in Canadian jurisprudence. In *R. v. Howard Smith Paper Mills Ltd.* (1957), 8 D.L.R. (2d) 449 (S.C.C.), the Supreme Court of Canada had to consider the meaning of the word "prevent" in relation to the word "unduly" and concluded that, when used together, the word "prevent" means "hinder or impede" in contrast to absolute elimination.

245 The MEG's, cited above at paragraph [57], explain the expression "prevention of competition" at paragraph 2.3 as follows:

> Similarly, competition can be **prevented** by conduct that is either unilateral or interdependent. Competition can be prevented as a result of unilateral behaviour where a merger enables a single firm to maintain higher prices than what would exist in absence of the merger, by hindering or impeding the development of increased competition. For example, the acquisition of an increasingly vigorous competitor in the market or of a potential entrant would likely impede the development of greater competition in the relevant market. Situations where a market leader pre-empts the acquisition of the acquiree by another competitor, or where a potential entrant acquires an existing business instead of establishing new facilities, can yield a similar result.
>
> Competition can also be prevented where a merger will inhibit the development of greater rivalry in a market already characterized by interdependent behaviour. This can occur, for example, as a result of the acquisition of a future entrant or of an increasingly vigorous incumbent in a highly stable market.

246 In light of ICG's plans to vigorously expand its activities in Atlantic Canada and in the absence of any evidence to the contrary, the Tribunal is of the view that there will likely be a substantial prevention of competition in Atlantic Canada as a result of the merger.

G. Statistical and Econometric Evidence

(1) Commissioner's Expert Evidence

247 Michael R. Ward, one of the Commissioner's experts, provided econometric evidence about the likely effects of the merger on Superior's ability to exercise market power. He used the well established approach of "merger simulation", a method developed specifically for analysing the competitive effects of mergers in differentiated product industries. In such industries, the potential for a unilateral price increase is high when the merging parties place competitive constraints on each other by virtue of a high degree of substitutability between their products prior to the merger. Prior to a merger, a unilateral price increase by one firm may lead to a loss of sales to its closest competitors. However, a unilateral price increase following a merger among close competitors may lead to a reduced loss of sales when the products of the merging companies are closer substitutes for each other than for the products of other firms in the industry (see generally exhibit R-108, J.A. Hausman and G.K. Leonard, "Economic Analysis of Differentiated Products Mergers Using Real World Data" (1997) 5:3 George Mason L. Rev. 321).

248 In the first part of his report (expert affidavit of M.R. Ward (30 August 1999): exhibit A-2059), Professor Ward estimates the structure of demand for propane. He then uses these estimates to simulate the instant merger's likely effects. In order to determine the degree of substitution between the products of the merging parties, Professor Ward obtained data on ICG and Superior branches in 46 out of 74 of Professor West's geographic markets for a period of 54 months up to 1998 for which data was available. He used Superior data on prices, sales, and product groupings, and ICG data on litres sold, dollar sales, gross profits, and product groupings to establish volumes and prices for each firm in four product segments: residential, industrial, autopropane, and "other" which includes construction, commercial, government and agriculture end-uses.

249 With this data set, Professor Ward measures the extent to which consumers substitute between ICG and Superior using a linear approximation to the Almost Ideal Demand System, a widely-accepted approach to demand estimation. He finds that an increase in ICG's price results in a statistically significant increase in Superior's market share in the residential and industrial segments, and that an increase in Superior's price reduces its market share significantly in those segments. Professor Ward interprets these findings as evidence for consumer substitution between the products of ICG and Superior, i.e., that they compete directly and their products are close substitutes for each other in the eyes of consumers. His report shows at page 21 that the results for the autopropane segment have the expected signs but are not statistically significant; results for the "other" segment are not reported due to lack of significance or implied upward-sloping demand curves.

250 Professor Ward's evidence at page 26 of his report also demonstrates that Superior reacts strategically to ICG's pricing behavior. He finds that when increases in ICG's unique costs result in a price increase of one percent, Superior increases its price by approximately two-thirds of a percent in the residential, industrial and automotive categories. He expects that ICG would respond to Superior's price increases but does not have the data to estimate that strategic relationship. In his simulation analyses, he makes the assumption that ICG will react to Superior's price changes in the same way as Superior reacts to ICG's pricing decisions as stated at page 27 of his report.

251 Using the statistical results obtained with the Almost Ideal Demand System, Professor Ward estimates the own-price and cross-price elasticities of demand in order to estimate the impact of the merger on product prices, a step referred to as simulation. Since he did not know the price elasticity of demand for propane, he estimated firm-level elasticities with three different assumptions for that key measure. At table 6 on page 29 of this report, he finds, for example, that if the price elasticity of demand for propane is -1.5, then the price elasticity of demand for ICG propane is -2.40 in the residential segment and the corresponding Superior price elasticity is -1.97 with regional and discount dealers in the market. He assumes that substitutability between the merging parties and independent firms is exactly half as large as that between ICG and Superior.

252 Combining the firm-level price elasticities with the evidence on strategic pricing (which would no longer occur post-merger), Professor Ward estimates the change in price due to the merger assuming there are no changes in marginal costs, i.e., no efficiency gains and no entry or supply-substitution by product segment. Depending on the elasticity assumed for propane demand, on the presence or absence of regional and discount dealers, and on the product segment, the average estimated price increases are between 1.4 percent and 15.1 percent. Table 7 on page 30 of his report shows that, using propane demand elasticity of -1.5, the average price increases are 8 percent in residential, 8.9 percent in industrial and 7.7 percent in automotive taking regional and discount dealers into account. He concludes at page 36:

> ... Fifth, ignoring possible price reductions from merger efficiencies, entry or supply-side substitution, the incorporation of these estimates into a merger simulation implies prices will increase due to the merger. The size of the price increase depends primarily on the demand for propane. Specifically, if propane demand is relatively inelastic, the merger is likely to raise average prices by 8% or more.

253 At the time of his analysis, Professor Ward did not have the statistical results of Professors Ryan and Plourde regarding the price elasticity of demand for propane. When this information was made available, he re-calculated the effects of the merger on prices using a propane demand elasticity of -1.0, based on their conclusion that the demand for propane was price-inelastic. In those calculations, he also relaxed his assumption that substitutability between independent firms and ICG and Superior was half that of the estimated substitutability between ICG and Superior. Instead, he assumed that they were equally substitutable.

Table 2 on page 8 of his report in reply (expert reply affidavit of M.R. Ward (4 October 1999): confidential exhibit CA-2060) shows that he estimates that the average price increases for residential, industrial and automotive are 11.7 percent, 7.7 percent, and 8.7 percent, respectively, when independent firms are in the market.

254 The respondents' experts, Professor Carlton and Dr. Bamberger, in their report in rebuttal (expert rebuttal affidavit of D.W. Carlton and G.E. Bamberger (27 September 1999): confidential exhibit CR-123), argue that Professor Ward's estimated price increases are overstated because he does not include the effects of efficiencies, entry or supply-side substitution in his analyses. They also criticize Professor Ward for not justifying his assumptions in this regard. They also consider that he has not adequately recognized the constraining effects of independent firms on Superior and ICG pricing. The respondents argue strenuously that Professor Ward did not provide an opinion as to the quantum of any likely price increases post-merger and, therefore, did not provide a basis for finding a substantial lessening of competition.

255 Noting its earlier comments regarding the evidence of entry and of supply substitution, the Tribunal does not accept the criticisms of Professor Carlton and Dr. Bamberger in these areas.

256 In reply to their criticism, Professor Ward re-calculated the price impacts including the effects of efficiencies and reported virtually identical price increases at all levels of efficiency gains up to and including $40 million per year, as shown at tables 3 to 5 on pages 10 to 12 of his report in reply (confidential exhibit CA-2060). In a further re-calculation, at the request of the respondents, that incorporated the approach to cost savings as outlined by Hausman and Leonard, cited above at paragraph [247], Professor Ward found that efficiencies had a stronger impact but resulted in price reductions of -0.9 percent in residential, -1.1 percent in industrial and -1.9 percent in automotive only at the $40 million level and then only if 100 percent of these efficiency gains resulted in variable-cost savings (Ward Undertaking (16 November 1999): exhibit A-2079, tables 3-5). As discussed below, no one including the respondents' experts on efficiency gains has suggested that this merger will produce $40 million of annual savings in variable costs.

257 In the Tribunal's view, Professor Ward's analysis, even though it does not take efficiencies into account, is highly relevant to a determination as to whether there is a likely substantial lessening of competition.

258 The Tribunal concludes that evidence of an actual or likely price increase is not necessary to find a substantial lessening of competition. What is necessary is evidence that a merger will create or enhance market power which, according to paragraph 2.1 of the MEG's, cited above at paragraph [57], is "the ability to profitably influence price, quality, variety, service, advertising, innovation or other dimensions of competition". There is no requirement under the Act to find that the merged entity *will* likely raise the price (or reduce quality or service). The only requirement under section 92 is for the Tribunal to decide whether the merged entity has the ability to do so.

259 For this reason, Professor Ward's simulations both in his report in reply and his undertaking which take efficiencies into account to address the respondents' criticism are irrelevant. The Tribunal infers from the results of his other simulations that the merged entity would have the ability to raise the price of propane.

260 As to the respondents' claim that Professor Ward has not offered an opinion on the extent and likelihood of a price increase, the Tribunal notes that his initial simulation results at table 7, on page 30 of his report (exhibit A-2059), provided six sets of estimates that were calculated based on three assumed values for the price elasticity of propane demand and on two scenarios concerning the presence or absence of regional and discount dealers in the market. He concluded that the merger would lead to higher prices under all assumed conditions. In his re-calculations in reply at table 2, on page 8 of his report in reply (confidential exhibit CA-2060), Professor Ward further varied his assumptions and obtained similar results.

261 The fact that Professor Ward simulated the merger's effects under a variety of assumptions and reached the same conclusion gives the Tribunal more confidence in his opinion than it would have if he had restricted his simulations to a narrowly defined set of assumptions. The Tribunal views Professor Ward's conclusion in his initial report, that average prices would rise by eight percent or more as a result of the merger assuming that propane demand is relatively inelastic, as a valid opinion, particularly given his further simulation results in reply.

(2) Respondents' Expert Evidence

262 The respondents' experts, Professor Carlton and Dr. Bamberger, were asked to evaluate the Commissioner's claim that Superior's proposed acquisition of ICG would result in a substantial prevention or lessening of competition in the market for propane in Canada. They concluded that there was no systematic evidence that the proposed merger would have such effect. They considered the competitive restraint on Superior, customer gains and losses, gross profit margin and EBITDA.

(a) Competitive Restraint

263 Professor Carlton presented econometric evidence that ICG has not provided a competitive restraint on Superior's pricing but that the independent propane dealers, in aggregate, have provided such constraint. This evidence contradicts the Commissioner's assertion that where significant competition takes place in the propane business, it is between ICG and Superior. If Professor Carlton is correct, then the removal by this merger of ICG as a competitor should not allow Superior to raise its price.

264 In his econometric models, Professor Carlton posits a relationship between Superior's gross profit margin and the "substantial presence" of ICG and of the remaining firms in aggregate. A substantial presence is measured in four separate ways. In the first model, the presence of ICG and of the other firms in aggregate are deemed substantial if their respective market shares are at least 15 percent. In the second and following models, a deemed substantial presence requires a market share of at least 20 percent, 25 percent and 30 percent, respectively.

265 Professor Carlton measures these hypothesized relationships by applying the regression analysis technique of ordinary least squares ("OLS") to 1998 monthly data on Superior's prices, costs, margins and volumes at the branch level, hence pooling time-series and cross-sectional data. These data come from Superior's internal records as do the proxies for secondary distribution costs. The prices of alternative fuels come from Statistics Canada databases. The 1998 market share data used to define the dichotomous substantial presence variables are taken from the branch templates prepared by Superior's branch managers in 1999. Professor Carlton controls for a variety of other exogenous variables and conducts additional OLS regression analyses for 1997 (using 1998 market shares) and also by profit margin in various end-uses. His results in these latter OLS analyses appear to use similar models and definitions of variables and to support his 1998 results; accordingly, the 1998 OLS results will be the focus of the Tribunal's review.

266 Professor Carlton finds that Superior's gross profit margin is higher where ICG has a substantial presence. Selecting model 1 as an example, Superior's margin is 1.47 cpl higher at locations where ICG has a substantial presence (i.e., 15 percent or greater market share) than where it does not. In all four models, the margin impact is positive and statistically significant.

267 The results for the independent firms show that the aggregate substantial presence of those firms decreases Superior's margin. Where the aggregate market share of the other firms is at least 15 percent, Superior's margin is 0.80 cpl lower than where the aggregate market share is less than 15 percent. Similarly, where the aggregate market share of the other firms is at least 30 percent, Superior's margin is 0.56 cpl lower than where the aggregate market share is less than 30 percent. The effect on margin is negative and statistically significant in all four models.

268 On the basis of these econometric results, Professor Carlton concludes that ICG does not constrain Superior's pricing behaviour, and that the merger will not enable Superior to increase prices, principally because of the discipline exerted by independent firms. At footnote 31, on page 15 of his report (confidential exhibit CR-120), Professor Carlton suggests that his results are consistent with the alleged "inefficiency" of ICG (i.e., that it has been badly managed).

269 The Tribunal notes that Professor Carlton's finding that Superior's gross margin is higher at locations where ICG has a substantial presence is an unexpected and unusual result and it is perhaps his most important result. Several criticisms were offered; the Tribunal will comment on the ones that seem most significant.

270 The Commissioner suggests that substantial presence variables may be proxies for market concentration. If this were the case, then Professor Carlton's results would tend to show that Superior's gross profit margin is higher in areas where

concentration is higher, rather than demonstrating that ICG is a weak competitor. Despite Professor Carlton and Dr. Bamberger's reply on this point, when taken in conjunction with various internal Superior reports of challenging behaviour by ICG, the Tribunal believes that the better view is that Professor Carlton's results reflect concentration.

271 The specification of the substantial presence of the independent firms is also problematic. Professor Carlton aggregates the volumes of all independent firms into one market share. Thus, as Professors Schwindt and Globerman point out at page 9 of their affidavit in rebuttal (confidential exhibit CA-2078), the statistical result would be the same whether the substantial presence variable combined market shares of many independent firms or represented the market share of one large independent firm. The Tribunal would expect different competitive effects if there were many independent firms with a certain combined share than if there were just one with that share. Hence the substantial presence variable that Professor Carlton used may not be a good measure of the competitive effect of independent firms.

272 Professor Carlton's models posit that Superior's margin is affected by ICG's and the independents' substantial presence. The Commissioner suggests that the opposite relationship may also hold simultaneously and criticizes Professor Carlton's statistical results for failing to take account of the simultaneous relationship between Superior's profits and the substantial presence variables. Such simultaneity is known to lead to biassed statistical estimates when the OLS method is used.

273 Replying to a similar criticism of his OLS results from Professor Ward (expert rebuttal affidavit of M.R. Ward (14 September 1999): exhibit A-2080), Professor Carlton repeats his analysis using the method of two-stage least squares ("2SLS") in order to take simultaneity into account. This further work indicates to the Tribunal that Professor Carlton gives some credence to this criticism. Footnote 15 on page 12 of his report in reply (expert reply affidavit of D.W. Carlton and B.E. Bamberger (19 September 1999): confidential exhibit CR-122) states that the results therefrom:

> ... provide no systematic support for the Commissioner's claim that ICG significantly constrains Superior's retail propane prices. Full regression results are reported in Appendix G.

274 It is instructive to compare Professor Carlton's 2SLS results with his OLS results. All four OLS models demonstrated that Superior's profit margin was higher where ICG had a substantial presence and that the positive relationship was statistically significant. With the method of 2SLS, one model results in a positive coefficient for ICG's substantial presence, three of the models now show negative coefficients for this relationship, and none of these four coefficients is statistically significant. These differences suggest to the Tribunal that Professor Carlton's OLS results are statistically biassed and not reliable.

275 For example, where substantial presence is defined at the 15 percent level, Professor Carlton's OLS results indicate that Superior's margin is 1.47 cpl higher where ICG's presence is substantial than where it is not, and that the relationship is statistically significant. However, the 2SLS results indicate that Superior's margin is 1.60 cpl lower where ICG's presence is substantial than where it is not; the relationship is not statistically significant.

276 Thus, while Professor Carlton is correct to claim that his 2SLS results do not provide systematic support for the Commissioner's claim, it also appears that they do not provide support for his own conclusions. In particular, the 2SLS results support neither the conclusion that Superior is more profitable at locations where ICG has a substantial presence nor the suggestion that ICG is an ineffective competitor. Indeed, the lack of statistical significance for ICG's substantial presence indicates that no relationship has been found.

277 With respect to the presence of independents, Professor Carlton's 2SLS results for the aggregate effect thereof also differ from his OLS results. In all four models, the substantial presence of independents has a much stronger statistically significant effect on Superior's margin than with OLS methods. For example, with a 15 percent substantial presence, the OLS impact of independents is -0.80 cpl; with 2SLS, the impact is -3.49 cpl. Similar differences are found across all four models.

278 The Tribunal observes that the measures of substantial presence for independent firms in aggregate depend on the market share data from Superior's branch templates, the limitations of which have already been noted. Simply put, the Tribunal believes that the substantial presence of independent firms has been measured with error and that the resulting coefficient estimates, whether OLS or 2SLS, are unreliable.

279 The Tribunal regards Professor Ward's criticism regarding simultaneity as appropriate and, therefore, places greater weight on Professor Carlton's 2SLS results. The Tribunal rejects Professor Carlton's OLS results and the implications which he draws therefrom. Moreover, since Professor Carlton's 2SLS results provide no information on the relationship between Superior's margin and ICG's substantial presence, the Tribunal can only conclude that Professor Carlton's econometric results are not useful in this case.

(b) Acquisition of Premier

280 To determine whether the merger is likely to result in a price increase, Professor Carlton examined the price effects of Superior's acquisition of Premier, which was completed in 1994. Premier had been a strong competitor in British Columbia and Alberta. After studying Superior's prices in those provinces before and after the acquisition, Professor Carlton finds, at paragraph 47 of his report (confidential exhibit CR-120), that Superior's average margin is statistically lower after the acquisition and that end-use margins are significantly lower for three end-uses — agent, automotive and residential.

281 Apart from the statistical and interpretive problems which Professors Schwindt and Globerman find with Professor Carlton's evidence, they note at page 14 of their report in rebuttal (confidential exhibit CA-2078) that Premier's sales were more heavily oriented to autopropane than were Superior's and suggest that this is why the average margin declined post-merger. That the Premier merger lowered Superior's profit margin is surprising. Together with the differing circumstances of the instant merger and the absence of reply by Professor Carlton to Professors Schwindt and Globerman's rebuttal points, the Tribunal believes that Professor Carlton's analysis of the Premier merger does not provide a good indication of the likely effects of the merger under consideration here.

(c) Customer Gains and Losses

282 Professor Carlton reports at paragraph 42 and table 12 of his report (confidential exhibit CR-120) his analysis of Superior's customer gains and losses. For 1996, his customer count data show that Superior experienced a net loss of 149 customers to ICG and 1,862 customers to independent firms. In 1997, Superior enjoyed a net gain of 157 customers from ICG but a net loss of 2,435 customers to independents. In 1998, Superior also had a net gain of 448 customers from ICG and a net loss of 995 customers to independents. He concludes that "Superior systematically loses more, or gains fewer, customers to or from independents than ICG. These results are consistent with my regression findings that independents, and not ICG, constrain Superior's propane prices" (*ibid.* at paragraph 42).

283 The Tribunal finds Professor Carlton's conclusion somewhat difficult to understand. It is not the case that Superior gained fewer customers from independents than from ICG. In each of the three years, his data show that Superior gained more customers from independents than from ICG (1,298 from independents versus 793 from ICG in 1996; 1,201 versus 1,115 in 1997; and 1,207 versus 1,116 in 1998). On a net basis, Superior gained more customers from ICG than it lost in two of those years and lost more customers than it gained from ICG in one year. It is not clear to the Tribunal what systematic solutions can be drawn from these numbers.

284 Professors Schwindt and Globerman, at page 12 of their report in rebuttal (confidential exhibit CA-2078), point out that the counting of actual customer gains and losses does not measure the number of customers that ICG challenged. Moreover, as they point out, counting customers will not reflect the size of those customers or the volumes won or lost. It may be, for example, that ICG's business strategy is more focussed on large-volume customers and hence, it may not challenge many small accounts that would likely be of interest to independent marketers. Referring to ICG's experience in Bromont, Quebec, they state that a simple counting of customers gained and lost is misleading.

285 As Professor Carlton does not challenge these criticisms in reply (confidential exhibit CR-121), the Tribunal is of the view that counting actual customers gained and lost does not, in itself, establish the ineffectiveness of ICG as a competitor to Superior.

(d) Gross Profit Margin

286 In Professor Carlton's view, as stated at paragraph 12 of his report (confidential exhibit CR-120), the Commissioner's claim is that retail propane prices depend on the number of national suppliers in a country. If the Commissioner were correct, he argues, then gross profit margins of propane dealers should be higher in Canada where the industry is more concentrated than in the United States where there are more "national retail suppliers" competing in a local market. He presents evidence for the period 1994-98 showing that the average gross profit margin (i.e., gross profits as a percentage of revenues) was lower for Superior (44.5) and ICG (44.7) than for a sample consisting of the seven largest American propane dealers with multi-market operations on which he could collect such data (47.9). This evidence, he argues, suggests that profitability is not a function of industry concentration and hence the merger of ICG and Superior will not present a problem for competition.

287 The Commissioner's experts, Professors Schwindt and Globerman, criticize this statistical finding for failing to take differences in product mix into account. The overall gross margins of propane dealers might vary because of profitability differences in the end-use markets they serve. Accordingly, they argue, the lower gross profit margins of ICG and Superior reflect the fact that they are more heavily involved with low-margin autopropane supply and less involved with residential propane than their American counterparts. Once the gross margins are corrected for differences in product mix, the margins of ICG and Superior are higher than the ones of the dealers in the United States.

288 At page 2 of his report in reply (confidential exhibit CR-122), Professor Carlton recalculates Superior's gross margin for 1998 assuming it had the same business mix as each of the three American propane dealers. The resulting average profit margin is higher than Superior's margin for that year and tends to support Professors Schwindt and Globerman's citation. Professor Carlton does not report such calculations for ICG. In the Tribunal's opinion, Professor Carlton has not shown that the Commissioner's business mix criticism is mistaken.

(e) EBITDA

289 Professor Carlton's evidence at table 3 of his report (confidential exhibit CR-120) is that EBITDA as a percentage of revenues are lower for ICG (11.2) and Superior (12.9) than for his sample of American dealers (15.6) for the 1994-98 period. He interprets these data as further support for his view that profitability is not related to industry concentration.

290 In the propane business, EBITDA equal gross profit less secondary distribution and other administrative costs, and hence, is a measure of net cash flow from operations. As a profit measure, it has the advantage of not being distorted by the arbitrary treatment of depreciation/amortization under generally accepted accounting rules, by the choice of capital structure which influences interest expense or by tax planning opportunities. Accordingly, EBITDA may be preferred to other profitability measures (such as net income) that measure profit with such distortions and are unreliable when making inter-firm comparisons.

291 The Commissioner takes issue with Professor Carlton's interpretation, stating that differences in EBITDA can be due to differences in "net margin" across applications. He notes, for example, that net margins can differ due to differences in capital investment across end-uses with the resulting differences in depreciation expense across end-uses. This argument is similar to the business mix argument discussed above with respect to differences in gross profit margins across firms.

292 In fact, Superior's own estimate of its 1996 net margins was 0.1118 cpl in the residential segment and -0.0032 cpl in auto. In 1995, those net margins were 0.1065 cpl and 0.0044 cpl, respectively (confidential exhibit CA-16 at 00923). The Commissioner appears to suggest that such differences in net margin account for differences in EBITDA/revenue between Canadian and American propane dealers as the former are more heavily involved in autopropane than are the latter.

293 However, the definition of net margins is not clear. If, as it appears, it includes depreciation and other costs such as head office costs, interest expense and taxes that are not measured by end-use, then any attempt to allocate such expenses to end-uses served by a propane dealer will require arbitrary allocation rules that make the results similarly arbitrary, if not meaningless. For example, how should the depreciation on a delivery truck that serves both agricultural and residential customers be allocated between these end-uses? Should it be done proportionately to litres delivered, to the number of customers, to distances, to time involved? Each such allocation procedure is as good as any other, and equally arbitrary. Moreover, it is not clear how depreciation should be measured. Certainly, the accounting treatment of depreciation does not attempt to measure the "wear and

tear" that takes place; accounting rules attempt only to spread the purchase price of an asset over some period of time in order to match the cost of the asset against the revenue it generated in a particular period of time as required by accounting principles.

294 The allocation procedures adopted by Superior illustrate the problem. Overhead costs were allocated to market segments and to geographic markets according to volumes, and operating costs according to the number of deliveries. The stated justification for these procedures is that "they appear to produce the best results" (confidential exhibit CA-16 at 00923).

295 At paragraph 9 of his report in reply (confidential exhibit CR-122), Professor Carlton suggests that although gross margins differ according to business mix, they reflect differences in secondary distribution costs across end-uses. Presumably, he means that a firm requires a higher gross profit margin in an end-use with higher secondary costs than in an end-use with lower secondary costs in order to operate profitably. However, he presents no evidence that this relationship holds in the propane business. Indeed, he simply states that "[t]here is no reason to believe that prices for residential and auto end-uses differ substantially after *all* (not just primary distribution) costs are accounted for".

296 The evidence cited above on Superior's net margins appears to provide a reason for such a belief. However, these margins depend crucially on the allocation procedures adopted.

297 The Tribunal is not bound by the allocation procedures that Superior used, and it cannot be sure that other equally reasonable procedures would not produce very different net margins. The Tribunal believes that it cannot attribute differences in EBITDA to differences in margins across end-uses as suggested by the Commissioner. However, it cannot accept without evidence that gross profits reflect higher secondary costs across end-uses as Professor Carlton suggests. It may be that, as with gross profit margins, differences in business mix and secondary distribution costs account for some, possibly large, portion of the EBITDA differences between large Canadian and American dealers. Hence the Tribunal is not prepared to accept Professor Carlton's conclusion that ICG and Superior are less profitable than his sample of large American propane dealers.

H. Conclusion

298 The Commissioner submits that this merger will lead to a substantial lessening of competition in local markets other than "category 1" markets referred to by Professor Schwindt and Globerman, the linked market number one (markets numbers 3, 4, 6, 9, and 7, 27, 40, 50, and 53, as defined by Professor West) and the Sechelt-Powell River market of British Columbia; he also submits that the merger will lead to a prevention of competition in the Maritimes. The Commissioner also submits that national accounts are a separate category of business over which the merged entity will be in a position to exercise market power. In addition to the evidence of high market shares and the difficulty of entry, the Commissioner relies on the expert opinion of Professors Schwindt, Globerman and Ward as to the merger's impact on market structure and the ability of the merged entity to raise price unilaterally.

299 The respondents argue that the impact of the merger on market structure will be minimal because ICG has not been a strong competitor. In particular, they rely on the expert opinion evidence of Professor Carlton who claims, on the basis of his statistical analysis, that ICG has not constrained Superior's prices in markets where they compete. On this basis, the respondents argue that the removal of ICG by this merger will have no significant competitive impact.

300 The legal test to be applied under section 92 of the Act is whether the merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially.

301 In *Hillsdown*, cited above at paragraph [127], at page 314, the Tribunal held that a finding of a substantial lessening of competition depends on whether the transaction will result in additional market power:

> ... In assessing the likely effects of a merger, one considers whether the merged firm will be able to exercise market power additional to that which could have been exercised had the merger not occurred. A merger will lessen competition if it enhances the ability of the merging parties to exercise "market power" by either preserving, adding to or creating the power to raise prices above competitive levels for a significant period of time. One considers the degree of any such likely increase and whether by reference to the particular facts of the case it should be characterized as substantial.

302 The Tribunal is largely in agreement with this statement; however, it does not agree that a merger which merely preserves existing power over price should be seen as lessening competition. The objective of merger review is to determine whether market power is increased at the margin.

303 In *Southam*, cited above at paragraph [47], at page 285, the Tribunal states:

> ... Most simply, are advertisers *likely* to be faced with significant higher prices or significantly less choice over a significant period of time than they would be likely to experience in the absence of the acquisitions? (emphasis added)

304 Subsection 92(2) of the Act makes it clear that market shares and concentration, per se, cannot lead to a finding that a merger will likely prevent or lessen competition in a substantial way. It reads:

> For the purpose of this section, the Tribunal shall not find that a merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially solely on the basis of evidence of concentration or market share.

305 Although evidence of his market share or concentration is not sufficient to justify for finding that a merger is likely to prevent or lessen competition substantially, it is no doubt a relevant factor. This evidence will be particularly useful in identifying mergers that are likely to result in greater interdependence among the remaining firms in the market.

306 In light of the evidence, the Tribunal is of the view that the merger is likely to lessen competition substantially in many local markets. The Tribunal accepts the opinion of Professors Schwindt and Globerman regarding the 16 local markets in which the merged entity will have post-merger combined market shares of 95 percent or more and which they referred to as "merger to monopoly". The Tribunal's concern in these markets is that the merged entity will have the ability to exercise market power by imposing a unilateral price increase.

307 The Tribunal accepts the Commissioner's conclusion regarding the eight markets referred to as "category 1" because the merger is expected to have minimal impact on competition between Superior and fringe competitors.

308 The Tribunal also finds that the merger is likely to lessen competition substantially in a set of markets referred to as "category 3" which identifies 16 markets in which ICG had a substantial market share prior to the merger but where there were at least three competitors including Superior and ICG. In these markets, the Tribunal expects that the elimination of ICG will enhance interdependence and reduce competition.

309 Finally, the Tribunal finds that the merger is likely to lessen competition substantially through the creation of a dominant firm in the 33 local markets referred to as "category 2". In these markets, the Tribunal is concerned about the increased interdependence effects that the merger is likely to produce.

310 The Tribunal finds that the merger is likely to lessen competition substantially in coordination services offered to national account customers. It is uncontested that only the merging firms provide these services across Canada. The merger will leave one remaining firm in Canada offering coordination services and there is no evidence to suggest that anyone capable of offering coordination services across Canada will commence those operations. The Tribunal recognizes that not all national account customers rely on these two companies for coordination services. However, the issue is to determine whether the merged firm will be able to exercise market power over its national account customers by imposing a unilateral price increase. The Tribunal is of the view that the merged entity will have the ability to do so as some witnesses indicated that they would be willing to pay more for these services in order to avoid the higher costs of internal coordination.

311 In coming to the conclusion that the merger will likely result in a substantial lessening of competition, the Tribunal considered the evidence of market shares and concentration provided by Professors West, Schwindt and Globerman and the econometric evidence of Professor Ward on the ability of the merged entity to impose unilateral price increases.

312 The Tribunal also considers that barriers to entry in the retail propane business are high based on the evidence of Professor Whinston and of several factual witnesses. The Tribunal also notes that entry has occurred in the past but that no

evidence demonstrates that it would occur within a reasonable period of time to prevent the exercise of market power. The Tribunal is of the view that Superior's and ICG's respective market shares have remained relatively constant through the last decade. Therefore, the Tribunal believes that Superior and ICG' combined market share constitutes approximately 70 percent of the market on a national basis despite entry by relatively small competitors.

313 The Tribunal also finds that the merger is likely to prevent competition substantially in Atlantic Canada. In making this finding, the Tribunal relies on the evidence of ICG's plans to vigorously expand its activities in Atlantic Canada. In this respect, the Tribunal also considered the evidence of high market shares, the evidence of high barriers to entry and the lack of evidence that entry did occur in the past.

V. Remedy

314 In light of the Tribunal's finding pursuant to section 92 of the Act that the merger is likely to lessen competition substantially in many local markets and for national account customers and that the merger is likely to prevent competition substantially in Atlantic Canada, the Tribunal is of the view that the sole remedy appropriate in this case would be the total divestiture by Superior of all of ICG's shares and assets (including those of the previously integrated branches thereof).

315 We take note of the Supreme Court's direction in *Southam*, cited above at paragraph [48], at pages 789 and 790, regarding the appropriate remedy:

> The evil to which the drafters of the *Competition Act* addressed themselves is substantial lessening of competition. See Competition Act, s. 92(1). It hardly needs arguing that the appropriate remedy for a substantial lessening of competition is to restore competition to the point at which it can no longer be said to be substantially less than it was before the merger.

Further, the Supreme Court stated at page 791:

> ... If the choice is between a remedy that goes farther than is strictly necessary to restore competition to an acceptable level and a remedy that does not go far enough even to reach the acceptable level, then surely the former option must be preferred. At the very least, a remedy must be effective. If the least intrusive of the possible effective remedies overshoots the mark, that is perhaps unfortunate but, from a legal point of view, such a remedy is not defective.

316 The Tribunal is of the view that since the merger between Superior and ICG is likely to prevent or lessen competition substantially in many local markets across Canada, an order for total divestiture is the sole effective remedy available to the Tribunal. Indeed, the Tribunal is of the view that any order for partial divestiture remedy, while less intrusive, would not effectively restore competition in these markets to the level at which it can no longer be said to be substantially less than it was prior to the merger.

317 The Tribunal will now turn to the respondents' argument under section 96 of the Act in order to determine whether an order for total divestiture can be made.

VI. Efficiencies

A. Summary of Efficiency Gains

318 The respondents submit that the merger will allow Superior to achieve substantial gains in efficiency. They presented the opinion of Cole Valuation Partners Limited ("Cole") stating that the aggregate of such gains ("efficiency value") falls in the range of $381 million to $421 million measured in constant dollars over 10 years. Cole also opines that these efficiency gains cannot be achieved through other means common to industry practice (expert affidavit of C. O'Leary and E. Fergin (17 August 1999): confidential exhibit CR-112 at 2).

319 Cole's report entitled "Quantification of the Efficiency Value Resulting from the Merger of Superior Propane and ICG Propane" is exhibit A. Appendix 1 to Cole's report is the report of A.T. Kearney Ltd., a management consulting firm with

expertise in, *inter alia*, logistics and operations management. The two reports and opinions therein constitute the "Cole-Kearney report".

320 The Cole-Kearney report is lengthy and detailed, but its main conclusions are the efficiency gains in each of the three major areas of operation: corporate centre, customer support and field operations. The corporate centre comprises the functions of corporate management and includes, *inter alia*, head office management activities, personnel and facilities, information systems technology, wholesale propane dealing and purchasing. The Cole-Kearney report projects that the merged entity will require 44 fewer employees in the head office functions than in the two companies separately, that the head office rent will decline, as will public company costs, legal, and marketing expenditures. The report states that estimated annualized savings of $15.4 million will arise from the elimination of redundancies and that, over 10 years, total projected savings will be $141.5 million taking into account certain one-time gains (e.g., on asset disposals) and costs (such as severance) of achieving those savings (*ibid.* at 9-12 and appendix 1 at section A).

321 Customer support functions include sales force and related management, customer service and administration, and regulatory and safety. The Cole-Kearney report expects cost savings arising from the duplication of facilities and redundant personnel in areas where both merging companies operate and from the adoption of Superior's decentralized "business model" in which branches are supported by a centralized branch support centre and regional branch support centres. ICG's five customer care centres will be eliminated. Annualized savings of $7.2 million are projected, resulting in $65.7 million in savings over 10 years after including one-time items (*ibid.* at 13-16 and appendix 1 at section B). The Cole-Kearney report notes that its estimates of cost savings exclude the expected savings from restructurings that Superior and ICG had already planned independent of the merger (*ibid.* appendix 1, tab B1 at 135, 136).

322 Field operations consist of field sites, branches and plant operations, delivery and service fleets, propane and tank inventory, and supply and transportation. Cost savings are anticipated to result from redundancies due to overlapping geographic markets and from the larger delivery volumes in each territory that will enable the merged entity to reduce supply and transportation costs. For example, the Cole-Kearney report projects 157 eliminated positions, a reduction of 17,694 tanks, and the elimination of 5.9 million litres of propane inventory. Annualized savings of $16.7 million are expected, for a total of $193.6 million over 10 years taking one-time items into account (*ibid.* at 17-20 and appendix 1 at section C).

323 The aggregate cost savings identified in the Cole-Kearney report amount to $400.8 million (with a margin of approximately $20 million) over 10 years, for a projected efficiency gain of $40.08 million (with a margin of approximately $2 million) per year. The Cole-Kearney report asserts a very high level of confidence in its realization, in part because (a) $13 million to $21 million of savings that would likely be realized in the absence of the merger were excluded; (b) identified efficiency gains from the merger were included only if they could be realized with a high degree of confidence; and (c) the efficiency gains are based on cost savings that are held to be more likely to be realized than revenue gains that are more speculative.

324 For greater certainty, the Tribunal notes the distinction between "annualized savings" as used in the Cole-Kearney report and "annual savings". The former term is a representative amount of one-year savings in an item when that item's cashflows are measured year by year over 10 years, before taking one-time related cashflows (e.g., due to severance payments, or asset disposals) into account. Accordingly, the savings for that item over 10 years need not equal the annualized savings multiplied by 10. Adding the annualized savings from the three categories discussed above leads to annualized savings of $39.3 million when rounded to one decimal. The latter term refers to all cashflows; for example, if the total savings over 10 years are $400.8 million, then the annual savings are $40.08 million.

B. Efficiency Net Present Value

325 The Cole-Kearney report also provides estimates of the discounted present value of the efficiency gains, the "efficiency net present value", which falls in the range of $291 million to $308 million (*ibid.* at 24). This calculation depends on the discount rate chosen and the particular set of cashflows evaluated (*ibid.*, appendix 4 at 318). Cole adopts the midpoint of $300 million for the point estimate of the efficiency net present value.

C. Tribunal's Summary and Evaluation

326 The Commissioner argues, based on the report in rebuttal of Professors Schwindt and Globerman and Mr. Kemp (expert rebuttal affidavit of R. Schwindt, S. Globerman, and T. Kemp (15 September 1999): confidential exhibit CA-3131), that $38.51 million claimed annual savings overstate what the merger is likely to generate and that only $21.2 million thereof are appropriately considered. The Commissioner argues that many of the claimed gains in efficiency are cost savings that are pecuniary in nature and should, therefore, be disregarded because they do not represent savings of real economic resources that would be redeployed by other sectors of the economy. Similarly, the Commissioner asserts that certain real economic costs have been classified as pecuniary and hence ignored when they should be deducted from claimed efficiency gains.

327 The Commissioner also asserts that the magnitudes of certain properly included efficiencies are overstated, and that costs incurred as a result of the merger have been inadequately treated.

328 In reply, the respondents dispute several of the Commissioner's criticisms and they submit that the Commissioner's claims in these areas should be disregarded. As many of the Commissioner's concerns are not challenged (for example, the elimination of the "wellness programme" as pecuniary savings), the Tribunal is concerned only with those points of disagreement.

(1) Corporate Centre

329 The Commissioner asserts that claimed cost savings in corporate centre are overstated by approximately $11.9 million per annum. Of these, the respondents defend their treatment of the Management Agreement, procurement, and public company costs which amount to $11.4 million per annum of the Commissioner's sought-after reduction in corporate centre cost savings.

(a) Management Agreement

330 Superior is managed by Superior Management Services Limited Partnership ("SMS") which acquired the obligations and benefits (the "Management Agreement") of managing Superior from the previous manager, Union Pacific Resources Inc., in May 1998 for $5 million (Cole-Kearney Report Compendium Binder: confidential exhibit CR-114, tab A1, appendix B). Superior Incentive Trust ("Incentive Trust"), which holds the class A units of SMS, receives distributions thereon of the management fees which Superior pays to SMS pursuant to the Management Agreement. The management group of Superior (Grant Billing, Mark Schweitzer and Geoff Mackey) owns 28 percent of Incentive Trust's units and hence is entitled to 28 percent of the distributions made by Incentive Trust. A group of investors, Enterprise Capital Management Inc. (the "Enterprise investors"), owns the remaining 72 percent of Incentive Trust's units.

331 The Commissioner asserts that the schedule of management fees in the Management Agreement provides incentives to SMS to increase (a) the profitability of Superior, and (b) the cash distribution to unitholders of the Superior Income Fund ("cash distribution") which owns Superior. The schedule provides no entitlement to SMS when the cash distribution per unit is less than $1.27. For cash distributions between $1.27 and $1.45, SMS is entitled to an amount equal to 15 percent of those cash distributions and to 25 percent when the cash distribution per unit is between $1.45 and $1.89. Above $1.89, SMS receives an amount equal to 50 percent of the cash distributions.

332 Accordingly, if the management group could achieve efficiencies that resulted in increased cash distributions, SMS would be entitled to the management fees in respect of such efficiency-based cash distributions. Assuming that the management group achieves the $40 million of efficiencies claimed in the Cole-Kearney report, the Commissioner estimates that SMS would receive management fees in respect thereof of approximately $7.5 million per annum. This amount is an average based on differing assumptions about Superior's future tax position given that management fees are a tax-deductible expense.

333 In summary, the Commissioner asserts that the management fees arising from achieving efficiencies attributed to the instant merger are payments that compensate SMS for providing the additional management services that are required to achieve these efficiencies. Viewed in this light, these fees are a cost of achieving the efficiencies and should therefore be deducted from the $40 million per annum of efficiencies claimed by the respondents. The Commissioner submits that the full amount of

these fees should be deducted, not just the 28 percent thereof that would be distributable to the management group, because the Enterprise investors have management obligations and involvement through representation on Superior's or ICG's boards.

334 The respondents offer several objections (expert reply affidavit of S. Cole, C. O'Leary, J.P. Tuttle, and E. Fergin (5 October 1999): confidential exhibit CR-113 at 9-13), the main one being that the fees do not call forth additional management efforts by the management group because the managers were fully engaged prior to the merger and because there will be no material change in the level of services provided by the managers; hence, no increase in economic costs will arise (*ibid.* at 10). As a result, the respondents argue that no deduction of the fees against claimed efficiencies is warranted.

335 The respondents indicate that the managers received interest-free, non-recourse loans from the Enterprise investors in order to facilitate the purchase of their 28 percent share in the Management Agreement (confidential exhibit CR-113, appendix B at 56).

336 It appears to the Tribunal that the respondents' position is that the managers are being paid more for providing the same amount of management services and hence that the fees they receive in the form of distributions from Incentive Trust are a pecuniary cost only. In simpler terms, the Management Agreement redistributes some of Superior's profit to the managers at the expense of Superior's owners since no additional management effort is provided. If the respondents' view is correct, the Tribunal finds it a strange argument to make, as it amounts to a statement that, in effect, the management group will be overpaid for the services they provide.

337 The respondents further argue that the Management Agreement is an investment made and paid for by the managers and that the payments they receive from Incentive Trust are distributions of profit rather than compensation for management services. They point out that the owners of the Management Agreement have the right to sell their interests therein. They also submit that since the Management Agreement predates the merger and has not been amended in this respect, the level of management services to be provided has not changed since 1996 when the terms of the agreement were established. Hence, the respondents argue that any change in payment must be a pecuniary transfer (confidential exhibit CR-113 at 11, 12).

338 The Tribunal does not agree that the Management Agreement is solely an investment, although it may have aspects thereof. In view of the fact that the management fees paid to SMS pursuant to the Management Agreement are tax-deductible expenses to Superior, they cannot be distributions of after-tax profits. While the managers purchased for their interests in the Management Agreement supported in part by interest-free non-recourse loans, the Tribunal finds that the acquisition price they paid only provides further incentive to them to supply additional services that increase their remuneration. Moreover, it appears to the Tribunal that the managers' ability to transfer their interests in the Management Agreement is highly circumscribed by section 6.1 of the Unitholders Agreement (confidential exhibit CR-113, appendix G, tab 3).

339 The Tribunal observes that managers of for-profit enterprises often receive compensation in the form of investments or investment-related vehicles, such as shares of the managed company, stock options on company shares, low-interest loans to acquire shares of the managed company, etc. Although the payments that they receive from these investments may be in the form of dividends or capital gains, these forms of managerial compensation are nonetheless techniques for improving the quality and quantity of managerial effort. In particular, these methods seek to align the interests of managers with those of owners so that managerial decisions benefit the latter group. Thus, even when the incentive payments are in the form of distributions on company securities held by the managers, their purpose is to provide incentive to managers to achieve corporate goals and those payments are properly viewed as compensation for effort.

340 The Tribunal agrees with the Commissioner that, in all relevant respects, the Management Agreement provides additional compensation to the managers for supplying additional managerial effort. Thus, these additional management fees are a true economic cost of achieving the efficiencies claimed by the respondents and hence are properly deducted from those efficiencies.

341 However, the Tribunal disagrees with the Commissioner regarding the appropriate amount of that deduction. The proper quantum is that amount that compensates the managers for additional effort and hence must be less than the total fees paid to SMS under the Management Agreement because 72 percent thereof accrues to the Enterprise investors. There is no

evidence that Enterprise investors or their board representative are or will be involved in active management or in achieving the claimed efficiencies. Accordingly, they benefit from the additional efforts provided by the management group but supply none themselves.

342 The Tribunal views the distributions on SMS's class A units by Incentive Trust to the Enterprise investors as a pecuniary redistribution of Superior's pre-tax profit from Superior's owners, particularly because those owners receive nothing from the Enterprise investors when the Management Agreement changed hands.

343 The respondents calculate the payments to the managers under the Management Agreement under different assumptions about Superior's future tax position and conclude that the managers will receive between $1.5 million and $2.8 million per annum if $40 million of efficiencies are properly claimed and achieved. Following the Commissioner's approach, the Tribunal adopts the average thereof, $2.2 million as the deduction from the claimed efficiencies (confidential exhibit CR-113 at 13 and appendix B at B1).

344 The Tribunal notes that the $7.5 million deduction claimed by the Commissioner is the Commissioner's estimate of the management fees payable to SMS in respect of this merger when the efficiency gains are $40 million per year. Since the Commissioner asserts that this amount is itself overstated for a variety of reasons, the amount of the management fees and hence any deduction in respect thereof must necessarily be lower if the Commissioner's assertion is correct.

345 The Tribunal notes further that the Commissioner's amount of $7.5 million average estimated management fees equals 18.75 percent of the $40 million claimed efficiency gain. The $2.2 million average fees resulting from the respondents' calculations are 5.5 percent of those efficiencies. Since the Tribunal agrees with the respondents as to exclusion of amounts received by the Enterprise investors, in determining the proper amount to deduct when efficiencies are less than $40 million, the Tribunal will use the latter percentage.

(b) Procurement

346 The Cole-Kearney report indicates that suppliers to the merged company will experience cost savings as a result of the combination of purchasing activities in one company rather than two. The merged company will be able to demonstrate these savings and negotiate discounts in truck freight and rail freight rates, among other areas (confidential exhibit CR-112, tab A9 at 115). The Cole-Kearney report had claimed approximately $2.84 million per year in savings to the merged company, but revised its estimate to $3.28 million per year in reply to the report prepared by the Commissioner's experts in rebuttal to include cost savings at Superior's transportation affiliate, Energy Transportation Incorporated (confidential exhibit CR-114, tab 6).

347 The Commissioner submits that the procurement savings of $3.28 million per year are largely pecuniary and not well documented. Indeed, in their report in rebuttal, the Commissioner's experts, Professors Schwindt and Globerman and Mr. Kemp, note that the estimates are based solely on A.T. Kearney's experience in negotiating transportation contracts for other clients (confidential exhibit CA-3131 at 19).

348 The Tribunal finds that there is insufficient evidence to support the claimed savings in the Cole-Kearney report. The Tribunal accepts the Commissioner's criticisms and consequently concludes that no savings have been established.

(c) Public Company Costs

349 The respondents claim an annual saving due to the merger of $660,000 in avoided public company costs. Such avoided costs include stock exchange listing fees, costs of outside directors, trustee's fees, regulatory filing costs, legal and audit fees, etc. Absent the merger, the respondents argue that ICG would have gone public and incurred these costs (confidential exhibit CR-112, tab A-8 at 111).

350 The Commissioner's experts criticize these savings on the basis that ICG could plausibly have been acquired by another company and could have avoided these costs. As a result, they argue that the cost savings are not properly attributed to the instant merger (confidential exhibit CA-3131 at 18).

351 The evidence of witness Henry Roberts, vice-president of Petro-Canada, is that arrangements had already been put in place to take ICG public through an offering of trust units when Superior made its offer to acquire ICG; ICG had already issued a preliminary prospectus and was promoting the offering via road shows. According to Mr. Roberts, Petro-Canada had received expressions of interest by a few potential buyers and had discussions with them; however, no such buyer made a binding offer to purchase ICG.

352 History aside, will these savings likely be attained if the Tribunal orders total divestiture. At the present time, the Tribunal does not and cannot know how the ordered divestiture would take place. However, since Superior is claiming the savings in public company costs as efficiencies, it has the burden of demonstrating to the satisfaction of the Tribunal that those savings are properly included in the analysis under subsection 96(1). Thus, Superior must establish that it would or would likely take ICG public in the event of a total divestiture order. It has not done so, and the efficiency claim is therefore denied.

(2) Field Operations

(a) Fleet and Driver Reductions

353 The Cole-Kearney report estimates that the merged entity will require fewer trucks of all types in the overlapping trade areas of the merging firms, so that a number of trucks and related delivery driver positions in overlapping areas can, therefore, be eliminated. The efficiencies in these categories arise from the elimination of certain planned vehicle purchases, the elimination of the operating costs on vehicles removed from service, proceeds of disposal of certain delivery vehicles (confidential exhibit CR-112, section C, tab C4), and the savings in driver remuneration (*ibid.*, tab C-5).

354 The Cole-Kearney report uses statistical regression methods (as subsequently presented during the hearing in confidential exhibit CR-113, appendix G, tab 5) to determine the relationship between operating hours per bulk truck and three determinants thereof, a trade area proxy measure of distance travelled, volumes delivered, and number of calls. Based on this statistical analysis (Predictive Regression Model Results: exhibit A-3122 at 2), a reduction of 13.27 percent in operating hours was found to be achievable. With this relationship, they conclude that the merged firm will require 661 trucks of all types and that 80 trucks (75 bulk trucks and 5 cylinder trucks) currently serving the overlapping trade areas of the merging parties can be eliminated (confidential exhibit CR-112, tab C4 at 236, 237). Correspondingly, 80 fewer delivery drivers would be needed (*ibid.*, tab C5 at 244).

355 As a result of this analysis, the Cole-Kearney report estimates annualized savings of $2.6 million ($33.4 million over 10 years) through the elimination of these trucks, and annualized savings of $3.9 million ($36.3 million over 10 years) through eliminating delivery driver positions (confidential exhibit CR-112 at 18). These cost savings account for approximately 17 percent of the ten-year, total gains in efficiency claimed by the Cole-Kearney report.

356 The Commissioner's experts, Professors Schwindt and Globerman, have criticized the methodology used by the Cole-Kearney report to predict the fleet and driver position reduction and the results therefrom (Evaluation of Appendix D of the Cole/Kearney Reply: exhibit A-3132). They note that the key variable for assessing savings is the average distance between customers, which is not measured by the Cole-Kearney report's trade area proxy. Moreover, they point out that while the Cole-Kearney report measures the relationship between operating hours per bulk truck in their sample and three determinants thereof including volume, their measure of that volume is total branch volume (including volumes delivered by cylinder trucks) rather than actual volumes delivered by those bulk trucks. Other problems include a poor statistical "goodness of fit" measure which the Commissioner's experts were able to improve on by using a different model.

357 The Commissioner's experts recalculated the analysis of the Cole-Kearney report with the correct data and concluded that the estimated reduction in operating hours was 3.62 percent (exhibit A-3132, table A-4) versus the estimate of 13.27 percent in the Cole-Kearney report. Accordingly, 30 trucks (28 bulk trucks and 2 cylinder trucks) could be eliminated as compared with the estimate of 80 in the Cole-Kearney report. On this basis, the Commissioner submits that cost savings will be $1.69 million per year less than the annualized estimate in the Cole-Kearney report.

358 Professors Schwindt and Globerman and Mr. Kemp note that since the truck reduction estimate in the Cole-Kearney report is too high, so accordingly is its estimated reduction in the number of delivery drivers (confidential exhibit A-3131 at 7). Assuming cost savings of $48,500 per driver (confidential exhibit CR-112 at 246) eliminated, the overstatement by 50 trucks means that Cole-Kearney's annualized cost savings from delivery driver elimination should be reduced by $2.43 million (i.e., 50 × $48,500). The Tribunal notes that the Commissioner's approach fails to consider the reduction in one-time severance costs that would result from terminating fewer drivers.

359 In response, the respondents emphasize that the Commissioner's experts, Professors Schwindt and Globerman, have no experience in the propane business and have never adjusted distribution routes or implemented a merger of this type.

360 In claiming a reduction of 28 bulk trucks in overlapping areas, the Commissioner's experts advocate a reduction of only 5.8 percent of the combined 481 bulk vehicles over 10 years, as compared with Cole-Kearney's estimated 15.6 percent reduction. In claiming a reduction of two cylinder trucks in overlapping areas, they advocate a 4.4 percent reduction over 10 years in the 45-vehicle cylinder fleet, as compared with Cole-Kearney's estimate of 11.1 percent.

361 The Tribunal cannot endorse the truck reduction estimates of the Commissioner's experts. Although they have demonstrated that the Cole-Kearney's approach to estimating truck reductions is flawed by a serious data problem, the Tribunal recognizes that some gains in efficiency are likely to result from truck reduction, especially in light of the overlapping routes of the merging parties. In the Tribunal's view, the truck reductions estimated by the Commissioner's experts are, at best, the bare minimum of what might be achievable. Accordingly, the Tribunal is of the view that the Commissioner's claimed reduction of $1.69 million in Cole-Kearney's estimated savings from truck reductions is likely too high.

362 The Tribunal believes that $1 million per year is a more realistic estimate of the savings from bulk truck reductions than the $770,000 calculated by the Commissioner's experts; a similar adjustment to their cylinder truck savings yields approximate annual savings of $150,000. With total estimated annual savings of $1.15 million, the Tribunal believes that Cole-Kearney's estimated annualized savings should be reduced by $1.43 million rather than by the Commissioner's figure of $1.69 million.

363 Applying the same percentage adjustment to savings in delivery drivers, the Tribunal believes that the savings will be approximately $1.9 million, rather than the $1.46 million claimed by the Commissioner. Accordingly, the Cole-Kearney's estimate of savings of $3.88 million per year should be reduced by $1.98 million, rather than by the Commissioner's figure of $2.43 million.

(b) Propane Supply and Transport

364 The Commissioner submits that Cole-Kearney's estimated cost savings of $1.39 million per year in this category are overstated. The Commissioner claims that cost savings due to bringing idle equipment into use rather than continue purchasing transport from independent haulers are pecuniary (i.e., that the idle capacity will be transferred from the merged entity to the private haulers that were formerly used). The Commissioner also submits that the savings attributed to reduction in the backup rail car fleet have not been established.

365 The respondents do not challenge the Commissioner's submissions, except to point out an apparent difference in amounts claimed between the text of the Commissioner's memorandum at page 222 and the corresponding data in table E2. According to the Commissioner, the text error is typographical and the data in table E2 are correct.

366 On this basis, the Tribunal accepts the Commissioner's criticisms of Cole-Kearney's cost savings.

(3) Other

(a) One-Time Items

367 The Commissioner states that Cole-Kearney's "annual claimed savings" of $38.51 million are overly optimistic, unrealistic and exaggerated. The Commissioner claims that this figure should be reduced by $17.3 million to produce annual estimated savings of $21.21 million, a figure that would still be too high for lack of a contingency factor.

368 The Cole-Kearney report claims cost savings of $400.8 million over 10 years with a contingency factor of approximately five percent, for a range of $381 million to $421 million. Thus, on an annual basis, claimed savings are approximately $40 million, the midpoint of the range of $38 million to $42 million, for 10 years.

369 It appears to the Tribunal that table E2 in the Commissioner's memorandum lists and aggregates Cole-Kearney's "annualized savings" and rounds such items and their sum to two decimals; hence the Commissioner's figure of $38.51 million per year omits one-time expenditures and receipts. Accordingly, the Commissioner's estimate of $21.21 million in annual cost savings from the merger does not include the one-time costs and receipts that result from achieving efficiencies.

370 In final argument, the Commissioner defended this exclusion in table E2 on the basis that it would be arbitrary to express any one-time cost or receipt as an annual amount by dividing by 10 years in order to add it to the recurring amounts. Indeed, dividing by any other number of years would be equally arbitrary. The Tribunal agrees that it is arbitrary to express a one-time cost or receipt as an annual amount over 10 years. However, the Tribunal does not agree that excluding these one-time amounts is appropriate.

371 In the Tribunal's view, the appropriate way to value all costs and receipts resulting from the merger, whether one-time or recurring, is through discounting the cashflows at the time of disbursement or receipt at an appropriate discount rate to a present value. Cole-Kearney did this in calculating the efficiency net present value discussed above. The Commissioner did not question the methodology or the results of that calculation or offer corresponding calculations. Moreover, it appears to the Tribunal that the respondents abandoned this approach by the time the hearing started:

> DR. SCHWARTZ: No, I don't. I thought you had discounting in your report.
>
> MR. COLE: Yes. In the original report the $40 million, or the $39 million, and the $400 million are nominal dollars, and in all our discussions with you we have used that paradigm. So while here in Calgary, we have not discussed discounted dollars or net present values.
>
> In our original report there is discussion of that, if need be, but we have not discussed it with you here today or yesterday. transcript at 34:6863, 6864 (8 December 1999).

372 Absent this approach, the Tribunal adopts as the basis for its consideration of cost savings the respondents' estimate of $400.8 million in total cost savings over 10 years or $40 million per annum, rather than $38.51 million per annum in annualized savings. This is done to recognize the one-time costs and receipts, although the Tribunal is well aware that a one-time cash receipt is more valuable the earlier it is received, while a one-time cost is more valuable the later the disbursement is made.

(b) Miscellaneous

373 The Commissioner submits that the Cole-Kearney cost savings in several other areas are overstated by approximately $620,000 per year in aggregate. The respondents do not challenge the Commissioner's submissions. On this basis, the Tribunal accepts the Commissioner's claims in these areas.

(c) Property Tax

374 The respondents claim that property tax payments saved by the merger are savings in user-based payments for local services that will not be needed after the merger and hence represent real savings to the municipalities. They say that the local property tax differs from income taxes in this respect. However, they also appear to recognize that not all of the municipal services supported by the property tax payments will be reduced. They claim that, absent a principled way to determine which resources will be saved, the full amount of property tax savings should be viewed as gains in efficiency.

375 The MEG's, cited above at paragraph [57], refer to merger-based tax savings as redistribution of income from taxpayers to firms; hence tax-savings are pecuniary gains rather than true cost savings. The MEG's at paragraph 5.3 do not distinguish between income taxes and other taxes. At the local level, many services supported by the property tax will not be reduced by the merger (e.g., local spending on education, health, social assistance, road maintenance, councillors' salaries).

376 At the hearing, the Tribunal suggested a principled way of distinguishing between pecuniary and real savings in the area of local services and taxes. If the firm receives an invoice for products or services provided by local government (e.g., the water bill from the local authority) and if the merged entity will use less of that product or service, then the savings are appropriately regarded as resource savings. Where it is not possible to determine whether property tax savings represent real resource savings or a pecuniary redistribution, the Tribunal agrees with the Commissioner that no claimed efficiency savings should be allowed. However, in this case, as the amount claimed by the respondents is relatively small, the Commissioner does not seek to reduce the efficiencies by that amount.

(d) Integration Costs

377 The Commissioner submits that the costs of the Cole-Kearney report should be deducted from claimed efficiencies as should the costs of management in planning the merger. The respondents dispute this submission regarding the Cole-Kearney report on the basis that the cost of retaining the consultants was incurred to satisfy the Commissioner.

378 In the Tribunal's view, the costs of the Cole-Kearney report and pre-merger planning costs should not be deducted from claimed efficiencies. The reason is that these costs have already been incurred and do not depend on whether the merger is allowed to proceed or on whether the efficiencies will be achieved. These costs are sunk costs and hence differ from the costs (e.g., severance payments) that will only be incurred as a result of implementing the merger. Thus, as an economic matter, it would be appropriate to deduct the consultants' fees only, for example, if they were contingent on the outcome of the instant hearing, for in such case they would not be sunk.

379 In any event, on the evidence before us, the Cole-Kearney consultants were only retained by the respondents after the December 1998 merger. Hence, it cannot be said that the costs of the Cole-Kearney report are costs which relate to the planning of the merger by management.

(4) Net Efficiencies

380 As noted at paragraph [372], the Tribunal includes one-time items in its analysis and, therefore, accepts $40 million per annum as the starting point to assess efficiency claims. In view of our findings and conclusion regarding the Commissioner's criticisms of the Cole-Kearney report, we conclude that the efficiencies and deductions therefrom are as follows:

Table 1: Deductions in Efficiencies

			Sought by Commissioner	**Allowed by Tribunal**
				($million/year)
	Deductions			
	i)	one-time items	$ 1.50	$ 0.00
	ii)	procurement	$ 3.28	$ 3.28
	iii)	public company costs	$ 0.66	$ 0.66
	iv)	delivery fleet	$ 1.69	$ 1.43
	v)	delivery drivers	$ 2.43	$ 1.98
	vi)	propane supply	$ 1.12	$ 1.12
	vii)	other (excl. management fees)	$ 0.62	$ 0.62
(a)	Total deductions before management fees		$ 11.30	$ 9.09

(b)	Gross efficiencies claimed by respondents	$ 40.00	$ 40.00
(c)	Net efficiencies before management fees (b-a)	$ 28.70	$ 30.91
(d)	Deduction regarding management fees	$ 7.50	$ 1.70
(e)	Net efficiencies (c-d)	$ 21.20	$ 29.21

Notes: * 5.5% of $30.91

381 Apart from the specific adjustments to the gains in efficiency claimed in the Cole-Kearney report, the Commissioner states that even after reducing the efficiency gains to $21.2 million, that figure is still unrealistically high, in part because it allows for no contingency factor. The Commissioner submits that the Tribunal should keep this overstatement in mind when balancing claimed efficiencies against the anti-competitive effects of the merger.

382 The Cole-Kearney report does not contain a deduction from claimed aggregate efficiency gains as a provision for the possibility that those gains may not be achieved. In this sense, there is no provision for contingency. Mr. Cole testified that the efficiency gains were estimated conservatively and were expressed in aggregate with a margin of approximately five percent. He also stated that, as described in the Cole-Kearney report (confidential exhibit CR-112, appendix 5), between $12 to $21 million of efficiency gains over 10 years were excluded because they could not be quantified precisely (transcript at 33: 6365-67 (7 December 1999)). The Tribunal is satisfied that there is a buffer zone around the estimated efficiency gains and is, therefore, of the view that the absence of an explicit contingency provision is immaterial.

383 In this case, the Commissioner chose not to lead evidence on efficiency gains and, therefore, was limited to rebutting the expert opinion evidence of Cole-Kearney. On its view of the evidence concerning the respondents' efficiencies, the Tribunal is satisfied that these efficiencies of $29.2 million per year will likely be brought about by the merger.

D. Legal Analysis

(1) Section 96 of the Act

384 Section 96 provides that:

> 96.(1) *The Tribunal shall not make an order under section 92* if it finds that the merger or proposed merger in respect of which the application is made has brought about or is *likely to bring about gains in efficiency* that will be *greater than*, and will *offset, the effects of any prevention or lessening of competition* that will result or is likely to result from the merger or proposed merger and that the gains in efficiency *would not likely be attained if the order were made*.
>
> (2) In considering whether a merger or proposed merger is likely to bring about gains in efficiency described in subsection (1), the Tribunal shall consider whether such gains will result in
>
> > (a) a significant increase in the real value of exports; or
> >
> > (b) a significant substitution of domestic products for imported products.
>
> (3) For the purposes of this section, the Tribunal shall not find that a merger or proposed merger has brought about or is likely to bring about gains in efficiency by reason only of a redistribution of income between two or more persons. (emphasis added)

385 Section 96 states, in unequivocal terms, that the Tribunal is not to make an order under section 92 if efficiency gains are greater than and offset the effects of any prevention or lessening of competition. As stated above, the respondents claim that significant efficiencies will result from this merger. The Commissioner, however, disputes the efficiencies claimed and further argues that section 96 is not available, as a matter of law, to the respondents in this case.

(2) Position of the Parties

(a) Commissioner

386 The Commissioner argues that section 96 is not available, as a matter of law, in cases where a merger eliminates competition and results in the creation of a monopoly in a relevant market. Further, he submits that in assessing the trade-off analysis in section 96, the Tribunal has a statutory responsibility to exercise its judgment as to the weight to be accorded to the transfer from consumers to producers, hence that applying a standard with a fixed predetermined weight is contrary to section 96.

387 The Commissioner suggests that the balancing weight standard as introduced by his expert, Peter G.C. Townley, is consistent with a proper interpretation of section 96. He submits that the efficiency gains do not offset the anti-competitive effects caused to the economy as a whole by this merger.

388 The Commissioner further submits that the respondents bear the onus of demonstrating all of the elements of the efficiency defence stated in section 96.

(b) Respondents

389 The respondents claim that significant efficiencies in the range of $40 million per annum will result from the merger between Superior and ICG. They argue that the test to be met under section 96 is that the efficiencies must offset any substantial lessening of competition. They further argue that a substantial lessening of competition is permitted provided it is outweighed by the efficiencies attributable to the merger. They also submit that the effects of the substantial lessening are measured by the deadweight loss to the economy and exclude wealth transfers between producers and consumers which are neutral to the economy.

390 Further, the respondents submit that the Commissioner is distancing himself from the MEG's, cited above at paragraph [57], by adopting a "distributional weights" approach articulated by his expert, Professor Townley. The respondents submit that the efficiencies will not be realized in the absence of the merger and that there is no evidence of any existing alternative proposals which could reasonably be expected to generate these efficiencies if a divestiture order were made under section 92.

391 With respect to the burden of proof, they argue that the Commissioner has not met his burden of establishing the effects of the substantial lessening of competition and that the efficiencies might be achievable in some other way.

(3) Status of the MEG's

392 The parties referred to the MEG's, cited above at paragraph [57], in their written submissions and in oral argument.

393 Although the Tribunal and the Federal Court of Appeal have held in *Canada (Director of Investigation & Research) v. Tele-Direct (Publications) Inc.* (1997), 73 C.P.R. (3d) 1 (Competition Trib.), at 37 and in *Canada (Director of Investigation & Research) v. Southam Inc.* (1995), 63 C.P.R. (3d) 1 (Fed. C.A.), at 41, that the MEG's are not sacrosanct nor legally binding, the Tribunal notes that they provide important enforcement guidelines reflecting the Commissioner's view on how the Act should be interpreted. The MEG's, which were published in 1991, were prepared to inform the business community and the public as to how the Competition Bureau analyzes the competitive impact of mergers including how it considers efficiencies.

394 The Tribunal takes notes that, since their adoption in 1991, no changes as to the interpretation of section 96 have been made to the MEG's. Indeed, even after the issuance of the decision in *Hillsdown*, cited above at paragraph [127], where Reed J. questioned whether the wealth transfer should be treated as neutral, the Commissioner continued, without amending his position, to apply the MEG's. Howard Wetston, the Director of Investigation and Research at the time, stated that he saw no need to revise the guidelines as the comment made by Reed J. in the *Hillsdown* decision was in *obiter dictum*.

395 The total surplus standard was reiterated on July 14, 1998 with the publication of *The Merger Enforcement Guidelines as Applied to a Bank Merger* by the Competition Bureau at paragraph 109, online: Industry Canada <*http://strategis.ic.gc.ca/SSG/ct01280e.html*> (last modified: 5 July 1998):

> Where a merger results in a price increase, it brings about both a neutral redistribution effect and a negative resource allocation effect on the sum of producer and consumer surplus (total surplus) within Canada. Ordinarily, the Director measures the efficiency gains described above against the latter effect, i.e., the deadweight loss to the Canadian economy. (reference omitted)

396 It is only after the Commissioner decided to file the application against the respondents in this case that changes to his position became apparent. Indeed, two recent speeches by Gwillym Allen, Assistant Deputy Commissioner of Competition, Economics and International Affairs, demonstrate a change in the Commissioner's interpretation of the efficiencies exception. In these speeches, Mr. Allen suggests that in some cases "it is more appropriate for the Competition Tribunal to determine whether the merger increases aggregate welfare or not" ("The treatment of Efficiencies in Merger Analysis": remarks given at "Meet the Competition Bureau" conference, Toronto, 3 May 1999) and that "given the evidence presented in a particular merger case, total surplus may not be an all-inclusive measure of the anticompetitive effects that are likely to arise from the merger". Hence, "other qualitative and quantitative subjective comparisons need to be performed in order to determine if the efficiency gains offset the anticompetitive effects" ("The Enforcement of the Efficiency Exception in Canadian Merger Cases": remarks given to the Competition Law Group, Stikeman Elliott, Barristers and Solicitors, Toronto, 25 June 1999).

397 This change in position is quite surprising. It must not be forgotten that the point of view put forward in the MEG's represents the considered opinion of the Commissioner, the official appointed by the Governor in Council to administer and enforce the Act. That view, it goes without saying, is the view arrived at by the Commissioner following careful advice given to him by his legal and economic advisers regarding the meaning of the various provisions of the Act. Although the Commissioner is not bound by the MEG's nor are they binding upon this Tribunal, the MEG's should be given very serious consideration by this Tribunal. Needless to say the Tribunal can disagree and in fact should disagree if it is of the opinion that the interpretation proposed in the MEG's is wrong. However, when referring and considering the MEG's, one should bear in mind the comments in the preface to the MEG's made by Howard Wetston, then Director of Investigation and Research. He stated that the Merger Guidelines were published to promote a better understanding of the Director's merger enforcement policy and to facilitate business planning. He also noted the extensive consultation process which was followed in their preparation.

(4) Efficiency "Exception"

398 The Commissioner submits that section 96 provides *a defence* to an otherwise anti-competitive merger to the respondents if they can demonstrate that the efficiency gains from the merger will be greater than and will offset the effects of any prevention or lessening of competition resulting from the merger. The respondents, on the other hand, argue that section 96 constitutes rather a limitation on the Tribunal's jurisdiction to make an order under section 92.

399 In *Canada (Director of Investigation & Research) v. Canadian Pacific Ltd.* (1997), 74 C.P.R. (3d) 55, at 63, (Competition Trib.), the Tribunal held that section 96 was a defence available to the respondents. The Tribunal further held that the onus of alleging and proving the material facts which form the basis of the defence fell upon the respondents:

> In my view, the Director's request for particulars is reasonable. Under the Act, the existence of efficiencies essentially constitutes *a defence* to the Director's application. Just as it is improper for the Director to plead bald allegations without pleading the material facts upon which he relies, so too must the respondents plead the material facts which form the basis of a "defence" of efficiency gains. (emphasis added)

The Tribunal can see no reason to disagree with the above statement.

(5) Burden of Proof

(a) Commissioner

400 The Commissioner submits that the respondents bear the burden of proving all the elements of the efficiency defence on a balance of probabilities and that, once a substantial lessening competition is established pursuant to section 92, the Tribunal

should proceed to make an appropriate order unless the respondents are successful with their defence under section 96. The Commissioner suggests that the respondents must bear the onus of establishing all the elements because they have the best knowledge of what strategies are available to them to generate the efficiency gains that they claim and what, if any, alternate means would or would not be available to achieve those gains. Further, the Commissioner submits that the section 11 powers provided by the Act do not place the Commissioner in a position as knowledgeable as the respondents about their business strategies. In support of his argument, the Commissioner relies on two Tribunal decisions: *Canada (Director of Investigation & Research) v. Canadian Pacific Ltd.*, cited above at paragraph [399], at page 63, and *Hillsdown*, cited above at paragraph [127], at pages 332-34, where the Tribunal recognized that the burden of proving the elements of the "efficiency defence" falls on the respondents.

401 The Commissioner also asserts that the respondents must show not only the likely efficiency gains but must also demonstrate the scope and extent of the anti-competitive effects of the merger, absent which the Tribunal is not in a position to determine whether the gains in efficiency are greater than and offset those effects and whether "the defence" has been established.

(b) Respondents

402 Relying on the *Hillsdown* decision, cited above at paragraph [127], the respondents submit that they bear the onus of proving the existence of the efficiencies claimed or the likelihood of their existence if the merger has not been implemented. They claim that the Commissioner bears the burden of establishing the effects of the substantial lessening of competition (i.e., the deadweight loss) and that the efficiencies might be achievable in some other way (e.g., a sale to third party). Indeed, the respondents submit that the Commissioner is in a good position, in view of his investigatory powers pursuant to section 11 of the Act, to obtain third party information.

(c) Conclusion

403 The Tribunal is of the view that the respondents bear the burden of proving all of the elements of section 96 on a balance of probabilities, except for "the effects of any prevention or lessening of competition", which must be demonstrated by the Commissioner.

(6) Role of Efficiencies under the Act

404 The Commissioner reminds us that section 1.1 states that the purpose of the Act is to "maintain and encourage competition in Canada" and that competition is not seen as an end in itself, but rather as a means to achieve the four objectives identified in section 1.1. The Commissioner further submits that no hierarchy is established among those "potentially conflicting" objectives. The Commissioner argues that it becomes clear when sections 96 and 1.1 are read together, that a section 96 defence will prevail only when a merger enhances the objectives of competition policy more than it diminishes them. The Commissioner argues that the Tribunal must decide whether Canadians and the Canadian economy are better off with or without the merger.

405 The respondents submit that the Commissioner's interpretation of section 96 is wrong since section 96 is not subordinate to the purpose clause of section 1.1. Further, the respondents suggest that where there is a conflict between a purpose clause statement and a substantive provision, the latter must prevail.

406 There are significant differences in the positions of the parties as to the proper interpretation of sections 1.1 (the purpose clause) and 96 (the efficiency exception) of the Act. Many of the issues raised are of long standing, in part because there have been so few litigated mergers in Canada since the Act was amended. In particular, no decision in a litigated merger has turned on the question of efficiency gains and hence it appears to the Tribunal that there is considerable confusion over the meaning of certain key terms. Before dealing with the positions of the parties, the Tribunal will set out its understanding of the relevant sections of the Act.

407 The Act seeks to obtain the benefits of a competitive economy. As set out in the purpose clause, these benefits, which we have characterized as the objectives of competition policy, are economic efficiency and adaptability, the expansion of opportunities for Canadian participation in world markets and openness to foreign competition at home, opportunities for small

businesses to participate in economic activity, and competitive consumer prices and product choices. Under the purpose clause, the Act seeks to achieve these objectives by maintaining and encouraging competition. To this end the Tribunal may, pursuant to section 92 of the Act, order divestiture where a merger is found to prevent or lessen competition substantially.

408 There was some discussion at the hearing concerning the status that should be given to the stated objectives, particularly whether the ordering of objectives in the list contains any useful information in interpreting the Act. Such discussion is misdirected; the true goal specified in the purpose clause is the maintenance and encouragement of competition. It is noteworthy that the Act does not give the Tribunal the powers to achieve the objectives individually.

409 For example, small businesses are not protected under the Act. The purpose clause indicates only that the opportunities for small businesses to participate in economic activity will result from maintaining and encouraging competition. Hence, no other powers are needed to realize this objective.

410 Accordingly, the listing of objectives of competition policy simply presents the rationale for maintaining and encouraging competition. No hierarchy among the listed objectives is indicated and hence no meaning can be taken from the order in which the listed objectives of competition policy appear in the purpose clause. Under the purpose clause, all of the objectives flow from competition.

411 There are, of course, other objectives that could be sought, one such being the proper distribution of income and wealth in society. It is clear, however, that when competition is maintained and encouraged, the resulting distribution of income and wealth may not be the proper one depending on one's political or social outlook. By not including distributional considerations in the list of objectives in the purpose clause, Parliament appears to have recognized this. Indeed, if distributional issues were a concern, Parliament might have felt it necessary to restrict or place limits on competition in order to achieve the proper distribution of income and wealth in society. However, such limits would place competition policy at war with itself.

412 Turning to section 96 of the Act, the "efficiency exception", the Tribunal notes that this section contains the only provision in the Act which limits or restricts the pursuit of competition. As noted above, section 1.1 states that competition should, in and of itself, promote efficiency; normally there will be no conflict between the statutory means (encouraging competition) and the desired end (efficiency). However, the existence of section 96 makes it clear that if competition and efficiency conflict in merger review, the latter is to prevail. Thus, an anti-competitive merger that created or increased market power but also increased efficiency could be approved. Addressing this possibility, the MEG's, cited above at paragraph [57], state at paragraph 5.1:

> One such circumstance is highlighted in section 96 of the Act, where it is recognized that some mergers may be both anticompetitive and efficiency enhancing. When a balancing of the anticompetitive effects and the efficiency gains likely to result from a merger demonstrates that the Canadian economy as a whole would benefit from the merger, section 96(1) explicitly resolves the conflict between the competition and efficiency goals in favor of efficiency.

The Tribunal cannot but agree with this view of section 96.

413 The existence of section 96 signals the importance that Parliament attached to achieving efficiency in the Canadian economy. Indeed, in the view of the Tribunal, section 96 makes efficiency the paramount objective of the merger provisions of the Act and this paramountcy means that the efficiency exception cannot be impeded by other objectives, particularly when those other objectives are not stated in the purpose clause. To be more explicit, if, pursuant to the purpose clause, the pursuit of competition is not to be limited by distributional concerns, then as a matter of both law and logic, the attainment of efficiency in merger review cannot be limited thereby when competition and efficiency conflict.

(7) Commissioner's Position that Section 96 Does Not Apply to a Merger to Monopoly

414 The Commissioner submits, as a matter of law, that section 96 does not apply in the circumstances of a merger-to-monopoly. The Commissioner's position is based on the underlying purpose of the Act stated in section 1.1 which is to "maintain and encourage competition". He submits that when a merger creates an absolute monopoly, competition is eliminated which runs counter to the underlying purpose of the Act. Further, the Commissioner submits that when one of the effects of a merger is

the creation of a monopoly, that monopoly can never be offset or "neutralized" by efficiency gains regardless of how substantial they are. The Commissioner also argues that if section 96 were intended to allow mergers that eliminate competition to be saved, Parliament would have used some very specific language to so provide.

415 The Commissioner argues that there is a distinction to be made between sections 92 and 96 of the Act. Subsection 92(2) means that one would not be able to find that a merger, for example, substantially lessens competition simply by virtue of it being a monopoly. That subsection specifically states:

> *For the purpose of this section*, the Tribunal shall not find that a merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially solely on the basis of evidence of concentration or market share. (emphasis added)

416 According to the Commissioner, subsection 92(2) is very specific and only applies for the purposes of that particular section, hence that a substantial lessening of competition leading to a 100 percent market share constitutes an elimination of competition which is not covered by section 96. In other words, the argument is that if a merger eliminates competition, the efficiency defence contemplated in section 96 should not apply.

417 The Commissioner conceded at the hearing that, as a matter of law, a respondent could invoke the section 96 exception as long as its market share did not attain 100 percent:

> MS STREKAF: Our submissions are that there is a different standard in the legislation that we read into the Act in Section 96 in the case of 100 percent that would not apply in your example in the case of a 96 percent situation.
>
> If you had a 96 percent market share, we would say that it would be very difficult, in those cases, for the Respondents to demonstrate that you could offset the effects of a 96 percent market share. But that's a question where we nonetheless recognize and acknowledge that in those kind of situations the Section 96 balancing needs to be performed. Our position is different for 100 percent.
>
> THE CHAIRMAN: A 98 percent market share and a 100 percent market share, the difference may simply be theoretical. Practically, it may not mean anything insofar as consumers are concerned.
>
> But you are saying, in the case of the 98 market share, they could at least attempt to have resort to 96?
>
> MS STREKAF: That's correct.
>
> THE CHAIRMAN: And you are saying, when they reach 100, they shouldn't be entitled to stop at the barrier and go back home.
>
> MS STREKAF: Yes. transcript at 41:8234, 8235 (1 February 2000).

418 The position taken by the Commissioner cannot be right. A merger that leads to a monopoly (i.e., where a merged entity has a 100 percent market share) is not, per se, a merger in regard to which the Tribunal may make an order under section 92. Subsection 92(2) requires, in effect, the Commissioner to adduce further evidence in order to show that the merger in question prevents or lessens or is likely to prevent or lessen competition substantially.

419 If the Tribunal concludes that the merger is likely to prevent or lessen competition substantially, it may make an order under section 92, subject to sections 94 to 96. Section 96 clearly provides that the Tribunal is not to make an order under section 92 if the gains in efficiency resulting from the merger are greater than and will offset the effects of any prevention or lessening of competition. Section 96 does not make any distinction between the "elimination" and the "substantial lessening" of competition. The section applies to any merger in respect of which the Tribunal may make an order under section 92. A merger leading to monopoly and in respect of which the Tribunal has concluded that there will be a substantial lessening of competition, is without doubt a merger to which section 96 applies.

(8) Effects of a Merger

420 In order to decide whether the efficiencies are greater than and offset the effects of any prevention or lessening of competition under section 96, the Commissioner suggests that the Tribunal should adopt the balancing weight standard described by his expert, Professor Townley. The Commissioner submits that using predetermined weights to the transfer would, as a matter of law, be contrary to section 96. According to the Commissioner, applying a predetermined weight would constitute an abrogation by the Tribunal of its statutory responsibility to exercise judgment. Professor Townley explained the reasons why the various approaches (price standard, the consumer surplus standard and the total surplus) are not consistent with a proper interpretation of section 96. In the Commissioner's view, only the balancing weight approach is consistent with a sound interpretation of section 96.

421 The respondents submit that the total surplus standard, as stated in the MEG's, cited above at paragraph [57], is the proper standard. They note that the Tribunal's decision in *Hillsdown*, cited above at paragraph [127], dated March 9, 1992, where Reed J. in her *obiter dictum*, questioned the appropriateness of the total surplus standard, has not led to any change to the MEG's. Indeed, at page 343, Reed J., in response to the submission made by both parties that the wealth transfer from consumers to producers was neutral, raised as a question whether the transfer is always neutral and suggested that it might be appropriate to include redistributional concerns when conducting the analysis required by subsection 96(1):

> One other consideration arises with respect to the arguments concerning the efficiency defence. The parties both rely on the judgment that the wealth transfer is a neutral one. A question posed during argument and which will be repeated here is: is this always so? If, for example, the merging parties in question were drug companies and the relevant product market related to a life-saving drug would economists say that the wealth transfer was neutral. The Tribunal does no more than raise this as a question. Another question respecting the alleged neutrality of the wealth transfer is: if the dominant firm which charges supra-competitive prices is foreign-owned so that all the wealth transfer leaves the country, should the transfer be considered neutral?

(a) Efficiency Effects and Redistributive Effects

422 An anti-competitive horizontal merger is a transaction that creates or enhances market power in the merged entity, the exercise of which leads to a higher price for the same good or reduced quality therein at the same price. If competitive conditions prevailed before the merger, the exercise of market power has several effects.

423 The economic effects of an anti-competitive merger are the effects on real resources, that is, the changes in the way the economy deploys those resources as the result of the merger. When market power results in an increase in the price of a product, allocative efficiency is reduced as consumers acquire less of the product and switch to lower-valued substitutes. Technical or productive efficiency is reduced because, with less consumption of the product, industry output falls and economic resources are diverted to the production of more costly substitute goods. A reduction in dynamic efficiencies as defined in the MEG's could also be an effect of an anti-competitive merger.

424 Since consumers pay more for the quantity of the product at the higher price, they lose some of the surplus they had when they paid the competitive price. A portion of this loss in consumer surplus is realized by the firm and its shareholders in the form of higher profits. Such loss is not a social loss, but rather a redistribution of gains from the merger; real resource use is not affected by this transfer of income.

425 However, the remaining loss of consumer surplus, beyond that realized by the shareholders in the form of increased profits, is a social loss and is often referred to as the "deadweight loss" because there are no offsetting gains. The lost value of output and consumption associated with the deadweight loss measures the allocative and technical inefficiency caused by the exercise of market power and represents the economic effect of the merger.

426 As we have already stated, the Tribunal is of the view that nothing in the Act allows us to consider distributional goals in merger review. Had this been Parliament's intention, surely the Act would have been worded differently. Robert H. Bork,

in his seminal work *The Anti-Trust Paradox* (New York: The Free Press, 1993), albeit in the American context, puts forward the view that income distribution and its effects are not to be considered in antitrust matters. The Tribunal agrees entirely with the following extract from pages 110 and 111:

> The model outlined addresses the total welfare of consumers as a class. It says nothing of how shares of consumption should be allocated through changes in the distribution of income. Yet all economic activity has income effects and, in particular, restriction of output by the exercise of monopoly power has income effects not taken into account by weighing only changes in allocative and productive efficiency. If the reader will look once more at Figure 4 he will see that at the competitive price, P_1, there is a large area under the demand curve that lies above the market price. This area represents the amount above the actual price that consumers would be willing to pay rather than go without the product; it is generally called the "consumer's surplus," perhaps on some notion that the consumer gets surplus value for his money.
>
> Those who continue to buy after a monopoly is formed pay more for the same output, and that shifts income from them to the monopoly and its owners, who are also consumers. This is not dead-weight loss due to restriction of output but merely a shift in income between two classes of consumers. The consumer welfare model, which views consumers as a collectivity, does not take this income effect into account. If it did, the results of trade-off calculations would be significantly altered. As Williamson notes, referring to his diagram: "The rectangle ... bounded by P_2 and P_1 at the top and bottom respectively and o and Q_2 on the sides represents a loss of consumers' surplus (gain in monopoly profits) that the merger produces. ... Inasmuch as the income distribution which occurs is usually large relative to the size of the dead-weight loss, attaching even a slight weight to income distribution effects can sometimes influence the overall valuation significantly."
>
> The issue is not crucial, perhaps, since most antitrust cases do not involve trade-off. The law's mistake has generally consisted of seeing restriction of output where there is none, and in such cases there will be no loss of consumer surplus. But even in cases where the trade-off issue must be faced, it seems clear the income distribution effects of economic activity should be completely excluded from the determination of the antitrust legality of the activity. It may be sufficient to note that the shift in income distribution does not lessen total wealth, and a decision about it requires a choice between two groups of consumers that should be made by the legislature rather than by the judiciary. (reference omitted)

(b) Standard for Merger Review

427 Assessing a merger's effects in this way is generally called the "total surplus standard". As discussed by the Commissioner's expert, Professor Townley (expert affidavit (16 August 1999): exhibit A-2081), and in a recent article by Michael Trebilcock and Ralph Winter, transfers from consumers to shareholders are not counted as losses under the total surplus standard. The anti-competitive effect of the merger is measured solely by the deadweight loss (M. Trebilcock and R. Winter, "The State of Efficiencies in Canadian Merger Policy" (1999-2000) 19:4 Canadian Competition Record 106). Under the total surplus standard, efficiencies need only exceed the deadweight loss to save an anti-competitive merger.

428 Other standards have been proposed. Under a "price standard", efficiencies are not recognized as a justification for a merger which results in a price increase to consumers. Under a "consumer surplus standard", efficiencies can be considered in merger review only if they are sufficiently large as to prevent a price increase. Effectively, this means that transfers of income are considered as losses; hence efficiencies must exceed the sum of the transfer of income and the deadweight loss.

429 From an economic point of view, the cost to society of an anti-competitive merger is the deadweight loss which measures lost economic resources. If, on the other hand, the merger generates efficiencies, it creates economic resources and hence the net economic effect of the merger in terms of resources may be much less than the deadweight loss. Indeed, the merger could be economically positive if efficiencies were sufficiently large, in which case society would benefit economically from allowing the merger.

430 This possibility is the basis for considering efficiencies in merger review. It is not to determine whether shareholders will be better off at the expense of consumers, but rather whether the economy gains more resources than it loses through the transaction. For this reason, it is important to distinguish true efficiencies, those savings that enable the firm to produce the

same amount with fewer inputs, from "pecuniary" economies, those savings that increase shareholder profits but do not allow the firm to be more productive. This distinction is recognized in subsection 96(3) which excludes pecuniary efficiencies from consideration. The only standard that addresses solely the effects of a merger on economic resources is the total surplus standard.

(c) Reasons for Total Surplus Standard

431 Professor Townley offers an approach ("balancing weights") in which the members of the Tribunal are invited to use their individual judgment and discretion to evaluate whether the gains to shareholders are more or less important to society than the losses of surplus imposed on consumers by the exercise of market power. However, the members of the Tribunal are selected for their expertise and experience in order to evaluate evidence that is economic or commercial in nature, not to advance their views on the social merit of various groups in society. As noted by Iacobucci J. in the Supreme Court's decision in *Southam*, cited above at paragraph [48], at pages 773 and 774:

> As I have already said, the Tribunal's expertise lies in economics and in commerce. The Tribunal comprises not more than four judicial members, all of whom are judges of the Federal Court — Trial Division, and not more than eight lay members, who are appointed on the advice of a council of persons learned in "economics, industry, commerce or public affairs". See *Competition Tribunal Act*, s.3. The preponderance of lay members reflects the judgment of Parliament that, for purposes of administering the *Competition Act*, economic or commercial expertise is more desirable and important than legal acumen.

432 First, the Tribunal is of the view, as already stated, that distributional concerns do not fall within the ambit of the merger provisions of the Act. If Parliament had intended that transfers from consumers to shareholders be considered, it would no doubt have clearly stated this intent in the Act.

433 Second, merger review must be predictable. Adopting Professor Townley's approach would result in decisions that vary from case to case depending on the views of the sitting members of the Tribunal regarding the groups affected by the mergers.

434 Third, the deadweight loss resulting from a price increase is typically quite small as Professors Trebilcock and Winter note in their article, cited above at paragraph [427]. On the other hand, as the Commissioner observes, the transfer is much larger than the deadweight loss resulting from the instant merger. This being the case, a standard that includes the transfer as an effect under subsection 96(1) would effectively result in the unavailability of the section 96 defence.

435 Professor Ward's evidence makes this clear. Using the calculations in table 8 of his initial report (exhibit A-2059 at 34), consider a large price increase of 15 percent. The resulting deadweight loss is 1.7 percent of sales but the transfer is 11.6 percent of sales when the price-elasticity of demand is -1.5. Accordingly, a merger that offered gains in efficiency of at least 1.7 percent of sales would be approved under a total surplus standard. However, under a consumer surplus standard, the efficiency gains would have to be at least 13.3 percent of sales.

436 When the elasticity of demand is -2.5, the deadweight loss and transfer are 2.8 percent and 9.4 percent of sales respectively. Accordingly, the total surplus standard would approve a merger if efficiency gains were at least 2.8 percent of sales. However, a consumer surplus standard would reject a merger unless efficiency gains were at least 12.2 percent of sales.

437 In an *obiter dictum* in the *Hillsdown* decision, cited above at paragraph [127], Reed J. appeared to favour the consumer surplus standard. However, as the above numbers indicate, applying a consumer surplus standard would lead the Tribunal to reject many efficiency-enhancing mergers on distributional grounds. As noted above, efficiency was Parliament's paramount objective in passing the merger provisions of the Act and it intended the efficiency exception in subsection 96(1) to be given effect. Accordingly, the Tribunal is not prepared to adopt a standard that frustrates the attainment of that objective.

438 Fourth, omitting income and wealth redistributional concerns from merger review does not mean that these concerns are to be ignored by public policy. Indeed, governments at all levels have adopted specific tax and social policy measures to address their distributional objectives. The Tribunal regards these measures as more effective ways of meeting a social policy goals. Blocking efficiency-enhancing mergers to achieve the same ends is, in our view, contrary to the Act.

