> In the context of s. 32(1)(*c*), the *process followed and the criteria used to arrive at a determination of "undueness" are questions of law and as such are reviewable by an appellate court. The application of this process and these criteria, that is the full inquiry, often involving complicated economic issues, into whether the impugned agreement was an undue restriction on competition, remains a question of fact* . The general rule that appellate courts should be reluctant to venture into a re-examination of the factual conclusions of the trial judge applies with special force in a complex matter such as here. (emphasis added)

82 Gonthier J.'s judgment indicates that the process and criteria used by a lower tribunal to determine the legal meaning of statutory language is reviewable by an appellate court as a question of law. However, the application of that legal meaning to a particular case (i.e. the "full inquiry") is a question of fact or, more precisely, a question of mixed law and fact. Again this background it is not difficult to reconcile Gibson J.'s understanding that a relevant market is a question of judgment based on the evidence, as per Gonthier J.'s reasoning in *Nova Scotia Pharmaceutical* .

83 A similar analysis can be applied easily to the reasoning of this Court in *Tanguay v. Unemployment Insurance Commission* (1985), 68 N.R. 154 (Fed. C.A.) , wherein Pratte J.A. stated at pp. 155-156:

> It is true that it is sometimes said that the question of whether an employee was justified in leaving his employment is one of fact. *However, it is clear that where the question is as to the definition that must be given to the words "just cause" in s. 41(1), this is purely a question of law* . It follows that if a decision is made which cannot be reconciled with this definition, the decision is vitiated by an error of law. (However, as the definition attributable to the words "just cause" in s. 41(1) is not so exact that it is always possible to say with certainty whether the employee has left his employment without just cause, cases may arise which may be decided one way or the other without doing injury to the legal concept of "just cause". *The question is then said to be one of fact: it would be more correct to say that it is a matter of opinion* .) (emphasis added)

84 Finally, the notion that what constitutes a relevant market is a question of fact that has been challenged by at least one commentator. Paul Crampton in *Mergers and the Competition Act* (Toronto: Carswell, 1990) recognizes that relevant market

definition is a question of law and his extensive treatment of the issue should help lay to rest any doubt on this point (at pp. 261 et seq.). With respect to the legal significance of *Hoffman-La Roche* and *J.W. Mills* , he concludes (at p. 264, n. 9):

> It would appear from the context of the remarks in these cases that the learned judges meant that the question "what constitutes the relevant market *in a given case" is a question of fact* . The distinction is important, because the meaning of the notion "relevant market" does not change from one fact situation to another. (emphasis added)

85 I agree with this characterization but would reformulate it so that it reads "what constitutes the relevant market in a given case is a question of mixed law and fact". This refinement of Crampton's observation preserves the notion that the analytical framework for determining a relevant market does not change from one case to another and is consistent with s. 12 of the *Competition Tribunal Act* .

86 In conclusion, I am of the view that the question of market definition is one of law and not fact and, therefore, this Court possesses the requisite jurisdiction to hear this appeal. As noted earlier, I am aware of the recent decision of this Court in *Upper Lakes Group Inc., v. National Transportation Agency* , supra, at p. 31, where the majority in obiter adopts a contrary opinion. Our respectful differences of opinion on this issue are now a matter of public record.

2. The Standard of Appellate Review — Curial Deference

87 Southam relies on the jurisprudence of the Supreme Court of Canada in support of its argument that curial deference is owed to decisions of a specialized tribunal, such as the Competition Tribunal, on matters falling squarely within its expertise. Succintly stated, "correctness" is not the appropriate standard of review in this case. This is so notwithstanding the fact that the *Competition Tribunal Act* contains no privative clause but rather a statutory right of appeal on questions of law and mixed law and fact. I think it important to note that, by implication, Southam's argument forces us to consider Parliament's intention with respect to the role of the Federal Court of Appeal and, ultimately, the Supreme Court of Canada in the development and application of competition law in Canada.

88 The respondent's argument raises two distinct questions. First, are the decisions of the Tribunal involving questions of law, including that pertaining to market definition, owed curial deference? Second, assuming that deference is owed, what is the appropriate standard of review? I find it unnecessary to address the latter question for, in my opinion, the doctrine of curial deference is inapplicable to the case at bar. [As to the appropriate standard of review, see Gonthier J. in *Bell Canada* , supra, at p. 1746 [[1989] 1 S.C.R.], and Hugessen J.A. in *Upper Lakes Group Inc. v. National Transportation Agency* , supra, at p. 9].

89 The most recent pronouncement of the Supreme Court on the matter of curial deference in an appeal context is *Pezim v. British Columbia (Superintendent of Brokers)* , supra, at p. 9, wherein Iacobucci J. reviews the earlier jurisprudence commencing with the Supreme Court's decision in *Bell Canada v. Canada (Canadian Radio-television and Telecommunications Commission)* , supra, at p. 9. In the latter case, the Supreme Court was faced with a statutory right of appeal from a decision of the CRTC. In an unanimous judgment, Gonthier J. states at pp. 1745-1746:

> It is trite to say that the jurisdiction of a court on appeal is much broader than the jurisdiction of a court on judicial review. In principle, a court is entitled, on appeal, to disagree with the reasoning of the lower tribunal.
>
> However, within the context of a statutory appeal from an administrative tribunal, additional consideration must be given to the principle of specialization of duties. Although an appeal tribunal has the right to disagree with the lower tribunal on issues which fall within the scope of the statutory appeal, curial deference should be given to the opinion of the lower tribunal on issues which fall squarely within its area of expertise.

90 While acknowledging that curial deference should be afforded the opinion of a lower tribunal on issues falling squarely within its area of expertise, the Supreme Court concluded that no deference was due in *Bell Canada* as the issue there involved an analysis of the procedural scheme created by the *Railway Act* and the *National Transportation Act* . Since the CRTC was not created for the purpose of interpreting either piece of legislation, the impugned decision was not within its expertise. Implicit in

this finding is the understanding that curial deference would have been owed had the CRTC's decision turned on the interpretation of a provision of its enabling statute.

91 It is settled that the concept of specialization of duties requires deference to decisions of tribunals on matters falling squarely within their expertise. This point was reaffirmed in *C.J.A., Local 579 v. Bradco Construction Ltd.*, [1993] 2 S.C.R. 316 . Although *Bradco* was not a case involving a statutory right of appeal, the observations of Sopinka J., writing for the majority, were quoted with approval in *Pezim* . At p. 335 [[1993] 2 S.C.R.], Sopinka J. held:

> ... the expertise of the tribunal is of the utmost importance in determining the intention of the legislator with respect to the degree of deference to be shown to a tribunal's decision in the absence of a full privative clause. Even where the tribunal's enabling statute provides explicitly for appellate review, as was the case in *Bell Canada, supra* , it has been stressed that deference should be shown by the appellate tribunal to the opinions of the specialized lower tribunal on matters squarely within its jurisdiction.
>
> On the other side of the coin, a lack of relative expertise on the part of the tribunal *vis-à-vis* the particular issue before it as compared with the reviewing court is a ground for a refusal of deference.

92 In *Pezim* , Iacobucci J. took the opportunity to consolidate the extant law in what he termed a "pragmatic or functional approach" to the concept of curial deference in an appellate context. That approach had its genesis in the reasons of Beetz J. in *U.E.S., local 298 v. Bibeault*, [1988] 2 S.C.R. 1048 , where at p. 1088 he stated:

> ... the Court examines not only the wording of the enactment conferring jurisdiction on the administrative tribunal, but the purpose of the statute creating the tribunal, the reason for its existence, the area of expertise of its members and the nature of the problem before the tribunal.

93 In the present circumstances, the functional approach advocated in *Pezim* requires an analysis on three levels: (1) the purpose of the Act and the reasons for the Tribunal's existence: (2) the statutory provisions conferring jurisdiction on the Tribunal and, in particular, the composition of the Tribunal and the decision-making power of its constituent members; and (3) the nature of the problem before the Tribunal.

(a) The Purpose of the Act

94 One of the principal purposes of the Act is to promote efficiency and adaptability in the Canadian economy. It also seeks to provide consumers with competitive prices and product choices. That the Act aims at the public interest in preventing anti-competitiveness is rendered clear in s. 1.1 of the Act which reads as follows:

> 1.1 The purpose of this Act is to maintain and encourage competition in Canada *in order* to promote the efficiency and adaptability of the Canadian economy, *in order* to expand opportunities for Canadian participation in world markets while at the same time recognizing the role of foreign competition in Canada, *in order* to ensure that small and medium-sized enterprises have an equitable opportunity to participate in the Canadian economy and *in order* to provide consumers with competitive prices and product choices. (emphasis added)

95 In 1986, Parliament divided jurisdiction over this public interest concern into two substantive parts. Under the current scheme, the superior courts of criminal jurisdiction, as well as the Trial Division of the Federal Court of Canada, have jurisdiction over the criminal provisions under Pt. VI of the Act. Meanwhile, the Tribunal has exclusive jurisdiction over the civil aspects found in Pt. VII of the *Competition Act* which deals with, inter alia, mergers. There can be no doubt that Parliament intended to establish a specialized Tribunal to deal with issues arising under Part VIII. That fact was noted by Gonthier J. in *Chrysler Canada Ltd. v. Canada (Competition Tribunal)*, [1992] 2 S.C.R. 394 , at p. 406:

> Section 8(1) *CTA* confirms the jurisdiction of the Tribunal over Part VIII. The civil part of the *CA* therefore falls entirely under the Tribunal's jurisdiction. It is readily apparent from the *CA* and the *CTA* that Parliament created the Tribunal as a

specialized body to deal solely and exclusively with Part VIII *CA* , since it involves complex issues of competition law, such as abuses of dominant position and mergers.

96 The Tribunal's specialized role is reflected in its broad remedial powers under s. 92 of the Act in respect of both proposed and completed mergers. Moreover, the Tribunal's powers under Pt. VIII are more effective in enforcing Parliament's concern for the long-term functioning of the free market than those under the criminal provisions, as noted by Gonthier J. in *Chrysler* at p. 407:

> The same concern for the proper long-term functioning of the free market lay at the very heart of the enactment of Part VIII in 1986. Civil remedies can be more finely attuned and stand a better chance of leading to lasting compliance with the *CA* than criminal convictions.

97 Consequently, the Tribunal's exclusive jurisdiction and broad powers in Pt. VIII are integral to the attainment of the objectives of the *Competition Act* and, in certain respect, more important than the criminal aspects of the Act. The broad powers of the Tribunal to act in the public interest suggest that curial deference is owed those decisions squarely within its expertise. Closer scrutiny of the scheme of the Act, however, is required before arriving at a final determination.

(b) Composition of Tribunal and Jurisdiction

98 Unlike any other federal tribunal, the Competition Tribunal is composed of both judicial and lay members. The relevant sections of the *Competition Tribunal Act* read as follows:

> 3.(2) The Tribunal shall consist of
>
> (*a*) not more than four members to be appointed from among the judges of the Federal Court — Trial Division by the Governor in Council on the recommendation of the Minister of Justice; and
>
> (*b*) not more than eight other members to be appointed by the Governor in Council on the recommendation of the Minister.
>
> (3) The Governor in Council may establish an advisory council to advise the Minister with respect to appointments of lay members, which council is to be composed of not more than ten members who are knowledgeable in economics, industry, commerce or public affairs and may include, without restricting the generality of the foregoing, individuals chosen from business communities, the legal community, consumer groups and labour.
>
> 4.(1) The Governor in Council shall designate one of the judicial members to be the Chairman of the Tribunal.
>
> 10.(1) Subject to section 11, every application to the Tribunal shall be heard before not less than three or more than five members sitting together, at least one of whom is a judicial member and at least one of whom is a lay member.
>
> (2) The Chairman shall designate a judicial member to preside at any hearing or, if the Chairman is present at a hearing, may preside himself.

99 While the Tribunal is composed of four "judicial members" (judges of the Trial Division of the Federal Court) and eight "lay members", the general practice is for the Tribunal to sit as a panel of three with the judicial member presiding, as required by subs. 10(2) of the *Competition Tribunal Act* . In theory, it is possible to have a panel of five composed of four judicial members and one lay member; see subs. 10(1). As to the expertise possessed by those appointed by the Governor in Council to the Tribunal, it is trite to note that the judicial members are not required by law to possess an expertise in competition law. (This is not to suggest that the judicial members do not bring to the Tribunal a legal expertise relevant to competition issues). Similarly, its lay members come to the Tribunal with diverse backgrounds. Some might possess an expertise in economics. Others are drawn from the business community because of their practical understanding of markets. Some lay members may well be perceived as representing the interests of opposing groups, e.g. business and labour.

100 Judicial and lay members are appointed for a seven-year term. Currently, of the eight lay members only one is retained on a full-time basis. The remaining serve on a part-time basis as required. The judicial members are relieved of their Federal Court duties only to the extent that it is necessary to fulfill their duties as members of the Tribunal. To those familiar with federal regulatory agencies such as the CRTC and National Transportation Agency, the statutory differences between these tribunals and the one under consideration are very real.

101 Not only does the *Competition Tribunal Act* distinguish between judicial and lay members, it does so for the express purpose of assigning jurisdiction with respect to three types of legal questions. Section 12 of the *Competition Tribunal Act* signifies a clear intent on the part of Parliament to divest the Tribunal's lay members of the jurisdiction to decide questions of law. The relevant provision reads as follows:

> 12.(1) In any proceedings before the Tribunal,
>
> (*a*) questions of law shall be determined only by the judicial members sitting in those proceedings; and
>
> (*b*) questions of fact or mixed law and fact shall be determined by all the members sitting in those proceedings.
>
> (2) In any proceedings before the Tribunal,
>
> (*a*) in the event of a difference of opinion among the members determining any question, the opinion of the majority shall prevail; and
>
> (*b*) in the event of an equally divided opinion among the members determining any question, the presiding member may determine the question.

102 While argument might have been directed at whether the issue of market definition is within the specialized expertise of the Tribunal's lay members, which in my opinion it is not, the fact remains that Parliament vested judicial members with sole responsibility for determining questions of law. Subsection 12(1) of the *Competition Tribunal Act* renders this patently clear while leaving questions of fact and questions of mixed law and fact to be decided by the members on a majority basis.

103 I hasten to add that the legislative history leading up to the passage of the *Competition Act* in 1986 reveals clearly that the Tribunal, as presently constituted with the jurisdiction of its respective members, reflects a compromise between those who sought to vest jurisdiction under Pt. VIII of the Act in a tribunal composed entirely of lay experts and those who sought to vest the courts with civil jurisdiction; see Bill C-256 (June 1971), Bill C-42 (March 1977), Bill C-13 (November 1977) and compare with Bill C-29 (April 1984). This compromise is reflected in the *Competition Tribunal Act* and, in my view, one which must be respected. I know of no other enabling legislation which goes so far as to prescribe in as much detail the respective roles of a tribunal's constituent members.

104 As stated above, the definition of product market is a question of law and therefore the criteria or factors used to circumscribe that definition must be questions which, if necessary, go to the judicial member of the Tribunal for determination. Given this statutory imperative, it cannot be said that the problem at hand falls squarely within the Tribunal's expertise. As a jurisdictional matter, Parliament has expressly decided otherwise. That much is evident from from Parliament's manifest intention to direct questions of law to the judicial member only, and who cannot be deemed to bring special expertise in competition law to the Tribunal. Hence, it follows that curial deference is not owed and that the standard of appellate review is correctness.

(c) Nature of the Problem

105 I have already determined, for jurisdictional purposes, that the adoption and application of a framework for market definition is a question of law. But there are also strong policy reasons why the issue of market definition should be subject to ordinary appellate review.

106 Market definition is a legal construct, not an economic one. It must be recognized that although the term "relevant market" is referred to in subs. 93(*g*) of the Act, it remains undefined as is the case in comparable legislation found in other jurisdictions; e.g. s. 7 of the *Clayton Act* , 15 U.S.C. 18 (U.S.C.A. 1993). The omission is not an oversight on the part of Parliament but an implied recognition of the fact that the term is and always has been a judicial construct informed by economic principles and now guided by the practical experience of those familiar with the operation of markets — lay members of the Tribunal: see generally G.J. Werden, "The History of Antitrust Market Delineation" (1992) 76 Marquette L. Rev. 123; Comment, "The Market: A Concept in Anti-Trust" (1954) 54 Colum. L. Rev. 580; and Darrel Macdonald, Comment, "Product Competition in the Relevant Market Under the Act" (1954) 53 Mich. L. Rev. 69; see also *United States v. Columbia Steel Co.*, 334 U.S. 495 (1948) at pp. 508, 519, 520 and 527; *Times-Picayune Publishing Co. v. United States*, 345 U.S. 594 (1953) at p. 612, n. 31.

107 It cannot be forgotten that market definition is vital to merger analysis and Parliament's concern over the exercise of market power. A definition which is too narrow may well have the de facto effect of repealing the merger provisions of the Act. Once it is held that the products of two merging firms are not within the product market then the issue of whether the merger is likely to cause a substantial lessening of competition is simply rendered moot. Conversely, a definition which is too broad is just as apt to enjoin mergers which do not undermine the objectives of the Act.

108 In conclusion, I am of the view that no curial deference is owed decisions of the Tribunal involving market definition.

3. Market Definition — Background

109 For purposes of merger analysis, a relevant market has three dimensions: product, geographic and temporal. The parties are agreed as to the geographic dimension. As will become evident, the temporal aspect remains a theoretical concern. It is the concept of product market which has proven problematic. The Tribunal's initial framework for assessing relevant product market was embodied in the concept of demand elasticity, but supposedly abandoned once it was recognized that "direct evidence" was unavailable and therefore the void would have to be filled by "indirect evidence" of substitutability.

110 Indirect evidence took the form of several factors or practical indicia which would be examined in arriving at a conclusion as to whether the Pacific Dailies and community newspapers are in the same product market with respect to retail print advertising services. The substance of the Director's argument is that the Tribunal failed to weigh the evidence relating to each of the indicia identified, but rather based its decision on the Director's failure to adduce statistical or anecdotal evidence as to whether "small changes in relative prices" would cause advertisers to move their retail print advertising from one newspaper to another. In adopting that approach the Tribunal, it is argued, ignored all other relevant evidence.

111 In alleging that the Tribunal failed to apply its stated approach to market definition, it has been presumed that that approach embodies the correct legal framework. It is my understanding that the parties had agreed on the analytical framework to be applied and that the Tribunal was prepared to evaluate the evidence and render a decision on the basis of that common understanding, as reflected in the practical indicia outlined by the Tribunal. The immediate problem is that the Tribunal's reasons do not even reflect that underlying agreement.

112 During argument on appeal, counsel for the Director indicated that the origins of the market definition employed by the Tribunal could be found in the affidavit of Dr. Globerman, an economist who testified on behalf of Southam (Appeal Case Vol. 24 at 9026). The affidavit refers sparingly to the Director's 1992 Merger Enforcement Guidelines which set out "evaluative criteria" for assessing, inter alia, relevant product markets. Southam's Memorandum of Appeal also cites those guidelines and, as well, the affidavit of Dr. Globerman in support of its position that the Tribunal adopted the correct "legal standard" and that that approach is consistent with the position both parties advanced before the Tribunal (see Respondents' Memorandum of Fact and Law, para. 61).

113 In my view, the principal issue raised by the Director cannot be addressed properly without first attempting to explain the origins of the practical indicia approach to market definition and the relevance of the Director's Guidelines. That such guidelines are binding on no one and are merely intended to explain the government's enforcement policy and the review function performed within the Bureau of Competition Policy is not questioned. What is of significance is the fact that the Director's Guidelines build

upon those promulgated by enforcement agencies in the United States. In turn, the American guidelines were drafted having regard to the extensive United States jurisprudence surrounding the interpretation of s. 7 of the *Clayton Act* which proscribes mergers resulting in a substantial lessening of competition. However, the Director's Guidelines are not even referred to in the Tribunal's Decision; on this point, see C.S. Goldman and J.D. Bodrug, "The *Hillsdown* and *Southam* Decisions: The First Round of Contested Mergers under the *Competition Act* " (1993) 38 McGill L.J. 724 at p. 751.

114 If we are to make any headway with respect to the issue of market definition in Canada then it is necessary to provide an analysis which discloses existing theoretical and legal frameworks. The ensuing analysis covers the following topics: (a) market power paradigms; (b) American jurisprudence; (c) Canadian jurisprudence; and (d) merger enforcement guidelines in both the United States and Canada. Following that analysis, I shall deal with the substantive error alleged by the Director.

(a) Market Power - The Paradigms

115 It is universally accepted that a merger must be examined in terms of its likely effect on competition within a relevant market. The central concern is with respect to exercise of market power by a single dominant firm or a group of firms acting collectively. In turn, market power is recognized as the ability to profitably raise prices above competitive levels without losing a significant portion of business to rival firms or firms that may become rivals as a result of the price increase: see Decision at 177 quoting G.A. Hay, "Market Power in Antitrust" (1992) 60 Antitrust L.J. 807 at p. 808; R. Pitofsky, "New Definitions of Relevant Market and the Assault on Antitrust" (1990) 90 Colum. L. Rev. 1805 at 1807-08 (hereafter "Pitofsky"); and ABA Antitrust Section, Monograph No. 12, Horizontal Mergers: Law and Policy (1986) at 62 (hereafter "Horizontal Mergers").

116 Since it is not possible to measure market power directly, the analysis of whether a merger will give rise to market power focuses initially on determining the relevant market. Once the relevant market has been defined then it is necessary to infer market power within that market though the use of proxies such as market shares or concentration (subject to the limitations prescribed by subs. 92(2) and s. 93 of the Act). With respect to product market definition, there are several paradigms used to explain how one goes about determining whether products are sufficiently close substitutes and therefore to be included in the same product market. Two are of particular relevance to the appeal at hand: the "hypothetical monopolist" and "cross-elasticity". The latter is outlined in the Tribunal's reasons while the former is embraced in the Director's Guidelines.

117 Under the hypothetical monopolist paradigm one asks what would happen if a hypothetical monopolist seller of a group of products imposed a "significant and non-transitory price increase". In the event a sufficient number of buyers were to shift to other products such that the monopolist would find the price increase unprofitable then that group of products is deemed too narrow to constitute a market. Accordingly, the market is expanded to embrace the next best substitute. The analysis is repeated until one is able to identify the smallest group of products for which the hypothetical monopolist could profitably impose a price increase. The geographic market is determined in an analogous manner; see generally Horizontal Mergers at 105, Crampton at 280 and Director's Guidelines at 7 and 9.

118 The cross-elasticity paradigm has both demand and supply dimensions. Demand elasticity refers to the effect which a change in the price of one product has on the demand of another. It measures the rate at which consumers increase or decrease their consumption of one product in response to the price change of another. Under this paradigm, if a change in the price of one product causes a significant change in the quantity demanded of another then the cross-elasticity of demand is said to be high and both products are treated as being in the same product market. Conversely, if a price change in one product causes little or no change in demand for the other product the cross-elasticity is said to be low and hence the products cannot be said to fall within the same product market. The process is repeated with respect to other products until the product dimensions of the market have been settled.

119 Supply elasticity focuses on the ability of *existing* companies to alter their production facilities to produce a product which competes with that produced by another hypothetical monopolist in response to a significant and non-transitory price increase imposed by the latter. The supply side of the equation is viewed as relevant because it is assumed that a monopolist contemplating a price increase will be constrained by the knowledge that others are capable of entering the market if it would

be profitable to do so. Whether or not existing firms will enter a particular market and therefore be deemed part of the relevant market, is dependent on whether there are any barriers to entry.

120 In evaluating supply elasticity, consideration is given to examples of both successful and unsuccessful entry into a product market (see Crampton at 293-94). It would appear that supply elasticity does not directly affect the question of whether one product is a substitute for another. Its primary purpose is to identify all of the firms that are within the relevant market. Consequently, this factor takes on greater significance when consideration is given to the matter of market shares or concentration (the more firms that comprise the market the less the market share) and whether the merger is likely to lessen competition substantially. I hasten to add that barriers to market entry may also be relevant in the context of whether the merger is likely to *prevent* competition in the sense that they act as deterrents with respect to potential competitors.

121 To the extent that either paradigm is seen as a practical tool in merger analysis, it remains necessary to establish in concrete terms what constitutes a "small but significant non-transitory increase in price". Typically, the literature refers to a 5% threshold increase in price sustained over a period of one year. Invariably, the 5% threshold can be adjusted, depending on the nature of the industry. The hypothesized price increase has significant policy implications by virtue of the fact that the percentage increase is directly related to the potential market power that is to be tolerated before merger enforcement is invoked. At the same time, it has been suggested that any threshold level is necessarily arbitrary and based on intuition; see Werden, "Market Delineation and the Justice Department's Merger Guidelines" (1983) Duke L.J. 514 at 550; and Horizontal Mergers at 118, citing Elzinga & Hogarty, "The Problem of Geographic Market Delineation in Antimerger Suits" (1973) 18 Antitrust Bulletin 45, 74.

122 The hypothetical monopolist and cross-elasticity paradigms are the two theoretical frameworks most commonly employed to explain the concept of a relevant market. Armed with that understanding, the real issue is whether either paradigm is of any practical significance when it comes to the task of delineating the boundaries of a product market. The major criticism of the hypothetical monopolist paradigm is that it offers little guidance regarding its practical application; see Crampton at 282 and Horizontal Mergers at 109. The majority of criticisms, however, are reserved for the cross-elasticity paradigm. Crampton offers a convenient summary of existing criticism (at pp. 277-78):

> As one commentator has observed, "(t)he difficulty of measuring demand elasticities has made it appear that it is hopeless to try to define economically meaningful industries." This is so for many reasons. First, one must gather empirical data regarding the variation of quantities demanded or supplied as a result of changes in the price of other goods. This is extremely difficult in the best of cir cumstances. Second, these measures assume that the price of the good that is being examined, together with all other factors which are capable of influencing demand/supply for this good, remain constant. Third, apart from these practical difficulties that are associated with measuring cross elasticities in the "real world", "(t)here is no magic value of cross-elasticity measure which divides 'close' substitutes from 'distant' substitutes." Indeed, the choice of where to locate the dividing line is completely arbitrary. In addition, since the monopolist cares only about the proportionate amount by which *his* sales decrease as price rises, particular cross-elasticities may provide a misleading indication of the ability of the market as a whole to constrain monopolistic behaviour. "Many very small cross-elasticities may do more to keep a monopolist from raising price than one large elasticity." Finally, several weaknesses in the correspondence between cross elasticity and substitutability have been identified. For example, there are situations in which this correspondence is not one to one. Accordingly, although courts, commissions and/or administrative authorities in several countries have referred to the need to include in the same market products with high cross-elasticities of demand or supply, the difficulties that would be associated with employing cross-elasticity as a *bona fide* framework of analysis would be great.

123 The most obvious limitation on the applicability of either the hypothetical monopolist or cross-elasticity paradigm is the unavailability of direct (i.e. statistical) evidence. With respect to the latter paradigm, it is widely acknowledged that the statistical data necessary to compute cross-elasticity is rarely, if ever, available. Thus, it is not surprising that various frameworks or tests have evolved. It is in the American jurisprudence that one begins to appreciate why it is that the issue of market definition remains so problematic and controversial.

(b) American Jurisprudence

124 Merger analysis in the United States is a two-step process. The first is to define the relevant market. The second is to determine whether there has been a substantial lessening of competition as required by s. 7 of the *Clayton Act* . With respect to the latter determination, the primary consideration is that of the market share held by the merging firms. Thus, for those accused of antitrust behaviour the legal strategy is to convince the decision-maker that the products of the two merging firms are not close substitutes and therefore not in the same product market. Failing that argument, the merging firms will seek to have the market expanded to include as many products or firms as possible so as to diminish their market share. Government strategy is to argue the converse.

125 It is within the above context that one begins to appreciate the fundamental significance of the market definition issue in the United States and the ability of American courts to carve out narrow or broad markets depending on the definitional framework so adopted. I hasten to point out, however, that our Act differs from the *Clayton Act* in several material respects. Subsection 92(2) of our Act expressly prohibits a finding that a merger is likely to lessen competition "solely on the basis of evidence of concentration or market share". Moreover, s. 93 of the Act provides a non-exhaustive list of factors that must be considered by the Tribunal before arriving at its conclusion.

126 For purposes of this appeal, it is sufficient to canvass three of the seminal decisions of the United States Supreme Court. Together they reflect the general framework on which market analysis is undertaken in that country.

127 The first of the decisions is *United States v. E.I. du Pont de Nemours & Co.*, 351 U.S. 377 (1956) (hereafter "*Cellophane* "), where the Supreme Court articulated the product market tests of "cross-elasticity of demand" and "reasonable interchangeability of use". Du Pont was charged with monopolizing the manufacture of cellophane in violation of s. 2 of the *Sherman Act* . The Government argued that the relevant product market was limited to cellophane. Du Pont produced almost 75% of the cellophane sold in the United States, but less than 20% of all flexible packaging material. Although there were findings that there were significant differences between cellophane and other flexible packaging materials in terms of physical characteristics and price levels, and that cellophane was the only packaging material suitable to the needs of certain users (e.g. cigarette manufacturers), a majority of the Supreme Court concluded that the proper market included all flexible packaging materials and thus the government had failed to discharge the burden of proof in establishing a monopoly on the part of du Pont. In reaching this conclusion, the Court's approach to market delineation embraced two tests: "reasonable interchangeability" and "cross-elasticity". The Court explained (at pp. 394-95, 400 and 404):

> **IV. The Relevant Market.**
>
> When a product is controlled by one interest, without substitutes available in the market, there is monopoly power. Because most products have possible substitutes, we cannot, as we said in *Times-Picayune Co. v. United States*, 345 U.S. 594 , 612, give "that infinite range" to the definition of substitutes. Nor is it a proper interpretation of the Sherman Act to require that products be fungible to be considered in the relevant market.
>
> . . . . .
>
> What is called for is an appraisal of the "cross-elasticity" of demand in the trade. See Note, 54 Col. L. Rev. 580. The varying circumstances of each case determine the result. In considering what is the relevant market for determining the control of price and competition, no more definite rule can be declared than that *commodities reasonably interchangeable by consumers for the same purposes* make up that "part of the trade or commerce," monopolization of which may be illegal. As respects flexible packaging materials, the market geographically is nationwide.
>
> . . . . .
>
> *An element for consideration as to cross-elasticity of demand* between products is the responsiveness of the sales of one product to price changes of the other. If a slight decrease in the price of cellophane causes a considerable number of customers of other flexible wrappings to switch to cellophane, it would be an indication that a high cross-elasticity of demand exists between them; that the products compete in the same market. The court below held that the "[g]reat sensitivity of customers in the flexible packaging markets to price or quality changes" prevented du Pont from possessing monopoly control over price. 118 F. Supp., at 207. The record sustains these findings. See references made by the trial court in Findings 123-149.

> We conclude that cellophane's interchangeability with the other materials mentioned suffices to make it a part of this flexible packaging material market.
>
> . . . . .
>
> The "market" which one must study to determine when a producer has monopoly power will vary with the part of commerce under consideration. *The tests are constant. That market is composed of products that have reasonable interchangeability for the purposes for which they are produced — price, use and qualities considered* . While the application of the tests remains uncertain, it seems to us that du Pont should not be found to monopolize cellophane when that product has the competition and interchangeability with other wrappings that this record shows. (emphasis added)

128 *Cellophane* is the only case that I am aware of where a finding of high demand elasticity was made on the basis of statistical market data. There are two other aspects of *Cellophane* which have attracted attention.

129 First, the reasoning of the majority is widely believed to be seriously flawed because of what is now termed the "Cellophane fallacy". In reaching their decision, it is maintained that the majority ignored the fact that du Pont's profits on cellophane were unusually high and therefore demand elasticity should not have been evaluated at the monopoly price. Critics contend that the reason why many con sumers of cellophane may have been willing to switch to other products was that du Pont was already charging supra-competitive prices, this extracting monopoly profits on its cellophane sale. However, it has been questioned whether merger analysis is susceptible to the so-called cellophane fallacy. Professor Posner (now Posner) has argued:

> The problem does not arise in a merger case, where the issue is not whether the current price exceeds the competition level but whether the merger might result in a further deterioration of competitive conditions. If there are good substitutes in consumption or production at the *current price* , it is a detail whether that price is competitive or monopolistic. (R. Posner, "Antitrust Law: An Economic Perspective", 128-129 (1976), cited in Horizontal Mergers at 125-26)

130 Thus, the true concern is with respect to the ability of the merging firms to impose further price increases upon their customers.

131 The one aspect of *Cellophane* which has attracted support is the majority's refusal to carve out a separate market in cellophane simply because there were some classes of users for whom cellophane was a preferred product. As Pitofsky states at 1814 [90 Colum. L. Rev.]:

> As long as substantial classes of customers existed who were in a position to switch easily and promptly in response to price increases or decreases ("precarious users"), the ability of those users to switch protected the competitive interests of those with a strong preference for cellophane over any substitutes ("captive users").

132 Six years after *Cellophane* , the Supreme Court rendered its decision in *Brown Shoe Co., Inc. v. United States*, 370 U.S. 294 (1962), which has been described as the Rosetta Stone of market definition. *Brown Shoe* was the first s. 7 merger case under the *Clayton Act* to be decided by the Supreme Court. In that case, the issue was whether a merger of *Brown Shoe* and *Kinney* , two shoe manufacturers with retail outlets, would lessen competition substantially in the supply of retail shoes. In the end, the Supreme Court condemned the merger for both its horizontal and vertical impacts.

133 Noting that Congress had not adopted any particular test for measuring the relevant market, the Supreme Court cited with approval both the "cross-elasticity of demand" and the "reasonable interchangeability of use" tests articulated in *Cellophane* . The Court then immediately went on to hold that within a broad market there may exist well defined substitutes which, in themselves, constitute a product market for antitrust purposes. The seminal passage giving rise to the concept of a submarket within a market, determined by reference to a number of practical indicia, is found at p. 325:

> The outer *boundaries of a product market* are *determined by the reasonable interchangeability of use* or the *cross-elasticity of demand* between the product itself and substitutes for it. However, within this broad market, well-defined submarkets may exist which, in themselves, constitute product markets for antitrust purposes. *United States v. E.I. du Pont de Nemours & Co.*, 353 U.S. 586 , 593-595. The *boundaries* of such a submarket *may be determined by examining such practical indicia*

> *as industry or public recognition of the submarket as a separate economic entity, the product's peculiar characteristics and uses, unique production facilities, distinct customers, distinct prices, sensitivity to price changes, and specialized vendors* . Because §7 of the Clayton Act prohibits any merger which may substantially lessen competition "in any line of commerce" (emphasis supplied), it is necessary to examine the effects of a merger in each such economically significant submarket to determine if there is a reasonable probability that the merger will substantially lessen competition. If such a probability is found to exist, the merger is proscribed. (emphasis added)

134 In *Brown Shoe* , the Supreme Court upheld the District Court's finding that there were three separate product markets: men's, women's and children's shoes. Resorting to four of the seven practical indicia, the Supreme Court found that each of these product lines were: (1) recognized by the public; (2) manufactured in separate plants; (3) characterized by uses peculiar to themselves; and (4) directed toward a distinct set of customers. Although one of the practical indicia was distinct prices, the Supreme Court refused to sanction a further division of product lines based on price/quality differences as it would simply be "unrealistic" (at p. 326). *Brown Shoe* had argued that men's shoes priced over $9 did not compete with those selling below that price. The Court did, however, conceded that price and quality differences may be important in determining the likely effect of a merger but felt that (at p. 326):

> ... the boundaries of the relevant market must be drawn with sufficient breadth to include the competing products of each of the merging companies and to recognize competition where, in fact, competition exists.

135 The delineation of submarket boundaries by reference to practical indicia such as those articulated in *Brown Shoe* was not well received. The submarket concept has been levelled "an intellectual monstrosity" with little "economic justification"; see Werden, supra, at p. 160. On a more charitable tone, one commentator notes that the indicia list "is presented without any indication of priority or right to specific factors and it unquestionably has worked a good deal of mischief in relevant market definition in merger cases"; Pitofsky at p. 1815. Nonetheless, the submarket concept has been used as a mechanism for excluding reasonably interchangeable products from a relevant market. Typically, reliance is placed on some but not all of the practical indicia; see Horizontal Mergers at p. 76.

136 Apparently in the two decades following the Supreme Court's decision in *Brown Shoe* , the submarket concept and the practical indicia nominated thinking on market delineation in the lower courts; see Werden, supra, at p. 172. In particular, government agencies employed the indicia to narrow the market and facilitate a finding that a merger was unlawful. However, reasonable interchangeability of use remains as an independent framework for market delineation in light of the decision in *United States v. Continental Can Co.*, 378 U.S. 441 (1964).

137 In *Continental Can* , the government challenged the acquisition by Continental Can, the second largest producer of metal containers in the United States, of Hazel-Atlas Glass, the third largest producer of glass containers in that country. Although he District Court had found that there was competition among metal, glass and plastic containers with respect to end uses, it held that it was not the type of competition contemplated by the *Clayton Act* . The Supreme Court disagreed and concluded that the product market consisted of metal and glass containers even though end use competition also included manufacturers of plastic and paper containers. This particular aspect of *Continental Can* produced strident criticism, including the accusation that:

> "The Court appears to have taken a result-oriented approach to definitions of the market gerrymandering of the boundaries" so as to maximize the prospect of invalidating the challenged acquisition. Note: The Supreme Court, 1963 Term, 78 Har. L. Rev. 143, 274-75 (1964).

138 Leaving aside this flawed aspect of the Supreme Court's reasoning *Continental Can* stands for the proposition that a finding of significant end use or inter-industry competition can overcome evidence of price differentials and low price sensitivity. Such facts, while relevant, are not determinative of the product market issue. At pp. 453-456, the Court reasoned:

> Interchangeability of use and cross-elasticity of demand are not to be used to obscure competition but to "recognize competition where, in fact, competition exists." *Brown Shoe Co. v. United States*, 370 U.S., at 326 . In our view there is and has been a rather general confrontation between metal and glass containers and competition between them for the

same end uses which is insistent, continuous, effective and quantityiwise very substantial. Metal has replaced glass and glass has replaced metal as the leading container for some important uses; both are used for other purposes; each is trying to expand its share of the market at the expense of the other; and each is attempting to preempt for itself every use for which its product is physically suitable, even though some such uses have traditionally been regarded as the exclusive domain of the competing industry. In differing degrees for different end uses manufacturers in each industry take into consideration the price of the containers of the op posing industry in formulating their own pricing policy. Thus, though the interchangeability of use may not be so complete and the cross-elasticity of demand not so immediate as in the case of most intra-industry mergers, there is over the long run the kind of customer response to innovation and other competitive stimuli that brings the competition between these two industries within §7's competition-preserving proscriptions.

Moreover, price is only one factor in a user's choice between one container or the other. That there are price differentials between the two products or that the demand for one is not particularly or immediately responsive to changes in the price of the other are relevant matters but not determinative of the product market issue. Whether a packager will use glass or cans may depend not only on the price of the package but also upon other equally important considerations. The consumer, for example, may begin to prefer one type of container over the other and the manufacturer of baby food cans may therefore find that his problem is the housewife rather than the packer or the price of his cans. This may not be price competition but it is nevertheless meaningful competition between interchangeable containers.

139 Reasonable interchangeability of use (functional interchangeability) emphasizes two factors: the product's uses and its physical characteristics. While demand cross-elasticity focuses on the sensitivity of buyers of one product to changes in the price of another, reasonable interchangeability focuses initially on the extent to which different products have similar qualities that allow them to be used for the same end use.

140 In determining whether products are substitutes for one another, the qualities of the products are not to be viewed in the abstract. Products which seem similar may be found not to be substitutes while products that appear very different may serve the same end use and be considered in the same product market. At the same time, the fact that two products are found to be functionally interchangeable does not necessarily lead to a finding that they are in the same product market. If buyers do not regard the products as substitutes for each other if only to a marginal degree then a broad market definition may be rejected on the basis that effective end use competition does not exist; see generally Kalinowski, Sullivan and McGuirl, *Antitrust Laws and Trade Regulation* , Vol. 3 (1994) at 18.02 et seq.

141 The American jurisprudence with respect to the proper application of the interchangeability of use test reveals that where the intended use of the product is the same, products have been placed in the same market notwithstanding the following factors: different price levels, different physical characteristics in composition appearance or quality, different customer classes or customer preferences and dissimilar production facilities or marketing and distribution methods; see Horizontal Mergers at p. 73, and cases collected at n. 359.

(c) Canadian Jurisprudence

142 The issue of market definition in Canadian jurisprudence has not receive the extensive treatment that it has in the United States. Before 1986, Canadian competition law, and merger law in particular, was largely based on the criminal provisions of the former *Combines Investigation Act* . Consequently, the issue of market definition was never pursued in terms of the economic and social policies generally associated with a civil scheme of regulating anti-competitiveness. Thus, the old criminal cases dealing with market definition are of little assistance in fashioning a modern product market definition under Pt. VIII of the Act. Since the new Act came into force, the Tribunal has had to deal with market definition in only two cases. Regrettably, as discussed below, neither of those cases is of assistance in resolving the issue under appeal.

143 Four of the old criminal cases which touch on market definition are note-worthy as they demonstrate that market definition was not a well-developed concept in Canadian law. All of these cases, however, do focus on the central concept of product market definition — substitutability. Yet, none offer a framework for determining how substitutability is to be assessed.

144 In *R. v. Hoffmann-La Roche Ltd.* , noted earlier, the defendant, who was accused of predatory pricing by distributing the drug Valium to hospitals free of charge, argued that the market in which the firms competed consisted of all purchasers of their product (e.g. pharmacies, physicians) and not just hospitals. The Trial Judge held that the hospital market was the relevant market. On appeal, it was alleged that the Trial Judge had failed to recognize the availability of substitute products when circumscribing the relevant market. The argument was rejected on the ground that substitutability was an irrelevant factor in view of the fact that the accused had provided Valium free to hospitals for the purpose of eliminating a competitor.

145 In *R. v. Canadian Coat and Apron Supply Ltd.*, [1967] 2 Ex. C.R. 53 , the accused, who were in the business of applying "linen towels" and controlled 85% to 90% of the market, were charged under subs. 32(1) of the *Combines Investigation Act* for conspiring to fix prices. They argued unsuccessfully that the product market should be expanded to include paper towels and other substitute products. The argument was rejected on the basis of customer preference for linen towels. At p. 82 Gibson J. concluded:

> ... that the market was the section of the public on the Island of Montreal that needed and wanted not paper towels, or other substitute products, but cleaned, ironed, pressed, ready to use linen towels ... and for whom paper towels and other substitute products were not satisfactory products;

146 In *R. v. Canadian General Electric Company Ltd.* (1976), 15 O.R. (2d) 360 (H.C.) , the three largest manufacturers of "large lamps", controlling 95% of the Canadian market, were found guilty of conspiracy to lessen competition in the market contrary to para. 32(1)(*c*) of the *Combines Investigation Act* , R.S.C. 1970, c. C-23. This case is of particular interest because it implicitly adopts the submarket analysis articulated in *Brown Shoe* . The Court found that large lamps, a class of light bulbs, were the relevant market based largely on industry perception and functional interchangeability (at p. 372):

> Large lamps were treated by each of the accused as a distinct segment of the industry for the purposes of manufacture and sale. They constituted a significant portion of the sales of all lamps in Canada during the period in question. Looked at from any angle, the manufacture or sale of large lamps may be said to constitute a class or species of business in itself.
>
> Large lamps are basically homogeneous products. There was little product differentiation among the large lamps of the three defendants. The public purchasing large lamps would be faced with comparable lines from each of the accused with the same physical characteristics and designed for the same use. The degree of substitutability or cross-elasticity is, for all practical purposes, non-existent.
>
> The distribution of large lamps may therefore be considered a relevant market for the purpose of s. 32(1)(*c*) of the Act. It is a special class of business and is a distinguishable range of lamps within the total variety of lamps produced. The market has not been artificially created to suit the purposes of the present charges but flows from the nature of the product, its lack of cross-elasticity or substitutability with other products, and the treatment given the product through a special mode of distribution and a distinctive sales policy.

147 Perhaps the most significant case on market definition is the decision of Gibson J. in *R. v. J.W. Mills & Sons Ltd.* , supra. That case turned on paras. 32(1)(*a*) and (*c*) of the *Combines Investigation Act* , R.S.C. 1952, c. 34, involving conspiracies to prevent or lessen competition. The accused were in the "import pool" business. They shipped goods that arrived in Vancouver from the Orient by ship to other points in Canada by use of a special category of railway car called "Pool cars". The accused argued, inter alia, that the Crown had not proved beyond a reasonable doubt the relevant market which they maintained should be expanded to include other competitors such as the railways and truckers. Gibson J. concluded otherwise after setting out a comprehensive list of market assessment factors. His analysis at pp. 305-307 is worthy of replication:

> Defining the relevant market in any particular case, therefore, requires a balanced consideration of a number of characteristics or dimensions to meet the analytical needs of the specific matter under consideration.
>
> At one extremity, an ill-defined description of competition is that every service, article, or commodity, which competes for the consumer's dollar is in competition with every other service, article, or commodity.

At the other extremity, is the narrower scope definition, which confines the market to services, articles, or commodities which have uniform quality and service.

In analyzing any individual case these extremes should be avoided and instead there should be weighed the various factors that determine the degrees of competition and the dimensions or boundaries of the competitive situation. For this purpose the dimensions or boundaries of a relevant market must be determined having in mind the purpose for what it is intended. For example, two products may be in the same market in one case and not in another.

And many characteristics or dimensions may be considered in defining the relevant market. All are not of the same order. And, in any particular case, usually, not all of the many characteristics or dimensions will have to be considered. In some instances, the definition may turn on only one characteristic or dimension or two (see again cases in Schedule "B"). However, in order to make a correct choice of the appropriate characteristics or dimensions, it may be necessary to review several types before selecting the proper one or ones.

Hereunder are noted some pertinent characteristics or dimensions that may be considered in defining a relevant market, but this list is not exhaustive. The classification also may be arranged in various ways.

(a) Product substitutability.

(The term economists use for this is "cross-elasticity of demand". The terms "substitutability" and "cross-elasticity" are synonymous. As an example, the demands for two products have a high cross-elasticity if a change in the price of one results in a large measure, in purchasers substituting it for the other. How to measure the degree of cross-elasticity in any given case is usually difficult).

(b) Actual and potential competition.

(The problem sometimes in competition analysis is whether to confine the "relevant market" to existing competition or to consider potential (sometimes called "poised") competition as well).

(c) Geographical area.

(The geographical dimensions of a market frequently an important factor in competitive analysis — e.g., should the relevant market be analyzed on a national basis, a regional or local area).

(d) Physical characteristics of products or service.

(Selecting products that have the same physical characteristics, or services that have the same features, is the simplest basis for defining a relevant market. But in some cases, for example, it may be correct legally to consider products with fairly dissimilar physical characteristics or services with somewhat dissimilar elements, as in the same market).

(e) End uses of products.

(The factor of end uses is closely related to physical characteristics in defining the relevant market. For example, if a product has different end uses in the hands of buyers, the definition of the relevant market may not be based solely on physical specifications. Also, for example, consideration of differences in uses is particularly important in studying markets for services).

(f) Relative prices of goods or services.

(The prices of goods or services may define the relevant market).

(g) Integration and stages of manufacture.

(Because of differences between the activities of competitors, problems of integration arise. In determining the relevant market, the problem is what products at what stage of manufacture to include or exclude).

(h) Methods of production or origin.

(Methods of production and the product resulting, and origin of material, as e.g., whether or not imported, are often important factors to consider in defining the relevant market).

148 The foregoing list is, of course, a rudimentary guideline representing a compendium of relevant market concepts prevalent at the time the case was decided (1968). Gibson J. made no further attempt to address any of the practical indicia. His final reasoning and conclusion on product market focused on lack of substitutability (at p. 314):

> In my view, firstly, there were no substitute services for this service business in which the accused operated, that is to say, the facilities solely by ship and solely by air and the transportation business in connection therewith in relation to articles and commodities transported from the said designated area of the Orient to Toronto and Montreal were and are in another market and not the market in which these accused carried on their business.

149 The only significant treatment of market definition under the *Competition Act* is found in the decisions of the Tribunal in *Canada (Director of Investigation and Research) v. Hillsdown Holdings (Canada) Ltd.* (1992), 41 C.P.R. (3d) 289 (Competition Tribunal) , and, to a lesser extent, in *Canada (Director of Investigation and Research) v. Chrysler Canada Ltd.* (1989), 27 C.P.R. (3d) 1 . I shall deal with the latter case first.

150 In *Chrysler Canada Ltd.* , the Director sought an order under s. 75 of the Act requiring the respondent to accept the complainant as a customer. The complainant carried on the business of exporting parts for Chrysler automobiles to markets outside of North America. One of the issues before the Tribunal was whether the product market consisted of Chrysler auto parts sold in Canada, Chrysler parts sold in the United States or auto parts in general. In defining the terms "product" and "market", the Tribunal specifically noted that the approach to market definition under s. 75 was not to be equated with that involving mergers where the ultimate test is whether there will be a substantial lessening of competition. In cases involving para. 75(1) (*a*), the ultimate test concerned the effect on the business of the person who is denied supplies. The Tribunal concluded that as the complainant's customers specified genuine Chrysler parts and would not accept substitutes, the product in question was Chrysler auto parts. Moreover, since the price paid for Chrysler parts sold in Canada was lower than that paid in the United States, the product was defined as Chrysler auto parts sold in Canada.

151 *Hillsdown* is the only other decision of the Tribunal which touches on the issue of market definition. In that case, the Tribunal considered the merger of the two largest meat rendering companies in Southern Ontario. The Tribunal had little difficulty in accepting the Director's argument that the product market was the provision of rendering *services* for certain red meat materials. Such services involve the collection of left-over parts of livestock which are unsuitable for human consumption but which can be processed into tallow and protein meal. The Tribunal's approach to market definition is brief (at p. 299):

> In determining the product dimensions of the market, *the first step is to identify the product or products with respect to which, prior to the merger, the two firms were competitors. The second step is to ask whether there are any close substitutes to that product to which customers could easily switch if prices were raised* (an indication of demand elasticity). If two products appear to be close substitutes when both are sold at marginal cost, then the two should be included in the same product market. (emphasis added)

152 In *Hillsdown* , the Tribunal appeared to assume that the merging firms were, prior to the merger, competitors with respect to rendering services, thereby eliminating the first step in the analysis. In fact, the merging firms carried out the same rendering business, with the exception that one dealt with both red meat and poultry, and the other only with red meat. But it is apparent that the Tribunal was not concerned with whether the services actually offered by the firms were close substitutes having regard to such factors as price and quality. Its analysis focused on the geographic dimension of the product market. Strictly speaking,

however, if the reasoning in *Hillsdown* were applied to the case at bar, the Director's appeal would have to be allowed as both the Pacific Dailies and the community newspapers offer the same service — retail print advertising.

153 To date, the Tribunal has not been asked to articulate any framework under the "first step", to determine whether the products of two merging firms are in the same market. That, of course, is the very issue before us. I turn first, however, to the matter of merger enforcement guidelines which were to have informed the Tribunal's approach to market definition.

(d) Merger Enforcement Guidelines

154 The first American guidelines were issued in 1968 and attempted to enunciate principles for market delineation in light of the Supreme Court jurisprudence at that time. These guidelines rejected the submarket concept articulated in *Brown Shoe* , but failed to take account of supply elasticity considerations. In 1982, and again in 1984, new guidelines were issued. These guidelines attempted to offer a complete analytical framework which could be used to identify those mergers that would create or enhance market power. The guidelines' threshold for significant market power is phrased in terms of the magnitude of the price increase that would be imposed by a hypothetical monopolist. Despite the attempt to avoid the practical indicia approach to market definition, the guidelines ultimately offered a non-exhaustive list of factors relevant to the task of market delineation. In 1982, they read as follows:

> (1) Evidence of buyers' perceptions that the products are or are not substitutes, particularly if those buyers have shifted purchases between the products in response to changes in relative price or other competitive variables;
>
> (2) Similarities or differences between the products in customary usage, design, physical composition and other technical characteristics;
>
> (3) Similarities or differences in the price movements of the products over a period of years; and
>
> (4) Evidence of sellers' perceptions that the products are or are not substitutes, particularly if business decisions have been based on those perceptions.

155 The 1984 American Guidelines contain no material changes. However, the issuance of new guidelines in 1992 has proved controversial because of an apparent shift in approach to market delineation and one which arguably reflects a more non-interventionist approach on the part of American enforcement agencies; See J. Simons and M. Williams, "The Renaissance of Market Definition", supra, and G.J. Werden, "Market delineation under the Merger Guidelines: a tenth anniversary retrospective", (1993) The Antitrust Bulletin 517. It is unnecessary to become embroiled in that debate and thus I turn to the Canadian guidelines.

156 In 1992, the Director issued the first Canadian Merger Guidelines for the purpose of promoting a better understanding of merger enforcement policy and to provide a unifying framework for evaluating the likely impact of mergers on competition in Canada. They also serve the stated purpose of articulating to the business and legal communities the approach used by the Bureau of Competition Policy in reviewing merger transactions. In certain respects, the Director's Guidelines build upon those issued in 1982 and 1984 in the United States. The hypothetical monopolist paradigm is expressly adopted. Thus, the critical concern is with respect to the ability of the merging firms to exercise market power by profitably raising prices.

157 The Director's Guidelines acknowledge that direct evidence in the form of statistical measures of cross-elasticities is rarely available and thus consideration must be given to nine evaluative criteria which provide indirect evidence of substitutability: (1) views, strategies, behaviour and identifying of buyers; (2) trade views, strategies and behaviours; (3) end use; (4) physical and technical characteristics; (5) buyers' switching costs; (6) price relationships and relative price levels; (7) cross-elasticity of supply considerations; (8) supply elasticity considerations; and (9) existence of second hand, reconditioned or leased products. Admittedly, there are similarities between the practical indicia referred to in *Brown Shoe* and those listed above. But any comparison must end here.

158 The Director's Guidelines are intended to provide a rational framework for delineating market boundaries. The central issue is framed in terms of the hypothetical monopolist paradigm and hence the ability of the merging firms to impose profitable price increases. Apparently, the value of the paradigm does not lie in its practical application. Its true function is to ensure that the task of market delineation does not lose sight of the principal concern — the ability of the merging firms to profitably impose price increases.

159 Unlike the practical indicia found in *Brown Shoe* , or the decision under appeal, the Director's Guidelines elaborate on each of the indicia and their relevance. Specifically, they reject the submarket concept as an independent framework of analysis, while recognizing that there is no one simple approach to market definition. The Director's Guidelines also accept functional interchangeability as a criterion for determining relevant product market. It is generally a necessary, but not sufficient, condition to be met before two products will be placed in the same market. Likewise, while direct evidence of cross-elasticity or price sensitivity of buyers remains a relevant consideration, the Director's Guidelines do not make it a necessary condition to a finding that two products are in the same product market.

160 It is instructive to reproduce those portions of the Director's Guidelines which were to have informed the Tribunal's reasoning but which remain non-binding on this Court:

> **3.2 The Product Dimension**
>
> **3.2.1 General Approach**
>
> The following approach to relevant market analysis is applied separately to each of the products in relation to which the merging parties appear to compete or are likely to compete. The analysis of the product scope of specific relevant markets commences by focussing upon what would happen if one of the merging parties attempted to impose a significant and nontransitory price increase in relation to the product. If the price increase would likely cause buyers to switch their purchases to other products in sufficient quantity to render the price increase unprofitable, the product that is the next best substitute will be added to the relevant market. The Bureau will then ask what would happen if the seller of this product and the merging party in question, acting as a hypothetical monopolist, attempted to impose a significant and nontransitory price increase with respect to the two products in the group. The process of adding the product that is the next best substitute for the products already included within the market continues until it would be possible for the sellers of these products, acting as a hypothetical monopolist, to profitably impose and sustain a significant price increase for a nontransitory period of time.
>
> **3.2.2 Evaluative Criteria**
>
> In assessing the nature and magnitude of likely supply and demand responses to a future price increase in the context of particular cases, all relevant information is considered. However, particular weight is given to the factors highlighted below, which provide indirect evidence of substitutability. Direct evidence, in the form of statistical measures of cross-elasticities of demand and supply, is rarely available. In some situations, the results of the analysis of each of these factors are not consistent with single conclusion. When this occurs, an attempt is made to arrive at the market definition that is most supportable by the available information.
>
> ***3.2.2.1 Views, Strategies, Behaviour and Identity of Buyers***
>
> The views, strategies and behaviour of buyers are often among the most important sources of information considered in the assessment of whether buyers will likely switch to another product in the event of the postulated significant and nontransitory price increase. What buyers state they are likely to do, what they have done in the past, and their strategic business plans, often provide a reliable indication of whether the postulated price increase is likely to be imposed and sustained. Where buyers have not substituted product B for product A in the past, and indicate that they would not likely do so in the event of the price increase, it may be inappropriate to conclude, on the basis of hypothetical considerations,

that these products compete in the same relevant market. The same can be true where two products are sold to buyers that have distinct characteristics. e.g., where product A is sold to consumers and product B is sold to businesses.

3.2.2.2 Trade Views, Strategies and Behaviour

Helpful information regarding historical and likely future developments in the relevant market is often provided by third parties knowledgeable about the industry, such as persons who supply the sellers of the relevant product. Similarly, industry surveys often provide data that assists the analysis. Another source of useful information is the past behaviour of the merging parties, or others who sell the relevant product, in relation to other products that are alleged to provide a significant constraining influence. For example, modifications to product design or packaging that follow similar developments made to a second product may suggest that the two products are in the same relevant market,

3.2.2.3. End Use

The extent to which two products are functionally interchangeable in end use is an important source of information regarding whether substitution between them is likely to occur. Indeed, functional interchangeability is generally a necessary, but not a sufficient, condition that must be met for two products to warrant inclusion in the same relevant market. Products that are purchased for similar end uses may be in the same relevant market notwithstanding the fact that they have very different physical characteristics, e.g., matches and disposable lighters.

Two products are more likely to be found to be in separate relevant markets as the difference between their prices increases or as their individual end users are, or are perceived to be, more unique. For example, premium products such as gold plated lighters, luxury cars and writing instruments may be found to be in separate relevant markets from discount lighters, compact cars and disposable pens, respectively, notwithstanding that the premium and discount products have similar end uses.

3.2.2.4 Physical and Technical Characteristics

Although two products with unique physical or technical characteristics *may* be found to be in the same relevant market on the basis of functional interchangeability, such products are often found to be in separate relevant markets. In general, the greater is the value that buyers place on the actual or perceived unique physical or technical characteristics of a product, the more likely it is that the product will be found to be in a distinct relevant market. Product warranties, post-sales services, order turn-around time, etc., are all included in the bundle of characteristics that make up a product.

161 Against this background, we are now in a position to deal with the substantive issue raised on appeal.

4. The Alleged Error

162 The Director has framed the principal issue in terms of whether the Tribunal erred in its application of the stated approach to product market definition by requiring statistical or anecdotal evidence of price sensitivity on the part of advertisers to the exclusion of other evidence substitutability. In order to analyze that alleged error, it is necessary to elaborate on the distinction between direct and indirect evidence of substitutability.

163 Products can be said to be in the same market if they are close substitutes. In turn, products are close substitutes if buyers are willing to switch from one product to another in response to a relative change in price, i.e. if there is buyer price sensitivity. Direct evidence of substitutability includes both statistical evidence of buyer price sensitivity and anecdotal evidence,[1] such as the testimony of buyers on past or hypothetical responses to price changes. However, since direct evidence may be difficult to obtain, it is also possible to measure substitutability and thereby infer price sensitivity through indirect means. Such indirect evidence focuses on certain practical indicia, such as functional interchangeability and industry views/behaviour, to show that products are close substitutes.

164 To the extent that it is possible to adduce statistical evidence of high demand elasticity, such evidence is virtually conclusive that two products are in the same product market. Evidence of price sensitivity can also come in anecdotal form which is a less conclusive, although still a persuasive factor tending to show that products are close sub stitutes. The fact that there is no direct evidence of substitutability, i.e. no statistical or anecdotal evidence of price sensitivity, does not show conclusively that products are not close substitutes. Put another way, evidence of price sensitivity is not a condition precedent for finding that two products are in the same product market. On this point, the decision in *Continental Can* is instructive. There, there was vigourous competition between the metal and glass industries for the business of various manufacturers. The evidence, however, disclosed a low demand elasticity. Nonetheless, the United States Supreme Court was prepared to conclude that the two products were in the same product market because of inter-industry competition. It must be recognized that there are simply too many factors other than price which can affect a buyer's choice and which can explain a low demand elasticity at any one point in time. As the Tribunal stated at p. 276: "... advertising decisions are complex and ... advertisers have difficulty in pinpointing the role of relative prices in their decisions." I turn now to the substance of the Director's argument.

165 The Director's argument that the Tribunal erred by requiring direct evidence of substitutability rests initially on a passage found at pp. 276-277 of the Decision:

> There are obvious differences and similarities between the dailies and the community newspapers. There is no reason to review them. In light of the differences, *it is incumbent on the Director to show that buyers regard the two products as highly similar and that small changes in relative price would cause a significant shift in advertising volume between the two vehicles* . Evidence showing that advertisers use one or the other vehicle mainly because of the characteristics of the particular vehicle suggests the opposite.
>
> *There is in fact no evidence before the tribunal that advertisers are highly sensitive to the relative prices of the dailies and community newspapers* . (emphasis added)

166 The Director maintains that the reference to "no evidence" in the last sentence quoted means direct evidence and therefore the Tribunal failed to consider the indirect evidence embraced by the practical indicia. Southam responds by noting that there is no express reference in the above quote to direct evidence, nor anything in the reasons of the Tribunal which would lead one to conclude that the Tribunal considered the absence of buyers' behavioural evidence of price sensitivity as decisive. Southam insists that the success of this appeal cannot hinge on an isolated passage from a decision totalling more than 300 pages in length. Reading the Tribunal's decision as a whole, Southam maintains that it is clear that the Tribunal reached its conclusion with respect to market definition only after carefully weighing all evidence, be it direct or indirect. I do not agree.

167 For the reasons below, I find that the Tribunal erred by requiring statistical or anecdotal evidence of high price sensitivity, and ignoring other relevant evidence of substitutability. It is apparent to me that the Tribunal ignored or overlooked the significance of certain indirect evidence which it was required to consider as a matter of law. Given this error of law, I feel that this is an appropriate case in which to exercise the Court's power under para. 52(*c*)(i) of the *Federal Court Act* to make the determination that ought to have been made by the Tribunal. There are no conflicting evidentiary issues which remain to be resolved as far as product market is concerned and the Tribunal has provided an exhaustive record of the evidence. In my view, the Court is entitled to make the determination that the Tribunal should have rendered on the product market issue.

168 It should be noted that there is a distinction between a Tribunal's role in establishing facts on the one hand, and applying them to a legal framework on the other. With respect to the former, it is clear that the Tribunal is in a better position than the Court to fulfil those roles. However, it is evident that the Tribunal in this case ignored relevant evidence with respect to two important matters: functional interchangeability and inter-industry competition.

169 First, the Tribunal erred in ignoring evidence of functional interchangeability by summarily dismissing the relevance of that factor. In my opinion, functional interchangeability is a vital feature of substitutability and therefore an indispensable component of product market definition.

170 The Tribunal's stated approach to product market definition noted that end use was a factor to be considered in the indirect framework. However, the Tribunal clearly failed to consider the importance of functional interchangeability, which is not simply one of many criteria to be considered but a central part of the framework. The only passage in which the Tribunal considered the matter of functionality interchangeability or end use is found at page 238:

> With respect to indirect evidence of the use of both for the same purpose, it is a matter of determining whether "purpose" can be inferred from the content of the advertisement and the circumstances related to the use of a particular vehicle. Almost by definition it can be said that community newspapers are used to reach customers in the respective areas where the papers are distributed and that dailies are used to reach customers throughout the Lower Mainland. It is not helpful to adopt this notion of purpose when evaluating whether dailies and community newspapers are effective substitutes.

171 The Tribunal considered the matter of functional interchangeability in two contexts — the first relating to substitution between electronic and print advertising and, second, in substitution between daily and community newspaper advertising. With respect to the first context, the Tribunal concluded that print and electronic media were not functionally interchangeable because "multiple price/product" advertising could not be produced in the electronic media (Decision at 224).

172 With respect to advertising in the Pacific Dailies and the community newspapers, the Tribunal appears to have held that they were not functionally interchangeable because advertising in these publications did not serve the same purpose. As indicated in the quotation above, the Tribunal simply found that "purpose" could not be inferred from the content and circumstances of advertising in the Pacific Dailies and community newspapers. This, in my view, was an error.

173 If "multiple price/product" advertising is a relevant purpose for distinguishing between print and electronic media then it must also be relevant as between advertising in daily and community newspapers. The Tribunal found that this notion of purpose was not "helpful" because community newspapers are more local than the Pacific Dailies. But the fact that the community newspapers were more local in nature does not go to the question of functional interchangeability, but to the behaviour of buyers as to preference for geographical scope. This latter subjective factor should not be mingled with the purely objective factor of functional interchangeability which focuses on use or purpose. In my view, "multiple price/product" advertising is a sufficient use or purpose to conclude, on an objective basis, that advertising is the Pacific Dailies and the community newspapers are functionally interchangeable. This conclusion is further supported by the various product modifications, such as "Flyer Force" and the formation of community newspaper groups, which were intended to increase the similarities in use between the daily and community newspapers.

174 Generally, functional interchangeability will be regarded as a necessary but not sufficient condition to be met before products will be placed in the same market. There are other factors which may tend to reinforce, or undermine, a finding that two products are functionally interchangeable. It is appropriate here to discuss the second indirect matter of evidence that the Tribunal ignored —

175 Referring to competition between the Pacific Dailies and the community newspapers for advertisers, the Tribunal found that "there is little doubt that they have been striving to attract many of the same advertisers" (Decision at 278). The Tribunal also found that the community newspapers were successful in attracting advertisers away from the Pacific Dailies and that the Pacific Dailies were concerned by the strength of the community newspapers (Decision at 268). However, the Tribunal inexplicably rejected this evidence of "broad" competition in favour of a more focused analysis (Decision at 268):

> **Conclusions Regarding Product Market**
>
> The community newspapers are uncommonly strong in the Lower Mainland and the dailies are uncommonly weak. Unlike in any other Canadian city, there are prospering community newspapers in virtually all parts of the dailies' city zone, The relative strength of the community newspapers outside the city zone is even greater. These facts concerned the Pacific Press and it sought means of coping with the attraction of the community newspapers for advertisers. In broad terms, this shows that the two kinds of newspapers are "in competition". However, a more focused analysis is required to determine whether they are in the same market, pursuant to s. 93 of the Act:

176 That "focused analysis" ultimately turned on *two* and only two strands of evidence — relating to product modifications and price sensitivity (see discussion supra at 23-27 and Decision at 268-79). In my view, the Tribunal erred in ignoring the evidence of "broad" competition. The evidence of broad competitiveness is sufficient to show that there is competition in fact between the Pacific Dailies and the community newspapers. Southam's subjective concerns were reflected in actions it undertook to compete with the community newspapers such as the introduction of "Flyer Force" (Decision at 274). The Tribunal appeared to dismiss the evidence of inter-industry competition because the loss of Southam's advertisers to the community newspapers was part of a "one-way flow" and that many advertisers who had switched to the community newspapers would not switch back to the Pacific Dailies in response to a price change. That "one-way flow" argument focuses entirely on the concept of price sensitivity.

177 Southam, at the very least, had an interest in stopping or slowing the one-way flow or even reversing it. Moreover, Southam introduced product modifications towards those ends. By focusing entirely on "one-way flow", the Tribunal ignored evidence that there was competition for both present, and possibly, future advertisers. In short, there was competition in fact and the Tribunal erred in dismissing this evidence of "broad" competition.

178 I conclude that the Tribunal in ignoring: (1) evidence of functional interchangeability between the Pacific Dailies and the community newspapers; and (2) evidence of inter-industry competition. In my view, when these factors and the supporting evidence are considered in conjunction, it is clear that the Pacific Dailies and the community newspapers are in the same product market. The superior product argument, advanced by Southam and implicitly adopted by the Tribunal does not, in my view, defeat that conclusion.

179 It will be recalled that in the chapter on "Conclusions Regarding Product" the Tribunal stated that: "the key question regarding the shift from the Pacific Dailies to the community newspapers is whether this is the kind of substitution that occurs when a better product is introduced ... the superior product generally replaces the existing product" (Decision at 276). The superior product argument rests on the common sense understanding that although two products may be functionally interchangeable, they may be highly differentiated in other material respects such that any changes in price cannot reasonably be regarded as having an effect on buyer choice. For example, the differences between disposable and gold plated lighters, Timex and Rolex watches, or Lada and Rolls Royce automobiles, are such that it is simply unrealistic to place the respective products in the same market. In these examples, the primary differences are reflected in price, quality and brand name recognition. However, the fact that product differentiation exists does not automatically lead to the conclusion that each product is in a separate market; see Areeda, *Antitrust Law* , (1995) Vol. IIA, at para. 563.

180 The "superior product" argument is an exception to the general framework of market definition analysis and cannot be used to mask competition where competition exists. All products try to provide superior characteristics because that is they very nature of the competitive market place and the entrepreneurial spirit. As a result of innovation and improvement, products can build a market, sometimes at the expense of existing products. That is what appears to have happened in the Lower Mainland where community newspapers introduced a cheaper and apparently more effective product which achieved the same ends as the one offered by the Pacific Dailies. The best evidence that competition really existed was Southam's preoccupation with the unparalleled success of the community newspapers and the combative measures which Southam initiated in response. By contract, one would not expect Rolex executives to be overly concerned with the loss of customers to Timex or vice versa. In my opinion, evidence of inter-industry competition renders the superior product argument inapplicable to the case at bar.

VI Conclusion

181 While evidence of substitutability through functional interchangeability and inter-industry competition was adduced, the Tribunal ultimately ignored such evidence. In doing so, the Tribunal adopted an overly narrow approach to substitutability as it dismissed "broad" conceptions of interchangeability and inter-industry competition. In doing so, the Tribunal erred in focusing predominantly on price sensitivity. In this case, the similarity of use between Pacific Dailies and community newspapers, and the competitiveness which existed between them, is sufficient to place both in the same product market.

182 This conclusion, of course, is not dispositive of this appeal. While the Pacific Dailies and the community newspapers are in the same product market, it remains to be determined whether the impugned merger would have the effect of lessening or preventing competition. This is the second step in the analysis under ss. 92 and 93 of the Act which requires the Tribunal to make an evaluative judgment. It should be emphasized that merger analysis in Canada requires this two-step process. Otherwise, the factors listed in ss. 92 and 93 of the Act for the purpose of evaluating the effects of a merger are rendered obsolete. The first step, the product market issue, in particular evidence of price sensitivity, must not be allowed to eclipse the vital evaluative aspect of Canadian merger law.

183 While the Tribunal went on to conclude that the Southam acquisition would not result in a substantial lessening of competition, it did not assess market shares or concentration and failed to evaluate that evidence having regard to the limitations found in subs. 92(2) of the Act. Nor did the Tribunal turn its attention to the factors listed in s. 93 of the Act as required by that section. Those matters will have to be dealt with by the Tribunal.

184 Finally, it is necessary for me to make note on the issue of prevention of competition. The Director argued before the Tribunal that Southam's acquisition prevented competition for two reasons. First, the acquisition prevented the formation of an effective community newspaper group. Second, the acquisition prevented the entry of a new daily, using one of the community newspapers as a springboard. The Tribunal rejected the first argument because of its finding that the community newspapers and the Pacific Dailies were not in the same product market, so that formation of a community newspapers group was irrelevant to the competition with Pacific Dailies. In light of my determination that community newspapers and the Pacific Dailies are in the same product market, the Tribunal will have to consider that first argument put forth by the Director respecting prevention of competition.

185 On appeal before this Court, the Director presented a third argument that Southam acquisition prevented competition. This argument suggests that the continuation of non-price competition between the Pacific Dailies and the community newspapers would have ultimately resulted in their becoming close substitutes (Appellant's Memorandum of Fact and Law, para. 152-157). As I understand it, that argument posits that the Southam acquisition eliminated the incentive for the community newspapers to engage in further product modifications, such as increasing the number of weekly editions, that would have made them closer substitutes for the Pacific Dailies. Since this argument was not raised in the pleadings below, nor before the Tribunal, it cannot be considered here.

VII Disposition

186 Pursuant to para. 52(*c*)(ii) of the *Federal Court Act* , the appeal is allowed; the decision of the Tribunal dated June 2, 1992 (excepting that portion dealing with the print real estate market on the North Shore) is set aside; and the matter remitted to the Tribunal for determination by a differently constituted panel in a manner consistent with these reasons. In accordance with the decision of this Court in *Canada (Director of Investigation and Research) v. Air Canada* (1988), 89 N.R. 241, 23 C.P.R. (3d) 178 (Fed. C.A.) , the appellant is entitled to his costs on appeal.

Appeal allowed.

Footnotes

1 There is some confusion over whether anecdotal evidence of price sensitivity is to be classified as direct as opposed to indirect evidence. At p. 179 of its Decision, the Tribunal classified anecdotal evidence relating to buyers' willingness to switch products in response to price changes as indirect evidence. But, at p. 238, it referred to the testimony of the Director's advertising witnesses adduced for the purpose of determining substitutability as evidence falling within the direct category. On appeal, the Director referred to anecdotal evidence of price sensitivity as indirect evidence. To avoid further confusion, I have employed the term direct evidence to include statistical and anecdotal evidence of price sensitivity.

Supreme Court of Canada

Canada (Director of Investigation & Research) v. Southam Inc.

1997 CarswellNat 368, 1997 CarswellNat 369, 1997 J.E. 632, [1996] S.C.J. No. 116, [1997] 1 S.C.R. 748, 144 D.L.R. (4th) 1, 209 N.R. 20, 50 Admin. L.R. (2d) 199, 69 A.C.W.S. (3d) 586, 71 C.P.R. (3d) 417, J.E. 97-632

Southam Inc., Lower Mainland Publishing Ltd., RIM Publishing Inc., Yellow Cedar Properties Ltd., North Shore Free Press Ltd., Specialty Publishers Inc., and Elty Publications Ltd., Appellants v. Director of Investigation and Research

Lamer C.J.C., La Forest, L'Heureux-Dubé, Sopinka, Gonthier, Cory, McLachlin, Iacobucci and Major JJ.

Oral reasons: March 20, 1997
Docket: 24915

Proceedings: Reversing (1995), 127 D.L.R. (4th) 263, 21 B.L.R. (2d) 1, 63 C.P.R. (3d) 1, [1995] 3 F.C. 557, (sub nom. *Director of Investigation & Research, Competition Act v. Southam Inc. (No. 1)*) 185 N.R. 321 (C.A.); Affirming (1995), 127 D.L.R. (4th) 329, 21 B.L.R. (2d) 68, 63 C.P.R. (3d) 67, (sub nom. *Director of Investigation & Research, Competition Act v. Southam Inc. (No. 2)*) 185 N.R. 291 (Fed. C.A.)

Counsel: *Neil Finkelstein, Glenn Leslie* and *Mark Katz*, for appellants.
Stanley Wong, André Brantz and *J. Kevin Wright*, for respondent.

The judgment of the court was delivered by *Iacobucci J.*:

1 The principal question raised by this appeal is whether a decision of the Competition Tribunal (the Tribunal) is entitled to curial deference. Following the approach outlined by this Court in its recent jurisprudence, I conclude that the particular decision of the Tribunal here at issue is entitled to deference.

1. Facts

2 Two daily newspapers serve the region in and around Vancouver. They are the *Vancouver Sun* and the *Vancouver Province*. The appellant Southam Inc., through its subsidiary Pacific Press Limited, owns both.

3 In addition to the two dailies, many smaller community newspapers circulate in the Lower Mainland of British Columbia. These community newspapers differ from the daily newspapers in a few respects: they serve smaller regions, they are distributed free of charge to all households in the regions they serve, and they are published only once, twice, or at most three times weekly. Community newspapers have been more successful in the Lower Mainland than in any other comparable region of Canada. Daily newspapers, by contrast, have been less successful in Vancouver than in other major Canadian cities.

4 In 1986, Southam consulted Dr. Christine Urban, an American expert, about the problems its Vancouver dailies were facing. Dr. Urban identified Vancouver's strong community newspapers as the cause of the dailies' malaise. She advised Southam to act to stem the growing power of the community newspapers.

5 In September, 1986, Southam introduced a flyer delivery service to the Lower Mainland. Known as Flyer Force, the new service offered delivery of flyers to even the households that did not receive a Southam newspaper. In 1988, several community newspapers, whose business included the delivery of flyers, joined to form a group whose geographic reach would rival Flyer Force's. This group was initially called the MetroVan Group. Later in 1988, the MetroVan Group expanded and changed its name to MetroGroup.

6 In September, 1988, Southam began to publish the *North Shore Extra*. This was a bi-weekly publication whose editorial focus was on the North Shore district of the Lower Mainland. The *Extra* was inserted as a supplement into copies of the *Vancouver Sun* bound for households in the North Shore. Additionally, the *Extra* was delivered to North Shore households that did not receive the *Sun*.

7 In January, 1989, Southam began to acquire community and specialized newspapers in the Lower Mainland. By May, 1990, the company had acquired a controlling interest in 13 community newspapers, a real estate advertising publication, three distribution services, and two printing concerns. Among its acquisitions were the Lower Mainland's two strongest community newspapers, the *North Shore News* and the *Vancouver Courier*, as well as the *Real Estate Weekly*.

8 In April, 1990, Southam discontinued the *North Shore Extra*.

9 On November 20, 1990, the respondent, the Director of Investigation and Research, applied for an order requiring Southam to divest itself of the *North Shore News*, the *Courier*, and the *Real Estate Weekly*. The Director's reason for taking this step was that Southam's acquisition of these publications was likely to lessen competition substantially in the retail print advertising and real estate print advertising markets in the Lower Mainland.

10 In early 1991, Southam shut down Flyer Force.

2. Relevant Statutory Provisions

11 Section 92 of the Competition Act, R.S.C. 1985, c. C-34 (Competition Act) addresses the problem of mergers that are likely to lessen competition substantially:

> *92.* (1) Where, on application by the Director, the Tribunal finds that a merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially
>
> (*a*) in a trade, industry or profession,
>
> (*b*) among the sources from which a trade, industry or profession obtains a product,
>
> (*c*) among the outlets through which a trade, industry or profession disposes of a product, or
>
> (*d*) otherwise than as described in paragraphs (*a*) to (*c*),
>
> the Tribunal may, subject to sections 94 to 96,
>
> (*e*) in the case of a completed merger, order any party to the merger or any other person
>
> (i) to dissolve the merger in such manner as the Tribunal directs,
>
> (ii) to dispose of assets or shares designated by the Tribunal in such manner as the Tribunal directs, or
>
> (iii) in addition to or in lieu of the action referred to in subparagraph (i) or (ii), with the consent of the person against whom the order is directed and the Director, to take any other action, ...

12 Various sections of the Competition Tribunal Act, R.S.C. 1985, c. 19 (2nd Supp.), create and provide for the constitution of the Tribunal:

> *3.* ...
>
> (2) The Tribunal shall consist of

(*a*) not more than four members to be appointed from among the judges of the Federal Court — Trial Division by the Governor in Council on the recommendation of the Minister of Justice; and

(*b*) not more than eight other members to be appointed by the Governor in Council on the recommendation of the Minister.

(3) The Governor in Council may establish an advisory council to advise the Minister with respect to appointments of lay members, which council is to be composed of not more than ten members who are knowledgeable in economics, industry, commerce or public affairs and may include, without restricting the generality of the foregoing, individuals chosen from business communities, the legal community, consumer groups and labour.

. . . . .

4. (1) The Governor in Council shall designate one of the judicial members to be Chairman of the Tribunal.

. . . . .

10. (1) Subject to section 11, every application to the Tribunal shall be heard before not less than three or more than five members sitting together, at least one of whom is a judicial member and at least one of whom is a lay member.

(2) The Chairman shall designate a judicial member to preside at any hearing or, if the Chairman is present at a hearing, may preside himself.

13 Sections 12 and 13 divide questions before the Tribunal into questions of law, questions of fact, and questions of mixed law and fact, and assign responsibility for resolving those questions, both in the first instance and on appeal:

12. (1) In any proceedings before the Tribunal,

(*a*) questions of law shall be determined only by the judicial members sitting in those proceedings; and

(*b*) questions of fact or mixed law and fact shall be determined by all the members sitting in those proceedings.

(2) In any proceedings before the Tribunal,

(*a*) in the event of a difference of opinion among the members determining any question, the opinion of the majority shall prevail; and

(*b*) in the event of an equally divided opinion among the members determining any question, the presiding member may determine the question.

. . . . .

13. (1) Subject to subsection (2), an appeal lies to the Federal Court of Appeal from any decision or order, whether final, interlocutory or interim, of the Tribunal as if it were a judgment of the Federal Court — Trial Division.

(2) An appeal on a question of fact lies under subsection (1) only with the leave of the Federal Court of Appeal.

3. Judgments in Appeal

A. Competition Tribunal

(i) On the merits (1992), 43 C.P.R. (3d) 161, with additional reasons (1993), 48 C.P.R. (3d) 224

14 Following 40 days of hearings, the Tribunal found that the acquisition by Southam of the community newspapers and affiliated businesses did not substantially lessen competition in the market for retail print advertising in the Lower Mainland. The Tribunal did find, however, that Southam's purchases had substantially lessened competition in the market for real estate print advertising in the North Shore region. After hearing argument on the issue of remedies, the Tribunal ordered Southam to divest itself, at its option, of either the *North Shore News* or the *Real Estate Weekly*. The Tribunal rejected Southam's proposed remedy, which was to sell the real estate section of the *North Shore News*.

15 During the hearing, the Tribunal heard from 50 witnesses and received literally volumes of documents in evidence. That the Tribunal paid heed to this prodigious body of evidence is clear from its written reasons, which occupy some 147 pages in a law report. Fortunately, it is not necessary for purposes of this appeal to reproduce the Tribunal's reasons in any detail.

16 The principal underlying question for the Tribunal was whether Southam's daily newspapers and its newly acquired community newspapers are in the same market. Its approach to this problem was to ask whether the two kinds of products are close substitutes for one another. The traditional economic measure of substitutability is cross-elasticity of demand, which is the extent to which consumers will switch from one product to another in response to slight changes in their relative prices. However, the Tribunal recognized that direct statistical evidence of cross-elasticity of demand will rarely be available. Accordingly, the members determined that recourse should be had to "indirect evidence" of substitutability. Indirect *indicia* of substitutability include (at p. 179) "the physical characteristics of the products, the uses to which the products are put, and whatever evidence there is about the behaviour of buyers that casts light on their willingness to switch from one product to another in response to changes in relative prices". Also relevant are "the views of industry participants about what products and which firms they regard as actual and prospective competitors".

17 Almost 100 pages of the Tribunal's decision are taken up with a painstaking review and evaluation of the evidence. On the strength of this, the Tribunal concluded that daily newspapers and community newspapers, though remarkably similar at first glance, serve different retail print advertising markets. Daily newspapers, which circulate widely but reach only a relatively small percentage of households, appeal to the advertising needs of large national firms that serve customers throughout a metropolitan region. Community newspapers, by contrast, circulate only within small communities but typically reach all of the households within those communities. These newspapers appeal to local advertisers whose customers live only within a certain district. In support of this conclusion, the Tribunal presented an informal survey of the behaviour of selected advertisers in the Lower Mainland.

18 The Tribunal also cited considerable evidence to suggest that Southam regarded the community newspapers as its chief competitors. In one document, Dr. Christine Urban, an American newspaper consultant retained by Southam, identified strong community newspapers as the root of Southam's problems in the Lower Mainland. In another document quoted in the Tribunal's decision at p. 195, an official of Southam warned against the danger of conceding forever to the community newspapers "a substantial portion of what is normally daily newspaper business". However, the members did not regard this evidence of what they called "inter-industry competition" as decisive. In their view, it showed that Southam believed that it was competing with the community newspapers. But simply to state that something is believed does not guarantee that it is so, and in this case the Tribunal found that Southam's belief was unfounded. "With the present product configurations", concluded the Tribunal at p. 277, "the dailies and community newspapers are at best weak substitutes for some advertisers".

19 Because the two kinds of newspapers were at best only weak substitutes, the Tribunal concluded that they were not in the same relevant product market and therefore that the acquisition by Southam of several community newspapers and affiliated businesses did not substantially lessen competition in the market for retail print advertising in the Lower Mainland.

20 However, the Tribunal did find that the acquisition by Southam of both the *North Shore News*, with its weekly real estate supplement, and the *Real Estate Weekly*, with its North Shore edition, gave Southam monopoly power over the market for real estate print advertising on the North Shore. The result was to lessen competition substantially in that market. The Tribunal ordered the parties to appear at a later date to consider the question of the remedy.

(ii) As to remedy 199247 C.P.R. (3d) 240

21 Having heard argument on the question, the Tribunal found that the test of a proposed remedy in contested proceedings is whether it will restore the competitive situation as it existed before the merger and is not, as Southam submitted, whether it will eliminate any substantial lessening of competition that the merger may have produced. However, the Tribunal found that, even accepting Southam's proposed test, Southam's proposed remedy of selling the weekly real estate supplement to the *North Shore News* still would not be effective. The Tribunal thought it likely that the real estate supplement would founder on its

own; certainly it would not be as substantial a presence in the North Shore as a stand-alone publication as it had been as part of the *North Shore News*. The Tribunal noted that Southam had offered to reach an accommodation with any prospective buyer concerning the continuation of the supplement's association with the *North Shore News*. The Tribunal members concluded, however, that they lacked the jurisdiction to order Southam to reach an accommodation. And in any event, the Tribunal doubted whether such a negotiated association would be conducive to the fostering of a competitive environment. Accordingly, the Tribunal ordered Southam to divest itself, at its option, of either the *North Shore News* or the *Real Estate Weekly*.

B. Federal Court of Appeal

(i) On the merits, [1995] 3 F.C. 557

22 The Director of Investigation and Research appealed the Tribunal's decision on the merits and Southam appealed the Tribunal's decision on the remedy. The Federal Court of Appeal allowed the first appeal and dismissed the second.

23 Robertson J.A., writing for the court, concluded that the Tribunal, though it had stated the correct formula, had nonetheless applied the wrong legal test. He accepted the Tribunal's account of the kinds of evidence that it had to consider, but stated that the Tribunal had failed to consider all of these. He found, in particular, that the Tribunal had not considered evidence that daily newspapers and community newspapers are functionally interchangeable and evidence that the owners of the daily newspapers considered themselves to be in competition against the community newspapers. Failure to consider relevant factors, he said, is an error of law. And to his mind, the Tribunal is entitled to no deference on a question of law.

24 By way of buttressing this conclusion, he emphasized that the *Competition Tribunal Act* mandates an unusual division of labour among the members of the Tribunal. Each panel of the Tribunal, he observed, must have at least one judicial member and the judicial members of any panel are entirely responsible for the settling of such legal questions as may arise in the course of a proceeding. Section 12 of the Act provides:

> *12.* (1) In any proceedings before the Tribunal,
>
> (*a*) questions of law shall be determined only by the judicial members sitting in those proceedings; and
>
> (*b*) questions of fact or mixed law and fact shall be determined by all the members sitting in those proceedings.

Consequently, an appeal from the Tribunal on a question of law is akin to an appeal from the Trial Division of the Federal Court. What is more, an appeal lies from any decision of the Tribunal on a question of law, and no privative clause protects the Tribunal's decisions. The *Competition Tribunal Act* provides:

> *13.* (1) Subject to subsection (2), an appeal lies to the Federal Court of Appeal from any decision or order, whether final, interlocutory or interim, of the Tribunal as if it were a judgment of the Federal Court — Trial Division.

Robertson J.A. further stressed that the judicial members of the Tribunal are not more expert in matters of law than are judges of the Federal Court of Appeal.

25 Invoking the power of the Federal Court of Appeal to substitute its own findings for those of a tribunal, Robertson J.A. held that the evidence before the Tribunal of the functional interchangeability of daily and community newspapers and of inter-industry competition was more than sufficient to show that the two kinds of newspapers are in the same market. Accordingly, he remitted the matter back to the Tribunal with instructions that it should inquire whether the acquisition of the *North Shore News*, the *Vancouver Courier*, and the *Real Estate Weekly* had resulted in a substantial lessening of competition in the market for retail print advertising in the Lower Mainland of British Columbia.

(ii) As to remedy 199247 C.P.R. (3d) 240

26 Turning to Southam's appeal of the remedy, Robertson J.A. declined to decide what the appropriate test for a remedy is, because Southam's proposed remedy failed regardless of the test applied. In answer to Southam's protest that the Tribunal

had imposed a penalty on it, Robertson J.A. observed that the Tribunal had sought only to impose an *effective* remedy. To his mind, this way of proceeding could not be objectionable. Against the complaint that the Tribunal had wrongly placed the burden of proving the effectiveness of its proposed remedy on Southam, Robertson J.A. invoked the maxim that he who asserts must prove. To Southam's argument that the Tribunal had wrongly dismissed its proposed remedy as ineffective, he said that curial deference was due to the Tribunal on this, a finding of mixed law and fact.

4. Issues

27 This appeal raises two issues. The first is whether the Federal Court of Appeal erred in concluding that it owed no deference to the Tribunal's finding about the dimensions of the relevant market and in subsequently substituting for that finding one of its own. The second is whether the Federal Court of Appeal erred in refusing to set aside the Tribunal's remedial order.

5. Analysis

28 The principal question in this appeal concerns the limits that an appellate court should observe in deciding a statutory appeal from a decision like the one that the Tribunal reached in this case. Ultimately, this comes down to a question about the standard of review that an appellate court should apply in a case such as this one. In the reasons that follow, the answer given is that the Competition Tribunal should be held to the standard of reasonableness *simpliciter*. In other words, a court, in reviewing the Tribunal's decision, must inquire whether that decision was reasonable. If it was, then the decision should stand. Otherwise, it must fall.

29 The secondary question is whether the Tribunal chose an appropriate remedy. My conclusion is that, even though the Tribunal imposed too strict a test, its chosen remedy is appropriate.

A. Statutory Right of Appeal

30 In *Pezim v. British Columbia (Superintendent of Brokers)*, [1994] 2 S.C.R. 557, a decision which, like this one, concerned a decision of an expert tribunal that was subject to a statutory right of appeal, the Court declared that the standard of review is a function of many factors. Depending on how the factors play out in a particular instance, the standard may fall somewhere between correctness, at the more exacting end of the spectrum, and patently unreasonable, at the more deferential end. See pp. 589-590.

31 An appellate court must consider the factors with a view to determining the approach that it should take as a court sitting in appeal of the decision of the tribunal. There is no privative clause, and so jurisdiction is not at issue. The tribunal enjoys jurisdiction by virtue of its constating statute and the appellate court enjoys jurisdiction by virtue of a statutory right of appeal. The legislative intent is clear. The question is what limits an appellate court should observe in the exercise of its statutorily mandated appellate function.

32 I wish to emphasize that in cases like the instant appeal no question arises about the extent of the tribunal's jurisdiction. Where the statute confers a right of appeal, an appellate court need not look to see whether the tribunal has exceeded its jurisdiction by breaching the rules of natural justice or by rendering a decision that is patently unreasonable. The manner and standard of review will be determined in the way that appellate courts generally determine the posture they will take with respect to the decisions of courts below. In particular, appellate courts must have regard to the nature of the problem, to the applicable law properly interpreted in the light of its purpose, and to the expertise of the tribunal.

33 I propose to consider each of the relevant factors in turn.

B. The Nature of the Problem Before the Tribunal

34 The parties vigorously dispute the nature of the problem before the Tribunal. The appellants say that the problem is one of fact. The respondent insists that the problem is one of law. In my view, the problem is one of mixed law and fact.

35 Section 12(1) of the Competition Tribunal Act contemplates a tripartite classification of questions before the Tribunal into questions of law, questions of fact, and questions of mixed law and fact. Briefly stated, questions of law are questions about what the correct legal test is; questions of fact are questions about what actually took place between the parties; and questions of mixed law and fact are questions about whether the facts satisfy the legal tests. A simple example will illustrate these concepts. In the law of tort, the question what" negligence" means is a question of law. The question whether the defendant did this or that is a question of fact. And, once it has been decided that the applicable standard is one of negligence, the question whether the defendant satisfied the appropriate standard of care is a question of mixed law and fact. I recognize, however, that the distinction between law on the one hand and mixed law and fact on the other is difficult. On occasion, what appears to be mixed law and fact turns out to be law, or *vice versa*.

36 For example, the majority of the British Columbia Court of Appeal in Pezim, , concluded that it was an error of law to regard newly acquired information on the value of assets as a" material change" in the affairs of a company. It was common ground in that case that the proper test was whether the information constituted a material change; the argument was about whether the acquisition of information of a certain kind qualified as such a change. To some extent, then, the question resembled one of mixed law and fact. But the question was one of law, in part because the words in question were present in a statutory provision and questions of statutory interpretation are generally questions of law, but also because the point in controversy was one that might potentially arise in many cases in the future: the argument was about kinds of information and not merely about the particular information that was at issue in that case. The rule on which the British Columbia Securities Commission seemed to rely — that newly acquired information about the value of assets can constitute a material change — was a matter of law, because it had the potential to apply widely to many cases.

37 By contrast, the matrices of facts at issue in some cases are so particular, indeed so unique, that decisions about whether they satisfy legal tests do not have any great precedential value. If a court were to decide that driving at a certain speed on a certain road under certain conditions was negligent, its decision would not have any great value as a precedent. In short, as the level of generality of the challenged proposition approaches utter particularity, the matter approaches pure application, and hence draws nigh to being an unqualified question of mixed law and fact. See R. P. Kerans, *Standards of Review Employed by Appellate Courts* (1994), at pp. 103-108. Of course, it is not easy to say precisely where the line should be drawn; though in most cases it should be sufficiently clear whether the dispute is over a general proposition that might qualify as a principle of law or over a very particular set of circumstances that is not apt to be of much interest to judges and lawyers in the future.

38 Part of the confusion in this case arises from the fact that the parties are arguing about two different questions. On the surface, it appears that the parties agree about the law: both say that, in determining the dimensions of the relevant market, the Tribunal must consider indirect evidence of cross-elasticity of demand. No one quarrels with the Tribunal's understanding of the kinds of indirect evidence it should consider.

39 However, the respondent says that, having informed itself correctly on the law, the Tribunal proceeded nevertheless to ignore certain kinds of indirect evidence. Because the Tribunal must be judged according to what it does and not according to what it says, the import of the respondent's submission is that the Tribunal erred in law. After all, if a decision-maker says that the correct test requires him or her to consider A, B, C, and D, but in fact the decision-maker considers only A, B, and C, then the outcome is as if he or she had applied a law that required consideration of only A, B, and C. If the correct test requires him or her to consider D as well, then the decision-maker has in effect applied the wrong law, and so has made an error of law.

40 The appellants, for their part, maintain that the Tribunal considered all the relevant kinds of indirect evidence, including the kinds that the respondent says it ignored. Accordingly, the appellants argue that if the Tribunal erred, it can only have been in applying the correct legal test to the facts. Such an error, say the appellants, is an error of fact. As authority for their position, they cite a passage from the decision of this Court in *Canada v. Pharmaceutical Society (Nova Scotia)*, (sub nom. *R. v.* Nova Scotia Pharmaceutical Society), [1992] 2 S.C.R. 606, at p. 647:

> In the context of s. 32(1)(*c*), the process followed and the criteria used to arrive at a determination of "undueness" are questions of law and as such are reviewable by an appellate court. The application of this process and these criteria, that

> is the full inquiry, often involving complicated economic issues, into whether the impugned agreement was an undue restriction on competition, remains a question of fact. The general rule that appellate courts should be reluctant to venture into a re-examination of the factual conclusions of the trial judge applies with special force in a complex matter such as here.

41 Both positions, so far as they go, are correct. If the Tribunal did ignore items of evidence that the law requires it to consider, then the Tribunal erred in law. Similarly, if the Tribunal considered all the mandatory kinds of evidence but still reached the wrong conclusion, then its error was one of mixed law and fact. The question, then, becomes whether the Tribunal erred in the way that the respondent says it erred.

42 Even a cursory reading of the Tribunal's reasons discloses that the Tribunal did not fail to consider relevant items of evidence. The respondent charges — and the Federal Court of Appeal agreed with him on this point — that the Tribunal ignored evidence of functional interchangeability and of inter-industry competition. But this overlooks the 14 pages that the Tribunal devoted to functional interchangeability, and the 28 pages that the Tribunal devoted to inter-industry competition. See pp. 191-218 and pp. 225-238. A great part, if not actually the bulk of the Tribunal's decision is taken up with an examination of the very factors that the respondent says it ignored. Therefore, the Tribunal did not err in law by failing to consider relevant factors.

43 The suggestion remains, however, that the Tribunal might have erred in law by failing to accord adequate weight to certain factors. The problem with this suggestion is that it is inimical to the very notion of a balancing test. A balancing test is a legal rule whose application should be subtle and flexible, but not mechanical. It would be dangerous in the extreme to accord certain kinds of evidence decisive weight as, for example, by saying that evidence of inter-industry competition should always be sufficient to prove that two companies are operating in the same market. A test would be stilted and impossible of application if it purported to assign fixed weights to certain factors as, for example, by saying that evidence of inter-industry competition should weigh 10 times as heavily in the Tribunal's deliberations as does evidence of physical similarities between the products in question. These sorts of things are not readily quantifiable. They should not be considered as matters of law but should be left initially at least to determination by the Tribunal. The most that can be said, as a matter of law, is that the Tribunal should consider each factor; but the according of weight to the factors should be left to the Tribunal.

44 It seems, then, that if the Tribunal erred, it was in applying the law to the facts; and that is a matter of mixed law and fact. This is especially so if, as here, the legal principle being applied involves a balancing test, because with a typical multi-factored balancing test so many factors weigh in the balance that a duplication of any one set of relevant circumstances in the future is unlikely. At the outside, the decision of the Tribunal in this case stands for the proposition that a large daily newspaper does not compete for retail advertising business with small community newspapers though probably it does not stand even for so general a proposition as that, because the Tribunal's decision rested in part on its assessment of the behaviour of *these* parties. Depending as it does so fully on the facts and circumstances of the case, the decision is too particular to have any great value as a general precedent.

45 In short, the Tribunal forged no new legal principle, and so its error, if there was an error, can only have been of mixed law and fact. It should be noted that no one has suggested that the Tribunal erred in its findings of fact. All of this tends to suggest that some measure of deference is owed to the decision of the Tribunal because, to paraphrase what Gonthier J. stated in Nova Scotia Pharmaceutical Society, , appellate courts should be reluctant to venture into a re-examination of the conclusions of the Tribunal on questions of mixed law and fact.

C. The Words of the Tribunal's Constating Statute

46 Section 13 of the Competition Tribunal Act confers a right of appeal from orders and decisions of the Competition Tribunal:

> *13.* (1) Subject to subsection (2), an appeal lies to the Federal Court of Appeal from any decision or order, whether final, interlocutory or interim, of the Tribunal as if it were a judgment of the Federal Court — Trial Division.
>
> (2) An appeal on a question of fact lies under subsection (1) only with the leave of the Federal Court of Appeal.

That Parliament granted such a broad, even unfettered right of appeal, as if from a judgment of a trial court, perhaps counsels a less-than-deferential posture for appellate courts than would be appropriate if a privative clause were present. However, as this Court has noted several times recently, the absence of a privative clause does not settle the question. See Pezim, ; Bell Canada v. Canada (Canadian Radio-Television & Telecommunications Commission)[1989] 1 S.C.R. 1722, at p. 1746.

D. The Purpose of the Statute that the Tribunal Administers

47 Parliament has described the purpose of the *Competition Act* in the following terms:

> *1.1* The purpose of this Act is to maintain and encourage competition in Canada in order to promote the efficiency and adaptability of the Canadian economy, in order to expand opportunities for Canadian participation in world markets while at the same time recognizing the role of foreign competition in Canada, in order to ensure that small and medium-sized enterprises have an equitable opportunity to participate in the Canadian economy and in order to provide consumers with competitive prices and product choices.

Competition Act, s. 1.1, as am. by R.S.C. 1985, c. 19 (2nd Supp.), s. 19.

48 The aims of the Act are more "economic" than they are strictly "legal". The "efficiency and adaptability of the Canadian economy" and the relationships among Canadian companies and their foreign competitors are matters that business women and men and economists are better able to understand than is a typical judge. Perhaps recognizing this, Parliament created a specialized Competition Tribunal and invested it with responsibility for the administration of the civil part of the *Competition Act*. See Competition Tribunal Act, s. 8(1).

49 This Court has said in the past that the Tribunal is especially well- suited to the task of overseeing a complex statutory scheme whose objectives are peculiarly economic:

> Section 8(1) [of the *Competition Tribunal Act*] confirms the jurisdiction of the Tribunal over Part VIII. The civil part of the [*Competition Act*] therefore falls entirely under the Tribunal's jurisdiction. It is readily apparent from the [*Competition Act*] and the [*Competition Tribunal Act*] that Parliament created the Tribunal as a specialized body to deal solely and exclusively with Part VIII [of the *Competition Act*], since it involves complex issues of competition law, such as abuses of dominant position and mergers.

See Chrysler Canada Ltd. v. Canada (Competition Tribunal)[1992] 2 S.C.R. 394, at p. 406. Because an appellate court is likely to encounter difficulties in understanding the economic and commercial ramifications of the Tribunal's decisions and consequently to be less able to secure the fulfilment of the purpose of the *Competition Act* than is the Competition Tribunal, the natural inference is that the purpose of the Act is better served by appellate deference to the Tribunal's decisions.

E. The Area of the Tribunal's Expertise

50 Expertise, which in this case overlaps with the purpose of the statute that the tribunal administers, is the most important of the factors that a court must consider in settling on a standard of review. This Court has said as much several times before, though perhaps never so clearly as in the following passage, from C.J.A., Local 579 v. Bradco Construction Ltd.[1993] 2 S.C.R. 316, at p. 335:

> ... the expertise of the tribunal is of the utmost importance in determining the intention of the legislator with respect to the degree of deference to be shown to a tribunal's decision in the absence of a full privative clause. Even where the tribunal's enabling statute provides explicitly for appellate review, as was the case in *Bell Canada* ..., it has been stressed that deference should be shown by the appellate tribunal to the opinions of the specialized lower tribunal on matters squarely within its jurisdiction.

51 As I have already said, the Tribunal's expertise lies in economics and in commerce. The Tribunal comprises not more than four judicial members, all of whom are judges of the Federal Court - Trial Division, and not more than eight lay members,

who are appointed on the advice of a council of persons learned in "economics, industry, commerce or public affairs". See Competition Tribunal Act, s. 3. The preponderance of lay members reflects the judgment of Parliament that, for purposes of administering the *Competition Act*, economic or commercial expertise is more desirable and important than legal acumen.

52 The particular dispute in this case concerns the definition of the relevant product market — a matter that falls squarely within the area of the Tribunal's economic or commercial expertise. Undeniably, the determination of cross-elasticity of demand, which is in theory the truest *indicium* of the dimensions of a product market, requires some economic or statistical skill. But even an assessment of indirect evidence of substitutability, such as evidence that two kinds of products are functionally interchangeable, needs a variety of discernment that has more to do with business experience than with legal training. Someone with experience in business will be better able to predict likely consumer behaviour than a judge will be. What is more, indirect evidence is useful only as a surrogate for cross-elasticity of demand, so that what is required in the end is an assessment of the *economic* significance of the evidence; and to this task an economist is almost by definition better suited than is a judge.

53 All of this is not to say that judges are somehow incompetent in matters of competition law. Significantly, Parliament mandated that the Competition Tribunal should include judicial members, and that the Chairman should always be a judge. See Competition Tribunal Act, s. 4. Clearly it was Parliament's view that questions of competition law are not altogether beyond the ken of judges. However, one of the principal roles of the judicial members is to decide such questions of pure law as may arise before the Tribunal. Over those questions they have exclusive jurisdiction. See *supra* at s. 12(1)(a). But over questions of fact and of mixed law and fact, the judicial members share their jurisdiction with the lay members. See *supra* at s. 12(1)(b). Thus, while judges are able to pronounce on questions of the latter kind, they may do so only together with the lay members; and, in a typically constituted panel, such as the one that sat in this case, the lay members outnumber the judicial ones, so that in the event of a disagreement between the two camps, the lay members as a group will prevail. This makes sense because, as I have observed, the expertise of the lay members is invaluable in the application of the principles of competition law.

F. The Standard

54 In my view, considering all of the factors I have canvassed, what is dictated is a standard more deferential than correctness but less deferential than "not patently unreasonable". Several considerations counsel deference: the fact that the dispute is over a question of mixed law and fact; the fact that the purpose of the *Competition Act* is broadly economic, and so is better served by the exercise of economic judgment; and the fact that the application of principles of competition law falls squarely within the area of the Tribunal's expertise. Other considerations counsel a more exacting form of review: the existence of an unfettered statutory right of appeal from decisions of the Tribunal and the presence of judges on the Tribunal. Because there are indications both ways, the proper standard of review falls somewhere between the ends of the spectrum. Because the expertise of the Tribunal, which is the most important consideration, suggests deference, a posture more deferential than exacting is warranted.

55 I wish to emphasize that the need to find a middle ground in cases like this one is almost a necessary consequence of our standard-of-review jurisprudence. Because appeal lies by statutory right from the Tribunal's decisions on questions of mixed law and fact, the reviewing court need not confine itself to the search for errors that are patently unreasonable. The standard of patent unreasonableness is principally a jurisdictional test and, as I have said, the statutory right of appeal puts the jurisdictional question to rest. See *New Brunswick Liquor Corp. v. C.U.P.E., Local 963*, (sub nom. C.U.P.E., Local 963 v. New Brunswick Liquor Corp.), [1979] 2 S.C.R. 227, at p. 237. But on the other hand, appeal from a decision of an expert tribunal is not exactly like appeal from a decision of a trial court. Presumably if Parliament entrusts a certain matter to a tribunal and not (initially at least) to the courts, it is because the tribunal enjoys some advantage that judges do not. For that reason alone, review of the decision of a tribunal should often be on a standard more deferential than correctness. Accordingly, a third standard is needed.

56 I conclude that the third standard should be whether the decision of the Tribunal is unreasonable. This test is to be distinguished from the most deferential standard of review, which requires courts to consider whether a tribunal's decision is patently unreasonable. An unreasonable decision is one that, in the main, is not supported by any reasons that can stand up to a somewhat probing examination. Accordingly, a court reviewing a conclusion on the reasonableness standard must look to see whether any reasons support it. The defect, if there is one, could presumably be in the evidentiary foundation itself or in the logical process by which conclusions are sought to be drawn from it. An example of the former kind of defect would be an

assumption that had no basis in the evidence, or that was contrary to the overwhelming weight of the evidence. An example of the latter kind of defect would be a contradiction in the premises or an invalid inference.

57 The difference between "unreasonable" and" patently unreasonable" lies in the immediacy or obviousness of the defect. If the defect is apparent on the face of the tribunal's reasons, then the tribunal's decision is patently unreasonable. But if it takes some significant searching or testing to find the defect, then the decision is unreasonable but not patently unreasonable. As Cory J. observed in Canada (Attorney General) v. P.S.A.C.[1993] 1 S.C.R. 941, at p. 963, "[i]n the Shorter Oxford English Dictionary' patently', an adverb, is defined as 'openly, evidently, clearly'". This is not to say, of course, that judges reviewing a decision on the standard of patent unreasonableness may not examine the record. If the decision under review is sufficiently difficult, then perhaps a great deal of reading and thinking will be required before the judge will be able to grasp the dimensions of the problem. See National Corn Growers Assn. v. Canada (Canadian Import Tribunal)[1990] 2 S.C.R. 1324, at p. 1370, per Gonthier J.; see also Toronto (City) Board of Education v. O.S.S.T.F.,District *15*, S.C.C., No. 24724, February 27, 1997, at para. 47 [now reported at (1997), 144 D.L.R. (4th) 385] *per* Cory J. But once the lines of the problem have come into focus, if the decision is patently unreasonable, then the unreasonableness will be evident.

58 The standard of reasonableness *simpliciter* is the same standard that was applied in *Pezim*, and for good reason: the parallels between this case and that one are obvious. *Pezim* involved the decision of a securities commission, one of whose tasks was to be sensitive to and enhance capital market efficiency; this appeal involves the decision of the Competition Tribunal, one of whose tasks is to recognize and in its own way to promote the efficiency of the Canadian economy. In *Pezim*, appeals from decisions of the securities commission lay as of right; in this case, appeals from decisions of the Competition Tribunal lie as of right. The questions in *Pezim* were entirely within the competence of the commission to answer; the question in this appeal is entirely within the competence of the Competition Tribunal to answer. The principal difference between *Pezim* and this case is that *Pezim* involved what were called questions of law. However, as I have already explained, the questions in that case were questions of law only in a somewhat attenuated sense. The difference between the questions in the two cases is therefore not as great as it might at first seem.

59 The standard of reasonableness *simpliciter* is also closely akin to the standard that this Court has said should be applied in reviewing findings of fact by trial judges. In Stein v. “Kathy K” (The) (“Storm Point” (The))1975[1976] 2 S.C.R. 802, at p. 806, Ritchie J. described the standard in the following terms:

> ... the accepted approach of a court of appeal is to test the findings [of fact] made at trial on the basis of whether or not they were *clearly wrong rather than whether they accorded with that court's view on the balance of probability*. [Emphasis added.]

60 Even as a matter of semantics, the closeness of the" clearly wrong" test to the standard of reasonableness *simpliciter* is obvious. It is true that many things are wrong that are not unreasonable; but when "clearly" is added to" wrong", the meaning is brought much nearer to that of" unreasonable". Consequently, the clearly wrong test represents a striking out from the correctness test in the direction of deference. But the clearly wrong test does not go so far as the standard of patent unreasonableness. For if many things are wrong that are not unreasonable, then many things are clearly wrong that are not patently unreasonable (on the assumption that "clearly" and "patently" are close synonyms). It follows, then, that the clearly wrong test, like the standard of reasonableness *simpliciter*, falls on the *continuum* between correctness and the standard of patent unreasonableness. Because the clearly wrong test is familiar to Canadian judges, it may serve as a guide to them in applying the standard of reasonableness *simpliciter*.

61 Putting all of the foregoing considerations into the balance and taking my cue from this Court's decisions on the subject, including particularly relatively recent decisions, I am of the view that decisions of the Competition Tribunal should be subject to review on a reasonableness standard. That this standard is appropriate and sensible becomes clear when one considers the complexity of economic life in our country and the need for effective regulatory instruments administered by those most knowledgeable and informed about what is being regulated. It bears noting, however, that the standard I have chosen permits recourse to the courts for judicial intervention in cases in which the Tribunal has been shown to have acted unreasonably.

62 In the final result, the standard of reasonableness simply instructs reviewing courts to accord considerable weight to the views of tribunals about matters with respect to which they have significant expertise. While a policy of deference to expertise may take the form of a particular standard of review, at bottom the issue is the weight that should be accorded to expert opinions. In other words, deference in terms of a "standard of reasonableness" and deference in terms of "weight" are two sides of the same coin. In this respect, I agree with Kerans, supra, at p. 17, who has described deference to expertise in the following way:

> Experts, in our society, are called that precisely because they can arrive at well-informed and rational conclusions. If that is so, they should be able to explain, to a fair-minded but less well-informed observer, the reasons for their conclusions. If they cannot, they are not very expert. If something is worth knowing and relying upon, it is worth telling. Expertise commands deference only when the expert is coherent. Expertise loses a right to deference when it is not defensible. That said, it seems obvious that [appellate courts] manifestly *must give great weight* to cogent views thus articulated. [Emphasis added.]

G. Application of the Standard

63 The question, then, is whether the Tribunal acted unreasonably when it decided that Southam's daily newspapers and community newspapers are in different product markets. I conclude that it did not.

64 The Federal Court of Appeal identified what it thought were two defects in the Tribunal's decision. The first is that the Tribunal failed to consider evidence that daily newspapers and community newspapers are functionally interchangeable. The second is that the Tribunal failed to consider evidence that Southam considered the community newspapers to be its principal rivals in the Lower Mainland.

65 By "functional interchangeability", the Federal Court of Appeal apparently meant "end use" or" purpose". See pp. 636-37. The Tribunal, for its part, elaborated (at pp. 225-38) at great length on the use to which advertisers put daily and community newspapers. At the end of 14 pages, it came to the conclusion with which the Federal Court of Appeal would later take issue: that advertisers use daily newspapers to reach consumers throughout the entire Lower Mainland and use community newspapers to reach smaller, "local" audiences.

66 The Federal Court of Appeal quarrelled with this conclusion on several grounds. Its first, and most general objection, was to the weight that the Tribunal assigned to the criterion of functional interchangeability. In the court's view, at p. 635, the Tribunal gave this important criterion short shrift: "the Tribunal clearly failed to consider the importance of functional interchangeability, which is not simply one of many criteria to be considered but a central part of the framework". However, as I have already noted, the weighing of criteria in a balancing test must be largely a matter of discretion. The very purpose of a multi-factored test, such as the one that the Tribunal used to determine the dimensions of the relevant product market, is to permit triers of fact to do justice in diverse particular cases.

67 As a general matter, in cases like this one, the aims and objectives of the statute may not be served by assigning principal or overriding importance to any one factor. It cannot be said as a matter of law that evidence of functional interchangeability should weigh more heavily in the balance than other kinds of evidence. The question therefore must be whether the Tribunal's attention to functional interchangeability was reasonable on the facts of this case.

68 For my part, I cannot say that the Tribunal acted unreasonably to discount the evidence of functional interchangeability. It had its reasons for doing so, and those reasons cannot be said to be without foundation or logical coherence. In particular, the Tribunal seems to have thought that daily newspapers and community newspapers serve different purposes. The former appeal to large advertisers who wish to convey their message throughout a metropolitan region. The latter appeal to smaller advertisers, who wish to reach all or many of the consumers living in a particular neighbourhood or district of a city. See the Tribunal's decision at p. 238. While I might not agree, as a matter of empirical "fact", that this description of the purposes of the respective kinds of newspaper is exhaustive, I think that it is not without its reasons. It is reasonable, if only reasonable, to suppose that advertisers are sufficiently discerning about the media they employ that they are unlikely to respond to changes in the relative prices of the two kinds of newspaper by taking their business from the one to the other. Fortunately for the Tribunal, its decision need only be reasonable and not necessarily correct.

69 However, that does not finish the matter. The Federal Court of Appeal had two other difficulties with the Tribunal's approach, and they appear to go to the reasoning that underlies the Tribunal's conclusion. The first is that it is inconsistent to lump together daily newspapers and community newspapers for purposes of distinguishing them from broadcast media but then to separate the two kinds of newspapers for purposes of distinguishing them from one another. The second is that the Tribunal's conclusion confuses geographical scope with purpose. Both alleged difficulties turn out on closer inspection not to be troubling.

70 The Federal Court of Appeal, at p. 636, described the first alleged difficulty in these terms: "If 'multiple price/product' advertising is a relevant purpose for distinguishing between print and electronic media then it must also be relevant as between advertising in daily and community newspapers". But, with respect, this conclusion does not follow. It is perfectly consistent to distinguish between the broadcast media and the print media on one ground and to distinguish further between two kinds of print media on another ground. Broadcasters attract advertisers who want to convey an "image". See the Tribunal's decision at p. 221. Newspapers attract advertisers who want to convey a great deal of specific information about a variety of products all at once. See supraat p. 221. Accordingly, the two kinds of media serve different markets. However, from the fact that newspapers in general serve a certain broad class of advertiser, it does not follow that all newspapers serve precisely the same particular advertisers, or the same relevant advertising markets. Further division of the market is possible. Thus, daily newspapers serve advertisers who wish to reach even a relatively small proportion of people throughout a large region. Community newspapers serve advertisers who wish to reach a large proportion of people in a small region. See supra, at p. 238. These markets are at least possibly, and therefore reasonably, different.

71 If the identification of an overarching, broad purpose that two kinds of products serve were sufficient to place those products in the same market, then all products could be placed in the same market, because all products serve the general purpose of satisfying consumers' needs. Certainly, following the Federal Court of Appeal's reasoning it would be possible to argue that broadcast media and print media are in the same market because both kinds of media serve advertisers. But it is not so, and the Federal Court of Appeal admitted at p. 636 that it is not so. The trick is to settle on the correct level of generality. Canadian courts have recognized as much in the past:

> ... speaking generally, it is of importance to bear in mind that the term "market" is a relative concept. In one sense, there is only one market in an economy since, to some extent, all products and services are substitutes for each other in competing for the customer's dollar.
>
> In another sense, almost every firm has its own market since, in most industries, each firm's product is differentiated, to some extent, from that of all other firms.
>
> Defining the relevant market in any particular case, therefore, requires a balanced consideration of a number of characteristics or dimensions to meet the analytical needs of the specific matter under consideration.

J.W. Mills & Son Ltd. v. R.[1968] 2 Ex. C.R. 275, at p. 305.

72 What has to be kept in mind is that purposes are as various as markets, and both come in different sizes. Consequently it is unhelpful to suggest that once a purpose has been identified, all those products that serve that purpose should be considered to fall within a single market. It is the *correct* or *relevant* purpose that must be found, which is to say the broadest purpose that is consistent with a high cross-elasticity of demand. For example, cars and tanks both serve the general purpose of conveying people from place to place. But no one would suggest that cars and tanks are in the same market. The reason is that consumers do not modify their car-purchasing behaviour in response to slight changes in the price of tanks, and governments do not modify their tank-purchasing behaviour in response to slight changes in the price of cars. A person who is in the market for a station wagon does not shop with an eye on the price of armaments. Again, the Minister of National Defence does not check prices at local car dealerships before announcing an acquisition of new military hardware.

73 The relevant purpose is a function of the psychology of consumption or preference. Consequently, in order to choose the relevant purpose, the adjudicator must possess in advance some idea about the behaviour of consumers. In this way, the purpose inquiry is a little circular. Tribunals inquire into purpose in order to get a grip on the tendency of consumers to substitute

one product for another, but they will not hit on the right purpose unless they already have a notion of what consumers will substitute for what. This circularity does not, however, alter the fact that more is needed to establish functional interchangeability than citation of a common purpose. That daily newspapers and community newspapers both seek the trade of "multiple price/ product" advertisers does not show, without more, that they are competing in the same market. It was open to the Tribunal to conclude, after consulting evidence of the behaviour of advertisers, that purchasing decisions in the real world are taken on the basis of some more particular purpose than to convey information about several products at once.

74 The Federal Court of Appeal at p. 636 also took issue, at a theoretical level, with the Tribunal's attention to the geographic scope of the different kinds of newspapers:

> But the fact that the community newspapers are more local in nature does not go to the question of functional interchangeability, but to the behaviour of buyers as to preference for geographical scope. This latter subjective factor should not be mingled with the purely objective factor of functional interchangeability which focuses on use or purpose.

Immediately, any argument that depends on a classification of purpose as" objective" is suspect. Purpose is at least, in part, a matter of intention and so is at least, in part, "subjective". Presumably, almost any object can be put to a multitude of uses. An axe handle, for example, can serve as a bludgeon or as an axe handle. The purpose it serves depends on the intention of the person in whose hand it is. In like manner, the purposes daily newspapers and community newspapers serve depend on the intentions of their users.

75 In the right hands, both could function as birdcage liners or as wrapping for fish and chips. At times, both probably do. However, those functions are uninteresting because they are atypical, and the Tribunal was right not to mention them. But in order to exclude those purposes and settle on the relevant ones, the Tribunal had to consider, at least implicitly, the intentions of the users of the two kinds of newspaper. Therefore, it was not illegitimate for the Tribunal to look to what the Federal Court of Appeal at p. 636 called "preference for geographical scope". Reaching consumers throughout a large region is one purpose. Reaching consumers in a neighbourhood is another purpose. It does not matter that the difference between them is in the intention of the advertiser. Intention is a component of purpose. Of course, "objective" considerations also play a part. A newspaper cannot be an aircraft, however much someone might wish that it could be. And this is reflected in the Tribunal's distinction. A community newspaper cannot reach a large audience, however much an advertiser might wish that it could, and a daily newspaper cannot reach only the consumers in a small locality.

76 It appears, then, that the Tribunal considered at length, at much greater length than did the Federal Court of Appeal, whether daily newspapers and community newspapers serve the same purpose. It concluded that they do not, and gave reasons for its conclusion. The reasons that the Federal Court of Appeal offered for questioning that conclusion are, with respect, unconvincing. Accordingly, failing the appearance of some other basic objection to the Tribunal's conclusion about functional interchangeability, that conclusion should stand.

77 The Federal Court of Appeal also found fault with the Tribunal's treatment of evidence that Southam regarded the community newspapers as its chief competitors. In particular, it objected to the Tribunal's preference for a "more focused analysis" of the evidence of inter-industry competition. In the court's view at p. 638, "[t]he evidence of broad competitiveness is sufficient to show that there is competition in fact between the Pacific Dailies and the community newspapers". It was error, said the Federal Court of Appeal, for the Tribunal to ignore that evidence.

78 In fact, the Tribunal devoted 28 pages of its reasons (pp. 191-218) to the question of inter-industry competition. The Tribunal did not "ignore" evidence of broad inter-industry competition. It simply did not regard that evidence as decisive (at pp. 191-92):

> *... determining that Pacific Press regarded the community newspapers as "competitors" is not by itself enough to place them in the same market.* Competition means many things to many people. What the tribunal must establish is whether dailies and the community newspapers are in the same product market for the purposes of assessing the implications of the acquisitions in question in this case. As discussed above in general terms, that exercise involves resolving whether

> dailies and community newspapers are effective substitutes for newspaper retail advertising services. The actions taken and the views expressed by participants in the alleged market are recognized by both parties and by expert witnesses as an *important* source of information in trying to answer this question. [Emphasis added.]

In short, the Tribunal found that although evidence of inter-industry competition suggests a certain conclusion, it is not sufficient by itself to establish that conclusion. In this it relied on the elementary principle that thinking something is so does not make it so. A company can believe that it is competing with another company without it actually (or legally) being so.

79 It is possible that if I were deciding this case *de novo*, I might not dismiss so readily as the Tribunal did what is admittedly weighty evidence of inter-industry competition. In my view, it is very revealing that Southam's own expert, an American newspaper consultant, identified the community newspapers as the source of Southam's difficulties in the Lower Mainland. To find, in the face of such evidence, that the daily newspapers and the community newspapers are not competitors is perhaps unusual. In that sense, the Tribunal's finding is difficult to accept. However, it is not unreasonable. The Tribunal explained that, in its view, Southam was mistaken about who its competitors were; and though I may not consider that reason compelling, I cannot say that it is not a reason for which there is a logical and evidentiary underpinning. More generally, I notice that the Tribunal seems to have been preoccupied with the definition of the relevant market. It is possible that the members may occasionally have lost sight of the ultimate inquiry, which is whether the acquisition of the community newspapers by Southam substantially lessened competition. But again, I cannot say that the Tribunal's approach was unreasonable. Definition of the relevant market is indeed a necessary step in the inquiry; and the fact that the Tribunal dwelled on it is perhaps understandable if, as seems to have been the case, the bounds of the relevant market were not clear.

80 I wish to observe, by way of concluding my discussion of this issue, that a reviewer, and even one who has embarked upon review on a standard of reasonableness *simpliciter*, will often be tempted to find some way to intervene when the reviewer him- or herself would have come to a conclusion opposite to the tribunal's. Appellate courts must resist such temptations. My statement that I might not have come to the same conclusion as the Tribunal should not be taken as an invitation to appellate courts to intervene in cases such as this one but rather as a caution against such intervention and a call for restraint. Judicial restraint is needed if a cohesive, rational, and, I believe, sensible system of judicial review is to be fashioned.

81 Accordingly, the Tribunal's conclusion must stand.

H. Remedy

82 Having found that Southam's acquisitions had produced a substantial lessening of competition in the market for real estate print advertising on the North Shore, the Tribunal ordered Southam to divest itself, at its own option, of either the *Real Estate Weekly* or the *North Shore News*. The Federal Court of Appeal declined to disturb this remedy. I agree with the Federal Court of Appeal that the remedy settled upon by the Tribunal should be allowed to stand.

83 The appellants submit that the correct test for a remedy under the *Competition Act* is whether it eliminates any substantial lessening of competition that the merger may have caused. The appellants observe that this is the standard that has been applied in cases under s. 92(1)(e)(iii) of the Competition Act, in which the parties have consented to the remedy. See, e.g., *Canada (Director of Investigation& Research) v. Air Canada* (1989), 27 C.P.R. (3d) 476(Competition Trib.), at pp. 513–14. They observe also that substantial lessening of competition is the evil that Parliament has sought to address in the Act. Mergers themselves are not considered to be objectionable except in so far as they produce a substantial lessening of competition. Therefore, restoration to the pre-merger situation is not what is wanted. Indeed, presumably *some* lessening of competition following a merger is tolerated, because the Act proscribes only a *substantial* lessening of competition. The appellants object further to what they see as the punitive quality of the remedy that the Tribunal imposed, and to what they regard as the illicit shifting to them of the burden of showing that the proposed remedy would be effective.

84 The respondent, for his part, says that the test of a remedy is whether it restores the parties to the pre-merger competitive situation. I believe that the appellants' test is the better one.

85 The evil to which the drafters of the *Competition Act* addressed themselves is substantial lessening of competition. See Competition Act, s. 92(1). It hardly needs arguing that the appropriate remedy for a substantial lessening of competition is to restore competition to the point at which it can no longer be said to be substantially less than it was before the merger. This is the test that the Tribunal has applied in consent cases. The Tribunal attempted to distinguish this case from those cases on precisely the ground that here the Director did not consent to the appellants' proposed remedy. But the distinction is not a sensible one. I can think of only two reasons why the test should be more forgiving where the parties have consented to a remedy. The first is that parties who have not consented should be punished for their obduracy. The second, which is related to the first, is that the law should provide parties with an incentive to come to a consensual arrangement. Neither reason is valid on closer analysis. The burden of a harsh standard falls entirely on one of the parties: the company. No punishment falls on the Director when he or she is obdurate, and the harsh standard gives him or her no incentive to consent to a remedy. Therefore, even if there is a policy of encouraging consent and punishing obduracy, it is not well served by the imposition of a more stringent standard in cases in which the parties have not consented. The better approach is to apply the same standard in contested proceedings as in consent proceedings.

86 However, the appellants do not benefit by their proposed standard. The reason is that the Tribunal expressly found that, even accepting that the appropriate standard is the one used in consent proceedings, Southam's proposed remedy fails because it would not likely be effective in eliminating the substantial lessening of competition. Robertson J.A. accepted this finding, saying that it was entitled to deference. I agree.

87 The Tribunal's choice of remedy is a matter of mixed law and fact. The question whether a particular remedy eliminates the substantial lessening of competition is a matter of the application of a legal standard to a particular set of facts. Therefore, for reasons I have already given, the Tribunal's decision must be reviewed according to a standard of reasonableness.

88 Because the Tribunal did not decide unreasonably when it decided that Southam's proposed remedy would not be effective, its decision should be allowed to stand. What Southam proposed was that it should sell the real estate supplement that appears weekly in the *North Shore News*. But, as the Tribunal very properly pointed out, it is not clear that the supplement would prosper or even survive on its own. Even if the supplement continued to enjoy the advantages of a close association with the *North Shore News*, the closeness of the association would not tend to foster competition. See the Tribunal's decision, supra, at p. 252.

89 The appellants' other objections to the remedy are unconvincing. The remedy is not punitive, because the Tribunal found that it was the only effective remedy. If the choice is between a remedy that goes farther than is strictly necessary to restore competition to an acceptable level and a remedy that does not go far enough even to reach the acceptable level, then surely the former option must be preferred. At the very least, a remedy must be effective. If the least intrusive of the possible effective remedies overshoots the mark, that is perhaps unfortunate but, from a legal point of view, such a remedy is not defective. As for the claim that the Tribunal wrongly required the appellants to demonstrate the effectiveness of their proposed remedy, no more need be said than that he who asserts should prove, as Robertson J.A. so aptly put it ((1995), 127 D.L.R., (4th) 329) at p. 337.

90 Therefore, I would dismiss the appeal of the remedy.

6. Conclusion

91 The Tribunal decided that the acquisition by Southam of several community newspapers did not substantially lessen competition in the market for retail print advertising in the Lower Mainland of British Columbia. That decision is entitled to deference. Because it is not unreasonable, it must be allowed to stand.

92 Accordingly, I would allow the appeal on the merits with costs throughout, set aside the judgment of the Federal Court of Appeal, and restore the order of the Tribunal. I would dismiss the appeal on the remedy with costs.

Appeal from judgment on merits allowed; appeal from judgment on remedy dismissed.

Competition Tribunal

Canada (Director of Investigation & Research) v. Tele-Direct (Publications) Inc.

1997 CarswellNat 3120, [1997] C.C.T.D. No. 8, 73 C.P.R. (3d) 1

In the Matter of an application by the Director of Investigation and Research under sections 77 and 79 of the Competition Act, R.S.C. 1985, c. C-34

The Director of Investigation and Research, Applicant and Tele-Direct (Publications) Inc. Tele-Direct (Services) Inc., Respondents and Anglo-Canadian Telephone Company NDAP-TMP Worldwide Ltd. and Directory Advertising Consultants Limited Thunder Bay Telephone, Intervenors

Lloyd Member, Roseman Member, Rothstein J.

Judgment: February 26, 1997
Docket: CT-94/3

Counsel: *James W. Leising*, *John S. Tyhurst*, *Gene Assad* and *George D. Hunter*, for applicant
Warren Grover, Q.C., *Glenn F. Leslie*, *Mark J. Nicholson*, *Diane M. Rogers* and *Andrea E. Redway*, for respondents
Russell W. Lusk, Q.C., and *Shawn C.D. Neylan*, for intervener, Anglo-Telephone Company
John F. Rook, Q.C. and *John M. Hovland*, for interveners NDAP-TMP Worldwide Ltd. and Directory Advertising Consultants Ltd.

Decision of the Board:

I. Introduction

1 This application is concerned, broadly speaking, with two aspects of telephone directory or, as it is commonly referred to "Yellow Pages", advertising. The first aspect is the provision of advertising space in a published directory or the publishing business. This aspect of the business encompasses activities such as the compilation, printing and distribution of the directory. The second aspect is the provision of the advertising services required to create a finished advertisement for publication in a directory. The services aspect of the business includes such elements as locating customers, selling advertising space, and providing advice and information to customers on the design, content, creation and placement of directory advertising.

2 The applicant in this case is the Director of Investigation and Research ("Director"), the public official charged with enforcement of the *Competition Act* ("Act").[1] The Director brings an application against the respondents, Tele-Direct (Publications) Inc. and Tele-Direct (Services) Inc., under sections 77 and 79 of the Act, the provisions dealing with, as they are commonly known, tied selling and abuse of dominant position:

> 77. (1) For the purposes of this section
>
> . . .
>
> "tied selling" means
>
> (a) any practice whereby a supplier of a product, as a condition of supplying the product (the "tying" product) to a customer, requires that customer to
>
> (i) acquire any other product from the supplier or the supplier's nominee, or

(ii) refrain from using or distributing, in conjunction with the tying product, another product that is not of a brand or manufacture designated by the supplier or the nominee, and

(b) any practice whereby a supplier of a product induces a customer to meet a condition set out in subparagraph (*a*)(i) or (ii) by offering to supply the tying product to the customer on more favourable terms or conditions if the customer agrees to meet the condition set out in either of those subparagraphs.

(2) Where, on application by the Director, the Tribunal finds that ... tied selling, because it is engaged in by a major supplier of a product in a market or because it is widespread in a market, is likely to

(a) impede entry into or expansion of a firm in the market,

(b) impede introduction of a product into or expansion of sales of a product in the market, or

(c) have any other exclusionary effect in the market,

with the result that competition is or is likely to be lessened substantially, the Tribunal may make an order directed to all or any of the suppliers against whom an order is sought prohibiting them from continuing to engage in ... tied selling and containing any other requirement that, in its opinion, is necessary to overcome the effects thereof in the market or to restore or stimulate competition in the market.

79. (1) Where, on application by the Director, the Tribunal finds that

(a) one or more persons substantially or completely control, throughout Canada or any area thereof, a class or species of business,

(b) that person or those persons have engaged in or are engaging in a practice of anti-competitive acts, and

(c) the practice has had, is having or is likely to have the effect of preventing or lessening competition substantially in a market,

the Tribunal may make an order prohibiting all or any of those persons from engaging in that practice.

3 In relation to section 77, the Director alleges that the respondents have engaged in a practice whereby, as a condition of supplying advertising space in telephone directories, they have required or induced customers seeking advertising space in telephone directories to acquire another product from them, namely telephone directory advertising services. As the respondents are allegedly major suppliers of advertising space, this practice of tied selling has allegedly impeded entry into or expansion of firms in the market because advertising agencies or others would provide the services or would expand to provide increased services, were space and services not tied together by the respondents. The result, it is alleged, is that competition has been, is, or is likely to be lessened substantially.

4 With respect to the alleged abuse of dominant position, the Director alleges that the respondents substantially or completely control the classes or species of business they engage in, namely the provision of advertising space and the provision of advertising services. The respondents, it is alleged, have engaged in or are engaging in a practice of anti-competitive acts in each of the markets for space and for services. In the advertising space market, the alleged practice focuses on the actions taken by the respondents upon entry by competing publishers of telephone directories into some of their markets. In the services market, the alleged practice includes acts directed by the respondents against alternative or independent suppliers of services. The acts alleged to be anti-competitive in the services market cover a wide gambit, including, among others, refusal to deal directly with certain service suppliers as agents for advertisers, providing space to independent service suppliers on less favourable terms than to the respondents' internal sales staff, "squeezing" the return available to independent service providers by restricting the availability of commission over time, and refusing to license its Yellow Pages trade-marks to competing service suppliers. These

practices allegedly have had, are having, or are likely to have the effect of preventing or lessening competition substantially in the markets for the provision of advertising space in telephone directories and advertising services, respectively.

5 The respondent Tele-Direct (Publications) Inc. is owned by Bell Canada and BCE Inc. It is comprised of two parts: a "directory" division and an "other business" division. The directory division embraces the directory publishing operations for Bell Canada in its territory, which covers most of Quebec and Ontario. The other business division is made up of various companies partly or wholly owned by BCE Inc., one of which is Tele-Direct (Services) Inc.[2] Tele-Direct (Services) Inc. publishes telephone directories under contract for non-Bell Canada telephone companies ("telcos") with discrete territories within Ontario,[3] for Télébec (owned by BCE Inc.) in parts of Quebec, and for other telcos outside of Ontario and Quebec. Tele-Direct (Services) Inc. also has international operations and includes Tele-Direct (Media) Inc., an accredited advertising agency specializing in Yellow Pages created by Tele-Direct in 1994. There is overlap between Tele-Direct (Services) Inc. and Tele-Direct (Publications) Inc. at the officer level but Tele-Direct (Services) Inc. has its own employees who run its business. In these reasons, except where the context requires separate identification, the two respondents will be referred to together as "Tele-Direct" or the respondents.