439 Fifth, the MEG's, cited above at paragraph [57], endorse the total surplus standard. Although the Tribunal is not bound by these guidelines, it recognizes that they contain a substantial degree of economic expertise and it agrees with the observation at footnote 57 therein that "[w]hen a dollar is transferred from a buyer to a seller, it cannot be determined *a priori* who is more deserving, or in whose hands it has a greater value".

(d) Other Effects

440 The Commissioner submits that the ordinary meaning of "effect/effet", that is, something which flows causally from something else, is the most logical to apply to interpret that language used in section 96. The parties referred to *The Shorter Oxford Dictionary*, 3rd ed. (Oxford: Clarendon Press, 1973) at 631, which defines "effect" as "[s]omething caused or produced; a result, consequence. Correl. w. cause." Similarly, they referred to the *Larousse de la Langue Française* (Paris: Librairie Larousse, 1979) at 605, which defines "effet" as "[c]e qui est produit, entraîné par l'action d'une chose."

441 The Commissioner further submits that, provided the effects flow from a prevention or lessening of competition resulting from the merger, section 96 does not place any other limitations upon the scope or range of "effects" to be considered, which includes detrimental effects of a merger that will affect consumers such as an increase in prices, a decrease in service, product choice or quality.

442 The respondents submit that the test to be met under section 96 is that the efficiencies must offset any *substantial lessening of competition*. They further argue that a substantial lessening of competition is permitted provided it is outweighed by the efficiencies attributable to the merger. They also submit that *the effects of the substantial lessening of competition* are measured by the deadweight loss to the economy and exclude wealth transfers between consumers and producers, which are neutral to the economy.

443 The Tribunal observes that an anti-competitive merger may well have other important economic and social effects. Job terminations and plant closures are often emphasized in the press, presumably because of their immediacy and significance to the people and communities involved.

444 While not seeking to minimize the importance of these effects on those affected, the Tribunal wishes to point out that they are not restricted to anti-competitive mergers. Layoffs and closures often result from mergers and business restructurings that are not offensive and the Commissioner may take no notice thereof under the Act. Accordingly, the Tribunal is of the view that these effects are not to be considered when they result from anti-competitive mergers.

445 As a result, the Tribunal cannot accept the Commissioner's submission that section 96 does not place any other limitations upon the scope or range of "effects" to be considered.

(e) Conclusion

446 In final argument, the Commissioner refers to the "anti-competitive effects" of the merger as including the redistributive effects of the transfer. The Tribunal does not regard the redistributive effects of a merger as anti-competitive.

447 The Tribunal further believes that the only effects that can be considered under subsection 96(1) are the effects on resource allocation, as measured in principle by the deadweight loss which takes both quantitative and qualitative effects into account. Accordingly, the Tribunal believes that the total surplus standard is the correct approach for analysing the effects of a merger under subsection 96(1).

448 As a practical matter, the effects of an anti-competitive merger include effects that are difficult to quantify and may not be captured through statistical estimation of the deadweight loss. Subsection 96(1) specifically provides that gains in efficiency must both be greater than and offset the effects of any lessening of competition. Thus, it may be that, in a strict quantitative comparison of efficiencies and the estimated deadweight loss, the former exceeds the latter, yet the requirement to be "greater than" may not be met because of unmeasured qualitative effects.

449 If the word "offset" (or in French, "neutraliseront") were taken to mean "prevent" or "neutralize", this would imply that efficiency gains had to prevent the estimated deadweight loss and the other effects of prevention or lessening of competition from occurring or to neutralize these effects. Such interpretation would be inconsistent with the existence of the efficiency exception which clearly allows such effects. The Commissioner submits that "offset" (in French, "neutraliseront") must be interpreted to mean "compensate for" rather than "prevent" or "neutralize". The Tribunal agrees with this submission.

450 Whether, in a given case, the efficiency gains "offset" the effects of any prevention or lessening is a matter which the Tribunal must assess and decide in light of the available evidence. However, the requirement to "offset" cannot be used to justify consideration of qualitative or other effects which are not open for consideration under the Act.

(9) Deadweight Loss

451 In final argument, the Commissioner presented several estimates of deadweight loss, the transfer, and the balancing weights resulting from the calculations undertaken to apply Professor Townley's approach. Certain of these estimates were based on information provided in final argument that was excluded. Moreover, since the total surplus standard is, in our view, the correct standard to use in the trade-off analysis under subsection 96(1), the Tribunal will discuss only the deadweight loss estimate calculated from properly introduced information.

452 The Commissioner adopts the approach presented in evidence by Professor Ward, whose expert report (exhibit A-2059) provides at table 8, on page 34, estimates of deadweight loss and consumer surplus transfer as percentages of initial sales under various assumed values of the price elasticity of demand. In that table, Professor Ward presents those percentage estimates for each of three values of the elasticity between -1.5 and -2.5 only, because at the time of his initial report, he did not have the evidence of Professors Plourde and Ryan that showed that demand for propane was inelastic and hence could not have a price-elasticity of less than -1.0.

453 The Commissioner adopts Professor Ward's estimated price increases shown at table 2 on page 8 of his affidavit in reply (confidential exhibit CA-2060) for the residential, industrial, and automotive end-use segments of 11.7 percent, 7.7 percent and 8.7 percent respectively, and reduces each by 0.7 percent to take account of the pass-through of cost savings. Professor Ward obtained his estimates after the results of Professors Plourde and Ryan became available and, accordingly, he assumed an elasticity of -1.0 in obtaining those estimates. Since Professor Ward was not able to estimate the price increase for his "other" segment, the Commissioner adopts seven percent as appropriate for that segment because it was the smallest increase that Professor Ward found.

454 The Commissioner presents estimates of 1998 combined sales of the merging companies in each of those segments: $94 million, $239 million, $139 million, and $113 million respectively, accounting for the combined total volumes sold by Superior and ICG. Thus, the Commissioner's segmented sales estimates are for combined total sales, not just the combined sales of the merging parties in overlapping areas. Since, according to Professor Ward's table, the deadweight loss varies directly with sales, the Commissioner's estimates thereof likely overstate the deadweight losses by segment in overlapping areas.

455 The Commissioner obtains estimates of deadweight loss by segment by taking the segment sales and price increase information and applying them to Professor Ward's table where the assumed demand elasticity is -1.5. The resulting deadweight loss estimates based on 1998 sales data are as follows:

residential	$0.8 million
industrial	$1.0 million
automotive	$0.7 million
other	$0.5 million
total	$3.0 million

456 The respondents point out that the estimates of deadweight loss would be lower had they been calculated at an industry demand of -1.0, as suggested by the work of Professors Plourde and Ryan. They also note the inconsistency in calculating deadweight losses assuming an elasticity of demand of -1.5 while using price increases estimated with an elasticity of demand of -1.0.

457 The Commissioner submitted in final argument Table R1 which calculates the deadweight loss assuming a nine percent price increase across all segments in overlapping markets and a price elasticity of demand of -1.0. The resulting estimate of deadweight loss is $3.43 million, although the sales revenue figure used ($572 million) was among the materials submitted in final argument that were excluded.

458 Even though it is probably overstated, the Tribunal is prepared to accept the deadweight loss estimate of $3.0 million put forward by the Commissioner, since the overstatement is inconsequential in view of our finding that the merger is likely to bring about gains in efficiency in the order of $29.2 million.

(10) Trade-off Analysis

459 Pursuant to subsection 96(1), the Tribunal must ask whether the gains in efficiency exceed and offset the effects of any prevention or lessening of competition that the merger has brought about or is likely to bring about. The Tribunal observes that while the gains in efficiency claimed by the respondents have been measured and reduced to dollar figures, efficiency gains could also include qualitative elements such as, for example, better service and higher quality. No evidence of qualitative efficiency gains has been produced.

460 Similarly, the effects of any lessening of competition can also have both measurable and qualitative elements. The estimated value of the deadweight loss, while measuring the effect of the higher price on resource allocation, may not capture lessening of service or quality reduction.

461 For greater certainty, the Tribunal is of the view that all of the gains in efficiency must be compared with all of the effects of any prevention or lessening of competition, even though this requires judgment when combining measured gains (effects) with qualitative gains (effects).

462 The Commissioner submits that subsection 96(1) requires the Tribunal to consider whether the efficiency gains would likely be realized absent the merger. The Commissioner criticizes the Cole-Kearney report for not considering whether claimed efficiencies could have been achieved through less anti-competitive means than a full scale merger. Following the decision on this point in *Hillsdown*, cited above at paragraph [127], at page 332, the Tribunal is of the view that the test to be applied is whether the efficiency gains would likely be realized in the absence of the merger. In dealing with this issue in *Hillsdown*, the Tribunal stated:

> The Director's position is that cost savings that do not arise *uniquely* out of the merger are not to be considered as efficiency gains. The respondents' position is that the test to be applied is whether the efficiency gains would *likely* have been realized in the absence of the merger. The tribunal accepts the respondents' position.

463 The Tribunal finds that the estimated gains in efficiency from this merger are $29.2 million per year over 10 years and these gains in efficiency would not likely be attained if the order for total divestiture were made. The Tribunal finds that the estimated deadweight loss is approximately $3.0 million per year over the same ten-year period.

464 The Commissioner submits that qualitative effects include distributional impacts and other qualitative elements including changes to levels of service, product quality and product choice, increased probability of coordinated behaviour, and innovation. For the reasons already given, the Tribunal will not consider distribution impacts.

465 The Tribunal took into account the increased probability of coordinated behaviour in its consideration of the evidence regarding a substantial lessening of competition. To the extent that the effect of such anti-competitive behaviour is a higher price, then it has already been reflected in the deadweight loss estimate. If there are other effects of coordinated behaviour to

be considered under section 96, further and better evidence about those effects is required. It cannot suffice simply to restate the concern under section 92.

466 A decline in service levels, holding quality of service constant, is also reflected in the deadweight loss estimate. However, the evidence indicates that ICG had established certain services and pricing arrangements (e.g., the Golf-Max program) that Superior and other propane marketers did not offer. Their removal or reduction would reduce the real output of the industry. Although no evidence was given on the likelihood or scope of the reduction or removal of these product offerings following the merger, the exercise of market power might take such forms together with, or instead of, a direct increase in price.

467 The Tribunal must determine whether all of the gains in efficiency brought about or likely to be brought about by the instant merger are greater than the estimated deadweight loss and the negative qualitative effects resulting or likely to result therefrom. As noted above, this determination requires that the latter two components be combined and then compared with total efficiency gains. The Tribunal views the impact on resource allocation of the negative qualitative effects as minimal and as most unlikely to exceed in amount the estimated deadweight loss. Thus, the combined effects of lessening or prevention of competition from the instant merger cannot exceed, in the Tribunal's opinion, $6 million per year for 10 years. On this basis, the Tribunal finds that the gains in efficiency are greater than those effects.

468 The Tribunal must also determine whether all of the gains in efficiency will offset those effects. Gains in efficiency exceed those effects by at least $23.2 million per year for 10 years and, in the Tribunal's opinion, adequately compensate society for those effects. Accordingly, the Tribunal finds that the gains in efficiency will offset those effects.

469 For these reasons, the Tribunal is of the view that the Commissioner's application for an order under section 92 of the Act should be denied.

VII. Dissent Opinion (Ms. Christine Lloyd)

470 There are several areas with respect to the appreciation of the facts underlying the efficiency defence and the legal interpretation of section 96 of the Act stated by the majority of the Tribunal with which I strongly disagree. The majority accepted for the most part the evidence on efficiencies claimed by the respondents, Superior and ICG. The respondents relied on the Cole-Kearney report; this expert report was prepared by two consulting firms whose mandate was to provide an opinion as to the value of the efficiencies that are likely to result from the merger. I have great concerns with certain aspects of the methodology and assumptions adopted by the experts that led to their calculations and resultant conclusions. Consequently, I am not satisfied, on a balance of probabilities, that the gains in efficiency as claimed by the respondents are *likely* to be brought about by the merger as required by subsection 96(1) and that the claimed efficiencies would not likely be attained if the order for total divestiture were made. Finally, when conducting the trade-off analysis in section 96, I conclude that even if $29.2 million of efficiencies were likely to be realized (as accepted by the majority), the proposed gains in efficiency will not be greater than and will not *offset* the effects of any prevention or lessening of competition that will result or is likely to result from the merger.

A. Quantum of Efficiencies

(1) Problematic Aspects of the Methodology Used

471 The respondents submit that the merger between Superior and ICG will allow them to achieve substantial gains in efficiency in the range of $40 million per annum based on the opinion of Cole-Kearney. They state that the aggregate of such gains is approximately $381 to $421 million measured in constant dollars over 10 years. I have great concerns regarding the respondents' efficiencies claimed in this proceeding as certain aspects of the methodology used to conduct the analysis are problematic.

472 The efficiencies claimed by the respondents depend largely on the elimination of costs at the level of field operations, i.e., redundant branches and trucks and other related cost savings. Professors Schwindt and Globerman and Mr. Kemp state at page 23 of their report in rebuttal (confidential exhibit CA-3131) the following:

C. Total Field Operations ($193.6 million, 48.3% of savings)

Projected efficiencies generated at the field operations level are very significant, accounting for *nearly half of the anticipated total*. These efficiencies are largely attributable to the rationalization of the branch system and the improvement of delivery logistics. (emphasis added)

473 These cost savings identified by Cole-Kearney are based on a definition of Superior's trade area size and overlaps with ICG's trade areas. The size of each trade area of Superior is defined on the basis of the farthest customer located from each respective branch as reported in the 1998 branch templates. This farthest distance then constitutes the radius of the trade area for each specific branch. The extent of the trade areas and trade area overlaps, in turn, constitute the framework on which the experts calculated the efficiencies claimed to result from the implementation of the merger of Superior and ICG.

474 As stated above at paragraph [207] when assessing the validity of the 1998 branch templates, the Tribunal concludes that these templates are suspect and unreliable. Therefore, it appears that since Superior's trade areas may not be as large as 620 kilometers, relying on these estimates to determine the extent of the overlaps may well overstate the cost savings that can be realized. Consequently, the impact on the results of the calculated efficiencies remains unknown.

475 Further, I have noted that the experts estimate trade area overlaps through a manual process which was not verified in a way to assure accuracy. In response to a question asked by the Tribunal, Eric Fergin, one of the respondents' experts responsible for this process, explained how these overlaps were identified:

MS LLOYD: Getting back to the trade area size, Mr. Fergin, do you have any sort of scatter map or anything that indicates the customers so that we can actually see on a map indicating where the overlap is?

MR. FERGIN: No, we don't. I don't have one with me. I know one was constructed — *sketches were constructed, because they were based on rough estimates looking at the two areas, the overall area that they overlaid, and based on the raw data that we had which was actually provided to the Bureau*. I don't have a reference number for the documents.

We did that, but unfortunately, no, I don't have a scatter map.

MS LLOYD: It would be nice to see what that overlap is.

MR. FERGIN: *I'm afraid I don't have something like that*. (emphasis added). transcript at 34:6722 (8 December 1999).

476 As I mentioned earlier, the methodology to define the trade areas and their resultant overlaps raise significant concerns for errors that would impact on the quantum of the efficiencies claimed. By using the farthest point to establish the radius as opposed to a defining line around the greatest density of customers, the respondents could have overstated the number of branches that could potentially be closed as well as the number of trucks and related equipment that could be eliminated. In fact, using smaller trade area definitions dictated by customer density may have resulted in no overlap between certain branches.

477 Further, no mechanism or tools were used (other than the alleged review by Andrew Carroll of Superior, a process that remains unclear) to verify the validity of the analysis conducted by the respondents' experts. I am of the view that a thorough *reality check* should have been conducted. For instance, the respondents could have used a Geographic Information System (commonly referred to as "GIS") to create a scatter map to plot customer locations in relation to each of their respective branches. This system would have produced accurate trade area overlaps to assist the experts in determining the number of redundant branches and accurate drive time patterns. The fact that the experts did not have recourse to an equivalent safeguard, in my view, undermines greatly the validity of the findings made by the experts. They were discussed with Mr. Fergin at the hearing:

MR. FERGIN: ...In fact, *we don't have information of granularity to show where all the branches were in each particular area*.

I believe it was Ms Lloyd who asked us last Wednesday, in fact, if we had maps that plotted out the delivery sites relative to the branches, and as I stated at that time, we did not have that information.

MS LLOYD: I thought you told me that you did it in lead-up to the analysis.

MR. FERGIN: I'm sorry?

MS LLOYD: I though I understood that you actually did have it, but that was in the lead-up to the analysis, that you had done it. I must have misunderstood you.

MR. FERGIN: *We had done it for the areas that we rode along in during our ride-alongs, but we hadn't done it for all the particular customers that were served by a particular branch*.

MS LLOYD: I misunderstood you.

MR. FERGIN: Okay. The other comment I have is: *Mr. Schwindt indicated that our methodology in terms of determining the area served for Superior was based solely on the radius of the trade area as determined by the farthest customer*.

Now, *that was the initial basis*, but we didn't strictly use that information without going back to Andrew Carroll of Superior Propane, who was our key liaison on this project in terms of giving us information and validating information as to what areas, particular branches, particular satellites served to determine that would in fact be a valid area or it should be adjusted accordingly somewhat because of the fact that a situation like this might exist or there might be one far outlying branch.

So the point I am trying to make is that: *We did not simply use the branch radius as the only factor for determining the trade areas served by Superior for a given branch*. (emphasis added) transcript at 37:7782, 7783 (14 December 1999).

478 The only validation process presented by the respondents is that of the "ride-alongs", which were conducted to validate the model used to predict reduction in fleet and driver personnel and other results therefrom. They submit that these ride-alongs, which consist of spending a day with a driver delivering propane to customer locations, allow them to validate the model that they have developed. Yet, in cross-examination by the Commissioner, Mr. Fergin conceded that he had participated in only two ride-alongs in Sudbury (with Superior) and Stratford (with ICG) where a detailed analysis was done as to time spent on various activities (i.e., comparing time spent driving, pumping propane, delivering and generating delivery receipts). He mentioned that ride-alongs were also conducted without tabulating the data in Moncton, Lloydminster, Concord, Vimont, Coquitlam and Burnaby (transcript at 37:7795 (14 December 1999)).

479 I am of the view that the validation process that was conducted in this case is insufficient to provide the assurance that the quantum of the efficiencies claimed is accurate. Further, the validation process was only performed with respect to the efficiencies claimed at the field operations level, most particularly with respect to the fleet reduction (annualized savings of $2.6 million which represents $33.4 million over 10 years) and related costs. In addition, inadequacies are further demonstrated by the fact that ride-alongs were conducted and reported using a sample of only two locations, one Superior and one ICG. As well, no allowance for regional differences was accounted for in this analysis.

(2) Highly Optimistic Assessment (That Does Not Account for Any Costs)

480 The Commissioner's experts point out that the evaluation made by Cole-Kearney of the efficiencies is highly optimistic not to say unrealistic because their projection of the efficiencies does not account for any costs resulting from the integration of the two companies. They point out at pages 9 and 10 of their report in rebuttal (confidential exhibit CA-3131) that Cole-Kearney did not account for transition and integration costs and some volume losses. As they stated:

The projected efficiencies of this transaction are largely driven by the integration of customer support (the second tier of administration) and field operations. These two broad categories of activities account for nearly two-thirds of the estimated cost savings, and both are complex. The proposed integration would involve the merging of ICG's 100,000 customers with

SPI's 200,000 customer base, the integration of and rationalization of ICG's 110 distribution sites with SPI's 140 sites, the integration of a substantial number of ICG's 700 employees into SPI's workforce of 1,300 people, and the integration and rationalization of an extensive delivery fleet. The business involves the distribution of propane, so integration will require the meshing of two complex networks. Moreover, the two enterprises have adopted fundamentally different operating philosophies. One, ICG, is moving towards a more centralized, information technology dependent model, while the other, SPI, continues to operate a more decentralized system. Given these facts, the integration of these two firms would appear to be a daunting task. However, the Kearney Report identifies very few costs attributable to the actual process of integration.

481 It is indubitable that the rationalization of the two site networks will generate real resource savings. However, the respondents' experts did not account for any increases in operating expenditures or ongoing capital expenditures that will result from additional costs related to volumes, staffing levels and number of customers. I am in agreement with Professors Schwindt and Globerman and Mr. Kemp when they state in their report in rebuttal (confidential exhibit CA-3131) at page 24 that:

> ... Volumes in all rationalised trade areas will increase, and, at some, volumes will more than double. Staffing will increase at the branches .... [C]ustomers per branch will increase significantly, and this will increase the number of administrative staff required to serve these customers....[M]any tasks will be reallocated to branch employees .... This will also increase staffing.... [I]ncreased volumes will require more delivery and service staff ....

482 Further, Professors Schwindt and Globerman and Mr. Kemp point out that equipment located at the branch or operating from the branch (including storage tanks and trucks) will increase, which, in turn, will require more space and expanded infrastructure and further storage space for inventories (parts and customers tanks). This will result in increased costs that have not been accounted for by the respondents' experts. In support of their criticism, the Commissioner's experts examined changes to operations and used the example of the Peterborough branch (a branch where the rationalization is straight forward) to demonstrate the effects that the integration will have on costs, as shown at table 7 on page 26 of their report in rebuttal (confidential exhibit CA-3131). They conclude at page 26 that:

> *The staffing level will increase by 60 percent*. Cylinder operations will be consolidated at this site which will increase cylinder truck traffic. *The bulk delivery fleet will double*. The increased fleet will require additional maintenance capacity on the site as well as general access and parking area. This could require reconfiguration of the site to handle the step change in delivery equipment. *Bulk delivery volumes are projected to increase by 220 percent*. Such a large increase will mean that *both primary deliveries and bulk truck daily liftings will also increase proportionately*. This suggests that the *site will have to be reconfigured* to handle the significant increase in load factors. (emphasis added)

483 The expert opinion of Professors Schwindt and Globerman and Mr. Kemp, as stated above, supports the Commissioner' submission that the efficiencies claimed by the respondents are overstated and hence, have not been demonstrated on a balance of probabilities:

> Secondly, we reiterate that the efficiency gains that were used for the purposes of this calculation of 21.2 million, on an annualized basis, is overstated for the reasons that we set out in the quantitative section of our materials.
>
> While that represents taking off the deductions that we were able to specifically identify in the evidence of Professors Schwindt and Globerman and as detailed in the argument, *we have pointed out many instances where the Respondents' efficiency gains are excessively optimistic, exaggerated, or don't meet the standard, in our submission, of being established on a balance of probabilities*. (emphasis added) transcript at 44:8737 (4 February 2000).

484 As stated in paragraph 5.7.2 of the MEG's, cited above at paragraph [57], and as discussed by the author A. Neil Campbell in *Merger Law and Practice, The Regulation of Mergers under the Competition Act* (Scarborough: Carswell 1997) at 162, I am of the view that efficiencies should be measured net of the implementation costs that would be incurred in obtaining them. Therefore, "retooling" and other costs necessary to achieve efficiency gains should be deducted from the total value of the efficiencies.

485 In light of my remarks on the methodology used by the experts and the insufficient consideration being given to additional costs that will result from the integration of field sites, I am of the view that the respondents have not demonstrated *on a balance of probabilities* the existence of the claimed $40 million of efficiencies per annum. As I have explained earlier, some problems identified with the methodology undermines greatly the validity of the efficiencies claimed by the respondents. There is no question that efficiencies can be realized in any merger or most particularly in this merger. However, the requirement under section 96 of the Act is to demonstrate the existence or the likelihood that the gains in efficiency will be brought about by the merger, hence the quantum of the claimed efficiencies on a balance of probabilities. In my view, the respondents have not met their burden of proof on that crucial element of their efficiency defence. As a result, I do not accept the respondents' efficiencies claim of $40 million per annum nor the reduced quantum of $29.2 million of efficiencies as accepted by the majority. Since I am not able to measure the degree to which these errors have affected the results nor able to quantify the inevitable costs that will result from this merger, I am not in a position to assess the real value of the efficiencies that will result or is likely to result from the merger and, therefore, will not speculate on their quantum.

B. The Merger has Brought About or is Likely to Bring About Gains in Efficiency (i.e., Likely to be Realized Post-Merger)

486 The respondents have not convinced me on a balance of probabilities that the $40 million of efficiencies claimed will be realized for the reasons stated above. In addition, regardless of the quantum of efficiencies that *theoretically* could be realized, the Tribunal has not been provided, in my opinion, with any evidence that they are likely to *materialize* post-merger.

487 In my view, the term "likely" used in section 96 requires more than the sole demonstration of the quantum of possible efficiencies. Rather, I believe that the term "likely" requires some evidence of the implementation process leading to the materialization of the claimed efficiencies. It is my opinion that evidence of this nature is necessary to provide the Tribunal with a *level of assurance* necessary to conclude that the efficiencies are *likely* to be realized post-merger (i.e., implemented by management).

488 Evidence before the Tribunal stresses the importance of the merging parties having a detailed plan to ensure success of the merger. On that point, Paul Inglis, one of the respondents' experts on efficiencies, discussed a study that examines 115 mergers that took place between 1993 and 1996 in North America and which identifies the factors contributing to a successful merger. In that regard, Mr. Inglis explained that the *existence of a business plan* was one of the key factors leading to a successful merger:

> Success in a merger is, in large part, *determined during the planning stage, but of course is* ***executed after the merger happens****. You have to make sure that you follow through on the good plans that are made up front*. And so I would like to talk about, once again, ***the post-merger factors***; and that is once the deal has consummated, once the agreement has been made.
>
> What are the things that allow us to believe that there is ***a good chance that the merger will be executed***? Again, there are five things that we believe correlate. ***Is there a clear vision and strategy for the company? Do they know who the management is going to be? Do they have a good plan for putting that management in place? Have they got the capabilities to show results early and to gain momentum from developing those results? Have they recognized that there are cultural differences and do they have a plan to break through those cultural differences and meld the two organizations together***? And finally, have they got a communications plan in place that will help them to execute that change in the cultures?...
>
> Let me turn next to determine the *management responsibility* point. Now, already there has been an identification of how many people will be in the management team. They plan to go forward with *ten senior management positions*. And they have a pool of senior resources to draw from. And that pool includes the likes of Geoff Mackey and Peter Jones and the other people that are the senior managers at ICG, as well as the people inside Superior. (emphasis added) transcript at 33:6347, 6348, 6350 (7 December 1999).

489 Mr. Inglis was touching upon a crucial point when addressing the importance of having an implementation plan in order to assure that the claimed efficiencies are executed. In the absence of such a plan, there is no assurance or any indication as to the degree of probability that this merger will achieve the efficiency gains identified by the experts.

490 A business plan setting out the implementation process/action plan outlining time frames for each step of the integration of the merger is necessary to achieve the claimed efficiencies. I take note that Mr. Inglis mentioned that Superior had a plan that was well *articulated* and that had been scrutinized over a long time frame. Unfortunately, the Tribunal was not presented with that alleged plan or any other plan. In fact, no such evidence was presented at the hearing. Mr. Schweitzer, Superior's Chief Executive Officer, the sole representative of Superior's management who testified at the hearing, did not provide evidence of the existence of a post-merger plan. It appears to me that a detailed business plan which expresses clearly the commitment and accountability of Superior's management (including the commitment of the Chief Executive Officer) should have been demonstrated. Further, there is no evidence that any study or due diligence was conducted to determine the cost effectiveness of merging the two companies prior to the decision by Superior to acquire ICG. Had this exercise been undertaken, the cost savings presented by Cole-Kearney would have had more credibility. Consequently, it appears to me that the realization of the efficiencies claimed strictly remain *possibilities and not probabilities* hence, the respondents have not demonstrated on a balance of probabilities that the efficiencies are likely to be realized.

491 One could argue that the Management Agreement referred to at paragraphs [330]-[345], which provides incentives to SMS to increase the profitability of Superior and the cash distribution to unitholders of the Superior Income Fund (cash distribution), further supports the view that the efficiencies are likely to be realized. However, since the additional profits, which lead to SMS's entitlements can come from either an increase in price resulting from the exercise of market power and/or from cost reductions, I am of the view that the Management Agreement does not offer the level of assurance necessary to conclude that extra profits will be generated from the realization of the claimed efficiencies and hence, that these efficiencies are *likely* to be achieved.

492 In the absence of any provision under the Act regarding the enforcement of the outcome, (i.e., the realization of the claimed efficiencies), it is even more critical that the respondents demonstrate that the merger is *likely* to bring about gains in efficiency *not solely on a theoretical level* through experts but also through direct evidence that *this is the direction that management is committed to seriously undertake with some assurance of completion post-merger*. Without such a crucial piece of evidence, it appears to me that the efficiencies claimed remain only a *theoretical* exercise that may never be implemented by management. This demonstration that the merger is *likely* to bring about gains in efficiency is an important element of the efficiency defence that they had to demonstrate in order to meet their burden of proof.

493 In light of my previous comments regarding the efficiencies claimed by the respondents' experts and the lack of information regarding the alleged commitment of management to the actual implementation, including time frames dedicated to each step of the implementation process, I am of the view that the requirement that the respondents must demonstrate that the merger has brought about or is *likely* to bring about gains in efficiency has not been met.

C. "That the Efficiencies Would Not Likely Be Attained If the Order Were Made"

494 Subparagraph 96(1) of the Act provides that:

> 96.(1) The Tribunal shall not make an order under section 92 if it finds that the merger or proposed merger in respect of which the application is made has brought about or is likely to bring about gains in efficiency that will be greater than, and will offset, the effects of any prevention or lessening of competition that will result or is likely to result from the merger or proposed merger ***and that the gains in efficiency would not likely be attained if the order were made***.
>
> (2) In considering whether a merger or proposed merger is likely to bring about gains in efficiency described in subsection (1), the Tribunal shall consider whether such gains will result in
>
> > (a) a significant increase in the real value of exports; or
> >
> > (b) a significant substitution of domestic products for imported products.

(3) For the purposes of this section, the Tribunal shall not find that a merger or proposed merger has brought about or is likely to bring about gains in efficiency ***by reason only of a redistribution of income between two or more persons***. (emphasis added)

495 While the Commissioner bears the onus of proving the effects of any prevention or lessening of competition resulting from the merger on a balance of probabilities, it is the respondents' burden to prove all the elements of their defence in order to be successful. These elements are: the existence of the claimed efficiencies, the likelihood that they will be brought about by the merger (realized post-merger through their actual implementation), *the fact that they would not likely be attained if the order for total divestiture were made* and that they are not pecuniary in nature. Once a determination has been made of what gains (both quantitative and qualitative) should be considered in the trade-off analysis, then the balancing process can take place.

496 Indeed, section 96 limits the efficiency gains that can be considered in the trade-off analysis to those that *would not likely be attained if the order were made* and to those that do not constitute a *redistribution of income between two or more persons*. While I agree with the majority that only efficiencies that constitute "real" resource savings must be considered and not those that are pecuniary in nature, I disagree with their appreciation of the requirement set out in subparagraph 96(1) *and that the gains in efficiency would not likely be attained if the order were made*.

497 This requirement of subparagraph 96(1) that they would not likely be attained if the order were made leads to this question: would the gains in efficiency likely be realized if the order for total divestiture were made? In other words, if the order for total divestiture were made, would the two companies independently likely realize gains in efficiency in some other way? The burden of proving this element also falls on the respondents and, in my view, has not been met on a balance of probabilities.

498 Indeed, *only those gains* which would not likely be attained if the order were made can be claimed by the respondents. This requirement is to ensure that gains that would likely be obtained absent the merger for instance as a result of internal growth, merger or joint venture with a third party, *restructuring*, or contractual arrangements (e.g., specialization agreement) are excluded from efficiencies claimed. Therefore, it appears that the merging parties had the onus of providing a reasonable explanation as to why efficiencies would not likely be sought through an alternative mean if the order for total divestiture were made.

499 In this case, the respondents have not, in my view, proved that the claimed efficiencies would not likely be attained if the order for total divestiture were made. Cole-Kearney's mandate was to provide *an opinion as to the value of efficiencies* that were likely to result from a merger of Superior and ICG. Their report states that alternative means were explored within the context of common industry practice such as internal growth, merger or joint venture with a third party or specialization agreement or licensing lease or other contractual arrangements. On that basis, they concluded that the merger is the only means by which to achieve efficiencies. No comparative evidence was provided on the results arising from the value of efficiencies from alternative means to assure the Tribunal that a merger was the *only* means by which to achieve the efficiencies. Surprisingly, restructuring was not mentioned by the experts.

500 Further, no evidence in support of their conclusions was provided to the Tribunal nor any explanation as to why measures such as restructuring would not likely be undertaken by Superior to reduce its costs in order to achieve efficiencies in some other way, absent the merger. Indeed, while evidence was provided regarding ICG's transformation process (a process that led to efficiencies which were properly not claimed by the experts), no evidence was provided as to what Superior would or would not likely undertake to achieve efficiency gains if the order were made. The Tribunal does not have evidence to conclude that Superior, on its own, had already "cut-out the fat" within its organization before undertaking the merger with ICG. Consequently, the efficiencies claimed by the respondents could include cost savings that Superior would likely achieve on its own, absent the merger. Such efficiencies resulting from Superior's own restructuring would have been discounted from the efficiencies claimed. Indeed, as stated in the MEG's, cited above at paragraph [57], where *some or all* of the claimed efficiency gains would likely be attained through other means if the order were made, they cannot be attributed to the merger and hence, must not be considered in the section 96 trade-off analysis. For these reasons, I am of the view that the respondents failed to prove that the gains in efficiency would not likely be attained if the order were made.

D. Issues Regarding the Trade-Off Analysis

501 As stated above, the respondents argue that the test to be met under section 96 of the Act is that the efficiencies must be greater than and offset any substantial lessening of competition and that the effects of such are measured by the deadweight loss to the economy and exclude wealth transfers between producers and consumers which are neutral to the economy.

502 The Commissioner submits that in conducting the trade-off analysis set out in section 96, the Tribunal has a statutory responsibility to exercise its judgment as to the weight to be accorded to the transfer from consumers to producers. Hence, he submits that applying a standard with a fixed predetermined weight would be contrary to section 96. Further, the Commissioner submits that the efficiency gains do not *offset*, i.e., "neutralize" or "compensate for", the anti-competitive effects caused to the economy as a whole by this merger.

503 The majority accepted that $29.2 million of efficiencies per annum is likely to be realized and is satisfied that the gains in efficiency are greater than and offset the effects of any prevention or lessening of competition that is likely to result from the merger. In their view, these quantitative efficiencies are greater than and offset the deadweight loss to the economy evaluated at $3 million per annum and the qualitative effects of any prevention or lessening of competition.

504 I agree with the majority that the trade-off analysis must be conducted through a single test where quantitative (productive) and qualitative (dynamic) efficiency gains together must be greater than and offset the quantitative (deadweight loss) and qualitative (e.g., reduction in non-price dimensions of competition) effects of any prevention or lessening of competition resulting from the merger. While I agree with the single test approach (i.e., as opposed to two tests, one quantitative and one qualitative), I disagree with their interpretation of the word "offset" in subsection 96(1) and with the weight that they attach to the effects of this merger.

505 It is clear to me that Parliament intended the members of the Tribunal to exercise their judgment when assessing the trade-off set out in section 96 of the Act. During the proceedings of the Legislative Committee on Bill C-91, there were several references to the fact that the terms used in that section should not be so precise as to restrict the Tribunal's interpretation and discretion. Rather, there was an agreement that the Tribunal should have the jurisdiction to exercise its discretion based on the merits of a specific case. It appears that the legislator intended that the Tribunal should not become so rigid when applying the law as to prevent some mergers that would benefit the economy and conversely allowing others that would clearly not benefit the economy. Therefore, the legislator decided not to provide a specific list of factors in addition to those already stated in subsection 96(2); the increase in the real value of exports and substitution of domestic products for imported products. Instead, the legislator preferred to rely on the discretion of the Tribunal members who have expertise to hear competition law matters.

506 While I recognize that efficiencies are given special consideration under section 96 and may constitute a defence to an otherwise anti-competitive merger, it appears to me that section 96 is an *exception to the application of section 92 of the Act* and not an *exception to the Act itself*. As Parliament stated, the trade-off set out in section 96 involves a balancing process and does not constitute, in my view, an *absolute* defence where the effects of the anti-competitive merger ought to be ignored. By that, I mean while the section 96 trade-off gives precedence to the gains in efficiency likely to result from the merger, this section must be interpreted in accordance with the objective and goals of the Act. This objective is to maintain and encourage competition in Canada in order to achieve the *goals* of the Act (i.e., the promotion of the efficiency and adaptability of the Canadian economy, the expansion of opportunities for Canadian participation in world markets, the equitable opportunity for small and medium-sized enterprises to participate in the Canadian economy and the provision of competitive prices and product choices to consumers). Therefore, it appears to me that the effects of any prevention or lessening of competition, which are contrary to the goals stated in the purpose clause of the Act, ought to be considered (for instance, the reduction or loss of consumer choice) in the trade-off analysis in order to determine whether the gains in efficiency are greater than and offset those effects.

507 In my view, if the analysis under section 96 were so simplistic as to only require the comparison between quantitative efficiency gains and the deadweight loss to the economy, this could lead to distorted outcomes. For instance, such a narrow interpretation would mean that an anti-competitive merger would more easily meet the test set out in the section as the demand

for the relevant product becomes less elastic (i.e., less price-sensitive). This perverse result arises from the fact that the calculated deadweight loss is proportional to the elasticity of demand. Therefore, following the interpretation of the majority, smaller gains in efficiency are required to outweigh and offset the deadweight loss to the economy when the demand is inelastic. In my view, there is no obvious reason to explain why Parliament would have written section 96 to give preference to anti-competitive mergers involving products for which demand is relatively inelastic (e.g., commodities).

508 Consequently, I am of the view that the qualitative effects must be given appropriate consideration in the trade-off analysis. Indeed, while the deadweight loss can simply be depicted on a matrix and quantified, a matrix does not take into account the peculiar effects of the merger under review. As it is recognized by authorities in the field and by the MEG's, cited above at paragraph [57], some effects of a merger cannot be valued in dollar terms, for instance reduction in service, quality, variety, innovation and other non-dimensions of competition. Therefore, these effects must receive a weight that is qualitative in nature. Accordingly, as certain effects in this merger cannot be quantified, I am of the view that they must be considered as qualitative and given an appropriate weight in the trade-off analysis.

509 As I explained earlier, I do not accept the quantum of efficiencies as adopted by the majority. However, I will use that amount in table 2 (contained in paragraph [512]) simply for the purpose of illustration. As seen in table 2, which compares the efficiency gains claimed in this merger to the effects of any prevention or lessening of competition, the respondents have not claimed any qualitative effects that will benefit society as a whole. For instance, they do not claim any dynamic efficiencies or that the efficiencies will result in a significant increase in the real value of exports as stated at subsection 96(2) of the Act. Therefore, I cannot conclude that this merger will generate *qualitative* gains in efficiency that will benefit the economy as a whole.

510 As to the qualitative effects of any prevention or lessening of competition, I have identified some that have not been given, in my view, sufficient weight in the analysis conducted by the majority. These effects are the loss of a vigorous competitor, which reduces consumer choice generally, particularly for national account customers and the absence of choice due to the elimination of competition in 16 markets. Further, the merged entity will have the ability to exercise market power which may result in the imposition of unilateral *price increases* and/or a *reduction or elimination of programs* such as the Cap-It and Auto-fill offered to customers. Conversely, the merged entity could use its market power to reduce prices for a period of time in order to squeeze competitors out of the market. This latter effect would be contrary to one of the goals stated at section 1.1 of the Act which seeks to provide an equitable opportunity for small and medium businesses to participate in the Canadian economy.

511 Finally, I am of the opinion that consideration must be given to the significant wealth transfer from consumers to producers that will result from a price increase. Controversy surrounds the issue as to whether the wealth transfer is an effect that should be considered in the analysis stated at section 96. While a wealth transfer resulting from a merger is deemed to be neutral from a pure economic standpoint, it is not neutral in the context of the purpose clause of the Act which states that the objective is to promote and encourage competition in order to, among other goals, *provide consumers with competitive prices and product choices*. I am of the view that if Parliament's intention were that gains resulting from higher profits (due to a reduction in competition) and achieved at the expense of consumers should be viewed as neutral, surely it would have stated so in the Act. Indeed, if this had been the intention of the legislator, no references would have been made to consumers in section 1.1 and further, the term "effects" in section 96 would have been defined as to exclude any consideration of that nature. Therefore, I agree with the *obiter dictum* of Reed J. in *Hillsdown*, cited above at paragraph [127], at page 337, that the word "effects" should not be given such a restrictive interpretation as to exclude the transfer from consumers to producers.

512 I am of the opinion that the wealth transfer from consumers to producers should not be viewed as a quantitative effect. There are no provisions in the Act suggesting that the effects must be quantified. It is my opinion that the transfer should be given qualitative consideration in the balancing process, which requires an exercise in judgment. A qualitative consideration allows for flexibility in the evaluation of each individual case under review.

TABLE 2: Trade-off Analysis

	Quantitative	Qualitative
Positive	$29.2 million as accepted by the majority (see my dissenting opinion above)	The respondents provided no evidence of any qualitative "positive" effects.
Negative	$3 million (deadweight loss)	Loss of a vigorous competitor which *reduces* consumer choices. *Absence* of choice for consumers in 16 markets and for national account customers. Ability to exercise market power that may result in: — the imposition of a *unilateral price increase or price decrease* ("to squeeze competitors out" of the market); — the *reduction or elimination of programs* offered to customers (i.e., Cap-It, Auto-fill, etc.); — the *reduction or elimination of services* (e.g., delivery services in certain areas); and — significant wealth transfer from consumers to producers.

513 I am of the view that when assessing the gains in efficiency against the effects of any prevention or lessening of competition, the claimed efficiencies are not greater than and do not *offset* these effects.

514 As stated by the Commissioner, I am of the view that in order for the defence to be successful, the respondents must demonstrate that the efficiencies will be greater than and *will offset* (i.e., compensate for) the effects of a merger. The respondents provided no evidence that the efficiencies claimed will *compensate for* the detrimental effects that will result from the merger. For example, the respondents could have claimed that the merger is likely to bring about dynamic efficiencies arising from innovation that will benefit the Canadian economy. Such qualitative efficiency gains could have been assessed in the trade-off analysis as ways to compensate for the detrimental effects caused to the economy as a whole. However, the respondents did not even attempt to present any such *beneficial* effect to the economy that will result from the merger.

E. Conclusion

515 In light of my dissenting reasons, I conclude that the respondents have not met their burden of proof of demonstrating, on a balance of probabilities, that the merger has brought about or is *likely* to bring about gains in efficiency that will be greater than and will offset the effects of any prevention or lessening of competition. Therefore, the Tribunal should make the order for total divestiture by Superior of all of ICG's shares and assets (including those of the previously integrated branches thereof) formulated pursuant to section 92 of the Act.

VIII. Order

516 The Tribunal hereby orders that the Commissioner's application for an order under section 92 of the Act is denied.

Application dismissed.

APPEAL by Commissioner of Competition from judgment reported at(2000), 7 C.P.R. (4th) 385, 2000 Comp. Trib. 15, 2000 CarswellNat 3449 (Competition Trib.) dismissing application by Commissioner for order dissolving merger of two corporations engaged in selling and distributing propane.

***Evans J.A.*:**

A. INTRODUCTION

1 This is an appeal from a decision of the Competition Tribunal ("the Tribunal"), dated August 30, 2000, dismissing an application by the Commissioner of Competition ("the Commissioner") for an order to dissolve the merger of the respondents, Superior Propane Inc. and ICG Propane Inc., or otherwise to remedy the lessening of competition likely to occur in the propane delivery market in Canada as a result of the merger.

[1]

2 The appeal raises a question of fundamental importance to the administration of the *Competition Act* that has been the subject of vigorous debate among economists and lawyers in Canada and elsewhere. Indeed, the issue is one on which the Commissioner, and his predecessor, the Director of Investigation and Research, Bureau of Competition Policy, have at different times propounded more than one view. However, the volume of the literature to which it has given rise far exceeds that of the jurisprudence and, prior to the decision under appeal, the question had been the subject of judicial comment in only one case.

3 The question concerns the scope of the so-called "efficiency defence". Under this statutory defence, a merger must be permitted, even though it is likely to prevent or substantially lessen competition in a particular market, if the efficiency gains flowing from the merger are greater than, and offset, the effects of the lessening of competition.

4 The precise issue raised by this appeal is whether, for the purpose of the efficiency defence, the "effects" of an anti-competitive merger are limited as a matter of law to the loss of resources to the economy as a whole (the deadweight loss), or whether they include a wider range of the effects of a substantial lessening of competition. The latter would include the wealth transfer from consumers to producers that occurs when the merged entity exercises its market power to increase prices above competitive levels, the elimination of smaller competitors from the market, and the creation of a monopoly.

5 The Tribunal held that the merger would substantially lessen or prevent competition in nearly all local propane markets in Canada, as well as in the market for national account coordination services associated with the delivery of propane. The total divestiture by Superior of all of ICG's shares and assets was found to be the only appropriate remedy to prevent this. However, by a majority the Tribunal also concluded that, since the merger was likely to result in efficiency gains of $29.2 million, and would result in only $3.0 million of quantitative deadweight loss and $3.0 million of qualitative deadweight loss, the merger was saved by the efficiency defence contained in the *Competition Act.*

6 Using the "total surplus standard", the Tribunal concluded that the deadweight loss was the sole "effect" of the lessening of competition that must be balanced against the efficiency gains. Accordingly, the Tribunal treated as irrelevant all other effects, including the size of the wealth transfer from consumers to Superior as a result of the higher than competitive market prices that Superior was likely to charge for propane as a result of the merger.

B. LEGISLATIVE FRAMEWORK

7 The statutory provisions relevant to this appeal are as follows:

Competition Act, R.S.C. 1985, c. C-34

1.1 The purpose of this Act is to maintain and encourage competition in Canada in order to promote the efficiency and adaptability of the Canadian economy, in order to expand opportunities for Canadian participation in world markets while at the same time recognizing the role of foreign competition in Canada, in —order to ensure that small and medium-sized enterprises have an equitable opportunity to participate in the Canadian economy and in order to provide consumers with competitive prices and product choices.	1.1 La présente loi a pour objet de préserver et de favoriser la concurrence au Canada dans le but de stimuler l'adaptabilité et l'efficience de l'économie canadienne, d'améliorer les chances de participation canadienne aux marchés mondiaux tout en tenant simultanément compte du rôle de la— concurrence étrangère au Canada, d'assurer à la petite et à la moyenne entreprise une chance honnête de participer à l'économie canadienne, de même que dans le but d'assurer aux consommateurs des prix compétitifs et un choix dans les produits.
92. (1) Where, on application by the Commissioner, the Tribunal finds that a merger or proposed merger prevents	92. (1) Dans les cas où, à la suite d'une demande du commissaire, le Tribunal

or lessens, or is likely to prevent or lessen, competition substantially——(*a*) in a trade, industry or profession,—(*b*) among the sources from which a trade, industry or profession obtains a product,—(*c*) among the outlets through which a trade, industry or profession disposes of a product, or—(*d*) otherwise than as described in paragraphs (*a*) to (*c*),—the Tribunal may, subject to sections 94 to 96,—(*e*) in the case of a completed merger, order any party to the merger or any other person—(i) to dissolve the merger in such manner as the Tribunal directs,—(ii) to dispose of assets or shares designated by the Tribunal in such manner as the Tribunal directs, or—...—————————(2) For the purpose of this section, the Tribunal shall not find that a merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially solely on the basis of evidence of concentration or market share.

conclut qu'un fusionnement réalisé ou proposé empêche ou diminue sensiblement la concurrence, ou aura vraisemblablement cet effet_:—*a*) dans un commerce, une industrie ou une profession;—*b*) entre les sources d'approvisionnement auprès desquelles un commerce, une industrie ou une profession se procure un produit;—*c*) entre les débouchés par l'intermédiaire desquels un commerce, une industrie ou une profession écoule un produit;—*d*) autrement que selon ce qui est prévu aux alinéas a) à c),—le Tribunal peut, sous réserve des articles 94 à 96_:—*e*) dans le cas d'un fusionnement réalisé, rendre une ordonnance enjoignant à toute personne, que celle-ci soit partie au fusionnement ou non_:—(i) de le dissoudre, conformément à ses directives,—(ii) de se départir, selon les modalités qu'il indique, des éléments d'actif et des actions qu'il indique,—...——(2) Pour l'application du présent article, le Tribunal ne conclut pas qu'un fusionnement, réalisé ou proposé, empêche ou diminue sensiblement la concurrence, ou qu'il aura vraisemblablement cet effet, en raison seulement de la concentration ou de la part du marché.

96. (1) The Tribunal shall not make an order under section 92 if it finds that the merger or proposed merger in respect of which the application is made has brought about or is likely to bring about gains in efficiency that will be greater than, and will offset, the effects of any prevention or lessening of competition that will result or is likely to result from the merger or proposed merger and that the gains in efficiency would not likely be attained if the order were made.————(2) In considering whether a merger or proposed merger is likely to bring about gains in efficiency described in subsection (1), the Tribunal shall consider whether such gains will result in——(*a*) a significant increase in the real value of exports; or—(*b*) a significant substitution of domestic products for imported products.———(3) For the purposes of this section, the Tribunal shall not find that a merger or proposed merger has brought about or is likely to bring about gains in efficiency by reason only of a redistribution of income between two or more persons.—

96. (1) Le Tribunal ne rend pas l'ordonnance prévue à l'article 92 dans les cas où il conclut que le fusionnement, réalisé ou proposé, qui fait l'objet de la demande a eu pour effet ou aura vraisemblablement pour effet d'entraîner des gains en efficience, que ces gains surpasseront et neutraliseront les effets de l'empêchement ou de la diminution de la concurrence qui résulteront ou résulteront vraisemblablement du fusionnement réalisé ou proposé et que ces gains ne seraient vraisemblablement pas réalisés si l'ordonnance était rendue.——(2) Dans l'étude de la question de savoir si un fusionnement, réalisé ou proposé, entraînera vraisemblablement les gains en efficience visés au paragraphe (1), le Tribunal évalue si ces gains se traduiront_:—*a*) soit en une augmentation relativement importante de la valeur réelle des exportations;—*b*) soit en une substitution relativement importante de produits nationaux à des produits étrangers.——(3) Pour l'application du présent article, le Tribunal ne conclut pas, en raison seulement d'une redistribution de revenu entre

plusieurs personnes, qu'un fusionnement réalisé ou proposé a entraîné ou entraînera vraisemblablement des gains en efficience.

Competition Tribunal Act, R.S.C. 1985, c. 19 (2nd Supp.)

2. "judicial member" means a member of the Tribunal appointed under paragraph 3(2)(a).

2. *juge+ Membre du Tribunal nommé en application de l'alinéa 3(2)a).

3. (1) There is hereby established a tribunal to be known as the Competition Tribunal.——(2) The Tribunal shall consist of—(*a*) not more than four members to be appointed from among the judges of the Federal CourtCTrial Division by the Governor in Council on the recommendation of the Minister of Justice; and(*b*) not more than eight other members to be appointed by the Governor in Council on the recommendation of the Minister.——(3) The Governor in Council may establish an advisory council to advise the Minister with respect to appointments of lay members, which council is to be composed of not more than ten members who are knowledgeable in economics, industry, commerce or public affairs and may include, without restricting the generality of the foregoing, individuals chosen from business communities, the legal community, consumer groups and labour.————(4) The Minister shall consult with any advisory council established under subsection (3) before making a recommendation with respect to the appointment of a lay member.

3. (1) Est constitué le Tribunal de la concurrence.———(2) Le Tribunal se compose_:—*a*) d'au plus quatre membres nommés par le gouverneur en conseil sur recommandation du ministre de la Justice et choisis parmi les juges de la Section de première instance de la Cour fédérale;—*b*) d'au plus huit autres membres nommés par le gouverneur en conseil sur recommandation du ministre.———(3) Le gouverneur en conseil peut constituer un conseil consultatif chargé de conseiller le ministre en ce qui concerne la nomination des autres membres et composé d'au plus dix personnes versées dans les affaires publiques, économiques, commerciales ou industrielles. Sans que soit limitée la portée générale de ce qui précède, ces personnes peuvent être des individus appartenant à la collectivité juridique, à des groupes de consommateurs, au monde des affaires et au monde du travail.——(4) Avant de recommander la nomination d'un autre membre, le ministre demande l'avis du conseil consultatif constitué en application du paragraphe (3).

10. (1) Subject to section 11, every application to the Tribunal shall be heard before not less than three or more than five members sitting together, at least one of whom is a judicial member and at least one of whom is a lay member.

10. (1) Sous réserve de l'article 11, toute demande présentée au Tribunal est entendue par au moins trois mais au plus cinq membres siégeant ensemble et, parmi lesquels il doit y avoir au moins un juge et un autre membre.

12. (1) In any proceedings before the Tribunal,—(*a*) questions of law shall be determined only by the judicial members sitting in those proceedings; and—(*b*) questions of fact or mixed law

12. (1) Dans toute procédure devant le Tribunal_:—*a*) seuls les juges qui siègent ont compétence pour trancher les questions de

and fact shall be determined by all the members sitting in those proceedings.——13. (1) Subject to subsection (2), an appeal lies to the Federal Court of Appeal from any decision or order, whether final, interlocutory or interim, of the Tribunal as if it were a judgment of the Federal CourtCTrial Division.——(2) An appeal on a question of fact lies under subsection (1) only with the leave of the Federal Court of Appeal.	droit;—*b*) tous les membres qui siègent ont compétence pour trancher les questions de fait ou de droit et de fait.———13. (1) Sous réserve du paragraphe (2), les décisions ou ordonnances du Tribunal, que celles-ci soient définitives, interlocutoires ou provisoires, sont susceptibles d'appel devant la Cour d'appel fédérale tout comme s'il s'agissait de jugements de la Section de première instance de cette Cour.—(2) Un appel sur une question de fait n'a lieu qu'avec l'autorisation de la Cour d'appel fédérale.

C. THE TRIBUNAL'S DECISION

8 The Tribunal heard this matter over 48 days; 39 days were devoted to hearing from 91 witnesses, including 17 experts, at least 10 of whom have a Ph.D. in economics, while submissions from counsel took another 9 days. The reasons for decision of the majority of the Tribunal (the presiding judicial member, Nadon J., and one of the lay members, Dr. Schwartz, an economist) run to some 469 paragraphs. There are also substantial dissenting reasons by the second lay member, Ms. Lloyd, covering, in part, issues that lie at the heart of this appeal.

9 The first 317 paragraphs of the majority's reasons, written by Nadon J., deal at length with whether the merger would prevent or substantially lessen competition within the meaning of section 92 of the *Competition Act*. The Tribunal was unanimous in concluding that it would and, since the Tribunal's conclusion on this is not the subject of appeal, I can deal with its findings relatively briefly.

10 First, the Tribunal found that the merger would not substantially lessen competition in only 8 of 74 local markets for the supply of propane: paragraph 307 of the Reasons. At the other extreme, in 16 markets the merged entity would have a monopoly or near monopoly, that is, a market share ranging from 97% to 100%: paragraph 306. And, in another 16 markets, where there was already substantial market concentration, the merger would remove healthy competition: paragraph 308. The remaining 33 markets were in an intermediate category in that, while Superior and ICG were the largest sellers of propane, and the merger was likely to lessen competition substantially, competition from other suppliers would continue after the merger: paragraph 309. Finally, the Tribunal found that the merger would lessen competition substantially in the coordination services offered to national account customers, leaving the merged entity as the only firm in Canada serving this market: paragraph 310.

11 Second, the demand for propane is fairly inelastic, that is, consumers are relatively insensitive to price increases. Although some consumers purchase propane for less than essential purposes, such as heating their swimming pools, most purchase it for home heating, automotive fuel and industrial purposes. Consequently, propane is not a discretionary item that most consumers can choose to forego.

12 Moreover, the cost of switching from propane to an alternative form of fuel is relatively high. For example, consumers who purchase propane to heat their homes will normally be deterred from substituting oil as a heating fuel by the considerable expense of converting to an oil burning furnace unless, for instance, their furnace is at the end of its useful life: paragraphs 24-25.

13 Third, relatively high barriers to entry face potential competitors in the market and hence increase the ability of the merged entity to raise prices above the competitive level. For example, consumers are often required to sign exclusive supply contracts stipulating that for five years they will purchase propane exclusively from the supplier and that, in the case of Superior, when the contract expires, consumers will give the supplier the right of first refusal. These supply contracts often contain lengthy notice of termination clauses that, in the case of ICG, require consumers to give 180 days notice prior to the termination date of the contract. In the absence of such notice, the contract is automatically renewed: paragraphs 132-146.

14 Another factor that makes switching suppliers difficult and costly is that the supplier, rather than the consumer, typically owns the propane tank: paragraph 147. In addition, a reputation for reliable delivery is an important factor in this market and consumers are therefore reluctant to switch to a new supplier with no established reputation: paragraph 154. Finally, new entrants are also likely to be discouraged by the maturity of the market; that is, there is little potential for growth in the demand for propane: paragraph 158.

15 In support of these findings on market entry barriers, the Tribunal noted that, when Imperial Oil Limited, a very large corporation, entered the market for propane distribution in 1990, it withdrew after nine years because market barriers made the venture uneconomic. Since then, no other entrants of comparable size or stature have materialized: paragraph 153.

16 On the basis of considerations of the kind noted above, the Tribunal concluded that, as a result of the merger, the merged entity was likely to increase the price of propane by an average of 8%: paragraphs 252-253. Having found that the merger would lead to a substantial lessening of competition contrary to section 92, the Tribunal concluded that only a total divestiture by Superior of all ICG's assets and shares would restore competition to the pre-merger level: paragraphs 314 and 316.

17 The Tribunal then proceeded to a consideration of the efficiency defence under section 96. It held that the merging parties had the burden of proving the efficiencies that would not have been generated but for the merger, while the Commissioner bore the burden of proving the anti-competitive effects, since he was in the better position to do so by virtue of the investigative powers conferred on him by the Act: paragraph 403. The merging parties had the burden of establishing that the resulting efficiencies would be greater than and offset the anti-competitive effects of the merger.

18 The majority calculated the net efficiency savings that would result from the merger, and could not have been achieved by other means, to be $29.2 million in each of the next ten years: paragraph 383. Ms. Lloyd dissented from the majority's view on this issue and held that the evidence before the Tribunal was insufficient to support this figure: paragraph 470. However, there is no appeal from this aspect of the Tribunal's decision and it is unnecessary to say more about it here.

19 Having made its entry on the "efficiency" side of the ledger, the Tribunal then considered the "effects" that would result from the "lessening or prevention of competition" if the merger was approved. The submissions and evidence before the Tribunal on this question went to two issues: the definition of "effects" for the purpose of section 96 and their quantification. The principal question in this appeal concerns the Tribunal's conclusion on the first of these issues.

20 The Tribunal had before it evidence describing various methodologies developed by economists for determining the effects of an anti-competitive merger. I should make it clear that the various standards considered by the Tribunal are, for the most part, the work of economists in the United States, and have been used as a basis for competition policy prescriptions. However, antitrust law in the United States does not have an efficiency defence comparable to section 96, although efficiencies are taken into consideration by the Federal Trade Commission when scrutinising a merger, along with other factors, including the likely wealth transfer from consumers to producers likely to result from it.

21 Two of the methodologies for determining when efficiency gains offset the adverse effects of an anti-competitive merger are likely to give a narrow scope to the efficiency defence. For example, under the "price standard" efficiencies will only justify an anti-competitive merger if they result in price decreases or, at least, do not increase prices. This is the most difficult standard for the parties to a merger to satisfy, and is the standard normally applied by the Federal Trade Commission as the basis for approving an anti-competitive merger: *Horizontal Merger Guidelines* (Department of Justice and Federal Trade Commission; April 2, 1992, revised April 8, 1997), pages 148-50.

22 The "consumer surplus standard" posits that a merger should be permitted only if the resulting efficiency gains exceed the sum of the wealth transferred to the producers and the deadweight loss occasioned by increases in price charged by the merged entity. In practice, this standard will also be difficult to establish and consequently will tend to narrow the availability of the efficiency defence.

23 On the basis of a report prepared for the Commissioner by an expert witness, Dr. Peter Townley, a professor of economics at Acadia University, counsel for the Commissioner submitted that the Tribunal should adopt a "balancing weights standard" as the basis for determining whether the efficiency gains from the merger of Superior and ICG were greater than, and offset, its anti-competitive effects.

24 Using this methodology, the Tribunal would determine the anti-competitive effects of a merger by taking into account a range of factors, but would not assign to each a fixed, *a priori* weight. The factors include: the deadweight loss; the wealth transfer from consumers resulting from the increase in prices through the exercise of market power; the loss of product choices and services currently associated with the product; and the prevention of competition and the creation of a monopoly or near monopoly in some or all of the relevant markets: paragraphs 386-387 and 431.

25 The Tribunal rejected this approach in favour of the "total surplus standard" which looks only at the overall loss to the economy as a result of the fall in demand for the merged entity's products following a post-merger increase in price, and the inefficient allocation of resources that occurs when, as prices rise, consumers purchase a less suitable substitute. The resulting loss of resources to the economy constitutes deadweight loss.

26 The Tribunal relied on the analyses of leading economists and of "law and economics" scholars, mainly from the United States, but also from Canada, in support of the "total surplus standard". Under this standard, an anti-competitive merger is allowed to proceed when efficiency gains exceed deadweight loss. Its rationale is that this standard measures the net increase or loss in general welfare as a result of the merger. In addition, it provides a predictable standard for merger review, and hence firms are not deterred from effecting mergers that will increase total economic resources by an inability to predict whether their merger will receive regulatory approval.

27 Under the total surplus standard, the wealth likely to be transferred from consumers to producers as a result of the merger is not considered to be an anti-competitive effect, because such a transfer is neutral: that is, it neither increases, nor decreases total societal wealth. Proponents of the total surplus standard argue that there is no economic reason for favouring a dollar in the hands of consumers of the products of the merged entity over a dollar in the hands of the producers or its shareholders, who are, after all, also consumers. Moreover, in the absence of complete data on the socio-economic profiles of the consumers and of the shareholders of the producers, it would be impossible to assess whether the redistributive effects of the wealth transferred as a result of the higher prices charged by the merged entity would be fair and equitable: paragraphs 423-425.

28 The Tribunal concluded that, properly interpreted, section 96 of the *Competition Act* mandates a methodology for determining the effects to be balanced against efficiency gains that ignores wealth transfers, or distributive effects, and focusses exclusively on the extent to which the merger increases net wealth in the economy as a whole. The reasons that the Tribunal advanced for its conclusion can be summarized as follows.

29 First, even if the necessary data were available, an assessment of the merits, or otherwise, of the distributive effects of a merger is a political task best performed by elected politicians, not by members of the Tribunal, who are appointed for their expertise in economics or commerce: paragraphs 431-432 and 438.

30 Second, since section 96 allows an anti-competitive merger where the efficiencies gained thereby are greater than, and offset, the effects of the lessening of competition, efficiency "was Parliament's paramount objective in passing the merger provisions of the Act": paragraph 437. Therefore, "effects" in section 96 should be interpreted in a way that best attains that objective. This excludes an interpretation that requires, or permits, distributive or other effects of a merger to be considered that are unrelated to the maximization of total societal wealth: paragraphs 411-413, 426 and 432.

31 Third, if business people are unable to predict whether the Commissioner or the Tribunal is likely to conclude that the efficiencies to be gained from a proposed merger will exceed, and offset, the adverse effects of the merger as calculated by the balancing weights standard, they will be deterred from merging, to the detriment of the economy as a whole: paragraph 433.

32 Accordingly, in the Tribunal's view, the difficulty of applying the balancing weights standard advanced by the Commissioner militates against its adoption. Indeed, even though Professor Townley favoured this approach he conceded in his evidence that, as an economist, he could not advise the Tribunal what weights to assign to the various factors to be considered. Hence, he could not say whether the efficiency gains from the merger of Superior and ICG were greater than and offset its effects.

33 Fourth, the Tribunal noted that in the *Merger Enforcement Guidelines* ("*MEG*") (Director of Investigation and Research, Information Bulletin No. 5, March 1991 (Supply and Services Canada, 1991)), which had been in force since 1991, the Commissioner had indicated that the effects of an anti-competitive merger were to be assessed for the purpose of section 96 by the total surplus standard.

34 Indeed, even after the appropriateness of the total surplus standard had been questioned by Reed J. when sitting as the judicial member of the Tribunal in *Canada (Director of Investigation & Research) v. Hillsdown Holdings (Canada) Ltd.* (1992), 41 C.P.R. (3d) 289 (Competition Trib.), the predecessor of the current Commissioner publicly reaffirmed the position taken in the *MEG*. In *Hillsdown*, *supra*, Reed J. had doubted (at page 339) whether an interpretation of "effects", such as that contained in the MEG, that omitted from consideration the wealth transferred from consumers to producers was consistent with the purposes of the Act.

35 Fifth, the Tribunal stated that the purpose and objectives section of the *Competition Act*, section 1.1, should not be read as requiring each of the objectives listed in it to be considered in the context of identifying the effects of a merger for the purpose of section 96. Rather, the references in section 1.1 to the Act's objectives, such as promoting "the efficiency and adaptability of the Canadian economy", ensuring that "small and medium-sized enterprises have an equitable opportunity to participate in the Canadian economy", and providing "consumers with competitive prices and product choices" should be regarded as no more than statements of the beneficial results of attaining the stated purpose of the Act, namely "to promote and encourage competition in Canada". Further, to the extent that there was a conflict between the general provision, section 1.1, and the specific, section 96, the latter should prevail: paragraphs 408-410.

36 The dissenting member of the Tribunal took issue with much of the majority's reasoning on the meaning of "effects" in section 96. In Ms. Lloyd's view, any interpretation of section 96 that excluded from "effects" the wealth transfer from consumers to producers likely to result from an anti-competitive merger was inconsistent with the objectives of the Act: paragraph 506.

37 She concluded that a flexible approach that enabled the Tribunal to take into account, along with other factors, the wealth transfer, both quantitatively and qualitatively, was more compatible with the statutory scheme, particularly in so far as its objectives include "to provide consumers with competitive prices and product choices": paragraph 511. Ms. Lloyd summarized (at paragraph 506) her position as follows:

> While I recognize that efficiencies are given special consideration under section 96 and may constitute a defence to an otherwise anti-competitive merger, it appears to me that section 96 is an *exception to the application of section 92 of the Act and not an exception to the Act itself.* (Emphasis added)

D. THE ISSUES

[38] The appeal raises three issues for the Court to decide.

[1]

(1) What standard of review is applicable to the Tribunal's determination of the "effects" of a merger to be considered under section 96?

(2) Did the Tribunal err in law when it interpreted "effects" as limited to those identified by the total surplus standard?

(3) Did the Tribunal err in law when it imposed on the Director the legal burden of proving the effects of the merger?

E. ANALYSIS

Issue 1: The Standard of Review

39 It was common ground between counsel that, in view of the Supreme Court of Canada's decision in *Canada (Director of Investigation & Research) v. Southam Inc.*, [1997] 1 S.C.R. 748 (S.C.C.), if the Tribunal's interpretation of the word, "effects", was entitled to any deference, the less deferential standard of reasonableness *simpliciter* would be appropriate.

40 The disputed question was, of course, whether any deference was due at all. In my view, the answer is to be found, for the most part, in the reasoning in *Southam, supra*, which also concerned the Tribunal, and in *Pushpanathan v. Canada (Minister of Employment & Immigration)*, [1998] 1 S.C.R. 982 (S.C.C.), which is an important, comprehensive and general elaboration of the pragmatic and functional analysis for determining the standard of judicial review of administrative action.

41 I turn, then, to an examination of the elements of the pragmatic and functional analysis as they apply to the case before us. A consensus seems to have emerged in the jurisprudence that the expertise of the tribunal under review, and the relevance of that expertise to resolving the issues in dispute, will normally be the most important of the pragmatic or functional factors considered in determining the standard of review: *Pushpanathan* , *supra*, at pages 1006-07, paragraph 32. I deal first with the nature of the issue decided by the Tribunal in this case.

(i) The nature of the issue decided by the Tribunal

42 In holding that the meaning of the word, "effects", in section 96 is limited to the deadweight loss resulting from an anti-competitive merger, the Tribunal was clearly interpreting the Act and was thereby deciding a question of law.

43 This is because the Tribunal's ruling purports to be of general application to all cases in which the efficiency defence is invoked. The Tribunal did not confine itself merely to identifying the factors to be considered or not considered in this case, nor to prescribing a methodology for determining only the "effects" of Superior's merger with ICG. Instead, the Tribunal makes it abundantly clear in its reasons that, as a matter of interpretation, the word, "effects", means *only* deadweight loss and that the efficiency defence is, *in all cases*, simply a codification of the total surplus standard.

44 For instance, based on its conclusion that section 96 encapsulates the total surplus standard, the Tribunal made the following findings with respect to the meaning of "the effects" of an anti-competitive merger:

[423] The economic effects of an anti-competitive merger are the effects on real resources, that is, the changes in the way the economy deploys those resources as the result of the merger.

[427] Assessing a merger's effects in this way is generally called the "total surplus standard". ...transfers from consumers to shareholders are not counted as losses under the total surplus standard. The anti-competitive effect of the merger is measured solely by the deadweight loss ... Under the total surplus standard, efficiencies need only exceed the deadweight loss to save an anti-competitive merger.

[430] ... The only standard that addresses solely the effects of a merger on economic resources is the total surplus standard.

[447] The Tribunal further believes that the only effects that can be considered under subsection 96(1) are the effects on resource allocation, as measured in principle by the deadweight loss which takes both quantitative and qualitative effects into account. Accordingly, the Tribunal believes that the total surplus standard is the correct approach for analysing the effects of a merger under subsection 96(1).

Since none of these statements was made with reference to the particular facts of the case, the Tribunal must have intended its view of the meaning of the word, "effects", to apply whenever the section 96 efficiency defence is raised.

45 Referring to the task of distinguishing the *interpretation* of a statutory standard (normally a question of law) from its *application* to the facts of a case (often a question of mixed fact and law), Iacobucci J. said in *Southam*, *supra* (at page 768, paragraph 37):

Of course, it is not easy to say precisely where the line should be drawn; though in most cases it should be sufficiently clear whether the dispute is over a general proposition that might qualify as a principle of law or over a very particular set of circumstances that is not apt to be of much interest to judges and lawyers in the future.

In a similar vein (*supra*, at page 767, paragraph 36), he had characterised a question as one of law "because the point in controversy was one that might potentially arise in many cases in the future."

46 Applying these observations to this case, I am of the view that, since the Tribunal's determination of what can be considered as an "effect" of the merger of Superior and ICG was intended to be of general application, it would be of "much interest to judges and lawyers", because other panels of the Tribunal will regard it as a legal proposition having considerable persuasive authority whenever they have to consider the efficiency defence under section 96. To use another of Iacobucci J.'s felicitous phrases (*Southam*, *supra*, at page 771, paragraph 45), the Tribunal in this case clearly "forged new legal principle".

(ii) The expertise of the Tribunal

47 Since the ultimate issue in determining the standard of review is whether the legislature should be taken to have intended the specialist administrative tribunal or the courts to bear primary responsibility for determining the question in dispute, it must be understood that "expertise" is a relative, not an absolute concept: *C.J.A., Local 579 v. Bradco Construction Ltd.*, [1993] 2 S.C.R. 316 (S.C.C.), at page 335. In assessing the relative expertise of the Tribunal and the Court, I have had regard to the following considerations.

48 First, the Tribunal is an adjudicative body. Just as it has done with the administration of human rights legislation, Parliament has divided responsibility for administering the *Competition Act* between the Competition Bureau, the policy-making, investigative and enforcement agency, headed now by the Commissioner, and the Tribunal, the adjudicative agency. In this respect, the Tribunal is different from multi-functional administrative agencies, such as securities commissions in many provinces, which typically have wide powers that match their regulatory mandate. The absence of broad policy development powers is a factor that limits the scope of the Tribunal's expertise: *Pezim v. British Columbia (Superintendent of Brokers)*, [1994] 2 S.C.R. 557 (S.C.C.), at page 596.

49 Second, expertise may be assessed by reference to the composition of an administrative tribunal. Hearings of the Tribunal are conducted before three to five members, at least one of whom must be a judicial member and one a lay member: *Competition Tribunal Act ("CTA")*, subsection 10(1). This case was heard by three members: the presiding judicial member and two lay members.

50 The judicial member is one of the maximum of four judges of the Trial Division of the Federal Court whom the Governor in Council may appoint to the Tribunal on the recommendation of the Minister of Justice: *CTA,* paragraph 3(2)(*a*). In addition to presiding at hearings of the Tribunal, the judicial member alone decides any questions of law that arise before the Tribunal: *CTA*, paragraph 12(1)(*a*).

[1]

51 I note that in the *Hillsdown* case *(supra*, at page 337, note 21), Reed J. made it clear that the validity of the definition in the *MEG*of "effects" involved the interpretation of section 96, and was thus a question of law alone. Hence, the Tribunal's reasons on this issue expressed her view as the judicial member of the Tribunal.

52 In contrast, Nadon J. does not state that his determination of the meaning of "effects" is solely his decision. However, since the Act gives to the judicial member sole responsibility for deciding questions of law, the standard of review cannot depend on whether, in a particular case, the lay member's participation in the decision on the legal issue extended beyond consultation.

53 A maximum of eight lay members are also appointed to the Tribunal by the Governor in Council on the recommendation of the Minister of Industry: *CTA*, paragraph 3(2)(*b*). No qualifications are prescribed for lay members. However, before making a recommendation, the Minister must consult with an Advisory Council comprising not more than ten members, who, the *CTA*, subsection 3(3) provides, are appointed from those

[1]

...who are knowledgeable in economics, industry, commerce or public affairs and may include, without restricting the generality of the foregoing, individuals chosen from business communities, the legal community, consumer groups and labour.	... personnes versées dans les affaires publiques, économiques, commerciales ou industrielles. Sans que soit limitée la portée générale de ce qui précède, ces personnes peuvent être des individus appartenant à la collectivité juridique, à des groupes de consommateurs, au monde des affaires et au monde du travail.

54 It is reasonable to infer from this provision that the Council was expected to recommend the appointment of lay members with a breadth of experience similar to that of the Advisory Council members themselves. Thus, members' fields of expertise need not be limited to economics, but may extend more broadly to public affairs. Further, their perspectives may include not only those of the business communities, including small and medium-sized business, but also of consumer groups and labour.

55 Questions of fact, and of mixed fact and law, are decided by all of the members of the panel of the Tribunal hearing a matter: *CTA*, paragraph 12(1)(*b*). In addition, even though the judicial member alone decides questions of law, the judicial member may well make his or her rulings after discussing the issues with the lay members and benefiting from whatever contribution they are able to make to the resolution of the legal issue from their perspective and on the basis of their expertise. After all, questions of law are rarely decided in the abstract, and generally require that careful consideration be given to the likely practical consequences and implications of deciding them one way rather than another.

56 In short, the composition of the Tribunal indicates a considerable level of expertise. This Court does not defer to decisions of the Trial Division of this Court on questions of law: *Harvard College v. Canada (Commissioner of Patents)*, [2000] 4 F.C. 528 (Fed. C.A.), at paragraph 180 (F.C.A). However, the fact that no more than four members of the Court may be appointed as judicial members suggests that, when sitting as the judicial member of the Tribunal and having the assistance of the lay members, a judge of the Trial Division can be expected to have a level of expertise or experience in this area of the law over and above that acquired by a judge in the ordinary course of judicial work. Nor do I disregard the importance of the understanding of the issues in dispute in this case that the Tribunal would have obtained after conducting 48 days of hearings.

57 Indeed, on more than one occasion, the Supreme Court of Canada has recognized (*Southam, supra,* at pages 772-73, paragraph 49) that the Tribunal

> is especially well suited to the task of overseeing a complex statutory scheme whose objectives are peculiarly economic.
>
> Iacobucci J. also noted in that case that, since the aims of the *Competition Act* are "more 'economic' than 'legal' (*supra*, at page 772, paragraph 48), it was appropriate to conclude that "the Tribunal's expertise lies in economics and commerce" (*supra*, at page 773, paragraph 51).

(iii) A question of law within the Tribunal's expertise?

58 Counsel for the respondents submitted that characterising a question decided by an administrative tribunal as one of statutory interpretation, and therefore one of law, is not necessarily determinative of the standard of review: see *Pushpanathan*

, *supra*, at page 1008, paragraph 34. However, it seems to me an obvious inference from the reasons for judgment of Iacobucci J. in *Southam, supra,*that, when all the factors in the pragmatic or functional mix are weighed together, the fact that the Tribunal in the case before us was deciding a question of law with a high degree of generality tips the scale in the direction of correctness as the applicable standard of review.

59 Thus, speaking at the level of principle, Iacobucci J. said (*supra*, at page 769, paragraph 39) that, if a decision-maker fails to consider all the factors that the legislature required to be considered, "then the decision-maker has in effect applied the wrong law, and so has made an error of law." And, turning to the Tribunal in particular, he said (*supra*, at page 769, paragraph 41): "If the Tribunal did ignore evidence that the law requires it to consider, then the Tribunal erred in law."

60 In my view, there is nothing about the word, "effects", to exclude the general principle that, in the absence of indicators to the contrary, statutory interpretation is a question of law that is reviewable on a standard of correctness. As Bastarache J. said in *Pushpanathan* (*supra*, at page 1012, paragraph 38):

> Without an implied or express legislative intent to the contrary ... legislatures should be assumed to have left highly generalized propositions of law to courts.

61 Thus, as a linguistic matter, the word, effects, does not suggest an implicit delegation of authority to the Tribunal to determine what factors must, and must not, be considered in determining what they are. If, as seems to be the case on the basis of the reasoning in *Southam, supra*, Iacobucci J. would have regarded a general proposition advanced by the Tribunal about the meaning of the word, "market", as subject to review for correctness, the same would seem equally true of the phrase, "the effects of any prevention or lessening of competition". Nor am I persuaded by counsel for the respondents that in *Southam* (*supra*, at pages 789-90, paragraphs 83-85) Iacobucci J. applied a standard other than correctness to the Tribunal's determination that the test for the remedy was the restoration of the parties to the pre-merger competitive position.

62 Moreover, an important element of the Tribunal's reasoning was its view of the statutory objectives provision of the *Competition Act*, section 1.1, and the relationship of that section to section 96. This is an issue of statutory interpretation of a kind with which courts are accustomed to dealing in the course of their ordinary work.

63 In short, I am not satisfied that Nadon J.'s expertise in competition law in general, and in the complexities of the merger of Superior and ICG in particular, gave him such a significant interpretative advantage over members of this Court as clearly to indicate Parliament's intention that the standard of review on the issue in dispute here should be that of unreasonableness. At the end of the day, the question of what count as "the effects of any prevention or lessening of competition" must be decided within the parameters of the Act, including its stated objectives. While economic expertise undoubtedly elucidates the strengths, weaknesses and consequences of the various choices available, it cannot be determinative of which of them, if any, is compatible with the *Competition Act*.

(iv) The Tribunal's constitutive statute and the scope of judicial review

64 Finally, the provisions of an administrative tribunal's constitutive statute respecting the grounds of judicial review, or the existence and scope of any right of appeal, may give some indication of the legislature's intention on the standard of review to be applied by a court to the tribunal's decisions.

65 At the one extreme, a strong preclusive clause, such as the bundle of exclusive jurisdiction, finality and "no *certiorari*" clauses typically found in the statutory schemes administered by labour relations boards, is indicative of a legislative intent to keep judicial review to a minimum. Hence, patent unreasonableness is generally the standard of review applied to labour boards' interpretation of the legislation that they administer.

66 At the other end of the spectrum are statutory rights of appeal that empower the appellate court to exercise any of the powers of the tribunal, direct the tribunal to take any action that the court considers proper and, for this purpose, to substitute its opinion for that of the tribunal. Rights of appeal from decisions of discipline committees of professional regulatory bodies are often of this kind.

67 There is a right of appeal from any decision of the Tribunal to this Court "as if it were a judgment of the Federal Court B Trial Division", except that, when the appeal is on a question of fact, leave of the Federal Court of Appeal is required: *CTA*, subsections 13(1) and (2). Section 27 of the *Federal Court Act*, R.S.C. 1985, c. F-7, imposes no limitations on the scope of the right of appeal from final judgments of the Trial Division to the Court of Appeal.

68 In my opinion, although expeditious decision-making is undoubtedly important in the review of mergers, the existence of an unrestricted right of appeal on questions of law, and of a modified right of appeal on questions of fact, must be entered as a factor indicative of Parliament's intention that the Tribunal's determinations of questions of law should be reviewable on appeal on a correctness standard.

(v) Conclusion

69 After weighing the factors to be considered in the pragmatic or functional analysis, and carefully examining the reasons for judgment in *Southam*, *supra*, I have concluded that it is the Court's function to determine whether the Tribunal was correct to decide that the effects of an anti-competitive merger that may be considered under section 96 are limited to the loss of resources to the economy as a whole resulting from the merger, to the exclusion of effects that relate to other statutory objectives, such as the wealth transfer from consumers to producers as a result of price increases, and the impact on competing small and medium sized businesses. A proposition of such generality is, to my mind, clearly a question of law.

70 I am not persuaded that, on an appeal to this Court, either the expertise of the Tribunal, or the degree of indeterminacy inherent in the word, "effects", indicates that the Court should review the Tribunal's decision on this issue on a standard other than that of correctness.

71 As Iacobucci J. noted in *Southam*, (*supra*, at pages 774-75, paragraph 53) with respect to the statutory requirement for, and to the role of, a judicial member of the Tribunal:

> Clearly it was Parliament's view that questions of competition law are not altogether beyond the ken of judges.
>
> This comment seems applicable also to the judges of this Court.
>
> [72] The composition of the Tribunal, and the rights of appeal from its decisions, reflect a carefully constructed compromise between assigning competition law exclusively to the domain of the judiciary, and entrusting it to a "non-judicial" regulatory agency, such as the Federal Trade Commission of the United States, which would operate subject to minimal judicial supervision: *Canada (Director of Investigation & Research) v. Southam Inc.*, [1995] 3 F.C. 557 (Fed. C.A.), at page 604 (*per* Robertson J.A.).

Issue 2: The Meaning of Effects in Section 96

73 The issue here is whether the Tribunal was correct in its interpretation of the phrase, "the effects of the prevention or lessening of competition ...", when it limited the relevant effects of the anti-competitive merger to those determined by the application of the total surplus standard. In my view, by so limiting the factors to be considered as "effects", the Tribunal erred in law because it failed to ensure that all the objectives of the *Competition Act*, and the particular circumstances of each merger, could be considered in the balancing exercise mandated by section 96.

74 With respect, I do not agree with the Tribunal's view that the list of objectives in section 1.1 of the *Competition Act* is merely a legislative rationale for the statutory purpose of maintaining and encouraging competition or that, if it is more than that, it should be read subject to the specific and contrary provisions of section 96. My reasons for these conclusions are as follows.

(i) The statutory text

(a) subsection 96(1)

75 Subsection 96(1) directs the Tribunal to consider whether the efficiencies produced by an anti-competitive merger are greater than, and offset, its anti-competitive effects. This is, in substance, a balancing test that weighs efficiencies on one hand, against anti-competitive effects on the other.

76 Writing of another provision in the *Competition Act* that called for the balancing of various factors, namely the determination of the scope of the relevant market, Iacobucci J. said in *Southam* (*supra*, at page 770, paragraph 43):

A balancing test is a legal rule whose application should be subtle and flexible, but not mechanical. It would be dangerous in the extreme to accord certain kinds of evidence decisive weight. [...] A test would be stilted and impossible of application if it purported to assign fixed weights to certain factors.

Hence, since the efficiency defence requires the Tribunal to balance competing objectives, its operation should remain flexible and not stilted by an overarching and restrictive interpretation.

77 In referring to "the effects of any prevention or lessening of competition", subsection 96(1) does not stipulate what effects must or may be considered. When used in non-statutory contexts, the word, "effects", is broad enough to encompass anything caused by an event. Indeed, even though it does not consider the redistribution of wealth itself to be an "effect" for the purpose of section 96, the Tribunal recognizes, as all commentators do, that one of the *de facto* effects of the merger is a redistribution of wealth: paragraph 446.

78 In addition, section 5.5 of the *MEG* explicitly recognises that a merger may have more than one effect:

Where a merger results in a price increase, it brings both a neutral redistribution effect and a negative resource allocation effect on the sum of producer and consumer surplus (total surplus) within Canada.

The *MEG* concluded, however, that:

The efficiency gains described above are balanced against the latter effect, i.e., the deadweight loss to the Canadian economy.

79 Thus, it is not doubted that the redistribution of resources is an effect of an anti-competitive merger, in the sense that it is caused by the exercise of market power created by the merger. Nevertheless, the Tribunal's interpretation of the word, "effects", as it is used in section 96, narrows it to a single effect, namely the loss or inefficient allocation of resources in the economy as a whole as measured by the deadweight loss.

80 Moreover, the statutory requirement that, for the section 96 defence to succeed, the efficiency gains must be greater than, *and offset*, the effects of a lessening of competition suggests a more judgmental assessment than is called for by the largely quantitative calculation of deadweight loss that the Tribunal held was statutorily mandated.

81 Of course, the precise meaning to be given to a word when it appears in a statute, especially if it is commonly used in everyday speech, must be determined by reference to its context. Hence, it was not necessarily an error of law for the Tribunal in this case to give to the word, "effects", a narrower meaning than would normally be ascribed to it in other contexts. The pertinent enquiry is whether, in the context of the *Competition Act*, the Tribunal was correct to narrow its meaning to the single effect of deadweight loss.

(b) subsection 96(3)

82 I attach some weight to subsection 96(3) of the *Competition Act*, which provides that the Tribunal shall not find that a merger or a proposed merger "is likely to bring about gains in efficiency by reason only of a redistribution of income between two or more persons." Hence, subsection 96(3) expressly *limits* the weight accorded to redistribution in assessing the *efficiencies* generated by a merger.

[1]

83 No similar limitation is imposed by the Act on the *effects* side of the balance. If Parliament had intended redistribution of income to be *excluded altogether* from the "effects" of an anti-competitive merger, as the Tribunal held, the drafter might well have been expected to have made an express provision, similar to that contained in subsection 96(3) with respect the efficiencies side of the balance. The absence of such a provision suggests that, contrary to the Tribunal's conclusion, Parliament did not intend to impose such a limitation on the "effects" side.

(ii) Statutory purposes and objectives

(a) section 1.1

84 I turn now to section 1.1 of the *Competition Act* which, for convenience's sake, I set out again.

[1]

The purpose of this Act is to maintain and encourage competition in Canada in order to promote the efficiency and adaptability of the Canadian economy, in order to expand opportunities for Canadian participation in world markets while at the same time recognizing the role of foreign competition in Canada, in order to ensure that small and medium-sized enterprises have an equitable opportunity to participate in the Canadian economy and in order to provide consumers with competitive prices and product choices.	La présente loi a pour objet de préserver et de favoriser la concurrence au Canada dans le but de stimuler l'adaptabilité et l'efficience de l'économie canadienne, d'améliorer les chances de participation canadienne aux marchés mondiaux tout en tenant simultanément compte du rôle de la concurrence étrangère au Canada, d'assurer à la petite et à la moyenne entreprise une chance honnête de participer à l'économie canadienne, de même que dans le but d'assurer aux consommateurs des prix compétitifs et un choix dans les produits. —

85 I see nothing in the wording of this provision to indicate that it is anything other than a typical statutory purposes clause, and should be construed accordingly. As is not uncommon in such clauses, not all of the stated purposes or objectives can be served at the same time, nor are all necessarily consistent.

86 For instance, the objective of expanding "opportunities for Canadian participation in world markets" may be irrelevant when the merged entity is unlikely to compete abroad. Further, as is the case here, there may be a conflict between the aim of promoting "the efficiency and adaptability of the Canadian economy" and providing consumers with "competitive prices and product choices." In addition, of course, the wording of a particular provision in a statute may be so clear and precise that it must be regarded as overriding an ambiguous purpose clause.

87 Nonetheless, despite the typically indeterminate quality and inherent inconsistencies of purpose or objectives clauses, including section 1.1, statutory provisions containing general statements of legislative purpose are integral to the statute and can carry as much weight as its other sections: Ruth Sullivan, *Driedger on the Construction of Statutes*, 3rd edition (Butterworths Canada Ltd. 1994), pages 263-68.

Thus, a purpose clause serves as a guide to the court or tribunal in its interpretation of other statutory provisions: *R. v. T. (V.)*, [1992] 1 S.C.R. 749 (S.C.C.), at page 765, and may establish the parameters within which it must interpret the provisions of the statute: *C.A.I.M.A.W., Local 14 v. Canadian Kenworth Co.*, [1989] 2 S.C.R. 983 (S.C.C.), at page 1028.

88 In my view, section 1.1 suggests that an interpretation of "effects" should not focus exclusively on *one* of the objectives of promoting competition, namely, promoting the efficiency and adaptability of the economy. Rather, the "effects" to be considered under section 96 should also include the other statutory objectives to be served by the encouragement of competition that an

anti-competitive merger may frustrate, such as the ability of medium and small businesses to participate in the economy, and the availability to consumers of a choice of goods at competitive prices.

89 Indeed, in moving the second reading of Bill C-91, *An Act to Establish the Competition Tribunal and to amend the Combines Investigation Act and the Bank Act and other Acts in consequence thereof*, 1 st Session, 33 rd Parliament, 1984-85-86, which became the *Competition Act* and *Competition Tribunal Act*, the Minister of Consumer and Corporate Affairs and Canada Post noted *(House of Commons Debates* (April 7, 1986) at 11927):

> The fourth but not the least objective is to provide consumers with competitive prices and product choices. As such, this objective becomes the common denominator in what we are trying to achieve. *This is the ultimate objective of the Bill*. (Emphasis added)

90 In spite of the existence of the multiple and ultimately inconsistent objectives set out in section 1.1, in certain instances the Act clearly prefers one objective over another. Thus, section 96 gives primacy to the statutory objective of economic efficiency, because it provides that, if efficiency gains exceed, and offset, the effects of an anti-competitive merger, the merger must be permitted to proceed, even though it would otherwise be prohibited by section 92. In this sense, the Tribunal was correct to state that section 96 gives paramountcy to the statutory objective of economic efficiency.

91 However, it does not follow from this that the only effects to be weighed against efficiency gains are limited to potential losses to the economy as a whole. Indeed, in the same Parliamentary speech referred to above, the Minister indicated (*Debates*, *supra*, at 11928) that the question posed to the Tribunal is:

> Would a particular merger result in efficiency gains which would offset *any* negative effects on competition? (Emphasis added)

> [92] Thus, although section 96 requires the approval of an anti-competitive merger where the efficiencies generated are greater than, and offset, its anti-competitive effects, the ultimate preference for the objective of efficiency in no way restricts the countervailing "effects" to deadweight loss. Instead, the word, "effects", should be interpreted to include all the anti-competitive effects to which a merger found to fall within section 92 in fact gives rise, having regard to *all* of the statutory purposes set out in section 1.1.

(b) "economic"purposes

93 In support of the position that the only effects of a merger that can be considered under section 96 are the resources lost to the economy as a whole, the respondents argued that the Supreme Court of Canada in *Southam* (*supra*, at page 772, paragraphs 48 and 49) authoritatively characterized the aims and objectives of the *Competition Act* as "more 'economic' than strictly 'legal' and as "peculiarly economic". In my opinion, however, these statements are not dispositive of the issue under consideration here, namely, whether the Tribunal's interpretation of "effects" was correct.

94 First, while these statements were clearly directed to the purposes of the *Competition Act* administered by the Tribunal, they were made in the context of the pragmatic or functional analysis conducted to determine the appropriate standard of review. When he used the words quoted above, Iacobucci J. was characterising the purpose of the Act in order to delineate the areas of expertise of the Court and the Tribunal respectively. Hence, they are not decisive in the context of the issue at stake here, namely, determining which effects of an anti-competitive merger may be considered as "effects" under section 96.

95 Second, a characterisation of the objectives of the *Competition Act* as economic does not necessarily lead to the conclusion that it is only permissible to consider as "effects" under section 96 the resources likely to be lost to the economy as a whole. I would have thought that the extent to which a merger is likely to result in the elimination of small and medium sized businesses from a market, or to cause consumers to pay more than competitive prices, are sufficiently "economic" to fall within Iacobucci J.'s characterisation of the aims and objectives of the Act.

96 Third, I have already noted the inclusion of persons with a wide range of backgrounds on the Advisory Council that the Minister of Industry must consult before making recommendations to the Governor in Council on the appointment of lay members to the Tribunal. The statutory inclusion of Council members from a wide range of backgrounds, including consumer groups and labour, suggests that the perspectives of those appointed are likely to extend beyond general welfare economics. This, in turn, is an indication that the Act itself is not concerned with "economics" so narrowly conceived as to exclude from consideration under section 96 the redistributive effects of higher prices that consumers will have to pay as a result of the merger, or its impact on small and medium sized businesses.

97 The Tribunal stated that taking into account a broader range of anti-competitive effects of a merger than the deadweight loss would license members of the Tribunal "to advance their views on the social merit of various groups in society" or "to achieve the proper distribution of income in society". These "political" tasks, the Tribunal stated, cannot be regarded as mandated by the Act, because they are not within the expertise of the members of the Tribunal, who "are selected for their expertise and experience in order to evaluate evidence that is economic and commercial in nature": paragraph 431.

98 In my view, this conclusion gives insufficient weight to the range of experience and perspectives that the Act contemplates that the members of the Tribunal may possess, and overstates the degree of "social engineering" involved in considering a broad range of anti-competitive effects under section 96. Like other regulatory administrative tribunals, the Tribunal is charged with the responsibility of protecting the public interest, which it does by striking a balance among conflicting interests and objectives in a manner that respects the text and purposes of the legislation, is informed both by technical expertise and by the judgment that comes from its members' varied experiences, and is responsive to the particularities of the case.

99 Of course, balancing competing objectives in order to determine where the public interest lies in a given case requires the exercise of discretion. However, the procedure and composition of the Tribunal equip it for this task no less well than those of other independent, specialized, administrative tribunals that are required to perform similar balancing exercises in the discharge of their regulatory functions.

100 Finally, I also find it difficult to accept the Tribunal's interpretation of the Act for the following two reasons. First, when Bill C-91 was introduced in Parliament it was widely regarded as a consumer protection measure. Thus, the Minister responsible stated in the House of Commons *(Debates*, *supra*, at 11927) that the Consumers' Association of Canada saw the Bill as promising "real progress for consumers". Indeed, the guidebook introduced when the legislation was first tabled states (Consumer and Corporate Affairs Canada, *Competition Law Amendments: A Guide* (December, 1985), page 4):

> Consumers and small business are among the prime beneficiaries of an effective competition policy.

101 In addition, the background document released when the amendments were previously tabled (Consumer and Corporate Affairs Canada, *Combines Investigation Act Amendments 1984: Background Information and Explanatory Notes* (April, 1984), page 2), states that:

> the Bill is concerned with fairness in the functioning of markets B fairness between producers and consumers, fairness between businesses and their suppliers, and suppliers and their customers.

102 It thus seems to me unlikely that Parliament either intended or understood that the efficiency defence would allow an anti-competitive merger to proceed, regardless of how much the merged entity might raise prices, provided only that the efficiencies achieved by the merger exceeded the resulting loss of resources in the economy at large. As Reed J. noted in the *Hillsdown* case, *supra*, at pages 337-38, differences in the drafting of the efficiency defence in the precursors to Bill C-91, which were not enacted, point in the same direction, and are considered in paragraphs 129-131, *post*.

103 Second, the result of applying the total surplus standard has some consequences that are so paradoxical in light of the consumer protection objectives of the Act that Parliament should not be regarded as having intended to limit the "effects" of the merger for the purpose of section 96 to deadweight loss. For example, use of the total surplus standard for calculating the anti-

competitive effects of a merger makes it easier to justify a merger between suppliers of goods for which demand is relatively inelastic than of goods for which demand is relatively elastic.

[1]

104 This is because, where the demand for particular goods is inelastic, as it is for propane, the goods cannot be substituted as cost-effectively as where the demand is elastic. Hence, price increases that result from the exercise of market power are tolerated more by purchasers of goods for which the demand is inelastic than by purchasers of those where the demand is elastic. Thus, since purchasers of goods for which demand is inelastic are relatively insensitive to price, fewer will purchase substitute goods despite increases in price. Therefore, a significant price increase will result in a smaller deadweight loss in a product where demand is inelastic than where it is elastic.

105 Thus, on the Tribunal's interpretation of section 96, the more inelastic the demand for the goods produced by the merged entity, the smaller will be the efficiencies required from the merger in order to offset its anti-competitive effects. It follows on this reasoning that, for the purpose of balancing efficiencies and effects, a potentially large wealth transfer from consumers of goods for which demand is inelastic to producers is to be ignored.

106 It is certainly not obvious how an interpretation of "effects" that creates a differential treatment of mergers by reference to the elasticity of demand for the goods produced by the merged entity is rationally related to any of the statutory aims of the *Competition Act*.

107 Another consequence of limiting the anti-competitive "effects" of a merger to deadweight loss is that it is irrelevant that the merger results in the creation of a monopoly in one or more of the merged entity's markets. According to the Tribunal, the fact that the merged entity of Superior and ICG will eliminate all consumer choice, and remove all competition, in the propane supply market, as it is likely to do in Atlantic Canada, for example, is not an "effect" that legally can be weighed under section 96 against the efficiency gains from the merger.

108 Again, such a conclusion seems to me so at odds with the stated purpose of the Act, namely "to maintain and encourage competition", and the statutory objectives to be achieved thereby, as to cast serious doubt on the correctness of the Tribunal's interpretation of section 96.

109 Given the purposes historically pursued by competition legislation and, in particular, the expressly stated purpose and objectives of the *Competition Act*, it is reasonable to infer from Parliament's failure to state expressly that only deadweight loss is to be considered as an "effect" of a merger for the purpose of section 96, that other effects related to the statutory purpose and objectives, including the interests of the consumers of the merged entity's products, must also be taken into account when the trade-off is made between efficiencies and anti-competitive effects.

(iii) Predictability

110 It was strenuously argued by counsel for the respondents that, since one of the objectives of the *Competition Act* set out in section 1.1 is to "promote the efficiency and adaptability of the Canadian economy", it was important for business people to be able to predict whether or not a proposed merger was likely to receive regulatory approval. Otherwise, they might be deterred from entering into a merger that would violate section 92 by substantially lessening competition, but would increase wealth in the Canadian economy as a whole by producing substantial efficiency gains.

111 Hence, it was argued, it is consistent with the purpose of section 96 to interpret the efficiency defence as requiring the use of the total surplus standard to determine the anti-competitive effects of a merger, because the use of this standard makes the result of the section 96 balancing exercise much more predictable. While far from self-applying, the total surplus standard will generally make it much easier than the balancing weights approach favoured by the Commissioner to predict what will be the "effects" of a merger.

112 While not without some attraction, this argument when considered alone is far from dispositive in a regulatory context. And, when assessed with the stronger arguments pointing in the opposite direction, it does not in my view significantly buttress the Tribunal's interpretation of section 96.

113 First, discretionary decision-making in the regulation of economic activity is commonplace and predictability of outcome is a matter of degree. Indeed, since discretion is essential to the efficacy of most regulatory regimes, the interest of individuals in being able to arrange their affairs in the more or less certain knowledge of how they will be regarded by agencies of the state is not so highly valued as in other areas (such as taxation or criminal law) where the state impinges on individual conduct.

114 Hence, even if true, the submission that the total surplus standard may make the result of the balancing exercise more predictable than the balancing weights approach must be assessed in the context of the administration of a public programme of economic regulation.

115 Second, one should not exaggerate the differences in the degrees of predictability inherent in the total surplus and balancing weights standards for determining the "effects" of an anti-competitive merger. Given the difficulties of, for example, assessing both the relative elasticity of demand for the goods produced or supplied by a merged entity, and the qualitative aspect of deadweight loss, the application of the total surplus standard is far from mechanical. Indeed, while section 5.5 of the *MEG* has adopted the total surplus standard, it also states that the "calculation of the anti-competitive effects of mergers is generally very difficult to make." See also Roy M. Davidson, "When Merger Guidelines Fail to Guide" (1991) 12 *Canadian Competition Policy Record* 44, at 46-47.

116 Conversely, it is in my view far from a fatal objection to the balancing weights approach that its proponent at the hearing before the Tribunal, Professor Townley, testified that, as an economist, he was unable to determine what were the effects of the merger of Superior and ICG and whether the efficiencies likely to be produced thereby were greater than, and offset, them. I take his point simply to have been that he was called as a witness expert in economics and that the balancing exercise called for by section 96 required broader public policy judgments that were outside his area of expertise, but were for the Tribunal to make as it thought would best advance the public interest within the parameters of the Act.

117 Third, there are various tools available to administrative agencies that enable them to give more precision, and hence predictability of application, to the discretionary statutory standards that they must apply to particular fact situations: speeches by members of the administrative agency detailing agency thinking on an issue, and more formal published policy guidelines that can be elaborated and tailored from time to time to take account of agency experience with administering the regulatory scheme, for example. I discuss below the *MEG* issued by the Commissioner, in so far as they deal with the Competition Bureau's view of the interpretation of section 96.

118 In addition, parties contemplating a merger may submit details to the Commissioner at an early stage of the process in order to obtain an initial indication of whether approval is likely to be forthcoming and, if the Commissioner thinks that there may be problems, what they are and how they may be addressed. Administrative adjudication is only the rarely seen, though important, tip of the regulatory process iceberg.

119 Hence, even if the total surplus standard provides more predictability to prospective merging parties, when compared, for instance, to the balancing weights approach, the predictability argument is not sufficiently compelling to persuade me that it is the methodology mandated by section 96 for determining the "effects" of an anti-competitive merger in all cases.

(iv) *Merger Enforcement Guidelines*

120 Both the Tribunal and, on appeal, counsel for the respondents, gave considerable weight to the *MEG*, issued in 1991 by the Director of Investigation and Research, Bureau of Competition Policy.

121 Section 5.5 of the *MEG* state that efficiency gains are to be balanced only against "a negative resource allocation effect on the sum of producer and consumer surplus (total surplus within Canada)"; in other words, "the deadweight loss to the Canadian

economy." It also states that the redistribution of wealth as a result of price increases stemming from the merger is "neutral", noting in footnote 37 that:

When a dollar is transferred from a buyer to a seller, it cannot be determined *a priori* who is more deserving or in whose hands it has a greater value.

122 In a speech given in Toronto on June 8, 1992 to the Canadian Institute, the then Director of Investigation and Research responded to the doubts expressed by Reed J., as the judicial member of the Tribunal that decided the *Hillsdown*case, *supra*, about whether the *MEG* were consistent with the *Competition Act* to the extent that they adopted total surplus standard as the basis for determining the "effects" of an anti-competitive merger. The Director saw no need to amend the *MEG* at that time, since economists advocated that wealth transfers to producers from consumers should be treated as a neutral effect of a merger, Reed J.'s expressions of doubt were only *obiter* and the Tribunal endorsed no other methodology for determining the "effects" to be taken into account under section 96.

123 In 1998, the approach to the determination of the anti-competitive effects of a merger adopted in the *MEG* was essentially endorsed in the Competition Bureau's publication, *The Merger Guidelines as Applied to a Bank Merger*.

124 The simple answer to the respondents' reliance on the *MEG* is that they are not law because they are not made under a grant of statutory authority, and cannot determine the meaning of the Act. Indeed, to the extent that they are inconsistent with the Act, they should be ignored. Further, the limited nature and intent of the *MEG* is clearly set out at the beginning of the document under the heading "Interpretation":

[1]

This document is intended solely to provide enforcement guidelines. As such, it sets forth the general approach that is taken to merger review, and is not a binding statement of how discretion will be exercised in a particular situation. Specific guidance regarding a specific merger may be requested from the Bureau through its program advisory opinions. The Guidelines are not intended to be a substitute for the advice of merger counsellors. They do not represent a significant change in enforcement policy or restate the law. *Final interpretation of the law is the responsibility of the Competition Tribunal and the courts.* (Emphasis added)

125 Of course, it may do little to inspire public confidence in the administration of the *Competition Act* that, in the context of the merger of Superior and ICG, the present Commissioner has apparently disavowed the interpretation of section 96 advanced in the *MEG*, which have still not been replaced. However, there was no allegation by the respondents that they had relied to their detriment on the *MEG*when they agreed to merge. While there was no evidence in the record about any discussions that may have taken place between the merging parties and the Bureau, it would not be surprising if such discussions had occurred and it had been indicated to the respondents that the Commissioner no longer thought that deadweight loss, measured both quantitatively and qualitatively, was the only "effect" that could ever be taken into account under section 96.

126 In addition, the possibility that a reviewing court may not agree with an agency's view of the law is an inevitable risk associated with the administrative practice of issuing non-binding guidelines and other policy documents to shed light on agency thinking and to assist those subject to the regulatory regime that it administers. This risk should deter neither the courts from deciding what the law is, nor agencies from engaging in the often useful exercise of administrative rule-making.

(v) The authorities

127 Finally, I consider whether existing authorities demonstrate the correctness of the Tribunal's interpretation of section 96. I turn, first, to the only other judicial pronouncement on the issue, namely, the decision of Reed J. in the *Hillsdown* case, *supra.* I agree with the respondents' position that what Reed J. said in that case is not dispositive of this case: not only is it, like the case before us, a decision of the Tribunal, but Reed J.'s statements did not form part of the *ratio* and, in some respects at least, she expressed herself more in the form of a doubt than of a definitive assertion that the interpretation in the *MEG* of "effects" was wrong in law.

128 Nonetheless, I find myself largely in agreement with the reasons given by Reed J. for querying whether the Tribunal was permitted to look only at deadweight loss when determining the effects to be balanced against any efficiency gains that, without the merger, were unlikely to be achieved.

129 In particular, I adopt her analysis of the legislative history of section 96: *Hillsdown*, *supra*, at pages 337-39. She observed that, unlike the present section 96, the previous, unenacted versions of the efficiency defence contained in both Bill C-42, *An Act to amend the Combines Investigation Act and to amend the Bank Act and other Acts in relation thereto or in consequence thereof*, 2nd Session, 30th Parliament, 1976-77, and in Bill C-29, *An Act to amend the Combines Investigation Act and the Bank Act and other Acts in consequence thereof*, 2nd Session, 32nd Parliament, 1983-84, did not require that the efficiencies gained from an anti-competitive merger be balanced against its effects.

130 Thus, Bill C-42 would have permitted an anti-competitive merger to proceed, provided only that substantial efficiency gains could be proved "by way of savings of resources for the Canadian economy" that would not otherwise have been attained: clause 31.71(5). Bill C-29 called for a determination of whether "the gains in efficiency would result in a substantial real net saving for the Canadian economy": clause 31.73(*c*). Neither of these provisions calls for a balancing of efficiencies against effects. Instead they focus on resource maximization in the economy as a whole in the same way as the total surplus standard.

131 I agree with Reed J.'s conclusion that, seen against this background, the more open-ended direction given to decision-makers by section 96, namely to balance the efficiency gains against the "effects" of an anti-competitive merger, should not be interpreted in substantially the same manner as the above clauses, which explicitly permitted anti-competitive mergers when the resulting efficiency gains produced *net savings of resources for the Canadian economy*. While the earlier bills seem clearly to have encapsulated the total surplus standard in the efficiency defences, section 96 does not.

132 I note, too, that, even though she may not have been entitled as a lay member of the Tribunal to express a view on an issue that I have held to be a question of law alone, Ms. Lloyd did not agree that "effects" were confined to deadweight loss to the exclusion of effects relating to the other objectives of the Act: paragraph 506.

133 In a word, views expressed by Tribunal members who have considered the issue are about evenly split. I draw some comfort from the existence of this division of opinion both between the judicial members who have considered the issue (Reed J. and Nadon J.), and between the lay members of the Tribunal in this case, if, as I understand it, Dr. Schwartz agreed with Nadon J. Thus, in disagreeing with the Tribunal's interpretation of section 96, I cannot be said to have gone against the unanimous view of those more expert than I in this area of the law.

134 Finally, it was suggested in argument that the Tribunal's interpretation had the support of all economists who had studied the issue. I do not dispute that an impressive array of economists, and law and economics specialists, both in Canada and the United States, have argued that the total surplus standard is the appropriate basis for determining whether an anti-competitive merger that produces efficiency gains should be permitted.

135 Nonetheless, the *Horizontal Merger Guidelines, supra*, in the United States continue to treat the exercise of market power leading to an increase in price above the competitive level as the most important anti-competitive effect of a merger, and the resulting wealth transfer from the consumers to the producers, as a misallocation of resources: see P.T. Denis, "Advances in the 1992 *Horizontal Merger Guidelines* in the Analysis of Competitive Effects" (Symposium on the New 1992 Merger Guidelines), *Antitrust Bulletin*, Fall 1993, pages 479-515.

136 Of course, as I have already noted, since there is no specific efficiency defence in the United States' legislation, the approach of the Federal Trade Commission to efficiency gains when considering the approval of anti-competitive mergers has limited relevance to the problem before us. Nonetheless, it is interesting to note that efficiency gains are generally most likely to make a difference in merger review when the likely adverse effects of the merger are not great, and will almost never justify a merger to monopoly or near monopoly: *Horizontal Merger Guidelines, supra*, at page 150.

137 In addition, some commentators in the United States have expressed surprise at the interpretation of section 96 adopted in the *MEG*. See, for example, J.F. Brodley, "The Economic Goals of Antitrust: Efficiency, Consumer Welfare, and Technological Progress, (1987) 62 *N.Y.U. L. Rev.* 1020, at 1035-36; S.F. Ross, "Afterword B Did the Canadian Parliament Really Permit Mergers That Exploit Canadian Consumers So the World Can Be More Efficient?" (1997) 65 *Antitrust Law Journal* 641. Thus, Ross writes (*supra*, at 652, note 41):

[1]

As Professor Brodley has observed, the logical extension of competition policy based solely on societal wealth maximization would be to prefer a monopolist that was able to perfectly price discriminate (charge each consumer the maximum amount each consumer was willing to pay) to the typical Canadian industry with a relatively few number of firms, which would not produce at a single competitive price.

138 Hence, it is clear that there is more than one view among commentators on whether competition policy should disregard *a priori* transfers of wealth and other "effects" of anti-competitive mergers, and consider only whether the merger has the effect of increasing or decreasing the resources in the economy as a whole. Nonetheless, when the issue arises in the legal context of a section 92 proceeding instituted by the Commissioner, it must be answered by reference to the *Competition Act,* and Parliament's stated purpose and objectives in enacting it. In my view, the narrow reading that the Tribunal gave to the word, "effects", in section 96 cannot be justified by reference to the views of lawyer-economists in the United States, no matter how eminent.

(vi) Conclusions

139 Having concluded for the above reasons that the Tribunal erred in law when it interpreted section 96 as mandating that, in all cases, the only effects of an anti-competitive merger that may be balanced against the efficiencies created by the merger are those identified by the total surplus standard, this Court should not prescribe the "correct" methodology for determining the extent of the anti-competitive effects of a merger. Such a task is beyond the limits of the Court's competence.

140 Whatever standard is selected (and, for all I know, the same standard may not be equally apposite for all mergers) must be more reflective than the total surplus standard of the different objectives of the *Competition Act*. It should also be sufficiently flexible in its application to enable the Tribunal fully to assess the particular fact situation before it.

141 It seems to me that the balancing weights approach proposed by Professor Townley, and adopted by the Commissioner, meets these broad requirements. Of course, this approach will no doubt require considerable elaboration and refinement when it comes to be applied to the facts of particular cases.

142 Further, while the adoption of the balancing weights approach is likely to expand the anti-competitive effects to be considered, and hence to narrow the scope of the defence, I see no reason why it should, as the respondent submitted, practically write section 96 out of the Act.

Issue 3: The Burden of Proof

143 The Tribunal held (at paragraph 403) that, since section 96 constitutes a defence to an infringement of section 92, the merging parties bear the burden of proving each of its elements on the balance of probabilities, except the existence or scale of the effects that must be balanced against the efficiency gains.

144 The Commissioner submitted that the Tribunal had erred in law in holding that he had the legal onus of proving anything at all under section 96. While the evidential burden may shift as a case unfolds, the legal burden throughout, counsel for the Commissioner argued, remains with the respondents.

145 Apart from setting out the parties' contentions, the Tribunal gave little clue about the reasons for its conclusion on the burden of proof issue. One obvious possibility is that the Tribunal endorsed the submissions made by the party in whose favour it decided particular issues. Thus, the Tribunal stated that the respondents had submitted that the Commissioner bears

the burden of proving the scale of the "effects" of an anti-competitive merger (that is, on the Tribunal's interpretation of section 96, the deadweight loss), because the Commissioner's investigative powers put him in a better position than the respondents to obtain the necessary information from third parties.

146 On the hearing of the appeal, counsel for the respondents added that, if merging parties were to attempt to obtain the kind of information required to establish the effects of the merger for the purpose of section 96, including information on competitors' pricing and costs, they would run the risk of being accused of conspiring to restrain competition contrary to section 45 of the Act.

147 Counsel for the Commissioner, on the other hand, relied on statements made by officials of the Ministry of Consumer and Corporate Affairs, when appearing before the Legislative Committee on Bill-91. They advised the Committee that, once the Commissioner had proved a substantial lessening of competition under section 92, the burden of proving any defence was borne by the merging parties.

148 On the facts, the burden of proof did not have to be decided when the present case was before the Tribunal. However, since the effects that must be considered by the Tribunal include facts not taken into account when it first made the decision under appeal, it is necessary for the Court to determine the issue, which is largely one of first impression.

149 It seems clear that deciding which party bears the burden of proving what elements of the efficiency defence is a pure question of law that is not confined to the particularities of this case. For the reasons given earlier, I am of the view that the standard of review of the Tribunal's conclusion on this issue is correctness.

150 Two general principles would seem to support the Commissioner's position. First, the party who asserts, must prove the assertion. Since it is the respondents who assert that the efficiency gains of the merger are likely to exceed, and to offset, its anti-competitive effects, this principle indicates that the respondents should be required to prove each and every aspect of the assertion. The second general principle is that the burden of proving a defence generally rests with the defendant.

151 However, the principle that the party who asserts must prove is not absolute: Sopinka, Lederman and Bryant, *The Law of Evidence in Canada*, 2^{nd} edition, (Butterworths Canada Ltd.; 1999), page 89. In addition, in the absence of authority, considerations of fairness, probability and policy would seem to be important determinants of the legal burden of proof: Sopinka, Lederman and Bryant, *supra,* at pages 86-90.

152 It would be somewhat odd, as counsel for the respondents argued, to place the legal onus of proving the anti-competitive effects of a merger on the party whose interest it is to deny that they exist or to minimise them. In addition, in the process of establishing a substantial lessening of competition, the Commissioner will often have gathered evidence on the effects of the merger that will also be relevant to the section 96 defence, including evidence on likely price increases following the merger and the impact of the merger on inter-related businesses.

153 These are matters on which the Commissioner is in a better position than the respondents to gather evidence by virtue of the investigative powers conferred on him by statute. Indeed, as Sopinka, Lederman and Bryant note (*supra*, at page 89), if "one party is peculiarly situated to prove a fact" a court may reverse the burden and place it on that party.

154 Accordingly, I have concluded that the Tribunal was correct to distribute the legal onus of proof as it did, so that the respondents bear the onus of proving every aspect of the section 96 defence, save for the anti-competitive effects of the merger.

F. CONCLUSIONS

155 In summary, I would allow the appeal, set aside the decision of the Tribunal with respect to the interpretation of section 96 of the *Competition Act* and remit the matter to the Tribunal for redetermination in a manner consistent with these reasons.

156 The Tribunal need only identify and assess "the effects of the prevention or lessening of competition" for the purpose of section 96 and decide whether the efficiencies that the Tribunal has already found to have been proved by the respondents are likely to be greater than, and to offset, those effects.

157 The Commissioner has the legal burden of proving the extent of the relevant effects, while the respondents have the burden, not only of proving the scale of the efficiency gains that would not have occurred but for the merger, but also of persuading the Tribunal on the ultimate issue, namely, that the efficiency gains are likely to be greater than, and to offset, the effects.

158 The appellant should have his costs, but because the respondents were successful on the burden of proof issue, I would reduce the costs awarded by 20% of those otherwise allowable.

***Létourneau J.A.*:**

159 I have had the benefit of reading the reasons for judgment issued by my colleague, Evans J.A.. I agree with him that the interpretation of the word "effects" in section 96 of the *Competition Act* (Act) R.S.C. 1985, c. C-34 involves a pure question of law that falls to be decided on a standard of correctness.

160 I also agree with my colleague that the word "effects" in section 96 of the Act ought not to be limited, as the Tribunal did, to the effects identified by the total surplus standard. As my colleague has pointed out, the interpretation of section 96 of the Act involves balancing market power and efficiency gains. The approach taken in this matter both in the United States and in Canada is by no means free from ambiguity and harsh criticism: see Robert H. Lande, The Rise and (Coming) Fall of Efficiency as the Ruler of Antitrust (1988) 33 *Antitrust* 429; David B. Andretsch, Divergent Views in antitrust Economics (1988) 33 *Antitrust Bull.* 135; Alan A. Fisher, Frederick I. Johnson and Robert H. Lande, Price Effects of Horizontal Mergers (1989) 77 *Calif. L.R.* 777; Lloyd Constantine, An Antitrust Enforcer Confronts the New Economics (1989) 58 *Antritrust L.J.* 661; Roy M. Davidson, When Merger Guidelines Fail to Guide (1992), *Canadian Competition Policy Record* 44, at page 46; Stephen F. Ross, Afterword - Did the Canadian Parliament Really Permit Mergers that Exploit Canadian Consumers so the World can be More Efficient? (1997) 65 *Antitrust Law Journal* 641, at pages 643-646; Tim Hazledine, Rationalism Rebuffed? Lessons from Modern Canadian and New Zealand Competition Policy (1998) *Review of Industrial Organization* 243; Jennifer Halliday, The Recognition, Status and Form of the Efficiency Defence to a Merger: Current Situation and Prospects for the Future (1999) *World Competition* 91. A review of these authorities reveals that the provision is at best confusing and puzzling. At worst, it can defeat the very purpose of the Act. I reproduce sections 96 and 1.1 for convenience:

96. (1) The Tribunal shall not make an order under section 92 if it finds that the merger or proposed merger in respect of which the application is made has brought about or is likely to bring about gains in efficiency that will be greater than, and will offset, the effects of any prevention or lessening of competition that will result or is likely to result from the merger or proposed merger and that the gains in efficiency would not likely be attained if the order were made.

(2) In considering whether a merger or proposed merger is likely to bring about gains in efficiency described in subsection (1), the Tribunal shall consider whether such gains will result in

(*a*) a significant increase in the real value of exports; or

(*b*) a significant substitution of domestic products for imported products.

(3) For the purposes of this section, the Tribunal shall not find that a merger or proposed merger has brought about or is likely to bring about gains in efficiency by reason only of a redistribution of income between two or more persons.

96. (1) Le Tribunal ne rend pas l'ordonnance prévue à l'article 92 dans les cas où il conclut que le fusionnement, réalisé ou proposé, qui fait l'objet de la demande a eu pour effet ou aura vraisemblablement pour effet d'entraîner des gains en efficience, que ces gains surpasseront et neutraliseront les effets de l'empêchement ou de la diminution de la concurrence qui résulteront ou résulteront vraisemblablement du fusionnement réalisé ou proposé et que ces gains ne seraient vraisemblablement pas réalisés si l'ordonnance était rendue.

(2) Dans l'étude de la question de savoir si un fusionnement, réalisé ou proposé, entraînera vraisemblablement les gains en efficience visés au paragraphe (1), le Tribunal évalue si ces gains se traduiront:

a) soit en une augmentation relativement importante de la valeur réelle des exportations;

b) soit en une substitution relativement importante de produits nationaux à des produits étrangers.

(3) Pour l'application du présent article, le Tribunal ne conclut pas, en raison seulement d'une redistribution de revenu entre plusieurs personnes, qu'un fusionnement réalisé ou proposé a entraîné ou entraînera vraisemblablement des gains en efficience.

Purpose

1.1 The purpose of this Act is to maintain and encourage competition in Canada in order to promote the efficiency and adaptability of the Canadian economy, in order to expand opportunities for Canadian participation in world markets while at the same time recognizing the role of foreign competition in Canada, in order to ensure that small and medium-sized enterprises have an equitable opportunity to participate in the Canadian economy and in order to provide consumers with competitive prices and product choices.

Objet

1.1 La présente loi a pour objet de préserver et de favoriser la concurrence au Canada dans le but de stimuler l'adaptabilité et l'efficience de l'économie canadienne, d'améliorer les chances de participation canadienne aux marchés mondiaux tout en tenant simultanément compte du rôle de la concurrence étrangère au Canada, d'assurer à la petite et à la moyenne entreprise une chance honnête de participer à l'économie canadienne, de même que dans le but d'assurer aux consommateurs des prix compétitifs et un choix dans les produits.

161 First, section 96 is broadly worded and provides no guidance as to the meaning of efficiency found in the section, the effects of the lessening of competition which are to be weighed against the efficiency gains, and the test, standard or trade-off to be applied in weighing the elements.

162 For example, what kind of economic efficiency does section 96 of the Act refer to? Allocative efficiency which is achieved when the existing products at the allocated prices satisfy the consumers' want? Or productive efficiency which is obtained when output is produced with the most cost-effective combination of productive resources available under present technology? Or technological or dynamic efficiency which is achieved through better industrial research development and a better rate of technological progress?

163 What are the anti-competitive effects of the merger that are to be weighed? Is it limited to deadweight loss which occurs when, because of higher prices, consumers choose an alternative and less appropriate substitute for the product that they would have other bought? Does the trade-off analysis include anti-competitive effects likely to arise in other related markets which would be affected by the merger? Does it include wealth transfers from consumers to producers that result from an exercise at market power? Are all the effects of the merger to be weighed and what weight should be given to them? Are they all of the same significance and value? On what basis is one effect to be preferred over the other? On what basis should some effects, if any, be ignored or discarded?

164 What standard should be applied to the trade-off analysis required by the application of section 96? The total surplus standard chosen by the Tribunal in this case which considers only the deadweight loss and none of the redistributive effects involved in the wealth transfer from consumers to producers? Or the price standard under which efficiencies allow for mergers only if prices are to be maintained or reduced? Or the consumer surplus standard which disallows a merger where the loss of consumer surplus exceeds the efficiency gains?

165 Second, the relationship of section 96 with section 1.1, which states the purpose of the Act, is not defined and, in fact to many, section 96 contradicts section 1.1 and defeats the purposes contained in that purpose clause. When weighing the efficiency gains of a merger against the lessening of competition, what should be done of the stated objectives of ensuring that small and medium-sized enterprises have an equitable opportunity to participate in the Canadian economy as well as providing consumers with competitive prices and product choices?

166 Third, section 96 poses no limits to the kind of mergers that can be effected and authorized as long as the efficiency gains will be greater than, and will offset, the effects of the lessening of competition and as long as these gains cannot be obtained by other means than the merger. This means that the creation of a monopoly or near monopoly through mergers could be authorized even though it would eliminate competition altogether, discourage competitive prices for consumers and would undermine, to the point of eradication, the development of small and medium-size enterprises, all these effects contrary to the purposes stated in section 1.1 of the Act.

167 Fourth, the problems created by section 96 are compounded by the fact that the provision is mandatory. The Tribunal shall not make an order preventing a merger where the undefined and elusive balancing test of section 96 is met.

168 Fifth, section 96 appears to have no geographical scope or limit so that efficiency gains made for the benefit of foreign corporations to the detriment of Canadian workers and consumers could be counted in the trade-off analysis that the provision requires. Or are mergers to be approved only if the efficiency gains in Canada exceed the losses in Canada? In the increasing context of globalization of trade and commerce, not to mention international trade treaties such as the *North American Free Trade Agreement Implementation Act*, S.C. 1993, c. 44 and the *World Trade Organization Agreement Implementation Act*, S.C. 1994, c. 47, Schedules I-IV, the issue of whether the balancing test applicable under section 96 is global or limited in its application to Canada becomes crucial. Yet, the provision still provides no guidance in this respect.

169 It is no wonder that conflicting views on the scope of section 96 have emerged and that the section, in search of predictability and workability, has been read down by eliminating some of the significant effects of the lessening of competition. It also comes as no surprise that many, influenced as they were by the Chicago school of thought in antitrust matters, concluded, as the Tribunal did in the present case, that efficiency of the economy overrides competition even with respect to an Act designed to maintain and promote competition.

170 It is true as Mr. Justice Iacobucci said in *Canada (Director of Investigation & Research) v. Southam Inc.*, [1997] 1 S.C.R. 748 (S.C.C.), at page 772 that the focus of the Act is on economy rather than law or, if one prefers, that the "aims of the Act are more economic than they are strictly legal". But section 96 really begs the question: what kind of economy? Monopolistic, competitive or a proper balance between these two poles?

171 The Tribunal found that the merger was likely to prevent competition substantially in Atlantic Canada and to lessen competition substantially in coordination services offered to national account customers: see decision, paragraphs 310 and 313. There was also conclusive evidence that, in many large areas of the country, the merger would not merely lessen competition, but would in fact eliminate it and create monopolies. The following Chart illustrates the impact of the merger with respect to monopolies or near monopolies: see Compendium of the appellant, page 001327:

172 The Tribunal, in view of its conclusion that efficiency is the paramount objective of the Act, ignored as an effect of the merger the fact that monopolies in certain product markets would ensue and failed to give any weight to that effect in its analysis under section 96. The Act maintains and promotes competition. It assumes that economic efficiency will generally and primarily develop through competition. It also accepts in section 96 that, in some cases, a reduction in competition can and will produce more efficiency than competition as it existed before merger.

173 In my respectful view, however, section 96 was not meant to authorize the creation of monopolies since it would defeat the purpose of section 1.1. The section was not intended to authorize mergers resulting in monopolies whereby, contrary to section 1.1, competition is eliminated, small and medium-sized enterprises are not able to enter or survive in the market and consumers are deprived of competitive prices.

174 As the Supreme Court of the United States has asserted repeatedly with respect to the U.S. antitrust laws, "Congress was dealing with competition, which it sought to protect, and monopoly, which it sought to prevent: *Standard Oil Co. v. Federal Trade Commission*, 340 U.S. 231 (U.S.S.C., 1951) , at pages 248-49 quoting *A. E. Staley Manufacturing Co. v. Federal Trade Commission*, 135 F.2d 453 (U.S. C.A. 7th Cir., 1943), at page 455". As my colleague pointed out, a similar expression of intent can be found in the Minister's (Minister of Consumer and Corporate Affairs and Canada Post) statement in the House of Commons where he reasserted in presenting the Bill that the ultimate objective of the Act was to provide consumers with competitive prices and product choices.

175 I agree with my colleague that the application of a balancing test requires a flexibility that the total surplus standard does not provide. It is true that a flexible approach may not yield the predictability that the assumptions and presumptions underlying the total surplus standard afford. However, if predictability is the preferred option, Parliament is at liberty to revisit section 96 and say so.

176 Finally, contrary to my colleague, I believe the Tribunal erred when it put on the Commissioner the legal burden (i.e., the burden of persuasion) of proving the effects of the lessening of competition. In practice, the merging parties will lead evidence of efficiency gains and of some of the effects of the lessening of competition. This is the evidential burden. They need to do that to establish that the gains offset the effects. Of course, the tendency for the merging parties might be to increase the amount of gains and downplay the effects of the lessening of competition. This is why, as we have seen in this case, the Commissioner also

bears in practice an evidential burden, that is the burden of leading evidence as to both components of the efficiency defence to alert the Tribunal to what the real, as opposed to the alleged, gains and effects are. In the end, however, the legal burden is on the merging parties to convince the Tribunal, first, that the efficiency gains are of the amount that they have contended, second, that the effects of the lessening of competition are those that they have identified and not those submitted by the Commissioner, and third, that the efficiency gains are greater than, and will offset, the effects.

177 I agree with the respondents that the Commissioner, with his statutory investigative powers, may be in a better position to gather information relevant to the effects and, indeed, that it would have done so in the context of the application of section 92 to which section 96 is a defence. The availability of statutory investigative powers will, indeed, enable the Commissioner to assume his evidentiary burden of gathering and filing relevant evidence to counter and rebut the allegations and evidence of the merging parties as to the effects of the lessening of competition. However, this is not sufficient to transfer the legal burden of proving these effects on the Commissioner. Indeed, there is no rationale and justification for putting on the Commissioner the burden of persuasion on one of the three components of the efficiency defence.

178 In conclusion, I would dispose of the matter as proposed by my colleague, except as to costs where I would make no apportionment in view of my conclusion that the Tribunal also erred on the issue of the legal burden of proof.

Appeal allowed in part.

Headnote
Commercial law --- Trade and commerce — Competition and combines legislation — Abuse of dominant position (monopolies) and mergers
Competition Tribunal must consider all objectives of Competition Act and particular circumstances of each merger when determining whether efficiencies of merger offset anti-competitive effect of merger — Appropriate standard for assessing efficiencies of mergers is Balancing Weights Approach — Including effects of entire redistribution of income and wealth caused by merger would vitiate Balancing Weights Approach and was not appropriate — Only socially negative effects of such redistribution were to be included.
The Commissioner of Competition applied for an order dissolving the merger of two propane companies. The Competition Tribunal found that the merger would substantially prevent and lessen competition and that divestiture was the sole appropriate remedy. However, the merger was saved from divestiture pursuant to s. 96 of the Competition Act by reason of efficiencies resulting from the merger. The Commissioner successfully appealed.

The appeals court held that the Tribunal had erred in limiting its consideration of the effects of the merger to resource-allocation effects and in not considering all of the objectives of the Act and the particular circumstances of the merger. The Tribunal was ordered to reconsider the matter, in accordance with the principles laid out by the court.

Held: The Application was dismissed on reconsideration.

Per Nadon, J: As an adjudicative body, the Tribunal's assessment does not include public interest consideration. Unlike American anti-trust law in which the overriding objective is consumer protection, in Canada s. 96 of the Competition Act gives paramountcy to the statutory objective of economic efficiency. Adopting an approach which prevented efficiency-enhancing mergers in all but rare circumstances must be wrong in law.

A merger to monopoly is not more objectionable than other instances of substantial lessening or prevention of competition unless additional effects are shown. However, once all the concerns raised by the Commissioner having been considered (deadweight loss, interdependent pricing, service quality, etc.) to consider monopoly, per se, as a qualitative factor, would be to double-count those effects.

The appropriate standard for assessing the efficiencies of mergers was the Balancing Weights Approach, by which a weighting factor is accorded to consumers as a group in order that consumer loss and producer gains be justly balanced. Including the effects of the entire redistribution of income and wealth caused by the merger would vitiate the Balancing Weights Approach. Accordingly, only the socially negative effects of such redistribution should be included. On the Commissioner's evidence, the measured adverse redistributive effect on consumers was approximately $2.6 million. The measured deadweight loss was $3 million and the maximum deadweight loss attributable to changes in the merged company's product line was $3 million dollars. Under any reasonable weighting scheme, the gains in efficiency of $29.2 million were greater than and offset all of the effects of lessening and prevention of competition attributable to the merger under review.

Per Dr. L. Schwartz (concurring): The proclaimed supremacy of the consumer interest in the United States is frequently overstated. The efficiency defence in s. 96(1) applies to mergers generally, even if imported and exported goods and services are not involved. Since the impact of a merger on small business is not a consideration under ss. 92 or 93, it might be inconsistent to give that impact greater weight under s. 96, despite the Court's direction otherwise. It is not reasonable to suppose that a firm with market power would impose the same price increase whether demand was inelastic or elastic.

Per Ms. C. Lloyd (dissenting): The majority erred in not considering some of the effects presented by the Commissioner. The majority should have considered the consumer's surplus transfer in its entirety. When all effects were properly considered the efficiency gains of $29.2 million per year did not adequately compensate society and offset the negative effects of this anti-competitive merger.

APPLICATION by Commissioner of Competition to dissolve merger of two propane companies.

***Nadon J.*:**

I. Introduction

1 On April 4, 2001, the Federal Court of Appeal (the "Court") set aside our decision of August 30, 2000. More particularly, the Court concluded that we erred in interpreting section 96 of the *Competition Act*, R.S.C. 1985, c. C-34 (the "Act"). As a result, the Court remitted the matter to us for redetermination in a manner consistent with its Reasons for Judgment (the "Appeal Judgment").

2 On December 7, 1998, an application was brought by the Commissioner of Competition (the "Commissioner") pursuant to section 92 of the Act for an order dissolving the merger of Superior Propane Inc. ("Superior") and ICG Propane Inc. ("ICG") or otherwise remedying the substantial prevention or lessening of competition that was likely to occur in the market for propane in Canada upon the implementation of the said merger. In our August 30, 2000, decision (the "Reasons"), we found that the merger of Superior and ICG would substantially prevent and lessen competition based on our analysis of the competitive effects with respect to two product markets (retail propane and national account coordination services) and 74 local geographic markets. Further, we concluded at paragraph 314 of our Reasons that "...the sole remedy appropriate in this case would be the total divestiture by Superior of all of ICG's shares and assets (including those of the previously integrated branches thereof)." The majority (Nadon J. and L. Schwartz) found that the merger was saved from divestiture by reason of the efficiencies resulting

from the merger. Specifically, the majority concluded, pursuant to section 96 of the Act, that the efficiencies arising from the merger were greater than, and offset, the effects of lessening or prevention of competition attributable to the merger.

3 When determining whether the efficiencies were greater than the anti-competitive effects, the majority adopted the "Total Surplus Standard". Under this standard, the gains in efficiency brought about the by merger are compared against the efficiency costs of the merger as represented by the deadweight loss. The Court found that the Tribunal erred in law by limiting the effects to be considered to resource-allocation effects and by failing to ensure that all of the objectives of the Act, and the particular circumstances of each merger, were considered in the balancing exercise mandated by section 96 of the Act.

4 The purpose of these Reasons and Order is to redetermine the extent of the effects of the aforementioned anti-competitive merger in light of the Court's decision. Consistent with the redetermination proceedings contemplated by the Court and upon agreement among counsel, no additional evidence was adduced at the five day hearing.

5 The redetermination proceedings raise several issues: (a) What is the scope of the redetermination proceedings? (b) Which findings of the Tribunal should or should not be revisited? (c) What is the jurisdiction and mandate of the Tribunal? (d) Which economic standard or test should be applied under subsection 96(1) of the Act? (e) What are the effects of the anti-competitive merger that must be considered by the Tribunal in this case? (f) How should they be treated and who bears the burden of proof? and (g) What is the result of the trade-off analysis conducted under subsection 96(1) of the Act based on the effects accepted by the Tribunal?

II. The Redetermination Proceedings

6 In *Air Canada* (*Air Canada v. Canada (Director of Investigation & Research)* (1993), 51 C.P.R. (3d) 131, [1993] C.C.T.D. No. 19 (Competition Trib.)), the Tribunal had to define the nature and extent of redetermination proceedings which arose out of a decision of the Federal Court of Appeal. In 1992, after having issued a consent order governing the operation of what was then known as Gemini, a computer reservation system used by Air Canada and Canadian Airlines, an application was brought to the Tribunal to vary the consent order. The Tribunal made a decision as to the scope of its jurisdiction. On appeal to the Federal Court of Appeal, the Court reversed and remitted the matter back to the Tribunal for reconsideration. Mr. Justice Strayer, who presided the Tribunal in the redetermination proceeding, made the following remarks starting at page 135:

> ...we have decided that the hearing for purposes of reconsideration will focus on establishing that the preconditions for the making of an order in accordance with s. 92 of the Act have been met and determining the appropriate remedy in the circumstances...
>
> We are satisfied that the means that we have chosen are, as a practical matter, adequate, fair and consistent with our understanding of the decision of the Federal Court of Appeal. (at page 135)
>
> *The sole justification for the tribunal once again becoming seized of this matter is the judgment of the Federal Court of Appeal. Without the direction to reconsider, the Tribunal would effectively be functus*. Unfortunately, and perhaps unavoidably given the complexity of the issues, the intentions of the Federal Court of Appeal with respect to the scope or nature of the hearing for reconsideration ... are not entirely transparent. (at page 136)
>
> *...the tribunal has a limited mandate in this matter--to reconsider certain issues in accordance with the direction of the Federal Court of Appeal*. We are of the opinion that much of the ground to be covered in the reconsideration is broadly the same as was previously covered...
>
> It is our understanding of the Federal Court of Appeal decision that the tribunal has been directed to "reconsider" the "matter" on the basis that the condition precedent to the exercise of the power to vary has been met. *The "matter" that is referred to is the November 5, 1992, application of the Director... The hearing to be held commencing November 15, 1993, is not a "new" case. The tribunal is neither required nor authorized by the Court of Appeal to hold a hearing de novo. The only reason that the tribunal can readdress this matter at all is because of the Court of Appeal decision and it must act in accordance with that decision*. (at page 140)

. . . . .

> Further, although Air Canada may have some new evidence, the issue of the possible restructuring of Canadian through a sale of its international routes was raised at the original hearing. At that time, Air Canada had ample opportunity to canvass this issue thoroughly. The tribunal addressed the evidence put before it in its decision of April 22, 1993, and concluded that it was not convinced that a sale of its international routes would leave Canadian as a viable domestic competitor... This finding formed part of the decision which was considered on appeal before the Federal Court of Appeal. Even if we were not precluded by the finding of that court, *it would be an exceptional measure for the tribunal to reopen this issue which it has already decided and to hear new evidence* ... (at page 141) [Emphasis added]

7 The Appeal Judgment provides the Tribunal with some guidance for the redetermination proceedings relating mainly to (a) the scope of the proceedings, (b) the meanings of effects for the purpose of section 96, (c) the scope of the burden on the Commissioner and the respondents with respect to section 96, and (d) the nature of the balancing exercise to be performed by the Tribunal pursuant to section 96. At paragraphs 156-157 of the Appeal Judgment, the Court stated:

> The Tribunal need only identify and assess "the effects of the prevention or lessening of competition" for the purpose of section 96 and decide whether the efficiencies that the Tribunal has already found to have been proved by the respondents are likely to be greater than, and to offset, those effects.
>
> The Commissioner has the legal burden of proving the extent of the relevant effects, while the respondents have the burden, not only of proving the scale of the efficiency gains that would not have occurred but for the merger, but also of persuading the Tribunal on the ultimate issue, namely, that the efficiency gains are likely to be greater than, and to offset, the effects.

8 The parties are not in agreement regarding the scope of the redetermination proceedings. The Commissioner argues that the scope thereof is described in paragraph 156 of the Appeal Judgment and that the "effects" that must be considered by the Tribunal are those described in paragraph 92 of the Appeal Judgment:

> Thus, although section 96 requires the approval of an anti-competitive merger where the efficiencies generated are greater than, and offset, its anti-competitive effects, the ultimate preference for the objective of efficiency in no way restricts the countervailing "effects", to deadweight loss. Instead, the word, "effects" should be interpreted to include all the anti-competitive effects to which a merger found to fall within section 92 in fact give rise, having regard to *all* of the statutory purposes set out in section 1.1.

9 The respondents disagree with the Commissioner for what they submit is an attempt to relitigate matters that were previously decided by the Tribunal but also attempt to convince the Tribunal to revisit its express and implicit findings regarding the likelihood of price increases following the merger, the size of the deadweight loss and the corresponding size of the wealth transfer.

10 The Appeal Judgment requires the Tribunal to conduct a broad assessment of all of the anti-competitive "effects" of the merger using a different standard or test, in lieu of the Total Surplus Standard, that reflects all of the objectives of the purpose clause of the Act. The Tribunal's initial findings were expressly tied to resource allocation and failed, according to the Court, to give adequate weight to the full range of objectives set out in the purpose clause of the Act. The Tribunal is now required to consider the wealth transfer that will result from the merger and to reconsider its prior findings with respect to the negative qualitative effects of the merger.

11 One of the important related issues is whether certain findings made by the Tribunal in its Reasons should be reexamined. Most of the Tribunal's findings in its Reasons were not appealed, and thus were not in issue before the Court. These findings cannot be revisited at this time. However, there were a number of findings that were made by reason of the erroneous interpretation of subsection 96(1) of the Act. In light of the Court's reasons and its interpretation of that section, this Tribunal must now make certain additional findings.

12 The respondents argue that the Commissioner is estopped from relitigating the qualitative effects of the merger on the basis of *res judicata*.

13 The Commissioner submits that a distinction must be drawn by the Tribunal between those "findings" which must necessarily be revisited in order to comply with the Court's direction to "consider all of the anti-competitive effects bearing in mind the purpose clause" and those "findings" that should not be "abandoned". The Commissioner submits that the Tribunal's "finding" regarding the negative qualitative effects of the merger must be revisited because the Tribunal's assessment in this regard was limited to the "impact on resource allocation of the negative qualitative effects". The Commissioner also argues that the estimated deadweight loss of $3 million per year attributable to price increases by the merged entity should not be revisited.

14 Further, the Commissioner submits that the doctrines of *functus officio* and *res judicata* invoked by the respondents do not apply with respect to the assessment by the Tribunal of any "effects" which fall within the scope of the Court's direction and which must be reconsidered in light of a proper reading of the purpose clause and in light of the particular circumstances of this case.

15 The majority of the Tribunal stated in its Reasons at paragraph 447, that:

> The Tribunal further believes that the only effects that can be considered under subsection 96(1) are the effects on resource allocation, as measured in principle by the deadweight loss which takes both quantitative and qualitative effects into account...

16 It is on the basis of this erroneous interpretation of section 96 that the majority refused to consider the wealth transfer and limited its assessment of the negative qualitative effects of the merger to their impact on resource allocation. As a result of this narrow interpretation of the statute, the majority did not consider the wealth transfer or any of the other (i.e. non-resource allocation) impacts of the negative qualitative effects of the merger.

17 At common law, the doctrine of *res judicata* only applies to a judicial decision which constitutes a final Judgment. In this instance, the Tribunal's decision with respect to the anti-competitive effects of the merger is not final, since the Court has remitted this matter to the Tribunal and has directed that the Tribunal reconsider the "effects of any prevention or lessening of competition" in accordance with a proper reading of the statute. Accordingly, the doctrine of *res judicata* has no application to the findings that were made as a result of our error in law. See Spencer Bower, Turner and Handley, The Doctrine of Res Judicata, 3d ed. (London: Butterworths, 1996), paragraph 19 (General Test), paragraphs 153-54 ("Finality"), paragraph 162 ("Decision subject to revision by tribunal itself") [hereinafter, *Spencer Bower, Turner and Handley*].

18 Further, when an appellate court reverses the findings of an inferior tribunal on a particular issue, the tribunal's judgment on that issue is voided *ab initio* and the appellate judgment becomes the sole source of *res judicata* between the parties. To the extent that any operation of *res judicata* arises in this instance, the Commissioner submits it arises to preclude Superior from challenging the express findings of the Court:

> 60. When a tribunal with original jurisdiction has granted, or refused, the relief claimed and an appellate tribunal reverses the judgment or order at first instance, the former decision, until then conclusive, is avoided *ab initio* and replaced by the appellate decision, which becomes the *res judicata* between the parties. Even if the appeal fails the operative decision becomes that of the appellate court which replaces the earlier decision as the source of any estoppels. (Spencer Bower, Turner and Handley)

III. The Role of the Tribunal

19 The Court made a number of remarks concerning the jurisdiction and mandate of the Tribunal, the selection and role of lay members of the Tribunal, and the significance that should be attached to section 1.1 of the Act (the "purpose clause") when interpreting specific provisions of the Act. We believe that it is important to expand on these remarks in order to provide for a better understanding of these issues.

20 More particularly, the Court describes the Tribunal as an adjudicative body and the Court recognizes that the Tribunal lacks the wide powers of multi-functional administrative agencies such as provincial securities commissions (Appeal Judgment,

at paragraph 48). The scope of the Tribunal's expertise is limited by virtue of not having broad policy development powers (Appeal Judgment, at paragraph 48), but like other regulatory administrative tribunals, it is charged with the responsibility of protecting the public interest by striking a balance among conflicting interests and objectives (Appeal Judgment, at paragraph 98). Yet, the composition of the Tribunal indicates a considerable level of expertise (Appeal Judgment, at paragraph 56) by virtue of the appointment process for lay members and their expertise (Appeal Judgment, at paragraph 54).

21 Further, the Court finds the purpose clause of the Act to have the "...typically indeterminate quality and inherent inconsistencies of purpose or objective clauses...", yet "statutory provisions containing general statements of legislative purpose are integral to the statute and can carry as much weight as its other sections..." (Appeal Judgment, at paragraph 87), and that balancing competing objectives in order to determine where the public interest lies in a given case requires the exercise of discretion (Appeal Judgment, at paragraph 99). Finally, the Tribunal is as well-suited to this task as "other independent, specialized, administrative tribunals that are required to perform similar balancing exercises in the discharge of their regulatory functions." (Appeal Judgment, at paragraph 99).

A. Jurisdiction and Mandate of the Tribunal

22 Regarding the Tribunal's conclusion that advancing views on the social merit of various groups in society and achieving the proper distribution of income in society were not its role under the Act, the Court states at paragraph 98 of the Appeal Judgment:

> In my view, this conclusion gives insufficient weight to the range of experience and perspectives that the Act contemplates that the members of the Tribunal may possess, and overstates the degree of "social engineering" involved in considering a broad range of anti-competitive effects under section 96. *Like other regulatory administrative tribunals, the Tribunal is charged with the responsibility of protecting the public interest, which it does by striking a balance among conflicting interests and objectives in a manner that respects the text and purposes of the legislation*, is informed both by technical expertise and by the judgment that comes from its members' varied experiences, and is responsive to the particularities of the case. [Emphasis added]

23 The Court's premise seems to lead to the conclusion at paragraph 116 of the Appeal Judgment that:

> Conversely, it is in my view far from a fatal objection to the balancing weights approach that its proponent at the hearing before the Tribunal, Professor Townley, testified that, as an economist, he was unable to determine what were the effects of the merger of Superior and ICG and whether the efficiencies likely to be produced thereby were greater than, and offset, them. I take his point simply to have been that he was called as a witness expert in economics and that the balancing exercise called for by section 96 required broader public policy judgments that were outside his area of expertise, *but were for the Tribunal to make as it thought would best advance the public interest within the parameters of the Act*. [Emphasis added]

24 The Tribunal is, no doubt, an adjudicative body, subject to review by the Court. The Tribunal is a quasi-judicial body that is mandated to hear cases and make decision based on its interpretation of the legislation (section 9 of the *Competition Tribunal Act* (the "CTA")). It is of interest to compare the Tribunal with multi-functional administrative agencies. Whereas those agencies often have a quasi-legislative function as well as policy development and enforcement powers, the Tribunal does not. The chair of such an agency reports to the Minister or through the Minister to the legislature; the chair of the Tribunal, required to be a member of the Federal Court, does not. The Tribunal regulates nothing except its own proceedings.

25 As a purely adjudicative body, the distinctive features of the Tribunal are its specialized area, competition law, and the presence of lay members who function in all respects as judges except that they do not decide matters of law. The lay members' contribution to the adjudication of matters arises from their specialized education and expertise, which enables them to understand the specialized evidence in fields of economics and commerce that typically appears in cases involving competition law. The presence of lay members recognizes that competition law is highly specialized, that judicial training in areas outside the law is limited, and that the judges of the Federal Court of Canada may be lacking in experience in commercial matters generally.

26 Thus, it is true that the lay membership does not possess, nor will they develop, the detailed knowledge of a particular regulated industry. This can only suggest that the role of the Tribunal differs in critical respects from the role of multi-functional

administrative agencies. Moreover, multi-functional administrative agencies will be entirely without the benefit of judicial members. This would be consistent with the quasi-legislative function that some, perhaps many, of these agencies discharge in their rule-making. However, the Tribunal has only an adjudicative function in which the judicial and lay members play complementary roles.

27 At the time that Bill C-91, An Act to Establish the Competition Tribunal and to amend the *Combines Investigation Act* and the *Bank Act* and other acts in consequence thereof (1 st Session, 33 rd Parliament, 1984-85-86), was introduced, the Minister explained the need for, and the role of, the proposed tribunal:

> The Economic Council of Canada's 1969 Interim Report on Competition Policy stated that any shift of competition policy legislation out of the criminal law should be accompanied by the formation of a specialized tribunal to adjudicate these matters. In their 1976 Report, Lawrence A. Skeoch and Bruce C. McDonald endorsed this view but stressed the need for the adjudicator to be separate from departmental policing and policy making functions. This conflict in roles has also been the subject of comment recently by the Supreme Court of Canada.
>
> In the Southam case, the Supreme Court decided that the investigatory functions of the RTPC [Restrictive Trade Practices Commission], such as the power to gather evidence through hearings and to direct further investigation, impaired its ability to act as an impartial adjudicator in authorizing search and seizure. This finding, which was made under the Charter of Rights and Freedoms, signalled a need to create an adjudicative body which would be free of the dual roles of investigation and adjudication that the RTPC has carried out in the past.
>
> The issue of adjudication of competition matters has been the subject of much discussion over the long history of competition law reform. Many interested parties have proposed reliance on the ordinary courts to adjudicate competition matters. One factor often cited in support of the courts is their ability to produce consistent results with clear and full rights of appeal. Others have expressed a preference for the use of a specialized tribunal because it would provide greater potential for expertise in economics and business, and would permit more scope for response by the decision maker to social and economic change. In particular, lay experts are better able to reflect the reality of the business world.
>
> *On balance, the Government believes it is more appropriate that these matters be adjudicated by a highly judicialized tribunal*. This hybrid will allow the use of expert lay persons as well as judges in the decision-making process. Nevertheless, the Government agrees that it is very important to have in the law an adjudication system that ensures the impartiality, due process and certainty which is associated with the courts.
>
> . . . . .
>
> The Tribunal's functions will be strictly adjudicative. It will have no role in supervising the investigative powers of the Director, initiating investigations or providing research of policy advice to the Government...
>
> (Minister of Consumer and Corporate Affairs [Canada], The Honourable Michel Côté, *Competition Law Amendments: A Guide*, December 1985 at 10-11.) [Emphasis (italics) added] [hereinafter, *Competition Law Amendments: A Guide*]

28 The reasons for replacing the RTPC with the Tribunal emphasize the Tribunal's strictly adjudicative role. Hence, the Tribunal's mandate is not to make decisions driven by "public interest concerns". In our view, the guardian of the public interest, if there is one in competition matters, is the Commissioner who has the statutory obligation to conduct inquiries, the discretion to initiate civil legal proceedings before the Tribunal and other courts and the powers to enforce the Act in the public interest. The Commissioner also has the right to intervene before administrative agencies to defend competition.

29 Since the Tribunal is not an administrative body such as the Canadian Radio-Telecommunications Commission, the National Energy Board, the Ontario Securities Commission, etc., its lay members are called upon only to apply the Act based on their assessment of the evidence. For example, under section 92 of the Act, the lay members must determine whether a merger prevents or lessens competition substantially and they must contribute to the determination of the order that addresses such findings. Such assessments do not involve public interest consideration. Hence, the Tribunal does not fully understand the Court's remarks at paragraph 99 of the Appeal Judgment:

> Of course, balancing competing objectives in order to determine *where the public interest lies in a given case requires the exercise of discretion*... [Emphasis added]

B. Role of Lay Members

30 The Court drew attention to the selection process for lay members and noted that lay members were representative of the broad-based council that considers their appointment (Appeal Judgment, at paragraph 54). Accordingly, the Court holds that the Tribunal exercises discretion to act on its understanding of the public interest.

31 It is true that the CTA provides for an advisory council to vet candidates for appointment of lay members and to make recommendations to the Minister regarding appointments. However, the members of the advisory council, while required to be chosen from different groups in society, are not representatives of those groups. The Parliamentary Committee that reviewed Bill C-91 in 1986 studied this matter at length and amended the Bill to clarify that lay members were "individuals chosen from" certain groups rather than "representatives of" those groups as the Bill had provided:

> **Mr. Ouellet**: Mr. Chairman, I would like that subclause 3.(3) of the bill be amended by striking out line 17 on page 2 and substituting the following:
>
> > erality of the foregoing, individuals chosen from
>
> This is the reason for my amendment. As has been pointed out by some of the witnesses who have appeared before us, if we leave the end of this paragraph as it is, the business community, legal community, consumer group and labour group might believe that those who will advise the Ministers are advising the Ministers on behalf of these communities and groups. It might create a conflicting advisory board rather than an advisory board which is helping the Minister, in a sense, one that gives genuine and unattached recommendations.
>
> By changing a word there, it will be clear that these people are not representative of these so-called groups, but are chosen from among these groups.
>
> **The Acting Chairman (Mr. Cadieux)**: Mr. Domm.
>
> **Mr. Domm**: Mr. Chairman, to show how interested we are in getting along with the legal profession, and noting that the Canadian Bar Association made this point in their presentation to the committee, we would be prepared to accept that amendment as proposed by Mr. Ouellet.
>
> Amendment agreed to ... (Minutes of Proceedings and Evidence of the Legislative Committee on Bill C-91. House of Commons, Issue No. 10, Tuesday, May 20, 1986 at 10:37)

32 Since the members of the advisory council itself were not selected in order to act as representatives of the groups from which they were chosen, it follows that the lay members recommended by the council were also not to be seen as representative of such groups. The amendment by the Parliamentary Committee makes it clear that the role of the advisory council was to consider lay appointments to the Tribunal based solely on the expertise and experience of candidates, rather than on the extent to which those candidates represented the interests of different groups in society. Indeed, the Minister had already made this clear:

> Parliament has long recognized the need for special investigatory powers to deal effectively with competition matters. However, as stated by the Supreme Court decision in the Southam case, certain procedural safeguards have to be met in order to satisfy the protections embodied in the Canadian Charter of Rights and Freedoms. There is also a very real need to reassess the adjudication of the non-criminal matters under the Act to ensure that the adjudicator has the economic and business expertise to deal with competition issues and yet still provide procedural fairness and consistency in decision-making. (*Competition Law Amendments: A Guide*, at 5.)

33 The Tribunal further notes that the Minister is bound to consult the advisory council only when it has been constituted. The Tribunal understands that in 1992, an order-in-council terminated the appointment of each of the members of the advisory council established pursuant to subsection 3(3) of the CTA. Indeed, the February 1992-93 Budget announced the winding up of a list of agencies and committees as part of the deficit reduction initiatives. The list included the advisory council on lay members of the Competition Tribunal (Hon. Gilles Loiselle, President of the Treasury Board, *Managing Government Expenditures*, February 27, 1992, page 39). The document explained that "...with Canada's competition regime now mature and well functioning, there is no longer a need to maintain a separate statutory advisory committee [sic]." The elimination of the advisory council indicates to us that it is unlikely that the council was constituted to ensure the selection of members who may share their views about the public interest generally.

34 Accordingly, in our view, there does not appear to be a basis for inferring that Parliament intended the lay members of the Tribunal to play the same role as members of multi-functional administrative agencies. In particular, lay members of the Tribunal do not exercise their discretion to determine the public interest in the face of conflicting objectives because (a) the Tribunal is adjudicative only and, like a court, has no public-interest mandate; (b) discretion to determine the public interest is not required to adjudicate; (c) the Act, which itself defines the public interest, clearly articulates what the Tribunal is to do when a merger that lessens competition substantially also generates efficiency gains, and (d) the party with the public-interest mandate, if there is one, is the Commissioner.

35 The idea of the Tribunal as a court was readily accepted in 1991 by senior officials of the federal Justice Department:

> The 1986 amendment package, among other things, shifted the merger and monopoly provisions from the criminal law to a civil basis. Adjudication of these provisions, along with the existing civilly reviewable practices, was placed in the hands of the newly created Competition Tribunal. The Tribunal is a hybrid court which sits in panels consisting of judges of the Federal Court Trial Division and lay members possessing knowledge of economics and business matters. (D. Rutherford, Q.C., Associate Deputy Minister, Department of Justice, Canada and J.S. Tyhurst, Counsel, Department of Justice, Canada. "Competition Law and the Constitution: 1889-1989 and into the Twenty-First Century", chapter 8 of R.S. Khemani and W.T. Stanbury (eds.), *Historical Perspectives on Canadian Competition Policy*, The Institute for Research on Public Policy, Halifax, 1991 at 277) [hereinafter, *Rutherford and Tyhurst*]

36 It is noteworthy that neither the Minister nor these senior officials made any mention whatsoever to any public-interest role for the Tribunal or any such role therein for the lay members of the Tribunal.

IV. Roots of the Merger Provisions of the Act

37 In the Appeal Judgment, the Court adopts the legislative history of section 96 as recited by Madame Justice Reed in the *Hillsdown* decision (*Canada (Director of Investigation & Research) v. Hillsdown Holdings (Canada) Ltd.* (1992), 41 C.P.R. (3d) 289 (Competition Trib.)) and refers to Reed J.'s analysis of the preceding, unenacted versions of the efficiency defence in Bills C-42 and C-29. In the Court's view, these Bills "...did not require that the efficiencies gained from an anti-competitive merger be balanced against its effects." (Appeal Judgment, paragraph 129 at 50-51)

38 To illustrate, the Court points out that

> [130] Thus, Bill C-42 would have permitted an anti-competitive merger to proceed, provided only that substantial efficiency gains could be proved "by way of savings of resources for the Canadian economy" that would not otherwise have been attained: clause 31.71(5). Bill C-29 called for a determination of whether "the gains in efficiency would result in a substantial real net saving for the Canadian economy": clause 31.73(c). Neither of these provisions calls for a balancing of efficiencies against effects. Instead they focus on resource maximization in the economy as a whole in the same way as the total surplus standard.
>
> [131] I agree with Reed J.'s conclusion that, seen against this background, the more open-ended direction given to decision-makers by section 96, namely to balance the efficiency gains against the "effects" of an anti-competitive merger, should not

be interpreted in substantially the same manner as the above clauses, which explicitly permitted anti-competitive mergers when the resulting efficiency gains produced *net savings of resources for the Canadian economy*. While earlier bills seem clearly to have encapsulated the total surplus standard in the efficiency defences, section 96 does not. (Appeal Judgment, at page 51) [Emphasis in original]

39 It appears to the Tribunal that both the Court and Reed J. have decided the meaning of subsection 96(1) of the Act solely by reference to its terms and to the terms of the corresponding subsection of preceding bills designed to amend the *Combines Investigation Act*, R.S.C. 1970, c.C-23, ("*Combines Investigation Act*"). We believe that a careful and detailed review of the legislative history of section 96 is essential to properly understand the true meaning of that provision.

A. 1969 Interim Report of the Economic Council of Canada

40 The source of the various bills proposed by the federal government was the *Interim Report on Competition Policy* issued by the Economic Council of Canada in July 1969 (the "Report"). That Report was the second of three reports in response to a special Reference from the federal government dated July 22, 1966, requesting the Council:

In the light of the Government's long-term economic objectives, to study and advise regarding:

(a) the interests of the consumer particularly as they relate to the functions of the Department of the Registrar General [now the Department of Consumer and Corporate Affairs];

(b) combines, mergers, monopolies and restraint of trade;

(c) patents, trade marks, copyrights and registered industrial designs.

(Report, at 1)

41 The Economic Council pointed out in the Report that the first part of the Reference was treated in the Council's *Interim Report on Consumer Affairs*, published in 1967, and that its next report would discuss the matters in (c) of the Reference (Report, at 1). The Economic Council wrote that:

The present Report deals with the second part - that is, with "combines, mergers, monopolies and restraint of trade" or, as we prefer to call it, competition policy. (Report, at 1)

Accordingly, the Economic Council distinguished competition policy from the federal role in consumer protection.

42 Describing the objectives of previous competition policy, the Economic Council observed:

In the past, the major objective of Canadian competition policy has usually been expressed in such terms as "the protection of the public interest in free competition". But it is necessary to go behind this and ask what the preservation of competition was intended to accomplish. One would be unwise to assume that what the legislators aimed at was a single, simple end such as economic efficiency. At least some role was likely played by considerations such as the desire to diffuse economic power (and thus, by implication, political power), sympathy for the plight of the small enterprise and entrepreneur, suspicion of big business, and concern for the fairness of competitive behaviour.

On the whole, however, competition policy in Canada appears to have been directed towards more strictly economic ends. Two such ends may be distinguished, one being concerned with the distribution of income, the other with the allocation of real resources in the economy.

Popular thinking about competition policy has tended to stress the first, or income, objective...

Professional economists, while not ignoring income distribution effects, have tended to be more concerned with the second objective of competition policy-the resource-allocation objective. This is a less obvious objective, but a highly relevant one for broad economic goals such as productivity growth. To many economists, the greatest objection to monopoly (again using the extreme example) is that it distorts the way scarce human and physical resources are brought together and used to meet the many demands of consumers. It leads, in other words, to inefficiency. The monopolist's prices are too high, relative to other prices, and because the usual adjustment machinery is not operative, they remain so. As a result, "relative prices become unreliable as indexes of relative scarcities and relative demands ... too little will be produced and too few resources utilized in [monopolistic] industries with high margins; and too much will be produced and too many resources utilized in industries with low margins." ... (Report, at 6-7)

43 The Economic Council concluded that competition policy (i.e. policies toward combines, mergers, monopolies and restraint of trade) should focus on economic efficiency:

It will be a recurrent theme in this Report that Canadian competition policy should aim primarily at bringing about more efficient performance by the economy as a whole. *Competition should not itself be the objective* but rather the most important single *means* by which efficiency is achieved... (Report at 9) [Emphasis in original, underlined emphasis added]

Essentially, we are advocating the adoption of a single objective for competition policy: the improvement of economic efficiency and the avoidance of economic waste, with a view to enhancing the well-being of Canadians...

This concentration on one objective is not meant to imply any necessary disparagement of other objectives, such as more equitable distribution of income and the diffusion of economic power, which have been entertained for competition policy in the past. It is simply that we believe:

(1) that a competition policy concentrated on the efficiency objective is likely to be applied more consistently and effectively; and

(2) that there exist more comprehensive and faster-working instruments, particularly the tax system and the structure of transfer payments, for accomplishing the deliberate redistribution of income and the diffusion of economic power, to whatever extent these are thought to be desirable.

(Report, at 19-20)

44 Thus, the Report firmly established that redistributive effects of competition policy were separate matters. The Council also cautioned against the uncritical acceptance of competition policies in other countries, in particular, the United States:

In drawing lessons from abroad, appropriate allowance must of course be made for differences between the Canadian and foreign economic environments. This has often been pointed out with reference to the United States. Although competition policies in Canada and the United States, as instituted in the late nineteenth century, were in many ways a response to common concerns, their subsequent divergence has been partly a reflection of certain rather deep-seated differences between the two countries ... and the smaller size and greater openness and world-trade orientation of the Canadian economy. *Perhaps the most important implication of the latter difference is that the Canadian economy is less able than its U.S. counterpart to afford a competition policy that, on occasion, may be prepared to sacrifice economic efficiency for other ends, such as the preservation of small business*. (Report, at 48) [Emphasis added]

45 The Economic Council recommended the creation of a tribunal that would adjudicate mergers to determine anti-competitive effects and "offsetting public benefits":

In its examination of a merger, the tribunal might be expected to have regard to all aspects of the merger that were related in any important way to the tribunal's general terms of reference. It would be primarily concerned with whether the merger was likely to lessen competition to the detriment of final consumers, and whether there were likely to be any offsetting public benefits. In addition, and without restricting the generality of the foregoing, the tribunal would be requested to pay attention to the following matters *in so far as they appeared to be of substantial economic importance in any particular case*:

. . . . .

> (8) the likelihood that the merger would be productive of substantial "social savings", i.e. savings in the use of resources (including resources used for such purposes as research and development), viewed from the standpoint of the Canadian economy as a whole.

(Report, at 115-116) [Underlined emphasis added]

46 Given the Economic Council's overriding concern with efficiency and its belief that distributional concerns were not part of competition policy, it is clear that the tribunal was not to be concerned with the redistributional effects of an anti-competitive merger when it considered item (8) because those effects were not losses of resources and, as redistributions of income, were not losses to society when viewed from the standpoint of the Canadian economy as a whole. Accordingly, the use of the phrase "offsetting public benefits" could not be used to introduce redistributional effects. Yet, the Economic Council did refer to a "balancing assessment":

> ...[The Director] would leave the consideration of item (8), dealing with social savings, to the tribunal, which in many cases would find itself required to perform *a balancing assessment between possible detrimental effects on competition and possible beneficial effects in the form of social savings*. It should be pointed out in this connection that what appear to be cost savings to individual firms are not always "social savings", i.e. savings for the total economy. Thus, for example, a firm that has grown larger by acquiring another firm may be able to obtain certain supplies more cheaply purely by virtue of its greater bargaining power. There are various possible outcomes in terms of profits and prices, but there is no saving in terms of the real resources (the physical amounts of labour, capital, etc.) required to produce and transport the supplies in question. No real resources are freed for other uses in the economy... (Report, at 117) [Emphasis added]

Accordingly, the Economic Council's "balancing assessment" referred, not to adverse redistributive effects on consumers, but to the detrimental effects of a merger on competition. In this assessment, the Economic Council emphasized the need to distinguish between real savings and pecuniary savings.

B. Legislative History of the Efficiency Defence

47 Bill C-256 was the government's first attempt to amend the *Combines Investigation Act* following publication of the Report. The government did not accept the Economic Council's insistence on economic efficiency as the sole objective of competition policy, as can be seen in the preamble to Bill C-256:

> Whereas competition in the private sector is ordinarily the best means of allocating resources, of enhancing efficiency in the production and distribution of goods and services and of transmitting the benefits of efficiency to the public, and competition also furthers individual enterprise by decentralizing economic power and reducing the need for government intervention in the achievement of economic objectives;
>
> And Whereas it is therefore desirable to promote competition actively and also to remove, throughout Canada, obstacles to competition whether created by combinations, mergers, monopolies or other situations or practices, and such objectives can only be achieved through the recognition, encouragement and enforcement of the role of competition as a matter of national policy;
>
> And Whereas it is also recognized that in cases where a market is too small to support a sufficient number of independent firms of efficient size to promote effective competition, alternative means of promoting maximum efficiency may be required, *but that where such an alternative means is adopted, it is necessary to ensure that the resultant benefits will be transmitted in substantial part and within a reasonable time to the public and that the public will be protected against any abuses that the alternative means of promoting efficiency may facilitate*;
>
> And Whereas it is necessary and desirable, in the interest of efficiency of production and distribution and the transmission of the benefits thereof to the public, to promote honest and fair dealing in the market;

Now therefore... (House of Commons, Bill C-256, 3 rd Session, 28 th Parliament, 19-20 Elizabeth II, 1970-71. (First Reading, June 29, 1971) [Emphasis added]

48 The preamble specifically calls attention to economic power, and to consumer welfare when it would be necessary, due to small market size, to depart from competition in order to achieve efficiency. The merger provisions of Bill C-256 addressed this concern with an efficiency defence that included a "passing on" requirement:

s.34(3) A merger shall not be prohibited or dissolved by order of the Tribunal if it is satisfied

(a) that none of the parties thereto could reasonably have commenced or continued to carry on business in the relevant market independently; or

(b) that

(i) the merger has led, is leading or is likely to lead to a significant improvement of efficiency over that which any of the parties to the merger could have achieved by commencing or continuing to carry on business independently or in any other manner that would have led to less restriction of competition than resulted or would be likely to result from the merger, and

(ii) a substantial part of the benefits derived or to be derived from such improvement of efficiency are being or are likely to be passed on, through conditions imposed by the market or by order of the Tribunal, to the public within a reasonable time in the form of lower prices or better products.

49 It was a clear concern of Bill C-256 that redistributional effects of anti-competitive mergers saved by efficiency gains not harm consumers beyond a reasonable time period. This concern was successively de-emphasized in subsequent bills.

50 Section 1 of Bill C-42 contained as preamble:

An Act to provide for the general regulation of trade and commerce by promoting competition and the integrity of the market place and to establish a Competition Board and the office of Competition Policy Advocate

WHEREAS a central purpose of Canadian public policy is to promote the national interest and the interest of individual Canadians by providing an economic environment that is conducive to the efficient allocation and utilization of society's resources, stimulates innovation in technology and organization, expands opportunities relating to both domestic and export markets *and encourages the transmission of those benefits to society in an equitable manner*;

AND WHEREAS one of the basic conditions requisite to the achievement of that purpose is the creation and maintenance of a flexible, adaptable and dynamic Canadian economy that will facilitate the movement of talents and resources in response to market incentives, that will reduce or remove barriers to such mobility, *except where such barriers may be inherent in economies of scale or in the achievement of other savings of resources*, and that will protect freedom of economic opportunity and choice by discouraging unnecessary concentration and the predatory exercise of economic power and by reducing the need for detailed public regulation of economic activity;

AND WHEREAS the effective functioning of such a market economy may only be ensured through the recognition and encouragement of the role of competition in the Canadian economy as a matter of national policy by means of the enactment of general laws of general application throughout Canada and by the administration of such laws in a consistent and uniform manner;

NOW, THEREFORE,... (Bill C-42, 2 nd Session, 30 th Parliament, 25-26 Elizabeth II, 1976-77. (First Reading March 16, 1977) [Emphasis added]

51 Bill C-42's preamble expresses concern for efficiency and equity generally, and states that saving resources could entail a departure from competition. However, in contrast with the previous bill, Bill C-42 limited the availability of the efficiency defence and dropped the "passing on" requirement:

> s.31.71(5) The Board shall not make an order under subsection (3) where it is satisfied by the parties to a merger or proposed merger to which this section applies that the merger or proposed merger has brought about or that there is a high probability that it will bring about substantial gains in efficiency, by way of savings of resources for the Canadian economy that are not reasonably attainable by means other than the merger.
>
> . . . . .
>
> (7) Where the Board finds that
>
> > (a) subsection (5) applies in respect of a merger or proposed merger to which this section applies, and
> >
> > (b) the merger or proposed merger will or is likely to result in virtually complete control by the parties to the merger or proposed merger in respect of a product in a market,
>
> the Board shall, notwithstanding subsection (5), make an order under subsection (3)...

52 The new approach to equity in merger review was therefore not to require a "passing on" of the benefits of efficiency gains to consumers, but rather to deny the availability of the efficiency defence when the merger would lead to virtually complete control of a product in a market. However, when the efficiency defence was available, no measures for consumer protection in respect of an anti-competitive merger were provided in the merger provisions.

53 The preamble and corresponding provisions in Bill C-13 (3rd Session, 30th Parliament, 26 Elizabeth II, 1977) were virtually identical to the above provisions of Bill C-42, although the efficiency defence in subsection 31.71(5) now required a "clear probability of substantial gains in efficiency that save resources for the Canadian economy". The limitation on the availability of the efficiency defence was retained.

54 Bill C-29 (2nd Session, 32nd Parliament, 32-33 Elizabeth II, 1983-84) differed in several respects. It contained no preamble or purpose clause and hence no reference to any goal including equity. It assigned merger review to the courts with an efficiency defence:

> s.31.73 The Court shall not make an order under section 31.72...
>
> > (c) where it finds that the merger or proposed merger has brought about or is likely to bring about gains in efficiency that will result in a substantial real net saving of resources for the Canadian economy and that the gains in efficiency could not reasonably be expected to be attained if the order were made.

Like Bills C-42 and C-13, there was no "passing on" requirement; however, unlike those Bills, there was no limitation on the availability of the efficiency defence.

55 In December, 1985, the Minister introduced Bill C-91 (1st Session, 33rd Parliament, 33-34 Elizabeth II, 1984-85) with a purpose clause and an efficiency defence which survived subsequent Parliamentary review and were included in the Act.

56 In *Hillsdown, supra*, Reed J. concluded that subsection 96(1) of the Act differed from the efficiency defences in Bills C-42 and C-29 only because it required the balancing of efficiency gains against the effects of the merger which those Bills did not apparently require. However, it does not appear that Reed J. took note

> (a) of the explicit concern with distributional equity in the preambles of Bills C-256, C-42 and C-13, and the explicit omission thereof in Bills C-29, C-91 and the Act;

(b) that Bill C-42 and all subsequent bills and the Act had dropped the "passing on" requirement in the efficiency defence contained in Bill C-256, and

(c) that the limitation on the availability of the efficiency defence in Bills C-42 and C-13 was omitted from Bills C-29, C91 and the Act.

57 In the Tribunal's view, Bill C-29, by requiring the "substantial real *net* saving", did call for a comparison of gains in efficiency attributable to the merger with the effects that reduced the savings therefrom. This formulation was an indication that the gains in efficiency and the effects had to be expressed in like units, otherwise the netting could not be done. For example, it is not clear how adverse redistributive effects, which are not losses of real savings, could be netted against real savings. Moreover, Bill C-29 contained no preamble or purpose clause and no reference to equity.

58 While, unlike Bills C-256, C-42 and C-13, Bill C-91 made no reference to equity, the issue of fairness to consumers came before the Parliamentary Committee reviewing Bill C-91.

C. The Parliamentary Committee

59 In its Appeal Judgment, the Court held the following:

[100] Finally, I also find it difficult to accept the Tribunal's interpretation of the Act for the following two reasons. First, when Bill C-91 was introduced in Parliament it was widely regarded as a consumer protection measure. Thus, the Minister responsible stated in the House of Commons (*Debates, supra*, at 11927) that the Consumers' Association of Canada saw the Bill as promising "real progress for consumers". Indeed, the guidebook introduced when the legislation was first tabled states (Consumer and Corporate Affairs Canada, *Competition Law Amendments: A Guide* (December 1985), page 4):

> Consumers and small business are among the prime beneficiaries of an effective competition policy.

[101] In addition, the background document released when the amendments were previously tabled (Consumer and Corporate Affairs Canada, *Combines Investigation Act Amendments 1984: Background Information and Explanatory Notes* (April 1984), page 2), states that:

> the Bill is concerned with fairness in the functioning of markets-fairness between producers and consumers, fairness between businesses and their suppliers, and suppliers and their customers.

[102] It thus seems to me unlikely that Parliament either intended or understood that the efficiency defence would allow an anti-competitive merger to proceed, regardless of how much the merged entity might raise prices, provided only that the efficiencies achieved by the merger exceeded the resulting loss of resources in the economy at large. As Reed J. noted in the *Hillsdown* case, *supra*, at pages 337-38, differences in the drafting of the efficiency defence in the precursors to Bill C-91, which were not enacted, point in the same direction, and are considered in paragraphs 129-131, *post*.

60 The Court's extract from page 4 of the *Competition Law Amendments: A Guide*, is an extract from the Minister's statement noted above and, in the Tribunal's view, requires some examination. The quoted passage comes in the context of the following:

The relatively small size of the Canadian market and the overall importance of international trade to the economy dictates that certain industries have to be concentrated in order to achieve scale or other efficiencies necessary to compete in world markets. However, the trend toward increasing concentration historically has been a cause for concern, and many industries are protected from competition by high economic and institutional barriers to entry, such as high tariffs. The Bill brings the law into focus with current economic realities so that it is better able to deal with the implications for Canadian industry of foreign competition in Canada and competition in world markets.

Consumers and small business are among the prime beneficiaries of an effective competition policy. These two groups are afforded little protection from anti-competitive conduct on the part of large, dominant firms under the existing legislation.

> The Bill strengthens the law and makes it more effective, thus ensuring *fairness in the marketplace*. This will benefit consumers and will maintain and encourage the drive and initiative of the small business sector, which has the greatest potential for job creation. (*Competition Law Amendments: A Guide*, at 4) [Emphasis added]

The full extract makes it clear that the creation of dominant firms able to compete successfully is the policy goal, and that consumers and small businesses will be better protected from anti-competitive conduct by these firms. When viewed in context, the cited extract does not confirm that the civil matters under Act are primarily measures for consumer protection, although consumers and small businesses would be "among the prime beneficiaries" not only from improved protection but also from the greater ability to compete.

61 In quoting the document *Combines Investigation Act Amendments 1984: Background Information and Explanatory Notes* (April 1984), the Court is referring not to Bill C-91 but rather to Bill C-29. As noted above, Bill C-29 differed from its predecessors by making no reference whatsoever to equity. Moreover, its efficiency defence explicitly ignored the redistributive effects that concerned its predecessor bills: the "passing on" requirement of Bill C-256 and the limitation on the efficiency defence in Bills C-42 and C-13 were dropped from this Bill. The "fairness" in the sentence quoted by the Court refers not to social equity but, rather, the fairness of opportunity provided in a competitive marketplace; there is no presumption that the resulting distribution of income and wealth in a competitive economy will be fair or equitable. Indeed, competitive markets may distribute income and wealth inequitably.

62 In the Tribunal's view, Parliament clearly understood that consumer protection was not the main goal of the amendments to the Act or of the merger provisions in particular. The Committee that considered Bill C-91 considered two amendments to the purpose clause that would have confirmed that view, but those amendments were not adopted by the Committee and not reported to the House of Commons:

> **Mr. Ouellet**: My amendment, Mr. Chairman, relates to the purpose of the bill, which is stated on page 7. I would like to strike out lines 14 to 26 and substitute the following:
>
> > The purpose of this act is first and foremost to provide consumers with competitive prices and product choices, and also in order to [e]nsure that small and medium-size enterprises have an equitable opportunity to participate in the Canadian economy and in order to maintain and encourage competition in Canada in order to promote the efficiency and adaptability of the Canadian economy, in order to expand opportunities for Canadian participation in world markets while at the same time recognizing the role of foreign competition in Canada.
>
> The purpose of my amendment is to give priority to consumers interests. You will note, Mr. Chairman, that not one word of my amendment is different from clause 1.1.
>
> . . . . .
>
> **Mr. Ouellet**: The reason for my amendment is to give priority to competitive prices and a choice of products for consumers. A Competition Act is first and foremost one that should protect consumers. The prime objective of a Minister of Consumer and Corporate Affairs should be to protect consumers. The way in which the purpose of the bill is presented suggest that consumer protection is the Minister's least concern. I do not think that this is the case. I therefore want to restore the normal order and refer to consumers first, then to competition in world markets and finally to the Canadian economy.
>
> . . . . .
>
> **Mr. Domm**: Yes. I appreciate the opportunity to point out that the purpose of this clause we are discussing today is to encourage competition, and particularly participation in world markets. It is not to overlook consumers. But I think it is to act as a guide to the purpose and object of the legislation. Competition itself is not an end, but it is rather the most effective means of stimulating efficiency and productivity and Canadian industrial growth. I think that we have to be cognizant of efficiency, international competitiveness and fairness.
>
> Consumers would benefit directly from increased competition because that of course results in lower prices and increased choice and better quality. I think there are some other factors that we should consider too, such as the Constitution. I would like to ask our gentleman from Justice to elaborate on that at this time.

. . . . .

Mr. Rosenberg: This morning, Mr. Ouellet, you raised the question about the constitutionality of the tribunal's jurisdiction. In looking at your amendment, I am a little bit concerned that in characterizing the purpose of the act as being first and foremost to provide consumers with competitive prices and product choices, essentially it seems to be characterized as a concern with individual contracts between consumers and the prices consumers pay for goods rather than with a concern for competition generally.

I am concerned when you start characterizing the business of the federal government as being individual consumer contracts, you are straying into an area which is within provincial jurisdiction; that is, contracts or property and civil rights in the province. I think it is important to characterize the goal of the law as being generally the encouragement of competition.

That being the purpose, one of the effects of it is going to be to lead to lower consumer prices and better product choice, but I think it is important not to lose sight of the fact the general purpose has got to be with respect to the competitive system generally throughout the country and not with respect to specific consumer concerns. The provinces have consumer protection statutes within their jurisdiction.

Mr. Domm: Thank you very much. We should also point out some positions taken by organizations like the Canadian Federation of Independent Business. On page 312 of their brief, they are very pleased with the inclusion of small business in the purpose clause. Also, the Canadian Manufacturers' Association, page 301: they are pleased with the wording of proposed subsection 1.1, which fully recognizes competition is international as well as domestic in today's marketplace, on page 1. The Chamber of Commerce, on page 316, point 2, is pleased that any framework legislation such as Bill C-91 must in itself be capable of being interpreted in a dynamic fashion. These are other reinforcing justifications for dealing specifically with the encouragement of competition in Canada.

Mr. Cadieux: I would just like to add, Mr. Chairman, that when you look at the title, whether you look at it in French or in English, *loi sur la concurrence* or Competition Act, and then go into the object-and if I read the English version of your text, which is perhaps more explicit, the purpose of this act is first and foremost to provide consumers with competitive prices, etc.-I think I agree more and more with the legal experts here that perhaps we are creating a horse of a different colour right now. We do have to deal with competition and of course, as a consequence, will ensure better prices for the consumer. Because of this, I will have to vote against the proposed amendment.

Motion negatived: nays, 3; yeas, 2

The Chairman: Mr. Orlikow's amendment now, on the same clause.

Mr. Orlikow: Mr. Chairman, I would move the following amendment to clause 19. I would move to strike out lines 14 to 26 and substitute the following words:

> 1.1 The purpose of this Act is to maintain and encourage competition in Canada in order to provide consumers with competitive prices and choice of goods and services wherever they may live, while at the same time ensuring that small and medium-sized enterprises have a full opportunity to participate in an economy with open markets.

The Chairman: Do I have some comment from Mr. Cappe or Mr. Domm? Mr. Cappe.

Mr. Cappe: Mr. Chairman, I do not have any comments on the reordering of the objectives. I think the dropping of the reference to promoting efficiency and adaptability of the Canadian economy is important, partly because of the way it affects consumers. I will just make that one comment.

Amendment negatived: nays, 3; yeas, 2 (Minutes of Proceedings and Evidence of the Legislative Committee on Bill C-91. House of Commons, Issue No. 10, Tuesday, May 20, 1986 at 10:59-10:62)

63 The Tribunal notes, for greater certainty, that Mr. Cappe and Mr. Rosenberg appeared before the Committee in their positions as Assistant Deputy Minister, Policy Coordination and General Counsel, respectively, for the Department of Consumer and Corporate Affairs and were co-drafters of Bill C-91.

64 It is apparent that the Minister's comments regarding Bill C-91 to which the Court refers relate to the benefits of competition generally for consumers. As the Parliamentary Committee emphasized, the principal focus of the amendments to the Act was not to protect consumers directly because, *inter alia*, doing so intruded in the provinces' domain and restricted the attainment of other goals, including efficiency, that also benefit consumers.

65 It is certainly true that Bill C-91 received support from the Consumers' Association of Canada, but only insofar as the Bill promoted its approach to consumer welfare. In fact, the Association was critical of the efficiency defence. A representative of the Association appeared before the Parliamentary Committee and made the following statement:

> **Mr. Thompson**: ...I would just like to sum up our remarks at this stage by saying that we think Bill C-91 is substantially better that what we have now. It is progress; there is no question about that. This is probably a familiar refrain to this committee at this stage. However, we think that from the consumer perspective it falls a long way short of what we deserve...
>
> We have a very short list of suggestions for improvements, I think it is fair to say-improvements in the tribunal powers, opportunities for consumers to appear before the tribunal, the removal of "unduly" from the conspiracy section, the removal of the object or intent test from "abuse of dominant position", tightening up of the efficiency defence and mergers, and a lowering of pre-notification thresholds.
>
> We feel that those are proposals which would significantly improve price and choice for consumers in the economy... (Minutes of Proceedings and Evidence of the Legislative Committee on Bill C-91, House of Commons, Issue No. 6, Tuesday, May 8, 1986 at 6:11)

66 The Consumers' Association of Canada was not alone in its criticism before the Parliamentary Committee of the efficiency defence in Bill C-91. We wish to point out and emphasize the remarks of Professor William Stanbury who stated that the provision was vague because it required, in his view, comparing "...a redistribution of income and the other involves with real gains in terms of the savings of resources." (Minutes of Proceedings and Evidence of the Legislative Committee on Bill C-91, Issue No.3, Tuesday, April 29, 1986 at 3:7).