6 The respondents deny each of the allegations in the Director's application. In particular, regarding the tied selling allegation, the respondents' primary position is that advertising services and advertising space form an inseparable package for reasons of efficiency and revenue growth. In response to the abuse of dominance allegations, the respondents maintain that they do not substantially or completely control, or have market power in, the alleged market as there are many adequate substitutes for telephone directory advertising, namely other local advertising media. With respect to the specific alleged anti-competitive acts, the respondents take the position that the allegations relate to acts directed at three specific groups operating in separate markets: other directory publishers, Tele-Direct's accredited agents and non-accredited service providers. Save for publishers, they assert that they are not in competition with the groups against whom their acts are said to be directed.

7 Five requests for leave to intervene were received and granted in this proceeding although two of those were later discontinued.

8 NDAP-TMP Worldwide Ltd. ("NDAP") and Directory Advertising Consultants Limited ("DAC") are accredited Yellow Pages advertising agencies which provide services to clients who wish to advertise in telephone directories, particularly those published by or for the various telcos across Canada. They arrange for the preparation and placement of the advertisements in these directories on behalf of their clients. They presented final argument on the issues relevant to the role of agencies in the market.

9 The Anglo-Canadian Telephone Company ("Anglo-Canadian"), through one of its divisions, publishes Yellow Pages directories in British Columbia for BC Tel and in parts of Quebec for Quebec Tel. Anglo-Canadian licenses the Yellow Pages trade-marks from the respondents. Anglo-Canadian presented final argument only on the issues related to the possible compulsory licensing of the Yellow Pages trade-marks requested by the Director as part of the abuse of dominance case.

10 InfoText Limited ("InfoText"), a subsidiary of Newfoundland Tel, and Thunder Bay Telephone supply subscriber listing information to Tele-Direct for directory publication for subscribers in Newfoundland and Labrador and in the city of Thunder Bay, respectively. InfoText subsequently discontinued its intervention. Both InfoText and Thunder Bay Telephone requested intervenor status only to place their requests for leave to intervene on the record, which the Tribunal allowed.

11 White Directory of Canada, Inc. ("White") is a non-telco publisher of telephone directories in St. Catharines, Niagara Falls and Fort Erie. White discontinued its intervention prior to the commencement of the hearing.

Preliminary Comments of the Presiding Judicial Member

12 The notice of application in this matter was filed on December 22, 1994. The hearing commenced in September 1995 and ended at the beginning of March 1996. This decision has taken over 11 months to issue. In view of the Tribunal's usual practice of dealing with matters before it more expeditiously, some explanation is warranted.

13 There is no doubt that this has been the most complex case presented to the Tribunal since its inception. In addition to a strongly contested question of market definition, the case, in reality, consists of five cases, each requiring the Tribunal to address substantial competition issues (tied selling, abuse of dominance in respect of agents, consultants and publishers and trade-marks). Each of the five cases involves a multitude of sub-issues. Many of the Director's numerous specific allegations were multifaceted. To each allegation, the respondents raised a host of defences.

14 The record in this case provides a telling indication of its complexity. It consists of almost 15,000 pages of transcript taken over 70 days and involving 58 witnesses, including five expert witnesses. There were 36 volumes of documents produced in the joint book of documents alone. A further 156 exhibits not included in the joint book were entered in evidence by the parties. The parties submitted over 600 pages of written argument and oral argument took 11 days.

15 In many respects, the approach of the Director and respondents to this case does not result in a joining of issues. Counsel for the Director referred to their respective positions as "ships passing in the night". The result is that the Tribunal has often been left to identify and define, as well as resolve, the issues.

16 Indeed, the appropriate conceptual frameworks for the various issues have been very difficult to determine. The application included novel allegations of anti-competitive acts (for example, "targeting" in respect of publisher entrants) and inter-relationships between issues, such as the alleged anti-competitive acts against agents in the abuse of dominance case and tying, which required considerable deliberation.

17 Finally, there was the troubling issue of tying. This is the first case in which tying has been raised as a "principal" or substantial allegation.[4] This is a particularly difficult issue when related to services. There has been considerable debate among competition lawyers, economists and jurists about the difficulty of addressing alleged anti-competitive activity without adversely affecting efficiency in the context of tying, and the Tribunal was squarely faced with these issues in this case.

Summary of Conclusions

18

1. Telephone directory advertising is a distinct advertising medium without close substitutes and is therefore the relevant product market. Geographic markets are local, corresponding roughly to the scope of each of Tele-Direct's directories. Tele-Direct has an overwhelming share of the product market in all relevant local markets.

2. Tele-Direct has control or market power since the condition of easy entry required to overcome the presumption of market power arising from Tele-Direct's extremely large market share is not satisfied. Direct indicators of market power, such as the level of profits and methods of pricing, reinforce this conclusion.

3. With respect to the allegation of tied selling, telephone directory space and telephone directory advertising services constitute two products solely for national and regional advertisers and Tele-Direct has tied the supply of advertising space to the acquisition of advertising services for these customers. We have prohibited the practice of tied selling.

4. The allegation that Tele-Direct has engaged in a practice of anti-competitive acts against entrants into telephone directory publishing, particularly in the Sault Ste. Marie and Niagara regions, is rejected.

5. The allegation that Tele-Direct has engaged in a practice of anti-competitive acts directed against agents and resulting in substantial lessening of competition is rejected.

6. The allegation that Tele-Direct has engaged in a practice of discriminatory anti-competitive acts against consultants which have or are likely to result in a substantial lessening of competition is accepted. Tele-Direct is ordered to cease the practice. Other allegations respecting consultants are rejected.

7. The allegation that Tele-Direct's refusal to license its trade-marks to certain competitors is a practice of anti-competitive acts is rejected because the refusal is protected from being an anti-competitive act by subsection 79(5) of the *Competition Act* as a legitimate exercise of its rights under the *Trade-marks Act*.

II. Background Facts

A. Telephone Directory Advertising

19 A white pages telephone directory is a comprehensive list of all telephone subscribers in a specified area. A listing includes a name, address and telephone number. A classified telephone directory, historically printed on yellow paper (hence "Yellow Pages"), [5] includes all business telephone subscriber listings plus advertising arranged by heading or descriptive category. There are often multiple headings under which a directory user might search in order to find a certain type of business.

20 Tele-Direct's Yellow Pages directories generally cover the same geographic area as the corresponding white pages. Some white pages directories, however, cover a much broader area than the Yellow Pages; in those cases, there would be several different Yellow Pages directories for a single white pages. Tele-Direct also publishes even more narrowly-scoped Yellow Pages directories for individual "neighbourhoods" in Montreal and Toronto.

21 Telcos are required by the Canadian Radio-television and Telecommunications Commission ("CRTC") to distribute the appropriate up-to-date telephone directory for their district, both white and Yellow Pages, to telephone subscribers at no additional charge. Tele-Direct pays the various telcos for subscriber listing information and the right to publish and distribute the directories to subscribers. It makes its profits from the net advertising revenues. Tele-Direct publishes directories annually.

22 Every business telephone subscriber is entitled to receive in its Yellow Pages directory one light-type listing free of charge under the heading of its choice. Any features added to a listing, for example, bold type or extra lines, a second heading or another directory must be purchased. Actual advertisements in the Yellow Pages must, of course, also be purchased. For Tele-Direct's purposes, an "advertiser" is a subscriber who has a paid item in either the white pages (an enhanced listing) or Yellow Pages of a directory. Revenues from Yellow Pages advertising is far greater than any "advertising" expenditures in the white pages. [6]

23 Approximately 50 percent of business subscribers are "advertisers". The remainder are called "non-advertisers" or "non-ads". The percentage of advertisers is smaller in the largest centres such as Montreal and Toronto and larger in smaller centres. Excluding neighbourhood directories and agency clients, [7] average advertising expenditures in 1994 in Tele-Direct (Publications) Inc. directories were approximately $1,700, with advertisers spending that amount or less constituting around 30 percent of revenues but over 80 percent of advertisers. At the other end of the spectrum, the top 30 percent of revenues comes from only about two percent of advertisers, those who spend more than approximately $10,000 annually. A few very large advertisers spending an average of $113,000 provide 6.5 percent of revenues but represent only 0.1 percent of advertisers by number.

24 A number of different types of advertising can be purchased in a Tele-Direct Yellow Pages directory. Apart from the basic upgrades to its initial free listing (e.g., second heading, bold type), a business may purchase "in-column" or "display" advertising. The pages in Tele-Direct's directories are generally divided into four columns; an "in-column" advertisement fits within the confines of one of the columns with the variation being in the height of the advertisement. In-column advertisements are arranged alphabetically, interspersed among the simple listings.

25 A variation on the in-column advertisement is the trade item advertisement, including the trade-name, trade-mark and custom trade-mark advertisements (usually referred to together as "trade-marks" or "trade-mark advertisements"). In order to place this type of advertisement, the listed businesses must have authorization to use the trade-name or mark in their directory advertising. The trade-name or mark acts as the heading for the advertisement, followed by one or more listings of specific businesses.

26 Display advertisements range in size from a quarter column (1/16 of a page) to a full page. The placement of these advertisements is loosely alphabetical, as space on a page permits. Options like various types of borders, red, other colours, "white knockout" (white background instead of yellow) may be added to both in-column and display advertisements. They also feature a variety of design and layout techniques, print styles and sizes and graphics.

B. Publishers

27 Revenues from the telephone directory business in Canada amount to about $900 million to $1 billion annually. The vast majority of these are generated by the telco-affiliated directories. Apart from the Tele-Direct directories and other directories published by or on behalf of telcos, there are over 250 "independent" directories published in Tele-Direct's territory. These directories are independent in the sense that they have no connection to the provider of telephone service. They come in a wide variety of formats (size, subject, colour of paper) but can, generally, be characterized as two types: "niche" and "broadly-scoped" directories.

28 Niche directories operate in geographic areas which are substantially smaller than the areas covered by the corresponding telco directories. These directories have a generally smaller, more tightly-scoped distribution area than the telco directory, allowing a local retailer to advertise to a smaller geographic area at a lower cost. Niche directories are often directed at a particular religious, ethnic or demographic group.

29 Two independent publishers of broadly-scoped directories currently produce directories in parts of Tele-Direct's territory. White, which was for a brief time an intervenor in this proceeding, has published directories in the Niagara region since 1993. Dial Source Plus, Inc. ("DSP") publishes a directory in the Sault Ste. Marie area and has also done so since 1993.

C. Service Suppliers

30 Telephone directory advertising services, including the sale of space in Tele-Direct's directories, are provided by three groups: Tele-Direct's internal sales force, advertising agencies and consultants. More detail on each of these groups and their particular method of operation will be provided as appropriate throughout these reasons. For the moment, the following should suffice to introduce the various players.

31 The internal sales force of Tele-Direct consists largely of unionized sales representatives who are remunerated through a combination of salary, commission and other incentives. Services similar to those provided by Tele-Direct's internal sales force are also offered by outside advertising agencies. These include general advertising agencies which, if they deal with Yellow Pages at all, usually have a department devoted to that function, advertising agencies specializing in Yellow Pages only and in-house advertising agencies.

32 Agencies are not remunerated directly by the advertiser but, rather, through a commission paid by the publisher as a percentage of the value of the advertising purchased. While the agency receives commission, the agency's employees earn salary for providing services to the agency's clients. Agencies are restricted in the accounts that they can service as Tele-Direct only pays commission on accounts which meet certain criteria. Tele-Direct's commissionable account definition has undergone a number of changes over the years which will be discussed in further detail later. It is not controversial that fewer accounts meet the current criteria than met prior definitions. The current criteria were adopted in 1993 and are sometimes referred to as the "national" account definition.[8] In order to receive the 25 percent commission payable on these accounts, the agency placing the advertising must be accredited as a Certified Marketing Representative or "CMR" in accordance with the standards set by the Yellow Pages Publishers Association ("YPPA").

33 Services are also provided by Yellow Pages consultants. Consultants create advertisements for Yellow Pages advertisers and advise them on where and to what extent they should advertise in the Yellow Pages. Typically, consultants obtain cost savings on behalf of advertisers by advising the purchase of smaller or less colourful advertisements, more limited geographic placement of advertisements or by redesigning the advertising. They are not recognized by Tele-Direct, which refers to them

by the less complimentary term of "cut agents". Consultants do not receive commission. In general, consultants are paid by the advertiser out of the savings in advertising expenditures resulting from the adoption of the consultant's advice.

III. Time Limitations

34 The respondents argue that the Director is subject to three time constraints which limit the allegations of anti-competitive acts that can be advanced for the purposes of the Director's case under section 79. These arguments are that: the *Competition Act* is not retrospective; the Director's allegations are statute-barred by the *Crown Liability and Proceedings Act*;[9] and subsection 79(6) of the *Competition Act* further limits those allegations. Each argument will be dealt with in turn.

35 The particular allegations that are challenged relate to Tele-Direct's requirement of "issue billing" (payment from CMRs required at the time of issue of a directory as opposed to monthly payments when advertisers deal with Tele-Direct's general sales force) and its restricting of the commissionability criteria applicable to CMRs. The actual words at paragraph 65 of the application are:

> ... the Applicant says that the Respondents have engaged in the following anti-competitive acts:
>
> . . .
>
> (c) providing advertising space to independent advertising agencies on less favourable terms and conditions than to its own sales staff, including: ...
>
>> (ii) requiring that such independent agencies pay the total amount outstanding for a year's insertion of advertising in a given directory, while customers placing orders through internal sales staff may pay such amount monthly over the course of the year without interest charges; ...
>
> (d) squeezing the return available to independent advertising agencies by acts which include:
>
> . . .
>
>> (iv) further restricting the availability of commission to such agencies over time.

A. Retrospectivity

36 There is no apparent difference between the parties with respect to the broad legal principles regarding retrospectivity. The general rule is that statutes are not to be construed as having retrospective operation unless such a construction is expressly or by necessary implication required by the language of the particular statute.[10] Côté, one of the authorities cited by the respondents, states that a retrospective effect occurs when a new statute is applied "in such a way as to prescribe the legal regime of facts entirely accomplished prior to its commencement." He further states that it is *not* retrospective operation when a statute is applied to ongoing facts which began prior to the statute's commencement.[11] The Driedger text, also referred to by the respondents, describes ongoing facts or "continuing facts" as

> ... one or more facts that endure over a period of time, such as ownership or imprisonment or residency. A continuing fact can be any state of affairs or status or relationship that is capable of persisting over time....[12]

The dispute between the parties is whether the allegations advanced by the Director regarding issue billing and commissionability criteria imply retrospective application of the *Competition Act*.

37 The respondents submit that since no concept of an "anti-competitive act" existed before 1986, when the *Competition Act* came into force, no act which occurred prior to 1986 can now be characterized as anti-competitive for purposes of section 79. They also argue that section 79 on its terms can *only* be applied to discrete acts or events, of which there must be multiple instances to constitute a "practice".

38 With respect to commissionability, the respondents argue that the Director is alleging that they "narrowed" the definition by discrete acts which occurred in 1975 and again in 1993. The 1975 "narrowing" cannot be anti-competitive and the 1993 "narrowing" alone is only one act and cannot amount to a "practice". Likewise, they say that the Director has alleged that Tele-Direct's "decision" to require issue billing, another discrete act which took place long before 1986, cannot be an anti-competitive act. The fact that these decisions resulted in allegedly restrictive policies that have been applied continuously ever since, they submit, is irrelevant because there is no "new act" of "requiring issue billing" or of "narrowing" besides 1993.

39 The Director argues that the respondents have mischaracterized the pleadings. The Director submits that the current situation, the day-to-day restricted state of the commissionable market and the ongoing requirement of issue billing, are the focus of the allegations of anti-competitive acts, rather than the original decisions to implement these policies. The pre-1986 events, the Director submits, shed light on history, intent and progress. Thus, the Director says there is no question of retrospectivity.

40 We are of the view that section 79 is not restricted in its application to discrete acts or events as opposed to an ongoing course of conduct or state of affairs. The meaning of "practice" in subsection 79(1) was considered by the Tribunal in the *NutraSweet* case. [13] There, the Tribunal found that a practice may exist where there is more than an "isolated act or acts". It also observed that the examples of anti-competitive acts listed in section 78 could entail both a course of conduct over time as well as discrete acts:

> ... The anti-competitive acts covered in s. 78 run a wide gamut. Some almost certainly entail a course of conduct over a period of time, such as freight equalization in para. 78(*c*), whereas others consist of discrete acts, such as the setting of product specifications in para. 78(*g*). The interpretation of "practice" must be sufficiently broad so as to allow for a wide variety of anti-competitive acts. Accordingly, the tribunal is of the view that a practice may exist where there is more than an "isolated act or acts". For the same reasons, the tribunal is also of the view that different individual anti-competitive acts taken together may constitute a practice. [14]

41 We are satisfied that the practice contemplated by subsection 79(1) must be more than an isolated act or acts but can include a number of individual anti-competitive acts taken together or a course of anti-competitive conduct over time.

42 Clearly, the Director's pleadings contemplate the violation of subsection 79(1) of the *Competition Act* by a current practice of anti-competitive acts by the respondents. The fact that the act or acts giving rise to the current practice took place prior to 1986 does not make application of the subsection retrospective. In this case, the Director is not challenging the initial decisions by Tele-Direct to commence issue billing and to restrict commission in 1975 as discrete anti-competitive acts in and of themselves. Requiring payment from CMRs at time of issue of a directory may have been instituted in 1959 but it continued after 1986 and existed when the Director's application was filed. Similarly, the "narrow" commissionability market which commenced with a change in the commissionability rules in 1975 continued after 1986. While it may have been narrowed further in 1993, it is not the discrete act of narrowing that is in issue in this case. Rather, it is the ongoing narrow commissionability rules that existed when the Director's application was filed and that were, in the view of the Director, exacerbated in 1993 with further narrowing, that are the focus of the allegations of anti-competitive conduct. As such, there is no retrospective application of the *Competition Act* in this case.

43 Nor is it inappropriate in these circumstances to have regard to events occurring prior to 1986 to consider fully the allegations made under section 79. We take guidance from the approach adopted by the Supreme Court in *Gamble v. R.* Wilson J., speaking for the majority, states:

> ... Frequently an alleged current violation [of the *Charter*] will have to be placed in the context of its pre-*Charter* history in order to be fully appreciated.... Charter standards cannot be applied to events occurring before its proclamation but it would be folly, in my view, to exclude from the Court's consideration crucial pre-*Charter* history. [15]

44 It is clear from the words of the application, and from the way the case developed before the Tribunal, that the current state of affairs is the focus of the Director's allegations of anti-competitive conduct. The respondents have not argued that the

Director's pleadings misled them regarding the case they had to meet and that therefore they have suffered prejudice in preparing or presenting their case. Indeed, such an argument could not be advanced given the detailed and inclusive record regarding not only the current situation in the market but also the historical context.

B. Crown Liability and Proceedings Act

45 The respondents' second limitation argument is based on section 32 of the *Crown Liability and Proceedings Act* which reads:

> Except as otherwise provided in this Act or in any other Act of Parliament, the laws relating to prescription and the limitation of actions in force in a province between subject and subject apply to any proceedings by or against the Crown in respect of a cause of action arising in that province, and proceedings by or against the Crown in respect of a cause of action arising otherwise than in a province shall be taken within six years after the cause of action arose.

46 The respondents argue that the *Crown Liability and Proceedings Act* statutorily bars the Crown (here, the Director) from acting on a cause of action which arose more than six years before the issuing of the application, that is, prior to December 22, 1988. Thus, they argue, all references to changes made in commissionability criteria or any other alleged anti-competitive act after 1986, when sections 78 and 79 were enacted, but prior to December 22, 1988 (six years before the application was filed), are statute-barred.

47 The respondents did not press this point and it will be dealt with summarily. First, as argued by the Director, the respondents cannot rely on the *Crown Liability and Proceedings Act* as they did not plead it in their response. The law is clear that a limitation period does not terminate a cause of action but provides a defendant with a procedural means of defence which must be pleaded in the defence. [16]

48 Second, section 32 of the *Crown Liability and Proceedings Act* is simply not applicable to this case. The opening words of section 32 indicate that if there is a specific limitation period in the statute governing the cause of action involved, here the *Competition Act*, that limitation period applies. [17] It is only in the absence of a specific provision that either a provincial limitation period or the six-year limitation period in section 32 is considered. Subsection 79(6) of the *Competition Act*, to which the respondents have also made reference, provides a limitation period for proceedings brought under that section.

C. Subsection 79(6)

49 Subsection 79(6) of the *Competition Act* states:

> No application may be made under this section in respect of a practice of anti-competitive acts more than three years after the practice has ceased.

Again, the respondents did not plead this limitation period. Further, while they refer to subsection 79(6), the respondents made no effort to argue how it applies in this case. No more need be said.

IV. Impact of the Consent Order

50 The respondents argue that the Director is estopped from bringing this application before the Tribunal to the extent that it deals with issues adjudicated by the Tribunal in a previous proceeding. On November 18, 1994, the Tribunal issued an order, the terms of which were agreed to by the parties, as a result of an application brought by the Director against the Yellow Pages publishers in Canada. [18] We will refer to that order as the Consent Order. The respondents in the present proceedings were among the respondents named in that order.

51 In the application which resulted in the Consent Order, the Director alleged that the respondents in those proceedings had jointly engaged in a practice of anti-competitive acts within the meaning of sections 78 and 79 of the Act. The specific allegations levied against those respondents and found at paragraph 74 of the application were as follows:

> ... it is the Director's submission that the Respondents engaged in the following anti-competitive acts to impede or prevent a competitor's entry into or eliminating a competitor from a market. The anti-competitive acts of the Respondents constituted a practice of anti-competitive acts by the Respondents which had the effect of substantially preventing or lessening competition in the relevant product market of the Selling of National Advertising into Telephone Directories in Canada. The Respondents:
>
>> (i) agreed that only Publishers could Sell National Advertising directly into Telephone Directories;
>>
>> (ii) appointed each other as their exclusive Selling Companies for the Selling of National Advertising in Telephone Directories in each of their respective territories and therefore did not compete with such exclusive Selling Companies in those territories;
>>
>> (iii) agreed to a Head Office Rule, thus precluding the National Advertiser from either placing the advertisement directly with all the Respondents which actually published the advertisements or using an entity unrelated to any of the Respondents to place the advertising directly in each Respondent's Telephone Directories.

52 The Consent Order contains prohibitions designed to prevent the respondents who agreed to it from engaging in certain acts in the selling of national advertising in Yellow Pages telephone directories, including:

> With regard to the sale of national advertising in Yellow Pages telephone directories, each respondent shall be prohibited from:
>
> . . .
>
>> (f) agreeing with any other respondent on the criteria for determining which national advertising accounts are commissionable;
>>
>> (g) agreeing with any other respondent on the rate of commission payable, except during a transition period ending June 30, 1995 during which a minimum commission of 25% will be available to selling companies for national advertising which meets the commissionability criteria established by each respondent.... [19]

53 The parties appear to be in agreement with respect to the law of issue estoppel. The doctrine of issue estoppel precludes an action being brought against a party with respect to an issue which was already decided in an earlier proceeding. There are three requirements to be met before issue estoppel applies so as to bar a new proceeding. First, there must have been an earlier proceeding in which there was a determination of the same issue. Second, the determination of the issue in the earlier proceeding must have been a final decision. Finally, the parties to each of the two proceedings must be the same. [20] The doctrine of issue estoppel applies equally to issues decided in consent orders and in contested orders. [21]

54 The Supreme Court of Canada has held that the decision upon which a party relies for issue estoppel must have dealt directly and necessarily with the issue which is being raised for a second time:

> ... It will not suffice if the question arose collaterally or incidentally in the earlier proceedings or is one which must be inferred by argument from the judgment.... The question out of which the estoppel is said to arise must have been "fundamental to the decision arrived at" in the earlier proceedings. [22] (references omitted)

55 Tele-Direct argues that the issues relating to its commissionability criteria alleged by the Director in this case, namely, that its policy of offering commission only on accounts which meet its "national" definition is an anti-competitive act and constitutes tied selling, were dealt with by the Tribunal in the Consent Order. Tele-Direct's position is that the Director is estopped from re-litigating these issues in the present proceeding. According to Tele-Direct, the Director, and the Tribunal by virtue of its issuance of the Consent Order, were satisfied that any substantial lessening of competition in the sales of national advertising would be alleviated by the terms of the order. If the Director seeks to vary the Consent Order, the Director can only do so by

following the procedure for rescission and variation of consent orders which is governed by section 106 of the Act; this course was not pursued by the Director.

56 The respondents further argue that, by implication, the Consent Order authorizes them to set their own commissionability criteria without interference as long as they do not agree on the rate with any other publisher. Accordingly, they say that it is inconsistent for the Director to bring this proceeding, which could result in the Tribunal interfering with Tele-Direct's decisions relating to its commissionability criteria for national advertising.

57 The Director's position is that the issues raised in the two proceedings are not the same and that, therefore, the doctrine of issue estoppel does not apply. According to the Director, the anti-competitive acts which were the subject of the Consent Order were certain *joint* practices of the Canadian Yellow Pages Service ("CANYPS") members (the telco publishers) regarding the manner in which national advertising could be placed in their directories. It was the agreements between the respondents to the Consent Order which constituted the anti-competitive acts and resulted in a substantial lessening of competition which were remedied by the order. In the present proceeding, however, it is alleged anti-competitive acts of Tele-Direct itself which are the subject of review. There was no decision in the earlier proceedings regarding how Tele-Direct sets its own commissionability criteria or how it otherwise deals with independent agencies located in its territory.

58 The requirements for issue estoppel are not met in this case. While the Consent Order was a final decision of the Tribunal, the terms of which are binding on Tele-Direct, the issues which were dealt with in that proceeding are not the same as those in the present case. This is clear from the application and supporting documentation and the Consent Order. It was the substantial lessening of competition resulting from the respondents' joint practice of anti-competitive acts or joint abuse of dominance that the Director sought to remedy by the Consent Order. The instant case deals with entirely separate allegations of anti-competitive acts of Tele-Direct acting alone. The Consent Order prohibits the respondents named in it from agreeing amongst themselves on the rate of commission payable. That order does not address the commissionability criteria which an individual publisher may set. Nothing in the Consent Order limits the jurisdiction of the Tribunal to review the commissionability criteria set by Tele-Direct.

V. Trade-Marks

59 The Director alleges that the respondents, by "refusing to licence [their] trade-marks, such as the words 'Yellow Pages' and 'Pages Jaunes' and the walking fingers logo, to competing suppliers of advertising services", have engaged in a practice of anti-competitive acts contrary to section 79 of the Act. In particular, the Director seeks to prohibit the respondents' alleged practice of "selective licensing" whereby certain competitors are refused licences, allegedly arbitrarily or pursuant to an anti-competitive intent, and others are not. As a remedy, the Director seeks an order "that the respondents licence, at the request of independent advertising agencies, including consultants, and on commercially reasonable terms and conditions, the trade-marks registered for the respondents' own use in relation to telephone directories."

60 The Director's submissions raise two issues. First, the Tribunal must determine whether the refusal to license a trade-mark to certain persons or groups of persons is an anti-competitive act. Second, if it is an anti-competitive act, the Tribunal must determine whether it has jurisdiction to order the respondents to license their trade-marks. Having carefully considered the evidence and the submissions of counsel, the Tribunal is of the view that the selective refusal to license a trade-mark is not an anti-competitive act. Accordingly, the second question need not be answered.

61 The facts concerning the respondents' refusal to license their trade-marks are not disputed. The respondents license the use of their trade-marks to CMRs and other telco-affiliated directory publishers; they do not license other advertising agencies or consultants. The respondents aggressively defend their trade-marks against what they perceive to be infringement but they do not pursue every perceived infringement with equal zeal. The evidence is that Tele-Direct overlooks certain uses of its trade-marks but threatens to, or institutes, legal action against the use of its trade-marks by, for instance, consultants.

62 Both the *Trade-marks Act* [23] and the *Competition Act* are relevant. The purpose of a trade-mark is to distinguish the wares or services of the owner from those of others. [24] The *Trade-marks Act* provides that the owner of a trade-mark has the exclusive

right to its use.[25] Further, the owner of a trade-mark may license another to use that trade-mark, and that use is deemed to have the same effect as use by the owner.[26] Subsection 79(5) of the *Competition Act* provides:

> For the purpose of this section, an act engaged in pursuant only to the exercise of any right or enjoyment of any interest derived under the *Copyright Act, Industrial Design Act, Integrated Circuit Topography Act, Patent Act, Trade-marks Act* or any other Act of Parliament pertaining to intellectual or industrial property is not an anti-competitive act.

63 The Director submits that subsection 79(5) does not preclude a finding that "abuses" of intellectual property rights are anti-competitive acts. It is the Director's position that Tele-Direct's practice of selective licensing is an abuse of Tele-Direct's trade-mark rights. The Director asserts that an owner's "exclusive right to use" its trade-mark is not unlimited. The Director relies upon case law which has defined "use" not to include activities which are for purposes other than distinguishing wares or services of the owner from the wares or services of others.[27] Accordingly, the Director submits that the respondents' position that "any written use of the words 'Yellow Pages' would be dealt with" and the fact that the respondents have used their "superior resources" to assert this claim successfully is evidence of the respondents' exclusionary intent in respect of their trade-marks.

64 Tele-Direct argues that, as owner of the trade-marks, it has the statutory right to decide to whom it will or will not license those trade-marks, including the right to refuse to licence where it is not in its best interest to do so. It argues that there is no evidence that it has adopted a policy of refusing to license trade-marks to competitors for the purposes of restraining competition; rather, it does not make sense for Tele-Direct to license its trade-marks to consultants whose businesses are based on the premise that Tele-Direct "rips-off" its customers.

65 In support of his position, the Director relies on the decision of the United States District Court in *Car-Freshener Corp. v. Auto-Aid Manufacturing Corp.*, where the Court stated that there was "no doubt that a trade-mark may be utilized in such a manner as to constitute a violation of antitrust laws"[28] and offered several examples: the use of a strong trade-mark to unlawfully tie a weaker product, unlawful price discrimination exercised with respect to a trade-mark, or other illegal anti-competitive practices. The Tribunal is in agreement with the Director that there may be instances where a trade-mark may be misused. However, in the Tribunal's view, something more than the mere exercise of statutory rights, even if exclusionary in effect, must be present before there can be a finding of misuse of a trade-mark. Subsection 79(5) explicitly recognizes this.

66 The respondents' refusal to license their trade-marks falls squarely within their prerogative. Inherent in the very nature of the right to license a trade-mark is the right for the owner of the trade-mark to determine whether or not, and to whom, to grant a licence; selectivity in licensing is fundamental to the rationale behind protecting trade-marks. The respondents' trade-marks are valuable assets and represent considerable goodwill in the marketplace. The decision to license a trade-mark -- essentially, to share the goodwill vesting in the asset -- is a right which rests entirely with the owner of the mark. The refusal to license a trade-mark is distinguishable from a situation where anti-competitive provisions are attached to a trade-mark licence.

67 The owner's exclusive jurisdiction over licensing accords with the scheme of the *Trade-marks Act*. There is no statutory means by which a person can petition the Registrar of Trade-marks for a licence to use a trade-mark, implying that the decision to license rests with the owner of the mark. Furthermore, the licensing provisions of the *Trade-marks Act* provide that, in order to constitute a valid licence, the trade-mark owner should have "direct or indirect control of the character or quality of the wares or services" to which the licensee was attaching the mark. Indeed, in *Unitel Communications Inc. v. Bell Canada*,[29] the Court expunged trade-marks owned by Bell Canada, in part because Bell Canada had failed to exercise control over the use of its trade-marks by an independent telco. In the case at bar, the lack of control over the quality of the goods or services is particularly relevant since the Director is suggesting that the respondents' trade-marks should be licensed to consultants with whom the respondents do not share identity of interest.

68 While the evidence suggests that Tele-Direct is motivated, at least in part, by competition in its decision to refuse to license its trade-marks, the fact is that the *Trade-marks Act* allows trade-mark owners to decide to whom they will license their trade-marks. The respondents' motivation for their decision to refuse to license a competitor becomes irrelevant as the *Trade-marks Act* does not prescribe any limit to the exercise of that right.

69 The respondents' legitimate desire to protect the value of the goodwill vested in their trade-marks by refusing to license them does not amount to an anti-competitive act. In view of the strength of their trade-marks, the respondents can be expected to be, and are entitled to be, protective of their rights. Indeed, if the respondents did not protect their marks, they would risk having them lose their distinctiveness, as in *Unitel*. This is a real concern, given that the Yellow Pages trade-marks are no longer registered in the United States.

70 While independent advertising agencies and consultants may wish to use the respondents' trade-marks, there is simply no basis for granting an order requiring the respondents to license their trade-marks.[30] Although the respondents may have been zealous in protecting their trade-marks, both in refusing to license and in threatening litigation for infringement, the irrefutable fact is that the respondents have been, through the provisions of the *Trade-marks Act*, accorded the right to refuse to license their trade-marks, even selectively. The exercise of this right is protected from being an anti-competitive act by subsection 79(5) of the Act.

VI. Market Definition

71 A necessary first step in deciding this case is to define the relevant market. This must be done for purposes of section 79 in order to determine if Tele-Direct, as alleged by the Director, "substantially or completely control[s], throughout Canada or any area thereof, a class or species of business". The Tribunal decided in *Director of Investigation and Research v. D & B Companies of Canada*[31] that "class or species of business" means product market and "control" means market power. The remaining phrase, "throughout Canada or any area thereof", refers to the geographic market. Therefore, in order for section 79 to apply, the Tribunal must first conclude that Tele-Direct has market power.

72 A market must also be defined in order to consider the allegation of tying, brought under section 77. Under subsection 77(2), the Tribunal must find that "tied selling, because it is engaged in by a major supplier of a product in a market ... is likely to" have a number of detrimental effects. If Tele-Direct is found to have market power, it would qualify as a "major supplier".

A. Product Market

73 The argument and the evidence presented to us regarding the relevant product market focus on whether there are close substitutes for telephone directory advertising. The Director includes in his relevant market advertising in Tele-Direct's Yellow Pages directories and in telephone directories produced by independent (non-telco affiliated) publishers.

74 The respondents concede that advertising in independent directories is in the same relevant market as advertising in Yellow Pages directories. Their position is that both independent and Yellow Pages directories form part of a broader product market comprised of all local advertising media. The respondents define "local advertising" in this context as advertising designed to promote business at a particular location. They would include, for example, direct mail, outdoor signage, community newspapers, daily newspapers, catalogues, trade magazines, flyers, radio, television -- in fact advertising in any medium as long as the advertising is designed to promote a particular location.

75 It is important to keep in mind that our goal in defining the relevant market in this case is to determine whether other local advertising media provide competitive discipline for Tele-Direct in respect of its Yellow Pages pricing[32] and output decisions. The Director argues that they do not. The respondents argue that they do.

(1) Substitutability -- The Basic Test

76 The parties agree that the fundamental test or "touchstone" for determining the boundaries of the relevant product market is substitutability, as the Tribunal has consistently held in previous decisions, including three abuse of dominant position cases.[33] Products must be close substitutes in order to be placed in the same product market. The parties also agree that the appropriate approach to or framework for market definition is set out in the Federal Court of Appeal decision in *Director of Investigation and Research v. Southam Inc.*[34] Both parties quote the same passage from that decision:

> Products can be said to be in the same market if they are close substitutes. In turn, products are close substitutes if buyers are willing to switch from one product to another in response to a relative change in price, i.e. if there is buyer price sensitivity. Direct evidence of substitutability includes both statistical evidence of buyer price sensitivity and anecdotal evidence, such as the testimony of buyers on past or hypothetical responses to price changes. However, since direct evidence may be difficult to obtain, it is also possible to measure substitutability and thereby infer price sensitivity through indirect means. Such indirect evidence focusses on certain practical *indicia*, such as functional interchangeability and industry views/ behaviour, to show that products are close substitutes.[35] (reference omitted)

It is also common ground between the parties that this approach does not represent a radical departure from the approach used by the Tribunal in previous decisions.

(2) The Southam Decision

77 The *Southam* decision is the first Court of Appeal decision to deal in any depth with market definition under the Act.[36] That the parties differ considerably on how the general approach stated by the Court of Appeal in *Southam* is to be applied to the facts of the case before us is evident from the broad product market proposed by the respondents and the narrow product market proposed by the Director.

(a) Direct Evidence of Substitutability

78 There is no dispute that, first, we must consider any direct evidence of substitutability. In *Southam* the Court of Appeal states:

> To the extent that it is possible to adduce statistical evidence of high demand elasticity, such evidence is virtually conclusive that two products are in the same product market. Evidence of price sensitivity can also come in anecdotal form which is a less conclusive, although still a persuasive factor tending to show that products are close substitutes.[37]

79 The Director did not adduce any statistical evidence. The respondents mention the two "Elliott" reports, studies conducted for Tele-Direct in early 1993 for purposes other than this proceeding, as "statistical data" on advertisers' reaction to relative price increases.[38] The Elliott reports were general surveys of "customer satisfaction" which did not deal with price sensitivity of advertisers between different media.[39] Even if they had dealt with relative prices of various different media, in our view the Elliott reports would not qualify as the type of direct statistical evidence of demand cross-elasticity that was intended by the Court of Appeal. Such a study would have to be undertaken for the purpose of determining cross-elasticity between the products alleged to be in the market, be conducted in an appropriately rigorous fashion and meet tests of statistical significance. While the Elliott reports do not qualify as statistical evidence of demand cross-elasticity, they will be considered as part of the indirect evidence of substitutability.

80 Although the Director called a number of buyers or advertisers as witnesses in this case, he does not rely on their evidence as "anecdotal evidence" of price sensitivity, from his point of view, low price sensitivity. He refers to their evidence as indirect evidence under various rubrics. The respondents likewise treat the testimony of the advertisers as indirect evidence. We will therefore not address the question of whether that testimony provides any direct evidence of price sensitivity or a lack thereof.

81 In the absence of direct evidence regarding buyer price sensitivity, we must therefore proceed to examine the available indirect evidence or "practical indicia" to draw inferences about price sensitivity.

(b) Indirect Evidence of Substitutability

82 The Director has organized the evidence of product market definition using headings similar to those set out in the *Merger Enforcement Guidelines*:[40] end use, physical and technical characteristics, views, strategies, behaviour and identity of buyers, trade views, strategies and behaviour ("inter-industry competition"), price relationships and relative price levels and switching

costs. The respondents have also used the same headings to organize their evidence, although in a slightly different order. The *Merger Enforcement Guidelines* are not sacrosanct. But, as the parties are agreed that the evidence may be organized according to those guidelines, we accept that this is a practical and useful way in which to proceed.

83 The parties may use the same organizational structure but they do not agree on the respective roles to be accorded to the various practical indicia. In particular, they take different positions on the way in which the indicia of "functional interchangeability" and "inter-industry competition" should be employed in defining a product market based on the Court of Appeal decision in *Southam*. They also differ, of course, on the nature of the evidence and the conclusions to be drawn therefrom that should be considered under each heading. A detailed review of the evidence and the arguments under each heading will follow. We must first address, however, the arguments regarding the general approach to the practical indicia or indirect evidence of substitutability.

84 The Director submits that the Court of Appeal in *Southam* found that functional interchangeability is a "vital feature" and a "central part of the framework" of market definition, although it is not a sufficient condition for two products to be in the same market. The Director argues that the Court of Appeal did not state that functional interchangeability and inter-industry competition were the "sole" or "driving" factors in market definition but only found that *ignoring* those factors was an error of law.

85 The respondents in their written argument agree that the Tribunal must consider the evidence with respect to functional interchangeability and that it is central but alone does not conclusively demonstrate that two products belong in the same relevant market -- other factors must be considered. They point out that the additional factor that was "very important" to the Court of Appeal in *Southam* was inter-industry competition. During oral argument, counsel took the stricter position that the Court of Appeal held that if functional interchangeability and "broad" inter-industry competition are found, then it is an error not to place the products under consideration in the same market. If the two indicia mentioned are present, the Tribunal *must* infer price sensitivity and therefore a single product market.

86 The Tribunal must determine whether the Court of Appeal prescribed, as a matter of law, the role and importance of the factors or indicia of "functional interchangeability" and "inter-industry competition". With respect to functional interchangeability as one of the indirect indicia, the Court of Appeal stated that it was "not simply one of many criteria to be considered but a critical part of the framework." It also confirmed that functional interchangeability will generally be regarded as a "necessary but not sufficient condition to be met before products will be placed in the same market." With respect to inter-industry competition, the Court of Appeal found that evidence of "broad" competition, namely that the two types of newspapers were striving to reach many of the same advertisers with significant success by the community newspapers which, in turn, preoccupied Southam and generated responses by it, was sufficient to show competition "in fact". [41]

87 A finding that the products alleged to be in the same market serve the same relevant purpose is a necessary first step in the analysis. A finding of functional interchangeability, however, is not alone sufficient to place the products in the same market. As the Court stated:

> ... There are other factors which may tend to reinforce, or undermine, a finding that two products are functionally interchangeable. [42]

88 With respect to evidence of "broad" inter-industry competition, we do not understand the Court to be saying that the presence of such evidence, along with evidence of functional interchangeability, will, in every case, dictate that the products in question should be placed in the same product market. If the Court intended to confine the analysis to these two practical indicia and effectively negate consideration of other factors, like, for example, the views, strategies and behaviour of buyers, the Court would have done so explicitly. It did not do so. In *Southam*, the Court confined its conclusions to the matter before it:

> While evidence of substitutability through functional interchangeability and inter-industry competition was adduced, the Tribunal ultimately ignored such evidence. In doing so, the Tribunal adopted an overly narrow approach to substitutability as it dismissed "broad" conceptions of interchangeability and inter-industry competition. In doing so, the Tribunal erred

> in focusing predominantly on price sensitivity. *In this case, the similarity of use between Pacific Dailies and community newspapers, and the competitiveness which existed between them, is sufficient to place both in the same product market*. [43]
>
> (emphasis added)

89 We conclude that consideration of functional interchangeability is essential in assessing indirect evidence of whether two or more products are in the same market. But this does not exclude other relevant evidence which may reinforce or undermine what functional interchangeability implies.

90 In considering the whole of the evidence, the Tribunal will bear in mind the ultimate reason why the market is being defined. In this case, the goal is to determine if the respondents have market power (or are "major suppliers"), that is, if the alleged close substitutes, other local advertising media, provide competitive discipline for Tele-Direct in making price (or quality) and output decisions.

(3) Functional Interchangeability

91 The Director submits that two headings from the *Merger Enforcement Guidelines*, "end use" and "physical and technical characteristics", are both related to the question of functional interchangeability. Certain characteristics of directories are, he argues, key factors which dictate the end use of a directory as a directional reference tool and which thus limit the "functional interchangeability" of directory advertising with directional advertising in other media.

92 The respondents argue that all local advertising has the same end use: to increase business at a particular location. They submit that the characteristics of the various media should not be considered as part of the determination of functional interchangeability.

93 Regarding functional interchangeability, the Court of Appeal in *Southam* says:

> ... But the fact that community newspapers are more local in nature does not go to the question of functional interchangeability, but to the behaviour of buyers as to preference for geographical scope. This latter *subjective* factor should not be mingled with the purely *objective* factor of functional interchangeability which focusses on use or purpose. [44]
>
> (emphasis added)

The Court imposes the constraint that the views of buyers should not enter when functional interchangeability is being decided because they are "subjective". Only "objective" factors should enter at this point.

94 Under the criterion "end use", the *Merger Enforcement Guidelines* refer to the extent to which two products are "functionally interchangeable in end use". That is the way in which the term will be used in this decision. Physical and technical characteristics, along with other indicia, serve to determine whether the products found to be functionally interchangeable in end use are close substitutes. Rather than considering physical and technical characteristics as part of the determination of functional interchangeability, as the Director proposes, the Tribunal will treat them separately from functional interchangeability.

95 The Director and one of his economics expert witnesses, Richard Schwindt, [45] have defined the relevant end use of telephone directory advertising to be use as a "directional" medium. ("Directional" and "directive" were used interchangeably in the material before us.) Two elements are said to characterize a directional advertising medium: (a) consumers consult the medium when they are at a point in the buying cycle when they are ready to buy, and (b) the medium is used as a reference tool. Directional advertising is distinguished from creative advertising, which is widely acknowledged to be used for creating or stimulating demand. The Director admits that other advertising media besides Yellow Pages might be considered directional but names catalogues, direct mail and classified newspaper advertising as the only candidates.

96 The respondents and their economics expert witness, Robert Willig, [46] take the view that all "local" advertising [47] has the same end use, to attract customers to a particular establishment. Thus, they argue, advertising in the Yellow Pages and advertising

in other local media are functionally interchangeable. In response to the Director's argument, they argue that directionality is not generally regarded as encompassing the element of use as a reference tool. They further argue that the directional/creative dichotomy is not valid. They take the position that there is no such sharp distinction in the advertising done by local advertisers. In their submission, directional means only that the advertising directs consumers to a particular establishment - which can be done in any medium. Given the respondents' definition of "local" advertising, all advertising by a local advertiser necessarily has a directional component. Similarly, since they are of the view that all local advertising, including advertising in telephone directories, has as its goal the stimulation of demand at a location, all local advertising necessarily has a creative component.

97 Since the respondents have defined "local" advertising as advertising designed to promote business at a particular location, it follows that the purpose of all local advertising is to attract customers to a business. Such a definition is at a high level of generality. While we recognize that the "end use" indicia acts as a "filter" or a "first stage" in the analysis only, it should still cast some light on the ultimate question to be determined, i.e., whether all "local" media are *close* substitutes providing sufficient competitive discipline among themselves that they should be considered to be part of the same product market in this case. We find the words of Gibson J. in *R. v. J.W. Mills & Sons Ltd.*, which the Court of Appeal in *Southam* found "worthy of replication", to be instructive on this point:

> Defining the relevant market in any particular case, therefore, requires a balanced consideration of a number of characteristics or dimensions to meet the analytical needs of the specific matter under consideration.
>
> At one extremity, an ill-defined description of competition is that every service, article, or commodity, which competes for the consumer's dollar is in competition with every other service, article or commodity.
>
> At the other extremity, is the narrower scope definition, which confines the market to services, articles, or commodities which have uniform quality and service.
>
> In analyzing any individual case these extremes should be avoided and instead there should be weighed the various factors that determine the degrees of competition and the dimensions or boundaries of the competitive situation. For this purpose the dimensions or boundaries of a relevant market must be determined having in mind the purpose for what it is intended. For example, two products may be in the same market in one case and not in another. [48]

98 The criterion of functional interchangeability in end use should not be treated at such a high level of generality that it precludes objective yet contextual analysis. To say that, for example, automobiles and bicycles are in the same product market because they both provide a means of transportation would make the level of generality so high that no meaningful analysis could be performed as a result of it. Some consideration must be given to context.

99 To put functional interchangeability in end use in context in this case, it is important to look at the buying cycle and which types of media are generally regarded as directional and thus particularly effective in reaching consumers who are at the end of the buying cycle. These consumers are "ready to buy" but must decide which commercial establishment to patronize. The question is which types of media effectively bring the particular establishment to the consumer's attention in those circumstances.

100 The respondents referred us to a number of American cases which, they argue, support their broad conception of end use. We do not find these authorities particularly helpful. First, and most importantly, the product market that is arrived at in a particular case is very much dependent on the facts of that case and the context in which the case is brought, that is, the alleged anti-competitive wrong that the plaintiff is seeking to cure. As Gibson J. stated in the passage quoted above, "two products may be in the same market in one case and not in another." Therefore, the mere fact that another court did or did not find that directory advertising was in the same market as other local media is not in itself compelling. Some of the cases cited by the respondents were not antitrust cases. [49] Others did not deal with directory advertising. [50] In addition, counsel for the Director was able to bring to our attention a number of other American cases in which the courts, either explicitly or implicitly, used Yellow Pages advertising as a relevant market. [51] Further, while the reasoning with respect to market definition in another case might provide us with some insight, one would have to be reasonably certain that the court in question was applying the same

conceptual framework or "test" as we have adopted. These considerations all highlight the futility of looking for a simple, neat answer to market definition in the case law.

101 Based on the evidence, particularly materials created by the respondents themselves outside of the context of this proceeding, which we will review in more detail below, we accept the Director's position that the distinction between creative and directional media is a valid one for determining the end use of Yellow Pages and other local advertising. A fair consideration of the evidence, which will shortly be addressed, supports the position that creative advertising creates awareness of and demand for goods and services at the beginning of the buying cycle and that directional advertising refers to advertising to consumers who are at the end of the buying cycle which "directs" them where to buy a product or service. This effectively limits the number of media that can be considered to be directional.

102 Although the respondents argued that directional advertising simply means advertising (in any media including those traditionally considered creative) that contains a name, address or phone number to "direct" a consumer to particular establishment, [52] this was not Tele-Direct's view outside of this case. In the Multimedia Training Course created by Tele-Direct for its sales representatives, directional advertising is defined as:

> Media used by the advertiser to direct the buyer where to buy or use a product or service. Examples: Yellow Pages, catalogues, direct mail. Directive media complements and supports creative media. [53]

The three examples used suggest that directional media, in fact, have very specific characteristics beyond simply including a name, address or phone number. All are print media and in each case there is no editorial or entertainment content. The consumer has no reason to consult these media other than a reason related to making a purchase, i.e., at the end of the buying cycle.

103 The course material also discusses and sets out in chart form the role of the various media at the various stages of the buying cycle: awareness, interest, comprehension, trial, purchase and repurchase. The text explains:

> ... [S]uch traditional advertising media as TV, Radio and Magazines are by their nature designed to generate awareness for products and services. The impact or intrusion qualities of this advertising creates an interest for the products and services and has the ability to demonstrate the benefits to the consumer and is ultimately designed to create a need or desire in the mind of the consumer.
>
> . . .
>
> Although creative advertising is crucial at the awareness, interest and comprehension stage of the buying cycle, it loses impact at the actual purchase stage because of the time or distance between the initial awareness and the purchase. [54]

104 At the purchase stage, newspaper, direct mail, outdoor, radio and Yellow Pages are all considered to have some strengths. Television and magazines are not. Of those with strength at the purchase stage, only newspapers and direct mail (and Yellow Pages), however, are described as "directive". The strength of outdoor advertising at the purchase stage is as a "reminder message". The strength of radio at that stage is to offer price points and convey a "sense of urgency". Again, this course material supports the view that directionality imports something more than the ability to provide a consumer with a name and address. All of television, newspapers, direct mail, outdoor, radio and Yellow Pages are capable of including this information in advertising, yet Tele-Direct did not consider them all to be directional.

105 This interpretation is further supported by the letter sent to the Director by Tele-Direct during the course of the Director's investigation into the industry (referred to as the "Bourke letter"). The letter was intended to provide industry background. [55] It states that:

> The Yellow Pages traditionally is viewed as a "directional" or "considered purchase" advertising medium, which provides consumers with information on where they can purchase the goods and services they want.... Directional advertising is most attractive to local advertisers, particularly local retailers, who seek to motivate customers to visit their stores or to use

> their services. *Other directional media include direct marketing, catalogues, trade magazines, and specialty supplements to newspapers or magazines*.[56]
>
> (emphasis added)

There is no mention made of outdoor or television and radio as directional media. When Thomas Bourke, Tele-Direct's President, testified at the hearing he confirmed that the basic strength of Yellow Pages was to provide information on where to buy, as stated in the letter. In the list of directional media, he would, however, now include the classified sections of daily and community newspapers and specialty and other classified directories.

106 The letter continues:

> By contrast, the other major advertising media - outdoor, newspapers, radio, television and magazines - are classified as "creative" advertising media, which create awareness of and demand for products and services. Creative advertising assists advertisers who are either trying to sell a product or service, or promote their name. This service is attractive to major manufacturers or suppliers, who usually do not have a preference as to where the consumer buys its product or services.[57]

107 Since names, addresses and phone numbers could just as easily be included in advertising in the regular part of a newspaper and a magazine as in a special supplement or classified section, something more is involved in the way that the participants in the industry view directionality. As in the training material, all the examples of directional media are characterized by the absence of general editorial content. The characteristic that specialty supplements and classified sections in newspapers or magazines, other directories, catalogues and direct mail share with Yellow Pages is that the advertising in those media will be totally ineffective unless it is consulted by people who are "in the market" -- who are looking to make a purchase. As Mr. Bourke put it when describing how Yellow Pages complete the buying cycle, they must be in a "buying frame of mind". Consumers will not be involuntarily exposed to the advertising by virtue of going to the medium for entertainment or other reasons; they must voluntarily decide to consult the Yellow Pages or a catalogue, read the direct mail or an advertising supplement or classified section. These media are not picked up and browsed through idly in a spare moment.

108 The respondents argue that all directional advertising, even Yellow Pages advertising, has a "creative" component. Otherwise, they submit, no one would pay for a display advertisement in the Yellow Pages. The free business listing could provide a name, address and phone number. Clearly, there is "creativity" involved in designing an eye-catching Yellow Pages advertisement. This is not the same as creative ("creates" *demand*) as opposed to directional ("directs" consumers who are ready to buy) advertising as those terms are used in the industry, according to the evidence.

109 Mr. Bourke, echoing Raymond Greimel, Executive Director of YPPA, testified that the new attitude in the industry is that Yellow Pages are *both* directional and creative. He was unable, however, to explain how Yellow Pages advertising "creates awareness of and demand for products and services" in the words of the Bourke letter, as he recognized that people do not consult the Yellow Pages unless they already have a need for some product or service. He could only say that Yellow Pages advertising "reinforced" or "supported" the advertising in the creative media.

110 We are not satisfied from the paucity of evidence on the point that directional advertising means that the medium containing the advertising is a "reference tool", as the Director further submits. If this element were proven, virtually all media except directories would be excluded from potentially being part of the relevant product market at this point. We do not consider that the evidence supports narrowing the definition of "directional" in this respect.

111 Functional interchangeability is simply a preliminary filter to exclude those products which evidently do not have the same end use as Yellow Pages advertising. Nevertheless, certain conclusions can be stated. First, the respondents' position that local advertising in *all* media qualifies as directional is not tenable. In particular, television, radio and outdoor media are clearly not treated as directional in Tele-Direct's own materials. Television is seen as having little relevance to the latter stages in the buying cycle; it is strong in creating awareness and interest at the beginning of the cycle only. While radio and outdoor have a

role at the later stages, that role was not to present a directive message but rather to create "urgency" or serve as a "reminder" of other advertising.

112 This is not to say that these media *cannot* be used for directional advertising in any circumstances. It is a possibility, but in deciding whether various media serve the same end use, one must look to usual uses and not mere possibilities unsupported by the evidence. We are of the view that both the electronic and outdoor media can be excluded at this point as they are not directional media and thus do not have the same end use as Yellow Pages advertising. Since the electronic and outdoor media have not met this "necessary" condition for inclusion in the relevant product market, we will not deal with them further.

113 Second, there is some doubt as to whether "regular" advertising (as opposed to special supplements or classifieds) in newspapers and magazines is properly included as directional advertising. Based on the list in the Bourke letter, which was updated by Mr. Bourke in his testimony and is therefore, presumably, as comprehensive as Tele-Direct considers it should be, we could exclude "regular" newspaper and magazine advertising at this point. The Multimedia Training Course, however, does refer to "newspaper" advertising, without further details, as directive. Given the preliminary nature of the criteria of functional interchangeability and in light of the overall model used by the respondents to argue their case, we will not exclude newspapers from further consideration. Magazines will not be dealt with further, as they were largely ignored in the remainder of the evidence and argument of both parties.

(4) Other Relevant Indicia

114 Having determined that some, though not all, local advertising media pass the threshold test of functional interchangeability, we will now consider the evidence and argument on the remaining practical indicia to decide if those media are close substitutes and belong to the same product market as telephone directory advertising.

(a) Physical and Technical Characteristics

115 Telephone directories are issued annually, are comprehensive both with respect to including all suppliers and being delivered to all telephone subscribers, and they are governed by their own rules with respect to the content of advertising. The Director is of the view that these characteristics set Yellow Pages apart from other media.

116 The respondents argue that each advertising medium has different "strengths and weaknesses" and can claim to be unique. They submit that a "catalogue" of differences is not alone enough to place two products in separate markets. They state that the relevant question is whether the product is unique in some respect that significantly limits the extent to which *buyers* (here, advertisers) are willing to substitute other products for the product at issue. We agree that to deal with physical and technical characteristics separately from the views and behaviour of buyers is somewhat artificial. It is, however, the way in which the parties have chosen to organize their arguments and the evidence in this case. Therefore, in this portion of the judgment, we will restrict ourselves to the points raised by the parties in their respective arguments under that heading. We recognize that this factor is mainly important in the analysis as providing background for the next section on buyer views and behaviour.

(i) Time Insensitivity/Permanence

117 Advertisements in the Yellow Pages are finalized several months prior to publication and have to stand for the entire year between directories. This means that Yellow Pages advertising cannot be used to convey time-sensitive information. As noted by Professor Schwindt, for the Director, this sets Yellow Pages apart from other directional media, such as direct mail or supplements to magazines or newspapers, in which time-sensitive information such as prices tends to be featured. In fact, until recently Tele-Direct regulations prohibited the inclusion of prices in Yellow Page advertisements to avoid potential false advertising claims. This ban has now been lifted. It is doubtful whether, in a fast-changing world, price advertising can ever be an important part of telephone directory advertising while directories are a print medium that changes only every year.[58] The evidence of the advertiser witnesses amply supported the conclusion that Yellow Pages are *not* used for time-sensitive advertising.[59]

118 The fact that Yellow Pages cannot be used to convey time-sensitive information is characterized by the respondents as a "weakness", the "flip side" of which is "permanence", a "strength". Based on a statement by Professor Willig in his rebuttal affidavit, [60] they conclude that a weakness in Yellow Pages does not suggest that advertisers *would not* substitute other media for Yellow Pages; a weakness probably suggests that they *would* substitute other media. Thus, any identified weaknesses are seen as evidence of Yellow Pages vulnerability and not as evidence that the products against which Yellow Pages is being compared may not be close substitutes.

119 We do not accept that a "weakness" alone provides evidence of or even suggests substitutability. Substitution is not a one-way process. The conclusion on whether there are close substitutes for the firm's products is not based on asymmetrical substitution. We must certainly consider whether there is ready substitution *from* Yellow Pages *to* other media but we must also be satisfied of the reverse, ready substitution *to* Yellow Pages *from* other media.

120 For the very reason that telephone directories are not suited to time-sensitive information, they are the one source of directional advertising that advertisers can be virtually certain will be retained for a long period by consumers. Apart from catalogues, which often are valid for periods of up to six months, the information in other vehicles is quickly dated and will be discarded. Catalogues, however, generally provide information on a single seller and do not cover the wide range of goods and services found in the Yellow Pages. The relative permanence of directories supports the Director's position that Yellow Pages are unique among directional media in serving as a continuing reference of all available suppliers.

(ii) Comprehensiveness

121 It is conceded by the respondents that telephone directories are unique with respect to their comprehensive list of suppliers. They argue, however, that comprehensiveness comes from the free listings and that the directory would still be comprehensive even if it contained no display advertisements. That is true. The respondents go on to state that an advertiser values comprehensiveness *only* if the advertiser is targeting customers who contact *all* listed suppliers before making a purchase, in which case the advertiser would not need a display advertisement. The latter statement simply does not follow. The advertiser witnesses who appeared before us made it clear that they value the comprehensiveness of the Yellow Pages because that is a feature that leads consumers in general to use the Yellow Pages. (Since we are talking about a directional medium, we are speaking of consumers who are ready to purchase some good or service and are looking for a supplier.) Once a consumer decides to consult the Yellow Pages because of its comprehensiveness, an advertiser finds it profitable to advertise in the Yellow Pages to cause that consumer to choose its establishment as opposed to that of another supplier.

122 On the distribution side, the respondents do not dispute that there is no other medium that is so comprehensively distributed. All telephone subscribers, the vast majority of the population, receive a telephone directory. The respondents attempt to counter this fact by pointing out that persons who receive the Yellow Pages, and thus are the potential customers of businesses listed or advertising in the Yellow Pages, are also exposed to other media which do not depend on their active involvement, that is, on their deciding to consult the Yellow Pages. This argument, in effect, simply reiterates the respondents' position that all media have the same end use, since it ignores the fact that the voluntary nature of Yellow Pages (consumers must decide to consult the Yellow Pages to be exposed to the advertising) means that it is *not* used for the same purpose as are the creative media (consumers are involuntarily exposed to the advertising by virtue of using the medium for the entertainment or information value). We have found that Yellow Pages are a directional medium. Exposure to creative media is not relevant as they serve a different purpose.

123 The respondents also point out that the scope of a particular directory may be too broad for a particular advertiser. That advertiser may wish to reach only a limited geographic area and could do so more cost-effectively with flyers. This will be addressed in the next section when we consider buyer views on whether the unique characteristics of Yellow Pages are significant to them and thus limit their choices among media.

(iii) Other Restrictions

124 In addition to the restriction on price advertising there are Yellow Pages rules regulating comparative advertising, the use of coupons and the use of superlatives. There is no evidence on the effect of these restrictions. However, their existence does indicate that the publishers of telephone directories were and are willing to create an advertising environment that sets their vehicle apart from others. Clearly Tele-Direct is not concerned that these restrictions make Yellow Pages less attractive such that advertisers would substitute other media.

125 In summary, all media have strength and weaknesses. Contrary to the respondents' arguments, however, we are of the view that "weaknesses" of the Yellow Pages as a medium do not imply that advertisers will readily switch from it to other media. If pricing information is important to advertisers and they *cannot* use Yellow Pages to convey prices because of restrictive rules or time-insensitivity, then their choice to use newspaper advertising instead cannot be seen as a *substitution of newspapers for Yellow Pages*. Likewise, if advertisers *cannot* achieve their goal of being in a "reference" medium by advertising in newspapers, then their decision to advertise in the Yellow Pages cannot be seen as a *substitution of Yellow Pages for newspapers*. In other words, strengths and weaknesses in areas important to advertisers are really characteristics that tend *against* substitutability. The existence of significant (to advertisers) differences between Yellow Pages and other media would lead to the inference that other media are not close substitutes to the Yellow Pages.

(b) Views, Strategies, Behaviour and Identity of Buyers

126 Both sides recognize the importance of the identity, views and behaviour of buyers, in this case, Yellow Pages advertisers. Before turning to the more detailed evidence, we first set out the position of each of the Director and the respondents on the question of substitutability from the perspective of the advertisers.

127 The Director submits that advertisers do not consider that there are any close substitutes for Yellow Pages advertising. He bases this on the testimony of the advertiser and agency witnesses, who although not a representative sample, gave cogent reasons for their views on substitution despite the diverse businesses involved. He argues that the advertisers cannot easily move their advertising spending from Yellow Pages to other media because of the value that they place on certain unique characteristics of Yellow Pages as a medium. In support of this position, he also points to evidence that Yellow Pages spending is not even part of the "advertising" budget at large for many Yellow Pages advertisers.

128 The respondents conceive of all advertisers, including Yellow Pages advertisers, as operating on a fixed advertising budget which is allocated among various media (the "media mix") based on the highest returns that can be obtained from the advertising expenditures. Decisions about media mix are driven by perceptions of relative cost-effectiveness. Therefore, Yellow Pages spending is vulnerable to reduction (by means of smaller size, less colour) or cancellation in favour of expanded spending on other local media which are perceived as more cost-effective. The respondents' position emphasizes the possibility of significant substitution between media "at the margin".

129 The respondents argue that the evidence supports the following propositions (although they state them in a somewhat different order):

(1) the businesses that advertise in Tele-Direct's directories ("current Tele-Direct customers") also advertise in a variety of other media;

(2) current Tele-Direct customers perceive that other media provide as good or better value than Yellow Pages advertising and may be assigned as high or a higher priority in the advertiser's media mix;

(3) current Tele-Direct customers in the same line of business may each choose a different media mix, including a different emphasis on advertising in the Yellow Pages (bigger or smaller, black and white or colour Yellow Pages advertisement);

(4) many of the businesses that do not advertise in Yellow Pages ("Tele-Direct non-advertisers") advertise elsewhere;

(5) Yellow Pages advertisers who have cancelled their advertising in Yellow Pages ("former Tele-Direct customers") continue to advertise in other media; and

(6) former Tele-Direct customers are unenthusiastic about the value provided by Tele-Direct in relation to other suppliers.

They submit that these propositions support their theory that advertisers readily shift their spending between media and thus Yellow Pages advertising and advertising in all other local media are in the same product market. The respondents also point to some evidence which they say reflects *actual* switching behaviour by Yellow Pages advertisers to other media.

130 Two preliminary comments are in order. The first relates to the use of a term such as "at the margin" which, in effect, invites the Tribunal to ignore the cellophane fallacy because of its emphasis on current price levels rather than the competitive price. [61] Any firm or group of firms that have fully exploited their market power might see some substitution if the relative price of their product goes up further. Their inability to raise their prices without buyer switching "at the margin" is, in these circumstances, because they have already exercised their market power *not* because they have *no* market power because of the presence of close substitutes.

131 Secondly, with regard to the proposition that advertising budgets are fixed, there is some support in the evidence that this is true for large companies. The situation is not so clear for small companies. We recognize, however, that some percentage of Tele-Direct's revenue is likely derived from advertisers who have advertising budgets that include Yellow Pages. Therefore, we will proceed to address the critical question of whether these advertisers and others treat Yellow Pages and other media as close substitutes. It will be convenient, in this instance, to organize our review of the evidence put forward by the parties by focusing in turn on each of the customer groups mentioned in the respondents' propositions. We will look first at the evidence regarding former Tele-Direct customers, then turn to non-advertisers and finally, current Tele-Direct customers.

(i) Former Tele-Direct Customers

132 This group comprises Tele-Direct customers who have *completely* cancelled their Yellow Pages advertising. One would expect, therefore, that these advertisers would provide the most compelling affirmation of the respondents' theory of ready shifts in spending between media.

133 At the outset, we note, however, that whatever is learned about former Tele-Direct customers cannot be generalized to the population of Yellow Pages advertisers as a whole. From Tele-Direct's 1994 Corporate Post Canvass Analysis Report we know that former Tele-Direct customers are relatively unimportant in terms of total Tele-Direct revenue, and individually they were spending far less than average annual amounts in the Yellow Pages. The 1993 revenue from advertisers who cancelled their Yellow Pages advertising completely in 1994 represented only 1.3 percent of total 1993 revenue for Tele-Direct (Publications) Inc. The average annual expenditure in the Yellow Pages for these advertisers was about $700. [62]

134 The respondents rely on the information about former customers provided by the January 1993 Elliott report on customer satisfaction. [63] The report indicates that former customers view Tele-Direct's products and services as "poor value" and generally of fair to poor quality, both absolutely and relative to other suppliers.

135 Because the former Tele-Direct customers could answer questions about other media suppliers, the results do indicate that *some* Tele-Direct former customers use other media. The study does not reveal what percentage of former customers are, in fact, using other advertising vehicles or which ones they are using. We know from the 1994 Corporate Post Canvass Analysis Report that former advertisers were spending relatively small amounts in the Yellow Pages. This would tend to indicate their options for buying other media on an annual basis with the dollars thus freed up are limited, given the cost of some of the media (particularly newspapers, radio and television) alleged to be close substitutes. The survey also found, not surprisingly, a low level of satisfaction with Tele-Direct among former customers. The study does not provide convincing evidence that a significant portion of former customers transferred advertising spending *from* the Yellow Pages *to* other media or that Yellow Pages is vulnerable to competition from other media as opposed to losing advertisers by virtue of its own failings.

136 With respect to former Tele-Direct customers the Director refers to two Tele-Direct reports which set out the reasons which customers gave to Tele-Direct sales representatives for cancelling their advertising: the "P.A.R. (Potential Advertiser

Retrieval) Summary" report and the "Wipe Out Sampling Summary".[64] One can assume from the fact that the representatives were able to contact the customers that they remained in business and maintained a business listing.

137 Tele-Direct uses the P.A.R. form completed by cancelled customers to attempt to understand why advertising was cancelled. One of the choices on the form for reason for cancellation is "trying other media". Professor Willig found it "notable" that Tele-Direct listed "trying other media" as a choice on the P.A.R. form., i.e., that Tele-Direct was alive to the possibility of its advertisers switching to other media. However, the P.A.R. Summary report printed in September 1995 shows that only four out of 203 former customers (two percent) surveyed stated that they cancelled because they were "trying other media". Professor Willig conceded that this low number would have some significance and would suggest a low level of movement between media if the study were meant to be comprehensive.

138 To counter the low percentage, the respondents argue that the relevant denominator is actually smaller than 203. To the extent that 56 customers were probably going to go out of business, they should be excluded. If we remove these customers, only three percent of the former customers surveyed gave "trying other media" as their reason for cancelling their Yellow Pages advertising.

139 The respondents would also exclude a further 84 customers who gave a variety of reasons other than "trying other media" for their cancellation (e.g., "financial reasons", "restructuring", "wouldn't discuss", "clients are mostly from referrals") to bring the sample size to 63. They would also include in the numerator, with those advertisers who answered "trying other media", another 47 advertisers who gave various other responses[65] on the argument that these advertisers were probably already using other media and, therefore, would not say they were "trying" other media when they moved their dollars to what they considered a more effective medium. Thus restructured, they argue that the report yields an 81 percent response rate in favour of substitutability between all media.

140 There is nothing in the report which supports the changes advocated by the respondents. The inclusions and exclusions are based on speculation, at best. Beyond removing the customers who have gone out of business, the report must be taken as it stands. If it is significant, as Professor Willig maintained, that Tele-Direct wanted to know if former customers were "trying other media", and included it as a possible response for former customers to choose, then it is significant whether they did choose that response or not. Any of the customers who answered could have selected "trying other media" if that were indeed their primary motivation for leaving the Yellow Pages.

141 On the whole the P.A.R. Summary report demonstrates that only a handful of customers may have discontinued Yellow Page advertising in favour of other advertising vehicles. Even for these customers little can be concluded about substitutability. They said they were "trying other media". Without some follow-up as to whether they found other advertising vehicles more effective in boosting their sales, it is not possible to tell if the other media were close substitutes for them. Indeed, some of these customers may have returned to Yellow Pages because they did *not* find the other media adequate for their purposes.

142 Similarly, the "Wipe Out Sampling Summary" by Tele-Direct shows only two of 87 (about two percent) former customers "trying other methods of advertising". The respondents attempt to re-interpret these results in the same manner as with the P.A.R. Summary report, i.e., by reducing the denominator. Again, there is no support in the document itself for such re-interpretation. This report tends to support the conclusion from the P.A.R. Summary report that very few customers discontinued Yellow Pages advertising in favour of other advertising vehicles.

(ii) Tele-Direct Non-advertisers

143 Tele-Direct's overall penetration rate is about 50 percent. This means, as the respondents state, that some businesses do not buy any Yellow Pages advertising. It is probably also true that most businesses advertise in some way. What does the evidence reveal, if anything, about this class of Tele-Direct non-advertisers? Is their advertising spending likely to be easily switched from whatever vehicles they are currently using into Yellow Pages (and vice versa)?

144 Tele-Direct divides non-advertisers into two groups: poor prospects for Yellow Pages advertising (Market 6) [66] and current non-advertisers with some potential (Market 7). Market 6 accounts are not contacted during a sales canvass; about 85 percent of Market 7 accounts are contacted. Both Valerie McIlroy, Tele-Direct's Vice-president of Marketing until July 1994, and David Giddings, a Vice-president of Sales, described the manner in which Tele-Direct contacts these non-advertisers as a "blitz". During a canvass, one or two days at various times are designated as "non-ad blitz days" and the telephone sales representatives focus on calling as many non-advertisers as they can each day, up to 20 to 30 calls. Tele-Direct's success in converting these non-advertisers is at most five percent.

145 If all media are close substitutes and advertising dollars are as fluid as the respondents argue, then Tele-Direct would seem to have a reasonable prospect of luring customers away from those other media and into the Yellow Pages. Yet, Tele-Direct's success rate with non-advertisers is very low. In addition, the approach taken to non-advertisers, namely telephone sales "blitz" days, provides little indication that Tele-Direct considers these non-advertisers "good" prospects which merit spending a lot of time and money to convert. Former Yellow Pages advertisers who have cancelled would presumably be especially good candidates but Tele-Direct does not appear to direct any special effort even to this group. One of the studies referred to by the respondents that does include some specific information on non-advertisers is the 1990 study by Impact Research. [67] The study consisted of interviews with 36 business people in Montreal and Toronto, half of whom were Yellow Pages "non-advertisers". [68] There is some indication that the non-advertisers were probably using some other media but there is no data on how many advertisers or which media.

146 The results of the study do not, in any event, support the respondents' contention about the potential to shift advertising dollars between all local media in search of the most "cost-effective" alternative. Seventeen of the 18 non-advertisers did not advertise in the Yellow Pages "mainly because of the *perceived non-use of the Yellow Pages by their potential customers*." Sixteen of the non-advertisers were not going to advertise in the next Yellow Pages edition because they were convinced it was an "*inappropriate medium* for their advertising needs". [69] Two were undecided.

147 The views of non-advertisers do not support the contention that there is ready substitution between Yellow Pages and all other local media. If anything, the evidence that is available tends in the opposite direction.

(iii) Current Tele-Direct Customers

148 The respondents place considerable emphasis on the fact that existing Yellow Pages advertisers use a variety of media and that many believe that other media are as good or a better value than Yellow Pages. Because many firms advertise in a number of different advertising vehicles, the respondents argue, they are thus able to shift advertising dollars among them as the returns on them vary.

149 The evidence from the Director's advertiser witnesses, as well as from the Tele-Direct surveys, [70] confirms that Yellow Page advertisers tend not to be solely reliant on this one vehicle. Many advertisers use a variety of media. Even within a heading, some Yellow Pages advertisers have smaller advertisements, advertisements without colour or simply a free listing, thus potentially freeing advertising dollars to spend in other media. However, there is little that we can conclude from this fact alone. As acknowledged by Professor Willig, the use of more than one advertising vehicle tells us nothing about whether the vehicles in question are substitutes, complements, [71] or have no relationship whatsoever. To draw conclusions about substitutability there must be evidence that advertisers do *in fact* shift between the various media in response to competitive moves by those media.

150 The principal evidentiary source referred to by the respondents respecting current customers is the January 1993 Elliott report. As with cancelled customers, current customers were asked to rate Tele-Direct in terms of, among other items, value for money and overall quality. Many existing customers believe that other media provide as good value or better value and quality than Yellow Pages advertising. Thirty-five percent say that the relative value for the money of Yellow Pages is much or somewhat worse than other suppliers while the relative quality is about the same as other suppliers. Likewise, 38 percent of all customers believe that Yellow Pages are high or very high priced in relation to other suppliers. In the western region

(Ontario), 56 percent of large customers believe that Yellow Pages are high or very high priced while only five percent say that Yellow Pages are very low or low priced. The respondents say this evidence shows that Yellow Pages are vulnerable to advertisers switching to other media.

151 We are of the view that these results tend to contradict rather than support the respondents' premise that all media are close substitutes. It is difficult to conclude that customers who had good substitutes would choose to continue to purchase a product that they believed was too high priced and of poor value. One would expect that, if all media were close substitutes, the medium perceived as providing better value and price would be purchased in preference to the others. Yet, dissatisfied Tele-Direct customers apparently continue to advertise in the Yellow Pages despite their opinion that other media are as good or better value and lower priced. The Elliott report provides more support for the proposition that Tele-Direct has a comfortable cushion of market power that permits it to keep its customers in spite of the fact that significant numbers of them were not complimentary about its service and pricing than it does for the proposition that Tele-Direct competes with other suppliers providing easily substitutable products.

152 The respondents also refer to a 1994 study by Omnifacts Research in Newfoundland. [72] Four focus group sessions were conducted with a total of 31 Yellow Pages advertisers, two sessions with new advertisers and two sessions with established customers. [73] In-depth interviews were conducted with 16 customers, 10 of whom had reduced their Yellow Pages spending. Many of the customers also used other media, primarily print, in the form of local trade magazines, flyers and direct mail for new customers and flyers and direct mail for established customers.

153 There was a general view among the participants that they *had* to advertise in the Yellow Pages. They generally found it difficult to judge the effectiveness of the advertising they did, including Yellow Pages. In particular, they expressed considerable uncertainty about the value of larger size and coloured advertisements in Yellow Pages. Established customers "... tend to follow the competition when deciding on placement and size of Yellow Pages advertising. Most are clearly not sure whether the advertising in the Yellow Pages actually works, but the consensus is that they have to be there." [74] Some expressed displeasure at the number of headings since they felt compelled to advertise in several headings if their competitors did.

154 Particularly significant are the results of the interviews with customers who had reduced their Yellow Pages expenditures. The report states:

> Those companies who reported that their expenditures decreased fall into two main groupings: those who decreased as a cost cutting measure and those who decreased primarily because they do not perceive the Yellow Pages to be effective for reaching their target markets.
>
> Those that decreased their expenditures as a cost cutting measure essentially felt that the current economic conditions were affecting their business revenues....
>
> Clients who have decreased their Yellow Pages expenditures because they did not consider the Yellow Pages to be effective, reported that their markets are primarily industrial or business-to-business and given the nature of the products and services that they offer, the Yellow Pages are not therefore consistent with their target markets. [75]

There is no indication in either case that customers reduced their Yellow Pages advertising in order to shift dollars into other media. [76]

155 Turning to the Director's evidence, the viva voce evidence of advertisers and other market participants who represent advertisers strongly supports the position of the Director that advertisers do not regard Yellow Pages and other media as close substitutes. Although several advertisers were approximately average size in terms of spending on Yellow Pages, most were in the top two or three percent of Tele-Direct customers. That is, average expenditures ranged from about $2,000 annually to well in excess of $100,000. For the most part a large percentage of advertising dollars were spent by these advertisers on other advertising vehicles, although a small number of the advertiser witnesses devoted almost all their advertising to Yellow Pages.

Advertisers spending relatively large amounts in the Yellow Pages are, nevertheless, well placed to provide evidence on the opportunities for substituting between Yellow Pages and other advertising vehicles.

156 Although the circumstances of advertisers and the language used to describe their advertising strategies varied, none of the advertisers indicated that other media could be substituted for Yellow Pages. What they did say was that they use different media for different purposes. They use Yellow Pages advertising for purposes which take advantage of its unique characteristics. They advertise in the Yellow Pages because it is a reference of all available suppliers which is received and retained by most consumers and is consulted by them. They consider that Yellow Pages is cost-effective in this regard and generates a superior level of customer response.

157 Some, particularly large-budget, advertisers use other media to "create awareness". The witnesses use media other than Yellow Pages to advertise specials, include prices or to target a specific group or occasion. Steve Kantor of Tiremag Corp., who sells aluminum wheels and tires, uses other vehicles to convey a seasonal message, selling the "sporty" look in spring and "safety" in fall. Likewise, Kenneth Flinn, who operates a taxi and courier business (Lockerby Taxi Inc.) and relies almost exclusively on Yellow Pages, uses radio during the holiday season to convey the message "don't drink and drive". Yellow Pages cannot accommodate this time-sensitive advertising.

158 On this point, the respondents attempted to demonstrate the vulnerability of Yellow Pages to substitution by a review of advertisements in a number of newspapers from Toronto, Thornhill, London, Ottawa, Niagara, Sault Ste. Marie, St. Catharines and Montreal over a three-week period. The purpose was to show that some advertisers were using both Yellow Pages and newspapers and that they could substitute one for the other. [77] Professor Willig observes that a "limited number" of advertisers employed "much the same" advertisements in both the newspaper and the Yellow Pages. He puts forward only four examples, of which only two are identical. For the other two, "the newspaper ad includes some of the same information presented in the directory display ad, but ... the newspaper ad also includes some timely information of the kind that a directory ad could not contain, due to its permanence." [78]

159 The respondents provided three further examples of advertisements that were similar in both the Yellow Pages and a newspaper. [79] These types of advertisements evidently represent a very small percentage of Yellow Pages advertisements. Equally important is the conclusion that the respondents draw from Professor Willig's survey and the other examples, that the advertisements are only "essentially" the same and that where differences arise, they often stem from the *greater timeliness* of the newspaper. For example, the newspaper advertisement contains a price. They did not, however, provide us with any basis for concluding that prices and other time-sensitive information are trivial or unimportant to advertisers.

160 Time sensitivity for some advertisers cannot mean that those advertisers are likely to *switch from* Yellow Pages *to* newspapers and vice versa. Instead, they will use newspapers to convey time-sensitive information because that is what newspapers are good at doing. Likewise, they will use Yellow Pages to convey a message that is *not* time-sensitive but that takes advantage of other characteristics of Yellow Pages as a medium.

161 Agents specialized in selling Yellow Pages, general advertising agents, a witness with a large media buying agency and the former Vice-president of Marketing with Tele-Direct also testified that they did not consider other advertising vehicles a substitute for Yellow Pages and had not observed their customers to have ever done so.

162 Professor Schwindt's evidence supports the Director's argument that certain types of businesses use or do not use the Yellow Pages because Yellow Pages have particular characteristics that set them apart from other advertising vehicles. His evidence showed that businesses providing emergency services (glass repair, contractors, plumbers), infrequently consumed products (lawyers, moving and storage, exterminators), services used by travellers (automobile rental), products for which the use of the telephone is important (pizza), or any combination of these, tend to rely heavily on the Yellow Pages. Professor Schwindt also points out that there are types of businesses (grocers, department stores and theatres) that are known to advertise very heavily in other vehicles such as newspapers and flyers and spend virtually nothing on Yellow Pages.

163 On the other hand, Professor Willig, for the respondents, pointed out that whether Tele-Direct has market power, i.e., is vulnerable to ready substitution by advertisers to other media, depends on the combined demand of all advertisers, including those who are not necessarily very reliant on Yellow Pages. While he concedes some advertisers are more reliant than others on Yellow Pages advertising and that this affects the *average* elasticity of demand and the ability of Tele-Direct to exercise market power, he is of the view that the presence of advertisers who are willing to switch serves to discipline Tele-Direct's pricing. He acknowledges, however, that his position is subject to exception if Yellow Pages publishers could be shown to have the ability to price discriminate.

164 Price discrimination allows a firm with market power to secure higher profits (strictly, price less marginal cost) on sales to some customers than on sales to others. A firm without the ability to price discriminate may be disciplined by the ready ability of at least some of its customers to switch if prices are increased and, when considering a price increase, must weigh what it will lose against what it will gain from that action.

165 However, where a firm has found a way to price discriminate, no weighing need be considered. The prices for customers who might switch will be left at a level where they will continue to purchase. However, for those customers who are so reliant on the firm that they cannot switch, the firm may extract higher prices and therefore higher profits on sales to them. The ability to price discriminate therefore tends to demonstrate that a firm is not, at least in respect to the customers who are subject to the discrimination, vulnerable to those customers substituting other products for that of the firm.

166 On our assessment of the evidence, Tele-Direct does engage in price discrimination but not as between headings, i.e., it does not charge plumbers (a business likely to be heavily reliant on Yellow Pages) more for the same advertisement than it does grocery stores (likely to be less reliant). Rather, Tele-Direct price discriminates against those who tend to spend more in Yellow Pages by buying larger advertisements[80] or colour. Those customers are charged much more than can be explained by the additional costs associated with producing and servicing the enhanced advertisement. Thus, larger advertisers (by expenditure) under all headings contribute more to Tele-Direct's profits than smaller advertisers. Professor Willig agreed that if customers who use colour value Yellow Pages more than customers who do not, the pricing of colour is a way to price discriminate between customers who value Yellow Pages more and customers who value it less.

167 Tele-Direct does not have to target these firms; they in effect identify themselves. Firms that are heavily reliant on Yellow Pages are the ones that will buy a larger and more colourful advertisement in order to attract customers away from their competitors in the same Yellow Pages heading. This is indicated by the large average expenditures per subscriber and per advertiser under headings such as "moving and storage" and five other headings that stand out in the top 25 listed by Professor Schwindt in his report. The fact that there are advertisers under other headings who are less reliant on Yellow Pages can have no influence on the ability of Tele-Direct to extract higher returns from advertisers who compete heavily within headings.

168 Moreover, while headings provide an important first indicator of whether a business is likely to be a heavy advertiser, there may be important differences among advertisers within a heading. One advertiser in a heading may have a larger or more colourful advertisement than the advertising by its competition within that heading. This is illustrated by the evidence of Howard Kitchen of Lansing Buildall, whose firm of lumber supply outlets is a relatively large Yellow Pages advertiser in the Toronto area. When asked about the fact that a large new entrant in lumber supply was not advertising in the Yellow Pages, he pointed out that his firm encouraged telephone inquiries while his competitor did not. The pricing of Yellow Pages, therefore, is able to capture the greater need of particular customers within headings as well as between headings. Thus, Tele-Direct's ability to price discriminate causes us to conclude, at least in respect of those larger advertisers who are most reliant on Yellow Pages advertising and therefore purchase large size advertisements or colour, that there is no ready substitutability between Yellow Pages and other media.

(iv) Conclusion

169 There is little evidence supporting the respondents' position that all media are substitutes for local advertisers. Specifically, the evidence of switching behaviour between Yellow Pages and other media is extremely weak. There is almost no evidence

that advertisers regard Yellow Pages as serving the same purpose as other media nor that they regard its purpose in the broad manner put forward by the respondents. While there is evidence of changes in advertising expenditures, they are associated with changes in economic conditions or advertising strategy rather than switching between media in response to competitive moves by those media.

170 While it is true as a matter of arithmetic that when expenditures are shifted within a fixed budget there will be winners and losers among the media, this fact tells us nothing about the willingness of firms to reallocate expenditures within the budget *as a result of competitive moves by advertising vehicles*. Advertisers' goals, situations and advertising needs are subject to change. Specific physical and technical differences among media limit the way that they can be used to accomplish a specific objective, such as the announcement of a sale, the listing of prices or a promotion related to a change in season and raise doubt about the willingness of advertisers to treat advertising dollars as fluid or as easily substitutable between Yellow Pages and other media. The respondents' proposition that both former and current Yellow Pages advertisers use a variety of advertising vehicles is likely correct. It was also proven that relatively large percentages of former and current advertisers do not think very highly of Yellow Pages. This tells us nothing about whether there is a sufficiently large body of Yellow Pages advertisers who are willing to switch their advertising dollars in the event that Yellow Pages were priced above the competitive level. There must be evidence that advertisers reallocate dollars in reaction to competitive moves by different media. It is insufficient just to demonstrate a fixed budget and changes in allocation by advertisers between media. In other words, there must be evidence in one form or another that advertisers regard other advertising vehicles as close substitutes for Yellow Pages.

171 The testimony of the advertiser witnesses about why they use Yellow Pages and the importance of Yellow Pages advertising to them is supported by Tele-Direct's own studies of advertisers. Many advertisers believe they *have* to be in Yellow Pages to be in a comprehensive reference tool, particularly if their competition is there. They feel they have no choice. As stated in the Omnifacts study:

> ... There were numerous comments concerning the fact that the Yellow Pages, like the telco, operates in a monopoly situation where their customers are to some extent captive advertisers, who have really no choice but to place their advertising with Tele-Direct. [81]

If they do not use Yellow Pages it is because it does not suit their purpose, not because they can readily move dollars between Yellow Pages and other media. The views of buyers, therefore, strongly tend to support the view that Yellow Pages and other local media are not close substitutes.

(c) Trade Views, Strategies and Behaviour (Inter-industry Competition)

172 The Director argues that there is little evidence that Tele-Direct or other market participants consider Yellow Pages to be in competition with other media. Whatever steps Tele-Direct took in relation to other media, he submits, are to be contrasted with its reaction to other market participants that it clearly regarded as competition. The other competitors referred to by the Director are consultants, agencies which sell Yellow Pages advertising, and independent publishers of telephone directories.

173 The respondents argue that Tele-Direct does not compete, for various reasons, with either consultants or agencies in providing *services* to advertisers. They do, however, admit that independent publishers are in the relevant market with Tele-Direct, whether that market includes only directories or all local media. We will, therefore, compare Tele-Direct's reactions to other media to its reactions to independent directory publishers, about which there is no dispute between the parties.

174 The respondents argue that the evidence reveals "broad competition" or "competition in fact", as referred to by the Court of Appeal in *Southam*, between Tele-Direct and all other local media. They submit that Tele-Direct views other media as competitors and has taken various initiatives to compete with other media. They argue that other media, in turn, view Tele-Direct as a competitor.

175 The respondents submit that evidence of "broad competition" places all local media in the same product market. The respondents say that differences in the type or intensity of response to different "competitors" should not eliminate some

"competitors" from the relevant market. We cannot agree. The type and intensity of the alleged competitive response is an element for consideration in determining if the products argued to be in the same market are close substitutes. Substitutability, as pointed out in the *J.W. Mills* case quoted above, is always a question of degree. Differences in the intensity of the reaction to players admitted to be competitors by Tele-Direct and those alleged to be competitors by Tele-Direct can help us to determine where to draw the line in this case.

(i) Tele-Direct's Views and Behaviour

• General

176 The evidence is unequivocal that other directory publishers have been referred to as competitors by Tele-Direct and the respondents concede that they are. A number of independent publishers not affiliated with a telco produce directories in Tele-Direct's territory. Over the years, Tele-Direct has collected information on and copies of directories of independent publishers. As of 1994, the information was organized into a "competitive database" as part of the creation of a "Sensitive Market Intelligence System". The sales representatives gather information and the marketing department analyzes information on independent publishers as part of this system. Tele-Direct goes to considerable lengths to track and compile data on the revenues, prices, scoping, circulation and other features of independent directories. [82]

177 Further, it is not in dispute between the parties that when a broadly-scoped independent directory entered into Tele-Direct's territory in each of the Niagara region and in Sault Ste. Marie, Tele-Direct responded with zero price increases, advertiser incentive programs, promotional campaigns, and improvements to its own directories. [83]

178 While there are references within Tele-Direct documents to other media as "competitors" and to "competing for the advertising dollar", there was no effort on Tele-Direct's part to track revenues, prices, features or circulation in a comprehensive and detailed a fashion as there was with other directory publishers. When one compares the competition data base and sensitive markets material cited above to the documents put forward by the respondents as showing competition with other media, the difference in intensity is immediately apparent. They refer in their written argument, for example, to two speeches from 1984 and 1985 which refer to "competing with all other types of advertising media" and being in a "constant struggle for the customer's advertising dollar." Considerable emphasis is also placed on a 1993 document entitled "East Office Competition Analysis". The "east office" deals with only a portion of Tele-Direct's territory, namely the Peterborough, Orillia and Barrie areas. The document is a summary of a meeting regarding competition. It lists newspapers, flyers, consultants and television as competitors and canvasses various points of discussion. It does not identify particular competitors, give any detail on revenues likely lost, comparative pricing or features like circulation.

179 There was likewise no evidence of a Tele-Direct response to other media competition that bears any resemblance to the focused and intense response to the competing directory publishers. The respondents referred us to other initiatives by Tele-Direct that they submit are of particular significance and we will deal with them in further detail below.

• Educational Efforts

180 Educating employees to deal with the existence of competitors might be some evidence of concern by Tele-Direct about the potential for its advertisers to switch to other media. The evidence regarding Tele-Direct's educational efforts indicates, at best, a weak concern about the necessity to compete with other media. The respondents rely on the Multimedia Training Course as the principal Tele-Direct initiative to compete with other media. The only clear evidence we have, which comes from a written answer by the respondents to a question on discovery, is that the course was given once in 1992 for four days to all sales "employees". The oral evidence on the issue was vague, suggesting that the course was not an initiative that was considered significant by Tele-Direct. [84]

181 Based on the course having been given once in 1992 to all sales representatives, the investment by Tele-Direct was 1880 (470 × 4) person-days. Based on the average remuneration of a premise sales representative, the cost to Tele-Direct was *at most* $500,000. [85] This was a one-time cost relating to *all* of Tele-Direct's territory with benefits spread over a number of

years. By contrast, in reaction to the entry of DSP in Sault Ste. Marie, in one year (1993) in one relatively small market Tele-Direct spent over $215,000. Evidence of educational efforts does not suggest a great concern on Tele-Direct's part about other media competition.

• *Sales Aids*

182 The respondents point to a variety of "sales aids" produced by Tele-Direct which contain references to other media. They submit that the specific claims made in the documents with respect to other media in relation to Yellow Pages are unimportant. Rather, they say significance lies in the simple fact that Tele-Direct created material which refers to other media to provide to its sales force. They claim that if Yellow Pages were "unique", there would be no need for this type of promotional material.

183 We are of the view that in examining the documents prepared for use by Yellow Pages representatives, we should consider whether the content of those documents points to the treatment by Tele-Direct of Yellow Pages as a separate advertising medium (the Director's position) versus whether the content indicates signs of competitive activity with other media (the respondents' position). The mere existence of sales aids which mention other media in some context cannot be solely determinative of the issue.

184 Two memoranda dated 1983 and 1985, respectively, deal with direct mail (flyers) as an alternative to Yellow Pages and provide visual aids to salespeople. The first concludes:

> We all know that any form of advertising is beneficial in one way or another but direct mail should never be an alternative to Yellow Pages when considering the circulation, permanence, or economy of the two mediums, and these visuals prove that. [86]

The second states:

> Unbelievable.
>
> When comparing the economy of Yellow Pages with the cost of Direct Mail it is hard to imagine why someone would consider Direct Mail an alternative to Yellow Pages advertising. [87]

Despite the fact that Tele-Direct sales representatives may have had, to some extent, to provide arguments on the superiority of Yellow Pages in relation to flyers and, indeed, any other media, the words used suggest non-, or at least low, substitutability between Yellow Pages and the alternative media. The authors of the memoranda appear to express disbelief and incredulity that anyone would ever consider direct mail as an economical alternative to Yellow Pages advertising.

185 Tele-Direct's Strategic Business Plan for the time period 1983-88 states:

> Part of a large, profitable but slow growth industry, the directory advertising business operates from a privileged position in a captive market. [88]

Tele-Direct has characterized its own market as "captive" in this business plan. We infer that this high level document reflects the perception of Tele-Direct management as to competition from other media. It places in context the aforementioned memoranda.

186 The respondents also refer to a set of documents that was prepared for the 1992 sales canvass which includes comparisons between the cost of advertising in Yellow Pages and two dailies and three community newspapers in the Toronto area. Other documents give the same type of information for other cities and towns. Another similar package compares the cost of Yellow Pages to two Toronto dailies, and shows what could be purchased with the Yellow Pages dollars in television, radio, flyers, calendars, key chains and ball point pens.

187 When we examine the content of these documents, we find that, as with the direct mail examples, what is being emphasized is the *lack* of comparability between the cost of Yellow Pages and the other media. With respect to the comparisons

with newspaper advertising, one document (from 1992), for example, compares a 1/4 page advertisement for 30 days in the Toronto Yellow Pages (circulation over 1.3 million) at $677 with a 1/4 page single insertion in *The Globe and Mail* (circulation about 325,000) at over $7,000. Mr. Giddings described this type of sales pitch as making a comparison to point out that there is *no* comparison between Yellow Pages and newspapers. Newspapers are simply so much more expensive that there is no comparability. Another document has a similar tone; it focuses mainly on newspapers for comparisons but also highlights how *little* can be purchased with the Yellow Pages dollars if transferred to television ("2-60 second spots, non-prime time"), radio ("2-1 minute spots") and flyers, calendars, key chains and ball point pens (15,600 flyers, 709 calendars, 1,213 key chains and 1,365 pens while Yellow Pages circulation is over 900,000).

188 Tele-Direct, unlike other print media, does not use a "CPM" or cost per thousand measure in promoting its product to advertisers. A CPM is a calculation of the cost of the medium per thousand persons reached, which can be applied to the number of copies sold (assuming one reader per copy sold) or read (if that number is known) of, for example, a magazine or newspaper. The CPM allows comparisons between print media. Tele-Direct researched the possibility of developing a CPM for its directories in the late 1980s. Its survey of general and specialized advertising agencies revealed that the agencies thought such a measure

> ... entirely unnecessary since we [Tele-Direct] are the only ones in this field and there can be no similar comparison (they absolutely cannot imagine comparing us to the other "media").
>
> . . .
>
> In the event of serious competition, all agree that such a tool would be useful.
>
> However, two of the largest agencies already understand the usefulness and even suggest the development of this type of measure to better acquaint people with the Yellow Pages on a "national" level, and to establish ourselves as the unbeatable leader in the industry. [89]

Although a later study concluded that a CPM measure should be developed for Yellow Pages that would be, to some extent, comparable to other media in order to "contribute to developing a media image for Y.P. directories, and would create a barrier for potential competition", none was developed. Tele-Direct does use a CPM-type formula internally in its pricing to ensure that its directories of similar circulation are priced similarly but CPM is not used as a marketing tool.

189 Equally relevant to the question of how Tele-Direct views its product in relation to other media is the large volume of Tele-Direct promotional material selling advertisers on the advantages of being dominant *in* a Yellow Pages heading. The virtues of size and colour are extolled in testimonial letters and other promotional material. The "YPROI study", which the respondents argue is a primary tool of their sales force in selling the "value of the medium", starts with a comparison of which media influenced persons who had made a recent purchase, [90] but also includes a page trumpeting the importance of size, colour and "impact" within the Yellow Pages so as to influence the buyer's selection of a firm once he or she consults the Yellow Pages.

190 The advantage of "standing out" that is being sold to customers is with respect to competitors advertising *in the Yellow Pages*, and not with reference to advertisements in some other medium. As pointed out by one of the Director's economics expert witnesses, Margaret Slade, [91] the amount of advertising a firm does in the Yellow Pages is dependent on how much its competitors do. When a Yellow Pages sales representative convinces a customer to increase its expenditures on Yellow Pages advertising, this creates pressure on its competitors to do likewise (referred to as the "prisoner's dilemma"). This phenomenon came through in the comments received from the established customers participating in the Omnifacts study in Newfoundland, that they tend to follow the competition when deciding on placement and size of their Yellow Pages advertising. The pressure on advertisers to observe and to some extent follow what their competitors are doing in the Yellow Pages indicates that Yellow Pages are a distinct medium, a separate arena within which firms seek to stand out.

191 The respondents stress that competition for the advertising dollar is not so much a matter of whether firms advertise in the Yellow Pages but of how *much* they advertise, primarily whether they buy coloured advertisements and larger advertisements.

The number of headings would be an additional factor determining the expenditures of customers. It is noteworthy that the attempts by Tele-Direct to sell colour and size to its advertisers are based on comparisons with black and white advertisements or smaller advertisements *within* Yellow Pages.[92] Thus, the success or failure of Tele-Direct representatives in capturing more of the advertising dollar depends on the extent to which they can convince customers that they need to upgrade their advertisements *to be more effective vis-à-vis the customers' competitors* in the Yellow Pages. It is difficult to perceive of this as "inter-media" competition.

• *Pricing -- General Policy*

192 Another relevant area in inter-media views and conduct concerns how, if at all, the prices of other media influence Tele-Direct's pricing. Tele-Direct generally establishes its prices about a year and a half to two years in advance, with prices, for example, for the 1995 directories set in late 1993.

193 The Pricing Policy documents placed on the record reveal that Tele-Direct considers various inputs in setting prices. For example, in the 1993 Pricing Policy produced in October 1991,[93] these included rate/circulation alignment policy,[94] recent Tele-Direct price-ups (1988-92), the consumer price index ("CPI") (1991-93), the paper and allied industry price index (1990-92), the percentage change year-to-year in the number of directory copies printed by Tele-Direct (1991-93), estimated price-ups in other media for 1992 and Tele-Direct's internal rate of inflation (1991-93). Given the timing, much of the information is estimated. The 1994 Pricing Policy is a two-page document only as all 1994 issues had a zero percent price-up. In the brief text, the following are mentioned: relationship with customers, impact on profitability, prevailing economic factors, cost containment including a recent, more favourable printing contract and the rate of inflation or CPI. In the 1995 Pricing Policy, the only change from the 1993 Pricing Policy is to replace the "paper and allied industry price index" heading with "junked directories".[95] The 1996 Pricing Policy adds two additional items, gross domestic product and personal disposable income and reverts to using an indicator of paper cost increase, as for 1993.

194 In all cases, the information regarding the forecasted price-ups of other media that is contained in the policies was obtained from general advertising agencies, usually two or three different ones, and is stated as a range. The media included are television, dailies, magazines, outdoor and radio. "Business papers" also appeared in one year and "transit" in one other year.

195 To obtain insight on how the information with respect to other media entered into pricing decisions, we look to the testimony of Ms. McIlroy, who was intimately involved in the pricing decisions. According to her, the "key drivers" of pricing were, in order of importance: relationship to cost, rate/circulation re-alignment, revenue stream for the sales force and local considerations, both economic and the presence or feared entry of a competitive directory. She stated that there was no direct relationship between the prices of other media and Tele-Direct's pricing. Her view was based on her own experience and a review of all relevant pricing documents on the record, dating from the early 1980s to the 1995 Pricing Policy. Ms. McIlroy did not alter her position regarding the relative unimportance of other media in setting Yellow Pages prices when responding to questions on cross-examination.

196 Douglas Renwicke was the Senior Vice-president to whom Ms. McIlroy reported from 1991-94 and was involved in sales or marketing from 1988. He expressed general agreement with Ms. McIlroy's description of the price setting process. He disagreed over certain details that are not germane to the present discussion. However, more importantly, he also disagreed with Ms. McIlroy concerning the relevancy of other media prices in Tele-Direct price setting.

197 Mr. Renwicke stated that the three "primary" key drivers for pricing in the 1990s are CPI, other media price-ups and local market knowledge. A group of "secondary" key drivers include growth and circulation, gross domestic product and Tele-Direct's internal rate of inflation (costs). He distinguished price setting in the 1980s when the key drivers were circulation, internal costs and, from 1987 to 1990, circulation alignment.

198 At least for the 1980s, during which Tele-Direct enjoyed exceptional growth, Mr. Renwicke agrees with Ms. McIlroy that factors such as the internal rate of inflation at Tele-Direct and circulation growth were primary determinants of Tele-Direct's prices. He also recognizes that towards the end of the 1980s discrepancies in rates per thousand in different directories became

another important concern that entered at the local market level. The attempt to get prices in line across markets was abandoned for a couple of years following the recession but appears to be reemerging as an ongoing factor. Considering Ms. McIlroy's and Mr. Renwicke's evidence together, we conclude that other media prices were not a "key driver" during the 1980s.

199 Mr. Renwicke explicitly distinguishes the 1990s and it is here that he appears to take issue with Ms. McIlroy. We will, therefore, look in more detail at the information available to the officers engaged in price setting in 1991, 1993 and 1994 (for 1993, 1995 and 1996). [96]

200 The 1993 Pricing Policy document sets out the following predicted increases in various items for 1993:

Increase in CPI for Ontario: 3.6%

Increase in CPI for Quebec: 3.7%

Tele-Direct internal rate of inflation: 5%

Increase in cost of printing: 4.7%

Increase in copies to be printed: 2.9%

(proxy for circulation increase)

201 The ranges of predicted percentage price-ups for other media set out in the document were obtained by Claude Phaneuf, Manager of Marketing Research, from two general advertising agencies and a media buying firm. [97] Notably, these predicted increases are for *1992 only*:

Television: 0% - 10%

Dailies: 3% - 7%

Business Papers: 5% - 8%

Magazines: 3% - 7%

Outdoor: 3% - 5%

Radio: 4% - 7%

According to Messrs. Phaneuf and Renwicke the predicted price changes for 1992 were considered relevant even though Tele-Direct was considering price changes for 1993 because the canvass of customers for the 1993 directories was done during 1992. However, Mr. Phaneuf could not explain why predicted changes for other factors such as the CPI were obtained for 1993.

202 Two notes accompany the information on other media price increases. They state: "Demand Driven Market" and "Anybody's Crystal Ball". According to Mr. Phaneuf, the second note is a warning about the discrepancy in the information received from different sources (as indicated by the wide range of predicted price changes, such as for television). Taking the first note at its face value, it means that the prices that would actually prevail in 1992 would depend on the state of demand at that time.

203 The average Tele-Direct price increase established in October 1991 for 1993 was five percent, with a minimum of 3.5 percent and a maximum of 5.9 percent for specific directories. The average price increase of five percent for 1993 falls within the range of other media price-ups (not difficult since the range is so large) but the same average increase could just as easily have been arrived at without any reference to other media prices. This observation also applies to the pricing documents for 1995 and 1996 that were used in setting prices in 1993 and 1994.

204 Several other points emerge from a review of the information available to Mr. Renwicke and other officers. Although Mr. Renwicke stated that he would be concerned about the prices of community and daily newspapers, only the price-up of dailies was collected. While the general agencies that provided the information to Mr. Phaneuf were much more likely to be familiar with dailies than with community newspapers, it is instructive that there is no evidence of any effort by Tele-Direct to obtain pricing information about its other alleged competitors, community newspapers.

205 Further, no information on flyers or direct mail is included. Other Tele-Direct documents group flyers with Yellow Pages as directional media, indicating that prices for flyers would clearly be relevant, and perhaps more relevant than predicted prices for the electronic media, business papers and magazines. We also note that the information provided by Mr. Phaneuf for television does not reveal whether the prices in question relate to local television, network television or both. When questioned about this Mr. Renwicke was not sure but thought that the predicted price changes related to local television.

206 We conclude that Ms. McIlroy's view that the prices of other media had little or no influence on Tele-Direct's pricing policy in the 1990s is borne out. Mr. Renwicke's use of the term "key driver" when referring to the prices of other media is disingenuous. The documentary evidence does not support this characterization. Nor, in fact, does the remainder of Mr. Renwicke's own testimony. By a "key driver", he apparently meant a very tenuous relationship between Tele-Direct's price increases and the price increases of other media. He testified that other media prices enter into Tele-Direct's price setting as follows:

> ... [W]e wouldn't focus this closely on network TV as we would on community or daily newspapers, but we focus on that because we don't want to be way out of line with what newspapers are pricing up at or other comparable media that we feel our advertisers use amongst their choices of how to promote their business.
>
> ... We feel if the gap was too large and we didn't pay attention to that over time, there could be at least substitution on the margin that could take place.
>
> I think that's a real concern throughout the recession.
>
> . . .
>
> > Q. You said you would be concerned if the prices were way out of line. What do you mean by "way out of line"?
> >
> > A. Frankly, particularly with newspapers, I would consider anything, five percent or greater, to be too much out of line. [98]

A fear of losing *some* advertising dollars to other media if a *relatively large* difference in price *increases* persists over time (and during a recession) confirms only that newspaper or other media pricing provides little or no competitive discipline for Tele-Direct's pricing. Tele-Direct did not ignore the prices of other media; they were a part of the general economic environment. But given the types of media covered and the tentative conclusions that it could derive from the information we cannot conclude that it had the concern of a firm worried about close substitutes.

• Pricing -- Revision of 1993 Prices in 1992

207 The respondents place considerable emphasis on the fact that in February 1992 Tele-Direct, for the first time ever, revised its 1993 prices during the canvass for the 1993 directories as it ran into advertiser resistance due to the difficult economic times. For the remaining directories not yet canvassed the average price increase was reduced from five percent to 3.2 percent.

208 The respondents point to a brief statement in the minutes of a sales and marketing executive meeting held in February 1992 which they say reflects the reasons why prices were revised:

> The rates that were implemented for 1993 have been revised to lower levels given the reaction of our customers to our 1992 prices, *the pricing of other media* and the expected rate of inflation in Ontario and Quebec. [99]

(emphasis added)

They also rely on the revised Standby Statement for 1993 Pricing which was presented at the meeting and apparently accepted by all concerned. The Statement reads:

> Our pricing policy for 1993 issues of Yellow Pages and White Pages directories has been revised downward to take into consideration the economic conditions prevailing in 1992.
>
> This policy reflects the fact that most prices are on a downward trend for 1992. It is also in step with the advertising industry where media rates for 1992 are expected to be in the 3% to 5% range for daily newspapers, magazines and out-of-home (billboards, etc.). Radio and T.V. are expected to be in the 0% to 5% range with peaks of 10% for T.V. due to high demand for last-minute buying.
>
> All media are expected to increase their rates towards the end of 1992 as the economy picks up. Forecasts for 1993 and 1994 are for prices increases of 10% or more. Based on these forecasts, it is evident that Yellow Pages directory advertising will be one of the media with the lowest price-ups during that period.
>
> Finally, our pricing structure must also reflect our own internal cost increases which have been kept to a minimum for 1992 thus allowing us to keep price-ups at their very low levels. [100]

209 Both Mr. Renwicke and Ms. McIlroy attended the meeting at which the prices were revised. Ms. McIlroy attributed no importance to the Standby Statement as a price setting document, regarding it purely as a document prepared for public relations purposes. Nor did Mr. Renwicke mention other media prices when describing the motivation for the revision in 1993 prices. He emphasized general economic conditions:

> In 1991 we clearly did not project the decrease that would take place in CPI or the recession ... [I]n February '92, we actually re-did prices for '93 for the books we could still catch and I am thinking of the border markets in particular that were being decimated with cross-border shopping, Niagara Falls, Sarnia, Windsor.
>
> We reduced those all by a percentage point. So, we did our best to try and get back down to a point where we were near CPI because our customers were reading in the paper every day that inflation in Toronto was approaching zero and why were our rates up at four per cent, five per cent, six per cent. Partly it was a function of the lag we had in setting those prices initially and not foreseeing the downturn that did take place in the economy. [101]

Taking into account both the documents and the views of two of the officers involved in the exercise, the 1993 price revision does not change our view that other media prices are not "key drivers" in Tele-Direct's pricing.

• New Products

210 The respondents list four new product initiatives which they say show competition between Tele-Direct and the other media by the fact of their having been tried. These four products were coupons in directories, AdSpot and BrandSell (creative-type directory advertisements), colour and participation in the "Marketing the Medium" program which is designed to prove the value of Yellow Pages.

211 There was little evidence about the nature and cost of these programs and why they were launched, which media were considered important competitors in triggering them, what success they achieved in terms of revenue gain or loss for Tele-Direct and if they were discontinued and why. Contrary to the respondents' submissions, we cannot accept that the mere existence of these alleged new products is instructive. Their mere existence is not indicative of substitutability between Yellow Pages and any other advertising medium.

(ii) Newspapers

• *Newspaper Consultants*

212 The respondents rely on the evidence of the activities of newspaper consultants as proof both of Tele-Direct's response to a "competitor" (daily newspapers) and of an initiative by another medium to compete against Yellow Pages. Newspaper consultants attempt to convince Yellow Pages advertisers that they are spending too much on their Yellow Pages advertising. Once the newspaper consultants have succeeded in persuading the advertiser to cut back on Yellow Pages spending, they then try to convince the advertiser to place some of the dollars "saved" in newspaper advertising.

213 Newspaper consultants first became active in Canada in 1987, having previously operated in the United States. One method used by the consultants was to hold seminars, sponsored by the newspaper that hired the consultants, to which Yellow Page advertisers were invited. A second method, apparently employed to a greater extent in recent years, is to locate good "prospects" among Yellow Pages advertisers (those with large or coloured Yellow Pages advertisements) and then visit them.

214 Newspaper consultant activity is not convincing evidence that newspapers and Yellow Pages are close substitutes. If Yellow Pages and newspapers were close substitutes, the newspaper's sales representatives would be fully familiar with Yellow Pages as part of the competitive environment. If the two media were close substitutes it would not be necessary for newspapers to hire outside "consultants" on a one-shot or periodic basis. Further, it would be expected that price discounting by the newspapers would be a more potent weapon than the rather circuitous approach of the use of consultants in regaining or capturing revenue from the Yellow Pages. The success of newspaper consultants depends on finding customers who are unhappy with Tele-Direct. An unmistakable implication is that such customers do not perceive other media as close substitutes for Yellow Pages, otherwise they would already have stopped or reduced their use of Yellow Pages.

215 Further, a successful newspaper consultant must convince the advertiser that a different, less costly Yellow Pages advertisement or set of advertisements will work *as well* as the existing Yellow Pages advertising. In other words, the question is how much does that advertiser really need to spend to have an effective advertisement *in the Yellow Pages*? This is borne out by the fact that a consultant's methodology involves two distinct steps. First, the Yellow Pages advertiser must be convinced that he or she can reduce Yellow Pages expenditures without prejudicing the results from the Yellow Pages advertising. Then, the newspaper consultant must try and sell the advertiser on spending the dollars saved elsewhere. But, this is clearly a second step. This is recognized even by Tele-Direct in a document referring to newspaper consultants:

> newspaper reps are recommending down-size YP and don't talk about newspapers (probably will go in later to make pitch). [102]

The advertiser, of course, may simply decide to pocket the savings. This process is not indicative of shifting of spending from one competing media to another. The restriction of the context to the Yellow Pages as the first step taken by newspaper consultants is a critical point in defining the relevant market. It indicates that what is occurring is not the allocation of the advertisers' overall advertising budget between newspapers and Yellow Pages but rather focusing on whether money can be saved in Yellow Pages advertising without regard to other media.

216 On the whole, the presence of newspaper consultants has been sporadic, sometimes in one local market and sometimes in another. In no case have they been continuously active in any local market. With respect to the actual success of the newspaper consultants, Ms. McIlroy testified that "they were never successful in doing any damage really of any kind, at least that we monitored. I never noticed any significant damage." [103] Mr. Giddings also testified that he could not quantify their impact. [104] This is telling evidence regarding Tele-Direct's response to the alleged "competition". The success of newspaper consultants could be easily tracked. They visit advertisers individually and try to convince them to adopt a specific advertising plan. In these cases it is perfectly clear to the Tele-Direct sales representatives why the customer is making changes in his or her program. No data was gathered by Tele-Direct on the impact of newspaper consultants, which would have been expected had Tele-Direct considered the effort worthwhile. It apparently did not.

• *Community Newspapers*

217 The respondents called one witness who represented community newspapers. Ginette Allard-Villeneuve of Quebecor testified that, in her opinion, community newspapers and Yellow Pages compete for the advertising budget and that the advertisements placed in each are "somewhat interchangeable". Since Ms. Allard-Villeneuve appeared to have very little familiarity with or knowledge about the Yellow Pages, it is evident that she is referring to a very attenuated form of "competition" between the two. The respondents do not, in fact, seem to be claiming anything more than that.

(iii) Conclusion

218 The evidence on inter-industry views and conduct indicates that there was some limited competition between Yellow Pages and other media, principally newspapers. When the form of this competition and Tele-Direct's response to it are contrasted with the kind of head-to-head competition that occurred in Sault Ste. Marie and Niagara Falls, where there was entry of competing broadly-scoped telephone directories, there are pronounced differences in the intensity of Tele-Direct response. [105] The same difference in intensity is found in Tele-Direct's failure to track its successes and failures relative to other media and its assiduous efforts to track the sales volumes of independent publishers that it had identified as competitors. Tele-Direct did collect anticipated prices of other media in setting its prices. However, these were broad estimates and the prices for electronic media, for which there is virtually no evidence of direct competition with Yellow Pages, are included. On the other hand, media which are closer (as opposed to "close") substitutes such as community newspapers and flyers are excluded. It is difficult to see the predicted price changes of other media as an important ingredient in Tele-Direct's pricing. In short, the evidence of inter-media competition supports the Director's position that Yellow Pages and other media are not close substitutes.

(d) Price Relationships and Relative Price Levels

219 There is little evidence that can properly be considered under this heading. Telephone directories and other media do not have a common standard of measurement that would allow valid price comparisons. While price comparisons were prepared for the use of Tele-Direct sales representatives, they were designed to show that Yellow Pages advertising was virtually non-comparable to other media (primarily newspapers). In any event, no common standard of measurement was used.

220 The respondents refer to two documents which purport to track a weighted average of annual price increases of other media and those of Tele-Direct over approximately a decade, along with the overall rate of inflation. [106] There is no rigorous analysis either in the internal documents of Tele-Direct or by the experts that would allow any conclusion to be drawn from these documents alone. Given that there are common economic forces driving prices even in very disparate industries, one would expect to see some correlation in overall price movement. An attenuated correlation in price movement does not indicate close substitutes. Even a high correlation between two sets of prices is only a *necessary* condition for the two products to be considered to be in the same market. But, it is not a *sufficient* condition to prove they are in the same market because other factors than substitutability may be responsible for the correlation.

(e) Switching Costs

221 There is no dispute that the costs of switching from one medium to another are relatively low.

(5) Conclusions Regarding Substitutability

222 Each of the indicia points in the same direction. We have little difficulty in concluding that telephone directory advertising is a distinct advertising medium without close substitutes. Directory advertising is a directional medium with a function distinct from that of creative media. Within the group of media considered to be directional, a review of the evidence regarding physical and technical characteristics, advertiser perceptions and behaviour, inter-industry competition and price relationships leads us to conclude that telephone directory advertising is a relevant product market.

B. Geographic Market

223 There is no dispute between the parties that the geographic market is local in nature, corresponding roughly to the scope of each of Tele-Direct's directories.

VII. Control: Market Power

224 The exercise of defining a relevant market is only a step towards answering the critical question of whether Tele-Direct has "control" or market power in that market. As the Tribunal has said on previous occasions, market power is generally considered to mean an ability to set prices above competitive levels and to maintain them at that level for a significant period of time without erosion by new entry or expansion of existing firms. In those cases, the Tribunal also recognized that where the available evidence does not allow the definition of market power to be applied directly, it is necessary to look to indicators of market power, such as market share and barriers to entry. [107]

225 The Tribunal has never ruled out the possibility, however, that direct indicators of market power might be available as evidence in an appropriate case. Direct indicators of market power relate to the performance of the firm or firms in question or to their behaviour. The broad question that is posed is whether the observed performance results (e.g., profits) or observed patterns of conduct (e.g., pricing policy) are more likely to be associated with a firm or firms that are competitive or with those that have market power. While there are difficulties in applying direct indicators of market power, if the evidence is available this avenue should not be excluded. In this case, the parties addressed both the indirect or structural approach to market power (market share and barriers to entry) and "other evidence" of market power of a more direct nature. The Tribunal will likewise address both avenues in that order.

A. Indirect Approach: Market Structure

226 Having determined that telephone directory advertising in local areas constitute relevant markets, it remains to determine Tele-Direct's market share and the conditions of entry into those markets. A large market share can support an initial determination that a firm likely has market power, absent other extenuating circumstances, in general, ease of entry. [108]

227 We will deal with the question of market power in the supply of telephone directory advertising, which includes both publishing and advertising services. The issues relating to the possible "subdivision" of the market into two (or perhaps more) component parts will be canvassed later in these reasons.

(1) Market Share

228 Based on Tele-Direct's November 1995 revenue estimates for independent publishers operating in its markets and the data on the record regarding its own published revenues for Ontario and Quebec for 1994, Tele-Direct (Publications) Inc. has approximately 96 percent share of telephone directory revenues in Ontario and Quebec. [109] It is instructive to note that, in 1992, a Tele-Direct document estimated the total *potential* sales of independent directories in Ontario and Quebec at $32 million. [110] That would indicate an upper limit on the potential growth of the independents of well under 10 percent of Tele-Direct revenues. The same year, Tele-Direct estimated the *actual* sales of independents at less than one-third of the "potential" amount set out.

229 The November 1995 estimates place the total revenues of the independents at slightly over one-half of what was described as their potential business in 1992. Even in Tele-Direct's worst case scenario regarding growth of independents, it would still be left with a market share of 90 percent.

230 Although there was no significant disagreement between the parties that the geographic markets are local in nature, largely corresponding to the scope of the relevant Tele-Direct directory, Tele-Direct's information on other publishers was presented for sales throughout the territory of Tele-Direct (Publications) Inc., namely Ontario and Quebec. No local market information was placed on the record except for the revenues of White and DSP in the Niagara and Sault Ste. Marie areas. White publishes a directory in each of Niagara Falls, St. Catharines and Fort Erie, as does Tele-Direct. DSP publishes one directory covering the area bounded by Sault Ste. Marie, Elliot Lake and Wawa in Canada. Tele-Direct publishes three separate directories for that

area. On the basis that in each of those two local markets the large independent and Tele-Direct are the only significant players, in the Niagara region based on 1994 revenues, Tele-Direct has a market share of about 85 percent, while in the Sault Ste. Marie region its market share is about 80 percent. [111]

231 Thus, even in the two markets in which Tele-Direct faces the most significant competition, its market share is still over 80 percent. In the absence of further detailed information on local market shares, which apparently even Tele-Direct does not compile, this fact, allied with Tele-Direct's overwhelming share of sales over its territory as a whole, leads us to conclude that Tele-Direct dominates telephone directory advertising in markets in Ontario and Quebec. *Prima facie*, we are of the view that Tele-Direct has market power based on its large share of the relevant market, absent compelling evidence of easy entry into the supply of telephone directory advertising.

(2) Barriers to Entry

232 In the absence of barriers to entry, even a single seller cannot exercise market power. Any attempt by the incumbent to price above the competitive level will attract immediate entry by competing sellers. We have concluded that Tele-Direct has a large share of the relevant market. Proof of easy entry would overcome the initial determination that Tele-Direct has market power in the supply of telephone directory advertising.

233 The parties have organized their arguments regarding barriers to entry under three headings, (a) observed entry and exit, (b) sunk costs and (c) incumbent advantages. We will use the same headings.

(a) Observed Entry and Exit

234 Observed entry into a market can provide some indication of the existence or non-existence and the nature of any barriers to entry. There is no dispute that entry into publishing a "niche" directory appears to be relatively easy. The Director has admitted as much, based on the large number of niche directories and the high level of observed entry and exit.

235 The Director argues that the smaller directories have captured only a "minuscule" portion of the market and that fact, combined with Tele-Direct's lack of competitive reaction to their presence, confirms that they are of little importance in constraining Tele-Direct's market power. Further, the experience of White and DSP confirms the existence of significant barriers to entry by a broadly-scoped directory.

236 The respondents submit that entry need not be on a large scale and that many independent publishers have entered on a small scale and then grown slowly, thus avoiding drawing a response from Tele-Direct. Although not directly stated, the implication is that the publishers that chose this strategy have become a competitive force in the market. They also point to White and DSP as proof that broadly-scoped directories have successfully entered, remain in the market and are even profitable.

(i) Niche/Smaller Directories

237 Relative ease of entry by niche directories is not particularly relevant to an assessment of Tele-Direct's market power as it is clear from the evidence that the presence of these directories has had and can have little competitive impact on Tele-Direct. There is no evidence of any response by Tele-Direct to the presence or entry of a niche directory. There is certainly no evidence that they currently limit Tele-Direct's pricing or encourage better service by their presence.

238 With the exception of directories published by White and DSP, virtually all of the independent directories cover smaller geographic areas than the directories produced by Tele-Direct. The Director is correct that these smaller directories account for only a small portion of the overall market (less than three percent by revenue). Further, level of activity of each of the smaller independent directories indicates why individually they are not a serious threat to Tele-Direct. If the directories of DSP and White are excluded, there are 279 other independent directories with estimated average annual sales of just over $51,000 each. Of these, the 30 Locator directories had by far the largest estimated average annual sales, of the order of $200,000 per directory. Mr. Renwicke thought that the largest Locator directory "could" be close to $1 million in revenue, which would make the remaining directories even smaller on average. The remaining 249 directories had estimated average annual sales of

approximately $33,000 each. In contrast, in 1995, the broadly-scoped DSP directory had estimated annual revenues of over $1 million while each of White's three broadly-scoped directories averaged over $500,000 in revenues.

239 The respondents spent some time with their witness, Mr. Renwicke, reviewing examples of directories of three independent publishers in support of their position that, instead of going "head-to-head" with Tele-Direct, an independent could enter small and gradually expand and still be a competitive force in local markets. The respondents referred specifically to the Easy to Read directory, the Locator directories and the Other Book. There are Easy to Read directories in about a dozen, mainly small, Ontario communities. Locator publishes some 30 directories in various small to medium-sized Ontario towns. The Other Book published ten directories, all in the Ottawa area, but is not published anymore. [112]

240 The argument focuses on the Easy to Read directory in Stratford, Ontario. It is described in the argument as an "impressive" directory. The fact remains, however, that it is of negligible size. The total revenues of all the Easy to Read directories are not even stated separately on the Overview of Other Publishers in Tele-Direct Markets. Presumably they are included in the group of "Other Publishers in Ontario (geographic)" which have average total annual sales of only about $31,000. Tele-Direct's 1994 revenues in Stratford were over 40 times that amount. [113]

241 Mr. Renwicke pointed out and made favourable comments about the features of the Locator directory entered in evidence, which included postal codes, audiotext [114] and community pages. He also described the Other Book, which had postal codes, amortization tables and a babysitter's guide as some of its features, as a "good-looking book".

242 Yet, despite the apparent quality of these directories, some of which contain features not offered by Tele-Direct in its directories, the respondents did not refer us to any evidence of Tele-Direct reacting to their presence in a way that would indicate that they were actually a competitive concern, in the sense of providing some discipline on Tele-Direct's quality and pricing. It is indisputable that Tele-Direct is aware of the presence of these independents and to some extent monitors their progress. That is not, in our view, evidence that these directories are a competitive force in the market. There is no indication on the record before us of any positive reaction of the type that occurred when DSP and White entered. Other than the existence of the competitive database and Mr. Renwicke's opinions, the respondents referred only to a 1993 presentation by Mr. Renwicke to the Tele-Direct board which provided information on independents and named White, DSP and Locator.

243 Moreover, even if there was evidence of some competitive response by Tele-Direct to niche directories this by itself would hardly be sufficient to conclude that Tele-Direct did not have market power given its overwhelming market share. The smaller or niche directories are, by their very nature, limited in scope and influence. Thus, although entry on this scale is easy, up to a point (since each new entrant must find a new "niche" and there is a limited number), entry by smaller directories does not limit Tele-Direct's market power.

(ii) Broadly-Scoped Independent Directories

244 The conditions of entry by a broadly-scoped independent directory covering an area similar to the corresponding Tele-Direct directory, which will compete head-to-head with Tele-Direct, are highly relevant to the question of market power. Tele-Direct's responses to the entry of broadly-scoped directories in the Niagara and Sault Ste. Marie areas indicate that only such head-to-head competition has the potential to produce the benefits to consumers that one looks to competition for, namely lower prices and better products and services.

245 Can entry by publishers of broadly-scoped directories be considered sufficiently easy so that Tele-Direct is unable to take advantage of its large market share? Additionally, assuming that entry of a single competing publisher were to occur, would this assure that Tele-Direct would no longer have market power because of either the intensity of competition or easy entry conditions for additional publishers? The respondents urge us to conclude that because White and DSP managed to enter in particular markets and have remained in business, entry barriers are low enough that Tele-Direct has no market power. We decline to place so much emphasis on two isolated instances of entry in answering these questions. To answer both questions properly, we must review the arguments on entry conditions for broadly-scoped independent directories in some detail.

(b) Sunk Costs

246 The Director argues that sunk costs are a barrier to entry as they are perceived by potential entrants as unrecoverable if entry is unsuccessful. The respondents submit that, based on the Tribunal's decision in *Southam*, sunk costs alone are not enough. In *Southam*, the Tribunal held that neither sunk costs nor economies of scale were themselves sufficient to create an entry barrier but that together they were.[115] The respondents contend that the other source of a barrier to entry identified by the Director in this case, namely incumbent advantages, is not like economies of scale and does not operate with whatever sunk costs are present to create entry barriers in the sense required by *Southam*.

247 We agree that *Southam* held that sunk costs or economies of scale individually are not sufficient. That decision, however, should not be taken to mean that the combination of sunk costs and economies of scale is the only way in which sunk costs can form part of a barrier to entry. What is important is whether the market in question is one in which the potential entrant faces the risk that the post-entry conditions will be less favourable than pre-entry conditions because of the likely response of the incumbent. Thus, in *Southam*, the presence of sunk costs and economies of scale meant that there was a credible threat that the incumbent would maintain output in the face of new entry even if doing so drove prices down towards cost.[116] This acted as a deterrent to entry.

248 In this case, therefore, it will be necessary to ask, first, whether there are in fact significant sunk costs associated with directory publishing. Then, we must determine whether the nature of the market is such that prospective entrants face a credible threat that the incumbent will respond in a manner that will make entry unprofitable given the existence of the sunk costs.

249 Sunk costs are defined as the part of the investment required for entry that cannot be recovered in the event that the attempt fails. Assets that are of value only to a specific enterprise are sunk and those that are of value to other firms are not sunk, or only partially sunk. The Director submits that entry into the directory business requires substantial sunk costs: acquiring and compiling subscriber listing information, assembling advertising enhancements), training the sales force and promoting the directory. The respondents admit that there is no doubt that there are "some" sunk costs associated with publishing a directory for the first time but submit that the Director has overstated the sunk costs. They say the sunk costs are not, in fact, significant. However, the evidence of the witnesses from White and DSP, which was not contradicted, amply supports the premise that the activities listed must be carried out in order to produce a directory and that the costs incurred are substantial.

250 DSP and White both entered by publishing a "prototype" directory. With a prototype directory, the publisher offers advertising in the directory at no charge. The prototype is distributed to consumers and the publisher then has a history of usage to give it credibility in selling advertising in its next directory. The respondents argue that the sunk costs are substantially increased when an independent publisher chooses to enter by publishing a prototype because there are no advertising revenues to offset the costs. They say that the extent of the sunk costs is within the control of the entrant and a different entry strategy would generate lower sunk costs.

251 Establishing usage and selling advertising are inextricably linked for a directory publisher. As stated in the 1993 Simba/ Communications Trends study, achieving credibility among local advertisers is one of the biggest hurdles that a publisher must overcome.[117] It was precisely in order to overcome the credibility concerns of advertisers that both DSP and White chose initially to publish a prototype directory. Entering with a paid directory does not eliminate the credibility problem and achieving credibility, by whatever means chosen, involves costs. We have no basis on which to conclude, as urged by the respondents, that it would have been less costly overall for White and DSP to enter first with a paid directory.

252 The respondents also submit that if the entrant chose to enter with an initial paid directory, it could avoid the cost of publishing entirely if a sufficient volume of business was not confirmed during the canvass and it then abandoned its plans to enter. While we agree that the only way to avoid the costs of producing a directory is to abandon the project, we do not agree that this is a strategy that could be used with impunity by would-be entrants. The mere possibility that such a strategy could be employed exacerbates the credibility problems facing a would-be entrant, and in the event it were employed, would detrimentally affect any prospects for the same firm or other firms to attempt entry in another market.

253 Recognizing that there are sunk costs involved in entry into directory publishing, do those sunk costs amount to a significant barrier to entry? We are of the opinion that those sunk costs do create a barrier to entry when a broadly-scoped directory is introduced because the entrant publisher is going "head-to-head" with the telco's directory. In those circumstances, the incumbent will respond and post-entry conditions will be less favourable for a would-be entrant than pre-entry conditions. As the Simba/Communications Trends study noted, under the heading "Disadvantages of Large, Head-to-Head Directories", "[u]tilities are willing to 'pull out the big guns' to protect large bread-and-butter markets."[118] It is not disputed that when White and DSP entered into Tele-Direct's markets with broadly-scoped directories, Tele-Direct responded with price freezes, incentive programs, enhancements and promotional campaigns. Thus, the combination of sunk costs and likely response by the incumbent create a significant entry barrier and entry would not necessarily occur even though Tele-Direct was pricing above competitive levels.

(c) Incumbent Advantages

(i) Subscriber Listing Information

254 Would-be entrants into the directory business do not have access to subscriber listing information from the telcos on the same terms as Tele-Direct. Access to subscriber listing information by independent publishers has been the subject of some controversy and has been dealt with on several occasions by the CRTC. In 1992, the CRTC ordered greater access to the subscriber listing information in the hands of Bell Canada. Because of the price of the information, and other conditions imposed on its distribution, this decision did not result in commercially viable access to the information. Both White and DSP witnesses testified that they were forced to wait until the Tele-Direct directory was published and then re-key, verify and update the listings to use in their own directories, a costly and time-consuming process.

255 In March 1995, the CRTC revisited the matter at the request of White and liberalized the availability of listing information, including reducing the price that could be charged by Bell Canada. There was no indication from the White or DSP witnesses who appeared before us of any problem with the 1995 resolution by the CRTC of the price and availability issues. Richard Lewis, the Executive Vice-president and Chief Executive Officer of White, stated, in fact, that White was very satisfied with that aspect of the decision.

256 The CRTC added an important proviso, however, when it ruled that consumers who wanted to opt out of having their listings sold to a "third party" could do so. From the point of view of the independent directory publishers, this caused a problem because the CRTC did not distinguish between types of "third parties". Thus, the independent publishers were grouped in with, for example, telemarketers, to whom many consumers would not want their information to be released. The 1995 decision was stayed pending an appeal to Cabinet which, in late June 1996, overturned that portion of the CRTC ruling.

257 In light of the Cabinet decision, which was rendered after the close of the hearing in this matter, the Tribunal invited further submissions from the parties regarding the impact of that decision on their respective positions. The respondents submit that the Cabinet decision has removed the only barrier to entry into publishing. The respondents point to Mr. Lewis's statement that after a favourable decision from Cabinet, White will proceed with additional directories in the Toronto/Niagara area. The Director agrees that the Cabinet decision will likely reduce *one of* the barriers to entry into directory publishing but maintains that there are still other, significant barriers into the market. The Director refers to the United States situation where, despite access to subscriber listing information for several years, independents have less than seven percent of total industry revenues.

258 The only evidence before us is that the issues of importance to the independents, availability, price and opting out, have been dealt with satisfactorily to them. We conclude that, at present, subscriber listing information cannot be considered to be a significant barrier to entry.

(ii) Reputation/Affiliation with Telco

259 An entrant into directory publishing has the related tasks of convincing users of the value of its directory and of convincing advertisers that it is a worthwhile vehicle in which to advertise. The directory will only be widely used if it has

a critical mass of advertising in it. If the directory is not widely used, few businesses will advertise in it and, in the absence of advertising by its competitors in a new directory, there is no pressure on a potential customer to advertise itself in the new directory. This is not a problem that Tele-Direct ever had to face because of its (or Bell Canada's) longstanding presence in the market as the only available directory. In addition, Tele-Direct benefits from its affiliation with a large and established telco which lends a certain authenticity.