67 Mr. D. O'Hagan, representing the Canadian Labour Congress, cited the position on the efficiency defence of the Consumers' Association of Canada with approval and insisted that

> ...the tribunal is empowered to attach structural conditions to assure that efficiency gains would be passed on to consumers in the form of better prices, better quality; to workers in the form of more stable jobs, better incomes and better working conditions; and to other community groups in ways that are relevant to them... (Minutes of Proceedings and Evidence of the Legislative Committee on Bill C-91, Issue No. 9, Thursday, May 15, 1986 at 9:12-9:13)

68 However, Mr. L. Hunter, former Director of Investigation and Research and co-drafter of Bill C-91, testified before the Committee as follows:

> Economic efficiency in the merger section, which is a defence as well, is really based on two fundamental premises. First of all, we want a law that will allow the government to be able to stop merger activity which has a serious effect on competition, however defined. "Substantially" happens to be the word that is used. At the same time, we want to recognize that mergers can truly bring about efficiency savings. They can lower costs. Those cost savings are important to the economy and to consumers.
>
> For many years, going back to the Economic Council of Canada's report in 1969, there has been the notion of trading off these two things. On the one hand we want to look at the effect on competition and how serious that is; on the other hand,

we want to look at what cost savings or efficiency gains there will be from the merger activity. This proposal basically says that if those efficiency savings are greater than the likely cost of competition, you should allow the merger.

Regarding what that efficiency test will come to mean, I think economists would tell you that it has a relatively precise meaning. It certainly means long-run economies of scale. By merging, you increase the production line you can undertake and that will lower your unit cost. That is an efficiency saving. There may also be economy efficiencies that arise from the dynamic nature of your business and the degree of innovation and research you undertake... (Minutes of Proceedings and Evidence of the Legislative Committee on Bill C-91, Issue No. 7, Monday, May 12, 1986 at 7:27-7:28)

69 Finally, the Committee debated at length an amendment to remove the efficiency defence from the proposed merger provisions of Bill C-91:

Mr. Ouellet: ...The purpose of this amendment is to remove from the bill the exception that is given there to the industry to plead before the tribunal that the merger should be approved where gain in efficiency would result.

My feeling is that this gain of efficiency is of such a magnitude that it could in fact impair the tribunal in preventing some mergers from taking place. In almost every merger, it would be possible to plead with good economics experts, accountants and so on that there will be gains in efficiency...

Mr. Domm: We would oppose the motion for amendment. I can talk to it at some length here, but I suppose in summary our reason for opposition would be that the purpose of this policy is basically to promote efficiencies. This is not an absolute override but rather a balancing defence of the benefits against the costs. For this reason, we would prefer to leave the proposed section 68 intact as printed.

. . . . .

Mr. Orlikow: Yes, Mr. Chairman, I certainly want to support Mr. Ouellet's amendment. I am not going to make a long speech at this stage. It has already been argued and we have had witnesses who have pointed out that to a large extent mergers really bring no real efficiencies and no real reductions in prices and certainly do not lead to more competition. We have had a whole series of mergers. We had Imasco taking over Canada Trust, Brascan Housing taking over paper companies, and mining companies going into Trilon. I think it is in today's *The Financial Post* or *The New York Times*. We are talking about assets of $60 billion or $90 billion, which means they have more economic power than the major bank. You have power corporations taking over all sorts of businesses and now moving into power finance.

There is no evidence these take-overs, these mergers, have done anything for Canadian, or have produced more jobs. If we could do the kind of in-depth study of those corporations we should be doing, we would find there are less jobs now than there were before the mergers, prices have not come down, and they have not spent more money on research and development.

It seems to me, and I have said this before, with this kind of clause in the bill, it is an open invitation for these mergers to be encouraged. These kinds of clauses give the people and the companies involved in mergers a defence to argue they are going to be more efficient and so on, if they should be charged under the provisions of this bill. I think it will be very difficult for the tribunal, as it has been for the courts with the old legislation, to take any effective action. For that reason, I would support Mr. Ouellet's amendment.

Mr. Domm: To refer to answer by Mr. Orlikow, page 7 of the bill, where we have outlined the purpose of the bill in proposed subsection 19.(1.1), is clearly to promote the efficiency and adaptability of the Canadian economy in order to expand opportunities for Canadian participation in world markets.

Regarding his concern, which has just been expressed-that there is no obligation to pass gains on to the consumer-I say such an obligation can be very difficult to objectively measure or to monitor, and unless the lessening of competition is overwhelming, competition in the market will result in gains passed on to consumers. For that reason, I would not be willing to support that amendment.

Mr. Orlikow: Just for the record, Mr. Chairman, I remind Mr. Domm and members of the committee that witnesses, including Professor Stanbury, were very emphatic that this bill would be and is quite deficient in its ability to attain the objectives which it sets out, if it does not give the tribunal the opportunity to deal with mergers.

Mr. Ouellet: I have a question to ask to the Parliamentary Secretary. As Professor Stanbury has pointed out to us, proposed section 68 contemplates a trade-off between gain and efficiency, and the lessening of competition. According to the government, which of the two is most important?

Mr. Domm: I think it goes back to a former statement I made in response to your original motion. It is a balancing defence we are looking for. It is not a question of which one, but rather a balancing defence of the benefits against the costs.

Mr. Ouellet: Do you agree that, as Professor Stanbury indicated to us, the matters which the tribunal will have to consider under this clause are not comparable, since one involves a redistribution of income and the other involves real gain and resource savings? Because Parliament does not seem to give any guidance to the tribunal and its priorities and the way to be applied to lessening competition and gaining efficiency, it seems it would be very difficult for the tribunal to choose. It seems clear it would be very difficult for the tribunal to choose. It seems clear there might be some gain of efficiency in any take-over, in any merger. Is this what government feels is more important, to the detriment of lessening competition?

Mr. Domm: The provision we are asking for provides "a simple redistribution of income shall not be considered to be a gain in efficiency."

. . . . .

Mr. Ouellet: This satisfies my questions. I thank Mr. Cappe, but I still believe such exceptions represent a major loophole in the merger sections and such a wide loophole should not be in the legislation. If we really want to have a legislation that effectively deals with mergers which could lessen competition, such exceptions where gain and efficiency should not be accepted.

Amendment negatived: nays, 4; yeas, 2 (Minutes of Proceedings and Evidence of the Legislative Committee on Bill C-91, Issue No. 11, Wednesday, May 21, 1986 at 11:38-11:42).

70 The Tribunal notes that the Committee took issue with the absolute defence of "superior competitive performance" under the abuse of dominance provisions in Bill C-91. That defence had provided as follows:

s.51(4) No order shall be made under this section where the Tribunal finds that competition has been, is being or is likely to be prevented or lessened substantially in a market as a result of the superior competitive performance of the person or persons against whom the order is sought.

The Committee rejected this absolute defence and instead provided that "superior competitive performance" was to be a factor that the Tribunal would be required to consider when deciding whether a practice lessened or prevented competition substantially in a market (Minutes of Proceedings and Evidence of the Legislative Committee on Bill C-91, Issue No. 11, Wednesday, May 21, 1986 at 11:33, 11:35). This factor now appears as subsection 78(4) of the Act.

D. Free Competition

71 In oral argument and in written reply, the Commissioner refers to the Court's treatment of the wealth transfer and to its acknowledgment of the "consumer protection" objective of the Act which, the Commissioner submits, is reflected in a long line of Canadian jurisprudence. The Commissioner emphasizes "...the protection of the public interest in free competition..." (Reply Memorandum of the Commissioner of Competition on the Redetermination Proceedings ("Commissioner's Reply Memorandum on Redetermination Proceedings"), paragraph 91 at 34) and argues that the extraction of wealth transfers from consumers through the exercise of market power represents injury to the public that the Supreme Court of Canada condemned in 1912 in *Weidman v. Shragge* (1912), 46 S.C.R. 1 (S.C.C.), (Commissioner's Reply Memorandum on Redetermination Proceedings, paragraph 92 at 34).

72 The Commissioner also draws attention to the 1992 Supreme Court of Canada decision in *Nova Scotia Pharmaceuticals* (*Canada v. Pharmaceutical Society (Nova Scotia)*, [1992] 2 S.C.R. 606 (S.C.C.)) in which the appellants were charged with two counts of conspiracy to prevent or lessen competition unduly, contrary to the *Combines Investigation Act*, paragraph 32(1)(c). The Commissioner quotes Gonthier J.'s decision:

> ...As this Court has always held in its previous judgments, the aim of the Act is to secure for the Canadian public the benefit of free competition. Excessive market power runs against the objectives of the Act... (Commissioner's Reply Memorandum on the Redetermination Proceedings, footnote 84 at 34)

73 The Tribunal notes that this quote omits the next and final sentence in that paragraph of Gonthier J.'s decision which states:

> When it occurs in the context of a conspiracy to restrict competition, s. 32(1)(*c*) will apply.

It goes without saying that Gonthier J. was referring to criminal conspiracy, and not to the merger provisions, including the efficiency defence, under the civil law regime introduced in 1986.

74 As a subsidiary matter, the Tribunal notes that the Supreme Court of Canada declined to rely on the doctrine of "free competition" in its decisions in *R. v. K.C. Irving Ltd.* ((1976), 32 C.C.C. (2d) 1 (S.C.C.)), which dealt with charges of both monopoly and merger and in *Atlantic Sugar Refineries Co. v. Canada (Attorney General)* ((1980), 54 C.C.C. (2d) 373 (S.C.C.)). In *R. v. Aetna Insurance Co.* ((1977), 34 C.C.C. (2d) 157 (S.C.C.)), the doctrine was discussed by the majority only in the context of the meaning of the word "unduly", and in *Canada (Attorney General) v. Law Society (British Columbia)* ([1982] 2 S.C.R. 307 (S.C.C.)), it appears that the Supreme Court of Canada ignored the concept in order to approve the exemption of regulated conduct.

75 The inadequacy of the criminal law approach in light of the central goal of economic efficiency was pointed out by senior Department of Justice officials in 1991 who wrote, quoting Bruce McDonald with approval:

> Although the criminal law had provided a safe constitutional haven for nearly three quarters of a century, concerns began to be expressed in the 1960's that competition legislation founded on such a basis might not be effective. Bruce McDonald wrote in 1965:
>
> > The demands of 1889 are not the demands of the 1960's, and the combines cases illustrate the contortions through which the courts have been going in their attempts to accommodate the change absent any fundamental overhaul of the statute. The object of the statute has changed, and increasingly the control of combines is recognized as a sophisticated problem requiring analysis of economic data. The Canadian courts, aware of their deficiencies in the training needed for such evaluations, resist as much as possible any debate over or inquiry into economic data or theory. The considerations of 1889 which impelled the legislators to make the combines law criminal no longer obtain. The undesirability of combines no longer stems appreciably from rejection on moral grounds; nor can the Act be specific in such a way as to bring combines offences within the other general category of moral element... This is not to suggest that combines ought to be in one of the two categories; but only that, if it is not, the use of the criminal law as the appropriate control device must be seriously questioned.
>
> This theme was echoed by the Economic Council in its 1969 *Interim Report on Competition Policy*. The Council had been asked in 1966 "In light of the government's longterm economic objectives, to study and advise regarding ... combines, mergers, monopolies and restraint of trade...". It concluded that the primary goal of competition policy should be the promotion of economic efficiency. That, to the Council, also meant moving from the strictures of the criminal law to a more flexible civil law basis:
>
> > The basic reasons for seeking to place some of the federal government's competition policy on a civil law basis would be to improve its relevance to economic goals, its effectiveness, and its acceptability to the general public. The greater flexibility afforded by civil law is especially to be desired in those areas of the policy that do not lend themselves well

to relatively unqualified prohibitions and that may in addition call for some case-by-case consideration of the likely economic effects of particular business structures or practices. (Rutherford and Tyhurst, at 258-259)

76 In the Tribunal's view, the statutory history and, in particular, the introduction of the civil law regime for mergers in the 1986 amendments to the *Combines Investigation Act* indicate that it would be wrong to adjudicate mergers on the basis of the "free competition" doctrine that has been applied by courts at various times in criminal conspiracy matters.

77 The shift in the review of merger from criminal to civil law further indicates the correctness of the "full-blown rule of reason" approach that Gonthier J. distinguished from the "partial rule of reason" that he found to be required by the conspiracy provisions in the *Nova Scotia Pharmaceuticals* case. Except for refusals to deal under section 75 of the Act which does not require a finding of substantial lessening of competition, the Tribunal has decided all cases before it, including mergers, under the full-blown rule of reason. Accordingly, the Tribunal may review all of the effects of an anti-competitive merger when the efficiency defence in section 96 is invoked.

E. Tribunal's Conclusions

78 The Court writes:

Given the purposes historically pursued by competition legislation and, in particular, the expressly stated purpose and objectives of the *Competition Act*, it is reasonable to infer from Parliament's failure to state expressly that only deadweight loss is to be considered as an "effect" of a merger for the purpose of section 96, that other effects related to the statutory purpose and objectives, including the interests of the consumers of the merged entity's products, must also be taken into account when the trade-off is made between efficiencies and anti-competitive effects. (Appeal Judgment, paragraph 109 at 43)

79 On the basis of the statutory history, the detailed and systematic review of Bill C-91 by the Parliamentary Committee, and the Committee's refusal to delete the efficiency defence or to amend the purpose clause to make consumer protection the primary focus of the legislation, the Tribunal can conclude only that the Committee was well aware that the 1986 amendments to the *Combines Investigation Act* sought goals that differed from the goals historically pursued by Canadian competition legislation. Historically, of course, Canada's merger law did not provide an efficiency defence to an anti-competitive merger. The introduction of section 96 itself indicates that the goals pursued by the 1986 amendments differed from those purposes historically pursued.

80 That the Parliamentary Committee removed the absolute defence of "superior competitive performance" under the proposed abuse of dominance provisions, but accepted the efficiency defence for mergers without amendment is a clear indication that the Committee fully understood the concept of efficiency and the consequences of providing the efficiency defence in merger review. It is clear to the Tribunal that the Parliamentary Committee endorsed the view that efficiency was the paramount objective of the merger provisions of the Act. It is difficult to reconcile these considerations with the Court's conclusion that Parliament did not intend or understand the outcome, or that it intended something else, particularly in light of the various preambles and purpose clauses after Bill C-13 that dropped all reference to equity as a goal of the legislation.

81 When Bill C-91 was introduced on second reading, the Minister stated in the House of Commons that the bill was a major economically-oriented statute:

...The report of the Commission on the Economic Union and Development Prospects for Canada underlined the importance of international trade for the Canadian economy by saying that, as much as possible, Canada should use international trade to ensure a continued and aggressive competition on the domestic market.

Mr. Speaker, economically oriented major statutes, such as the laws on competition, bankruptcy, corporations, copyright and trademarks provide the essential tools for orderly trade as they establish the basic rules for a competitive and fair market-based economy. However, most of these instruments are old, inoperative and out of date. Our rules are obsolete, inadequate, and in some cases, more an obstacle than an incentive to productivity. Canadian businesses will have difficulty

> in taking up the challenge to claim their fair share of international markets and facing the impact of international competition on the domestic market if they are paralyzed by inadequate legislation. Moreover, if our businesses are disadvantaged, all Canadians will suffer.
>
> I therefore believe, Mr. Speaker, that the Members of this House have a clear and pressing responsibility. They must update these statutes, eliminate such obstacles to growth and economic prosperity and see to it that businesses and consumers are treated fairly on the market. (*House of Commons Debates*, (April 7, 1986) at 11926)

While, quite obviously, the government was concerned with fairness "on the market", the primary reason for amending the *Combines Investigation Act* in 1986 was the need to strengthen Canadian business and provide an incentive for productivity in the face of aggressive international competition to which the government was committed and which would ultimately benefit consumers. Laws on bankruptcy, corporations, copyright and trademarks are concerned with fairness but fairness is not their purpose; those laws are principally concerned with promoting national economic development. Similarly, the Act is a key part of the fundamental framework for economic development. In the Tribunal's view, the portions of the Minister's speech cited by the Court (Appeal Judgment, paragraphs 89 and 91 at 36-37) are indeed consistent with the above-quoted remarks of the Minister.

82 In its Reasons at paragraph 413, the Tribunal concluded that efficiency was the paramount objective of the merger provisions of the Act, and the Court has stated that the Tribunal was correct:

> [90] In spite of the existence of multiple and ultimately inconsistent objectives set out in section 1.1, in certain instances the Act clearly prefers one objective to another. Thus, section 96 gives primacy to the statutory objective of economic efficiency, because it provides that, if efficiency gains exceed, and offset, the effects of an anti-competitive merger, the merger must be permitted to proceed, even though it would otherwise be prohibited by section 92. In this sense, the Tribunal was correct to state that section 96 gives paramountcy to the statutory objective of economic efficiency. (Appeal Judgment, at 36-37)

The Court also stated that this conclusion did not limit the definition of effects to be considered:

> [92] Thus, although section 96 requires the approval of an anti-competitive merger where the efficiencies generated are greater than, and offset, its anti-competitive effects, the ultimate preference for the objective of efficiency in no way restricts the countervailing "effects" to deadweight loss. Instead, the word, "effects" should be interpreted to include all the anti-competitive effects to which a merger found to fall within section 92 in fact gives rise, having regard to *all* of the statutory purposes set out in section 1.1. (Appeal Judgment, at 37)

83 The Court instructed the Tribunal to consider redistributive effects but it did not prescribe the method by which the Tribunal would perform its task. The Tribunal must follow this instruction in light of the clear legislative history that indicates that the merger provisions were not driven by the consumer interest. The Tribunal concludes that adopting an approach that prevents efficiency-enhancing mergers in all but rare circumstances must be wrong in law.

V. The Standard or Test to Assess the Efficiency Defence

84 The Commissioner asserts that the full amount of income redistributed by the merger is to be included in the assessment of "effects". The Respondents argue, *inter alia*, that when the appropriate treatment of the redistributive effects (i.e. the income/wealth transfer) is made, the gains in efficiency are sufficient to allow the instant merger to proceed.

85 In the Tribunal's view, the appropriate standard for judging the sufficiency of efficiency gains in relation to the effects of an anti-competitive merger is without doubt the central issue in this matter. The different standards were addressed by the Commissioner's expert witness, Professor Townley, in his report (exhibit A-2081) and his testimony. The Tribunal dealt with alternate standards rather briefly given its acceptance of the Total Surplus Standard. However, in light of the Court's decision, we will now examine the various standards.

A. Price Standard

86 Under a pure Price Standard, a merger can be approved only if it does not lead to an increase in market power. No consideration of efficiencies is allowed, even if efficiencies can be shown to lead to a price decrease.

B. Modified Price Standard

87 Although Professor Townley refers to a "price standard", he uses that label in connection with a merger where efficiency gains can be considered. In his description of the standard, efficiencies are considered as a positive factor in merger review but only when the post-merger price does not rise:

> If firms wish to merge, and if the merger would cause the price of the commodity in question to decrease, both consumers and firms would be better off than before the merger. That is, upward pressure on price is caused by increased market power while downward pressure is exerted by decreased marginal costs. If the latter is stronger than the former, then the potential for an overall price dec[r]ease exists, thus benefitting consumers. (Townley report, exhibit A-2081 at 28)

88 For greater clarification, and due to its similarity to the Price Standard as discussed above, the Tribunal refers to this standard as the Modified Price Standard. By requiring that efficiency gains be so large that the post-merger price decreases as a result of the merger, the Modified Price Standard requires that at least some of the cost-savings be passed on to consumers in the form of lower prices. However, under a Modified Price Standard, there is no basis for attacking a merger simply because of the efficiency gains that can be attributed to it.

89 Professor Townley notes that this standard is consistent with the Pareto Improvement Criterion, and can therefore be endorsed as a matter of welfare economics. He notes, however, that this standard assigns a distributional weight of zero to merging firms (i.e. to the gains to the shareholders thereof) while assigning an infinitely large weight to consumers. He further notes that

> ...The problem here is that application of this standard would disallow some mergers that are potentially welfare-enhancing.
>
> It was noted above that strict application of the Pareto Improvement Criterion would rule out some projects or policies that a reasonable person would support. For example, a policy that would make most people better off but a single person worse off would fail this criterion. Similarly, to rule against a merger that would involve only a slight price increase yet massive cost savings would seem unreasonable. (Townley report, exhibit A-2081 at 28-29)

Accordingly, Professor Townley does not advocate the Modified Price Standard.

C. Consumer Surplus Standard

90 Professor Townley describes the Consumer Surplus Standard as applicable to the case of a merger characterized by a price increase and efficiency gains. If the gains in efficiency exceed the total loss of consumer surplus (i.e. the deadweight (or efficiency) loss plus the consumer surplus that is redistributed from consumers to shareholders as excess profits), then the merger would be approved (Townley report, exhibit A-2081 at 29).

91 As presented by Professor Townley, the Consumer Surplus Standard does not require that the post-merger price decline or remain at the pre-merger level. It could allow a merger to proceed even if the post-merger price increased.

92 Professor Townley adopts the following notation to describe the effects of the merger:

(a) the portion of lost consumer surplus (B) transferred to shareholders;

(b) the corresponding increase in the shareholder profit due to the higher price (B);

(c) the cost-savings (gains in efficiency) from the merger (A); and

(d) the loss of efficiency or deadweight loss (the remaining portion of lost consumer surplus) from the merger (C).

In principle, at least, Professor Townley's variables are quantifiable and completely describe all of the effects on economic efficiency and on consumer welfare. The merger is approved if the gains in efficiency exceed total loss of consumer surplus, i.e. if A>B+C. Where these variables are not completely quantified, the required assessment nevertheless remains the same: are the efficiency gains greater than all of the effects on efficiency and on consumers. (The Tribunal notes that subsection 96(1) requires that efficiency gains exceed and offset all of the effects of lessening or prevention of competition. It is not always clear whether advocates of the Consumer Surplus Standard regard this standard as sufficient to meet the requirement to offset.)

93 Professor Townley is critical of the Consumer Surplus Standard. It "...is not consistent with any traditional welfare criterion (at least to my knowlege)..." (Townley report, exhibit A-2081 at 29-30). Moreover, by including the entire amount of the loss of consumer surplus experienced by all consumers, it treats all consumers alike (i.e. assigns the same weight to each) and protects all consumers even when some consumers are better off than the shareholders of the merged firm:

> From a welfare perspective, assigning distributional weights according to the Consumer Surplus Standard may be appropriate if consumers of the product in question are relatively poor. However, what if those who consume the product of the merged firms are relatively wealthy? That is, what if the commodity in question is a luxury produced by firms owned by relatively poor individuals? (This is akin to legislating rent controls on luxury apartments when the tenants are wealthier than the landlords.) I have no notion as to how likely this situation may be, but a Consumer Surplus Standard does not allow the discretion to deal with this type of case. (Townley report, exhibit A-2081 at 31-32)

Accordingly, Professor Townley is critical of the Consumer Surplus Standard because it does not discriminate among consumers, i.e. between relatively poor and relatively well-off consumers.

94 Under the Consumer Surplus Standard, the lost consumer surplus that is transferred to shareholders equals the excess profits received. However, the loss of surplus matters but the corresponding profit gain does not offset that loss in any way whatsoever. Like the Modified Price Standard, the Consumer Surplus Standard assigns a zero weight to shareholder profits even when society benefits therefrom. As he is concerned with social welfare maximization, Professor Townley does not ignore the possibility that gains to shareholders could be socially positive and hence he does not advocate the Consumer Surplus Standard either.

D. Total Surplus Standard

95 According to Professor Townley, the Total Surplus Standard, like the Consumer Surplus Standard, is applicable to a merger that results in both higher price and lower costs. The merger is approved if the loss of consumer surplus is exceeded by the increase in producer surplus. Using his notation, the merger is approved if: (A+B)>(B+C).

96 In this formulation, the income loss by consumers (B) equals the corresponding excess profit to shareholders due to the higher price (B). Unlike the Consumer Surplus Standard, the Total Surplus Standard includes the effect on shareholders but regards these gains and losses as exactly offsetting, so the test reduces to whether A>C. Accordingly, total surplus increases if the cost-savings exceed the deadweight (or efficiency) loss.

97 Professor Townley notes that the Total Surplus Standard is consistent with the Potential Pareto Improvement Criterion, i.e. that the shareholders could fully compensate the consumers and still be better off. He notes that the Criterion is met even though the compensation does not take place and he criticizes the Total Surplus Standard for regarding the gains in shareholder profit and consumer losses of income as completely offsetting:

> Therefore, like aggregate compensating variation and aggregate equivalent variation, a positive (negative) change in total surplus measure need not indicate a welfare increase (decrease) when income distribution issues exist but are ignored in the analysis. The total surplus method employs equal welfare weights across individuals and firms, and this may not be appropriate. That is, if price rises but the Total Surplus Standard is satisfied in a situation where consumers are relatively less wealthy than producers, aggregate economic well-being may decrease despite an increase in total surplus. (Townley report, exhibit A-2081 at 18)

98 Professor Townley's principal objection to the Total Surplus Standard is that it does not distinguish between shareholders of the merged firm and consumers of the product of the merged firm. If shareholders are uniformly better off than consumers, then the redistribution of income arising from the merger may be unfair to the less well-off group, and hence be socially adverse.

99 Presumably, however, if, as in his earlier illustration of the luxury commodity, the consumers were better off than the shareholders, Professor Townley would not be critical of a merger that was approved under a Total Surplus Standard. In that case, the redistribution of income would not be unfair to consumers because, by hypothesis, they are the better-off group to begin with. The merger would both increase efficiency and promote distributional fairness by transferring income to shareholders. Such redistributional effect would be socially positive.

100 The Tribunal notes that if the consumer and shareholder groups were each characterized by variability of income and wealth of their members, it might be difficult to characterize the redistribution of income arising from a merger as being unfair to one group or the other.

101 Professor Townley's concern is similar to his criticism of the Consumer Surplus Standard. In his view, that standard fails because it treats all consumers alike, hence protecting the better-off consumers from loss of income to supposedly equally well-off shareholders. However, his objection to the Total Surplus Standard is that it treats consumers and shareholders alike even when they are different. Indeed, his common objection to both is that they each prescribe a fixed weight and could hence fail to identify welfare-reducing mergers in particular cases.

E. Balancing Weights Approach

102 Accordingly, the key issue for Professor Townley is whether the distributional considerations are properly addressed by according the producers/shareholder group and the consumer group equal weights. Professor Townley stated that he, in his professional academic capacity, could not indicate what the appropriate weights were, but he advocated that the Tribunal had the capacity to do so.

103 In his Balancing Weights Approach, Professor Townley invites the Tribunal to attach a weight of unity to all producer gains from a merger. He proposes that a weight(w) be determined for all consumers "...because information on individual affected consumers is lacking..." (Townley report, exhibit A-2081 at 33), such that the weighted surplus is zero, hence:

$$1(A+B) - w(B+C) = 0$$

where A, B and C are known quantitative estimates of the magnitudes of all of the effects of the merger. Solving this equation for w, the balancing weight, establishes the weight accorded to consumers as a group in order that the consumer loss and the producer gains are just balanced.

104 In the instant merger, the Commissioner submits that A equals \$29.2 million, B equals \$40.5 million, and C equals \$3 million. On these figures, the balancing weight is found to be 1.6 (Memorandum of the Commissioner of Competition on the Redetermination Proceedings ("Commissioner's Memorandum on Redetermination Proceedings"), paragraph 113 at 46). Then, the Tribunal would decide whether the balancing weight was reasonable "...Based on whatever quantitative and qualitative information is available regarding the distributional impacts of a merger..." (Townley report, exhibit A-2081 at 33).

105 The Commissioner urges that, in employing Professor Townley's approach to the instant merger, the Tribunal should consider all relevant qualitative effects of the merger, not just the qualitative information that is available regarding the distributional impacts of the merger:

> Professor Townley recognized that the computed balancing weight only accounts for things that can be quantified and should be "assessed in light of qualitative factors". The other relevant qualitative effects of the merger should also be taken into account at this stage of the analysis. These include the extremely significant qualitative effects which are described in greater detail in Section III of this memorandum and in paragraphs 90 and 91 above. (Commissioner's Memorandum on Redetermination Proceedings), paragraph 117 at 47)

106 In oral argument, counsel for the Commissioner argued that the reasonableness of the balancing weight should be judged in relation to all the evidence and statutory considerations:

> MS STREKAF: Then, in order to look at those numbers, whether it's too high or too low, according to Professor Townley's approach what you would need to do is look at all of the evidence. You would need to look at 1.1 and the other guidance provided in the Act to see whether in fact the merger should be allowed or should be rejected. (Transcript, vol. 2, October 10, 2001, lines 1-8 at 270)

107 It is not entirely clear to the Tribunal what the Commissioner is seeking here. In particular, Professor Townley did not indicate that the computed balancing weight should be assessed in light of information that is not relevant to the consideration of equity between consumers and shareholders (Townley report, exhibit A-2081 at 33).

108 Moreover, Professor Townley advocates assigning the same weight to all consumers only because information on individual consumers is lacking. Since Professor Townley is concerned with welfare-maximizing mergers, where such information is available and describes significant differences among consumers, he would presumably want to take it into consideration.

109 Using the Balancing Weights Approach to assess the distributional concerns in the instant case, the Tribunal must find that the weight that properly reflects the consumer loss is at least 60 percent higher than the weight on shareholder gains, assuming again that the consumer and shareholder groups are distinct and reasonably internally homogeneous. If it can so find, then that is a factor that counts against the merger, and must be considered with all other factors required to be considered. Indeed, if estimates of A, B, and C accurately described all of the effects of a merger, the appropriateness of the balancing weight would be determinative. Accordingly, if the Tribunal knew, or could derive, the correct weight, it would be able to determine whether or not that weight exceeded the balancing weight.

F. Sources of the Correct Weight

110 In the Tribunal's view, the correct weight should be established by society or should reflect social attitudes toward equity among different income classes. There may be several sources from which the proper weighting can be inferred, one such being the tax system, which is explicitly, although not solely, concerned with equity. It is clear that the prevailing system of taxation in Canada does reflect a social consensus about the desirability of imposing burdens on different income classes. If tax rates are progressive with respect to income, then society has decided that the marginal dollar of income is worth less to the high-income taxpayer than it is to the low-income taxpayer. If, for example, the lowest tax rate is 20 percent and the highest is 50 percent, there is clear indication that low-income individuals are favoured over high-income individuals; assigning a weight of 1.0 to the latter group, the corresponding weight on the former would be 2.5.

111 Based on their recent review of the literature for the Canadian Tax Foundation, Professors Boadway and Kitchen conclude that:

> ...Taken overall, the tax system seems to be roughly proportional to income. This does not imply that government policy considered more generally is not redistributive. Much of what governments do on the expenditure side of the budget appears to be motivated by redistributive objectives, and it seems that a substantial amount of redistribution does, in fact, take place through expenditure programs - a consideration that further weakens the case for a highly progressive income tax structure. (See R. Boadway and H. Kitchen, *Canadian Tax Policy*, Paper No. 103, 3rd edition, Canadian Tax Foundation, 1999 at 45.)

112 It appears to the Tribunal that if the proper weight is to be inferred from the tax system alone, then it is unlikely to be as high as 1.6 given the general proportionality of effective tax rates. However, the Tribunal would expect to have the benefit of expert opinion in matters as specialized as this.

113 Having regard to the combined system of taxes and public expenditures in Canada, there appears to be a basis for attaching a greater weight to the income groups that could be described as poor or needy than to shareholders assuming they are neither. Professor Townley's report presents certain information in this regard which the Tribunal examines below.

G. Standard for Evaluating Efficiency Gains in the United States

114 Commenting on the Total Surplus Standard, the Court writes as follows:

> [134] Finally, it was suggested in argument that the Tribunal's interpretation had the support of all economists who had studied the issue. I do not dispute that an impressive array of economists, and law and economic specialists, both in Canada and the United States, have argued that the total surplus standard is the appropriate basis for determining whether an anti-competitive merger that produces efficiency gains should be permitted.
>
> [135] Nonetheless, the *Horizontal Merger Guidelines, supra*, in the United States continue to treat the exercise of market power leading to an increase in price above the competitive level as the most important anti-competitive effect of a merger, and the resulting wealth transfer from the consumers to the producers, as a misallocation of resources...
>
> [136] Of course, as I have already noted, since there is no specific efficiency defence in the United States' legislation, the approach of the Federal Trade Commission to efficiency gains when considering the approval of anti-competitive mergers has limited relevance to the problem before us. Nonetheless, it is interesting to note that efficiency gains are generally most likely to make a difference in merger review when the likely adverse effects of the merger are not great, and will almost never justify a merger to monopoly or near monopoly: *Horizontal Merger Guidelines, supra*, at page 150.
>
> [137] In addition, some commentators in the United States have expressed surprise at the interpretation of section 96 adopted in the *MEG*. See, for example, J.F. Brodley, "The Economic Goals of Antitrust: Efficiency, Consumer Welfare, and Technological Progress, (1987) 62 *N.Y.U.L. Rev.* 1020, at 1035-36; S.F. Ross, "Afterword-Did the Canadian Parliament Really Permit Mergers That Exploit Canadian Consumers So the World Can Be More Efficient?" (1997) 65 *Antitrust Law Journal* 641... (Appeal Judgment, at 52-53)

115 It is clear that the Court has placed weight on the treatment of efficiencies under U.S. antitrust law and has used it as the benchmark to evaluate the Tribunal's assessment under the Act. In the Tribunal's view, the differences between the American and Canadian approaches to merger review and efficiencies are very significant and cannot be appreciated without some knowledge of the history of American antitrust. (The Tribunal relies on two publications of the American Bar Association, Section of Antitrust Law: Monograph 12, *Horizontal Mergers: Law and Policy* (1986) and *Mergers and Acquisitions: Understanding the Antitrust Issues*, Robert S. Schlossberg and Clifford H. Aronson, eds. (2000) for its review of the American approach to efficiencies.)

116 The Price Standard guided courts in the United States for much of the past century and created judicial hostility toward efficiency evidence and arguments. In *Brown Shoe* (*United States v. Brown Shoe Co.*, 179 F. Supp. 721 (U.S. D.C. Mo., 1959) , *aff'd* 370 U.S. 294 (U.S. Mo., 1962)), the district court agreed with the government that certain advantages to Brown Shoe as a result of the acquisition would actually lower the price or raise product quality; however, the independent retailer would be less able to compete with the more efficient merged firm.

117 On appeal to the United States Supreme Court, Brown Shoe strongly denied that the merger would produce any cost savings, while the government, believing that such savings existed, attacked the alleged efficiency gains, charging that they would allow Brown Shoe to lower its prices. The United States Supreme Court recognized that consumers might benefit from the merger, and further noted that the law protected competition, not competitors. Nonetheless, it was primarily concerned that American antitrust law protected viable, small, locally-owned businesses and resolved the competing considerations in favour of "decentralization" (*United States v. Brown Shoe Co.*, 370 U.S. 294, at 344 (1962)).

118 In *Philadelphia National Bank* (*United States v. Philadelphia National Bank*, 374 U.S. 321 (U.S. Pa., 1963)), the defendants attempted to justify the merger by arguing, *inter alia*, that the new firm would be better able to compete with large out-of-state banks and would benefit the economy of the local community. While not contesting the accuracy of these assertions, the United States Supreme Court held at page 371:

> ...We are clear, however, that a merger the effect of which 'may be substantially to lessen competition' is not saved because, on some ultimate reckoning of social or economic debits and credits, it may be deemed beneficial...

In *Proctor and Gamble* (*F.T.C. v. Procter & Gamble Co.*, 386 U.S. 568 (U.S. Ohio, 1967), at 580), the United States Supreme Court wrote:

> Possible economies cannot be used as a defense to illegality. Congress was aware that some mergers which lessen competition may also result in economies but it struck the balance in favor of protecting competition.

In *Foremost Dairies* (*Foremost Dairies, Inc.*, 60 F.T.C. 944 (U.S. F.T.C., 1962)), the U.S. Federal Trade Commission held that significant gains in efficiency from the merger placed smaller rivals at a serious competitive disadvantage.

119 These decisions illustrate the American hostility toward efficiencies. Under the Price Standard, efficiency gains from a merger could not constitute a defence, but could assist the government in defeating the merger.

120 The judicial hostility toward efficiencies was reflected in the 1968 Merger Guidelines of the U.S. Department of Justice that allowed efficiencies as a justification for a merger otherwise subject to challenge only "under exceptional circumstances". Similarly, the 1982 Guidelines allowed for consideration of efficiency gains only in "extraordinary circumstances".

121 In our view, the hostility toward efficiencies in the United States arose not because the antitrust laws were opposed to efficiency *per se*, but rather because those laws were primarily concerned with "decentralization", i.e. preventing industrial concentration. In *Brown Shoe*, the United States Supreme Court was concerned that since the merged firm would have a market share exceeding 5 percent, a decision to approve the merger would result in the inability to prevent similar mergers by Brown's competitors. In *Philadelphia National Bank* , the Court was concerned with the relationship between market power and market structure as measured by market share and as endorsed by economists of that period. The Court held that a transaction that gave the merging firms a post-merger market share of 30 percent was presumptively illegal and could not be justified by other beneficial aspects such as efficiency gains. The "incipiency doctrine" arising from *Brown Shoe* and the "structuralist presumption" from *Philadelphia National Bank* are perhaps the principal results of the policy toward efficiencies embedded in the Price Standard.

122 It appears to the Tribunal that the enforcement agencies in the United States have moved away from the Price Standard to either the Modified Price Standard or the Consumer Surplus Standard. Following revisions in 1984 and 1992 to the treatment of efficiencies in the Merger Guidelines, the current guidelines were adopted in 1992 and clarified in 1997:

> The Agency will not challenge a merger if cognizable efficiencies are of a character and magnitude that the merger is not likely to be anticompetitive in any relevant market. To make the requisite determination, the Agency considers whether cognizable efficiencies likely would be sufficient to reverse the merger's potential harm to consumers in the relevant market, e.g., by preventing price increases in that market... (*Horizontal Merger Guidelines*, Issued by the U.S. Department of Justice and the Federal Trade Commission, Revised section 4, April 8, 1997) [hereinafter, *Horizontal Merger Guidelines*]

123 If the Agencies require that proven efficiencies *must* prevent price increases in order to reverse the potential harm to consumers, then the applicable standard is the Modified Price Standard. As written, however, the guidelines appear to regard preventing a price increase as sufficient but not necessary to reverse the harm to consumers. Accordingly, the Agencies' applicable standard may be the Consumer Surplus Standard. Whatever the standard, it is clear that the impact on the consumer is the paramount concern when efficiency gains are considered in merger review in the United States.

124 While there is no statutory defence of efficiency in American antitrust law, the enforcement agencies use their discretion in deciding whether to challenge a merger and will consider efficiencies as part of their assessment of the competitive effects of the merger. Accordingly, if cognizable efficiency gains are so large that the merger can no longer be said to harm consumers, then the agencies are prepared to approve the merger. In this sense, efficiency gains must "cleanse" the transaction in order to avoid challenge.

125 It appears that the only litigated cases in the United States in which challenged mergers were allowed to proceed based on efficiency gains have involved the merger of non-profit hospitals (*F.T.C. v. Butterworth Health Corp.*, 946 F. Supp. 1285 (U.S. W.D. Mich., 1996) , *aff'd*, 121 F.3d 708 (U.S. Mich. Ct. App., 1997) (*per curiam*) (table decision)) and *United States v. Long Island Jewish Medical Center*, 983 F. Supp. 121 (U.S. E.D. N.Y., 1997)). In these cases, the non-profit status of the merging parties was important in the courts' findings that the efficiency gains would ultimately benefit consumers.

126 But for the case of non-profit hospital mergers, there are no litigated cases in the United States in which cognizable efficiency gains were found large enough to permit an otherwise anticompetitive merger to proceed. The practical effect of the shift from a Price Standard to the Modified Price Standard or the Consumer Surplus Standard by the government enforcement agencies in the United States has been to continue the traditional hostility to efficiency gains (see D. Garza. *The New Efficiencies Guidelines: The Same Old Wine in a More Transparent Bottle*, Antitrust, Summer 1997 at 6-10.).

127 Exemplifying this hostility, the U.S. Federal Trade Commission recently referred to two recent cases involving efficiencies and submitted:

> ...Both *Cardinal Health* and *Staples* hold that, even if an efficiencies defense can be entertained, defendants must show that the "proven" efficiencies will be passed on and that they overwhelm any possible anticompetitive effects of the merger. (*Federal Trade Commission v. H.J. Heinz Company, et al.*, Reply Brief for the Plaintiff-Appellant Federal Trade Commission, No.00-5362, November 29, 2000 at 43 footnote 20)

128 The current head of the U.S. Federal Trade Commission provided a review of the recent litigation as of 1999 in which plausible efficiency claims were successfully attacked by the enforcement agencies and he concluded that the historical attitudes toward efficiencies remain:

> ...First, the government's attitude toward merger efficiencies has evolved toward greater acceptance. The days are long past when a merger will be attacked because it would lower costs. Moreover, at least in their Guidelines, the Agencies no longer argue that lower costs are not merger specific because of a hypothetical, but unlikely to be achieved in practice, alternative means to obtain the efficiencies. Nor is the "pass-on" requirement a basis for near automatic rejection of claimed lower costs.
>
> Second, problems nevertheless remain... Because the merging parties must show that the merger will likely lower costs, there is no justification for the government's prejudice against certain efficiencies. Hostility reflects the long standing reluctance to accept fully the cost-reducing potential of mergers.
>
> Third, the Agencies' attitude in court remains one of unrelenting hostility toward claims of lower costs...
>
> Perhaps these litigated cases do not accurately reflect the government's attitude. Mergers are now rarely litigated, and it may be too much to expect that the Agencies eschew advocacy. Nevertheless, these cases provide evidence of the lack of change in governmental attitudes. Past studies have found that overly hostile Agency attitudes toward merger efficiencies were widespread, and these recent cases are completely consistent with those studies. (Timothy J. Muris, *The Government and Merger Efficiencies: Still Hostile After All These Years*, George Mason Law Review, vol. 7:3, 1999 at 729-752, at 751)

129 The Tribunal concludes that in the United States, there is effectively no efficiency defence to an anti-competitive merger except in unusual cases such as non-profit hospital mergers. The courts and the enforcement agencies have adopted

the position that no harm to consumers can be tolerated under the antitrust laws, and hence efficiency gains cannot justify an anti-competitive merger.

130 Yet, as is clear from Muris' critique, the Tribunal cannot but note that there is strong debate within the American antitrust regime over the appropriate treatment of efficiencies in merger review.

H. Differences between Canadian and American Approaches to Mergers and Efficiencies

131 It is clear that the Court has placed weight on the American approach to antitrust and on the views of American commentators who, in line with that approach, are antagonistic to the Total Surplus Standard. In so doing, the Court does not appear to take account of the historic and continuing hostility toward efficiencies in merger review under American antitrust law and the reasons for that hostility, and it may not have completely realized the several critical, and perhaps subtle, ways in which the merger provisions of Canada's Act differ from the antitrust statutes and the judicial histories thereof in the United States.

(1) Market Structure Considerations

132 First, under subsection 92(2) of the Act, evidence consisting solely of market share or concentration is insufficient for the Tribunal to conclude that a merger will lessen or prevent competition substantially. This provision is a reaction to the incipiency doctrine adopted by the U.S. Supreme Court in *Brown Shoe* and to the structuralist presumption arising from *Philadelphia National Bank* . It should not be forgotten that American merger review had, by the 1960s, focussed virtually entirely on whether the post-merger market share was large enough to support a finding of illegality. It was not until its decision in *General Dynamics* (*United States v. General Dynamics Corp.*, 415 U.S. 486 (U.S. Ill., 1974)) in 1974 that the United States Supreme Court departed from rigid reliance on calculated market shares and gave consideration to other pertinent factors.

133 Whereas the decisions in *Brown Shoe* and *Philadelphia National Bank* reflected the economic learning of the day, the drafters of the amendments to Canada's Act in 1986 sought to take advantage of the more recent scholarship and research literature that placed the market power-market share relationship in considerable doubt. Accordingly, if "monopoly" is taken to mean one producer, then even in that extreme case a merger to monopoly cannot automatically be found to lessen competition substantially under section 92 just because the firm has a market share of 100 percent.

(2) Efficiencies and Competitive Effects

134 Second, as noted above, the Horizontal Merger Guidelines of the American enforcement agencies ("Horizontal Merger Guidelines") require that efficiency gains "cleanse" the merger of its harmful effects. In this way, the analysis of efficiencies is directly tied to the analysis of the merger's competitive effects on consumers. Only when the agencies are convinced that the negative effects have been eliminated will they decline to challenge the merger.

135 The requirement that proven efficiency gains "cleanse" the anti-competitive merger arises in the United States from the absence of a specific affirmative statutory defence that would permit an anti-competitive merger to proceed. The late Professor Areeda, perhaps the foremost expert on American antitrust law, addressed this matter succinctly:

> Although we have, to be sure, spoken of an economies "defense," it is not as a defense to a final conclusion that a merger "lessens competition" or is "illegal". Rather, the "defense" terminology refers to the rebuttal of a first order inference from a portion of the evidence (such as market shares) that a merger presumptively lessens competition and violates the statute. That is, it is a defense to a prima facie case... (P. Areeda et. al; *Antitrust Law*, Vol. IVA (Revised Edition), Aspen Publishers, 1998 at 28)

136 The approach to efficiencies under subsection 96(1) of the Act is very different. There is no requirement for efficiency gains to prevent the effects of lessening or prevention of competition from occurring, and the Tribunal found accordingly (Reasons, at paragraph 449). Were this the requirement, efficiencies would be considered as a factor in the section 92 inquiry. Indeed, the respondents argued this in the liability phase when they sought to show that the cost-savings from the instant merger were so large that the price would actually fall, hence the merger would not be anti-competitive. The Tribunal rejected this

argument in its entirety when it concluded that section 92 was about market power, the ability to influence price, rather than about whether price would, or would likely, rise or fall as a result of the merger (Reasons, at paragraph 258).

137 It is plainly Parliament's intent that, in merger review, efficiencies are to be considered only under section 96 and not under section 92. As a result, the consideration of efficiency gains is not to be tied into the analysis of competitive effects of the merger. Section 96 is worded accordingly by requiring that gains in efficiency be "greater than and offset" the effects of lessening or prevention of competition, rather than prevent those effects from occurring. Accordingly, "cleansing" of those effects is not required under the Act and, indeed, effects of lessening or prevention of competition may remain even when the test under section 96 is met.

(3) Trade-off Analysis

138 Third, as the Horizontal Merger Guidelines note, efficiencies are considered at the level of the individual relevant market. Consequently, in a merger where several relevant product and/or geographic markets have been delineated, the efficiency gains must reverse the harm in each such market. Accordingly, the insufficiency of those gains in even one relevant market can lead the enforcement agencies to disregard efficiency gains produced by the merger entirely.

139 With one exception, the Horizontal Merger Guidelines allow no trade-off whereby, for example, efficiency gains in one part of the country offset the anti-competitive effects in another part. According to those Guidelines, the reason for this treatment is found in the *Clayton Act*:

> Section 7 of the Clayton Act prohibits mergers that may substantially lessen competition "in any line of commerce ... in any section of the country." Accordingly, the Agency normally assesses competition in each relevant market affected by a merger independently and normally will challenge the merger if it is likely to be anticompetitive in any relevant market. In some cases, however, the Agency in its prosecutorial discretion will consider efficiencies not strictly in the relevant market, but so inextricably linked with it that a partial divestiture or other remedy could not feasibly eliminate the anticompetitive effect in the relevant market without sacrificing the efficiencies in the other market(s). Inextricably linked efficiencies rarely are a significant factor in the Agency's determination not to challenge a merger. They are most likely to make a difference when they are great and the likely anticompetitive effect in the relevant market(s) is small. (*Horizontal Merger Guidelines*, section 4, footnote 36)

Accordingly, it is only when efficiencies are inextricably linked that inter-market trade-offs can be considered, but even that exception is rare and related to the inadequacy of the remedy.

140 By contrast, section 96 of the Act applies to the transaction in its entirety. There is no requirement that gains in efficiency in one market or area exceed and offset the effects in that market or area. Rather, the tests of "greater than" and "offset" in section 96 require a comparison of the aggregate gains in efficiency with the aggregate of the effects of lessening or prevention of competition across all markets and areas. Accordingly, the Act clearly contemplates that some markets or areas may experience gains in efficiency that exceed the effects therein, while others may not.

(4) Industrial Concentration

141 The Court recognizes that the American antitrust laws do not contain an explicit efficiency defence, but does not explain the rationale. Given the historical American concern with preventing increases in industrial concentration and the possible political ramifications of conjoining economic and political power, efficiency concerns have been given much less importance. The same cannot be said for Canada. Since industrial concentration was already high in certain sectors and because of the increased openness of the Canadian economy to foreign competition, further increases in domestic concentration were deemed less important than the gains in economic efficiency that could be obtained, if proven. Moreover, the express concern in 1971 with economic and political power in Bill C-256 was dropped from subsequent attempts to amend the *Combines Investigation Act*.

142 Commentators on the penultimate version of the amendments to the Act, while calling attention to mergers that increase concentration in the small Canadian economy, write:

> On the other hand, smallness of market also means a greater probability of the existence of non-captured scale and other economies. For this reason, it seems to us essential that when a Canadian merger is challenged, the parties to it be given ample opportunity to offer an economies-capture defence. We must add, however, for this defence to be valid, the economies must occur in real resource use, as contrasted with the mere use of the new-found market power of bigness to squeeze extra "pecuniary" gains out of the profit margins of upstream suppliers, or of downstream processors and distributors. (B. Dunlop, D. McQueen and M. Trebilcock, *Canadian Competition Policy: A Legal and Economic Analysis*, Canada Law Book Inc., Toronto 1987 at 186)

Given the size of the American economy and the historic purpose of American antitrust laws, it is not surprising that the potential for losing scale economies was not a significant concern; indeed, under the Price Standard, such economies worked against the merger.

(5) Small Business

143 As noted above, small business historically received special consideration in the United States. The survival of small, locally-owned enterprises was a key goal of antitrust laws and, as noted above, efficiency considerations in mergers that created large competitors to small business were treated with hostility. While the emphasis of the U.S. antitrust laws on protecting small businesses from competition from larger firms has diminished very markedly, the hostile attitudes toward efficiencies have not.

144 The treatment of small business under Canada's Act is again very different. As the Tribunal noted, the purpose clause of the Act does not protect small businesses from large competitors; rather the Act provides that, under competition, small businesses have an "equitable opportunity" to participate in economic activity. Accordingly, if by virtue of greater efficiency, a merged firm obtains a competitive advantage over smaller, less efficient competitors, the Act finds no violation. If however that merger is anti-competitive, then if the test under section 96 is satisfied, the merger would proceed nonetheless.

(6) Foreign Ownership

145 Another important difference between the two countries is the implicit concern with Canadian ownership and economic control. In light of the degree of industrial concentration in Canada, mergers among large Canadian companies in the same industry would frequently be denied absent a recognized defence. One consequence of this is that large Canadian companies could more easily merge with foreign enterprises since the resulting merged company would less frequently cross the anti-competitive threshold in Canada.

146 It must be remembered that the Act was amended and the efficiency defence inserted therein at the same time as the debate on free trade with the United States and the growing trend toward privatization. In a globally more liberal environment for international trade and investment, the efficiency defence in section 96 allows the possibility that mergers among major Canadian businesses may produce entities that may possibly compete more effectively with large foreign enterprises at home and abroad.

(7) Efficiencies: "merger-specific" v. "order-driven"

147 As stated in the Horizontal Merger Guidelines, claimed efficiency gains must be "merger-specific". Although those Guidelines do not elaborate, this requirement appears to mean that a claimed efficiency gain is not cognizable if it could be achieved in another, presumably less anti-competitive, way.

148 The Tribunal found that the gains in efficiency in the instant merger would not be achieved absent the merger (i.e. if the order were made) and hence could be included in the test under subsection 96(1) (Reasons, at paragraph 462). This requirement is not the same as the one used by the American enforcement agencies. After satisfying itself that the two approaches were not identical, the Tribunal noted the same distinction was addressed in *Hillsdown, supra*, which supported the view that the Act

did not require that claimed gains in efficiency not be achievable in another, less anti-competitive way, although this was the requirement of the Commissioner's Merger Enforcement Guidelines ("MEGs").

149 The Commissioner may require that efficiency gains be merger-specific when deciding whether to challenge a merger. However, once an application is brought under the Act, included efficiency gains are "order-driven" rather than "merger-specific". Since an order of the Tribunal is formulated based on its findings under section 92 of the Act, efficiency gains are evaluated in light of the order. Hence, efficiencies can have no influence on the order that the Tribunal formulates.

I. American Commentary

150 The Court refers approvingly (Appeal Judgment, at paragraph 137) to American commentators who clearly articulate consumer protection as the overriding objective of U.S. antitrust laws. However, the merger provisions of Canada's Act are not so focussed on consumer protection. It appears to the Tribunal that American commentators have generally not realized this. Instead, they have been quick to attack section 96 of Canada's Act, and always on the basis that it diverges from the approach under American antitrust law. In this, the commentators are entirely correct, but they ignore Canadian economic conditions and concerns, in particular, the comparatively small size of the Canadian economy.

151 For example, in his analysis of the Act, Professor Ross advocates that the phrase "prevention or lessening of competition" in subsection 96(1) be interpreted in the same way as the phrase "restrain or injure competition unduly" in section 45 (presumably paragraph 45(1)(d)) and hence prevent redistributions of wealth from anti-competitive mergers as Parliament intended for criminal conspiracy (S. Ross, *Afterword-Did the Canadian Parliament Really Permit Mergers That Exploit Canadian Consumers So That The World Can Be More Efficient*?, Antitrust Law Journal, vol. 65, Issue 1, Fall 1996 at 641) [hereinafter, *Ross*]. The Tribunal disagrees with this view. If Parliament had intended the same meanings to these phrases, it would have used the same language when it added section 96 to the Act in 1986.

152 Secondly, Professor Ross notes the concern that the Consumer Surplus Standard would "...effectively read an efficiency defence out of the Competition Act" (Ross, at 647). Referring to the *obiter dicta* comments of Reed J. in the *Hillsdown* decision, he concludes that that standard would permit mergers where the efficiency gains are "...almost certain" and the "threat of substantially lessened competition is only likely..." (Ross, at 648). However, nothing in the Act suggests this, and in the Tribunal's view, the requirement that efficiency gains be shown on a balance of probabilities applies equally to any effects that are asserted.

153 Professor Ross may be correct to conclude that subsection 96(2) is inconsistent with the Total Surplus Standard (Ross, at 648), but it is also inconsistent with the Consumer Surplus Standard and the Modified Surplus Standard.

154 Professor Ross defines and criticizes a "total Canadian welfare model" because, when it results in blocking a merger by excluding efficiency gains and effects outside of Canada, it violates the non-discrimination requirements under international treaties and agreements (Ross, at 643-644). In the Tribunal's understanding, the "total Canadian welfare model" as defined by Professor Ross includes consideration of the deadweight loss to the Canadian economy and losses due to income transfer from Canadian consumers to foreign shareholders. Accordingly, it is a version of the Consumer Surplus Standard in which effects are limited to those experienced in Canada. As discussed below, the Tribunal disagrees with his conclusion regarding Canada's international obligations and his interpretation of the purpose clause of the Act.

155 In the Tribunal's view, Professor Ross appears to be antagonistic to any approach that differs from the approach adopted in the United States. Indeed, although his position is not entirely clear, his view appears to the Tribunal to be that no harm from an anti-competitive merger should be tolerated, regardless of proven efficiency gains. Although he refers to a consumer welfare standard, he appears to articulate the Modified Price Standard, which was criticized by Professor Townley at the first hearing.

156 The Court's reliance on Professor Brodley's article is puzzling since that article does not discuss Canadian law at all (Joseph F. Brodley, *The Economic Goals of Antitrust: Efficiency, Consumer Welfare, and Technological Progress* (1987) 62 N.Y.U. Law Review, 1020) [hereinafter, *Brodley*]. It cites neither the Act nor the Canadian MEGs, and it does not express surprise at the interpretation of section 96 adopted in the MEGs. Instead, addressing the on-going debate within American

antitrust law Professor Brodley writes that one approach to reconciling efficiency and consumer welfare would be to abandon the consumer interest. In light of Congressional and judicial decisions, he finds this unacceptable (Brodley, at 1035-36).

157 Professor Brodley emphasizes that consumer protection is the goal of American antitrust law. Regarding economic goals, he concludes:

> ...These economic objectives can be implemented by placing greater emphasis on stability and predictability of antitrust rules, preventing exclusionary conduct that threatens production efficiency, and recognizing a limited efficiencies defense when otherwise restrictive conduct would enhance production or innovation efficiency. (Brodley, at 1053)

Professor Brodley's article serves as a reminder of the debate within American antitrust law as it adapts to economic conditions a century after the antitrust laws were first introduced. It discusses Canada's approach not at all.

158 The Tribunal does not criticize the American antitrust regime, but it notes that it is the result of circumstances, policies, and judicial interpretation of the pertinent statutes that are unique to the United States. The opinions of American commentators on Canada's Act, whether cited by the Court or by the Commissioner, should be seen in the context of historical and continuing hostility toward efficiencies in merger review in the United States.

159 In the Tribunal's view, the prevailing hostile approach to efficiencies in American antitrust law derives from the primary focus of that regime on consumer protection. The adoption of the American approach to efficiencies under the Act would, without question, introduce the hostility that characterizes that approach. As noted above, the amendments in 1986 to the merger provisions of the *Combines Investigation Act* were primarily focussed on economic efficiency.

J. Does the Total Surplus Standard Vitiate Section 92?

160 In its Reasons, the Tribunal emphasized that the Consumer Surplus Standard could not be correct in law because it frustrates the attainment of efficiency that was Parliament's paramount objective in passing the merger provisions of the Act (Reasons, at paragraph 437).

161 The Commissioner now takes issue with that conclusion, and submits that adopting the Total Surplus Standard leads to the opposite situation, wherein anti-competitive mergers would routinely be saved because relatively small gains in efficiency will need to be proven in order to exceed the deadweight loss (Transcript, vol. 5, October 15, 2001, at 809-815).

162 In the Tribunal's view, these matters are extremely important for the proper understanding of the merger provisions of the Act.

(1) Background

163 In its Reasons regarding the Consumer Surplus Standard, the Tribunal took note of the observation of Professors Trebilcock and Winter that the deadweight loss of a price increase is typically quite small and the Tribunal confirmed this observation using data from the instant merger and Table 8 of Professor Ward's expert report (exhibit A-2059 at 34) to determine the deadweight loss of a hypothetical 15 percent price increase (Reasons, at paragraphs 434-436).

164 In describing the effects of an anti-competitive merger, the Tribunal distinguished between the efficiency effects and the redistributive effects thereof, and it did so under the assumption that competitive conditions prevailed before such a merger (Reasons, at paragraph 422). In the Tribunal's understanding, this is the typical approach in applying economic theory and, accordingly, when that theory is properly applied, the deadweight loss typically will be small.

165 The Tribunal notes that where competitive conditions do not prevail before the merger, then the deadweight loss from an anti-competitive merger may be much larger. In final argument in the first hearing, the Commissioner discussed this possibility at length and presented alternate estimates of the deadweight loss (Commissioner's Memorandum of Fact and Law, at paragraphs 744-756). The Commissioner concluded:

> It is our submission therefore that in order to perform an accurate total surplus standard test, the measure of deadweight loss to be contrasted to the efficiency gains must be done without the limitation imposed by the pre-merger perfectly competitive price assumption. The evidence shown in this case strongly supports the view that there exists at least a degree of market power in the market such that firms do not pre-merger set price exactly equal to average variable cost or marginal cost and that, given this markup, the true deadweight loss measure is that provided by Table T3. (Commissioner's Memorandum of Fact and Law, at paragraph 756)

166 In final argument, the Commissioner presented Table R3 to address an error in Table T3. The Tribunal excluded R3 and certain other estimates of the deadweight loss because they were based on information in respect of which expert opinion was required. As the Commissioner had not led any expert evidence in this regard, the respondents did not have the opportunity to address the matter raised in R3 (Reasons, at paragraph 451).

167 The Tribunal notes the estimates of deadweight loss shown in Table R3 were $54.89 million, calculated on an assumed price increase of nine percent, and $23.44 million calculated on an assumed price increase of four percent. Because Table R3 and other estimates of the deadweight loss premised on the existence of pre-merger distortions in price were excluded, the Tribunal did not discuss in its Reasons the Commissioner's argument that the measurement of the deadweight loss should take such distortions into account.

168 However, both of the estimates of deadweight loss shown in Table R3 were substantially larger than the $3 million estimate of deadweight loss, predicated on an average price increase of 8 percent, on which the Commissioner now relies. If these estimates had been properly introduced and had withstood cross-examination, the Tribunal might have concluded, using the Total Surplus Standard that it adopted, that the estimated efficiency gains of $29.2 million did not exceed and offset the effects of lessening of competition so measured.

169 The Tribunal cannot and will not revisit its decision. Nevertheless, it appears to the Tribunal that the typical analysis of effects, based on the assumption that pre-merger conditions were competitive, may not have been appropriate in this case and that the deadweight loss may be much larger than the estimate thereof on which the Commissioner now relies. It therefore cannot be said that the Total Surplus Standard necessarily would have led the Tribunal to approve the instant merger had the deadweight loss been measured properly.

(2) "Greater than and offset..."

170 The Commissioner suggests that under the Total Surplus Standard, an anti-competitive merger could be saved by minor cost-savings:

> It is our submission that is in fact what the Act was intended to address, to address situations where you had very substantial efficiency gains that resulted from the merger. It was in those circumstances that the efficiency defence is intended to apply, not intended to apply to authorize mergers where you simply can demonstrate that by getting rid of a president and a vice-president it is enough to allow otherwise a merger that reduces competition and increases prices to pass the test. (Transcript, vol. 5, October 15, 2001, lines 15-25 at 815)

171 In the Tribunal's view, this submission is premised on the conventional assumption that competitive conditions prevail prior to an anti-competitive merger, hence the resulting deadweight loss must be relatively small. The Tribunal used the same approach in its Reasons, at paragraph 422, when explaining and analyzing the effects in the typical case; it was not, however, illustrating the entire statutory requirement. While the Tribunal agrees that in such cases, relatively small gains in efficiency will be needed to exceed the typically small deadweight loss, the Act requires more under section 96.

172 Indeed, as the Tribunal pointed out in its Reasons (at paragraphs 449-450 and 468), subsection 96(1) makes it quite clear that the efficiency defence is not available if efficiency gains merely exceed the effects of lessening or prevention of competition. To be available, those gains must also offset the effects, and it cannot be concluded that the Tribunal would find that efficiency gains (whether large or small) that marginally exceeded the effects (whether large or small) would also offset

those effects. In particular, it cannot be concluded that an anti-competitive merger would be approved under section 96 if the only savings were the salaries of two senior executives.

173 In the instant case, the Tribunal found that the proven gains in efficiency were substantial in comparison to the losses in efficiency as measured by the deadweight loss, and this finding allowed the Tribunal to conclude that the statutory requirement to offset had also been met (Reasons, at paragraph 468). In the Tribunal's view, the application of the Total Surplus Standard in merger review under the Act does not result in the automatic acceptance of an anti-competitive merger, even where the pre-merger environment can properly be characterized as competitive. As noted above, when the evidence shows that pre-merger conditions are not competitive, it cannot be concluded that the deadweight loss would necessarily be so small that only minor gains in efficiency would exceed and offset that loss under the Total Surplus Standard.

K. Can the Consumer Surplus Standard be Met in this Case?

174 The Commissioner submits that:

> ...As a result, once the estimated size of the transfer is quantified by the Commissioner, it represents a relevant "measured effect" that should be added to the other measured effects for the purpose of determining the combined measured and qualitative effects, unless the Respondents demonstrate with appropriate evidence that some other treatment for the transfer is appropriate in the performance of the tradeoff in the circumstances of a particular case... (Commissioner's Memorandum on Redetermination Proceedings, paragraph 93 at 38-39)

In stating that the measured transfer of income (i.e. the measured redistributive effect) should be added in its entirety to the measured deadweight loss, and combined with those qualitative effects which are themselves efficiency effects or re-distributive effects on consumers, the Commissioner is advocating the Consumer Surplus Standard in respect thereof. Moreover, the Commissioner cites with approval the "...pragmatic approach of adding the wealth transfer to the allocative efficiency losses for the purposes of performing the section 96 defence..." suggested by American authors Fisher, Lande and Ross (Commissioner's Reply Memorandum on Redetermination Proceedings, paragraph 102 at 39).

175 Referring only to measured effects, the Commissioner submits that the instant merger could succeed if the proven annual efficiency gains were at least 7.5 percent of annual sales (Transcript, volume 5, October 15, 2001, at 814, line 12 to 815, line 2). On annual sales of $585 million, proven efficiencies of at least 7.5 percent thereof would exceed the Commissioner's measured total ($43.5 million) of the deadweight loss and income transfer.

176 The Tribunal notes that proven efficiencies, in this case equal to $29.2 million per year for ten years, are five percent of annual sales and hence are insufficient to exceed the total loss of consumer surplus as measured by the Commissioner.

177 The Tribunal disagrees with the Commissioner's submission: if the instant merger had produced proven efficiency gains equal to 7.5 percent of sales, then they would still be less than the measured loss of consumer surplus; hence, the Consumer Surplus Standard as applied only to measured deadweight loss and the income transfer would not be satisfied. The Commissioner's total measured loss of surplus is based on price increases averaging 8 percent across all business segments, and on a demand elasticity of -1.5; referring to Table 8 in Professor Ward's report (exhibit A-2059), the Commissioner finds that the components of lost surplus, the deadweight loss and the transfer, are 0.5 percent and 7.0 percent of sales respectively under those conditions.

178 However, the evidence in this case is that propane demand is inelastic; hence the demand elasticity could not be less than -1.0. Indeed, as the Tribunal noted in its Reasons, the respondents had argued that the measured deadweight loss was overstated because it was calculated at the demand elasticity of -1.5 and they noted that it was inconsistent with the estimation of price increases at a demand elasticity of -1.0 which the Commissioner had done by adopting and rounding down the estimated price increases in Table 2 of Professor Ward's Reply Affidavit to the Rebuttal Affidavit of Dennis W. Carlton & Gustavo E. Bamberger (exhibit A-2060) (Reasons, at paragraph 456)

179 The Commissioner acknowledged that the combined deadweight loss and redistributional effect are larger when calculated at a demand elasticity of -1.0 than when calculated at a demand elasticity of -1.5:

> Second, the majority noted that the respondents pointed out the deadweight loss estimates would be lower if they had been calculated at an industry demand of -1.0. As previously noted in oral argument, Professor Ward's Table 8 demonstrates that as demand becomes more inelastic, the deadweight loss for a particular price increase becomes smaller but the transfer becomes larger by an amount that makes the combined deadweight loss and transfer larger. As a result, if an elasticity of -1.0 had been used to prepare the table in Appendix A instead of an elasticity of -1.5, the deadweight loss would have been smaller, the transfer would have been larger, and the combined deadweight loss and transfer in the aggregate would also have been larger. (Commissioner's Memorandum on Redetermination Proceedings, paragraph 22 at 14)

180 While there is no evidence on the deadweight loss and transfer calculated at a demand elasticity of -1.0, it is clear that the lost surplus would exceed 7.5 percent of sales when calculated at a demand elasticity of -1.0. Accordingly, the Commissioner is incorrect to state that proven efficiency gains of 7.5 percent of sales would be required in order to meet the Consumer Surplus Standard.

181 In the Tribunal's view, the inability of efficiency gains of five percent of sales to meet the Consumer Surplus Standard in this case, and the insufficiency of gains of 7.5 percent to do so, amply illustrates that the required level of proven efficiency gains thereunder is unlikely to be attained except in the rarest of circumstances. We are of the view that the defence in subsection 96(1) would, for all intents and purposes, never succeed under this standard.

L. Is the Entire Transfer Necessarily Included?

182 The Commissioner's position is that the statistical and other evidence that informs the assessment of adverse redistributional effects is unnecessary in light of the Appeal Judgment of the Court. In the Commissioner's view, the redistribution of income and wealth as measured by the transfer of $40.5 million is the effect to be included in its entirety with no inquiry into the adverse elements thereof. In addition, the Balancing Weights Approach is nothing more than a tool to assist the Tribunal.

183 However, if the Commissioner is correct that the entire $40.5 million is to be included, then the Balancing Weights Approach is no longer necessary because it adds nothing to the decision that the Tribunal must make.

184 The Commissioner's position is that the measured redistributive effect must be taken into account in its entirety even when the consumers and shareholders are the same people:

> The Commissioner submits the merger clearly reduces the competitiveness of propane prices and this "effect" of the merger reduces the benefits of competitive propane prices to Canadian propane consumers by at least the amount of the consumers' surplus transfer. While it may be true that individual shareholders of Superior are, in some sense, consumers of propane themselves, it is the competitiveness of propane prices to consumers as consumers of the relevant product, and who are affected by the price increase, that is at issue here. Indeed, since all producers are in some sense consumers, competitive prices that benefit consumers will benefit all producers as well. The important consideration is that the consumers' surplus transfer is the immediate result of the anti-competitive merger. There is no preference for one or another class of consumer, but simply a public interest decision embedded in the Act that requires the likelihood of consumers being deprived of the benefits of more competitive prices (consumers' surplus transfer) as a result of an anti-competitive merger to be negatively weighted. Because in any given case competitive prices benefit the consumers of a product, but not the producers of that product, the identification of "competitive prices to consumers" as a goal of the *Act* effectively makes a policy choice to favour consumers. (Commissioner's Memorandum on Redetermination Proceedings, paragraph 29 at 16-17)

185 In recognizing that shareholders are also consumers, the Commissioner draws attention to the simultaneous positive and negative redistributional effects on those individuals. Yet the Commissioner asserts that no consideration of positive

redistributional effects is warranted even in those circumstances. In our view, this situation would more reasonably be judged socially neutral in the analysis of effects under section 96 of the Act.

186 In the Tribunal's view, there is no policy choice to favour consumers in the merger provisions of the Act. The Tribunal concluded that efficiency was the paramount objective of the merger provisions of the Act, and the Court agreed while requiring that the transfer be considered under subsection 96(1). A similar policy choice to favour efficiency is found in section 86 of the Act which permits higher prices to consumers if efficiencies are large enough to justify the specialization agreement.

187 A second reason for rejecting the necessity of including the entire amount of the transfer is that doing so vitiates the statutory efficiency defence. In their earlier influential article on American antitrust, Fisher and Lande observed:

> In approaching wealth transfers for a tradeoff analysis, the first problem is that the legislative history provides us with no guidance as to the precise relative weights of wealth transfers and efficiency effects. Giving any weight at all to redistribution would greatly affect the welfare tradeoff, because in general the redistribution effect (area S in Diagram IV-1) is many times greater than the deadweight loss (area D in Diagram IV-1)... As the percentage increase in price or the elasticity of demand decreases, the redistribution effect becomes dramatically larger than the deadweight loss. *Since the elasticity of demand and the probable percentage price increase are interrelated, in most mergers fitting the Williamsonian conditions the redistribution effect is likely to be between approximately four and forty times the deadweight loss*. (A. Fisher and R. Lande, *Efficiency Considerations in Merger Enforcement*, California Law Review, vol. 71, December 1983, no.6, 1582, at 1644-1645) [Emphasis added] [hereinafter, *Fisher and Lande*]

188 As an example of Fisher and Lande's analysis, where the price elasticity of demand is -1.0 and the consequential price increase is 10 percent, the wealth transfer will be 20 times the deadweight loss (for constant elasticity of demand). Accordingly, proven efficiency gains would be insufficient unless they were at least 21 times greater than the deadweight loss. For linear demand under the same conditions, the wealth transfer will be 22 times the deadweight loss. Hence, proven efficiency gains would be insufficient unless they were at least 23 times greater than the deadweight loss (Fisher and Lande, Table IV-4 at 1645).

189 By comparison, the proven efficiency gains in the instant merger ($29.2 million) are approximately 10 times the measured deadweight loss. Thus, even where the deadweight loss is relatively small and the proven efficiency gains are substantial in comparison, the latter will almost always be insufficient if the entire transfer were required to be included. In the Tribunal's view, the Fisher-Lande calculations demonstrate that including the entire transfer would result in the availability of the efficiency defence in section 96 only in rare circumstances.

190 A similar conclusion was reached in 1993 by a former official of the Bureau of Competition Policy who noted:

> ...If the words "the effects of any prevention or lessening of competition" are not limited to the deadweight loss resulting from a merger ... but are also considered to contemplate the wealth transfer associated with any price increase expected to result from the merger ... merging parties will very rarely, if ever, be able to meet the requirements of s. 96. The combined effect of the deadweight loss and the neutral wealth transfer resulting from a price increase typically far exceeds in order of magnitude any efficiencies which may be brought about by a merger. The Director recently stated that he is not aware of any merger that would have generated efficiencies sufficient to outweigh the sum of the likely wealth transfer and deadweight loss of the merger, and that he does not believe that such a merger will likely present itself in the future. (P.S. Crampton, *The Efficiency Exception for Mergers: An Assessment of Early Signals from the Competition Tribunal*, the Canadian Business Law Journal, vol. 21, 1993, 371, at 386)

Accordingly, a second reason for not requiring the full inclusion of the transfer, as a matter of law, is that it would make the defence of efficiency in section 96 unavailable except in rare circumstances, hence vitiating a statutory provision the paramount objective of which is economic efficiency.

191 Although arguing that the full amount of the transfer should be included in the measured effects, counsel for the Commissioner suggests two situations in which the transfer could be treated as neutral, or reduced and not given full effect. In

the first such situation, excess profits from sales to non-residents should be excluded. The second is the case of pre-existing monopsony.

(1) Redistribution to Foreigners

192 While advocating that the entire amount of the redistributed income be included as an effect for the analysis under subsection 96(1), counsel for the Commissioner suggests, in response to a question from the Tribunal (Transcript, vol. 1, October 9, 2001, at 68, lines 18-23) that there may be circumstances where the Tribunal should use its discretion to do otherwise. One instance is a merger of Canadian exporters following which the price increase is paid very largely by foreign consumers. In this case, counsel submits that the domestic component of the wealth transfer may be quite modest and the large component falling on foreign consumers could be ignored. The Tribunal should use its discretion to disregard the latter and therefore give the total wealth transfer less weight; accordingly, significant efficiency gains in comparison with the loss of efficiency (i.e. a small deadweight loss) and other effects could well allow the anti-competitive merger to proceed (Transcript, vol. 1, October 9, 2001, at 72, line 15, at 73, line 6).

193 The respondents argue, similarly, that many of Superior's largest customers are foreign owned companies and that the effect of the transfer on these foreign shareholders is not an adverse effect that should be considered (Memorandum of the Respondents Superior Propane Inc. and ICG Propane Inc. in Relation to the Redetermination Proceedings ("Respondents' Memorandum on Redetermination Proceedings"), paragraph 136 at 62).

194 The Tribunal notes that international aspects of the application of section 96 have been raised previously, most notably by Madame Justice Reed in *obiter dicta* in the *Hillsdown* decision. Reed J. queried whether the Act required neutral treatment of the redistribution of income consequent to an anti-competitive merger of foreign-owned firms located in Canada, as the excess profits earned on sales to Canadian consumers would flow to the foreign shareholders. It appears that the hypothetical situation posited by counsel to the Commissioner is the opposite of that characterized by Reed J.

195 The international ramifications of section 96 have been discussed by the American Professor Ross whose article was cited with approval by the Court. He posits an anti-competitive acquisition under the Act in Canada of a Canadian-owned firm by an American-owned firm where efficiency gains are large but accrue only in the United States; yet consumers pay higher prices, there are significant layoffs in Canada, and the deadweight loss is small. He concludes that under a "...*total world welfare*" standard, such merger would be approved, but under the "...*consumer surplus* model (roughly followed in the United States)", it would be blocked. He further concludes that under a "...*total Canadian welfare* model", the merger could be blocked by excluding the efficiency gains in the United States, but this raises serious questions of discrimination under Canada's international obligations under NAFTA and GATT. Accordingly, for this reason, and because he endorses the American approach to efficiencies generally, he doubts that the Canadian Parliament intended a standard other than the Consumer Surplus Standard (Ross, at 643-644).

196 Under the purpose clause of the Act, the purpose thereof is to maintain and encourage competition in Canada in order, *inter alia*, to promote the efficiency and adaptability of the Canadian economy. Accordingly, in the Tribunal's view, efficiency gains and deadweight loss (i.e. losses in efficiency) in foreign markets resulting from an anti-competitive merger in Canada are to be excluded in the application of section 96. This is clearly stated in the statute and is not a discretionary matter for the Tribunal. Accordingly, if the deadweight loss in foreign markets is an excluded effect, so are all other effects in foreign markets. In the Tribunal's view, the Act does not endorse a "*total world welfare*" standard.

197 A "*total Canadian welfare* standard" as defined by Professor Ross may or may not be discriminatory under Canada's international obligations, but the Act is not. In the Tribunal's understanding, those obligations require "national treatment" in the application of Canadian laws. Accordingly, if efficiency gains and effects in foreign markets are excluded when reviewing an anti-competitive merger of two Canadian-owned firms in Canada, the same exclusion must be accorded if those merging firms are owned by non-residents. In Professor Ross' hypothetical, the anti-competitive merger of an American-owned and a Canadian-owned firm would be blocked under the Total Surplus Standard (even if consideration of the layoffs was excluded) because there are no gains in efficiency in Canada.

198 Accordingly, the Tribunal agrees with counsel for the Commissioner that the portion of the transfer experienced by foreign consumers should be excluded in the section 96 analysis. However, the Tribunal does not agree that so doing is a matter of discretion.

(2) Pre-existing Monopsony

199 Counsel for the Commissioner submits that a second such instance for the Tribunal's exercise of discretion under subsection 96(1) arises in the case of an anti-competitive merger that offers countervailing power to an existing monopsony. Where consumers have organized to extract a subcompetitive price from producers in an industry, the gain in consumer surplus is not a gain to society because it comes at the expense of a corresponding loss in producers' profits. A subsequent merger that conferred market power on producers might be allowed to proceed in light of efficiency gains by ignoring the loss of the consumer surplus due to the pre-existing monopsony; only that portion of the wealth transfer that resulted from the increase in price above the competitive level would be considered (Transcript, vol. 5, October 15, 2001, at 825, line 23 to 826, line 17).

200 The Tribunal agrees that, if it is to consider redistributional effects under a standard other than the Total Surplus Standard, it should not automatically count the loss of consumer surplus attributable to pre-existing monopsony power against the merger if section 96 is invoked. The appropriate treatment of the various redistributional effects depends on the evidence presented, and that portion of the wealth transfer from consumers to producers may not be an adverse effect of the merger.

201 Although the Tribunal agrees with the submission of counsel, it notes that a merger policy that favours consumers over producers/shareholders would object to the loss of pre-existing monopsony benefits and, hence, in the scenario offered by counsel, the loss to consumers of their monopsony benefits would be counted against a merger that offered countervailing market power. Yet this is not the approach offered by counsel for the Commissioner, presumably because it is not what the Act requires. As noted previously, the Tribunal held and the Court agreed that the paramount objective of the merger provisions of the Act is efficiency.

(3) General

202 Accordingly, it is not clear to the Tribunal why it should take less than the full amount of the transfer into consideration in the subsection 96(1) analysis only in these two situations advanced by counsel for the Commissioner. In light of the concerns of Madame Justice Reed and Professor Townley, both of whose concerns are given weight by the Court, and having regard for the approach taken by the Commissioner's advisers in light of the Commissioner's dissatisfaction with the approach published in the 1992 MEGs, it is clear to the Tribunal that it should consider all effects routinely for their socially adverse, positive and neutral impacts.

203 In the Tribunal's view, the monopsony example raises a critical issue. Why should the merger provisions of the Act deny the consumer benefit in that instance? There must be some reason why merger policy concerns itself with the competitive price, even when achieving that price harms consumers by denying their monopsonistic gains.

204 The answer to that question, which has never been discussed in any part of the review of the instant merger is, clearly, economic efficiency itself. Competitive prices are desirable, not because they are low or fair to consumers-indeed, they may be quite the opposite-but rather because, in a wide range of circumstances, they promote economic efficiency quite generally. If this were not true, then there would be no particular reason to favour competitive markets. Clearly, there are more effective ways to ensure low and fair consumer prices over the economy as a whole than through a policy of maintaining and encouraging competition in Canada, but these other ways risk substantial, widespread bureaucracy and inefficiency, and reduction in economic growth and living standards, and they would not long be tolerated by Canadians.

205 Doubtless, there will be mergers that redistribute income adversely. If these redistributive welfare losses cannot be addressed more effectively in other ways, then there is a strong argument for taking them into account in merger policy. As noted by the Report of the Economic Council of Canada, and also in our Reasons, it was the Tribunal's view (Reasons, at paragraph

438) that redistributional issues were better handled outside of competition law. An example was offered by Madame Justice Reed in the *Hillsdown, supra*, decision: the merger of two drug companies where the relevant product is a life-saving drug.

206 The Tribunal notes that Parliament established the Patented Medicine Prices Review Board ("PMPRB"), an independent, quasi-judicial body, on December 7, 1987. Its regulatory function is to protect consumer interests by regulating the maximum prices charged by manufacturers for patented medicines to ensure that they are not excessive. The PMPRB's mandate extends to all patented drugs, prescription and non-prescription medicines sold in Canada for human and veterinary use (see generally www.pmprb-cepmb.gc.ca).

207 It thus appears that Parliament had already fully addressed Madame Justice Reed's concern when it established the PMPRB, equipped it with expert board members and professional staff, and mandated it specifically to ensure that prices of medicines were not excessive. There is no proper role for the Tribunal in this aspect of drug company mergers, as it would duplicate the role of the PMPRB which, unlike the Tribunal, has the relevant expertise and authority to regulate medicine prices in the consumer interest. Moreover, patentholders have rights which extend beyond the Tribunal's jurisdiction.

208 The regulation of retail propane prices is an option that is open to government. There is no doubt that Parliament does not hesitate to use all of the means at its disposal to raise the welfare of all Canadians. The Tribunal's proper role, especially since it deals only with the civil matters under the Act, is to ensure that the benefits of a competitive economy are achieved within the law.

M. Consumer Surplus Standard cannot be Correct in Law

209 In describing the Consumer Surplus Standard, the Court did not expressly endorse, neither did it reject, it. Rather, the Court stated:

> [22] The "consumer surplus standard" posits that a merger should be permitted only if the resulting efficiency gains exceed the sum of the wealth transferred to the producers and the deadweight loss occasioned by increases in price charged by the merged entity. In practice, this standard will also be difficult to establish and consequently will tend to narrow the availability of the efficiency defence. (Appeal Judgment at 12)

210 While the Court concluded that the Tribunal erred in law by adopting the Total Surplus Standard, it declined to prescribe the correct methodology:

> [139] ...Such a task is beyond the limits of the Court's competence.
>
> [140] Whatever standard is selected (and, for all I know, the same standard may not be equally apposite for all mergers) must be more reflective than the total surplus standard of the different objectives of the *Competition Act*. It should also be sufficiently flexible in its application to enable the Tribunal to fully assess the particular fact situation before it.
>
> [141] It seems to me that the balancing weights approach proposed by Professor Townley, and adopted by the Commissioner, meets these broad requirements. Of course, this approach will no doubt require considerable elaboration and refinement when it comes to be applied to the facts of particular cases.
>
> [142] Further, while the adoption of the balancing weights approach is likely to expand the anti-competitive effects to be considered, and hence narrow the scope of the defence, I see no reason why it should, as the respondent submitted, practically write section 96 out of the Act. (Appeal Judgment at 54-55)

211 It is clear however that the Commissioner's expert witness on welfare economics, Professor Townley, rejected the Consumer Surplus Standard because it failed to distinguish between those consumers for whom the merger's impact would be socially adverse and those for whom it would not (i.e. it applied a "fixed weight *a priori*").

212 It appears that, on appeal, the respondents argued that the Balancing Weights Approach would vitiate the efficiency defence in subsection 96(1). The Court disagreed with the respondents' submission, but the Court's response at paragraph 142

of the Appeal Judgment indicates that it was concerned that section 96 not be vitiated by reason of the standard adopted by the Tribunal.

213 The Tribunal accepts, as it must, the Court's directive that the Balancing Weights Approach does not vitiate the efficiency defence. Recognizing the Court's concern, the Tribunal also takes the instruction that, as a matter of law, it cannot adopt a standard that vitiates section 96.

214 The Tribunal concludes that the Consumer Surplus Standard, which requires that the full amount of the transfer be added to the deadweight loss in establishing the effects of an anti-competitive merger, is so limiting that its adoption in all cases would be contrary to the conclusion of the Court, would rule out the inquiry that Professor Townley regards as necessary to assess the welfare effects of the merger, and generally makes the efficiency defence unavailable under the Act, and so cannot be correct in law because it vitiates the statutory provision in subsection 96(1).

215 The fact that in this case proven efficiency gains of 7.5 percent of sales would not satisfy the Consumer Surplus Standard adequately demonstrates that the requirement therein is so high that it would be met, if ever, only in rare circumstances. Based on its review of the legislative history of the Act and the Parliamentary review of the 1986 amendments, the Tribunal concludes that the efficiency defence (and the exclusion of the limitations thereon in preceding bills) was not inserted into the Act for such limited use; rather, it was meant to be an essential part of the Canadian merger policy that emphasizes economic efficiency.

VI. The Effects

216 The Commissioner accepts, as he must, the Tribunal's finding of estimated efficiency gains of $29.2 million per year for ten years, although he insists that the measured deadweight loss of $3 million per year for ten years is correct despite the Tribunal's attempt to quantify certain qualitative effects. The Commissioner maintains that the full amount of the estimated income transfer of $40.5 million per year should be included and asserts several effects that the Tribunal should consider qualitatively in light of the purpose clause of the Act and the ruling of the Court. The Commissioner submits that regardless of the way in which the Tribunal performs the analysis under section 96 of the Act, it will find that the respondents have not met their burden to show that efficiencies both exceed and offset the effects.

217 The respondents assert that the Tribunal must make specific findings regarding the deadweight loss because it did not do so in its Reasons following the first hearing. Moreover, the Tribunal should consider that Professor Ward's evidence failed to find price increases in certain segments, hence the Commissioner's estimates of deadweight loss and transfer in these segments should be reduced or disregarded. Regarding qualitative effects and certain other matters, the Tribunal is *functus officio* and cannot revisit its findings. In addition, the Commissioner is prevented from introducing new evidence in the current hearing and therefore cannot establish certain effects.

218 The respondents further assert that whereas the Commissioner is now advocating the Consumer Surplus Standard, only the adverse portion of the income transfer can be considered. Since propane expenditures account for a relatively small portion of total expenditure for all consumers, the effect of the predicted price increase is small as is the impact of the transfer. Propane consumers are not generally poor or needy, and accordingly, the entire transfer of income should be regarded as neutral. On this basis, the Tribunal should allow the merger to proceed.

A. Deadweight Loss

219 The Commissioner submits that the resource misallocation effect (loss of efficiency) of the merger was correctly measured by the deadweight loss of $3 million per annum and should not be revisited by the Tribunal. In response to the Tribunal's conclusion in its Reasons that the measured deadweight loss was probably overstated, the Commissioner states that any overstatement due to the estimation based on total combined sales rather than combined sales of the parties in overlapping markets is *de minimus* (Commissioner's Memorandum on Redetermination Proceedings, paragraphs 19-20 at 13).

220 In response to the Tribunal's conclusion that the measured deadweight loss was overstated since it had been calculated incorrectly with a demand elasticity of - 1.5 rather than - 1.0, the Commissioner refers to Table 8 of Professor Ward's expert

report (exhibit A-2059) that demonstrates that the deadweight loss for a particular price increase becomes smaller as demand becomes more inelastic, and that while the deadweight loss would have been smaller if calculated at a demand elasticity of -1.0, the redistributive effect would have been larger and the combined deadweight loss and transfer would also have been larger (Commissioner's Memorandum on Redetermination Proceedings, paragraph 22 at 14). See paragraph 178 *supra*. However, the Commissioner does not argue that the Tribunal should revisit its conclusion regarding the overstatement of the deadweight loss on this basis.

221 The Commissioner states that the measured deadweight loss of $3 million was based solely on the price increase by the merged entity and did not include the mis-allocation effect (i.e. deadweight loss) due to interdependent pricing in certain markets by competing firms (Commissioner's Memorandum on Redetermination Proceedings, paragraphs 23-24 at 14-15).

222 The Commissioner states that the deadweight loss estimate does not include the mis-allocation of resources due to the prospective elimination of certain programs and services by the merged firm. The Commissioner notes that the Tribunal concluded that the impact thereof would be minimal and most unlikely to exceed, in amount, the estimated deadweight loss, implying a maximum effect equivalent to that of a price increase in the range of 7-11 percent. It appears that the Commissioner does not seek to disturb the Tribunal's conclusion (Commissioner's Memorandum on Redetermination Proceedings, paragraph 40 at 20-21).

223 Pointing out that the Tribunal concluded that the upper limit on the deadweight loss was $6 million, the respondents submit that the Tribunal did not make a specific finding on the size of the deadweight loss and they submit that the Tribunal should do so now. The respondents further assert that the Tribunal did not find that any specific price increase was likely when it made findings about the anti-competitive effects (Respondents' Memorandum on Redetermination Proceedings, paragraph 21 at 8) and that, on Professor Ward's evidence, the Tribunal could not conclude that a price increase would occur on a balance of probabilities (Respondents' Memorandum on Redetermination Proceedings, paragraph 25 at 10). They also maintain that only sales volumes in overlapping markets can be used when estimating the deadweight loss and the redistributive effect, and then only for residential and industrial business segments because Professor Ward did not make any estimates of price increases for his "Other" segment and his estimate for auto-propane was statistically insignificant (Respondents' Memorandum on Redetermination Proceedings, paragraph 26 at 10). They introduce calculations that the deadweight loss is $1.8 million and the transfer of income is $23.7 million which estimates are themselves overstatements (Respondents' Memorandum on Redetermination Proceedings, paragraphs 61-64 at 26-28).

224 The respondents submit that the proper estimation of the deadweight loss would exclude Superior's sales in Atlantic Canada because it is not an overlapping market, would exclude sales in "Category 1" markets since there is no substantial lessening of competition therein and would reduce sales in the automotive segment for lack of statistically significant evidence of a price increase, *inter alia*. The respondents' further estimates of the deadweight loss and transfer are substantially lower; the Commissioner offers rebuttal thereto in reply.

225 The respondents submit that the Tribunal's Reasons included consideration of the deadweight loss in Atlantic Canada, hence the Tribunal is *functus officio* in that regard (Respondents' Memorandum on Redetermination Proceedings, paragraph 74 at 35). They further submit that any deadweight loss arising from interdependent and coordinated pricing behaviour has already been considered by the Tribunal when it accepted the measured deadweight loss of $3 million (Respondents' Memorandum on Redetermination Proceedings, paragraph 76 at 36). The respondents also state that the Tribunal fully considered the deadweight loss implications of the negative qualitative effects of the merger, found them minimal, and is *functus officio* in that regard (Respondents' Memorandum on Redetermination Proceedings, paragraphs 66-67 at 29-31).