260 To overcome the preference of advertisers for the incumbent directory requires enhanced expenditures on advertising and promotion and lower prices by the entrant. There is numerical evidence on the disadvantage of entrants *vis-à-vis* the incumbent only with respect to lower prices. The Simba/Communications Trends study of the directory industry in the United States revealed that in the top 10 competitive markets, the average telco (utility) rate for a double-half column was 53 percent higher than for independent publishers competing head-to-head in those markets. The average cost of advertising, per thousand of circulation, for the utility directories was 46 percent higher than for the independents. [119]

261 Mr. Lewis of White stated that his company usually plans on pricing about 40 percent lower than the telco directory in a market they are considering entering. Gary Campbell, the General Manager of DSP, testified that on average their prices were 30 percent less than those of Tele-Direct. A comparison of published prices between Tele-Direct and the initial White and DSP directories confirms these general statements although price differences vary considerably between types of advertisements. [120]

262 In both markets, the entrants had invested in introducing new features (enhancements) into their directories that Tele-Direct had not hitherto introduced. For example, White's Niagara region directories included the following features not previously offered by Tele-Direct: free smaller size copy in addition to the regular size directory (a "mini"), audiotext, extensive community pages which provide information of regional or local interest, [121] larger size print, three column format instead of four, postal codes included in the white pages, additional colour in the advertisements. DSP also included many of the same enhancements in its directories plus other, unique, features. [122] Thus, any advantage enjoyed by Tele-Direct clearly stemmed from its incumbency and its affiliation with Bell Canada and not from the superiority of its product.

263 Based on White's experience in the United States, it appears that the rate differential between the independent and the telco does narrow over time but still remains significant. Mr. Lewis testified that in Buffalo, New York, where White has published for 27 years, its prices are still 25 to 33 percent less than those of the telco directory.

264 As part of the survey resulting in the January 1993 Elliott report, customers of Tele-Direct were asked if they would advertise in a competing directory if it offered 15 percent lower prices. Only 36 percent said that they would advertise in the new directory and a mere eight percent that they would discontinue advertising in Tele-Direct's directory. [123] As indicated by the United States data and the experience of White and DSP, to attract a significant number of advertisers the entrant would likely have to offer discounts closer to 50 percent than to 15 percent.

265 Based on both the particular experiences of White and DSP in entering Tele-Direct's markets and the more general evidence relating to the United States experience, it is our conclusion that an incumbent directory publisher's "reputation" or affiliation with a telco constitutes a significant barrier to entry into publishing a competing broadly-scoped directory. An important part of this barrier is the advantage that the incumbent directory has because it already contains the advertisements of a business's competitors. A new entrant must overcome that fact in seeking to persuade the business to advertise in its new directory. New entrants must offer substantial price discounts, even when they are publishing a product with features not included in the incumbent's directory.

(iii) "Yellow Pages" Trade-mark

266 The words "Yellow Pages" and "Pages Jaunes" and the "walking fingers" logo are both registered trade-marks of Tele-Direct in Canada. Tele-Direct only licenses those marks to publishers which are affiliated with other telcos. The same words and the logo are in the public domain in the United States.

267 As attested to by Mr. Lewis, it probably would have been easier for White (and DSP or any other entrant) to explain the nature of the product it was seeking to introduce in the Canadian market if it had been permitted to use the marks, which have a high level of public recognition, as it can and does in the United States. In fact, Mr. Lewis would have paid a "substantial" fee to use the marks in Canada. The trade-mark situation appears to confer some marketing advantage on Tele-Direct and reinforces the other barriers already discussed.

(iv) Strategic Behaviour

268 Under this heading, the Director first refers to the anti-competitive acts being alleged in a later portion of the argument regarding other publishers. Paragraph 120 states that

> ... It was Tele-Direct's objective to "make competition expensive" and "raising the bar" to entry and it succeeded.

The only way in which we could determine if the strategic behaviour referred to constitutes an entry barrier would be to assess the effects of that behaviour on the market. The Director did not deal with evidence of effects in relation to the issue of market power. The alleged anti-competitive acts regarding publishers will, of course, be dealt with in due course.

269 The Director also argues that the alleged anti-competitive acts in respect of services are relevant to entry conditions into publishing. It is submitted that one of Tele-Direct's objectives was to reduce the power of the specialized agencies in order to make it harder for new entrants into publishing to gain market share. If it had been proven that some Tele-Direct policy or initiative against agents did indeed have a deleterious effect on new publishing entrants, this would be relevant to our assessment of entry barriers. We are of the view, however, that the limited evidence provided on this point does not prove that there were such effects.

(3) Conclusion

270 We are of the view that even with subscriber listings available to independent publishers on reasonable terms, significant entry barriers in the form of the reputation effects and sunk costs reviewed above will remain. The condition of easy entry required to overcome the presumption of market power arising from Tele-Direct's extremely large market share is not satisfied.

B. Direct Approach: Other Evidence of Market Power

271 As other evidence of market power the Director relies on the high profits earned by Tele-Direct, its lack of responsiveness to customer needs, and an allegation that it has lagged behind other media in supporting agents, in promoting the product and in using technology to process advertisements received from agents. We are of the view that there is insufficient evidence on the record, and that the question was not explored in sufficient depth, for us to draw a conclusion one way or the other regarding the allegation of lagging behind other media. The evidence regarding profitability and customer dissatisfaction, however, is extensive.

(1) Profits

272 The respondents acknowledge at paragraph 41 of their response that Tele-Direct earns very large accounting profits. It is also undisputed that Tele-Direct pays 40 percent of its collected revenues directly to Bell Canada and a similar percentage to the other telcos with which it contracts to publish a directory. This payment is said to be in return for access to subscriber lists and for services. The evidence revealed that the only service provided by the telcos is billing.

273 Where the respondents and their expert, Professor Willig, differ from the Director is with respect to the significance of Tele-Direct's admitted profitability as an indicator of market power. The respondents' argument first points out the well-known concerns about trying to convert accounting to economic profit. While we recognize the validity of those concerns in general, we do not consider that they apply with much force to the most compelling evidence of profitability, the payment by Tele-Direct to Bell Canada. That payment is a set percentage of collected revenues. It is not an accounting "profit" figure or a "bottom line" amount produced by the application of accounting conventions. Therefore, we are of the view that an examination of the

payment to Bell Canada and its possible implications for market power is not clouded by accounting conventions at the outset. The presence of such a payment indicates that Tele-Direct has revenues of at least 40 percent over its recorded costs.

274 Professor Willig took the position that the profits which allow Tele-Direct to make the payment to Bell Canada reflect a return on intangible capital which is a necessary investment in the creation of the profits. In his rebuttal affidavit he stated:

> 46. ... It is well known that there are many reasons why accounting measures of profits can deviate both randomly and systematically from being an indicator of the theoretical notion of economic profits. One reason for systematic deviation is of general significance in businesses where intangible assets are important. Here, the value of the intangible assets does not appear on the accounting books. Then, when operating margins are expressed as a percent of the book value of assets, the resulting percent is systematically too large, relative to economic meaning, simply because the book's list of assets misses the intangible ones. This effect is likely to be of specially great quantitative significance where trade-marks, brand-names, product or service reputation, proprietary technology, and organizational capital are important to the business.
>
> 47. Of course, service industries typically contain leading instances of businesses where intangible assets are important. For example, the business of any successful magazine is unlikely to rest on significant tangible assets, and instead to depend on intangible assets that include the name and design of the magazine, and perhaps the organizational capital embedded in the editorial and advertising sales teams. The rate of return on tangible assets earned by such a business will turn sensitively on whether the books include ownership of the business office and a fleet of trucks or autos, or whether the business leases such properties. In either event, the assets that really drive the success of the business will not be valued on the books, and so the rate of return on assets will indicate nothing about the economic profitability of the enterprise, and certainly nothing about market power.
>
> 48. It goes without saying that the directory publishing business is a prime example of the effects just discussed. For all the conventional reasons alluded to, the rate of return on assets, or other accounting measures of profits, are not reliable indicators of market power.... [124]

275 In other words, Tele-Direct is only earning the requisite return on its intangible assets to remain in business and not any kind of economic rents. Professor Willig returned in his oral testimony to the example of a magazine and its intangible assets which create a loyal readership. We have some difficulty seeing the same effect at work with a directory which has no editorial content, unlike a magazine. There may be creativity in the way the directory is assembled so it is of maximum utility to consumers but the evidence was that Tele-Direct lagged behind new entrants like White and DSP in this respect.

276 When asked specifically about the intangible assets or activities of Tele-Direct, Professor Willig responded:

> Evidently ... there is some value to having, and having had, the "utility" franchise in a given area. If one tries to translate that into what it means today or next year, the operative word really is "reputation", and the reputation is of significance both to advertisers and also to consumers who have to decide whether to pick the book up or not and, if so, which book to pick up. Somehow that reputation attaches to that book because of its heritage, its history, evidently, and also to its identification with the current telco.
>
> . . .
>
> I agree ... that it is hard to reach out and grab that reputation. But if we think about the character of the directory business ... the notion that, if you are an advertiser and you are being asked to pay for an ad in advance of the completion of the book and in advance of evidence about what consumers are going to do in terms of using it, then you have to reach, as an advertiser, an expectation, an anticipation of how good the book is going to be.
>
> You have to form an image in your mind before you commit yourself to your advertising expenditure: Is everybody going to use this and will the other advertisers take ads in it? If they don't, then consumers won't use the book and, if consumers don't use the book, then my ad which I am being asked to pay for today won't have its exposure.

> The key to the underlying value proposition of the advertiser is the anticipation that 18 months later or 12 months later the book is going to be out and it is going to be a really good book and people are really going to use it.
>
> It is unusual that you can't really tell the value of what it is you are buying until it is done and many months have passed.... [125]

277 There are several difficulties with this hypothesis. First, on a factual level, there is evidence that Tele-Direct's advertisers (except the small group using agencies) do not pay for their advertising 12 to 18 months in advance. Monthly billing commences once the directory is published. Advertisers pay in instalments (interest free) after publication.

278 Second, Professor Willig emphasized that the key to the value of Tele-Direct's reputation asset was the anticipation that advertisers have that the directory is going to come out and will be a "good" directory that people are actually going to use. Surely all local media, which the respondents postulate are close substitutes for telephone directory advertising, face the same challenge in selling time or space to advertisers. Rather than paying Tele-Direct at a level that allows Tele-Direct to earn a 40 percent premium, would not advertisers simply switch to one of the other alleged close substitutes? Tele-Direct's premium would soon disappear in that scenario.

279 If, on the other hand, telephone directory advertising is somehow unique because of the close link between a critical mass of advertising in the directory and use of the directory by consumers, then this uniqueness argues against other media being close enough substitutes to provide competitive discipline. Tele-Direct's ability to exploit its association with the telco to earn returns well above its costs would then indicate market power in the market for telephone directory advertising. This latter scenario is more in accordance with the other evidence on the record which reveals that as between the telco directory and other *directory* publishers, the fact of association makes a significant difference. As was already discussed above, one cannot attribute the premium to Tele-Direct having a "superior product" to other telephone directory publishers in terms of the features of the directory. If it had a superior product, Tele-Direct would not concern itself with competing directories, which it does, and the only evidence before us was that the entrants like White and DSP were initially the superior product, until Tele-Direct responded to their enhancements.

280 Further, Professor Willig's theory of profits as a return on intangible assets cannot co-exist with the respondents' pleading that Tele-Direct's profits go to cross-subsidize Bell Canada's local telephone service as set out in their second amended response:

> 20. ... What was initially conceived as an essential but costly feature of telephone service has become a lucrative revenue source for the telcos....
>
> 21. In Ontario, for example, T-D Pubs pays each of the independent telcos with which it contracts 43% of the gross revenue collected from subscribers of the telco who advertise in the telephone directories. In the case of T-D Pubs, this revenue source, as well as the entire net income of T-D Pubs, are included by the CRTC in Bell Canada's revenues to reduce the cost of local service. Each residential telco subscriber in Ontario and Quebec receives a subsidy of over $2 per month as a result of the revenues captured through telephone directory advertising.

281 Bernard Courtois, Vice-president, Law and Regulatory Matters for Bell Canada, explained:

> ... So, both the commission revenues from Tele-Direct [the 40 percent] and all the net income of Tele-Direct, that is equivalent to adding $284 million to the revenues of Bell Canada in 1994 for regulatory purposes. Divide that by the number of residential subscribers and it amounts to $3.38 per month on the average residence telephone bill.
>
> I should say that the average residence basic telephone bill in Bell Canada with Touchtone is about $12.75. So, if you didn't have the Tele-Direct activities going on, that bill would have to be more than $16.00. Of course, if Tele-Direct were a completely arm's length company, we would still get some of that commission revenue.
>
> . . .

> Q. I think you did point out that in any telco basically they always collect some of this profit through the 40 percent. I mean every telco seems to collect that so they all get subsidized in that way by publishers. Is that what you were saying?
>
> A. That's correct, and I should point out that it's a very large part. I guess the commission revenues might be two-thirds and the net income one-third of that subsidy.... [126]

282 George Anderson, who was previously with NYNEX, described a similar situation in the United States. He testified that the utility directory publisher has to "impute" a substantial portion of its income, over and above the cost for subscriber listing information which has been widely available for some time in that country, back to the telco to help defer the cost of telephone service. In his words:

> The [AT & T] consent decrees ... took an unregulated business, which was Yellow Pages, and at the ninety-ninth hour put it in with the regulated segment of the business to serve as a cash cow, not my words, to serve as a funding business that would help defray, defer, hold down the rate of return and hold down the cost of telephone service. [127]

James Logan, currently President of YPPA and formerly with US West, confirmed this view.

283 We observe that if all Tele-Direct and other telco directory publishers were earning was a competitive return on all assets, including intangibles, the telcos would not have "profits" available to use for a completely different purpose, namely cross-subsidization of local telephone service. Unless intangibles are to be treated as a *deus ex machina* to explain away high economic profits, they must be identifiable, as must be the activities resulting in their creation. Otherwise, simply asserting "intangibles" would always preclude high profits from demonstrating market power. We cannot accept an approach leading to such a conclusion. Intangibles that can account for *apparent* high economic profit are the result of activities that are extraordinarily successful, such as those creating new products or ways of doing things better than others. In contrast to the example of successful magazines cited by Professor Willig, there is no evidence of this in the case of Tele-Direct or the other Yellow Pages publishers. Moreover, the fact that there is such widespread subsidization of telephone services by Yellow Pages publishers associated with telcos strongly suggests that the source of the subsidies is not any outstanding effort on the part of individual publishers.

284 The Director also argues that the fact that new entrants view the market as potentially profitable, even given the large price discounts off Tele-Direct's prices that they must offer and the other expenses they must incur to establish their own credibility or reputation, is an objective measure of Tele-Direct's profitability. We agree that market participants are responding to economic profit rather than to accounting profit.

285 We conclude, therefore, that the payment to the telcos by Tele-Direct is a form of "economic rent" whose value depends on the surplus that can be earned from publishing a directory associated with a telco. The cost to the telcos of providing the subscriber listings and doing the billing is minimal. The listings are a by-product of supplying telephone service and the billing for advertising is incorporated into the subscriber's monthly telephone bill. While it is true that it would be more costly for Tele-Direct to do the billing itself, it is unlikely that it would cost, at most, more than a few percent of revenue. [128]

286 In the face of competition from other media the amount that Tele-Direct could afford to pay, and that the telcos could demand, would be considerably less. With sufficient competition the payments to the telcos would disappear entirely. Even if Tele-Direct earns no economic profit on its operations beyond what it pays out to Bell Canada, its price to average cost margin is extraordinarily high. While no benchmark was placed in evidence, merger guidelines, both in the United States and Canada, place products in separate markets if their existence would not prevent a hypothetical monopolist, post-merger, from increasing prices by five percent. Even allowing as much as two percent for mailing costs, one is left with a margin of 38 percent. We are of the view that the evidence of economic rents provides a direct indication of Tele-Direct's market power.

(2) Dissatisfied Customers

287 The Director submits that the respondents' actions towards the advertisers, their customers, display market power. Reference is made to Tele-Direct's requirement that advertisers give up copyright in their advertisement, its restrictions on group advertising and evidence of low customer satisfaction in general. There is evidence, in the form of studies like the Elliott reports and the presence of consultants, that a significant percentage of Tele-Direct customers are less than happy with the service provided by Tele-Direct. We reviewed the evidence to this effect in the section on Market Definition when dealing with the arguments of the respondents which emphasized the low degree of customer satisfaction. As a direct indicator of market power, however, we are reluctant to rely on customer dissatisfaction because of the practical difficulties in applying such a subjective test.

(3) Other: Pricing Policies

288 In addition to the evidence of profitability advanced by the Director, the Tribunal is of the view that Tele-Direct's approach to setting prices supports the conclusion that Tele-Direct is behaving more like a firm with a comfortable margin of market power than a firm facing close substitutes. We note Professor Willig's point that evidence of price discrimination, in isolation, would not reliably indicate market power. In combination with the other evidence it is, however, compelling. Two aspects of Tele-Direct's price-setting policy are important: the premiums charged for colour and larger size (price discrimination) and the effort to equalize price per thousand across geographic markets (circulation alignment).

(a) Price Discrimination

289 As we reviewed in the section on market definition, colour and increased size are more valuable to advertisers who rely more heavily on the Yellow Pages. In broad terms, these are advertisers whose business involves infrequently purchased or emergency services (e.g., plumber, exterminator, mover, auto repairs, lawyer), infrequently purchased, expensive durables where comparison shopping is likely (e.g., cars, major appliances), services used by travellers (e.g., car rental) or which encourage orders by telephone (e.g., pizza, lumber yard with telephone order business). They need to attract attention in the Yellow Pages so that a consumer is drawn to their Yellow Pages advertisement as opposed to the Yellow Pages advertisement of their competitor. In our view, Tele-Direct systematically price discriminates against advertisers who are heavily reliant on the Yellow Pages through its pricing of colour and size and its ability to do so is direct evidence of market power.

290 Tele-Direct charges a 50 percent premium to add red to an advertisement. This premium is unrelated to costs of production. The representative of one of the independent publishers testified that at a 50 percent premium, a publisher would be realizing a very high profit margin. In other words, the additional printing and production costs are well below the price charged.

291 Ms. McIlroy explained that the object of Tele-Direct's pricing of colour at a premium is to control its penetration to ensure that it will be sufficiently uncommon so that the coloured advertisements "stand out" on the page. The price is set high enough that everyone will not buy it. In the same vein, Tele-Direct introduced multi-colour in those markets where there was already a lot of red in the directories as an alternative way of allowing advertisers to "stand out". This is not the kind of pricing policy that can be pursued by a firm under competitive pressure because its competitors would simply charge a lower price to take advantage of the profit opportunity and compete away the premium.

292 Further, the premium for red is largely invariant across local markets. It is difficult to see how there could be such uniform pricing in the face of "competition" from other local media, which would vary from market to market. Tele-Direct's pricing of red can hardly be seen as a response to these prices but is much more consistent with a company concerned only about its own, unique environment.

293 Based on the evidence before us, there is similar uniformity and lack of relationship to cost in Tele-Direct's pricing of larger advertisements. A comprehensive Tele-Direct rate card was not placed in evidence. In the 33 local markets included on the excerpt from the YPPA rates that was tendered as an exhibit, the price increases by about 90 percent for each doubling of advertisement size from a quarter column (1/16 page) to a double quarter column (1/8 page) and from a double quarter column to a double half column (1/4 page).[129] As in the case of colour, the evidence revealed that the additional costs of producing

larger advertisements do not appear to justify the increase in price. Based on cost, one would expect a discount greater than ten percent for an advertisement twice as large.

294 The respondents do not dispute that Tele-Direct's premiums for red and for size cannot be explained by additional costs. Counsel conceded in argument that those were the facts but argued that Tele-Direct was engaging in "value pricing". He hypothesized that an advertiser buying a larger advertisement might get ten times the results that would have been obtained with a smaller advertisement and, therefore, paying almost twice as much for the larger advertisement is actually a bargain. The larger advertiser, the argument goes, is getting more value out of the medium. Value pricing is not a phenomenon readily associated with a competitive market, the hallmark of which is pricing which is ultimately cost-driven. [130] Value pricing is more likely to be associated with a regulated monopolist and is more an indication of the presence of market power than of its absence.

295 The ability of Tele-Direct to discriminate against customers who spend *more* on advertising by way of larger or coloured advertisements is of particular importance in assessing whether Tele-Direct lacks market power *because* other local media provide close substitutes for Yellow Pages, as argued by the respondents. Larger Yellow Pages advertisers have greater choice among the allegedly competitive media since, by definition, they have more dollars in Yellow Pages that they can switch to any other media. Smaller advertisers are less likely to be able to afford the full range of other media. While it may be true, as Professor Willig pointed out, that certain vehicles, such as community newspapers or church calendars might be more acceptable to smaller advertisers, there is no denying that, from a budget point of view, larger advertisers have more options. Thus, larger Yellow Pages advertisers should have the more elastic demand if there are, as the respondents argue, close substitutes to Yellow Pages. The fact that Tele-Direct's margin over cost increases with enhanced expenditures on colour and size indicates the opposite. The anomaly of Tele-Direct being able to price discriminate against advertisers who at first blush have the greatest range of options underscores its market power.

296 The two broadly-scoped independent publishers, White and DSP, also charge some premiums for colour or size, although neither charges a premium as high or as consistent across the board as Tele-Direct's. [131] Certainly, no one has suggested that either White or DSP has market power. Yet, Mr. Campbell provided the same explanation of DSP's pricing of red, for example, as Ms. McIlroy did -- that it is priced above incremental costs to ensure its scarcity. Does the independents' use of some premiums for colour or size imply that Tele-Direct has no market power? We think not. The presence of two publishers in Sault Ste. Marie and Niagara certainly does not indicate a "competitive" market.

297 The evidence regarding the independent publishers does not detract from our view that Tele-Direct's ability to price discriminate is evidence of market power. Although the independents can, to a much more limited extent, implement some of the same pricing policies, this is not surprising. Tele-Direct prices in each local market create an "umbrella" beneath which the new entrants can shelter which underlines that Tele-Direct has market power sufficient to create the umbrella.

(b) Circulation Alignment

298 Since 1987 (or for 1989 prices onwards), Tele-Direct has actively pursued a policy of "circulation alignment" in calculating its annual price increases. The only exception was in 1992 (for 1994 prices) when poor economic conditions resulted in a zero price increase across the board. The objective of this policy was to bring about consistency in cost per thousand or CPM between directories. Some directories had experienced rapid growth in circulation but since they were subject to the same general price increases as other directories which had not grown as much in circulation, their CPM or price relative to circulation was substantially lower. Ms. McIlroy referred to the Mississauga directory as one in which the rates were seen as too low given the circulation of the directory. A program was therefore instituted to bring the CPMs in all markets into line over a number of years by imposing additional price increases (but not price decreases) in particular local markets.

299 In applying the alignment policy absolutely no allowance was made, or is made, for differentials in the intensity of competition from other media in each local market. The entire process can be described as a very bureaucratic one and certainly not what one would expect if Tele-Direct was forced to respond to varying degrees of competitive pressure in the numerous (approximately 100) local markets where it operates.

300 Professor Willig conceded that this "bureaucratic" approach to pricing and apparent indifference to local market conditions was puzzling but theorized that it could result from Tele-Direct's connection to a utility company. Utilities come from a culture of regulation where pricing flexibility is frowned upon. Further, if individual sales people were given latitude to discount to individual customers, the result for a large organization like Tele-Direct would be chaos.

301 Pricing individually by customer goes well beyond responding to the supposedly competitive media in a local market and thus does not directly address the point. The regulatory "culture" of utilities, is, of course, undeniable. What is more pertinent is how Tele-Direct could maintain such a culture in the form of its approach to pricing in the presence of the alleged close substitutes. If its bureaucratic price-setting led Tele-Direct to set a price too high in a particular market, surely it would see a dramatic revenue loss to other media and would quickly change its approach. There is no evidence that this has happened.

(4) Conclusion

302 The other direct evidence of market power advanced by the Director along with Tele-Direct's pricing policies affirm our previous conclusion based on the indirect approach that Tele-Direct has market power in telephone directory advertising.

VIII. Tied Selling

A. Introduction

303 Tying or "tied selling" is dealt with in section 77 of the *Competition Act*. The relevant parts of section 77 are:

> (1) ... "tied selling" means
>
> > (a) any practice whereby a supplier of a product, as a condition of supplying the product (the "tying" product) to a customer, requires that customer to
> >
> > > (i) acquire any other product from the supplier or the supplier's nominee, or
> > >
> > > (ii) refrain from using or distributing, in conjunction with the tying product, another product that is not of a brand or manufacture designated by the supplier or the nominee, and
> >
> > (b) any practice whereby a supplier of a product induces a customer to meet a condition set out in subparagraph (*a*)(i) or (ii) by offering to supply the tying product to the customer on more favourable terms or conditions if the customer agrees to meet the condition set out in either of those subparagraphs.
>
> (2) Where, on application by the Director, the Tribunal finds that ... tied selling, because it is engaged in by a major supplier of a product in a market or because it is widespread in a market, is likely to
>
> > (a) impede entry into or expansion of a firm in the market,
> >
> > (b) impede introduction of a product into or expansion of sales of a product in the market, or
> >
> > (c) have any other exclusionary effect in the market,
>
> with the result that competition is or is likely to be lessened substantially, the Tribunal may make an order directed to all or any of the suppliers against whom an order is sought prohibiting them from continuing to engage in ... tied selling and containing any other requirement that, in its opinion, is necessary to overcome the effects thereof in the market or to restore or stimulate competition in the market.

304 A tie is the supply of one product *on the condition that* the buyer takes a second product as well *or* on terms that *induce* the buyer to take the second product as well. Such an arrangement may be prohibited by the Tribunal under section 77 if it meets all the other requirements of that section, namely that the tying is a practice engaged in by a major supplier and results in a

substantial lessening of competition. The requirement that Tele-Direct must be a major supplier is satisfied by our earlier finding of market power in the telephone directory advertising market. The other requirements of the section are still to be resolved.

305 The Director alleges that the respondents have engaged in a practice of requiring or inducing customers for advertising space in telephone directories (the tying product) to acquire another product, telephone directory advertising services (the tied product), from the respondents. The Director further alleges that the practice of tied selling has impeded entry into or expansion of firms in the market resulting in a substantial lessening of competition.

306 The advertising space or publishing business is described at paragraph 9 of the application as including:

> ... all matters relevant to the provision of advertising space in a directory, including access to a subscriber data base (including information relating to new subscribers) upon which the books are based, compilation, physical creation of hard copy, printing, promotion and distribution.

The advertising services business refers to:

> ... the provision of services relating to the sale of advertising space in a telephone directory, including establishing new customers, calling on customers, and providing advice, information and other services relating to the design, cost, content, location, creation and placing of the advertisements.

The Director further states that the purchaser of an advertisement in a telephone directory obtains two products related to the two businesses: advertising space and advertising services.

B. Facts

307 Before we proceed further, it is necessary to review some facts relevant to the supply of advertising services to Yellow Pages advertisers.

(1) Tele-Direct's Internal Sales Force

308 Tele-Direct sells telephone directory advertising through its internal sales force. This group is sub-divided into those representatives who deal with customers over the telephone ("tel-sell") and those who attend at the customers' places of business ("premise"), together called the general sales force or "GSF". The premise sales representatives travel from place to place during the year to canvass advertisers for a particular area or directory within a confined time frame. In 1994, premise sales accounted for about 60 percent of the revenues generated by Tele-Direct's internal sales force, while tel-sell generated less than 30 percent of revenues.

309 A further category of sales representatives, sometimes included as part of the GSF and sometimes considered apart from it by Tele-Direct, is that which services so-called "national accounts". These representatives are called national account managers ("NAMs") or national account representatives ("NARs"). This group accounts for the remaining approximately 10 percent of revenues.

310 There are no hard and fast rules governing which accounts are handled by the NAM/NAR group as opposed to the remainder of the GSF. Some large accounts are serviced by the GSF. The Tele-Direct witnesses indicated that, in general, accounts that require a great deal of servicing, for example, multiple visits over a year, are likely to be assigned to the NAM/NAR unit. Because of the canvass-based sales approach used by the GSF, often the GSF is involved in a canvass in another area and is unavailable to service a particular account repeatedly. The NAMs and NARs are located in certain centres all year long and can service these accounts more easily. A further factor is the account's complexity, including number of headings, the number of markets, and the amount of change required each year. If the account requires a lot of attention to ensure accuracy (for example, that no directories are missed) and perhaps clerical-type support, it will end up in the national group. There was also evidence that accounts which had little future growth potential or which had simply proven to be problem accounts in the past are handled by the NAM/NAR unit.

311 Tele-Direct (Publications) Inc. is divided into two geographic regions, eastern and western. The eastern region is comprised of the province of Quebec, with parts of Ontario such as Ottawa, Kingston, Sault Ste. Marie and Sudbury. The western region covers the remainder of Ontario. The structure and organization of the company in both regions is broadly similar, although the eastern region is smaller both in terms of revenue serviced and number of sales representatives.

312 The facts regarding (a) remuneration, (b) evaluation and (c) account assignment and continuity for Tele-Direct's internal sales force are relevant because one of the Director's arguments regarding Tele-Direct's motivation to engage in the alleged tied selling is that its internal sales force can be more effectively motivated to sell more Yellow Pages advertising than agents.

(a) Remuneration

313 The remuneration of the Tele-Direct representatives is highly dependent on the revenues generated by each individual as they are paid through a combination of salary and commission. Both the tel-sell and premise representatives earn a base salary (which is higher for premise) and in addition are eligible for a number of commissions and incentives.

314 The amount of commission paid to a sales representative is determined by the nature of the advertising which is sold. If the sales representative manages to generate new business (an increase over the previous year's advertising expenditure), an annual commission of 13 percent is paid on the total new business. If the advertiser is renewing the advertising which was purchased in the previous year, the sales representative is paid a 2.4 percent commission on the renewal amount. Renewal commission is paid on any portion of an account which is renewed, even if the total amount of advertising purchased is less than the previous year. The renewal commission was first introduced in the early 1980s, prior to which the representatives were paid only salary and new business commission. The final basis upon which a commission is paid to a sales representative reflects rate increases. This applies in a situation where an advertiser renews exactly the same advertising program as it had in the previous year but there has been a rate increase which is applicable to that advertising program. The sales representative receives renewal commission on the amount spent the previous year and rate increase commission on the difference between the two account totals because of the rate increase. The rate increase commission is six percent.

315 Since 1993, a premise representative also has the potential of earning a yearly bonus in the amount of $2,000. The bonus is based on factors such as the number of complaints made against the representative by advertisers, the representative's score in Tele-Direct's internal evaluation, the number of "lates" (advertising submitted after a directory closing date) and mistakes and the representative's overall work flow. Apart from the bonus, there are a number of other incentives offered to premise sales representatives, for example, awards and trips.

316 The NAM/NAR group also earn base salary plus commission but with a much larger proportion of their income accounted for by salary. Their new business commission is nine percent, with a renewal commission of 0.5 percent and a rate increase commission of 1.2 percent. They may qualify for a bonus equal to seven percent of their income for maximizing net sales or a bonus of three percent for maximizing retained revenue. An average NAM earns less than an average premise representative.

317 Sales representatives are supervised by salaried sales managers. Sales managers also qualify for various incentives and bonuses, which may vary in nature from year to year, based on the results of the sales representatives that they supervise.

(b) Evaluation

318 In the western region Tele-Direct has a formal assessment program for its sales representatives called Total Performance Assessment ("TPA"). Each representative is assessed using the TPA every six months.

319 The TPA is comprised of three categories: sales results (worth 60 percent), customer satisfaction (worth 20 percent) and job administration (worth 20 percent). The sales results score is largely based on the representative's incremental revenues in relation to other representatives (25 points of 60). Customer satisfaction is broken down into customer disputes and an overall customer survey. Customer disputes refer to the number of times customers of the representative have called in with a complaint or a concern. The customer survey component is a Gallup survey. [132] The final aspect is job administration which includes

work flow (success in meeting benchmark requirements for servicing a certain percentage of revenue during a canvass by a certain date), number of internal queries and lates.

320 The TPA is not used in the eastern region which has not had a formal evaluation program since 1994 because of union disputes. Currently, sales representatives in the eastern region are evaluated by an internal management review in which their supervisors conduct follow-up interviews with clients. It is Tele-Direct's intention to replace this less formal evaluation process in the future.

(c) Account Assignment and Continuity

321 Tele-Direct uses a canvass approach to sell advertising. Each directory has a canvass period, the length of which depends on the size of the directory, during which the GSF focuses its attention on selling advertising for the next issue of that directory. The GSF is under time constraints to complete its sales and solicitations prior to the deadline, or the closing date, for the directory. Once one canvass is complete, the GSF moves on to the next one.

322 For each canvass, Tele-Direct canvass coordinators assign accounts to the sales representatives to ensure as much as possible that each salesperson ends up with a bundle of accounts which is balanced in revenue and in growth potential. Accounts are assigned based on a complex system of "markets" and "grades". For example, "Market 1" accounts are dealt with by premise representatives while "Market 2" accounts are dealt with by tel-sell. As well as being divided by market, accounts are also graded; the lower the grade assigned to an account the higher the potential that type of business will buy Yellow Pages. Grades are based on the type of business as represented by the heading under which it would appear in the directory.

323 For each canvass the grades and markets for the accounts are analyzed to determine whether, based on factors like time, the size of the cities or towns included and the number of sales representatives available, the premise representatives will cover all of the grades in Market 1, or whether, perhaps, some of the higher grades in that market should be assigned to tel-sell. For the same reasons, for a given canvass, not all accounts are assigned; those with lower potential or that are inactive may be dropped.

324 For both the premise and the tel-sell group, account assignment has traditionally been random. With a few minor exceptions, accounts were divided up at the beginning of each canvass with no intention of returning individual accounts to the same representative who serviced them in the previous year. In 1993, a test was conducted in a northern market whereby there was 100 percent continuity of tel-sell accounts. Ms. McIlroy's impression of the results was that they were positive in general; however, we have no information about whether tel-sell continuity has been adopted more generally. For premise sales, Tele-Direct adopted the Very Important Advertiser ("VIA") program in the late 1980s which provided a form of continuity: advertisers spending a certain amount per month were assigned the same representative every year. By 1992-93, there was a more general continuity policy in place whereby 30 percent of all premise accounts were assigned back to the sales representative for three years if $500 or more was being spent or a pricing incentive was involved. Currently, about 55 percent of the accounts of a typical premise representative (about 85 percent of revenue) are subject to continuity.

(2) Tele-Direct's Commissionability Rules

325 Prior to 1958, a 15 percent commission was available on "national" advertising. The definition of "national" was, however, unclear. In 1958, Bell Canada adopted a new policy, developed in consultation with and endorsed by the Canadian Association of Advertising Agencies. To be commissionable at 15 percent, the advertising had to appear in two or more directories serving two or more "calling areas" with no more than 80 percent of the total advertising in one directory. No particular association membership was required of the agency; if the agency's ability to pay was in doubt, its credit was investigated.

326 Tele-Direct's definition of a commissionable account underwent a further change effective January 1, 1976. The amended definition of commissionability became known as the "eight-market rule". To qualify as a commissionable account under this rule, the advertiser had to purchase advertising with a minimum value of a trade-mark in eight "markets", as defined by Tele-Direct. Canada was divided into 19 markets, with six in Quebec and seven in Ontario. The entire United States constituted a single 20th market. If the account qualified and the agency provided completed artwork, Tele-Direct would pay a 15 percent commission on the account. Again, no particular membership in an industry association was required.

327 The commissionability rule was next changed effective July 1, 1993 to create the so-called "national definition" which is the current rule. Under this rule, to be commissionable an account must advertise, at a minimum, in directories in two provinces. Advertising must be placed in at least 20 directories and in each directory the value of the advertising must be a minimum of a trade-mark. Finally, 20 percent of the total value of the advertising must be placed in directories outside Tele-Direct's territory.

328 In order to receive 25 percent commission on "national accounts" the agency has to be a CMR and a member of YPPA. In addition, to be eligible for the 25 percent commission, the CMR must transmit its order to Tele-Direct via the Value-Added Network ("VAN") run by the YPPA. This facility provides for electronic transmission of account data and other information to a publisher. In order to access VAN, the CMR must be a member of the YPPA and must acquire the necessary computer hardware and software.

329 All accounts which met the eight-market rule as of July 1993 have been "grandfathered"; Tele-Direct still pays 15 percent commission on those accounts. Once an account ceases to qualify under the eight-market rule, it cannot be re-qualified. New accounts, those which reached eight-market status after July 1993, cannot be "grandfathered". Tele-Direct has made no commitment to how long the "grandfathering" of eight-market accounts will remain in place. It could be discontinued at any time.

C. Alternate Theories of the Case

330 As elaborated in the opening statement, the Director's theory of the case for tying is that the respondents, as a condition of supplying space, have required or induced customers to acquire the tied product, services, from them. We have already reviewed the structure of the market. The respondents offer a commission on accounts meeting their "national" definition and on grandfathered eight-market accounts. They service the remainder of the accounts themselves and do not offer a commission, or price space and services separately, for those "local" accounts, amounting to over 90 percent of Tele-Direct's revenue.

331 In accordance with his theory, the Director alleges that the respondents by refusing to sell either the space or the services in an unbundled fashion have violated section 77. Counsel for the Director described the Director's case in opening in alternative terms by referring to the respondents' refusal to pay commission except to the limited extent that they now do as a violation of section 77 because commission would be a means of recognizing or effecting an unbundling for the services that non-commissionable customers seek. The Director says that as matters now stand, non-commissionable customers have a choice of either obtaining services from respondents as part of the "package" price that they pay for their advertising or paying twice for the services -- once as part of the package price charged by the respondents and once directly to the service provider.

332 The respondents say that the Director's concept of tying is misconceived. They submit that there is no product known as "advertising services" separate from a product known as "advertising space". They focus on the *selling* portion of the services referred to by the Director and argue that the sales advice provided by Tele-Direct's internal sales force forms an inseparable package with the space which Tele-Direct supplies in its directories. Indeed, they emphasize, there is no advertising space without a sale. They argue that how advertisements in their directories are sold is a business decision to be made solely by Tele-Direct and is not justiciable. Tele-Direct determines when it is more appropriate to sell its product through its internal sales force and when it will "employ" and pay a commission to agents to sell its product.

333 In other words, the respondents argue that they have chosen a "hybrid" system. As their primary sales channel, they maintain an internal sales force. They have also chosen to employ agents to sell to a limited group of large advertisers who have distinct needs. Among the reasons given for primary use of the internal sales force were: efficiency, that the average cost of revenues serviced internally was lower than for revenues serviced by outside agents; revenue growth, that the internal sales force is more effective in growing revenue; and servicing, to ensure attention to small advertisers and non-advertisers that Tele-Direct considers important but external agents might not.

334 The respondents take the position that the Director's application regarding tied selling is an attack on vertical integration. They characterize Tele-Direct's decision regarding commissionability as a choice in some instances to buy services from agents

and in others to make the services in-house. They refer to the words of Posner J. in *Jack Walters & Sons Corp. v. Morton Buildings, Inc.* for guidance:

> The end that Walters [a terminated dealer] alleges is that Morton [the manufacturer] wanted to take over the retail function; in the terminology of industrial organization, it wanted to integrate forward. But vertical integration is not an unlawful or even a suspect category under the antitrust laws: "Firms constantly face 'make-or-buy' decisions -- that is, decisions whether to purchase a good or service in the market or to produce it internally -- and ordinarily the decision, whichever way it goes, raises no antitrust question." ... Vertical integration is a universal feature of economic life and it would be absurd to make it a suspect category under the antitrust laws just because it may hurt suppliers of the service that has been brought within the firm.
>
> A common type of vertical integration is for a manufacturer to take over the distribution of his product....
>
> We just said that vertical integration is not an improper objective. But this puts the matter too tepidly; vertical integration usually is procompetitive. If there are cost savings from bringing into the firm a function formerly performed outside it, the firm will be made a more effective competitor. [133] (references omitted)

The respondents urge us to take from the words of Posner J. that their narrowing of the commissionability criteria is simply taking over the distribution function internally and Tele-Direct's decision about how to run its business, which it does not have to "justify" to anyone.

335 The Director underlines that he is not opposed to vertical integration in principle. He cautions, however, that if the method chosen for the vertical integration violates a section of the Act, with particular reference to sections 75, 77 and 79, then it is subject to challenge and the respondents cannot achieve immunity by "waving the flag of vertical integration". We agree that simply affixing the label of "vertical integration" does not conclusively decide anything. It does not preclude the Director from attempting to convince the Tribunal that what is going on in the case before it meets the requirements of a section of the Act. This view is not inconsistent with the *dicta* of Posner J. in the *Jack Walters* case, who indicates that the presence of market power may cast vertical integration in a different light and points out that market power was not present on the facts before him:

> ... some economists believe that monopolistic firms might integrate vertically in order to deny supplies or outlets to competitors, or to make it more costly for new firms to enter the market (because they would have to enter at more than one level of production or distribution), or to facilitate price fixing with their competitors. But nothing of this kind is suggested here. Walters does allege that Morton has a big name in the prefabricated farm buildings market, but there is no indication that this is a meaningful economic market that might be worth monopolizing, or that Morton's purpose in integrating into retail distribution was to make life harder for *its* competitors. Its object was to make more money by reducing the cost of retail distribution, not by coercing or excluding (or for that matter colluding with) its own competitors, whoever they may be, or discouraging potential competitors. *Indeed Walters' tie-in claim is premised on the ready availability, from other manufacturers, of the building parts that Morton sells in kits from which Morton Buildings are put together. This shows that Morton has no monopoly*. [134]
>
> (emphasis added; references omitted)

336 The recognition that vertical integration is generally pro-competitive on efficiency grounds raises another issue. The Director says there is no provision in section 77 for an efficiency "defence". We agree that there is no such explicit reference to an efficiency defence. However, many forced "package sales" are the product of efficiency and even a supplier with market power may sell items in combination for efficiency reasons.

337 A fundamental requirement of tying is the existence of two products, the tied product and the tying product. It is implicit in the determination of whether there are one or two products that efficiency considerations must be taken into account. We consider that demand for separate products and efficiency of bundling are the two "flip sides" of the question of separate products. Assuming demand for separate products, if efficiency is proven to be the reason for bundling, there is one product.

If not, there are two products. As we will review below, this approach is consistent with the American jurisprudence regarding the test for separate products relied on by the Director.

338 The Director is of the view that, assuming that the necessary elements of the section have been met -- major supplier, two products, tying, and the exclusion of competitors resulting in a substantial lessening of competition -- it is not necessary for him to provide a plausible explanation of *why* or *how* the firm benefits from the tie. This is a valid position. The Tribunal would not impose such a requirement on the Director. It cannot be denied, however, that there is always more comfort in drawing conclusions the greater the depth of understanding.

339 In this case, the Director has in fact provided explanations as to why Tele-Direct might be engaged in tied selling. The Director submits that Tele-Direct is leveraging its market power in the sale of space into the market for advertising services through tying. One explanation of this is that Tele-Direct's policy of bundling advertising space and services allows Tele-Direct to exploit better an alleged information asymmetry it enjoys *vis-à-vis* its customers, the advertisers. As with any advertising medium, it is not possible to evaluate effectiveness of Yellow Pages advertising with any degree of precision. To the extent that data on effectiveness of the medium is available, it is in the control of Tele-Direct not the advertisers. In light of this, the Director argues that Tele-Direct prefers to keep advertising services in-house as much as possible because its representatives can be more effectively motivated to "oversell" than independent service providers. We will deal with this reasoning in due course.

340 The Director also says that the "usual" assumption of profit maximization used in determining whether a firm stands to gain from a tie does not apply in the instant case and the economic literature on the subject that relies on this assumption to analyze the possible effects of a tie is not a useful source. He says it is futile to seek a "rational" or "profit-maximizing" explanation for Tele-Direct's behaviour since Tele-Direct, because of its unique situation and relationship to Bell Canada, is not subject to the constraints of profit-maximization and its corollary, cost-minimization.

341 In support of the premise that Tele-Direct is not profit-maximizing, Thomas Wilson, [135] an economist expert witness for the Director, draws on the fact that the profits of Tele-Direct are included for regulatory purposes when decisions are made about Bell Canada's prices. He is of the view that the pressure to minimize costs is reduced and that there may also be systematic distortions such as the use of more capital than an unregulated firm would use in order to boost the capital base of the regulated firm (the "Averch-Johnson effect"). However, this particular hypothesis is not supported by the evidence which, in fact, points in the other direction insofar as Tele-Direct has chosen to subcontract capital intensive operations such as printing.

342 Professors Wilson and Slade, for the Director, are also of the view that management's decisions with respect to the commissionability of various accounts are motivated by a concern to maximize *sales* rather than to minimize *costs*. Professor Wilson sees the reduced pressure on regulated firms to minimize costs as allowing Tele-Direct's management to pursue personal interests, such as operating a larger enterprise, thereby garnering personal satisfaction and monetary rewards. Professor Slade is of the view that the ownership structure of Tele-Direct, whereby there is no threat of a takeover, contributes to allow management to pursue its hypothesized desire for larger size.

343 Even though there are several occasions when we have difficulty understanding the decisions of Tele-Direct's management if they really are pursuing cost-minimization, we are far from convinced that Tele-Direct's management is not generally constrained to follow a profit-maximizing course. The fact that Tele-Direct is a wholly-owned subsidiary should be sufficient to ensure that there is adequate ownership control. It is obvious from the evidence of Mr. Courtois, the Bell Canada representative on Tele-Direct's Board of Directors, that Bell does not practice micro-management. The main instrument of control appears to be the requirement that Tele-Direct pay Bell the same percentage of revenues as Tele-Direct is required to pay other telcos when it contracts to perform their directory functions. This requirement was introduced precisely to impose market discipline on Tele-Direct. In addition to the forty percent of revenue that Tele-Direct remits to Bell, it also makes a substantial contribution to Bell's profits in the form of dividends. The evidence does not support the conclusion that Bell has been cavalier about allowing Tele-Direct's management to pursue other than profit-maximizing goals. Moreover, in recent years Bell's earnings have been well below its regulated allowed rate of return, a situation not conducive to permissiveness. Even when Bell earnings were not below the allowed rate of return, higher profits from Tele-Direct would still benefit Bell between applications for rate increases.

344 While we do not rule out that Tele-Direct's management may be under less than the usual amount of pressure to perform, we are reluctant to discard the usual working assumption of profit-maximization in the absence of some compelling evidence that is consistent with the assumption that Tele-Direct is pursuing other goals. The only specific evidence cited in support of the premise that Tele-Direct's management pushes revenue growth beyond the point of profit-maximization is the stress that they place on canvassing businesses that do not advertise in the Yellow Pages, the non-advertisers. The success rate from this effort is low and Professor Slade concludes that the fact that the effort is made can be explained by management's greater concern with growth of revenue than with profits. On the whole, however, the evidence on the canvass of non-advertisers is that moderate resources are devoted to this task. We are not convinced that the canvass of non-advertisers is not profit-maximizing.

345 We note here that there is another possible theory of the case. For reasons of clarity and coherence, however, it is more convenient to deal with it at a much later point in these reasons. We return to it below as an "Addendum" to our conclusion regarding the separate products issue.

346 We therefore do not accept that we should approach this case with a view to treating Tele-Direct as other than a profit-maximizing firm, albeit a firm with market power. Nor do we accept that efficiency considerations are not relevant to our section 77 analysis. Efficiency and demand, together, form the basis of the consideration of one or two products, to which we now proceed.

D. Separate Products

(1) Approach to Determining Separate Products or Single Product

347 The first element of section 77 to be considered is whether advertising space and advertising services are separate products. The Director takes the position that advertising services constitute a distinct product separate from advertising space. The respondents argue that advertising services are in fact an "input" into Yellow Pages advertising, not a separate product.

348 Merely labelling advertising services and advertising space as either two "products" or as "inputs" into a single product does not assist. As Areeda, Hovenkamp and Elhauge state:

> ... just about any product could be described as a tie of its components. And just about any two products could be described as mere parts in a more encompassing single product.... [136]

There must be some rationale for distinguishing between situations where there are two products involved, and thus at least the possibility of an illegal tie that should be prohibited, and those where there is a single product and no question of tying.

349 The parties are in agreement that the Canadian jurisprudence does not provide much guidance on the test to be applied. Both parties referred to the 1984 decision of the Supreme Court of the United States in *Jefferson Parish Hospital District No. 2 v. Hyde* [137] for guidance, although they emphasize different portions of the decision.

350 In *Jefferson Parish* the Court provided its most extensive discussion of the "single product" test. At issue in the case was the validity of an exclusive contract between the hospital and a firm of anaesthesiologists. Any patient who chose to have an operation performed at that hospital was required to use an anaesthesiologist employed by the firm in question (Roux & Associates). The Court had to decide if this constituted an illegal tying arrangement. In making that inquiry, the Court considered two questions, whether the hospital was selling two separate products that might be tied together and, if so, whether the hospital used market power to force its patients to accept the tying arrangement. The majority answered the first question in the affirmative but the second question in the negative (the hospital was found not to have market power), so in the result it found no illegal tying arrangement. The minority found only one product and concluded for that reason that there was no illegal tying arrangement. [138]

351 In discussing the question of separate products, the majority noted that the answer to the question of one or two products turns not on the functional relationship between them but rather on the character of the demand for the two items. The majority then stated:

> ... Thus, in this case no tying arrangement can exist unless there is a sufficient demand for the purchase of anesthesiological services separate from hospital services to identify a distinct product market in which it is efficient to offer anesthesiological services separately from hospital services. [139] (reference omitted)

352 We adopt this statement of the majority as the applicable test for separate products. We believe that this test effectively captures both the demand and the efficiency elements necessary for us to distinguish between cases when a tie that is injurious to consumer welfare is possible and those in which the tie, although imposed by a major supplier, is efficient and should not be condemned. Demand is, of course, critical. If there is no demand, it would be pointless to require that the two products be offered separately. Efficiency is also critical as the existence of separate demand should not govern if providing the products separately would result in higher costs that would outweigh the benefits to those who want them separately.

353 Our approach will be to examine first the evidence pertaining to the demand side of the equation, to determine whether the Director has proven buyer, in this case advertiser, interest in acquiring space and service separately. By this we mean an answer to the question: "Is there a significant set of advertisers who actually want the items separated?" If this question is answered in the affirmative, then we will turn to the evidence relating to whether it is efficient to separate the products.

354 The respondents rely on a portion of the minority judgment in *Jefferson Parish*. The minority wrote:

> ... there is no sound economic reason for treating surgery and anesthesia as separate services. Patients are interested in purchasing anesthesia only in conjunction with hospital services, so the hospital can acquire no *additional* market power by selling the two services together.... In these circumstances, anesthesia and surgical services should probably not be characterized as distinct products for tying purposes. [140]

In conclusion, they reiterated:

> ... Since anesthesia is a service useful to consumers only when purchased in conjunction with hospital services, the arrangement is not properly characterized as a tie between distinct products. It threatens no additional economic harm to consumers beyond that already made possible by any market power that the hospital may possess. *The fact that anesthesia is used only together with other hospital services is sufficient, standing alone, to insulate from attack the hospital's decision to tie the two types of services*. [141]
>
> (emphasis added)

355 The respondents did not provide us with any reason to adopt the minority judgment over the majority. In fact, the majority opinion explicitly rejected tests based on functional relationships, including the "useless without" test. In a footnote the majority noted:

> The fact that anesthesiological services are functionally linked to the other services provided by the hospital is not in itself sufficient to remove the Roux contract from the realm of tying arrangements. We have often found arrangements involving functionally linked products at least one of which is useless without the other to be prohibited tying devices.... [142]

There are also sound economic reasons to reject such a test. As pointed out in the Areeda text, it may perversely save the most dangerous ties and call for review when there is little likelihood of adverse effects. The authors of that text use the example of a manufacturer with a monopoly over can-closing machinery who requires all purchasers of the machinery to buy cans from it to point out that:

... [s]uch a tie would bring the [manufacturer] a complete monopoly over cans, for presumably no one would buy empty cans without the machinery to close them. Yet the useless-without test would immunize this tying arrangement. Moreover, while short-run profit maximization is *generally* not enhanced when the tied product has no other use, monopoly in the tied market can impair competition severely in the long-run.... [143]

(2) Other Case Law

356 The respondents have also advanced a plethora of other American cases with respect to the question of separate products. In general, the respondents rely on these cases to urge us to view the facts before us solely from the supplier's (Tele-Direct's) perspective and to ignore demand considerations. Their fundamental premise appears to be that Tele-Direct's choice to "market" its product in a certain fashion is determinative and negates the possibility of any tying claim. We did not accept the Director's argument that considerations of demand govern; likewise we reject the respondents' argument that a supplier's choice is paramount. Both elements of demand and efficiency will be taken into account, as set out above. In any event, it is clear that the case before us is unique and does not "fit" exactly into any of the precedents cited to us. A more detailed treatment of the case law follows.

(a) Single Product

357 One tying case was referred to, *Souza v. Estate of Bishop*, [144] a case against a lessor of land in Hawaii based on the refusal of the lessor, like most other landowners in Hawaii, to sell the land. The tying product was argued to be the residences plaintiffs owned on the land while the tied product was the leasehold. The claim was dismissed on a motion for summary judgment, affirmed by the Court of Appeal.

358 From this decision, the respondents ask us to conclude that if a supplier presents two products as a package or, in other words, if they are being marketed together, that is the end of the matter and the Tribunal must conclude that there is a single product. The Court found that the plaintiffs' argument defied reason because the product being marketed was a house plus leased land and not a house purchasable separately from the land on which it stood. The Court also found that the plaintiffs presented no evidence that the house and the leased land constituted separate products. We have already set out the test we intend to apply, which takes into account both demand and supply. We do not accept that simply because a producer or a supplier bundles products together that they are, *ipso facto*, one product.

359 Four cases are relied on by the respondents because they involve the Yellow Pages industry or an analogous industry. The respondents argue that these cases indicate that the United States courts have uniformly rejected any concept of an antitrust violation because of a publisher's refusal to pay commission or its decision to change the accounts on which it will pay commission. Thus, they conclude that the courts "in effect" have treated directory advertising as one product. They make this argument despite the fact that none of these cases was based on a claim of tied selling and therefore the issue of separate products in the sense with which we are dealing here was not before the court. The respondents claim, however, that these cases indicate that there is only one product *because* the tying argument was not raised in any of them.

360 We do not accept that the absence of a tying claim makes the cases dispositive of the issues before us in a tying case. In general, we do not see how the results in these cases can be directly transferred to the case before us. We will, however, review the decisions in order to see what, if any, assistance we can draw from the findings in resolving the issue of separate products on the facts before us.

361 In *Selten Agency, Inc. v. Pacific Telephone and Telegraph Co.*, [145] a specialized advertising agency brought an antitrust action involving numerous allegations against a number of telcos and telephone directory publishers that were members of the National Yellow Pages Service Association ("NYPSA") (the predecessor to YPPA). All of the allegations involved joint action by the NYPSA members. The only issue with any possible, although remote, relevance to this case was the claim by the agency that the NYPSA members *agreed* not to pay commissions on local advertising to agencies, constituting an illegal horizontal division of markets.

362 The Court concluded there was no evidence of an illegal agreement. The evidence was that the NYPSA agreement covered only national advertising; there was no prohibition on commissions for local advertising. Publishers were free to offer commission on local accounts and, the Court notes, some, in fact, did so. The Court also noted that those who did not offer commission on local accounts had their own sales force and therefore did not require the services of advertising agencies. The respondents rely heavily on the next sentence of the judgment, that "[i]t is not a violation of the antitrust laws for a publisher to refuse to buy a service that is not worth buying" [146] to argue that publishers do not have to buy services from agents or, in other words, provide a commission for any accounts they do not want to. As we have already stated, we do not accept that the supplier's choice is the sole governing factor in a tying case. Due consideration must be given to the supply side of the equation but we cannot ignore demand considerations.

363 In *O'Connor Agency v. General Telephone Co.*, [147] an advertising agency alleged that a Yellow Pages publisher conspired with other publishers to change the definition of local or "B" accounts so that commission would no longer be paid on those accounts. The defendants brought a motion for summary judgment which was granted.

364 In granting the motion, the Court found an "agreement" to change the criteria based on adherence to the YPPA guidelines. Using a rule of reason approach, the Court then proceeded to consider and weigh both the anti- and pro-competitive effects of the change in the relevant market. The Court found that the plaintiff had provided no admissible evidence that the relevant product market was Yellow Pages and also provided insufficient admissible evidence of actual anti-competitive effect arising from the change. The Court also found that the publisher had a legitimate business reason for adhering to YPPA standards, namely the uncontroverted evidence that the defendant changed the commission criteria to increase its national Yellow Pages advertising which was not performing up to expectation.

365 The respondents rely on this case for the very broad proposition that "the U.S. jurisprudence directly involving Yellow Pages has rejected any concept of any antitrust violation because of the refusal of a publisher to pay commission to a CMR or as a result of the publisher changing the accounts on which it will pay a CMR" and that "[i]n effect the courts have said there is only one product that we're selling and we can sell it through whatever channel we want". [148] The case certainly does not support those broad generalizations. It was a conspiracy case resolved on a motion for summary judgment because of failure to prove either a relevant market or actual anti-competitive effect.

366 The respondents submit that the case of *Thompson Everett, Inc. v. National Cable Advertising, L.P.* [149] is analogous to the case at bar. In that case an independent cable television advertiser representative brought action against exclusive contracts between the cable company and their spot advertising sales agents on the basis that the "traditional" cable representatives or sales agents were engaged in a concerted effort to exclude the independent from the business. The Court of Appeal affirmed the decision of the lower court to grant summary judgment.

367 The Court found that the exclusive contracts were not being enforced through an illegal conspiracy. It also found that the independent did not have access to the exclusive contracts because it was not willing to compete with the exclusive agents for them and was simply seeking to substitute its own method of serving the cable company for that selected by the cable company. The Court also found that there was no unlawful monopoly in the cable representative market because cable companies are part of a larger market.

368 Once again, the respondents rely on this case to argue that the Court endorsed the cable company's choice of using exclusive representatives simply because that was the way the cable company chose to do it. We have already indicated that the supplier's choice will not be the only consideration in a tying case. Indeed, the case itself does not go that far.

369 The most interesting decision referred to by the respondents is *Ad-Vantage Telephone Directory Consultants, Inc. v. GTE Directories Corp.* [150] The case involved a claim by an "authorized selling representative" ("ASR") for the placement of national advertising in telephone directories that the publisher had monopolized or attempted to monopolize the sale of Yellow Pages advertising. Because of problems in collecting payment for advertising placed by the ASR, the publisher started billing

the advertisers directly. The ASR claimed that the publisher's direct contact with its customers resulted in a loss of accounts to it and its eventual failure.

370 The monopolization case failed because the ASR could not define any relevant market in which it and the publisher competed. The ASR had originally based its claim on the national advertising market where the publisher competed for the sale of national advertising as an ASR itself but could not show any market power on the part of the publisher in that market. The claim was then amended to allege that the relevant market was the sale of advertising space in a specific directory, shifting the focus to local advertising. Based on evidence that the ASR had received commission for the placement of advertisements for two local advertisers, apparently by accident, the ASR argued that it competed with the publisher's sales force for local advertising. The argument of the ASR was that the lawful power to publish the exclusive directory for a specific geographic area did not give the publisher the right to be the exclusive seller of advertising space within that directory as publication and sale were separate activities.

371 The Court commented that the ASR's market theory had a certain "superficial" appeal based on its similarity to a typical wholesale/retail monopolization case where a vertically integrated manufacturer uses its dominant position at one level of activity (manufacturing) to eliminate competition at another level (retailing). The Court noted that for the ASR's theory to work, the publisher must be viewed as a wholesaler or manufacturer of advertising space and the ASR as a retailer of this space. If not a retailer, the ASR could not be considered a competitor of the publisher at the retail level.

372 The Court concluded that, to the extent that the sale of Yellow Pages advertising is an activity separable from the publishing of the advertising, the sales made by independent ASRs were in the nature of an agency and not retail sales. Agents, the Court noted, do not compete with those whom they represent. The wholesale/retail analogy failed, in part, because there *could* be no "resale" of Yellow Pages:

> ... Yellow pages is not a product that is produced and distributed. The blank yellow pages do not exist prior to the sale of an advertisement, somehow awaiting distribution on a resale market. Each advertisement, that is, the space of the ad, is "created" when the advertisement is sold to the advertiser.... ASRs do not maintain an inventory of ad space to be sold. An ASR cannot purchase a page in the yellow pages and then distribute it to advertisers as it sees fit. [151]

373 The agency characterization was preferred, in part, because the Court considered the relationship between the publisher and the ASR in the case before it to be analogous to the relationship between an airline and a travel agent:

> ... The publisher lawfully establishes the price for its advertising and announces it to the public. It determines when it is going to publish directories, and has the ultimate say on how many advertisements it will accept. An advertiser may deal directly with the publisher, or may use an Authorized Sales Representative. However, should it use an ASR, the ASR must submit a request for advertising to the publisher, analogous to a reservation in the forthcoming publication. The ASR does not purchase an inventory of yellow pages space. The service which the advertiser has paid for is performed by the publisher, not the ASR. Further, should the advertisement fail to appear as requested in the appropriate directory, the publisher is under an obligation to refund the advertiser's money. Finally, should a publisher not receive enough advertisements to make a directory profitable, it must still publish the directory; the publisher retains the "risk" that not enough yellow pages advertisements will be "distributed" -- not the ASRs. [152]

The Court found ample evidence in the record that the ASR functioned as an agent, including the NYPSA guidelines which provided that ASRs represented the publisher "when selling National Yellow Pages advertising to national advertisers or their advertising agencies, or when negotiating disputes with such national advertisers or their advertising agencies". [153] The Court noted that there was also evidence that the ASR acted as an agent of the advertiser, including liability to the publisher for payment, but concluded that "[e]ither way, an ASR functions as an agent, not an 'independent contractor,' and not, in any case, as a retailer of yellow pages advertising space." [154] Thus, the leveraging argument failed as there was no "second activity" to be monopolized by using the publisher's market power to publish directories as leverage.

374 One element of this decision is the Court's insistence that the ASRs had to be considered retailers in order to be in competition with the publisher. A finding that the ASRs were merely agents of the publishers or, perhaps, agents of the customers, in the sense of having no independent existence from either or both of those two entities seems to preclude competition between the ASRs and the publisher. We do not believe, however, that the inapplicability of a strict retail model is conclusive. The Court did mention in passing, for example, independent contractors. The fundamental question is whether the publisher is in competition with the ASR or other person alleged to be excluded by the activity in question, which we agree is a question that should also be addressed in the context of a tying claim.

375 A second important element of the Court's conclusion concerned the functions performed by ASRs, that were apparently viewed as simple "order takers" insofar as the commission from the publisher was concerned. The Court indicated its assumption that the ASR was paid separately by the advertiser for other services such as layout [155] when it distinguished the case before it from a successful monopolization claim by an advertising agency against a television station. The television station had expanded its in-house advertising agency services by starting to produce commercials (for a fee) as well as selling air time. In *Ad-Vantage*, the Court stated:

> Thus, in *Six Twenty-Nine Productions*, a leveraging argument was possible. The production of [Yellow Pages] advertisements is a related activity separate from the sale of advertising space. Each is a separate source of revenue. In the context of this case, no evidence was presented indicating that ASRs receive no separate compensation from their clients when the ASRs engage in the production -- the lay out -- of the advertisements. In fact, testimony of a former NYPSA official indicated that *most* of the national yellow pages advertising is purchased through ASRs by advertising agencies on behalf of national advertisers, supporting the notion that ad agencies perform a separate function. Thus, the leveraging argument made in *Six Twenty-Nine Productions* is not available here. [156]

376 What we take from this case is that it is important to examine the actual services performed by the agents for advertisers and the relationship between Tele-Direct and the agents, with a view to determining if they do, in fact, "compete" with Tele-Direct in any relevant sense.

(b) Relationship between Agents, Advertisers and Tele-Direct

377 The respondents say that, as in the *Ad-Vantage* case, agents in the case before us function as either representatives of Tele-Direct or, on occasion, as agents of the advertisers. In the first case, Tele-Direct does not compete with itself or its own representatives and in the second, it cannot be considered to compete with its customers. Based on the evidence of Charles Mitchell, Tele-Direct's Director of Marketing Sales Support, they submit that, in fact, Tele-Direct has not competed for agency accounts since 1992. The Director argues that, unlike in *Ad-Vantage*, the Canadian CMRs are not agents of Tele-Direct. The Director submits that the evidence supports the proposition that Tele-Direct has consistently considered, and still does consider, the agencies as its competitors.

378 The initial point at issue is the exact contractual relationship between agents and Tele-Direct. In 1988, Tele-Direct required the agencies to sign new contracts with it. Under those contracts, the agent warrants that it is duly authorized to enter into the agreement on behalf of the advertiser. Further, the agency agrees that "it is not acting and does not purport to act as agent for Tele-Direct." [157] This is exemplified by the provisions that the agent agrees to pay for the advertising; to indemnify and hold harmless Tele-Direct from claims by the advertiser; and to warrant on behalf of the advertiser the truth of all assertions in the advertising. Tele-Direct's Corporate Secretary and legal counsel, Patrick Crawford, confirmed that these contracts have not been revoked and that the agencies were not agents for or of Tele-Direct.

379 The respondents argue that the 1993 YPPA agreements entered into by the agencies in order to be accredited as CMRs supersede the earlier contracts although no steps have been taken to repudiate or amend the earlier contracts. In the application to be accredited as a CMR, the agency agrees to "represent" the publisher in the same terms as quoted in *Ad-Vantage* from the NYPSA guidelines. [158] The YPPA guidelines, however, describe a CMR as a member of YPPA which:

a. Represents to the users the Publishers' product, services and policies, while representing to the Publishers the customers' needs, desires and concerns.

b. Develops a comprehensive national Yellow Pages advertising program for prospects and/or advertisers.

c. Compiles and provides current information pertaining to all Publishers' practices affecting an advertiser's national Yellow Pages program.

d. Develops market research and cost studies for the advertiser or its agency as a basis for making advertising proposals.

e. Provides Publishers on a timely basis with the authorized list of dealers for solicitation under Advertiser's Trade Item.

f. Pays Publishers' invoices without recourse within the time period set forth in the individual Publishers' credit terms, notwithstanding its own collection status with that advertiser or its agency, unless any individual Publisher provides otherwise.

g. Absorbs all adjustment amounts incurred as a result of its own acts, errors, or omissions which including (*sic*) among other things, failure to notify Publishers of cancellations of orders, unless any individual Publisher provides otherwise. [159]

380 What comes out of this somewhat contradictory documentation of the relationship is that agents are not agents or representatives of Tele-Direct in any sense that would preclude a finding that the two are in competition. The agents are not so allied with Tele-Direct as a publisher that they have no independent existence. Their relationship has elements of both co-operation and competition.

381 The agents rely on the Yellow Pages industry, as represented by YPPA, and Tele-Direct specifically, to provide information on the effectiveness of Yellow Pages advertising. They are accredited based on industry standards. With respect to accreditation and the promotion of the medium, the relationship between Tele-Direct and the agents is undoubtedly cooperative.

382 However, the thrust of the Tele-Direct internal documentary evidence is that Tele-Direct treated the agents as competitors of its internal sales force. Prior to the 1990s, Tele-Direct sought to protect its client base from the agents by selling advertisers on using its services instead, stressing the advantages that dealing directly with Tele-Direct offered, including monthly billing and later closing dates, as well as considering more positive initiatives like assigning representatives to large accounts for a longer period of time. During the early 1990s, when Mr. Mitchell was head of the national accounts group, Tele-Direct actively competed for agents' clients. Mr. Mitchell testified that as of 1992, the approach changed to one of protecting internal accounts and revenue only but the documentation does not bear this out. Certainly, one of the reasons for the creation of Tele-Direct (Media) Inc. in 1994 was to combat the loss by Tele-Direct of national accounts to CMRs. The only "contradictory" evidence on this point is a somewhat unclear statement by Wayne Fulcher of DAC that prior to the formation of its CMR, Tele-Direct did not "normally" try to take away agency "headquartered" accounts. However, Mr. Fulcher does think that Tele-Direct's CMR is in competition with his agency.

383 Perhaps the most telling point is that Tele-Direct requires that agencies pay at the time of issue of a directory for advertising placed on behalf of their clients. If agents were only agents of Tele-Direct, they would not be financially responsible for the obligation of third parties -- the advertisers. This is compelling evidence that the agencies do not act as agents of Tele-Direct. The evidence is that Tele-Direct has always considered agents to be, and has reacted to them, as competitors.

384 Nor can the agents be considered to have no independent existence apart from the advertisers themselves that they also "represent" in the sense of placing orders for advertising on their behalf. Yellow Pages advertising is not a simple product to buy and advertisers desire assistance in making the purchase. Agents, however, are not *mere* "order placers" for advertisers or other advertising agencies employed by advertisers. The evidence before us, which is reviewed in more detail below, is that agents provide a range of services, including advice, layout, design and administration, for which they do not receive additional compensation beyond the commission paid by Tele-Direct. [160] Further, we have no evidence that much of the agents' business

consists of simply placing orders for another advertising agency employed by the customer to do the remaining work involved in producing the advertising. Advertisers want these other services in relation to their Yellow Pages advertising from agents. Thus, for advertisers, agents have a separate existence from Tele-Direct.

385 The relationship between Tele-Direct and agents is complex. Tele-Direct treats the agents as independent businesses with which they cooperate to advance their own objectives but with which they also compete. While Tele-Direct apparently recognizes that agents can service certain accounts better than its internal sales force, by reason of its creation of a class of commissionable accounts, it is also its goal, or at least the goal of certain groups within the corporation such as the national accounts group, to keep as much revenue as possible in-house and reduce its dependence on agencies to the absolute minimum possible. We conclude that the business relationship between Tele-Direct and agents is not inconsistent with Tele-Direct and agents treating each other as competitors.

(c) Additional Economic Benefit

386 The respondents argue that there is an "exception" to tying recognized in the American jurisprudence where the seller of the alleged tying product does not receive an "additional economic benefit" from the sale of the tied product. They say that Tele-Direct gets no additional economic benefit from the sale of services in this case because there is no "separate charge" for services.

387 The respondents cite two cases on this point. The first is *Directory Sales Management Corp. v. Ohio Bell*,[161] a decision affirming summary judgment granted against the plaintiff in an antitrust suit by an independent directory publisher against the telco and its directory publisher. The two defendants were wholly-owned subsidiaries of the same parent. One of the allegations was that the defendants tied business telephone service (tying product) to a free Yellow Pages listing (tied product) by refusing to reduce the price of the telephone service if the subscriber chose not to be listed.

388 The Court noted that an illegal tying arrangement might exist if the telco in some way charged for the "free" listing indirectly in the bill for telephone service, even though it did not charge for the listing directly. The evidence was that there was no hidden charge for the listing as the telco did not pay the publisher for the expenses incurred in publishing the listing. The Court stated that if the telco did not receive a "financial benefit" from the tied product, there could be no tying arrangement.

389 The second case is *Beard v. Parkview Hospital*.[162] Dr. Beard, an osteopathic radiologist, was employed by a group of doctors that was the exclusive provider of radiological services to Parkview Hospital. Dr. Beard resigned from the group with the intention of providing radiological services on his own to patients at Parkview Hospital. The hospital did not permit him to do so and Dr. Beard sued, alleging that the exclusive contract for radiological services was an illegal tie of radiological services to other hospital services. Under the terms of the contract between the hospital and the group providing the radiological services, the group billed patients directly for its services and the hospital did not share in the fee. The lower court granted summary judgment for the hospital.

390 In affirming the dismissal, the appeal court approved the lower court's reliance on the requirement that the seller of the tying product must benefit directly from the sale of the tied product. The Court held that the requirement was also consistent with *Jefferson Parish*, which stated that an illegal tying arrangement is one where a firm with market power attempts to impose restraints on competition in the market for the tied product, because the seller who "derives no economic benefit from sales of an alleged tied product or service is not attempting to invade the alleged tied product or service market in a manner proscribed by section 1 of the Sherman Act."[163]

391 Areeda explains the purpose of this rule in American case law and its relationship to tying as a *per se* offence:

> ... a tie-in, though affecting a substantial volume of commerce in the tied product, is not per se unlawful when it does not foreclose any rival supplier or, perhaps, when any such foreclosure is inherently minor....
>
> One convenient and frequent way to capture the concept of a relevant foreclosure is to ask whether the defendant has a financial interest in the tied product. In most courts, ties do not cross the threshold of potential power or effect when

> the defendant lacks an economic interest in the tied product, primarily because such a tie does not ordinarily enhance the defendant's power in the tied market or bring about any other consequences of the kind that the per se rule against tying seeks to prevent. "Foreclosure" there may be but not a relevant one. [164] (reference omitted)

Further, using the example of a defendant firm accused of providing its product *A* only to buyers who purchase *B* from a second, separate firm *T*, thus "foreclosing" other suppliers of product *B*, he explains:

> The defendant who gains not a penny, directly or indirectly, from firm *T*'s sales of product *B* is no "competitor" in the market for the tied product *B*. This much is clear, although there are difficulties ahead in deciding what type and magnitude of financial connection with firm *T* makes the defendant a "competitor" of those foreclosed suppliers. [165]

Therefore, where there is no financial interest in sales of the tied product or in the tied market, the alleged tie-in does not cross the threshold for *per se* illegality, although the alleged tie does remain subject to review under the rule of reason. [166]

392 There are three points to be made regarding this argument of the respondents. First, the test of lack of any financial interest in the tied market or economic benefit from the sale of the tied product, however worded, is closely linked in American law to the *per se* nature of tying, which makes us reluctant to adopt it directly because Canadian law is based on a different standard, that of "substantial lessening of competition".

393 Second, there is some validity to the Director's argument that the question of economic benefit from the tied product, or of participation by the firm with market power in the tied market, only arises when two separate corporate entities are involved in the supply of the tying and the tied products. That was the case in both decisions cited and is not the case on our facts.

394 Further, in the *Beard* case it was abundantly clear that the hospital itself, the supplier of the alleged tying product, was not a participant in the radiological services, or tied product, market in any way as it did not receive any part of the fee for those services, which went directly from the patient to the unrelated doctors' group. In *Ohio Bell*, the situation was less clear as the two corporate entities were related but, in any event, the Court was definitive that there was no evidence of a "hidden" or "indirect" charge for the Yellow Pages listing in the telco's bill for telephone service. The telco, the firm with market power, was not attempting to, in the words from *Beard*, "invade" the market for the supply of directory listings.

395 In contrast, on the facts before us, Tele-Direct itself supplies both space and services to all advertisers, both commissionable and non-commissionable. We also have evidence that it considers both consultants (detailed elsewhere) and agencies, the alternate service suppliers, to be its competitors. Since Tele-Direct provides services, it must be compensated for them. As a rational firm it would not provide something for nothing. Therefore, it cannot be concluded that it receives "no additional benefit" from its own sales of the alleged tied product. The precise form of that compensation or "benefit" is not at issue here. [167] Whether Tele-Direct has succeeded in foreclosing any alternate suppliers in the services market is evidently a relevant question but that is not what this argument of the respondents focuses on. This argument is that Tele-Direct gets no additional economic benefit from the provision of services and that, therefore, any exclusionary effects in that market are irrelevant because of the lack of linkage to the firm with market power over the tying product. The facts do not support this hypothesis.

(d) Separate Billing/Separate Payment

396 The respondents argue that if a producer pays for the "components" of a "product" directly and then sells the "product" complete with "necessary inputs" at a specified price, there is no tying. They state that the concept of tying *only* applies where the customer pays *separately* for the alleged tied and tying products. In oral argument, this was expressed as the proposition that it is not a tie to bundle something because as long as there is only one "cost" to the buyer, what is being sold is the supplier's single "product".

397 A distinction was drawn between the case at bar and the facts in *Jefferson Parish*, in which the respondents submit the items found by the Court to be separate products were not "bundled" but were in "two pieces" because there were two bills. They

argue that the patient in *Jefferson Parish* paid for both "parts", presumably hospital services and anaesthesiological services, and that if a buyer pays for two different things on two bills, there cannot be one product. Reference was also made to the case of *Collins v. Associated Pathologists, Ltd.* [168]

398 Turning to *Jefferson Parish*, the distinction drawn by the respondents between that case and the instant case on the facts relating to billing is not as apparent as argued. In *Jefferson Parish*, the hospital and Roux & Associates had a contract which provided that all anaesthesiological services required by the hospital's patients would be performed by Roux. The hospital agreed with Roux to provide an anaesthesia department, including space, equipment, maintenance and other services, drugs and supplies, and nursing personnel (subject to approval by Roux). The use of the anaesthesia department was restricted to physicians employed by Roux. As the Court said:

> The hospital has provided its patients with a package that includes the range of facilities and services required for a variety of surgical operations. At East Jefferson Hospital the package includes the services of the anesthesiologist. [169] (reference omitted)

399 The Court describes the billing arrangement as follows:

> ... The fees for *anesthesiological services* are billed separately to the patients by the hospital. They cover the hospital's costs *and* the professional services provided by Roux. After a deduction of eight percent to provide a reserve for uncollectible accounts, the fees are divided equally between Roux and the hospital. [170]
>
> (emphasis added)

400 The majority of the Supreme Court did consider the "separate billing" of "anesthesiological services" as a factor that entered into its determination of whether there were separate products. Yet, the actual billing arrangement, as described by the Court, looks very much like a combined bill for the tied product (professional anaesthesiological services) and part of the tying product (hospital services), much like Tele-Direct's bills for Yellow Pages advertising. Specifically, the amount billed included both a professional services portion for anaesthesiological services and a hospital-supplied anaesthesia equipment, facilities, support personnel and drugs portion. The fee is simply divided equally between the two, irrespective of the actual extent of professional services required in the particular case. It is not explicit separate billing of professional services.

401 In any event, there is no indication in the Court's decision that the factor of "separate billing" is essential or even critical. The most that can be said is that it is one factor to examine. We agree with the Director that if the entire resolution of the one or two products issue could be determined simply by the pricing or billing arrangements, this would allow suppliers to immunize all activity from tying claims simply by refusing to quote separate prices for items provided as a package.

402 Further, the Director submits that the mechanism or the route by which the money ends up in the hands of the separate service supplier is not relevant. In the commissionable market, the separate service supplier is paid by commission. A payment by commission may be somewhat more circuitous than, for example, direct billing by the hour by agents for their services (allied with a discounted price for space provided by Tele-Direct to persons who did not use its services) but the end result is the same -- the advertiser pays for the services, the advertiser receives the services of an agent, the agency receives payment for the services provided. Payment to agencies by way of commission was historically, and to a large degree still is, a fact of life in all advertising media.

403 The significance of the reference to *Collins* in this context escapes us. The Court in that case found that there was no distinct demand for pathology services as a product separate from hospital services. The Court did not refer to billing arrangements at all in making its findings. It based its conclusion solely on the lack of consumer or patient requests for specific pathologists or perception of pathology services as separate from other hospital services.

404 In summary, none of the cases referred to convinces us that the approach we have adopted to the separate product question is inappropriate. Several were largely irrelevant because they dealt with completely different facts or different, non-

tying, antitrust issues. To the extent issues were raised which we considered relevant, particularly in the other Yellow Pages cases, we dealt with them in that context. We will now proceed with the basic approach we outlined at the outset and consider the evidence and arguments relating to demand and efficiency.

(3) Demand by Advertisers

405 Are advertisers that fall in that portion of the market which Tele-Direct currently defines as non-commissionable interested in purchasing the services associated with creating and placing a Yellow Pages advertisement from a source other than Tele-Direct? In other words, does Tele-Direct's practice of bundling space and services for a single price "force" them to buy a product that they would rather not buy from Tele-Direct? Or, do they regard the two components as a package that they would rather not acquire separately in any event?

406 The Director called 19 advertiser witnesses; the respondents called two. All of the witnesses except the two called by the respondents expressed a desire to obtain the services associated with developing and placing Yellow Pages advertising from someone other than Tele-Direct. Seven of the 19 advertisers called by the Director are current agency clients; [171] the remainder of the advertisers are serviced directly by Tele-Direct representatives. Of those, eight use or have used a consultant. Three would like to use an agent but cannot qualify for commission.

407 Fourteen witnesses represent multi-outlet (whether franchised, licensed or corporate-owned), multi-directory advertisers. The geographic dispersion of the outlets ranges from a metropolitan area to country-wide. Three are single outlet but multi-directory advertisers because of the wide territory from which they draw business. The remaining four advertisers are single outlet, single directory advertisers. All of the witnesses called are spending above-average amounts in the Yellow Pages. Two were spending close to the average of $1,700 (at about $2,000 annually each); the remainder ranged from $7,000 to $300,000.

408 The respondents have not attempted to rebut the specific evidence of the advertisers who indicate that they would prefer to obtain advertising services from someone other than Tele-Direct. They called two witnesses to show that some advertisers prefer Tele-Direct's services, although one of those witnesses stated that advertisers should have the choice of dealing with Tele-Direct or using an agent. Counsel admitted in oral argument that in the "top end" of the market, some advertisers find the bundling of services and space by Tele-Direct problematic. He argues, however, that these advertisers constitute a "statistically insubstantial sample" and that there will always be a number of people "who would like to get something for nothing" and "as long as they aren't paying for it".

409 It is true that the customers called to give evidence constitute a very small proportion of total advertisers. They were not randomly selected and we do not treat them as a statistically significant sample. However, coupled with their anecdotal evidence of why they prefer to use agents is the evidence that in the current commissionable market, which includes grandfathered eight-market accounts, agents enjoy the lion's share of the business. When advertisers have the choice, the vast majority choose an agent, rather than Tele-Direct, for services. There is clearly separate demand beyond what Tele-Direct considers a "national" account (the 1993 definition) with respect to eight-market accounts, currently grandfathered. Moreover, there is no reason to believe that the line drawn by Tele-Direct between commissionable and non-commissionable accounts accurately reflects the boundary of demand; that those accounts that are commissionable prefer to use an alternate service provider while those who are not commissionable do not. Given the strength of demand for agents' services in the current commissionable market, we think it is reasonable to infer that the preference shown by the large majority of commissionable accounts for the use of agents extends down into the current non-commissionable market, at least to some extent. We are satisfied there is sufficient evidence before us to conclude that there is demand for separate advertising services below the existing commissionable market and that the advertisers called by the Director can tell us something about the nature of that demand.

410 Common amongst the Director's witnesses, whether single or multi-directory advertisers, was a preference for the advice or consultative services provided by an agent or a consultant over those of Tele-Direct. A recurring theme was that the agent or consultant provides an "overall" picture, reviewing all of the client's Yellow Pages advertising, including white pages listings, which headings were being used and which should be used, all the directories involved, what the client's competitors are doing and the nature of the business's markets. These service providers help plan the Yellow Pages advertising,

including recommending headings and, in some cases where the level of expenditure is higher, budgeting. In the case of agents, a representative is assigned to the account for a long period of time and the clients have the perception that the agency "understands" its particular business. That these service providers tend to pay attention to the overall picture is suggested by the testimony of two advertisers, one the client of an agent and one of a consultant, that the agency or the consultant was the one to bring to its attention duplicative advertisements in its Yellow Pages program.

411 The advertisers using agents also mentioned creative services as one of the elements of the service provided. For the clients of consultants, creative services are at least equally important since by re-designing an advertisement and by substituting other design techniques, like, for example, screening, for the more expensive size and colour, the consultants are able to reduce the cost of advertising.

412 In the case of both agents and consultants, advertisers generally perceive that these "independent" service providers are more interested in helping them get more out of their Yellow Pages advertising dollar than is the typical Tele-Direct representative. Frequently, according to the advertisers, the Tele-Direct representative does not have time to sit down and consult with the advertiser. The advertiser has to accommodate itself to the schedule of the representative faced with a full schedule and deadlines in a particular canvass. Another recurring complaint is that the Tele-Direct representative is more interested in selling more colour or a larger size than in arriving at the level and type of advertising that is right for that client; representatives are perceived as quite aggressive and prone to "upsell". Most of the advertisers also recognize that these problems result from the way in which Tele-Direct operates its canvasses and compensates its representatives; their comments were not directed at the representatives as individuals. While the agencies are also paid commission, individual representatives are paid straight salary for servicing the agency's existing client base. [172]

413 The multi-directory advertisers also prefer the services of third parties because they provide "co-ordination" or "administrative" services. These multi-directory advertisers are primarily the clients of agents rather than consultants. [173] They testified extensively about the advantages of using an agency which will keep track of publication dates for the various directories, control the uniformity of the advertisements, company image and message across directories and, where applicable, organize the contact between head office and franchisees or licensees for approval of advertisements and billing. Promoting a uniform message and image is particularly important to franchisers whose franchisees may be quite independent of head office and also to those which had enrolled businesses to their network which operate the franchised business as only a part of their overall business. [174]

414 It might be argued that the administrative services provided by agents are not supplied at all by Tele-Direct. [175] On that reasoning, administrative services would not be a component of the advertising services at issue in the tying case. The argument would be that since Tele-Direct does not supply administrative services, it is not in competition with agents because it is supplying different services and customers who want administrative services are free to purchase them separately.

415 It appears that, in fact, Tele-Direct has made some effort to provide the administrative services emphasized by the advertiser witnesses who appeared before us (uniformity and coordination) through its national accounts group and with its efforts regarding continuity. Further, while it is possible that such administrative services could *conceivably* be purchased separately, there is no reason to believe that it would be efficient to do so. There is no evidence of agents providing these services to advertisers who use Tele-Direct for the remaining services, even though there is clearly a demand for them. The fact that Tele-Direct provides administrative services in some cases but not in others simply means that Tele-Direct and the agents are not providing precisely the same product. Indeed, one would not expect to find homogeneous packages of services. Otherwise, there would be no reason for customers to choose one service provider over the other. Therefore, we are satisfied that administrative services are a relevant and important aspect of advertiser demand for advertising services.

416 We now turn to the respondents' argument that advertisers only prefer agents because they are getting something for nothing or they are not paying for the agents. We do not accept this argument. The advertiser is paying for the advertising services whether provided by Tele-Direct or, if the account is commissionable, by an agent. With respect to the use of consultants, advertisers pay to use consultants as Tele-Direct's price remains the same but the consultant charges the advertiser a portion of

the amount the advertiser saves by use of the consultant. Those savings would otherwise be for the advertiser to either spend on more Yellow Pages advertising or to pocket.

417 Even if we were to accept that the cost to advertisers of obtaining services is the same whether they choose Tele-Direct or an agent, we think it is still evidence of separate demand that where advertisers have the choice, the advertisers prefer to use agents. However, the evidence is, as will be explained, that when advertisers use agents, they bear costs additional to what they would have to bear if they placed their advertising through the Tele-Direct representative. Thus, it is apparent that customers prefer agents even if it is more costly to use an agent than to deal directly with Tele-Direct. This is strong evidence of demand for the services of agents by advertisers when they have the possibility of using them.

418 One source of higher cost derives from the billing practices of Tele-Direct. When advertising is placed through Tele-Direct's representative, the cost of advertising is divided into twelve equal parts and included in the Bell Canada telephone bill commencing upon issue of the directory. Advertisers who use agents are required to pay for their advertising on an issue basis, that is, to pay the full amount upon issue of the directory. When this occurs the advertisers' additional cost of using an agent is roughly one-half the annual cost of funds or, in other words, one-half of the commercial interest rate. [176] Given interest rates over the past 20 years, this has, depending upon the time, constituted approximately three to six percent of the advertising bill, a cost the advertiser does not pay if it uses Tele-Direct's services. In the words of Mr. Kitchen of Lansing Buildall, these advertisers are "paying a premium in terms of the payment schedule." While it is true that some advertisers that used agencies have arranged for periodic payments, no arrangement disclosed in the evidence is as favourable to them as the Tele-Direct monthly billing practice.

419 Another cost borne by some advertisers in order to use an agent is the placing of "extra" advertising in directories outside the areas from which the advertiser draws its customers so that the criteria for the eight-market rule (grandfathered accounts) are met. Five advertiser witnesses buy "extra" advertising. In one case, the cost of the additional advertisements is paid by the agent; in another the agent pays 15 percent of the cost of the additional advertisements. The other advertisers bear the full cost of the "extra" advertising.

420 How far down does the demand for separate services extend? We have evidence from a number of advertisers, both agency clients and clients of consultants, probably best described as large local or regional advertisers. Despite the amounts they are spending in Yellow Pages, these advertisers would not qualify even under the eight-market rule if they only advertised in the areas where they have locations or from where they draw business. [177] Since there are only seven market areas in Ontario and six in Quebec, that rule requires advertising outside the boundaries of each province. [178]

421 However, we did not hear from any truly "small" advertisers. Although two of the advertiser witnesses spend about average amounts in the Yellow Pages, they are the outlying examples. Most of the remaining witnesses, even those using consultants, spend at least $10,000 and most spend considerably more than that. Advertisers spending more than $10,000 annually represent only two percent of Tele-Direct's total advertisers by number and about one-third of its advertising revenues. There are, therefore, a vast number of advertisers representing a significant amount of revenue about which we know little regarding the character of their demand for separate advertising services.

422 The Director refers us to documentary evidence dating from 1975 when Tele-Direct changed to the eight-market commission rule to show that approximately 20 percent of the pre-1976 agency customers purchased less than $1,000 per year of Yellow Pages advertising. Many purchased as little as $500 worth of advertising annually. We have no reason to doubt the accuracy of these statements. We are reluctant, however, to reach conclusions about "small" advertisers based only on documentary evidence that is some 20 years old.

423 On the other hand, we have the views of Michael Trebilcock, the respondents' economist expert witness, [179] regarding "smaller" advertisers, which imply that these advertisers do not demand advertising services from a source other than the publisher. Based on the data provided in the report of the Office of Fair Trading, [180] he notes that for smaller advertisers, the cost of providing advertising services overwhelmingly comprises space and selling effort rather than advisory services. The

reasoning behind these statements is sound and there has not been any evidence or argument to the contrary. It is certainly plausible that the lowest-cost "advertisements", for example a bold listing, do not contain much, if any, creative content. We therefore accept that the general thrust of this argument is valid and that, for "smaller" advertisers, it is highly doubtful that a separate demand for advertising services exists. [181]

424 The evidence supports the view that there is buyer interest in obtaining advertising services from suppliers other than Tele-Direct over at least part of the spectrum of advertisers. While it is difficult to know where exactly to draw the line, we can conclude at this point that there is no evidence that would satisfy this threshold test of separate demand from "smaller", including new, advertisers. It is apparent that the larger advertisers would have the greater need for the services of agents or consultants based on the complexity of their advertising. Smaller, including new, advertisers whose advertising is relatively more simple likely would not have such need.

425 However, based on the evidence before us, we are not prepared to draw a firm line below which we could confidently say there is no evidence of buyer demand for services of independent advertising service providers. Therefore, at this point, we only conclude that there is evidence of buyer demand for advertising services for suppliers other than Tele-Direct for "larger" advertisers.

(4) Respondents' "Efficiency" Arguments

426 Given the evidence of demand for services from suppliers other than Tele-Direct, is there evidence that efficiency considerations would dictate a single product? Based on the historical practices of Tele-Direct, the Director has ample evidence that the products can and were, in fact, sold separately. Pre-1975, a large percentage of advertisers could acquire services from a source other than Tele-Direct. Under the eight-market rule and the 1993 rule, any advertiser that qualifies or can make itself qualify by some extra advertising can acquire services separately from an agent. The respondents have put forward a number of efficiency arguments which, if valid, they say would lead to the conclusion that there is a single product and therefore, no tie. These arguments are largely based on the analysis and evidence of Professor Trebilcock, their expert witness. There were also profitability studies entered in evidence by the respondents and they will be dealt with in the next section.

(a) Impossibility of Leveraging: Fixed Proportions

427 Professor Trebilcock, for the respondents, is of the view that the Director's theory that Tele-Direct is attempting to leverage its market power (assuming it has market power) over space into the services market by bundling space and services is not valid. He states that such leveraging cannot occur because advertising space and advertising services are complements which are consumed in fixed proportions. There is agreement between the experts on both sides that complementary goods used in fixed proportions imply that the only profit-maximizing motive to bundle the two products is in order to minimize costs; all opportunities to exploit market power could be accomplished with control over either product. This implies that the bundling is socially efficient and it should be concluded that there is only one product. [182]

428 Professor Slade, for the Director, argues that space and services are at least partially substitutable. Professor Slade is of the view that:

> ... it is possible to achieve the same impact by using a large ad or one that is cleverly designed. In addition, astute targeting of the "right" directories can substitute for purchasing space in a larger group of directories. More generally, an agency that provides service can often advise on ways to cut expenditure on space while maintaining the same level of advertising impact. In addition, it might even suggest ways of obtaining a higher impact from lower expenditure by, for example, substituting white knockout for colour. [183]

Because of the failure of the assumption of complementarity, she argues, leveraging is possible. Certainly the possibility of an extension of market power over a substitute, even if only a partial substitute, is one which causes concern and should be examined further.

429 The evidence supports variable rather than fixed proportions. To the extent that agents tend, compared to Tele-Direct representatives, to be less likely to promote increased expenditures on space, the additional expenditures on advertising services by agency clients (through the purchase of extra advertising, foregoing monthly billing) lead to the substitution of advertising services for advertising space. Furthermore, once it is recognized that there is an issue of the quality and content of advertising services, as indicated by the evidence of advertisers and their willingness to pay more for agents than it would cost them to use Tele-Direct's representatives, even assuming the same expenditure on space using an agent or Tele-Direct, it is difficult to see how advertising services are being consumed in fixed proportions with advertising space.

430 The evidence regarding the activities of consultants also suggests that advertising services and advertising space are not used in fixed proportions, and that they are partial substitutes. The purchase of services from a supplier other than Tele-Direct results in reduced expenditures on space. An example provided by a consultant concerned a very large and apparently inappropriate existing advertisement for a taxi company in the Hamilton area. The existing full page advertisement included a large picture of an airplane and reference to airport service. The consultant (Serge Brouillet of Ad-Vice Communications) determined from his marketing needs analysis for the client that he actually did very little airport business. The changes proposed by the consultant were both less costly and appeared to be more effective.

431 We conclude that advertising space and service are not consumed in fixed proportions and it cannot therefore be assumed, as argued by the respondents, that only efficiency explains why they are bundled by Tele-Direct.

(b) Widespread Industry Reliance on Internal Sales Force

432 As part of his expert evidence on behalf of the respondents, Professor Trebilcock stated that any theory of the tying allegations in this case must explain four central facts. One of those facts is stated as:

> Almost all yellow pages directory publishers organize their selling functions in a similar way to TD i.e. by heavy reliance on an internal sales force. [184]

It is not in dispute that all North American publishers, whether telco-affiliated or independent, rely heavily on their internal sales force. The Director has, however, brought forward evidence indicating that where the line is drawn between accounts that are open to agency competition because they qualify for commission and those which are exclusive to the internal sales force differs from publisher to publisher. The Director further argues that Tele-Direct's current commissionability rule is one of the strictest in North America.

433 The respondents submit that Tele-Direct's national account definition simply represents the transposition of the YPPA national account definition (also referred to as the YPPA "A" account definition) into the Canadian context. The YPPA by-laws provide that, as a minimum standard, an advertising program involving two or more publishers, 20 or more directories, and at least three states with 30 percent of the advertising revenue outside the primary state is considered national Yellow Pages advertising. Publisher members must accept advertising meeting those criteria as national. They are not precluded from accepting advertising meeting less stringent criteria as national. Each publisher decides on the level of compensation for advertising it defines as national.

434 While the *terms* of the YPPA definition are similar to those used by Tele-Direct in its definition, the evidence was that the effect of applying the definition in Canada is very different. Where there are about 6,000 directories in the United States, there are only about 350 in Canada. Tele-Direct is one of only seven or eight publishers in Canada and controls 70 percent of Canadian Yellow Pages publishing revenue. Tele-Direct's definition incorporates a minimum of two provinces instead of three states. Tele-Direct requires 20 percent of the published revenue outside the primary *publisher's territory*; the YPPA definition requires 30 percent of the revenue but outside the primary *state*. Under the YPPA definition, as long as two publishers are involved, there could be minimum revenue in the second publisher's territory. According to the agency witnesses, the 20 percent requirement is especially onerous given that Tele-Direct's territory includes the two most populous provinces. Overall, commission is currently

paid on 13 to 14 percent of total directory advertising revenues in the United States as opposed to seven to eight percent of total revenues in Canada.

435 Although it is true that an account wholly within a large state such as California (with a larger population than all of Canada) might not be commissionable under the "A" account definition, according to the President of the YPPA, most publishers, including telco affiliates (RBOCs) pay commission on regional accounts, called "B" accounts. For example, the evidence was that Pacific Bell has a commissionable account which could include accounts wholly within the state of California.

436 In Canada, with one exception, all the telco publishers require advertising to be placed in two publishers' territories to qualify for commission at 25 percent, [185] usually with a minimum of 20 percent of revenues required outside the dominant publisher's territory. Effectively, this generally means that two provinces will also be required. [186] Since the other publishers have much smaller territories than Tele-Direct, their "two publishers" requirement is easier to meet.

437 Professor Trebilcock places great stress on the fact that independent publishers also rely heavily on an internal sales force because "many of these directories do not remotely possess any market power (however measured) in many of the directory markets in which they operate." [187] Therefore, he concludes

> *The stark and enormously significant implication of this fact is that the decision to vertically integrate advertising selling functions clearly has nothing to do with market power*. It must be explained entirely by the kind of efficiency considerations ... outlined earlier in this opinion. [188]

438 Based on the evidence from White and DSP, we know that, in Canada at least, despite the fact that they offer commission on all accounts brought to them by CMRs, [189] the independents rely heavily on their internal sales force. The evidence that we have is that an internal sales force is a *necessity* for their survival rather than a choice based on efficiency considerations. Despite the liberal commission rules, they receive a small proportion of their overall revenues from agents and must rely on their own sales force for the bulk of their revenues. [190] In fact, recruiting an effective sales force is one of the hurdles a new publisher has to overcome.

439 While we agree that the independent publishers are unlikely to have market power, we are reluctant to conclude solely on the basis of the fact that they rely on an internal sales force that the "bundling" of sales and service by a publisher with market power is competitively benign. [191] We would likely be willing to draw that conclusion if we had evidence that the markets in which independents are operating, particularly in the United States, are competitive. If they were, yet most sales by publishers were on a bundled basis, that would be a very strong indication that efficiency was dictating the bundling and that there was only one product at issue. The only evidence we have, however, is that those markets, like Tele-Direct's market, are dominated by the telco publisher. It was pointed out to us by the respondents that most RBOCs' prices are even higher than Tele-Direct's. We also referred in the section dealing with Tele-Direct's market power to testimony that indicates that American telco publishers also have sufficient profits to subsidize local telephone service. We are, therefore, not satisfied that widespread reliance on an internal sales force across publishers, including independents, dictates a single product on efficiency grounds because it may be a function of telco dominance in all markets.

(c) Agents' Views

440 The implication of finding and prohibiting the tied selling alleged by the Director is that agents would, one way or another, be permitted to offer their services to a wider range of accounts below the level of "national" accounts currently considered by Tele-Direct as commissionable. Professor Trebilcock is of the view that agents are not interested in servicing smaller accounts.

441 In interviews with agents that the Director's staff undertook in investigations prior to filing the application, the agents stated that they were not interested in the smaller accounts. As reported by Professor Trebilcock, who had access to the summary of the interviews prepared by the Director's counsel, the smallest accounts that any of the agents expressed an interest in ranged from those spending from $10,000 to $50,000 per year on Yellow Pages. A lower limit of $10,000 excludes almost 98 percent

of all customers and approximately 70 percent of total revenue but would represent a substantial increase over the amount of revenue currently commissionable.

442 When giving evidence the agents took a different position and stated that they would be interested in all customers but would handle the business differently. The only reasonable interpretation is that the early answers reflected the agents views given their current method of operation. Their answers when giving evidence, in contrast, reflected the willingness of businesspeople to consider any reasonable opportunity to turn a profit, including considering the possibilities of paddling into uncharted waters. On the whole, we regard their views during the interviews as the more reliable. Because the agents apparently have little or no interest in servicing smaller accounts, we infer that they regard themselves, at least in their current setup, as at a cost disadvantage *vis-à-vis* Tele-Direct in dealing with these smaller customers.

443 Therefore, we agree with Professor Trebilcock that agents are not interested in servicing smaller accounts, although neither he in his evidence nor the Tribunal at this stage can be more explicit than having regard to the $10,000 to $50,000 range about what constitutes "smaller" accounts.

(d) Justification for Tele-Direct's Practice of Bundling

444 Professor Trebilcock attempted the most complete explanation and justification of Tele-Direct's practice of bundling space and services over most advertiser accounts. Initially, he divides what the Director has alleged to be advertising services into selling effort and consulting advice regarding the advertisement (artwork, placement, etc.). He states that selling effort cannot be priced on its own as customers will not pay for a "sales pitch"; it must be bundled with either space or consulting advice. The overall problem facing Tele-Direct (and other publishers) is to exercise control over those selling its product and to motivate agents or internal staff, as the case may be, to provide an optimal mix of selling effort and consulting advice *from Tele-Direct's viewpoint*. The Tribunal agrees that there is what is known as a "principal/agent" problem at work here. The issue is the nature of the problem and whether Tele-Direct's viewpoint is the only relevant one or should be the operative one.

445 Professor Trebilcock divides his explanation concerning Tele-Direct's approach to commissionability into three categories: small advertisers, larger local advertisers (which presumably includes regional advertisers) and currently commissionable advertisers (larger national or regional accounts involving multiple publishers). We have accepted that it is likely that small advertisers have no separate demand for advertising services. New advertisers, with few exceptions, coincide with small advertisers. For the sake of completeness we continue with the "efficiency" or cost-side evidence for all advertisers including small advertisers.

446 Professor Trebilcock's primary explanation of why Tele-Direct prefers to rely on its own resources for servicing small customers is that it is highly likely that it is cheaper for Tele-Direct to service small customers internally. His view is that the most effective method of selling advertising to these customers, probably because of significant economies of scale, appears to entail "'blanketing' directory territories in concentrated time blocks on a sequential basis" as Tele-Direct currently does. It is, however, not self-evident that this approach results in lower per unit costs than using smaller numbers of representatives who take a longer time to do a canvass. There is simply no evidence.

447 Another factor cited by Professor Trebilcock that is likely to lead to attenuated efforts by CMRs regarding small advertisers is the possibility that advertisers would engage in opportunistic conduct. The difficulty Professor Trebilcock foresees is that once the successful selling effort has been made, which the customer is unwilling to pay for, the customer is in a position to ask for, and other sellers are in a position to offer, a discount because they need only provide the consulting advice and not the selling effort, for which the first seller will be uncompensated. He believes that this problem is most acute for small advertisers, including first-time buyers. For large advertisers, selling effort constitutes a smaller percentage of overall advertising services. In addition, larger customers might have more difficulty engaging in opportunistic conduct because they are more likely to become known to agents. Tele-Direct can avoid this "free riding" by small advertisers by bundling space and selling effort. This is a version of the free riding argument often made in defence of vertical arrangements such as resale price maintenance which may be valid in some circumstances. There is, however, absolutely no evidence that it applies on the facts in the instant case.

448 Professor Trebilcock also points to a divergence of interest between Tele-Direct and agents which leads to an incentive compatibility problem should Tele-Direct use agents to service small advertisers, otherwise referred to as the "completeness externality". This externality, compounded by advertiser opportunism as explained above, is also the principal explanation advanced for why Tele-Direct prefers to provide services internally for "larger local" advertisers. As Professor Trebilcock recognizes, a simple cost difference cannot explain the reluctance of Tele-Direct to offer a commission on these accounts as the agents would not service them, even if commission were offered, if they were at a cost disadvantage to Tele-Direct.

449 According to Professor Trebilcock, there is a positive correlation between the "completeness" of a directory and the value that users place on it. Advertisers are willing to spend on a directory to the extent that the users find it valuable. But since each individual advertiser benefits only minimally from their own contribution to completeness, they are unwilling to pay for this effect. Tele-Direct, as the publisher, is able to internalize this externality over the longer term (the more "complete" and useful the directory, the more valuable the advertising space and the higher rates it can charge).

450 While there is no doubt that publishers value "completeness" for the reasons stated, it is largely an undefined term. There is no explanation in Professor Trebilcock's evidence, for example, of why a directory is in any sense more complete when there are paid bold listings rather than unpaid listings in ordinary type. Nor is there any adequate explanation of why users would value more advertisements in colour or larger advertisements unless they provide more information. There were also indications from the evidence that there can be *too much* advertising from the viewpoint of users. In large centres such as Montreal and Toronto, it has been necessary to split directories because of their size. Thus, while it is indisputable that directories must have sufficient representation by advertisers so that the directory is considered to be a useful reference, it is far from clear that *all* increases in advertising contribute to this objective. This point is critical because if Tele-Direct is encouraging increased selling effort beyond the range where further advertising contributes to completeness in any meaningful positive way, then the ability of Tele-Direct to sell additional advertising through its own sales force cannot be assumed to be socially beneficial in providing users with additional value.

451 Professor Trebilcock is of the view that the completeness externality leads to two results. First, Tele-Direct has a stronger incentive than CMRs to recruit new accounts; CMRs will focus most of their efforts on attracting existing advertisers from Tele-Direct or other CMRs. Second, while Tele-Direct is interested in retaining customers over the long term in order to enhance completeness, CMRs will be more concerned with immediate returns. Thus, when Tele-Direct recommends the, in Professor Trebilcock's words, "optimal" advertising package, the CMR will have an incentive to convince the advertiser that a less expensive or "sub-optimal" package is equally useful in order to recruit the customer. The risk of dissatisfaction on the part of the customer is increased; the customer may stop using Yellow Pages because of informational imperfections which make it difficult to distinguish between weakness in the medium and bad advice.

452 Further, Professor Trebilcock is of the view that it would be difficult for Tele-Direct to structure incentives to CMRs to induce them to sell a "socially optimal" quantity and quality of advertising by way of contract because of significant transactions costs. On the other hand, Tele-Direct can and does motivate its internal sales force "to sell and advise clients to purchase optimal packages by offering training, encouragement, screening of advertising sales by managers, internal promotions, awards, a team ethic, etc." [192]

453 The Tribunal is inclined to agree with Professor Trebilcock that it is probably easier for Tele-Direct to create incentives that motivate its own representatives to sell more than agents. The more important question is whether leaving Tele-Direct the unfettered choice of when to use agents and when to service internally leads to a truly "socially optimal" result. We have already indicated some doubts that the unrestricted pursuit of completeness, while it may be in Tele-Direct's interest, is wholly in the public interest or "socially optimal".

454 The Director argues that Tele-Direct chooses to retain services in-house because this allows it to motivate its sales force to exploit better the "information asymmetry" it enjoys *vis-à-vis* its customers or, in other words, to "oversell". He submits that Tele-Direct's incentive structure results in its sales representatives convincing advertisers to buy more than they would if they were provided with balanced information or the possibility of obtaining an alternative viewpoint from another service supplier.

Witnesses stated that they did not regard the advice from Tele-Direct's representatives as objective. We have acknowledged that, as a general matter, the effectiveness of marginal dollars spent on advertising is difficult to determine. This leaves customers somewhat vulnerable to the advice they receive. The incentive structure for Tele-Direct's representatives makes the Director's argument that they are motivated to "oversell" at least plausible. To the extent that the Tele-Direct representatives succeed in selling "too much" advertising to one advertiser, the effect would multiply throughout a heading, since, as the evidence revealed, many firms base their Yellow Pages expenditures on that of their competitors (the "prisoner's dilemma"). We, therefore, cannot accept Professor Trebilcock's critical assumption that the advertising a Tele-Direct representative sells is necessarily socially optimal.

455 With regard to recruiting new customers, we accept that a publisher would want to ensure that there was a thorough and efficient canvass of potential new customers, in the sense that all were approached and there was no duplication of effort. Since the prospective new Yellow Pages advertisers are easily identifiable from business telephone subscriber information in the hands of the publisher, it makes sense to assign them to specific persons rather than creating a "free for all". This can be done on an individual basis, by territory, or any other method that avoids multiple contact of the same prospect by different persons. The assignment is key; if customers are assigned it makes little difference whether the persons making the contact are employees or outside agents.

456 Professor Trebilcock also believes that a reason why Tele-Direct does not make larger local customers commissionable is that agents would curry favour with customers by recommending less than the "optimal" amount of advertising (or the amount that a Tele-Direct representative would recommend), with long-term detrimental effects, because they are primarily interested in immediate returns. While Tele-Direct may worry about the advice being given by agents, it is far from clear that the quality of their advice is a cause for concern with respect to satisfying the needs of consumers. The facts before us do not support Professor Trebilcock's view that agents tend to take a short-term view. When the actual relationships between customers and agents and customers and the internal sales force are considered, it is the former who have the long-term relationship. Until recently most Tele-Direct representatives, *unlike* agents, predominantly had a short-run relationship with customers. Professor Trebilcock also acknowledged that agents might be reluctant to be perceived as pushing current sales because customers might be inclined to switch agents. Tele-Direct's representatives do not have this concern because customers do not have freedom of choice. Much of the representatives' livelihood depends on increased sales to existing customers whereas the employees of the agents are on salary and receive no additional compensation for increased sales to existing clients.[193] Moreover, there is no evidence that agents' clients have tended to cancel advertising for any reason.

457 In Professor Trebilcock's view, the fact that Tele-Direct chooses to pay commission on multiple publisher accounts is evidence that Tele-Direct is motivated by efficiency considerations with respect to all its decisions regarding commissionability. Otherwise why would Tele-Direct choose to make any part of its sales commissionable? Professor Trebilcock interprets the fact that Tele-Direct pays commission on national accounts and that the bulk of sales to this segment is made by agents as proof that agents can more efficiently service this segment. While Professor Trebilcock believes that the tendency of agents to undersell and focus on existing advertisers and the possibility of opportunism are still present, the cost advantages of agents compensate for these weaknesses. These sophisticated advertisers are also better able to monitor whether they are being sold the "optimal" amount of advertising and the possibility of losing such a client effectively polices the agent. While the Director accepts that the agents are more efficient in servicing the commissionable segment, he disputes, as noted above, that agents in any circumstances sell "sub-optimal" amounts of advertising as defined by Tele-Direct's perspective. The Director takes issue with the view that Tele-Direct is more efficient in dealing with the rest of its customers. Detailed evidence on relative efficiency was placed before us and is the focus of the next section.

458 In summary, as indicated in the section on advertiser demand, we have accepted Professor Trebilcock's view that there is no separate demand for advertising services for "small" customers. With respect to those advertisers for which separate demand has been proven, called "larger local" advertisers by Professor Trebilcock, the Tribunal does not accept that either the completeness externality or the possibility of advertiser opportunism is supported on the evidence before us and, therefore, does not dictate that space and services are a single product with respect to those customers. The question of relative efficiency or cost advantages on the part of Tele-Direct with respect to servicing those advertisers will be addressed in detail in the next section.

(5) Comparative Profitability Studies: Agents/Internal Sales Force

459 The respondents have introduced evidence bearing on the comparative efficiency of Tele-Direct's representatives and agents to argue that the commissionability rules are, and always have been, efficiency based. The primary evidence is a comparative cost study dated 1995 created for these proceedings and entered through Michel Beauséjour, Tele-Direct's Vice-president of Finance. In addition, there are two other internal contribution-to-profit studies from 1974 and 1985, along with the descriptive evidence of Donald Richmond, Director of Manufacturing and Contract Administration for Tele-Direct, and Jan Rogers, Director of Corporate Methods and Support.

460 Before turning to a detailed discussion of the evidence it is necessary to consider its import with respect to the respondents' claim that its policies with respect to the payment of commission and the utilization of agents are dictated by efficiency considerations. While the studies referred to are relevant to the respondents' position, there are very important caveats that seriously weaken the conclusions that can be drawn from the evidence. Firstly, in an ordinary "make or buy" decision what is being compared is only the *cost* of producing a particular product in-house or buying it. This basic requirement (of looking only at cost) is violated when a comparison is made between the *contribution to Tele-Direct's profit* by the internal sales force and agents, i.e., revenue considerations enter.

461 More importantly, the products (i.e., the provision of services to commissionable and non-commissionable accounts) being compared in the Raheja study from 1974 and the 1995 study are very different. In fact, these studies are well described by the comparison of "apples and bananas". It is difficult to see what can be derived from the exercise of comparing the contribution to profit of agents and Tele-Direct's representatives who each deal with an entirely different set of customers. A significant percentage of the non-commissionable accounts are dealt with entirely over the telephone. Where representatives meet with customers, the customers' needs, for the most part, cannot be compared with the large multi-directory customers who rely on agents. What is the point of comparing the contribution to profit of agents, who are acknowledged to be relatively effective in serving complex "national" customers, with the contribution to profit of Tele-Direct's representatives in serving customers, many of whose requirements are relatively simple? While the comparison in 1985 between NAMs/NARs and agents might be considered to be a close, although not an exact comparison, the data are not current and not particularly detailed.

462 Overall, we have found these profitability studies not to be supportive of the respondents' position. The early studies are out-of-date (and Raheja is of limited relevance because of the difference in products being compared and an error in it), a critical point when considering current efficiency. At numerous points in the 1995 study, the differences in costs can be traced to differences in the characteristics of the customers being served rather than to any possible difference in the relative costs of agents and Tele-Direct's personnel. It also suffers from bias in favour of Tele-Direct because of its time frame and from methodological weaknesses.

463 For completeness, we will comment on the studies to further explain why, in our opinion, they are not reliable for the purpose advanced by the respondents, that is, to demonstrate that Tele-Direct's internal sales force is more efficient than agents.

(a) Raheja Study (1974) [194]

464 This study was prepared as part of a review of Tele-Direct's policy towards advertising agencies, including agencies specializing in Yellow Pages, which were a relatively recent phenomenon at the time, with a view to determining a commission payment. The study itself notes that the system of classifying accounts at Tele-Direct made it difficult to calculate profitability of the various components. Nevertheless, Mr. Bourke was of the view that management at the time placed sufficient confidence in the results of the study to make decisions on the basis of it. The study showed that in the "local market", defined as all sales within Tele-Direct's own directories, agency sales were less profitable. Although there is no evidence of the weight that the study played in the decision, in 1976 Tele-Direct sharply restricted the commissionable market by moving to the eight-market rule.

465 The odd thing about the exercise is that, taken on its own terms, there is an obvious error in the study: the commission to agents is counted both as a reduction from revenue *and* as an expense. When the error is corrected the comparative ratio

is somewhat better for the agents than it is for Tele-Direct's own representatives. The respondents take the position that the existence of the error is irrelevant; management acted on the information, proving that Tele-Direct was motivated by efficiency considerations and not by any other motive. While the study may suggest that Tele-Direct was at least *interested* in efficiency at the time, it is peculiar that so simple an error was not easily immediately detected by those supposedly basing decisions on it. In the circumstances, and having regard to the many qualifications in the study, the existence and results of the study are not of assistance.

(b) Profitability Study: National Accounts - Selling (1985) [195]

466 This study deals with the contribution to profit of national accounts serviced by agencies and NAMs in 1983 and 1984. Agencies included specialized and regular agencies while the NAMs included one Tele-Direct sales representative who dealt with high revenue potential customers and another who dealt with low revenue potential customers.

467 The study was entered in the record during the cross-examination of Mr. Beauséjour. Although the bottom line contributions to profit were noted, there was no examination of the study with the witness other than to establish that the then prevailing methodology regarding the payment to Bell Canada was employed. Based on the description in the document the only costs that were specifically attributed to the agents and NAMs were agency commissions and so-called sales expenses. The latter included the salaries of sales personnel in the national accounts group but also the personnel who processed orders submitted by agents. [196] All other costs were allocated on the basis of the net revenues generated by each of the two channels.

468 For the combined eastern and western regions, the contribution to profit as a percentage of total revenues generated for the agents and NAMs in 1983 was 18.7 percent and 17 percent respectively. In 1984 the contribution was 20 percent for both. While there are caveats, [197] the important point that emerges from the study is that Tele-Direct had no reason to believe at that time that it was less costly to rely on its own representatives who dealt with customers with the same or similar characteristics as those served by agents. The respondents did not bring to our attention any further study or any evidence whatsoever of internal consideration of relative efficiency leading up to the 1993 change in the commissionability rules. The only documentation on the record, and the evidence of Mr. Mitchell who was intimately involved in the preparation leading up to the change, focuses on effects on number of accounts and revenues that would be available to agents or the internal sales force under various scenarios.

(c) Profitability Study (1995) [198]

469 Towards the end of the hearing counsel for the respondents introduced through Mr. Beauséjour a document comparing the relative contribution to profit in 1994 of agents and the internal sales force, including the national accounts group. The document was admitted over the strenuous objections of counsel for the Director. During discovery, Tele-Direct provided a cost of sales figure for its internal sales force of 12.3 percent of revenue. The basis for that figure was explored through detailed follow-up questions and further explanation. There was no indication from the respondents that a second study was being undertaken by Tele-Direct, and that it contained results that were different from those that had been given on oral discovery and in follow-up answers. On December 4, 1995, counsel for the respondents produced the second study to counsel for the Director.

470 While we found the timing of the production and, in fact, counsel for the respondents' conduct of this whole matter of the new study to be, to say the least, unfortunate, we admitted the document while allowing the Director further discovery and preparation time. Despite the inappropriate timing, we were of the view that the Tribunal should not forego receiving information that could have an important bearing on the case and which apparently went to the heart of the respondents' position that the bundling of space and services by Tele-Direct was dictated by efficiency considerations.

(i) Unrepresentative Timing of Study

471 Apart from the general difficulty, already highlighted, of comparisons being made between the servicing of very different types of accounts, there is another serious defect in the recent study. The period for which the study is done almost certainly creates a bias in favour of the internal sales force *vis-à-vis* the agents because of the state of progress of certain improvements Tele-Direct was making to its process. The study fails to take account of the fact that the application of technology is in a period

of transition. While improvements favouring the internal sales force have been put in place, those favouring agents are on the immediate horizon. Despite this, the latter have been ignored in the study.

472 The system that Tele-Direct was putting in place in 1994 with respect to the publishing process was much more efficient for the internal sales force than the system that it replaced. More specifically, a computer system was introduced that allowed the electronic storage of advertisements, including finished artwork. This means that advertisements that renew without change, about 70 percent of all advertisements, are already in the computer. This is contrasted by Mr. Richmond with the previous system:

> ... In the old system, when we used an outside supplier [for pre-press functions, e.g., layout, paste-up], if we got an ad from last year, we may or may not have found that artwork because it was kept in a filing cabinet somewhere. It meant that the next year we had to have an artist redraw the artwork to match what was in the book before. This was very inefficient. We had to store logos all over the place so that everybody could get hold of it. [199]

There are also savings when there are changes to the advertisement. Under the new system, minor changes can easily be made on the electronic version of the advertisement.

473 Although agents submit their advertisements "camera ready" (as "veloxes"), they must be scanned into its system by Tele-Direct. If there is no change in an advertisement from the previous year then it follows that it should be possible to avoid re-scanning the advertisement, as it is already in the system, so some savings should be possible. Mr. Richmond did not know the percentage of agents' advertisements that are repeated without change but he did state that *all* CMR advertisements are scanned, implying they are scanned even if there is no change. It is not clear why Tele-Direct does this.

474 Thus, until recently and certainly when commission was further restricted in 1993, the costs that Tele-Direct would have experienced for the internal sales force were those that existed prior to the introduction of the new system. Under the old system the fact that agents were submitting complete advertisements meant that the cost comparison in the publishing part of creating a directory was far more favourable to agents than is presently the case. According to Mr. Richmond the cost of implementing the new system is $26 million and the annual savings are of the order of $12 million, which would have made previous publishing costs for internally-generated advertisements almost twice as high as they were in 1994.

475 Using current data disadvantages the agents with respect to the near future. There would be no need to scan agents' advertisements if the advertisements could be transmitted electronically. Currently, newspapers and magazines have systems in place for this purpose. The Yellow Pages publishers are moving in this direction, according to Mr. Logan, the President of the YPPA. He foresees this capability on the VAN system, the electronic YPPA order system, in two to three years. The pay-off would be a smoother flow with lower costs for publishers and CMRs and a reduction in errors.

476 The other area within publishing where change can be anticipated is in how Tele-Direct receives orders over the VAN. Currently a clerk in Montreal and one in Toronto take the information off the VAN as hard copy. After the order has been dealt with in this form, it is eventually re-entered into Tele-Direct's system. Ms. Rogers stated that Tele-Direct had hoped to be able to transfer all orders received through VAN directly into the contract data base without re-keying but this did not happen. According to Mr. Logan of the YPPA, "[t]he bigger publishers, both independents and utilities, now are developing and I think probably most of them -- not everybody, most of them -- can take the information directly off the VAN and run it into their systems without re-keying". [200] For some reason Tele-Direct is lagging behind other North American publishers in taking advantage of the VAN, the system for which agents made significant investments and for which, in part, Tele-Direct agreed to raise commission rates from 15 to 25 percent over a two-year period. While there have been reductions in cost in processing agents' orders since the movement to VAN, according to Ms. Rogers these appear to be less related to the VAN than to internal reorganization and, therefore, this confirms that Tele-Direct has not taken full advantage of the VAN.

477 For all these reasons, we conclude that the study does not recognize the technological transition in publishing Yellow Pages and that failure to do so favours the internal sales force over the agents.

(ii) Methodological Weaknesses

478 There are significant methodological problems with this study. The study is based on a "causal model". Costs were analyzed by Tele-Direct personnel to determine whether particular costs would be experienced in the absence of either agents or the internal sales force. If the answer was in the affirmative those costs were assigned to the group that caused the costs in question. Costs that could not be identified as caused by one or the other channel were treated as common costs and allocated to the two channels on the basis of relative revenue. This overall methodology was submitted to Tele-Direct's auditing firm for confirmation that the approach was sound. All cost assignments and allocations were performed by Tele-Direct personnel and the results were not audited by an outside firm. The testing of the results was done only through discovery and cross-examination during the hearing.

479 In the final result, the internal sales force's contribution to profit is shown to be approximately 13.5 percentage points higher than that of the agents. If we ignore for the moment the complications created by the difference in types of accounts serviced by each, this result would mean that in order for the agents to be competitive with the internal sales force the commission rate paid to them would have to be nine percent rather than the average of 22.5 percent that in fact is paid to them (22.5 less 13.5).

480 We turn first to the method used to allocate common costs. It is, in our view, valid to allocate these costs on the basis of revenue where the common costs can be considered to be related to the level of sales. This is true for an area such as manufacturing the directories, where the costs depend on the volume of advertisements and it may make little difference whether the advertisements are generated by the internal sales force or agents. This approach to allocating common costs is far less justifiable when the costs in question relate to personnel, e.g., the personnel department itself. This is important because sales representatives and all their support personnel are internal to Tele-Direct while the agents and their support personnel are not. In areas like these it would be more appropriate to allocate costs based on the relative proportion of employees identified as devoted to servicing the internal sales force and agents. Mr. Beauséjour admitted that this was an equally valid approach as using relative sales and that either method could have been used.

481 An analysis of each of the common cost areas to see whether it was more appropriate to use one or the other weighting procedure would have produced a more objective and defensible result. We note that Tele-Direct did depart from its approach to allocating common costs on the basis of revenue in at least one instance, which also happened to work in its favour.[201]

482 In the study Tele-Direct has violated its own methodology for attributing costs on a causal basis in a way that increases the costs of dealing with agents. As noted earlier, the current system of storing advertisements in a computer is in the process of being introduced. The cost of duplication between the old and new systems which would, on the stated approach, be attributed to the internal sales force, was treated in the study as a "transition" cost and was subtracted from the total internal costs. Similar costs related to moving to the VAN system were, however, attributed to the agents. To be even-handed, they too should have been considered "transition" costs and subtracted from the agents' costs. Further, it is questionable that the large investment in the new system for dealing with internal orders should simply be ignored, as was done in the study, rather than amortized over several years. The effect of not doing so is also to understate internal costs.

483 Counsel for the Director questioned the validity of the cost attribution in the study in several areas where a relatively small percentage of costs was taken to be caused by internal sales force even though the internal sales force and its direct support account for 61 percent of total employees. With respect to the costs of the Personnel and Benefits department, Tele-Direct concluded that there would only be a saving of about 16 percent from eliminating the internal sales force and thus only 16 percent of the total cost was attributed to the internal sales force. Similarly, in the Labour Relations department the saving assumed was only 30 percent. In defence of these decisions, Mr. Beauséjour explained that there were certain basic requirements that would have to be maintained to service the remaining personnel even if 61 percent of the personnel were eliminated. In effect, this approach treats the present organizational chart as inviolate. We question whether Tele-Direct would approach such a massive change on an "avoidable cost" basis.

484 The Director's principal challenge to this study relates to the method of dealing with the "cost of customer service" ("CCS"), the 40 percent of net sales revenue that is paid to Bell Canada. In all past studies of profitability, CCS was treated as a cost. It was also so treated throughout the many months when there were successive drafts and refinements of the

1995 study, almost until the moment that the study was entered in these proceedings. As a result of the penultimate amendment to the figure for CCS, the contribution to profit of the agents changed from being slightly less than the internal sales force to almost five percent *more* than the internal sales force. [202] Subsequent to that, Mr. Beauséjour decided that there was no reason to treat CCS as a cost since Tele-Direct and Bell were part of the same corporate entity and it makes little difference whether Tele-Direct made payments to Bell in the form of CCS or as dividends. Despite the apparently fortuitous timing of this realization, we accept that the point is valid. It is one thing for Bell to insist that CCS be included as a cost in order to impose market discipline on Tele-Direct but it is another matter when a study of the relative costs of using agents and internal staff is being performed. It then makes better sense to treat Bell and Tele-Direct on a consolidated basis. This in itself is not a methodological weakness.

485 However, the same reasoning means that the Tele-Direct study should have taken into account the benefits accruing to Tele-Direct/Bell from the fact that agents pay up-front for advertisements whereas customers of the internal sales force pay monthly. Mr. Beauséjour recognized this benefit in cross-examination but it does not appear in the study. As discussed earlier, the difference in timing of payment amounts to interest for about half a year, an appreciable difference of three to six percent per year.

(iii) Particular Examples of Problems Arising from the Difference in Products

486 The respondents advance this study as evidence which they say proves the different, and greater, "interface" costs that they incur when processing orders originating with external agents as compared to the costs of processing orders originating internally. As we indicated at the outset, it is extremely difficult, in conducting a study of this nature, to distinguish the genuine interface costs, costs that arise because Tele-Direct is dealing with agents rather than the internal sales force, from costs that arise from the nature of the advertising, and thus are not clearly related to the channel submitting the order and are not true interface costs. This problem permeates the study and, thus, it cannot prove relative interface costs in its present form as the respondents maintain it can.

487 That is not to say that we think the problems arising from the difference in the products, unlike the unrepresentative timing and methodological weaknesses already identified, consistently operate in the respondents' favour by lowering internal costs and raising agents' costs. As detailed below, this is sometimes the case; sometimes the reverse is true.

488 We turn to some examples. One relates to the interpretation and treatment of credits to customers as a result of Tele-Direct's errors. Customers using the internal sales force were reimbursed 1.3 percent of gross revenues as a result of errors made by sales representatives or during the publishing process. The rate of reimbursement to agents as a result of publishing error was 3.5 percent. This difference in the rate of Tele-Direct's errors is a factor in the overall lower contribution to profit of agents.

489 In the notes to the study it is stated that the difference is due to the fact that orders from agents are handled by more people, that is, CMR personnel and the national accounts publishing group of Tele-Direct. It is, however, irrelevant how many people in the CMR handle orders because only errors attributable *to Tele-Direct* are reimbursed. One possibility that may explain part of the difference in error rates is the greater knowledge and, perhaps, incentive that agents have to discover and complain about errors compared with the customers of the internal sales force. Mr. Beauséjour admitted this was a possibility. While this explanation would probably not change Tele-Direct's view that the higher reimbursement is a "cost", it would hardly be a reflection of lower efficiency in the use of agents compared to the internal sales force.

490 On the other hand, Ms. Rogers stated that the higher error rate in processing agents' orders was due to the larger, more complex advertising programmes submitted by agents. This suggests that the error rates are related to the nature of the advertising programmes rather than the channel through which they flow. To the extent that the principal reason for the difference is the difference in the type of accounts serviced by each channel, it cannot be concluded that the difference in error rate is a cost of dealing with agents.

491 The comparatively large error rate in dealing with agents' advertisements also shows up in other costs attributed to dealing with agents. A Tele-Direct employee checks the advertisements after the directories have been printed, a duplication

of effort since the agents also verify their advertisements. In addition, there are the resources expended in error negotiations with the agents.

492 Apart from the difference in the size of advertising programmes mentioned by Ms. Rogers, we also know about one other respect in which there is a significant difference in the content of advertisements submitted by the internal sales force and agents. Approximately 80 percent of "trade-mark" advertisements are handled by agents. Three Tele-Direct clerks within the department which processes agents' orders are assigned to checking a proposed trade-mark advertisement to ensure it has been authorized by the owner of the trade-mark. This is a cost assigned totally to agents that depends on the nature of the advertisement rather than on the channel dealing with the advertisement.

493 In a related area, that of bad debts, the study may, in fact, underestimate the comparative cost of dealing with agents as opposed to the internal sales force. Over the years there is a regular, although fluctuating, percentage of unpaid bills to customers serviced internally. Until recently Tele-Direct has not had the same experience with agents. Mr. Beauséjour noted that Tele-Direct is currently owed money by an agent but no figure for non-collection from agents was included in the study. The area of "melt", bad debts along with discontinuance of phone service, which negatively affect the internal sales force contribution to profit, are probably due to the character of the clients served by the internal sales force rather than having anything to do with who is servicing them. This is consistent with the more "volatile" nature of smaller accounts commented on in internal Tele-Direct documents.

(d) Conclusion

494 The numerous points on which the various studies are subject to challenge confirm that they cannot be used for the purpose of comparing the relative efficiency of Tele-Direct's internal sales force and agents.

(6) Conclusion on Separate Products

495 The Director has alleged that tying is present over the entire demand spectrum, although counsel for the Director has, in effect, recognized that there may not be tying for "small" customers. [203] According to the respondents, there is no tying for any of their customers. The parties' positions represent the two extremes. The Director would have us order the respondents to offer space and services separately (whether by separate prices or expanded commission) to all their customers. The respondents would have us make no order, thus allowing them to offer the two separately only to those customers that they choose.

496 We are of the view that neither extreme is supported by the evidence. What we see is that customers or advertisers are not homogeneous in terms of their need for services, or demand, or in terms of the costs involved in servicing them, or efficiency considerations. On the contrary, they are very heterogeneous, ranging from an individual running a small business from home and spending a minimal amount on a simple advertisement in the Yellow Pages to large corporations advertising in a multitude of directories. Our view is that we cannot decide whether there is one product or two products for all these different customers in a blanket fashion. We must engage in an exercise of "line drawing".

497 We are of the view that the evidence on demand for separately supplied advertising services and the evidence and arguments relating to efficiency of supply indicate that advertising space and advertising services are separate products with respect to "large local" and regional advertisers. They are a single product for "small" advertisers. The difficulty is in knowing how reasonably or workably to distinguish regional and, more problematic "large local", advertisers from "small" advertisers, whether in terms of number of markets (as in the eight-market rule) or dollars spent on Yellow Pages. In approaching this task we have been mindful that the Director bears a burden in this regard of justifying any remedy granted. To the extent that the evidence and argument have left the matter unresolved, it behooves us to be cautious in our conclusions.

498 We know that in the current commissionable market, including grandfathered accounts, where advertisers have a choice, they overwhelmingly choose agents. We have found that demand extends well below the 1993 "national" definition and below the eight-market definition of commissionability.

499 The differences in the constituents of demand between the relatively smaller advertisers that employ the services of a consultant and those of larger, multi-directory advertisers that use agents or would use them if their accounts were commissionable are notable. The needs of the latter are more complex. In addition to advice and creative services, most require help in administration and in assuring uniformity of message. We infer that the intensity of demand, as measured by their willingness to pay, year after year, for these services by way of extra advertising or issue billing, is greater for larger customers that have multi-dimensional needs.

500 We turn to cost considerations to focus further on the appropriate dividing line. We have concluded that agents' interest, presumably driven by their view of their comparative efficiency *vis-àvis* Tele-Direct, is primarily in customers with a minimum size ranging from $10,000 to $50,000 in annual expenditures on Yellow Pages advertising. This alone would dictate raising the bar for any unbundling of space and services to a minimum of $10,000.[204]

501 While the evidence that at least some independent publishers are willing to pay commission on any business brought in by agents could be interpreted to mean that it would be efficient to unbundle across the entire demand spectrum, we are not comfortable going that far. It is far from clear that these publishers are guided by the relative efficiency of agents and in-house staff in servicing customers since for the most part their market position requires them to rely heavily on in-house staff despite their liberal commission rules. Their policy on commission could as easily be reflective of their desire to attract additional demand as of the relative efficiency of agents and in-house staff.

502 The approach of the large American publishers associated with telcos is to bundle space and services for all accounts smaller than those classified as national accounts or, for those who use a "B" account definition, for accounts smaller than regional accounts. We are not satisfied, however, that the publishers in question operate in competitive markets and that their choice of a dividing line is necessarily efficiency driven. As a result, we conclude that while unbundling of national and "B" accounts by them is probably efficiency driven, we cannot say that bundling for the balance of their accounts is motivated by efficiency and is conclusive on the dividing line for one versus two products.

503 Tele-Direct's studies are not helpful in drawing conclusions with respect to relative efficiencies of agents and Tele-Direct's employees along the demand spectrum. What we do know is that the eight-market rule was created by Tele-Direct primarily to capture more accurately "national" accounts than did the original 1958 definition and, at the time, Tele-Direct apparently considered this rule to be in its interest. Further, it is also clear had no internal discussion of relative efficiencies when it further restricted commissionability in 1993. In doing so it ignored demand from existing eight-market customers (including those that were forced to buy unneeded advertising to qualify for eight-market status). Given that agents had served these types of customers over many years, that other publishers have "B" accounts, and that Tele-Direct at no time addressed the comparative efficiency of agents and the internal sales force for these accounts, there is no evidence of any efficiency offset which would lead us to conclude that space and services were not separate products for all the accounts within reach of the eight-market rule.

504 The eight-market rule was not specifically designed to deal with the needs of regional advertisers. This is obvious from the fact that there are seven markets in Ontario and six in Quebec. By almost any definition an advertiser covering all the markets in a province would be considered "regional" although such an advertiser would not be commissionable under the eight-market rule. Many of them likely managed to bring themselves within the rule with extra advertising. At a minimum, a firm that covers an entire province the size of Quebec or Ontario should qualify without more. We have no reason to doubt that the strong demand for advertising services from agents displayed by currently grandfathered eight-market accounts extends to advertisers that cover six markets, which would mean, for example, the entire province of Quebec. It is difficult to see that the efficiency implications for separately supplied advertising services at the six-market level are significantly different than for eight markets.