226 The purpose of this Redetermination Hearing is the consideration of effects that were not considered in the Reasons which followed the first hearing. The Tribunal made certain findings in respect of the deadweight loss and those findings were not disturbed by the Court. Those findings will not be revisited.

227 In its Reasons, the Tribunal did not consider separately the deadweight loss arising from interdependent and coordinated pricing by competitors of the merged firm because the Commissioner did not argue for consideration of this effect. Rather,

the Commissioner argued that interdependent and coordinated pricing was itself the effect to be considered, and the Tribunal disagreed (Reasons, at paragraph 465). Since the Commissioner did not propound deadweight loss from interdependent and coordinated pricing by competitors of the merged firm at the first hearing, the Tribunal did not make a specific finding in that regard. Rather, the Tribunal found, after all of the evidence, that the full extent of the measured (or estimated) deadweight loss was $3 million.

228 In any case, the Tribunal notes that there is no evidence of deadweight loss from interdependent and coordinated pricing on the record. Professor Ward did not address this issue at all in his expert report, and in his oral testimony cited by the Commissioner, Professor Ward said in regard thereto only "...There could possibly be two different effects..." (Commissioner's Memorandum on Redetermination Proceedings, paragraph 24 at 14-15). It appears to the Tribunal that Professor Ward did not examine these effects or present any opinion thereon. Accordingly, the Tribunal can reach no conclusion about deadweight loss from interdependent and coordinated pricing by competitors.

229 The Tribunal agrees with the respondents that it did not adopt a specific price increase for the purpose of assessing the deadweight loss. Rather, it accepted the Commissioner's estimate of $3 million as the deadweight loss and the Tribunal augmented it by its assessment of the maximum deadweight loss that could be attributed to changes in the product line by the merged firm. Accordingly, the Tribunal concluded that the deadweight loss would not exceed $6 million.

230 The Tribunal agrees with the respondents that it did not make a specific finding on the deadweight loss, for the reason that it was not necessary to do so in light of the small magnitude thereof in relation to proven efficiency gains. The Tribunal did, however, accept the $3 million estimated deadweight loss that the Commissioner proposed was the effect of the price increase by the merged firm. The Tribunal finds merit in some, but not all, of the respondents' claims that this estimate is overstated. Subsection 96(1) requires consideration of all effects of lessening or prevention of competition in Canada. Hence, there is no basis for excluding sales in Atlantic Canada just because it is not an overlapping market. Similarly, there is no basis for excluding sales in Category 1 markets just because no substantial lessening of competition was shown therein in the section 92 inquiry. On the other hand, the respondents may be correct that no deadweight loss in auto-propane should be considered because Professor Ward's estimated price increase in auto-propane was statistically insignificant and because his was the only statistical evidence before the Tribunal regarding the magnitudes of likely price increases.

231 Given the express purpose of this Redetermination Hearing, the Tribunal will not revisit its conclusion that Professor Ward did give an opinion about price increases generally and in certain segments such as auto-propane. Accordingly, the Tribunal will not revisit its conclusions that the $3 million estimate of deadweight loss submitted by the Commissioner is probably overstated and that the total deadweight loss is most unlikely to exceed $6 million.

232 The Commissioner further quotes the American authors noted above who make the point that the redistributive effects can have additional negative implications for efficiency. Citing articles by R. Posner and by R. Lande, these authors argue that the redistributed income will eventually be transformed into efficiency losses because the merged firm may become complacent and allow costs to rise (Commissioner's Reply Memorandum on Redetermination Proceedings, paragraph 103 at 39). To the Tribunal, this interesting observation suggests that the estimated deadweight loss from the instant merger is too low. However, these inferences are unsupported by anything on the record and the Tribunal will not consider them further.

233 In the Tribunal's view, the requirement in subsection 96(1) that efficiency gains must be "greater than" the effects of lessening or prevention of competition favours a quantification of efficiency gains and the effects to be considered, where possible. That a particular effect cannot, even in principle, be quantified does not relieve the Tribunal of assessing that effect in the "greater than" test. Accordingly, where it is possible to quantitatively estimate such effects even in a rough way, perhaps by establishing limits as the Tribunal has done regarding certain qualitative effects, it is desirable to do so where the evidence permits. On the other hand, effects that are, in principle, measurable should be estimated; failure to do so will not lead the Tribunal to view them qualitatively.

B. Interdependent and Coordinated Behaviour

234 The Commissioner argues now that the redistribution of income arising from the coordinated pricing behaviour of competitors should be considered as a qualitative effect by the Tribunal.

235 The Commissioner did not propound this effect at the first hearing.

> MEMBER SCHWARTZ: Apart from Dr. Ward's testimony here, which I don't want to minimize, I don't recall that the Commissioner advocated it in the first hearing that these were sources of deadweight loss and transfer that needed to be considered. Rather that the Commissioner said, as I understood it, that interdependence and coordination were themselves, I suppose, so important that they needed to be given a qualitative consideration outside of any deadweight loss or transfer issues.
>
> So am I wrong when I say the Commission did not seek to have deadweight loss and transfer from the coordinated effects considered?
>
> MS. STREKAF: Well, I think that - I guess two responses.
>
> First of all, there was no calculation put forward with respect to what the deadweight loss and transfer would be with respect to category two and three markets in the original case. I think the second response, and that relates to - part of the scope of this hearing is to now focus in and drill down very specifically in accordance with what the Federal Court of Appeals direction has been and to examine the effects in their totality. And in looking-
>
> . . . . .
>
> MS. STREKAF: In this context here, we are not - we had not put forward a specific number as to what those deadweight loss and transfers would be. But relying on the evidence that was at the hearing of Professor Ward, he recognized that there would be an additional deadweight loss and a transfer, and in discussing the coordination effects more specifically later on in the brief, we attempt to try and put some boxes around what those numbers might be to give you kind of an order of magnitude of how you might view that from a qualitative perspective rather than trying to quantify those numbers.
>
> MEMBER SCHWARTZ: Thank you very much. (Transcript, vol. 1, October 9, 2001, at 116, line 25 to 118, line 22)

236 In the Tribunal's view, the same evidentiary issues that attend the claim of deadweight loss from interdependent and coordinated behaviour attend the claim of redistributional effect. There is no evidence thereof on the record. Again, Professor Ward did not address this redistributional effect in his expert report. His oral evidence is, as noted above, speculative. Indeed, his oral evidence cited by the Commissioner addresses the possibility of loss of producer surplus by the competing independent firms, not the possible loss of consumer surplus by migrating customers (Commissioner's Memorandum on Redetermination Proceedings, paragraph 24 at 15).

237 Since the Tribunal had adopted the Total Surplus Standard, it would not have considered the redistributional effect of interdependent and coordinated behaviour by competitors had it been propounded at the first hearing. In light of the Appeal Judgment, the Tribunal is of the view that it should consider the submissions of the parties in this matter. However, as there is no evidence on which the Tribunal could assess the claimed redistributive effect of interdependent and coordinated behaviour, the Tribunal rejects the Commissioner's submission.

C. Service Quality and Programmes

238 The Commissioner maintains that the Tribunal, while it considered the deadweight loss effect of the removal or reduction of services and pricing arrangements offered by ICG, should now consider the redistribution of income associated with that exercise of market power. It should further consider the qualitative impacts associated with the elimination of or reduction in consumer choice in, for example, the national account coordination services product market (Commissioner's Memorandum on Redetermination Proceedings, paragraphs 34-41 at 19-21).

239 The respondents point out that the Tribunal stated in its Reasons that there was no evidence regarding the scope of any program removal or service reduction. In addition, they argue that the Commissioner has not explained why consumers value

choice *per se*, i.e. beyond the effect it has on price or quality of service, which matters have already been considered by the Tribunal (Respondents' Memorandum on Redetermination Proceedings, paragraphs 68-73 at 31-34).

240 The Tribunal recognized that ICG had established certain services and pricing arrangements that Superior and other propane marketers did not offer. (However the Commissioner notes that, in western Canada, Superior offers a program similar to ICG's "Cap-It" arrangement.) In the Tribunal's view, GolfMax and similar arrangements are specialized marketing arrangements and represent ways in which ICG has sought to differentiate itself from its competition in selling propane. The removal of certain specialized marketing arrangements by the merged company would cause a buyer for whom that arrangement was its preferred way of acquiring propane, to select a less-preferred arrangement. As with switching induced by a direct increase in price, this change of arrangements would entail a loss of efficiency as measured, in principle at least, by the deadweight loss and a redistribution of income from buyer to seller. If estimates of these effects could be made, the effects of reduced choice would be captured in the conventional way. If such estimates could not be made, then the effects would have to be established in some other way per the evidence.

241 On the evidence that propane demand was inelastic, the Tribunal concluded that propane consumption would not decline significantly if those marketing arrangements were eliminated. On the evidence, the Tribunal concluded that to the extent that certain marketing arrangements were removed, the deadweight loss therefrom would be "minimal" and "...most unlikely to exceed in amount the estimated deadweight loss..." of $3 million. (Reasons, paragraphs 466-467). In this way, the Tribunal used the available evidence to place an upper bound on the effect on efficiency brought about by the reduction or removal of certain marketing arrangements argued by the Commissioner as a qualitative factor.

242 The Tribunal was directed by the Court to consider the redistributive effects that it ignored initially. However, the Tribunal notes that at the first hearing, the Commissioner did not adduce any evidence on this matter. Rather, the Commissioner was content to argue that the removal/reduction of programs and services should be considered as (negative) qualitative effects. The Commissioner never argued, and hence adduced no evidence, regarding the redistributive effect resulting from this removal/reduction of programs and services.

D. Atlantic Canada

243 The Commissioner submits that the prevention of competition in Atlantic Canada that the Tribunal found in its section 92 inquiry is an effect to be considered qualitatively under section 96 of the Act. The respondents state that there is insufficient information on the record to assess the effect of this prevention of competition and that the Tribunal is *functus officio* in regard to the effects of prevention in Atlantic Canada, except for redistributional effects.

244 The Tribunal accepted that the merger prevents ICG's plans to expand in Atlantic Canada from being implemented. As a result, the price of propane will likely be higher than it would be if the merger did not take place. Accordingly, the possible effects of this prevention of competition in Atlantic Canada would be the efficiency gains and reduction in excess profits that would have resulted from the additional competition that the merger precludes.

245 Having identified and accepted the prevention of competition in Atlantic Canada, the Tribunal must assess the effects of such prevention. The prevention itself is distinguishable from its effects in the same way as above where the Commissioner distinguished between interdependent pricing and the effects thereof. There is no evidence on the record about the extent to which the price of propane would have fallen if ICG's expansion had occurred, and accordingly the possible efficiency gains and redistributional effects that the merger prevents in Atlantic Canada are not directly measured.

246 With respect to the prevented efficiency gains, the Tribunal notes that the Commissioner's calculation of the $3 million deadweight loss included sales by Superior in Atlantic Canada. Such calculation is an indirect way of including the prevented efficiency gains in Atlantic Canada. Though it might be a poor estimate, it was not criticized as such and accordingly, there is no basis or need for the Tribunal to reconsider the deadweight loss effect in a qualitative way. The Tribunal is *functus officio* in regard to the deadweight loss in Atlantic Canada.

247 Regarding the redistribution of income in the form of reduced excess profits to incumbents, the Tribunal agrees with the respondents that there is no evidence that would assist it in evaluating this effect from either a qualitative or quantitative perspective.

248 The Court states that the Tribunal found that, while the merged entity will eliminate "...all consumer choice, and remove all competition, in the propane supply market, as it is likely to do in Atlantic Canada, for example...", these effects were not to be considered under section 96 (Appeal Judgment, paragraph 107 at 43).

249 It appears to the Tribunal that, with respect, the Court may have confused prevention of competition and choice with reduction of competition and choice. There is no evidence that this merger will remove all competition in Atlantic Canada. Moreover, the Tribunal did not find that the merger would, or likely would, remove all competition in the propane supply market in Atlantic Canada. Finally, if the Court's statement concerning the elimination of consumer choice is a reference to Atlantic Canada, the Tribunal notes that it did not find that the merger would, or would likely, eliminate all consumer choice there.

E. Interrelated Markets

250 Referring to the Appeal Judgment, the Commissioner submits that the merger will result in additional losses of efficiency (i.e. deadweight loss) and additional redistribution of income in interrelated markets. The Commissioner points out that only 10.7 percent of the combined volumes of propane sold by Superior and ICG in 1998 were for residential end-use applications, and that propane is used as an intermediate input in a variety of industries and businesses (Commissioner's Memorandum on Redetermination Proceedings, paragraphs 30-33 at 17-18).

251 The Commissioner submits further that:

> An increase in the price of propane for these customers has the potential to increase the cost of goods produced or the services provided by these customers. Where an increase in propane prices results in a price increase for those other products, there will be additional resource misallocation (deadweight loss) and transfer effects beyond those identified above. These additional effects also result from the merger. While it is not feasible to quantify these effects, where, as here, the product involved represents a significant input in other products, this effect should be taken into account... (Commissioner's Memorandum on Redetermination Proceedings, paragraph 33 at 18)

252 The respondents assert that the Commissioner has provided no evidence on the effects from the merger in interrelated markets.

253 In the Tribunal's view, the issue here is whether an intermediate purchaser of propane will absorb the propane price increase or pass it on in some way. Whether the increase is large or small or whether propane is a significant input is not the issue.

254 The statutory wording of section 96 requires the showing of "...effects of any prevention or lessening of competition that will result or is likely to result...". In the Tribunal's view, the Commissioner's reference to the "...potential to increase the cost of goods..." is an insufficient basis for inferring that the effects or likely effects thereof will occur or for estimating the magnitudes thereof even in a rough way. In the Tribunal's view, the Commissioner has alluded to, but has not established, the effects and consequently the Tribunal agrees with the respondents. The Tribunal comments further on this matter below.

255 However, the Tribunal agrees that effects in related markets, where they are shown to arise from the lessening or prevention of competition, are important considerations under the Act and notes that the wording of subsection 96(1) provides for their inclusion. In particular, it is important to identify in which of the interrelated markets the effects occur in order to assess whether the redistribution of income occurs from consumer to shareholder or between shareholders of different businesses.

F. Loss of Potential Dynamic Efficiency Gains

256 The Commissioner submits that the merger will result in the loss of dynamic efficiency gains that would have been achieved by ICG's "transformation project". While these foregone gains are difficult to predict, the Commissioner submits that

qualitative consideration thereof is warranted because this concern relates to the objective of efficiency and adaptability in the purpose clause of the Act. The respondents state that the Tribunal is *functus officio* as regards dynamic efficiencies.

257 The Tribunal notes that ICG had adopted a new business model and was in the process of implementing various technologies when the merger occurred. The Commissioner notes:

> ...Whether the ICG model or the Superior model would have ultimately proved to be the more efficient remains an open question, however, what has been lost as a result of the merger are any potential dynamic efficiencies or enhanced competition that might have resulted over time from ICG's adoption of a technology-based approach to propane distribution... (Commissioner's Memorandum on Redetermination Proceedings, paragraph 78 at 32)

258 To accept the Commissioner's claim, the Tribunal would have to accept that ICG's transformation plan would succeed in achieving dynamic efficiency gains and cost savings. While there is evidence that ICG planned to introduce certain new technologies, there is no evidence on the gains or savings therefrom; for example, no expert witness testified to the likelihood of these gains being achieved, their "dynamic" character, or their quantum, and accordingly, the loss of such gains appears speculative even, apparently, to the Commissioner. Accordingly, the Tribunal rejects the Commissioner's submission.

G. Monopoly

259 In written argument, the Commissioner asserts that the creation of monopolies in 16 geographic markets for retail propane and the creation of monopoly in the "national accounts coordination services" market are qualitative effects that must be considered in the section 96 inquiry pursuant to the purpose clause of the Act (Commissioner's Memorandum on Redetermination Proceedings, paragraphs 67-73 at 29-31).

260 In oral argument, the Commissioner characterizes the instant merger as a monopoly having regard not only to those 16 geographic markets, but also to the much larger number of geographic markets where market power will be created or enhanced and will be expressed in coordinated pricing behaviour by other propane suppliers therein (Transcript, vol. 1, October 9, 2001, at 92, lines 9-24 and at 94, lines 1-11).

261 The respondents maintain that since section 96 concerns the "...effects of any lessening or prevention of competition...", the Commissioner must show additional effects of monopoly beyond those which have already been included in the deadweight loss and redistribution of income, and that no such additional evidence has been presented. They also maintain that the decision of the Court requires consideration of monopoly as a factor under section 96 only when the merged firm will have a market share of 100 percent, such not being the case in the instant merger. Finally, the respondents introduce calculations showing that the effects (deadweight loss and redistribution of income) in the Commissioner's monopoly markets are small.

262 The Court referred to the creation of monopoly as follows:

> [107] Another consequence of limiting the anti-competitive "effects" of a merger to deadweight loss is that it is irrelevant that the merger results in the creation of a monopoly in one or more of the merged entity's markets. According to the Tribunal, the fact that the merged entity of Superior and ICG will eliminate all consumer choice, and remove all competition, in the propane supply market, as it is likely to do in Atlantic Canada, for example, is not an "effect" that legally can be weighed under section 96 against the efficiency gains from the merger.
>
> [108] Again, such a conclusion seems to me to be so at odds with the stated purpose of the Act, namely "to maintain and encourage competition", and the statutory objectives to be achieved thereby, as to cast serious doubt on the correctness of the Tribunal's interpretation of section 96. (Appeal Judgment at 43)

(1) Definitional

263 The Tribunal did not find that the merged entity of Superior and ICG would eliminate all consumer choice and remove all competition, in the propane supply market, and in particular it did not find that this was likely in Atlantic Canada.

264 Even in those 16 markets described by the Commissioner's experts as "monopoly or near-monopoly markets", many consumers will have other product choices. The Tribunal accepted that, for the purposes of the section 92 inquiry, the product market was limited to "retail propane" and hence excluded other fuels pursuant to the criterion it adopted for market delineation (i.e. the five percent price increase of the "hypothetical monopolist" test). The result of that approach is the exclusion of alternatives that exist but are unlikely to be chosen. While other choices are available, it appeared to the Tribunal that they would not be chosen in sufficient quantities to meet the criterion it adopted, and hence those choices were excluded from the product market.

265 To further illustrate the issues of market definition, the Tribunal refers to its finding that "national account coordination services" constitutes a separate product market and that the instant merger is a merger of the only two firms in Canada that currently provide the service (Reasons, at paragraphs 73-82). In the sense that only one supplier will remain after the merger, the merger can be said to create a monopoly in "national account coordination services".

266 Nevertheless, it is not clear that a purchaser with propane requirements at many different locations will have "no choice". As the respondents argued, such firms will be able to obtain propane through regional and local suppliers and would even get a lower price for propane that would cover the apparently small incremental staffing cost to the national buyer. Moreover, as the Tribunal indicated in its Reasons, some national buyers of propane do in fact purchase propane this way. The Commissioner did not challenge that evidence at the first hearing.

267 However, the Tribunal based its decision to delineate a separate product market on the witness testimony that indicated that certain national buyers would bear a significant increase in the price of propane by the merged firm rather than switch to these regional and local suppliers despite the apparent monetary savings. Accordingly, the merger cannot be said to eliminate all choice for those buyers; all that can be said is that after the merger, the remaining choices will be so unattractive to some national buyers that, despite the apparent economic advantage, they will not choose them. Hence, it was appropriate to delineate a separate product market for the purposes of the Tribunal's inquiry under section 92. The Tribunal did not characterize the merger as a monopoly in "national account coordination services".

268 In the Tribunal's view, the term "monopoly" should be used with some appreciation of the definitional issues. The difficulty of defining monopoly outside of pure economic theory has been emphasized by Professors Trebilcock and Winter in an article cited by the Tribunal at paragraph 427 of its Reasons:

> ...To the layperson or undergraduate economics student, "monopoly" refers to a firm that sells free of any competitive discipline a product with no substitutes. A monopoly so-defined is fictional. Every product has some alternatives, if only because a consumer can keep the "cash" to purchase other commodities and services. Market power is a matter of degree, so a "monopoly" is not categorically defined... (M. Trebilcock and R. Winter, *The State of Efficiencies in Canadian Merger Policy*, Canadian Competition Record, Winter 1999-2000, vol. 19, no. 4, at 108)

269 Professor Ware made similar observations:

> Monopolies are much in the news in turn of the century Canada. Perhaps prompted by the Propane case as well as the merger of Air Canada and Canadian Airlines, there has been a virtual cacophony of "monopoly" allegations in the press. The implication seems to be that one only has to make this label stick to a proposed grouping or reorganization in order to bring down the wrath of competition law justly upon it.
>
> Although the term "monopoly" has a ring of precision to it, and forms a foundation stone for every student's introduction to economics, many would be surprised to learn that as an economic concept, the term monopoly is quite misleading and almost vacuous...
>
> The fact that monopoly is not a robust economic concept does not mean that competition policy and antitrust economics are ill-conceived. Rather, they are properly concerned with the search for market power and its abuse, not for monopoly, or even "monopolization". If predicated on the search for market power, the term monopoly can be understood more accurately

> as the product of an exercise in the definition of an antitrust market. What a merger to monopoly in this sense would mean is that for some products, firms involved in a proposed merger would have sufficient market power post-merger to profitably raise price by 5% (holding all other prices constant and abstracting from several factors...). The process of market delineation, as set out in the merger guidelines of Canada (and the United States) is not a process of identifying "monopoly" or even pure economic market power. It is a legal and procedural device designed as a step, albeit an important step, in a sequence of investigations established to identify the possibility that market power will increase as a consequence of a merger. Note that this exercise does *not* conclude that there are no other substitutes for the candidate products (so that the merger actually creates, in an economic sense, a monopoly); but, rather that a merger has the potential to create a minimum degree of market power. I use the term potential because subsequent steps in the analysis must consider the likelihood of entry within an adequate time period, the effect of capacity constraints, whether countervailing buyer power might exist, the implications of the merger for innovation, *etc.*
>
> Monopoly, then, is at best an elusive concept. The Tribunal and the Competition Bureau have, hitherto, largely recognized that such structural identifiers are only tools in the evaluation of market power and its consequences for economic efficiency... (R. Ware, *Efficiencies and the Propane Case*, International Antitrust Bulletin, Vol. 3, Issue 3, Fall/Winter 2000 at 17-18)

(2) Statutory History and Related Provisions

270 Although the Act does not provide a definition of the term "monopoly", its predecessor statute did. Section 33 of the *Combines Investigation Act* stated:

> Every person who is party or privy to or knowingly assists in, or in the formation of, a merger or monopoly is guilty of an indictable offence and is liable to imprisonment for two years.

Section 2 thereof provided a definition of "monopoly":

> "monopoly" means a situation where one or more persons either substantially or completely controls throughout Canada or any area thereof the class or species of business in which they are engaged and have operated such business or are likely to operate it to the detriment or against the interest of the public, whether consumers, producers or others, but a situation shall not be deemed a monopoly within the meaning of this definition by reason only of the exercise of any right or enjoyment of any interest derived under the *Patent Act*, or any other Act of the Parliament of Canada.

271 Under the amendments of 1986 to the *Combines Investigation Act*, merger is now a civil rather than a criminal offense. Since the definition of monopoly under section 2 of the *Combines Investigation Act* was not carried into the new Act, the Tribunal can assume only that that definition was not intended to be used. Indeed, the absence of any definition of monopoly indicates only that Parliament felt that none was needed under the Act as amended.

272 Under section 92, the Tribunal must decide whether a merger lessens or prevents competition substantially and, per subsection 92(2), it cannot so find solely on the basis of evidence of market share or concentration. Accordingly, even a merger to market share of 100 percent does not automatically violate section 92. Only after its consideration of entry and other factors can the Tribunal conclude that such merger will lessen or prevent competition substantially. Labelling such a merger as a "monopoly" neither adds to, nor detracts from, the Tribunal's required inquiry, which concerns the ability to exercise market power. The Tribunal is of the view that the creation of monopoly is irrelevant to its task under the merger provisions of the Act.

273 It is noteworthy that the offence of "monopolization" under the *Combines Investigation Act*, was decriminalized in 1986. The provisions thereof were amended and were included under "abuse of a dominant position" in section 79 of the amended Act. Accordingly, assuming a monopoly could be adequately defined, its formation does not constitute an offence under that section; indeed, nor is the occurrence of an anti-competitive act by such entity proscribed. Rather, the Commissioner is required to demonstrate dominance, a practice of anti-competitive acts, and the substantial lessening or prevention of competition that results from that practice.

274 As further indication that the civil provisions of the Act are not hostile to monopoly *per se*, the Tribunal refers to section 86 which allows the Tribunal to order the registration of a specialization agreement, and thereby to permit monopoly or elements thereof, when gains in efficiency are sufficiently large, i.e. when:

> ...the implementation of the agreement is likely to bring about gains in efficiency that will be greater than, and will offset, the effects of any prevention or lessening of competition that will result or is likely to result from the agreement and the gains in efficiency would not likely be attained if the agreement were not implemented... (Act, paragraph 86(1)(a))

Thus, an agreement that might otherwise be struck down as a criminal conspiracy may be registered when the gains in efficiency from the agreement are shown to meet essentially the same test as applies to mergers under subsection 96(1).

275 If the Court intended the creation of a monopoly to be a factor to be considered in conducting the subsection 96(1) inquiry then, *mutatis mutandis*, that view must also apply to specialization agreements because the efficiency test is the same. However, section 86 specifically authorizes the creation of monopoly or elements thereof through specialization agreements. It would make no sense to require the Tribunal to consider the creation of a monopoly as a negative effect of a specialization agreement when, by law, monopoly is permitted, indeed, desired, in that form.

(3) Section 96 Applies to this Merger

276 Writing in partial dissent of the Court, Létourneau, J.A. states that

> ...section 96 was not meant to authorize the creation of monopolies since it would defeat the purpose of section 1.1. This section was not intended to authorize mergers resulting in monopolies whereby, contrary to section 1.1, competition is eliminated, small and medium-sized enterprises are not able to enter or survive in the market and consumers are deprived of competitive prices. (Létourneau, J.A., Appeal Judgment, paragraph 15 at 8-9)

277 If, as it appears, Létourneau, J.A. is suggesting that the efficiency defence should not be available when mergers lead to structural monopolies then, with respect, he must be wrong. Defining monopoly as 100 percent market share, the Commissioner argued at the first hearing that section 96 was not available to such mergers as a matter of law, although mergers to a market share of 96 percent would be reviewed in a different way. As discussed in its Reasons, at paragraphs 418-419, the Tribunal held otherwise and the Court did not disturb this conclusion saying, rather, that the Tribunal should consider the purpose clause of the Act when analysing the effects under section 96. For this reason, the Commissioner no longer maintains the position taken at the first hearing.

278 As noted above, Bills C-42 and C-13 made the efficiency defence unavailable when the merger would result in virtually complete control of a product in a market. This provision was not included in Bills C-29, C-91 or the Act.

279 If Létourneau, J.A. is commenting on the instant transaction then, with respect, he must be largely mistaken about its effects. The merger, while it lessens and prevents competition substantially, does not eliminate all competition and does not prevent entry by small and medium-sized businesses and does not prevent their survival in the market. Yet it is an anti-competitive merger and it does deprive consumers of competitive prices.

280 It follows therefore, that in terms of the section 96 inquiry, the finding of monopoly according to any particular definition thereof is irrelevant. If the creation of a so-called monopoly is not *per se* sufficient to justify a conclusion of substantial lessening or prevention of competition under section 92 of the Act, then its creation cannot be a bar to the application of section 96. The Court did not interfere with the Tribunal's decision that the defence in section 96 applies to the instant merger. Since section 96 compares efficiency gains with the "...effects of any prevention or lessening of competition that will result or is likely to result from the merger...", the Court must have meant that there were effects of the substantial lessening on the record that the Tribunal had not considered.

281 Absent a statutory definition of monopoly, the Tribunal concludes that for the purposes of the Act, monopoly can be defined only as an entity with a high degree of market power. Indeed, by referring to markets not considered to be "monopoly

or near-monopoly", the Commissioner advocated such in oral argument. Accordingly, its effects for the purposes of section 96 of the Act are those efficiency and redistributive effects associated with any other exercise of market power; if there are other effects associated with the concept of monopoly, then they must be proven. However monopoly may be defined, a merger thereto is not more objectionable under the Act than other instances of substantial lessening or prevention of competition unless additional effects are shown.

282 In the Tribunal's opinion, the definitional problem reflects differences of opinion regarding the relationship between section 96 and the purpose clause. As it stated in its Reasons, the Tribunal views section 96 as a clear instruction that competition is not be to maintained or encouraged as otherwise required by the purpose clause. On this view, the Tribunal's task is clear; there is no conflict in the operation of these two important provisions.

(4) Additional Effects

283 It is clear from the history of American antitrust law that the conjoining of economic power and political power was a clear concern. Other values were also protected under American antitrust law, including job loss, effects on local communities, and decentralization by the absolute protection of small businesses. These effects are clearly matters that would have to be considered qualitatively if they were held to be effects for the purpose of section 96. Apart from the effect on small and medium-sized enterprises, such effects were not held to result from the instant merger.

284 The larger issue in regard to most of these concerns is that they are not connected to any of the objectives of Canadian competition policy, so it will be difficult to introduce them into the inquiry under section 96. For example, the Tribunal observed that job loss resulting from an anti-competitive merger was not an effect of lessening of competition for the purpose of section 96 because such losses also result from mergers that are not anti-competitive and in that case the Commissioner can take no notice thereof under the Act (Reasons, at paragraphs 443-444).

285 The Tribunal agrees with the respondents that, having considered all of the concerns raised by the Commissioner (i.e. deadweight loss, interdependent pricing, service quality, etc.) to consider, in addition, the creation, *per se*, of monopoly as a qualitative factor under section 96 is to double-count those effects (Respondents' Memorandum on Redetermination Proceedings, paragraph 87 at 40). Accordingly, the Commissioner must demonstrate those effects of monopoly which have not yet been considered; however, no such effects have been shown.

H. Small and Medium-Sized Enterprises

286 Referring to the Appeal Judgment, the Commissioner submits that, in its inquiry under section 96, the Tribunal should consider the impact of the merger on small and medium-sized enterprises in view of the reference thereto in the purpose clause of the Act.

287 The Commissioner cites the following:

- expert evidence that the market power this merger confers on Superior will allow it to discipline competitors by selectively lowering prices and thereby squeezing competitors in certain markets (Commissioner's Memorandum on Redetermination Proceedings, paragraph 56, at page 26)

- an internal document in which a Superior branch manager states that ICG and Irving each gained a commercial account at Superior's expense and that Superior would retaliate if the "trend" continued (Commissioner's Memorandum on Redetermination Proceedings, paragraph 58, at pages 26-27)

- an internal ICG document in which an ICG employee in Alberta states that ICG retaliated against Canwest and Cal-Gas and that the latter is now "pricing responsibly" (Commissioner's Memorandum on Redetermination Proceedings, paragraph 59, at page 27)

- the testimony of Mr. Edwards that he did not want to establish operations in a market with only one major competitor (Commissioner's Memorandum on Redetermination Proceedings, paragraph 60, at page 27)

• evidence that Superior retaliated against Imperial Oil's attempted entry (Commissioner's Memorandum on Redetermination Proceedings, paragraphs 61-62, at pages 27-28)

• one witness' testimony that he was concerned with predatory pricing and the confidential testimony of another that prices are sometimes so low that he finds it difficult to survive (Commissioner's Memorandum on Redetermination Proceedings, paragraphs 63-64, at page 28)

• expert evidence that the acquisition of ICG makes it more likely that Superior will discipline competitors engaged in aggressive discounting by meeting their prices (Commissioner's Memorandum on Redetermination Proceedings, paragraphs 63-64, at page 28)

The Commissioner also asserts, but does not show, that the merger increases Superior's ability to effectively deter expansion or entry of small and medium-sized propane suppliers with restrictive practices known to increase rivals' costs or decrease rivals' revenues (Commissioner's Memoramdum on Redetermination Proceedings, paragraphs 56-66 at 26-29).

288 The respondents state that small competitors will benefit from the merger to the extent that they follow the price increases of the merged firm and hence will not be harmed. They also state that the Tribunal is *functus officio* regarding deterrence of entry and expansion, disciplining of competitors, and the qualitative effects flowing from entry restriction (Respondents' Memorandum on Redetermination Proceedings, paragraphs 79-85 at 37-40).

289 The Tribunal takes the witness claims of predatory pricing seriously, but regards the testimony of the two competitors cited by the Commissioner as insufficient to establish predation. The Act is concerned with predation but there is no indication that any of these firms complained to the Commissioner about the pricing behaviour of Superior or of ICG prior to the merger. Moreover, the suggestion of predatory pricing is made by two competitors that remain in the industry. Distinguishing between predatory conduct and aggressive competition requires more evidence than is available here. In this regard, some of the cited testimony is confidential. Having reviewed the confidential transcript, however, the Tribunal regards this evidence as speculative and it cannot find predation or the likelihood thereof on the strength of such testimony.

290 The Tribunal accepted the evidence that new entrants or smaller firms seeking to expand find it difficult to compete for customers of Superior and ICG, in part, because of those firms' practice of writing customer contracts with certain anti-competitive provisions; 90-95 percent of both firms' customers are under standard form contracts (Reasons, at paragraph 132). As the Tribunal noted, there was some suggestion that Superior was considering relaxing some of these provisions if the merger proceeded, and there was discussion whether Superior's plans in this regard would be effective. Nonetheless, there is no evidence that the conditions of entry will be more difficult in this regard after the merger.

291 The Commissioner's examples of competitor discipline do not establish that Superior disciplined its small competitors; ICG, Irving, and Imperial Oil are certainly not small or medium-size businesses. That ICG apparently disciplined the regional firms is not evidence that Superior did so.

292 The Commissioner cites the experience of Mr. Edwards, who chose to locate his new propane business near London, Ontario. A former president of Superior, Mr. Edwards testified that he established his propane marketing business near London for a combination of personal and business reasons. His complete testimony is:

MR. EDWARDS: One was a personal one. I had moved from Toronto to London to do something else, and that didn't work out, so when I decided to re-enter the business, I was in London. Also, it's very close to the Sarnia infrastructure, which is the principal supply point in North America. The economies between Windsor and Toronto are very stable and often buoyant and steady, stable kinds of economies. There was - I didn't want to find myself competing in a market where I had one competitor.

MR. MILLER: Why is that?

MR. EDWARDS: Well, I had experienced that previously when I was out in Atlantic Canada. I competed nose to nose with the Irvings. If you move to Atlantic Canada to compete against the Irvings, I think you have an appreciation for what nose-to-nose competition with the Irvings would be like. It would be aggressive, at best.

I chose London because there is a variety of competitors serving a variety of markets, so I thought if I was going to enter the business, I would be better to enter it in that form.

MR. MILLER: In that there is more room to move against smaller independents?

MR. EDWARDS: If you duke it out with one major competitor, I suppose - my experience with the Irvings was that the duking out, it can be fairly punishing for a new entrant.

I thought if I positioned myself amidst a variety of competitors, I could incrementally compete with them a little bit here, a little bit there. (Transcript, vol. 8, October 6, 1999, at 1070, line 11 to 1071, line 20)

293 Mr. Edwards was president and chief executive officer of Superior until May 1996, and he incorporated his propane business in London, Ontario in June 1997 (Transcript, vol. 8, October 6, 1999, at 1063). Accordingly, his experience with the Irvings must have been during his tenure at Superior. Hence, his testimony must be taken to mean that Superior found it difficult to compete with Irving in Atlantic Canada, not that Irving "punished" small and medium-sized competitors, although it may be true.

294 The Commissioner cites the expert evidence of Professors Schwindt and Globerman, who testified that by eliminating ICG as a competitor, the merger would provide a greater incentive for Superior to meet price reductions by independent firms that competed actively on price; it would not have to share the eventual benefits of this disciplining strategy with ICG. In this way, independent firms (presumably, small and medium-sized enterprises) would be less inclined to compete on price. This expert opinion evidence was not challenged by the respondents at the first hearing, and the Tribunal accepted that evidence of the likely market structure in many geographic markets in coming to its decision that the merger lessened competition substantially.

295 The respondents submit that the Tribunal is *functus officio* with respect to the evidence of deterrence of entry and expansion, disciplining of competitors, and the qualitative effects flowing from entry restriction. The Tribunal considered the evidence on these matters in connection with its inquiry under section 92 of the Act. It cannot reconsider its findings or entertain new evidence. However, in light of the Appeal Judgment of the Court, the Tribunal must now consider, based on evidence available on the record, the effects of the merger on small and medium-sized enterprises in its inquiry under section 96 that it did not consider in its first Reasons.

296 In the Tribunal's view, while the Commissioner has not shown that Superior behaved aggressively toward its small and medium-sized competitors, the Commissioner has provided a reasonable basis for believing that this merger will likely result in coordinated pricing by its small and medium-sized competitors. The Commissioner does not dispute the respondents' claim that these competitors will likely experience higher margins and profits in consequence as the respondents suggest; rather, the Commissioner maintains that the resulting market structure is contrary to the goal of competition in the purpose clause of the Act, and that the impact on small and medium-sized competitors is inconsistent with an equitable opportunity to participate in economic activity as stated therein.

297 According to the Court, the impact of an anti-competitive merger on small and medium-sized enterprises is an effect of lessening or prevention of competition to be considered under subsection 96(1). The Court expresses its concern at several points in its Appeal Judgment. At paragraph 4, the Court suggests that "...the elimination of smaller competitors from the market..." is an effect that should be considered.

298 The Tribunal observes that there is no evidence in this case that the merger eliminates smaller competitors from the market, and the Commissioner does not submit such. In the Tribunal's view, the Commissioner is concerned that smaller competitors will choose to price interdependently rather than offer competitive challenge to the merged firm. The concern expressed by

Professors Schwindt and Globerman was not predatory behaviour by the merged firm; rather, they used the words "retaliation" and "squeeze" to indicate interdependence. In their expert report, predation is not mentioned even once (Report of R. Schwindt and S. Globerman, exhibit A-2056, (August 16, 1999) at 25-41).

299 At paragraph 69 of the Appeal Judgment, the Court concludes that the determination of the effects to be considered under section 96, including "...the impact on competing small and medium sized businesses...", is a question of law. At paragraph 88, the Court concludes that these effects should

> ...include the other statutory objectives to be served by the encouragement of competition that an anti-competitive merger may frustrate, such as the ability of medium and small businesses to participate in the economy...

300 The purpose clause of the Act states that when competition is maintained and encouraged, an equitable opportunity to participate in economic activity will be afforded to small and medium-sized enterprises. If the Tribunal is to consider the effect of an anti-competitive merger on small and medium-sized enterprises in the inquiry under subsection 96(1), then it must determine whether the merger denies those enterprises an equitable opportunity to participate in economic activity.

301 When those enterprises are competitors of the merged firm, it will not suffice to determine that the merger has a negative impact on them. Many mergers that are not anti-competitive will negatively affect smaller competitors and may indeed cause them to reposition or exit, but such mergers do not deny an equitable opportunity of smaller competitors to participate in economic activity. What must be shown is that the effect on small and medium-sized enterprises is an effect of the lessening or prevention of competition. That smaller competitors will begin to price in an interdependent/coordinated fashion in many relevant markets is a lessening of competition. While there may be deadweight loss and redistributive effects, there is, as noted above, no evidence thereof.

302 Alternatively, the small and medium-sized enterprises may be customers of the merged firm. In reply, the Commissioner states that the opportunity to charge anti-competitive prices is incompatible with the objective of the purpose clause of the Act that relates to an equitable opportunity for small and medium-sized businesses to participate in the economy:

> The paragraph quoted in fact says the opposite of the Respondents' characterization. It says that the Tribunal should not focus on one effect of the merger to the exclusion of the others; it does not say that any effect that benefits small business must be considered as a positive effect. *It refers to the wording of the Act, which relates to an equitable opportunity for small and medium-sized businesses to participate in the economy. That does not include an opportunity to charge anti-competitive prices*. Indeed, the Court also refers to the goal of the availability to consumers of a choice of goods at competitive prices, which is antithetical to the "positive" effect, cited by the Respondents, of a price increase resulting from an anti-competitive merger and subsequent price coordination amongst propane suppliers to exploit that increase. (Commissioner's Reply Memorandum on Redetermination Proceedings, paragraph 76 at 29) [Emphasis (italics) added]

303 In the Tribunal's view, the emphasized statement cannot be correct. If the purpose clause gave small and medium-sized business customers the absolute right to competitive prices, there would be an irreconcilable conflict between section 96 and the purpose clause because the former permits an anti-competitive merger when its requirements are met. In the Tribunal's view, the purpose clause does not grant absolute entitlements; even the objective of efficiency and adaptability is not absolute but is, rather, based on the result of a tradeoff analysis. Section 96 accords the efficiency objective in merger review priority over the other objectives only when its requirements are met. Accordingly, small and medium-sized business customers do not lose an equitable opportunity to participate in economic activity when the anti-competitive merger and the higher price are permitted by section 96. Similarly, small business customers of a firm that is part of a registered specialization agreement may also pay supra-competitive prices, yet the Act allows such agreements when the requirements of section 86 are met. An equitable opportunity to participate is not an absolute right to competitive prices granted by the purpose clause of the Act.

304 More generally, since, as in section 96, the statute explicitly permits an anti-competitive merger to proceed subject to certain conditions being met, it is illogical and contradictory to require that those conditions include the attainment of results that would be achieved under competition. Such an approach surely vitiates the statutory provision in section 96. Since this

cannot be what the Court meant, it must be correct for the Tribunal to focus on the denial of an equitable opportunity of small and medium-sized businesses to participate in economic activity.

305 To find the denial of an equitable opportunity of small and medium-sized enterprises to participate requires a demonstration that anti-competitive conduct offensive under the Act (i.e. section 79 or section 50) is taking place or will likely take place. On the evidence in this case, the Tribunal cannot conclude that small and medium-sized competitors and customers will lose an equitable opportunity to participate in economic activity.

VII. Redistributive Effects (the Wealth Transfer)

306 The Tribunal recognized the redistributive effects of the instant merger, but treated them as offsetting because it concluded that the Total Surplus Standard was the applicable standard; hence, the redistributive effects were, on balance, socially neutral. The Court concluded that the Tribunal

> ...erred in law when it interpreted section 96 as mandating that, in all cases, the only effects of an anti-competitive merger that may be balanced against the efficiencies created by the merger are those identified by the total surplus standard... (Appeal Judgment, paragraph 139 at 54)

Accordingly, among the effects which the Tribunal must consider are the redistributive effects based on the evidence available in the record.

A. Commissioner's Position

307 The Commissioner asserts that the higher price that will result from the merger will have the effect of transferring $40.5 million from propane consumers to shareholders of the merged firm annually. In the Commissioner's view, this is a "measured effect" of the merger that should be added to the other measured effects for the purpose of assessing all of the merger's effects. The Commissioner also submits that once the estimated size of the transfer has been quantified, the Commissioner's burden has been satisfied and that the respondents must demonstrate with appropriate evidence that some other treatment for the transfer is appropriate (Commissioner's Memorandum on Redetermination Proceedings, paragraphs 92-93 at 38-39).

308 The Commissioner submits that it is important to distinguish between producers (i.e. shareholders of the merged firm) and consumers of propane even if the former are also consumers thereof. Under the purpose clause of the Act, the concern for competitive prices to consumers requires that the entire redistributional effect be taken into account (Commissioner's Memorandum on Redetermination Proceedings, paragraphs 26-29 at 15-17).

309 In taking this view, the Commissioner refers to decisions in criminal cases under the Act and its predecessor statutes pursuant to which the objective of competition law is free competition for the public at large and that injury to the public from supra-competitive prices cannot be justified. Accordingly, "...[a] wealth transfer which arises from the direct exercise of market power and the imposition of increased prices *prima facie* offends the purpose and objectives of the *Act*." (Commissioner's Reply Memorandum on Redetermination Proceedings, paragraph 92 at 34-35).

310 The Commissioner notes that an alternate treatment of the transfer is provided in the opinion in dissent of Tribunal Member, Ms. Lloyd, who concluded that the wealth transfer should be considered from a qualitative perspective (Commissioner's Memorandum on Redetermination Proceedings, paragraph 102 at 42-43). However, the Commissioner does not advocate this view.

311 A third approach to the wealth transfer was that offered by Professor Townley, who would consider whether the Balancing Weights Approach is reasonable based on the evidence regarding the distributional aspects of the merger (Commissioner's Memorandum on Redetermination Proceedings, paragraph 110 at 45). However, the Commissioner states that Professor Townley's approach has been superseded by the Court's Appeal Judgment which recognizes the significance of the transfer itself. While adopting the Townley approach would, in the Commissioner's submission, lead the Tribunal to disapprove the

merger (Commissioner's Reply Memorandum on Redetermination Proceedings, paragraph 100 at 38), the Commissioner does not rely on that approach.

312 In the Commissioner's further submission, Professor Townley's Balancing Weights Approach is "...simply a tool that is available to *assist* the Tribunal in performing the tradeoff..." and that it is the respondents' burden to satisfy the Tribunal on the ultimate issue with respect to section 96 (Commissioner's Memorandum on Redetermination Proceedings, paragraph 119 at 480) [Emphasis in original]. According to the Commissioner, it is not necessary to consider the disproportionate effect on relatively low-income families and small, rural businesses that Professor Townley described in his report (Commissioner's Memorandum on Redetermination Proceedings, paragraph 116 at 47).

313 The Commissioner submits that as a result of the Appeal Judgment of the Court, the new approach adopted by his senior advisors in regard to assessing the transfer following the Commissioner's rejection of the Total Surplus Standard in the MEGs also reflected an incorrect and overly narrow interpretation of the Act (Commissioner's Reply Memorandum on Redetermination Proceedings, paragraph 99 at 37-38). Accordingly, the Commissioner no longer relies on that approach, which was emphasized at the first hearing.

B. Respondents' Position

314 The respondents submit that in its Appeal Judgment, the Court did not prescribe the correct methodology for assessing the effects under subsection 96(1). Accordingly, and in light of that Judgment, the Tribunal must fully assess the particular fact situation before it and consider only that portion of the wealth transfer that the Commissioner has shown to have adverse distributional impact and is important in its magnitude (Respondents' Memorandum on Redetermination Proceedings, paragraphs 100-101 at 45-46).

315 They further submit that the Commissioner's own position in law at the first hearing was that articulated by Mr. G. Allen, a senior advisor in the Bureau of Competition Policy, and that that approach seeks to determine the significant adverse redistributive effects of the transfer. That approach is consistent with Professor Townley's approach and, consistent with these experts, the entire income transfer cannot automatically count against the merger (Respondents' Memorandum on Redetermination Proceedings, paragraphs 106-108 at 48-49).

316 They submit that the Commissioner has now adopted the Consumer Surplus Standard, and they point out that Professor Townley testified that that standard involves an *a priori* fixed weight and was inconsistent with traditional welfare economics (Respondents' Memorandum on Redetermination Proceedings, paragraph 122 at 54-55 and paragraph 125 at 56-57).

317 The respondents cite witness testimony that propane expenditure is a small fraction of the buyer's total expenditures (Respondents' Memorandum on Redetermination Proceedings, paragraph 130 at 59) and that the effect of an eight percent price increase is a transfer of less than one percent of annual income of the buyer. While denying that there is evidence of an average eight percent price increase, they suggest that the income transfer therefrom would be inconsequential (Respondents' Memorandum on Redetermination Proceedings, paragraph 131 at 59).

318 The respondents assert that the redistributional effect of the merger is not adverse. They argue that the transfer of income will, in part, be between shareholders of the merged company and the shareholders of large, publicly-owned enterprises that buy propane, and the shareholders may even be the same persons. Further, many of Superior's largest customers are controlled by substantial foreign investors whose interests are not protected by the Act, particularly under the purpose clause thereof (Respondents' Memorandum on Redetermination Proceedings, paragraphs 133-136 at 60-62).

319 They also state that propane consumers are not generally poor or needy and that there is no evidence to the contrary. Many consumers are large industrial and agricultural concerns and wealthy individuals. They refer to Professor Townley's expert report (exhibit A-2081) that cited results of a survey of propane consumers by the Canadian Market Research Ltd. survey in 1997 ("CMR Study"), finding that 10 percent of residential customers studied used propane to heat their swimming pools. They also assert that the CMR Study is of limited scope, and they question why income transferred from people who use propane to heat

second homes, cottages or ski chalets should be treated as a negative effect. They submit that the Commissioner has the burden of justifying that treatment (Respondents' Memorandum on Redetermination Proceedings, paragraphs 138-147 at 62-67).

320 The respondents further submit that there is no evidence on the importance of the income effect on agricultural and auto-propane buyers. They conclude that there is no evidence that the redistributional impact of the merger is adverse, and that adopting the approaches of G. Allen and Professor Townley results in a neutral treatment of the wealth transfer (Respondents' Memorandum on Redetermination Proceedings, paragraphs 148-150 at 67-68).

C. Decision of the Court

321 At paragraph 74 of its Appeal Judgment, the Court disagreed with the Tribunal's interpretation of the purpose clause of the Act and stated that it should not be read subject to the specific and contrary provisions of section 96. In paragraph 75, the Court describes the test to be applied under subsection 96(1) as a "balancing test". At paragraph 77, the Court states that

> In referring to "the effects of any prevention or lessening of competition", subsection 96(1) does not stipulate what effects must or may be considered. When used in non-statutory contexts, the word, "effects", is broad enough to encompass anything caused by an event. Indeed, even though it does not consider the redistribution of wealth itself to be an "effect" for the purpose of section 96, the Tribunal recognizes, as all commentators do, that one of the *de facto* effects of the merger is a redistribution of wealth... (Appeal Judgment, at 32)

322 With reference to Reed J.'s comments *obiter dicta* in the *Hillsdown* decision at paragraph 131 of the Appeal Judgment, to the dissenting view of Ms. Lloyd at paragraph 132, to the treatment of the wealth transfer under the Horizontal Merger Guidelines, paragraphs 135-136, approvingly to certain American commentators on the interpretation of section 96 in the Commissioner's MEGs, paragraph 137, and in opposition to the views of "lawyer-economists" in the United States, paragraph 138, the Court concludes that

> ...the Tribunal erred in law when it interpreted section 96 as mandating that, in all cases, the only effects of an anti-competitive merger that may be balanced against the efficiencies created by the merger are those identified by the total surplus standard... (Appeal Judgment, paragraph 139 at 54)

323 The Court further concluded that it should not prescribe the correct methodology, such task being beyond the limits of the Court's competence (Appeal Judgment, at paragraph 139). It also stated that:

> Whatever standard is selected (and, for all I know, the same standard may not be equally apposite for all mergers) must be more reflective than the total surplus standard of the different objectives of the *Competition Act*. It should also be sufficiently flexible in its application to enable the Tribunal to fully assess the particular fact situation before it. (Appeal Judgment, paragraph 140 at 54)

324 The Court then suggested that the Balancing Weights Approach of Professor Townley was consistent with its broad requirements:

> It seems to me that the balancing weights approach proposed by Professor Townley, and adopted by the Commissioner, meets these broad requirements. Of course, this approach will no doubt require considerable elaboration and refinement when it comes to be applied to the facts of particular cases. (Appeal Judgment, paragraph 141 at 55)

D. Tribunal's Analysis of the Transfer

325 On the basis of the above, the Tribunal must now determine how to treat the redistributive effect (i.e. the transfer of wealth) based on the submissions of the parties, while taking instruction from the Court.

(1) General

326 There is some confusion over terminology. The Tribunal does not consider the redistribution of income that results from an anti-competitive merger to be an "anti-competitive effect". Rather, having regard to the decision of the Court, and referring to the wording of subsection 96(1), the redistributional impacts are among the effects of lessening or prevention of competition that the merger brings about or is likely to bring about. Redistribution of income and/or wealth occurs in many different ways in society, and often has nothing to do with competition policy. For example, government may redistribute income through the tax system or through public expenditures without transferring income anti-competitively.

327 The Tribunal notes the distinction for greater certainty because it is a distinction that is not made by the Court:

> Nonetheless, the *Horizontal Merger Guidelines, supra*, in the United States continue to treat the exercise of market power leading to an increase in price above the competitive level as the most important anti-competitive effect of a merger, and the resulting wealth transfer from the consumers to the producers, as a misallocation of resources: see P.T. Denis... (Appeal Judgment, paragraph 135 at 53)

At places in its Appeal Judgment the Court appears to refer to the redistributional effect as an anti-competitive effect, but such reference may reflect a convenient vocabulary rather than a statement of judicial understanding. In line with conventional economic analysis, the Tribunal does not regard the wealth transfer as anti-competitive or as a misallocation of resources. An anti-competitive effect is a misallocation of resources that reduces society's aggregate real income and wealth. A transfer redistributes income and wealth within society but does not reduce it.

328 Whatever the practice or terminology may be in the United States, the Tribunal seeks to distinguish these two sets of effects. In its Reasons, the Tribunal distinguished between the resource-allocation effects of an anti-competitive merger and the redistributive effects (Reasons, at paragraphs 422-425). It stated that it did not regard the redistributive effects of a merger as anti-competitive (Reasons, at paragraph 446), which does not preclude giving consideration to those effects.

329 In the simplest analysis, the redistribution of income that results from an anti-competitive merger of producers has a negative effect on consumers (through loss of consumer surplus) and a corresponding positive effect on shareholders (excess profit). Whether these two effects are completely or only partially offsetting is a social decision that, in Professor Townley's words, requires a value judgment and will depend on the characteristics of those consumers and shareholders. In some cases, society may be more concerned about one group than the other. In that case, the redistribution of income will not be neutral to society but rather will be seen as a social cost of, or social gain from, the merger.

Yet it is rarely so clear where or how the redistributive effects are experienced. As Williamson notes:

> For some products, however, the interests of users might warrant greater weight than those of sellers; for other products, such as products produced by disadvantaged minorities and sold to the very rich, a reversal might be indicated. But a general case that user interests greatly outweigh seller interests is not easy to make and possibly reflects a failure to appreciate that profits ramify through the system in ways-such as taxes, dividends, and retained earnings-that greatly attenuate the notion that monolithic producer interests exist and are favored ... (O. Williamson, *Economies as an Antitrust Defense Revisited*, volume 125, No. 4, University of Pennsylvania Law Review, 1977, 699, at 711)

When viewed in this light, the redistributive effects are generally difficult to identify correctly, and will involve multiple social decisions. Given the informational requirements of such assessments, the assumption of neutrality could be appropriate in many circumstances.

330 The Court notes favourably the views of Madame Justice Reed expressed in *obiter dicta* in the *Hillsdown* decision. In commenting on the Total Surplus Standard in *Hillsdown*, Madame Justice Reed questioned whether the redistributional effects were always offsetting and hence socially neutral. In her example of a life-saving drug, she questioned whether society was unaffected by the redistribution from ailing consumers to shareholders of the producer when it exercised its market power and raised the price of the drug. Accordingly, Madame Justice Reed appeared to articulate the view that the redistributional effects

might not always be socially neutral; yet she did not state that this was always the case so that the assumption of neutrality could be appropriate, presumably in less dire circumstances.

331 In criticizing the Consumer Surplus Standard, Professor Townley offered an example in which shareholders of a producer of a luxury good were less wealthy than the buyers (Townley Report, exhibit A-2081 at 32). In such cases, the exercise of market power would result in excess profits to the less wealthy group and would be seen as socially positive, rather than neutral. Such examples need not be far-fetched; mergers among airlines may benefit travellers who, on average, may be better off than the shareholders thereof; similarly, mergers among taxi owners, or among owners of ski resorts.

332 In its Appeal Judgment, the Court noted the following:

> ...Proponents of the total surplus standard argue that there is no economic reason for favouring a dollar in the hands of consumers of the products of the merged entity over a dollar in the hands of the producers or its shareholders, who are, after all, also consumers. Moreover, in the absence of complete data on the socio-economic profiles of the consumers and of the shareholders of the producers, it would be impossible to assess whether the redistributive effects of the wealth transferred as a result of the higher prices charged by the merged entity would be fair and equitable: paragraphs 423-425. (Appeal Judgment, paragraph 27 at 13-14)

The Tribunal can only agree that such information is required to determine the fairness and equity of the resulting distribution of income under a standard other than the Total Surplus Standard.

(2) Tribunal's Approach to the Redistributive Effects

333 Having regard to the comments, in *obiter dicta*, of Madame Justice Reed in *Hillsdown* cited above, and to the favourable view thereof of the Court, the Tribunal must accept that the redistributional effects can legitimately be considered neutral in some instances, but not in others. Fairness and equity require complete data on socio-economic profiles on consumers and shareholders of producers to know whether the redistributive effects are socially neutral, positive or adverse. While complete data may never be attainable, the Tribunal must be able to establish on the evidence the socially adverse effects of the transfer.

334 It is true, as the Commissioner submits, that the purpose clause of the Act does not discriminate against certain groups of consumers. However, the Tribunal cannot conclude that the redistribution of income is an effect that is necessarily always or entirely negative from society's viewpoint. To do so would be to adopt the "*a priori* fixed weight" to which Professor Townley objects based on his expertise in welfare economics. Moreover, that approach characterizes the Consumer Surplus Standard which, in the Tribunal's opinion, vitiates the statutory efficiency defence in section 96; accordingly, the Tribunal is not prepared to adopt that standard.

335 Noting that the Court has reservations about certain standards for the treatment of efficiency gains but has indicated its general approval of the Balancing Weights Approach of Professor Townley, the Tribunal is of the view that it should, as Professor Townley stated in his report, consider whatever qualitative or quantitative information is available that allows it to assess the redistributional effects. It therefore rejects the Commissioner's submission that the transfer of income must necessarily be included in its entirety once the Commissioner has estimated the size thereof and quantified it as a measured effect to be added to the other measured effects when assessing all of the effects of the merger under subsection 96(1). In the Tribunal's view, this largely quantitative approach is opposite to the instruction of the Court.

336 The Commissioner's alternatives to this approach are: (i) the qualitative approach advocated by Ms. Lloyd in dissent; (ii) the Balancing Weights Approach of Professor Townley, and (iii) at the first hearing, the evaluation of the adverse redistributional effects on a case-by-case basis described by the Commissioner's senior adviser G. Allen. It appears to the Tribunal that approach (i) is not now advocated by the Commissioner, and the Commissioner claims that the decision of the Court renders approach (iii) incorrect in law and that approach (ii) is incomplete and useful only as a tool to assist it in its broader inquiry.

337 The Commissioner's revised view of the Balancing Weights Approach is surprising because the Court indicated its approval thereof, albeit with the comment that it requires further refinement and elaboration when applied to the facts

of a particular case. The Commissioner's abandonment of the case-by-case assessment of adverse redistributive effects as propounded at the first hearing is also surprising, as it provides the elaboration and refinement in particular cases that supports the Balancing Weights Approach.

338 Following the instruction of the Court, the Tribunal would adopt the Balancing Weights Approach if there were sufficient information in evidence to come to an assessment of whether the estimated balancing weight of 1.6 is reasonable given the socio-economic differences between and among consumers and shareholders. Moreover, no alternate weight has been submitted nor any other approach that the Tribunal could use to evaluate the reasonableness of the estimated balancing weight of 1.6 as a measure of redistributive effects. While not adopting the Balancing Weights Approach, the Commissioner submits that in view of the record in its entirety, there is no basis for concluding that a weight of 1.6 or less is reasonable. There is, however, some limited information in the record that the Tribunal can use to reach a conclusion on the redistributive effects.

(3) Pecuniary Gains

339 Before reviewing that information, the Tribunal takes note of the Court's remarks concerning subsection 96(3) of the Act which, if correct, have very significant implications for the understanding of the merger provisions of the Act. Following the interpretation of the Commissioner's MEGs, the Tribunal regarded subsection 96(3) as denying that pecuniary savings could be included in "gains in efficiency". For example, if a merger of buyers enabled them to extract lower prices from sellers through the exercise of bargaining power, those savings would be a redistribution of pecuniary income from sellers to buyers, not an increase in societal real income as the result of the improved use of resources achieved through the merger. Accordingly, those savings should not be treated as gains in efficiency, even though buyers do achieve lower prices thereby. Another example of a pecuniary gain is tax-savings achieved by the merger, which represent a transfer from taxpayers generally to shareholders of the merged firm.

340 Thus, the Tribunal has viewed subsection 96(3) as a statutory reminder that there must be a gain to society, as opposed to a gain to one party at the expense of another, in order for a gain in efficiency to exist, i.e. that only those savings that resulted from improved resource allocation could be considered. In the Tribunal's view, the provision has no implications for the treatment of effects, a view that appears to be shared by all commentators on this part of the Act.

341 The Court's remarks concerning subsection 96(3) are as follows:

> [82] I attach some weight to subsection 96(3) of the *Competition Act*, which provides that the Tribunal shall not find that a merger or proposed merger "is likely to bring about gains in efficiency by reason only of a redistribution of income between two or more persons." Hence, subsection 96(3) expressly *limits* the weight accorded to redistribution in assessing the *efficiencies* generated by the merger.
>
> [83] No similar limitation is imposed by the Act on the *effects* side of the balance. If Parliament had intended redistribution of income to be *excluded altogether* from the "effects" of an anti-competitive merger, as the Tribunal held, the drafter might well have been expected to have made an express provision, similar to that contained in subsection 96(3) with respect the efficiencies side of the balance. The absence of such a provision suggests that, contrary to the Tribunal's conclusion, Parliament did not intend to impose such a limitation on the "effects" side. (Appeal Judgment, at 33-34)

342 If the Court is correct, then the pecuniary gain that benefits consumers as exemplified above, although not a gain in efficiency, would be an effect of the merger because, apparently, no limitation has been imposed on "effects".

343 In the Tribunal's view, it is very doubtful that Parliament intended that pecuniary gains be considered in merger review under section 96, whether the pecuniary gains benefitted either buyers or sellers. Certainly, there is nothing in the statutory history or legislative review that suggests this. Indeed, as the Court stated, efficiency is explicitly the paramount objective of section 96.

344 While the Court affirmed the Tribunal's conclusion, it required a broader conception of "effects":

> [92] Thus, although section 96 requires the approval of an anti-competitive merger where the efficiencies generated are greater than, and offset, its anti-competitive effects, the ultimate preference for the objective of efficiency in no way restricts the countervailing "effects" to deadweight loss. Instead, the word, "effects", should be interpreted to include all the anti-competitive effects to which a merger found to fall within section 92 in fact gives rise, having regard to *all* of the statutory purposes set out in section 1.1. (Appeal Judgment, at 37)

345 The Tribunal is of the view that the Court's instruction to it to consider all relevant effects including redistributive effects does not require it to consider pecuniary gain as an effect under subsection 96(1).

(4) Professor Townley's Statistical Evidence

346 Table 2 of Professor Townley's expert report contains information from the Statistics Canada report entitled *Family Expenditure in Canada, 1996*, and presents data on consumption of "bottled propane" by household income quintile. Table 2 states that household expenditure on bottled propane is 0.23 percent of total household expenditure. Accordingly, bottled propane expenditures are shown to constitute a very small share of total household spending (Townley report, exhibit A-2081, at 37).

347 Professor Townley calls attention to the pattern in Table 2 that the expenditure share declines as household income and total expenditure rise. For example, propane expenditure constitutes 1.68 percent of the total expenditure of the 20 percent of households with the lowest income (i.e. the lowest-income quintile). For the 20 percent of households that have the highest income (the highest-income quintile), propane spending is only 0.07 percent thereof. Professor Townley notes that while absolute spending does not display this pattern, the fact that bottled propane expenditure decreases as a share of total expenditure as income rises indicates to him that a price increase would have a relatively larger impact the lower one's income (Townley report, exhibit A-2081, at 36).

348 Professor Townley also points out that the average household expenditure on bottled propane nation-wide is only 0.23 percent of total household expenditure. However, he expresses concern that the Statistics Canada survey, because it does not distinguish among uses of propane (i.e. home heating versus running a barbeque), does not convey the impact of a price increase on households that use it for home heating (Townley report, exhibit A-2081 at 36). He regards the household expenditure data in the Statistics Canada survey as heavily skewed toward minor consumers (Townley report, exhibit A-2081, at 38).

349 Professor Townley quotes from a 1998 report of the Propane Gas Association, that cites a Statistics Canada estimate that 102,000 Canadian households are "fuelled by propane" (Townley report, exhibit A-2081, at 38). It is not entirely clear what the phrase "fuelled by propane" refers to, and the Tribunal cannot conclude that it refers exclusively to home heating.

350 Setting aside the household expenditure data that Professor Townley suggests may be skewed, the Tribunal observes that according to the Statistics Canada data shown in Table 2, 4.7 percent of the households in the lowest-income quintile and 29.1 percent of households in the highest-income quintile consume bottled propane. Accordingly, consumption of bottled propane is not limited to low-income groups.

351 While the 4.7 percent of households in the lowest-income quintile number only 102,465 households out of all 10,900,500 households in Canada as stated in Table 2, they should not, in the Tribunal's view, be ignored. However, as Professor Townley points out, the Statistics Canada survey includes the non-essential uses of propane by households in that income quintile. There is no information on the record in this regard that would assist in determining the extent to which the redistribution of income from this group is adverse.

352 The Court alluded to a possible distinction between essential and non-essential uses:

> Second, the demand for propane is fairly inelastic, that is, consumers are relatively insensitive to price increases. Although some consumers purchase propane for less than essential purposes, such as heating their swimming pools, most purchase

> it for home heating, automotive fuel and industrial purposes. Consequently, propane is not a discretionary item that most consumers can choose to forego. (Appeal Judgment, paragraph 11, at 8)

353 It appears to the Tribunal that while many consumers (including business consumers) do, in fact, have choices available other than propane, these alternatives may, for various reasons, not be attractive and so would not likely be adopted. However, there is no doubt, given the available evidence, but that many consumers have no good alternatives. Yet, if the essentiality of the application is a relevant variable, it will be difficult to draw firm conclusions about the adverse effect of the re-distribution of income based on the available evidence.

354 The CMR study, as described by Professor Townley, is a 1997 survey of commercial and residential customers of Superior in Atlantic Canada, Ontario and Quebec. The survey finds that Superior's commercial customers tend to be small businesses in rural areas, and its residential customers tend to be low-income, older-than-average and located in rural areas. Among Superior's residential customers in eastern Canada,

> ...15% of Superior customers earned less than $25,000 per year, 11% earned between $25,000 and $35,000 annually, 12% earned between $35,000 and $45,000, 11% between $55,000 and $75,000, and 9% earned more than $75,000 annually. (32% of those surveyed did not state their annual income.) (Townley report, exhibit A-2081, at 39)

355 The CMR study of eastern Canada consumers tends to support the impressions gained from the Statistics Canada material concerning residential consumers of propane. There is discussion of consumption by residential end-use or essentiality; for example, 53 percent of Superior's residential customers use propane for heating and 10 percent to heat a swimming pool (Townley report, exhibit A-2081, at 39).

356 The Tribunal cannot avoid the conclusion that the redistributive effect of the merger on low-income households that purchase propane will be socially adverse. As suggested above, however, the number of such households is quite small and some undetermined number of them may not be using propane for essential purposes.

357 The Tribunal places less weight on the redistributive effect on households which, as the respondents observe, use propane for swimming pools, barbeques, heating second homes, cottages and ski chalets. Many, although not necessarily all, of those households will presumably be in the higher income groups. The record is silent in this regard.

(5) Interrelated Markets: Redistributive Effects

358 The Tribunal noted above the Commissioner's observation that slightly more than 10 percent of propane sales by the merged company will be made directly to consuming households. The remaining 90 percent of sales will be made to businesses that use propane as an intermediate input in their production processes. Having regard to the Court's concern for interrelated markets and to the witness testimony at the first hearing, the Tribunal can only conclude that such propane will be acquired by large and successful, and in some cases widely-owned, companies that are well-known, as well as by small and medium-sized businesses about which little information is available.

359 The Tribunal heard the testimony of some small and medium-sized business owners, and it infers therefrom and from the CMR study regarding Superior's commercial customers in eastern Canada, that propane is used by some businesses whose owners will be negatively affected by the reduction in their profits that will result from their higher costs of propane to the extent that they cannot pass the price increase on in the form of higher prices for their products. For example, local restaurant owners that appeared as witnesses for the Commissioner may be able to raise their prices to offset their increased costs. On the other hand, it appears that some unstated number of family-owned agricultural operations use propane in crop-drying and those businesses may have no alternative or perhaps only unattractive alternatives to that use, and no ability to increase their prices.

360 The Commissioner refers to witness evidence that propane is "...a significant input for farmers for grain drying..." (Commissioner's Memorandum on Redetermination Proceedings, paragraph 32, at 18). Relying on the witness evidence, the respondents point out that the gross retail cost of propane accounts for two to three percent of the cost of drying crops and that the projected increase therein due to the merger would represent an effect that would be regarded by the

Commissioner's recently-adopted methodology for assessing redistributive effects as unimportant (Respondents' Memorandum on Redetermination Proceedings, paragraphs 129-130, at 58-59).

361 More importantly, in the Tribunal's view, there is nothing on the record that allows us to conclude that owners of agricultural enterprises are needy; indeed, according to the testimony of some owners of agricultural operations concerning the size of their businesses, they may be relatively well-off. Absent better evidence in this regard, it is impossible to determine whether and to what extent the redistribution of profits from agricultural businesses to the merged company's shareholders is socially adverse. Similar lack of information applies to the other small and medium-sized businesses to which the Commissioner refers.

362 The Tribunal notes further that since 90 percent of the merged firm's sales will be to other businesses, the impact of the price increase will fall on the products of those firms and will, through interrelated markets, ultimately be borne by business owners and household purchasers throughout the economy, to the extent that they are not borne by the lower profits of owners of those businesses that purchase the propane directly from the merged company. How the burden of the price increase is ultimately shared across business owners in interrelated markets and by households is an important question that is difficult to answer. Certainly, however, shareholders of the merged firm will not escape the price increases.

363 Yet, having regard to the evidence of regressivity of the price increase on consumers of "bottled propane" discussed above, there is no basis for assuming that outcome generally. The price increase may hit higher income groups disproportionately depending on their consumption patterns and on the extent to which propane is involved in the production of those goods and services. There is no evidence according to which such incidence of the price increase on 90 percent of initial propane sales might be inferred.

364 There may well be some small and medium-sized businesses that are only marginally profitable and also unable to pass on the price increase. However, there is no information on the record that would allow the Tribunal to assess the number of such enterprises or to distinguish between them and those that are perhaps quite successful. In the former, the redistribution of profit to the shareholders of the merged firm might not be socially neutral; in the latter, perhaps, it would be.

(6) Tribunal's Decision on Redistributive Effects

365 Based on its review of the evidence, the Tribunal cannot agree with the respondents' position that the redistributive effects are completely neutral. It is our view that the gains and losses are not completely offsetting and that there is a social loss that requires consideration.

366 However, on the basis of the evidence, the Tribunal cannot find that such loss is measured by the Commissioner's measured transfer of $40.5 million per annum, because the Commissioner has not demonstrated that that amount is the socially adverse effect. There is considerable reason to think that portions, perhaps significant portions, of the measured transfer are redistributions of profit among shareholders that society would regard neutrally.

367 The evidence tends to support the socially adverse redistributive effects regarding low-income households that use propane for essential purposes and have no good alternatives, but the number of such households appears to be small. In the Balancing Weights Approach of Professor Townley, the interests of those households should be weighted more heavily than the interests of the shareholders of the merged firm, but the higher weight is not determinable given the information on the record. In the Tribunal's view, the interests of other households and business owners should be weighted equally with shareholders of the merged firm in this case, particularly since, as the Commissioner has noted, all producers are, in a sense, consumers as well.

368 The Tribunal notes that it is possible to quantify the adverse redistributive effects of the transfer on household consumers of bottled propane in the lowest-income quintile based on the evidence of Professor Townley and Professor Ward. As there are approximately 102,465 consuming households in that group, and as the average expenditure per consuming household in that group is $277 per year (Townley report, exhibit A-2081, Table 2), total sales to that group are approximately $28.4 million per annum. Since the Commissioner's measured deadweight loss assumes a demand elasticity of-1.5 and a price increase to residential consumers in general of 11 percent (Commissioner's Memorandum on Redetermination Proceedings, Appendix A),

the transfer is 9.2 percent of sales (Ward report, exhibit A-2059, Table 8). Accordingly, on the Commissioner's evidence, the measured adverse redistributive effect on that group is approximately $2.6 million. This estimate assumes that all propane consumed by households in this group is for essential purposes.

VIII. Conclusions

369 It is clear, in our view, that the Court did not direct us to consider the entire amount of the wealth transfer as an "effect" of the lessening or prevention of competition. Rather, the Court has directed us to consider all of the "effects" in light of the statutory purposes of the purpose clause of the Act. Had the Court been of the view that the full amount of the wealth transfer constituted an "effect" under subsection 96(1), it would, no doubt, have said so in clear terms. The Court did not make a determination nor did it purport to make one with respect to the "effects" that will result from the prevention or lessening of competition in the merger under review. The Court did not attempt to make such a determination because the findings to be made are clearly within the Tribunal's expertise. The Court recognized this when it stated at paragraph 139 of the Appeal Judgment:

> Having concluded for the above reasons that the Tribunal erred in law when it interpreted section 96 as mandating that, in all cases, the only effects of an anti-competitive merger that may be balanced against the efficiencies created by the merger are those identified by the total surplus standard, this Court should not prescribe the "correct" methodology for determining the extent of the anti-competitive effects of a merger. Such a task is beyond the limits of the Court's competence.

370 Having assessed the measured adverse redistributive effect based on the evidence, it remains for the Tribunal to decide how to combine it with the measured deadweight loss of $3 million and the maximum deadweight loss attributable to changes in the merged company's product line of $3 million. Weighting redistributive effects equally with efficiency losses, the three effects would be added together to produce a maximum total effect of approximately $8.6 million.

371 However, there is no statutory basis under the Act (or in U.S. antitrust law) for assuming such equal weighting: perhaps the adverse redistributive effects should weigh twice as heavily as efficiency losses, in which case the three weighted effects would not exceed $11.2 million. Alternatively, since efficiency concerns are paramount in merger review, perhaps adverse redistributive effects should be weighted half as much as deadweight losses. In the instant case, it is clear that the adverse redistributive effects are, on the evidence, quite small. Accordingly, the Tribunal is of the view that any under any reasonable weighting scheme, the gains in efficiency of $29.2 million are greater than and offset all of the effects of lessening and prevention of competition attributable to the merger under review.

A. Observation

372 In the Tribunal's view, demonstrating significant adverse redistributional effects in merger review will, in most instances, not be an easy task. This may be why the Commissioner has argued so strongly for the inclusion of the transfer in its entirety, no questions asked. As cited by the respondents in part, Mr. Howard Wetston, the former Director of Investigation and Research addressed the evidentiary issue in commenting on the *Hillsdown* decision. Speaking of section 96, he said:

> The section itself is broadly framed, and so, it may be argued, supports various interpretations. Economists have advocated treating the wealth transfer neutrally owing to the difficulty of assigning weights *a priori* on who is more deserving of a dollar. Even considering that some system of weighting could be articulated, the practical implications of this are likely insurmountable - for, who is losing and who is receiving the transfer? Shares are often widely held in companies. Are the shareholders of pension-fund investors in a firm more or less deserving than the customers of that firm? Moreover, who are the customers? In cases of intermediate products, is one looking to the shareholders of the consuming companies or to their customers?
>
> One solution to this dilemma is to adopt the U.S.-style approach to consideration of efficiencies; namely, that savings must be passed on to consumers. Yet, if Parliament's desire had been to deny the possibility of any price impact on customers by giving consideration to the wealth transfer effects of a merger, then this could have been specified in the language of the section.

> Under these circumstances, I am respectfully of the view that, from an enforcement perspective, it is preferable not to depart at this time from the approach adopted in the *Merger Enforcement Guidelines*. Moreover, it should be understood that, regardless of the interpretation, the number of cases falling into this category will not be large. (Remarks delivered by Howard I. Wetston, Q.C., Director of Investigation and Research, Bureau of Competition Policy, to the Canadian Institute, Toronto, June 8, 1992)

373 In the Tribunal's view, the remarks of Mr. Wetston are very significant. First, he recognized that adequate measurement of the redistributive effects of a lessening or prevention of competition might well be impossible in light of the difficult questions that must be addressed. Second, Mr. Wetston recognized that no such effort was required under the American approach. However, there is no indication in the statute or elsewhere that Parliament intended this approach. The explicit efficiency defence in subsection 96(1) of the Act is clear evidence that Parliament intended not to follow the American approach to efficiencies.

374 This decision has been a very difficult exercise. The difficulty results in great part from the wording of subsection 96(1) of the Act which requires the Tribunal to weigh efficiencies against the "effects" of a lessening or prevention of competition. In that regard, we believe that the view expressed by Professor W.T. Stanbury before the legislative committee on Bill C-91, is entirely apposite:

> Now I come to the matter of the efficiency defence. Proposed section 68 [now s.96] of Bill C-91 clearly contemplates a trade-off between gains in efficiency and the lessening of competition. This raises a number of difficult questions. The first and most important is the matter of incommensurability - namely, that the tribunal will be asked to deal and make a judgment between a lessening of competition, which will probably result in higher prices, and gains in efficiency, which are real savings to society. These are not comparable kinds of things because one involves a redistribution of income and the other involved real gains in terms of the savings of resources.
>
> *Second, there is an inherent and unavoidable value judgment that the tribunal must make in dealing with proposed section 68. The sad part is that Parliament has given no guidance to the tribunal as to its priorities, as to the weights to be applied to the lessening of competition* [*effects*] *and gains in efficiency*.
>
> . . . . .
>
> With respect to the efficiency defence, there the clarification is not much of definition but of saying to the tribunal what priorities Parliament puts upon efficiency as opposed to the lessening of competition. *It is a judgment call; there is no technical way that can be handled by numbers or anything of that sort*. But Parliament could say...
>
> Let me just give you an historical example. In Bill C-256 the efficiency defence could be used only if the firms under review could show that at least part of the gains in efficiency were going to be passed on to consumers, you may recall. There is no such provision here. It seems to me that Parliament is indicating its priorities, that there is a difference in priorities there. I am not saying that we should adopt that; *I am saying that Parliament should decide and give instructions to the tribunal as to what values it wants the tribunals to adopt. The tribunal has to adopt a value - it cannot avoid it - in dealing with proposed section 68 of the Bill*. (Minutes of Proceedings and Evidence of the Legislative Committee on Bill C-91, Monday, May 7, 1986, Issue 7, page 3:4) [Emphasis added]

It was the Tribunal's initial view, on its acceptance of the Total Surplus Standard, that the Act did not give rise to the difficulties to which Professor Stanbury referred. However, in light of the Court's Appeal Judgment, we feel that, as Professor Stanbury pointed out to the Legislative Committee, subsection 96(1) requires the Tribunal to compare matters that cannot be easily, if at all, compared. On the one hand, there are efficiencies, which are real savings to society, and on the other hand, there are the redistribution effects which arise by reason of a price increase. We have attempted to render the incomparable "comparable" by, whenever possible, quantifying the effects. We have not been totally successful in this endeavour but we have come to the conclusion that the $29.2 million of efficiencies brought about by the merger is greater than and outweighs the "effects" of the lessening of competition.

375 Ms. Lloyd, in her dissenting opinion, which we have had the benefit of reading in draft form, has taken a different view of the matter. It is clear that, in her view, even if the merged company had been able to show efficiencies of, say, $100 million per year, that would not have sufficed to offset the effects of any prevention or lessening of competition.

376 Ms. Lloyd has taken what we would characterize as the "qualitative approach". We are convinced that under that approach rarely will a merger succeed in passing the section 96 test. Our review of the legislative history of the merger provisions, and in particular, of section 96 of the Act, leads us to conclude that that could not have been Parliament's intention.

377 The Tribunal therefore concludes that the Commissioner's application must be dismissed.

IX. Concurring Opinion (Dr. L. Schwartz)

378 Agreeing as I do with the Tribunal's decision, I would like to comment on certain ancillary matters that have arisen. In my view, the Court and Létourneau, J.A., have raised economic issues that I feel require further discussion.

A. Chicago School

379 In the Appeal Judgment, Létourneau, J.A. suggests that advocates of the "Chicago School of thought in antitrust matters" agree with the earlier decision of the Tribunal in this merger case (Appeal Judgment, at paragraph 11, Létourneau, J.A.). I have difficulty in characterizing the attitude of the Chicago School regarding the proper treatment of efficiency in merger review. For example, Nadon, J. cited the views of Robert Bork with approval (Reasons, at paragraph 426). However, Judge Posner writes:

> ...The problem, as we shall see, is that it is very difficult to measure the efficiency consequences of a challenged practice; and thus throughout this book we shall be continually endeavoring to find ways of avoiding the prohibition of efficient, albeit anti-competitive, practices without having to compare directly the gains and losses from a challenged practice... (R.A. Posner, *Antitrust Law: An Economic Perspective*, Chicago: University of Chicago Press, 1976 at 22)

In Judge Posner's view, the measurement of efficiency gains and losses is so difficult that it ought to be avoided. In my view, there is no agreement among Chicago School advocates on the proper treatment of efficiencies in reviewing horizontal mergers under American antitrust law.

380 In my understanding, the Chicago School of thought views all antitrust matters through the lens of applied price theory. On this view, I doubt that a separate product market for "national account coordination services" could be justified in light of the uncontradicted evidence proffered by the respondents. However, relying on the oral evidence of the Commissioner's witnesses, the Tribunal did not adopt applied price theory's conception of firms; it could be said, rather, that the Tribunal adopted a "transactions cost" perspective.

381 If economic theory and analysis are relevant under the Act, then virtually every decision of the Tribunal will reflect the "applied price theory" perspective of the Chicago School to some extent. In my view, however, the present and earlier decisions of the Tribunal in the instant case cannot be described as wholly consistent with that school of antitrust thought.

382 Létourneau, J.A. regards section 96 of the Act as vague.

> ...Are all the effects of the merger be weighed and what weight should be given to them? Are they all of the same significance and value? On what basis is one effect to be preferred over the other? On what basis should some effects, if any, be ignored or discarded? (Appeal Judgment, at paragraph 5)

383 Up until the Court released its Appeal Judgment in the instant matter, I had not viewed section 96 of the Act as vague, having in mind the recommendation of the Economic Council of Canada in its 1969 Report, the exclusion of redistributive objectives from the 1986 amendments in contrast to earlier bills, the Parliamentary review, various Ministerial statements, and particularly, the paramountcy of the objective of economic efficiency in section 96 of the Act that the Court has confirmed. That

said, if the Act is vague, it is my view that the apparent preference in some quarters for following the American approach will be of limited assistance in achieving the objectives of the purpose clause of the Act.

384 As noted by the Tribunal at paragraph 187 *supra*, Lande and Fisher acknowledged the lack of guidance in the American legislative history regarding the relative weighting of wealth transfers and efficiency effects. Fisher and Lande, who are generally critical of the Chicago School of antitrust, appeared to adopt the same position as Judge Posner. They concluded that case-by-case adjudication of efficiency gains versus effects was itself so "unworkable", even under the Consumer Surplus Standard, that merger review should avoid any such analysis (Fisher and Lande, at 1650). Their recommended approach was to evaluate all mergers based on rigid market-share criteria with few exceptions (Fisher and Lande, at 1691) and, of course, none for efficiency. However, the Act specifically calls for a case-by-case assessment of gains in efficiency and effects of lessening or prevention of competition, and it rules out sole reliance on market shares.

385 In my view, the proclaimed supremacy of the consumer interest in the United States is frequently overstated. The recurring softwood lumber dispute between Canada and the United States amply illustrates how the interests of domestic lumber producers in the United States have prevailed at the expense of the American consumer (particularly homebuyers), and evidence of gains in efficiency is not even required of those producers in return for the market restrictions that they seek. When viewing the American antitrust regime, we ought to remember that it is often circumscribed by other policies in which the consumer interest is not paramount.

B. Implications of Subsection 96(2)

386 There is a view that the efficiency defence in subsection 96(1) is available only when subsection 96(2) considerations are directly involved. This is not my understanding and, in response to a direct question from the Tribunal, the Commissioner did not take that position (Transcript, vol. 1, October 9, 2001, line 7, at 85). Subsection 96(2) requires special attention be given to exports and imports where they are involved, but subsection 96(1) applies to mergers generally, even if imported and exported goods and services are not involved.

387 As I understand the legislative history, the 1986 amendments, including section 96, were motivated in large part by the pressures of growing international trade and investment on Canadian businesses and by the need to encourage them to restructure in order to be able to succeed in the more competitive environment that ultimately benefits Canadian consumers. However, this does not indicate to me that the efficiency defence in subsection 96(1) was limited to mergers where subsection 96(2) considerations were directly involved. Rather, Canadian firms that become more efficient through mergers that stimulate exports and reduce imports can be given special consideration.

C. Small Business

388 The Court, relying on the purpose clause, has stated that the effects of an anti-competitive merger on small businesses must be considered when section 96 is invoked. Given the Court's emphasis on the purpose clause, it is puzzling that such consideration is only to be accorded under section 96. If the Court is correct in its view of the significance to be paid to small and medium-sized enterprises under the Act, surely it would be expected that such concern would be as relevant, if not more so, under section 92.

389 Section 93 of the Act lists certain factors that the Tribunal may consider when determining whether a merger prevents or lessens competition substantially under section 92. Neither efficiency nor small business are listed factors, and I infer therefrom that it was not Parliament's intent to allow the Tribunal to consider these factors in coming to a conclusion under section 92.

390 It is true that paragraph (h) in section 93 of the Act enables the Tribunal to consider any non-listed factor. However, in light of the purpose of the Act as provided in the purpose clause, objectives relating to efficiency and small businesses were well-understood; bluntly, they were too big to miss. Hence, if Parliament wanted to allow the Tribunal to consider these factors in the section 92 inquiry, it would not have left them to the residual paragraph (h) in section 93. The Tribunal refused to consider the impact of efficiency gains on price in its analysis under section 92 (Reasons, at paragraph 258), and the Court did not disturb

the Tribunal's conclusion that efficiency gains could not be considered under section 92 even if there were clear evidence that the price would decline as a result of those gains.

391 Similarly, a merger may have profound implications for small businesses, yet that is not a factor in the Tribunal's assessment of whether the merger prevents or lessens competition substantially. Thus, if parties to a merger did not invoke section 96, there would be no basis for the Tribunal to consider the small-business implications at all.

392 The purpose clause applies to the Act in its entirety. Accordingly, I think the better view is that since the impact of a merger on small business is, per statute, not a consideration under section 92 or section 93, then it may be inconsistent to give that impact greater weight under section 96.

D. Deadweight Loss and Elasticity of Demand

393 At paragraph 103 of the Appeal Judgment, the Court holds that applying the Total Surplus Standard leads to "paradoxical" consequences when viewed in light of the consumer protection objectives of the Act. In particular, that standard

> ...makes it easier to justify a merger between suppliers of goods for which demand is relatively inelastic than of goods for which demand is relatively elastic.

The Court continues:

> [104] This is because, where the demand for particular goods is inelastic, as it is for propane, the goods cannot be substituted as cost-effectively as where the demand is elastic. Hence, price increases that result from the exercise of market power are tolerated more by purchasers of goods for which the demand is inelastic than by purchasers of those where the demand is elastic. Thus, since purchasers of goods for which demand is inelastic are relatively insensitive to price, fewer will purchase substitute goods despite increases in price. Therefore, a significant price increase will result in a smaller deadweight loss where demand is inelastic than where it is elastic.
>
> [105] Thus, on the Tribunal's interpretation of section 96, the more inelastic the demand for the goods produced by the merged entity, the smaller will be the efficiencies required from the merger in order to offset its anti-competitive effects. It follows on this reasoning that, for the purpose of balancing efficiencies and effects, a potentially large wealth transfer from consumers of goods for which demand is inelastic to producers is to be ignored.
>
> [106] It is certainly not obvious how an interpretation of "effects" that creates a differential treatment of mergers by reference to the elasticity of demand for the goods produced by the merged entity is rationally related to any of the statutory aims of the *Competition Act*. (Appeal Judgment, at 42) [Underlined emphasis added]

394 It appears to me that the Court has placed some weight on its findings in these matters. With respect, I believe that the Court's views rest on a misapprehension of the relationship between deadweight loss and elasticity of demand.

395 What can be said is that, for a given demand elasticity and pre-merger sales, the calculated deadweight loss will be larger the larger is the price increase. This conclusion is reached by inspecting the formula for approximating the deadweight loss when competitive conditions prevail prior to the merger:

$$\text{deadweight loss} = (\text{percentage price increase})^2 \times \text{demand elasticity} \times \text{sales}/2$$

Similarly, a larger demand elasticity results in a larger deadweight loss, holding the other variables, including the price increase, constant. Certain issues can be illuminated by using this formula and the *ceteris paribus* assumption (Reasons, at paragraphs 435-436).

In pricing decisions, however, the *ceteris paribus* assumption is not met because the price increase will depend on the demand elasticity. A firm with market power will impose a larger price increase when demand is inelastic than when demand is elastic, for in the latter case, customers will more readily shift to alternatives. Thus, where demand is elastic, the price increase will be relatively small; hence the deadweight loss will be relatively small. In contrast, where demand is inelastic, the price increase will be relatively large, hence the deadweight loss will be relatively large.

Thus, it is not reasonable to suppose that a firm with market power would impose the same "significant price increase" whether demand was inelastic or elastic. Therefore, it does not follow that the deadweight loss would necessarily be smaller in the former case than in the latter, yet this is the Court's view.

396 The evidence of Professor Ward in this case illustrates the relationship between deadweight loss and demand elasticity. Using the average price increases of Superior and ICG when regional and discount firms are in the market, drawn from Table 7 of his expert report (exhibit A-2059) and, in parentheses, the associated deadweight losses as a percentage of sales in his Table 8 shows the following pattern:

Propane Demand Elasticity

	-1.5	-2.0	-2.5
Residential price increase	8.0%	4.1%	2.1%
deadweight loss	(0.5%)	(0.2%)	(0.1%)
Industrial price increase	8.9%	5.4%	3.3%
deadweight loss	(0.6%)	(0.3%)	(0.1%)
Automotive price increase	7.7%	4.5%	2.7%
deadweight loss	(0.5%)	(0.3%)	(0.1%)

397 For example, when demand is relatively elastic (-2.5), the deadweight loss in residential will be 0.1 percent of sales in that segment. However, if demand were relatively inelastic (-1.5), the deadweight loss would be larger, i.e. 0.5 percent of sales, because the price increase is much larger. The same pattern is observed in the industrial and automotive segments. Thus, contrary to the Court's view, it is apparent that the deadweight loss is larger when demand is inelastic than when it is elastic.

398 These distinctions and the possibility for error were, I believe, first pointed out by W.M. Landes and R.A. Posner in their well-known 1981 paper (*Market Power in Antitrust Cases*, 94 Harvard Law Review, No. 5, March 1981, 937, at 991-996) wherein they criticize Professor Scherer, apparently for a similar mistake in his text. As quoted by the Tribunal at paragraph 188 *supra*, Fisher and Lande also noted in 1983 that the probable percentage price increase and the elasticity of demand are interrelated. The relationship between deadweight loss and elasticity of demand is, in my view, a sophisticated one and I criticize no one. However, the Tribunal did not err in its appreciation of this relationship or its implications, and I respectfully disagree with the findings of the Court and the conclusions that it reached thereon.