505 There is a rough relationship between the number of markets served and the amounts spent on Yellow Pages advertising. According to Tele-Direct's internal studies, the average amount spent on Yellow Pages advertising among customers served by Tele-Direct representatives but that were in the commissionable category under the eight-market rule was $54,000.[205] The comparable figures for accounts that would qualify under a seven-market and six-market rule, respectively, are $44,000 and

$26,000. While some agents might find six-market accounts below their threshold of interest, the evidence is that they are within the range that some agents are willing to service, perhaps in anticipation of future growth.

506 We are cognizant that looking only on the demand side a case might be made for unbundling well below the six-market level. The evidence with regard to efficiency, principally the agents' views on accounts that they would like to service, does not support this conclusion. The Director suggests that there is no harm in unbundling across the board -- the market can be allowed to decide. If agents are more efficient, they will end up servicing the accounts. If Tele-Direct's internal sales force is more efficient, especially for smaller accounts, it will end up servicing those accounts. This implies a simple solution to a complex problem. In large measure, Tele-Direct is "the market" since the pricing of advertising services is inevitably its responsibility, whether it chooses to set commission rates for various types of accounts or to charge separately for the services of its internal sales force. Given widespread unbundling, Tele-Direct might well decide to set several different prices (or commission rates) for advertising services depending on the relative costs of servicing various categories of accounts. As the study on relative profitability showed, this would likely be a difficult task. It is not one that should be imposed without some greater certainty that there will be a significant overall benefit from the change. Therefore, we find that space and services constitute two products down to the six-market level and a single product below that level.

Addendum on Tying

507 At the outset of our discussion on tying, we indicated that another theory of the tying case was possible and we address that now. While some of the respondents' arguments and evidence are related, they did not adopt the precise approach which we outline hereunder.

508 One interpretation of the evidence is that advertising space and services are not demanded nor provided separately even in the existing commissionable market. Rather, larger advertisers either wish to purchase the bundle of space and services from Tele-Direct or from agents, in either case they are purchasing bundled space and services. Tele-Direct insists that the agents it deals with be accredited. The Director acknowledges that the placing of advertising in telephone directories is complex and accepts accreditation of agents by Tele-Direct. Indeed we do not necessarily envision advertisers purchasing space from Tele-Direct and providing their own services (except perhaps in the case of advertisers with accredited in-house advertising departments).

509 Following from the fact that accreditation means that only accredited services providers (including Tele-Direct's internal sales force) can place orders for space and they do so along with providing other services, it could be concluded that space and services must be bundled to be sold and that, therefore, they constitute a single product. Another way of viewing the matter would be that advertising space and services could be considered a single finished product on the basis that the real complaint respecting tying is not that advertisers are precluded from purchasing space and services separately, but that Tele-Direct has simply refused to supply unbundled space (i.e., at a discount) to agents which prevents them from selling to advertisers the same bundle of advertising space and services that is sold by Tele-Direct.

510 The evidence does not support this interpretation for the following reasons. First, we are satisfied that agents are not resellers of Tele-Direct's advertising space such that advertisers are purchasing the space *from agents* along with services. Agents do not carry an inventory of advertising space which they purchase from Tele-Direct for resale to advertisers. They assume no risks with respect to advertising space. Rather, when the agent's customer decides to purchase Yellow Pages advertising, the agent submits an order to Tele-Direct together with all other necessary information and Tele-Direct processes the order. The fact that Tele-Direct contracts with and bills the agents for the space, and treats the agents as the "buyer" in that sense, is not determinative of the relationship between the agent and the advertiser. We think that the fact that the agent does not have an inventory of space for resale is more consistent with the agent acting as an agent for the advertiser for the acquisition of space from Tele-Direct.[206] On this view of the evidence, the purchaser is not purchasing a bundle of space and services from the agent.

511 Second, the evidence does not indicate that advertisers wish to purchase advertising space from an agent as opposed to Tele-Direct. We think, all other things being equal, they are probably indifferent. However, there was evidence that they would prefer to pay Tele-Direct for space through monthly billing on their telephone bill rather than purchasing the space through

agents on an issue billing basis. It is Tele-Direct that requires the latter arrangement, not the customer who demands it. This is not evidence that advertisers demand Yellow Pages space from agents as part of a service and space bundle. Nor have we been presented with evidence suggesting that efficiency would be adversely affected if Tele-Direct was to contract with and bill advertisers directly for space.

512 Finally, a purpose of the *Competition Act* is to encourage competition in order to provide consumers with competitive prices and product choice. There is evidence of demand for services from agents as opposed to Tele-Direct and efficiency considerations at the six-market level and above do not preclude facilitating such choice. For these reasons we have rejected this alternative interpretation of the evidence and have accepted that advertising space and advertising services constitute separate products.

E. Tying Condition

513 Having determined that there are separate products over at least part of the spectrum of Yellow Pages advertisers, we must now determine if those advertisers falling within that range were somehow "forced" to buy the products together rather than from separate sources. Since we have not found separate products below six markets, any references to the "local" market in this section refer only to that portion of the market from the current "national" definition down to six markets. In that range, where we have found separate products, we must establish that the two products were "tied" together as set out in subsection 77(1).

514 Paragraph 77(1)(a) provides one definition of tied selling. In essence, it is described as a practice whereby a supplier, as a "condition of" supplying the tying product to a customer, requires that customer to acquire another product from the supplier. Paragraph 77(1)(b) provides an alternative definition, the operative portion of which is that tied selling is a practice whereby a supplier "induces" a customer to meet the condition of acquiring another product from the supplier by offering to supply the tying product on more favourable terms and conditions if the customer agrees to acquire the second product.

515 The Director pleaded both the "requirement" or "condition" and the "inducement" in the application. The Director submits that, on non-commissionable accounts, the respondents require the customer to acquire their advertising services as a condition of supplying the space at a bundled price "and/or" the respondents induce customers to acquire their services by offering to supply space at no additional cost for the additional value if the customer also acquires their services.

516 It is undisputed that Tele-Direct does not segregate the charges for space and services in the non-commissionable market segment and that those "local" customers who get their services elsewhere than from Tele-Direct (for example, by using a consultant) or do not need any or some of the services, do not pay less or get a discount off the total price of their advertising. The Director submits that the effect of this is that "local" customers must buy space and services together from Tele-Direct; it is only economically viable to purchase services separately from an independent provider in the commissionable market. To do so in the non-commissionable market would require the customer to pay twice for services, once to Tele-Direct as part of the bundled price and once to the independent service provider that would actually provide the services. The Director argues that the effect of this is that it is either a "requirement" that both space and services be acquired from Tele-Direct or, perhaps the better fit on the facts, a compelling "inducement" to do so.

517 The Director points to evidence of the advertisers that recognize that if they use an independent service provider when commission is not available they will, in effect, be paying twice for services and this is why they stay with Tele-Direct despite dissatisfaction with the quality of service. Further, the Director emphasizes that Tele-Direct itself knew the value of this economic inducement and used claims that its services were "free" or included in the cost of the space to convince customers to choose its services.

518 The respondents advance a number of arguments relevant to the question of whether space and services are indeed tied together on the facts of this case. They argue that there is no "condition" involved because there is no contractual obligation to purchase services from Tele-Direct as local customers are free to acquire services from a CMR; however, Tele-Direct will not pay a commission on the account. They rely on the case of *Ortho Diagnostic Systems, Inc. v. Abbott Laboratories, Inc.*[207] for the proposition that it is not an antitrust violation to sell components as a package where the same items can be purchased

separately but at greater cost. They argue that there are no *more favourable* terms and conditions offered to customers that take Tele-Direct's services over those that do not because there is only one set of terms and conditions in the local market -- the bundle.

519 We see no reason to conclude that the references in the section to "conditions" or even "terms and conditions" require that these be embodied in an explicit contractual document. As we understand this requirement, it is to determine that customers are effectively forced or coerced to take the two products, which have been determined to be separate products, from the supplier of the tying product rather than acquiring only the tying product from that source and getting the tied product from someone else. This obviously can occur where there is an explicit contractual requirement to that effect. It may, however, also be equally present where there is a discount or other advantage that constitutes an inducement to acquire the two from the same source. The "conditions" or coercion referred to in the section mean more than contractual terms; they may be economic conditions which have the effect of precluding choice of supplier. Whether customers actually do have an effective choice or not is a question of fact to be determined on the evidence before us, not of the legal nature of the purchase arrangement.

520 The *Ortho* case is of no assistance to the respondents. The case involved an application for a preliminary injunction by Ortho to prevent the implementation of a contract between the Council of Community Blood Centers and Abbott for a number of blood tests. Ortho alleged both monopoly leveraging and tying based on the theory that Abbott's pricing of various "packages" of blood tests forced any rational buyer to purchase all five tests from Abbott rather than buying one or more tests from competing suppliers like Ortho. The preliminary injunction was denied on the basis that Ortho had shown no irreparable harm.

521 The passages quoted to us by the respondents were simply the Court's summary of Abbott's arguments and authorities on the monopoly leveraging point. [208] The Court stated that Abbott's arguments gave it "pause" but all that it concluded in the end was that Ortho had shown that there were sufficiently serious questions on the merits to warrant litigation. On the tying claim, the Court, in fact, noted:

> There is some case law to support the position that a tie does not have to be explicit but can instead be inferred from the pricing structure of two products and the market power which the party has....
>
> Absent an explicit condition in the contract, there is a question of fact for the fact-finder regarding the existence of the tie, and we are unable on this state of the record to determine if plaintiff is likely to prevail on the merits of the tying claims. What is evident however is that there are sufficiently serious questions going to the merits of the tying claim to make them a fair ground for litigation. [209]

522 Therefore, the relevant question for us is whether, on the facts before us, the customers of Tele-Direct were "forced" to acquire services from it or did they have the option of acquiring space alone from Tele-Direct. We conclude that the evidence of the advertiser witnesses and Tele-Direct's own behaviour amply support the position of the Director that the lack of commission in the "local" market operated as a powerful inducement to acquire both space and services from Tele-Direct.

F. Substantial Lessening of Competition

523 Has the extent of the exclusion resulting from Tele-Direct's limitation of commission to "national accounts" as defined in the 1993 rule resulted in, or is it likely to result in, a substantial lessening of competition? It is first necessary to establish the relevant comparator that should be employed in evaluating the magnitude of the lessening involved. There is no purpose in comparing the six to eight-market accounts with all other accounts that are currently bundled and that we have decided may remain that way because demand characteristics and likely efficiency comparisons dictate a single product. The most relevant comparator is the size of the existing commissionable market under the 1993 definition because we are considering expanding that market. Eight-market accounts are currently commissionable but this could be discontinued at any moment without an order of the Tribunal so we include eight-market accounts as part of the tied portion of the market to evaluate substantiality. Further, grandfathering currently prevents accounts from "growing into" eight-market status.

524 In a word, it is clear that six to eight-market accounts constitute an appreciable volume of business that, without the tying practice, would be available for agents to service. The largest constituent is currently grandfathered eight-market accounts.

In addition, there are the six and seven-market accounts now serviced exclusively by Tele-Direct. Based on the Tele-Direct documentation prepared in anticipation of the 1993 rule change and the evidence of Mr. Mitchell, both of which are far from being completely clear, we find that a fair approximation of the value of accounts which are now commissionable under the 1993 definition (thus, excluding grandfathered accounts and including "national" accounts serviced both by Tele-Direct and agents) is about $30 million. Our best estimate of the accounts which have been found to be tied, namely six, seven and eight-market accounts, and would be added to the commissionable market is about $19 million. Thus, the combined total of the accounts found to be tied adds up to well in excess of 50 percent of the current commissionable market. Both in relative and absolute dollar terms, the amount of revenue affected by the tie is undoubtedly sufficient to conclude that there is a substantial lessening of competition.

525 A final issue arises with respect to substantial lessening. The respondents advance in their written argument a "technical" argument based on the use of definite and indefinite articles in subsection 77(2). They submit that the substantial lessening of competition must be assessed in the market for the tying product, here the market for the supply of advertising space: has the tying of space and services impeded entry into or expansion of a firm or had any other exclusionary effect in the space market? This argument was not referred to orally.

526 While the definite and indefinite articles can be read in different ways, the section should be read in a way that makes sense. Since tying generally, and certainly in this case, involves "leveraging" from the tying product market to the tied product market, it is only sensible to assess the effects of the practice, or the substantial lessening of competition, in the target or tied product market.

G. Remedy

527 Section 77 of the Act provides that upon a finding by the Tribunal of tied selling by the supplier of the tying product (Tele-Direct), the Tribunal may make an order "prohibiting [the supplier] from continuing to engage in ... tied selling...."

528 Prohibiting Tele-Direct from continuing to engage in tied selling means that the tying product, advertising space, and the tied product, advertising services for six, seven and eight-market accounts, must be unbundled by Tele-Direct. The "unbundling" may take the form of separate prices: Tele-Direct could quote separate rates for space and services. It may also take the form of an expanded definition of commissionable accounts to allow six, seven and eight-market customers to use the services of an agent, who would earn commission at an appropriate rate.

529 While we do not rule out the possibility of advertisers acquiring space from Tele-Direct (at the separately quoted space price) and then paying a separate fee for services to Tele-Direct or to an agent, we think this scenario is unlikely. There are practical implications arising from Tele-Direct's predominance in the publishing market and the accreditation of agents that suggest that the marketplace in an "unbundled" environment after our order will work largely the same as it does today except that the commissionable market will be expanded to cover six, seven and eight-market accounts. Advertisers that wish to utilize Tele-Direct's services would continue to buy space and services from Tele-Direct at one price.

530 Because of the specialized nature of the Yellow Pages industry, the respondents regard accreditation as important and the Director and his witnesses, for example, Ms. McIlroy and Professor Slade, support it. Thus, Tele-Direct would be justified in requiring that services, including the placement of orders, be provided by accredited service providers only. Unbundling does not require that advertisers be given the opportunity to interface directly with Tele-Direct to place their orders, if they do not wish to utilize Tele-Direct's services. Advertisers would either deal with Tele-Direct for space and services or with an agent for services and, through an agent, with Tele-Direct for space. This contributes to our view that in all likelihood, the structural arrangement that exists today would likely continue, changed only to permit agents to compete with Tele-Direct to provide services to six, seven and eight-market accounts.

531 The prohibition on tying, however, does not carry with it a requirement that Tele-Direct pay a specified commission to agents. It will be up to Tele-Direct to pay such commission as it chooses. Commission rates could be identical for all accounts or might be variable. However, the prohibition on tying implies that the price charged by Tele-Direct for its space and services

together cannot, in relation to the price at which it offers space to customers using agents (i.e., its price for both space and services together less the commission to the agent) be an inducement to customers' using Tele-Direct's services rather than agents, thus continuing the tie. In other words, the price for space to customers of agents cannot be artificially inflated (or the commission paid to agents artificially reduced) so that space is not realistically available separately. Tele-Direct cannot make it economically non-viable for customers to purchase space from Tele-Direct and use an agent's services because in those circumstances the space effectively costs more than if the customer were to use Tele-Direct's services.

532 The intervenor agents (and the Director in the alternative) submit that the Tribunal should order Tele-Direct to pay a minimum 15 percent commission to agents. Although this proposition was advanced in the context of the Tribunal finding a tie across the entire market for Yellow Pages advertising in Tele-Direct's directories, in the context of our finding that there is only tying down to the six-market level, the minimum 15 percent commission would apply in respect of six, seven or eight-market customers serviced by agents. We have no difficulty with Tele-Direct voluntarily complying with our order prohibiting tying by paying a minimum 15 percent commission. A 15 percent commission rate has historical precedent and is well accepted in the advertising industry. It appears to be a workable "average" that would be simpler to administer than variable commission rates for each of the six, seven and eight-market accounts, should Tele-Direct choose to use it.

533 However, the setting of a commission rate by the Tribunal is not, in our opinion, envisioned in the powers given to it under section 77 of the Act regarding tying or in the general jurisdiction given to the Tribunal under section 8 of the *Competition Tribunal Act*.[210] The Tribunal is not a rate-setting body. The implication of rate-setting is an ongoing regulatory oversight which is the antithesis of the objectives of competition policy. To grant this remedy, the Tribunal would be required to hold itself open to revision to the 15 percent rate. We could not saddle Tele-Direct or the agents with a rate cast in stone forever and the alternative of ongoing rate regulation is, in our view, simply not part of the mandate of the Tribunal. It is true that the Tribunal issued the Consent Order providing for a 25 percent commission on national accounts, but that order was for a limited time and was on consent. It provides no justification for a gearing up of a general regulatory process implied by setting a rate for an indefinite period in this contested proceeding.

534 The Tribunal's order will therefore provide that Tele-Direct is prohibited from tying its advertising services to advertising space for six, seven and eight-market accounts. Should Tele-Direct choose to comply with the order by a commission arrangement with accredited agents at a minimum rate of 15 percent, the Tribunal would find such an arrangement acceptable compliance. Otherwise, Tele-Direct can price space and services separately or implement a commission arrangement for six, seven and eight-market accounts at an appropriate level or levels. The price Tele-Direct charges for its bundle of space and services, if it continues to offer them as a package, in relation to the price that it charges for space separately cannot be such that it continues to tie space to services by way of an inducement offered to customers that take Tele-Direct's services. The order will specify that the parties may apply to the Tribunal for interpretation of the order or directions if they consider it necessary to ensure compliance.

IX. Abuse of Dominant Position

A. Introduction

535 For ease of reference, we set out again subsection 79 (1) of the Act, which deals with abuse of dominant position:

> Where, on application by the Director, the Tribunal finds that
>
> > (a) one or more persons substantially or completely control, throughout Canada or any area thereof, a class or species of business,
> >
> > (b) that person or those persons have engaged in or are engaging in a practice of anti-competitive acts, and
> >
> > (c) the practice has had, is having or is likely to have the effect of preventing or lessening competition substantially in a market,

the Tribunal may make an order prohibiting all or any of those persons from engaging in that practice.

536 Unlike previous abuse of dominance applications that have come before the Tribunal, where only one market was at issue, the Director here is putting forward two abuse of dominance cases, one involving the alleged market for the supply of advertising space and the second, the alleged market for the supply of advertising services.

537 One case is that the respondents have market power in the market for the supply of telephone directory advertising space, or publishing, and have engaged in a practice of anti-competitive acts which has resulted in a substantial lessening of competition in that market. This case involves the responses of the respondents to the instances of new entry by competing broadly-scoped publishers in local markets, most significantly the entry of White in the Niagara region and the entry of DSP in Sault Ste. Marie.

538 The second case is that the respondents have market power in the market for the supply of telephone directory advertising services or, in the alternative, that they are leveraging their market power in the space market into the services market, and have engaged in a practice of anti-competitive acts which have resulted in a substantial lessening of competition in the services market. Among the anti-competitive acts alleged to form a practice affecting this market are both acts directed at agents and acts directed at consultants. For example, one of the alleged anti-competitive acts is the bundling of space and services (restricted commissionability rules for agents) which forms the basis of the tying portion of the Director's application. Another is the alleged refusal by Tele-Direct to deal with consultants.

B. Approach to Section 79 Analysis

539 In dealing with the particular allegations in this case, the purpose of section 79 must be kept in mind. Neither party disputed that section 79 is not intended to condemn a firm merely for having market power. Instead, it is directed at ensuring that dominant firms compete with other firms on merit and not through abusing their market power. [211] Such abuse includes, as pointed out by the Director, entrenchment and extension of market power. [212] It would not be in the public interest to prevent or hamper even dominant firms in an effort to compete on the merits. Competition, even "tough" competition, is not to be enjoined by the Tribunal but rather only anti-competitive conduct. Unfortunately, distinguishing between competition on the merits and anti-competitive conduct, as the Tribunal has noted in the past, is not an easy task. [213]

540 The Tribunal established in *NutraSweet* that the list of anti-competitive acts set out in section 78 is not exhaustive. The Tribunal held that the common feature of the acts included in section 78 is that they are all performed for a "purpose", namely "an intended negative effect on a competitor that is predatory, exclusionary or disciplinary." [214] The Tribunal's approach to assessing whether acts are anti-competitive was set out most recently in *D & B*:

> ... in evaluating whether allegedly anti-competitive acts fall within section 78, the Tribunal must determine the "nature and purpose of the acts which are alleged to be anti-competitive and the effect that they have or may have on the relevant market". The required analysis will take into account the commercial interests of both parties to the conduct in question and the resulting restriction on competition. The decision in *Laidlaw* makes it clear that, although such proof may be possible in a particular case, it is not necessary for the Director to prove subjective intent to restrict competition in the relevant market on the part of a respondent. The respondent will be deemed to intend the effects of its actions. [215] (references omitted)

541 The Tribunal must determine the "purpose" of the act that is alleged to be anti-competitive. "Purpose" is used in this context in a broader sense than merely subjective intent on the part of the respondent. As counsel for the Director pointed out, it might be more apt to speak of the overall character of the act in question.

542 What the Tribunal must decide is whether, once all relevant factors have been taken into account and weighed, the act in question is, on balance, "exclusionary, predatory or disciplinary". Relevant factors include evidence of the effects of the act, of any business justification and of subjective intent which, while not necessary, may be informative in assessing the totality of the evidence. A "business justification" must be a "credible efficiency or pro-competitive" business justification for the act in

issue.[216] Further, the business justification must be weighed "in light of any anti-competitive effects to establish the overriding purpose"[217] of the challenged act:

> ... The mere proof of *some* legitimate business purpose would be, however, hardly sufficient to support a finding that there is no anti-competitive act. All known factors must be taken into account in assessing the nature and purpose of the acts alleged to be anti-competitive.[218]

543 In their argument, the respondents advance several propositions regarding the nature of an anti-competitive act that they submit the Tribunal must determine as a matter of law in this case. One of these propositions is particularly relevant to the case relating to the publishing market. They state that certain acts constitute "competition on the merits" and cannot ever be anti-competitive acts. In another formulation, they state that objectively competitive conduct cannot constitute an anti-competitive act. They would define "objectively competitive" conduct as conduct which a non-dominant firm would have undertaken in similar circumstances.[219] Applying this argument to the specific case of the allegations involving the publishing market, the respondents say that the Director cannot allege, for example, that "zero price increases" are an anti-competitive act because competitive firms sometimes use zero price increases or even price decreases to compete.

544 We do not take issue with the proposition that section 79 is not intended to prevent dominant firms from competing on the merits. We do, however, doubt that it is possible to define, in the abstract, a list of acts that are "objectively competitive" and that could never, therefore, engage section 79. Competition on price is surely one of the hallmarks of a competitive market. Yet even the act of "price cutting" cannot be given absolute immunity from review under section 79 because of the possibility of predation. In our view, a case-by-case, factual analysis will always be necessary to determine if, in the particular circumstances, an act is anti-competitive. All the relevant factors must be weighed in deciding whether a particular act is, in the circumstances, competition on the merits or an anti-competitive act. That question cannot be answered as a matter of law in a vacuum.

C. Market for Advertising Space - Publishing

(1) Facts

545 The independent publishers DSP and White have already been discussed at various places in these reasons, largely in chapter "VII. Control: Market Power". We summarize here and add some further relevant facts.

546 Since 1993, DSP has produced a white pages and classified directory covering Sault Ste. Marie, Elliot Lake and Wawa in northwestern Ontario. Since January 1994, it has been a division of Southam Inc. but is still operated largely independently from the Southam newspapers in the area in question. Tele-Direct publishes three separate directories for the areas covered by the DSP directory.

547 The DSP Canadian directory is combined with a corresponding directory for the Sault Ste. Marie, Michigan area. The American portion is published by Noverr Publishing Inc. ("Noverr") which publishes several directories in the state of Michigan.

548 White publishes competing directories (Niagara Falls, St. Catharines and Fort Erie) to Tele-Direct's in the Niagara region in Canada. White also entered Canada in 1993. White is a wholly-owned subsidiary of the American company White Directory Publishers, Inc. which is a private company controlled by the Lewis family. The American company began operations in 1968 with a classified directory (yellow pages only) in the Buffalo area. A white pages directory was later added and then in the second half of the 1980s and early 1990s additional directories containing both classified and white pages were started in other areas of New York state and Pennsylvania. White's entry into Canada was followed by further expansion in the United States in 1994 and 1995, into Florida and North Carolina.

549 Both DSP and White first published "prototype" directories in Canada, DSP in January 1993 and White in November and December 1993.[220] DSP published its first revenue directory in November 1993. White began its canvass for its first revenue directory in late 1993 and continued in 1994. Its first revenue directory was published in late 1994.

550 In order to produce their directories, White and DSP had to generate subscriber listings for their white and yellow pages. As discussed earlier, despite the 1992 ruling of the CRTC, at the time of their entry DSP and White did not have commercially viable direct access to subscriber listings. They had to use the most recent Tele-Direct directories, re-key the data, verify and update each listing.

551 Included in the directories of White and DSP were features which were not present in the existing directories of Tele-Direct in either region, including audiotext, community pages, larger size print, three-column format, postal codes and additional colour plus a free smaller size copy in addition to the regular size directory (a "mini").[221]

552 Less detail was provided on the other two competitive markets referred to by the Director. In October 1994, a competing directory was published in Joliette, Quebec by Les Pages Soleil, a joint venture involving the company which publishes the Locator directories in Ontario. Les Pages Soleil also feature enhancements like community pages, postal codes and only three columns per page.

553 In Newfoundland, a company called Unifone Files Inc. ("Unifone") intended to publish a province-wide directory called "The Big Phone Book", apparently some time in 1993 or 1994. Tele-Direct (Services) Inc. publishes seven directories in Newfoundland for Newfoundland Tel (St. John's, eastern Newfoundland (four), western Newfoundland and central Newfoundland). In addition to its broader scope, the Unifone directory was to feature larger print, community pages and a "mini" directory. As of February 1994, however, Unifone was no longer in existence and it never did publish a directory.

554 The two entrants for which we had evidence on this point (White and DSP) priced advertising in their directories 30 to 40 percent below Tele-Direct's rates.

555 Tele-Direct responded to these various entrants using a number of initiatives, including price freezes, advertiser incentive programs, advertising and promotional expenditures, and directory enhancements. Tele-Direct was also involved in litigation or threatened litigation against the entrants in Sault Ste. Marie and Niagara. Further details on these responses follow.

556 Tele-Direct adopted a zero percent price increase or price freeze in Sault Ste. Marie in 1993. Except for 1994, when there was a general price freeze across all of Tele-Direct's territory, prices were increased annually in the vast majority of Tele-Direct's directories outside of the competitive markets.[222] In 1995, there were zero price increases in Sault Ste. Marie, Joliette and the Niagara region. The information on the record regarding 1996 prices is that all markets were subject to a price increase, including the competitive markets.

557 Tele-Direct has offered advertiser incentive programs of various kinds throughout its territory at different times. The critical distinction between the programs offered in the competitive markets and those offered in other markets is that in the competitive markets the incentives were available to advertisers who *renewed or increased* their advertising whereas in the other markets only those advertisers who *increased* their level of spending were eligible.

558 The advertiser incentive program in Sault Ste. Marie was first offered in 1993. While originally intended as a one-year program it was extended to three years, ending in 1995.[223] In Niagara, a program similar to the Sault Ste. Marie advertiser incentive program was offered in 1994 and 1995. As of the hearing, no decision had been taken about proceeding to offer the program in Niagara for a third year. In Joliette, a program was offered in 1995 which provided that advertisers renewing or purchasing advertising would receive the next largest size advertisement or colour if applicable. In Newfoundland, the same program was offered in four directories in 1994. Mr. Beauséjour, Tele-Direct's Vice-president of Finance, confirmed that the program was instituted in response to the presence of Unifone.[224]

559 In each competitive market, Tele-Direct added a number of features to its directories that were introduced first by the entrant. Most of these features tend to be fairly standard in many American markets. For example, the enhancements used by White in its Canadian prototype are almost all standard features for it in its American markets. The features added by Tele-Direct in response are not generally used by it in its directories in other markets.

560 We have limited information about the Joliette and Newfoundland situations in this respect. Tele-Direct did add a community pages section to its Joliette directory. Mr. Renwicke thought that postal codes had also been added. A memorandum dated October 1993 records a recommendation by Tele-Direct (Services) Inc. that the Newfoundland directories contain "some enhancements starting with the central Newfoundland 1994 directory." [225]

561 In Sault Ste. Marie, Tele-Direct added enhancements to its directories similar to those offered by DSP, including four-colour format, postal codes, community pages and its own audiotext system (Talking Yellow Pages or "TYP"). Likewise, in Niagara Tele-Direct reacted to the entrance of White by adding enhancements similar to those of White to the Tele-Direct directories in that area. Tele-Direct did not introduce all of the enhancements included by the entrants. For example, it did not adopt larger type or distribute "mini" directories.

562 Some further detail is required about the audiotext system or TYP in order to understand the allegations advanced by the Director in this respect. Audiotext is an electronic technology which allows consumers with Touch-Tone phones to obtain access to audio messages which are stored on a computer. The directory publisher provides in its directory codes which can be used by consumers to gain access to the messages on topics of interest to the consumer. The provision of an audiotext service is comprised of both hardware components, the computer and satellite dish, for example, and the information lines which are fed to the satellite dish from a supplier. Depending on the information being offered, the lines are updated at regular intervals during the day, on a daily basis or on a monthly basis.

563 Tele-Direct introduced its first TYP in Kitchener in 1988 followed by Toronto and Quebec City that same year. Unlike the audiotext involving the provision of general information on various topics to consumers, the Kitchener and Quebec City services involved advertiser-specific information. The code was provided in the advertisement; the interested consumer could call for more detailed information regarding that supplier, for example, prices. These services were later abandoned for lack of advertiser interest; the Toronto service, which is of the general information type, is still offered. Since it first offered TYP, Tele-Direct's supplier of the information lines required has been a company called Perception Electronic Publishing ("Perception"). [226] As of November 1993, Perception is owned by Brite Voice Systems.

564 When it entered the Sault Ste. Marie market with its prototype directory in January 1993, DSP provided an audiotext service. This was the first time such a service was offered in Sault Ste. Marie. The information supplier for DSP was Perception. During the first two months that it was offered, the DSP audiotext service was heavily used.

565 Tele-Direct introduced its TYP in Sault Ste. Marie in April 1993 in advance of its June 1993 directory, some three months after DSP published its prototype directory, also using Perception for its information feed. Tele-Direct used flyers to distribute the relevant codes to consumers. It was roughly at the same time as the Tele-Direct TYP were introduced that DSP began to experience deterioration in its audiotext service because the information was no longer being updated in a timely manner. DSP was in constant contact with Perception in order to get the lines updated within an acceptable time frame, but with no success. The quality of DSP information feed from Perception remained poor until November 1993, which was essentially the same time that Perception was acquired by Brite Voice Systems.

566 Tele-Direct also engaged in large advertising campaigns in Sault Ste. Marie and Niagara. No detailed information was provided in this respect regarding the other two competitive markets. Compared with pre-entry levels virtually all of the advertising and promotional expenditures were new. In Sault Ste. Marie, Tele-Direct spent only about $50,000 on advertising in 1992 as compared to $215,000 in 1993. By 1994, expenditures had dropped back to $22,000. In Niagara, Tele-Direct spent $43,000 in 1992, $71,000 in 1993 and $28,000 in 1994. [227] In 1993, advertising expenditures in Sault Ste. Marie constituted approximately 11 percent of published revenues for that city; in 1993 in the Niagara area, advertising expenses amounted to less than one percent of published revenues.

567 Another circumstance relevant to the Director's allegations respecting publishers is that Tele-Direct initiated a suit against DSP in May 1993 for infringing the "walking fingers" trade-mark and Tele-Direct's copyright in the advertisements in the Tele-Direct directory with its prototype directory. In the spring of 1995, Tele-Direct notified DSP that it would also be challenging

the 1994 and 1995 DSP directories. At the time of the hearing, the lawsuit had reached the stage of discoveries. A representative for Tele-Direct had been discovered and the discovery of the representative for DSP was scheduled for November 1995.

568 Although no suit has been launched in relation to White, Tele-Direct made it abundantly clear to White early in 1993 that it would vigorously defend its trade-marks and its interpretation of its copyright interests arising from the advertisements in the Tele-Direct directories. In particular, Tele-Direct informed White that it could not make use of an advertiser's copy, layout or graphics as they existed in the current Tele-Direct directory in creating the first White directory.

(2) Control of a Class or Species of Business in Canada

569 The Tribunal has already found that the supply of telephone directory advertising constitutes a relevant product market and that the relevant geographic markets are local in nature. We have also found that Tele-Direct possesses market power in those markets. We are satisfied, therefore, that Tele-Direct has market power in the market for the supply of advertising space or the telephone directory publishing market and therefore controls the business in the relevant geographic markets.

(3) Practice of Anti-competitive Acts

(a) Allegations - Pleadings

570 The Director's application, as amended, says at paragraph 65 that the following acts together constitute a practice of anti-competitive acts affecting the market for advertising space, or the publishing market, which leads to a substantial lessening of competition in that market:

. . .

> (g) targeting price reductions and other discounts to those markets in which entry by competing publishers has occurred or is occurring; and
>
> (h) causing, directly or indirectly, advertising agencies to refuse to place advertising in telephone directories published by competing publishers or otherwise discriminating against or causing independent advertising agencies to discriminate against competing publishers; and
>
> (i) making disparaging statements in regard to new market entrants.

571 In argument, the Director did not refer to the act set out in (i). Under the heading in the written argument, "Otherwise Discriminating between Publishers", the Director gathers evidence relating to the respondents' policy of not allowing the directories of competing publishers to count towards the 20 directory requirement of Tele-Direct's national account definition. Under the heading in the written argument, "Targeting/Raising Rivals' Costs", the Director refers to various actions by the respondents in response to entry by competing publishers in the local markets of Joliette (Quebec), Newfoundland, Niagara and Sault Ste. Marie which are alleged to constitute anti-competitive acts because of their targeted nature and intent and the degree or intensity of the response. The particular responses listed are zero price increases, incentive programs, advertising and promotional spending, directory enhancements, interfering with the DSP audiotext feed and litigation or threats of litigation.

572 The respondents say that the allegations involving directory enhancements, promotional spending and litigation or threats of litigation are not encompassed by the pleadings and cannot be relied on by the Director.

573 It is not in dispute that the evidence and the argument put forward by the Director on this issue must be supported by the pleadings, either by the specific words in the application or by reasonable inference therefrom. It is trite to say that the pleadings are intended to define the issues in dispute between the parties, to give fair notice to each party as to the case that it will have to meet and to assist the decision maker in considering and deciding the allegations that have been made. Where, as here, an argument about the scope of the application is only raised at the stage of final argument, we agree with the Director that regard may be had to interlocutory proceedings, discovery and the conduct of the hearing itself to determine what the *parties* considered were the issues raised by those pleadings. We need not restrict ourselves to the pleadings in a vacuum.

(i) Enhancements

574 Directory enhancements were not explicitly mentioned in the application. However, in its request for leave to intervene, White specified, in paragraph 9 of the request, those matters in issue which affected it. Item (e) reads:

> offering directory enhancements (community pages, an audio text system and postal codes) targeted to areas where competition or the threat of competition exists....

575 As stated in the reasons of the Tribunal for granting leave to intervene, the respondents did not oppose the intervention. The respondents only objected to White being given leave to make representations with respect to certain issues which, the respondents argued, were outside the scope of the Director's application. The respondents submitted that the representations of an intervenor must be relevant to the proceedings and that relevance is defined by the parties' pleadings. The Tribunal agreed. The issues in White's intervention challenged by the respondents as being outside the scope of the application did not include item (e) "enhancements" but rather focused on six other items. The Tribunal accepted that four of the disputed six items were not supported by the application and excluded them from the purview of White's intervention.

576 If the respondents were genuinely of the view that the question of directory enhancements was outside the scope of the application as defined by the pleadings, then they would have challenged that part of White's intervention request. The question of what was and what was not supported by the pleadings regarding the alleged anti-competitive acts in relation to independent publishers was squarely in issue at the intervention hearing. The clear implication of the respondents' failure to challenge item (e) is that they considered that enhancements were within the pleadings.

577 Nothing occurred after the intervention hearing that would have led to any other conclusion. The Director requested the production of documents and conducted discovery on the question of enhancements. Eventually the relevant documents were produced, without objection.[228] The Director submits that Tele-Direct has taken this "about face" on the question of enhancements in order to provide an after-the-fact explanation for its belated production of a boxful of relevant documents relating to its responses in competitive markets. The Director called evidence at the hearing on enhancements, without objection. The respondents themselves led evidence on the question of enhancements. Tele-Direct cannot now change a position that it took on an interlocutory proceeding and maintained throughout discovery, the hearing and up until the commencement of its final argument. The entire case has been conducted on the basis that directory enhancements are fairly in issue. Enhancements are properly before the Tribunal.

(ii) Advertising and Promotional Expenditures

578 Unlike directory enhancements, advertising and promotional expenditures were not specifically addressed at White's intervention hearing. If we looked only at the words of the pleadings, it might be arguable whether those words would support the allegation. Again, however, we have a course of conduct that sheds considerable light on whether the parties themselves thought promotional expenditures were at issue as part of the allegation of anti-competitive acts. It is clear that they did. Oral and documentary discovery was conducted by the Director on this issue. Counsel for the Director referred to it in his opening address. The Director called evidence in chief on the issue and the respondents called responding evidence. Advertising and promotional expenditures are properly before the Tribunal.

(iii) Litigation and Threatened Litigation

579 Counsel for the respondents pointed out that the Director was not seeking any remedy specifically relating to litigation. Counsel for the Director did not address the respondents' argument that litigation or threatened litigation falls outside the pleadings. In argument on the merits, however, the Director took the position that litigation or threats of litigation contribute to the anti-competitive act of "targeting" or "raising rivals' costs".

580 The words of the pleadings do not obviously incorporate such a concept. The original application, at paragraph 65(h), contained a specific allegation of an anti-competitive act of "threatening or taking legal action to restrict competing suppliers of

advertising space from gaining access to, or from utilizing, subscriber listing information". This allegation was later withdrawn. However, as with promotional expenditures, litigation was dealt with in the evidence and argument. In view of the specific withdrawal by the Director of the reference in the pleadings to litigation or threatened litigation, the respondents' position is somewhat stronger on this point than on the others. But, it is not necessary to decide the issue on procedural grounds. As will become apparent, we are not satisfied on the merits of the argument that litigation or threatened litigation constitute anti-competitive conduct in this case.

(b) Alleged Anti-competitive Acts

(i) Causing Agencies to Refuse to Place Advertising with Independents

581 The independent publishers' directories do not count towards the 20-directory requirement that forms part of the 1993 definition of a Tele-Direct commissionable account. The Director argues that the effect of the Tele-Direct policy in this regard is that CMRs do not recommend independent directories to advertisers when they would do so if those directories counted towards qualification as a commissionable account. Thus, it is submitted, this excludes independents from revenues that they would otherwise obtain.

582 The Director relies on the evidence of Mr. Lewis of White comparing the situation in Canada with respect to advertising placed in his directories by CMRs to that in the United States. In distinction to Tele-Direct's policy, in the United States publishers include the directory of any other YPPA member in determining whether an account qualifies for commission. White is a YPPA member and therefore its directories count towards the minimum directory requirement in the United States. Mr. Lewis testified that in that country eight percent of White's advertising revenues are placed by CMRs while in Canada less than one-half of one percent comes from CMRs.

583 The respondents respond that this testimony alone does not constitute proof of the requisite exclusionary effect. Because White has been operating in the United States for a lot longer, and is therefore more established than it is in Canada, they question the validity of the comparison being made. Further, they rely on the evidence of Stephanie Crammond of Media Nexus, a specialized Yellow Pages advertising agency, that if she had confidence in the distribution figures cited by the various independents, she would consider them. Likewise, Richard Clark of DAC stated that his position on independent directories was to "wait and see" if they were going to stay around and then base a decision on which directory had greater usage. He did point out that typically the telco directory has the greater usage and, therefore, if a competing directory is used, generally it is on a secondary basis, with the primary advertising dollars allocated to the telco directory.

584 On balance, we are not persuaded by the Director's argument. While we recognize that monetary incentives are bound to enter into an agency's recommendation to a client, the Director's argument implies that agencies are entirely driven by earning commission and will compromise the quality of the advice they give by omitting to recommend a good, independent directory merely because it would not help the account qualify for a Tele-Direct commission. The burden of the remainder of the Director's case, as it involves agencies, is that they are, among other things, independent suppliers of advice to advertisers and therefore provide a valuable alternative to Tele-Direct's captive salesforce. For the Director to suggest now that agencies would not provide good advice seems to be somewhat inconsistent with that position. But apart from this, the independents, of course, pay their own commission on advertising placed in their directories.

585 There are factors at play other than Tele-Direct's criteria in agents' decisions when recommending directories to their clients. As Mr. Clark's testimony indicates, an important reason why independent publishers in Canada may not receive a high volume of business from agencies is that, because Tele-Direct is the established publisher, it is rarely a choice *between* Tele-Direct's directory and the independent directory for a particular area. Rather, the agency will generally recommend the Tele-Direct directory as the primary directory for advertising because of widespread usage and then, if additional money is available, recommend the independent *also*.

586 In summary, we do not accept that Tele-Direct's policy regarding the 20-directory requirement discourages agency recommendations of independent directories.

587 One final observation in this area arises from the respondents' written argument at paragraph 590, that as a matter of law "[i]t cannot be an anti-competitive act for a dominant firm to decline to assist or give aid to a competitor." We agree with the general proposition that a firm is not, and should not be, required to "assist" its competitors. The respondents, however, add an additional element to the proposition when they submit that:

> Each of the anti-competitive acts listed in section 78 require the dominant firm to *actively initiate* some action.... None of the listed acts are triggered simply by the dominant firm *not doing something or refusing to assist*....
>
> (emphasis added)

588 While the respondents did not advance this argument in relation to the specific allegation we are dealing with here (or, in fact, in relation to any specific allegation), it certainly seems relevant to the question of whether Tele-Direct should be obliged to recognize advertising in independent directories as counting towards Tele-Direct's commissionability requirement of a minimum of 20 directories. As stated above, as a general proposition, competitors should not be required to assist one another. But, this general proposition may be shown to be inapplicable in a given section 79 case by the Director proving that the "act" of the respondent meets the elements of that section and is an anti-competitive act leading to a substantial lessening of competition. Then, any order of the Tribunal which may issue is, by definition, not an order to "assist" a competitor but rather, in the case of subsection 79(1), an order to cease and desist from anti-competitive conduct.

589 It is, therefore, not sufficient, in circumstances such as these, to argue the general proposition. Nothing can be determined by simply labelling the alleged anti-competitive "act" as "doing something" (active) or "not doing something" (passive). The anti-competitive effect of the conduct of the respondents, whether "active" or "passive", must be weighed against any business justification in order to conclude whether there has or has not been a substantial lessening of competition. That can only be done by reference to the evidence. On this point, Tele-Direct only argued the general proposition.

(ii) Targeting/Raising Rivals' Costs

• Reaction of Tele-Direct

590 Before turning to the evidence it is necessary to consider what the Director means when he alleges that "targeting/raising rivals' costs" is an anti-competitive act. There is a growing body of literature dealing with "raising rivals' costs" ("RRC"). The theory was proposed as a similar but more credible route to market power than predatory pricing because it does not depend on short-term price cutting beyond what is profit-maximizing followed by later recoupment. With RRC, it is not necessary to cause the rivals to exit, no "deep pockets" are necessary and the additional profits are gained immediately.[229] Typically, an RRC strategy involves increasing rivals' costs by raising the price of some scarce input which in turn results in the rival reducing its output.[230] In other words, there is a relatively immediate output reduction in the market concerned. Only two elements of the act alleged by the Director seem to bear any resemblance to this conception of RRC -- the audiotext affair and litigation and threats of litigation. As we shall see, the remaining actions of Tele-Direct relating to pricing, incentives and advertising did not result in output reduction in the markets in question. The considerations involved in RRC can provide little assistance in evaluating the allegations relating to those reactions of Tele-Direct in competitive markets or the "targeting" aspect of this act.

591 The Director has not attempted to explain what is meant by targeting in any detail, perhaps regarding the term as largely self-explanatory. It is, however, far from being a household word in competition law. While we have no reason to discourage novel approaches to discerning potentially anti-competitive conduct that might fall within section 79, we do see considerable difficulty in applying the targeting concept. It is always difficult to distinguish between anti-competitive practices and normal competition. The conduct in question may be generally benign and it is only in certain contexts that it is anti-competitive. The difficulty is even more pronounced in this case, given the actions on the part of Tele-Direct that the Director would have the Tribunal, if not prohibit completely, certainly restrict.

592 In argument counsel for the Director described the nature of targeting as follows:

> The reason that acts of predation or near-predation can be anti-competitive is because the firm is dominant in a larger market. The danger is that, rather than bringing the public the benefit of competition in a limited area, what is happening is that in the long-term analysis the dominant firm is leveraging its market power from its broadly-dominated market into specific targeted areas where competition enters, with a view to either eliminate that competition entirely or, as in the situation here where the expressed intent fell a bit short of that, to ensure that the competition didn't move into any other markets and to raise their costs so that those companies would know that it was not going to be a profitable enterprise to continue their expansion.
>
> What we are suggesting is that this is really a test of degree, that we have in at least one of the markets evidence which is very close to predation. What we have is such a tightly focused and overwhelming marshalling of the dominant resources of the company to these targeted areas that there is a need for a remedy.
>
> . . .
>
> ... While one may formulate various tests that would have different requirements in terms of the super-normal targeted response, this is probably the clearest case imaginable in terms of the absolutely overwhelmingly aggressive nature of the response to these targeted markets. [231]

Counsel clarified that "leveraging" in this context means the use of monopoly rents from other markets to subsidize near-predatory behaviour in the markets in question. [232]

593 One of the ordinary meanings of the word "target" is

> anything that is fired at or made an objective of warlike operations ... [233]

In one obvious sense, therefore, "targeting" simply refers to focused or aimed rather than general responses. The facts show that Tele-Direct behaved differently in the competitive markets. If the Director is arguing that the actions of Tele-Direct constitute the anti-competitive act of targeting merely because its actions in markets in which broadly-scoped entry was occurring were different from those in markets where no such entry had occurred, we do not accept the argument. Targeting cannot be distinguished as an anti-competitive act merely by the fact that there is a differentiated response. Targeting, in the sense of a differentiated response to competitors, is a decidedly normal competitive reaction. An incumbent can be expected to behave differently where it faces entry than where it does not. One competes where there is competition. Similarly there may be gradations of reaction depending on the nature of the competitive threats.

594 The earlier discussion regarding market power established that, whereas the broadly-scoped directories published by entrants in the "targeted" markets were considered by Tele-Direct as competition for its own directories, the same was not true of other publishers who sought market niches defined by geography or other specific characteristics of their intended audience (e.g., ethnic, religious, easy to read directories). Furthermore, both White and DSP introduced features into their directories such as postal codes, information about cultural events, coupons, etc., that provide value to users that could affect whether the Tele-Direct directories would be retained by telephone subscribers in those markets if Tele-Direct did nothing.

595 If "targeting" does not depend solely on differentiated responses, how is it to be distinguished from competition on the merits? We do not take the Director to be proposing that an incumbent, even one with a dominant market position, is precluded from responding to entry. Entry would obviously be *encouraged* if the incumbent accommodated the entrant. It is, however, doubtful that anyone would suggest that this is a desirable competitive outcome. Anything short of accommodation is likely to make the post-entry prospects of an entrant less attractive than the pre-entry benefits enjoyed by the incumbent. It is, therefore, not enough for us to find that Tele-Direct's responses made entry less attractive.

596 Indeed, the Director's position seems to be that a firm is free to act to discourage entry but that there is a limit to what it may do. This is reflected in the Director's proposed remedy, which would allow Tele-Direct to use two out of three of price

reductions or discounts, enhancements and an advertising campaign in individual markets.[234] Once the incumbent passes this critical threshold, it is submitted that it has moved into the realm of anti-competitive conduct. The reasoning behind this, as we understand it, is that while what has been done in the particular markets may not be particularly harmful, the long-term harm caused by discouraging future entry outweighs any immediate benefit. In other words, the response in the markets where entry occurs is part of an effort to discourage entry into other markets by behaving in a fashion which is nearly, but not necessarily, predatory in the strict sense in which that word is usually used.

597 In support of the position that Tele-Direct's response went beyond what is "normal", the Director relies on its expressions of corporate intent, the number, variety and degree of its responses and the intensity of those responses. As a standard for assessing how far Tele-Direct went the Director submits that we can look to the evidence that its response in Sault Ste. Marie caused Tele-Direct to incur losses, a comparison to the experience of independent entrants in American markets, and the difference between White's and DSP's expectations and their actual results and their future plans.

598 Counsel for the Director also suggests that Tele-Direct is using its monopoly rents from other markets to cross-subsidize its responses in competitive markets. This possible meaning of targeting would only apply, however, where the dominant firm is incurring losses in the targeted market. However, the Director does not appear to be suggesting that this is a necessary condition for the Tribunal to find that "targeting" is an anti-competitive act in this case.

599 First, we will examine the question whether what Tele-Direct did in the competitive markets was generally of benefit to consumers (advertisers) in those markets, largely neutral or, in fact, harmful. While Tele-Direct's actions clearly made it more expensive for the entrants than if it had accommodated them, seizing market share from a rival by offering a better product or lower prices is not, in general, exclusionary since consumers in the markets concerned are made better off. The Director has not attempted to argue that Tele-Direct's responses caused harm to advertisers in the particular markets in which entry occurred. The Director did, however, submit that at least some of Tele-Direct's actions were of negligible or temporary benefit to those advertisers.

600 With respect to the zero price increases, there is no question that advertisers benefitted from this initiative. The evidence indicates that the advertiser incentive program in competitive markets was carefully designed to absorb customers' directory advertising budgets so that little would be left for the new entrants when they canvassed for paid advertising. Yet, it is difficult to conclude that these programs did not benefit advertisers, particularly when rebates were involved. Making its directories more attractive by adding enhancements and increased advertising by Tele-Direct would both tend to increase usage of telephone directories and, thus, benefit advertisers in those markets. There was evidence that some of the enhancements to Tele-Direct's directories were viewed by the company as temporary expedients. For example, the postal code feature in Niagara was designed to be easily removable.[235] Nevertheless, as no evidence was brought to our attention indicating actual removal of the postal code section, we can only conclude it has been maintained by Tele-Direct. Further, although the Director argued that much of Tele-Direct's advertising was "negative" advertising which only disparaged its competitors, we do not have enough information on the advertising campaign to be in a position to identify which portions were "negative" and if the negative outweighed the positive. Overall, the inescapable conclusion is that Tele-Direct's responses to entry resulted in an improvement for advertisers in the "targeted" markets.

601 What, then, about the likelihood of harm in Tele-Direct's territory as a whole because of the effect of these responses on future entry or expansion? There is evidence that Tele-Direct was not solely concerned with "meeting" competition in Sault Ste. Marie and Niagara. Tele-Direct also feared further entry into other areas, particularly from DSP which was associated with Southam and had the advantage of having local connections and organization through the publisher's newspapers. This is clear from the evidence of Ms. McIlroy, who was in a key position as Vice-president of Marketing at that time.

602 Ms. McIlroy testified that Tele-Direct designed its strategies first around the Sault Ste. Marie situation and then replicated them in Niagara when White appeared. She confirmed that one of her objectives in Sault Ste. Marie, as set out in document recording her notes for a presentation, was to "limit Southam motivation to continue Yellow Pages roll-out in Ontario".[236] She further explained that as a "counter-strategy", if Southam's intention to enter directory publishing was a long-term, well-

funded strategy, then her second objective was to "make the cost of carrying on business against [Tele-Direct] market-by-market exceptionally high." [237]

603 But those were not the sole objectives. Ms. McIlroy also described Tele-Direct's strategy in the following terms:

> ... the basic premise was to make it expensive for the competitor to compete with us and to focus on doing everything and doing it right in the Sault, putting whatever investments or resources that was necessary to avoid unnecessary market share [loss] and to protect our interest in that market. [238]

Similarly, in a presentation that she made to her fellow officers she set out the following points as constituting Tele-Direct's "challenge":

- Protect usage and awareness - promotion
- Add value to advertiser - incentive
- Add value to user - product enhancements
  - size and colour
- Sustain leadership profile
- Compete on value vs. cost
- *Make competition an expensive proposition*{239} (emphasis added)

Notes: 239 Confidential exhibit CJ-33 (black vol. 12), tab 88 at 133316.

Mr. Renwicke disputed whether the last point was ever accepted as corporate policy, but in matters of dispute between Ms. McIlroy and her fellow officers we accept her evidence. She left Tele-Direct on good terms and she has no discernible reason for colouring her evidence, particularly as she was the officer responsible for preparing tactics that the Director would have us label as anti-competitive.

604 It is only the reference to making competition "expensive" as part of Tele-Direct's strategy that raises any question of anti-competitive motivation. It is doubtful that Tele-Direct could make competition expensive without negatively affecting its own profitability. According to Ms. McIlroy the participants at the officers' meeting were taken aback at the cost to the company of making it expensive for the competition. They agreed to "spend what it took" with the proviso that the expenditures would be selective and the officers would be kept current on what was transpiring, even as frequently as on a weekly basis. The fact that Ms. McIlroy convinced her fellow officers to adopt a policy of making competition expensive even when doing so would be detrimental to current profits provides some indication that Tele-Direct was trying to influence its competitors' future conduct to some extent.

605 There is as well another consideration. The documents relating to Tele-Direct's responses in Sault Ste. Marie and Niagara were not provided during documentary discovery within the time frame ordered. They did not make their appearance until after Tele-Direct apparently learned that the Director had contacted Ms. McIlroy and that she would appear as a witness in these proceedings for the Director. Counsel for Tele-Direct attempted to blame the delay in the production of these documents on inadvertence. He said that the relevant box of documents got lost but that no one seemed to know where or why. If the documents were lost, a detailed explanation is in order especially given the controversial issue to which they pertain and that the content of some of the documents is clearly adverse to Tele-Direct's position. A vague explanation carries little weight. The belated production and inadequate explanation cause the Tribunal to make an adverse inference with respect to Tele-Direct's intentions on this issue. Tele-Direct apparently considered that it might have "gone too far" in its responses in those markets. This, along

with the statements of corporate policy, provides support for the view that Tele-Direct intended, in a subjective sense, to convey a warning about future entry as well as protecting its position in the individual markets subject to entry.

606 Nonetheless, the critical question is whether there is a reasonable likelihood that future entry will be discouraged by Tele-Direct's actions. If so, is that possible negative effect more compelling than the proven benefits in the individual markets from Tele-Direct's improving its product, freezing prices and increasing advertising expenditures, all of which contributed in some measure to increasing usage of telephone directories, which is generally seen as pro-competitive. A reasonable likelihood of significant long-run detriment must exist if these tactics are to be discouraged.

607 The Director relies to some extent on the evidence given by White and DSP, which will be canvassed below, regarding their intentions about future expansion, which he says shows that future entry and expansion *have been* deterred by Tele-Direct's behaviour. That evidence is, however, a small portion of the evidence put forward by the Director in support of his case. In effect, the Director asks us to *infer* from the "overwhelming intensity" of Tele-Direct's response in the markets where it faced entry that potential entry into other markets *will* be deterred.

608 Before we proceed to consider the more detailed arguments, we should indicate at the outset that we have serious reservations with respect to the overwhelming intensity approach adopted by the Director. The Director has not advanced any "objective" criteria by which the Tribunal is to assess whether Tele-Direct's responses in the competitive markets have the overall anti-competitive character or "purpose" required for section 79.

609 Although the Director is not arguing that Tele-Direct's conduct was predatory, predation is certainly the closest analogy to what is put forward here. The essence of an allegation of predatory pricing is that the firm foregoes short-run revenues by cutting prices, driving out rivals and thus providing itself with the opportunity to recoup more than its short-term losses through higher profits earned in the longer term in the absence of competition. A predatory pricing allegation is difficult because, at least in the short-run, consumers apparently benefit from lower prices. In addition, predation can only succeed if the predator has greater staying power than its rivals and a reasonable prospect of recouping its losses. In order to distinguish competitive pricing action from predation, therefore, the "Areeda-Turner test" for predatory pricing [239] was developed and has been adopted by the courts.

610 Our difficulty here is that, unlike the predatory pricing case, no "test" or criteria of any kind were even proposed by the Director or his experts. Indeed, we acknowledge that the likelihood of being able to establish objective criteria to distinguish between harmful and beneficial conduct of the type in issue is remote. In effect, because of the absence of any criteria, the Tribunal is being asked by the Director to place itself in the shoes of a potential entrant with a view to assessing the credibility of the alleged "threat" being issued by Tele-Direct by its responses to entry. The Tribunal must determine whether the response in the initial markets in which entry occurred was so "overwhelmingly intense" that an entrant would be intimidated and future entry or expansion deterred. [240] What may seem to be a response of "overwhelming intensity" to one person may not to another. It is inevitably a highly subjective exercise. Decisions by the Tribunal restricting competitive action on the grounds that the action is of overwhelming intensity would send a chilling message about competition that is, in our view, not consistent with the purpose of the Act, as set forth in section 1.1. We are concerned that, in the absence of some objective test, firms can have no idea what constitutes a "competitive" versus an "anti-competitive" response when responses like those used by Tele-Direct in this case are involved (e.g., price freezing or cutting, incentives, product improvements, increased advertising).

611 While Tele-Direct certainly made very strong responses to entry in Niagara and Sault Ste. Marie, there is no certain way for the Tribunal to judge what magnitude of response Tele-Direct would have employed had it not been concerned, among other things, with discouraging further entry. To say that the response was greater than it otherwise would have been assumes that we can judge how much Tele-Direct would have done had it been acting competitively and that, therefore, we can determine, with reasonable assurance, to what degree the observed responses went beyond that and became anti-competitive. In trying to make this comparison urged upon us by the Director, it must be recognized that Tele-Direct was facing pretty stiff competition from the new entrants. The entrants' publications were initially superior with respect to features and they were priced up to 40 percent below Tele-Direct. While Tele-Direct's expenditures on advertising and promotion constituted a sea change from its

previous expenditures, DSP spent more over the three years from 1992 to 1994 than Tele-Direct did, including large amounts in the local Southam newspaper.

612 The Director makes two broad arguments in support of the position that Tele-Direct's actions went beyond "normal" competition and, taken together, constitute anti-competitive acts. The first is that Tele-Direct's "bottom line" results in Sault Ste. Marie in 1993 reveal that Tele-Direct barely broke even in that market when the cost of introducing the improvements to the directory and the advertising and promotional expenditures are taken into account. This conclusion was not disputed by Mr. Beauséjour who agreed that the results shown were "very close to breakeven".

613 The analysis presented to the witness, however, included the payment to Bell Canada (CCS) as an "expense" deducted from revenue. When Bell and Tele-Direct are treated on an integrated basis, as we earlier found in the tying context to be appropriate when considering Tele-Direct's profitability study, it would be inaccurate to refer to Tele-Direct's results in Sault Ste. Marie as a "marginal profit" or "loss" situation. The pro-rated share of the payment to Bell would have to be added back to the Tele-Direct's results in Sault Ste. Marie. Given that the Bell payment is mostly contribution to profit and it is a substantial amount, this would move the Sault Ste. Marie results well above the breakeven point, even with the extra expenditures on enhancements and advertising. Indeed, it would appear that the payment to Bell constitutes the largest portion of the "profit" that attracts independent publishers to attempt to enter Tele-Direct's markets and which allows them to contemplate profitably pricing 30 or 40 percent below Tele-Direct. In the Niagara region, Tele-Direct earned a profit in 1993 even when the payment to Bell is treated as an expense.

614 The Director's second argument is that experience in the industry also demonstrates that Tele-Direct went beyond "normal" competitive responses. This includes the evidence regarding expectations of White and DSP versus their experience and their future intentions as well as evidence about how American telco publishers have responded to entry in their markets.

615 With respect to the experience of an American telco publisher responding to entry, Mr. Anderson, who was with NYNEX, testified in chief that when NYNEX perceived independent directory publishers as significant competition, it would make its sales force aware of their presence, possibly do more advertising, and consider the scoping of its directories and their features. He also pointed out that it had not been his experience that features would be introduced only in a competitive market. After a trial run, if the feature proved successful, it would be implemented "across the product line." In cross-examination, he admitted that NYNEX had never, at least to his knowledge, offered an incentive program similar to that used by Tele-Direct in its competitive markets in response to entry of a competing publisher. He gave the same response when asked about a specific market where, in response to entry, NYNEX might have frozen prices in specific markets in response to entry for two years, without rescoping. With respect to the remaining possibilities put to him by counsel for the Director, Mr. Anderson either had no knowledge (e.g., advertising as a separate budget item) or commented on the lack of applicability in the American context (e.g., telco publishers cannot offer audiotext, no trade-mark to protect through legal action). Without any knowledge about the marketplace in which NYNEX operates, we are unable to draw any conclusions about this evidence.

616 With respect to White, Mr. Lewis stated that his experience in entering markets in the United States had led him to believe that White would have larger sales in Niagara than turned out to be the case. In its first revenue year, White expected to capture between 30 and 40 percent of Tele-Direct's revenue.[241] In fact, White's revenue for its second directory (the first revenue-generating directory), published in 1994, was 17 percent of Tele-Direct's revenue. Revenue for the third directory (the 1995 directory) represented a nine percent increase from the previous year for a total of about 19 percent of Tele-Direct's revenue.

617 Mr. Lewis stated that his initial plans for expansion beyond the Niagara region in Canada had been put on hold indefinitely due to Tele-Direct's conduct *and* the inability to obtain complete subscriber listing information. At the time of the hearing, this matter of subscriber listings was on appeal to the federal Cabinet. Mr. Lewis also said that upon a favourable Cabinet decision on the privacy issue, he would anticipate starting a number of additional directories in the Toronto and Niagara region. Any conclusion that White was deterred from future expansion by Tele-Direct's conduct and that, therefore, that conduct passes an anti-competitive threshold would be difficult in light of this evidence and the subsequent Cabinet decision overruling the

CRTC decision that was to the effect that consumers should be able to opt out of having their listing information released to independent publishers.[242]

618 In formulating its entry strategy, DSP factored into its business plan both the risk of legal action by Tele-Direct and the possibility of a Tele-Direct competitive reaction. DSP, erroneously as it turns out, anticipated little response from Tele-Direct based on that company virtually ignoring the entry of the Locator directories in a large number of communities. As we have discussed, the Locator directories are simply not close substitutes for Tele-Direct's directories. DSP's expectation for its first revenue-generating directory was to capture about 50 percent of Tele-Direct's revenue. In developing this estimate, DSP reviewed the American experience and consulted extensively with its joint venture partner, Noverr. Instead, the directory generated about half of the expected revenue in dollar terms. The revenues for the second revenue-generating directory, published in 1994, were once again considerably lower than expected. It was, however, anticipated that the revenues for the 1995 directory would be higher and marginally profitable.

619 DSP has also decided not to expand in Ontario even though that was the original plan. While Tele-Direct's conduct was said to have been the reason for that decision, the evidence suggests that there were other reasons as well. In particular, it would appear that DSP's expectations were quite aggressive for a new business and, to some extent (in relying on the Locator experience), in error. The Director says that the Sault Ste. Marie, Michigan part of the DSP joint directory, which did not experience a response like Tele-Direct's, had been far more successful than its Ontario counterpart. However, that side of the publication also fell well short of what had been anticipated as a "normal" first year revenue, further suggesting that the DSP's expectations may not have been realistic.

620 We do not have enough evidence to arrive at any conclusion about the effect of Tele-Direct's actions on deterring entry or expansion in the Newfoundland and Joliette situations.

621 The remedy suggested by the Director changed from the application to final argument. In our view, the remedy, as currently formulated, illustrates the difficulty of dealing with "targeting" as an anti-competitive act. The notice of application, at paragraph 1(b)(xiii), requested that:

> the Respondents be prohibited from targeting price reductions and other discounts for advertising space to those markets in which entry by competing publishers has occurred or is occurring.

In oral argument, counsel for the Director explained that the remedy ultimately being requested by the Director would read as follows:

> that the respondents be prohibited for a period of five years from: (i) targeting a price, a price reduction, or other discount including any advertiser incentive program offering free colour, free size up, or a first time placement discount where there is no annual increase in advertiser spending; *and* (ii) targeting any directory enhancement, including audio-text service; *and* (iii) targeting any advertising campaign; to a market where entry by a competing directory publisher has occurred, is occurring, or is reasonably anticipated to occur unless such listed item is offered or applied uniformly and simultaneously by the respondents in the majority of their directory markets.

The "and" between the listed items is critical. The Director proposes that Tele-Direct be permitted to do any *one* or *two* of the three enumerated actions in any market where entry has occurred. However, if all three should be undertaken then they would have to be followed in a majority of Tele-Direct's local markets.

622 We recognize that the Director is likely attempting, by this compromise remedy, to recognize that Tele-Direct's responses are of benefit to consumers in the market in which they occur. This effectively highlights the difficulty of the "targeting" allegation. First, the number of competitive responses (one or two) that Tele-Direct is allowed is completely arbitrary. The Director has not provided the Tribunal with any rationale as to why one or two (but not three) responses would not be anti-competitive. Further, there is no suggestion that the Tribunal should limit the extent to which Tele-Direct could invoke the

competitive responses to which it would be entitled. Yet, the Director alleges that Tele-Direct's responses in the competitive markets were anti-competitive in part *because of* their intensity and ferocity.

623 Considering the difficulty in circumscribing "targeting" so that it does not result in discouraging desirable competitive activity, we do not find that Tele-Direct's conduct with regard to pricing, promotion and changes to its directories in the competitive markets, in particular in the Sault Ste. Marie and Niagara areas, is anti-competitive.

• *Litigation or Threatened Litigation*

624 Finally, we turn to the Director's argument that litigation or threatened litigation by Tele-Direct, when taken together with the other actions of Tele-Direct, contribute to targeting/raising rivals' costs.

625 The Director argues that Tele-Direct's use of litigation or threatened litigation "goes into the mix" to show intent and the excessive degree of the overall response to entry in the competitive markets. The Director does not rely on the nature of the litigation on its own. The Director does not argue, for instance, that the litigation was a "sham". "Sham" litigation, or litigation which the plaintiff knows is without foundation but uses to stifle or impair competition, can be a technique of predation. [243] In the words of Robert Bork: "As a technique for predation, sham litigation is theoretically one of the most promising." [244]

626 Since no argument is being made that the litigation started by Tele-Direct against DSP was "without foundation", [245] we need some other means to determine whether the litigation in question crossed the line to anti-competitive conduct. We do not consider that it is sufficient to look at the litigation only in combination with the other responses. There must be some evidence specific to the bringing or the conduct of the litigation itself that would lead us to conclude that the purpose was to contribute to the impairment of competition over the protection of property rights.

627 The Director points out that while Mr. Crawford, Tele-Direct's Corporate Secretary and legal counsel, originally testified that Tele-Direct defended any unauthorized use of its trade-marks and copyrights, it became apparent on cross-examination that this was not true. Tele-Direct overlooked unauthorized use on a number of occasions. Perhaps the difficulty with this witness's credibility on this issue and the fact that litigation seems only to be taken against specific competitors do lead to the view that Tele-Direct focused on those competitors. However, that alone is not enough if the litigation is not a sham.

628 On the facts of this case, we cannot conclude that Tele-Direct brought, conducted or gave warnings regarding otherwise apparently valid litigation in such a manner that its purpose was clearly to contribute to the impairment of competition in those markets where entry occurred rather than the protection of its intellectual property rights. There is no evidence, for instance, of undue delay. As of the date of the hearing, DSP had not yet been discovered but a major factor in this delay was the illness of Mr. McCarthy, the intended representative for DSP. Discovery of DSP was, however, scheduled for November 1995 with Mr. Campbell for DSP. Discoveries of Tele-Direct had been completed by the date of the hearing. There is no evidence that the litigation is following any other than the "normal" course. Unlike the *Laidlaw* case, there is no evidence of responding to an apparently minor matter in a "wildly overly aggressive manner" with multiple claims or of pointed threats to put a competitor "out of business" using, in part, the pursuit of legal action for which, as the Laidlaw representative informed the competitor, a large sum of money had been reserved. [246] While Tele-Direct did not proceed against White after its warning regarding possible litigation, it is certainly plausible that it did not do so because of the similarity of the issues to the DSP case. That litigation would seem likely to settle at least the copyright question once and for all, by establishing a precedent for Tele-Direct's dealings with other publishers.

629 The Tribunal, therefore, cannot accept the Director's submission that litigation or threatened litigation in this case can contribute to a finding of anti-competitive acts by Tele-Direct.

• *Audiotext in Sault Ste. Marie*

630 The Director alleges that Tele-Direct used its power as a major buyer to influence the supplier of audiotext information in Sault Ste. Marie, Perception, resulting in a degradation of the feed to DSP. The respondents acknowledge in their written

argument that the allegation could be an anti-competitive act, if proven, but dispute that it is supported by the evidence. The critical questions are whether Tele-Direct was merely asserting its contractual rights and what responsibility, if any, can be assigned to Tele-Direct for the quality of service delivered by Perception to DSP.

Did Tele-Direct have a contractual right to exclusivity?

631 The respondents state in their written argument, at paragraph 930, that "Perception recognized that Tele-Direct was entitled to the exclusive right to its only feed ...." This statement is not supported by the evidence. Up until January 1994, the only contract between Tele-Direct and Perception was for the Toronto area and it provided Tele-Direct with exclusive access to Perception's feed in the Toronto local calling area only. Perception had in fact refused to grant Tele-Direct exclusivity for other areas because of the limitation on its ability to market its service.

632 In the fall of 1992, when Tele-Direct became aware of the proposed entry into Sault Ste. Marie by DSP, including offering audiotext, Tele-Direct entered into negotiations with Perception to supply its TYP in that market. One of Tele-Direct's concerns was that the feed in Sault Ste. Marie be exclusive to it, that DSP not have access to the same feed. The evidence reveals that the parties did not, in fact, come to an agreement on exclusivity until much later. While exclusivity is mentioned in a letter in March 1993,[247] the draft contract sent by Perception to Tele-Direct in May 1993 is instructive. The letter enclosing the contract states that with "all the excitement of getting 'the Soo' up and talking" Perception had neglected to send Tele-Direct the contract for Sault Ste. Marie. The contract clearly states that it is a "non-exclusive" licence to receive and store information.[248]

633 The contract was never signed by Tele-Direct but nonetheless provides proof that Perception, at least, did not consider at that time that Tele-Direct had exclusive rights to its feed. They were certainly not *ad idem* in that respect. The final contract covering Sault Ste. Marie, which does provide for exclusivity, was not signed until January 1994.[249] A letter in September 1993 provides that upon acceptance of a new agreement by Tele-Direct, the "BDR Audio Network will be made available to only directory publishers in Canada and exclusively to Tele-Direct within Ontario and Quebec."[250] Peter Dolan, Director of Sales at Tele-Direct (Services) Inc., admitted, however, that Tele-Direct had to go "back and forth" with Perception a couple of times in order to get the wording regarding exclusivity re-inserted into the final contract. Tele-Direct does not appear to have had, until November 1993 at the earliest, a right to exclusivity with Perception and, therefore, had no right to insist or attempt to insist on exclusive service from Perception prior to that date.

Did Tele-Direct influence the delivery of service by Perception to DSP?

634 Upon becoming aware in late 1992 that Perception was supplying an information feed to DSP and that it had the same content as Tele-Direct's feed, Tele-Direct, through Mr. Dolan, expressed its displeasure to Perception. Perception agreed to remedy the situation prior to publication of the DSP directory. Mr. Dolan said that he thought Perception would acquire an alternate feed for DSP as a remedy. At the same time, Tele-Direct was pushing for exclusivity with Perception.

635 Tele-Direct's TYP were launched in mid-February 1993. Tele-Direct was not satisfied with Perception's response to its complaint regarding the feed to DSP, including an effort in early February whereby Perception started sending slightly re-arranged or reworded content to DSP. In cross-examination, Mr. Dolan indicated that Tele-Direct wanted a "superior feed" to that provided to DSP.[251]

636 A meeting was scheduled for February 23, 1993 with Perception. The agenda, which was provided to Perception, states that what Perception was doing with respect to the DSP feed was "not satisfactory" to Tele-Direct. Mr. Dolan explained that Perception was simply re-voicing the network and again stated that Tele-Direct was not satisfied because it wanted a "superior" feed. This concern was communicated to Perception at the meeting.

637 In re-examination, taking Mr. Dolan to clause 8 of the January 1994 contract with Perception which uses the word "superior", counsel for the respondents elicited a response that "superior" meant "of high quality" and that was the way in which Mr. Dolan had used the word in his cross-examination. Clause 8 of the contract reads:

> ... Brite does commit that the BDR Audio Network will continue to be of the same exceptional quality as the affiliate has enjoyed. BDR will continue to be of superior quality and utilize its own personnel for the creation and dissemination of information. [252]

Clause 11.6, which was later brought to the witness's attention, is instructive:

> ... Brite will continue to supply the superior level of programming that the Affiliate has come to expect. Other audio networks offered by Brite Voice Systems or any Brite subsidiary or related company, will not exceed the BDR Audio Network in measurable deliverables including, but not limited to, frequency of reports, quantity of content, program choice and diversity as well as voice quality. Brite will make every effort to avoid American colloquialism.... [253]

Even in the contract, therefore, it is apparent that the word "superior" is used in a comparative, rather than an absolute, sense. [254] When questioned by the panel about clause 11.6 of the contract, Mr. Dolan agreed that what the clause was meant to ensure was that nobody had anything *better* than Tele-Direct. We conclude, therefore, that, despite the later attempt at qualification, Mr. Dolan was using the word "superior" in its comparative sense throughout his testimony. Tele-Direct was pressing Perception for a better feed than Perception was giving DSP.

638 Of most significance, on January 25, 1993, Tele-Direct held out what can only be regarded as a major "carrot" to Perception. Mr. Dolan, on behalf of Tele-Direct, wrote asking Perception for its "advice and recommendations" on the most efficient way to provide a TYP service throughout Tele-Direct's territory. [255] There is evidence that by March of 1993, consequent upon a February 25, 1993 officers' meeting, these plans were scaled down dramatically. TYP installation was to begin only in markets currently or potentially threatened by a competitor, some ten markets. TYP were treated as a strategic tool against competition rather than a widespread innovation. In fact, after Sault Ste. Marie TYP were introduced only in Niagara Falls, in response to White, and in Windsor, where Tele-Direct was concerned both about potential entry by White and the fact that the Windsor Star is owned by Southam. It is difficult to escape the conclusion that Tele-Direct was using the promise of the roll-out of TYP service throughout its territory in order to gain the cooperation of Perception when it introduced its TYP service in Sault Ste. Marie in February 1993.

639 That the promised roll-out of the TYP service was a factor in the relationship between Tele-Direct and Perception is clear from the letter Perception wrote Tele-Direct on March 1, 1993, following the February meeting. In it Perception informed Tele-Direct that an "alternative audio source" for DSP would be provided by March 29, 1993. The letter concludes "... you are a very important client to us and we want to work with you as you roll out audiotex *(sic)* through out your territory." [256]

640 The deterioration to DSP feed was coincident with its first revenue canvass in the spring and summer of 1993. (Its first revenue directory was published in November 1993.) Because of the poor quality of the feed, the audiotext lines were not used to nearly the same extent as in the first two months of operation. Because of the reduced volume, DSP could not use the record of the number of calls to its audiotext service as evidence of widespread use of its directory by consumers. As a result, the audiotext service was not as positive a factor as it might have been in selling its directory to advertisers.

641 Mr. Campbell said that it would have been virtually impossible for DSP to change its information supplier when it experienced problems. Despite what Mr. Dolan said, there was little reason for Tele-Direct to think that Perception was able, even if willing, to produce an alternative high quality feed for DSP. As matters turned out, the feed to DSP only became acceptable again once the merger of Perception and Brite resulted in another source of feed becoming available in about November 1993.

642 We are of the view that Tele-Direct used its bargaining power, stemming from its dominant position in the market for the supply of telephone directory advertising, to pressure Perception to, in effect, withhold supply from DSP for the purpose of frustrating or, at least, negatively impacting, the DSP attempt at entry in Sault Ste. Marie. [257] Unlike the other responses used by Tele-Direct in the competitive markets, the only perceptible effect on consumers and advertisers was a negative one.

It would appear to us that the kind of conduct engaged in by Tele-Direct regarding audiotext in Sault Ste. Marie unequivocally falls within the class of anti-competitive acts against which sections 79 is meant to guard.

643 Did Tele-Direct engage in a practice of anti-competitive acts in relation to audiotext in Sault Ste. Marie? Based on the standard set out in *Nutrasweet*,[258] an "isolated act" does not constitute a practice. In the instant case the deterioration in the audiotext feed to DSP resulted from intensive and repeated efforts on the part of Tele-Direct that hardly qualify as an "isolated act". Nor do we find that the reasonably anticipated duration and seriousness of the consequences of the efforts by Tele-Direct suggest that they should be treated as "isolated" and thus outside the reach of section 79. We therefore consider that Tele-Direct's actions regarding the DSP feed for its audiotext service in Sault Ste. Marie constitute a practice of anti-competitive acts.

644 Further, we find no difficulty in concluding that the effects of the deterioration in the quality of the audiotext feed resulted in a substantial lessening of competition in the Sault Ste Marie market. In conducting its first revenue canvass, DSP was denied the anticipated marketing advantage of using its audiotext call volumes to prove usage of its directory to potential advertisers because the feed deteriorated just as the canvass started. Achieving credibility with advertisers is one of the biggest hurdles that an entrant publisher must overcome.[259] The audiotext problem was a serious setback for DSP in its initial effort to attract paid advertising. However, as the Director has not requested a remedy specific to the audiotext problem or, more generally, governing Tele-Direct's relationship with the suppliers, no remedy follows from this finding.

D. Market for Advertising Services

(1) Class or Species of Business in Canada (Relevant Market): Agents

645 The Director alleges a number of anti-competitive acts which form a practice resulting in a substantial prevention or lessening of competition in the market for the supply of advertising services. These alleged anti-competitive acts affect agents and consultants or, in some cases, one or the other. The Director takes the position that when determining whether there is a substantial prevention or lessening of competition the effects of all of the listed acts found to be anti-competitive should be combined because they all affect the advertising services market. Further, one of the alleged anti-competitive acts is the tying of the provision of advertising services to advertising space, the same allegation we have already dealt with in the tying portion of this decision. Another alleged anti-competitive act which bears a striking resemblance to an allegation of tying is also included under the heading "Squeezing", namely, "further restricting the availability of commission [to other service providers] over time".

646 The respondents submit that, to the extent a separate "services" market exists, consultants and agents are in different services markets and acts affecting more than one market cannot be combined to form a practice and, thus, to determine whether there has been a substantial prevention or lessening of competition. A prevention or lessening of competition must take place *in a market* in the words of section 79. They also argue that Tele-Direct does not have market power in either services market.

647 As we have found that there is an anti-competitive tie covering only part of the alleged advertising services market, we cannot agree with the Director that there is one advertising services market in which both agents and consultants operate that encompasses *all* of Tele-Direct's customers. Customers meeting the 1993 commissionability rule are evidently included in the services market. The customer segment that we have determined is anti-competitively tied under section 77 -- namely regional customers -- is also included. (We will return below to the question of whether the tying practice should also form part of the section 79 case.) Agents are operating in this services market. And, Tele-Direct competes with the agents in providing services to those customers. Consultants do not.

648 It is difficult to see how acts taking place in different markets could be logically combined to determine if competition is substantially lessened or prevented in a particular market. Thus, only the acts affecting agents can be combined for the purpose of determining whether there has been a substantial lessening of competition in the services market.

649 Correspondingly, only acts affecting consultants can be combined to determine whether there has been a substantial lessening of competition in the relevant market in which they operate. It is a separate section 79 case. The details of the allegations against consultants will be dealt with below under the heading "Consultants".

650 Further, not all the alleged practices of anti-competitive acts respecting agents are of a sufficiently similar character so that they can be combined when assessing whether there has been a substantial prevention or lessening of competition in the services market. In particular, tying (and its restatement "restricting commission over time") differs significantly from the other alleged anti-competitive acts. The Director has brought the allegation of tying under both sections 77 and 79. The analysis and result are the same under both sections. Having found that tying results in a substantial lessening of competition by impeding entry of or expansion of agents into or excluding them from the part of the demand spectrum between six and eight markets, should this substantial lessening of competition be combined with the effects resulting from any other practice of anti-competitive acts that the Director succeeds in proving? If so, all anti-competitive acts so found would automatically lead to a finding of substantial prevention or lessening of competition by reason of our finding respecting tying.

651 In our view, it is not appropriate to combine the effects of tying with the effects of the practice of other anti-competitive acts. The other alleged anti-competitive acts (save for group advertising) relate to a specific historical market, the commissionable market including the eight-market grandfathered accounts. It is possible to evaluate the effects of the alleged anti-competitive acts in this well-defined context. The issue is whether there has been a substantial lessening of competition where agents have historically been competing. In the case of tying, the allegation is that the extent of the market itself has been limited.

652 In this case, there is a distinct difference between the nature and effect of tying and the other alleged anti-competitive acts, save for group advertising which we return to below. We note that this might not be true in other cases where there might be some interaction or a less distinct dividing line between the section 77 and section 79 claims. A finding that the respondents have engaged in tying does not act as a spring-board for a finding of substantial lessening in the market segment where the agents have been competing. Prohibiting tying should permit the agents to compete in the enlarged market as they have in the historically commissionable market. A finding of substantial lessening of competition in the historically commissionable market should therefore be based on a practice of acts with respect to that market.

653 Therefore, we need not deal with tying further under section 79. We will now turn to the allegations relating to the commissionable market and then the allegation regarding the prohibition on group advertising which is distinct.

(2) Control of the Existing Commissionable Market

654 It is evident that, despite the Director's submission to this effect, Tele-Direct does not have *direct* control or market power in the currently commissionable advertising services market. It has a modest market share of approximately 25 percent in that market.[260] The Director also advances an alternative position that is not based on direct control by Tele-Direct but rather on the hypothesis that it is leveraging its control in the publishing market into the services market. We have found that Tele-Direct has control in the telephone directory advertising market which gives it market power in the publishing of advertising space. The Director argues that Tele-Direct is using this market power as a lever to obtain market power in advertising services through its alleged anti-competitive acts. We agree that this is an arguable theory that could, if proven, fall within the parameters of section 79. Whether Tele-Direct has, in fact, leveraged its existing market power must now be determined.

(3) Analysis Respecting the Existing Commissionable Market

655 The alleged anti-competitive acts are set out in full at paragraph 65 of the application. We paraphrase them here (not necessarily in the order set out in paragraph 65) as they relate to agents and alleged abuse of dominance only:

> (1) "squeezing" the return available to agents by transferring functions to, withholding services from and making terms of supply to agents more onerous;

(2) discriminating against agents by providing space to them on less favourable terms than available to Tele-Direct's internal sales force, including:

> • *group advertising* - prohibiting advertisements containing the name of more than one local advertiser, e.g., franchisees;
>
> • *issue billing* - requiring agents to pay for advertising on behalf of their clients at the time of issue as opposed to payment on a monthly basis which is the payment method employed when sales of advertising are made through Tele-Direct's own sales personnel;
>
> • *closing dates* - requiring that agents submit advertising for publication earlier than the date applicable to Tele-Direct's sales personnel;
>
> • *tear sheets, etc.* - refusing or delaying to provide tear sheets and other information and material to agents; and
>
> • *promotional programs* - delaying to inform agents of or refusing to make certain promotional programs available to agents' clients, including:
>
> > • a program whereby an advertiser using Tele-Direct's sales personnel could obtain a subsidy towards the cost of Yellow Pages advertising if Yellow Pages are mentioned in advertising in other media;
> >
> > • cooperative advertising programmes whereby a supplier contributes to the cost of advertising of its customer or distributor;
> >
> > • keyed advertising in which a new advertisement with a new telephone number is placed in the Yellow Pages and the calls to that number are monitored to assess the effectiveness of the advertisement; and
> >
> > • other trial and test programs.

656 The Director submits that these acts have had adverse effects on agents and that there is no business justification that would exempt the acts from being found to be anti-competitive. The Tribunal would observe that some of these acts appear to have created some difficulty for agents and, in some cases, there does not seem to be an acceptable business justification. However, it is not necessary to embark upon a detailed act-by-act analysis to weigh their effects on agents against their business justification because of our conclusion that the Director has not demonstrated that the acts have or are likely to prevent or lessen competition substantially in the relevant advertising services market.

657 Both parties referred us to the statement set out in the Tribunal's decision in *NutraSweet* that:

> [i]n essence, the question to be decided is whether the anti-competitive acts engaged in ... preserve or add to ... market power. [261]

The Director's operative theory is that Tele-Direct is extending its market power from the space market to the services market through the alleged practice of anti-competitive acts. This means that the Director must demonstrate that Tele-Direct has or is establishing, or is likely to achieve, market power in the services market.

658 In order to assess whether Tele-Direct now controls the services market, we first look to market shares in the currently commissionable market. There is disagreement between the Director and Tele-Direct on the respective market shares of Tele-Direct and the agents. The parties rely on a variety of data that most supports their positions. Market share estimates range from 65 to 87 percent for agents and from 13 to 35 percent for Tele-Direct. We reject the extreme numbers put forward by the Director and Tele-Direct as not supportable on the evidence and, indeed, they were not seriously advanced by either side. While there are weaknesses in the data, we are satisfied that a market share of about 75 percent for agents and 25 percent for Tele-Direct is reasonably accurate. [262]

659 A high market share for agents and a correspondingly low market share for Tele-Direct would suggest that, even if Tele-Direct has engaged in anti-competitive acts, it has not been successful in obtaining market power in the advertising services market. Indeed, the fact that Tele-Direct's market share is as high as it is may well be attributable to factors unique to Tele-Direct but which are not anti-competitive, such as the desire of some advertisers to deal directly with the publisher. From the available data, it is apparent that, even on an individual basis, Tele-Direct does not have as high a market share as DAC/NDAP, which has about a 40 percent share. Based on all these considerations, we are satisfied that Tele-Direct's 25 percent share falls well short of a level that might be considered to indicate market power.

660 We must also consider whether there is any evidence of a trend towards a material increase in Tele-Direct's market share, which might indicate that it is in the process or is likely in the future to acquire market power as a result of the acts which the Director alleges to be anti-competitive. Certainly, there is anecdotal evidence of individual advertisers switching from an agent to Tele-Direct for some of the reasons which constitute acts which the Director submits are anti-competitive, for example, issue billing. We have no evidence, however, of any declining trend in market share for agents or increasing trend in market share for Tele-Direct over any period of time. Further, it would not seem that the agency business is unattractive or that agents are in any way systematically going out of business. On the contrary, we have had evidence of additional agents being accredited in recent years and others who are still seeking accreditation.

661 Is there any reason to believe that in the future the alleged anti-competitive acts will have any *greater* deleterious effect on the agents than they may have had in the past? We recognize that a new element has been added to the interactions in the marketplace by the relatively recent creation of Tele-Direct's CMR. Could it be that, in combination with Tele-Direct (Media) Inc. which provides an additional vehicle for Tele-Direct to use practices like the alleged anti-competitive acts, the alleged anti-competitive acts will likely cause competition to be prevented or lessened substantially in the future?

662 We are unable to arrive at such a conclusion. We have no evidence of the competitive impact of the advent of Tele-Direct's CMR into the market. It has been competing since 1994 but we were provided with no evidence whatsoever from which to infer that the combination of its presence and Tele-Direct's alleged anti-competitive acts have resulted or will result in a materially lower market share to agents and a correspondingly higher share for Tele-Direct. One would have expected that if this was an important factor, we would have seen some significant movement of accounts from the independent agents to Tele-Direct's CMR. There was no such evidence. It is true that Tele-Direct's CMR is in its early years and it may not be as effective now as it will be later. To be valid, however, inferences about the future must be based on evidence. Given the record before us, any conclusion about the future effect of Tele-Direct's CMR in combination with the alleged anti-competitive acts would be speculative.

663 The Director has the burden of proving a substantial lessening of competition. We conclude that while some of the disadvantages which form part of the Director's abuse of dominance case and were imposed on agents by Tele-Direct may have had some adverse effect on them, that effect could not have been and is not likely to be substantial or the agents would not hold 75 percent of the market or there would be evidence of a decline over time in the share held by agents.

(4) Group Advertising

664 Group advertising is display advertising consisting of the individual business names of a number of franchisees or distributors under a common logo or trade-mark.[263] This type of advertisement is now prohibited by Tele-Direct and to all intents and purposes is not sold by agents or Tele-Direct.[264] The revenues that might potentially be converted into group advertising are currently non-commissionable and are serviced by the internal sales force as local or individual business accounts.

665 The effect of the alleged practice of anti-competitive acts regarding group advertising is to prevent competition by limiting the size of the commissionable market available to agents, rather than limiting their ability to compete for existing commissionable accounts. Because of the difference in the nature of the allegations, whether there is a likely substantial

prevention of competition as a result of Tele-Direct's practice regarding group advertising must be evaluated separately from the alleged practices of anti-competitive acts respecting the existing commissionable market.

666 We believe that Tele-Direct's policy on group advertising is dictated by its concern with a net revenue loss should advertisers abandon or reduce individual advertising in favour of group advertising. The incidental effect is to deny a type of advertising that would primarily be of interest to larger advertisers, for example, franchisers, some of whose accounts are likely targets for agencies. Although we heard anecdotal evidence of how certain advertisers would prefer to participate in group advertising, we were not presented with evidence as to the magnitude of the effect of this restriction. In the circumstances relating to agents we are of the opinion that such information should have been provided. Without such evidence, we cannot conclude that the prohibition against group advertising constitutes a substantial prevention of competition.

(5) Conclusion

667 We are unable to conclude that the evidence demonstrates that the acts alleged to be anti-competitive in the existing commissionable market and in respect of group advertising have had, are having or are likely to have the effect of preventing or lessening competition substantially. As a result, the Tribunal is without jurisdiction to grant a remedy under section 79 of the Act. It is, therefore, not necessary to consider in detail whether the individual acts complained of are anti-competitive and whether separately or in combination they amount to a practice.

668 We are not unmindful that some of Tele-Direct's actions in respect of agents seemed wilful and senseless. However, the Competition Tribunal does not exist to regulate industry practices generally. Rather, it has jurisdiction only to remedy the substantial prevention or lessening of competition and where this has not been proved, no remedy can be ordered.

E. Consultants

(1) Introduction

669 At paragraph 65(b) of the application, the Director alleges that Tele-Direct engaged in anti-competitive acts by refusing to deal directly with consultants as agents for advertisers purchasing space from Tele-Direct. The paragraph continues:

> The Respondents have issued guidelines to their advertising space sales staff which provide that the customer must deal with the Respondent's salespersons and no consultant can deal with the salespersons as a customer's agent.

The following, more specific, aspects of refusing to deal directly with consultants were provided in the written argument at paragraph 297:

> **[I.]**
>
> > (a) written instructions: refusal to act upon written instructions received from consultants on behalf of advertisers;
> >
> > (b) oral instructions: refusal to act upon oral instructions received from consultants on behalf of advertisers or meet consultants or the advertiser in the presence of consultants to receive same;
> >
> > (c) follow-up: refusal to deal with consultants on subsequent errors or problems.

670 In paragraph 65(c)(v) of the application, the Director alleges that Tele-Direct also engaged in anti-competitive acts by providing advertising space to consultants on less favourable terms than to its own sales staff, including rejecting or delaying orders based on alleged errors or other problems which would not result in delay or rejection of orders from Tele-Direct's own sales representatives. As set out in paragraph 296 of the written argument, the specific aspects of these acts are:

> **[II.]**

(a) delivery and processing problems: refusal to acknowledge or accept delivery of orders involving consultants or denial of delivery resulting in the delay or rejection of same, refusal to process such orders or the return of such orders to the advertiser or consultant;

(b) alleged errors: the identification of errors or problems in such orders which would not result in the delay or rejection of orders handled by the Respondents' own sales staff;

(c) oral instructions: refusal to meet with the advertiser to take instructions originating in advice from consultants;

(d) consequential acts: rejecting or delaying the processing of consultant orders, permitting or facilitating the following consequential actions:

(i) informing advertisers that their orders may or may not be processed if prepared by consultants or that consultants are "scam artists", have committed errors or similar threats or derogatory comments;

(ii) inducing breach of the contract between advertisers and consultants.

671 The final alleged anti-competitive acts of relevance to consultants are found at paragraph 65(e) of the application. The Director maintains that Tele-Direct is engaging in anti-competitive acts by refusing to supply specifications to consultants for the placing of advertisements in its directories.

672 We will deal with the alleged anti-competitive acts under the headings (a) refusal to deal directly with consultants, (b) discriminatory acts and (c) specifications, starting in "(5) Anti-competitive Acts", below.

(2) Allegations - Pleadings

673 The respondents argue that the "consequential acts" listed under II. (d) above do not fall within paragraph 65(c)(v) of the application and should not, therefore, be considered by the Tribunal. They also submit that one of the remedies requested by the Director, pertaining to copyright in advertisements, was not pleaded. The Director conceded that the case for including the remedy is not strong and we will not deal with it further.

674 On the question of the construction of the pleadings and what may be considered as fairly within them, once we have reached the stage of final argument we have indicated that what is determinative is what the parties considered to be in issue, looking at the proceeding as a whole. We will use the same general approach to the arguments here.

675 Counsel for the respondents admitted that aspects II.(a) and II.(b) were clearly in the application and II.(c) might be reasonably inferred from the application but II.(d) was outside the pleadings. The elements of (d) which were emphasized in oral argument by the respondents regarding their objection related to the question of inducing breach of contract and what was termed the "bad mouthing" claim or the making of disparaging remarks about consultants. In reply, counsel for the Director stated that the Director was not seeking a remedy with respect to the consequential acts and that there was little point in addressing whether they were part of the case. We have some difficulty with this position. The Director is clearly seeking a remedy for the alleged anti-competitive acts of providing advertising space to consultants on less favourable terms than to its own sales staff, including rejecting or delaying orders based on alleged errors or other problems, of which II.(d)(i), at least, is a subset. The Director also accepted, however, and we agree that any issue of counselling breach of contract is a matter for the civil courts so we will not deal with it further. The remaining acts listed in II.(d) were addressed by *both* parties through evidence and argument. Based on their conduct of the proceedings, the respondents were aware that these acts were in issue and there is, therefore, no prejudice to them by the Tribunal dealing with them on the merits.

(3) Competition Between Consultants and Tele-Direct

676 For the Director to succeed in any of the allegations, it must first be shown that Tele-Direct and the consultants are competitors. The respondents submit that consultants do not "sell" anything; they merely "unsell". They describe consultants

as being in the business of providing independent (or non-partisan) advice to disgruntled, local Yellow Pages advertisers. They say that Tele-Direct does not operate in this market since advertisers recognize that Tele-Direct's advice is partisan and not independent.

677 The Tribunal accepts that while the relationship between Tele-Direct and the consultants is not that seen in the more usual competitive context, they are nonetheless competitors. It is true that consultants exist by downselling, while it is highly unlikely that Tele-Direct representatives would offer the same type of advice. It is also true that consultants' advice is independent while Tele-Direct representatives are, by definition, partisan. Further, consultants normally do not have an ongoing relationship with an advertiser and their remuneration arrangement takes a different form than that for Tele-Direct. There may be other differences of detail.

678 At bottom, however, both consultants and Tele-Direct representatives provide services which a customer can use to achieve the final result of an advertisement in the Yellow Pages. As we have seen from the evidence put forward in this case, a customer may choose to use either a consultant or the Tele-Direct representative to obtain these services. In this sense, they are substitutes for one another and compete to serve the advertising customers. There was substantial evidence put before us that Tele-Direct, in fact, views consultants as significant competitors, monitors their progress and takes action to attempt to limit their inroads on its revenues.

679 This is not to say that consultants (and Tele-Direct) operate in the "separate" services market, an argument which we have already rejected. Both consultants and Tele-Direct are participants in the broad telephone directory advertising market. Tele-Direct controls that market, as set out in the chapter entitled "VII. Control: Market Power", above.

(4) Facts

(a) Consultants and their Method of Operation

680 Three directory advertising consultants testified before the Tribunal. Jim Harrison of Tel-Ad Advisors Ltd. ("Tel-Ad") has serviced the Ontario market from an office in the Toronto area since June 1984. Prior to that time, Mr. Harrison was an employee of Dominion Directory. Serge Brouillet, previously in sales and also training and promotion with Tele-Direct, started Ad-Vice Communications ("Ad-Vice") in mid-1989 in Sudbury to service northern Ontario. In the fall of 1990, he sold the northern Ontario operation to Charles Blais to be run as Ad-Vice North and moved into the Toronto market. Mr. Blais also appeared as a witness. Mr. Blais operated the Ad-Vice franchise in Sudbury from November 1990 to December 1992 when he sold it back to Mr. Brouillet who ran it in 1993.

681 A summary of the *modus operandi* of consultants in general will provide context for the relations between consultants and Tele-Direct and for the Director's allegations. Consultants operate on the basis that many Yellow Pages advertisers can reduce their Yellow Pages spending without reducing the effectiveness of the advertising. In other words, they target customers who are dissatisfied with the amount that they are spending with Tele-Direct and are willing to pay a fee to lower it. Consultants recruit customers by going through the Yellow Pages and identifying likely candidates for their services, those for whom they can save money. Two of the major factors are the size of the advertisement and the use of colour; number of headings and number of directories are also reviewed.

682 After contacting the client by telephone to determine interest, the consultant or an employee of the consultant meets with the client and makes a presentation showing the client various options for changing the advertising. The potential for conflict with Tele-Direct and its commissioned sales representatives is obvious from the outset. The consultants' income depends on reducing customers' expenditures on Yellow Pages. Thus, they attempt to convince the customer that the extra amount spent for options like larger size and colour is not worth paying. To do this, they might bring to the attention of the customer how much more those options cost and question their effectiveness for the customer. Tele-Direct's representatives, of course, emphasize the value and effectiveness of colour, size and the like by drawing on arguments and evidence put together by Tele-Direct to show that they are worth the cost.

683 With respect to submitting customers' orders to Tele-Direct for processing, when it first commenced operations Tel-Ad sent orders to Tele-Direct on behalf of customers. These were rejected by Tele-Direct. Then Tel-Ad sent in the orders on a generic order form with no identifiers; these were also rejected and returned either to Tel-Ad or the customer. Attempts to submit orders with a letter of power of attorney from the customer also failed. Eventually, Tel-Ad simply left the orders with the customers to be submitted to Tele-Direct. In July 1984, Tel-Ad started legal action against Tele-Direct for refusing to accept advertising orders directly from Tel-Ad. Tel-Ad also sought an interlocutory injunction requiring Tele-Direct to accept orders submitted by Tel-Ad on behalf of advertisers. The injunction application was denied on the basis of no irreparable harm and the action was later abandoned. Tel-Ad's activities led to the first version of Tele-Direct's guidelines for dealing with consultants, drafted in 1986. Tele-Direct's guidelines are reviewed in some detail below.

(b) Tele-Direct Reaction - General

684 The existence and activity of consultants strike at the trustworthiness of advice provided by Tele-Direct's sales representatives and place highly profitable revenues in jeopardy. Tele-Direct does all within its power to eliminate any possibility of consultants gaining the ear of its customers. It has taken out advertisements warning customers to beware of consultants. The same message is conveyed by the representatives and by letters to customers telling them to call Tele-Direct if contacted by consultants.

685 According to the 1986 Tele-Direct guidelines for dealing with consultants, the "official" line on consultants to be conveyed by representatives is that their objective is to reduce Yellow Pages advertising which will reduce the effectiveness of the advertising and likely adversely affect the customer's business, based on studies conducted by Tele-Direct. Emphasis is placed on the fact that consultants are only paid if the customer reduces Yellow Pages spending, implying that consultants are likely to give biased advice, and that Tele-Direct will perform the "same" service as the consultant (advice and artwork) and "not charge a fee".[265] Tele-Direct also encouraged its representatives to point out to the customer that while Tele-Direct was concerned with the long-term, consultants do not have a continuing relationship with the customer and therefore have no incentive to take into account the possible negative repercussions on the customer's business if their advice is followed.

686 There is evidence that at least some sales representatives went considerably further in their efforts to discredit consultants, calling them "scam" artists and other epithets, saying they were unfamiliar with Tele-Direct's specifications and showing poor photocopies of artwork done by consultants to customers in an attempt to cast doubt on the ethics and professionalism of the consultants.

687 Tele-Direct has also taken other, positive steps to combat consultants by improving elements of its service to its customers. For example, Tele-Direct has attempted to create a better working relationship with customers through "consultative" selling and by assigning representatives to customers for up to three years rather than changing each year. While the changes made by Tele-Direct were not in response to consultants alone, they were rooted in customer dissatisfaction with Tele-Direct's service.

(c) Tele-Direct's Consultant Guidelines

688 The guidelines set out Tele-Direct's procedures and directives to its sales force for dealing with orders for advertising originating with consultants and for handling customer contact once involvement of a consultant has been detected or suspected. This stage of the relationship between consultants, customers and Tele-Direct forms the focus of the Director's allegations of anti-competitive conduct. While the application of the various guidelines has been somewhat erratic and interpretation of their terms varied, it is clear that Tele-Direct has at no time dealt directly with a consultant acting *on behalf of* or in a representative capacity for an advertiser. Tele-Direct has always insisted on visiting a customer suspected of using a consultant even after an order was received from the customer and obtaining the customer's signature on its own documents. The package provided by Mr. Brouillet of Ad-Vice to his clients, following futile attempts on his part to avert the visit of the Tele-Direct representative by providing Tele-Direct's contract or a similar document to his clients himself,[266] advises the client that the Tele-Direct representative will be in contact to transfer the advertising program onto the Tele-Direct forms.

(i) 1986 Guidelines and Their Application

689 As general rules, the 1986 guidelines provided that:

> (c) Tele-Direct will not accept insertion orders directly from directory consultants who have not been granted accredited agency status by Tele-Direct.
>
> (d) Tele-Direct sales representatives should continue to contact their customers directly and request that the customers actually sign the Tele-Direct contracts and layout sheets so as to ensure the accuracy of the Yellow Pages advertising proposal prepared by a directory consultant. [267]

690 While the Tele-Direct policy of refusing to accept orders directly from consultants may have been followed in Tele-Direct's western region, it was not followed in the eastern region, in particular in Montreal, Sudbury and Ottawa. Letters sent in 1989 by Tele-Direct to Consultant en publicité annuaire et communication (CEPAC 2000) Inc. ("CEPAC 2000") in Montreal and Ad-Vice in Sudbury and in 1990 to Steven White of Tel-Ad in Ottawa [268] outlined for the consultants in question the procedure to follow in submitting orders to Tele-Direct. [269] The orders had to be delivered to named Tele-Direct managers in the relevant offices, accompanied by proper authorization by the advertiser on the advertiser's company letterhead.

691 Paul de Sève, Tele-Direct's Vice-president of Sales for the eastern region, confirmed that, although Tele-Direct's policy was not to deal directly with the consultant on the advertiser's behalf, in the eastern region at least, it was accepting orders from consultants. Orders were not automatically rejected and returned to the consultant even though Tele-Direct was aware of consultant involvement. The orders were taken as an indication that the customer wanted to change its advertising and a Tele-Direct representative would visit the advertiser and deal with him or her directly. In Tele-Direct's own words,

> ... Regardless of whether the "cut agent" or the customer was directing insertion/change/cancellation of Yellow Pages advertising through letter or order form, we would accept this information as notification that the customer wished to renegotiate his Yellow Pages advertising. The Tele-Direct representative would deal directly with our customer, using our forms and contracts in the setting up of Yellow Pages advertising. [270]

(ii) 1990 Policy and Application

692 Tele-Direct implemented new consultant guidelines in December 1990. The opening words of the revised guidelines state that:

> We changed our operating procedures on dealing with "cut agents" effective December, 1990, to further strengthen and reinforce our direct servicing philosophy with our customers.
>
> These changes were made to ensure that we did not act on "cut agent" instructions, for the insertion/change/cancellation of our customers' Yellow Pages advertising. Furthermore, these changes were intended to leave no doubt in the minds of our customers that we do not do business with "cut agents". [271]

The "general procedures" established by these guidelines were as follows:

> • we will always accept letters/packages sent or given to us by customers and act in accordance with their wishes.
>
> • to the best of our knowledge, we will not accept, nor act upon, information sent or given to us by "cut agents" on behalf of our customers, nor accept or act upon information sent or given to us by customers containing directives from "cut agents."
>
> • Instead, our procedure will be to not accept packages from "cut agents" or from customers for "cut agents" and in the event that a package is accepted in error, its contents will be returned to the "cut agent" with a covering letter designed for this purpose. [272]

693 The guidelines then provide more detail on the procedure to be followed in particular situations. The gist is that if, upon external examination of a letter or package, it became apparent that it was from a consultant or from a customer working with a consultant, the letter or package would be returned to the consultant. If the letter or package was apparently from a customer, with no external indication of consultant involvement, the letter or package would be opened but if further examination of the contents revealed the involvement of or a directive from a consultant, the letter or package would be returned to the consultant. Even when the letter or package appeared to come from or was, in fact, dropped off by the customer, if it was rejected because of consultant involvement, the customer would not be informed that the order had been returned to the consultant.

694 Mr. de Sève admitted that the procedures set out above represented a dramatic change from the 1986 guidelines, at least with respect to how the Montreal, Sudbury and Ottawa offices had been operating. [273] It is also clear from his testimony that the principal reason for the change was that Tele-Direct was having second thoughts about having "legitimized" the consultants to the extent they had by writing the letters referred to above in 1989 and 1990. The 1990 strike by Tele-Direct's sales representatives meant that the consultants were particularly active in the fall of that year.

695 The 1990 guidelines were adhered to strictly in one respect. At no time did Tele-Direct accept orders that were not submitted on the customer's letterhead. Other aspects of the guidelines appear to have been unevenly applied. Despite the statement that Tele-Direct would *always* accept orders from its customers and "act in accordance with their wishes", there was evidently considerable uncertainty within Tele-Direct as to how the guidelines were to be applied with respect to rejecting customers' orders for consultant involvement. Some orders containing indications of consultant involvement or where a consultant was known to be involved were accepted without incident or accepted after an initial rejection. Yet, Mr. de Sève's evidence, which as Vice-president of Sales for the eastern region we take to be an "official" application of the guidelines, was that where there was doubt, it was *assumed* that the documents came from a consultant and they were returned to the consultant without advising the customer.

696 This is what happened in the summer of 1991 in the case of a package containing 23 orders under customers' signatures which were, in fact, prepared by Ad-Vice North (Mr. Blais). An internal Tele-Direct document dealing with how it should respond to a complaint by Mr. Blais about this incident indicates that packages were being returned to Ad-Vice North by the Sudbury office *even though* Ad-Vice North was not mentioned in any of the correspondence and *regardless of* the fact that the letter of direction was from the customer because the employees recognized the Ad-Vice "format". Mr. de Sève stated that consultant involvement was probably assumed because of the number of orders in one envelope.

697 Mr. de Sève also confirmed that in 1991 Tele-Direct adopted a further policy of not processing orders received at the closing date according to the customer's instructions if they originated with a consultant even though it would do so for orders coming from its own sales force. Tele-Direct would instead rely on its last year's contract with the customer or the latest contract signed by the customer.

(iii) 1992 Policy and Application

698 The difficulties with and the inconsistency in application of the 1990 guidelines led to the most recent Tele-Direct guidelines for dealing with consultants, dated February 1992. These guidelines are currently in force. The operating procedures in those guidelines state that they are designed to "formalize our existing policy of dealing directly with customers." Two important aspects of that policy are:

> ... Tele-Direct will not accept a customer's appointment of a consultant to act on his/her behalf in dealings with Tele-Direct; and, Tele-Direct will not knowingly take instructions from a consultant acting on behalf of a customer. [274]

699 The detailed procedures provide that when correspondence is received from a consultant, whether by mail, courier, delivery, etc., it is opened and the contents examined to determine what action (from a list of A to D) should be taken. According to the procedures, any correspondence from a customer appointing a consultant to act on his/her behalf is to be returned to the customer with a form letter indicating that Tele-Direct will only deal with its customers directly (B). Any "directive" from a

consultant is to be returned to the consultant with a form letter which simply states that the material was received "in error" (C). A second form letter is to be sent to the customer explaining that the material has been returned to the consultant without being processed and stating Tele-Direct's policy of only dealing with the customer directly. The guidelines also state that any correspondence from a consultant regarding problems with or errors in published advertising are to be ignored altogether and the matter resolved directly with the customer (D).

700 Most importantly, if the correspondence contains instructions from a customer regarding his/her advertising, the procedures provide that the instructions should be accepted and handled "in the normal fashion, i.e., deal directly with the customer" (A). The evidence of Messrs. Renwicke and de Sève regarding when correspondence will be considered by Tele-Direct to contain instructions "from a customer" and will be accepted and handled in the "normal fashion" reveals that the guidelines are still open to interpretation. Mr. de Sève testified that even if the instructions are from the customer, on the customer's letterhead, if they include any reference to consultant involvement, the order will not be accepted. He was of the view that such a case fell within B or C set out above. Mr. Renwicke, on the other hand, first stated that such an order would be accepted. He then qualified this by saying that it depended on the "tonal quality" of the letter and of any references to a consultant. According to him, the defining criteria is whether it was perceived that the consultant "is going to be seen to or is actually playing a leadership role for that account". [275]

701 Assuming that the order is accepted, the guidelines also set out a "protocol" for customer contact by sales representatives when dealing "directly" with customers which reveals that little weight is given to the order already received from the customer. The representatives are to conduct themselves throughout in a "business-like and professional manner" but are expected to "only provide Yellow Pages selling services *directly to a customer*." While Tele-Direct's representatives are permitted (but not required) to meet with a customer when a consultant is present, they must decline to take *any* instructions from a consultant even if the customer insists. The protocol provides that all instructions must come directly from the customer. If the customer refuses to deal with the Tele-Direct representative directly, the representative is to review with the customer the customer's legal obligations under the existing Tele-Direct contract, i.e., that the previous year's advertising will simply be renewed. If this approach fails, the sales representatives are advised to try again later to re-convene the meeting but if the customer still refuses to deal directly, then advise the customer that the contract will remain in force in accordance with its terms.

702 Mr. de Sève admitted that under this protocol, where a customer handed the Tele-Direct representative a package containing instructions prepared by a consultant and asked the representative to follow them, that would lead to a termination of the interview and the instructions would not be followed. He also admitted that, in fact, Tele-Direct representatives would refuse to meet with the customer in the presence of the consultant because they would not be able to discuss with the client "one-on-one" the merits of the change in the advertising program.

(d) Specific Incidents

703 The Director relies on numerous specific incidents involving consultants and their customers as evidence in support of his allegations. The respondents dispute that some of those occurrences took place or if they took place, took place as related by the Director's witnesses.

704 We accept that there were times when Tele-Direct went beyond simply rejecting or returning orders from customers where consultant involvement was suspected and treated these in an extremely cavalier fashion. On one occasion in 1989, a package of customer orders prepared by Mr. Brouillet, including one from Ad-Vice's law firm, was left with a secretary who threw it out of the Tele-Direct office and into the hallway. The lawyer was able to confirm after a number of phone calls that his order had been retrieved and was processed. He inquired about the remaining orders but Tele-Direct refused to inform him of the fate of the other orders in the package.

705 On another occasion in 1990, when the manager designated to receive orders from Ad-Vice in Sudbury was not in the office, the process server left the package on the counter and the receptionist threw it in the garbage. Apparently the order was not processed in accordance with those instructions, according to the respondents, because the advice was delivered late. The only evidence brought to our attention on this point was a recently written note by the Tele-Direct representative that

stated "delivered past deadline - did not use their material".[276] The affidavit of service sworn contemporaneously, however, indicates that the package was delivered on August 16, 1990. Mr. de Sève's evidence was that the closing date for Sudbury was in November. We therefore do not accept that the package was delivered late.

706 We accept the evidence of incidents in which orders from customers who had used a consultant were subject to "errors" in processing by Tele-Direct. In three cases Tele-Direct acknowledged to the customers that errors had been made and provided a credit. These included Todd Optical Ltd. (mistake in telephone number and location), Adler Moving Systems (advertisement in the Elliot Lake directory omitted), Forest Products and Builders (advertisement did not appear), all customers of Mr. Brouillet. The owner of Todd Optical Ltd. had written a letter of support for Ad-Vice. We note that these errors all had potentially serious adverse consequences for the businesses involved.

707 Another customer of Ad-Vice, Lockerby Taxi Inc., whose owner appeared as a witness, experienced an odd error when an unpaid "filler" advertisement was published featuring Lockerby's name with the query "Sales Down?" in the background. Mr. Flinn was never provided an explanation or apology for the error. His attempt to obtain compensation was denied by Tele-Direct because he could not prove damage to his business.

708 The Director also called evidence that Tele-Direct informed customers that advertising prepared by a consultant did not comply with its specifications on the slimmest of pretexts.[277] Several of the examples related to clients of Mr. Brouillet, who testified that to his knowledge the advertisements were in accordance with existing specifications. The respondents called no evidence that the advertising did not meet specifications. In one case, the respondents admitted that the advertisement prepared by CEPAC 2000 did, in fact, comply with specifications.[278] We conclude that Tele-Direct would not have objected to these advertisements had it not been for the involvement of a consultant in each case.

709 As noted above, Tele-Direct's admitted practice is not to act on a customer's order, where a consultant is believed to be involved, until the customer has been visited by a Tele-Direct representative. Instead, Tele-Direct treats the order from the customer merely as an "indication" that the customer wants to change his or her advertising. Thus, in every case of suspected consultant involvement, the customer will be visited by a Tele-Direct representative. At the point of a meeting between the Tele-Direct representative and the customer, usually the customer would have already signed a contract with the consultant approving the changes recommended by the consultant and agreeing to pay the consultant's fee. The respondents deny that there was any tendency within Tele-Direct to delay visiting a customer who was known or suspected to have used a consultant until the last minute and to use the visit as the occasion to make disparaging remarks implying that the customer had been "taken advantage of" by the consultant or to use other tactics to pressure the customer into changing his or her mind about the program recommended by the consultant.

710 We accept that these types of tactics were fairly widely used by Tele-Direct's representatives. Last minute contact resulting in pressure on the customer and some confusion as to what the customer had to do to ensure the advertising would run as originally ordered occurred in several examples put before us. Mr. Harrison recounted the example of Mr. Kantor of Tiremag Corp. Mr. Kantor's order was delivered by registered mail to Tele-Direct in April 1993. Mr. Kantor was contacted by the Tele-Direct representative six months later, close to the closing date for the Brampton directory, and informed that no order for that directory had been received and that unless something was done, his advertising for the previous year would have to be used. Mr. Kantor insisted that he had already given them his instructions but Tele-Direct never located the package. The previous year's advertisement was run, then Tele-Direct located the package and admitted it had made a mistake. Similar problems occurred for Pat's Party Rentals, a client of Mr. Brouillet.[279] Other examples are the Britannia Restaurant & Banquet Hall, again a client of Mr. Brouillet, and the Muskoka Riverside Inn, a client of Mr. Blais.[280]

711 Eric Beesley of Georgetown Quik-Lube Ltd., who appeared in person, testified that, having submitted his order much earlier, he was contacted by the Tele-Direct representative the day before the closing date to attempt to persuade him to stay with his existing program. Then on the final day, he was called again and advised that he had to attend at the Tele-Direct office in person to make the changes. Mr. Beesley, however, was aware of the contractual clause allowing him to make changes in writing by a certain date, pointed out that he had complied with it and the advertising was processed as he had ordered.

712 There is only one documented case in the evidence in which a Tele-Direct representative counselled a customer *outright* not to honour a contract with a consultant. [281] Tele-Direct's guidelines explicitly warn Tele-Direct representatives not to provide advice with respect to customers' legal obligations. There is, however, abundant evidence of instances where customers refused to pay consultants following a meeting with the Tele-Direct representative. If the customer refuses to pay, the consultant is obliged to take legal action to recover the fees owed. [282] In general, where the consultants have gone to court, they have been successful in having the contract honoured. While it might be argued that the persistent refusals to pay by customers indicates dissatisfaction with the consultants' services rather than reflecting any tactics employed by Tele-Direct's representatives, on the evidence we accept that there is a link between the visit by the representative and the instances of refusal to pay the consultants' fees.

713 The issue in many of these incidents is whether Tele-Direct made innocent errors, or whether the climate in Tele-Direct towards consultants resulted in what was, in effect, sabotage of the consultants and their customers. An important reason for concluding that there was more than innocent errors at work is the evidence that Tele-Direct was willing to sacrifice the interests of customers by putting them in the middle of Tele-Direct's struggle against consultants. There is more than a hint of malevolence in the formal and explicit decision in the 1990 guidelines not to inform customers when orders submitted on their behalf were being refused (although this was changed in the 1992 guidelines).

(5) Anti-competitive Acts

714 The Director alleges a number of anti-competitive acts by Tele-Direct involving consultants relating to Tele-Direct's refusal to deal directly with consultants on behalf of advertisers, its discriminatory treatment of customers and customers' orders originating with consultants and its refusal to supply specifications to consultants. None are specifically listed in section 78 of the Act. As the list is not exhaustive, there is no reason not to assess the actions characterized by the Director as anti-competitive acts by Tele-Direct to see if they have the requisite exclusionary, predatory or disciplinary purpose.

715 The respondents argue that the challenged conduct cannot be anti-competitive because it was generally in accordance with the Tele-Direct guidelines for dealing with consultants, which they say were not intended to and do not prevent the consultants from doing business but rather render Tele-Direct's dealings with consultants "fair and consistent". They further submit that they have valid business reasons for their policy. These "business justifications" will be dealt with in detail for each alleged anti-competitive act.

716 In a related argument, the respondents submit that, to the extent that the Director is able to prove that Tele-Direct engaged in any of the alleged acts, those acts ceased in 1992 with the implementation of the most recent guidelines for dealing with consultants which have been consistently applied, unlike prior versions. They submit that any practice cannot be caught by section 79 as more than three years have elapsed since it ceased. We do not see validity in the argument. The 1992 guidelines are obviously still in force. The Director has not alleged that it is only the failure to follow the guidelines that is anti-competitive but that certain actions of Tele-Direct, which may not be contrary to the guidelines (refusal to deal directly with consultants on behalf of advertisers) or are simply not dealt with in the guidelines (some discriminatory acts, refusal to supply specifications), are anti-competitive. To the extent that the guidelines sanction conduct that the Director is alleging is anti-competitive, then the Director is, in effect, challenging the guidelines and their application also. The guidelines certainly do not prohibit (and may actually encourage) the particular conduct by Tele-Direct that is the subject of the allegations.

(a) Refusal to Deal Directly with Consultants

717 The respondents here repeat the argument that we dealt with earlier under the section concerning the abuse of dominant position with respect to publishers and the 20-directory requirement. They argue that a refusal *cannot* be an anti-competitive act and that they are not required to assist their "detractors" by dealing with consultants as that would be akin to placing a positive duty to act on the respondents. As we stated in that section, semantic arguments about whether the act in question is active or passive do little to advance the real issues in dispute. We will therefore proceed to analyze the more substantive arguments without further comment.

718 The evidence is clear that Tele-Direct has engaged, since the advent of Mr. Harrison and Tel-Ad in 1984, in the specific aspects of refusing to deal directly with consultants on behalf of customers set out under I. in the introduction above. Tele-Direct has refused to act on written instructions received from consultants on behalf of advertisers; refused to act upon oral instructions received from consultants on behalf of advertisers or meet consultants or the advertiser in the presence of consultants to receive same; and refused to deal with consultants on subsequent errors or problems.

719 In the eastern region between 1986 and 1990, Tele-Direct acted in contravention of its own 1986 guidelines by *accepting* orders from, at least, CEPAC 2000, Ad-Vice and Tel-Ad, as evidenced by the letters. Even those letters, however, make it clear that the order must be accompanied by a letter *from the customer on the customer's letterhead*.

720 There is also evidence that Tele-Direct refuses to accept oral instructions from consultants. The 1992 guidelines are clear that the Tele-Direct representative must not accept instructions, even indirectly, from anyone other than the customer. While the current guidelines allow the representative to meet with the customer with the consultant present, the representative is not required to do so. The evidence was that most of the time the representative refuses to meet with the customer with the consultant present. Likewise, Tele-Direct would not deal with consultants on follow-up matters on behalf of customers.

721 We must weigh the anti-competitive effects of the acts against the business justifications put forward by the respondents. There is no doubt that Tele-Direct was trying to make life difficult for the consultants by refusing to deal with them directly on behalf of advertisers. Tele-Direct did not want the consultants to have any legitimacy in their dealings with its customers. The 1990 guidelines were brought in to eliminate the slight leniency that had developed under the 1986 guidelines, which had placed letters from Tele-Direct in the hands of various eastern region consultants confirming that orders coming from them would be accepted and processed by Tele-Direct.

722 There are two possible types of adverse effects that might arise from Tele-Direct's refusal to deal with consultants acting on behalf of customers. The first is the possible increase in costs to the consultants that would result from having to do business in a somewhat roundabout way, rather than submitting orders directly. The second, and more important, effect is the effect on the consultants' credibility with customers when they have to explain to customers that they are not permitted by Tele-Direct to submit orders directly on their behalf but must use an indirect procedure. This might put the consultants in a negative light in the eyes of the customer, particularly if the customer is already generally aware of the background of acrimonious relations between Tele-Direct and consultants. Against that backdrop, the indirect procedure that the consultants must use for submitting orders to Tele-Direct might appear as a form of subterfuge.

723 The evidence does not indicate that cost increases to consultants from Tele-Direct's refusal have been a real issue. The consultants' businesses have experienced ups and downs. While Mr. Harrison was unable to grow his business between 1986 and 1992, servicing an average of 60 new accounts a year, in the last few years he has expanded and is now handling 200 to 250 new accounts a year. Mr. Brouillet testified that Ad-Vice revenues from Yellow Pages consulting were at a high between 1992 and 1994 but dropped roughly to 50 percent of that amount in the last two years. He has also diversified into other businesses in recent years. Mr. Blais eventually gave up and left the business.

724 Although all three of the mentioned consultants testified at the hearing, none of them expressly linked whatever difficulties that they might have experienced to an *increase in costs*. Even Mr. Blais did not do so. Undoubtedly, the consultants would like to have the advantage of being able to deal directly with Tele-Direct on behalf of advertisers. We find it instructive that Mr. Harrison has been operating since the mid-1980's, and still operates, in spite of Tele-Direct's refusal to deal directly with him in a representative capacity. Evidently, he, and other consultants no doubt, have managed to find an alternative to direct submission of orders that does not impose significant increased costs, or any increased costs at all, on their businesses. We cannot, therefore, identify any adverse cost effects on consultants resulting from Tele-Direct's refusal to deal with them acting on behalf of advertisers.

725 The question of possible negative reputational effects or damage to consultants' credibility arising from Tele-Direct's refusal to deal with them acting for customers is complex. To the extent that consultants lose reputation or credibility, customers

will be less likely to demand their services. We do have evidence from the consultants that they have suffered negative reputational effects. For example, Mr. Brouillet testified that he could not keep sales help because of the negative environment; sales personnel felt they were regarded by advertisers as not legitimate, as "scam" or "con" artists.

726 Unfortunately, it is difficult to determine whether these effects result from the refusal by Tele-Direct to deal directly or from other actions of Tele-Direct that are not alleged to be anti-competitive. The Director has not challenged as anti-competitive Tele-Direct's general hostility towards consultants, as manifested by the placing of advertising warning customers about consultants, writing letters to customers and sending out its representatives to their premises with messages to the same effect. In our view, the negative reputational effects on consultants are due largely to the general environment created by Tele-Direct rather than the specific refusal to deal directly with consultants acting for advertisers. Any connection between the negative reputational effect or loss of credibility on the part of consultants and the refusal to deal directly is very weak.

727 We turn to Tele-Direct's business justifications for its consultant guidelines and, thus, for its refusal to accept written or oral instructions from consultants or deal with them on follow-up matters. The respondents' general position is that their refusal to deal with consultants "is clearly an efficient response to the damaging effect of the consultants on their business". They point out that the objective of the consultants is to decrease directory advertising which is exactly the opposite of the respondents' objective, which is, in their words, to sell directory advertising "in order to increase the usage of their directories and produce a more complete directory." Because the consultants generally serve customers on a one-time basis, the respondents take the position that consultants have a "perverse" incentive to "undersell", which detracts from the completeness of the directories.

728 We have already dealt with the "completeness" argument as part of the analysis of tied selling. As we concluded there, it is far from clear that all increases in advertising (especially size and colour which are targeted by consultants for reduction) contribute to completeness. Therefore, the "upselling" of size and colour by Tele-Direct representatives cannot be assumed to be socially beneficial, nor can the "downselling" of those attributes by consultants be assumed to be socially detrimental. The optimal situation is one in which both points of view are freely available to advertisers so that the advertisers themselves can make the choice.

729 At paragraph 840 of their written argument, the respondents have also provided the following more detailed justifications for issuing and following their consultant guidelines:

> (i) the consultants do not accept responsibility for payment for the advertising;
>
> (ii) to ensure that the customer is fully informed with respect to the advertising they are purchasing and their available options;
>
> (iii) to ensure customers understand with whom they are dealing;
>
> (iv) to prevent the conflicts that may occur if the Respondents' sales representatives were to take instructions directly from the consultants;
>
> (v) to ensure that advertisers are aware of new programs and initiatives.

730 We need only deal with the first point. The Director has in effect admitted the validity of the respondents' first business justification, that consultants do not accept financial responsibility for the advertising, by the remedies he seeks. At paragraph 69(b)(iii) of the application, the proposed remedy was:

> ... that the Respondents accept orders for advertising space on behalf of any party that can satisfy the Respondents' reasonable requirements of evidence of authority to act on behalf of an advertiser and *capacity to pay for the space requested*.
>
> (emphasis added)

At paragraph 391 of the written argument, the following further remedy was added:

> ... that the Respondents be prohibited from requiring that customers who choose to utilize the services of a third party to place advertising be required to enter into a contract directly with the Respondents where the third party who has satisfied the Respondents' reasonable requirements of evidence of authority to act on behalf of the advertiser and *where the third party has guaranteed payment on behalf of the principal*.
>
> (emphasis added)

731 These proposed remedies imply that in the Director's view it is reasonable for Tele-Direct to insist on financial guarantees if Tele-Direct is to deal with consultants as representatives of the customer. The consultants do not currently accept any financial responsibility. What the Director has done is to suggest an alternative method of operations for Tele-Direct in its dealings with consultants. He is proposing, in effect, that Tele-Direct begin to deal directly with consultants acting for advertisers by creating a new third sales channel (in addition to the internal sales force and agents).

732 There is evidence that dealing directly with the consultants would require Tele-Direct to set up an additional interface to deal with them. As described by Mr. Logan of the YPPA, this was the experience of US West, which set up a group of specially trained employees to deal with consultants to avoid problems with its sales force when it dealt directly with consultants. Such direct dealing, therefore, would obviously entail an additional cost to Tele-Direct. Further, Tele-Direct does not currently deal with guarantees in the sense proposed by the Director. Agents, of course, simply pay up front. A system would have to be set up to accommodate this new procedure.

733 In the circumstances, we think that the additional costs that Tele-Direct would incur if it were forced to deal with consultants directly on behalf of advertisers is a valid justification for not doing so, given that no adverse cost effects on agents were proven and that any negative reputational effects that are attributable to the refusal to deal directly are, at best, weak. We conclude, therefore, that, overall, Tele-Direct is not engaging in anti-competitive acts by refusing to deal directly with consultants on behalf of advertisers and, in particular, by refusing to accept written or oral instructions from, or engage in follow-up communication with consultants acting on behalf of advertisers.

(b) Discriminatory Acts

734 The discriminatory acts involve Tele-Direct's actions after the customer has submitted an order based on a consultant's advice and the effects that flow therefrom. Notwithstanding Tele-Direct's stated policy, orders submitted by a customer are sometimes returned because Tele-Direct believes a consultant was involved in the preparation of the order. There is no justification for Tele-Direct precluding an advertiser from seeking the advice of a consultant if the advertiser so chooses. Indeed, that is what one part of Tele-Direct's written guidelines states. Yet, the guidelines, even the 1992 guidelines, also mandate the return of certain customer orders. The fact that Mr. De Sève, a senior executive of Tele-Direct, is aware, and apparently condones, the return of customer orders for suspicion of consultant involvement proves that these were not merely isolated instances or errors.

735 Further, the history of the 1990 guidelines underlines the fact that Tele-Direct was fully aware of and, in fact, sanctioned the foreseen negative consequences of those guidelines for its advertisers. The advertisers' interests were sacrificed in order to hamper the consultants. The effect of the 1990 guidelines, as Tele-Direct itself recognized when they were first drafted, was to place the advertiser in the middle of the battle between Tele-Direct and the consultants, to the detriment of the advertiser.

736 A document attached to the guidelines identifies "perceived weaknesses" in the guidelines which were to be reviewed with the legal advisors. The first related to the fact that Tele-Direct would be rejecting any package delivered by a consultant or bearing any external indication of consultant involvement even if delivered by the customer or also bearing customer information on its face. Packages would therefore be rejected even though they might contain instructions from the customer on the customer's letterhead. A second concern was whether it was a reasonable business approach not to notify customers that the letter/package delivered to Tele-Direct had been rejected and returned to the consultant. In spite of these misgivings, the new policy was put in place.

737 The internal document dealing with the incident where 23 orders prepared by Mr. Blais were rejected even though they were under customers' signatures states that legal counsel, in fact, recommended against the procedure in the guidelines which permitted this type of rejection. Counsel, as reported in the letter, was of the view that the customers had the right to deal with whomever they wished in designing their advertising and further had the right to send Tele-Direct their instructions on their letterhead and expect that they would be acted on as coming from them, provided that Tele-Direct was not required to deal directly with the consultant and the correspondence did not carry any consultant identification.

738 The respondents did not attempt to provide a business justification for rejecting or returning customer orders where there was no evidence of non-compliance with specifications or of late delivery. In the circumstances, we find that the rejection, return, denial of receipt or refusal to process customer orders involving consultants constitute anti-competitive acts.

739 As noted earlier, the Director is not of the view that Tele-Direct's insistence on visiting a customer after the customer has signed a contract with a consultant and submitted an order to Tele-Direct is by itself an anti-competitive act. He says that the issue relates to what the representative tells the customer and how the order received from the customer is treated. We agree that this is the crux of the difficulty. The anti-competitive acts are those that lead the customers to believe that they will be disadvantaged or that actually harm them because they have used a consultant. These include suspicious errors, last minute contact resulting in confusion for the advertiser about what must be done to have the new advertising run or resulting in missed deadlines, identifying errors or problems in the advertising that would not otherwise be a problem and informing customers that their orders might not be processed. We accept that such incidents occurred and that there is no assurance that they will not be repeated whenever consultants are seen as a threat.

740 The respondents argue that they were trying in all cases to ensure that their business operated efficiently by requiring consultants to meet deadlines and specifications. We have found that noncompliance with specifications and deadlines were largely pretexts for an attempt to pressure customers into changing their minds about a consultant's recommendations. Most of the incidents in evidence are more accurately characterized as highly disruptive because of the negative impact on customers rather than ensuring the smooth operation of Tele-Direct's business as argued. We have no hesitation in finding that statements or actions by Tele-Direct to discourage advertisers from dealing with consultants by expressly or implicitly indicating that advertisers will thereby be disadvantaged by Tele-Direct constitute anti-competitive acts.

741 The Director alleges that the respondents discriminate against consultants by refusing to meet with customers to take instructions originating in advice from consultants. On its face this looks very much like the allegation listed in I.(b) and forming part of the refusal by Tele-Direct to deal directly with consultants on behalf of advertisers. Presumably, the discriminatory act being alleged here is a refusal to accept oral instructions from customers using consultants while oral orders from customers not using consultants are accepted and acted on. As has already been noted, Tele-Direct requires that customers using consultants sign Tele-Direct's documents. In and of itself, this is not an anti-competitive act. It might, however, be a discriminatory act if customers not using consultants are not required to sign a contract in like circumstances.

742 However, the evidence of Mr. Giddings is that, by and large, all of Tele-Direct's customers sign its documents. In fact, Mr. Giddings testified that the only contracts which do not require signing are those contracts renewing advertising worth less than $100. Further, Mr. Giddings indicated that for those contracts which are not signed, if there is a conflict between the customer and the representative as to what advertising was actually ordered, which results in a "write-off", the representative is financially responsible for the write-off. This policy does not seem unreasonable on an operational basis. With respect to orders which Tele-Direct will accept orally from customers dealing with its representatives (that is, those under $100), there is no evidence that consultants deal with or are interested in obtaining clients whose orders are so small. We do not find this allegation to constitute an anti-competitive act.

743 There is no doubt that those discriminatory acts of Tele-Direct which we have found to be anti-competitive constitute a practice. They are not "isolated acts".

(c) Specifications

744 The Director submits that Tele-Direct's refusal to supply specifications to consultants is an anti-competitive act. He argues that consultants cannot adequately advise the customers who choose to use their services without up-to-date access to basic technical information. The Director points to evidence of Tele-Direct using alleged non-compliance with specifications to delay orders or discredit consultants in customers' eyes.

(i) Majority View (Rothstein J. and C. Lloyd)

745 The majority of the Tribunal are unable to agree with the Director for the following reasons. We see the refusal by Tele-Direct to provide specifications to consultants as another manifestation of Tele-Direct's general aversion to having any relationship with consultants. Looking at the experience of consultants and Tele-Direct's refusal to supply specifications to them, the evidence is that this has not adversely affected their ability to compete. Consultants have been in business since 1984 and we have heard of no difficulty experienced by them because Tele-Direct refused to provide them with specifications. [283] In one way or another, they were aware of what Tele-Direct's specifications required.

746 As to whether Tele-Direct not providing specifications to consultants would cause a problem in the future, Mr. Brouillet stated:

> ... If there were changes in their specifications and we were not informed about it, then obviously, there would be a problem. If there was really a problem, the client only had to call us within 24 hours, we could fix what was wrong and forward that to Tele-Direct. [284]

There is no evidence before us that suggests that Tele-Direct's specifications change frequently. If anything we are left with the contrary impression from the absence of evidence from consultants that frequent changes were a problem. Mr. Brouillet stated that once a problem is pointed out it can be quickly fixed. On the basis of this evidence, we are satisfied that any changes to specifications will become known by consultants quickly. We, therefore, have no basis upon which to infer that refusal to provide specifications to consultants will, in any material way, adversely affect their ability to compete in the future.