X. Dissenting Opinion (Ms. Christine Lloyd)

399 The majority of the Tribunal redetermined the effects of the aforementioned anticompetitive merger for the purpose of the efficiency defence under section 96 of the Act, in light of the Appeal Judgment dated April 4, 2001. I recognize that efficiencies are given special consideration under section 96 of the Act and may constitute a defence in an otherwise anticompetitive merger. Section 96 involves a balancing process and as stated by the Court, must be assessed in accordance with the objective and goals of the Act. This objective is to maintain and encourage competition in Canada in order to achieve the goals of the Act. These goals are: the promotion of the efficiency and adaptability of the Canadian economy; the expansion of opportunities for Canadian participation in world markets; the equitable opportunity for small and medium-sized enterprises to participate in the Canadian economy and the provision of competitive prices and product choices to consumers.

400 My dissent has regard to the majority's assessment and treatment of selected effects and their resultant conclusions. I am also concerned with the issue of the burden of proof as it relates to the complexity and extensiveness of the evidence that the majority claims should have been introduced by the Commissioner in order to prove certain effects of the merger. For instance, is it required that each of the effects of the merger be *quantified* by the Commissioner in order to be considered in the analysis? Which of the effects should be considered on a qualitative basis when conducting the analysis prescribed by section 96 of the Act? Finally, and importantly, I disagree with the view of the majority that the Tribunal should only consider "the

socially adverse" portion of the consumers' surplus transfer in the section 96 analysis. Indeed, I cannot find any justification under the Act or elsewhere for treating the transfer of consumer wealth in this manner.

401 The majority concludes that no consideration should be given to some of the effects presented by the Commissioner. These effects are: the reduction or elimination of customer programs; the prevention of competition in Atlantic Canada; the effects in interrelated markets; the loss of potential dynamic efficiency gains, and the effects on small and medium-sized enterprises. I believe that these effects should be given consideration. In relation to the consumers' surplus transfer, the majority decided to consider only the part deemed "socially adverse". I disagree with that conclusion. I am of the view that the transfer should be considered in its entirety when assessing the trade-off analysis.

402 Consequently, when conducting the trade-off analysis in section 96, I considered certain effects that were dismissed by the majority and conclude that the efficiency gains are not greater than and do not "offset" the negative effects of this anti-competitive merger within the parameters of the Act.

A. Reduction or Elimination of Customer Programs

403 The majority, consistent with the earlier reasoning, only considered the impact on "resource allocation" when addressing the negative qualitative effects of the merger. The majority concluded that this effect was minimal and that the amount was unlikely to exceed the estimated deadweight loss. The Commissioner, in argument, points out that the majority did not, however, consider the transfer effects that would be associated with a reduction in real output and the creation of a deadweight loss. In these Reasons, the majority decided not to consider the redistributive effect associated with the removal/reduction of programs and services as the Commissioner did not adduce any evidence on this matter. Consequently, the majority decided not to revisit the original conclusion on this issue. While I agree with the majority that no evidence was adduced as to the amount of the transfer effects associated with a reduction in real output and the creation of a deadweight loss, I am nevertheless of the opinion that the effects associated with the elimination or the reduction of consumer choice should be considered on a qualitative basis.

404 In my opinion, in the absence of ICG as a vigorous competitor, Superior, post-merger, will feel no competitive pressure or incentive to maintain the innovative programs established by ICG. One of the goals under the purpose clause of the Act is to provide consumers with competitive prices and product choices. Bundling propane with special service features is a means of differentiating an otherwise indistinguishable product. Providing a value-added feature sets the product apart from its competitors and this competitive advantage for the company then in turn, benefits consumers.

405 It is clear that the merger will have a significant negative impact on customer programs, services and product choice because of the disappearance of ICG as a competitor. As a result, Superior no longer has to compete on the basis of those services. Nonetheless, as the value of these services is very difficult to assess and hence are not quantified, I am of the view that they should be considered from a qualitative perspective.

406 In the case before us, consumers with a preference for a large national supplier of propane or with a need for "national account coordination services" will be deprived of all choice of suppliers. Indeed, Superior will lack incentive to provide national account customers with value added features beyond a central billing function. This potential loss of value-added features through the loss of ICG deprives the customer of product choices and while it cannot be quantified, this loss cannot be ignored and must be given weight qualitatively in the balancing process.

B. Prevention of Competition in Atlantic Canada

407 The majority recognized at paragraph 244, *supra*, that the merger prevents ICG's plans to expand in Atlantic Canada from being implemented and as a result, the price of propane will likely be higher than it would be if the merger does not take place. Accordingly, they conclude that the effects of this prevention in Atlantic Canada should have been quantified in the form of efficiency gains and reduction in excess profits to the incumbents that would have resulted from additional competition that the merger precludes. The majority concludes that there is no evidence on the record about the extent of these effects resulting therefrom.

408 It is a fact that Superior and Irving are the predominant operators in Atlantic Canada. ICG was looking to establish a branch office in Sydney, Nova Scotia, in partnership with the Petro-Canada agent. One of the expected results emerging from the additional competition in the region might have included more competitive prices and more product choices. Any potential benefits through the increased competition that ICG would have created are now thwarted by the merger.

409 Therefore, I agree with the Commissioner's position that the loss of the benefits of competition that might otherwise have developed in Atlantic Canada due to ICG's activities in the absence of the merger is a relevant qualitative effect that should be taken into consideration. The fact that it is difficult to predict what would have occurred in the absence of the merger does not mean that the real effect of the merger preventing competition from developing in Atlantic Canada should be left out of the analysis.

C. The Effects in Interrelated Markets

410 The majority is of the view that an increase in the price of propane which has the potential to increase the costs of goods produced or the services provided by businesses (i.e. an increase in the price of a significant input), is not relevant. The majority states at paragraph 253, *supra*, that the issue here is whether an intermediate purchaser of propane will absorb the propane price increase or pass it on to customers in some way. Further, the majority states that whether the increase is large or small or whether propane is a significant input is not the issue.

411 I strongly disagree with this view, especially in light of the Court, who acknowledged that one of the effects of a merger that may be relevant to the efficiency defence, is the "...impact of the merger on inter-related businesses." (Appeal Judgment, at paragraph 152).

412 Regarding the effects on interrelated businesses, the evidence demonstrates that by far the majority of propane volume (89.3 percent) in 1998 was sold by Superior and ICG Propane Inc. to bulk agents and for commercial, agricultural, industrial and automotive end use applications. Only 10.7 percent was sold for residential use. Further, there is significant evidence on the record that shows that the cost of propane was a significant input for products or services. This evidence was reported at paragraphs 30 and 32 of the Commissioner's Memorandum on Redetermination Proceedings.

413 This evidence indicates to me that the negative effects of a price increase would affect businesses as the cost of goods or services they produce would increase. Due to the fact that the relevant product in this case constitutes an input into a wide range of products and services in the Canadian economy, it is not feasible to quantify the additional resource allocation (deadweight loss) and transfer effects for each product or service affected by this "cost increase". This effect is important and must, in my view, be taken into account and be given appropriate weight in the balancing process.

D. The Loss of Potential Dynamic Efficiency Gains

414 The majority rejects the Commissioner's submissions that the merger will result in the loss of dynamic efficiency gains that would have been achieved by ICG's transformation process. The majority states at paragraph 258, *supra*, that there is no evidence on the gains therefrom, and note that no expert witness testified to the likelihood of these gains being achieved, their "..."dynamic" character, or their quantum, and accordingly the loss of such gains appears speculative..."

415 Although more in the nature of an *obiter*, I feel compelled here to express my surprise with the comment made by the majority regarding the necessity to have evidence on the "likelihood of those efficiency gains being achieved". In my humble opinion, this evidence regarding "likelihood" was not adduced with respect to the $29.2 million of efficiency gains alleged to result from the merger. In that regard, I expressed my concerns with respect to the likelihood of the respondents' alleged efficiency gains being achieved. I discussed these concerns in detail in my previous dissenting opinion (Reasons, at paragraphs 486-493).

416 The evidence demonstrates that ICG, in a competitive environment, had, prior to the merger, undergone a business re-engineering to enhance efficiency and improve productivity. ICG had embraced technology as one method by which to achieve

that goal. They had established computer-based systems to better manage the business and had given themselves a competitive advantage in the propane market. The process was not fully implemented when Superior acquired ICG and these innovations will now be reversed. I am of the view that the merger results in the loss of a propane company prepared to re-engineer its approach to conduct its business and attempt through innovation to improve its efficiency and competitiveness.

E. Effects on Small and Medium-Sized Enterprises

417 The majority expresses the views at paragraphs 286 to 305, *supra*, that the Commissioner has not shown that Superior behaved aggressively toward its small and medium-sized competitors. Further, the majority states that, although it takes the witnesses claims of predatory pricing seriously, the evidence is not sufficient to establish predation.

418 The majority comes to the conclusion that in order to consider the effects of Superior's increased market power and its ability therefrom to resort to "unfair tactics" to deter entry, or expansion or to discipline small and medium-sized enterprises, a case of predatory pricing should have been presented by the Commissioner. I recognize that pricing aggressively is an element of healthy competition and may not constitute violations under the provisions of the Act. However, I am of the view that evidence of a company's past conduct might constitute a relevant factor to be considered. The potential effect that this merged company might have on small and medium-sized enterprises in the future, and their equitable opportunity to compete becomes an issue.

419 Indeed, the evidence demonstrates that Superior's practices are designed to either increase rivals' costs or decrease rivals' revenues. Superior's own records indicate that "retaliation" is a response to any competitive company who has taken or attempts to take business away from Superior. This evidence was referred to in the Commissioner's Memorandum on Redetermination Proceedings at paragraphs 56 to 66. It is apparent that Superior's increased market power gives it *the ability* to "discipline" its competitors. Superior's retaliatory behaviour goes beyond normal competitive practices. Some examples of Superior's retaliatory behaviour are drastic margin cuts, tying up customers with multi-year contracts, removal charges, free tanks (normally rented) and the "last look" on tenders. Imperial Oil's failure to enter propane retailing is an example of Superior's aggressive reaction and inclination to resort to measures that deter expansion, entry or discipline competitors. While I recognize that Imperial Oil does not fall into the category of "small and medium-sized enterprises", I believe that Imperial Oil's exit from the market is indicative of how Superior's behaviour could negatively impact small and medium-sized enterprises. Furthermore, I see no reason why Superior would act any differently towards a company considered small or medium-sized.

420 Small and medium-sized enterprises are entitled under the Act to an equitable opportunity to compete. This increased ability to deter expansion, entry and discipline competitors is a real possibility that is supported by Superior's past behaviour. It is an effect that runs contrary to the goal of the Act to "provide an equitable opportunity for small and medium-sized enterprises to participate in the Canadian economy" and hence should be given weight in the balancing exercise.

F. The Consumers' Surplus Transfer

421 A significant effect of this merger is the wealth transfer from consumers to Superior Propane Inc. (consumers' surplus transfer) which has been estimated by the Commissioner to be as high as $40.5 million per annum. This wealth transfer results from the supra-competitive market prices that Superior would likely charge as a consequence of its market power. In the view of the Court, the Act is not in itself concerned with "economics" so narrowly conceived as to exclude from consideration under section 96 these redistributive effects and hence these effects must be given weight in the balancing process.

422 In its earlier Reasons, the majority recognized the redistributive effects of the instant merger, but treated them as offsetting because it concluded that the Total Surplus Standard was required in law; hence, that the redistributive effects were, on balance, socially neutral. In these Reasons, the majority asks what treatment should be given to the consumers' surplus transfer based on the submissions of the parties, while taking instruction from the Court. The majority concludes that the redistribution of income that results from an anti-competitive merger of producers has a negative effect on consumers (loss of consumers' surplus) and a correspondingly positive effect on shareholders (excess profit) and states that whether these two effects are completely or only partially offsetting is a *social decision*. Further, the majority recognizes at paragraph 333 of these Reasons that redistributional effects can legitimately be considered neutral in some instances, but not in others. The majority then went on to say that "...

[w]hile complete data may never be attainable, the Tribunal must be able to establish on the evidence the socially adverse effects of the transfer." The majority concludes that the redistributive effects are not completely neutral in the instant merger but refuse to consider the entirety of the Commissioner's measured transfer of $40.5 million per annum on the grounds that he has not demonstrated that *this amount is the socially adverse effect*. The majority is of the view that the interests of households and business owners should be given equal weights with shareholders of the merged entity in this case, particularly since, as the Commissioner has noted, all producers are, in a sense, consumers as well.

423 The merger reduces the competitiveness of propane prices and this effect reduces the benefits of competitive propane prices to *all* Canadian propane consumers by at least the amount of the consumers' surplus transfer. While individual shareholders of Superior may well be consumers of propane, the principle issue at hand is the competitiveness of propane prices for *all Canadian consumers* regardless of consumer segment; that is their demographics or the product end-use. The important consideration is that competitive propane prices should be available to all propane consumers as they are all affected by a price increase. Hence, the consumers' surplus transfer is an immediate effect resulting from the anti-competitive merger. I am of the view that there should be no preference for one segment of consumers over another segment. Indeed, the purpose clause of the Act explicitly recognizes the goal of providing consumers with "competitive prices". Further, the majority's approach for treating the transfer would require complete data on the socio-economic profiles of the consumers and of the shareholders of the producers. With such an approach, it would be impossible to assess whether redistributive effects on the wealth transferred as a result of the higher prices charged by the merged entity would be fair and equitable.

424 The fact that the merger will likely result in a transfer estimated at $40.5 million per annum due to Superior's ability to exercise its market power in the form of higher prices is a serious consideration given the Appeal Judgment and the language of the purpose clause of the Act. Therefore, I came to the conclusion that the entirety of the estimated income transfer of $40.5 million per year should be included in the section 96 trade-off analysis in light of the purpose clause.

G. Requirement to Quantify the Effects

425 As stated above at paragraph 400, I am concerned with the position adopted by the majority which requires the Commissioner to present evidence of a quantitative nature with regards to the effects of the anti-competitive merger for the purpose of the section 96 analysis. In my view, such requirement makes the Commissioner's evidentiary burden formidable. Indeed, as the Commissioner points out, certain effects under consideration are more qualitative in nature and in many instances some are impossible to quantify. For instance, the majority discards the effects on interrelated markets as, in their view, the magnitude of that effect was not established by the Commissioner. The majority implies at paragraph 254 that this effect should have been measured by calculating the deadweight loss and transfer effects resulting from a price increase in each market affected by the merger. Propane being a commodity, the end-uses of which extends to a very large number of businesses in Canada, makes such measurement highly complex. With such a required approach, not only would the Commissioner have to prove the number of businesses affected but he would also have to present evidence of a deadweight loss arising in each industry (interrelated market). That would be a daunting task to prove *even one* specific effect of the merger.

426 Finally, although the majority recognized at paragraph 372, with respect to the transfer effect in particular, that demonstrating significant adverse redistributional effects in merger review will, in most instances, "not be an easy task", the majority nevertheless maintains the view that this would constitute the appropriate treatment for the transfer. As I stated above, I see no justification under the Act for reducing the transfer to the part that is "socially adverse". The purpose clause of the Act explicitly recognizes the goal of providing all Canadian consumers with "competitive prices". I am concerned that the approach adopted by the majority regarding the transfer might well be impossible to implement in light of the complex issues such an approach would entail.

427 If the standard imposed on the Commissioner, as a result of this decision, were that he had to quantify each of the effects of an anti-competitive merger and demonstrate the *socially adverse* redistributional effect (part of the consumers' surplus transfer), it is my opinion that the merger provisions of the Act would be, at a minimum difficult, if not impossible to enforce.

H. Conclusion

428 In light of my dissenting reasons, when conducting the trade-off analysis in section 96, I conclude that the efficiency gains of $29.2 million per year are not greater than the combined measured effects ($43.5 million per year) and serious qualitative effects that I discussed above. As a result, the merger fails the "greater than" aspect of the test.

429 Further, I am of the view that the efficiency gains of $29.2 million per year do not "adequately compensate society", do not "offset" the negative effects of this anti-competitive merger within the parameters of the Act, for the combined measured $40.5 million of consumers' surplus transfer, the estimated deadweight loss of $3 million per year and the negative qualitative effects that I have identified. Finally, as I stated in my previous dissenting opinion, I still cannot find any meaningful consideration or real benefits in the nature of dynamic efficiencies that could have had an impact on the outcome of my analysis. Indeed, the respondents provided no evidence that the efficiencies claimed will *compensate for* the detrimental effects that will result from the merger. For example, the respondents could have claimed that the merger is likely to bring about dynamic efficiencies arising from innovation that will benefit the Canadian economy. Such qualitative efficiency gains could have been assessed in the trade-off analysis as ways to compensate for the detrimental effects caused to the economy as a whole. However, the respondents did not even attempt to present any such *beneficial* effect to the economy that will result from the merger.

430 Finally, as I discussed above at paragraph 425, I am of the view that this case raises serious concerns with respect to the evidentiary burden that must be met by the Commissioner in order to enforce the merger provisions of the Act. As I stated earlier, I disagree with the majority that each effect of the anti-competitive merger should be quantified in order to be considered under section 96 of the Act. Such a task would amount to an extremely difficult exercise to carry out with any degree of reliability.

(1) Observation

431 In this case, I was particularly concerned with the tremendous number of estimates that were provided as input into the calculations that formed part of the extensive economic evidence presented in relation to the efficiencies defence. For example, the input required to establish deadweight loss and transfer estimates included compounded estimates of volumes, prices per litre by end-use and projected price increases by end-use. This is not to say that using some arithmetic standard is not necessary; however, in my view such a standard should be used as a tool/guide in reaching a decision and should not be interpreted as having such precision so as to be concluded as being an end in itself. Qualitative input is, in my view, imperative in analysing the effects of an anti-competitive merger.

432 Relying on estimates and calculations to arrive at what appears to be a precise number provides a false sense of security in that numbers interpretation. In addition it eliminates or at a minimum, reduces the discretion/judgment that the Court allowed the Tribunal in conducting the balancing exercise. The Court recognized "...given the difficulties of for example assessing both the relative elasticity of demand for the goods produced or supplied by a merged entity, and the qualitative aspect of deadweight loss, the application of the total surplus standard is far from mechanical..." In my view it is inherent in this statement that the Court accepts that the results derived from any merger analysis may be imprecise and subject to margins of error. A qualitative analysis and learned judgment is therefore essential.

XI. Order

433 The Tribunal hereby orders that the Commissioner's application for an order under section 92 of the Act is denied.

Application dismissed.

Toronto Real Estate Board v. Commissioner of Competition

2017 CarswellNat 6861, 2017 CarswellNat 8751, 2017 CAF 236,
2017 FCA 236, 153 C.P.R. (4th) 426, 286 A.C.W.S. (3d) 369

THE TORONTO REAL ESTATE BOARD (Appellant) and COMMISSIONER OF COMPETITION (Respondent) and THE CANADIAN REAL ESTATE ASSOCIATION (Intervener)

M. Nadon, D.G. Near, Donald J. Rennie JJ.A.

Heard: December 5, 2016
Judgment: December 1, 2017
Docket: A-174-16

Proceedings: affirming *Commissioner of Competition v. Toronto Real Estate Board* (2016), 2016 Comp. Trib. 7, 2016 CarswellNat 1506, Denis Gascon Chair, Paul Crampton C.J., Wiktor Askanas Member (Competition Trib.); and affirming *Commissioner of Competition v. Toronto Real Estate Board* (2016), 2016 CarswellNat 2132, 2016 Comp. Trib. 8, Denis Gascon J. Chair, Paul Crampton C.J. Chair, Wiktor Askanas Member (Competition Trib.)

Counsel: William V. Sasso, Jacqueline Horvat, Carol Hitchman, for Appellant
John F. Rook, Q.C., Andrew Little, Emrys Davis, for Respondent
Sandra A. Forbes, Michael Finley, for Intervener

***M. Nadon, Donald J. Rennie JJ.A.*:**

I. Introduction

1 This is a statutory appeal from two decisions of the Competition Tribunal (the Tribunal) which held that certain information sharing practices of the Toronto Real Estate Board (TREB) prevented competition substantially in the supply of residential real estate brokerage services in the Greater Toronto Area (GTA): *Commissioner of Competition v. Toronto Real Estate Board*, 2016 Comp. Trib. 7 (Competition Trib.) (Tribunal Reasons, TR) and *Commissioner of Competition v. Toronto Real Estate Board*, 2016 Comp. Trib. 8 (Competition Trib.) (the Order).

2 TREB maintains a database of information on current and previously available property listings in the GTA. TREB makes some of this information available to its members via an electronic data feed, which its members can then use to populate their websites. However, some data available in the database is not distributed via the data feed, and can only be viewed and distributed through more traditional channels. The Commissioner of Competition says this disadvantages innovative brokers who would prefer to establish virtual offices, resulting in a substantial prevention or lessening of competition in violation of subsection 79(1) of the Competition Act, R.S.C. 1985, c. C-34 (Competition Act). TREB says that the restrictions do not have the effect of substantially preventing or lessening competition. Furthermore, TREB claims the restrictions are due to privacy concerns and that its brokers' clients have not consented to such disclosure of their information. TREB also claims a copyright interest in the database it has compiled, and that under subsection 79(5) of the Competition Act, the assertion of an intellectual property right cannot be an anti-competitive act.

3 For the reasons that follow, we would dismiss the appeal.

II. Background and Procedural History

4 TREB, the appellant, is a not-for-profit corporation incorporated under the laws of Ontario. With approximately 46,000 members, it is Canada's largest real estate board. TREB itself is not licensed to trade in real estate and does not do so.

5 TREB operates an online system for collecting and distributing real estate information among its members. This "Multiple Listing Service" or MLS system is not accessible to the general public. Part of the MLS system is a database (the MLS database) of information on properties, including, *inter alia*: addresses, list prices, interior and exterior photographs, length of time for sale, whether the listing was withdrawn or expired, etc. The information is entered by TREB's member brokers into the system and appears almost instantly on the MLS database. When inputting information, some fields are mandatory and others are optional. The MLS database contains both current listings and an archive of inactive listings going back to 1986. TREB's members have full access to the database at any time.

6 Many brokers operate sections of their websites where their clients can log in and view information, called "virtual office websites" or VOWs. TREB's data feed delivers information to brokers to populate these sections of their websites. Importantly, not all information in the MLS database is included in the data feed. Certain data is excluded (the "disputed data"). However, TREB's VOW Policy contains no restriction upon how its members can communicate the same disputed data to their clients through other delivery mechanisms. Consequentially, some information cannot be shared with clients in a VOW, but can be shared with them by other methods, such as in person, by email, or by fax.

7 In May 2011, the Commissioner first applied to the Tribunal, under subsection 79(1) of the Competition Act, for an order prohibiting certain behaviours related to TREB's restrictive distribution of digitized data. The Commissioner alleged that TREB's policies excluded, prevented, or impeded the emergence of innovative business models and service offerings in respect of the supply of residential real estate brokerage services in the GTA.

8 In April 2013, the Tribunal dismissed the Commissioner's application, finding that the abuse of dominance provisions of the *Competition Act* could not apply to TREB because, as a trade organization, TREB did not compete with its members (*Canada (Commissioner of Competition) v. Toronto Real Estate Board*, 2013 Comp. Trib. 9 (Competition Trib.)). However, on appeal in February 2014, this Court set aside the Tribunal's order and referred the matter back for reconsideration, finding that subsection 79(1) of the Competition Act could apply to TREB (*Canada (Commissioner of Competition) v. Toronto Real Estate Board*, 2014 FCA 29, 456 N.R. 373 (F.C.A.), leave to appeal to S.C.C. refused, 35799 (24 July 2014) [2014 CarswellNat 2755(S.C.C.)] (*TREB FCA 1*)).

9 The matter was reconsidered by a different panel of the Tribunal in the fall of 2015. On April 27, 2016, the Tribunal issued its reasons on the merits and made an order granting, in part, the Commissioner's application (*Commissioner of Competition v. Toronto Real Estate Board*, 2016 Comp. Trib. 7 (Competition Trib.)). The issue of remedy was the subject of a further hearing and order of the Tribunal on June 3, 2016 (*Commissioner of Competition v. Toronto Real Estate Board*, 2016 Comp. Trib. 8 (Competition Trib.)). Those two decisions are now on appeal before this Court.

10 The intervener in this case is the Canadian Real Estate Association (CREA), a national organization representing the real estate industry in Canada. TREB is a member of CREA. CREA owns the MLS trademarks. The MLS system is operated by local boards (in this case, by TREB) under license from CREA.

III. The Tribunal Decision

11 The Tribunal first addressed the abuse of dominance issue by defining the relevant market to be "the supply of MLS-based residential real estate brokerage services in the GTA" (Tribunal Reasons (TR) at para. 161). The Tribunal then addressed the three part test in subsection 79(1) of the Competition Act. For ease of reference, we reproduce the provision here:

> **Prohibition where abuse of dominant position**
>
> **79** (1) Where, on application by the Commissioner, the Tribunal finds that

(a) one or more persons substantially or completely control, throughout Canada or any area thereof, a class or species of business,

(b) that person or those persons have engaged in or are engaging in a practice of anti-competitive acts, and

(c) the practice has had, is having or is likely to have the effect of preventing or lessening competition substantially in a market, the Tribunal may make an order prohibiting all or any of those persons from engaging in that practice.

Ordonnance d'interdiction dans les cas d'abus de position dominante

79 (1) Lorsque, à la suite d'une demande du commissaire, il conclut à l'existence de la situation suivante:

a) une ou plusieurs personnes contrôlent sensiblement ou complètement une catégorie ou espèce d'entreprises à la grandeur du Canada ou d'une de ses régions;

b) cette personne ou ces personnes se livrent ou se sont livrées à une pratique d'agissements anticoncurrentiels;

c) la pratique a, a eu ou aura vraisemblablement pour effet d'empêcher ou de diminuer sensiblement la concurrence dans un marché, le Tribunal peut rendre une ordonnance interdisant à ces personnes ou à l'une ou l'autre d'entre elles de se livrer à une telle pratique.

12 The Tribunal found that TREB "substantially or completely controls the supply of MLS-based residential real estate brokerage services in the GTA" and therefore the terms of paragraph 79(1)(a) were met (TR at para. 162).

13 With respect to paragraph 79(1)(b), the Tribunal found that TREB had engaged in, and continued to engage in a practice of anti-competitive acts (TR at para. 454). TREB took the position that its actions were motivated by concern for the privacy of real estate buyers' and sellers' information, and that this concern constituted a legitimate business justification for the VOW restrictions which had to be balanced against the evidence of anti-competitive intent (TR at paras. 21, 285 - 287, 321).

14 In this context, the Tribunal found TREB's concern with privacy to be unpersuasive. We will turn to this issue in greater detail later in these reasons; suffice to say at this point that, looking at the record before it, the Tribunal found little evidence that TREB's VOW committee had considered or acted upon privacy concerns before establishing TREB's VOW Policy (TR at paras. 321, 360, 390).

15 Turning to paragraph 79(1)(c), the Tribunal found that the VOW restrictions prevented competition substantially in the market. After describing this branch of the test (TR at paras. 456 - 483), the Tribunal adopted a "but for" approach to this analysis, comparing the real world with the hypothetical world in which the VOW restrictions did not exist. Thus, in the Tribunal's view, it was the burden of the Commissioner to adduce evidence to prove "a substantial difference between the level of actual or likely competition in the relevant market in the presence of the impugned practice and the level of competition that likely would have prevailed in the absence of that practice" (TR at para. 482).

16 In describing the applicable test, the Tribunal made the point that the Commissioner could bring either quantitative or qualitative evidence, or both, to meet his burden. Because of its view that "dynamic competition is generally more difficult to measure and to quantify", there may be a greater need for the Commissioner to rely on qualitative evidence. This is particularly so in innovation cases. However, the Tribunal also recognized "that it may be more difficult to meet this burden when the Commissioner relies largely on qualitative evidence" (TR at paras. 471, 470).

17 After reviewing the parties' submissions on the evidence with respect to a lessening of competition (TR at paras. 484 - 499), the Tribunal noted that "there is a high degree of competition in the Relevant Market, as reflected in considerable ongoing entry and exit, a significant degree of discounting activity with respect to net commissions, and a significant level of ongoing technological and other innovation, including with respect to quality and variety and through Internet-based data-sharing vehicles" (TR at para. 501).

18 Nonetheless, in addressing the "but for" question, the Tribunal found that the VOW restrictions prevented competition in five ways: by increasing barriers to entry and expansion; by increasing costs imposed on VOWs; by reducing the range of brokerage services available in the market; by reducing the quality of brokerage service offerings; and by reducing innovation (TR at paras. 505 - 619).

19 However, the Tribunal found that the Commissioner had failed to prove that the VOW restrictions were preventing competition in three other manners: by reducing downward pressure on broker commission rates; by reducing output; and by maintaining incentives for brokers to steer clients away from inefficient transactions (TR at paras. 620 - 638).

20 After satisfying itself that the VOW restrictions were preventing competition in five ways, the Tribunal then addressed the substantiality of those anti-competitive effects. Turning first to magnitude and degree, the Tribunal framed the question as whether "full-information VOW brokerages likely would be hired by significantly more clients as a real estate brokerage but for the aggregate impact of the three components of TREB's anti-competitive acts" as a result of being able to display the disputed data (TR at para. 646).

21 TREB had argued that without conversion of website viewers into clients, the popularity of a website was irrelevant (TR at paras. 645, 648). However, the Tribunal found that website innovation could also be relevant if it spurred other competitors to compete (TR at para. 649).

22 After noting that the Commissioner had failed to conduct an empirical assessment with regard to local markets where sold information (the final price at which a house sold) was available through VOWs and other local markets where such information was not available through VOWs, the Tribunal declined to draw the adverse inference against the Commissioner which TREB argued it should draw. The Tribunal noted that "as a statutory authority, the Commissioner has to be prudent with, and make difficult decisions regarding the allocation of, the limited public funds available for administering and enforcing the Act at any given time" (TR at para. 656).

23 The Tribunal also considered, in refusing the draw the inference, the fact that the Commissioner's expert, Dr. Vistnes, had advised the Commissioner that an empirical assessment would be costly, difficult, and of little value. Notwithstanding its refusal to draw the adverse inference sought by TREB, the Tribunal made it clear that the Commissioner continued to bear the burden of proving that the required elements of his application were met which "may well be a more challenging task in the absence of quantitative evidence" (TR at para. 656).

24 The Tribunal then stated that it was prepared to draw an adverse inference against the Commissioner in regard to the testimony of two of its witnesses, Messrs. Nagel and McMullin, whose brokerages (respectively Redfin Corporation and Viewpoint Realty Services Inc.) conducted business in areas where the disputed data was available and in other areas where such data was not available (Nova Scotia and parts of the United States). Because neither witness presented evidence with regard to these other markets, the Tribunal inferred that the conversion rates of those websites would not be helpful to the Commissioner's case. However, the Tribunal then noted that it would not give much weight to its inference because of Dr. Vistnes' opinion that the low conversion rates could be the result of local differences in the relevant markets.

25 The Tribunal also commented that "even a limited comparison between one local U.S. market where sold information is available and one local U.S. market where such information is not available may have been at least somewhat helpful", adding that the same comment applied to Nova Scotia with respect to pending sold prices. The Tribunal also commented that the absence of such a comparison made its task with regard to the "substantiality" element of paragraph 79(1)(c) much more difficult. The Tribunal concluded by saying that the absence of such comparison "resulted in this case being much more of a 'close call,' than it otherwise may have been" (TR at para. 658).

26 However, the Tribunal highlighted the little weight it gave to the low conversion rates:

> [662] The Tribunal does not accord much significance to the fact that the low conversion rates of firms such as ViewPoint, Redfin and TheRedPin suggest that many consumers are evidently treating the information available on their websites as

> complements to the information available from the (different) broker they ultimately use to list or purchase their home. The fact remains that the innovative tools, features and other services available on those websites is assisting them to compete, and is forcing traditional brokerages to respond.

In other words, if we understand the Tribunal correctly, it was not prepared to, in effect, give any weight to the fact that the conversion rates of ViewPoint, Redfin, and TheRedPin were not significant. However, later in its reasons, the Tribunal makes the finding that if the disputed data were available to these firms in the GTA, they likely would have been successful in converting "an increasing and significant number of website users into clients". Paragraph 676 reads:

> [676] The Tribunal concludes that being able to obtain sold information from the VOW Data Feed, and to work with that data as they see fit, would likely enable full-information VOWs, including ViewPoint and those such as TheRedPin who would like to become full-information VOWs, to convert an increasing and significant number of website users into clients.

27 Then, in dealing with the issue of qualitative evidence, the Tribunal made six observations based on the evidence adduced on behalf of the Commissioner:

> [666] First ... the Disputed Data is very important, if not critical, in assisting Internet-based brokerages to distinguish themselves from incumbent traditional brokerages. ...
>
> [667] Second, home purchasers and sellers value being able to obtain information with respect to sold prices, the conditional sale status of homes in the market, firm "pending sold" information, [withdrawn, expired, suspended or terminated] listings and cooperating broker commissions *prior to* meeting with their broker/agent, or in any event *prior to* finalizing the listing price of their homes or making an offer on a home.
>
> [668] Third, an inability to display and use the Disputed Data to develop innovative products has been preventing, and is likely to continue to prevent, ViewPoint from entering the Relevant Market. This has also prevented Realosophy and TheRedPin from growing as much as they likely would have grown ... this also prevented Sam & Andy from expanding within the Relevant Market, and prevented their brokerage customers from doing the same.
>
> [669] Fourth, ViewPoint, Realosophy and TheRedPin are Internet-based innovative brokerages that, in aggregate, likely would have introduced a considerably broader range of brokerage services, increased the quality of some important services (such as CMAs), benefited from lower operating costs and considerably increased the overall level of innovation in the Relevant Market, "but for" the VOW Restrictions. ...
>
> [670] Fifth, the VOW Restrictions have erected barriers to the entry and expansion of innovative brokers in the Relevant Market ...
>
> . . .
>
> [672] Sixth, the VOW Restrictions have stifled innovation in the supply of Internet-based real estate brokerage services in the GTA.
>
> (emphasis in original)

28 The Tribunal then discussed the importance of the disputed data fields to brokers and consumers, finding that sold data, pending and conditional solds, and withdrawn, expired, suspended or terminated listings were valued by home buyers and sellers (TR at paras. 675 - 685). In the Tribunal's opinion, making cooperating broker commissions available would also increase transparency in the market and would allow brokers to distinguish themselves by providing more information (TR at paras. 686 - 690).

29 The Tribunal then reviewed counterarguments to its above findings. The Tribunal did not find significant that some VOW operators in Nova Scotia, which does not have any VOW restrictions, had abandoned their VOWs (TR at para. 693). Likewise, the Tribunal did not find significant the fact that statistics from the National Association of Realtors in the United

States indicated that customers did not value the disputed data fields that highly (TR at para. 694 - 696). The Tribunal noted that in the United States, where sold information was "widely displayed by competitor websites", the National Association of Realtors had started displaying sold information on what appeared to be its official website (TR at para. 700). In addition, the Tribunal was satisfied that the fact that brokers displayed the disputed data when permitted indicated that that information was of value to home buyers; otherwise brokers would not display it (TR at para. 701).

30 The Tribunal stated its conclusion on the magnitude of the effect of the VOW restrictions on competition in the following way:

> [702] For the reasons set forth above, the Tribunal concludes that the VOW Restrictions have adversely affected non-price competition in the Relevant Market to a degree that is material. Indeed, <u>the Tribunal concludes that the aggregate adverse impact of the VOW Restrictions on non-price competition has been substantial, having regard to the considerable negative effect on the range of brokerage services, the negative effect on the quality of service offerings, and the considerable adverse impact on innovation in the Relevant Market</u>. In the absence of an order, this substantial adverse impact is likely to continue. The Tribunal has reached this conclusion despite the fact that, the quantitative evidence on commission rates does not indicate that net commissions for real estate brokerage services were, are or likely would be, materially higher than in the absence of the VOW Restrictions.
>
> (emphasis added)

31 Then, turning to duration and scope, the Tribunal found that, as the VOW restrictions had been in place since 2011, the duration was substantial. Likewise, as the effects were present throughout the GTA, a substantial part of the market was impacted (TR at paras. 703 - 704).

32 Thus, the Tribunal found that all three of the subsection 79(1) requirements had been met and that the VOW restrictions were substantially preventing competition for residential real estate brokerage services in the GTA. At paragraphs 705 to 715 of its reasons, the Tribunal summarized its views on the three elements of subsection 79(1).

33 Turning to copyright, the Tribunal found that TREB did not lead sufficient evidence to demonstrate copyright in the MLS database. Copyright in a database exists where the "selection or arrangement of data" is original (TR at para. 732). The Tribunal found that TREB's evidence did not speak to skill and judgment in compiling the database, but rather illustrated that it was a more mechanical exercise. The Tribunal pointed to many facts including: TREB did not present witnesses on the arrangement of the data; a third party corrects errors in the database; contracts referencing copyright are not evidence that copyright exists; members provide the information which is uploaded "almost instantaneously" to the database; TREB's database is in line with industry norms across Canada; and creating rules on accuracy and quality of the information does not reflect the originality of the work (TR at para. 737).

34 In the alternative, the Tribunal found that, even if TREB had copyright in the database, it would not enjoy the protection offered by subsection 79(5) because TREB's conduct amounted to more than the "mere exercise" of its intellectual property rights (TR at paras. 720 - 721, 746 - 758).

IV. Issues

35 In order to dispose of this appeal, we must determine the three following issues:

> 1. Did the Tribunal err in finding that TREB had substantially reduced competition within the meaning of subsection 79(1) of the Competition Act?
>
> 2. Did the Tribunal err in failing to conclude that TREB's privacy concerns or statutory obligations constituted a business justification within the scope of paragraph 79(1)(b)?
>
> 3. Does subsection 79(5) of the Competition Act preclude TREB and CREA from advancing a claim in copyright in the MLS database? If not, did the Tribunal err in its consideration of TREB's claim of copyright?

V. Analysis

A. Standard of Review

36 Before addressing the three issues, a few words on the standard of review are necessary.

37 There is a statutory right of appeal to this Court from decisions of the Tribunal. Subsection 13(1) of the Competition Tribunal Act, R.S.C. 1985 (2nd Supp.), c. 19 (*Competition Tribunal Act*) provides that any decision or order can be appealed "as if it were a judgment of the Federal Court". In *Canada (Commissioner of Competition) v. CCS Corp.*, 2013 FCA 28, [2014] 2 F.C.R. 352 (F.C.A.) (*Tervita FCA*), our Court held that questions of law arising from decisions of the Tribunal were to be reviewed on the standard of correctness (TR at paras. 53 - 59; see also *Canada (Commissioner of Competition) v. Superior Propane Inc.*, 2001 FCA 104 (Fed.)C.A. at para. 88, [2001] 3 F.C. 185 (Fed. C.A.)). That determination was upheld by the Supreme Court of Canada in *Tervita Corp. v. Canada (Commissioner of Competition)*, 2015 SCC 3, [2015] 1 S.C.R. 161 (S.C.C.) (*Tervita SCC*).

38 As to questions of mixed fact and law, the Supreme Court in *Tervita SCC* also upheld this Court's determination in *Tervita FCA* that such questions were to be determined on the standard of reasonableness. With regard to questions of fact, leave of this Court is required (Competition Tribunal Act, s. 13(2)). In the present matter, no such leave was sought and consequently we cannot interfere with the Tribunal's findings of fact (see *CarGurus, Inc. v. Trader Corporation*, 2017 FCA 181 (F.C.A.) at para. 17; *Nadeau Ferme Avicole Ltée / Nadeau Poultry Farm Ltd. v. Groupe Westco Inc.*, 2011 FCA 188 (F.C.A.) at para. 47, (2011), 419 N.R. 333 (F.C.A.) (*Nadeau Poultry Farm*)).

B. Substantial Reduction in Competition

(1) TREB's and CREA's Submissions

39 TREB submits that the Tribunal erred in finding that the test under subsection 79(1) of the Competition Act was made out. In its view, the Commissioner bore the burden of proving each element of the test and did not discharge that burden on any of the three elements.

40 TREB asserts that since it does not control the relevant market, paragraph 79(1)(a) has not been established.

41 TREB submits that it did not act with the necessary anti-competitive purpose, therefore the Tribunal erred in finding that paragraph 79(1)(b) was made out. In its view, the VOW Policy was meant to allow its members to offer VOWs and thus reach a greater range of potential buyers. The exclusion of some data from the data feed was made for legitimate privacy related reasons.

42 With respect to paragraph 79(1)(*c*), TREB submits that the Tribunal erred in accepting speculative qualitative evidence. Actual quantitative evidence was available and should have been brought forward by the Commissioner. His failure to do so should have led the Tribunal to make an adverse inference against him. CREA, the intervener, agrees with TREB's submissions on these three points.

43 CREA further argues that the Tribunal read out, for all intents and purposes, the requirement of 'substantiality' from the subsection 79(1) test. In its view, statements by brokers are insufficient to establish that access to the disputed data would increase competition substantially. While access to the disputed data may help brokers improve their services, this is not equivalent to a competitive benefit. CREA points to other evidence it claims demonstrates that brokers operating with the current VOW data feed are equally or more competitive than those with access to more data. Furthermore, CREA asserts that there is no proven link between broker success and receiving more data.

(2) The Commissioner's Submissions

44 The Commissioner asserts that TREB's policies regarding the disputed data comprise at least three acts that constitute an anti-competitive practice, as quoted by the Tribunal at paragraph 320 of its reasons:

i. The exclusion of the Disputed Data from TREB's VOW Data Feed;

ii. Provisions in TREB's VOW Policy and Rules that prohibit Members who want to provide services through a VOW from using the information included in the VOW Data Feed for any purpose other than display on a website; and

iii. Prohibiting TREB's Members from displaying certain information, including the Disputed Data, on their VOWs... This prohibition is reinforced by terms in TREB's Data Feed Agreement that limit the use of the MLS data in the VOW Data Feed to a purpose that is narrower than the corresponding provision in the [authorized user agreement] that applies to Members using the Stratus system...

45 In other words, the Commissioner argues that it is anti-competitive to prohibit the disputed data from being distributed via the data feed.

46 The Commissioner further submits that the Tribunal's paragraph 79(1)(b) analysis is reasonable, entitled to deference, and supported by the evidence. The Tribunal applied the correct legal test, and its finding regarding TREB's purpose in implementing the VOW restrictions is one of fact, and therefore not reviewable on this appeal. In the alternative, the Commissioner submits that the facts indicate that the Tribunal's finding on this point was reasonable. The Tribunal looked at the evidence as a whole and determined that, while privacy concerns were mentioned at TREB's VOW taskforce meetings, they were not a principal motivating factor. Furthermore, this finding turned on a credibility assessment of the testimony of Mr. Richardson, TREB's CEO, which is entitled to deference.

47 Regarding paragraph 79(1)(c), the Commissioner submits that the Tribunal once again applied the correct legal test. TREB and CREA misstate the law when they say that the Commissioner must provide quantitative evidence to prove a substantial lessening or prevention of competition. In the Commissioner's view, this position is not supported by the case law. The Commissioner differentiates *Tervita SCC*, which found quantification necessary for a merger test under a different section of the *Competition Act*, namely subsection 96(1). Indeed, according to the Commissioner, non-price effects such as service quality, range of products, and innovation are not amenable to quantification. The Commissioner submits that TREB and CREA are *de facto* arguing that he has a legal burden to quantify the substantial lessening or preventing of competition. In addition, the Commissioner says that the Tribunal's refusal to draw an adverse inference against him on this point is entitled to deference.

(3) The Abuse of Dominance Framework

48 Subsection 79(1), which is reproduced at paragraph 11 above, sets out the three requirements necessary to establish an abuse of dominant position. The Commissioner bears the burden of establishing each of these elements (*Canada (Commissioner of Competition) v. Canada Pipe Co.*, 2006 FCA 233 (F.C.A.) at para. 46, (2006), 268 D.L.R. (4th) 193 (F.C.A.), leave to appeal to S.C.C. refused, 31637 (10 May 2007) [2007 CarswellNat 1107(S.C.C.)] (*Canada Pipe*)).The burden of proof with respect to each element is the balance of probabilities (*Canada Pipe* at para. 46; TR at para. 34).

49 Once the Commissioner establishes each element of subsection 79(1), the person or persons against whom the Commissioner's proceedings are directed, in this case TREB, can avoid sanction if they demonstrate that the impugned practice falls under one of the statutory exemptions. The only provision relevant to this case is subsection 79(5) of the Competition Act, which states that "an act engaged in pursuant only to the exercise of any right or enjoyment of any interest" derived under certain legislation pertaining to intellectual or industrial property, including the Copyright Act, R.S.C., 1985, c. C-42 (Copyright Act), is not an anti-competitive act.

50 TREB says, in its written submissions, that it "does not control the relevant market(s)" (TREB's Memorandum of Fact and Law at para. 66). However, this is the extent of its submissions on the issue. As TREB's substantive arguments clearly focus on paragraphs 79(1)(b) and (c), we continue on to examine in more depth the requirements of those provisions.

(4) Paragraph 79(1)(b)

51 Paragraph 79(1)(b) requires that the person or persons "have engaged in or are engaging in a practice of anti-competitive acts". There is no dispute that TREB's VOW policies constitute a practice. An indicative list of anti-competitive acts is provided in the *Competition Act* at section 78. None of those acts are directly relevant to this appeal. However, that list is non-exhaustive.

52 This Court in *Canada Pipe* found that an anti-competitive act is defined by reference to its purpose. Drawing on the Tribunal's decision in *Canada (Director of Investigation & Research) v. NutraSweet Co.* (1990), 32 C.P.R. (3d) 1 (Competition Trib.) (*NutraSweet*), this Court said that the requisite purpose is "an intended predatory, exclusionary or disciplinary negative effect on a competitor" (*Canada Pipe* at paras. 66, 74. See also NutraSweet at page 34).

53 To be more precise, *NutraSweet* pointed out that the "purpose common to all acts [listed in section 78], save that found in paragraph 78(f), is an intended negative effect on a competitor that is predatory, exclusionary or disciplinary" (at page 34). Indeed, paragraph 78(1)(f) cannot apply to a competitor, as it reads:

> 78 (1) For the purposes of section 79, *anti-competitive act*, without restricting the generality of the term, includes any of the following acts:
>
> . . .
>
> (*f*) buying up of products to prevent the erosion of existing price levels;

54 In *TREB FCA 1*, Sharlow J.A. determined that the 'on the competitor' language from *NutraSweet* and *Canada Pipe* could not mean 'on a competitor of the person accused of anticompetitive practices' (at paras. 19 - 20). On that premise, requiring a predatory, exclusionary, or disciplinary negative effect on a competitor in all cases would render paragraph 78(1)(f) meaningless. Paragraph (*f*) reflects a self-serving intent, not a relative one intended to harm a competitor. Yet it has been defined by Parliament to constitute an anti-competitive act.

55 With this in mind, we believe that the Tribunal applied the correct framework with respect to paragraph 79(1)(b). The Tribunal stated that it was looking for a predatory, exclusionary, or disciplinary effect on a competitor (TR at para. 272). Acting on the direction given by *TREB FCA 1*, the Tribunal defined competitor to mean "a person who competes in the relevant market, or who is a potential entrant into that market" and not a "competitor" of TREB (TR at para. 277).

56 The Tribunal correctly noted that subjective or objective intent could be used to demonstrate the requisite intent (TR at paras. 274, 283; *Canada Pipe* at para. 72). It closely scrutinized the evidence of TREB's subjective intent (TR at paras. 319 - 431). The Tribunal also looked to the "reasonably foreseeable or expected objective effects of the act (from which intention may be deemed...)" (TR at paras. 432 - 451) as instructed by *Canada Pipe* at para. 67 (see also *Tele-Direct (Publications) Inc. v. American Business Information Inc.* (1997), [1998] 2 F.C. 22, 154 D.L.R. (4th) 328 (Fed. C.A.), leave to appeal refused, 26403 (21 May, 1998) [1998 CarswellNat 3212(S.C.C.)] (*Tele-Direct*)). The Tribunal conducted a balancing exercise between the exclusionary effects (evidenced by subjective intent) and TREB's alleged legitimate business justifications (TR at paras. 319 - 431; *Canada Pipe* at para. 73).

57 The application of this test to the facts is a question of mixed law and fact. Ultimately, the Tribunal found that "the evidence of subjective anti-competitive intent and reasonably foreseeable exclusionary effects outweighs the very limited evidence that was adduced in support of the alleged legitimate business justifications that TREB claims underpinned the development and implementation of the VOW Restrictions" (TR at para. 452). This is a very fact-driven analysis. The Tribunal weighed the evidence, heard competing witnesses, and made findings of credibility. We see no error that would make this analysis unreasonable.

(5) Paragraph 79(1)(c)

58 Paragraph 79(1)(c) requires that "the practice has had, is having or is likely to have the effect of preventing or lessening competition substantially in a market" (underlining added). The market in question is not contested. The Tribunal defined the

market to be "the supply of MLS- based residential real estate brokerage services in the GTA" (TR at para. 161). We now turn to address the five other elements, as underlined above, in turn.

(a) The Practice

59 The Commissioner's Notice of Application was filed in May 2011, before TREB's current VOW Policy and Rules were in place. In November 2011, TREB enacted its new rules. The Commissioner accordingly amended her Statement of Claim. Nonetheless, the Statement of Claim remains broadly worded and does not specify which particular parts of TREB's rules and policies the Commissioner is impugning.

60 The alleged anti-competitive practices relate to what TREB does with some of the data from the MLS system and what TREB allows its members to do with this data. This "disputed data" is defined by the Tribunal, at paragraph 14 of its reasons, to include four types of information:

- sold data
- pending sold data
- withdrawn, expired, suspended, or terminated listings ("WESTs")
- offers of commission to the successful home buyer's real estate broker, also called the cooperating broker.

The utility of this data is described in the Tribunal's reasons at paragraphs 675 to 691, which fall within the "Substantiality" section of the reasons.

61 The parties' submissions and the evidence centred almost entirely on three particular practices, which the Tribunal collectively refers to as the "VOW Restrictions" (TR at para. 14). Those practices were the focus of the Tribunal's reasons and, after separate written and oral submissions on remedy, these restrictions remained the focus of the Tribunal's order. The following chart provides an overview of the restrictions, as listed in the Tribunal's reasons at paragraph 14, and their sources.

Restriction	**Source**
The exclusion of the disputed data from the VOW Datafeed	Policy articles 17, 15, 24
The prohibition on the display of the disputed data on a VOW	Rule 823; Datafeed Agreement clause 6.3(a)
The prohibition on the use of the VOW Datafeed information for any purpose other than display on a website	Datafeed Agreement clause 6.2(f), (g)

62 It is worth noting that the following TREB rules and policies are *not* affected by the Tribunal's order.

Restriction	**Source**
An individual needs the permission of their broker of record to establish a VOW	Datafeed Agreement clause 6.3(g)
Before viewing listing information on a VOW, a consumer must enter a lawful broker-consumer relationship with the brokerage; this includes agreeing to terms and conditions acknowledging entering into such a relationship and declaring that the consumer has a bona fide interest in the purchase, sale or lease of residential real estate	Rules 805, 809(i), (iii)
	Policy articles 1, 6, 7(iii)
Any listings other than TREB's MLS listings must be labelled as such and searched separately by consumers	Rules 828, 829

(b) Temporal Requirement

63 The temporal aspect of paragraph 79(1)(c) is not in issue. The effect on competition can be past, present, or future (*Canada Pipe* at para. 44) The Tribunal found that the VOW restrictions had anti-competitive effects in the past, present and future (TR at para. 706).

64 A duration of two years will usually be sufficient to establish an effect (*Tervita FCA* at para. 85). Here, TREB's VOW restrictions came into force in November 2011 and the Tribunal found the anti-competitive effects had been occurring for a substantial period of time (TR at paras. 703, 708).

(c) Preventing or Lessening

65 Paragraph 79(1)(c) refers to either a prevention and/or lessening of competition. The Tribunal found a prevention of competition (TR at para. 705). This means that there is no past time that the Tribunal can look at to compare with the present: the Tribunal must look at the present state of competition compared to a hypothetical world in which the VOW restrictions did not exist. This approach is not contested.

(d) Competition

66 Paragraph 79(1)(c) looks to the level of competition, as opposed to any effects of the behaviour on competitors (*Canada Pipe* at paras. 68 - 69). A "but for" inquiry is an acceptable method of analysis (*Canada Pipe* at paras. 39 - 40). This is a relative assessment: the current intensity of competition is not relevant in isolation.

67 Two questions must be asked regarding the nature of the competition element. The first is: competition for what? Here, the relevant competition is over real estate brokerage clients (TR at paras. 645 - 646). It is important to distinguish this competition from other, related, competition: for example, all websites want to attract web traffic in order to compete for advertising dollars.

68 Second, we must ask: competition between whom? This case is about competition in the "the supply of MLS-based residential real estate brokerage services in the GTA" (TR at para. 161). In order to supply MLS-based services, a broker must be a member of TREB. Therefore, we are really discussing competition between segments of TREB members.

69 The use of imprecise terminology sometimes makes it difficult to distinguish between competing TREB members. The Tribunal uses the terms "full information VOW-based brokerages" or "full information VOW brokerages" in contrast to "traditional 'bricks-and-mortar' brokerages." The Commissioner uses the terms "genuine VOWs" and "innovative brokers" in contrast to "VOWs." Dr. Vistnes, the Commissioner's expert witness, uses the terms "innovative VOW-based brokers" or "VOW-based brokers" in contrast with "traditional brick-and-mortar brokers."

70 However, for the purpose of the legal analysis required by paragraph 79(1)(c), the current competition between any two groups is not important *per se*. Rather, it is the general competition in the defined market between all participants now (with the VOW restrictions) and in the hypothetical "but for" world (without the VOW restrictions).

(e) Substantiality

71 The final element requiring elaboration is substantiality: the difference between the present and "but for" worlds must be substantial (*Canada Pipe* at para. 36). In its reasons, the Tribunal addressed substantiality in a separate section of its reasons (TR at paras. 640 - 704).

(i) Overview of the Evidence on Paragraph 79(1)(c)

72 There were eight expert reports in evidence before the Tribunal, four from the initial hearing in 2012 and four from the redetermination hearing in 2015.

73 Generally, the Tribunal found the evidence of the Commissioner's expert Dr. Vistnes to be credible and persuasive. However, on the particular issue of 79(1)(*c*) the Tribunal found that his evidence had missed the mark, saying that "Dr. Vistnes did not have a good understanding of the legal test for what constitutes a 'substantial' prevention or lessening of competition, as contemplated by paragraph 79(1)(c) of the Act. For this reason, the Tribunal refrained from accepting Dr. Vistnes' evidence on that particular issue" (TR at para. 108).

74 The Tribunal found Dr. Church, called by TREB, "to be less forthright, objective and helpful than Dr. Vistnes or Dr. Flyer." The Tribunal also found Dr. Church "to be evasive at several points during his cross-examination and to have made unsupported, speculative assertions at various points in his testimony and in his written expert reports" (TR at para. 109). Dr. Church's evidence on the issue of whether the prevention of competition was "substantial" is neither referred to nor mentioned in the Tribunal's reasons.

75 The Tribunal found Dr. Flyer, called by CREA, to be generally objective and forthcoming. However, it also found that "his testimony often remained general and high-level, and that he did not immerse himself in the details of the Canadian real estate industry and in the specific evidence and matters at issue in this proceeding to the same degree as Dr. Vistnes and Dr. Church" (para. 110) (We note, parenthetically, that given the Tribunal's view of Dr. Church's evidence, the criticism of Dr. Flyer on the basis that his evidence was not as detailed as Dr. Church is somewhat incongruous.) Dr. Flyer focused on the economic impact of the requested remedy on CREA, with considerable attention to the impact on CREA's trademarks. In our view, his reports are of little help in analyzing paragraph 79(1)(c).

76 In addition, there are a total of 23 witness statements from 15 witnesses. The names and the firms of the witnesses whose testimonies (and statements) are most relevant to the Tribunal's determination of substantial prevention of competition are the following:

- William McMullin, Chief Executive Officer of ViewPoint Realty Services Inc. (Viewpoint)
- Shayan Hamidi and Tarik Gidamy, co-founders of TheRedPin.com Realty Inc. (TheRedPin)
- Joel Silver, Managing Director of Trilogy Growth, LP (Trilogy)
- Mark Enchin, Sales Representative of Realty Executives Plus Ltd. (Realty Executives)
- Scott Nagel, Chief Executive Officer of Redfin Corporation (Redfin)
- Sam Prochazka, Chief Executive Officer of Sam & Andy Inc. (Sam & Andy)
- Urmi Desai and John Pasalis, co-founders of Realosophy Realty Inc. (Realosophy)

77 TREB and CREA do not challenge the admissibility of the statements and testimonies of the lay witnesses on which the Tribunal relies for the findings which form the basis of its conclusion that the anti-competitive effects resulting from the VOW restrictions lead, or are likely to lead, to a substantial prevention of competition in the GTA. Nevertheless, we believe that some guidance with respect to the evidence of lay witnesses in the context of a case like the one now before us might be useful.

78 Generally, the evidence of lay witnesses is limited to facts of which they are aware (David Paciocco and Lee Stuesser, *The Law of Evidence*, 7th ed. (Toronto: Irwin Law, 2015) at 195; Ron Delisle et al, *Evidence: Principles and Problems*, 11th ed. (Toronto: Thompson Reuters, 2015) at 874). This principle is reflected in Rules 68(2) and 69(2) of the Competition Tribunal Rules, SOR/2008-141, which are identical, and read "[u]nless the parties otherwise agree, the witness statements shall include only fact evidence that could be given orally by the witness together with admissible documents as attachments or references to those documents".

79 However, opinion evidence from lay witnesses is acceptable in limited circumstances: where the witness is in a better position than the trier of fact to form the conclusions; the conclusions are ones that a person of ordinary experience can make;

the witnesses have the experiential capacity to make the conclusions; or where giving opinions is a convenient mode of stating facts too subtle or complicated to be narrated as facts (*R. v. Graat*, [1982] 2 S.C.R. 819 (S.C.C.) at 836 - 839, (1982), 144 D.L.R. (3d) 267 (S.C.C.); *Hunt (Litigation Guardian of) v. Sutton Group Incentive Realty Inc.* (2002), 60 O.R. (3d) 665 (Ont. C.A.) at para. 17, (2002), 215 D.L.R. (4th) 193 (Ont. C.A.), quoting with approval Alan W. Bryant, Sidney N. Lederman & Michelle K. Fuerst, *The Law of Evidence in Canada*, 4th ed. (Markham, ON: LexisNexis Canada, 2014) at 12.14. See also Paciocco and Stuesser, ibidat 197 - 198 and Delisle et al, ibid at 874 - 876).

80 The question of opinion evidence given by lay witnesses was recently addressed by this Court in *Pfizer Canada Inc. v. Teva Canada Ltd.*, 2016 FCA 161, 400 D.L.R. (4th) 723(F.C.A.), where Stratas J.A., writing for this Court, upheld the Federal Court's acceptance of a corporate executive's testimony about what his pharmaceutical company would have done in the "but for" world in circumstances where the witness had actual knowledge of the company's relevant, real world, operations (at paras. 105 - 108, 112, 121).

81 Nevertheless, we think it is clear that lay witnesses cannot testify on matters beyond *their own conduct* and that of *their businesses* in the "but for" world. Lay witnesses are not in a better position than the trier of fact to form conclusions about the greater economic consequences of the "but for" world, nor do they have the experiential competence. While questions pertaining to how their particular business might have responded to the hypothetical world are permissible provided the requisite evidentiary foundation is established, any witness testimony regarding the impact of the VOW restrictions on competition generally strays into the realm of inappropriate opinion evidence.

(ii) Substantiality Analysis

82 Before addressing this important issue, it will be helpful to consider what the Supreme Court and this Court have said in regard to the expression "the effect of preventing or lessening competition substantially" found in paragraph 79(1)(c) of the Competition Act and the test relevant to a determination of substantial lessening or prevention of competition.

83 First, in *Tervita SCC*, albeit in the context of the merger provisions of the *Competition Act*, the Supreme Court made the following comments at paragraphs 44 to 46 of its reasons:

> [44] Generally, a merger will only be found to meet the "lessen or prevent substantially" standard where it [here, the "it" means the practice at issue] is "likely to create, maintain or enhance the ability of the merged entity to exercise market power, unilaterally or in coordination with other firms". Market power is the ability to "profitably influence price, quality, variety, service, advertising, innovation or other dimensions of competition. Or, in other words, market power is "the ability to maintain prices above the competitive level for a considerable period of time without such action being unprofitable"; where "price" is "generally used as shorthand for all aspects of a firm's actions that have an impact on buyers. If a merger does not have or likely have market power effects, s. 92 will not generally be engaged
>
> (references omitted)
>
> [45] The merger's likely effect on market power is what determines whether its effect on competition is likely to be "substantial". Two key components in assessing substantiality under the "lessening" branch are the degree and duration of the exercise of market power (*Hillsdown* at pp. 328-29). There is no reason why degree and duration should not also be considered under the "prevention" branch.
>
> [46] What constitutes "substantial" will vary from case to case. The Tribunal has not found it useful to apply rigid numerical criteria:
>
>> What will constitute a likely "substantial" lessening will depend on the circumstances of each case. ...Various tests have been proposed: a likely 5% price rise sustainable for one year; a 5% price rise sustainable over two years; a small but significant and non-transitory price rise. The Tribunal does not find it useful to apply rigid numerical criteria although these may be useful for enforcement purposes.

(*Hillsdown*, at pp. 328-329)

(emphasis added)

84 Then, at paragraphs 50 to 51 of *Tervita SCC*, the Supreme Court indicated that the words of paragraph 79(1)(c) of the Competition Act and those of subsection 92(1) were similar and thus conveyed the same idea:

> [50] *Canada Pipe* was a case involving abuse of dominance under s. 79(1)(*c*) of the Act. The words of s. 79(1)(*c*) - "is having or is likely to have the effect of preventing or lessening competition substantially in a market" - are very close to the words of s. 92(1) - "likely to prevent or lessen" - and convey the same ideas. In *Canada Pipe*, the Federal Court of Appeal employed a "but for" test to conduct the inquiry:
>
>> ... the Tribunal must compare the level of competitiveness in the presence of the impugned practice with that which would exist in the absence of the practice, and then determine whether the preventing or lessening of competition, if any, is "substantial"....
>>
>> The comparative interpretation described above is in my view equivalent to the "but for" test proposed by the appellant. [paras. 37-38]
>
> [51] A similar comparative analysis is conducted under s. 92(1). A merger review, by its nature, requires examining a counterfactual scenario: "... whether the merger will give the merged entity the ability to prevent or lessen competition substantially compared to the pre-merger benchmark or 'but for' world" (Facey and Brown, at p. 205). The "but for" test is the appropriate analytical framework under s. 92.

85 Lastly, at paragraph 60 of its reasons in *Tervita SCC*, the Supreme Court made the following remarks regarding the "but for" test:

> [60] The concern under the "prevention" branch of s. 92 is that a firm with market power will use a merger to prevent competition that could otherwise arise in a contestable market. The analysis under this branch requires looking to the "but for" market condition to assess the competitive landscape that would likely exist if there was no merger. <u>It is necessary to identify the potential competitor, assess whether but for the merger [here "but for" the anti-competitive practice] that potential competitor is likely to enter the market and determine whether its effect on the market would likely be substantial.</u>
>
> (emphasis added)

86 In *Canada Pipe*, at paragraphs 36 to 38 and 45 to 46, this Court, in addressing the test required to make a determination under paragraph 79(1)(c), observed that the test is relative in nature. Rather than assessing the absolute level of competition in the market the Tribunal must assess the level of competition in the presence of the impugned practice and compare this with the level of competition that would exist in the absence of the practice. This difference can occur in the past, present or future and the test will be made out where the difference is substantial. This Court noted that it is the role of the Tribunal to adapt this assessment to the case before it.

87 At paragraph 46 of *Canada Pipe*, this Court explicitly indicated that it was not dictating the type of evidence required, rather it wrote: "Ultimately, the Commissioner bears the burden of proof for each requisite element, and the Tribunal must be convinced on the balance of probabilities. The evidence required to meet this burden can only be determined by the Tribunal on a case-by-case basis."

88 It is clear from *Canada Pipe* that what will constitute a "substantial" lessening or prevention of competition depends on the facts of the case and that the Tribunal is not bound to apply a particular test in determining the issue. However, it is clear that in order for the Tribunal to find that a substantial lessening of competition has been established, it must be able, on the evidence before it, to conclude that were it not for the anti-competitive effects of the practice at issue, the market at issue would

be substantially more competitive. In other words, in the present matter, would there be a substantial incremental benefit to competition arising from the availability of the disputed data in TREB's VOW data feed?

89 In the present matter the Tribunal turned its mind to both the meaning of "substantiality" and the appropriate test to be applied. The Tribunal noted, at paragraph 461 of its reasons, that substantiality is an assessment of the exercise of market power. Market power, as the Tribunal defines it in paragraph 165 of its reasons, is the ability to control either prices or non-price dimensions of competition for a significant time. Non-price dimensions of competition include innovation and quality of service, among others.

90 At paragraph 480 of its reasons, the Tribunal acknowledges that the test for substantiality is relative in nature. That is, the Tribunal is to compare the level of competition that exists in the actual world with the level of competition that would exist, but for, the impugned practices. The test then, is to assess whether the difference between these two worlds is substantial. The Tribunal indicates that this test will be met where either price is materially higher, or one or more non-price dimension are materially lower than in the absence of the practices.

91 In making this assessment the Tribunal will have regard to the overall economic conditions of the relevant market. As explained in paragraph 468 of its reasons, this means that the duration of the impact will be considered along with the relative size of impact to determine whether the impact is substantial.

92 In our view, the Tribunal correctly understood the significance of the word "substantially" and the test which it had to apply in determining whether or not, on the facts of this case, TREB's practice regarding the disputed data was a practice which had the effect of preventing competition substantially in the GTA.

93 With these comments in mind, we now turn to TREB's and CREA's submissions as to why we should intervene. Their principal submission on substantiality is that it was improper for the Tribunal to determine whether the anti-competitive effects led to a substantial prevention of competition on the basis of qualitative evidence only. In their view, this led the Tribunal to determine the issue on "speculative opinion evidence unsupported by available empirical evidence" (TREB's Memorandum of Fact and Law at para. 14).

94 In making this submission, TREB and CREA put forward two arguments. The first is that in *Tervita SCC*, the Supreme Court held that the Commissioner had an obligation to quantify any quantifiable anti-competitive effect and that failure to do so would prevent him from relying on qualitative evidence in respect of effects which could have been quantified. Thus, in the view of TREB and CREA, anti-competitive effects can be considered qualitatively by the Tribunal only if they cannot be quantitatively estimated.

95 TREB and CREA further say that the Tribunal erred in concluding (TR, 469 - 470) that the aforementioned principle, enunciated by the Supreme Court in *Tervita SCC* at paragraph 124 of its reasons, did not apply to a determination made under section 92 of the Competition Act or under subsection 79(1) thereof. In other words, they submit that the Tribunal erred in finding that the Supreme Court's holding in *Tervita SCC*, on which TREB and CREA rely, was limited to determinations under subsection 96(1).

96 More particularly, TREB and CREA say that the rationale underlying the Supreme Court's statement of principle in *Tervita SCC* not only applies to determinations under subsection 96(1), but also to determinations arising under both section 92 and subsection 79(1). In support of this view, they rely on that part of paragraph 124 of *Tervita SCC* which we have underlined herein below.

> [124] The Commissioner argues that quantification is not a legal prerequisite to considering anti-competitive effects (R.F., paras. 84 and 88). On the contrary, the Commissioner's legal burden is to quantify the quantifiable anti-competitive effects upon which reliance is placed. Where effects are measurable, they must be estimated. Effects will only be considered qualitatively if they cannot be quantitatively estimated. A failure to quantify quantifiable effects will not result in such effects being considered qualitatively (*Superior Propane IV*, at para. 35). <u>This approach minimizes the degree of subjective judgment necessary in the analysis and enables the Tribunal to make the most objective assessment possible in the</u>

circumstances (*Superior Propane IV*, at para. 38). An approach that would permit the Commissioner to meet her burden without at least establishing estimates of the quantifiable anti-competitive effects fails to provide the merging parties with the information they need to know the case they have to meet.

(emphasis added)

97 TREB's and CREA's second argument is that the Tribunal should have drawn an adverse inference against the Commissioner by reason of his failure to adduce empirical evidence concerning competition on price and dynamic competition in markets (United States and Nova Scotia) where full information VOWs exist and in respect of which it was possible to measure the actual effects on competition. They say that the Commissioner deliberately decided not to perform a quantitative analysis of competition effects in these markets. More particularly, TREB and CREA argue that the Tribunal should have drawn the only inference possible resulting from the Commissioner's failure to adduce quantitative evidence, "namely that there was no substantial prevention or lessening of competition, dynamic or otherwise, that could be demonstrated on a balance of probabilities" (TREB's Memorandum of Fact and Law at para. 77).

98 TREB and CREA then address the reasons given by the Tribunal for not drawing an adverse inference against the Commissioner, namely that the Commissioner had to be prudent with regard to the spending of the funds under his authority and because of Dr. Vistnes' advice to the Commissioner that a study of the United States' experience would constitute a difficult and expensive endeavour that would likely not yield useful answers. (TREB and CREA say that Dr. Vistnes' testimony on this point constitutes an off the cuff response to a question posed by the Tribunal during the hearing). TREB and CREA say that the reasons given by the Tribunal for refusing to draw the adverse inference are improper and cannot be right.

99 In our respectful view, TREB's and CREA's submissions cannot succeed. First in *Tervita SCC*, the Supreme Court did not, contrary to TREB's and CREA's assertion, make any pronouncement pertaining to section 92 of the Competition Act regarding the necessity of quantifying effects which could be quantified. To the contrary, at paragraph 166 of its reasons in *Tervita SCC*, the Supreme Court indicated that there was no obligation on the part of the Commissioner to quantify anti-competitive effects under section 92:

> [166] It may seem paradoxical to hold that the Tribunal was correct in finding a likely substantial prevention of competition, only to then conduct the s. 96 balancing test and find zero anti-competitive effects. However, this result merely appears paradoxical in view of the particular facts of this case. Here, as discussed above, the Tribunal was able to consider evidence as to the effect on the market of the emergence of likely competitors, whether acceptable substitutes existed, and so on. Section 93 expressly permits the consideration of these factors in and of themselves. Ordinarily, the Commissioner would also use the evidence bearing on those factors to quantify the net effect of those factors on the economy in the form of deadweight loss. However, the statutory scheme does not bar a finding of likely substantial prevention where there has been a failure to quantify deadweight loss, and thus the Commissioner's failure to do so in this case was not fatal to the s. 92 determination. By contrast, the balancing test under s. 96 does require that quantifiable anti-competitive effects be quantified in order to be considered. As such, the failure to quantify deadweight loss in this case barred consideration, under s. 96, of the quantifiable effects that supported a finding of likely substantial prevention under s. 92. In circumstances where quantifiable effects were in fact quantified, a finding of likely substantial prevention under s. 92 would be accompanied by the consideration of quantified anti-competitive effects under the s. 96 analysis.
>
> (emphasis added)

100 Although we agree, as a matter of logic, that the Supreme Court's rationale in *Tervita SCC* for requiring that quantifiable effects be quantified could equally be applied to determinations made under both subsection 79(1) and section 92, there can be no doubt that the Supreme Court made it clear, at paragraph 166 cited above, that the principle did not apply to section 92. That being the case, we have no choice but to hold that the principle requiring quantification of quantifiable effects cannot be applied to subsection 79(1). Had it been open to us to decide the issue afresh, we would have held that the principle applied to determinations under subsection 79(1).

101 Consequently, TREB and CREA cannot succeed on their assertion that the Commissioner, in seeking a determination under subsection 79(1), had a legal obligation to quantify all effects which could be quantified. On the basis of *Tervita SCC*, the Commissioner did not have such an obligation.

102 We now turn to the Tribunal's refusal to make the adverse inference against the Commissioner which TREB and CREA sought because the Commissioner had failed to provide an empirical assessment "of the incremental effect of sold and other Disputed Data in increasing a full-information VOW operator's ability to generate clients" (TR at para. 653). This submission, in our respectful view, is also without merit.

103 To begin, we agree with the Commissioner that TREB's and CREA's argument is tantamount to arguing that the Commissioner had a legal burden to adduce quantifiable evidence. As we have just indicated, no such obligation arises under subsection 79(1).

104 Considering that the Commissioner had no such legal obligation, he, like any other plaintiff, had to decide what evidence he had to put forward to prove his case. As we know, he chose to do so by way of qualitative evidence and in so doing, he took the risk of failing to persuade the Tribunal that the anti-competitive effects of TREB's practice resulted in a substantial prevention of competition. As it turned out, the Tribunal was persuaded by the qualitative evidence adduced by the Commissioner.

105 We have carefully considered the case law and cannot see any basis to accept TREB's and CREA's proposition that the Tribunal ought to have drawn an adverse inference against the Commissioner for failing to conduct an empirical assessment of markets in the United States and in Nova Scotia, or for that matter in the GTA. That, in our respectful view, would be akin to giving the Tribunal the power to dictate to the Commissioner how he should present his case. There is no authority for such a proposition.

106 We agree with TREB and CREA in one respect. Had there been a valid basis to draw an adverse inference against the Commissioner, the reasons for refusing to draw the inference given by the Tribunal would clearly not have withstood scrutiny. The fact that the Commissioner has limited funds to spend may be a reality, but it is of no relevance to a determination of whether or not an adverse inference should be made. As to Dr. Vistnes' view with regard to the utility and cost of producing an empirical assessment, that, in our view, is also an irrelevant consideration. Whether the study would have been useful is a matter which the Tribunal would have had to appreciate and determine. It was clearly not up to Dr. Vistnes to make that determination. In any event, it is doubtful that Dr. Vistnes could provide that opinion to the Tribunal as it does not appear in his expert reports. However, as we are satisfied that there was no basis to draw the inference sought by TREB and CREA, the reasons given by the Tribunal, even though misguided, are of no consequence.

107 Additionally, it should be remembered that in *I.B.E.W., Local 894 v. Ellis-Don Ltd.*, 2001 SCC 4 (S.C.C.) at paragraph 73, [2001] 1 S.C.R. 221 (S.C.C.), the Supreme Court made the following point: "Whether or not an adverse inference is warranted on particular facts is bound up inextricably with the adjudication of the facts" (see also *Benhaim v. St-Germain*, 2016 SCC 48 (S.C.C.) at para. 52, [2016] 2 S.C.R. 352 (S.C.C.)). Thus, the Tribunal's refusal to draw an inference against the Commissioner is subject to the standard of reasonableness. We see no basis to conclude that the Tribunal's refusal to draw the inference is unreasonable.

108 TREB and CREA make a further submission regarding the Tribunal's determination that the prevention of competition was substantial. They say that, in any event, it was an error for the Tribunal to rely on evidence which they characterize as speculative qualitative evidence. At paragraph 75 of its Memorandum of Fact and Law, TREB defines quantitative evidence as "empirical evidence of the actual effect of certain impugned acts on competition in an existing real estate market" and defines qualitative evidence as "a reference essentially to opinion and anecdotal evidence of what might happen in the market if certain acts are permitted or not permitted".

109 More particularly (the argument which we now explain is one put forward mainly by CREA), they make four points. First, they say that the Tribunal erred in concluding, on the basis of statements made by brokers to the effect that they needed the disputed data in their VOWs so as to improve their offerings to the public and that their clients, i.e. buyers and sellers,

valued the opportunity of accessing the disputed data on their VOWs, that the availability of the disputed data would result in a substantial incremental competition benefit.

110 In TREB's and CREA's view, the Tribunal's conclusion on substantiality which results from its finding with respect to the anti-competitive effects of TREB's practice was tantamount to reading out the word "substantial" from the statutory provision. They say that, at best, the aforementioned witness statements constitute evidence of "an effect" on competition but clearly not of a substantial incremental competition benefit arising from the availability of the disputed data on the VOWs.

111 Second, TREB and CREA say that it was an error on the part of the Tribunal to find, on the basis of the evidence of William McMullin, that Viewpoint was prevented from entering the GTA market because of the unavailability of the disputed data. They say that Mr. McMullin's evidence on this point, in light of the overall evidence, was not credible adding that, in any event, the Tribunal erred in finding that Viewpoint's entry into the GTA would have had a substantial competitive effect considering that Viewpoint was less competitive (if one considers Viewpoint's commission rates and lack of rebates) in terms of price than other brokerages such as Realosophy and TheRedPin.

112 Third, TREB and CREA say that the Tribunal made a further error in finding that the Commissioner had met his burden of proof on the basis of qualitative benefits asserted by brokers when the evidence showed that brokers operating in the GTA with VOWs fed by TREB's VOW data feed (i.e. without the disputed data) were equally or more competitive than brokers operating on a data feed that included some of the disputed data.

113 Fourth, TREB and CREA say that the Tribunal also erred in finding that a substantial prevention of competition had been demonstrated by the Commissioner because there was a lack of evidence showing a link between the success of brokerages such as Redfin and Viewpoint and the availability of the disputed data in a VOW. In making this point, TREB and CREA argue that it was clear from the evidence that there was no causal relationship between being able to convert website users into clients and the availability of the disputed data on one's VOWs.

114 TREB and CREA conclude on this point by saying that the evidence regarding conversion rates was extremely important because the purpose of designing attractive websites was to convert viewers into clients.

115 TREB and CREA also point out that after finding that the evidence regarding conversion rates did not support the Commissioner's case, the Tribunal downplayed the importance of conversion rates on the basis of Dr. Vistnes' opinion that local differences in the markets under consideration probably explained why the conversion rates were low. TREB and CREA say that there was no evidence of these local differences before the Tribunal on which Dr. Vistnes could give the opinion that he gave. Dr. Vistnes' opinion, in their view, was entirely speculative.

116 Finally, TREB and CREA conclude their arguments regarding conversion rates by saying that even though the Tribunal refused to give any weight to the evidence showing low conversion rates, it nonetheless found, at paragraph 676 of its reasons, that if the disputed data was made available on TREB's data feed, web based brokerages would likely be successful in converting "an increasing and significant number of website users into clients".

117 To place TREB's and CREA's arguments in perspective, it is important to point out that the Tribunal understood the difference in nature between quantitative and qualitative evidence and that it recognized that it was more difficult for the Commissioner to prove his case on the basis of mostly qualitative evidence. The Tribunal indicated that in a case like the one before it, which pertained mostly to dynamic competition, it was inevitable that the Commissioner would have to rely on qualitative evidence in the form of business documents, witness statements, and testimonies, adding, however, that it remained the Commissioner's burden to prove his case on a balance of probabilities (TR at paras. 469 - 471).

118 On the basis of the qualitative evidence put forward by the Commissioner and in particular on the basis of the witness statements and testimonies of the persons referred to at paragraph 76 of these reasons, namely Messrs. McMullin, Hamidi, Gidamy, Silver, Enchin, Prochazka, Desai, and Pasalis, the Tribunal made findings of a number of anti-competitive effects caused by the VOW restrictions. In each case, the Tribunal found both that an anti-competitive effect existed and emphasized the relative significance of that effect as follows:

- The prevention of a considerably broader range of broker services in the GTA (TR at para. 583)

- The prevention of an increase in the quality of these services in a significant way (TR at para. 598)

- The prevention of the advent of considerably more innovation (TR at para. 616)

- The significant adverse impact on entry into, and expansion within the relevant market (TR at para. 550)

119 It was the Tribunal's opinion that "but for" the VOW restrictions these anti-competitive effects would be considerably lower. At paragraph 702 of its reasons, the Tribunal concluded that when considered in the aggregate, these anti-competitive effects on non-price dimensions amounted to a substantial prevention of competition.

120 In other words, the Tribunal held that the ultimate consequence of the anti-competitive effects found to exist was the maintenance of TREB and its members' collective market power in respect of residential brokerage services in the GTA (TR at para. 709) and that failing an order on its part, that market power would likely continue (TR at para. 712).

121 In our view, TREB's and CREA's arguments regarding the Tribunal's reliance on qualitative evidence are without merit.

122 First, it is clear that most of the points which TREB and CREA make on this issue are to the effect that many of the Tribunal's crucial findings are not supported by the evidence. This is particularly so in regard to their criticism of Mr. McMullin's evidence and in regard to Viewpoint's entry into the GTA. Although we have some misgivings in regard to a number of the findings made by the Tribunal, it must be remembered that these findings result from the Tribunal's assessment of the evidence before it. The same goes with respect to the weight which the Tribunal gave to that evidence. As we have already indicated, TREB and CREA, not having sought leave to challenge questions of fact on this appeal, cannot pursue this line of attack. TREB and CREA, without so saying, are inviting us to reassess the evidence before the Tribunal and to make different findings. We clearly cannot do so. Further, as this Court indicated in *Nadeau Poultry Farm* at paragraph 47, parties cannot "under cover of challenging a question of mixed fact and law, revisit the Tribunal's factual conclusions".

123 Second, it is also important to repeat that TREB and CREA do not challenge the admissibility of the statements nor of the testimonies given by the lay witnesses upon which the Tribunal relies for its findings.

124 Third, in our respectful opinion, the underlying premise behind TREB's and CREA's challenge on this point is that qualitative evidence without quantified evidence, which they say was available to the Commissioner, should not be considered nor given any weight. We have already determined that this premise is not well founded.

125 We agree, however, with TREB and CREA that the evidence pertaining to conversion rates does not support the Commissioner's case. Had the conversion rates been the determinative factor in this appeal, we would have intervened. We cannot see how the Tribunal can say, as it does at paragraph 676 of its reasons, that if Viewpoint and others could use the disputed data they would be in a position "to convert an increasing and significant number of website users into clients". The Tribunal's findings on conversion rates, which appear at paragraphs 653, 657, 658, and 664 of their reasons, show that the evidence before it did not support the Commissioner's case.

126 However, as the Commissioner argues, the Tribunal, although recognizing that conversion rates were low, made the point that his application was primarily concerned with dynamic competition and innovation and that, in the absence of quantifiable evidence on point, it had no choice but to determine the matter on the evidence before it, mostly qualitative evidence. More particularly, at paragraph 662 of its reasons, the Tribunal indicated in no uncertain terms that the additional innovation developed by full information VOW brokerages was not only helpful in their attempts to compete but was "forcing traditional brokers to respond" to this new type of competition.

127 We are therefore satisfied that in relying on qualitative evidence for its findings of anticompetitive effects and its ultimate conclusion on substantiality, the Tribunal made no reviewable error. Consequently, we have not been persuaded, in light of the

Tribunal's findings and of the applicable test, that there is any basis for us to interfere with the Tribunal's determination under paragraph 79(1)(c) of the Competition Act.

128 We now turn to the second issue raised by this appeal.

C. Privacy

129 TREB sought to justify its restriction on disclosure of the disputed data on the basis that the privacy concerns of vendors and purchasers constituted a business justification sufficient to escape liability under paragraph 79(1)(b) of the Competition Act. TREB asserted that privacy was integral to its business operations; more specifically, privacy was an aspect of maintaining the reputation and professionalism of its members, central to the interests of purchasers and sellers and to the cooperative nature and efficiency of the MLS system.

130 TREB also asserted that it was required, as a matter of law, to comply with Personal Information Protection and Electronic Documents Act, S.C. 2000, c. 5 (PIPEDA). It contended that this statutory requirement constituted a business justification, separate and apart from any question of the underlying motive TREB may have had for the VOW Policy and its anticompetitive effects. Characterized differently, having concluded that the policy was not motivated by subjective privacy concerns, the Tribunal was nevertheless obligated to continue and also determine, one way or another, whether the policy was mandated by *PIPEDA*. Had the Tribunal considered the consents in light of the requirements of *PIPEDA*, it would have found them lacking, and insufficient to authorize disclosure. This would lead, in TREB's submissions, to the conclusion that the restrictions on disclosure were necessary to comply with the legislation and constitute a business justification.

(1) The Tribunal's Decision

131 In considering privacy as a business justification under paragraph 79(1)(b), the Tribunal found that the "principal motivation in implementing the VOW Restrictions was to insulate its members from the disruptive competition that [motivated] Internet-based brokerages". It concluded that there was little evidentiary support for the contention that the restrictions were motivated by privacy concerns of TREB's clients. The Tribunal also found scant evidence that, in the development of the VOW Policy, the VOW committee had considered, been motivated by, or acted upon privacy considerations (TR at para. 321). The privacy concerns were "an afterthought and continue to be a pretext for TREB's adoption and maintenance of the VOW Restrictions" (TR at para. 390).

132 The Tribunal found the business justification argument simply did not mesh with the evidence. At paragraphs 395 to 398 of its reasons, the Tribunal observed that it was "difficult to reconcile" TREB's privacy arguments with the fact that the disputed data was made available to:

- All 42,500 TREB members via its Stratus system;
- The members of most other Ontario real estate boards through the data sharing program CONNECT;
- Clients of all TREB members and clients of members of most other Ontario real estate boards;
- Some appraisers;
- Third party industry stakeholders including CREA, Altus Group Limited, the CD Howe Institute, and Interactive Mapping Inc. (albeit for confidential use); and
- Customers via email subscription services or regular emails sent by members.

133 Further, the Tribunal noted that for many months TREB did nothing regarding two brokers who displayed the disputed data in apparent violation of TREB's policy (TR at paras. 372 - 374). It observed that few clients had reported concerns to TREB about their data being displayed and distributed online (TR at paras. 386-387) and that TREB did not produce evidence

to support its allegation that including the disputed data in the data feed would push consumers away from using MLS-based services (TR at para. 423).

134 Additionally, agents were entitled to, and routinely did, distribute detailed seller information, including sold prices, to their own clients without any restriction on further dissemination. Moreover, TREB's own intranet system enables TREB's members to forward by email up to 100 sold listings at a time to anyone (TR at para. 398).

135 The Tribunal found no evidentiary foundation to support the assertion that the policy was genuinely motivated by a concern about compliance with *PIPEDA*. Although the need to abide by *PIPEDA* was mentioned in the testimony of TREB's Chief Executive Officer, the Tribunal noted the absence of evidence from TREB's Board of Directors, its Chief Privacy Officer or its Chief Information Officer, which would support the conclusion that compliance with *PIPEDA* necessitated the policy (TR at paras. 378 - 379).

136 The Tribunal noted that while TREB implemented its privacy policy in 2004 and had appointed a Chief Privacy Officer, there was no evidence that the VOW Policy was directed towards compliance. TREB's only contact with the Privacy Commissioner was to ask for an opinion on a different document (a "Questions and Answers" document addressing a number of privacy related topics) in August 2012. These did not include questions related to the disputed data, and, in any event, these communications took place only after the VOW Policy and Rules were set (TR at paras. 375 - 376).

137 The Tribunal also noted at paragraph 407 of its reasons that Mr. Richardson, the CEO of TREB during the relevant time, operated on the assumption that the wording in the consents in the Listing Agreement was sufficient to permit disclosure.

138 In argument, TREB pointed to a 2009 decision of the Privacy Commissioner which held that an advertisement which said that a property sold at 99.3% of the list price contravened *PIPEDA* because it allowed the public to calculate the selling price. The Office of the Privacy Commissioner held that the exception for publicly available information did not apply because the information was obtained under the purchase agreement to which the salesperson was not privy and was not actually drawn from the Ontario registry or any source accessible to the public (TR at para. 388).

139 The Tribunal rejected TREB's assertion that this decision influenced the VOW Policy. It noted that, with two exceptions (the meetings of May 12 and May 20, 2011), privacy concerns were not reflected in the minutes or discussion pertaining to the development of the VOW Policy (see e.g. TR at para. 351). It concluded that privacy considerations were an *ex post facto* attempt to justify the policy.

140 The Tribunal then considered CREA's argument that consumers were concerned about their property information being disclosed on a public website. The Tribunal concluded that the evidence was very limited and not persuasive (TR at para. 776).

141 The Tribunal then examined the consent clauses contained in the Listing Agreement and concluded that the consents permitted the disclosure of the data. This point will be expanded upon below.

(2) Burden of Proof

142 Before turning to the substance of this issue, the parties raise a point concerning the burden of proof.

143 The Commissioner and TREB agree that TREB is bound by the provisions of *PIPEDA*. However, TREB contends that it was the Commissioner's burden to disprove TREB's assertion that the VOW Policy was required by *PIPEDA*. We do not agree. Neither this contention, nor the law, shifts the legal or evidentiary burden to the Commissioner to disprove the assertion that the policy is necessary as a matter of regulatory compliance.

144 The normal evidentiary burden applies. The party who asserts must prove: *Simpson v. Mair*, 2008 SCC 40 (S.C.C.) at para. 30, [2008] 2 S.C.R. 420 (S.C.C.). TREB has offered no compelling reason as to why this principle should not apply in respect of a business justification under section 79. In consequence, if TREB seeks to establish that regulatory compliance would be compromised, the onus is on it to lead the relevant evidence as part of its evidentiary burden, and to establish the consequential legal conclusions as part of its argument.

(3) A Business Justification was not Established

145 To begin, we reject the argument that the Tribunal did not consider the possibility that independent of motivation, regulatory compliance with *PIPEDA* could constitute a justification. Having reviewed the law, the Tribunal concluded that the business justification analysis was "subject to the important caveat that legal considerations, such as privacy, may provide a legitimate justification for an impugned practice" (TR at para. 302).

146 However, earlier in its reasons, the Tribunal wrote that "legal considerations, such as privacy laws, [may] legitimately justify an impugned practice, provided that the evidence supports that the impugned conduct was primarily motivated by such considerations" (TR at para. 294). We appreciate TREB's point that the Tribunal's reasons on this issue are equivocal. In our view, to the extent that the Tribunal required regulatory compliance to be the motivation behind the VOW Policy, it did so in error. If it can be established that a business practice or policy exists as a matter of a statutory or regulatory requirement, whether compliance was the original or seminal motivation for the policy is of no consequence.

147 This does not, however, eliminate the burden on the corporation to establish a factual and legal nexus between that which the statute or regulation requires and the impugned policy.

148 In order to establish a business justification within the meaning of paragraph 79(1)(b) of the Competition Act, a party must establish "a credible efficiency or pro-competitive rationale for the conduct in question, attributable to the respondent, which relates to and counterbalances the anti-competitive effects and/or subjective intent of the acts": *Canada Pipe* at para. 73. Proof of a "valid business justification ... is not an absolute defence for paragraph 79(1)(b)"; it must provide an explanation why the dominant corporation engaged in the allegedly anti-competitive conduct: *Canada Pipe* at paras. 88 - 91. As this Court explained in *Canada Pipe* at paragraph 87:

> [87] ...A business justification for an impugned act is properly relevant only insofar as it is pertinent and probative in relation to the determination required by paragraph 79(1)(*b*), namely the determination as to whether the purpose for which the act was performed was a predatory, exclusionary or disciplinary negative effect on a competitor. ... [A] valid business justification can, in appropriate circumstances, overcome the deemed intention arising from the actual or foreseeable negative effects of the conduct on competitors, by demonstrating that such anti-competitive effects are not in fact the overriding purpose of the conduct in question. In this way, a valid business justification essentially provides an alternative explanation as to why the impugned act was performed, which in the right circumstances might be sufficient to counterbalance the evidence of negative effects on competitors or subjective intent in this vein.

149 In sum, two facts must be established before an impugned practice can shelter behind paragraph 79(1)(b). First, there must be a credible efficiency or pro-competitive rationale for the practice. Second, the efficiencies or competitive advantages, whether on price or non-price issues, must accrue to the appellant. Put otherwise, the evidence must demonstrate how the practice generates benefits which allow it to better compete in the relevant market.