747 The respondents did not argue the business justification "that customers understand with whom they are dealing" to justify the refusal to supply specifications to consultants, although this was raised as a justification for other acts. However, we are of the view, based on the evidence, that this business justification is applicable here. There is evidence before us of a number of instances in which there was confusion on the part of advertisers as to the exact relationship of a consultant with Tele-Direct. [285]

748 We infer from the way in which some consultants operate that this confusion could be exacerbated if a consultant, on visiting a proposed customer, is armed with up-to-date specifications obtained from Tele-Direct. There are indications in the evidence that in their initial contact with advertisers, consultants do not go out of their way to distinguish themselves from Tele-Direct. In some cases, the evidence is that the customer remains confused as to the exact relationship between the consultant and Tele-Direct. [286] In other cases, it is apparent that while an advertiser may initially be confused, the fact that the consultant does not represent Tele-Direct eventually becomes apparent. It may become apparent in conversation between the advertiser and consultant or when the advertiser is requested to pay the consultant separate from Tele-Direct. In the case of Ad-Vice, a follow-up letter makes this clear. [287]

749 However, in our view, it is the initial confusion that creates the difficulty. We do not think consultants should be "getting their foot in the door" of advertisers because of such initial confusion. Being provided with specifications by Tele-Direct could be used by them as a form of "calling card" signifying a relationship with Tele-Direct that does not really exist. Notwithstanding that in many cases the confusion is eventually cleared up, we do think customers are best served when they know from the outset precisely with whom they are dealing and in this case, the relationship or lack of relationship between Tele-Direct and a consultant. We therefore think that Tele-Direct is justified in refusing to provide specifications to consultants and conclude that such refusal is not an anti-competitive act.

750 While we are not satisfied that the Director has made a case that the refusal to provide specifications to consultants is an anti-competitive act, we are not unmindful that ultimately it is the advertisers that might encounter difficulty if they retain the services of consultants who use incorrect specifications. It is for this reason that we have, in providing for a remedy for discriminatory acts against advertisers, required Tele-Direct, at its option, to take positive steps to revise a customer's order that is not submitted in compliance with its specifications so that the order complies or advise the customer what is wrong and how the customer may revise the order in accordance with its specifications.

(ii) Minority View (F. Roseman)

751 In my view, the refusal to supply specifications is an anti-competitive act. While differing from the majority in their conclusion, I accept that there is little evidence of past harm to consultants from the refusal. Nevertheless, consultants may suffer adverse effects in the future should Tele-Direct change its specifications. The consultants will eventually learn of the changes through trial and error but this leaves a considerable degree of uncertainty during an indeterminate transitional period. Therefore, there is the likelihood that the consultants will be significantly hampered so that the refusal to supply specifications should be considered an anti-competitive act given the complete absence of any sound business justification for the refusal.

752 The respondents have not advanced any valid business justification. They argue that the refusal is justified by the uniqueness and complexity of Tele-Direct's business and its desire to maintain the value and quality of its product. It is difficult to see how avoidable errors in orders prepared by consultants (and submitted by customers) contribute to quality.

753 I do not accept the majority's view that the evidence supports the conclusion that the availability of specifications to consultants would result in increased confusion on the part of customers as to the consultants' identity and purpose. I agree with the majority that it is impossible to identify the source of the confusion that apparently arose for some customers.[288] However, it is noteworthy that none of the incidents of confusion referred to by the majority was linked to Mr. Harrison[289] but only to Mr. Brouillet. Yet, it is Mr. Harrison who has been able to obtain ongoing access to Tele-Direct's specifications from YPPA through an affiliate in the United States. Because I am of the view that refusal to supply specifications will likely significantly hamper the consultants' ability to compete and that there is no valid business justification for the refusal, I conclude that the refusal constitutes an anti-competitive act.

(6) Substantial Lessening of Competition

754 The competitive effectiveness of consultants has been reduced as a result of Tele-Direct's practice of discriminatory acts. Consultants incur higher costs as a result of being forced to defend themselves before customers and by having to seek the aid of the courts in enforcing their contracts. These activities require time and expense that could otherwise be spent in attracting and serving customers.

755 In addition, the consultants' ability to attract new business is negatively affected when their customers are inconvenienced or harmed by Tele-Direct's discriminatory acts. Customers so affected are unlikely to be repeat customers or to recommend the services of consultants to other Yellow Pages advertisers.

756 Although consultants currently service a small portion of the total telephone directory advertising revenue, they are competitively significant. Tele-Direct was forced to respond positively to the presence of consultants by improving its servicing of its customers. Thus, consultants have had and can continue to have a significant positive influence on Tele-Direct's level of service to its customers as Tele-Direct legitimately strives to offset the inroads that consultants make into its sale of Yellow Pages advertising.

757 It is difficult to arrive at a numerical determination of the effect on consultants of the practice of discriminatory acts we have found to be anti-competitive because the acts are intermingled with other forces that hamper consultants. What we know, however, is that the consultants' ability to compete is limited and fragile as compared to Tele-Direct's virtual monopoly through its control of publishing. Consultants, by the nature of their services, have little ongoing business and must convince advertisers

to pay for their services when these advertisers could place advertising in directories without incurring such expense, i.e., the market for their services is necessarily a "thin" one.

758 Where a firm with a high degree of market power is found to have engaged in anti-competitive conduct, smaller impacts on competition resulting from that conduct will meet the test of being "substantial" than where the market situation was less uncompetitive to begin with. [290] In these circumstances, particularly Tele-Direct's overwhelming market power, even a small impact on the volume of consultants' business, of which there is some evidence, by the anti-competitive acts must be considered substantial. Of course, in the future, in the absence of any order by the Tribunal, there would be no constraint on Tele-Direct intensifying discriminatory acts against consultants and exacerbating an already substantial effect on them. We have no difficulty concluding that Tele-Direct's proven practice of anti-competitive acts has had, is having or is likely to have the effect of lessening competition substantially in the market.

(7) Remedies

759 The Tribunal recognizes that consultants' interests are antithetical to Tele-Direct's and that Tele-Direct should not be forced to assist consultants. However, consultants must be able to compete with Tele-Direct to provide services to advertisers. Tele-Direct cannot use its market power to impede consultants' activities and to disadvantage customers who wish to retain the services of consultants. On the other hand, Tele-Direct must not be restrained from competing fairly with consultants.

760 We have concluded that Tele-Direct's refusal to deal with the consultants directly on behalf of advertisers is not an anti-competitive act. No remedy is provided in this respect. Nor is any remedy provided for Tele-Direct's refusal to provide specifications to consultants.

761 We have found that Tele-Direct engaged in a practice of discriminatory acts against consultants and customers who use consultants resulting in a substantial lessening of competition. While many of the acts in evidence occurred more than three years before the filing of the Director's application, the practice continues. The practice of these acts is prohibited. Customers using consultants must be treated by Tele-Direct no differently than customers who do not use consultants.

762 For greater certainty, we elaborate on this remedy. Where a customer uses a consultant and the customer submits an order for advertising in the Yellow Pages, Tele-Direct is prohibited from rejecting the order. Tele-Direct may accept the customer's order without revisiting or contacting the customer to attempt to change the customer's mind. It will be open to Tele-Direct to act on the documents submitted by the customer or, if it considers it necessary, require the customer to sign a Tele-Direct document. If Tele-Direct decides to accept the order as it is, Tele-Direct is prohibited from not processing it or unduly delaying its processing and from refusing to confirm to the customer that the order will be processed as submitted. If the order is accepted and it turns out there is noncompliance with Tele-Direct's specifications, then the order must be processed in accordance with a revision made by Tele-Direct that complies with the specifications or the customer must be advised promptly that the order does not comply with specifications and informed of the exact problem and how to rectify it.

763 Alternatively, Tele-Direct has the option of providing further advice to the customer to try to convince the customer to change the order submitted. It may do so, including visiting the customer, but it is prohibited from employing the techniques that we have condemned as anti-competitive when doing so. For example, Tele-Direct may not delay until close to the closing date for submitting orders for a directory to contact the customer about alleged problems in the order. Tele-Direct may not advise the customer who used a consultant that the order does not conform to Tele-Direct's specifications or is otherwise unacceptable unless there is a material problem, in which case, Tele-Direct must provide the necessary information so the customer can cure the problem. Tele-Direct cannot use problems with the order in such a way as to leave the customer only with the option of reverting to the prior year's advertisement or having no advertisement appear. Nor may Tele-Direct delay until close to the closing date so that if the Tele-Direct's representative is able to convince the customer to change the order from that recommended by the consultant, that the customer does not have the opportunity of contacting the consultant if the customer wishes further advice from that source.

764 Subsequent efforts by Tele-Direct to resell the advertisers should be restricted to the merits of the advertising recommended by the consultant. Tele-Direct is prohibited from having its representatives discuss the role of or advisability of using a consultant at this time. We recognize that it may be difficult to distinguish between legitimate "puffing" of Tele-Direct's service and disparaging comments or inferences about the consultant's service. In view of the instances of disparaging comments by Tele-Direct that have occurred, we caution Tele-Direct to ensure that its instructions to its representatives are clear that in their follow-up meetings they are not to disparage consultants. What would be of concern would be evidence of systematic continuous representations that are untrue or that disparage consultants in these follow-up meetings.

765 For example, it is simply untrue that customers would receive the same advice from Tele-Direct for no cost as from a consultant who charges a fee because Tele-Direct representatives will rarely if ever recommend a reduction in advertising, which is the essence of the consultants' advice. The fact that consultants have a short-term relationship with a customer may be true but comments to this effect are disparaging if made with a view to causing a customer to lose confidence in a consultant's advice, not based on the merits of that advice. Tele-Direct should ensure that in these meetings its representatives restrict their selling effort to the merits of the advertising.

Observation by C. Lloyd and F. Roseman

766 We would have preferred to see a prohibition on attempted reselling by Tele-Direct's representative after an order was received from a customer. In our view, Tele-Direct has ample opportunity to establish a situation of trust and confidence between its customers and its representatives. If it fails to use its opportunities and customers choose to take the advice of a consultant because they perceive that they have not received quality service from Tele-Direct, then, ideally, that would be the end of the matter for that directory year. We have chosen, however, not to dispute the Director's concession that Tele-Direct should not be precluded from visiting advertisers after they have submitted an order.

X. Order

767 FOR THESE REASONS, THE TRIBUNAL ORDERS THAT:

Definitions

1. In this order,

(a) "market" shall mean a market as defined by Tele-Direct for purposes of its commissionability rules prior to the filing of the application in this matter, and, for greater certainty, there shall in future be no fewer than six markets in Quebec and seven markets in Ontario;

(b) "consultants" shall mean firms which advise telephone directory advertisers on how to increase the effectiveness of and reduce expenditures on telephone directory advertising, primarily in the Yellow Pages, and which assist advertisers in the placement of orders for telephone directory advertising, but does not include firms which are accredited advertising agencies.

Tied Selling

2. The respondents are prohibited from continuing to engage in tied selling, namely tying the supply of advertising space by them to the acquisition of advertising services from them, for customers advertising in six, seven and eight markets.

Abuse of Dominant Position

3. The respondents are prohibited from engaging in the practice of discriminatory acts relating to consultants and customers of consultants.

Remaining Allegations

4. The remainder of the application of the Director is dismissed.

Interpretation

5. The Director or the respondents may apply to the Tribunal for directions or an order interpreting any of the provisions of this order.

Confidentiality

6. As required by paragraph 11(1) of the Confidentiality (Protective) Order issued by the Tribunal on March 30, 1995, the panel determines that a "reasonable period" for the retention, in a secure and organized manner, by the respondents of those protected documents returned to them by the Director upon completion or final disposition of this proceeding and any appeals relating thereto, shall be five years.

53 Confidential exhibit CJ-16 (blue vol. 7), tab 215 at 118727.

54 *Ibid.* at 118801.

55 At the hearing, counsel for the respondents attempted to convince the Tribunal to attribute less weight to the letter than we otherwise might on the grounds that it was not prepared with the assistance of an economist and that it was produced in a compressed period of time. The letter was written by Tele-Direct's Vice-president of Marketing with the assistance of a number of lawyers from counsel's office. We have no information as to the extent of the economic background of any of those lawyers. It is signed by the President of Tele-Direct. During the discovery process the respondents resisted production of the letter on the grounds that it was protected by settlement negotiation privilege. The Tribunal ruled that the letter did not fall within that privilege and ordered it produced. We have no hesitation, for the purposes for which we refer to the letter, of attributing significant weight to it.

56 Exhibit J-5 (green vol. 3), tab 239 at 86008.

57 *Ibid.*

58 Apparently there is some experimentation in some American centres with allowing restaurants to run advertisements that include menus. In a relatively stable economic environment firms in such an industry might be willing to risk committing themselves to prices for as long as a year.

59 See, e.g., the testimony of Jack Forrester of HOJ Car and Truck Rentals, that he does not use Yellow Pages for specials or promotions: transcript at 5:778 (11 September 1995); the testimony of Jean-Yves Laberge of the Turpin Group of automobile sales and leasing businesses, that he puts prices and specials in his newspaper advertisement but not in the Yellow Pages: transcript at 13:2406-407 (3

October 1995); and the testimony of Steve Kantor of Tiremag Corp., who sells wheels and tires, that he cannot use Yellow Pages to advertise seasonal product offerings or prices: transcript at 17:3288-89 (11 October 1995).

60 Paragraph 24 of Professor Willig's rebuttal affidavit (exhibit R-181) reads:

... As a matter of economics, it is difficult to see how negative characteristics can contribute to a showing of dominance in a narrow relevant market. Instead, negative characteristics contribute to the willingness of buyers to substitute out of the product at issue, and so their recognition should, if anything, argue for a wider market to be relevant, not a narrower one.

61 It is commonplace economics that a firm with market power will set prices where the demand for its product is elastic; that is, at the point where a further increase in price would cause a reduction in revenue. Some of the reduction in revenue may result from consumers switching to other products which are the closest substitutes *at that price*, but which would not be considered by these consumers as substitutes if the firm with market power were pricing its product *at a competitive level*. This so-called "cellophane fallacy" (originating from criticism of the decision of the Supreme Court of the United States in *United States v. E.I. du Pont de Nemours & Co.*, 351 U.S. 377 (1956)) can result in the mistaken conclusion that a firm does not have market power because of the presence of substitutes when in fact the reverse is true -- the substitution is occurring *because of* the exercise of market power. In principle markets should be defined at competitive prices.

62 Confidential exhibit CJ-28 (black vol. 7), tab 42 at 129284. Customers who disconnected their business telephone service are not included. There was no general price change between 1993 and 1994, although there were a number of incentive plans.

63 Confidential exhibit CJ-14 (blue vol. 5), tab 173.

65 "Non-believers", "inadequate response from advertising" and "don't need large recognition".

66 For example, individuals in professions prohibited from advertising, variety stores, construction sites.

67 Confidential exhibit CJ-18 (blue vol. 9), tab 249.

68 Contrary to Tele-Direct's habitual use of the term, the "non-advertisers" studied may have had a bold listing.

69 *Supra* note 67 at 107661, 107681 (emphasis added). One non-advertiser was just starting up his business and could not make the current edition deadline.

70 E.g., Elliott reports: confidential exhibit CJ-14 (blue vol. 5), tab 173 (January 1993) and confidential exhibit CJ-19 (blue vol. 10), tab 285 (February 1993 - Newfoundland); V.I.A. survey: confidential exhibit CJ-11 (blue vol. 2), tab 89; Yellow Pages Satisfaction Study (Omnifacts Research): confidential exhibit CJ-15 (blue vol. 6), tab 199.

71 The term "complement" has been used in this context primarily in its ordinary sense and not in its strict economic sense. No one has asserted that the different advertising vehicles are complements in the sense that a reduction in the price of one vehicle would lead to an increase in the price of the other. Rather the term has been used to indicate that Yellow Pages perform a different function than other vehicles and are thus needed to complete an advertising programme.

72 *Supra* note 70.

73 *Ibid.* New advertisers were generally very small companies; established customers were larger.

74 *Ibid.* at 116796.

75 *Ibid.* at 116811-12.

76 In terms of actual switching behaviour, the respondents referred to evidence of a locksmith who cut his Yellow Pages spending and bought brochures, on the advice of a Yellow Pages consultant, and of a photographer who was visited by a newspaper consultant who designed a smaller Yellow Pages advertisement for him. The implications of the existence and practices of the consultants for substitutability will be dealt with in the next section. Both newspaper and Yellow Pages consultants use a similar methodology, in

that they attempt to convince an advertiser that a smaller, less expensive Yellow Pages advertisement will be equally effective *in the Yellow Pages*. The Director also provided numerous examples of "non-switching" where increases or decreases in spending on other media were unrelated to spending on Yellow Pages.

77 Newspaper advertisements were identified for establishments in the businesses represented by the top five Yellow Pages headings in the region's Tele-Direct directories. Then, those establishments with newspaper advertisements were sought in their local Tele-Direct Yellow Pages directories. Overall, the search found 542 newspaper advertisers in these categories. Of this group, 39% had display advertisements in both the searched newspaper and in the local Tele-Direct Yellow Pages directory, while 61% of the newspaper advertisers had no display advertisement in their local Tele-Direct Yellow Pages directory. (The 61% is comprised of 42% who had no Yellow Pages business phone number, and hence no listing in the Tele-Direct Yellow Pages of any kind. Another 12% did have lightface classified listings in the local Tele-Direct Yellow Pages directory, but no advertisement in that directory of any kind. Yet another 6% had a boldface listing in their local Tele-Direct Yellow Pages directory, but no display advertisement in that directory.)

78 Expert affidavit of R. Willig (17 August 1995): exhibit R-180 at paras. 20-22, appendix 2B.

79 Exhibit R-116. One of the three contained pricing information in the newspaper and not in the directory.

80 There is an important difference between Yellow Pages and non-classified advertising in other print media (or electronic media, for that matter) that results from the fact that media with editorial or entertainment content usually prefer to have minimum percentage of such content. The effect is to create an opportunity cost to having larger advertisements, because they absorb some of the available space for other content. This consideration is not present in the case of Yellow Pages and should not affect the pricing of larger advertisements.

83 For further details, see the facts set out in the section entitled "C. Market for Advertising Space - Publishing" in chapter "IX. Abuse of Dominant Position", *infra*.

84 Mr. Giddings' testimony on this topic was confusing. He testified at various times that the course, or perhaps one module of it (which a discovery answer indicated had never been used for training purposes), was given to new representatives in about 1990 and that it, or some part of it, had been repeated for unknown numbers in 1993 and 1994. However, he also testified that no new premise sales representatives had been hired since 1992 casting doubt as to how many times and to how many persons the course was given.

85 The use of the average premise remuneration errs on the side of being too high. The other type of sales representative, a telephone sales representative, earns, on average, only about 60 percent of what a premise representative earns. Also, Mr. Giddings did say at one point that this course was given to *new* representatives, who would likely earn less than average in any case.

91 Professor of Economics at the University of British Columbia.

92 While it is true that price comparisons with the newspapers are used, including different sizes of newspaper advertisements and advertisements with red, the message is that it is cheaper to use the Yellow Pages regardless of the size or colour of the advertisement.

93 The 1993 prices were revised in February 1992. The respondents rely heavily on this particular exercise; it is reviewed in detail below.

94 Consistency in cost per thousand of circulation across directories.

95 Ms. McIlroy explained that the "junked directories" are those that never enter into circulation. Tele-Direct used the volume of junked directories to forecast how many copies should be printed and to ensure that estimate was realistic. If many of the copies printed end up as junked directories, this over-inflates Tele-Direct's circulation figures.

96 The 1992 exercise (for 1994) is not included as prices were not increased.

97 Information on business papers and outdoor came from only one source.

109 Overview of Other Publishers in Tele-Direct Markets: confidential exhibit CR-170; Tele-Direct (Publications) Inc. - Profitability Study for 1994: confidential exhibit CR-185. Tele-Direct's 1994 published revenues were the most recent available at the time of the hearing. Exhibit CR-170 was put forward by the respondents as their most up-to-date information on independents' revenues and so we will refer to it to the exclusion of the various other numbers and documents brought up during Mr. Renwicke's testimony. Exhibit CR-170 provides two different bottom line totals for number of independent directories and revenue. The difference is accounted for by cessation of publication by one publisher with ten directories and revenues of $1.5 million. The totals that have been used are those that include that publisher and its revenues.

110 Telephone Directory Competition in Ontario/Quebec: confidential exhibit CJ-13 (blue vol. 4), tab 164; testimony of D. Renwicke: transcript at 46:9679-80 (27 November 1995). This figure was calculated based on a research study conducted in the United States which determined that independents overall had 5.9 percent of telco directory revenues. The 1993 Simba/Communications Trends study places independents at under 7 percent of total national revenues: confidential exhibit CJ-14 (blue vol. 5), tab 174.

111 According to the respondents' map of other publishers (exhibit R-159), only DSP and Tele-Direct are in Sault Ste. Marie, Elliot Lake and Wawa; only White and Tele-Direct are in St. Catharines and Niagara Falls. There are the Locator and Easy to Read directories in Fort Erie but there is no local revenue information on the record. It cannot be very high based on averages taken from Overview

of Other Publishers in Tele-Direct Markets (confidential exhibit CR-170). Niagara calculation: Tele-Direct 1994 published revenues for Niagara Falls, St. Catharines and Fort Erie taken from Tele-Direct's 1994 Corporate Post Canvass Analysis Report (confidential exhibit CJ-28 (black vol. 7), tab 42 at 128980); White's 1994 revenue was stated by Richard Lewis to be 17 percent of Tele-Direct's revenue (transcript at 22:4363-64 (18 October 1995)). Sault Ste. Marie calculation: Tele-Direct 1994 published revenues for the Sault Ste. Marie, Elliot Lake and Wawa taken from Tele-Direct's 1994 Corporate Post Canvass Analysis Report (confidential exhibit CJ-28 (black vol. 7), tab 42 at 128983); DSP 1994 (year 2) revenues taken from DSP - Sault Ste. Marie Directory - Gross Revenue from 1993 to 1995 (confidential exhibit CA-109).

112 Overview of Other Publishers in Tele-Direct Markets: confidential exhibit CR-170.

120 White's prices in 1994 were generally about 25 percent less than Tele-Direct's for in-column, about 40 percent less for display and about 55 less for red display: exhibit A-103. White first published in Niagara in 1993 with a prototype directory in which advertisers could advertise free of charge. The 1994 prices are for its first "revenue" directory in which advertisers paid for their advertising. Likewise, in Sault Ste. Marie, the DSP rates reflected substantial discounts off Tele-Direct's, with greater discounts for display and coloured display than for other types of advertisements: YPPA Rates and Data Information for the period 1992-95: exhibit A-111.

121 For example, area sports team schedules, seating diagrams for theatres and arenas, a listing of local golf courses, highway access information, historical sites, schedule of events, maps, senior citizens' services listings, human services' listings, "kid's pages", bus routes, customs and goods and services tax information.

122 For example, it is a "flip" directory with the Canadian cities on one side and the neighbouring American cities on the other. The book also includes a "reverse directory" -- listings by phone number first.

123 Confidential exhibit CJ-14 (blue vol. 5), tab 73 at 115416-18.

128 All the work relating to contract verification and dealing with complaints is already done by Tele-Direct. What is performed by Bell Canada are simply the mechanical steps of bill preparation and mailing.

129 YPPA Rates and Data Information for the period 1992-95: exhibit A-111 at 9.

130 Leaving aside dynamic, innovation-driven industries, to which telephone directories do not belong.

131 In Sault Ste. Marie, DSP charges a premium for red ranging from 36 to 50 percent for full page, half page, double half column (1/4 page), double quarter column (1/8 page) and quarter column (1/16 page). For each doubling in size, however, DSP price increases are 56 percent to 76 percent, considerably lower than Tele-Direct's size premium. In Niagara Falls, White charges only between eight and nine percent premium for red, with one exception, a quarter column advertisement, which reflects a 28 percent increase. For each doubling in size, White charges from 74 to 91 percent more.

132 Each year 25 customers of each sales representatives are asked questions relating to the quality of the service provided by the representative.

169 *Supra* note 137 at 18.

170 *Ibid.* at 6 n. 4.

171 One advertiser (Turpin Group Inc.) participates in a trade-mark advertisement for General Motors dealers for which General Motors, a national advertiser, uses DAC. Turpin's own advertising is treated as local and it deals with Tele-Direct's internal sales force.

172 The evidence is that the agencies generally keep servicing existing clients and prospecting for new clients separate; adding new clients is usually the primary responsibility of one or more designated persons. Out of the five CMRs that testified, two pay commission for new clients; only one of those offers that incentive to all employees, the other has a vice-president who is responsible for new business.

173 Only two of the multi-directory (leaving aside the one who is in only two directories) advertisers were clients of consultants and only one of those talked about uniformity of advertisements and co-ordinating dates and deadlines.

174 E.g., the "Autopro" line of automobile parts is offered by licensed Autopro mechanics and service stations across the country; the franchisees of Location Pelletier offer short-term vehicle rentals under that banner but usually operate another business as well.

175 A similar conclusion was reached in the United Kingdom by the Office of Fair Trading ("OFT") in its 1984 report on the Yellow Pages industry: exhibit J-6 (green vol. 4), tab 282. When British Telecom withdrew all commission and internalized services through an exclusive sales contractor, the advertising agencies argued that they were placed at a disadvantage in competing to offer services to advertisers as the advertiser had to pay for the sales contractor's services, included in the rate card price, and then pay again to use the services of an agent. The OFT concluded that the "administration of the account" on the advertiser's behalf, by which they meant the day-to-day running of the account (negotiating claims, authorizations, proof-checking, paying bills) could not be carried out by the sales contractor and would either be done by the advertiser using its own resources or an agent. In respect of those services, therefore, the agencies were not competing with the sales contractor but rather with the advertiser's own resources.

176 Counsel for the respondents appeared to take the position that advertisers did not incur higher costs of using agents in those cases where the advertisers placed advertisements in a number of directories that were issued throughout the year. Although this argument

has a superficial appeal because it appears that advertisers are paying on a periodic basis either way, it is not valid. Advertisers who use an agent must pay in advance for each directory as opposed to over a 12 month period if they use Tele-Direct.

177 Of the seven agency clients, five, to all appearances, would not meet the eight-market criteria; the sixth apparently does but does not meet the 20-directory requirement for the 1993 rule. The seventh may meet the 1993 definition but as a group advertisement which is problematic for other reasons (see chapter "IX. Abuse of Dominant Position" under "D. Market for Advertising Services", *infra*). The three advertisers who currently use Tele-Direct but would like to use an agent are similar: a franchiser, a large regional advertiser and a company with three offices in two provinces.

178 Among the agency clients, HOJ Car and Truck Rentals, for example, spends $125,000 annually and has 36 franchises, all located in southwestern Ontario. Location Pelletier spends $120,000 to $160,000 annually but its 60 licensees are all within the province of Quebec. Stephensons' Rent-all Inc., as Mr. Day of Day Advertising Group, Inc. testified, became non-commissionable when the eight-market rule came in and that was when it began to do the "extra" advertising. Stephensons has 38 retail outlets in southern Ontario and spends $140,000 on Yellow Pages advertising. Among the consultant clients, Canac-Marquis Grenier has 10 outlets across Quebec and spends $50,000 on its advertising; Tiremag Corp. spends $20,000 although it has only one outlet.

179 Professor of Law and Director of the Law and Economics Programme at the University of Toronto.

180 *Supra* note 175.

181 We note from Tele-Direct's 1994 Corporate Post Canvass Analysis Report that "new" advertisers, those using Yellow Pages for the first time or new businesses, are certainly among the smaller Tele-Direct advertisers. Selling effort is especially important with respect to new advertisers. The average *annual* expenditure by a new advertiser is $839, less than half the average for all advertisers. Less than one-half of one percent of new advertisers spend $1,000 or more *per month* where the corresponding percentage among established advertisers is about 3.5 times greater. Apparently, the typical new Yellow Pages advertiser starts with a small advertisement, in which case it is the value of the medium and the "sales pitch" which are important and not other advertising services.

182 We should note here that while the Director refers to space and services, Professor Trebilcock refers to three elements: space, consulting advice (design, graphics, layout, etc.) and selling effort (or pure promotion of the value of the medium). He recognizes that selling effort is clearly variable in relation to space. That is the genesis of the principal-agent problem dealt with later in this section.

183 Expert rebuttal affidavit of M.E. Slade (28 August 1995): exhibit A-119 at 11.

184 Expert affidavit of M. Trebilcock (18 August 1995): exhibit R-174(b) at para. 27.

185 AGT Directory Limited only pays 25 percent on foreign numbers (as do all publishers) but pays 15 percent on *any other* advertising, including local accounts.

186 Except for Edmonton Tel: advertising in Calgary and Edmonton would qualify under its rule.

187 *Supra* note 184 at para. 27.

188 *Ibid.*

189 The evidence of Mr. Lewis of White was that White pays commission (in the United States and presumably also in Canada) on any account submitted by a CMR without restriction. The commission rate is 23 percent for established directories and 30 percent for newer directories. Likewise, DSP pays CMRs commission on any account.

190 E.g., for White: eight percent of revenues in U.S. placed by agents; in Canada, one-half of one percent of revenues placed by agents.

191 In circumstances where the dominant players are telco publishers and those publishers only pay commission on national and regional accounts, it follows that agents are active mainly in those sectors. They are not set up to service local accounts even if independents pay commission on those. Thus, because the dominant players do not want to use agents for local accounts, independents *cannot*, even if they wanted to, rely solely on agents but must use an internal sales force. Professor Slade is of the view that agents would tend to serve this market over time if the major publishers changed their policies and provided a broader market. Further, as the independent

is usually the newcomer into a market dominated by the telco publisher, agents are reluctant to recommend a new directory, even for national and regional accounts where at least some of the major players pay commission, until it has proven itself.

192 *Supra* note 184 at para. 22.

193 Based on the evidence of the representatives of CMRs who testified; together those CMRs account for a large portion of commissionable sales.

194 Confidential exhibit CJ-32 (black vol. 11), tab 83 at 132667ff.

195 Exhibit J-1 (red vol. 1), tab 61.

196 Total salaries were allocated to CANYPS, agencies, NAMs and GSF.

197 To anticipate questions that might arise as a result of the discussion of Tele-Direct's latest contribution to profit study, the same percentage cost of customer service (the payment to Bell Canada) and "melt" is used for both agents and NAMs. There is some tipping of the scales in favour of agents with respect to the cost of customer service since it is applied net of commission in the case of agents. On the other hand, no account is taken of the fact that agents pay up-front and the customers of NAMs pay over a year.

198 Confidential exhibit CR-185.

199 Transcript at 34:7026 (7 November 1995).

200 Transcript at 36:7370 (9 November 1995).

201 Depreciation of the scanner (a common cost since it is caused neither by internal sales force or CMRs) is divided equally between internal sales force and agents based on relative volume of items by number scanned from these sources. Based on the revenue methodology otherwise employed most of the depreciation would be allocated to internal sales force.

202 The reason why CCS has such a large impact is that under Tele-Direct's contract with Bell Canada the revenue from agents who are billed by Tele-Direct rather than Bell are not subject to the payment of CCS. Thus the average payment of CCS is much lower in the case of agents than of internal sales force.

203 By proposing the further alternative remedy of reverting to the pre-1975 commission rule.

204 We are referring to monetary amounts here because that is the way the evidence came in. Other criteria, such as number of markets, are more informative and other evidence was presented in that form. We attempt to relate the two measures below.

205 While the document is not explicit, the data were gathered in 1993 so we infer these are 1993 figures: confidential exhibit CJ-31 (black vol. 10), tab 69 at 131635.

206 Agents are agents for or "represent" advertisers in the sense that they place advertising on the advertisers' behalf but, as indicated earlier, agents have an independent interest and existence apart from advertisers in other aspects of service provision.

219 They rely mainly on *Clear Communications Ltd. v. Telecom Corp. of New Zealand* (1994), 174 N.R. 266 (P.C.).

220 Advertising in a prototype directory is provided free to businesses. A prototype serves to lend credibility to a new publisher's claim that it will, in fact, produce a directory and affords the publisher an opportunity to prove to advertisers the value of advertising in its directory.

221 DSP also included a "reverse" directory -- listings by phone number first.

222 The exceptions for Tele-Direct's directories were the neighbourhood directories and areas subject to rescoping or splitting of directories. At the request of other telcos, like Newfoundland Tel and Northern Tel, prices were also frozen in those directories in 1995.

223 In the first year (1993), all existing advertisers renewing or purchasing advertising received the next size up or colour, if applicable, at no extra charge. In 1994, all advertisers who participated in the program in 1993 were offered the next size up free, free colour or a 15 percent rebate if they renewed or increased their advertising. Those who had not participated in 1993 and new advertisers were given a 15 percent rebate. In the third and final year, the program became even more complex with different choices available to 1994 participants who were renewing depending on which option they had chosen (rebate/free size up or colour) in 1994. Non-advertisers and non-participants were again offered a 15 percent rebate as were 1994 participants who were increasing their advertising.

224 In 1995, when Unifone was no longer present, advertisers were offered a 15 percent rebate if they increased their advertising but participants in the 1994 program could receive the rebate if they renewed their upsized or colour item.

239 In brief, the essence of the test is that a price below reasonably anticipated short-run marginal costs is predatory while a price above short-run marginal costs is not. Because marginal cost data are often unavailable, average variable cost is generally used as a proxy. For a summary of the conclusions of Areeda and Turner on this topic, see *Antitrust Law*, vol. 3 (Toronto: Little, Brown, 1978) at para. 711d.

240 There would evidently be little point in the incumbent pursuing an aggressive course of responses in every market subject to entry solely to make an impression or deliver a threat since that strategy would have already been defeated. If there was widespread response by the incumbent in all markets in which entry occurred or was threatened, consumers would benefit in the short-term with no discernible long-term negative effects.

241 Anticipated sales are expressed as a percentage of estimated revenue of the existing directory. This does not mean that all sales are drawn from the incumbent as the demand for directory advertising is expected to increase when a second publication is introduced.

242 For further explanation of this matter, see chapter "VII. Control: Market Power" under "A. Indirect Approach: Market Structure", "(2) Barriers to Entry", "(c) (i) Subscriber Listing Information", *supra*.

243 Sham litigation could include a claim with no reasonable cause of action which might be struck out at an early stage of proceedings or a claim based on facts that were untrue or otherwise not supportive of the claim, in which case, the litigation could be extensive.

260 See further discussion of market share below under "Analysis Respecting the Existing Commissionable Market".

261 *Supra* note 4 at 47.

262 Both sides agreed that the agents' market share in 1993 was about 80 percent: confidential exhibit CJ-31 (black vol. 10), tab 69 at 131680. Adjusting to exclude sales into Tele-Direct's directories by agents based outside of Tele-Direct's territory, we arrive at approximately 75 percent for agents and 25 percent for Tele-Direct.

263 The difficulty here is that some franchisees or licensees carry on a number of businesses besides the licensed or franchised one and they do not operate their business under a "corporate" name. They wish to be listed in the advertisement under their own name, which often has high recognition value in their community, while still participating in the group advertising to promote the licence or franchise. An example is the Autopro dealers: the licensed Autopro garages or service stations do not carry the "Autopro" name. Tele-Direct does not permit them to be listed under their individual names.

264 There was evidence of an occasional advertisement that appears to be a group advertisement or something resembling a group advertisement but we are satisfied that it is Tele-Direct's policy not to permit group advertising.

265 These assertions ignore the fact that Tele-Direct representatives would rarely, if ever, give advice on how to reduce spending.

266 Tele-Direct threatened him with legal action, apparently for breach of copyright in its contractual terms and conditions.

267 Confidential exhibit CJ-10 (blue vol. 1), tab 5 (public).

268 Not affiliated with Mr. Harrison.

269 Initially, Tele-Direct refused to accept orders from Mr. Brouillet, until he obtained a copy of the letter sent to CEPAC 2000.

270 Operating procedures prior to December 1990: confidential exhibit CJ-11 (blue vol. 2), tab 58 at 107788 (public).

271 Operating procedures, December 1990: *ibid.* at 107792 (public).

275 Testimony of P. de Sève: transcript at 44:9123-27 (22 November 1995); testimony of D. Renwicke: transcript at 46:9630-34 (27 November 1995).

276 Confidential exhibit CJ-27 (black vol. 6), tab 33 at 128522.

277 E.g., Postime Distributors (wrong paper, wrong size), Paul's Quality Woodcraft (non-compliance with specifications in general), M & L Service (wrong paper) and Canac-Marquis Grenier (borderless advertisement not allowed).

278 The advertisement was for Canac-Marquis Grenier.

279 The order was sent in under her signature on July 15, 1991. On September 30, 1991, the client received a form letter from Tele-Direct stating that the material had been returned to the consultant without processing. (As of that date, Ad-Vice had not received anything back.) The customer panicked, thinking her advertising would not appear. Mr. Brouillet was unable to obtain confirmation that the advertising would appear as ordered. The client ended up dealing directly with Tele-Direct and Mr. Brouillet had to sue to recover his fee.

280 The Britannia Restaurant & Banquet Hall order was sent in on August 2, 1991. On September 25, 1991, shortly before the closing date, Tele-Direct faxed the client its contract documents, which described the previous year's program. The client simply signed the documents, thinking they represented the new order. The old program appeared, the client protested, Tele-Direct insisted on full payment, the client refused to pay and was eventually barred from placing further advertising in Tele-Direct's directories. A Tele-Direct notation on a document relating to this customer indicates some concern even on its part about what transpired. The Muskoka Riverside Inn submitted its order prior to the deadline for making changes. The order was returned to the consultant and the client notified he had to send the order himself. The client missed the deadline for changing artwork and Tele-Direct ran the old advertising.

281 L.J. Sunshine Hardwood Flooring. Ad-Vice has sued the customer for breach of contract. In his defence, the customer claims that the Tele-Direct representative advised him that he had been "misrepresented" and should stop payment on his cheque.

282 Or, evidently, write off the account or accept a reduced fee in settlement, as Mr. Blais did on one occasion.

283 This is not to say that Tele-Direct did not reject some orders based on non-compliance with specifications. This may have been the fault of the consultant not to conform to the specifications of which he was aware or because Tele-Direct, without justification, wished to create difficulty for a consultant. But Tele-Direct's rejection of orders was not attributable to consultants not being aware of what Tele-Direct's specifications required.

284 Transcript at 15:2762 (6 October 1995).

285 Evidence of Mr. Lee of M & L Service, Mr. and Mrs. Jovandin of L.J. Sunshine Hardwood Flooring, Mr. Fox of Fox & Partners Limited, Mr. Harmic of Dominion Springs Corporation, Mr. McMaster of H.R. Home Renovations. Of course, the consultants blamed Tele-Direct for the confusion and Tele-Direct blamed the consultants. We cannot say for certain how the confusion about the relationship between Tele-Direct and consultants arose in each case but it does appear there was confusion in the minds of some customers.

286 E.g., Mr. Lee of M & L Service.

287 The package provided by Mr. Brouillet to his clients advises the client that the Tele-Direct representative will be in contact to transfer the advertising program to the Tele-Direct forms.

288 *Supra* note 287.

289 *Ibid.* All of the incidents cited related to clients of Ad-Vice except for Mr. Fox of Fox & Partners Limited, who was not linked to a specific consultant.

290 The approach we adopt is implicit in *Director of Investigation and Research v. Imperial Oil Ltd.* (26 January 1990), CT8903/390, Reasons and Decision at 16, [1990] C.C.T.D. No. 1 (QL) (Comp. Trib.) and in U.S. Dept. of Justice/Federal Trade Comm'n, *Horizontal Merger Guidelines*, (2 April 1992) at 1.51. Although dealing with a consent order, *Imperial* in effect addresses the issue of what constitutes a substantial lessening of competition when there are varying initial degrees of market power by evaluating what is required to cure the alleged substantial lessening of competition. Similarly, the Guidelines view any numerical increase in concentration more severely the higher the initial market share of the acquiring firm.

SUPREME COURT OF CANADA

CITATION: Canada (Minister of Citizenship and Immigration) *v.* Vavilov, 2019 SCC 65

APPEAL HEARD: December 4, 5, 6, 2018
JUDGMENT RENDERED: December 19, 2019
DOCKET: 37748

BETWEEN:

Minister of Citizenship and Immigration
Appellant

and

Alexander Vavilov
Respondent

ON APPEAL FROM THE FEDERAL COURT OF APPEAL

Administrative law — Judicial review — Standard of review — Proper approach to judicial review of administrative decisions — Proper approach to reasonableness review.

Citizenship — Canadian citizens — Registrar of Citizenship cancelling certificate of Canadian citizenship issued to Canadian-born son of parents later revealed to be Russian spies — Decision of Registrar based on interpretation of statutory exception to general rule that person born in Canada is Canadian citizen — Exception stating that Canadian-born child is not citizen if either parent was *representative or employee in Canada of foreign government at time of child's birth — Whether Registrar's decision to cancel certificate of citizenship was reasonable — Citizenship Act, R.S.C. 1985, c. 29, s. 3(2)(a).*

V was born in Toronto in 1994. At the time of his birth, his parents were posing as Canadians under assumed names. In reality, they were foreign nationals working on assignment for the Russian foreign intelligence service. V did not know that his parents were not who they claimed to be. He believed that he was a Canadian citizen by birth, he lived and identified as a Canadian, and he held a Canadian passport. In 2010, V's parents were arrested in the United States and charged with espionage. They pled guilty and were returned to Russia. Following their arrest, V's attempts to renew his Canadian passport proved unsuccessful. However, in 2013, he was issued a certificate of Canadian citizenship.

Then, in 2014, the Canadian Registrar of Citizenship cancelled V's certificate on the basis of her interpretation of s. 3(2)(a) of the *Citizenship Act*. This provision exempts children of "a diplomatic or consular officer or other representative or employee in Canada of a foreign government" from the general rule that individuals born in Canada acquire Canadian citizenship by birth. The Registrar concluded that because V's parents were employees or representatives of Russia at the time of V's birth, the exception to the rule of citizenship by birth in s. 3(2)(a), as she interpreted it, applied to V, who therefore was not, and had never been, entitled to citizenship. V's application for judicial review of the Registrar's decision was dismissed by the Federal Court. The Court of Appeal allowed V's appeal and quashed the Registrar's decision because it was unreasonable. The Minister of Citizenship and Immigration appeals.

Held: The appeal should be dismissed.

Per **Wagner** C.J. and **Moldaver**, **Gascon**, **Côté**, **Brown**, **Rowe** and **Martin** JJ.: The Registrar's decision to cancel V's certificate of citizenship was unreasonable, and the Court of Appeal's decision to quash it should be upheld. It was not reasonable for the Registrar to interpret s. 3(2)(a) of the *Citizenship Act* as applying to children of individuals who have not been granted diplomatic privileges and immunities at the time of the children's birth.

More generally, this appeal and its companion cases (*Bell Canada v. Canada (Attorney General)*, 2019 SCC 66) provide an opportunity to consider and clarify the law applicable to the judicial review of administrative decisions as addressed in *Dunsmuir v. New Brunswick*, 2008 SCC 9, [2008] 1 S.C.R. 190, and subsequent cases. The submissions presented to the Court have highlighted two aspects of the current framework which need clarification. The first aspect is the analysis for determining the standard of review. The second aspect is the need for better guidance from this Court on the proper application of the reasonableness standard.

It has become clear that *Dunsmuir*’s promise of simplicity and predictability has not been fully realized. Certain aspects of the current standard of review framework are unclear and unduly complex. The former contextual analysis has proven to be unwieldy and offers limited practical guidance for courts attempting to determine the standard of review. The practical effect is that courts struggle in conducting the analysis, and debates surrounding the appropriate standard and its application continue to overshadow the review on the merits, thereby undermining access to justice. A reconsideration of the Court’s approach is therefore necessary in order to bring greater coherence and predictability to this area of law. A revised framework to determine the standard of review where a court reviews the merits of an administrative decision is needed.

In setting out a revised framework, this decision departs from the Court’s existing jurisprudence on standard of review in certain respects. Any reconsideration of past precedents can be justified only by compelling circumstances and requires carefully weighing the impact on legal certainty and predictability against the costs of continuing to follow a flawed approach. Although adhering to the established jurisprudence will generally promote certainty and predictability, in some instances doing so will create or perpetuate uncertainty. In such circumstances, following a prior decision would be contrary to the underlying values of clarity and certainty in the law.

The revised standard of review analysis begins with a presumption that reasonableness is the applicable standard in all cases. Where a legislature has created an administrative decision maker for the specific purpose of administering a statutory scheme, it must be presumed that the legislature also intended that decision maker to fulfill its mandate and interpret the law applicable to all issues that come before it. Where a legislature has not explicitly provided that a court is to have a more involved role in reviewing the decisions of that decision maker, it can safely be assumed that the legislature intended a minimum of judicial interference. Respect for these institutional design choices requires a reviewing court to adopt a posture of restraint. Thus, whenever a court reviews an administrative decision, it should start with the presumption that the applicable standard of review for all aspects of that decision will be reasonableness. As a result, it is no longer necessary for courts to engage in a contextual inquiry in order to identify the appropriate standard. Conclusively closing the door on the application of a contextual analysis to determine the applicable standard streamlines and simplifies the standard of review framework. As well, with the presumptive application of the reasonableness standard, the relative expertise of administrative decision makers is no longer relevant to a determination of the standard of review. It is simply folded into the new starting point. Relative expertise remains, however, a relevant consideration in conducting reasonableness review.

The presumption of reasonableness review can be rebutted in two types of situations. The first is where the legislature has indicated that it intends a different standard to apply. This will be the case where it has explicitly prescribed the applicable standard of review. Any framework rooted in legislative intent must respect clear statutory language. The legislature may also direct that derogation from the presumption is appropriate by providing for a statutory appeal mechanism from an administrative decision to a court, thereby signalling the legislature's intent that appellate standards apply when a court reviews the decision. Where a legislature has provided a statutory appeal mechanism, it has subjected the administrative regime to appellate oversight and it expects the court to scrutinize such administrative decisions on an appellate basis. The applicable standard is therefore to be determined with reference to the nature of the question and to the jurisprudence on appellate standards of review. Where, for example, a court hears an appeal from an administrative decision, it would apply the standard of correctness to questions of law, including on statutory interpretation and the scope of a decision maker's authority. Where the scope of the statutory appeal includes questions of fact or questions of mixed fact and law, the standard is palpable and overriding error for such questions.

Giving effect to statutory appeal mechanisms in this way departs from the Court's recent jurisprudence. This shift is necessary in order to bring coherence and conceptual balance to the standard of review analysis and is justified by weighing the values of certainty and correctness. First, there has been significant and valid judicial and academic criticism of the Court's recent approach to statutory appeal rights and of the inconsistency inherent in a standard of review framework based on legislative intent that otherwise declines to give meaning to an express statutory right of appeal. Second, there is no satisfactory justification for the recent trend in the Court's jurisprudence to give no effect to statutory rights of appeal in the standard of review analysis, absent exceptional wording. More generally, there is no convincing reason to presume that legislatures mean something entirely different when they use the word "appeal" in an administrative law statute. Accepting that the legislature intends an appellate standard of review to be applied also helps to explain why many statutes provide for both appeal and judicial review mechanisms, thereby indicating two roles for reviewing courts. Finally, because the presumption of reasonableness review is no longer premised upon notions of relative expertise and is now based on respect for the legislature's institutional design choice, departing from the presumption of reasonableness review in the context of a statutory appeal respects this legislative choice.

The second situation in which the presumption of reasonableness review will be rebutted is where the rule of law requires that the standard of correctness be applied. This will be the case for certain categories of legal questions, namely constitutional questions, general questions of law of central importance to the legal system as a whole and questions related to the jurisdictional boundaries between two or more administrative bodies. First, questions regarding the division of powers between Parliament and the provinces, the relationship between the legislature and the other branches of the state, the scope of Aboriginal and treaty rights under s. 35 of the *Constitution Act, 1982*, and other constitutional matters require a final and determinate answer from the courts. Second, the rule of law requires courts to have the final word with regard to general questions of law that are of central importance to the legal system as a whole because they require uniform and consistent answers. Third, the rule of law requires courts to intervene where one administrative body has interpreted the scope of its authority in a manner that is incompatible with the jurisdiction of another since the rule of law cannot tolerate conflicting orders and proceedings where they result in a true operational conflict between two administrative bodies. The application of the correctness standard for such questions therefore respects the unique role of the judiciary in interpreting the Constitution and ensures that courts are able to provide the last word on questions for which the rule of law requires consistency and for which a final and determinate answer is necessary.

The general rule of reasonableness review, when coupled with these limited exceptions, offers a comprehensive approach to determining the applicable standard of review. The possibility that another category could be recognized as requiring a derogation from the presumption of reasonableness review in a future case is not definitively foreclosed. However, any new basis for correctness review would be exceptional and would need to be consistent with this framework and the overarching principles set out in this decision. Any new correctness category based on legislative intent would require a signal of legislative intent as strong and compelling as a legislated standard of review or a statutory appeal mechanism. Similarly, a new correctness category based on the rule of law would be justified only where failure to apply correctness review would undermine the rule of law and jeopardize the proper functioning of the justice system in a manner analogous to the three situations described in this decision.

For example, the Court is not persuaded that it should recognize a distinct correctness category for legal questions on which there is persistent discord within an administrative body. A lack of unanimity within an administrative tribunal is the price to pay for decision-making freedom and independence. While discord can lead to legal incoherence, a more robust form of reasonableness review is capable of guarding against such threats to the rule of law. As well, jurisdictional questions should no longer be recognized as a distinct category subject to correctness review; there are no clear markers to distinguish such questions from other questions related to interpreting an administrative decision maker's enabling statute. A proper application of the reasonableness standard will enable courts to ensure that administrative bodies have acted within the scope of their lawful authority without having to conduct a preliminary assessment on jurisdictional issues and without having to apply the correctness standard.

Going forward, a court seeking to determine what standard of review is appropriate should look to this decision first in order to determine how the general framework applies. Doing so may require the court to resolve subsidiary questions on which past precedents will often continue to provide helpful guidance and will continue to apply essentially without modification, such as cases concerning general questions of law of central importance to the legal system as a whole or those relating to jurisdictional boundaries between administrative bodies. On other issues, such as the effect of statutory appeal mechanisms, true questions of jurisdiction or the former contextual analysis, certain cases will necessarily have less precedential force.

There is also a need for better guidance from the Court on the proper application of the reasonableness standard, what that standard entails and how it should be applied in practice. Reasonableness review is meant to ensure that courts intervene in administrative matters only where it is truly necessary to do so in order to safeguard the legality, rationality and fairness of the administrative process. Its starting point lies in the principle of judicial restraint and in demonstrating respect for the distinct role of administrative decision makers. However, it is not a "rubber-stamping" process or a means of sheltering decision makers from accountability. While courts must recognize the legitimacy and authority of administrative decision makers and adopt a posture of respect, administrative decision makers must adopt a culture of justification and demonstrate that their exercise of delegated public power can be justified. In conducting reasonableness review, a court must consider the outcome of the administrative decision in light of its underlying rationale, to ensure that the decision as a whole is transparent, intelligible and justified. Judicial review is concerned with both the outcome of the decision and the reasoning process that led to that outcome. To accept otherwise would undermine, rather than demonstrate respect toward, the institutional role of the administrative decision maker.

Reasonableness review is methodologically distinct from correctness review. The court conducting a reasonableness review must focus on the decision the administrative decision maker actually made, including the justification offered for it. A court applying the reasonableness standard does not ask what decision it would have made in place of the administrative decision maker, attempt to ascertain the range of possible conclusions, conduct a new analysis or seek to determine the correct solution to the problem. Instead, the reviewing court must consider only whether the decision made by the decision maker, including both the rationale for the decision and the outcome to which it led, was unreasonable.

In cases where reasons are required, they are the starting point for reasonableness review, as they are the primary mechanism by which decision makers show that their decisions are reasonable. Reasons are the means by which the decision maker communicates the rationale for its decision: they explain how and why a decision was made, help to show affected parties that their arguments have been considered and that the decision was made in a fair and lawful manner, and shield against arbitrariness. A principled approach to reasonableness review is therefore one which puts those reasons first. This enables a reviewing court to assess whether the decision as a whole is reasonable. Attention to the decision maker’s reasons is part of how courts demonstrate respect for the decision-making process.

In many cases, formal reasons for a decision will not be given or required. Even without reasons, it is possible for the record and the context to reveal that a decision was made on the basis of an improper motive or for another impermissible reason. There will nonetheless be situations in which neither the record nor the larger context sheds light on the basis for the decision. In such cases, the reviewing court must still examine the decision in light of the relevant factual and legal constraints on the decision maker in order to determine whether the decision is reasonable.

It is conceptually useful to consider two types of fundamental flaws that tend to render a decision unreasonable. The first is a failure of rationality internal to the reasoning process. To be reasonable, a decision must be based on an internally coherent reasoning that is both rational and logical. A failure in this respect may lead a reviewing court to conclude that a decision must be set aside. Reasonableness review is not a line-by-line treasure hunt for error. However, the reviewing court must be able to trace the decision maker's reasoning without encountering any fatal flaws in its overarching logic. Because formal reasons should be read in light of the record and with due sensitivity to the administrative regime in which they were given, a decision will be unreasonable if the reasons for it, read holistically, fail to reveal a rational chain of analysis or if they reveal that the decision was based on an irrational chain of analysis. A decision will also be unreasonable where the conclusion reached cannot follow from the analysis undertaken or if the reasons read in conjunction with the record do not make it possible to understand the decision maker's reasoning on a critical point. Similarly, the internal rationality of a decision may be called into question if the reasons exhibit clear logical fallacies.

The second type of fundamental flaw arises when a decision is in some respect untenable in light of the relevant factual and legal constraints that bear on it. Although reasonableness is a single standard that already accounts for context, and elements of a decision's context should not modulate the standard or the degree of scrutiny by the reviewing court, what is reasonable in a given situation will always depend on the constraints imposed by the legal and factual context of the particular decision under review. These contextual constraints dictate the limits and contours of the space in which the decision maker may act and the types of solutions it may adopt. The governing statutory scheme, other relevant statutory or common law, the principles of statutory interpretation, the evidence before the decision maker and facts of which the decision maker may take notice, the submissions of the parties, the past practices and decisions of the administrative body, and the potential impact of the decision on the individual to whom it applies, are all elements that will generally be relevant in evaluating whether a given decision is reasonable. Such elements are not a checklist; they may vary in significance depending on the context and will necessarily interact with one another.

Accordingly, a reviewing court may find that a decision is unreasonable when examined against these contextual considerations. Because administrative decision makers receive their powers by statute, the governing statutory scheme is likely to be the most salient aspect of the legal context relevant to a particular decision. A proper application of the reasonableness standard is capable of allaying the concern that an administrative decision maker might interpret the scope of its own authority beyond what the legislature intended. Whether an interpretation is justified will depend on the context, including the language chosen by the legislature in describing the limits and contours of the decision maker's authority.

Both statutory and common law will also impose constraints on how and what an administrative decision maker can lawfully decide. Any precedents on the issue before the administrative decision maker or on a similar issue, as well as international law in some administrative decision making contexts, will act as a constraint on what the decision maker can reasonably decide. Whether an administrative decision maker has acted reasonably in adapting a legal or equitable doctrine involves a highly context-specific determination.

Matters of statutory interpretation are not treated uniquely and, as with other questions of law, may be evaluated on a reasonableness standard. Where this is the applicable standard, the reviewing court does not undertake a *de novo* analysis of the question or ask itself what the correct decision would have been. But an approach to reasonableness review that respects legislative intent must assume that those who interpret the law, whether courts or administrative decision makers, will do so in a manner consistent with the modern principle of statutory interpretation. Administrative decision makers are not required to engage in a formalistic statutory interpretation exercise in every case. But whatever form the interpretive exercise takes, the merits of an administrative decision maker's interpretation of a statutory provision must be consistent with the text, context and purpose of the provision.

Furthermore, the decision maker must take the evidentiary record and the general factual matrix that bears on its decision into account, and its decision must be reasonable in light of them. The reasonableness of a decision may be jeopardized where the decision maker has fundamentally misapprehended or failed to account for the evidence before it. The reasons must also meaningfully account for the central issues and concerns raised by the parties, even though reviewing courts cannot expect administrative decision makers to respond to every argument or line of possible analysis.

While administrative decision makers are not bound by their previous decisions, they must be concerned with the general consistency of administrative decisions. Therefore, whether a particular decision is consistent with the administrative body's past decisions is also a constraint that the reviewing court should consider when determining whether an administrative decision is reasonable. Finally, individuals are entitled to greater procedural protection when the decision in question involves the potential for significant personal impact or harm. Where the impact of a decision on an individual's rights and interests is severe, the reasons provided to that individual must reflect the stakes. The principle of responsive justification means that if a decision has particularly harsh consequences for the affected individual, the decision maker must explain why its decision best reflects the legislature's intention.

The question of the appropriate remedy — specifically, whether a court that quashes an unreasonable decision should exercise its discretion to remit the matter to the decision maker for reconsideration with the benefit of the court's reasons — is multi-faceted. The choice of remedy must be guided by the rationale for applying the reasonableness standard to begin with, including the recognition by the reviewing court that the legislature has entrusted the matter to the administrative decision maker, and not to the court, concerns related to the proper administration of the justice system, the need to ensure access to justice and the goal of expedient and cost-efficient decision making. Giving effect to these principles in the remedial context means that where a decision reviewed by applying the reasonableness standard cannot be upheld, it will most often be appropriate to remit the matter to the decision maker for reconsideration with the benefit of the court's reasons. However, there are limited scenarios in which remitting the matter would stymie the timely and effective resolution of matters in a manner that no legislature could have intended. An intention that the administrative decision maker decide the matter at first instance cannot give rise to endless judicial reviews and subsequent reconsiderations. Declining to remit a matter to the decision maker may be appropriate where it becomes evident that a particular outcome is inevitable and that remitting the case would therefore serve no useful purpose. Elements like concern for delay, fairness to the parties, urgency of providing a resolution to the dispute, the nature of the particular regulatory regime, whether the administrative decision maker had a genuine opportunity to weigh in on the issue in question, costs to the parties, and efficient use of public resources may also influence the exercise of a court's discretion to remit the matter.

In the case at bar, there is no basis for departing from the presumption of reasonableness review. The Registrar's decision has come before the courts by way of judicial review, not by way of a statutory appeal. Given that Parliament has not prescribed the standard to be applied, there is no indication that the legislature intended a standard of review other than reasonableness. The Registrar's decision does not give rise to any constitutional questions, general questions of law of central importance to the legal system as a whole or questions regarding the jurisdictional boundaries between administrative bodies. As a result, the standard to be applied in reviewing the Registrar's decision is reasonableness.

The Registrar's decision was unreasonable. She failed to justify her interpretation of s. 3(2)(a) in light of the constraints imposed by s. 3 considered as a whole, by international treaties that inform its purpose, by the jurisprudence on the interpretation of s. 3(2)(a), and by the potential consequences of her interpretation. Each of these elements — viewed individually and cumulatively — strongly supports the conclusion that s. 3(2)(a) was not intended to apply to children of foreign government representatives or employees who have not been granted diplomatic privileges and immunities. Though V had raised many of these considerations, the Registrar failed to address those submissions in her reasons and did not do more than conduct a cursory review of the legislative history of s. 3(2)(a) and conclude that her interpretation was not explicitly precluded by its text.

First, the Registrar failed to address the immediate statutory context of s. 3(2)(a), which provides clear support for the conclusion that all of the persons contemplated by s. 3(2)(a) must have been granted diplomatic privileges and immunities in some form for the exception to apply. Second, the Registrar disregarded compelling submissions that s. 3(2) is a narrow exception consistent with established principles of international law and with the leading international treaties that extend diplomatic privileges and immunities to employees and representatives of foreign governments. Third, it was a significant omission to ignore the relevant cases that were before the Registrar which suggest that s. 3(2)(a) was intended to apply only to those individuals whose parents have been granted diplomatic privileges and immunities. Finally, there is no evidence that the Registrar considered the potential consequences of expanding her interpretation of s. 3(2)(a) to include all individuals who have not been granted diplomatic privileges and immunities. Rules concerning citizenship require a high degree of interpretive consistency in order to shield against arbitrariness. The Registrar's interpretation cannot be limited to the children of spies — its logic would be equally applicable to other scenarios. As well, provisions such as s. 3(2)(a) must be given a narrow interpretation because they potentially take away rights which otherwise benefit from a liberal and broad interpretation. Yet there is no indication that the Registrar considered the potential harsh consequences of her interpretation, or whether, in light of those potential consequences, Parliament would have intended s. 3(2)(a) to apply in this manner. Although the Registrar knew her interpretation was novel, she failed to provide a rationale for her expanded interpretation.

It was therefore unreasonable for the Registrar to find that s. 3(2)(a) can apply to individuals whose parents have not been granted diplomatic privileges and immunities in Canada. It is undisputed that V's parents had not been granted such privileges and immunities. No purpose would therefore be served by remitting this matter to the Registrar. Given that V was born in Canada, his status is governed only by the general rule of citizenship by birth. He is a Canadian citizen.

Per **Abella** and **Karakatsanis** JJ.: There is agreement with the majority that the appeal should be dismissed. The Registrar's decision to cancel V's citizenship certificate was unreasonable and was properly quashed by the Court of Appeal.

There is also agreement with the majority that there should be a presumption of reasonableness in judicial review. The contextual factors analysis should be eliminated from the standard of review framework, and "true questions of jurisdiction" should be abolished as a separate category of issues subject to correctness review. However, the elimination of these elements does not support the foundational changes to judicial review outlined in the majority's framework that result in expanded correctness review. Rather than confirming a meaningful presumption of deference for administrative decision-makers, the majority strips away deference from hundreds of administrative actors, based on a formalistic approach that ignores the legislature's intention to leave certain legal and policy questions to administrative decision-makers. The majority's presumption of reasonableness review rests on a totally new understanding of legislative intent and the rule of law and prohibits any consideration of well-established foundations for deference. By dramatically expanding the circumstances in which generalist judges will be entitled to substitute their own views for those of specialized decision-makers who apply their mandates on a daily basis, the majority's framework fundamentally reorients the relationship between administrative actors and the judiciary, thus advocating a profoundly different philosophy of administrative law.

The majority's framework rests on a flawed and incomplete conceptual account of judicial review, one that unjustifiably ignores the specialized expertise of administrative decision-makers and reads out the foundations of the modern understanding of legislative intent. Instead of understanding legislative intent as being the intention to leave legal questions within their mandate to specialized decision-makers with expertise, the majority removes expertise from the equation entirely. In so doing, the majority disregards the historically accepted reason why the legislature intended to delegate authority to an administrative actor. In particular, such an approach ignores the possibility that specialization and expertise are embedded into this legislative choice. Post-*Dunsmuir*, the Court has been steadfast in confirming the central role of specialization and expertise, affirming their connection to legislative intent, and recognizing that they give administrative decision-makers the interpretative upper hand on questions of law. Specialized expertise has become the core rationale for deference. Giving proper effect to the legislature's choice to delegate authority to an administrative decision-maker requires understanding the advantages that the decision-maker may enjoy in exercising its mandate. Chief among those advantages are the institutional expertise and specialization inherent to administering a particular mandate on a daily basis. In interpreting their enabling statutes, administrative actors may have a particularly astute appreciation for the on-the-ground consequences of particular legal interpretations, of statutory context, of the purposes that a provision or legislative scheme are meant to serve, and of specialized terminology. The advantages stemming from specialization and expertise provide a robust foundation for deference. The majority's approach accords no weight to such institutional advantages and banishes expertise from the standard of review analysis entirely. The removal of the current conceptual basis for deference opens the gates to expanded correctness review.

In the majority's framework, deference gives way whenever the rule of law demands it. This approach, however, flows from a court-centric conception of the rule of law. The rule of law means that administrative decision-makers make legal determinations within their mandate; it does not mean that only judges decide questions of law with an unrestricted license to substitute their opinions for those of administrative actors through correctness review. The majority's approach not only erodes the presumption of deference; it erodes confidence in the fact that law-making and legal interpretation are shared enterprises between courts and administrative decision-makers. Moreover, access to justice is at the heart of the legislative choice to establish a robust system of administrative law. This goal is compromised when a narrow conception of the rule of law is invoked to impose judicial hegemony over administrative decision-makers, which adds unnecessary expense and complexity. Authorizing more incursions into the administrative system by judges and permitting *de novo* review of every legal decision adds to the delay and cost of obtaining a final decision.

The majority's reformulation of "legislative intent" invites courts to apply an irrebuttable presumption of correctness review whenever an administrative scheme includes a right of appeal. Elevating appeal clauses to indicators of correctness review creates a two-tier system that defers to the expertise of administrative decision-makers only where there is no appeal clause. Yet appeal rights do not represent a different institutional structure that requires a more searching form of review. The mere fact that a statute contemplates an appeal says nothing about the degree of deference required in the review process. The majority's position hinges almost entirely on a textualist argument — i.e., that the presence of the word "appeal" indicates a legislative intent that courts apply the same standards of review found in civil appellate jurisprudence. This disregards long-accepted institutional distinctions between courts and administrative decision-makers. The continued use by legislatures of the term "appeal" cannot be imbued with the intent that the majority ascribes to it. The idea that appellate standards of review must be applied to every right of appeal is entirely unsupported by the jurisprudence. For at least 25 years, the Court has not treated statutory rights of appeal as a determinative reflection of legislative intent, and such clauses have played little or no role in the standard of review analysis. Moreover, pre-*Dunsmuir*, statutory rights of appeal were still seen as only one factor and not as unequivocal indicators of correctness review. Absent exceptional circumstances, a statutory right of appeal does not displace the presumption of reasonableness.

The majority's disregard for precedent and *stare decisis* has the potential to undermine both the integrity of the Court's decisions, and public confidence in the stability of the law. *Stare decisis* places significant limits on the Court's ability to overturn its precedents. The doctrine promotes the predictable and consistent development of legal principles, fosters reliance on judicial decisions, and contributes to the integrity of the judicial process. Respect for precedent also safeguards the Court's institutional legitimacy. The precedential value of a judgment does not expire with the tenure of the panel of judges that decided it. When the Court does choose to overrule its own precedents, it should do so carefully, with moderation, and with due regard for all the important considerations that undergird the doctrine of *stare decisis*. A nuanced balance must be struck between maintaining the stability of the common law and ensuring that the law is flexible and responsive enough to adapt to new circumstances and societal norms. *Stare decisis* plays a critical role in maintaining that balance and upholding the rule of law.

There is no principled justification for departing from the existing jurisprudence and abandoning the Court's long-standing view of how statutory appeal clauses impact the standard of review analysis. In doing so, the majority disregards the high threshold required to overturn the Court's decisions. The unprecedented wholesale rejection of an entire body of jurisprudence that is particularly unsettling.

The affected cases are numerous and include many decisions conducting deferential review even in the face of a statutory right of appeal and bedrock judgments affirming the relevance of administrative expertise to the standard of review analysis. Overruling these judgments flouts *stare decisis*, which prohibits courts from overturning past decisions that simply represent a choice with which the current bench does not agree. The majority's approach also has the potential to disturb settled interpretations of many statutes that contain a right of appeal; every existing interpretation of such statutes that has been affirmed under a reasonableness standard will be open to fresh challenge. Moreover, if the Court, in its past decisions, misconstrued the purpose of statutory appeal clauses, legislatures were free to clarify this interpretation through legislative amendment. In the absence of legislative correction, the case for overturning decisions is even less compelling.

The Court should offer additional direction on reasonableness review so that judges can provide careful and meaningful oversight of the administrative justice system while respecting its legitimacy and the perspectives of its front-line, specialized decision-makers. However, rather than clarifying the role of reasons and how to review them, the majority revives the kind of search for errors that dominated the Court's prior jurisprudence. The majority's multi-factored, open-ended list of constraints on administrative decision making will encourage reviewing courts to dissect administrative reasons in a line-by-line hunt for error. These constraints may function in practice as a wide-ranging catalogue of hypothetical errors to justify quashing an administrative decision. Structuring reasonableness review in this fashion effectively imposes on administrative decision-makers a higher standard of justification than on trial judges. Such an approach undercuts deference. Reasonableness review should instead focus on the concept of deference to administrative decision-makers and to the legislative intention to confide in them a mandate. Curial deference is the hallmark of reasonableness review, setting it apart from the substitution of opinion permitted under correctness.

Deference imposes three requirements on courts conducting reasonableness review. First, deference is the attitude a reviewing court must adopt towards an administrative decision-maker. Deference mandates respect for the legislative choice to entrust a decision to administrative actors rather than to the courts, for the important role that administrative decision-makers play, and for their specialized expertise and the institutional setting in which they operate. Reviewing courts must pay respectful attention to the reasons offered for an administrative decision, make a genuine effort to understand why the decision was made, and give the decision a fair and generous construction. Second, deference affects how a court frames the question it must answer and the nature of its analysis. A reviewing court does not ask how it would have resolved an issue, but rather whether the answer provided by the decision-maker was unreasonable. Ultimately, whether an administrative decision is reasonable depends on the context, and a reviewing court must be attentive to all relevant circumstances, including the reasons offered to support the decision, the record, the statutory scheme and the particular issues raised, among other factors. Third, deferential review impacts how a reviewing court evaluates challenges to a decision. The party seeking judicial review bears the onus of showing that the decision was unreasonable; the decision-maker does not have to persuade the court that its decision is reasonable.

The administrative decision itself is the focal point of the review exercise. In all cases, the question remains whether the challenging party has demonstrated that a decision is unreasonable. Where reasons are neither required nor available, reasonableness may be justified by past decisions of the administrative body or in light of the procedural context. Where reasons are provided, they serve as the natural starting point to determine whether the decision-maker acted reasonably. By beginning with the reasons, read in light of the surrounding context and the grounds raised, reviewing courts provide meaningful oversight while respecting the legitimacy of specialized administrative decision making. Reviewing courts should approach the reasons with respect for the specialized decision-makers, their significant role and the institutional context chosen by the legislator. Reviewing courts should not second-guess operational implications, practical challenges and on-the-ground knowledge and must remain alert to specialized concepts or language. Further, a reviewing court is not restricted to the four corners of the written reasons and should, if faced with a gap in the reasons, look to other materials to see if they shed light on the decision, including: the record of any formal proceedings and the materials before the decision-maker, past decisions of the administrative body, and policies or guidelines developed to guide the type of decision under review. These materials may assist a court in understanding the outcome. In these ways, reviewing courts may legitimately supplement written reasons without supplanting the analysis. Reasons must be read together with the outcome to determine whether the result falls within a range of possible outcomes. This approach puts substance over form where the basis for a decision is evident on the record, but not clearly expressed in written reasons.

As well, a court conducting deferential review must view claims of error in context and with caution, cognizant of the need to avoid substituting its opinion for that of those empowered and better equipped to answer the questions at issue. Because judicial substitution is incompatible with deference, reviewing courts must carefully evaluate the challenges raised to ensure they go to the reasonableness of the decision rather than representing a mere difference of opinion. Courts must also consider the materiality of any alleged errors. An error that is peripheral to the reasoning process is not sufficient to justify quashing a decision. The same deferential approach must apply with equal force to statutory interpretation cases. In such cases, a court should not assess the decision by determining what, in its own view, would be a reasonable interpretation. Such an approach imperils deference. A *de novo* interpretation of a statute necessarily omits the perspective of the front-line, specialized administrative body that routinely applies the statutory scheme in question. By placing that perspective at the heart of the judicial review inquiry, courts display respect for specialization and expertise, and for the legislative choice to delegate certain questions to non-judicial bodies. Conversely, by imposing their own interpretation of a statute, courts undermine legislative intent.

In the instant case, there is agreement with the majority that the standard of review is reasonableness. The Registrar's reasons failed to respond to V's submission that the objectives of s. 3(2)(a) of the *Citizenship Act* require its terms to be read narrowly. Instead, the Registrar interpreted s. 3(2)(a) broadly, based on a purely textual assessment. This reading was only reasonable if the text is read in isolation from its objective. Nothing in the history of this provision indicates that Parliament intended to widen its scope. Furthermore, the judicial treatment of this provision also points to the need for a narrow interpretation. In addition, the text of s. 3(2)(c) can be seen as undermining the Registrar's interpretation of s. 3(2)(a), because the former denies citizenship to children born to individuals who enjoy diplomatic privileges and immunities equivalent to those granted to persons referred to in the latter. This suggests that s. 3(2)(a) covers only those employees in Canada of a foreign government who have such privileges and immunities, in contrast with V's parents. By ignoring the objectives of s. 3 as a whole, the Registrar's decision was unreasonable.

The following is the judgment delivered by

THE CHIEF JUSTICE AND MOLDAVER, GASCON, CÔTÉ, BROWN, ROWE AND MARTIN JJ. —

[1] This appeal and its companion cases (see *Bell Canada v. Canada (Attorney General)*, 2019 SCC 66), provide this Court with an opportunity to re-examine its approach to judicial review of administrative decisions.

[2] In these reasons, we will address two key aspects of the current administrative law jurisprudence which require reconsideration and clarification. First, we will chart a new course forward for determining the standard of review that applies when a court reviews the merits of an administrative decision. Second, we will provide additional guidance for reviewing courts to follow when conducting reasonableness review. The revised framework will continue to be guided by the principles underlying judicial review that this Court articulated in *Dunsmuir v. New Brunswick*, 2008 SCC 9, [2008] 1 S.C.R. 190: that judicial review functions to

maintain the rule of law while giving effect to legislative intent. We will also affirm the need to develop and strengthen a culture of justification in administrative decision making.

[3] We will then address the merits of the case at bar, which relates to an application for judicial review of a decision by the Canadian Registrar of Citizenship concerning Alexander Vavilov, who was born in Canada and whose parents were later revealed to be Russian spies. The Registrar found on the basis of an interpretation of s. 3(2)(a) of the *Citizenship Act*, R.S.C. 1985, c. C-29, that Mr. Vavilov was not a Canadian citizen and cancelled his certificate of citizenship under s. 26(3) of the *Citizenship Regulations*, SOR/93-246. In our view, the standard of review to be applied to the Registrar's decision is reasonableness, and the Registrar's decision was unreasonable. We would therefore uphold the Federal Court of Appeal's decision to quash it, and would dismiss the Minister of Citizenship and Immigration's appeal.

I. <u>Need for Clarification and Simplification of the Law of Judicial Review</u>

[4] Over the past decades, the law relating to judicial review of administrative decisions in Canada has been characterized by continuously evolving jurisprudence and vigorous academic debate. This area of the law concerns matters which are fundamental to our legal and constitutional order, and seeks to navigate the proper relationship between administrative decision makers, the courts and individuals in our society. In parallel with the law, the role of administrative decision

making in Canada has also evolved. Today, the administration of countless public bodies and regulatory regimes has been entrusted to statutory delegates with decision-making power. The number, diversity and importance of the matters that come before such delegates has made administrative decision making one of the principal manifestations of state power in the lives of Canadians.

[5] Given the ubiquity and practical importance of administrative decision making, it is essential that administrative decision makers, those subject to their decisions and courts tasked with reviewing those decisions have clear guidance on how judicial review is to be performed.

[6] In granting leave to appeal in the case at bar and in its companion cases, this Court's leave to appeal judgment made clear that it viewed these appeals as an opportunity to consider the law applicable to the judicial review of administrative decisions as addressed in *Dunsmuir* and subsequent cases. In light of the importance of this issue, the Court appointed two *amici curiae*, invited the parties to devote a substantial portion of their submissions to the standard of review issue, and granted leave to 27 interveners, comprising 4 attorneys general and numerous organizations representing the breadth of the Canadian administrative law landscape. We have, as a result, received a wealth of helpful submissions on this issue. Despite this Court's review of the subject in *Dunsmuir*, some aspects of the law remain challenging. In particular, the submissions presented to the Court have highlighted two aspects of the current framework which need clarification.

[7] The first aspect is the analysis for determining the standard of review. It has become clear that *Dunsmuir*'s promise of simplicity and predictability in this respect has not been fully realized. In *Dunsmuir*, a majority of the Court merged the standards of "patent unreasonableness" and "reasonableness *simpliciter*" into a single "reasonableness" standard, thus reducing the number of standards of review from three to two: paras. 34-50. It also sought to simplify the analysis for determining the applicable standard of review: paras. 51-64. Since *Dunsmuir*, the jurisprudence has evolved to recognize that reasonableness will be the applicable standard for most categories of questions on judicial review, including, presumptively, when a decision maker interprets its enabling statute: see, e.g., *Alberta (Information and Privacy Commissioner) v. Alberta Teachers' Association*, 2011 SCC 61, [2011] 3 S.C.R. 654; *Mouvement laïque québécois v. Saguenay (City)*, 2015 SCC 16, [2015] 2 S.C.R. 3, at para. 46; *Canadian National Railway Co. v. Canada (Attorney General)*, 2014 SCC 40, [2014] 2 S.C.R. 135, at para. 55; *Canadian Artists' Representation v. National Gallery of Canada*, 2014 SCC 42, [2014] 2 S.C.R. 197, at para. 13; *Smith v. Alliance Pipeline Ltd.*, 2011 SCC 7, [2011] 1 S.C.R. 160, at paras. 26 and 28; *Canada (Citizenship and Immigration) v. Khosa*, 2009 SCC 12, [2009] 1 S.C.R. 339, at para. 25; *Dunsmuir*, at para. 54. The Court has indicated that this presumption may be rebutted by showing the issue on review falls within a category of questions attracting correctness review: see *McLean v. British Columbia (Securities Commission)*, 2013 SCC 67, [2013] 3 S.C.R. 895, at para. 22. It may also be rebutted by showing that the context indicates that the legislature intended the standard of review to be correctness: *McLean*, at para. 22; *Edmonton (City) v. Edmonton East (Capilano) Shopping

Centres Ltd., 2016 SCC 47, [2016] 2 S.C.R. 293, at para. 32; *Canada (Canadian Human Rights Commission) v. Canada (Attorney General)*, 2018 SCC 31, [2018] 2 S.C.R. 230 ("*CHRC*"), at paras. 45-46. However, uncertainty about when the contextual analysis remains appropriate and debate surrounding the scope of the correctness categories have sometimes caused confusion and made the analysis unwieldy: see, e.g., P. Daly, "Struggling Towards Coherence in Canadian Administrative Law? Recent Cases on Standard of Review and Reasonableness" (2016), 62 *McGill L.J.* 527.

[8] In addition, this analysis has in some respects departed from the theoretical foundations underpinning judicial review. While the application of the reasonableness standard is grounded, in part, in the necessity of avoiding "undue interference" in the face of the legislature's intention to leave certain questions with administrative bodies rather than with the courts (see *Dunsmuir*, at para. 27), that standard has come to be routinely applied even where the legislature has provided for a different institutional structure through a statutory appeal mechanism.

[9] The uncertainty that has followed *Dunsmuir* has been highlighted by judicial and academic criticism, litigants who have come before this Court, and organizations that represent Canadians who interact with administrative decision makers. These are not light critiques or theoretical challenges. They go to the core of the coherence of our administrative law jurisprudence and to the practical implications of this lack of coherence. This Court, too, has taken note. In *Wilson v.*

Atomic Energy of Canada Ltd., 2016 SCC 29, [2016] 1 S.C.R. 770, at para. 19, Abella J. expressed the need to "simplify the standard of review labyrinth we currently find ourselves in" and offered suggestions with a view to beginning a necessary conversation on the way forward. It is in this context that the Court decided to grant leave to hear this case and the companion cases jointly.

[10] This process has led us to conclude that a reconsideration of this Court's approach is necessary in order to bring greater coherence and predictability to this area of law. We have therefore adopted a revised framework for determining the standard of review where a court reviews the merits of an administrative decision. The analysis begins with a presumption that reasonableness is the applicable standard in all cases. Reviewing courts should derogate from this presumption only where required by a clear indication of legislative intent or by the rule of law.

[11] The second aspect is the need for better guidance from this Court on the proper application of the reasonableness standard. The Court has heard concerns that reasonableness review is sometimes perceived as advancing a two-tiered justice system in which those subject to administrative decisions are entitled only to an outcome somewhere between "good enough" and "not quite wrong". These concerns have been echoed by some members of the legal profession, civil society organizations and legal clinics. The Court has an obligation to take these perspectives seriously and to ensure that the framework it adopts accommodates all types of administrative decision making, in areas that range from immigration, prison

administration and social security entitlements to labour relations, securities regulation and energy policy.

[12] These concerns regarding the application of the reasonableness standard speak to the need for this Court to more clearly articulate what that standard entails and how it should be applied in practice. Reasonableness review is methodologically distinct from correctness review. It is informed by the need to respect the legislature's choice to delegate decision-making authority to the administrative decision maker rather than to the reviewing court. In order to fulfill *Dunsmuir*'s promise to protect "the legality, the reasonableness and the fairness of the administrative process and its outcomes", reasonableness review must entail a sensitive and respectful, but robust, evaluation of administrative decisions: para. 28.

[13] Reasonableness review is an approach meant to ensure that courts intervene in administrative matters only where it is truly necessary to do so in order to safeguard the legality, rationality and fairness of the administrative process. It finds its starting point in the principle of judicial restraint and demonstrates a respect for the distinct role of administrative decision makers. However, it is not a "rubber-stamping" process or a means of sheltering administrative decision makers from accountability. It remains a robust form of review.

[14] On the one hand, courts must recognize the legitimacy and authority of administrative decision makers within their proper spheres and adopt an appropriate posture of respect. On the other hand, administrative decision makers must adopt a

culture of justification and demonstrate that their exercise of delegated public power can be "justified to citizens in terms of rationality and fairness": the Rt. Hon. B. McLachlin, "The Roles of Administrative Tribunals and Courts in Maintaining the Rule of Law" (1998), 12 *C.J.A.L.P.* 171, at p. 174 (emphasis deleted); see also M. Cohen-Eliya and I. Porat, "Proportionality and Justification" (2014), 64 *U.T.L.J.* 458, at pp. 467-70.

[15] In conducting a reasonableness review, a court must consider the outcome of the administrative decision in light of its underlying rationale in order to ensure that the decision as a whole is transparent, intelligible and justified. What distinguishes reasonableness review from correctness review is that the court conducting a reasonableness review must focus on the decision the administrative decision maker actually made, including the justification offered for it, and not on the conclusion the court itself would have reached in the administrative decision maker's place.

II. Determining the Applicable Standard of Review

[16] In the following sections, we set out a revised framework for determining the standard of review a court should apply when the merits of an administrative decision are challenged. It starts with a presumption that reasonableness is the applicable standard whenever a court reviews administrative decisions.

[17] The presumption of reasonableness review can be rebutted in two types of situations. The first is where the legislature has indicated that it intends a different standard or set of standards to apply. This will be the case where the legislature explicitly prescribes the applicable standard of review. It will also be the case where the legislature has provided a statutory appeal mechanism from an administrative decision to a court, thereby signalling the legislature's intent that appellate standards apply when a court reviews the decision. The second situation in which the presumption of reasonableness review will be rebutted is where the rule of law requires that the standard of correctness be applied. This will be the case for certain categories of questions, namely constitutional questions, general questions of law of central importance to the legal system as a whole and questions related to the jurisdictional boundaries between two or more administrative bodies. The general rule of reasonableness review, when coupled with these limited exceptions, offers a comprehensive approach to determining the applicable standard of review. As a result, it is no longer necessary for courts to engage in a "contextual inquiry" (*CHRC*, at paras. 45-47, see also *Dunsmuir*, at paras. 62-64; *McLean*, at para. 22) in order to identify the appropriate standard.

[18] Before setting out the framework for determining the standard of review in greater detail, we wish to acknowledge that these reasons depart from the Court's existing jurisprudence on standard of review in certain respects. Any reconsideration such as this can be justified only by compelling circumstances, and we do not take this decision lightly. A decision to adjust course will always require the Court to

carefully weigh the impact on legal certainty and predictability against the costs of continuing to follow a flawed approach: see *Canada (Attorney General) v. Bedford*, 2013 SCC 72, [2013] 3 S.C.R. 1101, at para. 47; *Canada v. Craig*, 2012 SCC 43, [2012] 2 S.C.R. 489, at paras. 24-27; *Ontario (Attorney General) v. Fraser*, 2011 SCC 20, [2011] 2 S.C.R. 3, at paras. 56-57 and 129-31, 139; *R. v. Henry*, 2005 SCC 76, [2005] 3 S.C.R. 609, at paras. 43-44; *R. v. Bernard*, [1988] 2 S.C.R. 833, at pp. 849-50.

[19] On this point, we recall the observation of Gibbs J. in *Queensland v. Commonwealth* (1977), 139 C.L.R. 585 (H.C.A.), which this Court endorsed in *Craig*, at para. 26:

> No Justice is entitled to ignore the decisions and reasoning of his predecessors, and to arrive at his own judgment as though the pages of the law reports were blank, or as though the authority of a decision did not survive beyond the rising of the Court. A Justice, unlike a legislator, cannot introduce a programme of reform which sets at nought decisions formerly made and principles formerly established. It is only after the most careful and respectful consideration of the earlier decision, and after giving due weight to all the circumstances, that a Justice may give effect to his own opinions in preference to an earlier decision of the Court.

[20] Nonetheless, this Court has in the past revisited precedents that were determined to be unsound in principle, that had proven to be unworkable and unnecessarily complex to apply, or that had attracted significant and valid judicial, academic and other criticism: *Craig*, at paras. 28-30; *Henry*, at paras. 45-47; *Fraser*, at para. 135 (per Rothstein J., concurring in the result); *Bernard*, at pp. 858-59. Although adhering to the established jurisprudence will generally promote certainty

and predictability, in some instances doing so will create or perpetuate uncertainty in the law: *Minister of Indian Affairs and Northern Development v. Ranville*, [1982] 2 S.C.R. 518, at p. 528; *Bernard*, at p. 858; *R. v. B. (K.G.)*, [1993] 1 S.C.R. 740, at p. 778. In such circumstances, "following the prior decision because of *stare decisis* would be contrary to the underlying value behind that doctrine, namely, clarity and certainty in the law": *Bernard*, at p. 858. These considerations apply here.

[21] Certain aspects of the current framework are unclear and unduly complex. The practical effect of this lack of clarity is that courts sometimes struggle in conducting the standard of review analysis, and costly debates surrounding the appropriate standard and its application continue to overshadow the review on the merits in many cases, thereby undermining access to justice. The words of Binnie J. in his concurring reasons in *Dunsmuir*, at para. 133, are still apt:

> [J]udicial review is burdened with undue cost and delay. Litigants understandably hesitate to go to court to seek redress for a perceived administrative injustice if their lawyers cannot predict with confidence even what standard of review will be applied . . . . If litigants do take the plunge, they may find the court's attention focussed not on their complaints, or the government's response, but on lengthy and arcane discussions of something they are told is [the choice of standard analysis] . . . . A victory before the reviewing court may be overturned on appeal because the wrong "standard of review" was selected. A small business denied a licence or a professional person who wants to challenge disciplinary action should be able to seek judicial review without betting the store or the house on the outcome . . . .

Regrettably, we find ourselves in a similar position following *Dunsmuir*. As Karakatsanis J. observed in *Edmonton East*, at para. 35, "[t]he contextual approach can generate uncertainty and endless litigation concerning the standard of review." While counsel and courts attempt to work through the complexities of determining the standard of review and its proper application, litigants "still find the merits waiting in the wings for their chance to be seen and reviewed": *Wilson*, at para. 25, per Abella J.

[22] As noted in *CHRC*, this Court "has for years attempted to simplify the standard of review analysis in order to 'get the parties away from arguing about the tests and back to arguing about the substantive merits of their case'": para. 27, quoting *Alberta Teachers*, at para. 36, citing *Dunsmuir*, at para. 145, per Binnie J. The principled changes set out below seek to promote the values underlying *stare decisis* and to make the law on the standard of review more certain, coherent and workable going forward.

A. *Presumption That Reasonableness Is the Applicable Standard*

[23] Where a court reviews the merits of an administrative decision (i.e., judicial review of an administrative decisions other than a review related to a breach of natural justice and/or the duty of procedural fairness), the standard of review it applies must reflect the legislature's intent with respect to the role of the reviewing court, except where giving effect to that intent is precluded by the rule of law. The starting point for the analysis is a presumption that the legislature intended the standard of review to be reasonableness.

[24] Parliament and the provincial legislatures are constitutionally empowered to create administrative bodies and to endow them with broad statutory powers: *Dunsmuir*, at para. 27. Where a legislature has created an administrative decision maker for the specific purpose of administering a statutory scheme, it must be presumed that the legislature also intended that decision maker to be able to fulfill its mandate and interpret the law as applicable to all issues that come before it. Where a legislature has not explicitly prescribed that a court is to have a role in reviewing the decisions of that decision maker, it can safely be assumed that the legislature intended the administrative decision maker to function with a minimum of judicial interference. However, because judicial review is protected by s. 96 of the *Constitution Act, 1867*, legislatures cannot shield administrative decision making from curial scrutiny entirely: *Dunsmuir*, at para. 31; *Crevier v. Attorney General of Quebec*, [1981] 2 S.C.R. 220, at pp. 236-37; *U.E.S., Local 298 v. Bibeault*, [1988] 2 S.C.R. 1048, at p. 1090. Nevertheless, respect for these institutional design choices made by the legislature requires a reviewing court to adopt a posture of restraint on review.

[25] For years, this Court's jurisprudence has moved toward a recognition that the reasonableness standard should be the starting point for a court's review of an administrative decision. Indeed, a presumption of reasonableness review is already a well-established feature of the standard of review analysis in cases in which administrative decision makers interpret their home statutes: see *Alberta Teachers*, at para. 30; *Saguenay*, at para. 46; *Edmonton East*, at para. 22. In our view, it is now

appropriate to hold that whenever a court reviews an administrative decision, it should start with the presumption that the applicable standard of review for all aspects of that decision will be reasonableness. While this presumption applies to the administrative decision maker's interpretation of its enabling statute, the presumption also applies more broadly to other aspects of its decision.

[26] Before turning to an explanation of how the presumption of reasonableness review may be rebutted, we believe it is desirable to clarify one aspect of the conceptual basis for this presumption. Since *C.U.P.E. v. N.B. Liquor Corporation*, [1979] 2 S.C.R. 227, the central rationale for applying a deferential standard of review in administrative law has been a respect for the legislature's institutional design choice to delegate certain matters to non-judicial decision makers through statute: *C.U.P.E.*, at pp. 235-36. However, this Court has subsequently identified a number of other justifications for applying the reasonableness standard, some of which have taken on influential roles in the standard of review analysis at various times.

[27] In particular, the Court has described one rationale for applying the reasonableness standard as being the relative expertise of administrative decision makers with respect to the questions before them: see, e.g., *C.U.P.E.*, at p. 236; *Pushpanathan v. Canada (Minister of Citizenship and Immigration)*, [1998] 1 S.C.R. 982, at paras. 32-35; *Pezim v. British Columbia (Superintendent of Brokers)*, [1994] 2 S.C.R. 557, at pp. 591-92; *Canada (Director of Investigation and Research) v.*

Southam Inc., [1997] 1 S.C.R. 748, at paras. 50-53; *Dunsmuir,* at para. 49, quoting D. J. Mullan, "Establishing the Standard of Review: The Struggle for Complexity?" (2004), 17 *C.J.A.L.P.* 59, at p. 93; see also *Dunsmuir,* at para. 68. However, this Court's jurisprudence has sometimes been deeply divided on the question of what expertise entails in the administrative context, how it should be assessed and how it should inform the standard of review analysis: see, e.g., *Khosa*, at paras. 23-25, per Binnie J. for the majority, compared to paras. 93-96, per Rothstein J., concurring in the result; *Edmonton East*, at para. 33, per Karakatsanis J. for the majority, compared to paras. 81-86, per Côté and Brown JJ., dissenting. In the era of what was known as the "pragmatic and functional" approach, which was first set out in *Bibeault*, a decision maker's expertise relative to that of the reviewing court was one of the key contextual factors said to indicate legislative intent with respect to the standard of review, but the decision maker was not presumed to have relative expertise. Instead, whether a decision maker had greater expertise than the reviewing court was assessed in relation to the specific question at issue and on the basis of a contextual analysis that could incorporate factors such as the qualification of an administrative body's members, their experience in a particular area and their involvement in policy making: see, e.g., *Pezim*, at pp. 591-92; *Southam*, at paras. 50-53; *Dr. Q v. College of Physicians and Surgeons of British Columbia*, 2003 SCC 19, [2003] 1 S.C.R. 226, at paras. 28-29; *Canada (Deputy Minister of National Revenue) v. Mattel Canada Inc.*, 2001 SCC 36, [2001] 2 S.C.R. 100, at paras. 28-32; *Moreau-Bérubé v. New Brunswick (Judicial Council),* 2002 SCC 11, [2002] 1 S.C.R. 249, at para. 50.

[28] Unfortunately, this contextual analysis proved to be unwieldly and offered limited practical guidance for courts attempting to assess an administrative decision maker's relative expertise. More recently, the dominant approach in this Court has been to accept that expertise simply inheres in an administrative body by virtue of the specialized function designated for it by the legislature: *Edmonton East*, at para. 33. However, if administrative decision makers are understood to possess specialized expertise on all questions that come before them, the concept of expertise ceases to assist a reviewing court in attempting to distinguish questions for which applying the reasonableness standard is appropriate from those for which it is not.

[29] Of course, the fact that the specialized role of administrative decision makers lends itself to the development of expertise and institutional experience is not the only reason that a legislature may choose to delegate decision-making authority. Over the years, the Court has pointed to a number of other compelling rationales for the legislature to delegate the administration of a statutory scheme to a particular administrative decision maker. These rationales have included the decision maker's proximity and responsiveness to stakeholders, ability to render decisions promptly, flexibly and efficiently, and ability to provide simplified and streamlined proceedings intended to promote access to justice.

[30] While specialized expertise and these other rationales may all be reasons for a legislature to delegate decision-making authority, a reviewing court need not evaluate which of these rationales apply in the case of a particular decision maker in

order to determine the standard of review. Instead, in our view, it is the *very fact* that the legislature has chosen to delegate authority which justifies a default position of reasonableness review. The Court has in fact recognized this basis for applying the reasonableness standard to administrative decisions in the past. In *Khosa*, for example, the majority understood *Dunsmuir* to stand for the proposition that "with or without a privative clause, a measure of deference has come to be accepted as appropriate where a particular decision had been allocated to an administrative decision-maker rather than to the courts": para. 25. More recently, in *Edmonton East*, Karakatsanis J. explained that a presumption of reasonableness review "respects the principle of legislative supremacy and the choice made to delegate decision making to a tribunal, rather than the courts": para. 22. And in *CHRC*, Gascon J. explained that "the fact that the legislature has allocated authority to a decision maker other than the courts is itself an indication that the legislature intended deferential review": para. 50. In other words, respect for this institutional design choice and the democratic principle, as well as the need for courts to avoid "undue interference" with the administrative decision maker's discharge of its functions, is what justifies the presumptive application of the reasonableness standard: *Dunsmuir*, at para. 27.

[31] We wish to emphasize that because these reasons adopt a presumption of reasonableness as the starting point, expertise is no longer relevant to a determination of the standard of review as it was in the contextual analysis. However, we are not doing away with the role of expertise in administrative decision making. This

consideration is simply folded into the new starting point and, as explained below, expertise remains a relevant consideration in conducting reasonableness review.

[32] That being said, our starting position that the applicable standard of review is reasonableness is not incompatible with the rule of law. However, because this approach is grounded in respect for legislative choice, it also requires courts to give effect to clear legislative direction that a different standard was intended. Similarly, a reviewing court must be prepared to derogate from the presumption of reasonableness review where respect for the rule of law requires a singular, determinate and final answer to the question before it. Each of these situations will be discussed in turn below.

B. *Derogation From the Presumption of Reasonableness Review on the Basis of Legislative Intent*

[33] This Court has described respect for legislative intent as the "polar star" of judicial review: *C.U.P.E. v. Ontario (Minister of Labour)*, 2003 SCC 29, [2003] 1 S.C.R. 539, at para. 149. This description remains apt. The presumption of reasonableness review discussed above is intended to give effect to the legislature's choice to leave certain matters with administrative decision makers rather than the courts. It follows that this presumption will be rebutted where a legislature has indicated that a different standard should apply. The legislature can do so in two ways. First, it may explicitly prescribe through statute what standard courts should apply when reviewing decisions of a particular administrative decision maker.

Second, it may direct that derogation from the presumption of reasonableness review is appropriate by providing for a statutory appeal mechanism from an administrative decision maker to a court, thereby signalling the application of appellate standards.

(1) Legislated Standards of Review

[34] Any framework rooted in legislative intent must, to the extent possible, respect clear statutory language that prescribes the applicable standard of review. This Court has consistently affirmed that legislated standards of review should be given effect: see, e.g., *R. v. Owen*, 2003 SCC 33, [2003] 1 S.C.R. 779, at paras. 31-32; *Khosa*, at paras. 18-19; *British Columbia (Workers' Compensation Board) v. Figliola*, 2011 SCC 52, [2011] 3 S.C.R. 422, at para. 20; *Moore v. British Columbia (Education)*, 2012 SCC 61, [2012] 3 S.C.R. 360, at para. 55; *McCormick v. Fasken Martineau DuMoulin LLP*, 2014 SCC 39, [2014] 2 S.C.R. 108, at para. 16; *British Columbia (Workers' Compensation Appeal Tribunal) v. Fraser Health Authority*, 2016 SCC 25, [2016] 1 S.C.R. 587, at paras. 8 and 29; *British Columbia Human Rights Tribunal v. Schrenk*, 2017 SCC 62, [2017] 2 S.C.R. 795, at para. 28.

[35] It follows that where a legislature has indicated that courts are to apply the standard of correctness in reviewing certain questions, that standard must be applied. In British Columbia, the legislature has established the applicable standard of review for many tribunals by reference to the *Administrative Tribunals Act*, S.B.C. 2004, c. 45: see ss. 58 and 59. For example, it has provided that the standard of review applicable to decisions on questions of statutory interpretation by the B.C.

Human Rights Tribunal is to be correctness: *ibid.*, s. 59(1); *Human Rights Code*, R.S.B.C. 1996, c. 210, s. 32. We continue to be of the view that where the legislature has indicated the applicable standard of review, courts are bound to respect that designation, within the limits imposed by the rule of law.

(2) Statutory Appeal Mechanisms

[36] We have reaffirmed that, to the extent possible, the standard of review analysis requires courts to give effect to the legislature's institutional design choices to delegate authority through statute. In our view, this principled position also requires courts to give effect to the legislature's intent, signalled by the presence of a statutory appeal mechanism from an administrative decision to a court, that the court is to perform an appellate function with respect to that decision. Just as a legislature may, within constitutional limits, insulate administrative decisions from judicial interference, it may also choose to establish a regime "which does not exclude the courts but rather makes them part of the enforcement machinery": *Seneca College of Applied Arts and Technology v. Bhadauria*, [1981] 2 S.C.R. 181, at p. 195. Where a legislature has provided that parties may appeal from an administrative decision to a court, either as of right or with leave, it has subjected the administrative regime to appellate oversight and indicated that it expects the court to scrutinize such administrative decisions on an appellate basis. This expressed intention necessarily rebuts the blanket presumption of reasonableness review, which is premised on giving effect to a legislature's decision to leave certain issues with a body other than a court.

This intention should be given effect. As noted by the intervener Attorney General of Quebec in its factum, [TRANSLATION] "[t]he requirement of deference must not sterilize such an appeal mechanism to the point that it changes the nature of the decision-making process the legislature intended to put in place": para. 2.

[37] It should therefore be recognized that, where the legislature has provided for an appeal from an administrative decision to a court, a court hearing such an appeal is to apply appellate standards of review to the decision. This means that the applicable standard is to be determined with reference to the nature of the question and to this Court's jurisprudence on appellate standards of review. Where, for example, a court is hearing an appeal from an administrative decision, it would, in considering questions of law, including questions of statutory interpretation and those concerning the scope of a decision maker's authority, apply the standard of correctness in accordance with *Housen v. Nikolaisen*, 2002 SCC 33, [2002] 2 S.C.R. 235, at para. 8. Where the scope of the statutory appeal includes questions of fact, the appellate standard of review for those questions is palpable and overriding error (as it is for questions of mixed fact and law where the legal principle is not readily extricable): see *Housen*, at paras. 10, 19 and 26-37. Of course, should a legislature intend that a different standard of review apply in a statutory appeal, it is always free to make that intention known by prescribing the applicable standard through statute.

[38] We acknowledge that giving effect to statutory appeal mechanisms in this way departs from the Court's recent jurisprudence. However, after careful

consideration, we are of the view that this shift is necessary in order to bring coherence and conceptual balance to the standard of review analysis and is justified by a weighing of the values of certainty and correctness: *Craig*, at para. 27. Our conclusion is based on the following considerations.

[39] First, there has been significant judicial and academic criticism of this Court's recent approach to statutory appeal rights: see, e.g., Y.-M. Morissette, "What is a 'reasonable decision'?" (2018), 31 *C.J.A.L.P.* 225, at p. 244; the Hon. J.T. Robertson, *Administrative Deference: The Canadian Doctrine that Continues to Disappoint* (April 18, 2018) (online), at p. 8; the Hon. D. Stratas, "The Canadian Law of Judicial Review: A Plea for Doctrinal Coherence and Consistency" (2016), 42 *Queen's L.J.* 27, at p. 33; Daly, at pp. 541-42; *Québec (Procureure générale) v. Montréal (Ville)*, 2016 QCCA 2108, 17 Admin. L.R. (6th) 328, at paras. 36-46; *Bell Canada v. 7265921 Canada Ltd.*, 2018 FCA 174, 428 D.L.R. (4th) 311, at paras. 190-92, per Nadon J.A., concurring, and at 66 and 69-72, per Rennie J.A., dissenting; *Garneau Community League v. Edmonton (City)*, 2017 ABCA 374, 60 Alta. L.R. (6th) 1, at paras. 91 and 93-95, per Slatter J.A., concurring; *Nova Scotia (Attorney General) v. S&D Smith Central Supplies Limited*, 2019 NSCA 22, at paras. 250, 255-64 and 274-302 (CanLII), per Beveridge J.A., dissenting; *Atlantic Mining NS Corp. (D.D.V. Gold Limited) v. Oakley*, 2019 NSCA 14, at paras. 9-14 (CanLII). These critiques seize on the inconsistency inherent in a standard of review framework based on legislative intent that otherwise declines to give meaning to an express statutory right of appeal. This criticism observes that legislative choice is not one-

dimensional; rather, it pulls in two directions. While a legislative choice to delegate to an administrative decision maker grounds a presumption of reasonableness on the one hand, a legislative choice to enact a statutory right of appeal signals an intention to ascribe an appellate role to reviewing courts on the other hand.

[40] This Court has in the past held that the existence of significant and valid judicial, academic and other criticism of its jurisprudence may justify reconsideration of a precedent: *Craig*, at para. 29; *R. v. Robinson*, [1996] 1 S.C.R. 683, at paras. 35-41. This consideration applies in the instant case. In particular, the suggestion that the recent treatment of statutory rights of appeal represents a departure from the conceptual basis underpinning the standard of review framework is itself a compelling reason to re-examine the current approach: *Khosa*, at para. 87, per Rothstein J., concurring in the result.

[41] Second, there is no satisfactory justification for the recent trend in this Court's jurisprudence to give no effect to statutory rights of appeal in the standard of review analysis absent exceptional wording: see *Tervita Corp. v. Canada (Commissioner of Competition)*, 2015 SCC 3, [2015] 1 S.C.R. 161, at paras. 35-39. Indeed, this approach is itself a departure from earlier jurisprudence: the Hon. J. T. Robertson, "Judicial Deference to Administrative Tribunals: A Guide to 60 Years of Supreme Court Jurisprudence" (2014), 66 *S.C.L.R.* (2d) 1, at pp. 91-93. Under the former "pragmatic and functional" approach to determining the applicable standard of review, the existence of a privative clause or a statutory right of appeal

was one of four contextual factors that a court would consider in order to determine the standard that the legislature intended to apply to a particular decision. Although a statutory appeal clause was not determinative, it was understood to be a key factor indicating that the legislature intended that a less deferential standard of review be applied: see, e.g., *Pezim*, at pp. 589-92; *British Columbia Telephone Co. v. Shaw Cable Systems (B.C.) Ltd.*, [1995] 2 S.C.R. 739, at paras. 28-31; *Southam*, at paras. 30-32, 46 and 54-55; *Pushpanathan*, at paras. 30-31; *Dr. Q*, at para. 27; *Mattel*, at paras. 26-27; *Law Society of New Brunswick v. Ryan*, 2003 SCC 20, [2003] 1 S.C.R. 247, at paras. 21 and 27-29; *Barrie Public Utilities v. Canadian Cable Television Assn.*, 2003 SCC 28, [2003] 1 S.C.R. 476, at para. 11; *Monsanto Canada Inc. v. Ontario (Superintendent of Financial Services)*, 2004 SCC 54, [2004] 3 S.C.R. 152, at para. 7.

[42] The Court did indeed sometimes find that, even in a statutory appeal, a deferential standard of review was warranted for the legal findings of a decision maker that lay at the heart of the decision maker’s expertise: see, e.g., *Pezim*. In other instances, however, the Court concluded that the existence of a statutory appeal mechanism and the fact that the decision maker did not have greater expertise than a court on the issue being considered indicated that correctness was the appropriate standard, including on matters involving the interpretation of the administrative decision maker’s home statute: see, e.g., *Mattel*, at paras. 26-33; *Barrie Public Utilities*, at paras. 9-19; *Monsanto*, at paras. 6-16.

[43] Yet as, in *Dunsmuir*, *Alberta Teachers*, *Edmonton East* and subsequent cases, the standard of review analysis was simplified and shifted from a contextual analysis to an approach more focused on categories, statutory appeal mechanisms ceased to play a role in the analysis. Although this simplification of the standard of review analysis may have been a laudable change, it did not justify ceasing to give *any* effect to statutory appeal mechanisms. *Dunsmuir* itself provides little guidance on the rationale for this change. The majority in *Dunsmuir* was silent on the role of a statutory right of appeal in determining the standard of review, and did not refer to the prior treatment of statutory rights of appeal under the pragmatic and functional approach.

[44] More generally, there is no convincing reason to presume that legislatures mean something entirely different when they use the word "appeal" in an administrative law statute than they do in, for example, a criminal or commercial law context. Accepting that the word "appeal" refers to the same type of procedure in all these contexts also accords with the presumption of consistent expression, according to which the legislature is presumed to use language such that the same words have the same meaning both within a statute and across statutes: R. Sullivan, *Sullivan on the Construction of Statutes* (6th ed. 2014), at p. 217. Accepting that the legislature intends an appellate standard of review to be applied when it uses the word "appeal" also helps to explain why many statutes provide for *both* appeal and judicial review mechanisms in different contexts, thereby indicating two roles for reviewing courts: see, e.g., *Federal Courts Act*, R.S.C. 1985, c. F-7, ss. 27 and 28. This offers further

support for giving effect to statutory rights of appeal. Our colleagues' suggestion that our position in this regard "hinges" on what they call a "textualist argument" (at para. 246) is inaccurate.

[45] That there is no principled rationale for ignoring statutory appeal mechanisms becomes obvious when the broader context of those mechanisms is considered. The existence of a limited right of appeal, such as a right of appeal on questions of law or a right of appeal with leave of a court, does not preclude a court from considering other aspects of a decision in a judicial review proceeding. However, if the same standards of review applied regardless of whether a question was covered by the appeal provision, and regardless of whether an individual subject to an administrative decision was granted leave to appeal or applied for judicial review, the appeal provision would be completely redundant — contrary to the well-established principle that the legislature does not speak in vain: *Attorney General of Quebec v. Carrières Ste-Thérèse Ltée*, [1985] 1 S.C.R. 831, at p. 838.

[46] Finally, and most crucially, the appeals now before the Court have allowed for a comprehensive and considered examination of the standard of review analysis with the goal of remedying the conceptual and practical difficulties that have made this area of the law challenging for litigants and courts alike. To achieve this goal, the revised framework must, for at least two reasons, give effect to statutory appeal mechanisms. The first reason is conceptual. In the past, this Court has looked past an appeal clause primarily when the decision maker possessed greater relative

expertise — what it called the "specialization of duties" principle in *Pezim*, at p. 591. But, as discussed above, the presumption of reasonableness review is no longer premised upon notions of relative expertise. Instead, it is now based on respect for the legislature's institutional design choice, according to which the authority to make a decision is vested in an administrative decision maker rather than in a court. It would be inconsistent with this conceptual basis for the presumption of reasonableness review to disregard clear indications that the legislature has intentionally chosen a more involved role for the courts. Just as recognizing a presumption of reasonableness review on all questions respects a legislature's choice to leave some matters first and foremost to an administrative decision maker, departing from that blanket presumption in the context of a statutory appeal respects the legislature's choice of a more involved role for the courts in supervising administrative decision making.

[47] The second reason is that, building on developments in the case law over the past several years, this decision conclusively closes the door on the application of a contextual analysis to determine the applicable standard, and in doing so streamlines and simplifies the standard of review framework. With the elimination of the contextual approach to selecting the standard of review, the need for statutory rights of appeal to play a role becomes clearer. Eliminating the contextual approach means that statutory rights of appeal must now either play no role in administrative law or be accepted as directing a departure from the default position of reasonableness review. The latter must prevail.

[48] Our colleagues agree that the time has come to put the contextual approach espoused in *Dunsmuir* to rest and adopt a presumption of reasonableness review. We part company on the extent to which the departure from the contextual approach requires corresponding modifications to other aspects of the standard of review jurisprudence. We consider that the elimination of the contextual approach represents an incremental yet important adjustment to Canada's judicial review roots. While it is true that this Court has, in the past several years of jurisprudential development, warned that the contextual approach should be applied "sparingly" (*CHRC*, at para. 46), it is incorrect to suggest that our jurisprudence was such that the elimination of the contextual analysis was "all but complete": reasons of Abella and Karakatsanis JJ., at para. 277; see, in this regard, *CHRC*, at paras. 44-54; *Saguenay*, at para. 46; *Tervita*, at para. 35; *McLean*, at para. 22; *Edmonton East*, at para. 32; *Rogers Communications Inc. v. Society of Composers, Authors and Music Publishers of Canada*, 2012 SCC 35, [2012] 2 S.C.R. 283, at para. 15. The contextual analysis was one part of the broader standard of review framework set out in *Dunsmuir*. A departure from this aspect of the *Dunsmuir* framework requires a principled rebalancing of the framework as a whole in order to maintain the equilibrium between the roles of administrative decision makers and reviewing courts that is fundamental to administrative law.

[49] In our view, with the starting position of this presumption of reasonableness review, and in the absence of a searching contextual analysis, legislative intent can only be given effect in this framework if statutory appeal

mechanisms, as clear signals of legislative intent with respect to the applicable standard of review, are given effect through the application of appellate standards by reviewing courts. Conversely, in such a framework that is based on a presumption of reasonableness review, contextual factors that courts once looked to as signalling deferential review, such as privative clauses, serve no independent or additional function in identifying the standard of review.

[50] We wish, at this juncture, to make three points regarding how the presence of a statutory appeal mechanism should inform the choice of standard analysis. First, we note that statutory regimes that provide for parties to appeal to a court from an administrative decision may allow them to do so in all cases (that is, as of right) or only with leave of the court. While the existence of a leave requirement will affect whether a court will hear an appeal from a particular decision, it does not affect the standard to be applied if leave is given and the appeal is heard.

[51] Second, we note that not all legislative provisions that contemplate a court reviewing an administrative decision actually provide a right of appeal. Some provisions simply recognize that all administrative decisions are subject to judicial review and address procedural or other similar aspects of judicial review in a particular context. Since these provisions do not give courts an appellate function, they do not authorize the application of appellate standards. Some examples of such provisions are ss. 18 to 18.2, 18.4 and 28 of the *Federal Courts Act*, which confer jurisdiction on the Federal Court and the Federal Court of Appeal to hear and

determine applications for judicial review of decisions of federal bodies and grant remedies, and also address procedural aspects of such applications: see *Khosa*, at para. 34. Another example is the current version of s. 470 of Alberta's *Municipal Government Act*, R.S.A. 2000, c. M-26, which does not provide for an appeal to a court, but addresses procedural considerations and consequences that apply "[w]here a decision of an assessment review board is the subject of an application for judicial review": s. 470(1).

[52] Third, we would note that statutory appeal rights are often circumscribed, as their scope might be limited with reference to the types of questions on which a party may appeal (where, for example, appeals are limited to questions of law) or the types of decisions that may be appealed (where, for example, not every decision of an administrative decision maker may be appealed to a court), or to the party or parties that may bring an appeal. However, the existence of a circumscribed right of appeal in a statutory scheme does not on its own preclude applications for judicial review of decisions, or of aspects of decisions, to which the appeal mechanism does not apply, or by individuals who have no right of appeal. But any such application for judicial review is distinct from an appeal, and the presumption of reasonableness review that applies on judicial review cannot then be rebutted by reference to the statutory appeal mechanism.

C. *The Applicable Standard Is Correctness Where Required by the Rule of Law*

[53] In our view, respect for the rule of law requires courts to apply the standard of correctness for certain types of legal questions: constitutional questions, general questions of law of central importance to the legal system as a whole and questions regarding the jurisdictional boundaries between two or more administrative bodies. The application of the correctness standard for such questions respects the unique role of the judiciary in interpreting the Constitution and ensures that courts are able to provide the last word on questions for which the rule of law requires consistency and for which a final and determinate answer is necessary: *Dunsmuir*, at para. 58.

[54] When applying the correctness standard, the reviewing court may choose either to uphold the administrative decision maker's determination or to substitute its own view: *Dunsmuir*, at para. 50. While it should take the administrative decision maker's reasoning into account — and indeed, it may find that reasoning persuasive and adopt it — the reviewing court is ultimately empowered to come to its own conclusions on the question.

(1) Constitutional Questions

[55] Questions regarding the division of powers between Parliament and the provinces, the relationship between the legislature and the other branches of the state, the scope of Aboriginal and treaty rights under s. 35 of the *Constitution Act, 1982*, and other constitutional matters require a final and determinate answer from the courts. Therefore, the standard of correctness must continue to be applied in

reviewing such questions: *Dunsmuir*, para. 58; *Westcoast Energy Inc. v. Canada (National Energy Board)*, [1998] 1 S.C.R. 322.

[56] The Constitution — both written and unwritten — dictates the limits of all state action. Legislatures and administrative decision makers are bound by the Constitution and must comply with it. A legislature cannot alter the scope of its own constitutional powers through statute. Nor can it alter the constitutional limits of executive power by delegating authority to an administrative body. In other words, although a legislature may choose what powers it delegates to an administrative body, it cannot delegate powers that it does not constitutionally have. The constitutional authority to act must have determinate, defined and consistent limits, which necessitates the application of the correctness standard.

[57] Although the *amici* questioned the approach to the standard of review set out in *Doré v. Barreau du Québec*, 2012 SCC 12, [2012] 1 S.C.R. 395, a reconsideration of that approach is not germane to the issues in this appeal. However, it is important to draw a distinction between cases in which it is alleged that the effect of the administrative decision being reviewed is to unjustifiably limit rights under the *Canadian Charter of Rights and Freedoms* (as was the case in *Doré*) and those in which the issue on review is whether a provision of the decision maker's enabling statute violates the *Charter* (see, e.g., *Nova Scotia (Workers' Compensation Board) v. Martin*, 2003 SCC 54, [2003] 2 S.C.R. 504, at para. 65). Our jurisprudence holds that

an administrative decision maker's interpretation of the latter issue should be reviewed for correctness, and that jurisprudence is not displaced by these reasons.

(2) General Questions of Law of Central Importance to the Legal System as a Whole

[58] In *Dunsmuir*, a majority of the Court held that, in addition to constitutional questions, general questions of law which are "both of central importance to the legal system as a whole and outside the adjudicator's specialized area of expertise" will require the application of the correctness standard: para. 60, citing *Toronto (City) v. C.U.P.E., Local 79*, 2003 SCC 63, [2003] 3 S.C.R. 77, at para. 62, per LeBel J., concurring. We remain of the view that the rule of law requires courts to have the final word with regard to general questions of law that are "of central importance to the legal system as a whole". However, a return to first principles reveals that it is not necessary to evaluate the decision maker's specialized expertise in order to determine whether the correctness standard must be applied in cases involving such questions. As indicated above (at para. 31) of the reasons, the consideration of expertise is folded into the new starting point adopted in these reasons, namely the presumption of reasonableness review.

[59] As the majority of the Court recognized in *Dunsmuir*, the key underlying rationale for this category of questions is the reality that certain general questions of law "require uniform and consistent answers" as a result of "their impact on the administration of justice as a whole": *Dunsmuir*, para. 60. In these cases, correctness

review is necessary to resolve general questions of law that are of "fundamental importance and broad applicability", with significant legal consequences for the justice system as a whole or for other institutions of government: see *Toronto (City)*, at para. 70; *Alberta (Information and Privacy Commissioner) v. University of Calgary*, 2016 SCC 53, [2016] 2 S.C.R. 555, at para. 20; *Canadian National Railway*, at para. 60; *Chagnon v. Syndicat de la fonction publique et parapublique du Québec*, 2018 SCC 39, [2018] 2 S.C.R. 687, at para. 17; *Saguenay*, at para. 51; *Canada (Canadian Human Rights Commission) v. Canada (Attorney General)*, 2011 SCC 53, [2011] 3 S.C.R. 471 ("*Mowat*"), at para. 22; *Commission scolaire de Laval v. Syndicat de l'enseignement de la région de Laval*, 2016 SCC 8, [2016] 1 S.C.R. 29, at para. 38. For example, the question in *University of Calgary* could not be resolved by applying the reasonableness standard, because the decision would have had legal implications for a wide variety of other statutes and because the uniform protection of solicitor-client privilege — at issue in that case — is necessary for the proper functioning of the justice system: *University of Calgary*, at paras. 19-26. As this shows, the resolution of general questions of law "of central importance to the legal system as a whole" has implications beyond the decision at hand, hence the need for "uniform and consistent answers".

[60] This Court's jurisprudence continues to provide important guidance regarding what constitutes a general question of law of central importance to the legal system as a whole. For example, the following general questions of law have been held to be of central importance to the legal system as a whole: when an

administrative proceeding will be barred by the doctrines of *res judicata* and abuse of process (*Toronto (City)*, at para. 15); the scope of the state's duty of religious neutrality (*Saguenay*, at para. 49); the appropriateness of limits on solicitor-client privilege (*University of Calgary*, at para. 20); and the scope of parliamentary privilege (*Chagnon*, at para. 17). We caution, however, that this jurisprudence must be read carefully, given that expertise is no longer a consideration in identifying such questions: see, e.g., *CHRC*, at para. 43.

[61] We would stress that the mere fact that a dispute is "of wider public concern" is not sufficient for a question to fall into this category — nor is the fact that the question, when framed in a general or abstract sense, touches on an important issue: see, e.g., *Communications, Energy and Paperworkers Union of Canada, Local 30 v. Irving Pulp & Paper, Ltd.*, 2013 SCC 34, [2013] 2 S.C.R. 458, at para. 66; *McLean*, at para. 28; *Barreau du Québec v. Quebec (Attorney General)*, 2017 SCC 56, [2017] 2 S.C.R. 488, at para. 18. The case law reveals many examples of questions this Court has concluded are *not* general questions of law of central importance to the legal system as a whole. These include whether a certain tribunal can grant a particular type of compensation (*Mowat*, at para. 25); when estoppel may be applied as an arbitral remedy (*Nor-Man Regional Health Authority Inc. v. Manitoba Association of Health Care Professionals*, 2011 SCC 59, [2011] 3 S.C.R. 616, at paras. 37-38); the interpretation of a statutory provision prescribing timelines for an investigation (*Alberta Teachers*, at para. 32); the scope of a management rights clause in a collective agreement (*Irving Pulp & Paper*, at paras. 7, 15-16 and 66, per

Rothstein and Moldaver JJ., dissenting but not on this point); whether a limitation period had been triggered under securities legislation (*McLean*, at paras. 28-31); whether a party to a confidential contract could bring a complaint under a particular regulatory regime (*Canadian National Railway*, at para. 60); and the scope of an exception allowing non-advocates to represent a minister in certain proceedings (*Barreau du Québec*, at paras. 17-18). As these comments and examples indicate, this does not mean that simply because expertise no longer plays a role in the selection of the standard of review, questions of central importance are now transformed into a broad catch-all category for correctness review.

[62] In short, general questions of law of central importance to the legal system as a whole require a single determinate answer. In cases involving such questions, the rule of law requires courts to provide a greater degree of legal certainty than reasonableness review allows.

(3) Questions Regarding the Jurisdictional Boundaries Between Two or More Administrative Bodies

[63] Finally, the rule of law requires that the correctness standard be applied in order to resolve questions regarding the jurisdictional boundaries between two or more administrative bodies: *Dunsmuir*, para. 61. One such question arose in *Regina Police Assn. Inc. v. Regina (City) Board of Police Commissioners*, 2000 SCC 14, [2000] 1 S.C.R. 360, in which the issue was the jurisdiction of a labour arbitrator to consider matters of police discipline and dismissal that were otherwise subject to a

comprehensive legislative regime. Similarly, in *Quebec (Commission des droits de la personne et des droits de la jeunesse) v. Quebec (Attorney General)*, 2004 SCC 39, [2004] 2 S.C.R. 185, the Court considered a jurisdictional dispute between a labour arbitrator and the Quebec Human Rights Tribunal.

[64] Administrative decisions are rarely contested on this basis. Where they are, however, the rule of law requires courts to intervene where one administrative body has interpreted the scope of its authority in a manner that is incompatible with the jurisdiction of another. The rationale for this category of questions is simple: the rule of law cannot tolerate conflicting orders and proceedings where they result in a true operational conflict between two administrative bodies, pulling a party in two different and incompatible directions: see *British Columbia Telephone Co.*, at para. 80, per McLachlin J. (as she then was), concurring. Members of the public must know where to turn in order to resolve a dispute. As with general questions of law of central importance to the legal system as a whole, the application of the correctness standard in these cases safeguards predictability, finality and certainty in the law of administrative decision making.

D. *A Note Regarding Jurisdictional Questions*

[65] We would cease to recognize jurisdictional questions as a distinct category attracting correctness review. The majority in *Dunsmuir* held that it was "without question" (para. 50) that the correctness standard must be applied in reviewing jurisdictional questions (also referred to as true questions of jurisdiction or

vires). True questions of jurisdiction were said to arise "where the tribunal must explicitly determine whether its statutory grant of power gives it the authority to decide a particular matter": see *Dunsmuir*, at para. 59; *Quebec (Attorney General) v. Guérin*, 2017 SCC 42, [2017] 2 S.C.R. 3, at para. 32. Since *Dunsmuir*, however, majorities of this Court have questioned the necessity of this category, struggled to articulate its scope and "expressed serious reservations about whether such questions can be distinguished as a separate category of questions of law": *McLean*, at para. 25, referring to *Alberta Teachers*, at para. 34; *Edmonton East*, at para. 26; *Guérin*, at paras. 32-36; *CHRC*, at paras. 31-41.

[66] As Gascon J. noted in *CHRC*, the concept of "jurisdiction" in the administrative law context is inherently "slippery": para. 38. This is because, in theory, any challenge to an administrative decision can be characterized as "jurisdictional" in the sense that it calls into question whether the decision maker had the authority to act as it did: see *CHRC*, at para. 38; *Alberta Teachers*, at para. 34; see similarly *City of Arlington, Texas v. Federal Communications Commission*, 569 U.S. 290 (2013), at p. 299. Although this Court's jurisprudence contemplates that only a much narrower class of "truly" jurisdictional questions requires correctness review, it has observed that there are no "clear markers" to distinguish such questions from other questions related to the interpretation of an administrative decision maker's enabling statute: see *CHRC*, at para. 38. Despite differing views on whether it is possible to demarcate a class of "truly" jurisdictional questions, there is general agreement that "it is often difficult to distinguish between exercises of delegated

power that raise truly jurisdictional questions from those entailing an unremarkable application of an enabling statute": *CHRC*, at para. 111, per Brown J., concurring. This tension is perhaps clearest in cases where the legislature has delegated broad authority to an administrative decision maker that allows the latter to make regulations in pursuit of the objects of its enabling statute: see, e.g., *Green v. Law Society of Manitoba*, 2017 SCC 20, **[2017] 1 S.C.R. 360**; *West Fraser Mills Ltd. v. British Columbia (Workers' Compensation Appeal Tribunal)*, 2018 SCC 22, [2018] 1 S.C.R. 635.

[67] In *CHRC*, the majority, while noting this inherent difficulty — and the negative impact on litigants of the resulting uncertainty in the law — nonetheless left the question of whether the category of true questions of jurisdiction remains necessary to be determined in a later case. After hearing submissions on this issue and having an adequate opportunity for reflection on this point, we are now in a position to conclude that it is not necessary to maintain this category of correctness review. The arguments that support maintaining this category — in particular the concern that a delegated decision maker should not be free to determine the scope of its own authority — can be addressed adequately by applying the framework for conducting reasonableness review that we describe below. Reasonableness review is both robust and responsive to context. A proper application of the reasonableness standard will enable courts to fulfill their constitutional duty to ensure that administrative bodies have acted within the scope of their lawful authority without having to conduct a preliminary assessment regarding whether a particular interpretation raises a "truly"

or “narrowly” jurisdictional issue and without having to apply the correctness standard.

[68] Reasonableness review does not give administrative decision makers free rein in interpreting their enabling statutes, and therefore does not give them licence to enlarge their powers beyond what the legislature intended. Instead, it confirms that the governing statutory scheme will always operate as a constraint on administrative decision makers and as a limit on their authority. Even where the reasonableness standard is applied in reviewing a decision maker’s interpretation of its authority, precise or narrow statutory language will necessarily limit the number of *reasonable* interpretations open to the decision maker — perhaps limiting it one. Conversely, where the legislature has afforded a decision maker broad powers in general terms — and has provided no right of appeal to a court — the legislature’s intention that the decision maker have greater leeway in interpreting its enabling statute should be given effect. Without seeking to import the U.S. jurisprudence on this issue wholesale, we find that the following comments of the Supreme Court of the United States in *Arlington*, at p. 307, are apt:

> The fox-in-the-henhouse syndrome is to be avoided not by establishing an arbitrary and undefinable category of agency decision-making that is accorded no deference, but by taking seriously, and applying rigorously, in all cases, statutory limits on agencies’ authority. Where [the legislature] has established a clear line, the agency cannot go beyond it; and where [the legislature] has established an ambiguous line, the agency can go no further than the ambiguity will fairly allow. But in rigorously applying the latter rule, a court need not pause to puzzle over whether the interpretive question presented is “jurisdictional” . . . .

E. *Other Circumstances Requiring a Derogation from the Presumption of Reasonableness Review*

[69] In these reasons, we have identified five situations in which a derogation from the presumption of reasonableness review is warranted either on the basis of legislative intent (i.e., legislated standards of review and statutory appeal mechanisms) or because correctness review is required by the rule of law (i.e., constitutional questions, general questions of law of central importance to the legal system as a whole, and questions regarding jurisdictional boundaries between administrative bodies). This framework is the product of careful consideration undertaken following extensive submissions and based on a thorough review of the relevant jurisprudence. We are of the view, at this time, that these reasons address all of the situations in which a reviewing court should derogate from the presumption of reasonableness review. As previously indicated, courts should no longer engage in a contextual inquiry to determine the standard of review or to rebut the presumption of reasonableness review. Letting go of this contextual approach will, we hope, "get the parties away from arguing about the tests and back to arguing about the substantive merits of their case": *Alberta Teachers*, at para. 36, quoting *Dunsmuir*, at para. 145, per Binnie J., concurring.

[70] However, we would not definitively foreclose the possibility that another category could be recognized as requiring a derogation from the presumption of reasonableness review in a future case. But our reluctance to pronounce that the list of exceptions to the application of a reasonableness standard is closed should not be

understood as inviting the routine establishment of new categories requiring correctness review. Rather, it is a recognition that it would be unrealistic to declare that we have contemplated every possible set of circumstances in which legislative intent or the rule of law will require a derogation from the presumption of reasonableness review. That being said, the recognition of any new basis for correctness review would be exceptional and would need to be consistent with the framework and the overarching principles set out in these reasons. In other words, any new category warranting a derogation from the presumption of reasonableness review on the basis of legislative intent would require a signal of legislative intent as strong and compelling as those identified in these reasons (i.e., a legislated standard of review or a statutory appeal mechanism). Similarly, the recognition of a new category of questions requiring correctness review that is based on the rule of law would be justified only where failure to apply correctness review would undermine the rule of law and jeopardize the proper functioning of the justice system in a manner analogous to the three situations described in these reasons.

[71] The *amici curiae* suggest that, in addition to the three categories of legal questions identified above, the Court should recognize an additional category of legal questions that would require correctness review on the basis of the rule of law: legal questions regarding which there is persistent discord or internal disagreement within an administrative body leading to legal incoherence. They argue that correctness review is necessary in such situations because the rule of law breaks down where legal inconsistency becomes the norm and the law's meaning comes to depend on the

identity of the decision maker. The *amici curiae* submit that, where competing reasonable legal interpretations linger over time at the administrative level — such that a statute comes to mean, simultaneously, both "yes" and "no" — the courts must step in to provide a determinative answer to the question without according deference to the administrative decision maker: factum of the *amici curiae*, at para. 91.

[72] We are not persuaded that the Court should recognize a distinct correctness category for legal questions on which there is persistent discord within an administrative body. In *Domtar Inc. v. Quebec (Commission d'appel en matière de lésions professionnelles)*, [1993] 2 S.C.R. 756, this Court held that "a lack of unanimity [within a tribunal] is the price to pay for the decision-making freedom and independence given to the members of these tribunals": p. 800; see also *Ellis-Don Ltd. v. Ontario (Labour Relations Board)*, 2001 SCC 4, [2001] 1 S.C.R. 221, at para. 28. That said, we agree that the hypothetical scenario suggested by the *amici curiae* — in which the law's meaning depends on the identity of the individual decision maker, thereby leading to legal incoherence — is antithetical to the rule of law. In our view, however, the more robust form of reasonableness review set out below, which accounts for the value of consistency and the threat of arbitrariness, is capable, in tandem with internal administrative processes to promote consistency and with legislative oversight (see *Domtar*, at p. 801), of guarding against threats to the rule of law. Moreover, the precise point at which internal discord on a point of law would be so serious, persistent and unresolvable that the resulting situation would amount to "legal incoherence" and require a court to step in is not obvious. Given these practical

difficulties, this Court's binding jurisprudence and the hypothetical nature of the problem, we decline to recognize such a category in this appeal.

III. Performing Reasonableness Review

[73] This Court's administrative law jurisprudence has historically focused on the analytical framework used to determine the applicable standard of review, while providing relatively little guidance on how to conduct reasonableness review in practice.

[74] In this section of our reasons, we endeavour to provide that guidance. The approach we set out is one that focuses on justification, offers methodological consistency and reinforces the principle "that reasoned decision-making is the lynchpin of institutional legitimacy": *amici curiae* factum, at para. 12.

[75] We pause to note that our colleagues' approach to reasonableness review is not fundamentally dissimilar to ours. Our colleagues emphasize that reviewing courts should respect administrative decision makers and their specialized expertise, should not ask how they themselves would have resolved an issue and should focus on whether the applicant has demonstrated that the decision is unreasonable: paras. 288, 289 and 291. We agree. As we have stated above, at para. 13, reasonableness review finds its starting point in judicial restraint and respects the distinct role of administrative decision makers. Moreover, as explained below, reasonableness

review considers all relevant circumstances in order to determine whether the applicant has met their onus.

A. *Procedural Fairness and Substantive Review*

[76] Before turning to a discussion of the proposed approach to reasonableness review, we pause to acknowledge that the requirements of the duty of procedural fairness in a given case — and in particular whether that duty requires a decision maker to give reasons for its decision — will impact how a court conducts reasonableness review.

[77] It is well established that, as a matter of procedural fairness, reasons are not required for all administrative decisions. The duty of procedural fairness in administrative law is "eminently variable", inherently flexible and context-specific: *Knight v. Indian Head School Division No. 19*, [1990] 1 S.C.R. 653, at p. 682; *Baker v. Canada (Minister of Citizenship and Immigration)*, [1999] 2 S.C.R. 817, at paras. 22-23; *Moreau-Bérubé*, at paras. 74-75; *Dunsmuir*, at para. 79. Where a particular administrative decision-making context gives rise to a duty of procedural fairness, the specific procedural requirements that the duty imposes are determined with reference to all of the circumstances: *Baker*, at para. 21. In *Baker*, this Court set out a non-exhaustive list of factors that inform the content of the duty of procedural fairness in a particular case, one aspect of which is whether written reasons are required. Those factors include: (1) the nature of the decision being made and the

process followed in making it; (2) the nature of the statutory scheme; (3) the importance of the decision to the individual or individuals affected; (4) the legitimate expectations of the person challenging the decision; and (5) the choices of procedure made by the administrative decision maker itself: *Baker*, at paras. 23-27; see also *Congrégation des témoins de Jéhovah de St-Jérôme-Lafontaine v. Lafontaine (Village)*, 2004 SCC 48, [2004] 2 S.C.R. 650, at para. 5. Cases in which written reasons tend to be required include those in which the decision-making process gives the parties participatory rights, an adverse decision would have a significant impact on an individual or there is a right of appeal: *Baker*, at para. 43; D. J. M. Brown and the Hon. J. M. Evans, with the assistance of D. Fairlie, *Judicial Review of Administrative Action in Canada* (loose-leaf), vol. 3, at p. 12-54.

[78] In the case at bar and in its companion cases, reasons for the administrative decisions at issue were both required and provided. Our discussion of the proper approach to reasonableness review will therefore focus on the circumstances in which reasons for an administrative decision are required and available to the reviewing court.

[79] Notwithstanding the important differences between the administrative context and the judicial context, reasons generally serve many of the same purposes in the former as in the latter: *R. v. Sheppard*, 2002 SCC 26, [2002] 1 S.C.R. 869, at paras. 15 and 22-23. Reasons explain how and why a decision was made. They help to show affected parties that their arguments have been considered and demonstrate

that the decision was made in a fair and lawful manner. Reasons shield against arbitrariness as well as the perception of arbitrariness in the exercise of public power: *Congrégation des témoins de Jéhovah de St-Jérôme-Lafontaine*, at paras. 12-13. As L'Heureux-Dubé J. noted in *Baker*, "[t]hose affected may be more likely to feel they were treated fairly and appropriately if reasons are given": para. 39, citing S.A. de Smith, J. Jowell and Lord Woolf, *Judicial Review of Administrative Action* (5th ed. 1995), at pp. 459-60. And as Jocelyn Stacey and the Hon. Alice Woolley persuasively write, "public decisions gain their democratic and legal authority through a process of public justification" which includes reasons "that justify [the] decisions [of public decision makers] in light of the constitutional, statutory and common law context in which they operate": "Can Pragmatism Function in Administrative Law?" (2016), 74 *S.C.L.R.* (2d) 211, at p. 220.

[80] The process of drafting reasons also necessarily encourages administrative decision makers to more carefully examine their own thinking and to better articulate their analysis in the process: *Baker*, at para. 39. This is what Justice Sharpe describes — albeit in the judicial context — as the "discipline of reasons": *Good Judgment*: *Making Judicial Decisions* (2018), at p. 134; see also *Sheppard*, at para. 23.

[81] Reasons facilitate meaningful judicial review by shedding light on the rationale for a decision: *Baker*, at para. 39. In *Newfoundland and Labrador Nurses' Union v. Newfoundland and Labrador (Treasury Board)*, 2011 SCC 62, [2011] 3

S.C.R. 708, the Court reaffirmed that "the purpose of reasons, when they are required, is to demonstrate 'justification, transparency and intelligibility'": para. 1, quoting *Dunsmuir*, at para. 47; see also *Suresh v. Canada (Minister of Citizenship and Immigration)*, 2002 SCC 1, [2002] 1 S.C.R. 3, at para. 126. The starting point for our analysis is therefore that where reasons are required, they are the primary mechanism by which administrative decision makers show that their decisions are reasonable — both to the affected parties and to the reviewing courts. It follows that the provision of reasons for an administrative decision may have implications for its legitimacy, including in terms both of whether it is procedurally fair and of whether it is substantively reasonable.

B. *Reasonableness Review Is Concerned With the Decision-making Process and Its Outcomes*

[82] Reasonableness review aims to give effect to the legislature's intent to leave certain decisions with an administrative body while fulfilling the constitutional role of judicial review to ensure that exercises of state power are subject to the rule of law: see *Dunsmuir*, at paras. 27-28 and 48; *Catalyst Paper Corp. v. North Cowichan (District)*, 2012 SCC 2, [2012] 1 S.C.R. 5, at para. 10; *Reference re Remuneration of Judges of the Provincial Court of Prince Edward Island*, [1997] 3 S.C.R. 3, at para. 10.

[83] It follows that the focus of reasonableness review must be on the decision actually made by the decision maker, including both the decision maker's reasoning

process and the outcome. The role of courts in these circumstances is to *review*, and they are, at least as a general rule, to refrain from deciding the issue themselves. Accordingly, a court applying the reasonableness standard does not ask what decision it would have made in place of that of the administrative decision maker, attempt to ascertain the "range" of possible conclusions that would have been open to the decision maker, conduct a *de novo* analysis or seek to determine the "correct" solution to the problem. The Federal Court of Appeal noted in *Delios v. Canada (Attorney General)*, 2015 FCA 117, 472 N.R. 171, that, "as reviewing judges, we do not make our own yardstick and then use that yardstick to measure what the administrator did": at para. 28; see also *Ryan*, at paras. 50-51. Instead, the reviewing court must consider only whether the decision made by the administrative decision maker — including both the rationale for the decision and the outcome to which it led — was unreasonable.

[84] As explained above, where the administrative decision maker has provided written reasons, those reasons are the means by which the decision maker communicates the rationale for its decision. A principled approach to reasonableness review is one which puts those reasons first. A reviewing court must begin its inquiry into the reasonableness of a decision by examining the reasons provided with "respectful attention" and seeking to understand the reasoning process followed by the decision maker to arrive at its conclusion: see *Dunsmuir*, at para. 48, quoting D. Dyzenhaus, "The Politics of Deference: Judicial Review and Democracy", in M. Taggart, ed., *The Province of Administrative Law* (1997), 279, at p. 286.

[85] Developing an understanding of the reasoning that led to the administrative decision enables a reviewing court to assess whether the decision as a whole is reasonable. As we will explain in greater detail below, a reasonable decision is one that is based on an internally coherent and rational chain of analysis and that is justified in relation to the facts and law that constrain the decision maker. The reasonableness standard requires that a reviewing court defer to such a decision.

[86] Attention to the decision maker's reasons is part of how courts demonstrate respect for the decision-making process: see *Dunsmuir*, at paras. 47-49. In *Dunsmuir*, this Court explicitly stated that the court conducting a reasonableness review is concerned with "the qualities that make a decision reasonable, referring both to the process of articulating the reasons and to outcomes": para. 47. Reasonableness, according to *Dunsmuir*, "is concerned mostly with the existence of justification, transparency and intelligibility within the decision-making process", as well as "with whether the decision falls within a range of possible, acceptable outcomes which are defensible in respect of the facts and law": *ibid.* In short, it is not enough for the outcome of a decision to be *justifiable*. Where reasons for a decision are required, the decision must also be *justified*, by way of those reasons, by the decision maker to those to whom the decision applies. While some outcomes may be so at odds with the legal and factual context that they could never be supported by intelligible and rational reasoning, an otherwise reasonable outcome also cannot stand if it was reached on an improper basis.

[87] This Court's jurisprudence since *Dunsmuir* should not be understood as having shifted the focus of reasonableness review away from a concern with the reasoning process and toward a nearly exclusive focus on the *outcome* of the administrative decision under review. Indeed, that a court conducting a reasonableness review properly considers both the outcome of the decision and the reasoning process that led to that outcome was recently reaffirmed in *Delta Air Lines Inc. v. Lukács*, 2018 SCC 2, [2018] 1 S.C.R. 6, at para. 12. In that case, although the outcome of the decision at issue may not have been unreasonable in the circumstances, the decision was set aside because the outcome had been arrived at on the basis of an unreasonable chain of analysis. This approach is consistent with the direction in *Dunsmuir* that judicial review is concerned with *both* outcome *and* process. To accept otherwise would undermine, rather than demonstrate respect toward, the institutional role of the administrative decision maker.

C. *Reasonableness Is a Single Standard That Accounts for Context*

[88] In any attempt to develop a coherent and unified approach to judicial review, the sheer variety of decisions and decision makers that such an approach must account for poses an inescapable challenge. The administrative decision makers whose decisions may be subject to judicial review include specialized tribunals exercising adjudicative functions, independent regulatory bodies, ministers, front-line decision makers, and more. Their decisions vary in complexity and importance, ranging from the routine to the life-altering. These include matters of "high policy"

on the one hand and "pure law" on the other. Such decisions will sometimes involve complex technical considerations. At other times, common sense and ordinary logic will suffice.

[89] Despite this diversity, reasonableness remains a single standard, and elements of a decision's context do not modulate the standard or the degree of scrutiny by the reviewing court. Instead, the particular context of a decision constrains what will be reasonable for an administrative decision maker to decide in a given case. This is what it means to say that "[r]easonableness is a single standard that takes its colour from the context": *Khosa*, at para. 59; *Catalyst*, at para. 18; *Halifax (Regional Municipality) v. Nova Scotia (Human Rights Commission)*, 2012 SCC 10, **[2012] 1 S.C.R. 364,** at para. 44; *Wilson*, at para. 22, per Abella J.; *Canada (Attorney General) v. Igloo Vikski Inc.*, 2016 SCC 38, [2016] 2 S.C.R. 80, at para. 57, per Côté J., dissenting but not on this point; *Law Society of British Columbia v. Trinity Western University*, 2018 SCC 32, **[2018] 2 S.C.R. 293,** at para. 53.

[90] The approach to reasonableness review that we articulate in these reasons accounts for the diversity of administrative decision making by recognizing that what is reasonable in a given situation will always depend on the constraints imposed by the legal and factual context of the particular decision under review. These contextual constraints dictate the limits and contours of the space in which the decision maker may act and the types of solutions it may adopt. The fact that the contextual constraints operating on an administrative decision maker may vary from one

decision to another does not pose a problem for the reasonableness standard, because each decision must be both justified by the administrative body and evaluated by reviewing courts in relation to its own particular context.

D. *Formal Reasons for a Decision Should Be Read in Light of the Record and With Due Sensitivity to the Administrative Setting in Which They Were Given*

[91] A reviewing court must bear in mind that the written reasons given by an administrative body must not be assessed against a standard of perfection. That the reasons given for a decision do "not include all the arguments, statutory provisions, jurisprudence or other details the reviewing judge would have preferred" is not on its own a basis to set the decision aside: *Newfoundland Nurses*, at para. 16. The review of an administrative decision can be divorced neither from the institutional context in which the decision was made nor from the history of the proceedings.

[92] Administrative decision makers cannot always be expected to deploy the same array of legal techniques that might be expected of a lawyer or judge — nor will it always be necessary or even useful for them to do so. Instead, the concepts and language employed by administrative decision makers will often be highly specific to their fields of experience and expertise, and this may impact both the form and content of their reasons. These differences are not necessarily a sign of an unreasonable decision — indeed, they may be indicative of a decision maker's strength within its particular and specialized domain. "Administrative justice" will

not always look like “judicial justice”, and reviewing courts must remain acutely aware of that fact.

[93] An administrative decision maker may demonstrate through its reasons that a given decision was made by bringing that institutional expertise and experience to bear: see *Dunsmuir*, at para. 49. In conducting reasonableness review, judges should be attentive to the application by decision makers of specialized knowledge, as demonstrated by their reasons. Respectful attention to a decision maker’s demonstrated expertise may reveal to a reviewing court that an outcome that might be puzzling or counterintuitive on its face nevertheless accords with the purposes and practical realities of the relevant administrative regime and represents a reasonable approach given the consequences and the operational impact of the decision. This demonstrated experience and expertise may also explain why a given issue is treated in less detail.

[94] The reviewing court must also read the decision maker’s reasons in light of the history and context of the proceedings in which they were rendered. For example, the reviewing court might consider the evidence before the decision maker, the submissions of the parties, publicly available policies or guidelines that informed the decision maker’s work, and past decisions of the relevant administrative body. This may explain an aspect of the decision maker’s reasoning process that is not apparent from the reasons themselves, or may reveal that an apparent shortcoming in the reasons is not, in fact, a failure of justification, intelligibility or transparency.

Opposing parties may have made concessions that had obviated the need for the decision maker to adjudicate on a particular issue; the decision maker may have followed a well-established line of administrative case law that no party had challenged during the proceedings; or an individual decision maker may have adopted an interpretation set out in a public interpretive policy of the administrative body of which he or she is a member.

[95] That being said, reviewing courts must keep in mind the principle that the exercise of public power must be justified, intelligible and transparent, not in the abstract, but to the individuals subject to it. It would therefore be unacceptable for an administrative decision maker to provide an affected party formal reasons that fail to justify its decision, but nevertheless expect that its decision would be upheld on the basis of internal records that were not available to that party.

[96] Where, even if the reasons given by an administrative decision maker for a decision are read with sensitivity to the institutional setting and in light of the record, they contain a fundamental gap or reveal that the decision is based on an unreasonable chain of analysis, it is not ordinarily appropriate for the reviewing court to fashion its own reasons in order to buttress the administrative decision. Even if the outcome of the decision could be reasonable under different circumstances, it is not open to a reviewing court to disregard the flawed basis for a decision and substitute its own justification for the outcome: *Delta Air Lines*, at paras. 26-28. To allow a reviewing court to do so would be to allow an administrative decision maker to

abdicate its responsibility to justify to the affected party, in a manner that is transparent and intelligible, the basis on which it arrived at a particular conclusion. This would also amount to adopting an approach to reasonableness review focused solely on the outcome of a decision, to the exclusion of the rationale for that decision. To the extent that cases such as *Newfoundland Nurses* and *Alberta Teachers* have been taken as suggesting otherwise, such a view is mistaken.

[97] Indeed, *Newfoundland Nurses* is far from holding that a decision maker's grounds or rationale for a decision is irrelevant. It instead tells us that close attention must be paid to a decision maker's written reasons and that they must be read holistically and contextually, for the very purpose of understanding the basis on which a decision was made. We agree with the observations of Rennie J. in *Komolafe v. Canada (Minister of Citizenship and Immigration)*, 2013 FC 431, 16 Imm. L.R. (4th) 267, at para. 11:

> *Newfoundland Nurses* is not an open invitation to the Court to provide reasons that were not given, nor is it licence to guess what findings might have been made or to speculate as to what the tribunal might have been thinking. This is particularly so where the reasons are silent on a critical issue. It is ironic that *Newfoundland Nurses*, a case which at its core is about deference and standard of review, is urged as authority for the supervisory court to do the task that the decision maker did not do, to supply the reasons that might have been given and make findings of fact that were not made. This is to turn the jurisprudence on its head. *Newfoundland Nurses* allows reviewing courts to connect the dots on the page where the lines, and the direction they are headed, may be readily drawn . . . .

[98] As for *Alberta Teachers*, it concerned a very specific and exceptional circumstance in which the reviewing court had exercised its discretion to consider a question of statutory interpretation on judicial review, even though that question had not been raised before the administrative decision maker and, as a result, no reasons had been given on that issue: paras. 22-26. Furthermore, it was agreed that the ultimate decision maker — the Information and Privacy Commissioner's delegate — had applied a well-established interpretation of the statutory provision in question and that, had she been asked for reasons to justify her interpretation, she would have adopted reasons the Commissioner had given in past decisions. In other words, the reasons of the Commissioner that this Court relied on to find that the administrative decision was reasonable were not merely reasons that *could* have been offered, in an abstract sense, but reasons that *would* have been offered had the issue been raised before the decision maker. Far from suggesting in *Alberta Teachers* that reasonableness review is concerned primarily with outcome, as opposed to rationale, this Court rejected the position that a reviewing court is entitled to "reformulate a tribunal's decision in a way that casts aside an unreasonable chain of analysis in favour of the court's own rationale for the result": para. 54, quoting *Petro-Canada v. British Columbia (Workers' Compensation Board)*, 2009 BCCA 396, 276 B.C.A.C. 135, at paras. 53 and 56. In *Alberta Teachers*, this Court also reaffirmed the importance of giving proper reasons and reiterated that "deference under the reasonableness standard is best given effect when administrative decision makers provide intelligible and transparent justification for their decisions, and when courts ground their review of the decision in the reasons provided": para. 54. Where a

decision maker's rationale for an essential element of the decision is not addressed in the reasons and cannot be inferred from the record, the decision will generally fail to meet the requisite standard of justification, transparency and intelligibility.

E. *A Reasonable Decision Is One That Is Both Based on an Internally Coherent Reasoning and Justified in Light of the Legal and Factual Constraints That Bear on the Decision*

[99] A reviewing court must develop an understanding of the decision maker's reasoning process in order to determine whether the decision as a whole is reasonable. To make this determination, the reviewing court asks whether the decision bears the hallmarks of reasonableness — justification, transparency and intelligibility — and whether it is justified in relation to the relevant factual and legal constraints that bear on the decision: *Dunsmuir*, at paras. 47 and 74; *Catalyst*, at para. 13.

[100] The burden is on the party challenging the decision to show that it is unreasonable. Before a decision can be set aside on this basis, the reviewing court must be satisfied that there are sufficiently serious shortcomings in the decision such that it cannot be said to exhibit the requisite degree of justification, intelligibility and transparency. Any alleged flaws or shortcomings must be more than merely superficial or peripheral to the merits of the decision. It would be improper for a reviewing court to overturn an administrative decision simply because its reasoning exhibits a minor misstep. Instead, the court must be satisfied that any shortcomings or flaws relied on by the party challenging the decision are sufficiently central or significant to render the decision unreasonable.

[101] What makes a decision unreasonable? We find it conceptually useful here to consider two types of fundamental flaws. The first is a failure of rationality internal to the reasoning process. The second arises when a decision is in some respect untenable in light of the relevant factual and legal constraints that bear on it. There is however, no need for reviewing courts to categorize failures of reasonableness as belonging to one type or the other. Rather, we use these descriptions simply as a convenient way to discuss the types of issues that may show a decision to be unreasonable.

(1) A Reasonable Decision Is Based on an Internally Coherent Reasoning

[102] To be reasonable, a decision must be based on reasoning that is both rational and logical. It follows that a failure in this respect may lead a reviewing court to conclude that a decision must be set aside. Reasonableness review is not a "line-by-line treasure hunt for error": *Irving Pulp & Paper*, at para. 54, citing *Newfoundland Nurses*, at para. 14. However, the reviewing court must be able to trace the decision maker's reasoning without encountering any fatal flaws in its overarching logic, and it must be satisfied that "there is [a] line of analysis within the given reasons that could reasonably lead the tribunal from the evidence before it to the conclusion at which it arrived": *Ryan*, at para. 55; *Southam*, at para. 56. Reasons that "simply repeat statutory language, summarize arguments made, and then state a peremptory conclusion" will rarely assist a reviewing court in understanding the rationale underlying a decision and "are no substitute for statements of fact, analysis,

inference and judgment": R. A. Macdonald and D. Lametti, "Reasons for Decision in Administrative Law" (1990), 3 *C.J.A.L.P.* 123, at p. 139; see also *Gonzalez v. Canada (Minister of Citizenship and Immigration)*, 2014 FC 750, 27 Imm. L.R. (4th) 151, at paras. 57-59.

[103] While, as we indicated earlier (at paras. 89-96), formal reasons should be read in light of the record and with due sensitivity to the administrative regime in which they were given, a decision will be unreasonable if the reasons for it, read holistically, fail to reveal a rational chain of analysis or if they reveal that the decision was based on an irrational chain of analysis: see *Wright v. Nova Scotia (Human Rights Commission)*, 2017 NSSC 11, 23 Admin. L.R. (6th) 110; *Southam*, at para. 56. A decision will also be unreasonable where the conclusion reached cannot follow from the analysis undertaken (see *Sangmo v. Canada (Citizenship and Immigration)*, 2016 FC 17, at para. 21 (CanLII)) or if the reasons read in conjunction with the record do not make it possible to understand the decision maker's reasoning on a critical point (see *Blas v. Canada (Citizenship and Immigration)*, 2014 FC 629, 26 Imm. L.R. (4th) 92, at paras. 54-66; *Reid v. Criminal Injuries Compensation Board*, 2015 ONSC 6578; *Lloyd v. Canada (Attorney General)*, 2016 FCA 115, 2016 D.T.C. 5051; *Taman v. Canada (Attorney General)*, 2017 FCA 1, [2017] 3 F.C.R. 520, at para. 47).

[104] Similarly, the internal rationality of a decision may be called into question if the reasons exhibit clear logical fallacies, such as circular reasoning, false dilemmas, unfounded generalizations or an absurd premise. This is not an invitation

to hold administrative decision makers to the formalistic constraints and standards of academic logicians. However, a reviewing court must ultimately be satisfied that the decision maker's reasoning "adds up".

(2) A Reasonable Decision Is Justified in Light of the Legal and Factual Constraints That Bear on the Decision

[105] In addition to the need for internally coherent reasoning, a decision, to be reasonable, must be justified in relation to the constellation of law and facts that are relevant to the decision: *Dunsmuir*, at para. 47; *Catalyst*, at para. 13; *Nor-Man Regional Health Authority*, at para. 6. Elements of the legal and factual contexts of a decision operate as constraints on the decision maker in the exercise of its delegated powers.

[106] It is unnecessary to catalogue all of the legal or factual considerations that could constrain an administrative decision maker in a particular case. However, in the sections that follow, we discuss a number of elements that will generally be relevant in evaluating whether a given decision is reasonable, namely the governing statutory scheme; other relevant statutory or common law; the principles of statutory interpretation; the evidence before the decision maker and facts of which the decision maker may take notice; the submissions of the parties; the past practices and decisions of the administrative body; and the potential impact of the decision on the individual to whom it applies. These elements are not a checklist for conducting reasonableness review, and they may vary in significance depending on the context.

They are offered merely to highlight some elements of the surrounding context that can cause a reviewing court to lose confidence in the outcome reached.

[107] A reviewing court may find that a decision is unreasonable when examined against these contextual considerations. These elements necessarily interact with one another: for example, a reasonable penalty for professional misconduct in a given case must be justified *both* with respect to the types of penalties prescribed by the relevant legislation and with respect to the nature of the underlying misconduct.

(a) *Governing Statutory Scheme*

[108] Because administrative decision makers receive their powers by statute, the governing statutory scheme is likely to be the most salient aspect of the legal context relevant to a particular decision. That administrative decision makers play a role, along with courts, in elaborating the precise content of the administrative schemes they administer should not be taken to mean that administrative decision makers are permitted to disregard or rewrite the law as enacted by Parliament and the provincial legislatures. Thus, for example, while an administrative body may have considerable discretion in making a particular decision, that decision must ultimately comply "with the rationale and purview of the statutory scheme under which it is adopted": *Catalyst*, at paras. 15 and 25-28; see also *Green*, at para. 44. As Rand J. noted in *Roncarelli v. Duplessis*, [1959] S.C.R. 121, at p. 140, "there is no such thing as absolute and untrammelled 'discretion'", and any exercise of discretion must accord with the purposes for which it was given: see also *Congrégation des témoins*

de Jéhovah de St-Jérôme-Lafontaine, at para. 7; *Montréal (City) v. Montreal Port Authority*, 2010 SCC 14, [2010] 1 S.C.R. 427, at paras. 32-33; *Nor-Man Regional Health Authority*, at para. 6. Likewise, a decision must comport with any more specific constraints imposed by the governing legislative scheme, such as the statutory definitions, principles or formulas that prescribe the exercise of a discretion: see *Montréal (City)*, at paras. 33 and 40-41; *Canada (Attorney General) v. Almon Equipment Limited*, 2010 FCA 193, [2011] 4 F.C.R. 203, at paras. 38-40. The statutory scheme also informs the acceptable approaches to decision making: for example, where a decision maker is given wide discretion, it would be unreasonable for it to fetter that discretion: see *Delta Air Lines*, at para. 18.

[109] As stated above, a proper application of the reasonableness standard is capable of allaying the concern that an administrative decision maker might interpret the scope of its own authority beyond what the legislature intended. As a result, there is no need to maintain a category of "truly" jurisdictional questions that are subject to correctness review. Although a decision maker's interpretation of its statutory grant of authority is generally entitled to deference, the decision maker must nonetheless properly justify that interpretation. Reasonableness review does not allow administrative decision makers to arrogate powers to themselves that they were never intended to have, and an administrative body cannot exercise authority which was not delegated to it. Contrary to our colleagues' concern (at para. 285), this does not reintroduce the concept of "jurisdictional error" into judicial review, but merely

identifies one of the obvious and necessary constraints imposed on administrative decision makers.

[110] Whether an interpretation is justified will depend on the context, including the language chosen by the legislature in describing the limits and contours of the decision maker's authority. If a legislature wishes to precisely circumscribe an administrative decision maker's power in some respect, it can do so by using precise and narrow language and delineating the power in detail, thereby tightly constraining the decision maker's ability to interpret the provision. Conversely, where the legislature chooses to use broad, open-ended or highly qualitative language — for example, "in the public interest" — it clearly contemplates that the decision maker is to have greater flexibility in interpreting the meaning of such language. Other language will fall in the middle of this spectrum. All of this is to say that certain questions relating to the scope of a decision maker's authority may support more than one interpretation, while other questions may support only one, depending upon the text by which the statutory grant of authority is made. What matters is whether, in the eyes of the reviewing court, the decision maker has properly justified its interpretation of the statute in light of the surrounding context. It will, of course, be impossible for an administrative decision maker to justify a decision that strays beyond the limits set by the statutory language it is interpreting.

(b) *Other Statutory or Common Law*

[111] It is evident that both statutory and common law will impose constraints on how and what an administrative decision maker can lawfully decide: see *Dunsmuir*, at paras. 47 and 74. For example, an administrative decision maker interpreting the scope of its regulation-making authority in order to exercise that authority cannot adopt an interpretation that is inconsistent with applicable common law principles regarding the nature of statutory powers: see *Katz Group Canada Inc. v. Ontario (Health and Long-Term Care)*, 2013 SCC 64, [2013] 3 S.C.R. 810, at paras. 45-48. Neither can a body instructed by legislation to determine what tax rate is applicable in accordance with an existing tax system ignore that system and base its determination on a "fictitious" system it has arbitrarily created: *Montréal (City)*, at para. 40. Where a relationship is governed by private law, it would be unreasonable for a decision maker to ignore that law in adjudicating parties' rights within that relationship: *Dunsmuir*, at para. 74. Similarly, where the governing statute specifies a standard that is well known in law and in the jurisprudence, a reasonable decision will generally be one that is consistent with the established understanding of that standard: see, e.g., the discussion of "reasonable grounds to suspect" in *Canada (Minister of Transport, Infrastructure and Communities) v. Farwaha*, 2014 FCA 56, [2015] 2 F.C.R. 1006, at paras. 93-98.

[112] Any precedents on the issue before the administrative decision maker or on a similar issue will act as a constraint on what the decision maker can reasonably decide. An administrative body's decision may be unreasonable on the basis that the body failed to explain or justify a departure from a binding precedent in which the

same provision had been interpreted. Where, for example, there is a relevant case in which a court considered a statutory provision, it would be unreasonable for an administrative decision maker to interpret or apply the provision without regard to that precedent. The decision maker would have to be able to explain why a different interpretation is preferable by, for example, explaining why the court's interpretation does not work in the administrative context: M. Biddulph, "Rethinking the Ramification of Reasonableness Review: *Stare Decisis* and Reasonableness Review on Questions of Law" (2018), 56 *Alta. L.R.* 119, at p. 146. There may be circumstances in which it is quite simply unreasonable for an administrative decision maker to fail to apply or interpret a statutory provision in accordance with a binding precedent. For instance, where an immigration tribunal is required to determine whether an applicant's act would constitute a criminal offence under Canadian law (see, e.g., *Immigration and Refugee Protection Act*, S.C. 2001, c. 27, ss. 35-37), it would clearly not be reasonable for the tribunal to adopt an interpretation of a criminal law provision that is inconsistent with how Canadian criminal courts have interpreted it.

[113] That being said, administrative decision makers will not necessarily be required to apply equitable and common law principles in the same manner as courts in order for their decisions to be reasonable. For example, it may be reasonable for a decision maker to adapt a common law or equitable doctrine to its administrative context: see *Nor-Man Regional Health Authority*, at paras. 5-6, 44-45, 52, 54 and 60. Conversely, a decision maker that rigidly applies a common law doctrine without

adapting it to the relevant administrative context may be acting unreasonably: see *Delta Air Lines*, at paras. 16-17 and 30. In short, whether an administrative decision maker has acted reasonably in adapting a legal or equitable doctrine involves a highly context-specific determination.

[114] We would also note that in some administrative decision making contexts, international law will operate as an important constraint on an administrative decision maker. It is well established that legislation is presumed to operate in conformity with Canada's international obligations, and the legislature is "presumed to comply with . . . the values and principles of customary and conventional international law": *R. v. Hape*, 2007 SCC 26, [2007] 2 S.C.R. 292, at para. 53; *R. v. Appulonappa*, 2015 SCC 59, [2015] 3 S.C.R. 754, at para. 40. Since *Baker*, it has also been clear that international treaties and conventions, even where they have not been implemented domestically by statute, can help to inform whether a decision was a reasonable exercise of administrative power: *Baker*, at paras. 69-71.

(c) *Principles of Statutory Interpretation*

[115] Matters of statutory interpretation are not treated uniquely and, as with other questions of law, may be evaluated on a reasonableness standard. Although the general approach to reasonableness review described above applies in such cases, we recognize that it is necessary to provide additional guidance to reviewing courts on this point. This is because reviewing courts are accustomed to resolving questions of statutory interpretation in a context in which the issue is before them at first instance

or on appeal, and where they are expected to perform their own independent analysis and come to their own conclusions.

[116] Reasonableness review functions differently. Where reasonableness is the applicable standard on a question of statutory interpretation, the reviewing court does not undertake a *de novo* analysis of the question or "ask itself what the correct decision would have been": *Ryan*, at para. 50. Instead, just as it does when applying the reasonableness standard in reviewing questions of fact, discretion or policy, the court must examine the administrative decision as a whole, including the reasons provided by the decision maker and the outcome that was reached.

[117] A court interpreting a statutory provision does so by applying the "modern principle" of statutory interpretation, that is, that the words of a statute must be read "in their entire context and in their grammatical and ordinary sense harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament": *Rizzo & Rizzo Shoes Ltd. (Re)*, [1998] 1 S.C.R. 27, at para. 21, and *Bell ExpressVu Limited Partnership v. Rex*, 2002 SCC 42, [2002] 2 S.C.R. 559, at para. 26, both quoting E. Driedger, *Construction of Statutes* (2nd ed. 1983), at p. 87. Parliament and the provincial legislatures have also provided guidance by way of statutory rules that explicitly govern the interpretation of statutes and regulations: see, e.g., *Interpretation Act*, R.S.C. 1985, c. I-21.

[118] This Court has adopted the "modern principle" as the proper approach to statutory interpretation, because legislative intent can be understood only by reading

the language chosen by the legislature in light of the purpose of the provision and the entire relevant context: Sullivan, at pp. 7-8. Those who draft and enact statutes expect that questions about their meaning will be resolved by an analysis that has regard to the text, context and purpose, regardless of whether the entity tasked with interpreting the law is a court or an administrative decision maker. An approach to reasonableness review that respects legislative intent must therefore assume that those who interpret the law — whether courts or administrative decision makers — will do so in a manner consistent with this principle of interpretation.

[119] Administrative decision makers are not required to engage in a formalistic statutory interpretation exercise in every case. As discussed above, formal reasons for a decision will not always be necessary and may, where required, take different forms. And even where the interpretive exercise conducted by the administrative decision maker is set out in written reasons, it may look quite different from that of a court. The specialized expertise and experience of administrative decision makers may sometimes lead them to rely, in interpreting a provision, on considerations that a court would not have thought to employ but that actually enrich and elevate the interpretive exercise.

[120] But whatever form the interpretive exercise takes, the merits of an administrative decision maker's interpretation of a statutory provision must be consistent with the text, context and purpose of the provision. In this sense, the usual principles of statutory interpretation apply equally when an administrative decision

maker interprets a provision. Where, for example, the words used are “precise and unequivocal”, their ordinary meaning will usually play a more significant role in the interpretive exercise: *Canada Trustco Mortgage Co. v. Canada*, 2005 SCC 54, [2005] 2 S.C.R. 601, at para. 10. Where the meaning of a statutory provision is disputed in administrative proceedings, the decision maker must demonstrate in its reasons that it was alive to these essential elements.

[121] The administrative decision maker’s task is to interpret the contested provision in a manner consistent with the text, context and purpose, applying its particular insight into the statutory scheme at issue. It cannot adopt an interpretation it knows to be inferior — albeit plausible — merely because the interpretation in question appears to be available and is expedient. The decision maker’s responsibility is to discern meaning and legislative intent, not to “reverse-engineer” a desired outcome.

[122] It can happen that an administrative decision maker, in interpreting a statutory provision, fails entirely to consider a pertinent aspect of its text, context or purpose. Where such an omission is a minor aspect of the interpretive context, it is not likely to undermine the decision as a whole. It is well established that decision makers are not required “to explicitly address all possible shades of meaning” of a given provision: *Construction Labour Relations v. Driver Iron Inc.*, 2012 SCC 65, [2012] 3 S.C.R. 405, at para. 3. Just like judges, administrative decision makers may find it unnecessary to dwell on each and every signal of statutory intent in their

reasons. In many cases, it may be necessary to touch upon only the most salient aspects of the text, context or purpose. If, however, it is clear that the administrative decision maker may well, had it considered a key element of a statutory provision's text, context or purpose, have arrived at a different result, its failure to consider that element would be indefensible, and unreasonable in the circumstances. Like other aspects of reasonableness review, omissions are not stand-alone grounds for judicial intervention: the key question is whether the omitted aspect of the analysis causes the reviewing court to lose confidence in the outcome reached by the decision maker.

[123] There may be other cases in which the administrative decision maker has not explicitly considered the meaning of a relevant provision in its reasons, but the reviewing court is able to discern the interpretation adopted by the decision maker from the record and determine whether that interpretation is reasonable.

[124] Finally, even though the task of a court conducting a reasonableness review is *not* to perform a *de novo* analysis or to determine the "correct" interpretation of a disputed provision, it may sometimes become clear in the course of reviewing a decision that the interplay of text, context and purpose leaves room for a single reasonable interpretation of the statutory provision, or aspect of the statutory provision, that is at issue: *Dunsmuir*, at paras. 72-76. One case in which this conclusion was reached was *Nova Tube Inc./Nova Steel Inc. v. Conares Metal Supply Ltd.*, 2019 FCA 52., in which Laskin J.A., after analyzing the reasoning of the administrative decision maker (at paras. 26-61 (CanLII)), held that the decision

maker's interpretation had been unreasonable, and, furthermore, that the factors he had considered in his analysis weighed so overwhelmingly in favour of the opposite interpretation that that was the only reasonable interpretation of the provision: para. 61. As discussed below, it would serve no useful purpose in such a case to remit the interpretative question to the original decision maker. Even so, a court should generally pause before definitively pronouncing upon the interpretation of a provision entrusted to an administrative decision maker.

(d) *Evidence Before the Decision Maker*

[125] It is trite law that the decision maker may assess and evaluate the evidence before it and that, absent exceptional circumstances, a reviewing court will not interfere with its factual findings. The reviewing court must refrain from "reweighing and reassessing the evidence considered by the decision maker": *CHRC*, at para. 55; see also *Khosa*, at para. 64; *Dr. Q*, at paras. 41-42. Indeed, many of the same reasons that support an appellate court's deferring to a lower court's factual findings, including the need for judicial efficiency, the importance of preserving certainty and public confidence, and the relatively advantageous position of the first instance decision maker, apply equally in the context of judicial review: see *Housen*, at paras. 15-18; *Dr. Q*, at para. 38; *Dunsmuir*, at para. 53.

[126] That being said, a reasonable decision is one that is justified in light of the facts: *Dunsmuir*, para. 47. The decision maker must take the evidentiary record and the general factual matrix that bears on its decision into account, and its decision must

be reasonable in light of them: see *Southam*, at para. 56. The reasonableness of a decision may be jeopardized where the decision maker has fundamentally misapprehended or failed to account for the evidence before it. In *Baker*, for example, the decision maker had relied on irrelevant stereotypes and failed to consider relevant evidence, which led to a conclusion that there was a reasonable apprehension of bias: para. 48. Moreover, the decision maker's approach would *also* have supported a finding that the decision was unreasonable on the basis that the decision maker showed that his conclusions were not based on the evidence that was actually before him: para. 48.

(e) *Submissions of the Parties*

[127] The principles of justification and transparency require that an administrative decision maker's reasons meaningfully account for the central issues and concerns raised by the parties. The principle that the individual or individuals affected by a decision should have the opportunity to present their case fully and fairly underlies the duty of procedural fairness and is rooted in the right to be heard: *Baker*, at para. 28. The concept of responsive reasons is inherently bound up with this principle, because reasons are the primary mechanism by which decision makers demonstrate that they have actually *listened* to the parties.

[128] Reviewing courts cannot expect administrative decision makers to "respond to every argument or line of possible analysis" (*Newfoundland Nurses*, at para. 25), or to "make an explicit finding on each constituent element, however

subordinate, leading to its final conclusion" (para 16). To impose such expectations would have a paralyzing effect on the proper functioning of administrative bodies and would needlessly compromise important values such as efficiency and access to justice. However, a decision maker's failure to meaningfully grapple with key issues or central arguments raised by the parties may call into question whether the decision maker was actually alert and sensitive to the matter before it. In addition to assuring parties that their concerns have been heard, the process of drafting reasons with care and attention can alert the decision maker to inadvertent gaps and other flaws in its reasoning: *Baker*, at para. 39.

(f) *Past Practices and Past Decisions*

[129] Administrative decision makers are not bound by their previous decisions in the same sense that courts are bound by *stare decisis*. As this Court noted in *Domtar*, "a lack of unanimity is the price to pay for the decision-making freedom and independence" given to administrative decision makers, and the mere fact that some conflict exists among an administrative body's decisions does not threaten the rule of law: p. 800. Nevertheless, administrative decision makers and reviewing courts alike must be concerned with the general consistency of administrative decisions. Those affected by administrative decisions are entitled to expect that like cases will generally be treated alike and that outcomes will not depend merely on the identity of the individual decision maker — expectations that do not evaporate simply because the parties are not before a judge.

[130] Fortunately, administrative bodies generally have a range of resources at their disposal to address these types of concerns. Access to past reasons and summaries of past reasons enables multiple individual decision makers within a single organization (such as administrative tribunal members) to learn from each other's work, and contributes to a harmonized decision-making culture. Institutions also routinely rely on standards, policy directives and internal legal opinions to encourage greater uniformity and guide the work of frontline decision makers. This Court has also held that plenary meetings of a tribunal's members can be an effective tool to "foster coherence" and "avoid . . . conflicting results": *IWA v. Consolidated-Bathurst Packaging Ltd.*, [1990] 1 S.C.R. 282, at pp. 324-28. Where disagreement arises within an administrative body about how to appropriately resolve a given issue, that institution may also develop strategies to address that divergence internally and on its own initiative. Of course, consistency can also be encouraged through less formal methods, such as the development of training materials, checklists and templates for the purpose of streamlining and strengthening institutional best practices, provided that these methods do not operate to fetter decision making.

[131] Whether a particular decision is consistent with the administrative body's past decisions is also a constraint that the reviewing court should consider when determining whether an administrative decision is reasonable. Where a decision maker *does* depart from longstanding practices or established internal authority, it bears the justificatory burden of explaining that departure in its reasons. If the decision maker does not satisfy this burden, the decision will be unreasonable. In this

sense, the legitimate expectations of the parties help to determine both whether reasons are required and what those reasons must explain: *Baker*, at para. 26. We repeat that this does not mean administrative decision makers are bound by internal precedent in the same manner as courts. Rather, it means that a decision that departs from longstanding practices or established internal decisions will be reasonable if that departure is justified, thereby reducing the risk of arbitrariness, which would undermine public confidence in administrative decision makers and in the justice system as a whole.

[132] As discussed above, it has been argued that correctness review would be required where there is "persistent discord" on questions on law in an administrative body's decisions. While we are not of the view that such a correctness category is required, we would note that reviewing courts have a role to play in managing the risk of persistently discordant or contradictory legal interpretations within an administrative body's decisions. When evidence of internal disagreement on legal issues has been put before a reviewing court, the court may find it appropriate to telegraph the existence of an issue in its reasons and encourage the use of internal administrative structures to resolve the disagreement. And if internal disagreement continues, it may become increasingly difficult for the administrative body to justify decisions that serve only to preserve the discord.

(g) *Impact of the Decision on the Affected Individual*

[133] It is well established that individuals are entitled to greater procedural protection when the decision in question involves the potential for significant personal impact or harm: *Baker*, at para. 25. However, this principle also has implications for how a court conducts reasonableness review. Central to the necessity of adequate justification is the perspective of the individual or party over whom authority is being exercised. Where the impact of a decision on an individual's rights and interests is severe, the reasons provided to that individual must reflect the stakes. The principle of responsive justification means that if a decision has particularly harsh consequences for the affected individual, the decision maker must explain why its decision best reflects the legislature's intention. This includes decisions with consequences that threaten an individual's life, liberty, dignity or livelihood.

[134] Moreover, concerns regarding arbitrariness will generally be more acute in cases where the consequences of the decision for the affected party are particularly severe or harsh, and a failure to grapple with such consequences may well be unreasonable. For example, this Court has held that the Immigration Appeal Division should, when exercising its equitable jurisdiction to stay a removal order under the *Immigration and Refugee Protection Act*, consider the potential foreign hardship a deported person would face: *Chieu v. Canada (Minister of Citizenship and Immigration)*, 2002 SCC 3, [2002] 1 S.C.R. 84.

[135] Many administrative decision makers are entrusted with an extraordinary degree of power over the lives of ordinary people, including the most vulnerable

among us. The corollary to that power is a heightened responsibility on the part of administrative decision makers to ensure that their reasons demonstrate that they have considered the consequences of a decision and that those consequences are justified in light of the facts and law.

F. *Review in the Absence of Reasons*

[136] Where the duty of procedural fairness or the legislative scheme mandates that reasons be given to the affected party but none have been given, this failure will generally require the decision to be set aside and the matter remitted to the decision maker: see, e.g., *Congrégation des témoins de Jéhovah de St-Jérôme-Lafontaine*, at para. 35. Also, where reasons are provided but they fail to provide a transparent and intelligible justification as explained above, the decision will be unreasonable. In many cases, however, neither the duty of procedural fairness nor the statutory scheme will require that formal reasons be given at all: *Baker*, at para. 43.

[137] Admittedly, applying an approach to judicial review that prioritizes the decision maker's justification for its decisions can be challenging in cases in which formal reasons have not been provided. This will often occur where the decision-making process does not easily lend itself to producing a single set of reasons, for example, where a municipality passes a bylaw or a law society renders a decision by holding a vote: see, e.g., *Catalyst*; *Green*; *Trinity Western University*. However, even in such circumstances, the reasoning process that underlies the decision will not usually be opaque. It is important to recall that a reviewing court must look to the

record as a whole to understand the decision, and that in doing so, the court will often uncover a clear rationale for the decision: *Baker*, at para. 44. For example, as McLachlin C.J. noted in *Catalyst*, "[t]he reasons for a municipal bylaw are traditionally deduced from the debate, deliberations, and the statements of policy that give rise to the bylaw": para. 29. In that case, not only were "the reasons [in the sense of rationale] for the bylaw . . . clear to everyone", they had also been laid out in a five-year plan: para. 33. Conversely, even without reasons, it is possible for the record and the context to reveal that a decision was made on the basis of an improper motive or for another impermissible reason, as, for example, in *Roncarelli*.

[138] There will nonetheless be situations in which no reasons have been provided and neither the record nor the larger context sheds light on the basis for the decision. In such a case, the reviewing court must still examine the decision in light of the relevant constraints on the decision maker in order to determine whether the decision is reasonable. But it is perhaps inevitable that without reasons, the analysis will then focus on the outcome rather than on the decision maker's reasoning process. This does not mean that reasonableness review is less robust in such circumstances, only that it takes a different shape.

G. *A Note on Remedial Discretion*

[139] Where a court reviews an administrative decision, the question of the appropriate remedy is multi-faceted. It engages considerations that include the reviewing court's common law or statutory jurisdiction and the great diversity of

elements that may influence a court's decision to exercise its discretion in respect of available remedies. While we do not aim to comprehensively address here the issue of remedies on judicial review, we do wish to briefly address the question of whether a court that quashes an unreasonable decision should exercise its discretion to remit the matter to the decision maker for reconsideration with the benefit of the court's reasons.

[140] Where the reasonableness standard is applied in conducting a judicial review, the choice of remedy must be guided by the rationale for applying that standard to begin with, including the recognition by the reviewing court that the legislature has entrusted the matter to the administrative decision maker, and not to the court, to decide: see *Delta Air Lines*, at para. 31. However, the question of remedy must also be guided by concerns related to the proper administration of the justice system, the need to ensure access to justice and "the goal of expedient and cost-efficient decision making, which often motivates the creation of specialized administrative tribunals in the first place": *Alberta Teachers*, at para. 55.

[141] Giving effect to these principles in the remedial context means that where a decision reviewed by applying the reasonableness standard cannot be upheld, it will most often be appropriate to remit the matter to the decision maker to have it reconsider the decision, this time with the benefit of the court's reasons. In reconsidering its decision, the decision maker may arrive at the same, or a different, outcome: see *Delta Air Lines*, at paras. 30-31.

[142] However, while courts should, as a general rule, respect the legislature's intention to entrust the matter to the administrative decision maker, there are limited scenarios in which remitting the matter would stymie the timely and effective resolution of matters in a manner that no legislature could have intended: *D'Errico v. Canada (Attorney General)*, 2014 FCA 95, at paras. 18-19 (CanLII). An intention that the administrative decision maker decide the matter at first instance cannot give rise to an endless merry-go-round of judicial reviews and subsequent reconsiderations. Declining to remit a matter to the decision maker may be appropriate where it becomes evident to the court, in the course of its review, that a particular outcome is inevitable and that remitting the case would therefore serve no useful purpose: see *Mobil Oil Canada Ltd. v. Canada-Newfoundland Offshore Petroleum Board*, [1994] 1 S.C.R. 202, at pp. 228-30; *Renaud v. Quebec (Commission des affaires sociales)*, [1999] 3 S.C.R. 855; *Groia v. Law Society of Upper Canada*, 2018 SCC 27, [2018] 1 S.C.R. 772, at para. 161; *Sharif v. Canada (Attorney General)*, 2018 FCA 205, 50 C.R. (7th) 1, at paras. 53-54; *Maple Lodge Farms Ltd. v. Canadian Food Inspection Agency*, 2017 FCA 45, 411 D.L.R. (4th) 175, at paras. 51-56 and 84; *Gehl v. Canada (Attorney General)*, 2017 ONCA 319, at paras. 54 and 88 (CanLII). Elements like concern for delay, fairness to the parties, urgency of providing a resolution to the dispute, the nature of the particular regulatory regime, whether the administrative decision maker had a genuine opportunity to weigh in on the issue in question, costs to the parties, and the efficient use of public resources may also influence the exercise of a court's discretion to remit a matter, just as they may influence the exercise of its discretion to quash a decision that is flawed: see *MiningWatch Canada v. Canada*

(Fisheries and Oceans), 2010 SCC 2, [2010] 1 S.C.R. 6, at paras. 45-51; *Alberta Teachers*, at para. 55.

IV. Role of Prior Jurisprudence

[143] Given that this appeal and its companion cases involve a recalibration of the governing approach to the choice of standard of review analysis and a clarification of the proper application of the reasonableness standard, it will be necessary to briefly address how the existing administrative law jurisprudence should be treated going forward. These reasons set out a holistic revision of the framework for determining the applicable standard of review. A court seeking to determine what standard is appropriate in a case before it should look to these reasons first in order to determine how this general framework applies to that case. Doing so may require the court to resolve subsidiary questions on which past precedents will often continue to provide helpful guidance. Indeed, much of the Court's jurisprudence, such as cases concerning general questions of law of central importance to the legal system as a whole or those relating to jurisdictional boundaries between two or more administrative bodies, will continue to apply essentially without modification. On other issues, certain cases —including those on the effect of statutory appeal mechanisms, "true" questions of jurisdiction or the former contextual analysis — will necessarily have less precedential force. As for cases that dictated how to conduct reasonableness review, they will often continue to provide insight, but should be used carefully to ensure that their application is aligned in principle with these reasons.

[144] This approach strives for future doctrinal stability under the new framework while clarifying the continued relevance of the existing jurisprudence. Where a reviewing court is not certain how these reasons relate to the case before it, it may find it prudent to request submissions from the parties on both the appropriate standard and the application of that standard.

[145] Before turning to Mr. Vavilov's case, we pause to note that our colleagues mischaracterize the framework developed in these reasons as being an "encomium" for correctness, and a turn away from the Court's deferential approach to the point of being a "eulogy" for deference (at paras. 199 and 201). With respect, this is a gross exaggeration. Assertions that these reasons adopt a formalistic, court-centric view of administrative law (at paras. 229 and 240), enable an unconstrained expansion of correctness review (at para. 253) or function as a sort of checklist for "line-by-line" reasonableness review (at para. 284), are counter to the clear wording we use and do not take into consideration the delicate balance that we have accounted for in setting out this framework.

V. Mr. Vavilov's Application for Judicial Review

[146] The case at bar involves an application for judicial review of a decision made by the Canadian Registrar of Citizenship on August 15, 2014. The Registrar's decision concerned Mr. Vavilov, who was born in Canada and whose parents were later revealed to be undercover Russian spies. The Registrar determined that Mr. Vavilov was not a Canadian citizen on the basis of an interpretation of s. 3(2)(a) of

the *Citizenship Act* and cancelled his certificate of citizenship under s. 26(3) of the *Citizenship Regulations*. We conclude that the standard of review applicable to the Registrar's decision is reasonableness, and that the Registrar's decision was unreasonable. We would uphold the decision of the Federal Court of Appeal to quash the Registrar's decision and would not remit the matter to the Registrar for redetermination.

A. *Facts*

[147] Mr. Vavilov was born in Toronto as Alexander Foley on June 3, 1994. At the time of his birth, his parents were posing as Canadians under the assumed names of Tracey Lee Ann Foley and Donald Howard Heathfield. In reality, they were Elena Vavilova and Andrey Bezrukov, two foreign nationals working on a long-term assignment for the Russian foreign intelligence service, the SVR. Their false Canadian identities had been assumed prior to the birth of Mr. Vavilov and of his older brother, Timothy, for purposes of a "deep cover" espionage network under the direction of the SVR. The United States Department of Justice refers to it as the "illegals" program.

[148] Ms. Vavilova and Mr. Bezrukov were deployed to Canada to establish false personal histories as Western citizens. They worked, ran a business, pursued higher education and, as noted, had two children here. After their second son was born, the family moved to France, and later to the United States. In the United States, Mr. Bezrukov obtained a Masters of Public Administration at Harvard University and

worked as a consultant, all while working to collect information on a variety of sensitive national security issues for the SVR. The nature of the undercover work of Ms. Vavilova and Mr. Bezrukov meant that there was no point at which either of them had any publicly acknowledged affiliation with the Russian state, held any official diplomatic or consular status, or had been granted any diplomatic privilege or immunity.

[149] Until he was about 16 years old, Mr. Vavilov did not know that his parents were not who they claimed to be. He believed that he was a Canadian citizen by birth, lived and identified as a Canadian, held a Canadian passport, learned both official languages and was proud of his heritage. His parents' true identities became known to him on June 27, 2010, when they were arrested in the United States and charged (along with several other individuals) with conspiracy to act as unregistered agents of a foreign government. On July 8, 2010, they pled guilty, admitted their status as Russian citizens acting on behalf of the Russian state, and were returned to Russia in a "spy swap" the following day. Mr. Vavilov has described the revelation as a traumatic event characterized by disbelief and a crisis of identity.

[150] Just prior to his parents' deportation, Mr. Vavilov left the United States with his brother on a trip that had been planned before their parents' arrest, going first to Paris, and then to Russia on a tourist visa. In October 2010, Mr. Vavilov unsuccessfully attempted to renew his Canadian passport through the Canadian Embassy in Moscow. Although he submitted to DNA testing and changed his

surname from Foley to Vavilov at the behest of passport authorities, his second attempt to obtain a Canadian passport in December 2011 was also unsuccessful. He was then informed that despite his Canadian birth certificate, he would also need to obtain and provide a certificate of Canadian citizenship before he would be issued a passport. Mr. Vavilov applied for that certificate in October 2012, and it was issued to him on January 15, 2013. At that point, he made another passport application through the Canadian Embassy in Buenos Aires, Argentina, and, after a delay, applied for mandamus, a process that was settled out of court in June 2013. The Minister of Citizenship and Immigration undertook to issue a new travel document to Mr. Vavilov by July 19, 2013.

[151] However, Mr. Vavilov never received a passport. Instead, he received a "procedural fairness letter" from the Canadian Registrar of Citizenship dated July 18, 2013 in which the Registrar stated that Mr. Vavilov had not been entitled to a certificate of citizenship, that his certificate of citizenship had been issued in error and that, pursuant to s. 3(2)(a) of the *Citizenship Act*, he was not a citizen of Canada. Mr. Vavilov was invited to make submissions in response, and he did so. On August 15, 2014, the Registrar formally cancelled Mr. Vavilov's Canadian citizenship certificate pursuant to s. 26(3) of the *Citizenship Regulations*.

B. *Procedural History*

(1) Registrar's Decision

[152] In a brief letter sent to Mr. Vavilov on August 15, 2014, the Registrar informed him that she was cancelling his certificate of citizenship pursuant to s. 26(3) of the *Citizenship Regulations* on the basis that he was not entitled to it. The Registrar summarized her position as follows:

a) Although Mr. Vavilov was born in Toronto, neither of his parents was a citizen of Canada, and neither of them had been lawfully admitted to Canada for permanent residence at the time of his birth.

b) In 2010, Mr. Vavilov's parents were convicted of "conspiracy to act in the United States as a foreign agent of a foreign government", and recognized as unofficial agents working as "illegals" for the SVR.

c) As a result, the Registrar believed that, at the time of Mr. Vavilov's birth, his parents were "employees or representatives of a foreign government".

d) Accordingly, pursuant to s. 3(2)(a) of the *Citizenship Act*, Mr. Vavilov had never been a Canadian citizen and had not been entitled to receive the certificate of Canadian citizenship that had been issued to him in 2013. Section 3(2)(a) provides that s. 3(1)(a) of the *Citizenship Act* (which grants citizenship by birth to persons born in Canada after February 14, 1977) does not apply to an individual if, at the time of the individual's birth, neither of their parents was a citizen or lawfully admitted to Canada for permanent residence and either parent was "a diplomatic or consular officer or other representative or employee in Canada of a foreign government."

[153] For these reasons, the Registrar cancelled the certificate and indicated that Mr. Vavilov would no longer be recognized as a Canadian citizen. The Registrar's letter did not offer any analysis or interpretation of s. 3(2)(a) of the *Citizenship Act*. However, it appears that in coming to her decision, the Registrar relied on a 12-page report prepared by a junior analyst, which included an interpretation of this key statutory provision.

[154] In that report, the analyst provided a timeline of the procedural history of Mr. Vavilov's file, a summary of the investigation into and charges against his parents in the United States, and background information on the SVR's "illegals" program. The analyst also discussed several provisions of the *Citizenship Act*, including s. 3(2)(a), and it is this aspect of her report that is most relevant to Mr. Vavilov's application for judicial review. The analyst's ultimate conclusion was that the certificate of citizenship issued to Mr. Vavilov in January 2013 was issued in error, as his parents had been "working as employees or representatives of a foreign government (the Russian Federation) during the time they resided in Canada, including at the time of Mr. Vavilov's birth", and that "[a]s such, Mr. Vavilov was not entitled to receive a citizenship certificate pursuant to paragraph 3(2)(a) of the *Citizenship Act*": A.R., Vol. I, at p. 3. The report was dated June 24, 2014.

[155] In discussing the relevant legislation, the analyst cited s. 3(1)(a) of the *Citizenship Act*, which establishes the general rule that persons born in Canada after February 14, 1977 are Canadian citizens. The analyst also referred to an exception to that general rule set out in s. 3(2) of the *Citizenship Act*, which reads as follows:

> (2) Paragraph (1)(a) does not apply to a person if, at the time of his birth, neither of his parents was a citizen or lawfully admitted to Canada for permanent residence and either of his parents was
>
> (a) a diplomatic or consular officer or other representative or employee in Canada of a foreign government;
>
> (b) an employee in the service of a person referred to in paragraph (a); or
>
> (c) an officer or employee in Canada of a specialized agency of the United Nations or an officer or employee in Canada of any other international organization to whom there are granted, by or under any Act of Parliament, diplomatic privileges and immunities certified by the Minister of Foreign Affairs to be equivalent to those granted to a person or persons referred to in paragraph (a).

[156] The analyst noted that s. 3(2)(a) refers both to diplomatic and consular officers and to *other* representatives or employees of a foreign government. She acknowledged that the term “diplomatic or consular officer” is defined in s. 35(1) of the *Interpretation Act* and that the definition lists a large number of posts within a foreign mission or consulate. However, the analyst observed that no statutory definition exists for the phrase “other representative or employee in Canada of a foreign government.”

[157] The analyst compared the wording of s. 3(2)(a) with that of a similar provision in predecessor legislation. That provision, s. 5(3)(b) of the *Canadian Citizenship Act*, R.S.C. 1970, c. C-19, excluded from citizenship children whose "responsible parent" at the time of birth was:

> (i) a foreign diplomatic or consular officer or a representative of a foreign
> government accredited to Her Majesty,
> (ii) an employee of a foreign government attached to or in the service of a foreign diplomatic mission or consulate in Canada, or
> (iii) an employee in the service of a person referred to in subparagraph (i).

[158] The analyst reasoned that because s. 3(2)(a) "makes reference to 'representatives or employees of a foreign government,' but does not link the representatives or employees to 'attached to or in the service of a foreign diplomatic mission or consulate in Canada' (as did the earlier version of the provision), it is reasonable to maintain that this provision intends to encompass individuals not included in the definition of 'diplomatic and consular staff'": A.R., vol. I, at p. 7.

[159] Although the analyst acknowledged that "Ms. Vavilova and Mr. Bezrukov, were employed in Canada by a foreign government without the benefits or protections (i.e.: immunity) that accompany diplomatic, consular, or official status positions", she concluded that they were nonetheless "unofficial employees or representatives" of Russia at the time of Mr. Vavilov's birth: A.R., vol. I, at p. 13. The exception in s. 3(2)(a) of the *Citizenship Act*, as she interpreted it, therefore applied to Mr. Vavilov. As a result, the analyst recommended that the Canadian

Registrar of Citizenship "recall" Mr. Vavilov's certificate on the basis that he was not, and had never been, entitled to citizenship.

(2) Federal Court (Bell J.), 2015 FC 960, [2016] 2 F.C.R. 39

[160] Mr. Vavilov sought and was granted leave to bring an application for judicial review of the Registrar's decision in the Federal Court pursuant to s. 22.1 of the *Citizenship Act*. His application was dismissed.

[161] The Federal Court rejected Mr. Vavilov's argument that the Registrar had breached her duty of procedural fairness by failing to disclose the documentation that had prompted the procedural fairness letter. In the Federal Court's view, the Registrar had provided Mr. Vavilov sufficient information to allow him to meaningfully respond, and had thereby satisfied the requirements of procedural fairness in the circumstances.

[162] The Federal Court also rejected Mr. Vavilov's challenge to the Registrar's interpretation of s. 3(2)(a) of the *Citizenship Act*. Applying the correctness standard, the Federal Court agreed with the Registrar that undercover foreign operatives living in Canada fall within the meaning of the phrase "diplomatic or consular officer or other representative or employee in Canada of a foreign government" in s. 3(2)(a). In the Federal Court's view, to interpret s. 3(2)(a) in any other way would render the phrase "other representative or employee in Canada of a foreign government" meaningless and would lead to the "absurd result" that "children

of a foreign diplomat, registered at an embassy, who conducts spy operations, cannot claim Canadian citizenship by birth in Canada but children of those who enter unlawfully for the very same purpose, become Canadian citizens by birth": para. 25.

[163] Finally, the Federal Court was satisfied, given the evidence, that the Registrar's conclusion that Mr. Vavilov's parents had at the time of his birth been in Canada as part of an undercover operation for the Russian government was reasonable.

(3) Federal Court of Appeal (Stratas J.A. with Webb J.A. Concurring; Gleason J.A. Dissenting), 2017 FCA 132, [2018] 3 F.C.R. 75

[164] A majority of the Federal Court of Appeal allowed Mr. Vavilov's appeal from the Federal Court's judgment and quashed the Registrar's decision.

[165] The Court of Appeal unanimously rejected Mr. Vavilov's argument that he had been denied procedural fairness by the Registrar. In the Court of Appeal's view, the Registrar had provided Mr. Vavilov sufficient information in the procedural fairness letter to enable him to know the case to meet. Even if Mr. Vavilov had been entitled to more information at the time of that letter, the court indicated that his procedural fairness challenge would nevertheless have failed because he had subsequently obtained that additional information through his own efforts and was able to make meaningful submissions.

[166] The Court of Appeal was also unanimously of the view that the appropriate standard of review for the Registrar's interpretation and application of s. 3(2)(a) of the *Citizenship Act* was reasonableness. It split, however, on the application of that standard to the Registrar's decision.

[167] The majority of the Court of Appeal concluded that the analyst's interpretation of s. 3(2)(a), which the Registrar had adopted, was unreasonable and that the Registrar's decision should be quashed. The analysis relied on by the Registrar on the statutory interpretation issue was confined to a consideration of the text of s. 3(2)(a) and an abbreviated review of its legislative history, which totally disregarded its purpose or context. In the majority's view, such a "cursory and incomplete approach to statutory interpretation" in a case such as this was indefensible: para. 44. Moreover, when the provision's purpose and its context were taken into account, the only reasonable conclusion was that the phrase "employee in Canada of a foreign government" in s. 3(2)(a) was meant to apply only to individuals who have been granted diplomatic privileges and immunities under international law. Because it was common ground that neither of Mr. Vavilov's parents had been granted such privileges or immunities, s. 3(2)(a) did not apply to him. The cancellation of his citizenship certificate on the basis of s. 3(2)(a) therefore could not stand, and Mr. Vavilov was entitled to Canadian citizenship under the *Citizenship Act*.

[168] The dissenting judge disagreed, finding that the Registrar's interpretation of s. 3(2)(a) was reasonable. According to the dissenting judge, the text of that provision admits of at least two rational interpretations: one that includes all employees of a foreign government and one that is restricted to those who have been granted diplomatic privileges and immunities. In the dissenting judge's view, the former interpretation is not foreclosed by the context or the purpose of the provision. It was thus open to the Registrar to conclude that Mr. Vavilov's parents fell within the scope of s. 3(2)(a). The dissenting judge would have upheld the Registrar's decision.

C. *Analysis*

(1) Standard of Review

[169] Applying the standard of review analysis set out above leads to the conclusion that the standard to be applied in reviewing the merits of the Registrar's decision is reasonableness.

[170] When a court reviews the merits of an administrative decision, reasonableness is presumed to be the applicable standard of review, and there is no basis for departing from that presumption in this case. The Registrar's decision has come before the courts by way of judicial review, not by way of a statutory appeal. On this point, we note that ss. 22.1 through 22.4 of the *Citizenship Act* lay down rules that govern applications for judicial review of decisions made under that Act, one of which, in s. 22.1(1), is that such an application may be made only with leave of the

Federal Court. However, none of these provisions allow for a party to bring an appeal from a decision under the *Citizenship Act*. Given this fact, and given that Parliament has not prescribed the standard to be applied on judicial review of the decision at issue, there is no indication that the legislature intended a standard of review other than reasonableness to apply. The Registrar's decision does not give rise to any constitutional questions, general questions of law of central importance to the legal system as a whole or questions regarding the jurisdictional boundaries between two or more administrative bodies. As a result, the standard to be applied in reviewing the decision is reasonableness.

(2) Review for Reasonableness

[171] The principal issue before this Court is whether it was reasonable for the Registrar to find that Mr. Vavilov's parents had been "other representative[s] or employee[s] in Canada of a foreign government" within the meaning of s. 3(2)(a) of the *Citizenship Act*.

[172] In our view, it was not. The Registrar failed to justify her interpretation of s. 3(2)(a) of the *Citizenship Act* in light of the constraints imposed by the text of s. 3 of the *Citizenship Act* considered as a whole, by other legislation and international treaties that inform the purpose of s. 3, by the jurisprudence on the interpretation of s. 3(2)(a), and by the potential consequences of her interpretation. Each of these elements — viewed individually and cumulatively — strongly supports the conclusion that s. 3(2)(a) was not intended to apply to children of foreign government

representatives or employees who have not been granted diplomatic privileges and immunities. Though Mr. Vavilov raised many of these considerations in his submissions in response to the procedural fairness letter (A.R., vol. IV, at pp. 448-52), the Registrar failed to address those submissions in her reasons and did not, to justify her interpretation of s. 3(2)(a), do more than conduct a cursory review of the legislative history and conclude that her interpretation was not explicitly precluded by the text of s. 3(2)(a).

[173] Our review of the Registrar's decision leads us to conclude that it was unreasonable for her to find that the phrase "diplomatic or consular officer or other representative or employee in Canada of a foreign government" applies to individuals who have not been granted diplomatic privileges and immunities in Canada. It is undisputed that Mr. Vavilov's parents had not been granted such privileges and immunities. No purpose would therefore be served by remitting this matter to the Registrar.

(a) *Section 3(2) of the Citizenship Act*

[174] The analyst justified her conclusion that Mr. Vavilov is not a citizen of Canada by reasoning that his parents were "other representative[s] or employee[s] in Canada of a foreign government" within the meaning of s. 3(2)(a) of the *Citizenship Act*. Section 3(2)(a) provides that children of "a diplomatic or consular officer or other representative or employee in Canada of a foreign government" are exempt from the general rule in s. 3(1)(a) that individuals born in Canada after February 14,

1977 acquire Canadian citizenship by birth. The analyst observed that although the term "diplomatic or consular officer" is defined in the *Interpretation Act* and does not apply to individuals like Mr. Vavilov's parents, the phrase "other representative or employee in Canada of a foreign government" is not so defined, and may apply to them.

[175] The analyst's attempt to give the words "other representative or employee in Canada of a foreign government" a meaning distinct from that of "diplomatic or consular officer" is sensible. It is generally consistent with the principle of statutory interpretation that Parliament intends each word in a statute to have meaning: Sullivan, at p. 211. We accept that if the phrase "other representative or employee in Canada of a foreign government" were considered in isolation, it could apply to a spy working in the service of a foreign government in Canada. However, the analyst failed to address the immediate statutory context of s. 3(2)(a), including the closely related text in s. 3(2)(c):

> (2) Paragraph (1)(a) does not apply to a person if, at the time of his birth, neither of his parents was a citizen or lawfully admitted to Canada for permanent residence and either of his parents was
>
> (a) a diplomatic or consular officer or other representative or employee in Canada of a foreign government;
>
> (b) an employee in the service of a person referred to in paragraph (a); or
>
> (c) an officer or employee in Canada of a specialized agency of the United Nations or an officer or employee in Canada of any other international organization to whom there are granted, by or under any Act of Parliament, diplomatic privileges and immunities

certified by the Minister of Foreign Affairs to be equivalent to those granted to a person or persons referred to in paragraph (a).

[176] As the majority of the Court of Appeal noted (at paras. 61-62), the wording of s. 3(2)(c) provides clear support for the conclusion that *all* of the persons contemplated by s. 3(2)(a) — including those who are “employee[s] in Canada of a foreign government” — must have been granted diplomatic privileges and immunities in some form. If, as the Registrar concluded, s. 3(2)(a) includes persons who do not benefit from these privileges or immunities, it is difficult to understand how effect could be given to the explicit equivalency requirement articulated in s. 3(2)(c). However, the analyst did not account for this tension in the immediate statutory context of s. 3(2)(a).

(b) *The Foreign Missions and International Organizations Act and the Treaties It Implements*

[177] Before the Registrar, Mr. Vavilov argued that s. 3(2) of the *Citizenship Act* must be read in conjunction with both the *Foreign Missions and International Organizations Act*, S.C. 1991, c. 41 (“*FMIOA*”), and the *Vienna Convention on Diplomatic Relations*, Can. T.S. 1966 No. 29 (“*VCDR*”). The *VCDR* and the *Vienna Convention on Consular Relations*, Can. T.S. 1974 No. 25, are the two leading treaties that extend diplomatic and/or consular privileges and immunities to employees and representatives of foreign governments in diplomatic missions and consular posts. Parliament has implemented the relevant provisions of both conventions by means of s. 3(1) of the *FMIOA*.

[178] To begin, we note that Canada affords citizenship in accordance both with the principle of *jus soli*, the acquisition of citizenship through birth regardless of the parents' nationality, and with that of *jus sanguinis*, the acquisition of citizenship by descent, that is through a parent: *Citizenship Act*, s. 3(1)(a) and (b); see I. Brownlie, *Principles of Public International Law* (5th ed. 1998), at pp. 391-93. These two principles operate as a backdrop to s. 3 of the *Citizenship Act* as a whole. It is undisputed that s. 3(2)(a) operates as an exception to these general rules. However, Mr. Vavilov took a narrower view of that exception than did the Registrar. In his submissions to the Registrar, he argued that Parliament intended s. 3(2) of the *Citizenship Act* to simply mirror the *FMIOA* and the *VCDR*, as well as Article II of the *Optional Protocol to the Vienna Convention on Diplomatic Relations, concerning Acquisition of Nationality*, 500 U.N.T.S. 223, which provides that "[m]embers of the mission not being nationals of the receiving State, and members of their families forming part of their household, shall not, solely by the operation of the law of the receiving State, acquire the nationality of that State". Mr. Vavilov made the following submission to the Registrar:

> The purpose in excluding diplomats and their families, including newborn children, from acquiring citizenship in the receiving state relates to the immunities which extend to this group of people. Diplomats and their family members are immune from criminal prosecution and civil liability in the receiving state. As such, they cannot acquire citizenship in the receiving state and also benefit from these immunities. A citizen has duties and responsibilities to its country. Immunity is inconsistent with this principle and so does not apply to citizens. See Article 37 of the *Convention*.
>
> Section 3(2) legislates into Canadian domestic law the above principles and should be narrowly interpreted with these purposes in

> mind. The term "employee in Canada of a foreign government" must be interpreted to mean an employee of a diplomatic mission, or connected to it, who benefits from the immunities of the *Convention*. Any other interpretation would lead to absurd results. There is no purpose served in excluding any child born of a person not having a connection to a diplomatic mission in Canada while sojourning here from the principle of *Jus soli*.
>
> (A.R., vol. IV, at pp. 449-50)

[179] In *Al-Ghamdi v. Canada (Minister of Foreign Affairs & International Trade)*, 2007 FC 559, 64 Imm. L. R. (3d) 67, a case which was referred to in the analyst's report and which we will discuss in greater detail below, the Federal Court, at para. 53, quoted a passage by Professor Brownlie on this point:

> Of particular interest are the special rules relating to the jus soli, appearing as exceptions to that principle, the effect of the exceptions being to remove the cases where its application is clearly unjustifiable. A rule which has very considerable authority stipulated that children born to persons having diplomatic immunity shall not be nationals by birth of the state to which the diplomatic agent concerned is accredited. Thirteen governments stated the exception in the preliminaries of the Hague Codification Conference. In a comment on the relevant article of the Harvard draft on diplomatic privileges and immunities it is stated: 'This article is believed to be declaratory of an established rule of international law'. The rule receives ample support from legislation of states and expert opinion. The Convention on Certain Questions relating to the Conflict of Nationality Laws of 1930 provides in Article 12: 'Rules of law which confer nationality by reasons of birth on the territory of a State shall not apply automatically to children born to persons enjoying diplomatic immunities in the country where the birth occurs.'
>
> In 1961 the United Nations Conference on Diplomatic Intercourse and Immunities adopted an Optional Protocol concerning Acquisition of Nationality, which provided in Article II: 'Members of the mission not being nationals of the receiving State, and members of their families forming part of their household, shall not, solely by the operation of the law of the receiving State, acquire the nationality of that State'.

> Some states extend the rule to the children of consuls, and there is some support for this from expert opinion. [Emphasis deleted.]
>
> (Brownlie, at pp. 392-93).

[180] Mr. Vavilov included relevant excerpts from the parliamentary debate that had preceded the enactment of the *Citizenship Act* in support of his argument that the very purpose of s. 3(2) of the *Citizenship Act* was to align Canada's citizenship rules with these principles of international law. These excerpts describe s. 3(2) as "conform[ing] to international custom" and as having been drafted with the intention of "exclud[ing] children born in Canada to diplomats from becoming Canadian citizens": Hon. J. Hugh Faulkner, Secretary of State of Canada, House of Commons, *Minutes of Proceedings and Evidence of the Standing Committee on Broadcasting, Films and Assistance to the Arts, respecting Bill C-20*, *An Act respecting citizenship*, No. 34, 1st Sess., 30th Parl., February 24, 1976, at 34:23. The record of that debate also reveals that Parliament took care to avoid the danger that because of how some provisions were written, "a number of other people would be affected such as those working for large foreign corporations": *ibid*. Although the analyst discussed the textual difference between s. 3(2) and a similar provision in the former *Canadian Citizenship Act*, she did not grapple with these other elements of the legislative history, despite the fact that they cast considerable doubt on her conclusions, indicating that s. 3(2) was not intended to affect the status of individuals whose parents have not been granted diplomatic privileges and immunities.

[181] In attempting to distinguish the meaning of the phrase "other representative or employee in Canada of a foreign government" from that of the term "diplomatic or consular officer", the analyst also appeared to overlook the possibility that some individuals who fall into the former category might be granted privileges or immunities despite not being considered "diplomatic or consular officer[s]" under the *Interpretation Act*. Yet, as the majority of the Federal Court of Appeal pointed out, such individuals do in fact exist: paras. 53-55, citing *FMIOA*, at ss. 3 and 4 and Sched. II, Articles 1, 41, 43, 49, and 53. In light of Mr. Vavilov's submissions regarding the purpose of s. 3(2), the failure to consider this possibility is a noticeable omission.

[182] It is well established that domestic legislation is presumed to comply with Canada's international obligations, and that it must be interpreted in a manner that reflects the principles of customary and conventional international law: *Appulonappa*, at para. 40; see also *Pushpanathan*, at para. 51; *Baker*, at para. 70; *GreCon Dimter inc. v. J.R. Normand inc.*, 2005 SCC 46, [2005] 2 S.C.R. 401, at para. 39; *Hape*, at paras. 53- 54; *B010 v. Canada (Citizenship and Immigration)*, 2015 SCC 58, [2015] 3 S.C.R. 704, at para. 48; *India v. Badesha*, 2017 SCC 44, [2017] 2 S.C.R. 127, at para. 38; *Office of the Children's Lawyer v. Balev*, 2018 SCC 16, [2018] 1 S.C.R. 398, at paras. 31-32. Yet the analyst did not refer to the relevant international law, did not inquire into Parliament's purpose in enacting s. 3(2) and did not respond to Mr. Vavilov's submissions on this issue. Nor did she advance any alternate explanation for why Parliament would craft such a provision in the first place. In the face of

compelling submissions that the underlying rationale of s. 3(2) was to implement a narrow exception to a general rule in a manner that was consistent with established principles of international law, the analyst and the Registrar chose a different interpretation without offering any reasoned explanation for doing so.

(c) *Jurisprudence Interpreting Section 3(2) of the Citizenship Act*

[183] Although the analyst cited three Federal Court decisions on s. 3(2)(a) of the *Citizenship Act* in a footnote, she dismissed them as being irrelevant on the basis that they related only to "individuals whose parents maintained diplomatic status in Canada at the time of their birth". But this distinction, while true, does not explain why the *reasoning* employed in those decisions, which directly concerned the scope, the meaning and the legislative purpose of s. 3(2)(a), was inapplicable in Mr. Vavilov's case. Had the analyst considered just the three cases cited in her report — *Al-Ghamdi*; *Lee v. Canada (Minister of Citizenship and Immigration)*, 2008 FC 614, [2009] 1 F.C.R. 204; and *Hitti v. Canada (Minister of Citizenship and Immigration)*, 2007 FC 294, 310 F.T.R. 169 — it would have been evident to her that she needed to grapple with and justify her interpretation in light of the persuasive and comprehensive legal reasoning that supports the position that s. 3(2)(a) was intended to apply only to those individuals whose parents have been granted diplomatic privileges and immunities.

[184] In *Al-Ghamdi*, the Federal Court considered the constitutionality of paras. (a) and (c) of s. 3(2) of the *Citizenship Act* in reviewing a decision in which

Passport Canada had refused to issue a passport to a child of a Saudi Arabian diplomat. In its reasons, the court came to a number of conclusions regarding the purpose and scope of s. 3(2), including, at para. 5, that:

> The only individuals covered in paragraphs 3(2)(a) and (c) of the *Citizenship Act* are children of individuals with diplomatic status. These are individuals who enter Canada under special circumstances and without undergoing any of the normal procedures. Most importantly, while in Canada, they are granted all of the immunities and privileges of diplomats . . . .

[185] The court went on to extensively document the link between the exception to the rule of citizenship by birth set out in s. 3(2) of the *Citizenship Act* and the rules of international law, the *FMIOA* and the *VCDR*: *Al-Ghamdi*, at paras. 52 et. seq. It noted that there is an established rule of international law that children born to parents who enjoy diplomatic immunities are not entitled to automatic citizenship by birth, and that their status in this respect is an exception to the principle of *jus soli*: *Al-Ghamdi*, at para. 53, quoting Brownlie, at pp. 391-93. In finding that the exceptions under s. 3(2) to citizenship on the basis of *jus soli* do not infringe the rights of children of diplomats under s. 15 of the *Charter*, the court emphasized that *all* children to whom s. 3(2) applies are entitled to an "extraordinary array of privileges under the *Foreign Missions and International Organizations Act*": *Al-Ghamdi*, at para. 62. Citing the *VCDR*, it added that "[i]t is precisely because of the vast array of privileges accorded to diplomats and their families, which are by their very nature inconsistent with the obligations of citizenship, that a person who enjoys diplomatic status cannot acquire citizenship": para. 63. In its analysis under s. 1 of the

Charter, the court found that the choice to deny citizenship to individuals provided for in s. 3(2) is "tightly connected" to a pressing government objective of ensuring "that no citizen is immune from the obligations of citizenship", such as the obligations to pay taxes and comply with the criminal law: *Al-Ghamdi*, at paras. 74-75. In the case at bar, the analyst failed entirely to engage with the arguments endorsed by the Federal Court in *Al-Ghamdi* despite the court's key finding that s. 3(2)(a) applies only to "children born of foreign diplomats or an equivalent", a conclusion upon which the very constitutionality of the provision turned: *Al-Ghamdi*, at paras. 3, 9, 27, 28, 56 and 59.

[186] In *Lee*, another case cited by the analyst, the Federal Court confirmed the finding in *Al-Ghamdi* that "[t]he only individuals covered in paragraphs 3(2)(a) and (c) of the *Citizenship Act* are children of individuals with diplomatic status": *Lee*, at para. 77. The court found in *Lee* that the "functional duties of the applicant's father" were not relevant to whether or not the applicant was excluded from citizenship pursuant to s. 3(2)(a) of the *Citizenship Act*: para. 58. Rather, what mattered was only that at the time of the applicant's birth, his father had been a registered consular official and had held a diplomatic passport and the title of Vice-Consul: paras. 44, 58, 61 and 63.

[187] *Hitti*, the third case cited in the analyst's report, concerned a decision to confiscate two citizenship certificates on the basis that, under s. 3(2) of the *Citizenship Act*, their holders had never been entitled to them. In that case, the

applicants' father, a Lebanese citizen, had been employed as an information officer of the League of Arab States in Ottawa. Although the League did not have diplomatic standing at that time, Canada had agreed as a matter of courtesy to extend diplomatic status to officials of the League's information centre, treating them as "attachés" of their home countries' embassies: *Hitti*, at paras. 6 and 9; see also *Interpretation Act*, s. 35(1). Mr. Hitti argued he did not, in practice, fulfill diplomatic tasks or act as a representative of Lebanon, but there was nonetheless a record of his being an accredited diplomat, enjoying the benefits of that status and being covered by the *VCDR* when his children were born: paras. 5 and 8. The Federal Court rejected a submission that Mr. Hitti would have had to perform duties in the service of Lebanon in order for his children to fall within the meaning of s. 3(2)(a), and concluded that "what Mr. Hitti did when he was in the country is not relevant": para. 32.

[188] What can be seen from both *Lee* and *Hitti* is that what matters, for the purposes of s. 3(2)(a), is not whether an individual carries out activities in the service of a foreign state while in Canada, but whether, at the relevant time, the individual has been granted diplomatic privileges and immunities. Thus, in addition to the Federal Court's decision in *Al-Ghamdi*, the analyst was faced with two cases in which the application of s. 3(2) had turned on the existence of diplomatic status rather than on the "functional duties" or activities of the child's parents. In these circumstances, it was a significant omission for her to ignore the Federal Court's reasoning when determining whether the espionage activities of Ms. Vavilova and Mr. Bezrukov were sufficient to ground the application of s. 3(2)(a).

(d) *Possible Consequences of the Registrar's Interpretation*

[189] When asked why the children of individuals referred to in s. 3(2)(a) would be excluded from acquiring citizenship by birth, another analyst involved in Mr. Vavilov's file (who had also been involved in Mr. Vavilov's brother's file) responded as follows:

> Well, usually the way we use section 3(2)(a) is for – you're right, for diplomats and that they don't -- because they are not -- they are not obliged . . . to the law of Canada and everything, so that's why their children do not obtain citizenship if they were born in Canada while the person was in Canada under that status. But then there is also this other part of the Act that says other representatives or employees of a foreign government in Canada, that may open the door for other person than diplomats and that's how we interpreted in this specific case 3(2)(a) but there is no jurisprudence on that.
>
> (R.R. transcript, at pp. 87-88)

[190] In other words, the officials responsible for these files were aware that s. 3(2)(a) was informed by the principle that individuals subject to the exception are "not obliged . . . to the law of Canada". They were also aware that the interpretation they had adopted in the case of the Vavilov brothers was a novel one. Although the Registrar knew this, she failed to provide a rationale for this expanded interpretation.

[191] Additionally, there is no evidence that the Registrar considered the potential consequences of expanding her interpretation of s. 3(2)(a) to include individuals who have not been granted diplomatic privileges and immunities. Citizenship has been described as "the right to have rights": U.S. Supreme Court

Chief Justice Earl Warren, as quoted in A. Brouwer, *Statelessness in Canadian Context: A Discussion Paper* (July 2003) (online), at p. 2. The importance of citizenship was recognized in *Benner v. Canada (Secretary of State)*, [1997] 1 S.C.R. 358, in which Iacobucci J., writing for this Court, stated: "I cannot imagine an interest more fundamental to full membership in Canadian society than Canadian citizenship": para. 68. This was reiterated in *Canada (Minister of Citizenship and Immigration) v. Tobiass*, [1997] 3 S.C.R. 391, in which this Court unanimously held that "[f]or some, such as those who might become stateless if deprived of their citizenship, it may be valued as highly as liberty": para. 108.

[192] It perhaps goes without saying that rules concerning citizenship require a high degree of interpretive consistency in order to shield against a perception of arbitrariness and to ensure conformity with Canada's international obligations. We can therefore only assume that the Registrar intended that this new interpretation of s. 3(2)(a) would apply to any other individual whose parent is employed by or represents a foreign government at the time of the individual's birth in Canada but has not been granted diplomatic privileges and immunities. The Registrar's interpretation would not, after all, limit the application of s. 3(2)(a) to the children of spies — its logic would be equally applicable to a number of other scenarios, including that of a child of a non-citizen worker employed by an embassy as a gardener or cook, or of a child of a business traveller who represents a foreign government-owned corporation. Mr. Vavilov had raised the fact that provisions such as s. 3(2)(a) must be given a narrow interpretation because they deny or potentially take away rights — that of

citizenship under s. 3(1) in this case — which otherwise benefit from a liberal and broad interpretation: *Brossard (Town) v. Québec (Commission des droits de la personne)*, [1988] 2 S.C.R. 279, at p. 307. Yet there is no indication that the Registrar considered the potential harsh consequences of her interpretation for such a large class of individuals, which included Mr. Vavilov, or the question whether, in light of those possible consequences, Parliament would have intended s. 3(2)(a) to apply in this manner.

[193] Moreover, we would note that despite following a different legal process, the Registrar's decision in this case had the same effect as a revocation of citizenship — a process which has been described by scholars as "a kind of 'political death'" — depriving Mr. Vavilov of his right to vote and the right to enter and remain in Canada: see A. Macklin, "Citizenship Revocation, the Privilege to Have Rights and the Production of the Alien" (2014), 40 *Queen's L.J.* 1, at pp. 7-8. While we question whether the Registrar was empowered to unilaterally alter Canada's position with respect to Mr. Vavilov's citizenship and recognize that the relationship between the cancellation of a citizenship certificate under s. 26 of the *Citizenship Regulations* and the revocation of an individual's citizenship (as set out in s. 10 of the *Citizenship Act*) is not clear, we leave this issue for another day because it was neither raised nor argued by the parties.

D. *Conclusion*

[194] Multiple legal and factual constraints may bear on a given administrative decision, and these constraints may interact with one another. In some cases, a failure to justify the decision against any one relevant constraint may be sufficient to cause the reviewing court to lose confidence in the reasonableness of the decision. Section 3 of the *Citizenship Act* considered as a whole, other legislation and international treaties that inform the purpose of s. 3, the jurisprudence cited in the analyst's report, and the potential consequences of the Registrar's decision point overwhelmingly to the conclusion that Parliament did not intend s. 3(2)(a) to apply to children of individuals who have not been granted diplomatic privileges and immunities. The Registrar's failure to justify her decision with respect to these constraints renders her interpretation unreasonable, and we would therefore uphold the Federal Court of Appeal's decision to quash the Registrar's decision.

[195] As noted above, we would exercise our discretion not to remit the matter to the Registrar for redetermination. Crucial to our decision is the fact that Mr. Vavilov explicitly raised all of these issues before the Registrar and that the Registrar had an opportunity to consider them but failed to do so. She offered no justification for the interpretation she adopted except for a superficial reading of the provision in question and a comment on part of its legislative history. On the other hand, there is overwhelming support — including in the parliamentary debate, established principles of international law, an established line of jurisprudence and the text of the provision itself — for the conclusion that Parliament did not intend s. 3(2)(a) of the *Citizenship Act* to apply to children of individuals who have not been granted

diplomatic privileges and immunities. That being said, we would stress that it is not our intention to offer a definitive interpretation of s. 3(2)(a) in all respects, nor to foreclose the possibility that multiple reasonable interpretations of other aspects might be available to administrative decision makers. In short, we do not suggest that there is necessarily "one reasonable interpretation" of the provision as a whole. But we agree with the majority of the Court of Appeal that it was *not* reasonable for the Registrar to interpret s. 3(2)(a) as applying to children of individuals who have not been granted diplomatic privileges and immunities at the time of the children's birth.

[196] Given that it is undisputed that Ms. Vavilova and Mr. Bezrukov, as undercover spies, were granted no such privileges, it would serve no purpose to remit the matter in this case to the Registrar. Given that Mr. Vavilov is a person who was born in Canada after February 14, 1977, his status is governed only by the general rule set out in s. 3(1)(a) of the *Citizenship Act*. He is a Canadian citizen.

E. *Disposition*

[197] The appeal is dismissed with costs throughout to Mr. Vavilov.

The following are the reasons delivered by

ABELLA AND KARAKATSANIS JJ. —

[198] Forty years ago, in *C.U.P.E., Local 963 v. New Brunswick Liquor Corporation*, [1979] 2 S.C.R. 227, this Court embarked on a course to recognize the unique and valuable role of administrative decision-makers within the Canadian legal order. Breaking away from the court-centric theories of years past, the Court encouraged judges to show deference when specialized administrative decision-makers provided reasonable answers to legal questions within their mandates. Building on this more mature understanding of administrative law, subsequent decisions of this Court sought to operationalize deference and explain its relationship to core democratic principles. These appeals offered a platform to clarify and refine our administrative law jurisprudence, while remaining faithful to the deferential path it has travelled for four decades.

[199] Regrettably, the majority shows our precedents no such fidelity. Presented with an opportunity to steady the ship, the majority instead dramatically reverses course — away from this generation's deferential approach and back towards a prior generation's more intrusive one. Rather than confirming a meaningful presumption of deference for administrative decision-makers, as our common law has increasingly done for decades, the majority's reasons strip away deference from hundreds of administrative actors subject to statutory rights of appeal; rather than following the consistent path of this Court's jurisprudence in understanding legislative intent as being the intention to leave legal questions within their mandate to specialized decision-makers with expertise, the majority removes expertise from the equation entirely and reformulates legislative intent as an overriding intention to

provide — or not provide — appeal routes; and rather than clarifying the role of reasons and how to review them, the majority revives the kind of search for errors that dominated the pre-*C.U.P.E.* era. In other words, instead of *reforming* this generation's evolutionary approach to administrative law, the majority *reverses* it, taking it back to the formalistic judge-centred approach this Court has spent decades dismantling.

[200] We support the majority's decision to eliminate the vexing contextual factors analysis from the standard of review framework and to abolish the shibboleth category of "true questions of jurisdiction". These improvements, accompanied by a meaningful presumption of deference for administrative decision-makers, would have simplified our judicial review framework and addressed many of the criticisms levied against our jurisprudence since *Dunsmuir v. New Brunswick*, [2008] 1 S.C.R. 190.

[201] But the majority goes much further and fundamentally reorients the decades-old relationship between administrative actors and the judiciary, by dramatically expanding the circumstances in which generalist judges will be entitled to substitute their own views for those of specialized decision-makers who apply their mandates on a daily basis. In so doing, the majority advocates a profoundly different philosophy of administrative law than the one which has guided our Court's jurisprudence for the last four decades. The majority's reasons are an encomium for correctness and a eulogy for deference.

The Evolution of Canadian Administrative Law

[202] The modern Canadian state "could not function without the many and varied administrative tribunals that people the legal landscape" (The Rt. Hon. Beverley McLachlin, *Administrative Tribunals and the Courts: An Evolutionary Relationship*, May 27, 2013 (online)). Parliament and the provincial legislatures have entrusted a broad array of complex social and economic challenges to administrative actors, including regulation of labour relations, welfare programs, food and drug safety, agriculture, property assessments, liquor service and production, infrastructure, the financial markets, foreign investment, professional discipline, insurance, broadcasting, transportation and environmental protection, among many others. Without these administrative decision-makers, "government would be paralyzed, and so would the courts" (Guy Régimbald, *Canadian Administrative Law* (2nd ed. 2015), at p. 3).

[203] In exercising their mandates, administrative decision-makers often resolve claims and disputes within their areas of specialization (Gus Van Harten et al., *Administrative Law: Cases, Text, and Materials* (7th ed. 2015), at p. 13). These claims and disputes vary greatly in scope and subject-matter. Corporate merger requests, professional discipline complaints by dissatisfied clients, requests for property reassessments and applications for welfare benefits, among many other matters, all fall within the purview of the administrative justice system.

[204] The administrative decision-makers tasked to resolve these issues come from many different walks of life (Van Harten et al., at p. 15). Some have legal

backgrounds, some do not. The diverse pool of decision-makers in the administrative system responds to the diversity of issues that it must resolve. To address this broad range of issues, administrative dispute-resolution processes are generally "[d]esigned to be less cumbersome, less expensive, less formal and less delayed" than their judicial counterparts — but "no less effectiv[e] or credibl[e]" (*Rasanen v. Rosemount Instruments Ltd.* (1994), 17 O.R. (3d) 267 (C.A.), at p. 279). In the field of labour relations, for example, Parliament explicitly rejected a court-based system to resolve workplace disputes in favour of a Labour Board, staffed with representatives from management and labour alongside an independent member (Bora Laskin, "Collective Bargaining in Ontario: A New Legislative Approach" (1943), 21 *Can. Bar Rev.* 684; John A. Willes, *The Ontario Labour Court: 1943-1944* (1979); Katherine Munro, "A 'Unique Experiment': The Ontario Labour Court, 1943-1944" (2014), 74 *Labour/Le Travail* 199). Other administrative processes — license renewals, zoning permit issuances and tax reassessments, for example — bear even less resemblance to the traditional judicial model.

[205] Courts, through judicial review, monitor the boundaries of administrative decision making. Questions about the standards of judicial review have been an enduring feature of Canadian administrative law. The debate, in recent times, has revolved around "reasonableness" and "correctness", and determining when each standard applies. On the one hand, "reasonableness" review expects courts to defer to decisions by specialized decision-makers that "are defensible in respect of the facts and law"; on the other, "correctness" review allows courts to substitute their own

opinions for those of the initial decision-maker (*Dunsmuir*, at paras. 47-50). This standard of review debate has profound implications for the extent to which reviewing courts may substitute their views for those of administrative decision-makers. At its core, it is a debate over two distinct philosophies of administrative law.

[206] The story of modern Canadian administrative law is the story of a shift away from the court-centric philosophy which denied administrative bodies the authority to interpret or shape the law. This approach found forceful expression in the work of Albert Venn Dicey. For Dicey, the rule of law meant the rule of courts. Dicey developed his philosophy at the end of the 19th century to encourage the House of Lords to restrain the government from implementing ameliorative social and welfare reforms administered by new regulatory agencies. Famously, Dicey asserted that administrative law was anathema to the English legal system (Albert Venn Dicey, *Introduction to the Study of the Law of the Constitution* (10th ed. 1959), at pp. 334-35). Because, in his view, only the judiciary had the authority to interpret law, there was no reason for a court to defer to legal interpretations proffered by administrative bodies, since their decisions did not constitute "law" (Kevin M. Stack, "Overcoming Dicey in Administrative Law" (2018), 68 *U.T.L.J.* 293, at p. 294).

[207] The canonical example of Dicey's approach at work is the House of Lords' decision in *Anisminic Ltd. v. Foreign Compensation Commission*, [1969] 2 A.C. 147, the judicial progenitor of "jurisdictional error". *Anisminic* entrenched non-deferential judicial review by endorsing a lengthy checklist of "jurisdictional errors"

capable of undermining administrative decisions. Lord Reid noted that there were two scenarios in which an administrative decision-maker would lose jurisdiction. The first was narrow and asked whether the legislature had empowered the administrative decision-maker to "enter on the inquiry in question" (p. 171). The second was wider:

> [T]here are many cases where, although the tribunal had jurisdiction to enter on the inquiry, it has done or failed to do something in the course of the inquiry which is of such a nature that its decision is a nullity. It may have given its decision in bad faith. It may have made a decision which it had no power to make. It may have failed in the course of the inquiry to comply with the requirements of natural justice. *It may in perfect good faith have misconstrued the provisions giving it power to act so that it failed to deal with the question remitted to it and decided some question which was not remitted to it. It may have refused to take into account something which it was required to take into account. Or it may have based its decision on some matter which, under the provisions setting it up, it had no right to take into account. I do not intend this list to be exhaustive.* [Emphasis added; p. 171.]

[208] The broad "jurisdictional error" approach in *Anisminic* initially found favour with this Court in cases like *Metropolitan Life Insurance Company v. International Union of Operating Engineers, Local 796*, [1970] S.C.R. 425, and *Bell v. Ontario Human Rights Commission*, [1971] S.C.R. 756. These cases "took the position that a definition of jurisdictional error should include any question pertaining to the interpretation of a statute made by an administrative tribunal", and in each case, "th[e] Court substituted what was, in its opinion, the correct interpretation of the enabling provision of the tribunal's statute for that of the tribunal" (*Canada (Attorney General) v. Public Service Alliance of Canada*, [1991] 1 S.C.R. 614, at p. 650, per Cory J., dissenting, but not on this point). In *Metropolitan Life*, for example, this

Court quashed a labour board's decision to certify a union, concluding that the Board had "ask[ed] itself the wrong question" and "decided a question which was not remitted to it" (p. 435). In *Bell*, this Court held that a human rights commission had strayed beyond its jurisdiction by deciding to investigate a complaint of racial discrimination filed against a landlord. The Court held that the Commission had incorrectly interpreted the term "self-contained dwelling uni[t]" found in s. 3 of the *Ontario Human Rights Code*, *1961-62*, S.O. 1961-62, c. 93, and by so doing, had lost jurisdiction to inquire into the complaint of discrimination (pp. 767 and 775).

[209] As these cases illustrate, the *Anisminic* approach proved easy to manipulate, allowing courts to characterize any question as "jurisdictional" and thereby give themselves latitude to substitute their own view of the appropriate answer without regard for the original decision-maker's decision or reasoning. The *Anisminic* era and the "jurisdictional error" approach were and continue to be subject to significant judicial and academic criticism (*Public Service Alliance*, at p. 650; *National Corn Growers Assn. v. Canada (Import Tribunal)*, [1990] 2 S.C.R. 1324, at p. 1335, per Wilson J., concurring; Beverley McLachlin, P.C., "'Administrative Law is Not for Sissies': Finding a Path Through the Thicket" (2016), 29 *C.J.A.L.P.* 127, at pp. 129-30; Jocelyn Stacey and Alice Woolley, "Can Pragmatism Function in Administrative Law?" (2016), 74 *S.C.L.R.* (2d) 211, at pp. 215-16; R.A. MacDonald, "Absence of Jurisdiction: A Perspective" (1983), 43 *R. du B.* 307).

[210] In 1979, the Court signaled a turn to a more deferential approach to judicial review with its watershed decision in *C.U.P.E.* There, the Court challenged the "jurisdictional error" model and planted the seeds of a home-grown approach to administrative law in Canada. In a frequently-cited passage, Dickson J., writing for a unanimous Court, cautioned that courts "should not be alert to brand as jurisdictional, and therefore subject to broader curial review, that which may be doubtfully so" (p. 233; cited in nearly 20 decisions of this Court, including *Dunsmuir*, at para. 35; *Canada (Citizenship and Immigration) v. Khosa*, [2009] 1 S.C.R. 339, at para. 45; *Alberta (Information and Privacy Commissioner) v. Alberta Teachers' Association*, [2011] 3 S.C.R. 654, at para. 33; *Canada (Canadian Human Rights Commission) v. Canada (Attorney General)*, [2018] 2 S.C.R. 230, at para. 31). The Court instead endorsed an approach that respected the legislature's decision to assign legal policy issues in some areas to specialized, non-judicial decision-makers. The Court recognized that legislative language could "bristl[e] with ambiguities" and that the interpretive choices made by administrative tribunals deserved respect from courts, particularly when, as in *C.U.P.E.*, the decision was protected by a privative clause (pp. 230 and 234-36).

[211] By championing "curial deference" to administrative bodies, *C.U.P.E.* embraced "a more sophisticated understanding of the role of administrative tribunals in the modern Canadian state" (*National Corn Growers*, at p. 1336, per Wilson J., concurring; *Domtar Inc. v. Quebec (Commission d'appel en matière de lésions professionnelles)*, [1993] 2 S.C.R. 756, at p. 800). As one scholar has observed:

> . . . legislatures and courts in . . . Canada have come to settle on the idea that the functional capacities of administrative agencies – their expertise, investment in understanding the practical circumstances at issue, openness to participation, and level of responsiveness to political change – justify not only their law-making powers but also judicial deference to their interpretations and decisions. *Law-making and legal interpretation are shared enterprises in the administrative state*. [Emphasis added.]
>
> (Stack, at p. 310)

[212] In explaining why courts must sometimes defer to administrative actors, *C.U.P.E.* embraced two related foundational justifications for Canada's approach to administrative law — one based on the legislature's express choice to have an administrative body decide the issues arising from its mandate; and one animated by the recognition that an administrative justice system could offer institutional advantages in relation to proximity, efficiency, and specialized expertise (David Dyzenhaus, "The Politics of Deference: Judicial Review and Democracy" in Michael Taggart, ed., *The Province of Administrative Law* (1997), 279 at p. 304).

[213] A new institutional relationship between the courts and administrative actors was thus being forged, based on "an understanding of the role of expertise in the modern administrative state" which "acknowledge[d] that judges are not always in the best position to interpret the law" (The Hon. Frank Iacobucci, "Articulating a Rational Standard of Review Doctrine: A Tribute to John Willis" (2002), 27 *Queen's L.J.* 859, at p. 866).

[214] In subsequent decades, the Court attempted to reconcile the deference urged by *C.U.P.E.* with the lingering concept of "jurisdictional error". In *U.E.S.*,

Local 298 v. Bibeault, [1988] 2 S.C.R. 1048, the Court introduced the "pragmatic and functional" approach for deciding when a matter was within the jurisdiction of an administrative body. Instead of describing jurisdiction as a preliminary or collateral matter, the *Bibeault* test directed reviewing courts to consider the wording of the enactment conferring jurisdiction on the administrative body, the purpose of the statute creating the tribunal, the reason for the tribunal's existence, the area of expertise of its members, and the nature of the question the tribunal had to decide — all to determine whether the legislator "intend[ed] the question to be within the jurisdiction conferred on the tribunal" (p. 1087; see also p. 1088). If so, the tribunal's decision could only be set aside if it was "patently unreasonable" (p. 1086).

[215] Although still rooted in a formalistic search for jurisdictional errors, the pragmatic and functional approach recognized that legislatures had assigned courts and administrative decision-makers distinct roles, and that the specialization and expertise of administrative decision-makers deserved deference. In her concurring reasons in *National Corn Growers*, Wilson J. noted that part of the process of moving away from Dicey's framework and towards a more sophisticated understanding of the role of administrative tribunals:

> . . . has involved a growing recognition on the part of courts that they may simply not be as well equipped as administrative tribunals or agencies to deal with issues which Parliament has chosen to regulate through bodies exercising delegated power, e.g., labour relations, telecommunications, financial markets and international economic relations. Careful management of these sectors often requires the use of experts who have accumulated years of experience and a specialized understanding of the activities they supervise. [p. 1336]

[216] By the mid-1990s, the Court had accepted that specialization and the legislative intent to leave issues to administrative decision-makers were inextricable and essential factors in the standard of review analysis. It stressed that "the expertise of the tribunal is of the utmost importance in determining the intention of the legislator with respect to the degree of deference to be shown to a tribunal's decision . . . [e]ven where the tribunal's enabling statute provides explicitly for appellate review" (*United Brotherhood of Carpenters and Joiners of America, Local 579 v. Bradco Construction Ltd.*, [1993] 2 S.C.R. 316, at p. 335). Of the factors relevant to setting the standard of review, expertise was held to be "the most important" (*Canada (Director of Investigation and Research) v. Southam Inc.*, [1997] 1 S.C.R. 748, at para. 50).

[217] Consistent with these judgments, this Court invoked the specialized expertise of a securities commission to explain why its decisions were entitled to deference on judicial review even when there was a statutory right of appeal. Writing for a unanimous Court, Iacobucci J. explained that "the concept of the specialization of duties requires that deference be shown to decisions of specialized tribunals on matters which fall squarely within the tribunal's expertise" (*Pezim v. British Columbia (Superintendent of Brokers)*, [1994] 2 S.C.R. 557, at p. 591; see also *Bell Canada v. Canada (Canadian Radio-Television and Telecommunications Commission)*, [1989] 1 S.C.R. 1722, at pp. 1745-46). Critically, the Court's willingness to show deference demonstrated that specialization outweighed a statutory appeal as the most significant indicator of legislative intent.

[218] In *Pushpanathan v. Canada (Minister of Citizenship and Immigration)*, [1998] 1 S.C.R. 982, the Court reformulated the pragmatic and functional approach, engaging four slightly different factors from those in *Bibeault*, namely: (1) whether there was a privative clause, or conversely, a right of appeal; (2) the expertise of the decision-maker on the matter in question relative to the reviewing court; (3) the purpose of the statute as a whole, and of the provision in particular; and (4) the nature of the problem, i.e., whether it was a question of law, fact, or mixed law and fact (paras. 29-37). Instead of using these factors to answer whether a question was jurisdictional, *Pushpanathan* deployed them to discern how much deference the legislature intended an administrative decision to receive on judicial review. *Pushpanathan* confirmed three standards of review: patent unreasonableness, reasonableness *simpliciter*, and correctness (para. 27; see also *Southam*, at paras. 55-56).

[219] Significantly, *Pushpanathan* did not disturb the finding reaffirmed in *Southam* that specialized expertise was the most important factor in determining whether a deferential standard applied. Specialized expertise thus remained integral to the calibration of legislative intent, even in the face of statutory rights of appeal (see *Law Society of New Brunswick v. Ryan*, [2003] 1 S.C.R. 247, at paras. 21 and 29-34; *Cartaway Resources Corp. (Re)*, [2004] 1 S.C.R. 672, at para. 45; *Council of Canadians with Disabilities v. VIA Rail Canada Inc.*, [2007] 1 S.C.R. 650, at paras. 88-92 and 100).

[220] Next came *Dunsmuir*, which sought to simplify the pragmatic and functional analysis while maintaining respect for the specialized expertise of administrative decision-makers. The Court merged the three standards of review into two: reasonableness and correctness. *Dunsmuir* also wove together the deferential threads running through the Court's administrative law jurisprudence, setting out a presumption of deferential review for certain categories of questions, including those where the decision-maker had expertise or was interpreting its "home" statute (paras. 53-54, per Bastarache and LeBel JJ., and para. 124, per Binnie J., concurring). Certain categories of issues remained subject to correctness review, including constitutional questions regarding the division of powers, true questions of jurisdiction, questions of law that were both of central importance to the legal system as a whole and outside the adjudicator's specialized area of expertise, and questions about jurisdictional lines between tribunals (paras. 58-61). Where the standard of review had not been satisfactorily determined in the jurisprudence, four contextual factors — the presence or absence of a privative clause, the purpose of the tribunal, the nature of the question at issue and the expertise of the tribunal — remained relevant to the standard of review analysis (para. 64).

[221] Notably, *Dunsmuir* did not mention statutory rights of appeal as one of the contextual factors, and left undisturbed their marginal role in the standard of review analysis. Instead, the Court explicitly affirmed the links between deference, the specialized expertise of administrative decision-makers and legislative intent. Justices LeBel and Bastarache held that "deference requires respect for the legislative

choices to leave some matters in the hands of administrative decision makers, for the processes and determinations that draw on particular expertise and experiences, and for the different roles of the courts and administrative bodies within the Canadian constitutional system" (para. 49). They noted that "in many instances, those working day to day in the implementation of frequently complex administrative schemes have or will develop a considerable degree of expertise or field sensitivity to the imperatives and nuances of the legislative regime" (para. 49, citing David J. Mullan, "Establishing the Standard of Review: The Struggle for Complexity?" (2004), 17 *C.J.A.L.P*. 59, at p. 93).

[222] Post-*Dunsmuir*, this Court continued to stress that specialized expertise is the basis for making administrative decision-makers, rather than the courts, the appropriate forum to decide issues falling within their mandates (see *Khosa*, at para. 25; *R. v. Conway*, [2010] 1 S.C.R. 765, at para. 53; *McLean v. British Columbia (Securities Commission)*, [2013] 3 S.C.R. 895, at paras. 30-33). Drawing on the concept of specialized expertise, the Court's post-*Dunsmuir* cases expressly confirmed a presumption of reasonableness review for an administrative decision-maker's interpretation of its home or closely-related statutes (see *Alberta Teachers' Association*, at paras. 39-41). As Gascon J. explained in *Mouvement laïque québécois v. Saguenay (City)*, [2015] 2 S.C.R. 3, at para. 46:

> Deference is in order where the Tribunal acts within its specialized area of expertise . . . (*Saskatchewan (Human Rights Commission) v. Whatcott*, 2013 SCC 11, [2013] 1 S.C.R. 467, at paras. 166-68; *Mowat*, at para. 24). In *Alberta (Information and Privacy*

> *Commissioner) v. Alberta Teachers' Association*, 2011 SCC 61, [2011] 3 S.C.R. 654, at paras. 30, 34 and 39, the Court noted that, on judicial review of a decision of a specialized administrative tribunal interpreting and applying its enabling statute, it should be presumed that the standard of review is reasonableness (*Canadian National Railway Co. v. Canada (Attorney General)*, 2014 SCC 40, [2014] 2 S.C.R. 135, at para. 55; *Canadian Artists' Representation v. National Gallery of Canada*, 2014 SCC 42, [2014] 2 S.C.R. 197 ("*NGC*"), at para. 13; *Khosa*, at para. 25; *Smith v. Alliance Pipeline Ltd.*, 2011 SCC 7, [2011] 1 S.C.R. 160, at paras. 26 and 28; *Dunsmuir*, at para. 54).

[223] And in *Edmonton (City) v. Edmonton East (Capilano) Shopping Centres Ltd.*, [2016] 2 S.C.R. 293, the majority recognized:

> The presumption of reasonableness is grounded in the legislature's choice to give a specialized tribunal responsibility for administering the statutory provisions, and the expertise of the tribunal in so doing. Expertise arises from the specialization of functions of administrative tribunals like the Board which have a habitual familiarity with the legislative scheme they administer . . . . [E]xpertise is something that inheres in a tribunal itself as an institution: ". . . at an institutional level, adjudicators . . . can be presumed to hold relative expertise in the interpretation of the legislation that gives them their mandate, as well as related legislation that they might often encounter in the course of their functions". [Citation omitted; para. 33.]

[224] The presumption of deference, therefore, operationalized the Court's longstanding jurisprudential acceptance of the "specialized expertise" principle in a workable manner, continuing the deferential path Dickson J. first laid out in *C.U.P.E.*

[225] As for statutory rights of appeal, they continued to be seen as either an irrelevant factor in the standard of review analysis or one that yielded to specialized expertise. So firmly entrenched was this principle that in cases like *Bell Canada v.*

Bell Aliant Regional Communications, [2009] 2 S.C.R. 764, *Smith v. Alliance Pipeline Ltd.*, [2011] 1 S.C.R. 160, *ATCO Gas and Pipelines Ltd. v. Alberta (Utilities Commission)*, [2015] 3 S.C.R. 219, and *Canada (Attorney General) v. Igloo Vikski Inc.*, [2016] 2 S.C.R. 80, the Court applied the reasonableness standard without even *referring* to the presence of an appeal clause. When appeal clauses *were* discussed, the Court consistently confirmed that they did not oust the application of judicial review principles.

[226] In *Khosa*, Binnie J. explicitly endorsed *Pezim* and rejected "the idea that in the absence of express statutory language . . . a reviewing court is 'to apply a correctness standard as it does in the regular appellate context'" (para. 26). This reasoning was followed in *Canada (Canadian Human Rights Commission) v. Canada (Attorney General)*, [2011] 3 S.C.R. 471 ("*Mowat*"), where the Court confirmed that "care should be taken not to conflate" judicial and appellate review (para. 30; see also para. 31). In *McLean*, decided two years after *Mowat*, the majority cited *Pezim* and other cases for the proposition that "general administrative law principles still apply" on a statutory appeal (see para. 21, fn. 2). Similarly, in *Mouvement laïque*, Gascon J. affirmed that

> [w]here a court reviews a decision of a specialized administrative tribunal, the standard of review must be determined on the basis of administrative law principles. This is true regardless of whether the review is conducted in the context of an application for judicial review or of a statutory appeal . . . . [para. 38]

[227] In *Edmonton East*, the Court considered — and again rejected — the argument that statutory appeals should form a new category of correctness review. As the majority noted, "recognizing issues arising on statutory appeals as a new category to which the correctness standard applies — as the Court of Appeal did in this case — would go against strong jurisprudence from this Court" (para. 28). Even the dissenting judges in *Edmonton East*, although of the view that the wording of the relevant statutory appeal clause and legislative scheme pointed to the correctness standard, nonetheless unequivocally stated that "a statutory right of appeal is not a new 'category' of correctness review" (para. 70).

[228] By the time these appeals were heard, contextual factors had practically disappeared from the standard of review analysis, replaced by a presumption of deference subject only to the correctness exceptions set out in *Dunsmuir* — which explicitly did *not* include statutory rights of appeal. In other words, the Court was well on its way to realizing *Dunsmuir*'s promise of a simplified analysis. Justice Gascon recognized as much last year in *Canadian Human Rights Commission*:

> *This contextual approach should be applied sparingly*. As held by the majority of this Court in *Alberta Teachers*, it is inappropriate to "retreat to the application of a full standard of review analysis where it can be determined summarily" . . . . After all, the "contextual approach can generate uncertainty and endless litigation concerning the standard of review" (*Capilano* [*Edmonton East*], at para. 35). The presumption of reasonableness review and the identified categories will generally be sufficient to determine the applicable standard. In the exceptional cases where such a contextual analysis may be justified to rebut the presumption, it need not be a long and detailed one (*Capilano* [*Edmonton East*], at para. 34). Where it has been done or referred to in the past, the analysis has been limited to determinative factors that showed a

> clear legislative intent justifying the rebuttal of the presumption (see, e.g., *Rogers*, at para. 15; *Tervita*, at paras. 35-36; see also, *Saguenay*, at paras. 50-51). [Emphasis added; para. 46.]

[229] In sum, for four decades, our standard of review jurisprudence has been clear and unwavering about the foundational role of specialized expertise and the limited role of statutory rights of appeal. Where confusion persists, it concerns the relevance of the contextual factors in *Dunsmuir*, the meaning of "true questions of jurisdiction" and how best to conduct reasonableness review. That was the backdrop against which these appeals were heard and argued. But rather than ushering in a simplified next act, these appeals have been used to rewrite the whole script, reassigning to the courts the starring role Dicey ordained a century ago.

The Majority's Reasons

[230] The majority's framework rests on a flawed and incomplete conceptual account of judicial review, one that unjustifiably ignores the specialized expertise of administrative decision-makers. Although the majority uses language endorsing a "presumption of reasonableness review", this presumption now rests on a totally new understanding of legislative intent and the rule of law. By prohibiting any consideration of well-established foundations for deference, such as "expertise . . . institutional experience . . . proximity and responsiveness to stakeholders . . . prompt[ness], flexib[ility], and efficien[cy]; and . . . access to justice", the majority reads out the foundations of the modern understanding of legislative intent in administrative law.

[231] In particular, such an approach ignores the possibility that specialization and other advantages are embedded into the legislative choice to delegate particular subject matters to administrative decision-makers. Giving proper effect to the legislature's choice to "delegate authority" to an administrative decision-maker requires understanding the *advantages* that the decision-maker may enjoy in exercising its mandate (*Dunsmuir*, at para. 49). As Iacobucci J. observed in *Southam*:

> Presumably if Parliament entrusts a certain matter to a tribunal and not (initially at least) to the courts, *it is because the tribunal enjoys some advantage that judges do not*. For that reason alone, review of the decision of a tribunal should often be on a standard more deferential than correctness. [Emphasis added; para. 55.]

[232] Chief among those advantages are the institutional expertise and specialization inherent to administering a particular mandate on a daily basis. Those appointed to administrative tribunals are often chosen precisely because their backgrounds and experience align with their mandate (Van Harten et al., at p. 15; Régimbald, at p. 463). Some administrative schemes explicitly require a degree of expertise from new members as a condition of appointment (*Edmonton East*, at para. 33; *Dr. Q v. College of Physicians and Surgeons of British Columbia*, [2003] 1 S.C.R. 226, at para. 29; Régimbald, at p. 462). As institutions, administrative bodies also benefit from specialization as they develop "habitual familiarity with the legislative scheme they administer" (*Edmonton East*, at para. 33) and "grappl[e] with issues on a repeated basis" (*Parry Sound (District) Social Services Administration Board v. O.P.S.E.U., Local 324*, [2003] 2 S.C.R. 157, at para. 53). Specialization and

expertise are further enhanced by continuing education and through meetings of the membership of an administrative body to discuss policies and best practices (Finn Makela, "Acquired Expertise of Administrative Tribunals and the Standard of Judicial Review: The Case of Grievance Arbitrators and Human Rights Law" (2013), 17 *C.L.E.L.J.* 345, at p. 349). In addition, the blended membership of some tribunals fosters special institutional competence in resolving "polycentric" disputes (*Pushpanathan*, at para. 36; *Dr. Q* at paras. 29-30; *Pezim*, at pp. 591-92 and 596).

[233] All this equips administrative decision-makers to tackle questions of law arising from their mandates. In interpreting their enabling statutes, for example, administrative actors may have a particularly astute appreciation for the on-the-ground consequences of particular legal interpretations; of statutory context; of the purposes that a provision or legislative scheme are meant to serve; and of specialized terminology used in their administrative setting. Coupled with this Court's acknowledgment that legislative provisions often admit of multiple reasonable interpretations, the advantages stemming from specialization and expertise provide a robust foundation for deference to administrative decision-makers on legal questions within their mandate (*C.U.P.E.*, at p. 236; *McLean*, at para. 37). As Professor H.W. Arthurs said:

> There is no reason to believe that a judge who reads a particular regulatory statute once in his life, perhaps in worst-case circumstances, can read it with greater fidelity to legislative purpose than an administrator who is sworn to uphold that purpose, who strives to do so daily, and is well-aware of the effect upon the purpose of the various alternate interpretations. There is no reason to believe that a legally-

> trained judge is better qualified to determine the existence or sufficiency or appropriateness of evidence on a given point than a trained economist or engineer, an arbitrator selected by the parties, or simply an experienced tribunal member who decides such cases day in and day out. There is no reason to believe that a judge whose entire professional life has been spent dealing with disputes one by one should possess an aptitude for issues which arise often because an administrative system dealing with cases in volume has been designed to strike an appropriate balance between efficiency and effective rights of participation.
>
> ("Protection against Judicial Review" (1983), 43 *R. du B.* 277, at p. 289)

[234] Judges of this Court have endorsed both this passage and the broader proposition that specialization and expertise justify the deference owed to administrative decision-makers (*National Corn Growers*, at p. 1343, per Wilson J., concurring). As early as *C.U.P.E.*, Dickson J. fused expertise and legislative intent by explaining that an administrative body's specialized expertise can be essential to achieving the purposes of a statutory scheme:

> The Act calls for a delicate balance between the need to maintain public services, and the need to maintain collective bargaining. Considerable sensitivity and unique expertise on the part of Board members is all the more required if the twin purposes of the legislation are to be met. [p. 236]

[235] Over time, specialized expertise would become the core rationale for deferring to administrative decision-makers (*Bradco Construction*, at p. 335; *Southam*, at para. 50; Audrey Macklin, "Standard of Review: Back to the Future?", in Colleen M. Flood and Lorne Sossin, eds., *Administrative Law in Context* (3rd ed. 2018), 381 at pp. 397-98). Post-*Dunsmuir*, the Court has been steadfast in confirming the central role of specialization and expertise, affirming their connection to

legislative intent, and recognizing that they give administrative decision-makers the "interpretative upper hand" on questions of law (*McLean*, at para. 40; see also *Conway*, at para. 53; *Mowat*, at para. 30; *Newfoundland and Labrador Nurses' Union v. Newfoundland and Labrador (Treasury Board)*, [2011] 3 S.C.R. 708, at para. 13; *Doré v. Barreau du Québec*, [2012] 1 S.C.R. 395, at para. 35; *Mouvement laïque*, at para. 46; *Khosa*, at para. 25; *Edmonton East*, at para. 33).

[236] Although the majority's approach extolls respect for the legislature's "institutional design choices", it accords no weight to the institutional advantages of specialization and expertise that administrative decision-makers possess in resolving questions of law. In so doing, the majority disregards the historically accepted reason *why* the legislature intended to delegate authority to an administrative actor.

[237] Nor are we persuaded by the majority's claim that "if administrative decision makers are understood to possess specialized expertise on all questions that come before them, the concept of expertise ceases to assist a reviewing court in attempting to distinguish questions for which applying the reasonableness standard is appropriate from those for which it is not". Here, the majority sets up a false choice: expertise must either be assessed on a case-by-case basis or play no role at all in a theory of judicial review.

[238] We disagree. While not every decision-maker necessarily has expertise on every issue raised in an administrative proceeding, reviewing courts do not engage in an individualized, case-by-case assessment of specialization and expertise. The

theory of deference is based not only on the legislative choice to delegate decisions, but also on institutional expertise and on "the reality that . . . those working day to day in the implementation of frequently complex administrative schemes have or will develop a considerable degree of expertise or field sensitivity to the imperatives and nuances of the legislative regime" (*Khosa*, at para. 25; see also *Nor-Man Regional Health Authority Inc. v. Manitoba Association of Health Care Professionals*, [2011] 3 S.C.R. 616, at para. 53; *Edmonton East*, at para. 33).

[239] The exclusion of expertise, specialization and other institutional advantages from the majority's standard of review framework is not merely a theoretical concern. The removal of the current "conceptual basis" for deference opens the gates to expanded correctness review. The majority's "presumption" of deference will yield all too easily to justifications for a correctness-oriented framework.

[240] In the majority's framework, deference gives way whenever the "rule of law" demands it. The majority's approach to the rule of law, however, flows from a court-centric conception of the rule of law rooted in Dicey's 19th century philosophy.

[241] The rule of law is not the rule of courts. A pluralist conception of the rule of law recognizes that courts are not the exclusive guardians of law, and that others in the justice arena have shared responsibility for its development, including administrative decision-makers. *Dunsmuir* embraced this more inclusive view of the rule of law by acknowledging that the "court-centric conception of the rule of law"

had to be "reined in by acknowledging that the courts do not have a monopoly on deciding all questions of law" (para. 30). As discussed in *Dunsmuir*, the rule of law is understood as meaning that administrative decision-makers make legal determinations within their mandate, and not that only judges decide questions of law with an unrestricted license to substitute their opinions for those of administrative actors through correctness review (see McLachlin, *Administrative Tribunals and the Courts: An Evolutionary Relationship*; The Hon. Thomas A. Cromwell, "What I Think I've Learned About Administrative Law" (2017), 30 *C.J.A.L.P.* 307, at p. 308; *Wilson v. Atomic Energy of Canada Ltd.*, [2016] 1 S.C.R. 770, at para. 31, per Abella J.).

[242] Moreover, central to any definition of the rule of law is access to a fair and efficient dispute resolution process, capable of dispensing timely justice (*Hryniak v. Mauldin*, [2014] 1 S.C.R. 87, at para. 1). This is an important objective for all litigants, from the sophisticated consumers of administrative justice, to, most significantly, the particularly vulnerable ones (Angus Grant and Lorne Sossin, "Fairness in Context: Achieving Fairness Through Access to Administrative Justice", in Colleen M. Flood and Lorne Sossin, eds., *Administrative Law in Context* (3rd ed. 2018), 341, at p. 342). For this reason, access to justice is at the heart of the legislative choice to establish a robust system of administrative law (Grant and Sossin, at pp. 342 and 369-70; Van Harten, et al., at p. 17; Régimbald, at pp. 2-3; McLachlin, *Administrative Tribunals and the Courts: An Evolutionary Relationship*). As Morissette J.A. has observed:

> . . . the aims of administrative law . . . generally gravitate towards promoting access to justice. The means contemplated are costless or inexpensive, simple and expeditious procedures, expertise of the decision-makers, coherence of reasons, consistency of results and finality of decisions.
>
> (Yves-Marie Morissette, "What is a 'reasonable decision'?" (2018), 31 *C.J.A.L.P.* 225, at p. 236)

[243] These goals are compromised when a narrow conception of the "rule of law" is invoked to impose judicial hegemony over administrative decision-makers. Doing so perverts the purpose of establishing a parallel system of administrative justice, and adds unnecessary expense and complexity for the public.

[244] The majority even calls for a reformulation of the "questions of central importance" category from *Dunsmuir* and permits courts to substitute their opinions for administrative decision-makers on "questions of central importance to the legal system as a whole", even if those questions fall squarely within the mandate and expertise of the administrative decision-maker. As noted in *Canadian Human Rights Commission*, correctness review was permitted only for questions "of central importance to the legal system *and* outside the specialized expertise of the adjudicator" (para. 28 (emphasis in original)). Broadening this category from its original characterization unduly expands the issues available for judicial substitution. Issues of discrimination, labour rights, and economic regulation of the securities markets (among many others) theoretically raise questions of vital importance for Canada and its legal system. But by ignoring administrative decision-makers' expertise on these matters, this category will inevitably provide more "room . . . for

both mistakes and manipulation" (Andrew Green, "Can There Be Too Much Context in Administrative Law? Setting the Standard of Review in Canadian Administrative Law" (2014), 47 *U.B.C. L. Rev.* 443, at p. 483). We would leave *Dunsmuir*'s description of this category undisturbed.[1]

[245] We also disagree with the majority's reformulation of "legislative intent" to include, for the first time, an invitation for courts to apply correctness review to legal questions whenever an administrative scheme includes a right of appeal. We do not see how appeal rights represent a "different institutional structure" that requires a more searching form of review. The mere fact that a statute contemplates a reviewing role for a court says nothing about the *degree of deference* required in the review process. Rights of appeal reflect different choices by different legislatures to permit review for different reasons, on issues of fact, law, mixed fact and law, and discretion, among others. Providing parties with a right of appeal can serve several purposes entirely unrelated to the standard of review, including outlining: where the appeal will take place (sometimes, at a different reviewing court than in the routes provided for judicial review); who is eligible to take part; when materials must be filed; how materials must be presented; the reviewing court's powers on appeal; any leave requirements; and the grounds on which the parties may appeal (among other things). By providing this type of structure and guidance, statutory appeal provisions may allow legislatures to promote efficiency and access to justice, in a way that exclusive reliance on the judicial review procedure would not have.

[1] Other than one of the two *amici*, no one asked us to modify this category.

[246] In reality, the majority's position on statutory appeal rights, although couched in language about "giv[ing] effect to the legislature's institutional design choices", hinges almost entirely on a textualist argument: the presence of the word "appeal" indicates a legislative intent that courts apply the same standards of review found in civil appellate jurisprudence.

[247] The majority's reliance on the "presumption of consistent expression" in relation to the single word "appeal" is misplaced and disregards long-accepted institutional distinctions between how courts and administrative decision-makers function. The language in each setting is different; the mandates are different; the policy bases are different. The idea that *Housen v. Nikolaisen*, [2002] 2 S.C.R. 235, must be inflexibly applied to every right of "appeal" within a statute — with no regard for the broader purposes of the statutory scheme or the practical implications of greater judicial involvement within it — is entirely unsupported by our jurisprudence.

[248] In addition, the majority's claim that legislatures "d[o] not speak in vain" is irreconcilable with its treatment of privative clauses, which play no role in its standard of review framework. If, as the majority claims, Parliament's decision to provide appeal routes must influence the standard of review analysis, there is no

principled reason why Parliament's decision via privative clauses to *prohibit* appeals should not be given comparable effect.[2]

[249] In any event, legislatures in this country have known for at least 25 years since *Pezim* that this Court has not treated statutory rights of appeal as a determinative reflection of legislative intent regarding the standard of review (*Pezim*, at p. 590). Against this reality, the continued use by legislatures of the term "appeal" cannot be imbued with the intent that the majority retroactively ascribes to it; doing so is inconsistent with the principle that legislatures are presumed to enact legislation in compliance with existing common law rules (Ruth Sullivan, *Statutory Interpretation* (3rd ed. 2016), at p. 315).

[250] Those legislatures, moreover, understood from our jurisprudence that this Court was committed to respecting *standards* of review that were statutorily prescribed, as British Columbia alone has done.[3] We agree with the Attorney General of Canada's position in the companion appeals of *Bell Canada v. Canada (Attorney General)*, 2019 SCC 66, that, absent exceptional circumstances, the existence of a

[2] The "constitutional concerns" cited by the majority are no answer to this dilemma — nothing in *Crevier v. Attorney General of Quebec*, [1981] 2 S.C.R. 220, prevents privative clauses from influencing the *standard* of review, as they did for years under the pragmatic and functional approach and in *C.U.P.E.* (David Dyzenhaus, "Dignity in Administrative Law: Judicial Deference in a Culture of Justification" (2012), 17 *Rev. Const. Stud.* 87, at p. 103; David Mullan, "Unresolved Issues on Standard of Review in Canadian Judicial Review of Administrative Action – The Top Fifteen!" (2013), 42 *Adv. Q.* 1, at p. 21).

[3] See *Administrative Tribunals Act*, S.B.C. 2004, c. 45. Quebec's recent attempt to introduce such legislation is another example of a legislature which understood that it was free to set standards of review, and that the mere articulation of a right of appeal did not dictate what those standards would be: see Bill 32, *An Act mainly to promote the efficiency of penal justice and to establish the terms governing the intervention of the Court of Québec with respect to applications for appeal*, 1st Sess., 42nd Leg., 2019.

statutory right of appeal does not displace the presumption that the standard of reasonableness applies.[4] The majority, however, has inexplicably chosen the template proposed by the *amici*,[5] recommending a sweeping overhaul of our approach to legislative intent and to the determination of the standard of review.

[251] The result reached by the majority means that hundreds of administrative decision-makers subject to different kinds of statutory rights of appeal — some in highly specialized fields, such as broadcasting, securities regulation and international trade — will now be subject to an irrebuttable presumption of correctness review. This has the potential to cause a stampede of litigation. Reviewing courts will have license to freely revisit legal questions on matters squarely within the expertise of administrative decision-makers, even if they are of no broader consequence outside of their administrative regimes. Even if specialized decision-makers provide reasonable interpretations of highly technical statutes with which they work daily, even if they provide internally consistent interpretations responsive to the parties' submissions and consistent with the text, context and purpose of the governing scheme, the administrative body's past practices and decisions, the common law, prior judicial rulings and international law, those interpretations can still be set aside by a reviewing court that simply takes a different view of the relevant statute. This risks undermining the integrity of administrative proceedings whenever there is a statutory right of appeal, rendering them little more than rehearsals for a judicial appeal — the

[4] The notion that legislative intent finds determinative expression in statutory rights of appeal found no support in the submissions of four of the five attorneys general who appeared before us.

[5] Even the *amici* did not go so far as to say that *all* appeal clauses were indicative of a legislative intent for courts to substitute their views on questions of law.

inverse of the legislative intent to establish a specialized regime and entrust certain legal and policy questions to non-judicial actors.

[252] Ironically, the majority's approach will be a roadblock to its promise of simplicity. Elevating appeal clauses to indicators of correctness review creates a two-tier system of administrative law: one tier that defers to the expertise of administrative decision-makers where there is no appeal clause; and another tier where such clauses permit judges to substitute their own views of the legal issues at the core of those decision-makers' mandates. Within the second tier, the application of appellate law principles will inevitably create confusion by encouraging segmentation in judicial review (*Mouvement laïque*, at para. 173, per Abella J., concurring in part; see also Paul Daly, "Struggling Towards Coherence in Canadian Administrative Law? Recent Cases on Standard of Review and Reasonableness" (2016), 62 *McGill L.J.* 527, at pp. 542-43; The Hon. Joseph T. Robertson, "Identifying the Review Standard: Administrative Deference in a Nutshell" (2017), 68 *U.N.B.L.J.* 145, at p. 162). Courts will be left with the task of identifying palpable and overriding errors for factual questions, extricating legal issues from questions of mixed fact and law, reviewing questions of law *de novo*, and potentially having to apply judicial review and appellate standards interchangeably if an applicant challenges in one proceeding multiple aspects of an administrative decision, some falling within an appeal clause and others not. It is an invitation to complexity and a barrier to access to justice.

[253] The majority's reasons "roll back the *Dunsmuir* clock to an era where some courts asserted a level of skill and knowledge in administrative matters which further experience showed they did not possess" (*Khosa*, at para. 26). The reasons elevate statutory rights of appeal to a determinative factor based on a formalistic approach that ignores the legislature's intention to leave certain legal and policy questions to specialized administrative decision-makers. This unravelling of Canada's carefully developed, deferential approach to administrative law returns us to the "black letter law" approach found in *Anisminic* and cases like *Metropolitan Life* whereby specialized decision-makers were subject to the pre-eminent determinations of a judge. Rather than building on *Dunsmuir*, which recognized that specialization is fundamentally intertwined with the legislative choice to delegate particular subject matters to administrative decision-makers, the majority's reasons banish expertise from the standard of review analysis entirely, opening the door to a host of new correctness categories which remain open to further expansion. The majority's approach not only erodes the presumption of deference; it erodes confidence in the existence — and desirability — of the "shared enterprises in the administrative state" of "[l]aw-making and legal interpretation" between courts and administrative decision-makers (Stack, at p. 310).

[254] But the aspect of the majority's decision with the greatest potential to undermine both the integrity of this Court's decisions, and public confidence in the stability of the law, is its disregard for precedent and *stare decisis*.

[255] *Stare decisis* places significant limits on this Court's ability to overturn its precedents. Justice Rothstein described some of these limits in *Canada v. Craig*, [2012] 2 S.C.R. 489, the case about horizontal *stare decisis* on which the majority relies:

> The question of whether this Court should overrule one of its own prior decisions was addressed recently in *Ontario (Attorney General) v. Fraser*, 2011 SCC 20, [2011] 2 S.C.R. 3. At paragraph 56, Chief Justice McLachlin and LeBel J., in joint majority reasons, noted that overturning a precedent of this Court is a step not to be lightly undertaken. *This is especially so when the precedent represents the considered views of firm majorities* (para. 57).
>
> Nonetheless, this Court has overruled its own decisions on a number of occasions. (See *R. v. Chaulk*, [1990] 3 S.C.R. 1303, at p. 1353, *per* Lamer C.J., for the majority; *R. v. B. (K.G.)*, [1993] 1 S.C.R. 740; *R. v. Robinson*, [1996] 1 S.C.R. 683.) *However, the Court must be satisfied based on compelling reasons that the precedent was wrongly decided and should be overruled* . . . .
>
> Courts must proceed with caution when deciding to overrule a prior decision. In *Queensland v. Commonwealth* (1977), 139 C.L.R. 585 (H.C.A.), at p. 599, Justice Gibbs articulated the required approach succinctly:
>
>> No Justice is entitled to ignore the decisions and reasoning of his predecessors, and to arrive at his own judgment as though the pages of the law reports were blank, or as though the authority of a decision did not survive beyond the rising of the Court. A Justice, unlike a legislator, cannot introduce a programme of reform which sets at nought decisions formerly made and principles formerly established. It is only after the most careful and respectful consideration of the earlier decision, and after giving due weight to all the circumstances, that a Justice may give effect to his own opinions in preference to an earlier decision of the Court. [Emphasis added; paras. 24-26.]

[256] Apex courts in several jurisdictions outside Canada have similarly stressed the need for caution and compelling justification before departing from precedent. The United States Supreme Court refrains from overruling its past decisions absent a "special justification", which must be over and above the belief that a prior case was wrongly decided (*Kimble v. Marvel Entertainment, LLC.*, 135 S. Ct. 2401 (2015), at p. 2409; see also *Halliburton Co. v. Erica P. John Fund, Inc.*, 573 U.S. 258 (2014), at p. 266; *Kisor v. Wilkie*, 139 S. Ct. 2400 (2019), at pp. 2418 and 2422; Bryan A. Garner et al., *The Law of Judicial Precedent* (2016), at pp. 35-36).

[257] Similarly, the House of Lords "require[d] much more than doubts as to the correctness of [a past decision] to justify departing from it" (*Fitzleet Estates Ltd. v. Cherry* (1977), 51 T.C. 708, at p. 718), an approach that the United Kingdom Supreme Court continues to endorse (*R. v. Taylor*, [2016] UKSC 5, [2016] 4 All E.R. 617, at para. 19; *Willers v. Joyce (No. 2)*, [2016] UKSC 44, [2017] 2 All E.R. 383, at para. 7; *Knauer v. Ministry of Justice*, [2016] UKSC 9, [2016] 4 All E.R. 897, at paras. 22-23).

[258] New Zealand's Supreme Court views "caution, often considerable caution" as the "touchstone" of its approach to horizontal *stare decisis*, and has emphasized that it will not depart from precedent "merely because, if the matter were being decided afresh, the Court might take a different view" (*Couch v. Attorney-General (No. 2)*, [2010] NZSC 27, [2010] 3 N.Z.L.R. 149, at paras. 105, per Tipping J., and 209, per McGrath J.).

[259] Restraint and respect for precedent also guide the High Court of Australia and South Africa's Constitutional Court when applying *stare decisis* (*Lee v. New South Wales Crime Commission*, [2013] HCA 39, 302 A.L.R. 363, at paras. 62-66 and 70; *Camps Bay Ratepayers' and Residents' Association v. Harrison*, [2010] ZACC 19, 2011 (4) S.A. 42, at pp. 55-56; *Buffalo City Metropolitan Municipality v. Asla Construction Ltd.*, [2019] ZACC 15, 2019 (4) S.A. 331, at para. 65).