150 The Tribunal assessed the evidence before it according to the correct principles and found it lacking. The Tribunal concluded that TREB was motivated by a desire to maintain control over the disputed data in an effort to forestall new forms of competition, and not by any efficiency, pro-competition, or genuine privacy concerns (TR at paras. 369, 389 - 390). It was fair for the Tribunal to consider that, had regulatory compliance been a concern, there would have been evidence of such communications. It concluded that there was "no evidence" that TREB's privacy policies received much, if any, consideration during the development of TREB's VOW Policy and Rules.

151 The evidence, some of which we have summarized earlier, is compelling. As leave to challenge these findings was not sought, the Tribunal's conclusion that there were no procompetitive business or efficiency justifications for the policy is reasonable and will not be disturbed. This sets the stage for TREB's second and, we believe, principal argument.

(4) Privacy Obligations under PIPEDA

152 TREB submits that the Tribunal erred in failing to engage in a stand-alone assessment of TREB's responsibilities under *PIPEDA* regarding the collection and use of personal information.

153 In its reasons, the Tribunal considered *PIPEDA* and whether its requirements mandated the policy. In this regard, it looked at the extent to which TREB engaged with the Privacy Commissioner and considered the provisions of *PIPEDA*. It also examined the nature and scope of the consent clause in the Listing Agreement. It proceeded on the understanding that the data was confidential and then considered the scope and effect of the consents governing its use. It concluded that the consents were effective.

154 In our view, the role of the Tribunal was to interpret the scope of the consents under the ordinary law of contract, as informed by the purpose and objectives of *PIPEDA*. This is what it did, and we find no error in the conclusion reached.

(a) The Standard of Review

155 As a preliminary matter, we consider that in reviewing the consent in the Listing Agreements, the Tribunal was interpreting a standard form contract. As such, the standard of review is correctness.

156 Generally speaking, contractual interpretation involves questions of mixed law and fact and, thus, is reviewable on a deferential standard: *Creston Moly Corp. v. Sattva Capital Corp.*, 2014 SCC 53S.C.C. at para. 50, [2014] 2 S.C.R. 633 (S.C.C.) (*Sattva*). The interpretation of standard form contracts is an exception to this rule. Their interpretation constitutes a question of law and, thus, is reviewable for correctness: *Ledcor Construction Ltd. v. Northbridge Indemnity Insurance Co.*, 2016 SCC 37 (S.C.C.) at para. 46, [2016] 2 S.C.R. 23 (S.C.C.) (*Ledcor*). Determining the interplay between a statutory provision and a contractual term is also an exception and is reviewable for correctness: *Canada (Office of the Information Commissioner) v. Calian Ltd.*, 2017 FCA 135 (F.C.A.) at para. 37, (2017), 414 D.L.R. (4th) 165 (F.C.A.) (*Calian*). Statutory rights of appeal do not necessarily convert a reasonableness standard to a correctness one-it depends on the exact language of the legislative provision: *Edmonton (City) v. Edmonton East (Capilano) Shopping Centres Ltd.*, 2016 SCC 47 (S.C.C.) at para. 31, [2016] 2 S.C.R. 293 (S.C.C.).

157 MLS Rules specify that brokers cannot change or delete any part of clause 11 of the Listing Agreement (Rule 340). The *Frequently Asked Privacy Questions* provided by CREA states that "[b]oth current and historical data is essential to the operation of the MLS® system and by placing your listing on the MLS® system you are agreeing to allow this ongoing use of listing and sales information". The Listing Agreement is, at least for the purposes of these proceedings, a contract of adhesion or standard form.

(b) The Consents

158 *PIPEDA* requires that individuals consent to the collection, use, and disclosure of their personal information (sch. 1, clause 4.3.1). This consent must be informed (sch. 1, clause 4.3.2). Amendments in 2015 to this principle specified that for consent to be informed, the person must understand the "nature, purpose and consequences of the collection, use or disclosure of the personal information" (s. 6.1).

159 As noted earlier, the Tribunal proceeded on the basis that the sale price of property is personal information and therefore subject to the terms of *PIPEDA*, which mandates informed consent to the use of personal information.

160 While the Listing Agreement used by TREB provides consent to some uses of personal information, TREB asserts that had the Tribunal examined it more closely, it would have found that the Listing Agreement did not provide sufficiently specific wording to permit disclosure of personal information in the VOW data feed. Specifically, TREB contends that the consents do not permit the distribution of the data over the internet, and that is qualitatively different from the distribution of the same information by person, fax, or email.

161 The Listing Agreement contains a clause governing the "Use and Distribution of Information". TREB focuses on the consent to the collection, use, and disclosure of information for the purpose of listing and marketing of the Property itself but

omits that part of the consent (in the same clause) that says the real estate board may "make such other use of the information as the Brokerage and/or real estate board(s) deem appropriate, in connection with the listing, marketing and selling of real estate during the term of the listing and thereafter." The Commissioner contends that this latter part of the consent (in the same clause) is the pertinent part and that it is sufficient to permit the ongoing use and disclosure of information, even after the listing is no longer active. We agree with the Commissioner's position.

162 The Tribunal had before it the Listing Agreements used from 2003 to 2015. Although there is data in the MLS database dating back to 1986, Listing Agreements prior to 2003 were not before the Tribunal or this Court. Therefore, this Court expresses no opinion regarding the information obtained prior to 2003 or any information that may have entered the database without being subject to the 2003 to 2015 Listing Agreements.

163 The Listing Agreement was created by the Ontario Real Estate Association and recommended by TREB to its members (TR at para. 64). In the most recent version before the Court, the relevant section of the Use and Distribution of Information clause reads:

> The Seller acknowledges that the database, within the board's MLS System is the property of the real estate board(s) and can be licensed, resold, or otherwise dealt with by the board(s). The Seller further acknowledges that the real estate board(s) may, <u>during the term of the listing and thereafter</u>, distribute the information in the database, within the board's MLS System to any persons authorized to use such service which may include other brokerages, government departments, appraisers, municipal organizations and others; market the Property, at its option, <u>in any medium, including electronic media</u>; <u>during the term of the listing and thereafter</u>, compile, retain and publish any statistics including historical data within the board's MLS System and retain, reproduce and display photographs, images, graphics, audio and video recordings, virtual tours, drawings, floor plans, architectural designs, artistic renderings, surveys and listing descriptions which may be used by board members to conduct comparative analyses; and make such other use of the information as the Brokerage and/or real estate board(s) deem appropriate, in connection with the listing, marketing and selling of real estate <u>during the term of the listing and thereafter</u>.
>
> (emphasis added)

164 The wording in the Listing Agreements from 2003 onwards is substantially similar to that quoted above. However, the phrase "during the term of the listing and thereafter" (underlined above), first appears in 2012. The Use and Distribution of Information clause in the Listing Agreement is broad and unrestricted. Sellers are informed that their data could be used for several purposes: for distribution in the database to market their house; to compile, retain, and publish statistics; for use as part of comparative market analysis; and any other use in connection with the listing, marketing, and selling of real estate. Nothing in the text implies the data would only be used during the time the listing is active. Indeed, the use of data for historical statistics of selling prices necessitates that the data will be kept. The Tribunal noted that TREB's policies 102 and 103 add that, apart from inaccurate data, "[n]o other changes will be made in the historical data" (TR at para. 401). We note as well that clause 11 of the Listing Agreement allows for the property to be marketed "using any medium, including the internet".

165 *PIPEDA* only requires new consent where information is used for a new purpose, not where it is distributed via new methods. The introduction of VOWs is not a new purpose-the purpose remains to provide residential real estate services and the Use and Distribution of Information clause contemplates the uses in question. The argument that the consents were insufficient-because they did not contemplate use of the internet in the manner targeted by the VOW Policy-does not accord with the unequivocal language of the consent.

(c) Conduct of the Parties

166 The conduct of the parties may be considered in the interpretation of a contract. Given our conclusion as to the correct interpretation of the consents, it is not necessary to consider the contextual elements or conduct of the parties. However, we choose to do so here because it illuminates and reinforces our conclusion arising from the terms of the contract itself.

167 In *Sattva*, the Supreme Court of Canada stated that, with some limitations, a contract's factual matrix includes "absolutely anything which would have affected the way in which the language of the document would have been understood by a reasonable [person]" (*Sattva* at para. 58 citing *Investors Compensation Scheme Ltd. v. West Bromwich Building Society*, [1997] UKHL 28, [1998] 1 All E.R. 98 (U.K. H.L.) at 114). Thus, the conduct of the parties forms part of the factual matrix of the contract and can, subject to some restrictions, inform the interpretation of its terms.

168 The extent to which the factual matrix, including the parties' conduct, may inform the interpretation is subject to the "overwhelming principle" (formulated in *Sattva*, but characterized as such in *Teal Cedar Products Ltd. v. British Columbia*, 2017 SCC 32 (S.C.C.) at para. 55, (2017), 411 D.L.R. (4th) 385 (S.C.C.) (*Teal Cedar*)). There are two elements to the overwhelming principle. The factual matrix cannot be given excessive weight (so as to "overwhelm" the contract); and the factual matrix cannot be interpreted in such isolation from the text of the contract such that a new agreement is effectively created (*Sattva* at para. 57; *Teal Cedar* at paras. 55 - 56, 62).

169 In *Calian*, this Court observed that "the clear language of a contract must always prevail over the surrounding circumstances" (*Calian* at para. 59). Further, the factual matrix may only be considered to the extent that it helps determine the "mutual and objective intentions of the parties as expressed in the words of the contract" (*Sattva* at para. 57). Indeed, only evidence revealing "knowledge that was or reasonably ought to have been within the knowledge of both parties at or before the date of contracting" may inform the interpretation of the contract (*Sattva* at para. 58). For example, the subjective intention of one party cannot be relied upon to interpret the meaning of a contract (*Sattva* at para. 59; *ING Bank N.V. v. Canpotex Shipping Services Ltd.*, 2017 FCA 47 (F.C.A.) at paras. 112, 121, (2017), 277 A.C.W.S. (3d) 281 (F.C.A.) (*ING Bank*)). Reliance of that sort would offend the parol evidence rule, i.e., that evidence external to the contract that would "add to, subtract from, vary, or contradict a contract that has been wholly reduced to writing" is inadmissible (*Sattva* at para. 59; *ING Bank* at paras. 112, 121).

170 As far as standard form contracts are concerned, the factual matrix is less relevant (*Ledcor* at paras. 28, 32). This is in keeping with the rationale underlying the correctness standard for standard form contracts: that contracts of this nature are not negotiated, but rather offered on a "take-it-or-leave-it" basis. However, in *Ledcor* Wagner J. observed at paragraph 31 that some surrounding circumstances, such as the purpose of the contract, the nature of the relationship it creates, and the market or industry in which it operates, may be considered:

> [31] I agree that factors such as the purpose of the contract, the nature of the relationship it creates, and the market or industry in which it operates should be considered when interpreting a standard form contract. However, those considerations are generally not "inherently fact specific": *Sattva*, at para. 55. Rather, they will usually be the same for everyone who may be a party to a particular standard form contract. This underscores the need for standard form contracts to be interpreted consistently, a point to which I will return below.

171 Applying these principles to the facts as found by the Tribunal, there is nothing in the evidence that would suggest that TREB considered that the consents were inadequate or that TREB drew a distinction between the means of communication of information. To the contrary, TREB's conduct, as well as the testimony of its CEO, are only consistent with the conclusion that it considered the consents were sufficiently specific to be compliant with *PIPEDA* in the electronic distribution of the disputed data on a VOW, and that it drew no distinction between the means of distribution.

172 We note as well that TREB's position that *PIPEDA* mandates the VOW Policy is inconsistent with some of its own evidence. For example, TREB refused a request by a seller to remove the seller's MLS listing information, noting that its policy respected *PIPEDA* requirements (TR at para. 400).

173 The Tribunal also noted that TREB sought legal advice with respect to whether the consents were adequate to address the privacy issues related to the posting of photographs of the interior of homes, and, consequentially changed the consent to provide express authorization with respect to images. There was no evidence that similar steps were contemplated or taken with respect to the sold or pending sold information. Similarly, TREB sought legal advice with respect to the provision of sold data

to members. That advice noted that "a strong argument can be made that the words 'conduct comparative market analyses'" in the consents authorised disclosure of selling price information to prospective clients.

174 Finally, the Tribunal's view on the scope of consents is consistent with the direction of the Supreme Court of Canada in *Royal Bank of Canada v. Trang*, 2016 SCC 50 (S.C.C.) at paras. 36 - 42, [2016] 2 S.C.R. 412 (S.C.C.). There the Court held that a mortgage balance was less sensitive information because the principal, the rate of interest, and due dates were all publicly available under provincial land registry legislation. In this case, the selling price of every home in Ontario is publicly available under the same legislation. When the consents are considered in light of the nature of the privacy interests involved, the Tribunal's conclusion that they were sufficient takes on added strength.

175 This ground of appeal therefore fails and we now turn to the last issue raised by the appeal.

D. Copyright in the MLS Database

176 TREB and CREA submit that the Tribunal erred in finding that TREB does not have copyright in the database. In our view this ground of appeal fails. In light of the determination that the VOW Policy was anti-competitive, subsection 79(5) of the Competition Act precludes reliance on copyright as a defence to an anti-competitive act. This is sufficient to dispose of the appeal in respect of copyright.

177 While not strictly necessary to do so, we will address CREA's contention that the Tribunal applied the incorrect legal test to determine whether copyright exists. On this point we agree. It is, however, an error of no consequence. The same result is reached on the application of the correct law.

178 We turn to the Subsection 79(5) issue. Subsection 79(5) of the Competition Act provides:

> **Exception**
>
> **79** (5) For the purpose of this section, an act engaged in pursuant only to the exercise of any right or enjoyment of any interest derived under the *Copyright Act*, *Industrial Design Act*, *Integrated Circuit Topography Act*, *Patent Act*, *Trade-marks Act* or any other Act of Parliament pertaining to intellectual or industrial property is not an anti-competitive act.
>
> **Exception**
>
> **79** (5) Pour l'application du présent article, un agissement résultant du seul fait de l'exercice de quelque droit ou de la jouissance de quelque intérêt découlant de la *Loi sur les brevets*, de la *Loi sur les dessins industriels*, de la *Loi sur le droit d'auteur*, de la *Loi sur les marques de commerce*, de la *Loi sur les topographies de circuits intégrés* ou de toute autre loi fédérale relative à la propriété intellectuelle ou industrielle ne constitue pas un agissement anti-concurrentiel.

179 Subsection 79(5) seeks to protect the rights granted by Parliament to patent and copyright holders and, at the same time, ensure that the monopoly and exclusivity rights created are not exercised in an anti-competitive manner. The language of subsection 79(5) is unequivocal. It does not state, as is contended, that any assertion of an intellectual property right shields what would otherwise be an anti-competitive act.

180 Parliament clearly signaled, through the use of the word "only", to insulate intellectual property rights from allegations of anti-competitive conduct in circumstances where the right granted by Parliament, in this case, copyright, is the sole purpose of exercise or use. Put otherwise, anti-competitive behaviour cannot shelter behind a claim of copyright unless the use or protection of the copyright is the sole justification for the practice.

181 TREB attached conditions to the use of its claimed copyright rights in the disputed data. For the reasons given earlier, we see no error in the Tribunal's findings as to the anti-competitive purpose or effect of the VOW Policy. The Tribunal found that the purpose and effect of those conditions was to insulate members from new entrants and new forms of competition. The purpose, therefore, of any asserted copyright was not "only" to exercise a copyright interest.

182 While this is sufficient to dispose of this ground of appeal, as noted earlier, we will, for the sake of completeness, address the second alleged error in the Tribunal's analysis of copyright.

183 Copyright is a creature of statute. The *Copyright Act* provides that copyright exists for "every original literary, dramatic, musical and artistic work" created by Canadians (section 5). This phrase is defined at section 2 to include compilations, which is in turn defined to include works "resulting from the selection or arrangement of data". The classification of the database as a compilation is not contested on appeal.

184 The meaning of the word "original" in section 5 of the Copyright Act was considered by the Supreme Court in *CCH Canadian Ltd. v. Law Society of Upper Canada*, 2004 SCC 13, [2004] 1 S.C.R. 339 (S.C.C.) [*CCH*]:

> [16] ... For a work to be "original" within the meaning of the Copyright Act, it must be more than a mere copy of another work. At the same time, it need not be creative, in the sense of being novel or unique. What is required to attract copyright protection in the expression of an idea is an exercise of skill and judgment. By skill, I mean the use of one's knowledge, developed aptitude or practised ability in producing the work. By judgment, I mean the use of one's capacity for discernment or ability to form an opinion or evaluation by comparing different possible options in producing the work. This exercise of skill and judgment will necessarily involve intellectual effort. The exercise of skill and judgment required to produce the work must not be so trivial that it could be characterized as a purely mechanical exercise. For example, any skill and judgment that might be involved in simply changing the font of a work to produce "another" work would be too trivial to merit copyright protection as an "original" work.

185 The point of demarcation between a work of sufficient skill and judgment to warrant a finding of originality and something less than that - a mere mechanical exercise - is not always self-evident. This is particularly so in the case of compilations. It is, however, within the parameters of the legal test, a highly contextual and factual determination.

186 This is not a new observation. In *Édutile Inc. v. Automobile Protection Assn. (APA)*, [2000] 4 F.C. 195, 6 C.P.R. (4th) 211 (Fed. C.A.) the Court acknowledged that "[i]t is not easy in compilation situations to draw a line between what signifies a minimal degree of skill, judgment and labour and what indicates no creative element" (at para. 13). Although decided before *CCH*, the observation remains apposite.

187 There is, however, guidance in the case law as to the criteria relevant to the determination of whether the threshold of originality is met. In *Red Label Vacations Inc. v. 411 Travel Buys Ltd.*, 2015 FC 18, 473 F.T.R. 38 (F.C.), Manson J. noted that "when an idea can be expressed in only a limited number of ways, then its expression is not protected as the threshold of originality is not met" (at para. 98, citing *Delrina Corp. v. Triolet Systems Inc.* (2002), 58 O.R. (3d) 339 (Ont. C.A.) at paras. 48-52, (2002), 17 C.P.R. (4th) 289 (Ont. C.A.), leave to appeal to S.C.C. refused, 29190 (28 November, 2002) [2002 CarswellOnt 4080(S.C.C.)]).

188 In *Tele-Direct* the Court found a compilation not to be original in part because it was done in accordance with "commonplace standards of selection in the industry" (paras. 6 - 7). Although *Tele-Direct* predates *CCH*, the proposition that industry standards may be relevant to the originality analysis is a legitimate, residual consideration (see e.g. *Harmony Consulting Ltd. v. G.A. Foss Transport Ltd.*, 2011 FC 340 (F.C.) at paras. 34, 39, 65, 77, 182-188, (2011), 92 C.P.R. (4th) 6 (F.C.), aff'd 2012 FCA 226 (F.C.A.) at paras. 37-38, (2012), 107 C.P.R. (4th) 1 (F.C.A.) (*Harmony* FCA); *Geophysical Service Inc. v. Encana Corp.*, 2016 ABQB 230 (Alta. Q.B.) at para. 105, 201638 Alta. L.R. (6th) 48 (*Geophysical*)).

189 Applying the guidance of the Supreme Court in *CCH*, it is important to view adherence to industry standards as, at best, one factor to be considered amongst many. In. *Geophysical*, Eidsvik J. explained there is no steadfast rule that "there is no entitlement to copyright protection ... where the selection or arrangement is directed by accepted and common industry practices" (at paras. 100-101):

> ... these cases [that considered "common industry practices"] do not stand for such steadfast rules or copyright criteria. Certainly, these considerations were part of the analysis in those cases in deciding whether the production was an original

> work, but they are not the test. The judge in each case made a factual determination about whether sufficient skill and judgment was brought to the work to merit the "original" finding.

190 However, if observing industry standards amounts merely to "mechanical amendments", originality will not be found (*Harmony* FCA at para. 37).

191 In *Distrimedic Inc. v. Dispill Inc.*, 2013 FC 1043, 440 F.T.R. 209 (Eng.) (F.C.), de Montigny J. (as he then was) wrote that "when the content and layout of a form is largely dictated by utility and/or legislative requirements, it is not to be considered original" (at para. 324). He continued and observed that compilations

> will not be considered to have a sufficient degree of originality when the selection of the elements entering into the work are dictated by function and/or law, and where their arrangement into a tangible form of expression is not original. Only the visual aspect of the work is susceptible to copyright protection, if original (at para. 325).

192 In this context, TREB and CREA argue that the Tribunal wrongly required proof of creativity and went beyond the appropriate test for originality. After reviewing the MLS database, the Tribunal noted the "absence of a creative element" (TR at para. 732). Further, while the Tribunal cited *CCH* for the correct originality test in paragraph 733, it then relied on *Tele-Direct* to invoke and apply the element of creativity which, post-*CCH*, is not the correct test (*CCH* at para. 25).

193 We agree with the appellants on this point. However, in view of the Tribunal's findings of fact, applying the correct test, we reach the same result.

194 The Tribunal considered a number of criteria relevant to the determination of originality (paragraphs 737 - 738 and 740 - 745). Those included the process of data entry and its "almost instantaneous" appearance in the database. It found that "TREB's specific compilation of data from real estate listings amounts to a mechanical exercise" (TR at para. 740). We find, on these facts, that the originality threshold was not met.

195 In addition, we do not find persuasive the evidence that TREB has put forward relating to the use of the database. How a "work" is used casts little light on the question of originality. In addition, we agree with the Tribunal's finding that while "TREB's contracts with third parties refer to its copyright, but that does not amount to proving the degree of skill, judgment or labour needed to show originality and to satisfy the copyright requirements" (TR at para. 737).

196 We would therefore dismiss this ground of appeal.

VI. Conclusion

197 For the reasons above, we would dismiss the appeal with costs.

***D. G. Near J.A.*:**

I agree.

Appeal dismissed.

1992 CarswellNat 1630
Competition Tribunal

Canada (Director of Investigation & Research) v. Hillsdown Holdings (Canada) Ltd.

1992 CarswellNat 1630, [1992] C.C.T.D. No. 4, 41 C.P.R. (3d) 289

In the Matter of an application by the Director of Investigation and Research for orders pursuant to section 92 of the Competition Act, R.S.C., 1985, c. C-34, as amended

In the Matter of the acquisition by Hillsdown Holdings (Canada) Limited of 56% of the common shares of Canada Packers Inc.

Counsel: Randal T. Hughes, Peter J. Cavanagh, Rory R. Edge, Andrea Safer, for Applicant
Glenn F. Leslie, Neil R. Finkelstein, John J. Quinn, Jeffrey W. Galway, for Respondents

Decision of the Board:

I. Introduction

1 An application is brought by the Director of Investigation and Research ("Director") pursuant to subparagraph 92(1)(e)(ii) of the *Competition Act*, [1] to require the respondent Hillsdown Holdings (Canada) Limited ("Hillsdown") to divest itself of the business operated by the respondent Ontario Rendering Company Limited ("Orenco") or to divest such assets as the Tribunal may designate.

2 The application was triggered by Hillsdown's acquisition on July 4, 1990 of Canada Packers Inc. As a result of that acquisition Hillsdown obtained control of Orenco, a rendering company previously controlled by Canada Packers Inc. Hillsdown already controlled, through its wholly-owned subsidiary, Maple Leaf Mills Limited, a rendering business carried on by its rendering division, Rothsay. It is alleged that the common control of these two businesses is likely to result in a substantial lessening of competition in the non-captive red meat rendering market in southern Ontario.

3 Subsequent to the acquisition, Canada Packers Inc. and Maple Leaf Mills Limited were amalgamated and continued under the name Canada Packers Inc. This name was subsequently changed to Maple Leaf Foods Inc. Orenco is presently operated as a wholly-owned subsidiary of Nine-Five Investments Limited which is in turn a wholly-owned subsidiary of Maple Leaf Foods Inc.

4 Orenco operates a rendering facility in Dundas, Ontario. Rothsay operates a facility in Moorefield, Ontario. The two sites are within approximately 60 miles of each other. Orenco and Rothsay (Moorefield) are approximately 40 miles west and 90 miles northwest of Toronto respectively. Rothsay also operated until recently a rendering facility at a lakeshore location in downtown Toronto ("Rothsay (Toronto)"). This property was expropriated by the City of Toronto on July 26, 1988. The facility was finally closed on November 30, 1990 after Rothsay had moved its Toronto business to the Orenco plant in Dundas and elsewhere.

5 The interaction of the expropriation and the merger is a major complicating factor in this case. The respondents argue that significant efficiencies occurred as a result of the merger. The applicant contends that the moving of the Rothsay (Toronto) business to Orenco and elsewhere was not a rationalization arising as a result of the merger but a response to the expropriation notice which Rothsay (Toronto), at this time, was under. The transfer of the Rothsay (Toronto) business to Orenco occurred before the Director filed his application on February 15, 1991, seeking divestiture of the Orenco business. Thus, the interim order requiring that the two businesses be held separate and apart was obtained only after the integration of Rothsay (Toronto) and Orenco had been underway for some time. An additional important consideration in this case is the contracting nature of the red meat rendering business. The respondents say it is declining. The applicant says it is flat.

II. The Rendering Business

6 Rendering involves the processing of the left-over parts of livestock such as cattle, hogs and poultry which are either unfit or unsuitable for human consumption. The primary sources of supply for renderable materials are slaughterhouses, meat packing plants, poultry processing plants, abattoirs, grocery stores and butcher shops. The materials include: fresh packing house material (such as beef and pork heads, feet, offal, bones, fat and blood); material such as fat and bone discarded in preparing cuts for the retail consumer trade; and poultry material including offal and feathers. Renderable material is also obtained from deadstock, that is, from animals which have died or been killed outside the slaughtering process.[2] Such animals may have died as a result of disease or accident on the farm or in transit to the slaughterhouse.

7 The quantity of renderable material available depends on the number of cattle, hogs and poultry which are killed in the market area served by the renderer. This in turn will vary with consumer demand for beef, pork and poultry products. Slaughterhouses are required to have all renderable materials produced as a result of a day's kill removed before they can commence operation the following day. The value of the renderable material compared to the value of a cattle beast or hog is insignificant.[3] Thus, the supply of renderable material does not depend on the price paid by the renderer for the material. The supply of renderable material is essentially inelastic in response to the price paid for it.

8 Two types of renderers exist. One is the "integrated renderer" which processes material produced in the slaughtering, packing or processing activities of affiliates in a vertically integrated operation (captive material). The other is the "non-integrated renderer" which collects and processes renderable material obtained from suppliers who are not affiliated with the renderer (non-captive material). Integrated renderers may or may not also process renderable material that is non-captive. Both Orenco and Rothsay are integrated renderers that also process non-captive material.

9 Non-captive material is picked up in specially equipped trucks. The renderer either pays the supplier for the renderable material or charges the supplier for its collection. Whether the material is purchased or a charge is levied depends upon a number of factors including the type of renderable material involved, the volume being acquired, and transportation and processing costs. Deadstock is often picked up from the farm by deadstock collectors rather than by the renderer directly. The collectors remove the hide for tanning and debone the carcass to provide meat for pet food. The rest of the carcass is then delivered to the rendering facility or picked up at the deadstock plant by the renderer.

10 At the rendering plant the material which has been collected is graded, sorted and dumped into receiving pits. It is then processed through either a continuous or batch rendering cooker. This involves cooking the material in a pressure cooker and feeding it through a press. Blood can either be rendered with other red meat by-products or separately. Poultry feathers are processed in specialized equipment (a hydrolyzer) and are processed separately.

11 Two products are produced from the rendering process: tallow and protein meal. Tallow is used in the production of soaps, animal feeds, cosmetics, paints, rubbers and in a variety of other consumer and industrial products. It is produced in a variety of grades (for example, top white, bleachable fancy, special, yellow grease, pet food grade). The grade or quality of the tallow depends upon the type of renderable material from which it comes. Beef tallow is the highest quality, white in colour and has a comparatively high melting point (titre point). Tallow produced from poultry material is yellow in colour and has a lower melting point. Tallow produced from pork materials is of an intermediate quality.

12 The meal produced from the rendering process is used primarily in animal feed, fertilizers and pet food manufacturing. It also comes in a variety of grades depending upon its protein value. Blood meal is the highest quality. Meal rendered from poultry material is of a higher quality than meal rendered from red meat material.

13 Both the tallow and the meals compete with products such as coconut oil, palm oil, soya oil and soya meal which are sold on the commodities markets. The prices at which the products produced by the rendering process can be sold, then, are determined by the international market. A bulletin is published weekly in Ontario by a brokerage house called Eastern Packinghouse Brokers Ltd. It lists the current prices for at least some of the various grades of tallow and protein meal. The protein meal is listed as Unground Dried Rendered Tankage (U.D.R.T.) and its price varies with its protein content. The renderer thus is a "price-taker" with respect to these products.

III. Expropriation Then Merger

14 On July 26, 1988 an expropriation notice was issued by the City of Toronto transferring ownership of the land on which the Rothsay (Toronto) facility [4] was located to the Corporation of the City of Toronto. The City notified Rothsay that it required possession of this property by November 1, 1988.

15 Rothsay negotiated with the City for an extension of the time limit to enable it to find alternate premises from which to operate its business. Rothsay did not vacate the premises on November 1, 1988 and a lease with the City was eventually signed on December 19, 1989. That lease was stated to be for the period November 1, 1988 to June 30, 1990. A clause which would have required Rothsay to waive any right to apply, at the end of the lease period, for a postponement of the City's claim for possession was explicitly deleted from the lease.

16 Rothsay sought information concerning possible sites for the relocation of its Toronto business. The Hamilton harbour area was identified as the best. Rothsay commenced negotiations with the Hamilton Harbour Commission. Appropriate sites were identified and the Hamilton Harbour Commission was willing to accept Rothsay as a tenant. Unfortunately, the Harbour Commission was slow in acquiring the property required for the relocation. Rothsay also began exploring the possibility of expanding its Moorefield facility in order to accommodate the Toronto volumes.

17 By March 1990, Rothsay was still waiting for the Hamilton Harbour Commission to come forward with a proposal. As an alternative it decided to "fast track" expansion of its Moorefield facility. Any expansion of the Moorefield facility required approval from the provincial Ministry of the Environment which would entail at some point a public meeting to explain and discuss the proposal. Rothsay estimated that Ministry of the Environment approval might be obtained by December 31, 1990 and construction of the expanded facilities completed nine to twelve months thereafter. It therefore sought an extension of its lease with the City of Toronto until December 31, 1991. [5] The City granted an extension to August 31, 1990 with the indication that any further extension would be considered after discussion with its business consultants. A further extension to September 30, 1990 was granted because the City's business consultants were not available to consult during July and August.

18 On May 29, 1990 a representative of Rothsay met with Orenco for the purpose of seeing if that company could process the Rothsay (Toronto) volumes. It is clear that the possibility of a Hillsdown acquisition of Canada Packers Inc. was known. An attempt was made to characterize this meeting as having as its primary purpose the assessment of Pat Jones, who was general manager of Orenco, to see if he would fit into the Rothsay organization after a merger should such occur. That is not a credible characterization of the purpose of the meeting. The notes of Joseph F. Kosalle, Vice-President, Finance, Agribusiness Group of Maple Leaf Foods Inc., regarding the meeting make it clear that the primary purpose was to seek a solution for rendering the Rothsay (Toronto) volumes. The assessment of Mr. Jones as a potential employee was an unexpected afterthought.

19 The documentary evidence makes it clear that Orenco contemplated during the second half of its 1990 fiscal year upgrading certain components of its rendering equipment. The equipment in place was old and the company was operating at or above capacity. [6] Adequate time for preventive maintenance was not available and when breakdowns occurred the company

was vulnerable to losses arising therefrom. Part of the planned expansion involved installation of a hydrolyzer to enable Orenco to process poultry feathers.

20 Mr. Jones told Rothsay that Orenco was prepared to process the Rothsay (Toronto) volumes "with or without a merger". As of May 29, 1990, Orenco estimated that it would take six months for it to put certain equipment in place so that it could render the additional red meat material and if some of Rothsay's Toronto equipment was used for this purpose, the time frame would be even shorter. Thus, should Rothsay have been required by the City to leave the Toronto harbour area before either a new facility was built in Hamilton or Moorefield expanded, an available option was to have Orenco process the Toronto volumes for the interim period. It is clear that tolling agreements between renderers are not uncommon in the industry.

21 In June 1990, Rothsay submitted reports concerning environmental concerns (water pollution and odour control) to the Ministry of the Environment regarding the proposed expansion of Moorefield. Ministry of the Environment concept approval for the expansion and an expression of support with respect thereto were eventually communicated to Rothsay sometime in or prior to November 1990. The public hearing necessary before final approval could be given was never held since sometime before November 30, 1990, Rothsay had moved a significant portion of its Toronto volumes to Orenco and relinquished what was by that time its month-by-month lease to the City.

22 A reorganization of the collection and processing of renderable material took place after the merger and the relinquishment of the Toronto premises. This resulted in renderable materials east of Oshawa, which had previously been collected by both Orenco and Rothsay (Toronto), being collected by Rothsay's rendering facility near Montreal, Laurenco, for processing at that plant. Prior to the merger, Rothsay (Laurenco) had been losing money due to low volumes. [7] Oshawa is approximately 270 miles from Montreal. Some materials which had previously been rendered at Rothsay (Moorefield) were sent to Orenco. Rothsay (Moorefield) was able then to process one-third of the remaining Rothsay (Toronto) volumes and Orenco processed the other two-thirds.

IV. Market Definition

23 In order to determine the likely effects of any merger or acquisition it is first necessary to determine the boundaries of the *relevant* market. A *relevant* market is that product or service with respect to which after a merger there is likely to be a substantial lessening of competition. Once the *relevant* market is defined, an assessment can be made as to the likely effect of the merger or acquisition on that market. Market boundaries, however, are not static. They expand and contract in response to price. One can conceptually think of a series of concentric areas whereby as the price rises the radii lengthen. The very definition of the market boundaries therefore carries with it an assessment as to whether the merged firm has or is likely to have market power. While the various elements relevant in considering the effect of a merger, first market boundaries and then whether a substantial lessening of competition is likely to occur, will be discussed in a linear fashion, the non-linear aspect of the analysis should be kept in mind. [8]

24 It is useful to refer to the explanation of the concept of a *relevant* market set out in the monograph *Horizontal Mergers: Law and Policy*:

> For purposes of assessing the likelihood that a merger will create or enhance single-firm market power, market definition has been characterized as "an analytical construct enabling us to compensate for our inability to measure market power directly." Areeda and Turner explain:
>
> > Market definition becomes crucial only when there are no other discoverable facts establishing the existence and degree of market power more directly and with tolerable accuracy. One would never need to define the market if he could accurately establish the firm's demand and cost curves - the quantities that could be sold at various prices, and the costs of producing those quantities. That information would directly establish both the presence of market power and the magnitude of potential monopoly profits. The firm's demand curve would reflect the availability of any substitutes, without further need for identifying them or their closeness.

> Because direct measurement of a firm's market power is extraordinarily difficult, a two-step indirect measurement process has evolved: first define the relevant market, and then infer power within the market through the use of proxies such as market shares and other factors. [9] (footnotes omitted)

25 The identification of the relevant market in which it is alleged a substantial lessening of competition is likely to occur is normally assessed from two perspectives: the product or products with respect to which a merged firm acting alone or in concert with others is likely to be able to exercise market power and the geographic area within which such power is likely to be exercised. [10] The term "product" is used in the legal and economic literature relevant to competition law as meaning the output (product or service) which the producer (seller) provides to the consumer (purchaser). Thus, the use of that term should not be taken as excluding services. [11]

A. Product Dimension (Product Market)

26 Conceptually, the product in issue in this case can be thought of as the renderable material obtained by the renderers from the suppliers of that material or it can be thought of as rendering services provided by the renderers to slaughterhouses, meat processing plants, grocery stores, etc. If the first characterization is used then the analysis for competition purposes focuses on the possible monopsony power of the renderers as buyers of the raw materials. If the second characterization is used then the analysis focuses on the possible market power of the renderers as sellers of the rendering service. No significant difference results from the two characterizations. The Tribunal accepts that the more convenient way of describing the product is the latter, that is, as the sale of rendering services. This is more convenient because it avoids the conceptual awkwardness which arises from the fact that sometimes the renderer pays for the renderable materials and sometimes charges for its collection.

27 In determining the product dimensions of the market, the first step is to identify the product or products with respect to which, prior to the merger, the two firms were competitors. The second step is to ask whether there are any close substitutes to that product to which consumers could easily switch if prices were raised (an indication of demand elasticity). If two products appear to be close substitutes when both are sold at marginal cost, then the two should be included in the same product market.

28 At the time of the acquisition, Rothsay (Moorefield) rendered red meat by-products, blood, deadstock, poultry offal and feathers. Orenco rendered red meat by-products, blood, deadstock and grease but not poultry offal or feathers. Rothsay (Toronto) rendered the same kind of materials as Orenco.

29 The grease rendered by both Rothsay (Toronto) and Orenco is in general "restaurant grease" which has been used for deep frying certain foods. Although both Rothsay (Toronto) and Orenco processed grease it is processed differently from other renderable materials, usually in different equipment, and it is collected independently of the other renderable materials. Rothsay (Moorefield) has not and does not render grease. Little evidence was led with respect to grease or as to how the merger affected competition in this segment of the industry. Thus, it has not been established that it should be considered as part of the relevant product market.

30 The Director has not suggested that poultry offal and feathers should be included in the relevant market. Orenco did not process such material before the merger. It lacked the equipment required to process poultry feathers. Special equipment is not required to render poultry offal. While there is some documentation which indicates that prior to the merger Orenco was planning to acquire equipment to enable it to process poultry feathers, it has not been suggested by the Director that the merger would lead to any substantial lessening of competition with respect to rendering services for producers of that material.

31 Prior to the acquisition approximately 30% of the material rendered by Orenco came from affiliated Canada Packers Inc. operations. The remaining 70% was acquired from non-captive sources. Approximately 14% of Rothsay's material came from affiliated Maple Leaf Mills Limited operations. The remaining 86% was acquired from non-captive sources. There is no dispute that captive materials are not included in the product dimension of the relevant market.

32 It is clear that there are few "product substitutes", that is, alternatives available to the consumer of rendering services (demand elasticity is low). Some deadstock presumably might be buried but this is not a viable option for a significant amount of renderable material. [12] Landfill-site regulations often prohibit the disposal of renderable material at those locations and, as noted above, slaughterhouses require that renderable materials be removed on a daily basis.

33 While conceptually it would seem that supply elasticity with respect to the product dimensions of the market should also be included in defining the market, these factors are often considered when assessing whether the merger is likely to lessen competition substantially in the relevant market. Supply elasticity would be high and market power therefore would not likely be significant if other firms could immediately respond to a price rise by flooding the market with the relevant product either because they have excess capacity or because they can easily switch their production facilities to produce the relevant product. Those factors will be considered when the likelihood of substantial lessening of competition is assessed. [13]

34 The Tribunal accepts the Director's contention that the product dimension of the relevant market is the provision of rendering services for non-captive red meat renderable material which includes deadstock materials and blood.

B. Geographic Dimension (Geographic Market)

35 Determining the geographic dimensions of the relevant market is similar to determining the product dimensions; one asks whether there is a geographic area within which the merged firm either alone or in concert with others is likely to have market power. This requires identifying some area such that the merged firm has an advantage based on geographic considerations over firms not inside that area. Frequently this advantage results from transportation costs but often other factors may also be relevant, such as differing labour costs in the two areas or governmental restrictions and regulations. [14]

36 An assessment of geographic boundaries requires an assessment as to whether a significant number of consumers within the alleged area are willing to turn to suppliers outside of that area to obtain, in this case, rendering services and whether there are suppliers outside the proposed boundary who could supply consumers within that area with rendering services, as effective competitors to the merged firm (indicators of demand elasticity and supply elasticity respectively). It is clear that such switching or "substitutability" is more likely to occur on the edges of the defined geographic boundaries as the distance between the consumer of rendering services and the merged plant increases, provided there is another supplier of rendering services in the vicinity. Clearly, geographic boundaries of adjacent markets overlap and they are neither static nor precise. As in the case of the product market dimensions, a useful starting point for their definition is the existing pattern or patterns of competition which existed pre-merger.

37 The geographic dimensions of the market in issue in this case will be discussed by reference to three factors: distance, borders and consumer preference.

(1) Distance

38 The Director adopted submissions which were made to him on behalf of the respondents as accurately describing the distances applicable in defining the geographic dimensions of the relevant market:

> A good indicator of the relevant geographic market of a renderer is its current collection area. In general, the distance a renderer will travel to collect raw material is directly related to the value of the material available. There are three factors that affect the value of raw material and, thus, delineate the geographic area from which a renderer can effectively collect raw material: the type of raw material available, the perishable nature of the raw material and the cost of collection.
>
> . . .
>
> The interplay of these factors sets the distance from a rendering plant that a renderer will travel to get raw material. The need for product freshness sets a maximum collection distance. In general, waste is not [to] be shipped more than a few

hundred miles because of the need for freshness. Because of transportation costs, a renderer will only travel that far for a large supply of high quality materials. For small amounts, the maximum distance might only be 75 to 100 miles.

. . .

The only possible overlap in the collecting areas between Rothsay Rendering and CP is in Southern Ontario based on a maximum collection distance of 300 miles from a plant. (In fact, the maximum collection distance may be much shorter for different types of by-products.) Consequently, in this submission we will only consider the effects of the merger in Ontario.

In Southern Ontario, Rothsay has two plants; one in Toronto and a larger one in Moorefield which is north of Kitchener-Waterloo. The Orenco plant is located in Dundas which is just west of Hamilton. The major collection area for both Rothsay and Orenco for most by-products is bounded by Windsor to the west, Kingston to the east, Owen Sound to the north and Northern New York State to the south. Orenco has a collection company called Liberty Reductions which collects raw material in the Buffalo area and delivers it to Orenco.

In the case of Orenco, from Dundas, Ontario it is about 193 miles to Windsor, 169 miles to Owen Sound and 204 miles to Kingston, so a 200 mile limit is a fairly accurate measure of the realistic collection distance of a Southern Ontario renderer. As for the Southern limit of Orenco's area, it is about 155 miles to Rochester, New York. Orenco will, however, go as far as Sault Ste Marie for a pick-up of high yielding waste (a distance of nearly 400 miles), but a service call of that distance is unusual.

Thus, we submit the relevant geographic market is the area within a 200-mile radius of the Rothsay and Orenco facilities. This area includes at least Southern Ontario, Northern New York State (the sector bounded by Rochester to the east and Jameston to the south) and South-Eastern Michigan (Port Huron, Detroit and their environs). [15]

. . .

Because of the low value-to-weight ratio of raw material for rendering, and its perishability, the cost of collection is relatively high in comparison with the value of the end product. A renderer will only pick up raw material where it is economical to do so. Whether it is economical in a given case depends on several factors, namely the type of material available, the amount of material available, and the distance to be travelled. While no fixed maximum economical distance can be established, for the reasons set out in our Submission it is appropriate to consider as a bench-mark a range of 200 miles (about 320 kilometres). [16]

39 Despite these initial submissions, the respondents called evidence to demonstrate that some renderers can and do travel over 200 miles to collect renderable material. Reference was made to the fact that Baker Commodities Inc. ("Baker") has a plant in Lowell, Massachusetts [17] and collects red meat material at a distance of 500 miles from that location. Most of the plant's tonnage, however, is collected from within 350 miles of the plant. Transfer depots are used in collecting the materials. Transfer depots are large collection containers into which material collected locally is dumped so that only full trailer loads travel the long distances. Transportation costs are a significant factor in this industry. [18]

40 Lomex Inc. ("Lomex"), also referred to as "Couture", has begun very recently to collect red meat material in Toronto for its plant in Montreal over 300 miles away. It is allegedly trying to establish a transfer depot outside Toronto but has not yet done so. Evidence was also given that Phil's Recycling, [19] a low overhead (mainly deadstock) collector with a non-unionized work force has transported materials for a distance of up to 600 miles and on a regular basis takes material 400 miles from Toronto to Montreal at a profit.

41 The Tribunal is reluctant to place much emphasis on the activity of Baker out of Lowell, Massachusetts, since it relates to another market area. The geographic dimensions of the relevant market have to be determined by reference to the economic factors existing in the relevant area. Thus, the evidence of Baker operating out of Massachusetts and into Quebec is of limited

usefulness. Counsel states that the evidence is only being put forward to demonstrate that it is physically possible in some circumstances to collect from such distances and the Tribunal accepts it for that purpose.

42 Insofar as Lomex is concerned, it is collecting two full truck loads from two fairly large slaughtering operations and this activity is of very recent origin.[20] The Tribunal heard evidence that in the opinion of one industry participant Lomex was trying to "buy" its way into the Toronto market. Lomex's activity is more consistent with a market entry *initiative*[21] rather than being evidence of a viable competitor which is established in the relevant market.

43 Phil's Recycling which operates out of Peterborough, Ontario is a unique and somewhat specialized operation. The profitability of its collection and delivery operation is aided by carrying "haul backs" (e.g., firewood from Quebec for the Toronto market, white stone from Perth). More importantly, Phil's Recycling is not a renderer. It is not Phil's Recycling which must be assessed as an effective competitor to the merged firm but the renderers to whom it sells. Phil's Recycling sells to renderers located in southern Ontario as well as to renderers located in Quebec. It collects about 100 to 150 metric tonnes a week and sells about one-half of that to Quebec renderers. The activity of Phil's Recycling is peripheral in nature.

44 It is clear that there has not been and there is not now much vigorous and effective competition to Rothsay (Moorefield) and Orenco from renderers located more than 200 miles away. Particularly significant is the fact that when Rothsay (Toronto) was faced with expropriation it did not choose to send its Toronto volumes (i.e., those collected west of Oshawa) to Rothsay (Laurenco) near Montreal for rendering despite the fact that that plant had and continues to have low volumes.

(2) Borders

45 In addition to a 200 mile distance limitation, the Director argues that both provincial and international borders create boundaries to the geographic dimensions of the relevant market. This assertion will be considered from two perspectives: United States restrictions respecting the importation of renderable material and Canadian federal and provincial legislation respecting the handling and disposition of the renderable material.

46 Insofar as United States restrictions are concerned, the practice of the United States Department of Agriculture ("USDA") with regard to the importation of renderable material from Canada is allegedly set out in a letter from Robert Melland to counsel for the respondents. That letter states:

> Animal products originating from a Canadian-approved slaughterhouse that are accompanied by a sanitary certificate of origin issued by the Canadian Government are allowed unrestricted entry into the United States.
>
> Animal products that do not originate from a Canadian-approved slaughterhouse and for which the exporter is unable to obtain a Government certificate attesting to the origin of the materials must be consigned directly from the port of entry under USDA seal to an approved rendering plant in the United States.
>
> There are several USDA-approved rendering facilities authorized to receive animal products of Canadian origin.[22]

47 Counsel for the Director objected to this evidence being relied upon because it had not been adduced through a witness and therefore could not be subjected to cross-examination.[23] The Tribunal takes cognizance of that defect.

48 Canadian federal legislation is found in the *Meat Inspection Act*,[24] and in the regulations promulgated pursuant to that Act. Sections 7 and 8 of the Act provide:

> 7. <u>No person shall export a meat product [includes the carcass of an animal or a product or by-product of a carcass] out of Canada unless</u>
>
> > (a) it was prepared or stored in <u>a registered establishment</u> that was <u>operated in accordance with this Act</u> and the regulations;

(b) that person provides an inspector with evidence satisfactory to the Minister that the meat product meets the requirements of the country to which it is being exported; and

(c) that person obtains a certificate from an inspector authorizing the export of that meat product.

8. No person shall send or convey a meat product from one province to another unless

(a) it was prepared or stored in a registered establishment that was operated in accordance with this Act and the regulations; and ...

(underlining added) [25]

49 The *Meat Inspection Regulations, 1990*, however, provide:

3.(1) Sections 7 to 9 of the Act do not apply in respect of

. . .

(k) a meat product that has not been condemned and is destined for inedible rendering.

. . .

(3) Section 8 of the Act does not apply in respect of the following meat products:

. . .

(c) a meat product that has been condemned and is destined for inedible rendering in accordance with paragraph 54(1)(b); [26]

50 Thus, there is no prohibition arising from federal legislation which prevents renderable material being taken across either provincial or international borders unless it is condemned material. Also, condemned material is not prohibited from being moved interprovincially. However, since section 7 of the *Meat Inspection Act* applies to such material, it cannot be exported unless it originates in a federally licensed slaughterhouse or meat processing plant (a registered establishment). [27]

51 Insofar as provincially licensed slaughterhouses and meat processors are concerned, s. 108 of *Regulation 607*, promulgated pursuant to the *Meat Inspection Act (Ontario)* [28] provides:

108. Where this Regulation prescribes that,

(a) an animal be condemned and killed;

(b) a carcass or a part or organ thereof be condemned; or

(c) inedible offal and meat that is not food be disposed of,

an inspector shall direct that such animal, carcass, part, organ, inedible offal or meat that is not food be disposed of by,

(d) delivery to a rendering plant,

(i) licensed under the *Dead Animal Disposal Act*, or

(ii) approved under the *Meat Inspection Act* (Canada),

in a vehicle constructed and equipped in accordance with the *Dead Animal Disposal Act*;

(e) burying with a covering of at least sixty centimetres of earth;

(f) incineration by a method approved by the Director [Director of Veterinary Service Branch of the Ministry of Agriculture and Food;

(g) rendering in a plant that is equipped with high temperature rendering facilities approved by the Director; or

(h) any other method approved by the Director. [29]

52 While subparagraph 108(d)(ii) seems to contemplate the licensing of renderers under the federal *Meat Inspection Act*, in fact no such licensing is done and all Ontario renderers are provincially licensed. Thus, under Ontario law provincially licensed slaughterhouses must deliver condemned materials, inedible offal and meat that is not food to provincially licensed renderers. There is no evidence suggesting that paragraph 108(g) or 108(h) has been used to broaden this restriction.

53 Provincial legislation also imposes restrictions on the disposition of deadstock by collectors of that material. Section 4 of the Ontario *Dead Animal Disposal Act* [30] requires that dead animals (horses, goats, sheep, swine, cattle) be collected by licensed collectors and provides:

> (2) No collector shall give, sell or deliver a dead animal to any person other than the holder of a licence as an operator of a receiving plant or a rendering plant under this Act.

And section 5 requires:

5.(1) No person shall engage in the business of,

(a) a broker;

(b) a collector;

(c) an operator of a receiving plant; or

(d) an operator of a rendering plant,

without a licence therefor from the Director.

(2) No person shall collect a dead animal unless he is the holder of a licence as a collector.

Thus, Ontario law prevents deadstock being delivered to a renderer who is outside Ontario (i.e., who is not provincially licensed).

54 Federally inspected slaughterhouses account for 80% of the cattle slaughtered in the southern Ontario region and for 90% of the hogs slaughtered. [31] Deadstock and condemned material comprise from 5 to 10% of the total red meat renderable materials available for rendering.

55 There is evidence that the regulatory constraints described above do not impose a significant impediment to the movement of most renderable materials across the Canada-United States border. In 1975-76, Rothsay (Moorefield) had a contract with a pork slaughterer in Detroit whereby renderable material was brought across the border for rendering. Mr. Kosalle gave evidence that the handling of deadstock and condemned material caused no problems. These were simply put in a separate container by the slaughterer and picked up under a side agreement which Rothsay had with a Detroit renderer. There is no reason to suppose that a similar arrangement would not work with respect to material flowing into the United States from Canada. The Detroit contract was lost when a renderer closer to the slaughterer obtained the account. Rothsay (Moorefield) had become uncompetitive when the exchange rate changed.

56 Orenco operated a collection service called Liberty Reduction Inc. in the Buffalo area for some time. The material collected was brought to Orenco in Dundas for rendering. This operation was eventually sold to Darling & Company, Ltd ("Darling") on January 7, 1991. The volumes were not high enough for it to make economic sense for Orenco to continue that operation. It was not discontinued as a result of difficulties arising because of regulatory constraints related to crossing the border. Darling closed its Buffalo plant a few months later because of low volumes.

57 When Darling had labour difficulties at its Toronto plant sometime during 1988-89, materials were taken to Darling's Detroit and Buffalo plants for rendering. Also, there is evidence that some material (grease) is now being taken from Sault Ste. Marie to Detroit. While it is clear that Darling has consistently brought materials from the London and Windsor areas to its Toronto plant rather than taking it to the Detroit facility, this is not necessarily evidence that difficulty exists in taking materials across the border.[32] That behaviour can result, for example, from factors related to the capacity utilization of the various Darling plants.

58 Baker has been importing renderable material from Quebec to the United States since June 1991 and is currently importing 227 metric tons of material a week including packinghouse material, bone and fat, and deadstock. (Quebec legislation respecting deadstock may be different from that in Ontario.) Baker has experienced delays at the border on two occasions. One problem was resolved when the letter referred to above[33] was given to border officials and they verified its contents with authorities in Washington. The other problem was clerical in nature and was quickly resolved.

59 It is clear that there has been some but not a great deal of cross-border transportation of renderable materials. In the Toronto-Hamilton area this was probably largely due to the fact that until recently Darling had a rendering plant in Buffalo, New York. Thus, the lack of cross-border activity can be attributed to market configuration rather than to regulatory or other practical constraints arising from the existence of the Canada-United States border.

(3) Consumer Preferences

60 It is suggested that consumers are unwilling to turn to a supplier whose rendering plant is more than 200-250 miles distant or whose rendering plant is located in the United States. Since renderable materials must be removed on a daily basis, there is a need for reliable service. The Tribunal is not convinced that the alleged consumer preferences play much of a role in the market definition. To the extent that such preferences exist the Tribunal considers them as resulting more from lack of supplier recognition than from any innate reason related to distance or borders. In fact, Lomex has acquired two customers and it operates from a distance of over 250 miles away.

C. Conclusion

61 The purpose of determining the product and geographic dimensions of the relevant market is of course to allow for identification of the competitors to the merged firm and the calculation of the respective market shares of the market participants. It is important to emphasize, however, that market boundaries cannot and will not in many instances be precise. They can only be approximations. As long as market share statistics are not taken as the only indicators of the existence of market power, the exact location of those boundaries becomes less important. Restraints on a merged firm's (alleged) market power can come from both inside and outside the market as defined.

62 It is useful to refer to some comments set out in the text entitled *Competition Law* by Whish. While that text is directed to the difficulties in defining the product dimensions of a market, they equally apply to geographic dimensions:

> The idea of interchangeability [substitutability] is simple enough. In practice of course one finds that identification of the relevant product [geographic] market can give rise to great difficulty. The reason for this is that the concept of the relevant market is just that - a concept; it is a useful theoretical device which facilitates an understanding of the problem of monopoly, but it is not to be supposed that it is reflective of the real commercial world.[34]

And further:

> The difficulties associated with the relevant product [geographic] market issue can be overcome provided that definition of the market is not thought to be of fundamental significance: in particular it is vital that having identified the relevant market, competitive pressures which come from outside that market should still be considered. The mistake is to suppose that in the commercial world there is a whole series of independent, discrete relevant product [geographic] markets which exert no influence on one another. In fact in business there exists a complex web of interlocking markets and sub-markets which may have an influence on one another in a more or less tangential way. Once that has been recognized, the danger of defining the market too narrowly ceases to be a problem, because the identification of the market is seen to be only a staging post on the way to the really important question which is whether a firm is in a position to behave independently of its competitors. For this purpose it is relevant to consider not only the position of firms within the defined product [geographic] market but also the competitive pressure that can be exerted from those in other markets. ... If this approach is [not] adopted, then immense strain is imposed on the meaning of the relevant product [geographic] market, greater than the concept can realistically bear. [35]

63 In the present case, as has been noted, the product dimensions of the relevant market are easy to define: the provision of rendering services for non-captive red meat renderable material which includes deadstock materials and blood. The geographic dimensions, however, are more uncertain. This uncertainty arises because of the inherent ambiguity with respect to where market boundaries begin and end and, more importantly in this case, because of changes which have been occurring in the market since the merger. [36]

64 With respect to the geographic dimensions the Tribunal considers that transportation and other costs related to operating at a distance are such that a renderer located over 200-250 miles from Rothsay-Orenco should not be included in the relevant market. While it is clear that the Canada-United States border will result in some additional costs for renderers who engage in the cross-border collection of the material as a result of required paper work and possible delays at the border, the Tribunal is of the view that renderers located within the United States but close to the border could provide effective competition to the merged firm.

65 In the present case regardless of whether one defines the geographic market as the Ontario market (as the Director contends) or as the Ontario market plus parts of northern New York State and southeastern Michigan (as the respondents contend), the market is still highly concentrated. [37]

D. Identification of Competitors

66 The purpose of defining the relevant market is of course to facilitate identification of the merged firm's competitors and to assess the market share of the relevant market which each holds vis-à-vis the merged firm. A significant difficulty in identifying the merged firm's competitors in the present case arises because of the dramatic changes which have taken place and are taking place independent of the merger. It is relatively easy to identify Rothsay and Orenco's competitors at the time of the merger in July 1990. These were Darling (Toronto), F.W. Fearman Company Limited ("Fearman"), Banner Packing Limited ("Banner"), J.M. Schneider Inc. ("Schneider"), and Ray Bowering. In addition, it was anticipated that Central By-Products would soon become a competitor. [38]

67 As of the date of the merger, Darling had rendering plants in Buffalo, Toronto and Detroit. Darling is the largest independent renderer in North America and has thirty-four rendering plants throughout the United States and one in Canada. Darling has been experiencing financial difficulties. Darling closed its Buffalo plant some time during either the winter or spring of 1991. Darling's Toronto plant was situated on land leased from the Toronto Harbour Commission. On the most recent expiration of the lease (October 31, 1990) the Commission refused to renew. A court order for vacant possession by January 7, 1992 was obtained. Even without the cancellation of this lease, there was speculation that Darling intended to leave the harbour area because of the costs involved in meeting environmental requirements. [39] Whether that company will relocate in Canada is not clear. Thus, at present the only Darling plant whose existence can be relied upon to provide competition to the merged firm is in Detroit.

68 Fearman was a competitor prior to the merger but it was bought by Canada Packers Inc. (now Maple Leaf Foods Inc.) on February 18, 1991. That acquisition has not been challenged by the Director. Fearman is therefore no longer a competitor and must be treated as part of the Rothsay-Orenco group. Fearman was and is a pork slaughterer whose rendering operation was mainly devoted to processing captive materials although more recently some non-captive material is being processed.

69 Banner remains a competitor to the merged firm. It is a fairly small renderer located in downtown Toronto. Much of its finished product material (tallow and meal) goes into its own pet food operation. It was a vigorous competitor to Orenco, Rothsay (Toronto) and Darling (Toronto). At the same time, its costs of operation have risen as a result of amounts which must be spent to meet environmental concerns and revenue is dropping because of the depressed state of prices for the finished products (tallow and meal).[40] Prices charged by Banner to its customers for rendering services have accordingly been rising. Banner has indicated an interest in selling its Toronto rendering facility since it moved its pet food operation to Trenton, Ontario.[41]

70 Schneider is located in Kitchener, Ontario and it remains a competitor in the market. Its rendering facility until recently were used to process only captive material. As a result of the closure of its beef slaughtering operations in Ontario, capacity became available to render non-captive materials and it entered the non-captive red meat rendering market.

71 Ray Bowering, a deadstock collector located in Melbourne, Ontario, remains a competitor. He operates a small batch cooker and renders very small volumes.

72 Central By-Products is not yet in operation but the evidence indicates that it soon will be. It is being constructed by David T. Smith and James W. Murray. Messrs. Smith and Murray operate deadstock businesses. They decided in February 1990 to construct their own rendering facility near Hickson, Ontario, on land owned by Mr. Murray. He operates Oxford Deadstock Limited and presently uses Darling as a renderer. Mr. Smith operates a deadstock collecting and processing operation as well as a pet food business, Atwood Pet Food Supplies Ltd and presently uses Orenco as a renderer.

73 There is no evidence that Baker's plant in Rochester, New York has historically been a competitor of Rothsay and Orenco in southern Ontario. That plant, like Darling, is also part of a large multi-plant firm. It is the second largest renderer on the North American continent. The Baker (Rochester) plant is within geographical reach of the relevant market, being located 135 miles from Orenco's plant in Dundas. It is clear that both Baker (Rochester) and Darling (Detroit) would become increasingly competitive in the southern Ontario market served by the merged firm (insofar as geographical location is concerned) in proportion to any supra-competitive price rise which might be exacted. Since Baker (Rochester) has not historically been in the market and since it is not immediately adjacent to the border, it may be that it should be considered a potential entrant rather than a competitor in the market. Its relationship to the merged firm will be considered from both points of view.

74 Lomex commenced operating in the Toronto market in the summer of 1991[42] and, as has been noted, is taking two full truck loads from two of the larger Toronto area producers of renderable materials to Lomex's plant outside Montreal. The Tribunal has not classified Lomex as a competitor within the market but recognizes that as a potential entrant Lomex will provide some discipline on the merged firm's ability to raise prices.

V. Substantial Lessening of Competition

75 Market power in the economic sense is the ability to maintain prices above the competitive level for a considerable period of time without such action being unprofitable. In a competitive market prices will tend towards marginal cost. Market power can be viewed as the ability of a firm to deviate profitably from marginal cost pricing. In assessing the likely effects of a merger, one considers whether the merged firm will be able to exercise market power additional to that which could have been exercised had the merger not occurred. A merger will lessen competition if it enhances the ability of the merging parties to exercise "market power" by either preserving, adding to or creating the power to raise prices above competitive levels for a significant period of time. One considers the degree of any such likely increase and whether by reference to the particular facts of the case it should be characterized as substantial.

76 Whether an enhancement of market power exists as a result of a merger and whether it is substantial is determined by reference to a number of factors. Market share data can give a *prima facie* [43] indication as to whether such is the case.

A. Market Concentration

77 The market concentration in the relevant market can be measured by reference to a number of different indicia. What measure will be chosen will depend upon the nature of the industry in question and the data available. In this case two measures have been used: the amount of renderable material actually processed in the recent past by the firms (historical output) and the plant capacity of the competitors (productive capacity). With respect to firms which have not previously been active in the market but which as a result of changes are now considered to be competitors, only the second method of measurement can be used.

78 A market share measurement based on pre-merger volumes of renderable material processed in southern Ontario indicates that Orenco and Rothsay were each servicing approximately 30% of that non-captive red meat rendering market. Darling's Toronto plant was processing 13%. Banner was processing 12% and Fearman 2%. An extrapolation from those data indicates that after the merger the merged Rothsay-Orenco firm will hold approximately 62-63% of the southern Ontario market. The next largest firm, Darling, for the moment at least would hold approximately 12-13%. Banner would hold 11-12%. Schneider and Ray Bowering would continue to process small amounts of non-captive material.

79 While the increased market share concentration calculated on that basis can be seen at a glance, two tools which have been developed in the United States for measuring market concentration in a summary fashion were referred to in evidence: the four-firm concentration ratio [44] and the Herfindahl-Hirschman Index ("HHI"). The four-firm concentration ratio measures market concentration by adding together the market shares of the four largest firms in the market. If the post merger concentration is very high and the merged firm accounts for a significant proportion thereof, then the merger is one which if assessed solely by reference to market shares will be considered to lead to a substantial lessening of competition. The HHI is computed by adding together the squares of the market shares of all the firms in the market. [45] The HHI can theoretically range from near zero to 10,000 (100 × 100) for a monopoly. In the context of anti-trust enforcement in the United States, it is generally thought that if a market has an HHI over 1,800 it is highly concentrated. An HHI between 1,000 and 1,800 is of medium concentration and below 1,000 relatively unconcentrated. [46] If the increase in HHI as a result of the merger exceeds 100 and the post merger HHI for the market exceeds 1,800, according to the Director's expert, one should assume (at least on a *prima facie* basis) that the merger will substantially lessen competition. [47]

80 Thomas W. Ross, who gave expert evidence on behalf of the Director, noted that the pre-merger four-firm concentration ratio for the total red meat renderable materials (captive and non-captive) in southern Ontario was 86.8% measured by reference to the volume of renderable materials processed each week by the firms. [48] The post-merger four-firm concentration ratio for these materials is 90.4%. The pre-merger ratio for non-captive materials only was 90.4% and post-merger is 91.6%. [49] While the application of this method of measurement clearly demonstrates how highly concentrated the markets are, it tells little about the effects of the merger. It demonstrates the inadequacies of the four-firm concentration ratio as a measure of increased concentration [50] in a case such as the present where the changes resulting from the merger are primarily occurring among the top four firms.

81 David D. Smith, who also gave expert evidence on behalf of the Director, did an analysis applying the HHI to measure increased concentration and using as a measure of market share the volume of non-captive red meat renderable material being processed in July 1990 by Ontario renderers. This analysis led to a finding that the increase in the HHI as a result of the merger with respect to the rendering of red meat by-products and deadstock was 1,594 points to a total HHI for that market of 3,608. Insofar as non-captive material is concerned, it is estimated that the increase is 1,526 points to a market total of 3,791.

82 The second variable by reference to which the position of the various competitors was assessed is plant capacity. This allows some measurement to be made with respect to Baker (Rochester) and Darling (Detroit) as competitors even though they have not historically been such. The capacity of some of the plants is not greatly in dispute: Darling (Detroit) can process approximately 1,600 metric tonnes per week; Baker (Rochester) can process approximately 1,600 metric tonnes per week; Schneider can process approximately 800 metric tonnes per week; Banner can process approximately 510 metric tonnes per week; Central By-Products will be able to process approximately 363 metric tonnes and Ray Bowering has capacity for 23 metric tonnes; Fearman's capacity is approximately 450 metric tonnes per week, which should now be added to that of the merged firm. [51]

83 The capacity of the Orenco and Rothsay (Moorefield) plants are subject to more dispute. The respondents say Orenco's capacity is approximately 2,500 metric tonnes per week; the Director argues that it is approximately 2,900 metric tonnes. It is not necessary to consider in detail the dispute with respect to Orenco's capacity because the difference is small. However, the positions of the two parties vary greatly with respect to the capacity which should be attributed to Rothsay (Moorefield). The respondent argues that insofar as the equipment at that plant is presently used for rendering poultry materials, it should not be considered to be capacity available to render red meat. Rothsay (Moorefield) has two cookers; one is used full- time to render poultry materials and the other part-time for poultry offal and part-time for red meat. Approximately 200 metric tonnes per week of poultry offal is processed on the second cooker. This occupies approximately 17 to 18 hours per week with an additional seven hours required for cooking and cleaning the equipment when it is switched over.

84 The Tribunal accepts the position that capacity for present purposes should be assessed by reference to the equipment that is able to render red meat materials rather than to the purpose for which it is presently being used. The Tribunal understands from the evidence that this is the basis on which the capacities of the other plants, at least Baker (Rochester) and Darling (Detroit), were assessed. The extent to which Rothsay (Moorefield) would actually switch from processing poultry materials to processing red meat is more appropriately considered in assessing the significance of market share and plant capacity estimates, particularly in the context of assessing the import of excess capacity. Accordingly, for present purposes the Rothsay (Moorefield) red meat rendering capacity is approximately 3,200 metric tonnes per week.

85 On this basis the merged firm including Fearman would hold approximately 56% of the total productive capacity of the market if both Baker (Rochester) and Darling (Detroit) are considered to be competitors and approximately 66% if only the latter is included. Dr. Smith did a number of HHI calculations based on plant capacity. These were based on a number of different possible scenarios with respect to who was in and who was out of the market. While such calculations could be done by reference to the capacities which the Tribunal has accepted, it is not obvious that they add much in the present case.

86 The various measurements indicate that the merger increases market share considerably in an already highly concentrated market and gives rise to at least an initial concern that the merger will likely substantially lessen competition in that market.

B. Excess Capacity - Increasing Available Capacity by Switching Rendering Equipment Presently Used for Poultry - Increasing Capacity by Easy Expansion of Existing Facilities

87 As has already been noted, market share is not necessarily a reliable determinant of market power. As an indicia of such it may either overstate or understate a firm's market power. If other firms in the market have excess capacity, they can respond to a supra-competitive price rise by flooding the market at a lower price level. As a result, the best question to ask when assessing market power, in some circumstances, is whether the respondents' current competitors have capacity available to serve what otherwise would be the merged firm's customers. One of the most significant sources of high supply elasticity is the excess capacity of competing firms. The respondents argue that Rothsay-Orenco competitors have extensive excess capacity in comparison to the merged firm and therefore the merged firm will not be able to exercise significant market power.

88 Insofar as the alleged excess capacity of Rothsay-Orenco's competitors is concerned, the situation of Darling is quite problematic. As has been noted, it has lost its Toronto lease and will have to move. Mr. Kosalle's view is that Darling will stay in the Toronto-Hamilton area and probably construct a new plant. He is also of the view that Darling will transport Toronto

materials to its Detroit plant in the interim. Darling was processing approximately 850 metric tonnes per week at its Toronto plant; 40% of this was collected west of Lambeth which is near London, Ontario. For the purpose of assessing excess capacity (existing or likely to exist in the near future) the Tribunal is not willing to place much reliance on Darling constructing a new plant in the Hamilton area. At the same time, since Darling is a large multi-plant firm with plants in Cleveland, Ohio, Detroit, Michigan, Coldwater, Michigan and Milwaukee, Wisconsin, the Tribunal accepts the argument that a considerable amount of capacity could be opened up at the Detroit location by shifting volumes between the Cleveland, Coldwater and Milwaukee facilities.

89 The Tribunal heard evidence that Banner was operating at capacity (approximately 500 metric tonnes per week) but could increase that capacity by approximately 390 metric tonnes per week if $400,000 was spent on additional equipment.

90 Schneider also has excess capacity as a result of closing its Ontario cattle slaughtering operations. Its capacity is estimated to be approximately 800 metric tonnes per week of which approximately 400 metric tonnes is presently being used. Central By-Products is installing a plant with the capacity to render approximately 360 metric tonnes. It will use only 113 metric tonnes per week for its captive materials. Baker (Rochester) could open up excess capacity of approximately 400 metric tonnes.[52] Lomex in Montreal is thought to have excess capacity and Rothsay (Laurenco) at that same location is known to have excess capacity of approximately 800 metric tonnes. Although, as has been noted, the Tribunal has not considered the Montreal plants to be in the relevant market.

91 Insofar as the merged firm's excess capacity is concerned, it is alleged that after the merger Orenco will have only 233 metric tonnes excess capacity per week and Rothsay (Moorefield) will have only 78. These figures appear to significantly understate the excess capacity of those establishments. In the first place, this estimate assumes that Fearman's rendering plant will be closed and the material previously rendered at that plant will be rendered in the future at Rothsay (Moorefield) and Orenco. The decision to close Fearman's rendering plant and thereby reduce Rothsay and Orenco's excess capacity is a matter which is within the control of the Agribusiness Group of Maple Leaf Foods Inc. It is a decision which apparently was only discussed two or three weeks prior to the Tribunal's hearing. This alleged decision, at the moment, is speculative.

92 In addition, the excess capacity of Rothsay (Moorefield) has been calculated on the assumption that priority will be given to the rendering of poultry materials at the expense of red meat materials. The excess capacity figures for Moorefield are calculated by excluding usage of the equipment which is presently dedicated to processing poultry materials. It is assumed that the equipment will continue to be used for that purpose. With respect to whether Rothsay (Moorefield) would switch its equipment to rendering poultry material if rendering red meat material became more profitable, there is much reason to think that it would not. While poultry offal does not produce high quality tallow, poultry feathers do produce a high quality meal.[53] In addition, much of Rothsay's poultry volumes are captive materials for which disposal would have to be provided in any event.

93 It is known that Maple Lodge Farms Ltd, a poultry processing firm not related to Maple Leaf Foods Inc., has entered the poultry material rendering business and might expand this activity. Maple Lodge Farms Ltd produces 36-38% of Ontario's poultry.[54] It is estimated that Maple Lodge Farms Ltd was processing 23 metric tonnes per week in June 1990, and in October 1991 it was processing 218 metric tonnes per week. To the extent that that firm ceases to use Rothsay (Moorefield) to process its renderable materials, capacity would be freed up. Most important with respect to the respondents' estimates of their excess capacity is a letter written in December, 1990. It states:

> ... Rothsay (Moorefield) and Orenco have sufficient cooking capacity to handle all the raw material currently processed by Rothsay, Orenco and Darling & Co. in Ontario. This cooking capacity could be fully utilized if relatively inexpensive modifications were made to the Rothsay Moorefield and Orenco plants to de-bottleneck their production lines. For example, Orenco could increase its capacity by installing additional press equipment.[55]

94 It is clear that in general in this industry it is fairly easy for renderers to increase their capacity or when they are a multi-plant firm to shift the renderable material among different plants to open up capacity at a given plant when it is needed. Some of the larger firms, at least, plan their plants with a view to being able to respond quickly in this way. With respect to the ease with

which the firms can increase or reallocate their capacity, this can be seen in the reallocation which took place among Rothsay (Laurenco), Rothsay (Moorefield) and Orenco after the merger in response to the expropriation of Rothsay (Toronto). With respect to the ability to move material between plants and thereby free up capacity, Joseph G. Huelsman, General Manager, Baker Commodities Inc., gave evidence as to how this could be done at the Baker (Rochester) plant if it was deemed advisable to do so in order to enable that firm to enter the southern Ontario market. There appears to be significant excess capacity in the industry generally and the merged firm is not capacity-constrained. The excess capacity of firms both within and outside the relevant market will provide a degree of competitive pressure on the merged firm and restrain to a considerable extent its ability to raise prices.

C. Market Environment

95 A significant factor in this case is the changes which are taking place in the red meat rendering market. The Director describes the market as flat, the respondents describe it as declining. The Tribunal finds the respondents' description persuasive, particularly the evidence of Erna H.K. van Duren. [56] She estimates that the supply of renderable red meat material resulting from cattle slaughter in Ontario is likely to decline by 4% per year until at least 1995. She estimates that the renderable red meat material from pork slaughter is expected to decline 0.3% per year over the same period. Poultry materials are expected to increase by approximately 3.2% per year. As has been noted, beef materials are sought-after because they produce high quality tallow. Poultry feathers, however, produce high quality protein meal.

96 Dr. van Duren's opinion is based on several factors. Firstly, consumer preference for red meat has been declining since 1970. This change in consumer taste from red meat to poultry and non-meat products results from concern that eating red meat is not as healthy as eating the other products. The relative price of red meat vis-à-vis other products is also referred to as a factor.

97 Secondly, insofar as Ontario is concerned, there has been a marked decline in cattle-rearing activity in the province. Such activity has been shifting westward to the provinces of Alberta and Saskatchewan. The trend westward is due to the increased size of herds needed to stay competitive. These can be raised much more economically in Alberta and Saskatchewan than in Ontario.

98 The shift of cattle-rearing operation westward has been accompanied by a movement to locate slaughter operations close to where the cattle are raised. Instead of transporting either live cattle or cattle carcasses east, the various cuts for the consumer trade are more likely to be prepared at a slaughterhouse located close to where the cattle have been reared. Transportation costs are less for what is known as boxed beef than for live animals or carcasses.

99 There was some discussion before the Tribunal about projections prepared by Agriculture Canada for Canada East and Canada West which projected a much smaller decline in cattle slaughter in Canada East than Dr. van Duren estimates. Dr. van Duren notes that the Canada East and Canada West models are merely mirrors of each other and thus the Agriculture Canada model is one that really pertains to Canada as a whole and says little about the Ontario situation. [57]

100 The Director argues that the market may have been declining but that there is no reason to assume that the past trend will continue. Dr. van Duren, on the other hand, argues that there is little indication that the restructuring of the North American red meat industry which has been occurring is likely to stop, especially in Canada. Thus, it is argued that it is likely that the Canadian industry will continue to consolidate and increase its geographic concentration westward with a consequent decline of beef slaughter in Ontario. The Tribunal accepts Dr. van Duren's opinion.

101 Reference was also made to the trends and restructuring which have been occurring in the industry generally, particularly in the United States markets since the 1970s. While the Tribunal is reluctant to put much weight on events which occur in other markets, in this instance it agrees that industry trends in general provide some relevant information concerning the context within which the industry as a whole is operating. Since 1970 there has been a decline in the number of independent renderers in the United States from over 600 to under 350. This decline has been particularly noticeable in large metropolitan areas. The New York Metropolitan Area has seen a reduction from seven to two rendering facilities since the early 1980s. In the Los Angeles Metropolitan Area, the amount of rendering has dropped from four plants operating 24 hours a day, six days a week, to two

plants operating at two-thirds capacity. Finally, in the Chicago Metropolitan Area the amount of rendering has been reduced from nine large plants, including the largest in the world, plus several smaller plants in 1975 to only one small plant. [58] While it is true that a city or state boundary may tell one little about the geographical dimensions of the relevant markets, the reduction in the number of plants in the larger metropolitan areas does give some indication of the trends in this market.

102 Decline in the volumes of red meat material available for rendering in Ontario, of course, opens up additional excess capacity for renderers, thus providing an additional incentive for renderers to compete aggressively for material in their current collection areas and to increase the size of those collection areas. There is also incentive as volumes decline to purchase adjacent renderers in order to acquire the requisite volumes.

103 In addition to the decline in red meat materials, this industry faces increasing costs as a result of environmental concerns and as a result of changes in what is considered to be appropriate use for the land on which some rendering plants are located (or for the land proximate thereto). These factors force changes in market configurations. For example, both Rothsay (Toronto) and Darling have lost their Toronto harbourfront property and lease respectively. The Toronto harbourfront location afforded proximity to the major suppliers of renderable materials in the Toronto area and access to port facilities from which tallow could be shipped to the international market in which it is sold. It is argued that environmental concerns would lead to difficulties with respect to any proposed expansion of Rothsay (Moorefield). While the Tribunal is not convinced that this would necessarily be the case, it is clear that failure to meet environmental standards in the past has been the subject of much adverse publicity for that plant. Banner also has experienced increased costs as a result of environmental considerations. [59]

104 Another factor which is having a negative impact on this industry is the relatively depressed prices at which tallow and meal are being sold. The respondents state that the protein meal which is produced from the rendering process is, in general, sold within Canada but that the tallow products are exported. It is noted that there is an abundant supply of alternative non-animal based products which compete with the tallows and which are being promoted as preferable to the animal-based products.

105 In general, then, the industry is one in which there has been and is a decreasing supply of quality renderable materials, costs have been rising and there is little ability to control the price at which the finished products (tallow and meal) are sold. Renderers have been increasing their prices to customers, for example, by charging for the pick-up of materials which previously had been collected without charge and by picking up but ceasing to pay for materials which previously had been purchased. While some of the witnesses see these changes as resulting from the merger, the evidence indicates that such is not the case. These changes are a result of the increasing costs and decreasing revenues which the renderers are experiencing. Rendering is a necessary service and thus renderers are not likely to disappear completely from an urban area. The pressures on the industry, however, have led to increasing consolidation. [60]

D. Barriers to Entry

106 In the absence of significant entry barriers it is unlikely that a merged firm, regardless of market share or concentration, could maintain supra-competitive pricing for any length of time. An attempt to do so would cause competitors to enter the market and the additional supplies created in that manner would drive prices back to the competitive level.

107 As has been noted above, whether one classifies a firm which has not previously been active as a competitor to the merged firm as a competitor in the relevant market or as a potential entrant whose existence restrains the merged firm from levying supra-competitive prices is not of great importance. The respondents argue that entry can be defined in a number of ways: to include new firms entering the market, firms expanding their activities into the relevant market from another geographic area, local firms beginning to offer the relevant product (which did not do so before), and firms already in the relevant market (sometimes called "fringe firms") expanding their output. [61] The Tribunal has chosen not to classify the expansion of output by existing firms, be they "fringe firms" or major competitors, as entry decisions. The Tribunal considers entry to be either the establishment of a new firm in the market whether entirely new to the industry or new to the geographic area (e.g., the Tribunal has already indicated that it considered Lomex to be attempting entry) or local firms which previously did not offer the product in question commencing to do so (e.g., deadstock operators or slaughterhouses commencing to also operate a rendering facility). [62]

108 The Director has alleged that barriers to entry into the relevant market consist of: the environmental and regulatory requirements which must be met; the difficulty which exists with respect to acquiring sufficient supplies to become viable; the sunk costs involved in starting a rendering plant.

(1) Environmental and Regulatory Constraints

109 There is no doubt that provincial Ministry of the Environment, Ministry of Agriculture and Food and municipal approvals are needed to start a rendering plant and that some locations are simply not available for this use. Many sites in urban areas or sites close to urban areas are not likely to be available. Environmental and regulatory approvals can more easily be obtained, however, if an appropriate site is chosen, for example, a site in an industrially-zoned area of a large municipality. Mr. Kosalle testified that the Hamilton Harbour Commission has several sites suitable for rendering facilities and that the Hamilton Harbour Commission is amenable to leasing a site for such a facility. These sites are particularly attractive as they provide access to a wharf which allows for the economical transportation of finished products. [63]

110 Reference was made to the fact that Central By-Products had been delayed in opening its newly constructed facility as a result of the need to comply with environmental requirements. Central By-Products commenced construction of its facility in February 1990 without obtaining prior environmental approval. Professional engineers were not retained to design air and water treatment until after construction had been started. Ministry of the Environment approval for the new plant is expected shortly. [64] The experiences of that firm demonstrate the difficulties which an inexperienced entrant into the market can encounter.

111 The Tribunal does not put much weight on the length of time Rothsay took in trying to locate a new site when faced with the expropriation of its Toronto plant. There would be good reasons for Rothsay to try to retain its Toronto location for as long as possible. The Tribunal is of the view that *de novo* entry would likely take approximately 18 months to accomplish. At the same time, entry by a supplier from an adjacent geographic market through expansion of its collection area would not entail this difficulty. Also, forward integration on a small scale by the larger slaughterhouses would likely be less difficult if land were available at the site and the slaughterhouse already located in an appropriately zoned area.

(2) Sufficient Supplies

112 Insofar as obtaining sufficient supplies are concerned, the amount of material needed will depend on the size of the plant in question. Central By-Products clearly is of the view that 113 metric tonnes is sufficient. [65] A slaughterer or deadstock operator who establishes a rendering plant at the same location as his slaughtering or deadstock operation, will incur less costs in rendering material produced therefrom than a non-integrated renderer since no collection costs will be involved. Fearman, for example, has been operating a rendering plant for its captive pork products having a capacity of 450 metric tonnes per week. Schneider has a capacity of approximately 800 metric tonnes per week. Banner which has no captive material operates a plant having a capacity of approximately 510 metric tonnes per week.

113 Better Beef and Quality Meat Packers are examples of slaughterers with sufficient supply to establish at least a small scale rendering operation. They respectively produce approximately 900 and 1,000 metric tonnes of renderable material per week. Groups of smaller suppliers might also have the requisite minimum volume to justify construction of a rendering plant. [66]

114 Such enterprises, of course, would not be able to establish a rendering facility of the scale of Orenco or Rothsay. What is more, given the contracting nature of the industry one can question whether or not much entry is in fact likely to occur as a result of forward-integration by slaughterers such as Better Beef and Quality Meat Packers or by a group of smaller companies. But this is clearly more than just a mere possibility. Central By-Products has taken this initiative recently and insofar as poultry is concerned, Maple Lodge Farms Ltd appears to have done so. The test as to whether potential entry will discipline the market is whether such entry is likely to occur, not merely whether it could occur.

(3) Sunk Costs

115 Insofar as sunk costs are concerned, there is little evidence as to the proportion of the investment which is sunk in a rendering plant. There is evidence, however, that the total investment required can vary considerably depending on the size of the facility. Central By-Products has recently built a plant in Hickson, Ontario at a cost of $1.1 to $1.2 million. Ray Bowering is a small collector who originally sold material to Phil's Recycling. Ray Bowering built his own plant which can render 23 metric tonnes of material per week. [67] At the other end of the scale, however, Rothsay has estimated that $10 million would be reasonable as an estimate for the cost of a new plant. [68] While there is no direct evidence concerning the proportion of costs which would be sunk, it is clear that some must be involved, for example, the costs of obtaining regulatory approvals, the specialized equipment and building required which on resale would command a lower price than that for which they were bought.

(4) Conclusion

116 The extent of the barriers to entry depends upon the would-be-entrant. They are moderately high for a *de novo* entrant. The regulatory and environmental approvals which are required together with the construction time involved, as has been noted, would probably mean that approximately 18 months would be required to effect entry. In addition, the obtaining of sufficient volumes, unless one purchased such from an existing competitor in the market, as well as the fact that some sunk costs would be involved would discourage such entry. Indeed, given the state of this market one would not expect *de novo* entry.

117 As has been noted, entry on a small scale by forward integration of the larger slaughterhouses or groups thereof cannot be dismissed as a possible source of entry particularly if they are located in an area where such industry is accepted and where adjacent physical space is available. The experience of Messrs. Murray and Smith in constructing Central By-Products indicates that the investment required for a small operation can be relatively modest; sunk costs did not deter that initiative. While the Tribunal heard evidence that the small slaughterhouses would not contemplate attempting to render their own materials, there is no evidence that this is so for the larger ones. At the same time, the Tribunal does not rely on forward integration by the larger slaughterhouses as a significant source of probable entry. The most probable source of entry in response to a price rise is entry by existing suppliers already established in adjacent regions. Barriers to entry would not preclude entry by such renderers in response to a price rise. Also they might in any event attempt to do so in order to expand their collection area because of low volumes.

E. Renderable Materials Are Not Homogeneous

118 Renderable materials are not homogeneous. That is, they vary as to quality and in the distance at which they are located from the rendering plant. Some are picked up; some are delivered to the plant by the producer of the material or by others. The price paid for the material or the pick-up charge levied will differ depending on the quantity and the quality of the material. Quality will differ, for example, as between beef and pork material, as among shop bones and fat (e.g., material from supermarkets), packing house materials, low grade deadstock materials, blood. The quality will also vary depending upon the freshness of the material. There are no published price lists relating to the collecting of renderable materials. While the main thrust of the Director's case has been that the merged firm will become a dominant firm, insofar as any increased market power might be alleged to lead to collusion or tacit price following rather than from dominant firm behaviour, the non-homogeneous nature of renderable materials (including differences in quality, quantity and distance from the rendering plant) would make such behaviour difficult.

F. Conclusion

119 It is clear that a lessening of competition will result from the merger. What will constitute a likely "substantial" lessening will depend on the circumstances of each case. It is difficult to articulate criteria which might be applicable apart from the obvious ones of degree and duration. The degree of lessening can in some circumstances be assessed by reference to factors such as the number of competitors left in the market, the amount of harm which can be done before the market is likely to again become competitive, for example, as a result of new entry. Various tests have been proposed: a likely 5% price rise sustainable

for one year; a 5% price rise sustainable over two years; a small but significant and non-transitory price rise. The Tribunal does not find it useful to apply rigid numerical criteria although these may be useful for enforcement purposes.

120 In addition to the lessening which will occur as a result of the merger, lessening is also occurring as a result of changes in the market independent of the merger. It seems clear that the Toronto area was the most competitive in North America. The competition was driven largely by the aggressiveness of Darling (Toronto) and Banner. A highly competitive situation existed between three firms all located within the City of Toronto (Darling, Rothsay and Banner) and one located 40 miles distant (Orenco). That competitive situation of course cannot be re-established.

121 The Tribunal is asked to assess the effects of the merger in the light of the new situation because it will be within that context that the merged firm will operate. The merger of the two largest firms and the closure of the Darling (Toronto) plant will substantially change the structure of the market. Even if Darling remains in the market and competes from Detroit it will not be as effective a competitor from that location as it was when it had a plant located in Toronto. Darling will take on the character of a fringe firm rather than a major competitor. While, as has been noted, the view has been expressed that Darling will build a plant in Hamilton, there is no verifiable evidence of such intention. One would have thought that if Darling intended to maintain a plant in that area it would have taken concrete steps with respect thereto before now.

122 Dr. Ross expressed the opinion that with the merger and the departure of the Darling plant from the Toronto-Hamilton area, the merged firm would likely assume the behaviour of a dominant firm with the remaining firms functioning as a competitive fringe. He expressed the view that the price increases which would follow could be very high because the elasticity of demand is so low (producers of renderable material must dispose of it). That conclusion depended upon a number of assumptions including high barriers to entry and limited excess capacity in the hands of the merged firm's competitors.

123 The respondents argue that the likely effects of the merger should be assessed by reference to a longer time frame than two years. Given the declining state of the market it is argued that in the not too far distant future (the respondents say five years) there will only be enough red meat renderable material to support one plant and some smaller specialty fringe firms. It is also argued that with or without the merger, given the projected increase in poultry materials together with the decline in red meat materials, Rothsay (Moorefield) will be dedicated to processing poultry materials and will be out of the red meat material rendering business.[69]

124 The decision in *United States v. General Dynamics Corp.*[70] is cited for the proposition that in assessing a merger one must consider changes that are occurring in the market and that are likely to occur in the future. That case concerned the coal industry. The United States government relied on statistical evidence to show that there was concentration in that industry, that the concentration was increasing, and that the acquisition in question would increase the market share of General Dynamics Corp. and contribute to the concentration trend. The Supreme Court upheld a finding of a lower court that despite this statistical evidence there would be no lessening of competition because of the acquired firm's current production and its much more limited potential for future production as a result of its depleted reserves.

125 While market share statistics are high and barriers to *de novo* entry are moderately high, the Tribunal cannot ignore the fact that a significant source of competitive discipline will exist from those firms which border geographically on the relevant market and which would be prepared to expand their area of collection in the face of a price rise by the merged firm. Indeed, such firms may find it necessary to do so in any event in order to obtain sufficient volumes for themselves. The fact that there is excess capacity everywhere in the relevant market and in the rendering plants proximate thereto means that constraint will exist on the merged firm's ability to raise prices.

126 It is true that the merger was not caused by a need to rationalize the firms as a result of lower volumes. Nor did the merger happen for the purpose of limiting competition in the market. The merger "just happened" as part of the larger acquisition of Canada Packers Inc. by Hillsdown. At the same time, the declining nature of the market is a significant factor to be taken into account since it will lead to increased excess capacity and increased expansion of existing collection areas.

127 In the light of these considerations, the Tribunal finds that it has not been convinced, on the balance of probabilities, that a substantial lessening of competition is likely to arise as a result of the merger of the two rendering businesses. This decision is very much a borderline one and the difficulty relates to the dynamic changes which are occurring in the market.

128 In addition, the effectiveness of any divestiture order which might be given is a relevant consideration. It will be discussed below after discussion of the evidence and arguments respecting efficiencies are considered.

VI. Efficiencies

129 Section 96 of the *Competition Act* provides:

> 96. (1) The Tribunal shall not make an order under section 92 if it finds that the merger or proposed merger in respect of which the application is made has brought about or is likely to bring about gains in efficiency that will be greater than, and will offset, the effects of any prevention or lessening of competition that will result or is likely to result from the merger or proposed merger <u>and that the gains in efficiency would not likely be attained if the order were made</u>.
>
> (2) In considering whether a merger or proposed merger is likely to bring about gains in efficiency described in subsection (1), the Tribunal shall consider whether such gains will result in
>
> (a) a significant increase in the real value of exports; or
>
> (b) a significant substitution of domestic products for imported products.
>
> (3) For the purposes of this section, the Tribunal shall not find that a merger or proposed merger has brought about or is likely to bring about gains in efficiency by reason only of a redistribution of income between two or more persons.
>
> (underlining added)

130 Section 96 recognizes the fact that mergers which result in or are likely to result in a substantial lessening of competition may have beneficial consequences as well as detrimental and anti-competitive ones. Mergers can increase the efficiency of firms, for example, by enabling them to benefit from economies of scale (the unit cost of production decreases as the amount of output product increases); economies of scope (when lower costs are included in producing two or more products together than in producing them separately); dynamic efficiencies which arise because of improvements to product quality or innovation. [71]

A. Assessment of Cost Savings Claimed as Efficiencies

131 Three types of efficiencies are claimed by the respondents as arising out of the merger: administrative cost savings; transportation savings; and manufacturing costs savings.