[260] The virtues of horizontal *stare decisis* are widely recognized. The doctrine "promotes the evenhanded, predictable, and consistent development of legal principles, fosters reliance on judicial decisions, and contributes to the actual and perceived integrity of the judicial process" (*Kimble*, at p. 2409, citing *Payne v. Tennessee*, 501 U.S. 808 (1991), at p. 827). This Court has stressed the importance of *stare decisis* for "[c]ertainty in the law" (*Canada (Attorney General) v. Bedford*, [2013] 3 S.C.R. 1101, at para. 38; *R. v. Bernard*, [1988] 2 S.C.R. 833, at p. 849; *Minister of Indian Affairs and Northern Development v. Ranville*, [1982] 2 S.C.R. 518, at p. 527). Other courts have described *stare decisis* as a "foundation stone of the rule of law" (*Michigan v. Bay Mills Indian Community*, 572 U.S. 782 (2014), at p. 798; *Kimble*, at p. 2409; *Kisor*, at p. 2422; see also *Camps Bay*, at pp. 55-56; Jeremy Waldron, "Stare Decisis and the Rule of Law: A Layered Approach" (2012), 111 *Mich. L. Rev.* 1, at p. 28; Lewis F. Powell, Jr., "Stare Decisis and Judicial Restraint" (1990), 47 *Wash. & Lee L. Rev.* 281, at p. 288).

[261] Respect for precedent also safeguards this Court's institutional legitimacy. The precedential value of a judgment of this Court does not "expire with the tenure of the particular panel of judges that decided it" (*Plourde v. Wal-Mart Canada Corp.*, [2009] 3 S.C.R. 465, at para. 13). American cases have stressed similar themes:

> There is . . . a point beyond which frequent overruling would overtax the country's belief in the Court's good faith. Despite the variety of reasons that may inform and justify a decision to overrule, we cannot forget that such a decision is usually perceived (and perceived correctly) as, at the least, a statement that a prior decision was wrong. There is a limit to the amount of error that can plausibly be imputed to prior Courts. If that limit should be exceeded, disturbance of prior rulings would be taken as evidence that justifiable reexamination of principle had given way to drives for particular results in the short term. The legitimacy of the Court would fade with the frequency of its vacillation.
>
> (*Planned Parenthood of Southeastern Pennsylvania v. Casey, Governor of Pennsylvania*, 505 U.S. 833 (1992), at p. 866; see also *Florida Department of Health and Rehabilitative Services v. Florida Nursing Home Association*, 450 U.S. 147 (1981), at p. 153, per Stevens J., concurring.)

[262] Several scholars have made this point as well (see e.g., Michael J. Gerhardt, *The Power of Precedent* (2008), at p. 18; Garner et al., at p. 391). Aharon Barak has warned that

> overruling precedent damages the public's conception of the judicial role, and undermines the respect in which the public holds the courts and its faith in them. Precedent should not resemble a ticket valid only for the day of purchase.
>
> ("Overruling Precedent" (1986), 21 *Is.L.R.* 269, at p. 275)

[263] The majority's reasons, in our view, disregard the high threshold required to overturn one of this Court's decisions. The justification for the majority abandoning this Court's long-standing view of how statutory appeal clauses impact the standard of review analysis is that this Court's approach was "unsound in principle" and criticized by judges and academics. The majority also suggests that the Court's decisions set up an "unworkable and unnecessarily complex" system of judicial review. Abandoning them, the majority argues, would promote the values underlying *stare decisis*, namely "clarity and certainty in the law". In doing so, the majority discards several of this Court's bedrock administrative law principles.

[264] The majority leaves unaddressed the most significant rejection of this Court's jurisprudence in its reasons — its decision to change the entire "conceptual basis" for judicial review by excluding specialization, expertise and other institutional advantages from the analysis. The lack of any justification for this foundational shift — repeatedly invoked by the majority to sanitize further overturning of precedent — undercuts the majority's stated respect for *stare decisis* principles.

[265] The majority explains its decision to overrule the Court's prior decisions about appeal clauses by asserting that these precedents had "no satisfactory justification". It does not point, however, to any arguments different from those heard and rejected by other panels of this Court over the decades whose decisions are being discarded. Instead, the majority substitutes its own preferred approach to interpreting statutory rights of appeal — an approach rejected by several prior panels of this Court

in a line of decisions stretching back three decades. The rejection of such an approach was explicitly reaffirmed *no fewer than four times in the past ten years* (*Khosa*, at para. 26; *Mowat*, at paras. 30-31; *Mouvement laïque*, at para. 38; *Edmonton East*, at paras. 27-31; see also *McLean*, at para. 21).

[266] Overruling these judgments flouts *stare decisis* principles, which prohibit courts from overturning past decisions which "simply represen[t] a preferred choice with which the current Bench does not agree" (*Couch*, at para. 105; see also *Knauer*, at para. 22; *Casey*, at p. 864). "[T]he entire idea of *stare decisis* is that judges do not get to reverse a decision just because they never liked it in the first instance" (*Knick v. Township of Scott, Pennsylvania*, 139 S. Ct. 2162 (2019), at p. 2190, per Kagan J., dissenting). As the United States Supreme Court noted in *Kimble*:

> . . . an argument that we got something wrong—even a good argument to that effect—cannot by itself justify scrapping settled precedent. Or otherwise said, it is not alone sufficient that we would decide a case differently now than we did then. To reverse course, we require as well what we have termed a "special justification"—over and above the belief "that the precedent was wrongly decided." [Citation omitted; p. 2409.]

[267] But it is the unprecedented wholesale rejection of an entire body of jurisprudence that is particularly unsettling. The affected cases are too numerous to list in full here. It includes many decisions conducting deferential review even in the face of a statutory right of appeal (*Pezim*; *Southam*; *Committee for Equal Treatment of Asbestos Minority Shareholders v. Ontario (Securities Commission)*, [2001] 2 S.C.R. 132; *Dr. Q*; *Ryan*; *Cartaway*; *VIA Rail*; *Association des courtiers et agents*

immobiliers du Québec v. Proprio Direct inc., [2008] 2 S.C.R. 195; *Nolan v. Kerry (Canada) Inc.*, [2009] 2 S.C.R. 678; *McLean*; *Bell Canada (2009)*; *ATCO Gas*; *Mouvement laïque*; *Igloo Vikski*; *Edmonton East*) and bedrock judgments affirming the relevance of administrative expertise to the standard of review analysis and to "home statute" deference (*C.U.P.E.*; *National Corn Growers*; *Domtar Inc.*; *Bradco Construction*; *Southam*; *Pushpanathan*; *Alberta Teachers' Association*; *Canadian Human Rights Commission*, among many others).

[268] Most of those decisions were decided unanimously or by strong majorities. At no point, however, does the majority acknowledge this Court's strong reluctance to overturn precedents that "represen[t] the considered views of firm majorities" (*Craig*, at para. 24; *Ontario (Attorney General) v. Fraser*, [2011] 2 S.C.R. 3, at para. 57; see also *Nishi v. Rascal Trucking Ltd.*, [2013] 2 S.C.R. 438, at paras. 23-24), or to overrule decisions of a "recent vintage" (*Fraser*, at para. 57; see also *Nishi*, at para. 23). The decisions the majority *does* rely on, by contrast, involved overturning usually only one precedent and almost always an older one: *Craig* overruled a 34-year-old precedent; *R. v. Henry*, [2005] 3 S.C.R. 609, overruled a 19-year-old precedent (and another 15-year-old precedent, in part); and the dissenting judges in *Bernard* would have overruled a 10-year-old precedent.

[269] The majority's decision to overturn precedent also has the potential to disturb settled interpretations of many statutes that contain a right of appeal. Under the majority's approach, every existing interpretation of such statutes by an

administrative body that has been affirmed under a reasonableness standard of review will be open to fresh challenge. In *McLean*, for example, this Court acknowledged that a limitations period in British Columbia's *Securities Act*[6] had two reasonable interpretations, but deferred to the one the Commission preferred based on deferential review. We see no reason why an individual in the same situation as Ms. McLean could not now revisit our Court's decision through the statutory right of appeal in the *Securities Act*, and insist that a new reviewing court offer *its* definitive view of the relevant limitations period now that appeal clauses are interpreted to permit judicial substitution rather than deference.

[270] The majority does not address the chaos that such legal uncertainty will generate for those who rely on settled interpretations of administrative statutes to structure their affairs, despite the fact that protecting these reliance interests is a well-recognized and especially powerful reason for respecting precedent (Garner et al., at pp. 404-11; Neil Duxbury, *The Nature and Authority of Precedent* (2008), at pp. 118-19; *Kimble*, at pp. 2410-11). By changing the entire status quo, the majority's approach will undermine legal certainty — "the foundational principle upon which the common law relies" (*Bedford*, at para. 38; see also Cromwell, at p. 315).

[271] Moreover, if this Court had for over 30 years significantly misconstrued the purpose of statutory appeal routes by failing to recognize what *this* majority has ultimately discerned — that in enacting such routes, legislatures were unequivocally

[6] R.S.B.C. 1996, c. 418, s. 159

directing courts to review *de novo* every question of law that an administrative body addresses, regardless of that body's expertise — legislatures across Canada were free to clarify this interpretation and endorse the majority's favoured approach through legislative amendment. Given the possibility — and continued absence — of legislative correction, the case for overturning our past decisions is even less compelling (*Binus v. The Queen*, [1967] S.C.R. 594, at p. 601; see also *Kimble*, at p. 2409; *Kisor*, at pp. 2422-23; *Bilski v. Kappos, Under Secretary of Commerce for Intellectual Property and Director, Patent and Trademark Office*, 561 U.S. 593 (2010), at pp. 601-2).

[272] Each of these rationales for adhering to precedent — consistent affirmation, reliance interests and the possibility of legislative correction — was recently endorsed by the United States Supreme Court in *Kisor*. There, the Court invoked *stare decisis* to uphold two administrative law precedents which urged deference to administrative agencies when they interpreted ambiguous provisions in their regulations (*Bowles, Price Administrator v. Seminole Rock & Sand Co.*, 325 U.S. 410 (1945); *Auer v. Robbins*, 519 U.S. 452 (1997)). Writing for the majority on the issue of *stare decisis*, Justice Kagan explained at length why the doctrine barred the Court from overturning *Auer* or *Seminole Rock*. To begin, Justice Kagan reiterated the importance of *stare decisis* and the need for special justification to overcome its demands. She then explained that *stare decisis* carried even greater force than usual when applied to two decisions that had been affirmed by a "long line of precedents" going back 75 years or more and cited by lower courts thousands of times (p. 2422).

She noted that overturning the challenged precedents would cast doubt on many settled statutory interpretations and invite relitigation of cases (p. 2422). Finally, Justice Kagan reasoned that Congress remained free to overturn the cases if the Court had misconstrued legislative intent:

> . . . even if we are wrong about *Auer*, "Congress remains free to alter what we have done." In a constitutional case, only we can correct our error. But that is not so here. Our deference decisions are "balls tossed into Congress's court, for acceptance or not as that branch elects." And so far, at least, Congress has chosen acceptance. It could amend the APA or any specific statute to require the sort of *de novo* review of regulatory interpretations that Kisor favors. Instead, for approaching a century, it has let our deference regime work side-by-side with both the APA and the many statutes delegating rulemaking power to agencies. It has done so even after we made clear that our deference decisions reflect a presumption about congressional intent. And it has done so even after Members of this Court began to raise questions about the doctrine. Given that history — and Congress's continuing ability to take up Kisor's arguments — we would need a particularly "special justification" to now reverse *Auer*. [Citations omitted; pp. 2422-23]

[273] In the face of these compelling reasons for adhering to precedent, many of which have found resonance in this Court's jurisprudence, the majority's reliance on "judicial and academic criticism" falls far short of overcoming the demands of *stare decisis*. It is hard to see why the *obiter* views of the handful of Canadian judges referred to by the majority should be determinative or even persuasive. The majority omits the views of any academics or judges who *have* voiced support for a strong presumption of deference without identifying our approach to statutory rights of appeal as cause for concern (Dyzenhaus, "Dignity in Administrative Law: Judicial Deference in a Culture of Justification", at p. 109; Green, at pp. 489-90; Matthew

Lewans, *Administrative Law and Judicial Deference* (2016); Jonathan M. Coady, "The Time Has Come: Standard of Review in Canadian Administrative Law" (2017), 68 *U.N.B.L.J.* 87; The Hon. John M. Evans, "Standards of Review in Administrative Law" (2013), 26 *C.J.A.L.P.* 67, at p. 79; The Hon. John M. Evans, "Triumph of Reasonableness: But How Much Does It Really Matter?" (2014), 27 *C.J.A.L.P.* 101; Jerry V. DeMarco, "Seeking Simplicity in Canada's Complex World of Judicial Review" (2019), 32 *C.J.A.L.P.* 67).

[274] A selective assortment of criticism is not evidence of generalized criticism or unworkability. This Court frequently tackles contentious, high-profile cases that engender strong and persisting divisions of opinion. The public looks to us to definitively resolve those cases, regardless of the composition of the Court. As Hayne J. noted in *Lee*:

> To regard the judgments of this Court as open to reconsideration whenever a new argument is found more attractive than the principle expressed in a standing decision is to overlook the function which a final court of appeal must perform in defining the law. In difficult areas of the law, differences of legal opinion are inevitable; before a final court of appeal, the choice between competing legal solutions oftentimes turns on the emphasis or weight given by each of the judges to one factor against a countervailing factor ... *In such cases, the decision itself determines which solution is, for the purposes of the current law, correct*. It is not to the point to argue in the next case that, leaving the particular decision out of account, another solution is better supported by legal theory. *Such an approach would diminish the authority and finality of the judgments of this Court.* As the function of defining the law is vested in the Court rather than in the justices who compose it, a decision of the Court will be followed in subsequent cases by the Court, however composed, subject to the exceptional power which resides in the Court to permit reconsideration.

> Accordingly, as one commentator has put the point: "the previous decision is to be treated as the primary premise from which other arguments follow, and not just as one potential premise among an aggregate of competing premises". [Emphasis in original; footnote omitted.]
>
> (paras. 65-66, citing *Baker v. Campbell*, [1983] HCA 39, 153 C.L.R. 52, at pp. 102-3)

[275] This Court, in fact, has been clear that "criticism of a judgment is not sufficient to justify overruling it" (*Fraser*, at para. 86). Differences of legal and public opinion are a natural by-product of contentious cases like *R. v. Jordan*, [2016] 1 S.C.R. 631, or even *Housen*, which, as this Court acknowledged, was initially applied by appeal courts with "varying degrees of enthusiasm" (*H.L. v. Canada (Attorney General)*, [2005] 1 S.C.R. 401, at para. 76; see also Paul M. Perell, "The Standard of Appellate Review and The Ironies of Housen v. Nikolaisen" (2004), 28 *Adv. Q.* 40, at p. 53; Mike Madden, "Conquering the Common Law Hydra: A Probably Correct and Reasonable Overview of Current Standards of Appellate and Judicial Review" (2010), 36 *Adv. Q.* 269, at pp. 278-79 and 293; Paul J. Pape and John J. Adair, "Unreasonable review: The losing party and the palpable and overriding error standard" (2008), 27 *Adv. J.* 6, at p. 8; Geoff R. Hall, "Two Unsettled Questions in the Law of Contractual Interpretation: A Call to the Supreme Court of Canada" (2011), 50 *Can. Bus. L.J.* 434, at p. 436).

[276] To justify circumventing this Court's jurisprudence, the majority claims that the precedents being overturned *themselves* departed from the approach to statutory rights of appeal under the pragmatic and functional test. That, with respect,

is wrong. Ever since *Bell Canada (1989)* and in several subsequent decisions outlined earlier in these reasons, statutory rights of appeal have played little or no role in the standard of review analysis. Moreover, in pre-*Dunsmuir* cases, statutory rights of appeal were still seen as only one factor among others — and *not* as unequivocal indicators of correctness review (see, for example, *Canada (Deputy Minister of National Revenue) v. Mattel Canada Inc.*, [2001] 2 S.C.R. 100, at paras. 27-33; *Chieu v. Canada (Minister of Citizenship and Immigration)*, [2002] 1 S.C.R. 84, at paras. 23-24; *Harvard College v. Canada (Commissioner of Patents)*, [2002] 4 S.C.R. 45, at paras. 149-51). Our pre- and post-*Dunsmuir* cases on statutory rights of appeal shared in common an unwavering commitment to determining the standard of review in administrative proceedings using administrative law principles, even when appeal rights were involved.

[277] For the majority, the elimination of the contextual factors appears to have justified the reconstruction of the whole judicial review framework. Yet the elimination of the contextual analysis was all but complete in our post-*Dunsmuir* jurisprudence, and does not support the foundational changes to judicial review in the majority's decision. Neither that development, nor the majority's assertion that our precedents have proven "unclear and unduly complex", justifies the conclusion that *all* of our administrative law precedents — even those unconnected to the practical difficulties in applying *Dunsmuir* — are suddenly fair game.

[278] This Court is overturning a long line of well-established and recently-affirmed precedents in a whole area of law, including several unanimous or strong majority judgments. There is no principled justification for such a dramatic departure from this Court's existing jurisprudence.

Going Forward

[279] In our view, a more modest approach to modifying our past decisions, one that goes no further than necessary to clarify the law and its application, is justified. "[W]hen a court does choose to overrule its own precedents, it should do so carefully, with moderation, and with due regard for all the important considerations that undergird the doctrine" (Garner et al., at pp. 41-42). Such an approach to changing precedent preserves the integrity of the judicial process and, at a more conceptual level, of the law itself as a social construct. Michael J. Gerhardt summarized this approach eloquently:

> Judicial modesty is . . . . a disposition to respect precedents (as embodying the opinions of others), to learn from their and others' experiences, and to decide cases incrementally to minimize conflicts with either earlier opinions of the Court or other constitutional actors. [p. 7]

[280] Judicial modesty promotes the responsible development of the common law. Lord Tom Bingham described that process in his seminal work, *The Rule of Law* (2010):

> . . . it is one thing to move the law a little further along a line on which it is already moving, or to adapt it to accord with modern views and practices; it is quite another to seek to recast the law in a radically innovative or adventurous way, because that is to make it uncertain and unpredictable, features which are the antithesis of the rule of law. [pp. 45-46]
>
> (See also Robert J. Sharpe, *Good Judgment: Making Judicial Decisions* (2018), at p. 93; Beverley McLachlin, "The Role of the Supreme Court of Canada in Shaping the Common Law", in Paul Daly, ed., *Apex Courts and the Common Law* (2019), 25, at p. 35; *R. v. Salituro*, [1991] 3 S.C.R. 654, at p. 670; *Friedmann Equity Developments Inc. v. Final Note Ltd.*, [2000] 1 S.C.R. 842, at para. 42; *R. v. Kang-Brown*, [2008] 1 S.C.R. 456, at paras. 14-16, per Lebel J., and 73-74, per Binnie J., concurring.)

[281] Lord Bingham's comments highlight that a nuanced balance must be struck between maintaining the stability of the common law and ensuring that the law is flexible and responsive enough to adapt to new circumstances and shifts in societal norms. *Stare decisis* plays a critical role in maintaining that balance and upholding the rule of law. When *stare decisis* is respected, precedent acts as a stabilizing force: providing certainty as to what the law is, consistency that allows those subject to the law to order their affairs accordingly, and continuity that protects reliance on those legal consequences. *Stare decisis* is at the heart of the iterative development of the common law, fostering progressive, incremental and responsible change.

[282] So what do we suggest? We support a standard of review framework with a meaningful rule of deference, based on *both* the legislative choice to delegate decision-making authority to an administrative actor *and* on the specialized expertise that these decision-makers possess and develop in applying their mandates. Outside of the three remaining correctness categories from *Dunsmuir* — and absent clear and

explicit legislative direction on the *standard* of review — administrative decisions should be reviewed for reasonableness. Like the majority, we support eliminating the category of "true questions of jurisdiction" and foreclosing the use of the contextual factors identified in *Dunsmuir*. These developments introduce incremental changes to our judicial review framework, while respecting its underlying principles and placing the ball in the legislatures' court to modify the standards of review if they wish.

[283] To the extent that concerns were expressed about the quality of administrative decision making by some interveners who represented particularly vulnerable groups, we agree that they must be taken seriously. But the solution does not lie in authorizing more incursions into the administrative system by generalist judges who lack the expertise necessary to implement these sensitive mandates. Any perceived shortcomings in administrative decision making are not solved by permitting *de novo* review of every legal decision by a court and, as a result, adding to the delay and cost of obtaining a final decision. The solution lies instead in ensuring the proper qualifications and training of administrative decision-makers. Like courts, administrative actors are fully capable of, and responsible for, improving the quality of their own decision-making processes, thereby strengthening access to justice in the administrative justice system.

[284] We also acknowledge that this Court should offer additional direction on conducting reasonableness review.[7] We fear, however, that the majority's multi-factored, open-ended list of "constraints" on administrative decision making will encourage reviewing courts to dissect administrative reasons in a "line-by-line treasure hunt for error" (*Communications, Energy and Paperworkers Union of Canada, Local 30 v. Irving Pulp & Paper, Ltd.*, [2013] 2 S.C.R. 458, at para. 54). These "constraints" may function in practice as a wide-ranging catalogue of hypothetical errors to justify quashing an administrative decision — a checklist with unsettling similarities to the series of "jurisdictional errors" spelled out in *Anisminic* itself.

[285] Structuring reasonableness review in this fashion effectively imposes on administrative decision-makers a higher standard of justification than that applied to trial judges. Such an approach undercuts deference and revives a long-abandoned posture of suspicion towards administrative decision making. We are also concerned by the majority's warning that administrative decision-makers cannot "arrogate powers to themselves that they were never intended to have", an unhelpful truism that risks reintroducing the tortured concept of "jurisdictional error" by another name.

[286] We would advocate a continued approach to reasonableness review which focuses on the concept of *deference* and what it requires of reviewing courts. Curial deference, after all, is *the* hallmark of reasonableness review, setting it apart

[7] Consistent with requests from some commentators and some of the interveners at these hearings, including the Canadian Bar Association and the Council of Canadian Administrative Tribunals (see also Mullan, at pp. 76-78).

from the substitution of opinion permitted under the correctness standard. The choice of a particular standard of review — whether described as "correctness", "reasonableness" or in other terms — is fundamentally about "whether or not a reviewing court should defer"[8] to an administrative decision (see *Dunsmuir*, at para. 141, per Binnie J., concurring; Régimbald, at pp. 539-40). If courts, therefore, are to properly conduct "reasonableness" review, they must properly understand what deference means.

[287] In our view, deference imposes three requirements on courts conducting reasonableness review. It informs the attitude a reviewing court must adopt towards an administrative decision-maker; it affects how a court frames the question it must answer on judicial review; and it affects how a reviewing court evaluates challenges to an administrative decision.

[288] First and foremost, deference is an "attitude of the court" conducting reasonableness review (*Dunsmuir*, at para. 48). Deference mandates respect for the legislative choice to entrust a decision to administrative actors rather than to the courts, and for the important role that administrative decision-makers play in upholding and applying the rule of law (*Toronto (City) v. C.U.P.E., Local 79*, [2003] 3 S.C.R. 77, at para. 131, per LeBel J., concurring). Deference also requires respect for administrative decision-makers, their specialized expertise and the institutional setting in which they operate (*Dunsmuir*, at paras. 48-49). Reviewing courts must pay

[8] Factum of the intervener the Canadian Association of Refugee Lawyers, at para. 5; factum of the intervener the Council of Canadian Administrative Tribunals, at paras. 24-26.

"respectful attention" to the reasons offered for an administrative decision, make a genuine effort to understand why the decision was made, and give the decision a fair and generous construction in light of the entire record (*Newfoundland Nurses*, at paras. 11-14 and 17).

[289] Second, deference affects how a court frames the question it must answer when conducting judicial review. A reviewing court does not ask how it would have resolved an issue, but rather, whether the answer provided by the administrative decision-maker has been shown to be unreasonable (*Khosa*, at paras. 59 and 61-62; *Dunsmuir*, at para. 47). Framing the inquiry in this way ensures that the administrative decision under review is the focus of the analysis.

[290] This Court has often endorsed this approach to conducting reasonableness review. In *Ryan*, for example, Iacobucci J. explained:

> . . . When deciding whether an administrative action was unreasonable, a court should not at any point ask itself what the correct decision would have been . . . . The standard of reasonableness does not imply that a decision-maker is merely afforded a "margin of error" around what the court believes is the correct result.
>
> . . . Unlike a review for correctness, there will often be no single right answer to the questions that are under review against the standard of reasonableness . . . . Even if there could be, notionally, a single best answer, it is not the court's role to seek this out when deciding if the decision was unreasonable. [paras. 50-51]
>
> (See also *Volvo Canada Ltd. v. U.A.W., Local 720*, [1980] 1 S.C.R. 178, at p. 214; *Toronto (City)*, at paras. 94-95, per LeBel J., concurring; *VIA Rail*, at para. 101; *Mason v. Minister of Citizenship and Immigration*, 2019 FC 1251, at para. 22 (CanLII), per Grammond J.; Régimbald, at p. 539; Sharpe, at pp. 204 and 208; Paul Daly, "The Signal and the Noise in

> Administrative Law" (2017), 68 *U.N.B.L.J.* 68, at p. 85; Evans, "Triumph of Reasonableness: But How Much Does It Really Matter?", at p. 107.)

[291] Third, deferential review impacts how a reviewing court evaluates challenges to an administrative decision. Deference requires the applicant seeking judicial review to bear the onus of showing that the decision was unreasonable (*Williams Lake Indian Band v. Canada (Aboriginal Affairs and Northern Development)*, [2018] 1 S.C.R. 83, at para. 108; *Mission Institution v. Khela*, [2014] 1 S.C.R. 502, at para. 64; *May v. Ferndale Institution*, [2005] 3 S.C.R. 809, at para. 71; *Ryan*, at para. 48; *Southam*, at para. 61; *Northern Telecom Ltd. v. Communications Workers of Canada*, [1980] 1 S.C.R. 115, at p. 130). Focusing on whether the applicant has demonstrated that the decision is unreasonable reinforces the central role that administrative decisions play in a properly deferential review process, and confirms that the decision-maker does not have to persuade the court that its decision is reasonable.

[292] Assessing whether a decision is reasonable also requires a qualitative assessment. Reasonableness is a concept that pervades the law but is difficult to define with precision (*Dunsmuir*, at para. 46). It requires, by its very nature, a fact-specific inquiry that involves a certain understanding of common experience. Reasonableness cannot be reduced to a formula or a checklist of factors, many of which will not be relevant to a particular decision. Ultimately, whether an administrative decision is reasonable will depend on the context (*Catalyst Paper Corp. v. North Cowichan (District)*, [2012] 1 S.C.R. 5, at para. 18). Administrative

law covers an infinite variety of decisions and decision-making contexts, as LeBel J. colourfully explained in *Blencoe v. British Columbia (Human Rights Commission)*, [2000] 2 S.C.R. 307, at para. 158 (dissenting in part, but not on this point):

> . . . not all administrative bodies are the same. Indeed, this is an understatement. At first glance, labour boards, police commissions, and milk control boards may seem to have about as much in common as assembly lines, cops, and cows! Administrative bodies do, of course, have some common features, but the diversity of their powers, mandate and structure is such that to apply particular standards from one context to another might well be entirely inappropriate . . . .

[293] Deference, in our view, requires approaching each administrative decision on its own terms and in its own context. But we emphasize that the inherently contextual nature of reasonableness review does not mean that the degree of scrutiny applied by a reviewing court varies (*Alberta Teachers' Association*, at para. 47; *Wilson*, at para. 18). It merely means that when assessing a challenge to an administrative decision, a reviewing court must be attentive to all relevant circumstances, including the reasons offered to support the decision, the record, the statutory scheme and the particular issues raised by the applicant, among other factors (see, for example, *Suresh v. Canada (Minister of Citizenship and Immigration)*, [2002] 1 S.C.R. 3, at para. 40; *Newfoundland Nurses*, at para. 18; Van Harten et al., at p. 794). Without this context, it is impossible to determine what constitutes a sufficiently compelling justification to quash a decision under reasonableness review. Context may make a challenge to an administrative decision more or less persuasive

— but it does not alter the deferential posture of the reviewing court (*Suresh*, at para. 40).

[294] Deference, however, does not require reviewing courts to shirk their obligation to review the decision. So long as they maintain a respectful attitude, frame the judicial review inquiry properly and demand compelling justification for quashing a decision, reviewing courts are entitled to meaningfully probe an administrative decision. A thorough evaluation by a reviewing court is not "disguised correctness review", as some have used the phrase. Deference, after all, stems from respect, not inattention to detail.

[295] Bearing this in mind, we offer the following suggestions for conducting reasonableness review. We begin with situations where reasons are required.[9]

[296] The administrative decision is the focal point of the review exercise. Where reasons are provided, they serve as the natural starting point to determine whether the decision-maker acted reasonably (*Williams Lake*, at para. 36). By beginning with the reasons offered for the decision, read in light of the surrounding context and the grounds raised to challenge the decision, reviewing courts provide meaningful oversight while respecting the legitimacy of specialized administrative decision making.

---

[9] Under the duty of procedural fairness outlined in *Baker v. Canada (Minister of Citizenship and Immigration)*, [1999] 2 S.C.R. 817, at para. 43.

[297] Reviewing courts should approach the reasons with respect for the specialized decision-makers, the significant role they have been assigned and the institutional context chosen by the legislator. Reasons should be approached generously, on their own terms. Reviewing courts should be hesitant to second-guess operational implications, practical challenges and on-the-ground knowledge used to justify an administrative decision. Reviewing courts must also remain alert to specialized concepts or language used in an administrative decision that may be unfamiliar to a generalist judge (*Newfoundland Nurses*, at para. 13; *Igloo Vikski*, at paras. 17 and 30). When confronted with unfamiliar language or modes of reasoning, judges should acknowledge that such differences are an inevitable, intentional and invaluable by-product of the legislative choice to assign a matter to the administrative system. They may lend considerable force to an administrative decision and, by the same token, render an applicant's challenge to that decision less compelling. Reviewing courts scrutinizing an administrative body's decision under the reasonableness framework should therefore keep in mind that the administrative body holds the "interpretative upper hand" (*McLean*, at para. 40).

[298] Throughout the review process, a court conducting deferential review must view claims of administrative error in context and with caution, cognizant of the need to avoid substituting its opinion for that of those empowered and better equipped to answer the questions at issue. Because judicial substitution is incompatible with deference, reviewing courts must carefully evaluate the challenges raised by an applicant to ensure they go to the *reasonableness* of the administrative decision.

[299] Unsurprisingly, applicants rarely present challenges to an administrative decision as explicit invitations for courts to substitute their opinions for those of administrative actors. Courts, therefore, must carefully probe challenges to administrative decisions to assess whether they amount, in substance, to a mere difference of opinion with how the administrative decision-maker weighed or prioritized the various factors relevant to the decision-making process. Allegations of error may, on deeper examination, simply reflect a legitimate difference in approach by an administrative decision-maker. By rooting out and rejecting such challenges, courts respect the valuable and distinct perspective that administrative bodies bring to answering legal questions, flowing from the considerable expertise and field sensitivity they develop by administering their mandate and working within the intricacies of their statutory context on a daily basis. The understanding and insights of administrative actors enhance the decision-making process and may be more conducive to reaching a result "that promotes effective public policy and administration . . . than the limited knowledge, detachment, and modes of reasoning typically associated with courts of law" (*National Corn Growers*, at pp. 1336-37 (emphasis deleted), per Wilson J., concurring, citing J. M. Evans et al., *Administrative Law: Cases, Text, and Materials* (3rd ed. 1989), at p. 414).

[300] When resolving challenges to an administrative decision, courts must also consider the *materiality* of any alleged errors in the decision-maker's reasoning. Under reasonableness review, an error is not necessarily sufficient to justify quashing a decision. Inevitably, the weight of an error will depend on the extent to which it

affects the decision. An error that is peripheral to the administrative decision-maker's reasoning process, or overcome by more compelling points advanced in support of the result, does not provide fertile ground for judicial review. Ultimately, the role of the reviewing court is to examine the decision as a whole to determine whether it is reasonable (*Dunsmuir*, at para. 47; *Khosa*, at para. 59). Considering the materiality of any impugned errors is a natural part of this exercise, and of reading administrative reasons "together with the outcome" (*Newfoundland Nurses*, at para. 14).

[301] Review of the decision as a whole is especially vital when an applicant alleges that an administrative decision contains material omissions. Significantly, and as this Court has frequently emphasized, administrative decision-makers are not required to consider and comment upon every issue raised by the parties in their reasons (*Construction Labour Relations v. Driver Iron Inc.*, [2012] 3 S.C.R. 405, at para. 3; *Newfoundland Nurses*, at para. 16, citing *Service Employees' International Union, Local No. 333 v. Nipawin District Staff Nurses Association*, [1975] 1 S.C.R. 382, at p. 391). Further, a reviewing court is not restricted to the four corners of the written reasons delivered by the decision-maker and should, if faced with a gap in the reasons, look to the record to see if it sheds light on the decision (*Williams Lake*, at para. 37; *Delta Air Lines Inc. v. Lukács*, [2018] 1 S.C.R. 6, at para. 23; *Newfoundland Nurses*, at para. 15; *Alberta Teachers' Association*, at paras. 53 and 56).

[302] The use of the record and other context to supplement a decision-maker's reasons has been the subject of some academic discussion (see, for example, Mullan,

at pp. 69-74). We support a flexible approach to supplementing reasons, which is consistent with the flexible approach used to determine whether administrative reasons must be provided to begin with and sensitive to the "day-to-day realities of administrative agencies" (*Baker*, at para. 44), which may not be conducive to the production of "archival" reasons associated with court judgments (para. 40, citing Roderick A. Macdonald and David Lametti, "Reasons for Decision in Administrative Law" (1990), 3 *C.J.A.L.P.* 123).

[303] Some materials that may help bridge gaps in a reviewing court's understanding of an administrative decision include: the record of any formal proceedings as well as the materials before the decision-maker, past decisions of the administrative body, and policies or guidelines developed to guide the type of decision under review (see Matthew Lewans, "Renovating Judicial Review" (2017), 68 *U.N.B.L.J.* 109, at pp. 137-38). Reviewing these materials may assist a court in understanding, "by inference", why an administrative decision-maker reached a particular outcome (*Baker*, at para. 44; see also *Williams Lake*, at para. 37; *Mills v. Ontario (Workplace Safety and Insurance Appeals Tribunal (Ont.)*, 2008 ONCA 436, 237 O.A.C. 71, at paras. 38-39). It may reveal further confirmatory context for a line of reasoning employed by the decision-maker — by showing, for example, that the decision-maker's understanding of the purpose of its statutory mandate finds support in the provision's legislative history (*Celgene Corp. v. Canada (Attorney General)*, [2011] 1 S.C.R. 3, at paras. 25-29). Reviewing the record can also yield responses to the specific challenges raised by an applicant on judicial review, responses that are

“consistent with the process of reasoning” applied by the administrative decision-maker (*Igloo Vikski*, at para. 45). In these ways, reviewing courts may legitimately supplement written reasons without “supplant[ing] the analysis of the administrative body” (*Lukács*, at para. 24).

[304] The “adequacy” of reasons, in other words, is not “a stand-alone basis for quashing a decision” (*Newfoundland Nurses*, at para. 14). As this Court has repeatedly confirmed, reasons must instead “be read together with the outcome and serve the purpose of showing whether the result falls within a range of possible outcomes” (*Newfoundland Nurses*, at para. 14; *Halifax (Regional Municipality) v. Canada (Public Works and Government Services)*, [2012] 2 S.C.R. 108, at para. 44; *Agraira v. Canada (Public Safety and Emergency Preparedness)*, [2013] 2 S.C.R. 559, at para. 52; *Williams Lake*, at para. 141, per Rowe J., dissenting, but not on this point). This approach puts substance over form in situations where the basis for a decision by a specialized administrative actor is evident on the record, but not clearly expressed in written reasons. Quashing decisions in such circumstances defeats the purpose of deference and thwarts access to justice by wasting administrative and judicial resources.

[305] In our view, therefore, if an applicant claims that an administrative decision-maker failed to address a relevant factor in reaching a decision, the reviewing court must consider the submissions and record before the decision-maker, and the materiality of any such omission to the decision rendered. An administrative

decision-maker's failure, for example, to refer to a particular statutory provision or the full factual record before it does not automatically entitle a reviewing court to conduct a *de novo* assessment of the decision under review. The inquiry must remain focussed on whether the applicant has satisfied the burden of showing that the omission renders the decision reached unreasonable.

[306] We acknowledge that respecting the line between reasonableness and correctness review has posed a particular challenge for judges when reviewing interpretation by administrative decision-makers of their statutory mandates. Judges routinely interpret statutes and have developed a template for how to scrutinize words in that context. But the same deferential approach we have outlined above must apply with equal force to statutory interpretation cases. When reviewing an administrative decision involving statutory interpretation, a court should not assess the decision by determining what, in its own view, would be a reasonable interpretation. Such an approach "imperils deference" (Paul Daly, "Unreasonable Interpretations of Law" (2014), 66 *S.C.L.R.* (2d) 233, at p. 250).

[307] We agree with Justice Evans that "once [a] court embarks on its own interpretation of the statute to determine the reasonableness of the tribunal's decision, there seems often to be little room for deference" (Evans, "Triumph of Reasonableness: But How Much Does It Really Matter?", at p. 109; see also *Mason*, at para. 34; Dyzenhaus, "Dignity in Administrative Law: Judicial Deference in a Culture of Justification", at p. 108; Daly, "Unreasonable Interpretations of Law", at

pp. 254-55). We add that a *de novo* interpretation of a statute, conducted as a prelude to "deferential" review, necessarily omits a vital piece of the interpretive puzzle: the perspective of the front-line, specialized administrative body that routinely applies the statutory scheme in question (Dyzenhaus, "The Politics of Deference: Judicial Review and Democracy", at p. 304; Paul Daly, "Deference on Questions of Law" (2011), 74 *Mod. L. Rev.* 694). By placing that perspective at the heart of the judicial review inquiry, courts display respect for administrative specialization and expertise, and for the legislative choice to delegate certain questions to non-judicial bodies.

[308] Conversely, by imposing their own interpretation of a statutory provision, courts *undermine* legislative intent to confide a mandate to the decision-maker. Applying a statute will almost always require some interpretation, making the interpretive mandate of administrative decision-makers inherent to their legislative mandate. The decision-maker who applies the statute has primary responsibility for interpreting the provisions in order to carry out their mandate effectively.

[309] Administrative decision-makers performing statutory interpretation should therefore be permitted to be guided by their expertise and knowledge of the practical realities of their administrative regime. In many cases, the "ordinary meaning" of a word or term makes no sense in a specialized context. And in some settings, law and policy are so inextricably at play that they give the words of a statute a meaning unique to a particular specialized context (*National Corn Growers*, at p. 1336, per Wilson J., concurring; *Domtar Inc.*, at p. 800). Further, not only are

statutory provisions sometimes capable of bearing more than one reasonable interpretation, they are sometimes drafted in general terms or with "purposeful ambiguity" in order to permit adaptation to future, unknown circumstances (see Felix Frankfurter, "Some Reflections on the Reading of Statutes" (1947), 47 *Colum. L. Rev.* 527, at p. 528). These considerations make it all the more compelling that reviewing courts avoid imposing judicial norms on administrative decision-makers or maintaining a dogmatic insistence on formalism. Where a decision-maker can explain its decision adequately, that decision should be upheld (Daly, "Unreasonable Interpretations of Law", at pp. 233-34, 250 and 254-55).

[310] Justice Brown's reasons in *Igloo Vikski* provide a useful illustration of a properly deferential approach to statutory interpretation. That case involved an interpretation of the *Customs Tariff*, S.C. 1997, c. 36, as it applies to hockey goaltender gloves. The Canada Border Services Agency had classified the gloves as "[g]loves, mittens [or] mitts". Igloo Vikski argued they should have been classified as sporting equipment. The Canadian International Trade Tribunal ("CITT") confirmed the initial classification. The Federal Court of Appeal reversed the decision.

[311] Acknowledging that the "specific expertise" of the CITT gave it the upper hand over a reviewing court with respect to certain questions of law, Justice Brown determined that the standard of review was reasonableness. Writing for seven other members of the Court, he carefully reviewed the reasons of the CITT and how it had engaged with Igloo Vikski's arguments before turning to the errors alleged by

Igloo Vikski and the Federal Court of Appeal. Conceding that the CITT reasons lacked "perfect clarity", Justice Brown nevertheless concluded that the Tribunal's interpretation was reasonable. While he agreed with Igloo Vikski that an alternate interpretation to that given by the CITT was available, the inclusive language of the applicable statute was broad enough to accommodate the CITT's reasonable interpretation. By beginning with the reasons offered for the interpretation and turning to the challenges mounted against it in light of the surrounding context, *Igloo Vikski* provides an excellent example of respectful and properly deferential judicial review.

[312] We conclude our discussion of reasonableness review by addressing cases where reasons are neither required nor available for judicial review. In these circumstances, a reviewing court should remain focussed on whether the decision has been shown to be unreasonable. The reasonableness of the decision may be justified by past decisions of the administrative body (see *Edmonton East*, at paras. 38 and 44-46; *Alberta Teachers' Association*, at paras. 56-64). In other circumstances, reviewing courts may have to assess the reasonableness of the outcome in light of the procedural context surrounding the decision (see *Law Society of British Columbia v. Trinity Western University*, [2018] 2 S.C.R. 293, at paras. 51-56; *Edmonton East*, at paras. 48-60; *Catalyst Paper Corp.*, at paras. 32-36). In all cases, the question remains whether the challenging party has demonstrated that a decision is unreasonable.

[313] In sum, reasonableness review is based on deference to administrative decision-makers and to the legislative intention to confide in them a mandate. Deference must inform the attitude of a reviewing court and the nature of its analysis: the court does not ask how it would have resolved the issue before the administrative decision-maker but instead evaluates whether the decision-maker acted reasonably. The reviewing court starts with the reasons offered for the administrative decision, read in light of the surrounding context and based on the grounds advanced to challenge the reasonableness of the decision. The reviewing court must remain focussed on the reasonableness of the decision viewed as a whole, in light of the record, and with attention to the materiality of any alleged errors to the decision-maker's reasoning process. By properly conducting reasonableness review, judges provide careful and meaningful oversight of the administrative justice system while respecting its legitimacy and the perspectives of its front-line, specialized decision-makers.

Application to Mr. Vavilov

[314] Alexander Vavilov challenges the Registrar of Citizenship's decision to cancel his citizenship certificate. The Registrar concluded that Mr. Vavilov was not a Canadian citizen, and therefore not entitled to a certificate of Canadian citizenship because, although he was born in Canada, his parents were "other representative[s] or employee[s] in Canada of a foreign government" within the meaning of s. 3(2)(a) of the *Citizenship Act*, R.S.C. 1985, c. C-29.

[315] The first issue is the applicable standard of review. We agree with the majority that reasonableness applies.

[316] The second issue is whether the Registrar was reasonable in concluding that the exception to Canadian citizenship in s. 3(2)(a) applies not only to parents who enjoy diplomatic privileges and immunities, but also to intelligence agents of a foreign government. The onus is therefore on Mr. Vavilov to satisfy the reviewing court that the decision was unreasonable. In our view, he has met that onus.

[317] Mr. Vavilov was born in Canada in 1994. His Russian parents, Elena Vavilova and Andrey Bezrukov, entered Canada at some point prior to his birth, assumed the identities of two deceased Canadians and fraudulently obtained Canadian passports. After leaving Canada to live in France, Mr. Vavilov and his family moved to the United States. While in the United States, Mr. Vavilov's parents became American citizens under their assumed Canadian identities. Mr. Vavilov and his older brother also obtained American citizenship.

[318] In June 2010, agents of the United States Federal Bureau of Investigation arrested Mr. Vavilov's parents and charged them with conspiracy to act as unregistered agents of a foreign government and to commit money laundering. Mr. Vavilov's parents pleaded guilty to the conspiracy charges in July 2010 and were returned to Russia in a spy swap. Around the same time, Mr. Vavilov and his brother travelled to Russia. The American government subsequently revoked Mr. Vavilov's

passport and citizenship. In December 2010, he was issued a Russian passport and birth certificate.

[319] From 2010 to 2013, Mr. Vavilov repeatedly sought a Canadian passport. In December 2011, he obtained an amended Ontario birth certificate, showing his parents' true names and places of birth. Using this birth certificate, Mr. Vavilov applied for and received a certificate of Canadian citizenship in January 2013. Relying on these certificates, Mr. Vavilov applied for an extension of his Canadian passport in early 2013. On July 18, 2013, the Registrar wrote to Mr. Vavilov, informing him that there was reason to believe the citizenship certificate had been erroneously issued and asking him for additional information.

[320] On April 22, 2014, Mr. Vavilov provided extensive written submissions to the Registrar. He argued that the narrow exception set out in s. 3(2) of the Act does not apply to him. Because he was born in Canada, he is entitled to Canadian citizenship. Mr. Vavilov also argued that the Registrar had failed to respect the requirements of procedural fairness.

[321] The Registrar wrote to Mr. Vavilov on August 15, 2014, cancelling his certificate of Canadian citizenship. In her view, because Mr. Vavilov met the two statutory restrictions in s. 3(2) of the Act, he was not a Canadian citizen. First, when Mr. Vavilov was born in Canada, neither of his parents were Canadian citizens or lawfully admitted to Canada for permanent residence. Second, as unofficial agents working for Russia's Foreign Intelligence Service, Mr. Vavilov's parents were "other

representative[s] or employee[s] in Canada of a foreign government" within the meaning of s. 3(2)(a).

[322] The Federal Court ([2016] 2 F.C.R. 39) dismissed Mr. Vavilov's application for judicial review. It found that the Registrar had satisfied the requirements of procedural fairness and, applying a correctness standard, determined that the Registrar's interpretation of s. 3(2)(a) was correct. The Federal Court then reviewed the application of s. 3(2)(a) on a reasonableness standard and concluded that the Registrar had reasonably determined that Mr. Vavilov's parents were working in Canada as undercover agents of the Russian government at the time of his birth.

[323] The Federal Court of Appeal ([2018] 3 F.C.R. 75) allowed the appeal and quashed the Registrar's decision to cancel Mr. Vavilov's citizenship certificate. Writing for the majority, Stratas J.A. agreed that the requirements of procedural fairness were met but held that the Registrar's interpretation of s. 3(2)(a) was unreasonable. In his view, only those who enjoy diplomatic privileges and immunities fall within the exception to citizenship found in s. 3(2)(a). Justice Stratas reached this conclusion after considering the context and purpose of the provision, its legislative history and international law principles related to citizenship and diplomatic privileges and immunities.

[324] As a general rule, administrative decisions are to be judicially reviewed for reasonableness. None of the correctness exceptions apply to the Registrar's

interpretation of the Act in this case. As such, the standard of review is reasonableness.

[325] The following provisions of the *Citizenship Act* are relevant to this appeal:

> **Persons who are citizens**
>
> **3 (1)** Subject to this Act, a person is a citizen if
>
> > **(a)** the person was born in Canada after February 14, 1977;
>
> . . .
>
> **Not applicable to children of foreign diplomats, etc.**
>
> **(2)** Paragraph (1)(a) does not apply to a person if, at the time of his birth, neither of his parents was a citizen or lawfully admitted to Canada for permanent residence and either of his parents was
>
> > **(a)** a diplomatic or consular officer or other representative or employee in Canada of a foreign government;
> >
> > **(b)** an employee in the service of a person referred to in paragraph (a); or
> >
> > **(c)** an officer or employee in Canada of a specialized agency of the United Nations or an officer or employee in Canada of any other international organization to whom there are granted, by or under any Act of Parliament, diplomatic privileges and immunities certified by the Minister of Foreign Affairs to be equivalent to those granted to a person or persons referred to in paragraph (a).

The general rule embodied in s. 3(1)(a) of the Act is that persons born in Canada are Canadian citizens. Section 3(2) sets out an exception to this rule. As such, if s. 3(2) applies to Mr. Vavilov, he was never a Canadian citizen.

[326] The specific issue in this case is whether the Registrar's interpretation of the statutory exception to citizenship was reasonable. Reasonableness review entails deference to the decision-maker, and we begin our analysis by examining the reasons offered by the Registrar in light of the context and the grounds argued.

[327] In this case, the Registrar's letter to Mr. Vavilov summarized the key points underlying her decision. In concluding that Mr. Vavilov was not entitled to Canadian citizenship, the Registrar adopted the recommendations of an analyst employed by Citizenship and Immigration Canada. As such, the analyst's report properly forms part of the reasons supporting the Registrar's decision.

[328] The analyst's report sought to answer the question of whether Mr. Vavilov was erroneously issued a certificate of Canadian citizenship. The report identifies the key question in this case as being whether either of Mr. Vavilov's parents was a "representative" or "employee" of a foreign government within the meaning of s. 3(2)(a). Much of the report relates to matters not disputed in this appeal, including the legal status of Mr. Vavilov's parents in Canada and their employment as Russian intelligence agents.

[329] The analyst began her analysis with the text of s. 3(2)(a). In concluding that the provision operates to deny Mr. Vavilov Canadian citizenship, she set out two textual arguments. First, she compared the current version of s. 3(2)(a) to an earlier iteration of the exception found in s. 5(3) of the *Canadian Citizenship Act*, R.S.C. 1970, c. C-19:

Not applicable to children of foreign diplomats, etc.

(3) Subsection (1) does not apply to a person if, at the time of that person's birth, his responsible parent

(*a*) is an alien who has not been lawfully admitted to Canada for permanent residence; and

(*b*) is

(i) a foreign diplomatic or consular officer or a representative of a foreign government <u>accredited to Her Majesty</u>,

(ii) an employee of a foreign government <u>attached to or in the service of a foreign diplomatic mission or consulate in Canada</u>, or

(iii) an employee in the service of a person referred to in subparagraph (i).

[330] The analyst stated that the removal of references to official accreditation or a diplomatic mission indicate that the previous exception was narrower than s. 3(2)(a). She then pointed out that the definition of "diplomatic or consular officer" in s. 35(1) of the *Interpretation Act*, R.S.C. 1985, c. I-21, clearly associates these individuals with diplomatic positions. Because the current version of s. 3(2)(a) does not link "other representative or employee in Canada of a foreign government" to a diplomatic mission, the analyst determined "it is reasonable to maintain that this provision intends to encompass individuals not included in the definition of 'diplomatic and consular staff.'" Finally, the analyst stated that the phrase "other representative or employee in Canada of a foreign government" has not been previously interpreted by a court.

[331] Beyond the analyst’s report, there is little in the record to supplement the Registrar’s reasons. There is no evidence about whether the Registrar has previously applied this provision to individuals like Mr. Vavilov, whose parents did not enjoy diplomatic privileges and immunities. Neither does there appear to be any internal policy, guideline or legal opinion to guide the Registrar in making these types of decisions.

[332] In challenging the Registrar’s decision, Mr. Vavilov bears the onus of demonstrating why it is not reasonable. Before this Court, Mr. Vavilov submitted that the analyst focussed solely on the text of the exception to citizenship. In his view, had the broader objectives of s. 3(2)(a) been considered, the analyst would have concluded that “other representative” or “employee” only applies to individuals who benefit from diplomatic privileges and immunities.

[333] In his submissions before the Registrar, Mr. Vavilov offered three reasons why the text of s. 3(2) must be read against the backdrop of Canadian and international law relating to the roles and functions of diplomats.

[334] First, Mr. Vavilov explained that s. 3(2)(a) should be read in conjunction with the *Foreign Missions and International Organizations Act*, S.C. 1991, c. 41 (“*FMIOA”*). This statute incorporates into Canadian law aspects of the *Vienna Convention on Diplomatic Relations*, Can. T.S. 1966 No. 29, Sched. I to the *FMIOA*, and the *Vienna Convention on Consular Relations*, Can. T.S. 1974 No. 25, Sched. II to the *FMIOA*, which deal with diplomatic privileges and immunities. He submitted

that s. 3(2) denies citizenship to children of diplomats because diplomatic privileges and immunities, including immunity from criminal prosecution and civil liability, are inconsistent with the duties and responsibilities of a citizen. Because Mr. Vavilov's parents did not enjoy such privileges and immunities, there would be no purpose in excluding their children born in Canada from becoming Canadian citizens.

[335] Second, Mr. Vavilov provided the Registrar with Hansard committee meeting minutes such as the comments of the Honourable J. Hugh Faulkner, Secretary of State, when introducing the amendments to s. 3(2), who explained that the provision had been redrafted to narrow the exception to citizenship.

[336] Third, Mr. Vavilov cited case law, arguing that: (i) the exception to citizenship should be narrowly construed because it takes away substantive rights (*Brossard (Town) v. Quebec Commission des droits de la personne*, [1988] 2 S.C.R. 279, at p. 307); (ii) s. 3(2)(a) must be interpreted functionally and purposively (*Medovarski v. Canada (Minister of Citizenship and Immigration)*, [2005] 2 S.C.R. 539, at para. 8); and (iii) because Mr. Vavilov's parents were not immune from criminal or civil proceedings, they fall outside the scope of s. 3(2) (*Greco v. Holy See (State of the Vatican City)*, [1999] O.J. No. 2467 (QL) (S.C.J.); *R. v. Bonadie* (1996), 109 C.C.C. (3d) 356 (Ont. C.J.); *Al-Ghamdi v. Canada (Minister of Foreign Affairs & International Trade)* (2007), 64 Imm. L.R. (3d) 67 (F.C.)).

[337] The Federal Court's decision in *Al-Ghamdi*, a case which challenged the constitutionality of s. 3(2)(a), was particularly relevant. In that case, Shore J. wrote

that s. 3(2)(a) only applies to the "children of individuals with diplomatic status" (paras. 5 and 65). Justice Shore also stated that "[i]t is precisely because of the vast array of privileges accorded to diplomats and their families, which are by their very nature inconsistent with the obligations of citizenship, that a person who enjoys diplomatic status cannot acquire citizenship" (para. 63).

[338] The Registrar's reasons failed to respond to Mr. Vavilov's extensive and compelling submissions about the objectives of s. 3(2)(a). It appears that the analyst misunderstood Mr. Vavilov's arguments on this point. In discussing the scope of s. 3(2), she wrote, "[c]ounsel argues that CIC [Citizenship and Immigration Canada] cannot invoke subsection 3(2) because CIC has not requested or obtained verification with the Foreign Affairs Protocol to prove that [Mr. Vavilov's parents] held diplomatic or consular status with the Russian Federation while they resided in Canada." It thus appears that the analyst did not recognize that Mr. Vavilov's argument was more fundamental in nature — namely, that the objectives of s. 3(2) require the terms "other representative" and "employee" to be read narrowly. During discovery, in fact, the analyst acknowledged that her research did not reveal a policy purpose behind s. 3(2)(a) or why the phrase "other representative or employee" was included in the Act. It also appears that the analyst did not understand the potential relevance of the *Al-Ghamdi* decision, since her report stated that "[t]he jurisprudence that does exist only relates to individuals whose parents maintained diplomatic status in Canada at the time of their birth."

[339] The Registrar, in the end, interpreted s. 3(2)(a) broadly, based on the analyst's purely textual assessment of the provision, including a comparison with the text of the previous version. This reading of "other representative or employee" was only reasonable if the text is read in isolation from its objective. Nothing in the history of this provision indicates that Parliament intended to widen its scope. Rather, as Mr. Vavilov points out, the modifications made to s. 3(2) in 1976 appear to mirror those embodied in the *Vienna Convention on Diplomatic Relations* and the *Vienna Convention on Consular Relations*, which were incorporated into Canadian law in 1977. The judicial treatment of this provision, in particular the statements in *Al-Ghamdi* about the narrow scope of s. 3(2)(a) and the inconsistency between diplomatic privileges and immunities and citizenship, also points to the need for a narrow interpretation of the exception to citizenship.

[340] In addition, as noted by the majority of the Federal Court of Appeal, the text of s. 3(2)(c) can be seen as undermining the Registrar's interpretation. That provision denies citizenship to children born to individuals who enjoy "diplomatic privileges and immunities certified by the Minister of Foreign Affairs to be equivalent to those granted to a person or persons referred to in paragraph (a)". As Stratas J.A. noted, this language suggests that s. 3(2)(a) covers *only* those "employee[s] in Canada of a foreign government" who have diplomatic privileges and immunities.

[341] By ignoring the objectives of the provision, the Registrar rendered an unreasonable decision. In particular, the arguments supporting a reading of s. 3(2)

that is restricted to those who have diplomatic privileges and immunities, likely would have changed the outcome in this case.

[342] Mr. Vavilov has satisfied us that the Registrar’s decision is unreasonable. As a result, the Court of Appeal properly quashed the Registrar’s decision to cancel Mr. Vavilov’s citizenship certificate, and he is thus entitled to a certificate of Canadian citizenship.

[343] We would therefore dismiss the appeal with costs to Mr. Vavilov throughout.

Appeal dismissed with costs throughout.

Telecom Decision CRTC 2014-398

PDF version

Route reference: Telecom Notice of Consultation 2013-685

Ottawa, 31 July 2014

File numbers: 8620-C12-201317230 and 8620-C12-201312082

Wholesale mobile wireless roaming in Canada – Unjust discrimination/undue preference

The Commission ***finds*** *that there were clear instances of unjust discrimination and undue preference by Rogers Communications Partnership with respect to (i) the imposition of exclusivity clauses in its wholesale mobile wireless roaming agreements with certain new entrants, and (ii) the wholesale mobile wireless roaming rates it charged certain new entrants. Consequently, the Commission* ***prohibits*** *exclusivity provisions in wholesale mobile wireless roaming agreements between Canadian carriers for service in Canada. Since the implementation of section 27.1 of the* Telecommunications Act *mitigates the risk of future unjust discrimination with respect to wholesale mobile wireless roaming rates, the Commission will not put in place a remedy in this regard.*

Introduction

1. Roaming service allows a mobile wireless carrier's retail customers to automatically access voice, data, and text services by using a visited carrier's network (also referred to as a host network) when they travel outside their home carrier's network footprint. For this access to take place, the home carrier and the visited carrier must enter into a wholesale mobile wireless roaming agreement (wholesale roaming agreement). These agreements for wholesale roaming services may be one-way (i.e. one carrier's customers can roam on the wireless network of the other carrier) or two-way/reciprocal (i.e. each carrier's customers can roam on the other carrier's wireless network). They may be for domestic or international roaming services.

2. Mobile wireless carriers are subject to conditions of licence imposed by Industry Canada under the *Radiocommunication Act* in order to use the spectrum needed to provide mobile wireless services.[1] Among other things, the conditions of licence require mobile wireless carriers to provide wholesale roaming services at commercially negotiated rates, terms, and conditions. If mobile wireless carriers are unable to successfully negotiate a wholesale roaming agreement within 60 days of a

[1] CPC-2-0-17 – *Conditions of Licence for Mandatory Roaming and Antenna Tower and Site Sharing and to Prohibit Exclusive Site Arrangements* (Issue 2, March 2013)

roaming proposal, they may have recourse to arbitration in accordance with *Industry Canada's Arbitration Rules and Procedures*.[2]

Background

3. Since the mid-1990s, the Commission has forborne from regulating mobile wireless services except with respect to its powers under section 24 and subsections 27(2), 27(3), and 27(4)[3] of the *Telecommunications Act* (the Act). As a result of forbearance, mobile wireless carriers are not, among other things, required to obtain prior Commission approval of the rates, terms, and conditions for mobile wireless services, including wholesale roaming. However, the Commission has retained the power to impose conditions on the offer and provision of services (section 24) and to make findings of undue preference or unjust discrimination (subsections 27(2), (3), and (4)).

4. In mid-2013, Commission staff undertook a fact-finding exercise to assess the impact of wholesale roaming agreements on the competitiveness of the Canadian wireless industry and the choices available to Canadians. As part of that exercise, on 30 August 2013, Commission staff requested information on roaming services from certain Canadian mobile wireless carriers, including copies of their wholesale roaming arrangements with other Canadian and U.S.-based carriers. Commission staff also met with representatives from some Canadian mobile wireless carriers to obtain additional information and clarification.

5. Based on the information obtained through the fact-finding exercise, the Commission found that some Canadian mobile wireless carriers were charging or proposing to charge significantly higher rates for wholesale mobile wireless roaming services to other Canadian mobile wireless carriers than to U.S.-based carriers. For instance, the rates that some Canadian carriers contracted to pay or were being asked to pay were many times higher than those that U.S.-based carriers paid, particularly with respect to data services. Further, some Canadian carriers were subject to more restrictive terms and conditions than those that applied to U.S.-based carriers.

6. These disparities in wholesale mobile wireless roaming rates, terms, and conditions gave rise to concerns that certain Canadian mobile wireless carriers may be subject to unjust discrimination or undue preference, contrary to subsection 27(2) of the Act.

[2] CPC-2-0-18 – *Industry Canada's Arbitration Rules and Procedures* (Issue 2, March 2013)

[3] The cited provisions are

24. The offering and provision of any telecommunications service by a Canadian carrier are subject to any conditions imposed by the Commission or included in a tariff approved by the Commission.

27(2) No Canadian carrier shall, in relation to the provision of a telecommunications service or the charging of a rate for it, unjustly discriminate or give an undue or unreasonable preference toward any person, including itself, or subject any person to an undue or unreasonable disadvantage.

27(3) The Commission may determine in any case, as a question of fact, whether a Canadian carrier has complied with section 25, this section or section 29, or with any decision made under section 24, 25, 29, 34 or 40.

27(4) The burden of establishing before the Commission that any discrimination is not unjust or that any preference or disadvantage is not undue or unreasonable is on the Canadian carrier that discriminates, gives the preference or subjects the person to the disadvantage.

Consequently, the Commission launched the current proceeding on 12 December 2013 to consider whether or not, as a question of fact, there is a situation of unjust discrimination or undue preference with respect to wholesale roaming agreements in Canada.

7. The Commission also announced that it would launch a second proceeding to examine the wholesale mobile wireless market more broadly and to determine whether it is sufficiently competitive (the second wireless proceeding). This proceeding was launched, through Telecom Notice of Consultation 2014-76, in February 2014.

8. On 28 March 2014, the Minister of Finance tabled Bill C-31, *An Act to implement certain provisions of the budget tabled in Parliament on February 11, 2014 and other measures*, which included a proposed amendment to the Act to establish caps to prevent Canadian carriers from charging other Canadian carriers more for wholesale mobile wireless roaming services than they charge their own customers for mobile voice, data, and text services. Bill C-31 received Royal Assent on 19 June 2014, and these caps now form part of a new section of the Act: section 27.1.

Proceeding

9. The Commission received interventions from the Bell companies,[4] Rogers Communications Partnership (RCP), and TELUS Communications Company (TCC) (collectively, the national wireless carriers); Bragg Communications Inc. carrying on business as Eastlink, Data & Audio-Visual Enterprises Wireless Inc. (Mobilicity), Quebecor Media Inc. on behalf of Videotron G.P., and Globalive Wireless Management Corp. (WIND) (collectively, the new entrants); MTS Inc., Saskatchewan Telecommunications, and TBayTel (collectively, the regional wireless carriers); the Competition Bureau; Lynx Mobility (Lynx); and Benjamin Klass, the Canadian Network Operators Consortium Inc. (CNOC), Fibernetics Corporation, Mobilexchange Ltd., the Public Interest Advocacy Centre (PIAC),[5] and Vaxination Informatique (together, the other interveners). Submissions were also received from members of the general public.

10. The public record of this proceeding, which closed on 5 June 2014, is available on the Commission's website at www.crtc.gc.ca or by using the file numbers provided above.

---

[4] Bell Aliant Regional Communications, Limited Partnership (in respect of its subsidiaries KMTS; NorthernTel, Limited Partnership; and Télébec, Limited Partnership); Bell Mobility Inc.; Northwestel Inc.; and the members of the Comcentric Group (Brooke Telecom Co-operative Ltd., Bruce Telecom, Hay Communications Co-operative Limited, Huron Telecommunications Co-operative Limited, Mornington Communications Co-operative Limited, Quadro Communications Co-operative Inc., and Tuckersmith Communications Co-operative Limited)

[5] PIAC, the Consumers' Association of Canada, the National Pensioners Federation, and the Council of Senior Citizens Organizations of British Columbia presented their interventions together.

11. The wholesale roaming agreements filed on the record of this proceeding, as well as several portions of the parties' interventions, were filed in confidence. While confidential information cannot be disclosed in this decision, the Commission has analyzed and taken into account the full record of this proceeding in making its determinations.

Issues

12. This decision addresses the following issues:

- Is there, as a question of fact, a situation of unjust discrimination or undue preference with respect to the rates and other terms in wholesale roaming agreements in Canada?
- If so, what is the appropriate remedy?

Unjust discrimination or undue preference with respect to wholesale roaming agreements in Canada

13. Several parties, including the new entrants, Lynx, and the other interveners, alleged that the national wireless carriers are unjustly discriminating against other carriers or granting themselves an undue preference by engaging in one or more of the following activities:

- charging or proposing to charge wholesale mobile wireless roaming rates for voice, data and text services that are many times higher than
  - the rates they charge U.S.-based mobile wireless carriers;
  - the rates they charge other Canadian mobile wireless carriers;
  - the rates they charge their own retail customers for these services; and/or
  - their costs for providing wholesale mobile wireless roaming services; and/or
- imposing or proposing to impose other restrictive terms in wholesale roaming agreements, including terms with respect to exclusivity[6] and seamless roaming.[7]

14. These parties generally argued that the national wireless carriers are able to engage in unjustly discriminatory and unduly preferential behaviour because they are in a significantly better bargaining position than the new entrants and small mobile wireless carriers. This difference in bargaining positions results from the fact that

[6] In the current context, a term with respect to exclusivity usually prevents the recipient of wholesale mobile wireless roaming services from entering into an agreement for these services with another carrier providing service in the same service area.

[7] Seamless roaming provides for the uninterrupted flow of a voice call that transitions from a home network to a visited network or vice versa.

smaller carriers must enter into wholesale roaming agreements with the national wireless carriers in order to offer their own retail customers national wireless coverage, which in turn is necessary for them to be able to attract retail customers and remain competitive.

15. Several parties noted that in 2008-09, following the Industry Canada auction of spectrum licences for advanced wireless services (the AWS auction), most new entrants could enter into roaming agreements with only one national carrier, for network technology reasons. Most new entrants sought wholesale mobile wireless roaming over networks based on Global System for Mobile Communications (GSM) technology. This decision was based on many factors, including the availability of handsets, particularly smartphones that operate exclusively on these networks. As WIND pointed out, RCP was the only wireless operator in Canada whose network allowed roaming using GSM at that time; therefore, most of the new entrants that acquired spectrum in the AWS auction concluded roaming agreements with RCP.

16. The new entrants submitted that their current wholesale roaming agreements raise their costs, thereby adversely affecting their ability to compete in the retail market. They also submitted that arbitration is not an appropriate recourse to counter the imbalance in bargaining positions, as it is expensive and time consuming. They added that there are no guidelines to determine whether rates are commercially reasonable.

17. According to the Competition Bureau, the national wireless carriers can use wholesale roaming agreements as a strategic tool to ensure that new entrants are not, and do not become, effective competitors. The Bureau submitted that if new entrants are not able to compete effectively, there is a significant risk that they will either become niche players with little competitive effect or simply exit the Canadian mobile wireless market.

18. The national wireless carriers denied that they had engaged in any unjust discrimination or undue preference with respect to (i) the rates they charged for wholesale mobile wireless roaming services, or (ii) other terms in their wholesale roaming agreements, such as exclusivity and seamless roaming.

19. According to the national wireless carriers, wholesale roaming agreements with U.S.-based mobile wireless carriers cannot be compared to agreements with other Canadian mobile wireless carriers, as the former are generally two-way agreements and the latter are generally one-way agreements. In addition, they argued that domestic and international markets cannot be compared. Similarly, they submitted that retail mobile wireless rates cannot be compared to wholesale mobile wireless roaming rates because a national carrier’s retail customers remain on their home network and do not access a visited network, and are therefore not roaming.

20. The national wireless carriers argued that any differences in wholesale mobile wireless roaming rates are based on a number of factors, including reciprocity, traffic volume, traffic balance, access to vast or unique geographic coverage, the timing of

the wholesale roaming agreement, and whether the agreement is part of a broader relationship such as a joint-build or network sharing arrangement.

21. With respect to other terms, the national wireless carriers generally argued that exclusivity typically results in lower rates. They also submitted that seamless roaming is not widely provided to international partners.

22. The national wireless carriers stated that if new entrants believe that any wholesale mobile wireless roaming rates and other terms are not commercially reasonable, they can request arbitration according to *Industry Canada's Arbitration Rules and Procedures*, which is subject to tight timelines. They also submitted that there are currently multiple options available to new entrants for wholesale roaming.

Commission's analysis and determinations

23. The Commission's analysis of an allegation of undue preference or unreasonable disadvantage under subsection 27(2) of the Act is conducted in two phases:

- it must first determine whether the conduct in question is discriminatory or constitutes a preference; and
- where it so determines, it must then decide whether the discrimination is unjust or the preference is undue.

Phase 1: Determination of discrimination or preference

24. With respect to the first part of the test, wholesale mobile wireless roaming services provide the same functionality, regardless of whether they are provided (i) domestically or to U.S.-based carriers, or (ii) pursuant to one-way or two-way wholesale roaming agreements. Consequently, the Commission considers that, notwithstanding the differences in how they are provisioned, these services can be compared to determine whether there is discrimination or preference under subsection 27(2) of the Act. In the Commission's view, the different circumstances and trade-offs reflected in wholesale roaming agreements are relevant in determining whether any discrimination or preference is unjust or undue.

25. The Commission has reviewed all the wholesale roaming agreements filed on the record of the current proceeding and has found that the rates included in these agreements varied widely. The Commission **concludes** that this variation in rates constitutes discrimination and/or preference within the meaning of the Act.

26. Further, the Commission notes that RCP has entered into exclusive wholesale roaming agreements with certain new entrants but not with other mobile wireless carriers. The Commission **concludes** that the inclusion of exclusivity clauses in RCP's wholesale roaming agreements with certain new entrants constitutes discrimination and/or preference within the meaning of the Act.

Phase 2: Unjust/undue nature of discrimination/preference

27. Discrimination or preference in and of itself is not contrary to the Act; the discrimination must be unjust or the preference undue. Given the time and cost required to build out mobile wireless networks, if new entrants are to compete effectively with national wireless carriers that have broad network coverage, they must enter into wholesale roaming agreements with those carriers in order to provide national mobile wireless coverage to their retail customers. This situation could create a significant imbalance in bargaining positions between national wireless carriers and smaller mobile wireless carriers, including new entrants.

28. Following the AWS auction, new entrants had no choice but to enter into wholesale roaming agreements with RCP because, given the technology involved, RCP had the only national network available in Canada on which new entrants' customers could roam.

29. The Commission notes that the rates that RCP charged certain new entrants were significantly higher than the rates it charged many large U.S.-based mobile wireless carriers and other Canadian mobile wireless carriers, particularly with respect to wholesale mobile wireless data roaming services. The Commission recognizes that factors such as reciprocity, timing of the agreement, geographic coverage offered to the roaming partner, and traffic volume would explain some differences in the wholesale roaming rates that RCP charged other carriers. However, the Commission considers that these factors do not justify the magnitude of those differences.

30. With respect to exclusivity, based on the record of this proceeding, exclusivity clauses are not common in current wholesale roaming agreements. The Commission considers that the inclusion of exclusivity clauses in RCP's agreements with certain new entrants was a result of RCP's stronger bargaining position. These clauses have prevented mobile wireless carriers from being able to negotiate more favourable rates, terms, and conditions with other mobile wireless carriers that have put in place compatible networks.

31. In light of the above, the Commission **finds** that, contrary to subsection 27(2) of the Act, RCP engaged in unjust discrimination and undue preference with respect to (i) the wholesale mobile wireless roaming rates it charged certain new entrants for voice, data and text services, and (ii) the imposition of exclusivity clauses in its wholesale roaming agreements with certain new entrants.

Appropriate remedy

32. Several of the new entrants asked that an interim remedy be put in place, until the conclusion of the second wireless proceeding, to protect new entrants against irreparable harm. They asked that interim wholesale mobile wireless roaming rates be set at retail rates for access to a national wireless carrier's network. Several parties, including the new entrants, Lynx, and some of the other interveners, submitted that a permanent remedy should take the form of a regulated wholesale tariff or rate cap.

33. The Bell companies and TCC argued that if the Commission finds that a carrier has unjustly discriminated against another carrier or conferred an undue preference on itself in a wholesale roaming agreement, that finding cannot be attributed to any other carrier and the remedy should be limited to that agreement only.

34. The regional wireless carriers argued that universally applied caps regarding wholesale mobile wireless roaming rates would significantly disadvantage them, as the national wireless carriers would be able to access their networks at rates that are not sufficient to support ongoing investment in rural and remote communities.

35. PIAC submitted that any wholesale roaming framework should apply universally to all wireless carriers to ensure fairness, certainty, and predictability, and that the Commission should engage in ongoing oversight of wholesale roaming agreements.

Commission's analysis and determinations

36. Section 27.1 of the Act,[8] which came into force during the course of this proceeding, establishes caps for all Canadian mobile wireless carriers on wholesale mobile wireless roaming rates for voice, data and text services based on the retail rates for those services. The Commission is responsible for enforcing this section.

37. The Commission considers that the implementation of section 27.1 of the Act reduces the risk of future unjust discrimination with respect to wholesale mobile wireless roaming rates. It also provides most new entrants with relief that is similar to the interim remedy they proposed. Therefore, the Commission **concludes** that, for the

[8] 27.1(1) The amount charged during a year by a Canadian carrier to a second Canadian carrier for roaming services with respect to the transmission of all domestic wireless voice calls and the domestic portion of all international wireless voice calls shall not exceed the amount determined by the formula A/B where A is the first Canadian carrier's total retail revenues from the provision of wireless voice call services to its Canadian subscribers, for calls both originating and terminating in Canada, for the preceding year; and B is the number of minutes provided for those calls for the preceding year.

(2) The amount charged during a year by a Canadian carrier to a second Canadian carrier for roaming services with respect to the transmission of wireless data in Canada shall not exceed the amount determined by the formula A/B where A is the first Canadian carrier's total retail revenues from the provision of wireless data services in Canada to its Canadian subscribers for the preceding year; and B is the number of megabytes provided for those data services for the preceding year.

(3) The amount charged during a year by a Canadian carrier to a second Canadian carrier for roaming services with respect to the transmission of all domestic wireless text messages and the domestic portion of all international wireless text messages shall not exceed the amount determined by the formula A/B where A is the first Canadian carrier's total retail revenues from the provision of wireless text message services to its Canadian subscribers, for text messages both originating and terminating in Canada, for the preceding year; and B is the number of those text messages for the preceding year.

(4) The Canadian carrier shall not charge the second Canadian carrier any other amount in relation to the provision of the roaming services referred to in subsections (1) to (3).

(5) The amount established by the Commission that a Canadian carrier can charge to a second Canadian carrier for roaming services prevails over an amount determined under any of subsections (1) to (3) to the extent of any inconsistency.

purposes of this proceeding, it will not put in place a remedy for unjust discrimination with respect to wholesale mobile wireless roaming rates.

38. With respect to exclusivity provisions in wholesale roaming agreements, the Commission considers that to address the finding of unjust discrimination and undue preference with respect to RCP, it is necessary and appropriate to prohibit such provisions in RCP's agreements with other mobile wireless carriers. Further, to ensure that other carriers do not engage in such behaviour, the Commission considers it necessary and appropriate to prohibit exclusivity provisions in all wholesale roaming agreements between Canadian mobile wireless carriers. In the Commission's view, this prohibition will also promote wholesale competition in the mobile wireless industry in Canada.

39. Accordingly, pursuant to section 24 of the Act, the Commission **determines** that the offering and provision of roaming services by Canadian mobile wireless carriers is subject to the condition that such carriers are prohibited from applying exclusivity provisions in wholesale roaming agreements with other Canadian mobile wireless carriers. Exclusivity clauses in current wholesale roaming agreements between Canadian carriers are therefore rendered inapplicable as of the date of this decision.

Other issues

40. The Commission notes that there were claims of unjust discrimination or undue preference with respect to other terms and conditions in wholesale roaming agreements, such as seamless roaming. Several parties also suggested regulating wholesale mobile wireless roaming rates.

41. Since these issues are under consideration in the second wireless proceeding, the Commission considers that it would be more appropriate to address them in that proceeding. In particular, in that proceeding, the Commission is exploring the possibility of reasserting its jurisdiction to apply certain provisions of the Act that are currently forborne. The Commission notes that if it were to reassert its jurisdiction with respect to rate regulation and establish rates for wholesale mobile wireless roaming services, these rates would prevail over the caps set by section 27.1 of the Act.[9]

Consistency with the Policy Direction

42. The Commission considers that the determination made in this decision with respect to exclusivity is consistent with the Policy Direction[10] for the reasons set out below.

43. The Policy Direction states that the Commission, in exercising its powers and performing its duties under the Act, shall implement the policy objectives set out in

---

[9] Ibid.

[10] *Order Issuing a Direction to the CRTC on Implementing the Canadian Telecommunications Policy Objectives*, P.C. 2006-1534, 14 December 2006

section 7 of the Act, in accordance with paragraphs 1(*a*), (*b*), and (*c*) of the Policy Direction.

44. The regulatory measure under consideration in this decision relates to terms for wholesale roaming agreements. Therefore, subparagraphs 1(*a*)(i) and (ii) and subparagraphs 1(*b*)(i), (ii), and (iv) of the Policy Direction apply to the Commission's determination in this decision.

45. In compliance with subparagraph 1(*b*)(i) of the Policy Direction, the Commission considers that the policy objectives set out in paragraphs 7(*b*), (*c*), (*f*), and (*h*)[11] of the Act are advanced by the regulatory measure established in this decision.

46. Consistent with subparagraphs 1(*a*)(i) and (ii) of the Policy Direction, the Commission considers that prohibiting exclusive wholesale roaming agreements is efficient and proportionate to its purpose, and interferes with the operation of market forces to the minimum extent necessary to meet the policy objectives cited above. As noted above, the Commission also considers that prohibiting exclusive wholesale roaming agreements will promote wholesale competition in the mobile wireless industry.

47. Consistent with subparagraph 1(*b*)(ii) of the Policy Direction, the Commission considers that the prohibition of exclusive wholesale roaming agreements will not deter economically efficient competitive entry into the market nor promote economically inefficient entry.

48. Consistent with subparagraph 1(*b*)(iv) of the Policy Direction, the Commission considers that its determination, as it relates to network interconnection arrangements or regimes for access to networks, is technologically and competitively neutral and does not artificially favour either Canadian carriers or resellers.

Interim rates for disaggregated wholesale high-speed access services in Ontario and Quebec

The Commission determines that disaggregated wholesale high-speed access (HSA) services should be made available, on an interim basis, by Bell Canada, Cogeco, RCCI, and Videotron to competitors in Ontario and Quebec, and sets out the interim rates for these services. The availability of disaggregated wholesale HSA services will enable competitors to become more innovative by giving them a greater degree of control over their service offerings to Canadians, including access to fibre-to-the-premises facilities.

Introduction

1. The Commission regulates wholesale high-speed access (HSA) services provided by the large cable and telephone companies (collectively, the wholesale HSA service providers). Competitors[1] can use these services to provide their own retail Internet services and other services.

2. In Telecom Regulatory Policy 2015-326, the Commission mandated the implementation of a disaggregated wholesale HSA service consisting of only an access component, and imposed an obligation on certain carriers in Ontario and Quebec to provide the service. When implemented, the obligation to provide a disaggregated wholesale HSA service would replace the obligation to provide an aggregated wholesale HSA service, which includes both access and transport components. The Commission stated that this change would be subject to a transition plan. The disaggregated wholesale HSA service was to be made available on a central office (CO) or head-end basis, and only when a competitor actually obtained the service at the CO or head-end. In addition to requiring the provision of end-customer access over existing copper and hybrid fibre coaxial (HFC) facilities, the Commission mandated access over fibre-to-the-premises (FTTP) facilities.

3. As a result of its determinations, the Commission directed Cogeco Communications Inc. (Cogeco); Quebecor Media Inc., on behalf of Videotron G.P. (Videotron); and

[1] For the purpose of this order, "competitors" are the customers of wholesale HSA service providers. Competitors purchase access to wholesale HSA services to provide or resell telecommunications services to their own end-users.

Rogers Communications Canada Inc. (RCCI) [collectively, the cable carriers],[2] as well as Bell Canada, to file configurations for their proposed disaggregated wholesale HSA services for their Ontario and Quebec serving territories.

4. The Commission reviewed the companies' proposals and, in Telecom Decision 2016-379, it established guidelines for acceptable configurations and directed the companies to file proposed rates and associated Phase II cost studies for their disaggregated wholesale HSA services that reflected the Commission's directives. Bell Canada was also directed to file rates and associated Phase II cost studies for an external meet-me point for competitor interconnection to its disaggregated wholesale HSA service, similar to the meet-me point provided by the cable carriers.[3]

Applications

5. The Commission received tariff applications from Bell Canada, Cogeco, RCCI, and Videotron, dated 9 January 2017, along with supporting cost studies for both fibre-to-the-node (FTTN)-based and FTTP-based disaggregated wholesale HSA services.

6. As part of their applications, the cable carriers filed proposed capacity rates per 50 megabits per second (Mbps) and access rates for their FTTN-based disaggregated wholesale HSA services. Cogeco and RCCI also filed proposed access rates for their FTTP-based disaggregated wholesale HSA services that rely on radio frequency over glass (RFoG) technology. In addition, the cable carriers proposed to apply their existing aggregated wholesale HSA service charges to corresponding activities associated with their disaggregated wholesale HSA services.

7. Bell Canada filed proposed capacity rates per 50 Mbps and access rates for the company's FTTN- and FTTP-based disaggregated wholesale HSA services with supporting cost studies. Similar to the cable carriers, Bell Canada proposed to apply its existing aggregated wholesale HSA service charges to some of the corresponding activities associated with its disaggregated wholesale HSA service. Bell Canada also proposed modified service charges for FTTN access and capacity rates per 50 Mbps, along with several new service charges.

8. On 31 January 2017, Bell Canada filed a tariff application and a supporting cost study for the provision of a meet-me point for competitors at a given CO, including proposed service charges.

9. On 28 February 2017, Cogeco submitted a separate tariff application to establish access rates for a new Ethernet passive optical network (EPON)-based FTTP service offering.

---

[2] At the time, Cogeco Communications Inc. was known as Cogeco Cable Inc., and Rogers Communications Canada Inc. was known as Rogers Communications Partnership.

[3] Bell Canada filed a Part 1 application with the Commission, dated 2 December 2016, to review the requirement to provide a meet-me point. This application is currently under consideration.

10. Bell Canada filed updates to the cost studies for its disaggregated wholesale HSA service, as well cost studies in support of revised rates for its aggregated wholesale HSA service, on 20 March 2017. These studies included multiple scenarios to reflect the impact of different assumptions for both types of wholesale HSA services.

11. On 21 April 2017, Bell Canada filed a tariff application with supporting cost studies for a bonded FTTN access for its disaggregated wholesale HSA service.

12. The intervention process is ongoing. The public records of these proceedings can be found on the Commission's website at www.crtc.gc.ca or by using the file numbers provided above.

Issues

13. To enable the timely introduction of disaggregated wholesale HSA services, the Commission considers that it may be appropriate to make the services available to competitors on an interim basis while the in-depth review to establish final rates is carried out.

14. Accordingly, the Commission has identified the following issues to be addressed in this order:

    - Should disaggregated wholesale HSA services be made available on an interim basis?
    - If so, are the rates proposed by Bell Canada and the cable carriers based on reasonable costs?
    - If the proposed rates are not based on reasonable costs, what adjustments should be made?

Should disaggregated wholesale HSA services be made available on an interim basis?

15. In Telecom Regulatory Policy 2015-326, the Commission stated that the availability of disaggregated wholesale HSA services would enable competitors to become more innovative by giving them a greater degree of control over their service offerings. Moreover, such services could encourage competitor investment in alternative transport facilities, thereby serving to develop a more robust telecommunications system.

16. In addition, disaggregated wholesale HSA services would enable competitors to access end-users served by FTTP facilities.

17. The unavailability of FTTP access is a concern for competitors. Competitors have recently requested relief regarding FTTP access for the time period in which disaggregated wholesale HSA services are not available. For example, in Telecom Decision 2016-446, the Commission directed RCCI to make FTTP access available through its aggregated wholesale HSA service to TekSavvy Solutions Inc. and other

competitors at a residential complex where RCCI had deployed FTTP and had removed its existing HFC network.

18. The availability of interim rates would provide competitors with the ability to use disaggregated wholesale HSA services (including FTTP access) and the opportunity to more effectively compete prior to the finalization of the rates, to the benefit of Canadians.

19. In light of the above, the Commission determines that disaggregated wholesale HSA services should be made available on an interim basis.

Are the rates proposed by Bell Canada and the cable carriers based on reasonable costs?

Positions of parties

20. Bell Canada and the cable carriers proposed rates that are generally based on the associated Phase II costs[4] plus a specified markup.

21. Bell Canada proposed to use an alternative costing approach to develop its capacity rate per 50 Mbps, rather than using the costing methodology outlined in its Regulatory Economic Studies Manual (the Manual). Bell Canada provided one set of cost studies based on its alternative costing approach and a second set of cost studies based on Phase II costing principles. Further, it provided rationale to support its alternative costing approach.

22. In addition, Bell Canada and the cable carriers proposed deviations from past Commission determinations regarding the annual capital unit cost change assumption[5] and various working fill factors (WFFs)[6] of equipment. Each company provided rationale for its proposed deviations.

23. Bell Canada further proposed an FTTN access rate for its disaggregated (and aggregated) wholesale HSA services that did not incorporate several assumptions that the Commission applied in Telecom Regulatory Policy 2011-703 when setting FTTN access rates for the company's existing aggregated wholesale HSA service (assumptions that have been maintained in the current interim FTTN access rates for

---

[4] Phase II costs reflect the costs of the prospective incremental resources used to provide a service, consistent with the costing methodologies and assumptions set out in the incumbent local exchange carriers' approved Manuals. Phase II costing principles were set out in Telecom Decision 79-16 and amended in subsequent Commission decisions.

[5] The annual capital unit cost change assumption reflects technological advancements, whereby suppliers are able to meet rising demands from traffic growth by increasing equipment capacity at a lower cost per unit.

[6] The WFF is a measure of the ultimate utilization of a shared facility and is used to recognize the non-working capacity (spare units, units required for maintenance [i.e. administrative] functions, etc.) of the shared facility, and to apportion the cost of non-working capacity to the per-unit cost of the working capacity. A lower WFF will result in higher costs.

its aggregated wholesale HSA service). Bell Canada also proposed certain service charges for disaggregated wholesale FTTN access that differ from the corresponding charges in place for aggregated wholesale FTTN access.

Commission's analysis and determinations

24. The Commission has reviewed the costing approaches and assumptions proposed by Bell Canada and the cable carriers in developing their rates for disaggregated wholesale HSA services and has completed a preliminary review of the evidence submitted in their respective applications in support of their deviations from either the Phase II costing methodology or previous Commission determinations. Given that the arguments in support of the deviations have not been subject to a thorough review that includes comments from parties and interrogatories, the Commission considers that it would be premature to set interim rates that incorporate the proposed deviations.

25. As noted by Bell Canada,[7] the FTTN access component is the same for both aggregated and disaggregated wholesale HSA services. Since the assumptions that Bell Canada included in its proposed FTTN access rate for its disaggregated wholesale HSA service differ from those applied in past decisions by the Commission and have not been subject to a thorough review, the Commission considers that it would also be premature to incorporate such assumptions in setting interim FTTN access rates for Bell Canada's disaggregated wholesale HSA service.

26. In addition, the Commission has found several errors in spreadsheet cost models that affect the disaggregated wholesale HSA service rates proposed by some of the cable carriers, which should be corrected.

27. In light of the above, the Commission considers that Bell Canada's and the cable carriers' proposed costs, for the purpose of setting interim rates, are not reasonable. The Commission further considers that interim rates should rely on established Phase II costing methodology and past Commission determinations.

If the proposed rates are not based on reasonable costs, what adjustments should be made?

28. The Commission considers that a number of adjustments related to the following are required to ensure that the interim rates reflect more reasonable underlying costs:

- costing methodology;
- previous Commission determinations;
- Bell Canada-specific determinations related to the access component; and
- cost model errors.

---

[7] See Bell Canada Tariff Notice 7522, Attachment 1, paragraph 43.

Costing methodology

Background

29. Each large incumbent local exchange carrier's (ILEC)[8] Manual states that the capacity cost method is to be used to estimate the unit cost for shared facilities. The capacity cost method determines the per-unit cost by dividing the installed first cost[9] of the shared facilities by its maximum capacity and then dividing this ratio by the appropriate WFF. In addition, the unit cost included in a cost study is to reflect the cost of growth technology, i.e. the technology the company will deploy going forward.

Positions of parties

30. Bell Canada submitted that its preferred approach for estimating monthly capacity rates per 50 Mbps was to use a costing approach called "explicit costing" instead of the capacity costing approach outlined in the Manual. Bell Canada described its explicit costing approach as a fundamental tool to properly estimate causal costs, and described the capacity costing approach as an outdated methodology that was introduced some 40 years ago as an approximation to explicit costing. Bell Canada further submitted that capacity costing is only applicable when the network is stable and evolving slowly and that, since these conditions are not met today, capacity costing is not as accurate as explicit costing and will not lead to just and reasonable rates.

31. Bell Canada submitted separate sets of cost studies and associated monthly capacity rates per 50 Mbps, with one set based on the explicit costing approach and the other set based on the capacity costing approach.

32. Cogeco proposed an approach in its cost study that did not uniformly apply growth technology in the estimation of its capital expenditures.

Commission's analysis and determinations

33. The Commission has reviewed Bell Canada's explicit costing approach in conjunction with the Manual and previous instances in which Bell Canada has used an explicit costing approach, and considers that the proposed approach requires further review. Accordingly, for interim rate-setting purposes, the Commission has used Bell Canada's cost studies that use the capacity costing approach.

34. With regard to Cogeco's approach, Phase II costing methodology is clear in that the capital expenditures included in a regulatory economic study are to reflect growth technology. Accordingly, the Commission has made appropriate adjustments.

---

[8] "Large ILECs" refers to Bell Aliant Regional Communications, Limited Partnership; Bell Canada; Bell MTS; Saskatchewan Telecommunications; and TELUS Communications Company.

[9] This represents the incremental capital cost of the next unit of demand. This cost is always calculated using "cost new" and "growth technology."

Previous Commission determinations

Positions of parties

35. Bell Canada (in its alternative proposal for monthly capacity rates per 50 Mbps that were calculated using the capacity costing approach) and the cable carriers proposed to calculate the unit cost of shared equipment using WFFs that are lower than those approved in Appendix V, table 9 of the Manual, or in Telecom Decision 2006-77. In support of its proposed WFFs, Bell Canada provided measurements of the percentage of equipment ports in use for different speed ports in its edge and core network, along with samples of measurements of peak traffic on the active ports. The cable carriers provided evidence, in the form of a report prepared by CableLabs,[10] to support their proposed WFFs.

36. Bell Canada and the cable carriers proposed to apply annual capital unit cost changes that were different from the -26.4% figure established in Telecom Decision 2016-117 to their traffic-driven equipment. The cable carriers submitted that they agreed with TELUS Communications Company's (TCC) submission in its Tariff Notice 512 filing, wherein TCC submitted that *Routers Report: Five-Year Forecast: 2011-2015* by the Dell'Oro Group (the 2011 Dell'Oro Report), which was used to set the -26.4% figure, was out of date, and that a more recent report was available (the 2016 Dell'Oro Report). The cable carriers supported TCC's position that the appropriate annual capital unit cost change assumption of -16.8% for data aggregation and switching equipment is more appropriate, based on the information contained in the 2016 Dell'Oro Report. The cable carriers proposed to use an annual capital unit cost change of -17%. In a similar vein, Bell Canada proposed an annual capital unit cost change of -15.7% based on a calculation using data from the updated report.

Commission's analysis and determinations

37. The Commission considers that the evidence noted above requires further review. Accordingly, for interim rate-setting purposes, the Commission has applied

- WFFs approved in Appendix V, table 9 of the Manual, or used in determinations set out in Telecom Decision 2006-77, as appropriate, to each company's shared equipment; and

- the annual capital unit cost change of -26.4% established in Telecom Decision 2016-117 to each company's traffic-driven equipment.

Bell Canada-specific determinations related to the access component

Umbilical fibre costs

---

[10] *Cable Broadband Network Architecture and Capacity Planning: Working Fill Factor*, jointly filed on 9 January 2017 by Bragg Communications Incorporated, operating as Eastlink; Cogeco; RCCI; Shaw Cablesystems G.P.; and Videotron.

Positions of parties

38. Bell Canada proposed to recover umbilical fibre costs for both its FTTN- and FTTP-based disaggregated wholesale HSA service in its monthly capacity rate per 50 Mbps. Bell Canada submitted that these components are usage-sensitive and should therefore be recovered in the monthly capacity rate rather than the monthly access rates.

Commission's analysis and determinations

39. For the aggregated wholesale HSA service, the umbilical fibre costs for the FTTN-based service are currently being recovered through Bell Canada's FTTN access rates, which were made final in Telecom Regulatory Policy 2011-703, modified in Telecom Decision 2013-73, and made interim in Telecom Decision 2016-117. Since the FTTN access component for the aggregated wholesale HSA service is the same as the one for the disaggregated wholesale HSA service, it would be appropriate to apply the current FTTN access rate for the aggregated wholesale HSA service to the FTTN access for the disaggregated wholesale HSA service on an interim basis.

40. Since the Commission has approved an interim bonded FTTN access rate for Bell Canada's aggregated wholesale HSA service that includes the same assumption,[11] it would also be appropriate to apply the assumption to the bonded FTTN access rate for the company's disaggregated wholesale HSA service.

41. The Commission considers that the corresponding umbilical fibre component for FTTP access has a high capacity and is unlikely to be usage sensitive. Therefore, on an interim basis, it would be appropriate to associate the umbilical fibre costs with the FTTP access rate rather than the monthly capacity rate per 50 Mbps.

42. With the above approach, inclusion of all or a portion of the umbilical fibre costs in the disaggregated wholesale HSA monthly capacity rate per 50 Mbps may lead to over-recovery of these costs. Accordingly, for the interim rates, umbilical fibre costs should be removed from Bell Canada's monthly capacity rate per 50 Mbps.

43. The Commission will review Bell Canada's proposed transfer of umbilical fibre costs from the access rates to the monthly capacity rates for both aggregated and disaggregated wholesale HSA services during the process to establish final rates.

Removal of labour cost constraint

Positions of parties

44. Bell Canada proposed an FTTN access rate for its disaggregated wholesale HSA service that did not incorporate a Commission cost adjustment made in

[11] See Telecom Order 2017-261.

Telecom Regulatory Policy 2011-703 that caps the labour cost included in the digital subscriber line access multiplexer (DSLAM) costs at 40% of total DSLAM costs.

Commission's analysis and determinations

45. Given this inconsistency with the Commission's determination, for interim rates, it would be appropriate to include the cost constraint in the FTTN access rate for Bell Canada's disaggregated wholesale HSA service. Since the Commission has approved an interim bonded FTTN access rate for the aggregated wholesale HSA service that includes the cost constraint, it would be appropriate to apply the cost constraint to the bonded FTTN access rate for the disaggregated wholesale HSA service. Bell Canada's proposal will be reviewed during the process to establish final rates.

FTTN access service charges

Positions of parties

46. Bell Canada filed proposed FTTN access service charges for its disaggregated wholesale HSA service consisting of installation charges and charges for speed changes. These charges differ from the corresponding interim-approved FTTN access service charges for its aggregated wholesale HSA service.

Commission's analysis and determinations

47. In the Commission's ongoing proceeding to determine final rates for aggregated wholesale HSA service, Bell Canada did not file proposed new rates for the above-noted service charges for wholesale FTTN access, even though FTTN access for both the aggregated and disaggregated wholesale HSA services would require the same treatment for installation and speed changes. For the interim rates, it would be appropriate to apply the service charges that were approved for FTTN access for the aggregated wholesale HSA service to FTTN access for the disaggregated wholesale HSA service. The Commission will review Bell Canada's proposal during the process to establish final rates.

Cost model errors

48. The Commission notes that, in its review of the cost models filed in confidence by the companies, it found spreadsheet errors related to RCCI's estimation of capital expenditures for certain equipment and the vintage of certain data used by Videotron. The Commission has therefore made corrections that are reflected in the interim approved rates.

Conclusion

49. In light of the above, the Commission **approves on an interim basis** Bell Canada's and the cable carriers' proposed rates, subject to the revisions set out in Appendix 1 to this order. The approved rates include access rates for FTTN- and FTTP-based disaggregated wholesale HSA services, capacity rates per 50 Mbps, and associated

service charges for Bell Canada and the cable carriers, as well as rates for Bell Canada's meet-me point. Any rates proposed in the companies' tariff notices that are not listed in Appendix 1 are approved on an interim basis without changes. Explanations of the Commission's adjustments are summarized in Appendix 2.

50. The Commission **directs** Bell Canada, Cogeco, RCCI, and Videotron to issue revised tariff pages by **8 September 2017** reflecting the determinations set out in this order.[12]

Appendix 1 to Telecom Order CRTC 2017-312

Interim approved rates for disaggregated wholesale HSA services

Table 1(a): Interim approved monthly capacity rates per 50 Mbps

Company	Bell Canada	Cogeco	RCCI	Videotron
Rate	$15.04	$161.56	$143.99	$126.91

Table 1(b): Interim approved monthly FTTN access rates

Company	Speed	Rate
Bell Canada (non-bonded)	All	$25.62
Bell Canada (bonded)	All	$52.32
Cogeco	0-6 Mbps	$14.00
	7-15 Mbps	$15.64
	16-40 Mbps	$21.86
	41-60 Mbps	$32.48
	61-120 Mbps	$52.51
	121-250 Mbps	$61.41
RCCI	0-15 Mbps	$21.71
	16-30 Mbps	$24.52
	31-60 Mbps	$26.50
	61-100 Mbps	$28.88
	101-249 Mbps	$40.77
	250-499 Mbps	$54.05
	500-749 Mbps	$61.54
	750-1024 Mbps	$76.93
Videotron	0-5 Mbps	$17.57
	6-10 Mbps	$19.61
	11-30 Mbps	$23.10
	31-60 Mbps	$30.57
	61-120 Mbps	$35.88

	121-200 Mbps	$39.63
	201-500 Mbps	$56.89
	501-1000 Mbps	$75.81

Table 1(c): Interim approved monthly FTTP access rates

Company	Speed	Rate
Bell Canada (FTTP)	All	$121.79
Cogeco (EPON)	All	$172.43
Cogeco (RFoG)	0-6 Mbps	$43.24
	7-15 Mbps	$46.02
	16-40Mbps	$49.37
	41-60 Mbps	$56.90
	61-120 Mbps	$66.70
	121-250 Mbps	$72.28
RCCI (RFoG)	0-15 Mbps	$27.21
	16-30 Mbps	$30.24
	31-60 Mbps	$32.37
	61-100 Mbps	$34.93
	101-249 Mbps	$47.74
	250-499 Mbps	$62.03
	500-749 Mbps	$70.11
	750-1024 Mbps	$86.68

Table 1(d): Bell Canada – Interim approved access service charges

Item	Rate
Disaggregated wholesale HSA non-bonded FTTN access installation charge	$90.65
Disaggregated wholesale HSA bonded FTTN access installation charge	$167.84
Speed change service charge, per disaggregated HSA access • **With a premises visit**	$90.65

Appendix 2 to Telecom Order CRTC 2017-312

Rationale for Commission rate adjustments

Table 2(a): Bell Canada

Monthly capacity rate per 50 Mbps

Area requiring adjustment	Commission adjustment	Rationale for adjustment
Costing methodology	Used capacity costing instead of explicit costing	Bell Canada proposed to use an explicit costing approach to estimate capacity rates. Capacity costing rather than explicit costing is the Commission’s accepted approach for the estimation of costs. Evidence submitted to deviate from the use of capacity costing will be fully reviewed during the process to set final rates.
Switch and router costs	Applied a WFF of 80% to switch and router equipment	Bell Canada, in its alternative capacity costing approach, applied WFFs that are lower than the WFFs in Appendix V, table 9 of the Manual. Evidence submitted to deviate from approved WFFs will be fully reviewed during the process to set final rates.
Switch and router costs	Applied an annual capital unit cost change of -26.4% to switch and router costs	Bell Canada applied an annual capital unit cost change of -15.7% to switch and router costs instead of -26.4%, which was established in Telecom Decision 2016-117. Evidence submitted to deviate from the determination in Telecom Decision 2016-117 will be fully reviewed during the process to set final rates.

Umbilical fibre	Excluded umbilical fibre (FTTN and FTTP) costs from the monthly capacity rate	Bell Canada treated umbilical fibre for both FTTN and FTTP access as usage-sensitive equipment and included the costs in the monthly capacity rate. FTTN umbilical fibre costs are currently recovered through the FTTN access rate – an assumption that the Commission applied when it set rates for FTTN access for the aggregated service. As discussed in the “Monthly access rate” section below, for interim rate purposes, the umbilical fibre for both FTTN and FTTP is to be associated with the access component. Inclusion of these costs in the monthly capacity rate will lead to over-recovery of these costs. Evidence submitted to deviate from this approach will be fully reviewed during the process to set final rates.

Monthly access rate

Area requiring adjustment	Commission adjustment	Rationale for adjustment
Umbilical fibre	Included appropriate umbilical fibre costs in FTTN and FTTP access rates	Bell Canada excluded umbilical fibre from the access rate for FTTN and FTTP. FTTN umbilical fibre costs are currently recovered through the FTTN access rate – an assumption that the Commission applied when it set rates for FTTN access for the aggregated service. Given the capacity of the FTTP umbilical fibre, the same assumption is to apply to FTTP access. Evidence submitted to deviate from this approach will be fully reviewed during the process to set final rates.

Cap on DSLAM labour costs	Applied a 40% cap on DSLAM labour costs for FTTN access rates	Bell Canada did not include the Commission-applied labour cap of 40% of the DSLAM costs in its estimation of FTTN access rates. Given that the cap is in place for existing FTTN access rates, it is appropriate to maintain it for these rates. Evidence submitted to deviate from this approach will be fully reviewed during the process to set final rates.

Table 2(b): Cogeco

Monthly capacity rate per 50 Mbps and access rates

Area requiring adjustment	Commission adjustment	Rationale for adjustment
Node segmentation and Converged Cable Access Platform (CCAP) capital costs	Adjusted node segmentation and CCAP capital costs to reflect the appropriate WFFs	Cogeco estimated its node segmentation costs using WFFs that are lower than those used in the Telecom Decision 2006-77 cost determinations. Evidence submitted to deviate from the determinations made in Telecom Decision 2006-77 will be fully reviewed during the process to set final rates. Cogeco estimated its CCAP capital costs using WFFs that are lower than those in Appendix V, table 9 of the Manual. Evidence submitted to deviate from the determination made in Appendix V, table 9 will be fully reviewed during the process to set final rates.

Monthly capacity rate per 50 Mbps

Area requiring adjustment	Commission adjustment	Rationale for adjustment
CCAP capital costs	Applied an annual capital unit cost change of -26.4% to CCAP capital costs	Cogeco applied an annual capital unit cost change of -17% to CCAP capital costs instead of -26.4%, which was established in Telecom Decision 2016-117. Evidence submitted to deviate from the determination in Telecom Decision 2016-117 will be fully reviewed during the process to set final rates.

Growth technology	Adjusted costs to appropriately reflect growth technology	Cogeco did not uniformly apply growth technology in the estimation of its capital expenditures in its cost study. As per the Manual, growth technology should be included in the cost study.

Table 2(c): RCCI

Monthly capacity rate per 50 Mbps and access rates

Area requiring adjustment	Commission adjustment	Rationale for adjustment
Node segmentation capital costs	Adjusted node segmentation capital costs to reflect the appropriate WFFs	RCCI estimated its node segmentation costs using WFFs that are lower than the WFFs used in the Telecom Decision 2006-77 cost determinations. Evidence submitted to deviate from the determinations made in Telecom Decision 2006-77 will be fully reviewed during the process to set final rates.

Monthly capacity rate per 50 Mbps

Area requiring adjustment	Commission adjustment	Rationale for adjustment
Router and CCAP capital costs	Applied an annual capital unit cost change of -26.4% to point of interconnection (POI) router and CCAP capital costs	RCCI applied an annual capital unit cost change of -17% to POI router and CCAP capital costs instead of -26.4%, which was established in Telecom Decision 2016-117. Evidence submitted to deviate from the determination in Telecom Decision 2016-117 will be fully reviewed during the process to set final rates.
Router and CCAP capital costs	Adjusted router and CCAP capital costs to reflect the appropriate WFFs	RCCI estimated its router and CCAP capital costs based on WFFs that are lower than those provided in Appendix V, table 9 of the Manual. Evidence submitted to deviate from the determination in Appendix V, table 9 will be fully reviewed during the process to set final rates.
Spreadsheet error	Corrected calculation error	RCCI incorrectly calculated the capital expenditures for certain equipment

Table 2(d): Videotron

Monthly capacity rate per 50 Mbps

Area requiring adjustment	Commission adjustment	Rationale for adjustment
Node segmentation and CCAP capital costs	Adjusted node segmentation and CCAP capital costs to reflect the appropriate WFFs	Videotron estimated its node segmentation costs based on WFFs that are lower than those used in the Telecom Decision 2006-77 cost determinations. Evidence submitted to deviate from the determinations in Telecom Decision 2006-77 will be fully reviewed during the process to set final rates. Videotron estimated its CCAP capital costs based on WFFs that are lower than those in Appendix V, table 9 of the Manual. Evidence provided to deviate from the determination in Appendix V, table 9 will be fully reviewed during the process to set final rates.
CCAP capital costs	Applied an annual capital unit cost change of -26.4% to CCAP capital costs	Videotron applied an annual capital unit cost change of -17% to CCAP capital costs instead of -26.4%, which was established in Telecom Decision 2016-117. Evidence submitted to deviate from the determination in Telecom Decision 2016-117 will be fully reviewed during the process to set final rates.
Spreadsheet error	Corrected spreadsheet error	Videotron referenced incorrect vintage of certain data in its calculations

2008 SCC 53
Supreme Court of Canada

F.H. v. McDougall

2008 CarswellBC 2041, 2008 CarswellBC 2042, 2008 SCC 53, [2008] 11 W.W.R. 414, [2008] 3 S.C.R. 41, [2008] A.C.S. No. 54, [2008] S.C.J. No. 54, 169 A.C.W.S. (3d) 346, 260 B.C.A.C. 74, 297 D.L.R. F.H. (Appellant) and Ian Hugh McDougall (Respondent)

F.H. (Appellant) and The Order of the Oblates of Mary Immaculate in the Province of British Columbia (Respondent)

F.H. (Appellant) and Her Majesty The Queen in Right of Canada as represented by the Minister of Indian Affairs and Northern Development (Respondent)

McLachlin C.J.C., LeBel, Deschamps, Fish, Abella, Charron, Rothstein JJ.

Heard: May 15, 2008
Judgment: October 2, 2008 [*]
Docket: 32085

Proceedings: reversing *C. (R.) v. McDougall* (2007), 2007 CarswellBC 723, 2007 BCCA 212, 41 C.P.C. (6th) 213, 68 B.C.L.R. (4th) 203, (sub nom. *F.H. v. McDougall)* 396 W.A.C. 222, [2007] 9 W.W.R. 256, (sub nom. *F.H. v. McDougall)* 239 B.C.A.C. 222 (B.C. C.A.)**Proceedings: reversing in part *C. (R.) v. McDougall* (2005), 2005 BCSC 1518, 2005 CarswellBC 2578 (B.C. S.C.)**

Counsel: Allan Donovan, Karim Ramji, Niki Sharma for Appellant
Bronson Toy for Respondent, Ian Hugh McDougall
F. Mark Rowan for Respondent, The Order of the Oblates of Mary Immaculate in the Province of British Columbia
Peter Southey, Christine Mohr for Respondent, Her Majesty The Queen

***Rothstein J.*:**

1 The Supreme Court of British Columbia found in a civil action that the respondent, Ian Hugh McDougall, a supervisor at the Sechelt Indian Residential School, had sexually assaulted the appellant, F.H., while he was a student during the 1968-69 school year. A majority of the British Columbia Court of Appeal allowed the respondent's appeal in part, and reversed the decision of the trial judge. I would allow the appeal to this Court and restore the judgment of the trial judge.

I. Facts

2 The Sechelt Indian Residential School was established in 1904 in British Columbia. It was funded by the Canadian government and operated by the Oblates of Mary Immaculate. F.H. was a resident student at the school from September 1966 to March 1967 and again from September 1968 to June 1974. Ian Hugh McDougall was an Oblate Brother until 1970 and was the junior and intermediate boys' supervisor at the school from 1965 to 1969.

3 The school building had three stories. Dormitories for junior and senior boys were located on the top floor. A supervisors' washroom was also located on the top floor and was accessible through a washroom for the boys. The intermediate boys' dormitory was on the second floor. McDougall had a room in the corner of that dormitory.

4 F.H. claims to have been sexually assaulted by McDougall in the supervisors' washroom when he was approximately ten years of age. At trial, he testified that McDougall sexually abused him on four occasions. The trial judge set out his evidence of these incidents at paras. 34-38 of her reasons:

> As to the first occasion, F.H. had been in the dormitory with others. The defendant asked four boys to go upstairs to the main washroom where they were to wait before going to the supervisors' washroom for an examination. F.H. was the last to go into the washroom to be examined. When he went in, he was asked to remove his pyjamas and while facing the defendant, he was checked from head to toe. His penis was fondled. The defendant then turned him around, asked him to bend over and put his finger in his anus. He removed his clothing, grabbed F.H. around the waist, pulled him onto his lap and raped him. The defendant had put the cover of the toilet down and was using it as a seat. After the defendant ejaculated, he told the plaintiff to put on his pyjamas and leave the room.
>
> F.H. was shocked. He did not cry or scream, nor did he say anything. When he went to the main communal washroom, he could see that he was bleeding. The next morning, he noticed blood in his pyjamas. He went downstairs to the boys' washroom and changed. The bloody pyjamas were rinsed and placed in his locker.
>
> The second incident was approximately two weeks after the first. F.H. was in the dormitory getting ready for bed when the defendant asked him to go to the supervisors' washroom so he could do an examination. There were no other boys present. F.H. was asked to remove his pyjamas and again, he was raped. He went to the communal washroom to clean himself up. In the morning, he realized that his pyjamas were bloody. As it was laundry day, he threw his pyjamas in the laundry bin with the sheets.
>
> The third incident occurred approximately one month later. F.H. testified that once again he was asked to go to the supervisors' washroom, remove his pyjamas and turn around. Again, the defendant grabbed him by the waist and raped him. He was bleeding, but could not recall whether there was blood on his pyjamas.
>
> The fourth incident occurred approximately one month after the third. As he was getting ready for bed, the defendant grabbed him by the shoulder and took him upstairs to the supervisors' washroom. Another rape occurred.

(2005 BCSC 1518 (B.C. S.C.))

5 F.H. did not tell anyone about the assaults until approximately the year 2000. He and his wife were having marital difficulties. She had learned of his extra-marital affair. He testified that because of the problems in his marriage he felt he had to tell his wife about his childhood experience. At his wife's recommendation, he sought counselling.

6 F.H. commenced his action against the respondents on December 7, 2000, approximately 31 years after the alleged sexual assaults. In British Columbia there is no limitation period applicable to a cause of action based on sexual assault and the action may be brought at any time (see *Limitation Act*, R.S.B.C. 1996, c. 266, s. 3(4)(1)).

II. Judgments Below

A. British Columbia Supreme Court, 2005 BCSC 1518 (B.C. S.C.)

7 F.H.'s action was joined with the action of R.C., another former resident of the school who made similar claims against the same parties. The parties agreed to have a trial on the following discrete issues of fact (para. 1):

1) Was either plaintiff physically or sexually abused while he attended the school?

2) If the plaintiff was abused

a) by whom was he abused?

b) when did the abuse occur? and

c) what are the particulars of the abuse?

8 The trial judge, Gill J., began her reasons by noting that the answer to the questions agreed to by the parties depended on findings as to credibility and reliability. Few issues of law were raised. She referred to *Francis v. Canada (Attorney General)*, [2002] B.C.J. No. 436, 2002 BCSC 325 (B.C. S.C.), in which the court stated that in cases involving serious allegations and grave consequences, the civil standard of proof that is "commensurate with the occasion" applied (para. 4).

9 The trial judge then went on to review the testimony of each plaintiff, McDougall and others who worked at the school or were former students. McDougall denied the allegations of sexual abuse and testified that he could not recall ever strapping F.H. He also denied ever conducting physical examinations of the boys and gave evidence that boys were not taken into the supervisors' washroom.

10 In determining whether F.H. was sexually assaulted, the trial judge dealt with the arguments of the defense that F.H.'s evidence was neither reliable nor credible. Gill J. rejected the defense position that F.H.'s inability to respond to certain questions should lead to an adverse conclusion regarding the reliability of his evidence. She found F.H.'s testimony credible while acknowledging that the commission of the assaults in the manner described by F.H. would have carried with it a risk of detection. Gill J. also rejected the contention of defense counsel that F.H.'s motive to lie must weigh heavily against his credibility. Rather she agreed with counsel for F.H. that the circumstances surrounding his disclosure were not suggestive of concoction.

11 The trial judge pointed out areas of consistency and inconsistency between F.H.'s testimony and that of the other students at the school. She also noted that there were significant discrepancies in the evidence given by F.H. as to the frequency of the abuse. At trial, F.H. said there were four incidents. On previous occasions, he said the abuse occurred every two weeks or ten days. Despite these inconsistencies, the trial judge concluded F.H. was a credible witness and stated that his evidence about "the nature of the assaults, the location and the times they occurred" had been consistent (para. 112). She concluded that F.H. had been sexually abused by McDougall, the sexual assaults being four incidents of anal intercourse committed during the 1968-69 school year.

12 In relation to the issue of physical abuse, the trial judge limited herself to deciding whether the plaintiffs had proved that they were strapped while at school. To answer this question, the trial judge reviewed the evidence of McDougall and the testimony of another Brother employed at the school as well as the testimony of several of F.H.'s fellow students. She concluded that strapping was a common form of discipline and that it was not used only in response to serious infractions. She concluded that F.H. was strapped by McDougall an undetermined number of times while at the school.

13 With respect to the claims made by R.C., the trial judge found that he had not proven that he had been sexually assaulted, but found that he had been strapped by a person other than McDougall.

B. British Columbia Court of Appeal (2007), 68 B.C.L.R. (4th) 203, 2007 BCCA 212 (B.C. C.A.)

14 The decision of the Court of Appeal was delivered by Rowles J.A., with Southin J.A. concurring. Ryan J.A. dissented.

(1) Reasons of Rowles J.A.

15 Rowles J.A. concluded that McDougall' s appeal from that part of the order finding that he had sexually assaulted F.H. should be allowed; however his appeal from that part of the order finding that he had strapped F.H. should be dismissed.

16 Rowles J.A. found that it was obvious that the trial judge was aware of the case authorities that have considered the standard of proof to be applied in cases where allegations of morally blameworthy conduct have been made, i.e. proof that is "commensurate with the occasion". However, in her view, the trial judge was bound to consider the serious inconsistencies in the evidence of F.H. in determining whether the alleged sexual assaults had been proven to the standard "commensurate with the allegation". She found that the trial judge did not scrutinize the evidence in the manner required and thereby erred in law.

17 In allowing the appeal in respect of the sexual assaults alleged by F.H., Rowles J.A. was of the opinion that in view of the state of the evidence on that issue, no practical purpose would be served by ordering a new trial.

(2) Concurring Reasons of Southin J.A.

18 In her concurring reasons, Southin J.A. discussed the "troubling aspect" of the case — "how, in a civil case, is the evidence to be evaluated when it is oath against oath, and what is the relationship of the evaluation of the evidence to the burden of proof?" (para. 84).

19 Southin J.A. held that it was of central importance that the gravity of the allegations be forefront in the trier of fact's approach to the evidence. It was not enough, in her view, to choose the testimony of the plaintiff over that of the defendant. Instead, "[t]o choose one over the other... requires... an articulated reason founded in evidence other than that of the plaintiff (para. 106). Moreover, Southin J.A. found that Cory J.'s rejection in *R. v. W. (D.)*, [1991] 1 S.C.R. 742 (S.C.C.), of the "either/or" approach to evaluating evidence of the Crown and the accused as to the conduct of the accused in criminal cases also applied to civil cases.

20 In the end, she could not find in the trial judge's reasons a "legally acceptable articulated reason for accepting the plaintiff's evidence and rejecting the defendants' evidence" (para. 112).

(3) Dissenting Reasons of Ryan J.A.

21 While sharing the concerns of the majority about "the perils of assigning liability in cases where the events have occurred so long ago", Ryan J.A. disagreed with the conclusion that the trial judge did not apply the proper standard of proof to her assessment of the evidence (para. 115).

22 Ryan J.A. noted that the trial judge set out the test — a standard of proof commensurate with the occasion — early in her reasons. "Having set out the proper test, we must assume that she properly applied it, unless her reasons demonstrate otherwise" (para. 116).

23 In the view of Ryan J.A., alleging that the trial judge misapplied the standard of proof to her assessment of the evidence was to say that the trial judge erred in her findings of fact. To overturn the trial judge's findings of fact, the appellate court must find that the trial judge made a manifest error, ignored conclusive or relevant evidence or drew unreasonable conclusions from it.

24 Ryan J.A. was of the view that the trial judge had made no such error. The trial judge had acknowledged the most troubling aspect of F.H.'s testimony — that it was not consistent with earlier descriptions of the abuse — and decided that at its core, the testimony was consistent and truthful. The inconsistencies were not overlooked by the trial judge.

25 Having found no error in the reasons for judgment, Ryan J.A. was of the view that the Court of Appeal should have deferred to the conclusions of the trial judge. Accordingly, she would have dismissed the appeal.

III. Analysis

A. The Standard of Proof

(1) Canadian Jurisprudence

26 Much has been written as judges have attempted to reconcile the tension between the civil standard of proof on a balance of probabilities and cases in which allegations made against a defendant are particularly grave. Such cases include allegations of fraud, professional misconduct, and criminal conduct, particularly sexual assault against minors. As explained by L. R. Rothstein, R. A. Centa, and E. Adams, in "Balancing Probabilities: The Overlooked Complexity of the Civil Standard of Proof in *Special Lectures of the Law Society of Upper Canada 2003: The Law of Evidence* (2003), 455, at p. 456:

> ...These types of allegations are considered unique because they carry a moral stigma that will continue to have an impact on the individual after the completion of the civil case.

27 Courts in British Columbia have tended to follow the approach of Lord Denning in *Bater v. Bater*, [1950] 2 All E.R. 458 (Eng. C.A.). Lord Denning was of the view that within the civil standard of proof on a balance of probabilities "there may be degrees of probability within that standard" (p. 459), depending upon the subject matter. He stated at p. 459:

> It does not adopt so high a degree as a criminal court, even when it is considering a charge of a criminal nature, but still it does require a degree of probability which is commensurate with the occasion.

28 In the present case the trial judge referred to *Francis v. Canada (Attorney General)*, at para. 154, in which Neilson J. stated:

> The court is justified in imposing a higher degree of probability which is "commensurate with the occasion"....

29 In the constitutional context, Dickson C.J. adopted the *Bater* approach in *R. v. Oakes*, [1986] 1 S.C.R. 103 (S.C.C.). In his view a "very high degree of probability" required that the evidence be cogent and persuasive and make clear the consequences of the decision one way or the other. He wrote at p. 138:

> Having regard to the fact that s. 1 is being invoked for the purpose of justifying a violation of the constitutional rights and freedoms the *Charter* was designed to protect, a very high degree of probability will be, in the words of Lord Denning, "commensurate with the occasion". Where evidence is required in order to prove the constituent elements of a s. 1 inquiry and this will generally be the case, it should be cogent and persuasive and make clear to the Court the consequences of imposing or not imposing the limit.

30 However, a "shifting standard" of probability has not been universally accepted. In *Continental Insurance Co. v. Dalton Cartage Co.*, [1982] 1 S.C.R. 164 (S.C.C.), Laskin C.J. rejected a "shifting standard". Rather, to take account of the seriousness of the allegation, he was of the view that a trial judge should scrutinize the evidence with "greater care". At pp. 169-71 he stated:

> Where there is an allegation of conduct that is morally blameworthy or that could have a criminal or penal aspect and the allegation is made in civil litigation, the relevant burden of proof remains proof on a balance of probabilities....
>
> . . . . .
>
> There is necessarily a matter of judgment involved in weighing evidence that goes to the burden of proof, and a trial judge is justified in scrutinizing evidence with greater care if there are serious allegations to be established by the proof that is offered.
>
> . . . . .
>
> I do not regard such an approach (the *Bater* approach) as a departure from a standard of proof based on a balance of probabilities nor as supporting a shifting standard. The question in all civil cases is what evidence with what weight that is accorded to it will move the court to conclude that proof on a balance of probabilities has been established.

31 In Ontario Professional Discipline cases, the balance of probabilities requires that proof be "clear and convincing and based upon cogent evidence" (see *Heath v. College of Physicians & Surgeons (Ontario)* (1997), 6 Admin. L.R. (3d) 304 (Ont. Div. Ct.), at para. 53).

(2) Recent United Kingdom Jurisprudence

32 In the United Kingdom some decisions have indicated that depending upon the seriousness of the matters involved, even in civil cases, the criminal standard of proof should apply. In *R. (on the application of McCann) v. Manchester Crown Court* (2002), [2003] 1 A.C. 787 (U.K. H.L.), Lord Steyn said at para. 37:

> ... I agree that, given the seriousness of matters involved, at least some reference to the heightened civil standard would usually be necessary: *In re H (Minors) (Sexual Abuse: Standard of Proof)*, [1996] A.C. 563, 586 D-H, per Lord Nicholls of Birkenhead. For essentially practical reasons, the Recorder of Manchester decided to apply the criminal standard. The

Court of Appeal said that would usually be the right course to adopt. Lord Bingham of Cornhill has observed that the heightened civil standard and the criminal standard are virtually indistinguishable. I do not disagree with any of these views. But in my view pragmatism dictates that the task of magistrates should be made more straightforward by ruling that they must in all cases under section 1 apply the criminal standard.

33 Yet another consideration, that of "inherent probability or improbability of an event" was discussed by Lord Nicholls in *H., Re* (1995), [1996] A.C. 563 (Eng. H.L.), at p. 586:

> ... the inherent probability or improbability of an event is itself a matter to be taken into account when weighing the probabilities and deciding whether, on balance, the event occurred. The more improbable the event, the stronger must be the evidence that it did occur before, on the balance of probability, its occurrence will be established.

34 Most recently in *B (Children), Re*, [2008] 3 W.L.R. 1 (U.K. H.L.), a June 11, 2008 decision, the U.K. House of Lords again canvassed the issue of standard of proof. Subsequent to the hearing of the appeal, Mr. Southey, counsel for the Attorney General of Canada, with no objection from other counsel, brought this case to the attention of the Court.

35 Lord Hoffman addressed the "confusion" in the United Kingdom courts over this issue. He stated at para. 5:

> Some confusion has however been caused by dicta which suggest that the standard of proof may vary with the gravity of the misconduct alleged or even the seriousness of the consequences for the person concerned. The cases in which such statements have been made fall into three categories. First, there are cases in which the court has for one purpose classified the proceedings as civil (for example, for the purposes of article 6 of the European Convention for the Protection of Human Rights and Fundamental Freedoms) but nevertheless thought that, because of the serious consequences of the proceedings, the criminal standard of proof or something like it should be applied. Secondly, there are cases in which it has been observed that when some event is inherently improbable, strong evidence may be needed to persuade a tribunal that it more probably happened than not. Thirdly, there are cases in which judges are simply confused about whether they are talking about the standard of proof or about the role of inherent probabilities in deciding whether the burden of proving a fact to a given standard has been discharged.

36 The unanimous conclusion of the House of Lords was that there is only one civil standard of proof. At para. 13, Lord Hoffman states:

> ... I think that the time has come to say, once and for all, that there is only one civil standard of proof and that is proof that the fact in issue more probably occurred than not.

However, Lord Hoffman did not disapprove of application of the criminal standard depending upon the issue involved. Following his very clear statement that there is only one civil standard of proof, he somewhat enigmatically wrote, still in para. 13:

> ... I do not intend to disapprove any of the cases in what I have called the first category, but I agree with the observation of Lord Steyn in *McCann's* case, at p. 812, that clarity would be greatly enhanced if the courts said simply that although the proceedings were civil, the nature of the particular issue involved made it appropriate to apply the criminal standard.

37 Lord Hoffman went on to express the view that taking account of inherent probabilities was not a rule of law. At para. 15 he stated:

> I wish to lay some stress upon the words I have italicised ["to whatever extent is appropriate in the particular case"]. Lord Nicholls [*In re H*] was not laying down any rule of law. There is only one rule of law, namely that the occurrence of the fact in issue must be proved to have been more probable than not. Common sense, not law, requires that in deciding this question, regard should be had, to whatever extent appropriate, to inherent probabilities.

38 *B (Children), Re* is a child case under the United Kingdom *Children Act 1989*. While her comments on standard of proof are confined to the 1989 Act, Baroness Hale explained that neither the seriousness of the allegation nor the seriousness of

the consequences should make any difference to the standard of proof to be applied in determining the facts. At paras. 70-72, she stated:

> My Lords, for that reason I would go further and announce loud and clear that the standard of proof in finding the facts necessary to establish the threshold under section 31 (2) or the welfare considerations in section 1 of the 1989 Act is the simple balance of probabilities, neither more nor less. Neither the seriousness of the allegation nor the seriousness of the consequences should make any difference to the standard of proof to be applied in determining the facts. The inherent probabilities are simply something to be taken into account, where relevant, in deciding where the truth lies.
>
> As to the seriousness of the consequences, they are serious either way. A child may find her relationship with her family seriously disrupted; or she may find herself still at risk of suffering serious harm. A parent may find his relationship with his child seriously disrupted; or he may find himself still at liberty to maltreat this or other children in the future.
>
> As to the seriousness of the allegation, there is no logical or necessary connection between seriousness and probability. Some seriously harmful behaviour, such as murder, is sufficiently rare to be inherently improbable in most circumstances. Even then there are circumstances, such as a body with its throat cut and no weapon to hand, where it is not at all improbable. Other seriously harmful behaviour, such as alcohol or drug abuse, is regrettably all too common and not at all improbable.

(3) Summary of Various Approaches

39 I summarize the various approaches in civil cases where criminal or morally blameworthy conduct is alleged as I understand them:

(1) The criminal standard of proof applies in civil cases depending upon the seriousness of the allegation;

(2) An intermediate standard of proof between the civil standard and the criminal standard commensurate with the occasion applies to civil cases;

(3) No heightened standard of proof applies in civil cases, but the evidence must be scrutinized with greater care where the allegation is serious;

(4) No heightened standard of proof applies in civil cases, but evidence must be clear, convincing and cogent; and

(5) No heightened standard of proof applies in civil cases, but the more improbable the event, the stronger the evidence is needed to meet the balance of probabilities test.

(4) The Approach Canadian Courts Should Now Adopt

40 Like the House of Lords, I think it is time to say, once and for all in Canada, that there is only one civil standard of proof at common law and that is proof on a balance of probabilities. Of course, context is all important and a judge should not be unmindful, where appropriate, of inherent probabilities or improbabilities or the seriousness of the allegations or consequences. However, these considerations do not change the standard of proof. I am of the respectful opinion that the alternatives I have listed above should be rejected for the reasons that follow.

41 Since *Hanes v. Wawanesa Mutual Insurance Co.*, [1963] S.C.R. 154 (S.C.C.), at pp. 158-64, it has been clear that the criminal standard is not to be applied to civil cases in Canada. The criminal standard of proof beyond a reasonable doubt is linked to the presumption of innocence in criminal trials. The burden of proof always remains with the prosecution. As explained by Cory J. in *R. v. Lifchus*, [1997] 3 S.C.R. 320 (S.C.C.), at para. 27:

> First, it must be made clear to the jury that the standard of proof beyond a reasonable doubt is vitally important since it is inextricably linked to that basic premise which is fundamental to all criminal trials: the presumption of innocence. The two concepts are forever as closely linked as Romeo with Juliet or Oberon with Titania and they must be presented together as a unit. If the presumption of innocence is the golden thread of criminal justice, then proof beyond a reasonable doubt

> is the silver and these two threads are forever intertwined in the fabric of criminal law. Jurors must be reminded that the burden of proving beyond a reasonable doubt that the accused committed the crime rests with the prosecution throughout the trial and never shifts to the accused.

42 By contrast, in civil cases, there is no presumption of innocence. As explained by J. Sopinka, S. N. Lederman and A. W. Bryant, *The Law of Evidence* (2nd ed. 1999), at p. 154:

> ... Since society is indifferent to whether the plaintiff or the defendant wins a particular civil suit, it is unnecessary to protect against an erroneous result by requiring a standard of proof higher than a balance of probabilities.

It is true that there may be serious consequences to a finding of liability in a civil case that continue past the end of the case. However, the civil case does not involve the government's power to penalize or take away the liberty of the individual.

43 An intermediate standard of proof presents practical problems. As expressed by L. Rothstein et al., at p. 466:

> As well, suggesting that the standard of proof is "higher" than the "mere balance of probabilities" leads one inevitably to inquire what percentage of probability must be met? This is unhelpful because while the concept of "51% probability", or "more likely than not" can be understood by decision-makers, the concept of 60% or 70% probability cannot.

44 Put another way, it would seem incongruous for a judge to conclude that it was more likely than not that an event occurred, but not sufficiently likely to some unspecified standard and therefore that it did not occur. As Lord Hoffman explained in *B (Children), Re* at para. 2:

> If a legal rule requires a fact to be proved (a "fact in issue"), a judge or jury must decide whether or not it happened. There is no room for a finding that it might have happened. The law operates a binary system in which the only values are zero and one. The fact either happened or it did not. If the tribunal is left in doubt, the doubt is resolved by a rule that one party or the other carries the burden of proof. If the party who bears the burden of proof fails to discharge it, a value of zero is returned and the fact is treated as not having happened. If he does discharge it, a value of one is returned and the fact is treated as having happened.

In my view, the only practical way in which to reach a factual conclusion in a civil case is to decide whether it is more likely than not that the event occurred.

45 To suggest that depending upon the seriousness, the evidence in the civil case must be scrutinized with greater care implies that in less serious cases the evidence need not be scrutinized with such care. I think it is inappropriate to say that there are legally recognized different levels of scrutiny of the evidence depending upon the seriousness of the case. There is only one legal rule and that is that in all cases, evidence must be scrutinized with care by the trial judge.

46 Similarly, evidence must always be sufficiently clear, convincing and cogent to satisfy the balance of probabilities test. But again, there is no objective standard to measure sufficiency. In serious cases, like the present, judges may be faced with evidence of events that are alleged to have occurred many years before, where there is little other evidence than that of the plaintiff and defendant. As difficult as the task may be, the judge must make a decision. If a responsible judge finds for the plaintiff, it must be accepted that the evidence was sufficiently clear, convincing and cogent to that judge that the plaintiff satisfied the balance of probabilities test.

47 Finally there may be cases in which there is an inherent improbability that an event occurred. Inherent improbability will always depend upon the circumstances. As Baroness Hale stated in *B (Children), Re* at para. 72:

> ... Consider the famous example of the animal seen in Regent's Park. If it is seen outside the zoo on a stretch of greensward regularly used for walking dogs, then of course it is more likely to be a dog than a lion. If it is seen in the zoo next to the lions' enclosure when the door is open, then it may well be more likely to be a lion than a dog.

48 Some alleged events may be highly improbable. Others less so. There can be no rule as to when and to what extent inherent improbability must be taken into account by a trial judge. As Lord Hoffman observed at para. 15 of *B (Children), Re*:

> ... Common sense, not law, requires that in deciding this question, regard should be had, to whatever extent appropriate, to inherent probabilities.

It will be for the trial judge to decide to what extent, if any, the circumstances suggest that an allegation is inherently improbable and where appropriate, that may be taken into account in the assessment of whether the evidence establishes that it is more likely than not that the event occurred. However, there can be no rule of law imposing such a formula.

(5) Conclusion on Standard of Proof

49 In the result, I would reaffirm that in civil cases there is only one standard of proof and that is proof on a balance of probabilities. In all civil cases, the trial judge must scrutinize the relevant evidence with care to determine whether it is more likely than not that an alleged event occurred.

50 I turn now to the issues particular to this case.

B. The Concerns of the Court of Appeal Respecting Inconsistency in the Evidence of F.H.

51 The level of scrutiny required in cases of sexual assault was central to the analysis of the Court of Appeal. According to Rowles J.A. at para. 72, one of the issues was "whether the trial judge, in light of the standard of proof that had to be applied in a case such as this, failed to consider the problems or troublesome aspects of [F.H.]'s evidence". The "troublesome aspects" of F.H.'s evidence related to, amongst others, inconsistencies as to the frequency of the alleged sexual assaults as between F.H.'s evidence on discovery and at trial, as well as to an inconsistency between the original statement of claim alleging attempted anal intercourse and the evidence given at trial of actual penetration.

52 In the absence of support from the surrounding circumstances, when considering the evidence of F.H. on its own, the majority of the Court of Appeal concluded that the trial judge had failed to consider whether the facts had been proven "to the standard commensurate with the allegation" and had failed to "[s]crutinize the evidence in the manner required and thereby erred in law" (para. 79).

53 As I have explained, there is only one civil standard of proof — proof on a balance of probabilities. Although understandable in view of the state of the jurisprudence at the time of its decision, the Court of Appeal was in error in holding the trial judge to a higher standard. While that conclusion is sufficient to decide this appeal, nonetheless, I think it is important for future guidance to make some further comments on the approach of the majority of the Court of Appeal.

54 Rowles J.A. was correct that failure by a trial judge to apply the correct standard of proof in assessing evidence would constitute an error of law. The question is how such failure may be apparent in the reasons of a trial judge. Obviously in the remote example of a trial judge expressly stating an incorrect standard of proof, it will be presumed that the incorrect standard was applied. Where the trial judge expressly states the correct standard of proof, it will be presumed that it was applied. Where the trial judge does not express a particular standard of proof, it will also be presumed that the correct standard was applied:

> Trial judges are presumed to know the law with which they work day in and day out.
>
> (*R. v. B. (R.H.)*, [1994] 1 S.C.R. 656 (S.C.C.), at p. 664, *per* McLachlin J. (as she then was)).