(1) Administrative Cost Savings

132 The total annual administrative cost savings alleged is $1,101,337. These arise from a reduction in the number of positions which are no longer required at Orenco allegedly as a result of the merger, positions such as a marketing manager, an accountant, a route service manager, three grease salesmen. The cost savings arise from the money which would have been spent on salaries and associated benefits as well as expenses (e.g., travel expenses). The numerical amount claimed as cost savings is not in dispute. What is disputed is whether these savings arose from the merger or from some other cause. Also, a consideration not raised in argument is why, if grease is not now considered to be in the relevant market, savings with respect to grease salesmen are included in the efficiency calculations.

133 The Director's experts challenge these administrative cost savings as efficiency gains arising out of the merger on the ground that: (i) information relating to them is entirely in the hands of the respondents and it is easy in the context of a merger to camouflage the dismissal of redundant employees; (ii) these kinds of savings are due to spreading fixed costs over larger

output and thus they could have been obtained through means other than the merger, e.g., internal growth, joint venture, or as a result of another merger. The Director's position is that cost savings that do not arise *uniquely* out of the merger are not to be considered as efficiency gains. The respondents' position is that the test to be applied is whether the efficiency gains would *likely* have been realized in the absence of the merger. The Tribunal accepts the respondents' position.

134 The most significant difficulty in assessing whether these cost savings arose as a result of the merger, however, arises because they are based on assumptions with respect to the likely structure of the market had the merger not occurred and those assumptions do not appear to be the appropriate ones. This same consideration arises with respect to at least some of the transportation cost savings and will be addressed in discussing them.

(2) Transportation Cost Savings

135 Three sources of savings on transportation costs are identified: the rationalization of truck routes in Western Ontario; the rationalization of routes in Toronto; and the savings arising from transporting material to Orenco in Dundas rather than to Rothsay (Moorefield). With respect to Western Ontario, since Rothsay (Moorefield) and Orenco covered much of the same territory in Western Ontario, it is possible after the merger to use fewer trucks to collect the same amount of material, resulting in savings of mileage, labour and capital. The total annual savings from these is calculated to be $241,433.46. There is no serious argument that these figures and savings are not accurate. Insofar as the savings respecting the Toronto routes are concerned, these routes were serviced prior to Rothsay (Toronto) volumes being moved to Dundas out of Rothsay (Toronto) and Orenco. Combining these routes resulted in savings in mileage, labour and capital of $1,451,522.69.

136 The respondents claim only one-third of these (an annual cost saving of $483,841) as being attributable to the merger. This apportionment is based on the assumption that Rothsay would not have solved its expropriation problems by expanding Moorefield or by obtaining a location on the Hamilton Harbour, but would have had to relinquish two-thirds of its Toronto business. Since it could accommodate one-third of the business at Moorefield without expansion of its existing facility, it claimed only one-third of the savings arising under this heading. A similar one-third allocation was made with respect to the savings claimed as arising out of transporting material from Toronto to Orenco in Dundas rather than from Toronto to Moorefield. One-third of $519,905 was claimed ($173,302) as an annual cost savings.

137 There is little quarrel with the numbers which are claimed. The validity of the claims with respect to the last two categories of transportation savings, however, is based on the assumption that Rothsay would have responded to the expropriation notice it was under by moving as much material as it could to Moorefield (i.e., one-third of the Toronto volume) and abandoning the rest.[72] This is not a credible assumption. Mr. Kosalle's evidence was that the most likely solution to the expropriation notice would have been for Rothsay to have constructed a new plant in the Hamilton Harbour area. In addition, notices given to drivers who were terminated from the Rothsay (Toronto) plant on transfer of the Toronto volumes to Rothsay (Moorefield) and Orenco were told that their termination was the result of the expropriation of the Toronto plant. Mr. Kosalle admitted that it was impossible to distinguish cost savings which might have arisen as a result of the merger from those which arose as a result of the restructuring which occurred in response to the expropriation. Insofar as efficiency gains likely to arise from the merger are concerned, the burden of proof is on the respondents. The respondents have not met that burden with respect to the claimed efficiency gains insofar as such claims depend upon the assumption that Rothsay would have responded to the expropriation by moving one-third of its Toronto volumes to Moorefield and by abandoning the rest.

(3) Manufacturing Cost Savings

138 The savings in manufacturing costs which are alleged to result from the merger relate to Orenco's purchase before the merger of approximately 6 million pounds of bleachable fancy tallow to mix with its raw material in order to produce higher quality tallow. This tallow was purchased from Taylor By-Product in the United States. It cost Orenco $184,400 more annually than would have been the case had it purchased the tallow locally. In addition, the cost of heating, milling and refining the tallow was $33,600 annually. It is alleged that Orenco can now produce the same product using Rothsay raw materials.

139 The Tribunal is not convinced that this is a saving arising out of the merger. It is argued that Orenco could not buy the quantity of tallow required in Canada before the merger because it was not available in the amounts required and that it could not buy the raw material to itself produce this grade of tallow because at the time it was operating at full operational capacity. It seems clear that the savings in question arose because Orenco upgraded its machinery, thereby increasing its capacity, and not as a result of the merger. This should therefore not be considered to be an efficiency gain. [73]

140 Donald G. McFetridge prepared expert evidence assessing the deadweight loss [74] which likely could arise from the merger and compared it to the efficiencies claimed by the respondents. He assumed for the purposes of this analysis a 20% (and alternatively a 30%) decrease in the price paid by the renderers to the suppliers of renderable material. He also did an analysis based on a 40% increase with an elasticity of 0.1. On the basis of that analysis he concluded that the claimed efficiency gains outweighed the deadweight loss. Dr. McFetridge chose the 20% figure as a starting point because on examination for discovery the Director's representative, Stephen Peters, had referred to this percentage. It is clear that the percentage decreases which were used may not be very realistic for this industry. The prices can vary from a fairly small amount (e.g., three cents per pound) to a charge being levied for pick-up. In any event, given the Tribunal's findings elsewhere it is not necessary to express any conclusions with respect to this analysis.

(4) Conclusion

141 It is first necessary to address the question of the burden of proof which must be met by respondents when alleging efficiency gains. Counsel for the respondents seemed to argue that once they had established the claimed efficiency gains on a *prima facia* basis, that was sufficient to transfer the onus of disproving them to the Director. He argued that if on the balance of probabilities there was uncertainty, the doubt should be resolved in the respondents' favour. The Tribunal does accept that argument. The respondents have the onus of proving the existence of the efficiencies claimed, or the likelihood of their existence when the merger has not been consummated, on the balance of probabilities in the normal way. Many of the claimed efficiency gains in this case, as has been noted, have not been proven to have arisen out of the merger as opposed to having arisen as a result of the restructuring caused by the expropriation. More importantly, however, the respondents based their trade-off analysis on a legal interpretation of section 96 which the Tribunal does not think is correct. That interpretation will be discussed below.

B. Legal Interpretation of Subsection 96(1)

142 In order to understand the arguments which were presented to the Tribunal respecting the proper interpretation of section 96, it is necessary to refer to a distinction which is made by economists between two different types of detrimental effects which may result from a firm having a monopoly or a dominant position in a market. If the merger results in the merged entity being able to raise prices above what would exist in a competitive market, then a transfer of funds (the wealth transfer) from the consumer to the producers is likely to occur. While this will be detrimental to individual consumers personally, it is not necessarily classified by economists as detrimental to society as a whole. This thesis postulates that there is no reason to suppose that the wealth transfer in the hands of the purchaser (consumer) would be used for any more socially beneficial purpose than would be the case if it were in the hands of the producer (seller). What is important under this economic value judgment, is the detrimental effects which arise from the merger which lead to losses for society as a whole. [75]

143 Detriment to society as a whole is said to arise, for example, when consumers because of the higher prices choose an alternate and less appropriate substitute product for the use they have in mind. They substitute a product which would have been their second choice in a competitive market. This inefficient substitution is seen as a misallocation of resources; it is seen as a loss to society as a whole. It is referred to as allocative inefficiency or the deadweight loss.

144 Both the Director and the respondents argue that subsection 96(1) directs the Tribunal to balance "the gains in efficiency" which will arise from the merger against this allocative inefficiency or deadweight loss. [76] The Director's *Merger Enforcement Guidelines* states:

Section 96(1) requires efficiency gains to be balanced against "the effects of any prevention or lessening of competition that will result or is likely to result from the merger or proposed merger". Where a merger results in a price increase, it brings about both a neutral redistribution effect and a negative resource allocation effect on the sum of producer and consumer surplus (total surplus) within Canada. The efficiency gains described above are balanced against the latter effect, i.e., the deadweight loss to the Canadian economy. [77] (footnote omitted)

This interpretation of section 96 is also found in the text *Mergers and the Competition Act* by Crampton. [78] The Tribunal [79] has difficulty accepting this interpretation.

145 In the first place, the Tribunal is directed by subsection 96(1) of the *Competition Act* to balance "the gains in efficiency" against the "effects of any prevention or lessening of competition that will result or is likely to result". [80] If only allocative inefficiency or the deadweight loss to the Canadian economy was intended by Parliament to be weighed in the balance then one would have thought that the section would have been drafted to specifically so provide. The interpretation which both the Director and the respondents put on section 96 requires a reading down of the phrase "effects of substantial lessening of" so that it does not include the transfers from consumers to producers which will generally be the largest effect of the substantial lessening. [81]

146 Indeed, earlier bills respecting proposed revisions to the *Combines Investigation Act*, which preceded the *Competition Act*, contained clauses which made it clear that efficiency gains were to be given precedence without any necessity to weigh them against the total effects arising out of a substantial lessening of competition occurring by reason of the merger. For example, Bill C-42 read:

(5) The Board shall not make an order under subsection (3) where it is satisfied by the parties to a merger or proposed merger to which this section applies that the merger or proposed merger has brought about or that there is a high probability that it will bring about substantial gains in efficiency, by way of savings of resources for the Canadian economy that are not reasonably attainable by means other than the merger. [82]

And, Bill C-29 provided:

31.73 The court <u>shall not</u> make an order under section 31.72

. . .

(c) where it finds that the merger or proposed merger has brought about or is likely to bring about <u>gains in efficiency that will result in a substantial real net saving of resources for the Canadian economy</u> and that the gains in efficiency could not reasonably be expected to be attained if the order were made. [83]

(underlining added)

147 But these clauses were not enacted and the text of subsection 96(1) does not provide that if substantial efficiency gains exist the merger should be allowed. Rather, the subsection requires a weighing of "efficiency gains" against the "effects of any prevention or lessening of competition that will result or is likely to result from the merger".

148 A description of the various purposes served by competition law in relation to efficiency gains is found in the text entitled *Competition Law*. [84] It is noted that one traditional purpose has been to protect the consumer from being charged supra-competitive prices. While one can argue that this is insignificant from the point of view of loss to the economy as a whole, Whish notes that there is a powerful political argument for preventing such accretions of wealth at the consumer's expense. Another purpose which has traditionally been seen as served by competition law is to encourage the dispersal of power and the distribution of wealth:

> Aggregations of resources in monopolists or multinational corporations or conglomerates could be considered a threat to the whole notion of democracy, individual freedom of choice and economic opportunity. This argument has been influential in the US where for many years there was fundamental mistrust of big business, and it was under the antitrust laws that the world's largest corporation, AT and T, was eventually dismembered. [85]

A third objective of competition law is seen as that of protecting the small firm against more powerful rivals:

> Somehow the competition authorities should hold the ring and ensure that the 'small guy' is given a fair chance to succeed. This idea has had a strong appeal in the US, in particular during the period when Chief Justice Warren led the Supreme Court. However it has to be appreciated that the arrest of the Darwinian struggle, whereby the most efficient succeed and the weak disappear, in order to protect small business can run directly counter to the idea of consumer welfare. It may be that competition law is used to preserve the inefficient and to stunt the performance of the efficient. Bork has been particularly scathing of the 'uncritical sentimentality' in favour of the small guy in the US and in recent years US law has been developing in a noticeably less sentimental way. Meanwhile the current darling of the European Commission is the 'small and medium sized undertaking', indicating that the little guy is still in favour on this side of the Atlantic. [86] (footnote omitted)

149 These objectives can run counter to the fourth objective which is that of furthering the efficiency of the economy as a whole:

> Also it is important to appreciate that economic and political fashions change and that the priority of objectives over a period can alter. In the US a fundamental change is taking place and yesterday's naked restraint of competition may turn out to be tomorrow's precondition for efficiency. [87]

150 With this background in mind, then, one turns to the purpose clause of the *Competition Act*. That clause makes it clear that several objectives are meant to be served by the Act. The clause states that:

> 1.1 The purpose of this Act is to maintain and encourage competition in Canada in order <u>to promote the efficiency and adaptability of the Canadian economy</u>, in order to expand opportunities for Canadian participation in world markets while at the same time recognizing the role of foreign competition in Canada, in order to ensure that small and medium-sized enterprises have an equitable opportunity to participate in the Canadian economy <u>and in order to provide consumers with competitive prices</u> and product choices.
>
> (underlining added).

151 The interpretation of section 96 which both parties adopt requires a selective reading of that clause. It requires that one give precedence to the instruction that the Act be interpreted "in order to promote the efficiency ... of the Canadian economy" over the instruction that the Act be interpreted "in order to provide consumers with competitive prices". Equally, the instruction that the Act be interpreted "in order to ensure that small and medium-sized enterprises have an equitable opportunity to participate in the Canadian economy" is accorded lesser significance. The Tribunal has not been referred to any jurisprudence which indicates that in a listing of objectives in the purpose clause of a statute that which is listed first is to be given greater weight than those which follow. Also, there is nothing in the text of the purpose section which indicates that such preference is to be given. Indeed, in debates in the House of Commons, the Minister responsible for the Act indicated that it was the fourth objective which was of overriding concern:

> The fourth but not the least objective is to provide consumers with competitive prices and product choices. As such, this objective becomes the common denominator in what we are trying to achieve. This is the ultimate objective of the Bill. [88]

152 Reference is made by Crampton[89] to the evidence given before the Legislative Committee on Bill C-91.[90] In that forum it was pointed out that the efficiency section was unclear because it required a balancing of two different things. The response at 11:40 reads as follows:

> Mr. Ouellet: I have a question to ask to the Parliamentary Secretary. As Professor Stanbury has pointed out to us, proposed section 68 contemplates a trade-off between gain and [sic] efficiency, and the lessening of competition. According to the government, which of the two is most important?
>
> Mr. Domm: I thing it goes back to a former statement I made in response to your original motion. It is a balancing defence we are looking for. It is not a question of which one, but rather a balancing defence for the benefits against the costs.
>
> Mr. Ouellet: Do you agree that, as Professor Stanbury indicated to us, the matters which the tribunal will have to consider under this clause are not comparable, since one involves a redistribution of income and the other involves real gain and resource savings? Because Parliament does not seem to give any guidance to the tribunal and its priorities and the way to be applied to lessening competition and gaining efficiency, it seems it would be very difficult for the tribunal to choose. It seems clear there might be some gain of efficiency in any take-over, in any merger. Is this what government feels is more important, to the detriment of lessening competition?

•1735

> Mr. Domm: The provision we are asking for provides "a simple redistribution of income shall not be considered to be a gain in efficiency."
>
> Mr. Ouellet: In their presentation the Canadian Federation of Independent Business suggests guidelines in regard to the efficiency defence be embodied in the legislation. Why are you not giving some guidance precisely to the tribunal in this regard?
>
> Mr. Domm: I would refer you to proposed subsection 68.(2). Proposed subsection 68.(2) directs the tribunal to consider if the gains will result in a significant increase in the real value of exports or substitution of domestic products or importer producers.

153 It is to be noted that the answers which were given relate to a determination of what should be considered as an efficiency gain and not to a clarification of what such gains, however they might be defined, should be balanced against.

154 The Tribunal is not unaware of the debate which has raged south of the border as to whether allocative efficiency should be the only goal of merger policy.[91] The debate in the United States is well described in *Horizontal Mergers: Law and Policy*.[92] It is useful to quote a summary set out therein of the various positions relating to efficiencies:

> *Absolute Defense*. Muris may be the leading proponent of an absolute efficiencies defense. Although he concedes that a full efficiencies defense would "somewhat complicate merger proceedings and economies can not always be demonstrated," Muris nevertheless believes that merger law must be based on economic theory and that that premise dictates consideration of efficiencies.
>
> *Partial Defense*. Some commentators believe that efficiencies ought to be considered on a case-by-case basis, but suggest that the scope of an efficiencies defense may be limited to minimize the extent of judicial resources necessary to resolve such claims. Areeda and Turner would limit the defense to certain types of efficiencies (i.e., plant size and plant specialization where there is product complementarity) which they feel are most likely to result in significant cost savings. Former FTC Chairman Miller similarly would recognize an efficiencies defense, but only for efficiencies related to economies of scale.

Sullivan also favors a partial efficiencies defense, but he would limit it according to an evidentiary standard rather than by types of efficiencies:

> An alternative, not leading the Court into an unbearably complex or value laden area of judgment, would be to say that where cost saving efficiencies are clear, and arise in a context where market forces will oblige the seller to pass them on to consumers, and where competitive harm is only speculative ... the wise course is to risk the possible social harm for the certain benefit. Even if the Court is not ready to weigh the social benefit of efficiencies against the social harm of competitive injury when both seem similarly likely or certain to eventuate, it might nevertheless value a significant and likely social benefit higher than a much more doubtful harm.

Similarly, some commentators would require that claimed efficiencies be of a certain minimum size before being subject to litigation.

In an effort to integrate efficiency considerations with traditional antitrust concerns, Rogers writes that "efficiencies are relevant as a procompetitive factor only when they produce a more competitive market. This condition is likely to be satisfied, he suggests, where a merger involves two moderate-sized firms in a market dominated by larger firms with identifiable efficiency advantages. A corollary is that efficiencies in other situations may make a market less rather than more competitive and therefore should not be considered a defense in those circumstances.

Prosecutorial Discretion. One method for accommodating efficiencies without placing the issue squarely before the courts is to allow the enforcement agencies to consider efficiencies in deciding whether to challenge a transaction. Under this approach, efficiency claims would not be entertained once a suit is brought. Williamson suggests that enforcement authorities should decline to bring cases in which "a reasonably plausible showing of real economies can be made," but he do[es] not think it feasible or rewarding for the courts to entertain explicitly an economies defense involving a full-blown trade-off assessment. This approach is outlined in the FTC Statement and, apparently, in the 1984 Merger Guidelines.

One could expect, however, to see parties attempt to urge district courts to revisit the efficiencies issue when the prosecutor decides that the claim is not sufficient to justify the merger. It has been suggested, for example, that parties will present evidence of efficiencies to the courts in any event and may even argue that it would be arbitrary and capricious for the enforcement authorities but not the courts to consider such evidence.

Raise Enforcement Thresholds. Other commentators, while sympathetic to the notion that efficiencies are desirable and can sometimes justify otherwise harmful mergers, believe that the costs of fully litigating a vast range of efficiency claims would impose an intolerable burden on the judicial system. Moreover, even if efficiencies could be quantified with precision, it might still be impossible to quantify a merger's competitive costs, against which the efficiencies must be balanced.

The proponents of this view generally assert that most efficiency-enhancing mergers will be permitted if the general standards under the Merger Guidelines are set at such a level as to balance market power and efficiency effects. Fisher and Lande, citing evidence of the high cost of business uncertainty and of litigating efficiency claims, conclude:

> [W]e would incorporate efficiency concerns by adjusting the Guidelines' threshold for challenging mergers and urging the government and the courts to follow them with practically no exceptions. This change would have the effect of allowing more merger efficiencies and weeding out many of the mergers whose effect on market power was unduly speculative, without increasing litigation and business adjustment costs excessively.

The commentators who advocate setting of the general standards with efficiency goals in mind generally do not suggest specific numerical thresholds. Some of the material cited above was published prior to the 1982 Guidelines, so it is unclear how the revised standards would affect the commentators' views. For example, Areeda and Turner have supported a partial efficiencies defense because mergers with combined market shares in the 10 to 13 percent range - which would likely have been subject to challenge under the 1968 Guidelines, but not under the 1982 or 1984 Guidelines - could frequently involve efficiencies. Another observer points out that, according to a study by Scherer, firms in eleven out of twelve industries studied could achieve most if not all advantages of multiplant size with a national market share of 14 percent or less - a level unlikely to be challenged under the current Guidelines. [93] (footnotes omitted)

155 With respect to subsection 96(1) of the *Competition Act*, it is argued that if the words "effects of substantial lessening of competition" are not limited to deadweight loss then there will be a significant number of efficiency enhancing mergers that will not be allowed. Whether this is the case or not is not a matter which can be determined on the evidence given in this case. Certainly, one interpretation which is open on the basis of the wording of subsection 96(1) is to weigh any alleged efficiency gains against the degree of likelihood that detrimental effects (both wealth transfers and allocative inefficiency) will arise from the substantial lessening of competition. That is, in those cases where such effects are likely but not positively certain to follow, one could give more weight to efficiency gains than where the reverse is true. The likely detrimental effects of a merger may on some occasions be moderate in extent, in others they may be quite extreme. It is not unreasonable to expect that a balancing of the alleged efficiency gains could be assessed by references thereto. To the extent that the efficiency gains would be likely to lead to lower prices for consumers this would likely be determinative. [94]

156 One other consideration arises with respect to the arguments concerning the efficiency defence. The parties both rely on the judgment that the wealth transfer is a neutral one. A question posed during argument and which will be repeated here is, is this always so. If, for example, the merging parties in question were drug companies and the relevant product market related to a life-saving drug would economists say that the wealth transfer was neutral. The Tribunal does no more than raise this as a question. Another question respecting the alleged neutrality of the wealth transfer is: if the dominant firm which charges supra-competitive prices is foreign-owned so that all the wealth transfer leaves the country, should the transfer be considered neutral? Dr. McFetridge referred to this in his affidavit and concluded that a decision that such was not neutral would be discriminatory. The Tribunal does no more than raise these questions since for the reasons expressed above it is not necessary to make a decision on them in the present context.

VII. Order for Divestiture - Effectiveness

157 It has been argued that an order for divestiture would not be effective in this case. For an order to be effective Rothsay must respond to it by taking positive steps to ensure that it remains a vigorous competitor in the red meat rendering business. The Director assumes that Rothsay will do so. Rothsay asserts that it will not.

158 Since the divestiture requires the removal from Orenco of the Rothsay (Toronto) volumes which are now being processed at Orenco, this implicitly requires that Rothsay either expand its Moorefield facility or construct a new facility, for example, in Hamilton. While counsel for the Director suggested that some other arrangement might be made, for example, the continued processing of materials at Orenco under contract, it is difficult to conclude that this would be a viable long term solution. While Orenco would undoubtedly be willing to process such materials under a tolling agreement on a temporary basis if Rothsay were constructing additional facilities, it is difficult to accept that Orenco under independent management would agree to such an arrangement on a permanent basis, rather than insisting that Rothsay sell the relevant contracts to Orenco.

159 An order cannot now be given which will put Rothsay and Orenco back in the position in which they were pre-merger. At the time of the merger Rothsay was vigorously pursuing a solution to the expropriation of its Toronto plant. There is no reason to assume that Rothsay would not have been allowed to stay in the Toronto location until new facilities were constructed. Mr. Kosalle, at least, is of the opinion that the solution would have been the construction of a new facility on the Hamilton Harbour Commission lands. With the merger the momentum towards that solution died.

160 Orenco has changed its facility so that a significant amount of the Rothsay (Toronto) volumes are being accommodated at that plant. Orenco has not purchased a hydrolyzer nor moved into the processing of poultry feathers. A divestiture of Orenco would leave all the captive materials originating from both Hillsdown's and Canada Packers Inc.'s red meat and poultry processing operations with Rothsay (Moorefield). Approximately 680 metric tonnes per week of captive red meat material are processed by Orenco. The merger of the upstream red meat and poultry processing operations of Hillsdown and Canada Packers Inc. has been approved. The merger of those operations does not raise competitive concerns. With a divestiture order the total

volume of captive materials would be processed by Rothsay (Moorefield). In the absence of the expansion of Moorefield this would occupy a significant amount of available capacity.

161 In addition to the captive red meat materials, Maple Leaf Foods Inc., Rothsay's upstream poultry processing operation, processes 40% of the poultry processed in the province of Ontario. Since the supply of poultry materials is expected to increase, the Moorefield facility over time will be required to process additional captive poultry materials and it is argued that it is likely to elect to concentrate on rendering poultry, both captive and non-captive, rather than compete with Orenco in providing rendering services for red meat materials. Thus, it is argued that Rothsay (Moorefield) will cease to be a vigorous competitor for red meat material in the relevant market in any event.

162 The Tribunal accepts the respondents' argument that the continued decline in red meat material together with other changes in the market make construction of a new plant in Hamilton less attractive now than it was in 1989-90. Insofar as Rothsay's Moorefield facility is concerned, while the Tribunal is not convinced that expansion of that facility would be impossible as a result of environmental concerns and community opposition, the question is whether Rothsay would choose to pursue that option.

163 If there had been no expropriation of the Toronto plant the question of the effectiveness of a divestiture order would not have arisen. In the particular circumstances of this case, however, the Tribunal doubts that an order for divestiture would be effective to preserve a significant degree of competition in the relevant market for a sufficient period of time to justify its issuance.

164 The Tribunal does not want to leave the impression that merely because the respondents have changed their positions in response to the merger before the application for an interim order was brought by the Director, the Tribunal is reluctant to order divestiture. That is clearly not the case. The Tribunal's comments on the likely ineffectiveness of a divestiture order pertains only to the particular facts of this case including the particular market conditions. The Tribunal is not convinced that issuing an order which depends for its effectiveness on one of the parties constructing additional facilities in a market where there is already excess capacity and shrinking volumes would accomplish a pro-competitive result.

VIII. Order

165 FOR THESE REASONS, THE TRIBUNAL HEREBY ORDERS THAT the application for a divestiture order is denied.

APPENDIX

Information Note [95]

The Director of Investigation and Research v. Hillsdown Holdings (Canada) Limited

March 9, 1992. The Competition Tribunal today handed down its decision in the Hillsdown Holdings (Canada) Limited ("Hillsdown") case. The Tribunal panel, composed of Madame Justice Barbara Reed, Madame Marie-Hélène Sarrazin and Mr. Victor L. Clarke, has refused to order Hillsdown to divest itself of the business operated by Ontario Rendering Company Limited ("Orenco"). The unanimous decision results from an application by the Director of Investigation and Research under the merger provisions of the *Competition Act*.

Hillsdown obtained control of Orenco when it acquired 56% of the common shares of Canada Packers Inc. in July 1990. Hillsdown already controlled, through its wholly-owned subsidiary Maple Leaf Mills Limited, the Rothsay rendering business. Orenco operates a rendering facility in Dundas, Ontario. Rothsay operates a rendering facility in nearby Moorefield, Ontario. Rothsay also operated a facility in Toronto but the property was expropriated by the City and that facility closed in November 1990. Rothsay then moved its Toronto business to the Orenco plant in Dundas and elsewhere. The Director argued that Hillsdown's control of both the Rothsay and Orenco businesses is likely to result in a substantial lessening of competition in the non-captive red meat rendering market in southern Ontario.

The Tribunal was not convinced that a substantial lessening of competition is likely to arise as result of the merger of the Orenco and Rothsay businesses. A significant factor in arriving at this decision is the declining nature of the red meat rendering market, mainly due to a switch in consumer preference from red meat and a shift in cattle-rearing from Ontario to Saskatchewan and Alberta. Decreasing supply of quality renderable materials, increased costs and decreasing revenues have resulted in increasing consolidation in the industry. Given the market conditions, the Tribunal found that there will be a significant source of competitive discipline from potential competitors in adjacent markets that would be likely to expand their collection areas if the merged firm (Rothsay/Orenco) should raise prices above a competitive level.

The Tribunal also considered the effectiveness of a divestiture order under the particular circumstances of this case. The Tribunal took into account that as result of the expropriation of Rothsay's Toronto facility such an order would implicitly require Rothsay to either expand its Moorefield facility or build a new one. The Tribunal was not convinced that an order which depends for its effectiveness on the expansion of existing capacity in a declining market where volumes of renderable material are shrinking should be issued.

Footnotes

1 R.S.C., 1985, c. C-34, as amended.

2 Often referred to in the evidence as "fallen animals".

3 The ratio of the value of the renderable material as a percentage of carcass cost, as of June 1991, was estimated as 1.15% for beef and 0.38% for hogs.

4 Maple Leaf Mills Limited was the legal entity that held title to the property which was expropriated.

5 Applicant's Selected Documents, vol. 1, tab 19 at 43 (Exhibit A-7); vol. 2, tab 185 at 2 (Exhibit A-8).

6 Joint Book of Documents, vol. 15B, tab 56 at 9, 11, 50 (Exhibit JB-15B).

7 The transfer of approximately 150,000 lbs (68 metric tonnes) per week to that location did not appreciably improve Laurenco's financial situation because volumes have continued to decline. (Transcript at 703 (3 December 1991)).

8 H. Hovenkamp, *Economics and Federal Antitrust Law* (St. Paul, Minn.: West, 1985) at 58:
The correlation between market share and market power can be vigorously expressed in a formula. However, the formula contains *three* relevant variables: market share, market demand elasticity, and the elasticity of supply of competing and fringe firms. If the two elasticity variables remain constant, then market power would be proportional to market share. In the real world, however, market elasticities vary greatly from one market to another. Thus in order to estimate a firm's market power we must gather some information not only about a firm's market share, but also about the demand and supply conditions that it faces.

9 ABA Antitrust Section, Monograph No. 12, (1986) at 62-63.

10 *Ibid.* at 59-61 for a discussion of relevant markets.

11 Subsection 2(1) of the *Competition Act* expressly provides that for the purposes of the Act "product" includes an article and a service.

12 Ronald L. Dancey gave evidence that when Orenco started charging seven cents a pound for the collection of blood rather than picking it up at no charge, his company, Morrison's Meat Packers Limited, started routing the blood into a holding tank to be pumped out as sewage. (Transcript at 130, 158 (26 November 1991)).

13 A discussion of three different ways of treating supply substitution, i.e., when defining the market, when determining market shares or when assessing the significance of market share figures, is found in G.J. Werden, "Market Delineation and the Justice Departments' Merger Guidelines" [1983] Duke L.J. 514 at 518-20.

14 The United States jurisprudence indicates that the definition of the geographic dimension of the relevant market has been determined by reference to tests such as: the area where "the effect of the merger on competition will be direct and immediate" or "the area in which the acquired firm is an actual direct competitor". (*United States v. Marine Bancorporation*, 418 U.S. 602, at 619, 622 (1973)).

15 Applicant's Selected Documents, vol. 1, tab 6 at 5-7 (Exhibit A-7).

16 *Ibid.*, tab 13 at 4.

17 More accurately, Tewksbury, Massachusetts.

18 Fred D. Bisplinghoff, speaking of North American markets generally, states in his expert affidavit:

Normally renderers can only economically pick up raw material within a seventy-five mile radius of the plant. There is a point of diminishing returns due to overtime hours, spoilage of raw material, and insufficient time to maintain trucks. The above conditions have led to building receiving stations, which can be constructed approximately 125-150 miles from the plants. Two to four straight trucks can operate from this facility, dump their loads onto an open top semi-trailer which can be pulled to plant by a tractor. This enables the renderer to service an area approximately 200 to 250 miles from the plant, but it significantly increases the hauling costs as it adds reload and station costs to the route cost. This appreciably increases the overall haul cost but is an economical alternative to operating several plants at less than one-half capacity. (Expert Affidavit of Fred D. Bisplinghoff at 7-8 (Exhibit R-8)).

19 Until recently named Phil's Rendering Service Inc.

20 While it is not entirely clear when the activity commenced, the evidence indicates that it was probably during the summer of 1991.

21 The concept "entry" is defined in *Director of Investigation and Research v. Laidlaw Waste Systems Ltd.*, (20 January 1992), CT-91/2, Reasons for Order (Competition Trib.) at 77.

22 Letter dated 25 November 1991 to Jay D. Kendry from Robert Melland, Administrator, United States Department of Agriculture (Exhibit R-6).

23 Especially since the respondents had refused to allow the Director to rely on pages from the relevant USDA manual without calling a witness to attest to the procedure set out therein.

24 R.S.C. 1985 (1st Supp.), c. 25, as amended.

25 Limitations also exist with respect to the importation of meat products. Section 9 provides:

9. (1) No person shall import a meat product into Canada unless

(a) at the time it was prepared for export, the country from which it originated and any country in which it was processed had meat inspection systems, those systems and the relevant establishments in those countries were approved in writing by the Minister before that time and the approvals were valid at that time;

(b) that person provides an inspector with evidence satisfactory to the Minister that it meets the prescribed standards for imported meat products;

(c) it meets the prescribed standards for imported meat products; and

(d) it is packaged and labelled in the manner prescribed.

(2) Every person who imports a meat product into Canada shall, as soon as possible, deliver it, in its imported condition, to a registered establishment for inspection by an inspector.

(3) No person shall have in his possession an imported meat product that the person knows

(a) has been imported into Canada in contravention of subsection (1);

or

(b) has not been delivered to a registered establishment for inspection as required by subsection (2).

26 SOR/90-288, as amended.

27 There are also certain conditions which must be met in dealing with condemned materials. For example, paragraph 54(1)(b) of the *Meat Inspection Regulations, 1990* provides that federally registered slaughterers must identify condemned material, convey it to the inedible products area of their establishments, and then either render it themselves or denature it and convey it either to another registered establishment *or* to a rendering plant. Notably though, paragraph 54(1)(b) does not seem to place any interprovincial restrictions on the location of the rendering plant to which the condemned materials are shipped.

28 R.S.O. 1980, c. 260, as amended.

29 R.R.O. 1980, Reg. 607, s. 108.

30 R.S.O. 1980, c. 112, as amended.

31 Transcript at 173 (26 November 1991).

32 James A. Ransweiler, Vice-President and Division Manager of the Great Lakes Division of Darling & Company, Ltd., gave evidence with respect to the past and present activities of Darling. That evidence was given in confidence. Where the facts found in these reasons do not coincide with that evidence this should not be taken as a reluctance to refer to Mr. Ransweiler's evidence because it was given in confidence but rather as a decision by the Tribunal that it does not wish to give that evidence much weight.

33 *Supra*, note 21.

34 R. Whish, *Competition Law* (London: Butterworths, 1985) at 216.

35 *Ibid.* at 218-19.

37 Expert Affidavit of David D. Smith at para. 32 (Exhibit A-4); Expert Affidavit of Thomas W. Ross at para. 38 (Exhibit A-1).

38 A small amount of material was also being taken out of the market to Quebec by Phil's Recycling. As has been noted, the Tribunal does not consider Quebec renderers to be established in the relevant market.

39 Applicant's Selected Documents, vol. 1, tab 14 at 11 (Exhibit A-7).

40 Transcript at 246 (26 November 1991).

41 *Ibid.* at 500 (2 December 1991).

42 *Supra*, note 19.

43 *Prima facie* is being used in its ordinary dictionary meaning of "at first sight" or "on first impression". This does *not* signify that the Director has by merely proving market share thereby proved his case subject to whatever rebuttal evidence the respondents might adduce. A responsibility still remains with the Director despite the market share evidence to adduce some evidence regarding barriers to entry.

44 Sometimes referred to in the evidence as "CR4".

45 The HHI was derived from oligopoly theory; see G.J. Stigler, *The Organization of Industry* (Homewood, Ill.: R.D. Irwin, 1983) at 31; Expert Affidavit of David D. Smith at para. 43 (Exhibit A-4).

46 H. Hovenkamp, *supra*, note 8 at 304-305.

47 Expert Affidavit of David D. Smith at para. 44 (Exhibit A-4). In the United States, if the HHI increases by more than 100 as a result of the merger and the post-merger HHI is between 1,000 and 1,800, then the merger is likely to be challenged. If the post-merger

HHI is over 1,800 and the increase as a result of the merger is over 50, then the merger is likely to be challenged. (*1984 [U.S.] Justice Department Merger Guidelines*, 49 Fed.Reg. 26,823 (1984) at para. 3.11(b)). Thus, the Director's expert is applying a higher test than pertains in the United States, an approach which will likely be more appropriate for Canadian industries which will often already be highly concentrated.

48 Expert Affidavit of Thomas W. Ross, table 1 at 15 (Exhibit A-1). Dr. Ross' analysis assumes market boundaries of 200-250 miles and one restricted by the Canada-United States border.

49 Orenco, Rothsay and Fearman were treated as one entity post-merger for the purposes of this analysis and Fearman is added to the Rothsay volumes pre-merger because that acquisition has not been challenged.

50 Transcript at 337 (27 November 1991).

51 The Tribunal has selected what we consider to be reasonable approximations although we should point out that a range of numbers was given to us respecting plant capacities and utilization.

52 This assumes that there is an ability to shift material between Rochester, N.Y. and Lowell, Mass. (see Transcript at 1080-81 (10 December 1991)).

53 On average red meat material yields 22% tallow and 24% meal. Poultry offal yields 8% (low quality tallow) fat and 20% meal. Raw feathers yield about 26-30% feather meal. (Applicant's Selected Documents, vol. 1, tab 6 at 2 (Exhibit A-7)).

54 Transcript at 523-24 (2 December 1991).

55 Applicant's Selected Documents, vol. 1, tab 38 at 1 (Exhibit A-7).

56 Expert Affidavit of Erna H.K. van Duren (Exhibit R-11).

57 Dr. van Duren noted that the amount of renderable material which would be available in the future depends upon: (i) the number of animals slaughtered; (ii) the carcass size; and (iii) the proportion of the carcasses which is renderable. She assumed a carcass size for her model that was equal to the 1990 levels. She noted that insofar as the proportion of renderable material to carcass size is concerned, over the years there have been significant reductions in this regard as leaner and leaner cattle have been bred. The most significant factor for present purposes, however, is the drop in cattle slaughter which has occurred and is occurring in Ontario as a result of both the decrease in consumer demand for red meat and the shift westward of cattle-rearing and slaughtering operations. She looked at the declines which have occurred between 1981 and 1990 and made estimates for the next five years on the assumption that such trends would continue.

58 Expert Affidavit of Fred D. Bisplinghoff at paras. 23, 39-41, 66 (Exhibit R-8).

59 Transcript at 246ff (26 November 1991).

60 See also Joint Book of Documents, vol. 17A, tab 74 at 36 (Exhibit JB-17A Confidential):

We are in a mature market. The only way a renderer can significantly increase his supply of raw material is by obtaining an existing supply. Hence, we do expect to see further rationalizations of the industry. These changes will see packer renderers no longer rendering, and independent custom renderers being bought-out by larger competitors.

72 Supplemental Affidavit of Donald G. McFetridge at para. 11 (Exhibit R-20).

73 With respect to the admonition in subsection 96(3) of the Act that a gain in efficiency shall not be considered appropriate for a decision if it arises "by reason only of a redistribution of income between two or more persons", while this is not relevant given the conclusion that the Tribunal has reached with respect to the cause of the cost saving in question, it is useful to refer to the comments of the former Director of Investigation and Research in a speech on October 15, 1988. These provide content to the subsection 96(3) exception:

... gains in efficiency that are pecuniary in nature, that is arising as a result of a distribution of income between two or more persons, are unacceptable.

By way of illustration, cost savings that result when a firm is able to use increased bargaining leverage to extract volume discounts from suppliers are not eligible per se for consideration. The fact that the purchaser is able to obtain products at a reduced cost in these circumstances is only a transfer of income from suppliers. However, cost savings resulting from larger volume orders, which enable the purchaser to attain economies of scale or incur lower transaction costs, may reflect real efficiency gains and consequently may be accepted for consideration. If the placement of larger volume orders also enables the supplier to reduce costs, part of which are transferred to the purchaser in the form of lower prices, then that part may also qualify as real efficiency gains. Other examples where such pecuniary gains in efficiency may arise, and are thus not allowable, might be found in labour procurement situations and tax savings matters. (C.S. Goldman, "Mergers, Efficiency and the Competition Act: Notes for an Address", Commercial and Consumer Workshop, Faculty of Law, McGill University, Montreal, Quebec, October 15, 1988).

And an explanation found in Areeda also sheds light on this concept:

In addition to the "technological" economies of scale ..., many large firms enjoy "pecuniary" economies of scale to some degree, for example, higher discounts for volume advertising or lower rates for heavy utility use not related to resource savings. Unlike technological economies, these pecuniary economies do not represent long-run savings in the use of socially valued resources. And they may raise barriers to entry in some cases. Indeed, pecuniary economies may be a euphemism for the surplus profits made possible by monopoly on the buyer's side of the market. Monopsony, as buyer monopoly is called, spoils economic efficiency just as seller monopoly does. Consequently, restructuring of large firms can hardly be resisted on the ground that it would deprive them of pecuniary economies. (*Supra*, note 69 at 36.)

VI CONCLUSION

VII DISPOSITION

I — Introduction

2 This appeal is brought by the Director of Investigation and Research (the "Director") from that part of the decision of the Competition Tribunal (the "Tribunal") dated June 2, 1992 (the "decision") wherein the Tribunal dismissed the Director's

application for an order under s. 92 of the *Competition Act* , R.S.C. 1985, c. C-34 (the "Act") requiring Southam Inc. ("Southam") to divest itself of two community newspapers published in the lower mainland of British Columbia. The Director was unable to persuade the Tribunal that Southam's acquisition of the two community newspapers and its ownership of the only two daily newspapers published in the lower mainland was likely to prevent or lessen competition substantially in the retail print advertising market.

3 This appeal is of significance, not only because it is the first contested merger case under s. 92 of the Act to reach this Court, but because it also raised three fundamental issues. The first stems from the Director's allegation that the Tribunal erred in failing to apply its stated approach to product market definition. As will become apparent, the analytical framework for determining whether the products produced by two merging firms are sufficiently close substitutes so as to be placed in the same product market is critical to the achievement of the objectives underlying the merger provisions of the Act. The second and third issues represent two of Southam's principal responses to the Director's allegation.

4 First, while denying that the Tribunal committed any reviewable error, Southam maintains that the question of market definition is one of fact for which leave to appeal is required pursuant to subs. 13(1) of the *Competition Tribunal Act* , R.S.C. 1985, c. 19 (2nd Supp.). Such leave not having been sought, it is maintained that this Court lacks the requisite jurisdiction to review the Tribunal's Decision. Second, and alternatively, even if market definition is found not to be a question of fact, Southam maintains that the Tribunal's findings on this issue fall squarely within its area of expertise and, accordingly, its decision must be treated with the degree of curial deference prescribed by the Supreme Court of Canada in *Bell Canada v. Canada (Canadian Radio-Television and Telecommunications Commission)*, [1989] 1 S.C.R. 1722 , and more recently in *Pezim v. British Columbia (Superintendent of Brokers)*, [1994] 2 S.C.R. 557 . Implicit in this argument is the understanding that "correctness" is not the appropriate standard of review in this appeal.

II — Background

1. The Litigation

5 Southam is a diversified Canadian communication company whose principal business is newspaper publishing. Through a wholly-owned subsidiary, Pacific Press Limited, Southam currently owns the two Vancouver area daily newspapers, the "Vancouver Sun" and the "Province" (the "Pacific Dailies"). Both papers are circulated in the Lower Mainland of British Columbia and throughout the rest of the province. In a series of transactions carried out in 1989 and 1990, Southam acquired a direct or indirect controlling interest in thirteen community newspapers in the lower mainland, including the "North Shore News" and the "Vancouver Courier". As well, Southam acquired three distribution businesses, two printing businesses and the "Real Estate Weekly", a real estate advertising publication. Prior to the acquisitions, there were two independent competitors in the North Shore market for print real estate advertising: the "Homes" supplement of the "North Shore News" and the North Shore edition of the "Real Estate Weekly".

6 Following these acquisitions, the Director applied to the Tribunal for an order pursuant to s. 92 of the Act requiring Southam to dispose of its interests in the two community newspapers identified above, as well as the "Real Estate Weekly". The Director alleged that control by Southam of the two community newspapers was likely to lessen or prevent competition substantially in the supply of print *retail* advertising services in various markets throughout the Lower Mainland. He also alleged that the acquisition of the "North Shores News", with its Homes Supplement, and the North Shore edition of the "Real Estate Weekly" would lessen or prevent competition substantially with respect to print *real estate* advertising services on the North Shore. In this appeal, we are not concerned with the dispute regarding Southam's acquisition of the "Real Estate Weekly". That issue is the subject of an appeal initiated by Southam for which separate reasons have issued (see *Canada (Director of Investigation and Research) v. Southam* , A-1668-92, August 8, 1995 [reported at p. 68, post]). Accordingly, these reasons apply solely to that part of the Tribunal's decision [now reported at (1992), 43 C.P.R. (3d) 161] dealing with the acquisition of the two community newspapers and the print retail advertising services which they and the Pacific Dailies offer.

2. Lower Mainland Newspaper Industry

7 An important source of revenue for the Pacific Dailies is the sale of advertising to retailers. In 1991, the "Vancouver Sun" and the "Province" generated in excess of $98 and $46 million respectively in advertising revenues. Prior to the acquisitions, Southam had no interest, direct or indirect, in any community newspaper in the Lower Mainland.

8 The "North Shore News" is a controlled distribution community newspaper delivered free of charge three times a week to approximately 62,000 households in areas of Vancouver collectively referred to as the North Shore. It is common ground that this is an extremely affluent area of Vancouver and thus of particular interest to Lower Mainland advertisers. Of the approximately 1,000 community newspapers in Canada, the "North Shore News" is one of the largest (Decision at 242). In 1989, this newspaper generated gross advertising revenues of $9 million.

9 The "Vancouver Courier" is also a community newspaper distributed free of charge to households on the West side of the City of Vancouver every Wednesday and Sunday. The Sunday edition, however, is distributed to households on the East and West sides of Vancouver, thereby increasing circulation to approximately 120,000. This community newspaper went into receivership in 1979 after attempting to publish on a daily basis, but subsequently was revitalized. In 1989, it generated gross advertising revenues of $4.5 million.

10 The daily newspaper industry has been in decline throughout North America over the last decade where average household penetration (the number of copies sold per 100 households) has fallen, as has the industry's share of total net advertising revenues (Decision at 170-71). This phenomenon is equally applicable to the Pacific Dailies in the Lower Mainland. The "Sun"'s average household penetration in its given city zone fell from 43% to 33% between 1985 and 1990. The "Province's" penetration dropped from 25% to 22% during the same period (Decision at 173).

11 While the Pacific Dailies are said to be "uncommonly weak" in the Lower Mainland, the Tribunal found that the community newspapers are "uncommonly strong" (Decision at 268). Unlike any other Canadian city, there are prospering community newspapers in all parts of the Pacific Dailies' city zone. The relative strength of these community newspapers is attributed to the growing trend of retail advertisers for targeted marketing. Retailers place a premium on advertising vehicles that allow them to focus their message on specific trading areas with high household penetration. Daily newspapers, with their broad geographic circulation and comparatively low household penetration levels, are said to be ill-suited to meeting those targeted needs (Decision at 271-72, 277-78).

12 The decline of the Pacific Dailies in relation to the community newspapers was also explained by the Pacific Dailies' high and largely fixed costs. One group of advertisers use the community newspapers because they obtain local penetration in their trading areas at a lower cost than is possible with the Pacific Dailies (Decision at 189-90, 277-78). The comparatively high cost of advertising in the Pacific Dailies has also caused many large multi-outlet retailers to shift their print advertising from "run-of-press" display ads to pre-printed inserts or what are commonly referred to as "free-standing flyers". These cost less to produce and offer advertisers more control over printing, quality design and distribution (Decision at 246). Most flyer advertisers require high levels of penetration in their targeted markets, which the Pacific Dailies alone cannot provide. By comparison, community newspapers are ideally suited to meet the distribution demands of flyer advertisers (Decision at 272).

13 In an attempt to improve the performance of the Pacific Dailies, Southam implemented a number of measures beginning in 1987. First, Southam introduced "Flyer Force", a flyer distribution business which competed with the flyer services of the community newspapers. In so doing, Southam attempted to address the existing shortcoming in circulation and penetration by establishing an extended market coverage system in the Lower Mainland that would supplement the Pacific Dailies' reach by delivering flyers on behalf of the papers' advertisers to both subscribers and non-subscribers. "Flyer Force" lost an average of $2 million per year while in operation and was terminated in early 1991 following Southam's acquisitions, with losses totalling approximately $10 million (Decision at 194). Part of the 1989-1990 acquisitions included three flyer distribution businesses which Southam believed to be the only ones considered reliable by advertisers (Decision at 240-41).

14 As a further measure to improve the performance of the Pacific Dailies, Southam decided, in 1988, to build a new plant in Surrey. The primary purpose of the new plant was to introduce a more modern, lower cost facility than the existing one. However,

the Surrey Plant proposal offered the additional rationale of contributing to the launch of zoned supplements by Southam as a means of competing with the community newspapers (Decision at 195-96). A zoned supplement is a section of a daily newspaper containing advertising and editorial content of specific interest to a geographic community within the newspaper's circulation area. Southam did in fact proceed with one such supplement, the "North Shore Extra", which was made part of the "Vancouver Sun" on the North Shore. It was also distributed by "Flyer Force" as a stand-alone publication to households on the North Shore which were not "Vancouver Sun" subscribers. The "North Shore Extra" was launched in September, 1988, but discontinued in April, 1990. Prior to its discontinuance, the "North Shore Extra" was losing $20,000 per month (Decision at 197). Following the acquisitions, Southam did not proceed with its plan for zoned supplements in other parts of the Lower Mainland.

15 The community newspapers respondent to these so-called "product innovations" introduced by Southam by forming groups offering advertisers the opportunity to purchase multiple advertising at a discount in one or more of the community newspapers within the group (see Decision at 257-59). The first successful effort was the formation of "MetroVan" in 1988 which included both the "Courier" and "North Shore News". Later in 1988, the "MetroVan" newspapers formed "MetroGroup" with ten community newspapers owned by Trinity Holdings Inc. Trinity Holdings also co-ordinated its papers' discount rates through "MetroValley". The purpose of "MetroGroup" was to challenge the Pacific Dailies for national and major retail advertising revenues in the Lower Mainland. The "North Shore News" and the "Vancouver Courier" remained members of the "MetroGroup" until acquired by Southam which, in 1990, established another community newspaper group: "VanNet Group". That group consisted of twelve of the thirteen community newspapers acquired by Southam, including the "Courier" and the "North Shore News", as well as a number of other publications.

III — The Parties' Position Before The Tribunal

1. The Director

16 On July 8, 1991, the Director filed an amended application for an order requiring, inter alia, the divestiture of the "North Shore News" and the "Vancouver Courier" on the ground that their acquisition by Southam was likely to prevent or lessen competition substantially in the market for "newspaper retail advertising services" in the North Shore and the City of Vancouver respectively. As to a "lessening of competition, the Director alleged that the merger was "likely to enable Southam to unilaterally impose and maintain a material price increase in a substantial part of the [relevant retail advertising market] for a substantial period of time" (Amended Notice of Application, Appeal Case Vol. 1, pp. 100 and 206). The Director argued that there were two ways in which a price increase could be implemented by Southam. First, it could raise the advertising rates in the "North Shore News" and the "Vancouver Courier" to supra-competitive levels. Alternatively, the Pacific Dailies as well as the two community newspapers could raise their rates (Decision at 269).

17 The Director also alleged that the acquisition of the two community newspapers in question was likely to "prevent" competition substantially "for the supply of multi-market newspaper retail advertising services throughout the Lower Mainland" (Amended Notice of Application, Appeal Case Vol. 1, p. 215). The thrust of this argument is that the acquisition of the two community newspapers in question, which were the strongest community newspapers in the Lower Mainland, prevented the formation of an effective community newspaper group that was independent of the Pacific Dailies (Decision at 287). In short, the "Courier" and the "North Shore News" would not be participating in a community newspaper group which could offer effective competition against the Pacific Dailies. The Director also alleged that the acquisitions would prevent entry by a new daily using the "North Shore News" or a successful community newspaper group as a springboard (Decision at 207).

2. Southam

18 Southam's initial argument was that the Pacific Dailies and the community newspapers are not in the same product market. That is to say that retail print advertising services in the Pacific Dailies is not a close substitute for that available from community newspapers, which offer higher household penetration at a lower cost when compared with the Pacific Dailies (Amended Response, Appeal Case Vol. I, p. 247). During the course of argument before the Tribunal, Southam maintained that retailers advertising in the community newspapers would not be sensitive to changes in price because they are using what they regard as a superior product, a product for which retail advertising in the Pacific Dailies is not a substitute (Decision at 276).

Alternatively, Southam argued that if the product market was found to embrace pring advertising in both the Pacific Dailies and community newspapers then it would be appropriate to broaden the market to include all other advertising channels, including television, radio, free-standing flyers (Decision at 178-79). Failing these arguments, Southam maintained that the acquisitions did not substantially lessen or prevent competition in the relevant market.

IV — The Tribunal's Decision

19

1. Analytical Framework (Decision at 171-183)

20 The Tribunal stated that the central concern underlying merger analysis is whether the impugned merger will create, increase or preserve market power, which is defined as the ability of a firm or group of firms to maintain prices above the competitive level (Decision at 177-78). As a framework of analysis, the Tribunal accepted that it is first necessary to determine the relevant market within which market power can be measured. A relevant market has both a product and geographic dimension.

21 Since the geographic dimension of the market was not contested, the Tribunal addressed the product dimension in terms of whether the products offered by the merging firms are close substitutes. In turn, it was recognized that substitutability could be measured, at least in principle, by the extent to which buyers would switch from one product to another in response to changes in relative prices. As direct evidence of such, known as cross-elasticity of demand, was not available the Tribunal determined that it was necessary to draw on more "indirect evidence". At p. 179, [43 C.P.R. (3d)], the Tribunal set out the framework that was to be followed:

> Whether two or more goods or services are close substitutes can in principle be measured by the extent to which buyers would switch from one to another in response to a change in relative prices. This measurement, the cross elasticity of demand, is rarely available. In practice it is usually necessary to *draw on more indirect evidence such as the physical characteristics of the products, the uses to which the products are put, and whatever evidence there is about the behaviour of buyers that casts light on their willingness to switch from one product to another in response to changes in relative prices. The views of industry participants about what products and which firms they regard as actual and prospective competitors are another source of evidence that is sometimes available* . In this case, the views of industry participants — newspaper suppliers and advertisers, including representatives from advertising agencies — have been the main source of information. This has been supplemented by the view of experts concerning the extent to which media and advertising vehicles may be substituted. The Director has relied very heavily on the views expressed in the internal documents of Southam and Pacific Press regarding competition between the dailies and the community newspapers and the means of confronting that competition. (emphasis added)

22 The Tribunal's extensive analysis (300 pages) deals initially with five topics: similarities and differences between daily and community newspapers in terms of product configuration; views and be haviour of Southam; views and behaviour of individual community newspapers in the Lower Mainland; views and behaviour of retail advertisers; and evidence relating to community newspaper groups. After arriving at certain critical conclusions regarding product market, the Tribunal proceeded to canvass two other topics: entry into community newspaper publishing and the matter of substantial lessening and prevention of competition.

23 Before reviewing the topics set out above, the Tribunal considered what was meant by "newspaper retail print advertising services" which had been alleged by the Director to be the relevant product market. The Tribunal held that it consisted of retail advertising using display, or "run-of-press" advertising, which is advertising interspersed with editorial content. By definition, classified advertising was excluded as was national advertising because of "price discrimination", a concept which need not be addressed herein (Decision at 181). However, the Tribunal also found that the product in question included flyers inserted into newspapers or otherwise delivered (Decision at 183).

2. Similarities/Differences between Dailies/Community Newspapers (Decision at 184-90)

24 In the context of retail print advertising, the Tribunal found that the most important differences between daily and community newspapers are circulation, penetration and cost. Community newspapers offer high penetration in local areas, which the Tribunal found to be a relative strength over dailies. Differences in penetration and circulation also translate into different advertising rate structures for the Pacific Dailies and community newspapers. While the former's advertising rates are much higher than the latter's, the Tribunal found it difficult to make price comparisons because of the different attributes of the respective newspapers. Despite that difference, the Tribunal concluded that many retailers are willing to use either the Pacific Dailies or the community newspapers, or both, and that for them the critical considerations relate to coverage and penetration (Decision at 187).

25 The Tribunal also found that many advertisers in community newspapers are local retailers who draw their customers exclusively or primarily from the area covered by the community newspaper. These local advertisers are attracted to the lower cost and higher penetration offered by community newspapers (Decision at 189). The Tribunal found that 50% of the advertisers in the community newspapers were local advertisers whose trading area was too small to use the Pacific Dailies profitably. The Tribunal excluded this group of advertisers from the relevant market because these advertisers would not switch to the Pacific Dailies in response to small changes in relative price in the community newspapers. At pp. 189-190 [43 C.P.R. (3d)], the Tribunal reasoned:

> There is therefore no debate about the existence of a significant volume of advertising by retailers that do not qualify as part of the relevant market. The relative size and the price sensitivity of this group of advertisers are critical to a determination of the likely effects of the acquisitions. This group disciplines the ability of the community newspapers to raise prices in a way that is independent of competition with the dailies. If the community newspapers were to raise prices, roughly 50% of their retail advertisers (by revenue) would either swallow the increase or reduce their volume in part or altogether. While they might move to other vehicles, the dailies would not benefit.

26 In light of this finding, the Tribunal indicated that it remained to be determined whether the remaining 50% of advertisers that use or might use the Pacific Dailies regard them and the community newspapers as substitutes "in the sense that these advertisers would change the volume of advertising from one vehicle to another in response to small changes in relative price" (Decision at 190).

3. Views and Behaviour of Southam (Decision at 191-213)

27 The Tribunal found that Southam was concerned by the strength of the community newspapers in the Lower Mainland. However, it also held that the fact that Southam may have regarded the community newspapers as competitors was not in and of itself sufficient to place them both in the same product market: "Competition means many things to many people" (Decision at 191). The issue remained whether the Pacific Dailies and community newspapers are effective substitutes for retail print advertising services. The Tribunal did acknowledge, however, that the views expressed by Southam were an "important source of information" and that the Director had relied heavily on the views expressed by Southam in its internal documents (Decision at 179 and 191).

28 In this regard, the Tribunal reviewed: (a) a consulting report prepared for Southam; (b) Southam's introduction of a flyer distribution business and a zoned supplement on the North Shore; (c) Southam's concern with respect to price sensitivity of advertisers; (d) Southam's reasons for acquiring the "Courier" and the "North Shore News"; and (e) marketing to the Pacific Dailies.

(a) The Urban Report (Decision at 192-193)

29 In 1986, Dr. Christine Urban, a newspaper industry consultant, was hired by Southam to prepare a study and to recommend strategies for improving the performance of the Pacific Dailies. Dr. Urban found that the community newspapers were at least partly responsible for the relatively low advertising revenues earned by the Pacific Dailies when compared to dailies operated by Southam in other parts of the country. In her report she stated (Decision at 192):

> What is the reason for this substantial difference in market performance seen between Vancouver and other markets? We believe strongly that it is the large number of aggressive weeklies in Vancouver, which are siphoning revenues (logically) due to the Sun and/or Province by virtue of their readership and market presence.

30 Dr. Urban's report also considered several strategies for improving the performance of the Pacific Dailies. Ultimately, she recommended that Southam adopt a strategy to reduce the Pacific Dailies' high costs. Although not part of her principal strategy, Dr. Urban also recommended that Southam "construct a strategy" to compete with the community newspapers. At p. 192 of its Decision, the Tribunal reproduced the relevant portion of her report:

> Despite these factors, Pacific Press must consciously and proactively construct a strategy to aggressively compete with the weeklies: a strategy that, at worst, will continue to preserve the dailies' 27% share and, at best, blunt the weeklies' ability to form better/stronger confederations. It would be especially dangerous if the weeklies were given any "open" period of time in which to operate with impunity, consolidating the gains they may have made with major advertisers and having the opportunity to teach advertisers new comparative criteria for their selection of print media.

31 With respect to this passage, the Tribunal made two initial comments. First, the reference by Dr. Urban to the 27% share consisted of "total local advertising dollars spent on all media" in the Lower Mainland which suggested a broad view of the market. On the other hand, the Tribunal observed that "there is no discussion in the report that relates to media or advertising vehicles other than community newspapers." The Tribunal accepted the fact that the community newspapers continued to gain strength after 1985 as evidenced by the fact that they had an increasing share of overall advertising revenues. The Tribunal concluded that the community newspapers in the Lower Mainland continued to grow relative to the Pacific Dailies (Decision at 193).

(b) Flyer Force and North Shore Extra (Decision at 193-200)

32 As discussed earlier, Southam adopted a number of measures in an attempt to attract more advertising. The first was the introduction of "Flyer Force", a flyer delivery system delivering to households in a given circulation area, including those that do not subscribe to the Pacific Dailies. The Tribunal found that while "Flyer Force" was in existence, the Pacific Dailies and the community newspapers were in the same relevant product market and that it was most likely that "Flyer Force" was discontinued for financial reasons and not because of the acquisitions (Decision at 195 and 197).

33 The second step adopted by Southam was the introduction of a zoned supplement. When the decision was taken in 1988 to build a new printing plant, one of the additional rationales offered for the project was that the plant could contribute to the planned launch of zoned supplements as a means of competing with the community newspapers. This rationale was offered by Mr. Perks, a Southam executive, in a document reproduced in part by the Tribunal at p. 195 of its Decision:

> As shown in the 1986 Urban Report ... the community newspapers in 1986 held an abnormally high share of the Lower Mainland print medium advertising and flyer distribution business.
>
> Despite the introduction of Flyer Force, which in 1988 will produce $2 million positive swing in the contribution of inserts to Pacific Press, *the community newspapers continue to consolidate their position* . [This statement of Flyer Force's contribution seems highly exaggerated in light of the available information on the Sun's insert revenues discussed above.]
>
> Pacific Press has delayed plans to launch the first "Sun Plus", which is the working title for a series of weekly zoned products. Profit pressure in 1988 caused this delay. *Unless we are prepared to concede (forever?) a substantial portion of what is normally daily newspaper business to the community newspapers, this project must be activated in 1989* .

(emphasis added)

34 Mr. Perks testified that he included the references to the zoned supplement at the request of the Pacific Dailies' management and that he did not believe that the zoned supplement could succeed in regaining lost business. His view was that an "irreversible flow" to the community newspapers had occurred (Decision at 196).

35 The "North Shore Extra" was the only community newspaper launched by Southam but was discontinued shortly after the acquisition of the "North Shore News". With respect to the "North Shore Extra", the Tribunal concluded that its introduction indicated that the Pacific Dailies, in their traditional format, were not in the same product market. The Tribunal asked: "If the dailies and the community newspapers are already in the same market, why would the dailies consider starting community newspapers?" (Decision at 200). [The issue is not whether daily and community newspapers are in the same product market as suggested by this passage: see also Decision at 274-75 and the Tribunal's ultimate conclusion on this point at 278.]

(c) Price Sensitivity of Advertisers (Decision at 200-201)

36 At p. 200 of its Decision, the Tribunal reproduced a portion of a Southam document suggesting that if one of the Pacific Dailies, the "Province", were to raise its advertising rates substantially, that paper would lose its "low-end" advertisers. That document reads in part:

> But none of these reasons will entice clients who cannot afford Pacific Press rates. They will be forced to go to the weeklies. If the Province were to dramatically raise its ad rates, Pacific Press would then be leaving the low end of the market to the weeklies.

37 The Tribunal concluded that this type of evidence was not useful in deciding whether two products are close substitutes in the sense that "... a small change in the price of *either* product will result in a shift of purchases" [Tribunal's emphasis]. Evidence with respect to advertisers for whom affordability was not a problem was felt to be a better indicator of substitutability. The full reasoning of the Tribunal is found at pp. 200-201:

> Even this bald statement is not free of ambiguity with respect to substitutability between the dailies and the community newspapers. While some form of substitution is implied in the quotation, it is not of the sort that one ordinarily looks for in deciding that two products are close substitutes and therefore in the same market, namely, that a small change in the price of *either* product will result in a shift of purchases. The quotation implies that advertisers would be forced by limited budgets to switch from the dailies to the community newspapers. At least as important as the expressed concern about these advertisers in the absence of any reference to a loss of advertisers for whom affordability was not an issue. Movement by those advertisers to the community papers consequent upon a daily increase would more clearly indicate substitutability.

(d) Reasons for Acquisitions — Prices Paid (Decision at 201-209)

38 The Tribunal considered whether the acquisition of the two community newspapers in question was for investment purposes or whether the motivation was to eliminate these newspapers as competitors of the Pacific Dailies and to preclude other potential buyers from taking advantage of the former's strategic value (Decision at 201). One strand of evidence consisted of documents but prepared by Southam executives. Another strand related to the prices paid for the two community newspapers.

39 With respect to the documentary evidence, the Tribunal turned to a memorandum prepared by Mr. Perks and distributed to other executives in preparation for a meeting with the Southam board regarding the acquisition of the community newspapers. That document together with the testimony of Mr. Perks led the Tribunal to conclude that the acquisitions were intended to achieve three strategic purposes: (1) to prevent the possibility of the "North Shore News" being purchased for the purpose of launching a third daily in competition with the Pacific Dailies; (2) to preclude financial losses to the Pacific Dailies and a corresponding benefit to the community newspapers in the event of the former experiencing further labour problems; and (3) to prevent the formation of a hostile community newspaper group (Decision at 202).

40 As to the strategic importance of the "North Shore News" as a springboard to a third daily, the Tribunal held that this evidence was not relevant to the issue of product market. Rather it went to the question of whether the acquisitions had the effect of substantially preventing competition (Decision at 202).

41 With respect to the second strategic purpose, the Tribunal acknowledged the permanent losses suffered by Southam as a result of a number of labour strikes. The Pacific Dailies had been shut down by a strike in November, 1978, to July, 1979, and again for two months in 1984. A rumoured strike in 1987 never materialized. During these periods, the community newspapers benefitted greatly as "[c]ustomers of the dailies flocked to [the community newspapers] to fulfil their newspaper advertising needs" (Decision at 204). However, the Tribunal characterized the fact that advertisers turned to community newspapers during strikes as "very weak evidence of substitutability since they had little choice" (Decision at 204). Such evidence merely established that, in the short run, community newspapers are the closest substitutes for the Pacific Dailies. [These conclusions do not relate to the question originally posed. As for the third strategy, it was inexplicably dealt with under the issue "prices paid".]

42 The evidence disclosed that Southam had paid a premium price for both the "North Shore News" and the "Vancouver Courier" (Decision at 208). The Director argued that this evidence supported the view that these community newspapers were acquired for strategic or anti-competitive reasons and not for investment purposes. The Tribunal concluded that the two community newspapers were not purchased solely as stand-alone investments (Decision at 209). The Tribunal then went on to determine that the evidence was inconclusive as to whether they were purchased for the purpose of defeating a hos tile community newspaper group. The evidence merely showed that the "Vancouver Courier" and "North Shore News" were more valuable in combination than when operated and marketed separately (Decision at 209).

(e) Marketing of the Pacific Dailies (Decision at 209-213)

43 In support of his argument that the Pacific Dailies and the community newspapers are in the same product market, the Director referred to market research efforts by the Pacific Dailies and to brochures and other marketing aids prepared for the use of their sales representatives when dealing with advertising clients. Generally, the Tribunal did not find the evidence helpful as the research efforts embraced all types of advertising and not just the print media (see Decision at 208-12).

44 Another strand of evidence related to the efforts of the Pacific Dailies to track those persons who were advertising in the community newspapers and the flyers carried by them for the purpose of identifying potential advertisers. While Southam's witness testified that tracking had been confined to advertising in the flyers, the Tribunal accepted the evidence of the Director's witness that tracking had been carried out with regard to both. The Tribunal concluded, however, that this evidence involved "only one of many strands bearing on the delineation of the product market" (Decision at 213).

4. Community Newspapers Viewpoint (Decision at 213-18)

45 The Tribunal found that the sales department of the "North Shore News" monitors all media on the North Shore for leads, including magazines, television and radio, in addition to the Pacific Dailies. The only significant conclusion of the Tribunal is found at page 216:

> Thus, it is apparent that North Shore News sales staff continue to approach all major daily advertisers. The North Shore News continues to survey its readers in order to develop arguments that their representatives can use when soliciting advertisers that use the dailies, with particular emphasis on comparative penetration.

5. Views and Behaviour of Advertisers (Decision at 218-57)

46 The Tribunal considered the anecdotal evidence of a number of advertisers regarding their use of electronic media and print advertising. With respect to the former, the Tribunal concluded that it was a weak substitute for print advertising and therefore these two products were not in the same market. The Tribunal reasoned that there are two ways to establish substitutability between print advertising and electronic media. One is through "a direct response to a price change that leads to a change in the use of advertising vehicles" (Decision at 221). On this point, the Tribunal found that the witnesses did not refer to "single"

where a switch was prompted by a change in prices. The other means of establishing substitutability was by reference to indirect evidence that the two vehicles are used for the same purpose. The Tribunal found that multiple price/product advertising cannot be produced effectively other than in print and particularly in newspaper display advertising and flyers. Accordingly, advertising on television and radio was found not to be close substitutes for display advertising purposes (Decision at 224-25).

47 As for those using display advertising, the Director produced several witnesses in support of his argument that retail advertisers in the Lower Mainland regard the Pacific Dailies and community papers as interchangeable vehicles for conveying their advertising message to consumers. The Tribunal found that the Director's advertising witnesses were not always clear on the rationale for their print advertising strategies. As well, the Tribunal observed that the Director did not systematically pursue the question of price sensitivity as between daily and community newspapers (Decision at 235-36). Some witnesses were not asked how they would respond to a hypothetical price increase in either the Pacific Dailies or the community newspapers. Some who were so asked testified that they would not return to the daily newspapers even if confronted by a rate increase because of the latter's poor penetration in the trading areas (Decision at 236-37).

48 The only other evidence of price sensitivity was a survey conducted by Angus Reid on behalf of Southam (see Decision at 251-257). However, the Tribunal held that the results of the survey could not be relied upon because of a serious methodological error made in the course of the survey. Consequently, the survey's results were ignored by the Tribunal.

49 In the final analysis, the Tribunal found that there was no direct evidence that display advertisers would switch between the Pacific Dailies and community newspapers in response to a change in relative prices. With respect to indirect evidence of substitutability, the Tribunal held that the similar purposes achieved by advertising in the Pacific Dailies and the community newspapers should not be adopted when evaluating substitutability. At p. 238, the Tribunal reasoned:

> As with substitution between the print and electronic media, substitution between daily and community newspapers can be shown directly or indirectly. The first type of evidence has not been apparent in the testimony of the Director's advertiser witnesses. The changes in newspaper use were not prompted by any discernible change in prices. With respect to indirect evidence of the use of both for the same purpose, it is a matter of determining whether "purpose" can be inferred from the content of the advertisement and the circumstances related to the use of a particular vehicle. Almost by definition it can be said that community newspapers are used to reach customers in the respective areas where the papers are distributed and that dailies are used to reach customers throughout the Lower Mainland. It is not helpful to adopt this notion of purpose when evaluating whether dailies and community newspapers are effective substitutes.

6. Community Newspaper Groups (Decision at 257-268)

50 In considering evidence relating to community newspaper groups, the Tribunal noted that it was not possible to determine whether the new business attracted to the community newspapers was a result of the availability of group discounts or "simple adjustments in the way existing advertisers deal with the various community newspapers" (Decision at 262). The Tribunal concluded that while there was an increase in group sales, there was no evidence to suggest that such sales constituted new advertising business. In light of the data, it was reasonable to infer that the increased sales came from existing customers who would normally have placed their advertising directly with the community newspapers (Decision at 262). The Tribunal's formal conclusion at this stage read as follows (at p. 267):

> In conclusion, on the basis of the available evidence the tribunal is not convinced that the multi-paper discount is an important factor in the community newspapers' ability to attract business from the dailies or, in fact, that the new business coming to the community newspapers through the groups would otherwise advertise in the dailies.

7. Conclusions Regarding Product Market (Decision at 268-279)

51 The Tribunal found that "community newspapers are uncommonly strong in the Lower Mainland and the dailies are uncommonly weak", a fact which concerned the Pacific Dailies and which caused them to seek "means of coping with the attraction of the community newspapers for advertisers" (Decision at 269). In broad terms, the Tribunal concluded that

the Pacific Dailies and the community newspapers were in competition but that "a more focussed analysis" was required to determine whether they were in the same market.

52 In dealing with the product dimension of the relevant market, the Tribunal referred to two "conceptual frameworks" that ran throughout the evidence and argument (Decision at 270). The so-called narrow framework focussed on Southam's post-merger ability to exercise market power and raise prices for print retail advertising in the Lower Mainland. [Presumably, this framework relates to the issue of whether the merger is likely to lessen or prevent competition substantially as the Tribunal made no further reference to same.] The broader framework was found to embrace all dimensions of competition between the Pacific Dailies and the community newspapers and consists of two parts.

53 One part addressed the Director's argument that the strength of the community newspapers could be attributed to the Pacific Dailies' inability to compete more effectively and that the success of the community newspapers at the expense of the Pacific Dailies was proof that both were in the same product market. By acquiring the community newspapers, Southam was avoiding the need to compete more effectively (Decision at 270). On this issue, the Tribunal concluded that the reasons underlying the present strength of the community newspapers was of secondary importance to the evidence that bore directly on whether the products of the respective newspapers are substitutes for one another (Decision at 272).

54 The second part of the broad approach is directed at the two ways in which the Pacific Dailies and the community newspapers could conceivably compete for advertising dollars. One is through product modifications which make the respect newspapers more attractive to purchasers, the other is with respect to price.

55 Turning to product modifications in the context of the community newspapers, the Tribunal noted that one possibility was to increase the number of weekly editions thereby providing advertisers with a broader choice and thus matching more closely what the Pacific Dailies have to offer. The second product modification referred to by the Tribunal was the creation of community newspaper groups and the attempt to attract more advertising dollars through group buys. In response, the Tribunal concluded that the evidence failed to demonstrate that this product modification was successful in attracting advertisers of the Pacific Dailies to the community newspapers (Decision at 273).

56 Turning to the product modifications introduced by the Pacific Dailies, the Tribunal acknowledged that Southam's "Flyer Force" was in the same market as the community newspapers at the time of the acquisitions. By contrast, Southam's introduction of the "North Shore Extra" was found not to be related to the main business of the Pacific Dailies and therefore the zoned supplement constituted a separate product (Decision at 274). The Tribunal concluded that the introduction of a zoned supplement did not prove that the Pacific Dailies and community newspapers were in the same market (Decision at 274-75). [At p. 278, the Tribunal held that with the introduction of the "North Shore Extra", the Pacific Dailies and the community newspapers were in the same market with respect to display advertising on the North Shore.]

57 With respect to price competition, the Tribunal was not convinced that the community newspapers, either individually or through group discounts, geared their advertising rates to the Pacific Dailies. While acknowledging that Southam was concerned that if the Pacific Dailies' advertising rates increase appreciably small advertisers would be forced to go to the community newspapers, the Tribunal deemed this weak evidence of price sensitivity because only the smaller advertisers would be so affected (Decision at 275).

58 The Tribunal then referred to the evidence of Mr. Perks who had testified to the fact that the smaller advertisers had left the "Vancouver Sun" some time ago and that there was no chance they would shift their advertising back to that paper. After stating that this evidence was consistent with the conclusion that the business lost by the Pacific Dailies to the community newspapers was part of a "one-way flow" (Decision at 196), the Tribunal posited that if "it was high rates that drove the smaller advertisers away, then lower rates could bring them back" (Decision at 275). It is at this point in its reasons that the Tribunal began its extensive analysis relating to cross-elasticity.

59 The Tribunal stated the "key question" as follows (Decision at 276):

> The key question regarding the shift from the dailies to the community newspapers is whether this is the kind of substitution that occurs when a better product is introduced, or whether it reflects the weighing of combinations of characteristics of two products that are seen as offering very similar value per dollar. In the first scenario the superior product gradually replaces the existing product. While it may appear that the products are in the same market, they are not; customers are insensitive to prices and would not return to the old product in response to a small change in relative prices.

60 The above passage raises the central issue in terms of whether advertisers are insensitive to "small change[s] in relative prices" because they view advertising in the community newspapers as a superior product for which the Pacific Dailies are not a substitute. The Tribunal then outlined the Director's position (Decision at 276):

> On the other hand, the Director's allegations imply that a sufficiently large segment of users of community newspapers and dailies are sensitive to the relative cost of the two vehicles and would significantly change which vehicle they use in response to fairly small changes in price. Counsel for the Director argues that advertising decisions are complex and that advertisers have difficulty pinpointing the role of relative prices in their decisions. This is undoubtedly true. Price i s just one of many variables that the advertisers have to take into account because advertising vehicles are highly differentiated products. Are the products in question here too highly differentiated for buyers to respond to small price changes? There are obvious differences and similarities between the dailies and the community newspapers. There is no reason to review them.

61 After stating that there are obvious differences between the Pacific Dailies and the community newspapers, the Tribunal concluded that the onus was on the Director to demonstrate that advertisers regard the two products as highly similar and that there is high demand elasticity. At pp. 276-277, the critical issue was formulated as follows:

> In light of the differences, *it is incumbent on the Director to show that buyers regard the two products as highly similar and that small changes in relative price would cause a significant shift in advertising volume between the two vehicles. Evidence showing that advertisers use one or the other vehicle mainly because of the characteristics of the particular vehicle suggests the opposite* . (Emphasis added)

62 The last sentence in the above passage indicates that advertisers remain insensitive to price changes because of the advantages or disadvantages associated with advertising in one type of newspapers as opposed to the other. Continuing on at p. 277, the Tribunal concluded:

> *There is in fact no evidence before the tribunal that advertisers are highly sensitive to the relative prices of the dailies and the community newspapers* . With community newspapers throughout the Lower Mainland, with two and sometimes three editions per week, with apparently good overall quality including secure distribution, the community newspapers appear to have become the preferred vehicle for many advertisers that formerly relied solely on the dailies. The evidence is that the ability to obtain very high household penetration in the areas from which they draw customers is a major advantage that advertisers find in community newspapers. They are unlikely to be willing to give that up simply because the cost of advertising in the dailies goes down. With their present product configurations the dailies and community newspapers are at best weak substitutes for some advertisers. (emphasis added)

63 The Tribunal's negative finding on price sensitivity was based, in part, on its finding that a "high" proportion of advertisers in the community newspapers are "... not candidates for the dailies: their trade is too local." As to "high reach" or "multi-outlet", advertisers who use both the Pacific Dailies and the community newspapers there was some evidence of price sensitivity but no evidence that it was greater than among the small advertisers in the community newspapers. [Presumably, the Tribunal was referring to the two groups of advertisers discussed earlier in its reasons; see supra at 15-16, and Decision at 189-90.] This conclusion is found at p. 277:

> A high proportion of advertisers in the community newspapers are not candidates for the dailies: their trade is too local. While there is *some* price sensitivity vis-à-vis dailies and community newspapers among multi-outlet or high reach advertisers, there is no evidence that it is greater than among the smaller advertisers in community newspapers vis-à-vis the alternatives that are open to them.

64 At page 278, the Tribunal reiterated its earlier conclusion that the evidence does not support the contention that "small changes in relative prices" would induce advertisers to shift from one type of newspaper to the other:

> Thus, the evidence regarding the demand for newspaper advertising leads the tribunal to conclude that the community newspapers and the dailies are very weak substitutes: small changes in relative prices are not likely to induce a significant shift by advertisers from one type of newspaper to the other. Although community newspapers have over time succeeded in attracting business from the dailies, this has been caused more by changes in the conditions facing advertisers than by their responses to changes in price.

65 In reaching this conclusion the Tribunal did acknowledge that the Pacific Dailies and the community newspapers had been competing for advertisers though product modifications. In regard to "Flyer Force" and the "North Shore Extra", the Pacific Dailies and the community newspapers were in the same product market with respect to display advertising. Nonetheless, the Pacific Dailies and the community newspapers were found to be too weak substitutes to be considered part of the same product market. At p. 278, the Tribunal reasoned:

> Examined solely as an unchanging product at a given point in time, the dailies and the community newspapers are too weak substitutes to be considered part of the same market. Yet, there is little doubt that they have been striving to attract many of the same advertisers. This competition has taken the form of modifications to their product offerings to take advantage of the changes in market conditions. With Flyer Force and the North Shore Extra, the Sun and the community newspapers were in the same market with respect to flyer delivery through much of the Lower Mainland and in the same market with respect to display advertising on the North Shore.

66 In passing, the Tribunal noted that advertising in the electronic media is too weak a substitute to be considered part of the relevant product market and that flyers delivered by reliable distributors are "clearly" in the same market. Finally, the Tribunal noted that the existence of community newspaper groups did not affect this conclusion as they had not had a significant impact on competition with the Pacific Dailies (Decision at 278-79).

8. Entry Into Community Newspaper Publishing (Decision at 279-285)

67 After deciding that retail print advertising services in the Pacific Dailies was not in the same product market as the community newspapers, the Tribunal went on to discuss at length certain conditions affecting entry into the community newspaper publishing business. The Tribunal commented that it was not difficult to enter this market, but that it was difficult to survive. In this regard, the Tribunal noted that the preferred method of entry was by acquisition, as evidenced by the actions of Southam. The Tribunal went on to hold that in order to make a finding that entry into the market is difficult, two factors would have to be addressed: "economies of scale" and "sunk costs". Neither factor by itself was held to be a sufficient barrier to entry.

68 Economies of scale suggests, for example, that once a community newspaper acquires a lead in circulation and in size (e.g. "North Shore News"), it gains a decisive advantage over new entrants into the market. The term "sunk costs" signifies costs incurred in starting a business but which are not recoverable in the event that it fails. The Tribunal made no finding with respect to whether either of those conditions were satisfied. After discussing the evidence relating the failure of the "North Shore Today", a short-lived competitor of the "North Shore News", the Tribunal concluded that new competitors could enter a market where an existing community newspaper was poor and entry was otherwise rewarding. At p. 284, the Tribunal reasoned:

> It is reasonable to conclude that there are a significant number of would-be entrants, such as Mr. Hopkins [editor of the short-lived North Shore Today], who would try to seize an opening created by a poor community newspaper in a community that had the potential to offer significant rewards.

9. Substantial Lessening/Prevention of Competition (Decision at 285-288)

69 After discussing the issue of market entry, the Tribunal went on to conclude that there was only a marginal likelihood that Southam's acquisitions of the "North Shore News" and the "Courier" would result in significantly higher advertising rates in the geographic markets alleged by the Director (Decision at 285):

> Since the dailies and community newspapers are weak substitutes the likelihood of the acquisitions resulting in significantly higher prices is very low. Moderate changes in relative prices are not likely to affect advertisers' choices in a significant way. Thus, if the object of the acquisitions is to protect the dailies, this can only be done through fairly dramatic changes in the prices of the community newspapers, considered collectively. Southam would have to concentrate its price increases in the Courier and the North Shore News as all the other papers it owns face significant competition from a rival community newspaper. Advertisers would switch to the rival before considering the dailies. Raising prices would undoubtedly be costly to the Courier and the North Shore News but *might* be profitable to Southam as a whole if the dailies were able to maintain prices at a higher level than they otherwise could or, alternatively, to slow down the drift of advertisers to the community newspapers. Southam does not have the market power to follow this course.

70 The Tribunal then turned to two arguments advanced by the Director with respect to whether the merger was likely to *prevent* competition. With respect to the Director's argument that the acquisitions frustrated the formation of an effective community newspaper group, the Tribunal noted that that argument could not succeed once it was found that the Pacific Dailies and community newspapers were not in the same product market. As to the Director's allegation that Southam's acquisitions prevented the possibility of another person acquiring one of the community newspapers for the purpose of launching a daily, the Tribunal rejected it on the basis that it was not likely such an event would occur (Decision at 287-88).

V — Issues/Analysis

71 The Director submits that the Tribunal erred in concluding that the Pacific Dailies and community newspapers are not in the same product market. Specifically, it is argued that: (1) the Tribunal failed to properly apply its own stated approach to defining the relevant product market by requiring direct evidence of high price sensitivity on the part of advertisers; and (2) in concluding that a group of community newspapers would not be in the same product market as the Pacific Dailies, the Tribunal ignored relevant indirect evidence. Alternatively, the Director submits that the Tribunal erred in failing to consider whether, but for the acquisitions, the Pacific Dailies and community newspapers would have become close competitors for retail advertising services.

72 Southam's position is relatively straightforward. The Tribunal did not err in its stated approach nor in its assessment of the evidence. As to the alternative ground of appeal, Southam maintains that the Director neither pleaded the issue nor raised it in argument before the Tribunal. In any event, Southam maintains that this Court lacks the jurisdiction to deal with the matter of market definition as it is a question of fact for which leave has not been sought as required by law. Southam also submits that the issues under appeal come within the Tribunal's area of expertise and, for that reason, its Decision is owed curial deference. I propose to deal initially with the latter two arguments advanced by Southam.

1. Market Definition — Question of Fact or Law?

73 If the issue of market definition is merely a question of fact then it necessarily follows that this Court lacks jurisdiction to hear this appeal. Subsection 13(2) of the *Competition Tribunal Act* dictates that an appeal on a question of fact cannot be brought without leave of this Court and no such leave has been sought by the Director. In my opinion, however, such leave was not required in this case.

74 The test or analytical framework that is to be adopted in determining whether products offered by two merging firms are "close substitutes", and therefore in the same product market, is a question of law. For example, as will be discussed more fully below, there are a number of tests or analytical frameworks that can be adopted for purposes of defining a relevant market. "Cross-elasticity" and "reasonable interchangeability of use" are two examples. The adoption of the appropriate framework and its proper application remain a question of law. Whether the facts in a particular case satisfy the requirements of any one framework is a question of fact or more precisely a question of mixed law and fact. Admittedly, the task of applying facts to

a legal definition or framework is more often than not labelled a question of fact. This is so principally because the ultimate decision is one which requires the exercise of personal judgment on the part of the decision-maker, as is the case when arriving at primary determinations of fact.

75 I prefer to use the term mixed law and fact for two reasons. First, it avoids confusion in cases such as the one before us where jurisdiction is dependent on the type of question under review. Questions of fact, in my view, should be though of in terms of primary facts to be established before the law can be applied, e.g. facts which are observed by witnesses and proved by testimony; see *Moreno v. Canada (Minister of Employment & Immigration)* (1993), [1994] 1 F.C. 298 (C.A.) at pp. 311-312. Whether these facts, once established, satisfy some legal definition or requirement is essentially a question of mixed law and fact. My second and principal reason for employing the term "mixed law and fact" is that it accords with subs. 12(1) of the *Competition Tribunal Act* . That subsection distinguishes between questions of law, questions of mixed law and fact, and questions of fact for jurisdictional purposes, a matter which will be dealt with more fully below under the topic of curial defence:

> 12.(1) In any proceedings before the Tribunal,
>
> (*a*) *questions of law* shall be determined only by the judicial members sitting in those proceedings; and
>
> (*b*) *questions of fact or mixed law and fact* shall be determined by all the members sitting in those proceedings. (emphasis added)

76 The confusion which exists over what is a question of law as opposed to a question of fact is further exacerbated in cases where the legal test ultimately selected is one which requires the decision-maker to engage in an analysis involving an assessment and weighing of factors intimately tied to the facts of the case. For example, in the present case, the Tribunal was obligated to turn from direct evidence of demand cross-elasticity to indirect evidence of substitutability as reflected in the "practical indicia" outlined in its Decision: e.g., physical characteristics of the products; uses to which products are put; behaviour and views of buyers, etc. Admittedly, such a legal framework gives the decision-maker a broad or flexible basis on which to formulate an opinion; so much so that it is analogous to cases where the decision-maker is called on to make primary determinations of fact. That approach to market definition does not, however, undermine the understanding that there are other appropriate evaluative frameworks and that the adoption of the correct legal framework for establishing substitutability remains a question of law. The argument of the Director is that the Tribunal erred when it expressly adopted one approach (practical indicia) but applied another (high demand cross-elasticity). But, as stated above, whether the test or analytical framework actually adopted or applied is the proper one remains a question of law.

77 It cannot be denied that there is dictum which holds that the task of delineating a relevant market is a question of fact. But, in my view, subject to the recent unreported decision of this Court in *Upper Lakes Group Inc. v. National Transportation Agency* , May 5, 1995, A-162-94, there is nothing in the relevant case law which cannot be explained in the manner I have outlined.

78 The understanding that market definition is a question of fact can be traced to the decision of *R. v. Hoffman-La Roche Ltd. (Nos. 1 & 2)* (1981), 125 D.L.R. (3d) 607 (Ont. C.A.) , where the Ontario Court of Appeal considered para. 34(1)(*c*) of the former *Combines Investigation Act* , a criminal provision relating to predatory pricing. In that case, the appellant pharmaceutical company was giving a drug it sold, Valium, free to hospitals. Both the appellant and its competitor provided Valium to hospitals, retail pharmacies, physicians, clinics and government institutions, and it was argued that the market in which the firms competed consisted of all purchasers of Valium, not just hospitals. The Trial Judge held that the hospital market was the relevant market. Martin J.A., speaking for the Ontario Court of Appeal, agreed and further held, at p. 619 [125 D.L.R. (3d)], that what constitutes a relevant market is a question of fact:

> What constitutes a relevant market is essentially a question of fact depending on the circumstances underlying the particular offence alleged.

79 As support for this proposition, Martin J.A. cited *R. v. J.W. Mills & Son Ltd.*, [1968] 2 Ex. C.R. 275 , at p. 305, aff'd (1971), 14 D.L.R. (3d) 464 (S.C.C.) . In that case, paras. 32(1)(*a*) and (*c*) of the *Combines Investigation Act* were at issue regarding the charge of limiting or preventing competition. Gibson J. considered whether a relevant market had been established in the

indictment. In the course of his judgment, he held that a relevant market "... is a matter of judgment based upon the evidence" (at p. 305). Gibson J., however, went on to provide a non-exhaustive list of factors relevant in defining a relevant market (see discussion, infra, at 53 et seq.). In certain respects, this approach to market definition resembles that adopted by the Tribunal herein. But, as noted earlier, the "practical indicia" formulation is but one of several frameworks and its adoption remains a question of law as does the question of whether the Tribunal properly applied it.

80 There are at least two decisions which, in my view, strengthen the position that market definition is not a question of fact of the kind contemplated by subs. 13(1) of the *Competition Tribunal Act* . One is a decision of the Supreme Court of Canada, the other a decision of this Court. I turn first to the reasons of Gonthier J. in *R. v. Nova Scotia Pharmaceutical Society*, [1992] 2 S.C.R. 606 , which highlight the distinction between questions of law and questions of fact (or what the *Competition Tribunal Act* labels as mixed law and fact).

81 In *Nova Scotia Pharmaceutical* , the Supreme Court had to consider para. 32(1)(*c*) of the former *Combines Investigation Act* dealing with conspiracies to prevent or lessen competition unduly. In the course of his judgment, Gonthier J. held at pp. 646-647 that the meaning of the word "unduly" was a question of law which was reviewable by an appellate court:

> While the word unduly is not defined by statute and defies precise measurement, it is a word of common usage which denotes to all of us in one way or another a sense of seriousness. Something affected unduly is not affected to a minimal degree but to a significant degree.
>
> . . . . .
>
> According to the appellants, since the determination of whether the restriction on competition was undue is a question of fact, not subject to appellate review, no conclusion can be drawn from the case law. This argument rests on a mistaken perception of the distinction between questions of fact and questions of law.