Whether the correct standard was expressly stated or not, the presumption of correct application will apply unless it can be demonstrated by the analysis conducted that the incorrect standard was applied. However, in determining whether the correct standard has indeed been applied, an appellate court must take care not to substitute its own view of the facts for that of the trial judge.

55 An appellate court is only permitted to interfere with factual findings when "the trial judge [has] shown to have committed a palpable and overriding error or made findings of fact that are clearly wrong, unreasonable or unsupported by the evidence" (*L. (H.) v. Canada (Attorney General)*, [2005] 1 S.C.R. 401, 2005 SCC 25 (S.C.C.), at para. 4 (emphasis deleted), *per* Fish J.). Rowles J.A. correctly acknowledged as much (para. 27). She also recognized that where there is some evidence to support an inference drawn by the trial judge, an appellate court will be hard pressed to find a palpable and overriding error. Indeed, she quoted the now well-known words to this effect in the judgment of Iacobucci and Major JJ. in *Housen v. Nikolaisen*, [2002] 2 S.C.R. 235, 2002 SCC 33 (S.C.C.), at para. 27 of her reasons (para. 22 of *Housen*).

56 Rowles J.A. was satisfied that the trial judge was aware of the standard of proof that had heretofore been applied in cases of moral blameworthiness. At para. 35 of her reasons she stated:

> ... From her reasons it is obvious that the judge was aware of the case authorities that have considered the standard of proof to be applied in cases where allegations of morally blameworthy conduct have been made.

That should have satisfied the Court of Appeal that the trial judge understood and applied the standard of proof they thought to be applicable to this case.

C. The Inconsistency in the Evidence of F.H.

57 At para. 5 of her reasons, the trial judge had regard for the judgment of Rowles J.A. in *R. v. B. (R.W.)* (1993), 24 B.C.A.C. 1 (B.C. C.A.), at paras. 28-29, dealing with the reliability and credibility of witnesses in the case of inconsistencies and an absence of supporting evidence. Although *R. v. B. (R.W.)* was a criminal case, I, like the trial judge, think the words of Rowles J.A. are apt for the purposes of this case:

> In this case there were a number of inconsistencies in the complainant's own evidence and a number of inconsistencies between the complainant's evidence and the testimony of other witnesses. While it is true that minor inconsistencies may not diminish the credibility of a witness unduly, a series of inconsistencies may become quite significant and cause the trier of fact to have a reasonable doubt about the reliability of the witness' evidence. There is no rule as to when, in the face of inconsistency, such doubt may arise but at the least the trier of fact should look to the totality of the inconsistencies in order to assess whether the witness' evidence is reliable. This is particularly so when there is no supporting evidence on the central issue, which was the case here. [para. 29]

58 As Rowles J.A. found in the context of the criminal standard of proof, where proof is on a balance of probabilities there is likewise no rule as to when inconsistencies in the evidence of a plaintiff will cause a trial judge to conclude that the plaintiff's evidence is not credible or reliable. The trial judge should not consider the plaintiff's evidence in isolation, but must look at the totality of the evidence to assess the impact of the inconsistencies in that evidence on questions of credibility and reliability pertaining to the core issue in the case.

59 It is apparent from her reasons that the trial judge recognized the obligation upon her to have regard for the inconsistencies in the evidence of F.H. and to consider them in light of the totality of the evidence to the extent that was possible. While she did not deal with every inconsistency, as she explained at para. 100, she did address in a general way the arguments put forward by the defence.

60 The trial judge specifically dealt with some of what the Court of Appeal identified as the troublesome aspects of F.H.'s evidence. For example, Rowles J.A. stated at para. 77, that F.H.'s evidence with respect to inspections in the supervisors' washroom was not consistent with the testimony of other witnesses:

> ... There was no corroborative evidence from the witnesses who had been students at the School of other boys having lined up and being examined by McDougall in the supervisor's washroom so as to lend support to the respondent's recollection of events. In fact, the defense evidence was to the opposite effect, that is, the boys did not line up outside the staff washroom for any reason or at any time.

61 However, Gill J. dealt with the washroom inspections as well as the inconsistent recollection of the witnesses regarding these inspections. She also made a finding of fact that inspections were performed and were routine at the school. At para. 106 of her reasons she stated:

> It was argued that the evidence of F.H. was not consistent with the evidence of others. No inspections were done in the supervisors' washroom or in the way that F.H. described. I agree that no other witness described inspections being done in the supervisors' washroom. However, evidence about inspections was given by defence witnesses. I have already referred to the evidence of Mr. Paul. I accept that inspections were done in the manner he described. The boys were sometimes inspected on shower days and supervisors regularly checked to ensure that they had washed themselves thoroughly. Admittedly, Mr. Paul did not say that the defendant had conducted such examinations, but he described the inspections as a routine of the school. In fact, Mr. Paul's evidence is not consistent with the evidence of the defendant, who stated that the only examination of the boys was for head lice and it was done by the nurse.

62 In this passage of her reasons, the trial judge dealt with the inconsistency between the evidence of F.H. and other witnesses. She also considered McDougall's testimony in light of other evidence given by witnesses for the defence. From the evidence of Mr. Paul she concluded that examinations were routinely carried out. She found that Mr. Paul's evidence about examinations was not consistent with that of McDougall who had testified that examinations were only for head lice and were carried out by the nurse. The necessary inference is that she found McDougall not to be credible on this issue.

63 The majority of the Court of Appeal was also concerned with the testimony of F.H., that each time he was sexually assaulted by McDougall, he would go upstairs from his dorm to the supervisors' washroom. At para. 77 of her reasons, Rowles J.A. stated:

> However, [F.H.] was a junior boy rather than an intermediate one at the relevant time and his dorm would have been on the top floor. Based on the evidence of where the boys slept, [McDougall] could not have taken [F.H.] "upstairs" from his dorm.

Counsel for F.H. points out that in his evidence at trial, F.H. testified that he was an intermediate boy when the sexual assaults occurred and that as an intermediate boy he would have to go upstairs to the supervisors' washroom. Although there was contradictory evidence, there was evidence upon which F.H. could have been believed.

64 It is true that Gill J. did not deal with F.H.'s inconsistency as to the frequency of the inspections inside the supervisors' washroom as identified by Rowles J.A. at para. 75:

> The respondent also told Ms. Stone that the young boys regularly lined up outside the staff washroom, which they referred to as the "examination room", every second week in order to be examined. At trial he testified this lining up only happened the first time he was sexually assaulted. Again, this is a substantial change in the respondent's recounting of events.

Nor did Gill J. specifically address the change in the allegations of attempted anal intercourse and genital fondling in the original statement of claim and the evidence of F.H. at trial of actual penetration. Rowles J.A. stated at para. 76:

> The respondent's original statement of claim only alleged attempted anal intercourse and genital fondling. There was no allegation about the appellant actually inserting his finger in F.H.'s anus or having forced anal intercourse. The respondent's evidence at trial was of actual penetration. As the trial judge found, the respondent acknowledged that he had reviewed the statement of claim, including the paragraphs which particularized the alleged assaults, and that he was aware of the difference between actually doing something and attempting to do something.

65 However, at paras. 46 and 48 of her reasons, Gill J. had recounted these inconsistencies as raised in cross-examination. Her reasons indicate she was aware of the inconsistencies.

66 As for the inconsistency relating to the frequency of the sexual assaults, Rowles J.A. stated at para. 73:

> At his examination for discovery the respondent said that the sexual assaults took place "weekly", "frequently", and "every ten days or so" over the entire time he was at the School. The respondent admitted at trial that he had said on discovery

> that he had told the counsellor, Ms. Nellie Stone, that the sexual assaults by the appellant had taken place over the entire time he was at the School, while he was between the ages of eight and fourteen years. At trial, the respondent testified that the sexual assaults occurred on only four occasions over a period of two-and-a-half months.
>
> [Emphasis added.]

67 Counsel for F.H. points out that F.H.'s evidence was that he was subjected to physical and sexual abuse while he was at the residential school perpetrated by more than one person, that the question to which he was responding mixed both sexual and physical abuse and that the majority of the Court of Appeal wrongly narrowed F.H.'s statement only to assaults perpetrated by McDougall. Counsel says that F.H. was commenting on all of the physical and sexual abuse he experienced at the school which involved more than McDougall and took place over his six years of attendance.

68 The Court of Appeal appears to have interpreted his evidence on discovery that he was sexually assaulted by McDougall over the entire time he was at the school, while in his evidence at trial it was only four times over two and a half months. Although the evidence is not without doubt, it is open to be interpreted in the way counsel for F.H. asserts and that there was no inconsistency between F.H.'s evidence on discovery and at trial.

69 As to the frequency of the alleged sexual assaults by McDougall, the trial judge did not ignore inconsistencies in the evidence of F.H. In spite of the inconsistencies, she found him to be credible. At para. 112 of her reasons, she stated:

> There are, however, some inconsistencies in the evidence of F.H. As the defence has also argued, his evidence about the frequency of the abuse has not been consistent and there are differences between what he admittedly told Ms. Stone, what he said at his examination for discovery and his evidence at trial. At trial, he said there were four incidents. On previous occasions, he said that this occurred every two weeks or ten days. That is a difference of significance. However, his evidence about the nature of the assaults, the location and the times they occurred has been consistent. Despite differences about frequency, it is my view that F.H. was a credible witness.

70 The trial judge was not obliged to find that F.H. was not credible or that his evidence at trial was unreliable because of inconsistency between his trial evidence and the evidence he gave on prior occasions. Where a trial judge demonstrates that she is alive to the inconsistencies but still concludes that the witness was nonetheless credible, in the absence of palpable and overriding error, there is no basis for interference by the appellate court.

71 All of this is not to say that the concerns expressed by Rowles J.A. were unfounded. There are troubling aspects of F.H.'s evidence. However, the trial judge was not oblivious to the inconsistencies in his evidence. The events occurred more than 30 years before the trial. Where the trial judge refers to the inconsistencies and deals expressly with a number of them, it must be assumed that she took them into account in assessing the balance of probabilities. Notwithstanding its own misgivings, it was not for the Court of Appeal to second guess the trial judge in the absence of finding a palpable and overriding error.

72 With respect, I cannot interpret the reasons of the majority of the Court of Appeal other than that it disagreed with the trial judge's credibility assessment of F.H. in light of the inconsistencies in his evidence and the lack of support from the surrounding circumstances. Assessing credibility is clearly in the bailiwick of the trial judge and thus heightened deference must be accorded to the trial judge on matters of credibility. As explained by Bastarache and Abella JJ. in *R. c. Gagnon*, [2006] 1 S.C.R. 621, 2006 SCC 17 (S.C.C.), at para. 20:

> Assessing credibility is not a science. It is very difficult for a trial judge to articulate with precision the complex intermingling of impressions that emerge after watching and listening to witnesses and attempting to reconcile the various versions of events. That is why this Court decided, most recently in *H.L.*, that in the absence of a palpable and overriding error by the trial judge, his or her perceptions should be respected.

73 As stated above, an appellate court is only permitted to intervene when "the trial judge is shown to have committed a palpable and overriding error or made findings of fact that are clearly wrong, unreasonable or unsupported by the evidence" (*L. (H.)*, at para. 4 (emphasis deleted)). The Court of Appeal made no such finding. With respect, in finding that the trial judge

failed to scrutinize F.H.'s evidence in the manner required by law, it incorrectly substituted its credibility assessment for that of the trial judge.

D. Palpable and Overriding Error

74 Notwithstanding that the Court of Appeal made no finding of palpable and overriding error, the Attorney General of Canada submits that the trial judge did indeed make such an error. This argument is based entirely on the inconsistencies in the evidence of F.H. The Attorney General says that in light of these inconsistencies, the trial judge was clearly wrong in finding F.H. credible.

75 I do not minimize the inconsistencies in F.H.'s testimony. They are certainly relevant to an assessment of his credibility. Nonetheless, the trial judge was convinced, despite the inconsistencies, that F.H. was credible and that the four sexual assaults alleged to have been committed by McDougall did occur. From her reasons, it appears that the trial judge's decision on the credibility of the witnesses was made in the context of the evidence as a whole. She considered the layout of the school and the fact that the manner in which F.H. described the assaults as taking place would have carried with it the risk of detection. She also considered whether F.H.'s evidence about inspections taking place in the supervisors' washroom and the availability of sheets and pyjamas was consistent with evidence of other witnesses. She acknowledged that F.H. had a motive to lie to save his marriage and decided that the circumstances surrounding disclosure were not suggestive of concoction. She also factored into her analysis the demeanor of F.H.: that "[he] was not a witness who gave detailed answers, often responding simply with a yes or no, nor did he volunteer much information" (para. 110), and that "[w]hen [he] testified, he displayed no emotion but it was clear that he had few, if any, good memories of the school" (para. 113).

76 In the end, believing the testimony of one witness and not the other is a matter of judgment. In light of the inconsistencies in F.H.'s testimony with respect to the frequency of the sexual assaults, it is easy to see how another trial judge may not have found F.H. to be a credible witness. However, Gill J. found him to be credible. It is important to bear in mind that the evidence in this case was of matters occurring over thirty years earlier when F.H. was approximately ten years of age. As a matter of policy, the British Columbia legislature has eliminated the limitation period for claims of sexual assault. This was a policy choice for that legislative assembly. Nonetheless, it must be recognized that the task of trial judges assessing evidence in such cases is very difficult indeed. However, that does not open the door to an appellate court, being removed from the testimony and not seeing the witnesses, to reassess the credibility of the witnesses.

E. Corroboration

77 The reasons of the majority of the Court of Appeal may be read as requiring, as a matter of law, that in cases of oath against oath in the context of sexual assault allegations, that a sexual assault victim must provide some independent corroborating evidence. At para. 77 of her reasons, Rowles J.A. observed:

> There was no corroborative evidence from the witnesses who had been students at the School of other boys having lined up and being examined by McDougall in the supervisor's washroom so as to lend support to [F.H.]'s recollection of events.

At para. 79 she stated:

> ... No support for [F.H.]'s testimony could be drawn from the surrounding circumstances.

78 In her concurring reasons at para. 106, Southin J.A. stated:

> ... To choose one over the other in cases of oath against oath requires, in my opinion, an articulated reason founded in evidence other than that of the plaintiff.

79 The impression these passages may leave is that there is a legal requirement of corroboration in civil cases in which sexual assault is alleged. In an abundance of caution and to provide guidance for the future, I make the following comments.

80 Corroborative evidence is always helpful and does strengthen the evidence of the party relying on it as I believe Rowles J.A. was implying in her comments. However, it is not a legal requirement and indeed may not be available, especially where the alleged incidents took place decades earlier. Incidents of sexual assault normally occur in private.

81 Requiring corroboration would elevate the evidentiary requirement in a civil case above that in a criminal case. Modern criminal law has rejected the previous common law and later statutory requirement that allegations of sexual assault be corroborated in order to lead to a conviction (see *Criminal Code*, R.S.C. 1970, c. C-34, s. 139(1), mandating the need for corroboration and its subsequent amendments removing this requirement (*Act to amend the Criminal Code in relation to sexual offences and other offences against the person and to amend certain other Acts in relation thereto or in consequence thereof*, S.C. 1980-81-82-83, c. 125), as well as the current *Criminal Code*, R.S.C. 1985, c. C-46, s. 274, stipulating that no corroboration is required for convictions in sexual assault cases). Trial judges faced with allegations of sexual assault may find that they are required to make a decision on the basis of whether they believe the plaintiff or the defendant and as difficult as that may be, they are required to assess the evidence and make their determination without imposing a legal requirement for corroboration.

F. Is W. (D.) Applicable in Civil Cases in Which Credibility is in Issue?

82 At paras. 107, 108 and 110 of her reasons, Southin J.A. stated:

> It is not enough for the judge to say that I find the plaintiff credible and since he is credible the defendant must be lying.
>
> What I have said so far is, to me, no more than an application to civil cases of *R. v. W. (D.)*, [1991] 1 S.C.R. 742.
>
> . . . . .
>
> I see no logical reason why the rejection of "either/or" in criminal cases is not applicable in civil cases where the allegation is of crime, albeit that the burden of proof on the proponent is not beyond reasonable doubt but on the balance of probabilities.

83 *W. (D.)* was a decision by this Court in which Cory J., at pp. 757-58, established a three-step charge to the jury to help the jury assess conflicting evidence between the victim and the accused in cases of criminal prosecutions of sexual assaults:

> First, if you believe the evidence of the accused, obviously you must acquit.
>
> Second, if you do not believe the testimony of the accused but you are left in reasonable doubt by it, you must acquit.
>
> Third, even if you are not left in doubt by the evidence of the accused, you must ask yourself whether, on the basis of the evidence which you do accept, you are convinced beyond a reasonable doubt by that evidence of the guilt of the accused.

84 These charges to the jury are not sacrosanct but were merely put in place as guideposts to the meaning of reasonable doubt, as recently explained by Binnie J. in *R. v. S. (J.H.)*, [2008] 2 S.C.R. 152, 2008 SCC 30 (S.C.C.), at paras. 9 and 13:

> ... Essentially, *W. (D.)* simply unpacks for the benefit of the lay jury what reasonable doubt means in the context of evaluating conflicting testimonial accounts. It alerts the jury to the "credibility contest" error. It teaches that trial judges are required to impress on the jury that the burden never shifts from the Crown to prove every element of the offence beyond a reasonable doubt.
>
> . . . . .
>
> In *R. v. Avetysan*, [2000] 2 S.C.R. 745, 2000 SCC 56, Major J. for the majority pointed out that in any case where credibility is important "[t]he question is really whether, in substance, the trial judge's instructions left the jury with the impression that it had to choose between the two versions of events" (para. 19). The main point is that lack of credibility on the part of the accused does not equate to proof of his or her guilt beyond a reasonable doubt.

85 The *W. (D.)* steps were developed as an aid to the determination of reasonable doubt in the criminal law context where a jury is faced with conflicting testimonial accounts. Lack of credibility on the part of an accused is not proof of guilt beyond a reasonable doubt.

86 However, in civil cases in which there is conflicting testimony, the judge is deciding whether a fact occurred on a balance of probabilities. In such cases, provided the judge has not ignored evidence, finding the evidence of one party credible may well be conclusive of the result because that evidence is inconsistent with that of the other party. In such cases, believing one party will mean explicitly or implicitly that the other party was not believed on the important issue in the case. That may be especially true where a plaintiff makes allegations that are altogether denied by the defendant as in this case. *W. (D.)* is not an appropriate tool for evaluating evidence on the balance of probabilities in civil cases.

G. Did the Trial Judge Ignore the Evidence of McDougall?

87 In an argument related to *W. (D.)*, the Attorney General of Canada says at para. 44 of its factum, that "[s]imply believing the testimony of one witness, without assessing the evidence of the other witness, marginalizes that other witness" since he has no way of knowing whether he was disbelieved or simply ignored.

88 The Attorney General bases his argument on the well-known passage in *Faryna v. Chorny* (1951), [1952] 2 D.L.R. 354 (B.C. C.A.), which concludes at p. 357:

> ... a Court of Appeal must be satisfied that the trial Judge's finding of credibility is based not on one element only to the exclusion of others, but is based on all the elements by which it can he tested in the particular case.

89 Thus, the Attorney General contends, at para. 47 of its factum, that:

> ... In a civil proceeding alleging a sexual assault, if the trier of fact accepts the plaintiff's evidence and simply ignores the defendant's evidence, that conclusion would breach the requirement described in *Faryna*, that every element of the evidence must be considered.

90 I agree that it would be an error for the trial judge to ignore the evidence of the defendant and simply concentrate on the evidence submitted by the plaintiff. But that is not the case here.

91 The trial judge described the testimony given by McDougall with respect to his vocational beliefs, his subsequent marriage, his role at the school, the routine at the school, the laundry procedure and his denials as to having sexually assaulted either R.C. or F.H.. She also dealt with the defense arguments with respect to the credibility and reliability of the testimony of R.C. and F.H. regarding the sexual assaults. Indeed, she found that R.C. did not prove he was sexually assaulted by McDougall.

92 In determining whether McDougall had ever strapped R.C. or F.H., she summarized McDougall's evidence as follows at para. 131:

> As stated, it was the defendant's evidence that during his years at the school, he administered the strap to only five or six intermediate boys. He did so as punishment for behavior such as fighting or swearing. It was always to the hand and was always done in the dorm. He denied the evidence of Mr. Jeffries that he had frequently disciplined him for the reasons Mr. Jeffries described. He denied going to his grandmother's home or mocking him about wanting to visit his grandmother. He denied the evidence of F.H.

93 She also highlighted a contradiction in McDougall's testimony at para. 135:

> It is also my view that the defendant minimized his use of the strap as a form of discipline. Further, while he testified that no child was ever strapped in his room, when testifying about one specific incident, he said that he brought the boy "upstairs to my room and I administered the strap three times to his right hand".

Although McDougall later "corrected himself to say that he had strapped the boy in the dorm and not in his room, it was open to the trial judge to believe his first statement and not his "correction".

94 And as earlier discussed, at para. 106 of her reasons, she pointed out inconsistency between the evidence of McDougall and one of the defence witnesses, Mr. Paul, on the issue of routine physical inspections of the students.

95 At para. 66 of her reasons for the majority of the Court of Appeal, Rowles J.A. stated:

> From the reasons the trial judge gave for finding that the appellant had strapped the respondent, one can infer that the judge did not accept the appellant's evidence on that issue. Disbelief of a witness's evidence on one issue may well taint the witness's evidence on other issues, but an unfavourable credibility finding against a witness does not, of itself, constitute evidence that can be used to prove a fact in issue.

96 I agree with Rowles J.A. However, the trial judge's unfavourable credibility findings with respect to McDougall's strapping evidence together with her belief in Paul's evidence in preference to that of McDougall with respect to routine physical inspections, indicates that she did not ignore McDougall's evidence or marginalize him. She simply believed F.H. on essential matters rather than McDougall.

H. Were the Reasons of the Trial Judge Adequate?

97 The Attorney General alleges that the reasons of the trial judge are inadequate. The same argument was not accepted by the Court of Appeal. At para. 61, Rowles J.A. stated:

> Generally speaking, if a judge's reasons reveal the path the judge took to reach a conclusion on the matter in dispute, the reasons are adequate for the purposes of appellate review. To succeed in an argument that the trial judge did not give adequate reasons, an appellant does not have to demonstrate that there is a flaw in the reasoning that lead to the result. In this case, the judge's reasons are adequate to show how she arrived at her conclusion that the respondent had been sexually assaulted.

Where the Court of Appeal expresses itself as being satisfied that it can discern why the trial judge arrived at her conclusion, a party faces a serious obstacle to convince this court that the reasons are nonetheless inadequate.

98 The meaning of adequacy of reasons is explained in *R. v. Sheppard*, [2002] 1 S.C.R. 869, 2002 SCC 26 (S.C.C.). In *R. v. Walker*, [2008] 2 S.C.R. 245, 2008 SCC 34 (S.C.C.), Binnie J. summarized the duty to give adequate reasons:

> (1) To justify and explain the result;
>
> (2) To tell the losing party why he or she lost;
>
> (3) To provide for informed consideration of the grounds of appeal; and
>
> (4) To satisfy the public that justice has been done.

99 However, an appeal court cannot intervene merely because it believes the trial judge did a poor job of expressing herself. Nor, is a failure to give adequate reasons a free standing basis for appeal. At para. 20 of *Walker*, Binnie J. states:

> Equally, however, *Sheppard* holds that "[t]he appellate court is not given the power to intervene simply because it thinks the trial court did a poor job of expressing itself (para. 26). Reasons are sufficient if they are responsive to the case's live issues and the parties' key arguments. Their sufficiency should be measured not in the abstract, but as they respond to the substance of what was in issue.... The duty to give reasons "should be given a functional and purposeful interpretation" and the failure to live up to the duty does not provide "a free-standing right of appeal" or "in itself confe[r] entitlement to appellate intervention" (para. 53).

100 An unsuccessful party may well be dissatisfied with the reasons of a trial judge, especially where he or she was not believed. Where findings of credibility must be made, it must be recognized that it may be very difficult for the trial judge to put into words the process by which the decision is arrived at (see *R. c. Gagnon*). But that does not make the reasons inadequate. In

R. v. M. (R.E.), 2008 SCC 51 (S.C.C.), released at the same time as this decision, McLachlin C J. has explained that credibility findings may involve factors that are difficult to verbalize:

> While it is useful for a judge to attempt to articulate the reasons for believing a witness and disbelieving another in general or on a particular point, the fact remains that the exercise may not be purely intellectual and may involve factors that are difficult to verbalize. Furthermore, embellishing why a particular witness's evidence is rejected may involve the judge in saying unflattering things about the witness; judges may wish to spare the accused who takes the stand to deny the crime, for example, the indignity of not only rejecting his evidence in convicting him, but adding negative comments about his demeanor. In short, assessing credibility is a difficult and delicate matter, that does not always lend itself to precise and complete verbalization. [para. 49]

Nor are reasons inadequate because in hindsight, it may be possible to say that the reasons were not as clear and comprehensive as they might have been.

101 Rowles J.A. found that the reasons of the trial judge showed why she arrived at her conclusion that F.H. had been sexually assaulted by McDougall. I agree with her that the reasons of the trial judge were adequate.

IV. Conclusion

102 I am of the respectful opinion that the majority of the Court of Appeal erred in reversing the decision of the trial judge. The appeal should be allowed with costs. The decision of the Court of Appeal of British Columbia should be set aside and the decision of the trial judge restored.

Appeal allowed.

Pourvoi accueilli.

Footnotes

* A corrigendum issued by the court on November 4, 2008 has been incorporated herein.

246 F.3d 708
United States Court of Appeals,
District of Columbia Circuit.

FEDERAL TRADE COMMISSION, Appellant,
v.
H.J. HEINZ CO. and Milnot Holding Corporation, Appellees.

No. 00–5362
|
Argued Feb. 12, 2001.
|
Decided April 27, 2001.

Synopsis

Federal Trade Commission (FTC) brought suit under Clayton Act, seeking to prevent merger of second and third largest manufacturers of jarred baby food. The United States District Court for the District of Columbia, James Robertson, J., denied FTC's motion for preliminary injunction, and FTC appealed. The Court of Appeals, Karen LeCraft Henderson, Circuit Judge, held that: (1) FTC established prima facie case that merger would be anticompetitive, and (2) manufacturers failed to rebut presumption created by prima facie case.

Reversed and remanded.

***710 **366** Appeal from the United States District Court for the District of Columbia (No. 00cv01688).

Attorneys and Law Firms

Debra A. Valentine, General Counsel, Federal Trade Commission, argued the cause for the appellant. John F. Daly, Assistant General Counsel, Richard G. Parker, Director, and Richard B. Dagen, David A. Balto and David C. Shonka, Attorneys, Federal Trade Commission, were on brief.

Edward P. Henneberry argued the cause for the appellees. W. Bradford Reynolds, Marc G. Schildkraut, Kenneth W. Starr, and Mark L. Kovner were on brief.

J. Joseph Curran, Jr., Attorney General, and Ellen S. Cooper, Assistant Attorney General, State of Maryland; Bruce M. Botelho, Attorney General, State of Alaska; Janet Napolitano, Attorney General, State of Arizona; Mark Pryor, Attorney General, State of Arkansas; Bill Lockyer, Attorney General, and Peter Siggins, Chief Deputy Attorney General, State of California; Ken Salazar, Attorney General, State of Colorado; Richard Blumenthal, Attorney General and Steven Rutstein, Assistant Attorney General, State of Connecticut; Robert R. Rigsby, Corporation Counsel, Charles L. Reischel, Deputy Corporation Counsel, and Bennett Rushkoff, Senior Counsel, District of Columbia; Robert A. Butterworth, Attorney General, State of Florida; Earl I. Anzai, Attorney General, State of Hawaii; Alan G. Lance, Attorney General, State of Idaho; James E. Ryan, Attorney General, State of Illinois; Karen M. Freeman–Wilson, Attorney General, State of Indiana; Thomas J. Miller, Attorney General, State of Iowa; Carla J. Stovall, Attorney General, State of Kansas; Richard P. Ieyoub, Attorney General, State of Louisiana; Jennifer Granholm, Attorney General, and Thomas L. Casey, Solicitor General, State of Michigan; Julie Ralston Aoki, Assistant Attorney General, State of Minnesota; Mike Moore, Attorney General, State of Mississippi; Frankie Sue Del Papa, Attorney General, State of Nevada; Philip T. McLaughlin, Attorney General, State of New Hampshire; Eliot Spitzer, Attorney General, State of New York; Michael F. Easley, Attorney General, and K.D. Sturgis, Assistant Attorney General, State of North Carolina; Herbert D. Soll, Attorney General, Commonwealth of the Northern Mariana Islands; Betty D. Montgomery, Attorney General, State of Ohio; ***711 **367** W.A. Drew Edmondson, Attorney General, State of Oklahoma; Angel E. Rotger–Sabat, Attorney General, Commonwealth of Puerto Rico; Mark Barnett, Attorney General, State of South Dakota; John Cornyn, Attorney General, State of Texas; Jan Graham, Attorney General, State of Utah; William H. Sorrell, Attorney General, State of Vermont; Mark L. Earley, Attorney General, Commonwealth of Virginia; Christine O. Gregoire, Attorney General, State of Washington; Darrell V. McGraw, Jr., Attorney General, and Douglas L. Davis, Assistant Attorney General, State of West Virginia; James E. Doyle, Attorney General, and Kevin J. O'Connor, State of Wisconsin; and Gay Woodhouse, Attorney General, State of Wyoming; were on brief for The Thirty–Six Amici Curiae in support of the appellant.

James H. Skiles and Jan Amundson were on brief for Grocery Manufacturers of America, Inc. et al., Amici Curiae in support of the appellees.

C. Boyden Gray, William J. Kolasky, Jeffrey D. Ayer and Robert H. Bork were on brief for Citizens for a Sound Economy Foundation, Amicus Curiae, in support of the appellees.

Before: HENDERSON, RANDOLPH and GARLAND, Circuit Judges.

Opinion for the court filed by Circuit Judge HENDERSON.

Opinion

KAREN LeCRAFT HENDERSON, Circuit Judge.

On February 28, 2000 H.J. Heinz Company (Heinz) and Milnot Holding Corporation (Beech–Nut) entered into a merger agreement. The Federal Trade Commission (Commission or FTC) sought a preliminary injunction pursuant to section 13(b) of the Federal Trade Commission Act (FTCA), 15 U.S.C. § 53(b), to enjoin the consummation of the merger. The injunction was sought in aid of an FTC administrative proceeding which was subsequently instituted by complaint to challenge the merger as violative of, *inter alia,* section 7 of the Clayton Act, 15 U.S.C. § 18. The district court denied the preliminary injunction and the FTC appealed to this court. For the reasons set forth below, we reverse the district court and remand for entry of a preliminary injunction against Heinz and Beech–Nut.

I. Background

Four million infants in the United States consume 80 million cases of jarred baby food annually, representing a domestic market of $865 million to $1 billion.[1] *FTC v. H.J. Heinz, Co.,* 116 F.Supp.2d 190, 192 (D.D.C.2000). The baby food market is dominated by three firms, Gerber Products Company (Gerber), Heinz and Beech–Nut. Gerber, the industry leader, enjoys a 65 per cent market share while Heinz and Beech–Nut come in second and third, with a 17.4 per cent and a 15.4 per cent share respectively. *Id*. The district court found that Gerber enjoys unparalleled brand recognition with a brand loyalty greater than any other product sold in the United States. *Id*. at 193. Gerber's products are found in over 90 per cent of all American supermarkets.[2]

By contrast, Heinz is sold in approximately 40 per cent of all supermarkets. Its sales are nationwide but concentrated ***712 **368** in northern New England, the Southeast and Deep South and the Midwest. *Id*. at 194. Despite its second-place domestic market share, Heinz is the largest producer of baby food in the world with $1 billion in sales worldwide. Its domestic baby food products with annual net sales of $103 million are manufactured at its Pittsburgh, Pennsylvania plant, which was updated in 1991 at a cost of $120 million. *Id*. at 192–93. The plant operates at 40 per cent of its production capacity and produces 12 million cases of baby food annually. Its baby food line includes about 130 SKUs (stock keeping units), that is, product varieties (*e.g.,* strained carrots, apple sauce, etc.). Heinz lacks Gerber's brand recognition; it markets itself as a "value brand" with a shelf price several cents below Gerber's. *Id*. at 193.

Beech–Nut has a market share (15.4%) comparable to that of Heinz (17.4%), with $138.7 million in annual sales of baby food, of which 72 per cent is jarred baby food. Its jarred baby food line consists of 128 SKUs. Beech–Nut manufactures all of its baby food in Canajoharie, New York at a manufacturing plant that was built in 1907 and began manufacturing baby food in 1931. Beech–Nut maintains price parity with Gerber, selling at about one penny less. It markets its product as a premium brand. *Id*. Consumers generally view its product as comparable in quality to Gerber's. *Id*. Beech–Nut is carried in approximately 45 per cent of all grocery stores. Although its sales are nationwide, they are concentrated in New York, New Jersey, California and Florida.[3] *Id*. at 194.

At the wholesale level Heinz and Beech–Nut both make lump-sum payments called "fixed trade spending" (also known as "slotting fees" or "pay-to-stay" arrangements) to grocery stores to obtain shelf placement. *Id.* at 197. Gerber, with its strong name recognition and brand loyalty, does not make such pay-to-stay payments. The other type of wholesale trade spending is "variable trade spending," which typically consists of manufacturers' discounts and allowances to supermarkets to create retail price differentials that entice the consumer to purchase their product instead of a competitor's. *Id*.

Under the terms of their merger agreement, Heinz would acquire 100 per cent of Beech–Nut's voting securities for $185 million. Accordingly, they filed a Premerger Notification and Report Form with the FTC and the United States Department of Justice pursuant to the Hart–Scott–Rodino Antitrust Improvement Act of 1976, 15 U.S.C. § 18a.[4] On July 7, 2000 the FTC authorized this action for a preliminary injunction under section 13(b) of the FTCA and, on July 14, 2000, it filed a complaint and motion for preliminary injunction. The district court conducted a five-day hearing in late August and early September and heard final arguments on September 21, 2000. The record before the district court consisted of 1,267 exhibits, including 150 demonstrative exhibits, 32 depositions and 41 affidavits. ***713** ****369** In addition, eleven witnesses testified. On October 18, 2000 the district court denied preliminary injunctive relief. The court concluded that it was "more probable than not that consummation of the Heinz/Beech–Nut merger will actually increase competition in jarred baby food in the United States." *H.J. Heinz,* 116 F.Supp.2d at 200. The FTC appealed and sought injunctive relief pending appeal, which this court granted on November 8, 2000. On November 22, 2000 the FTC filed an administrative complaint against Heinz and Beech–Nut, charging that the proposed merger violates section 5 of the FTCA and, if consummated, would violate section 7 of the Clayton Act. *In the Matter of H. J. Heinz,* Docket No. 9295 (filed Nov. 22, 2000).

II. Analysis

A. *Standard of Review*

We review a district court order denying preliminary injunctive relief for abuse of discretion, *National Wildlife Fed'n v. Burford,* 835 F.2d 305, 319 (D.C.Cir.1987), and will set aside the court's factual findings only if they are "clearly erroneous." Fed.R.Civ.P. 52(a); *United States v. Marine Bancorporation, Inc.,* 418 U.S. 602, 615 n. 13, 94 S.Ct. 2856, 41 L.Ed.2d 978 (1974). If our review of the district court order "reveals that it rests on an erroneous premise as to the pertinent law, however, we must examine the decision in light of the legal principles we believe proper and sound." *Ambach v. Bell,* 686 F.2d 974, 979 (D.C.Cir.1982). We apply *de novo* review to the district court's conclusions of law. *See FTC v. National Tea Co.,* 603 F.2d 694, 696–98 (8th Cir.1979) (reviewing *de novo* proper standard of proof under section 13(b) of FTCA); *cf. FTC v. Warner Communications Inc.,* 742 F.2d 1156, 1160 (9th Cir.1984) (per curiam) (finding as matter of law district court applied incorrect standard for section 7 violation). In deciding whether to grant preliminary injunctive relief under section 13(b), the court evaluates whether it is in the public interest to enjoin the proposed merger. *See* 15 U.S.C. § 53(b).

B. *Section 7 of the Clayton Act*

Section 7 of the Clayton Act prohibits acquisitions, including mergers, "where in any line of commerce or in any activity affecting commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly." 15 U.S.C. § 18; *see United States v. Philadelphia Nat'l Bank,* 374 U.S. 321, 355, 83 S.Ct. 1715, 10 L.Ed.2d 915 (1963) ("The statutory test is whether the effect of the merger 'may be substantially to lessen competition' 'in any line of commerce in any section of the country.' "). The "Congress used the words '*may* be substantially to lessen competition' (emphasis supplied), to indicate that its concern was with probabilities, not certainties." *Brown Shoe Co. v. United States,* 370 U.S. 294, 323, 82 S.Ct. 1502, 8 L.Ed.2d 510 (1962) (emphasis original); *see* S.Rep. No. 1775, at 6 (1950), U.S.Code Cong. & Admin. News at 4293, 4298 ("The use of these words ["may be"] means that the bill, if enacted, would not apply to the mere possibility but only to the reasonable probability of the pr[o]scribed effect...."). "Merger enforcement, like other areas of antitrust, is directed at market power. It shares with the law of monopolization a degree of schizophrenia: an aversion to potent power that heightens risk of abuse; and tolerance of that degree of power required to attain economic benefits." Lawrence A. Sullivan & Warren S. Grimes, *The Law of Antitrust* § 9.1, at 511 (2000). The Congress has empowered the FTC, *inter alia,* to weed out those mergers whose effect "may be substantially to lessen competition" from those that enhance competition. *See* H.R.Rep. No. 1142, at 18–19 (1914). ***714** ****370** In section 13(b) of the FTCA, the Congress provided a mechanism whereby the FTC may seek preliminary injunctive relief preventing the merging parties from consummating the merger until the Commission has had an opportunity to investigate and, if necessary, adjudicate the matter.

C. *Section 13(b) of the Federal Trade Commission Act*

"Whenever the Commission has reason to believe that a corporation is violating, or is about to violate, Section 7 of the Clayton Act, the FTC may seek a preliminary injunction to prevent a merger pending the Commission's administrative adjudication of the merger's legality." *FTC v. Staples, Inc.,* 970 F.Supp. 1066, 1070 (D.D.C.1997); *see* 15 U.S.C. § 53(b). Section 13(b) provides for the grant of a preliminary injunction where such action would be in the public interest—as determined by a weighing of the equities and a consideration of the Commission's likelihood of success on the merits. 15 U.S.C. § 53(b).[5] The Congress intended this standard to depart from what it regarded as the then-traditional equity standard, which it characterized as requiring the plaintiff to show: (1) irreparable damage, (2) probability of success on the merits and (3) a balance of equities favoring the plaintiff. H.R.Rep. No. 93–624, at 31 (1971). The Congress determined that the traditional standard was not "appropriate for the implementation of a

Federal statute by an independent regulatory agency where the standards of the public interest measure the propriety and the need for injunctive relief." *Id*. "The courts had evolved an approach to cases in which government agencies, acting to enforce a federal statute, sought interim relief. The agency, in such cases, was not held to the high thresholds applicable where private parties seek interim restraining orders." *FTC v. Weyerhaeuser Co.,* 665 F.2d 1072, 1082 (D.C.Cir.1981); *see FTC v. Exxon Corp.,* 636 F.2d 1336, 1343 (D.C.Cir.1980) ("In enacting [Section 13(b)], Congress further demonstrated its concern that injunctive relief be broadly available to the FTC by incorporating a unique 'public interest' standard in 15 U.S.C. § 53(b), rather than the more stringent, traditional 'equity' standard for injunctive relief."). The FTC is not required to *establish* that the proposed merger would in fact violate section 7 of the Clayton Act. *Staples,* 970 F.Supp. at 1071; *see FTC v. Food Town Stores, Inc.,* 539 F.2d 1339, 1342 (4th Cir.1976) ("The district court is not authorized to determine whether the antitrust laws have been or are about to be violated. That adjudicatory function is vested in the FTC in the first instance."). We now consider the FTC's likelihood of success and weigh the equities. *Accord FTC v. Freeman Hosp.,* 69 F.3d 260, 267 (8th Cir.1995); *FTC v. University Health, Inc.,* 938 F.2d 1206, 1217 (11th Cir.1991); *Warner Communications,* 742 F.2d at 1160.

1. Likelihood of Success

To determine likelihood of success on the merits we measure the probability that, after an administrative hearing on the merits, the Commission will succeed in proving that the effect of the Heinz/Beech–Nut merger "may be substantially to lessen competition, or to tend to create a monopoly" in violation of section 7 of the Clayton Act. 15 U.S.C. § 18. This court and others have suggested that the standard for likelihood of success on the merits is met if the FTC "has raised questions going to the merits so serious, substantial, ***715 **371** difficult and doubtful as to make them fair ground for thorough investigation, study, deliberation and determination by the FTC in the first instance and ultimately by the Court of Appeals." *FTC v. Beatrice Foods Co.,* 587 F.2d 1225, 1229 (D.C.Cir.1978) (Appendix to Statement of MacKinnon & Robb, JJ.)[6]; *Staples,* 970 F.Supp. at 1071; *Warner Communications,* 742 F.2d at 1162 (quoting *National Tea,* 603 F.2d at 698); *see University Health,* 938 F.2d at 1218. This specific standard was articulated by the court below, *see H.J. Heinz,* 116 F.Supp.2d at 194, and it is a standard to which the appellees have not objected.

In *United States v. Baker Hughes Inc.,* 908 F.2d 981, 982–83 (D.C.Cir.1990), we explained the analytical approach by which the government establishes a section 7 violation. First the government must show that the merger would produce "a firm controlling an undue percentage share of the relevant market, and [would] result[ ] in a significant increase in the concentration of firms in that market." *Philadelphia Nat'l Bank,* 374 U.S. at 363, 83 S.Ct. 1715. Such a showing establishes a "presumption" that the merger will substantially lessen competition. *See Baker Hughes,* 908 F.2d at 982. To rebut the presumption, the defendants must produce evidence that "show [s] that the market-share statistics [give] an inaccurate account of the [merger's] probable effects on competition" in the relevant market. *United States v. Citizens & S. Nat'l Bank,* 422 U.S. 86, 120, 95 S.Ct. 2099, 45 L.Ed.2d 41 (1975).[7] "If the defendant successfully rebuts the presumption [of illegality], the burden of producing additional evidence of anticompetitive effect shifts to the government, and merges with the ultimate burden of persuasion, which remains with the government at all times." *Baker Hughes Inc.,* 908 F.2d at 983; *see also Kaiser Aluminum,* 652 F.2d at 1340 & n. 12. Although *Baker Hughes* was decided at the merits stage as opposed to the preliminary injunctive relief stage, we can nonetheless use its analytical approach in evaluating the Commission's showing of likelihood of success. Accordingly, we look at the FTC's prima facie case and the defendants' rebuttal evidence.

a. Prima Facie Case

Merger law "rests upon the theory that, where rivals are few, firms will be able to coordinate their behavior, either by overt collusion or implicit understanding, in order to restrict output and achieve profits above competitive levels." *FTC v. PPG Indus.,* 798 F.2d 1500, 1503 (D.C.Cir.1986).[8] Increases in concentration above certain levels are thought to "raise[ ] a likelihood of 'interdependent anticompetitive ***716 **372** conduct.' " *Id.* (quoting *General Dynamics,* 415 U.S. at 497, 94 S.Ct. 1186); *see FTC v. Elders Grain,* 868 F.2d 901, 905 (7th Cir.1989). Market concentration, or the lack thereof, is often measured by the Herfindahl–Hirschmann Index (HHI). *See Staples,* 970 F.Supp. at 1081 n. 12.[9]

Sufficiently large HHI figures establish the FTC's prima facie case that a merger is anti-competitive. *See Baker Hughes,* 908 F.2d at 982–83 & n. 3; *PPG,* 798 F.2d at 1503. The district court found that the pre-merger HHI "score for the baby food industry is 4775"—indicative of a highly concentrated industry.[10] *H.J. Heinz,* 116 F.Supp.2d at 196; *see PPG,* 798 F.2d at 1503; Horizontal Merger Guidelines, *supra,* § 1.51. The merger of Heinz and Beech–Nut will increase the HHI by 510 points. This creates, by a wide margin, a presumption that the merger will lessen competition in the domestic jarred baby food market. *See* Horizontal Merger Guidelines, *supra,* § 1.51 (stating that HHI increase of more than 100 points, where post-merger HHI exceeds 1800, is "presumed ... likely to create or enhance market power or facilitate its exercise"); *see also Baker Hughes,* 908 F.2d at 982–83 & n. 3; *PPG,* 798 F.2d at 1503.[11] Here, ***717 **373** the FTC's market concentration statistics[12] are bolstered by the indisputable fact that the merger will eliminate competition between the two merging parties at the wholesale level, where they are currently the only competitors for what the district court described as the " second position on the supermarket shelves." *H.J. Heinz,* 116 F.Supp.2d at 196. Heinz's own documents recognize the wholesale competition and anticipate that the merger will end it. JA 2680; *see also* JA 2185. Indeed, those documents disclose that Heinz considered three options to end the vigorous wholesale competition with Beech–Nut: two involved innovative measures while the third entailed the acquisition of Beech–Nut. JA 2184. Heinz chose the third, and least pro-competitive, of the options.

Finally, the anticompetitive effect of the merger is further enhanced by high barriers to market entry.[13] The district court found that there had been no significant entries in the baby food market in decades and that new entry was "difficult and improbable." *H.J. Heinz,* 116 F.Supp.2d at 196. This finding largely eliminates the possibility that the reduced competition caused by the merger will be ameliorated by new competition from outsiders and further strengthens the FTC's case. *See University Health,* 938 F.2d at 1219 & n. 26.

As far as we can determine, no court has ever approved a merger to duopoly under similar circumstances.

***718 **374** b. Rebuttal Arguments

In response to the FTC's prima facie showing, the appellees make three rebuttal arguments, which the district court accepted in reaching its conclusion that the merger was not likely to lessen competition substantially. For the reasons discussed below, these arguments fail and thus were not a proper basis for denying the FTC injunctive relief.

1. Extent of Pre–Merger Competition

The appellees first contend, and the district court agreed, that Heinz and Beech–Nut do not really compete against each other at the retail level. Consumers do not regard the products of the two companies as substitutes, the appellees claim, and generally only one of the two brands is available on any given store's shelves. Hence, they argue, there is little competitive loss from the merger.

This argument has a number of flaws which render clearly erroneous the court's finding that Heinz and Beech–Nut have not engaged in significant pre-merger competition. First, in accepting the appellees' argument that Heinz and Beech–Nut do not compete, the district court failed to address the record evidence that the two do in fact price against each other, *see, e.g.,* 8/31/2000 Tr. 247–48, and that, where both are present in the same areas,[14] they depress each other's prices as well as those of Gerber even though they are virtually never all found in the same store. *See, e.g.,* 8/30/2000 Tr. 147–48, 172; PX 531 at ¶ 8; PX 481 at ¶ 12; PX 479 at ¶ ¶ 6–7; PX 478 at ¶ 6; DX 14 at RP–110. This evidence undermines the district court's factual finding.

Second, the district court's finding is inconsistent with its conclusion that there is a single, national market for jarred baby food in the United States. The Supreme Court has explained that "[t]he outer boundaries of a product market are determined by the reasonable interchangeability of use [by consumers] or the cross-elasticity of demand between the product itself and substitutes for it." *Brown Shoe,* 370 U.S. at 325, 82 S.Ct. 1502; *see also United States v. E.I. du Pont de Nemours & Co.,* 351 U.S. 377, 395, 76 S.Ct. 994, 100 L.Ed. 1264 (1956).[15] The definition of product market thus "focuses solely on demand substitution factors," *i.e.,* that consumers regard the products as substitutes. Horizontal Merger Guidelines, *supra,* § 1.0; Sullivan & Grimes, *supra,* § 11.2b1, at 579. By defining the relevant product market generically as jarred baby food, the district court concluded that in areas where Heinz's and Beech–Nut's products are both sold, consumers will switch between them in response to a "small but significant and nontransitory increase in price (SSNIP)." Horizontal Merger Guidelines, *supra,* § 1.11; *H.J. Heinz,* 116 F.Supp.2d at 195. The district court never explained this inherent inconsistency in its logic nor could counsel for the appellees explain it at oral argument.

Third, and perhaps most important, the court's conclusion concerning pre-merger competition does not take into account the indisputable fact that the merger will eliminate competition at the wholesale level between the only two competitors for the ****375 *719** "second shelf" position. Competition between Heinz and Beech–Nut to gain accounts at the wholesale level is fierce with each contest concluding in a winner-take-all result. JA 2680. The district court regarded this loss of competition as irrelevant because the FTC did not establish to its satisfaction that wholesale competition ultimately benefitted consumers through lower retail prices. The district court concluded that fixed trade spending did not affect consumer prices and that "the FTC's assertion that the proposed merger will affect variable trade spending levels and consumer prices is ... at best, inconclusive."[16] *H.J. Heinz,* 116 F.Supp.2d at 197. Although the court noted the FTC's examples of consumer benefit through couponing initiatives, the court held that it was "impossible to conclude with any certainty that the consumer benefit from such couponing initiatives would be lost in the merger." *Id.*

In rejecting the FTC's argument regarding the loss of wholesale competition, the court committed two legal errors. First, as the appellees conceded at oral argument, no court has ever held that a reduction in competition for wholesale purchasers is not relevant unless the plaintiff can prove impact at the consumer level. Oral Arg. Tr. at 22, 28; *see Hospital Corp. of Am. v. FTC,* 807 F.2d 1381, 1389 (7th Cir.1986) ("Section 7 does not require proof that a merger or other acquisition has caused higher prices in the affected market. All that is necessary is that the merger create an appreciable danger of [collusive practices] in the future. A predictive judgment, necessarily probabilistic and judgmental rather than demonstrable, is called for.") (citation omitted). Second, it is, in any event, not the FTC's burden to prove such an impact with "certainty." To the contrary, the antitrust laws assume that a retailer faced with an increase in the cost of one of its inventory items "will try so far as competition allows to pass that cost on to its customers in the form of a higher price for its product." *In re Brand Name Prescription Drugs Antitrust Litig.,* 123 F.3d 599, 605 (7th Cir.1997), *reh'g and suggestion for reh'g en banc denied* (Oct. 8, 1997). Section 7 is, after all, concerned with *probabilities,* not certainties. *United States v. El Paso Natural Gas Co.,* 376 U.S. 651, 658, 84 S.Ct. 1044, 12 L.Ed.2d 12 (1964); *Brown Shoe,* 370 U.S. at 323, 82 S.Ct. 1502; *Baker Hughes,* 908 F.2d at 984.[17]

***720 **376** 2. Post–Merger Efficiencies

The appellees' second attempt to rebut the FTC's prima facie showing is their contention that the anticompetitive effects of the merger will be offset by efficiencies resulting from the union of the two companies, efficiencies which they assert will be used to compete more effectively against Gerber. It is true that a merger's primary benefit to the economy is its potential to generate efficiencies. *See generally* 4A Phillip E. Areeda, Herbert Hovenkamp & John L. Solow, *Antitrust Law* ¶ 970 at 22–25 (1998). As the Merger Guidelines now recognize, efficiencies "can enhance the merged firm's ability and incentive to compete, which may result in lower prices, improved quality, or new products." Horizontal Merger Guidelines, *supra,* § 4.

Although the Supreme Court has not sanctioned the use of the efficiencies defense in a section 7 case, *see Procter & Gamble Co.,* 386 U.S. at 580, 87 S.Ct. 1224,[18] the trend among lower courts is to recognize the defense. *See, e.g., FTC v. Tenet Health Care Corp.,* 186 F.3d 1045, 1054 (8th Cir.1999), *reh'g and reh'g en banc denied* (Oct. 6.1999); *University Health,* 938 F.2d at 1222; *FTC v. Cardinal Health, Inc.,* 12 F.Supp.2d 34, 61 (D.D.C.1998); *Staples,* 970 F.Supp. at 1088–89; *see also* ABA Antitrust Section, *Mergers and Acquisitions: Understanding the Antitrust Issues* 152 (2000) ("The majority of courts have considered efficiencies as a means to rebut the government's prima facie case that a merger will lead to restricted output or increased prices. These courts, however, generally have found inadequate proof of efficiencies to sustain a rebuttal of the government's case."). In 1997 the Department of Justice and the FTC revised their Horizontal Merger Guidelines to recognize that "mergers have the potential to generate significant efficiencies by permitting a better utilization of existing assets, enabling the combined firm to achieve lower costs in producing a given quantity and quality than either firm could have achieved without the proposed transaction." Horizontal Merger Guidelines, *supra,* § 4.

Nevertheless, the high market concentration levels present in this case require, in rebuttal, proof of extraordinary efficiencies, which the appellees failed to supply. *See University Health,* 938 F.2d at 1223 ("[A] defendant who seeks to overcome a presumption that a proposed acquisition would substantially lessen competition must demonstrate that the intended acquisition would result in significant economies and that these economies ultimately would benefit competition and, hence, consumers."); Horizontal Merger

Guidelines, *supra,* § 4 (stating that "[e]fficiencies almost never justify a merger to monopoly or near-monopoly"); 4A Areeda, *et al., Antitrust Law* ¶ 971f, at 44 (requiring "extraordinary" efficiencies where the "HHI is well above 1800 and the HHI increase is ***721 **377** well above 100"). Moreover, given the high concentration levels, the court must undertake a rigorous analysis of the kinds of efficiencies being urged by the parties in order to ensure that those "efficiencies" represent more than mere speculation and promises about post-merger behavior. The district court did not undertake that analysis here.

In support of its conclusion that post-merger efficiencies will outweigh the merger's anticompetitive effects, the district court found that the consolidation of baby food production in Heinz's under-utilized Pittsburgh plant "will achieve substantial cost savings in salaries and operating costs." *H.J. Heinz,* 116 F.Supp.2d at 199. The court also credited the appellees' promise of improved product quality as a result of recipe consolidation.[19] The only cost reduction the court quantified as a percentage of pre-merger costs, however, was the so called "variable conversion cost": the cost of processing the volume of baby food now processed by Beech–Nut. The court accepted the appellees' claim that this cost would be reduced by 43% if the Beech–Nut production were shifted to Heinz's plant, *see* JA 4619, a reduction the appellees' expert characterized as "extraordinary."

The district court's analysis falls short of the findings necessary for a successful efficiencies defense in the circumstances of this case. We mention only three of the most important deficiencies here. First, "variable conversion cost" is only a percentage of the total variable manufacturing cost. A large percentage reduction in only a small portion of the company's overall variable manufacturing cost does not necessarily translate into a significant cost advantage to the merger. Thus, for cost reduction to be relevant, we must at least consider the percentage of Beech–Nut's total variable manufacturing cost that would be reduced as a consequence of the merger. At oral argument, the appellees' counsel agreed. Oral Arg. Tr. at 43. This correction immediately cuts the asserted efficiency gain in half since, according to the appellees' evidence, using total variable manufacturing cost as the measure cuts the cost savings from 43% to 22.3%. *See* JA 4620.

Second, the percentage reduction in *Beech-Nut's* cost is still not the relevant figure. After the merger, the two entities will be combined, and to determine whether the merged entity will be a significantly more efficient competitor, cost reductions must be measured across the new entity's combined production—not just across the pre-merger output of Beech–Nut. *See* 4A Areeda, *et al., supra,* ¶ 976d at 93–94. The district court, however, did not consider the cost reduction over the merged firm's combined output. At oral argument the appellees' counsel was unable to suggest a formula that could be used for determining that cost reduction. *See* Oral Arg. Tr. at 45–47.

Finally, and as the district court recognized, the asserted efficiencies must be "merger-specific" to be cognizable as a defense.[20] ***722 **378** *H.J. Heinz,* 116 F.Supp.2d at 198–99; *see* Horizontal Merger Guidelines, *supra,* § 4; 4A Areeda, *et al., supra,* ¶ 973, at 49–62. That is, they must be efficiencies that cannot be achieved by either company alone because, if they can, the merger's asserted benefits can be achieved without the concomitant loss of a competitor. *See generally* 4A Areeda, *et al., supra,* ¶ 973. Yet the district court never explained why Heinz could not achieve the kind of efficiencies urged without merger. As noted, the principal merger benefit asserted for Heinz is the acquisition of Beech–Nut's better recipes, which will allegedly make its product more attractive and permit expanded sales at prices lower than those charged by Beech–Nut, which produces at an inefficient plant. Yet, neither the district court nor the appellees addressed the question whether Heinz could obtain the benefit of better recipes by investing more money in product development and promotion—say, by an amount less than the amount Heinz would spend to acquire Beech–Nut. At oral argument, Heinz's counsel agreed that the taste of Heinz's products was not so bad that no amount of money could improve the brand's consumer appeal. Oral Arg. Tr. at 54. That being the case, the question is how much Heinz would have to spend to make its product equivalent to the Beech–Nut product and hence whether Heinz could achieve the efficiencies of merger without eliminating Beech–Nut as a competitor. The district court, however, undertook no inquiry in this regard. In short, the district court failed to make the kind of factual determinations necessary to render the appellees' efficiency defense sufficiently concrete to offset the FTC's prima facie showing.

3. Innovation

The appellees claim next that the merger is required to enable Heinz to innovate, and thus to improve its competitive position against Gerber. Heinz and Beech–Nut asserted, and the district court found, that without the merger the two firms are unable to launch new products to compete with Gerber because they lack a sufficient shelf presence or ACV. *See* *H.J. Heinz,* 116 F.Supp.2d at 199–200. This kind of defense is often a speculative proposition. *See* 4A Areeda, *et al., supra,* ¶ 975g (noting "truly formidable" proof problems in determining innovation economies). In this case, given the old-economy nature of the industry as well as Heinz's position as the world's largest baby food manufacturer, it is a particularly difficult defense to prove. The court below accepted the appellees' argument principally on the basis of their expert's testimony that new product launches are cost-effective only when a firm's ACV is 70% or greater (Heinz's is presently 40%; Beech–Nut's is 45%). ***723 **379** That testimony, in turn, was based on a graph that plotted revenue against ACV. According to the expert, the graph showed that only four out of 27 new products launched in 1995 had been successful—all for companies with an ACV of 70% or greater.

The chart, however, does not establish this proposition and the court's consequent finding that the merger is necessary for innovation is thus unsupported and clearly erroneous. All the chart plotted was revenue against ACV and hence all it showed was the unsurprising fact that the greater a company's ACV, the greater the revenue it received. Because the graph did not plot the profitability (or any measure of "cost-effectiveness"), there is no way to know whether the expert's claim—that a 70% ACV is required for a launch to be "successful" in an economic sense—is true.[21] Moreover, the number of data points on the chart were few; they were limited to launches in a single year; and they involved launches of all new grocery products rather than of baby food alone. Assessing such data's statistical significance in establishing the proposition at issue, *i.e.,* the necessity of 70% ACV penetration, is thus highly speculative. The district court did not even address the question of the data's statistical significance and the appellees' counsel could offer no help at oral argument. *See* Oral Arg. Tr. at 39 ("I'm not aware of the statistical significance of the underlying study.").[22] In the absence of reliable and significant evidence that the merger will permit innovation that otherwise could not be accomplished, the district court had no basis to conclude that the FTC's showing was rebutted by an innovation defense.

Moreover, Heinz's insistence on a 70–plus ACV before it brings a new product to market may be largely to persuade the court to recognize promotional economies as a defense. Heinz argues that to profitably launch a new product, it must have nationwide market penetration to recoup the money spent on advertising and promotion. It wants to spread advertising costs out among as many product units as possible, thereby lowering the advertising cost per unit. It does not want to "waste" promotional expenditures in markets where its products are not on the shelf or where they are on only a few shelves. For example, in a metropolitan area in which Heinz has a 75 per cent ACV, every dollar spent on advertising is two or three times more "effective" than in a market in which it has only a 25 per cent ACV. As one authority notes, however, "[t]he case for recognizing a defense based on promotional economies is relatively weak." 4A Areeda, *et al., supra,* ¶ 975f, at 77. The district court accepted Heinz's claim that it could not introduce new products without at least a 70 per cent ACV because it would ***724 **380** be unable to adequately diffuse its advertising and promotional expenditures. But the court failed to determine whether substantial promotional scale economies exist now and, if they do, whether Heinz and Beech–Nut "for that reason operate at a substantial competitive disadvantage in the market or markets in which they sell" or whether there are effective alternatives to merger by which the disadvantage can be overcome. *Id.* at ¶ 975f2, at 78.

4. Structural Barriers to Collusion

In a footnote the district court dismissed the likelihood of collusion derived from the FTC's market concentration data. "[S]tructural market barriers to collusion" in the retail market for jarred baby food, the court said, rebut the normal presumption that increases in concentration will increase the likelihood of tacit collusion. *H.J. Heinz,* 116 F.Supp.2d at 198 n. 7. The court's sole citation, however, was to testimony by the appellees' expert, Jonathan B. Baker, a former Director of the Bureau of Economics at the FTC, who testified that in order to coordinate successfully, firms must solve "cartel problems" such as reaching a consensus on price and market share and deterring each other from deviating from that consensus by either lowering price or increasing production. He opined that after the merger the merged entity would want to expand its market share at Gerber's expense, thereby decreasing the likelihood of consensus on price and market share. 9/8/2000 Tr. 1010–1013. In his report, Baker elaborated on his theory, explaining that the efficiencies created by the merger will give the merged firm the ability and incentive to take on Gerber in price and product improvements. DX 617. He also predicted that policing and monitoring of any agreement would be more difficult than it is now, due in part to a time lag in the ability of one firm to detect price cuts by another. But the district court made no finding that any of these "cartel problems" are so much greater in the baby food industry than in other industries that they rebut the normal presumption. In fact, Baker's testimony about "time lag" is refuted by the record which reflects that supermarket prices are available from industry-wide scanner data within 4–8 weeks. *See* DX 617 at ¶ 86 (report of appellees' expert Jonathan Baker); *see also* Oral Arg. Tr. at 30 (statement by appellees' counsel that nothing in record reflects time lag is greater in baby food industry than in other industries). His testimony is further undermined by the record evidence of past price leadership in the baby food industry.[23]

The combination of a concentrated market and barriers to entry is a recipe for price coordination. *See University Health,* 938 F.2d at 1218 n. 24 ("Significant market concentration makes it 'easier for firms in the market to collude, expressly or tacitly, and thereby force price above or farther above the competitive level.' " (citation omitted)). "[W]here rivals are few, firms will be able to coordinate their behavior, ***725** ****381** either by overt collusion or implicit understanding, in order to restrict output and achieve profits above competitive levels." *PPG,* 798 F.2d at 1503. The creation of a durable duopoly affords both the opportunity and incentive for both firms to coordinate to increase prices. The district court recognized this when it questioned Baker on whether the merged entity will, up to a point, expand its market share but "then [with Gerber will] find a nice equilibrium and they'll all get along together." 9/8/2000 Tr. 1014. Tacit coordination

> is feared by antitrust policy even more than express collusion, for tacit coordination, even when observed, cannot easily be controlled directly by the antitrust laws. It is a central object of merger policy to obstruct the creation or reinforcement by merger of such oligopolistic market structures in which tacit coordination can occur.

4 Phillip E. Areeda, Herbert Hovenkamp & John L. Solow, *Antitrust Law* ¶ 901b2, at 9 (rev. ed.1998). Because the district court failed to specify any "structural market barriers to collusion" that are unique to the baby food industry, its conclusion that the ordinary presumption of collusion in a merger to duopoly was rebutted is clearly erroneous.[24]

* * *

Although we recognize that, post-hearing, the FTC may accept the rebuttal arguments proffered by the appellees, including their efficiencies defense, and permit the merger to proceed, we conclude that the FTC succeeded in "rais[ing] questions going to the merits so serious, substantial, difficult and doubtful as to make them fair ground for thorough investigation, study, deliberation and determination by the FTC." *Warner Communications,* 742 F.2d at 1162. The FTC demonstrated that the merger to duopoly will increase the concentration in an already highly concentrated market; that entry barriers in the market make it unlikely that any anticompetitive effects will be avoided; that pre-merger competition is vigorous at the wholesale level nationwide and present at the retail level in some metropolitan areas; and that post-merger competition may be lessened substantially. These substantial questions have not been sufficiently answered by the appellees. As we said in *Baker Hughes,* "[t]he more compelling the prima facie case, the more evidence the defendant must present to rebut it successfully." 908 F.2d at 991. In concluding that the FTC failed to make the requisite showing, the district court erred in a number of respects. Regarding the contention of lack of pre-merger competition, it made a clearly erroneous factual finding and misunderstood the law with respect to the import of competition at the wholesale level. Regarding the proffered efficiencies defense, the court failed to make the kind of factual findings required to render that defense sufficiently concrete to rebut the government's prima facie showing. Finally, as to the contention that the merger is necessary for innovation, the court clearly erred in relying on evidence that does not support its conclusion. Because the district court incorrectly assessed the merits of the appellees' rebuttal arguments, it improperly discounted the FTC's showing of likelihood of success.

***726** ****382** 2. Weighing of the Equities

Although the FTC's showing of likelihood of success creates a presumption in favor of preliminary injunctive relief, we must still weigh the equities in order to decide whether enjoining the merger would be in the public interest. 15 U.S.C. § 53(b); *see PPG,* 798 F.2d at 1507; *Weyerhaeuser,* 665 F.2d at 1081–83. The principal public equity weighing in favor of issuance of preliminary injunctive relief is the public interest in effective enforcement of the antitrust laws. *University Health,* 938 F.2d at 1225. The Congress specifically had this public equity consideration in mind when it enacted section 13(b). *See Food Town Stores,* 539 F.2d at 1346 (Congress enacted section 13(b) to preserve status quo until FTC can perform its function). The district court found, and there is no dispute, that if the merger were allowed to proceed, subsequent administrative and judicial proceedings on the merits "will not matter" because Beech–Nut's manufacturing facility "will be closed, the Beech–Nut distribution channels will be closed, the new label and recipes will be in place, and it will be impossible as a practical matter to undo the transaction." *H.J. Heinz,* 116 F.Supp.2d at 201. Hence, if the merger were ultimately found to violate the Clayton Act, it would be impossible to recreate pre-merger competition. *See Warner Communications,* 742 F.2d at 1165 ("A denial of a preliminary injunction would preclude effective relief if the Commission ultimately prevails and divestiture is ordered."). Section 13(b) itself embodies congressional recognition of the fact that divestiture is an inadequate and unsatisfactory remedy in a merger case, 119 Cong. Rec. 36612 (1973), a point that has been emphasized by the United States Supreme Court. *See, e.g., FTC v. Dean Foods Co.,* 384 U.S. 597, 606 n. 5, 86 S.Ct. 1738, 16 L.Ed.2d 802 (1966) ("Administrative experience shows that the Commission's inability to unscramble merged assets frequently prevents entry of an effective order of divestiture.").

On the other side of the ledger, the appellees claim that the injunction would deny consumers the procompetitive advantages of the merger. *See FTC v. Pharmtech Research, Inc.,* 576 F.Supp. 294, 299 (D.D.C.1983) (explaining that public equities include "beneficial economic effects and procompetitive advantages for consumers"). The district court found that if the merger were preliminarily enjoined, the injury to competition would also be irreversible, that is, the merger would be abandoned and could not be consummated if ultimately found lawful. By contrast to its first finding, however, for the latter conclusion the court relied not on the facts of this case but on our statement in *Exxon* that—as a general matter—temporarily blocking a tender offer is likely to end an attempted acquisition, "as a result of the short life-span of most tender offers." *Id*. (quoting *Exxon,* 636 F.2d at 1343). In their brief in this court, the appellees offer nothing more to support the finding that the merger would never be consummated were an injunction to issue. Indeed, they devote only a single sentence, without any citation, to the point. The district court's finding that an injunction would "kill this merger" is thus not a factual finding supported by record evidence. This case does not involve a short-lived tender offer as did the case cited by the court for its "kill the merger" conclusion. The appellees acknowledge that there is no alternative buyer for Beech–Nut and the court found that it is not a failing company but rather a "profitable and ongoing enterprise." *H.J. Heinz,* 116 F.Supp.2d at 201 n. 9. If the merger makes economic sense now, the appellees have offered no reason why it would not do so later. Moreover, Beech–Nut's principal assets of value to Heinz are, assertedly, its recipes and brand ***727 **383** name. Nothing in the record leads us to believe that both will not still exist when the FTC completes its work. It may be that Beech–Nut will have to sell its recipes to Heinz at a lower price than the price of today's merger. But that is at best a "private" equity which does not affect our analysis of the impact on the market of the two options now before us and which has not in any event been urged by the appellees.[25] *See id*.

In sum, weighing of the equities favors the FTC. If the merger is ultimately found to violate section 7 of the Clayton Act, it will be too late to preserve competition if no preliminary injunction has issued. On the other hand, if the merger is found not to lessen competition substantially, the efficiencies that the appellees urge can be reclaimed by a renewed transaction. Our conclusion with respect to the equities necessarily lightens the burden on the FTC to show likelihood of success on the merits, a burden which the FTC has met here.

III. Conclusion

It is important to emphasize the posture of this case. We do not decide whether the FTC will ultimately prove its case or whether the defendants' claimed efficiencies will carry the day.[26] Our task is to review the district court's order to determine whether, under section 13(b), preliminary injunctive relief would be in the public interest. We have considered the FTC's likelihood of success on the merits. We have weighed the equities. We conclude that the FTC has raised serious and substantial questions. We also conclude that the public equities weigh in favor of preliminary injunctive relief and therefore that a preliminary injunction would be in the public interest. Accordingly, we reverse the district court's denial of preliminary injunctive relief and remand the case for entry of a preliminary injunction pursuant to section 13(b) of the Federal Trade Commission Act.

So ordered.

Footnotes

1 The facts as set forth herein are based on the district court's factual findings and the record material submitted by the parties.

2 Product volume in retail stores throughout the country is measured by the product's All Commodity Volume (ACV). Gerber's near 100 per cent ACV is impressive because virtually all supermarkets stock at most two brands of baby food. In at least one area of the country as many as 80 per cent of supermarket retailers stock only Gerber.

3 Although Heinz and Beech–Nut introduced evidence showing that in areas that account for 80% of Beech–Nut sales, Heinz has a market share of about 2% and in areas that account for about 72% of Heinz sales, Beech–Nut's share is about 4%, the FTC introduced evidence that Heinz and Beech–Nut are locked in an intense battle at the wholesale level to gain (and maintain) position as the second brand on retail shelves.

4 Section 18a requires pre-merger notification for a merger in which either the acquiring or the acquired firm has total net sales or assets of at least $10 million and the other firm has annual sales or total assets of at least $100 million. The acquirer must have at least 15 per cent or $15 million worth of the target firm's voting securities or assets. 15 U.S.C. § 18a(a). Filers must disclose specific financial and market data and pay a filing fee.

5 Section 13(b) of the FTCA provides that "[u]pon a proper showing that, weighing the equities and considering the Commission's likelihood of ultimate success, such action would be in the public interest, ... a preliminary injunction may be granted." 15 U.S.C. § 53(b).

6 In *Beatrice Foods,* two members of the court, writing separately from a denial of *en banc* review, included the quoted language from an unpublished judgment and memorandum issued earlier in the litigation.

7 To rebut the defendants may rely on "[n]onstatistical evidence which casts doubt on the persuasive quality of the statistics to predict future anticompetitive consequences" such as "ease of entry into the market, the trend of the market either toward or away from concentration, and the continuation of active price competition." *Kaiser Aluminum & Chem. Corp. v. FTC,* 652 F.2d 1324, 1341 (7th Cir.1981). In addition, the defendants may demonstrate unique economic circumstances that undermine the predictive value of the government's statistics. *See United States v. General Dynamics Corp.,* 415 U.S. 486, 506–10, 94 S.Ct. 1186, 39 L.Ed.2d 530 (1974) (fundamental changes in structure of coal market made market concentration statistics inaccurate predictors of anticompetitive effect); *see also University Health,* 938 F.2d at 1218.

8 A "horizontal merger" involves firms selling the same or similar products in a common geographical market.

9 "The FTC and the Department of Justice, as well as most economists, consider the measure superior to such cruder measures as the four-or eight-firm concentration ratios which merely sum up the market shares of the largest four or eight firms." *PPG,* 798 F.2d at 1503. The Department of Justice and the FTC rely on the HHI in evaluating proposed horizontal mergers. *See* United States Dep't of Justice & Federal Trade Comm'n, *Horizontal Merger Guidelines* §§ 1.5, 1.51 (1992), as revised (1997). The HHI is calculated by totaling the squares of the market shares of every firm in the relevant market. For example, a market with ten firms having market shares of 20%, 17%, 13%, 12%, 10%, 10%, 8%, 5%, 3% and 2% has an HHI of 1304 ($20^2 + 17^2 + 13^2 + 12^2 + 10^2 + 10^2 + 8^2 + 5^2 + 3^2 + 2^2$). If the firms with 13% and 5% market shares were to merge, the HHI would increase by 130 points, expressed by the formula 2ab, which is derived from $(a+b)^2$ or $a^2 + 2ab + b^2$. Under the Merger Guidelines a market with a postmerger HHI above 1800 is considered "highly concentrated" and mergers that increase the HHI in such a market by over 50 points "potentially raise significant competitive concerns." *Id.* at § 1.51. Mergers "producing an increase in the HHI of more than 100 points [in such markets] are [presumed] likely to create or enhance market power or facilitate its exercise." *Id*. Although the Merger Guidelines are not binding on the court, they provide "a useful illustration of the application of the HHI." *PPG,* 798 F.2d at 1503 n. 4.

10 To determine the HHI score the district court first had to define the relevant market. The court defined the product market as jarred baby food and the geographic market as the United States. *H.J. Heinz,* 116 F.Supp.2d at 195. The parties do not challenge the court's definition.

11 The FTC argues that this finding alone—that it is certain to establish a prima facie case—entitles it to preliminary injunctive relief under *PPG.* We disagree with the Commission's reading of *PPG*. In *PPG,* the Commission appealed the district court's denial of its request for a preliminary injunction to prevent PPG Industries, the world's largest producer of glass aircraft transparencies, from acquiring Swedlow, Inc., the world's largest manufacturer of acrylic aircraft transparencies. 798 F.2d at 1502. After defining the relevant market and determining market share, the district court found that the merger would significantly increase the concentration in an already highly concentrated market. It also "found high market-entry barriers that would prolong high market concentration." *Id*. at 1503. On appeal, this court stated: "There is no doubt that the pre-and post-acquisition HHI's and market shares found in this case entitle the Commission to some preliminary relief." *Id.* This statement came, however, in the context of a case in which the appellants offered no rebuttal (other than the observation of rapid and continuing technological changes in the industry) to the presumption generated by the market concentration data on which the FTC based its prima facie showing. *Id*. at 1506. The court then noted the rule established in *Weyerhaeuser* that the FTC is entitled to a "presumption in favor of a preliminary injunction when [it] establishes a strong likelihood of success on the merits." *Id*. at 1507.

12 The Supreme Court has cautioned that statistics reflecting market share and concentration, while of great significance, are not conclusive indicators of anticompetitive effects. *See General Dynamics,* 415 U.S. at 498, 94 S.Ct. 1186; *Brown Shoe,* 370 U.S. at 322 n. 38, 82 S.Ct. 1502 ("Statistics reflecting the shares of the market controlled by the industry leaders and the parties to the merger are, of course, the primary index of market power; but only a further examination of the particular market—its structure, history and probable future—can provide the appropriate setting for judging the probable anticompetitive effect of the merger."). In *General Dynamics* the Supreme Court held that the market share statistics the government used to seek divestiture of the merged firm were insufficient because, in failing to take into account the acquired firm's long-term contractual commitments (coal contracts), the statistics overestimated the acquired firm's ability to compete in the relevant market in the future. *General Dynamics,* 415 U.S. at 500–504, 94 S.Ct. 1186.

13 Barriers to entry are important in evaluating whether market concentration statistics accurately reflect the pre- and likely postmerger competitive picture. *Cf. Baker Hughes,* 908 F.2d at 987. If entry barriers are low, the threat of outside entry can significantly alter the anticompetitive effects of the merger by deterring the remaining entities from colluding or exercising market power. *See United States v. Falstaff Brewing Corp.,* 410 U.S. 526, 532–33, 93 S.Ct. 1096, 35 L.Ed.2d 475 (1973); *Baker Hughes,* 908 F.2d at 987 ("In the absence of significant barriers, a company probably cannot maintain supracompetitive pricing for any length of time."); Horizontal Merger Guidelines, *supra,* § 3.0 ("A merger is not likely to create or enhance market power or to facilitate its exercise, if entry into the market is so easy that market participants, after the merger, either collectively or unilaterally could not profitably maintain a price increase above premerger levels."). Low barriers to entry enable a potential competitor to deter anticompetitive behavior by firms within the market simply by its ability to enter the market. *FTC v. Procter & Gamble Co.,* 386 U.S. 568, 581, 87 S.Ct. 1224, 18 L.Ed.2d 303 (1967) ("It is clear that the existence of Procter at the edge of the industry exerted considerable influence on the market."). Existing firms know that if they collude or exercise market power to charge supracompetitive prices, entry by firms currently not competing in the market becomes likely, thereby increasing the pressure on them to act competitively. *See Baker Hughes,* 908 F.2d at 988; *Byars v. Bluff City News Co.,* 609 F.2d 843, 851 n. 19 (6th Cir.1979).

14 There are at least ten metropolitan areas in which Heinz and Beech–Nut both have more than a 10 per cent market share and their combined share exceeds 35 per cent. PX 781 at Ex. 1B.

15 Interchangeability of use and cross-elasticity of demand look to the availability of products that are similar in nature or use and the degree to which buyers are willing to substitute those similar products for one another. *See E.I. du Pont de Nemours,* 351 U.S. at 393, 76 S.Ct. 994.

16 Fixed trade spending consists of "slotting fees," "pay-to-stay" arrangements, new store allowances and other payments to retailers in exchange for shelf space and desired product display. *H.J. Heinz,* 116 F.Supp.2d at 197. Variable trade spending includes payments to retailers tied to sales volume and intended to insure a specific sales volume and lower shelf price. *Id*.

17 Although the merger's effects on the wholesale market for baby food are important to a determination of whether the merger is likely to reduce competition in the baby food market overall, we reject the FTC's argument here that the "wholesale competition" between Heinz and Beech–Nut is an entirely distinct "line of commerce" within the meaning of

section 7 of the Clayton Act such that it must be analyzed independently from "retail competition." The Congress amended section 7 in 1950 "to make the measure of anticompetitive acquisitions the extent to which they lessened competition 'in any line of commerce,' rather than the extent to which they lessened competition 'between' the two companies." *Citizen Publishing Co. v. United States,* 394 U.S. 131, 137 n. 3, 89 S.Ct. 927, 22 L.Ed.2d 148 (1969). Courts interpret "line of commerce" as synonymous with the relevant product market. *See* *General Dynamics,* 415 U.S. at 510, 94 S.Ct. 1186; *Falstaff Brewing,* 410 U.S. at 531–32, 93 S.Ct. 1096. The district court defined only one market—jarred baby food sold throughout the line of commerce in the United States. Thus, the proper "line of commerce" for analysis in this case is the *overall* market for jarred baby food, which includes both retail and wholesale levels. At this point in the proceedings, the wholesale market cannot be separated out for analysis without regard to the merger's effect on other levels of competition.

18 In *Procter & Gamble Co.,* 386 U.S. at 580, 87 S.Ct. 1224, the Supreme Court stated that "[p]ossible economies cannot be used as a defense to illegality" in section 7 merger cases. The issue is, however, not a closed book. *See* *Staples,* 970 F.Supp. at 1088 (collecting cases). Areeda and Turner explain that "[i]n interpreting the *Clorox* language, moreover, observe that the court referred only to 'possible' economies and to economies that 'may' result from mergers that lessen competition. To reject an economies defense based on mere possibilities does not mean that one should reject such a defense based on more convincing proof." 4 Phillip Areeda & Donald Turner, *Antitrust Law* ¶ 941b, at 154 (1980). They conclude that "[t]he Court's brief and unelaborated language [in *Clorox*] cannot reasonably be taken as a definitive disposition of so important and complex an issue as the role of economies in analyzing legality of a merger." *Id.*

19 In addition, the district court described Heinz's distribution network as much more efficient than Beech–Nut's. *H.J. Heinz,* 116 F.Supp.2d at 199. It failed to find, however, a significant diseconomy of scale in distribution from which either Heinz or Beech–Nut suffers. 4A Areeda, *et al., supra,* ¶ 975e1, at 73. In other words, although Beech–Nut has an inefficient distribution system, it can make that system more efficient without merger. Heinz's own efficient distribution network illustrates that a firm the size of Beech–Nut does not need to merge in order to attain an efficient distribution system.

20 The Horizontal Merger Guidelines explain that "merging firms must substantiate efficiency claims so that the Agency can verify by reasonable means the likelihood and magnitude of each asserted efficiency, how and when each would be achieved (and any costs of doing so), how each would enhance the merged firm's ability and incentive to compete, and why each would be merger-specific. Efficiency claims will not be considered if they are vague or speculative or otherwise cannot be verified by reasonable means." Horizontal Merger Guidelines, *supra,* § 4. Regarding the types of efficiencies asserted here, the Guidelines state:

> The Agency has found that certain types of efficiencies are more likely to be cognizable and substantial than others. For example, efficiencies resulting from shifting production among facilities formerly owned separately, which enable the merging firms to reduce the marginal cost of production, are more likely to be susceptible to verification, merger-specific, and substantial, and are less likely to result from anticompetitive reductions in output. Other efficiencies, such as those relating to research and development, are potentially substantial but are generally less susceptible to verification and may be the result of anticompetitive output reductions. Yet others, such as those relating to procurement, management, or capital cost are less likely to be merger-specific or substantial, or may not be cognizable for other reasons.

Id.

21 For example, a 5 cent piece of bubble gum introduced with a 90% ACV could appear as a failure on the graph because of low revenue but nonetheless be profitable. On the other hand, a high priced grocery product introduced with the same ACV could generate a lot of revenue (and thus appear as a "success" on the graph) yet be unprofitable.

22 The graph evidence is also not useful unless we know the "sunk" costs in bringing the product to market and the manufacturer's fixed and variable costs in producing the product. Sunk costs are costs that have already been incurred such as research and development and promotional expenses, including brand name development. *See* Henry N. Butler, *Economic Analysis for Lawyers* 935 (1998). Fixed costs refer to those expenses that do not vary with output and will be incurred as long as the firm continues in business. Variable costs are those that change with the rate of output such as wages paid to workers and payments for raw materials. *See id*. at 920, 936; E. Thomas Sullivan & Jeffrey L. Harrison, *Understanding Antitrust and its Economic Implications* 19–21 (3d ed.1998).

23 In an oligopolistic market characterized by few producers, price leadership occurs when firms engage in interdependent pricing, setting their prices at a profit-maximizing, supracompetitive level by recognizing their shared economic interests with respect to price and output decisions. *See Brooke Group Ltd. v. Brown & Williamson Tobacco Corp.*, 509 U.S. 209, 227, 113 S.Ct. 2578, 125 L.Ed.2d 168 (1993); *see also* Jesse W. Markham, *The Nature and Significance of Price Leadership,* 41 Amer. Econ. Rev. 891 (1951); Richard A. Posner, *Oligopoly and the Antitrust Laws: A Suggested Approach,* 21 Stan. L.Rev. 1562, 1582 (1969); Donald Arthur Washburn, *Price Leadership,* 64 Va. L.Rev. 691, 693–697 (1978). In a duopoly, a market with only two competitors, supracompetitive pricing at monopolistic levels is a danger. *See* Edward Hastings Chamberlin, *The Theory of Monopolistic Competition: A Re-orientation of the Theory of Value* 46–55 (8th ed.1962).

24 Contrary to the appellees' claims, nothing in *Baker Hughes* suggests otherwise. In that case, the sophisticated nature of the purchasers of the industry's product and the "volatile and shifting" nature of each firm's market share rendered the HHI figures an unreliable measure of concentration. *See* 908 F.2d at 986–87. No such circumstances exist in this case.

25 The district court noted that "[t]he parties have not stressed private equities" but the court nonetheless considered them. It concluded that while "the corporate interests of Heinz and Milnot and especially the interests of Dearborn Capital Partners LP, which presumably acquired Milnot through a leveraged buyout with the purpose and intent of selling its interest at a profit" were important to the private parties, they should not affect the outcome of the proceeding. *H.J. Heinz,* 116 F.Supp.2d at 200 n. 9. We agree. "While it is proper to consider private equities in deciding whether to enjoin a particular transaction, we must afford such concerns little weight, lest we undermine section 13(b)'s purpose of protecting the 'public-at-large, rather than the individual private competitors.' " *University Health,* 938 F.2d at 1225 (citation omitted); *cf. Weyerhaeuser,* 665 F.2d at 1083 ("Private equities do not outweigh effective enforcement of the antitrust laws. When the Commission demonstrates a likelihood of ultimate success, a countershowing of private equities alone would not suffice to justify denial of a preliminary injunction barring the merger.").

26 "The most difficult mergers to assess may be those that combine both negative and positive effects: creating market power that increases the risk of oligopolistic pricing while at the same time creating efficiencies that reduce production or marketing costs." Sullivan & Grimes, *supra,* § 9.1, at 511.

341 F.Supp.3d 27
United States District Court, District of Columbia.

FEDERAL TRADE COMMISSION, Plaintiff,
v.
WILH. WILHELMSEN HOLDING ASA, Wilhelmsen Maritime Services AS, Resolute Fund II, L.P., Drew Marine Intermediate B.V., and Drew Marine Group, Inc., Defendants.

Civil Action No. 18-cv-00414-TSC
|
Filed October 1, 2018

Synopsis

Background: Federal Trade Commission (FTC) brought action seeking a preliminary injunction to block a proposed merger between two large providers of marine water treatment chemicals and related services.

Holdings: The District Court, Tanya S. Chutkan, J., held that:

supply of marine water treatment (MWT) products and services, including boiler water treatment (BWT) chemicals, cooling water treatment (CWT) chemicals, and associated products and services, to global fleets, constituted a relevant antitrust market;

FTC made out a prima facie case of anticompetitiveness;

providers failed to meet their burden to establish that entry to the market would be appropriately timely, likely, and sufficient to deter or counteract the competitive effects of the merger;

evidence of buyer power was insufficient to rebut the FTC's prima facie case of anticompetitiveness;

providers failed to carry their burden to demonstrate the verifiability of their claimed efficiencies that would result from providers' merger, to rebut FTC's prima facie case of anticompetitiveness; and

equities favored issuance of a preliminary injunction blocking proposed merger.

Motion granted.

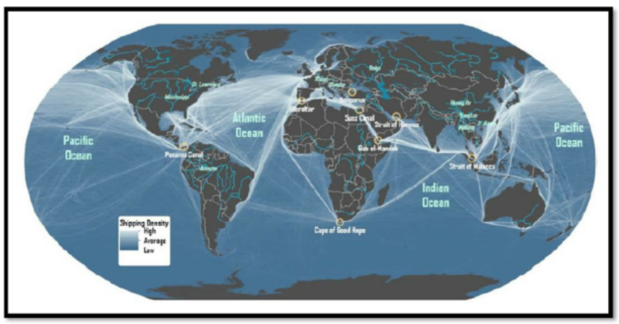
MEMORANDUM OPINION

Tanya S. Chutkan, District Judge

The Federal Trade Commission ("FTC") has moved for a preliminary injunction to block a proposed merger between defendants Wilhelmsen Maritime Services AS ("WMS"), Wilhelmsen Ship Services ("WSS") (collectively "Wilhelmsen"), and The Resolute Fund II, L.P., Drew Marine Intermediate II B.V., and Drew Marine Group, Inc. (collectively "Drew"), two large providers of marine water treatment chemicals and related services. The FTC objects to the merger on the grounds that Defendants are each other's closest and only realistic competition for supplying these chemicals and services on a global scale, and the merger threatens to reduce or eliminate tangible consumer benefits resulting from market competition. Having considered the evidence presented through live testimony, as well as extensive pleadings, exhibits, and other submissions, the court hereby GRANTS the motion for preliminary injunction.

I. BACKGROUND

This case is about the likely impact of a proposed merger in the international maritime industry—an industry on which much of the global economy, including intercontinental trade, large-scale transport of raw materials, and the import/export of foodstuffs and manufactured goods, depends. *See* PX90033 at 001; PX90034 at 001 (noting that "[i]nternational shipping transports more than 80 percent of global trade ***40** to peoples and communities all over the world," and that "[s]hipping is the most efficient and cost-effective method of international transportation for most goods"). By at least one estimate, the worldwide shipping industry includes 50,000 merchant ships registered in over 150 nations. PX90033 at 001. The following map, originally sourced from the National Center for Ecological Analysis and Synthesis, depicts common global shipping routes and underscores the breadth and density of maritime industry activities:



PX10126 at 023. While international merchant ships includes many types of vessels, all of them—and especially large ones—require regular maintenance to ensure continuous performance at operational levels. Companies like Wilhelmsen and Drew provide an array of products and services designed to ensure the continued operational performance of all types of maritime vessels. *See* PX10126 at 008–009 (noting that "VPP [vessel performance products] applications are necessary to maintain financial and operational efficiency of vessels," and that such products "are required by all commercial shipping vessel classes," which include container ships, bulk ships, cruise ships, military ships, tankers, cargo ships, and even offshore oil and gas rigs). Defendants sell maritime customers several categories of products, including cleaning chemicals, fuel treatment chemicals, welding gases, refrigerants, and, critically, water treatment chemicals. Am. Compl. ¶ 29; Ans. ¶ 29. The products at issue in this case are consumable water treatment products and related services, a category that includes products and services for the chemical treatment of boiler water, cooling water, water production, waste water, ballast water, and potable water. DX-1161 at 0019.

Marine vessels use water resources for a number of applications, including drinking, showering, cleaning, pools, spas, and—critically—for boiler and cooling systems. JX-0149 at 003. Depending on the type of ship, a boiler is necessary either as a constituent part of the main propulsion system or as part of an auxiliary system on which the propulsion system relies. PX90030 at 001. In auxiliary systems, the boiler primarily serves to generate steam to support ship functions in vessels running on marine diesel engines or diesel electric propulsion. PX90030 at 001. Examples include preventing Heavy Fuel Oil ("HFO")—a highly viscous substance—from falling below the temperature at which it is useable, heating HFO to ensure fluidity immediately before use in the engine, and for use in purifiers, ***41** booster modules, and other applications. PX90030 at 002–005. Cooling water systems reduce excess heat produced by the working machinery of a vessel's engine. PX90032 at 001. Essentially, cooling water systems circulate water through the engine to remove heat and reduce the likelihood of engine failure. Fry Hrg. Tr. at 943: 17–24 ("If you don't maintain the cooling water side, then you're relying on the oil side of the house to take up and remove that heat from the engine. And what happens is, if you don't cool the cylinders down, the oil starts breaking down. When the oil starts breaking down, then you get metal-to-metal contact inside the piston and the rings, and then you have an engine failure, and usually ... under those circumstances you have a crank case explosion as well.").

Marine water treatment chemicals "are all the chemicals associated with the maritime operation of ships"—including boiler chemistry, diesel chemistry, central cooling water, and evaporators. Fry Hrg. Tr. at 936: 11–12. After measuring the pH, conductivity, temperature, and oxidation-reduction potential of the water with specialized testing equipment, ship engineers inject these chemicals into the boiler and engine cooling systems through specialized dosing equipment optimized for high-pressure/low-volume or low-pressure/high-volume applications. Fry Hrg. Tr. at 945: 10–12; JX-0135 at 005; PX90014 at 003–004. Once injected, water treatment chemicals ensure the performance and reliability of marine boiler and engine cooling systems by: (1) removing excess oxygen from the systems, (2) allowing fine-tuned control of boiler water, cooling water, and feedwater pH; and (3) preventing the leaching and circulation of harmful metals. *See* Fry Hrg. Tr. at 937: 1–21; *see also* JX-0135 at 002. In each of these applications, the chemicals operate to reduce or eliminate the incidence of scale, corrosion, and oxygen formation within boiler, feedwater, and engine cooling systems, as well as the risk of engine overheating with respect to cooling systems specifically. Fry Hrg. Tr. at

937: 1–6; JX-0135 at 003; Fry Hrg. Tr. at 943: 12–14 ("Q. And why do vessels use engine cooling water chemicals? A. To control the amount of corrosion and erosion within the cooling channels of the engine itself.").

Although marine water treatment chemicals "only account for a small fraction of the cost of managing a ship," PX80014 ¶ 3, failure to treat the water resources in boiler and engine cooling systems comes with significant consequences, including breakdown or catastrophic failure. *See, e.g.*, Thompson Hrg. Tr. at 259: 18–24 ("Q. What happens if a boiler develops corrosion? A. [I]t could potentially damage the boiler. It may require significant servicing or even replacement"); JX-0135 at 002 ("Deviating from recommended pH and phosphate control limits can lead to caustic corrosion and result in catastrophic failure of the boiler system."); Fry Hrg. Tr. at 942: 24–25–943:4, 17–24 (describing how failure to treat high pressure boiler water could cause a ruptured pipe and boiler explosion, and how failure to treat cooling water could cause engine failure or explosion). System failure requires costly repairs and unscheduled downtime that translates to lost business and profits for shipping companies. JX-0149 at 003 ("Water treatment is as much about asset protection as it is about maintaining efficiency. The consequences of not using the right treatments can be costly, resulting in unscheduled downtime, or in the worst cases catastrophic, leading to total breakdown of equipment"); PX90014 at 003; Thompson Hrg. Tr. at 259:21–24 (noting that due to the size of the boilers involved, replacement would likely require cutting a hole in the hull and removing the boiler in ***42** pieces). Maritime companies therefore regard a consistent and effective marine water treatment program as critical to maintaining an operational fleet of ships. *See, e.g.*, PX80014 ¶¶ 3, 5, 7 (describing the importance of water treatment chemicals to ship operations, the need for consistency and dependability in chemical products, and the preference for companies offering total packages of chemical products and related services); Medina Hrg. Tr. at 167: 8–10 ("[C]onstancy in the chemical makeup of [marine water treatment chemical] products is crucial to the maintenance of our equipment.").

Consistent with customer demand for reliable water treatment chemical programs, suppliers of water treatment chemicals focus their business strategy on providing more than the chemicals themselves. They supply a "total solution"—a program that includes chemical products, test kits, technical expertise and support, and access to a global network with the ability to quickly and reliably provide product on demand, wherever a vessel is located, and whatever its specific needs may be. JX-0231 at 154 ("Manufacturer/supplier should be able to ... [s]upply a total solution rather than just the product"); [redacted] uses the phrase 'total solution' here, can you explain what that phrase means. A. It typically means the service that would come with the product, or even identifying what would be the best product for that application. So the total package would be not just a product but the service associated with the use, or identifying the right use of the right product for that application."); [redacted] (noting that when Drew enrolls a new customer in its water treatment program it offers recommendations on how to use specific water treatment chemicals, how to test water in boiler and cooling systems, and how to properly dose the chemicals); Medina Hrg. Tr. at 170:7–171:25 (discussing various services provided by marine chemical suppliers); *see also, e.g.*, Thompson Hrg. Tr. at 279:9–281:22 (describing the specific products and services covered under contract with marine chemical supplier). Defendants—whose business is described in more detail below—provide such programs.

Defendant Drew Marine Group, Inc. is a subsidiary of defendant Drew Marine Intermediate II B.V., which is owned by defendant The Resolute Fund II, L.P., a private equity fund managed by The Jordan Company. Am. Compl. ¶ 24. Drew was originally established in 1928, and has grown over the ensuing years into a company with a global infrastructure. Am. Compl. ¶ 24; DX-1161 at 0006, 0010. As Drew Marine representatives put it at a management presentation on February 15, 2017, "Drew Marine's strength is in delivering technical support in specialty chemicals." DX-1161 at 0019. Accordingly, roughly [redacted]% of Drew's revenue is traceable to "Water Treatment Solutions," a category that includes an array of products and services related to the chemical treatment of boiler water, cooling water, water production, waste water, ballast water, and potable water. DX-1161 at 0019. Drew maintains a "sales, service and logistics network that spans 47 countries, with stocking locations in nearly 100 distribution facilities that in turn supply [an estimated] 1000 ports and customers worldwide." PX10126 at 017.

Defendant Wilhelmsen Maritime Services AS is a wholly owned subsidiary of defendant Wilh. Wilhelmsen Holding ASA, a publicly traded corporation headquartered in Norway. Am. Compl. ¶ 23. Wilhelmsen Ship Services (WSS) is a division of WMS that focuses on supplying marine customers with a number of products and services, including water treatment chemicals and associated equipment for boiler water, cooling water, water production, ***43** and pool water. PX61000 ¶¶ 51, 53; PX90046; PX90047; PX90050; PX90063. Wilhelmsen—the parent company—was founded as a shipping business in 1861. PX61000 ¶ 51. WSS was founded in 1968. Since then, WSS has developed into "the largest maritime services network in the world," capable of delivering "in 125 countries ... [and] supporting [its] non-stop operations in 2,200 port locations across the globe." PX20172 at 006. Marine chemicals account for [redacted]% of WSS's total revenues. PX20137 at 0010.

Pursuant to a Share Purchase Agreement dated April 27, 2017, WMS proposed to acquire 100% of Drew's voting securities for approximately $400 million. Am. Compl. ¶ 25. The FTC then conducted a ten-month investigation, after which it "found reason to believe that the proposed Acquisition violates Section 7 of the Clayton Act and Section 5 of the FTC Act." Mem. Supp. Prelim. Inj. 12 ("Mot."). The FTC initiated an administrative action alleging a violation of the above statutes, and the merits trial in that action is scheduled to begin on July 24, 2018. Mot. at 2. The FTC also filed the instant motion for a preliminary injunction under Section 13(b) of the FTC Act, to preserve the status quo pre-merger during the pendency of the administrative proceeding. Mot. at 12–13.

An evidentiary hearing on the motion for preliminary injunction began on May 29, 2018 and concluded on June 19, 2018. The court heard testimony from fifteen fact witnesses—either live or via video deposition—and three expert witnesses. Plaintiff and Defendants each submitted proposed findings of fact and conclusions of law on June 25, 2018, along with a combined 4,186 exhibits.

II. LEGAL STANDARDS

A. Section 7 of the Clayton Act

Section 7 of the Clayton Act prevents mergers or acquisitions where "the effect ... may be substantially to lessen competition, or to tend to create a monopoly" in "any line of commerce or in any activity affecting commerce in any section of the country." 15 U.S.C. § 18. As the Supreme Court has noted, Section 7 concerns "probabilities, not certainties," *Brown Shoe Co. v. United States*, 370 U.S. 294, 323, 82 S.Ct. 1502, 8 L.Ed.2d 510 (1962), and thus the FTC need not demonstrate certainty that a proposed merger will produce anticompetitive effects—only that a "substantial lessening of competition will be 'sufficiently probable and imminent' to warrant relief." *FTC v. Arch Coal, Inc.*, 329 F.Supp.2d 109, 115 (D.D.C. 2004) (citing *United States v. Marine Bancorporation*, 418 U.S. 602, 618, 94 S.Ct. 2856, 41 L.Ed.2d 978 (1974)).

B. Section 13(b) Standard for Preliminary Injunction

Section 13(b) of the Federal Trade Commission Act empowers the Federal Trade Commission to seek preliminary injunctive relief in order to prevent a merger until it can adjudicate the merger's legality in an administrative proceeding, provided the agency has "reason to believe" that the merger will violate the antitrust laws. 15 U.S.C. § 53(b); *see also FTC v. CCC Holdings Inc.*, 605 F.Supp.2d 26, 35 (D.D.C. 2009); *FTC v. H.J. Heinz Co.*, 246 F.3d 708, 714 (D.C. Cir. 2001). Section 13(b) provides that an injunction may issue "[u]pon a proper showing that, weighing the equities and considering the Commission's likelihood of ultimate success, such action would be in the public interest." 15 U.S.C. § 53(b). As the D.C. Circuit noted in *Heinz*, the omission of any irreparable harm element evinces Congress's intention "to depart from what it regarded as the ... traditional equity standard" that applies to traditional requests for preliminary ***44** relief. *Heinz*, 246 F.3d at 714; *see also FTC v. Exxon Corp.*, 636 F.2d 1336, 1343 (1980) ("In enacting [15 U.S.C. § 53(b)], Congress ... demonstrated its concern that injunctive relief be broadly available to the FTC by incorporating a unique 'public interest' standard ... rather than the more stringent, traditional 'equity' standard for injunctive relief.").

Under Section 13(b), the district court balances the FTC's likelihood of success against the equities on a sliding scale. *FTC v. Whole Foods Mkt., Inc.*, 548 F.3d 1028, 1035 (D.C. Cir. 2008) (Brown, J.) (citing *H.J. Heinz Co.*, 246 F.3d at 727). Since Congress's particular "public equity consideration in enacting Section 13(b) was 'the public interest in effective enforcement of the antitrust laws,' " a showing of "private equities" alone will not suffice to overcome a showing of likelihood of success, and the equities often favor the FTC. *Id.* Moreover, "[t]he FTC is not required to *establish* that the proposed merger would in fact violate section 7 of the Clayton Act" in a Section 13(b) proceeding. *FTC v. Sysco Corp.*, 113 F.Supp.3d 1, 22 (D.D.C. 2015) (quoting *Heinz*, 246 F.3d at 714). Instead, "to demonstrate the likelihood of success on the merits, 'the government need only show that there is a reasonable probability that the challenged transaction will substantially impair competition." *Id.* (quoting *FTC v. Staples*, 970 F.Supp. 1066, 1072 (D.D.C. 1997)). Thus, the trial court's role in a Section 13(b) proceeding is to "measure the probability that, after an administrative hearing on the merits, the Commission will succeed in proving that the effect of the [proposed] merger 'may be substantially to lessen competition, or to tend to create a monopoly in violation of section 7 of the Clayton Act.' " *Id.* (quoting *Heinz*, 246 F.3d at 714). The FTC satisfies this standard where it "rais[es] questions going to the merits so serious, substantial, difficult[,] and doubtful as to make them fair ground for thorough investigation." *Whole Foods*, 548 F.3d at 1035 (Brown, J.) (quoting *Heinz*, 246 F.3d at 714–15); *see also Sysco*, 113 F.Supp.3d at 22. Nevertheless, a preliminary injunction in this context remains "an extraordinarily drastic remedy," *Exxon*, 636 F.2d at 1343 (quoting *Medical Society v. Toia*, 560 F.2d 535, 538 (2d Cir. 1977)), especially since "as a result of the short life-span of most tender offers, the issuance of a preliminary injunction blocking an acquisition or merger may prevent the transaction from ever being consummated." *Id.*

C. *Baker Hughes* Burden-Shifting Framework

Courts in this Circuit apply the burden-shifting framework set out in *United States v. Baker Hughes Inc.*, 908 F.2d 981, 991 (D.C. Cir. 1990), to assess whether a proposed merger violates Section 7 of the Clayton Act. Under that framework, the FTC bears the initial burden to prove that a proposed merger would result in "undue concentration in the market for a particular product in a particular geographic area." *Id.* at 982; *see also Heinz*, 246 F.3d at 715 (quoting *United States v. Phila. Nat'l Bank*, 374 U.S. 321, 363, 83 S.Ct. 1715, 10 L.Ed.2d 915 (1963)); *United States v. Anthem, Inc.*, 236 F.Supp.3d 171, 192 (D.D.C. 2017). Such a showing entitles the FTC to a presumption that the merger will substantially lessen competition. *Baker Hughes*, 908 F.2d at 982 (citing *United States v. Citizens & Southern Nat'l Bank*, 422 U.S. 86, 120–22, 95 S.Ct. 2099, 45 L.Ed.2d 41 (1975)); *Arch Coal*, 329 F.Supp.2d at 115–17, *appeal dismissed*, No. 04-5291, 2004 WL 2066879 (D.C. Cir. Sept. 15, 2004). Defendants are then entitled to rebut the presumption by presenting evidence that " 'show[s] that the market-share statistics ***45** [give] an inaccurate account of the [merger's] probable effects' on competition in the relevant market." *Heinz*, 246 F.3d at 715 (quoting *Citizens & Southern Nat'l Bank*, 422 U.S. at 120, 95 S.Ct. 2099). Where defendants successfully rebut the presumption of illegality, "the burden of producing additional evidence of anticompetitive effect shifts to the government, and merges with the ultimate burden of persuasion, which remains with the government at all times." *Baker Hughes*, 908 F.2d at 983; *see also Heinz,* 246 F.3d at 715.

III. DISCUSSION

A. Likelihood of Success on the Merits

1. Prima Facie Case

Given that "the ultimate determination of the legality of a merger involves an assessment of the new firm's market power ... and the prima facie case concerns market concentration," *Anthem*, 236 F.Supp.3d at 193 (D.D.C. 2017), it is appropriate to begin a merger analysis by defining the "relevant product and geographic boundaries of the market[ ] in question." *FTC v. Cardinal Health, Inc.*, 12 F.Supp.2d 34, 45 (D.D.C. 1998); *see also id.* ("[d]efining the relevant market is critical in an antitrust case because the legality of the proposed mergers in question almost always depends upon the market power of the parties involved."); *Marine Bancorporation*, 418 U.S. at 618, 94 S.Ct. 2856 (describing market definition as a "necessary predicate" to evaluating the legality of a merger under Section 7). The "relevant market has two components: (1) the relevant product market and (2) the relevant geographic market." *CCC Holdings Inc.*, 605 F.Supp.2d at 37; *see also Arch Coal*, 329 F.Supp.2d at 117. In this case, there is no dispute regarding the relevant geographic market—the parties agree it is global. Nevo Hrg. Tr. at 564:18–565:8; Israel Hrg. Tr. at 1456:21–23. Thus, the court now turns to determining the bounds of the relevant product market.

a. Relevant Product Market

1. LEGAL STANDARD

The Supreme Court has long maintained that "[t]he outer boundaries of a product market are determined by the reasonable interchangeability of use or the cross-elasticity of demand between the product itself and the substitutes for it." *Brown Shoe Co.*, 370 U.S. at 325, 82 S.Ct. 1502. Accordingly, the touchstone is demand substitution —"[m]arket definition focuses ... on customers' ability and willingness to substitute away from one product to another in response to a price increase or a corresponding non-price change such as reduction in product quality or service." 2010 Merger Guidelines § 4. The key question is "whether there are other products offered to consumers which are similar in character or use to the product or products in question, as well as how far buyers will go to substitute one commodity for another." *Staples*, 970 F.Supp. at 1074 (citing *United States* *v. E.I. du Pont de Nemours and Co.*, 351 U.S. 377, 393, 76 S.Ct. 994, 100 L.Ed. 1264 (1956)); *see also* *United States v. H & R Block*, 833 F.Supp.2d 36, 51 (D.D.C. 2011). Where "one product is a reasonable substitute for the other, it is to be included in the same relevant product market even though the products themselves are not the same." *Cardinal Health*, 12 F.Supp.2d at 46.

Whether a product is a reasonable substitute for another depends on two factors: (a) the extent to which "buyers view similar products as substitutes" and thus "can substitute the use of one for the other" (i.e., functional interchangeability), *Sysco*, 113 F.Supp.3d at 25; *Arch Coal*, 329 F.Supp.2d at 119; and (b) the extent to ***46** which variations in the price of one product—an increase, for example—affects demand for another (i.e., cross-elasticity of demand). *See, e.g.,* *Cardinal Health*, 12 F.Supp.2d at 46 ("a product is construed to be a 'reasonable substitute' for another when the demand for it increases in response to an increase in the price for the other."). Thus, the boundaries of the relevant market lie where the reasonable alternatives for substitution—based on use or price—end. "The relevant market consists of all the products that the Defendants' customers view as substitutes to those supplied by the Defendants" *id.*, "even though the products themselves are not entirely the same." *Sysco*, 113 F.Supp.3d at 25.

Broad markets sometimes include relevant submarkets that themselves may "constitute product markets for antitrust purposes." *Whole Foods*, 548 F.3d at 1037–38 (Brown, J.) (quoting *Brown Shoe*, 370 U.S. at 325, 82 S.Ct. 1502). A firm need not "be included in the relevant product market for antitrust purposes" just because "it may be termed a competitor in the overall marketplace." *H & R Block*, 833 F.Supp.2d at 51 (quoting *Staples*, 970 F.Supp. at 1075); *see also* *Sysco*, 113 F.Supp.3d at 26 ("[F]or example, fruit can be bought from both a grocery store and a fruit stand, but no one would reasonably assert that buying all of one's groceries from a fruit stand is a reasonable substitute for buying from a grocery store"). Moreover, "the 'product' that comprises the market need not be a discrete good for sale," *Sysco*, 113 F.Supp.3d at 26, but can be a "cluster of products ... and services," *Phila. Nat'l Bank*, 374 U.S. at 356, 83 S.Ct. 1715, as long as the combination of "a number of different products or services" into "a single market ... reflects commercial realities." *United States v. Grinnell Corp.*, 384 U.S. 563, 572, 86 S.Ct. 1698, 16 L.Ed.2d 778 (1966); *Sysco*, 113 F.Supp.3d at 26 ("[W]hat is relevant for consideration here is not any particular food item sold or delivered by Defendants, but the full panoply of products and services offered by them that customers recognize as 'broadline distribution.' "). Such a "cluster market" can even "allow items that are not substitutes for each other to be clustered together in one antitrust market for analytical convenience." *FTC v. Staples, Inc. (Staples II)*, 190 F.Supp.3d 100, 117 (D.D.C. 2016) (finding a cluster market of consumable office supplies justified because "market shares and competitive conditions are likely to be similar for the distribution of pens to large customers and the distribution of binder clips to large customers."); *see also* *ProMedica Health Sys., Inc. v. FTC*, 749 F.3d 559, 565–68 (6th Cir. 2014) (describing the appropriateness of clustering multiple types of hospital services for the purposes of analytical convenience where competitive conditions were similar).

Lastly, antitrust markets can be based on targeted customers. Section 4.1.4 of the Merger Guidelines—described by the court in *Sysco* as providing "[t]he clearest articulation of [a targeted customer] approach to product market definition"—states that "[i]f a hypothetical monopolist could profitably target a subset of customers for price increases, the Agencies may identify relevant markets defined around those targeted customers, to whom a hypothetical monopolist would profitably and separately impose at least a [small but significant and non-transitory increase in price]." Merger Guidelines § 4.1.4; *Sysco*, 113 F.Supp.3d at 27. In other words, a targeted customer market may exist when "[a] price increase for targeted customers may be profitable even if a price increase for all customers would not be profitable because too many other customers would ***47** substitute away." Merger Guidelines § 3. Thus, "[d]efining a market around a targeted consumer ... requires finding that sellers could 'profitably target a subset of customers for price increases,' " which in turn demands that there be "differentiated pricing and limited arbitrage." *Staples II*, 190 F.Supp.3d at 117–18.

Courts employ two main analytical approaches in order to determine whether the boundaries of a relevant product market are "drawn narrowly to exclude any other product to which, within reasonable variations in price, only a limited number of buyers will turn." *United States v. Aetna, Inc.*, 240 F.Supp.3d 1, 20 (D.D.C. 2017) (quoting *Times-Picayune Publ'g Co. v. United States*, 345 U.S. 594, 612 n.31, 73 S.Ct. 872, 97 L.Ed. 1277 (1953)). These include the hypothetical monopolist test, the application of which is frequently the subject of "testimony from experts in the field of economics," and the "practical indicia" described by the Supreme Court in *Brown Shoe*. *Sysco*, 113 F.Supp.3d at 27.

Hypothetical Monopolist Test

In determining the bounds of a relevant market, courts often opt "to ask hypothetically whether it would be profitable to have a monopoly over a given set of substitutable products .... If so, those products may constitute a relevant market." *H & R Block*, 833 F.Supp.2d at 51–52; *see also* 5C Phillip E. Areeda & Herbert Hovenkamp, Antitrust Law (hereinafter, "Areeda & Hovenkamp"), ¶ 530a, at 237 (4th ed. 2014) ("[A] market can be seen as the array of producers of substitute products that could control price if united in a hypothetical cartel or as a hypothetical monopoly."). This hypothetical inquiry is referred to by courts and in the merger guidelines as the hypothetical monopolist test. *See Sysco*, 113 F.Supp.3d at 27; Merger Guidelines § 4.1.1. The test essentially asks whether a "hypothetical profit-maximizing firm, not subject to price regulation, that was the only present and future seller of those products ... likely would impose at least a small but significant and non-transitory increase in price ("SSNIP") on at least one product in the market, including at least one product sold by one of the merging firms." Merger Guidelines § 4.1.1. A SSNIP is usually defined as five percent or more. *Id.*

The Brown Shoe Practical Indicia

Courts also determine the boundaries of a relevant product market by examining "such practical indicia as industry or public recognition of the [relevant market] as a separate economic entity, the product's peculiar characteristics and uses, unique production facilities, distinct customers, distinct prices, sensitivity to price changes, and specialized vendors." *Whole Foods*, 548 F.3d at 1037–38 (Brown, J.) (quoting *Brown Shoe*, 370 U.S. at 325, 82 S.Ct. 1502). The *Brown Shoe* " 'practical indicia' of market boundaries may be viewed as evidentiary proxies for proof of substitutability and cross-elasticities of supply and demand." *H & R Block*, 833 F.Supp.2d at 51 (quoting *Rothery Storage & Van Co. v. Atlas Van Lines, Inc.*, 792 F.2d 210, 218 (D.C. Cir. 1986)).

2. ANALYSIS

The FTC defines the relevant product market here as "the supply of marine water treatment ("MWT") products and services to Global Fleet customers," where MWT products and services include "[t]he supply of BWT chemicals, CWT chemicals, and associated products and services." Plaintiff's Proposed Findings of Fact and Conclusions of Law ("PFF") ¶¶ 7, 17, ECF No. 81-2. This definition depends on at least three premises: (1) that there are no functional substitutes for the supply of ***48** boiler water treatment ("BWT") products and services or cooling water treatment ("CWT") products and services, (2) that it is appropriate to cluster BWT products and services and CWT products and services into one antitrust market for analytical convenience (while excluding other water treatment products), and (3) that it is appropriate to define the relevant market around "Global Fleets" as a distinct set of targeted customers. *See* PFF ¶¶ 17–44.

As an initial matter, the court finds that there are no reasonable substitutes for BWT or CWT products and services. These products and services have unique purposes—preserving the functionality of boilers and engines—and no party has pointed to any chemical or group of chemicals, or associated services, that could replace the critical functions that such products perform. In other words, it is possible to regard BWT products and services and CWT products and services as two *separate* product markets (e.g., the market for BWT and the market for CWT), insofar as none of the products grouped in either category have any reasonable substitutes that can perform the same functions.[1] Thus, the disputed threshold issues are (1) whether the markets for BWT and CWT can be clustered together in the manner proposed by the FTC, and (2) whether that cluster market can be further defined around the FTC's preferred set of targeted customers.

i. BWT and CWT as a Cluster Market

Defendants, supported by their expert, Dr. Mark A. Israel, advance two primary arguments against the FTC's proposed cluster market: that the market is overinclusive and underinclusive. Mem. Supp. Opp'n to Mot. at 23, ECF No. 50-2. They argue that the market is overinclusive insofar as it combines two categories of product—BWT and CWT—that are not reasonably interchangeable, meaning that combining them does not accurately reflect commercial realities and conflicts with the notion that product market definition depends on substitutability. ECF No. 50-2 at 24; DX-0060 ¶¶ 66–67. Defendants also argue that the proposed market is underinclusive because it is inappropriate for the FTC to consider BWT and CWT in the same market without also including the other water treatment and marine products typically sold alongside BWT and CWT, frequently in the same contract. ECF No. 50-2 at 25; DX-0060 ¶¶ 68–70. While Defendants acknowledge that these other products are not reasonable substitutes for BWT or CWT, they assert that neither are BWT and CWT reasonable substitutes for one another, such that with respect to products typically sold together, the FTC cannot include one product category that is not a reasonable substitute and then exclude others on that same ground. In other words, "the FTC cannot both lump BWTC and CWTC because they are part of the same sales and purchase process, but then also exclude all other products that are also part of that process." ECF No. 50-2 at 25–26.

The FTC responds first that Defendants' argument regarding overinclusiveness—based on the absence of interchangeability between BWT and CWT—fundamentally misapprehends the nature of a cluster market. According to the FTC, a cluster market does not aim to group ***49** together substitutable products, but rather groups non-substitutable products that face similar competitive conditions. Reply to Opp'n. to Mot. 5, ECF No. 56-2. The FTC argues that since both BWT and CWT products function to maintain operational equipment on marine vessels, both involve the same customers with the same need for global consistency, and both are distinguishable from products like cleaning chemicals, which do not require the same level of consistency. ECF No. 56-2 at 5–6. Moreover, the FTC argues that Defendants face the same set of competitors for both products, and therefore BWT and CWT face similar competitive conditions and can be appropriately clustered. ECF No. 56-2 at 5–6. As for Defendants' underinclusiveness argument, the FTC notes that clustering BWT and CWT with other marine products is inappropriate because those products do not share similar competitive conditions, despite the fact that customers negotiate for them at the same time as they negotiate for BWT and CWT. ECF No. 56-2 at 9–10.

The court concludes that the FTC's use of the cluster market approach is appropriate in this case.[2] Although BWT and CWT products are distinct products intended for distinct uses, they are also indisputably similar. Both are specially blended chemicals that are injected into water systems using special equipment, in order to prevent corrosion and erosion in critical systems. Thompson Hrg. Tr. at 259:18–24; Fry Hrg. Tr. at 943:13–14. While both products make up a "small fraction of the cost of managing a ship," PX80014 ¶ 3, the cost of system failure in the absence of these products is high. JX-0135 at 002. The fact that these products are low cost, highly critical, and heavily dependent on precise chemistry means that maritime companies strongly prefer consistency in their use, so as to avoid the risk of adverse chemical reaction and the resulting temporary or catastrophic system failure. Moreover, BWT and CWT products are frequently sold together as part of an overall management program that includes a number of additional product-related services. Deckman Hrg. Tr. at 475: 4–14. These similar characteristics matter because they factor into customers' decisions regarding the quantity of products they purchase, the timing of those purchases, as well as where they make their purchases. In other words, similar product characteristics—including function and risk—produce similar needs and constraints for shipping companies, which in turn affects supplier strategies and, accordingly, promotes similar competitive conditions across these product categories.[3]

***50** It follows from this point that products that do not share key characteristics do not produce similar needs or constraints for shipping companies, meaning that they give rise to different competitive conditions. The court finds that the FTC has carried its burden to demonstrate those differences. While BWT and CWT chemicals are both "water treatment chemicals"—a category that includes "chemicals for the treatment of evaporator water, ballast water, potable water, and pool/spa water or their related equipment," DFF ¶ 85—the evidence is clear that (1) sales of BWT and CWT are the driving force behind sales in the "water treatment chemicals" category,[4] and (2) other chemicals in that category, such as pool and spa chemicals, are easier to obtain from multiple suppliers. PX80006 ¶¶ 10, 27; Thompson Hrg. Tr. at 326:24-327:10. They also do not pose the same risks to a ship's critical systems, because they have no function related to those systems.

The same is true for the larger grouping of marine products. While Defendants correctly note that agreements for the sale of marine products to global fleets often include products in addition to BWT and CWT—such as tank cleaning chemicals, gases, or refrigerants, *see* Sarro Hrg. Tr. at 113 (noting that Teekay purchase agreements often include many different marine products, and that Teekay also purchases many products from WSS in addition to BWT and CWT); DX-1297 at 0013-0015 (listing products covered by purchase agreement)—the differences between these products and BWT/CWT are material. For example, tank cleaning products are less technically complex, do not pose the same operational risks, and are ordered on a short term, cleaning-by-cleaning basis, which makes it easier for shippers to switch suppliers. *See* Franzo Hrg. Tr. at 348:22–350:1–22 (describing the differences between tank cleaning and water treatment business and the difference in competitive conditions based on the characteristics of each product); JX-0254 ¶ 7 ("Different categories of chemicals require different levels of sophistication in chemistry. Water treatment chemicals are generally more sophisticated and harder to develop than other categories of marine chemicals."). Accordingly, tank cleaning presents a more lucrative business opportunity for smaller suppliers than does water ***51** treatment, where ships "really [do not] want to upset the apple cart by changing their products." Franzo Hrg. Tr. at 349:7–11; JX-0254 ¶ 3 (noting that tank cleaning is roughly 60% of [redacted] business, and that water treatment business is small in comparison); PX-80028 at ¶ 3 (describing water treatment chemicals as [redacted] "smallest product category" and tank cleaning chemicals as the largest). In other words, differences in product characteristics between BWT/CWT and other water treatment products lead to differences in maritime companies' sourcing decisions and are therefore connected to differences in competitive conditions.

Moreover, while the evidence suggests that companies tend to negotiate prices for multiple products at the same time, it also cuts against the notion that customers engage in one-stop shopping for all their marine products. *See* PX00004 at 010, 015 (noting that WSS and Drew customers do not typically "one-stop shop" and often "mix and match across suppliers"). In other words, framework agreements may set the price for several products from a particular supplier, but such agreements tend to be non-exclusive, leaving the door open to other, specific product purchases at individual ports. *See* PX-61002 at 041–042. Thus, an analytical approach that focuses on BWT and CWT to the exclusion of other marine products does not appear to fundamentally conflict with commercial reality, given that customers are empowered to make individualized product choices in different places and at different times.

For these reasons, the court concludes that FTC has appropriately clustered BWT and CWT products and services into one antitrust market for analytical convenience.

ii. "Global Fleets" as Targeted Customers

As defined by the FTC, "Global Fleets are fleets of 10 or more globally trading vessels—vessels above 1,000 gross tons in size that have traded at two ports that are at least 2,000 nautical miles apart in the preceding 12 months." Mot. Prelim. Inj. at 18, ECF No. 45-3. The FTC argues that it is appropriate to define the relevant product market around this group because "Global Fleets have distinct characteristics and requirements that limit customer choice, as compared to local or regional fleets," thus making them susceptible to price discrimination as a distinct customer group. ECF No. 45-3 at 19. In particular, the FTC points out that Global Fleet customers have "particular needs as it relates to centralized negotiation of contracts for delivery to geographically dispersed locations, product consistency, and product availability." ECF No. 45-3 at 19. The FTC also argues that Defendants have the ability to price discriminate because they "individually negotiate prices with each customer[,] and customers have a limited ability to arbitrage." ECF No. 45-3 at 19.

Defendants proffer several reasons why the "Global Fleets" distinction is not a meaningful way of segmenting customer groups. First, they contend that the definition of Global Fleets does not accord with commercial reality, given that neither WSS nor Drew use the FTC's definition of that term and less than half of WSS customers meet the Global Fleet criteria. ECF No. 50-2 at 26; DX-0060 ¶¶ 82, 85, 86. Defendants further argue that the Global Fleets construct is premised on arbitrary thresholds and accordingly produces variable and underinclusive results. Specifically, they allege that: (1) 43% of the vessels that WSS and Drew supply had trading patterns fitting the FTC's criteria in some fiscal quarters, but not in others, indicating ***52** that the boundaries of the Global Fleets construct are too permeable to be analytically helpful; and (2) the FTC's numerical cutoff—10 or more globally trading vessels—is arbitrary, and produces the following anomalous mismatches: (a) a quarter of the vessels in 23% of Global Fleets were not globally trading vessels, (b) 31% of the vessels in non-Global Fleets count as globally trading vessels, and (c) 20% of non-Global Fleets are comprised completely of globally trading vessels. ECF No. 50-2 at 27; *see also* DX-0060 ¶¶ 83–84 & Table 4. Defendants contend that including all vessels weighing 1,000 gross tons or more in the antitrust market would better accord with commercial realities.

The "Global Fleets" construct is meant to capture key aspects of the economic reality facing fleets with a significant number of globally trading vessels and which need access to the products and services that defendants provide. The construct purports to isolate a relevant subset of the market and measure how the result of a merger would affect customers within that subset. It follows that the construct is a useful way to discuss and predict economic conditions only if its key aspects correspond to elements of the existing marketplace that would make it possible to "profitably target a subset of customers for price increases" post-merger. *Sysco*, 113 F.Supp.3d at 38. The FTC, relying on the analysis of its economic expert, Dr. Aviv Nevo, has carried its burden to show that the construct is useful here.

a. Global Fleets Constitute a Distinct Customer Group with Distinct Needs

The FTC has adequately demonstrated that Global Fleets are a distinct group with distinct needs, as compared to the entire group of MWT customers. The distinction matters primarily because vessel trading patterns differ. Some vessels trade more globally than regionally or locally, meaning they travel further, visit more countries and ports in more varied locations, and spend less time in port. PX-61000 ¶ 103. Within the FTC's definition of Global Fleets as fleets including ten or more globally trading vessels, a vessel trading pattern that includes distances of more than 2,000 nautical miles is global, while regional patterns include distances of 500 and 2,000 nautical miles and local patterns include distances of less than 500 nautical miles. PX-61000 ¶ 105. The following data, reproduced from PX-61000 ¶ 110, illustrates the distinct travel patterns of local, regional, and globally trading vessels.

***53**

EXHIBIT 8

Number of unique ports, countries, and continents visited, by trading pattern, 2017

	Trading Pattern	5th Percentile	25th Percentile	Median	75th Percentile	95th Percentile
	Number of unique ports visited					
1.	Global	5	12	18	25	38
2.	Regional	2	5	10	19	41
3.	Local	1	2	3	4	9
	Number of unique countries visited					
4.	Global	3	6	10	13	19
5.	Regional	1	1	3	5	12
6.	Local	1	1	1	2	3
	Number of unique continents visited					
7.	Global	1	2	3	4	5
8.	Regional	1	1	1	2	3
9.	Local	1	1	1	1	1

Source: Vessel Characteristic Data; Vessel Movement Data

Notes: Globally, regionally, and locally trading vessels are vessels that traveled more than 0 nm within the calendar year to two locations that were more than 2,000 nm, between 500 nm and 2,000 nm, and less than 500 nm apart from each other, as the crow flies. I include only the 42,986 live and active vessels of 1,000 gt or higher in 2017 that are classified as either globally trading, regionally trading, or locally trading in 2017.

Importantly, neither the emphasis on vessels with global trading patterns nor the 2,000 nautical mile cutoff for defining a globally trading vessel are arbitrary parameters. Different trading patterns create different product needs that affect how customers weigh the value of consistent worldwide service potential at high levels of product quality. PX-61000 ¶ 111 ("Globally trading vessels tend to be larger, travel much greater distances, and visit more countries and multiple continents during the course of a year. Therefore, it should be expected that their preferences over the importance of high quality water treatment products and services that are consistently available differs from vessels with regional and local trading patterns); *see* Sarro Hrg. Tr. at 77:15–25 ("Q. When Teekay's vessels are operating on a spot charter, how predictable is where they're traveling to? A. Well, it's quite unpredictable, actually, because it's subject to market conditions. So whatever charter we pick up at the time—you know, that's what ends up happening. And it's on a per-voyage basis, is whatever it is ... would be where we're loading, and then we have to discharge.... Q. Do you know necessarily which port a spot charter will call in from month to month? A. No."); PX80002 at 003 ("Because we conduct much of our business as spot charters, we have limited ability to predict our vessels' trade routes, including what ports they will visit or when."). The industry itself recognizes that vessel trading patterns have commercial significance, as shown by the parties' own statements and internal documents. *See e.g.*, PX70006 (Grimholt IH Vol. 1 Tr.) at 164:23–167:15 (describing how WSS categorizes vessels as global when they "have traveled in excess of 2,000 nautical miles between the furthest points in a given twelve months," noting that such categorization "makes a difference [in] how [WSS] sell[s] and deliver[s]," and explaining how globally trading vessels "have different needs because they have vessels trading globally or further from their home ports, which means that our capability to serve them will be of more interest in a sales meeting than their local needs would be"); ***54** PX20388 at 005 (explaining that a potential sales model distinguishes between local, regional, and global trading patterns, and noting that the former two "don't necessarily correspond as well with our main competitive advantage which is our ability to provide standard products and services in virtually every port worldwide").[5] Notably, WSS collects data on which vessels traveled 2,000 nautical miles between furthest points in the last 12 months in order guide its sales strategy. *See* JX-0188 at 044–45.

The FTC's vessel size cutoff of 1,000 gross tons is also non-arbitrary and based on the parties' own conceptions of the market. The evidence shows that vessel size correlates with global trading pattern and, accordingly, with distinct product needs. *See* PX61000 ¶¶ 109, 111. In general, the larger the vessel, the more likely it is to trade globally. PX61000 ¶ 109. In keeping with this trend, internal documents show that Defendants focus their sales efforts on larger vessels and frame their business and competitive potential in terms of vessel size. *See* PX61000 ¶ 93; DX-1247_WSSFTC-0018878 at 11 (discussing categorization of vessels by weight for purposes of segmenting market and estimating market size); Grimholt Hrg. Tr. at 1236:10–16 (describing the total market in terms of sailing ships above 1,000 gross tons). Thus, combining the court's findings regarding trading pattern and vessel size, it follows that the FTC's definition of a globally trading vessel—vessels larger than 1,000 gross tons that have traveled 2,000 nautical miles between furthest points in the last 12 months—is both non-arbitrary and grounded in the ordinary course of business.

The evidence also shows that vessels are typically organized into fleets, containing varying numbers of globally trading vessels. *See* PX61000 ¶ 91. In order to measure the effect that a significant number of globally trading vessels would have on the water treatment needs of a fleet as a whole, Dr. Nevo organized the vessel-level raw data into fleets according to affiliation with unique owners or separate technical managers (“operators”). PX61000 ¶ 113. Dr. Nevo grouped vessels with the same operator into the same fleet, producing 9,407 unique “fleets” made up of varying numbers of vessels. PX61000 ¶¶ 113, 114; Nevo Hrg. Tr. at 586:6–20. He then defined “Global Fleets” as those having ten or more globally trading vessels, Nevo Hrg. Tr. at 586:21–587:6, and on the basis of that definition, identified 532 Global Fleets and calculated Defendants' market shares within the Global Fleets category. PX61000 ¶¶ 118, 123.

As noted above, Defendants objected to Dr. Nevo's definition of “ten or more globally trading vessels,” on the grounds that ten vessels is arbitrary and incongruent with commercial reality. While the court agrees that Dr. Nevo's choice of ten globally trading vessels was arbitrary in the sense that the number ten is not compelled by any specific market reality, the court disagrees that Dr. Nevo's construction is therefore meaningless. As the court understands it, Dr. Nevo's choice of ten globally trading vessels was not intended as an exact statement of the threshold number of globally trading vessels a fleet must have in order to manifest distinct product-related ***55** needs and preferences. Rather, Dr. Nevo chose ten as a starting point for developing a series of statistical estimates, the non-statistical implications of which support the appropriateness of regarding Global Fleets as a distinct customer group.

Dr. Nevo's fleet-level analysis took the following course: first, he inferred—after analyzing data and documentation used or created in the ordinary course of Defendants' business—that fleets with a significant number of globally trading vessels were likely to have distinct preferences that uniquely suit global suppliers. Nevo Hrg. Tr. at 587:7–19. Then, using the fleet data he compiled, Dr. Nevo sought to approximate what share of the fleet-level market would have those preferences. Because he did not know what threshold number of vessels would separate fleets with distinct preferences from those without, Dr. Nevo chose the number ten because of its roundness and simplicity. Nevo Hrg. Tr. at 587:20–22 (“So then, the question is, where's the cutoff. And I started with ten. Ten is a starting point.... [I]t's a round number. That's literally why we chose [it].”), 589:3–4 (“[I]'ll be the first to admit ... there's no hard rule as to why it was ten); *see also* *Staples II*, 190 F.Supp.3d at 118 n.10 (acknowledging and accepting expert's need to establish threshold cutoff for “practical analytical purposes”). After obtaining the results of that analysis, he ran trials to test the robustness of the results—that is, to measure how dependent his initial results were on his initial assumption of ten vessels. Nevo Hrg. Tr. at 589:1–590:11. Less dependency—i.e., more stability in the result—indicates the presence of a stable market reality that produces similar results despite variation in threshold numbers. *See* Nevo Hrg. Tr. at 596:20–597:19. Based on the initial trial, Dr. Nevo found that (1) Global Fleets accounted for most of all globally trading vessels—84% of vessels by tonnage and 71% by vessel count; (2) Global Fleets were mostly made up of globally trading vessels: 81.8% and 92.2% by count and tonnage; and (3) Global Fleets accounted for [redacted] and [redacted] of WSS's and Drew's respective MWT revenue. *See* Nevo Hrg. Tr. at 595:16–596:13; PX61000 ¶¶ 118, 161, 123. He also found that similar market share calculations held across four subsequent trials, two substituting five and then fifteen as the threshold numbers, one using ten but omitting any attempt to standardize the names of “operators” as they appeared in the raw data, and one only measuring sales to all globally trading vessels, without sorting those vessels into fleets (thus eliminating the need for any threshold number at all). PX61000 ¶ 123 n.234; Nevo Hrg. Tr. at 589:14–590:11. Notably, the specific percentages differ between each of these trials. PX61000 ¶ 123 n.234. That is because the point of the trials is not to establish that any particular set of percentages is the most accurate one, but rather to rely on the consistency across the range of percentages to illustrate that (1) there is a significant segment of the market—whatever the exact numbers—that focuses on global trading and therefore has needs and preferences that distinguish it from other customers; and (2) that segment accounts for a majority of Defendants' business. *See* PX61000 ¶¶ 119–21. In other words, the qualitative implications of the percentages do not change even if the percentages themselves shift somewhat across trials. *See* PX61000 ¶ 123 n.234 (noting that market share percentages “are not qualitatively sensitive to alternative definitions of ‘global fleets’ ”); Nevo Hrg. Tr. at 589:10–13 (“So ... I really tried to say, well, what happens if I define it as 5 and 15, or various other measures, to make sure that the end result, at least qualitatively, doesn't actually change."). The court ***56** considers these factual observations to be accurate and well supported, and therefore finds that the FTC has carried its burden to demonstrate that it is appropriate to consider Global Fleets a distinct customer group within the market for MWT products.

b. Price Discrimination Against Global Fleet Customers is Possible Post-Merger

The court finds that the FTC has carried its burden to demonstrate that price discrimination is possible post-merger because: (1) Global Fleets are a distinct group of customers with distinct needs; (2) negotiation with Global Fleets typically occurs on an individualized basis; and (3) documentation reveals that Defendants have contemplated pricing differentials based on size and trading pattern. As the court has already discussed the first factor, the discussion in this section focuses on the remaining two.

Defendants typically negotiate framework agreements with Global Fleets for the whole fleet or for a significant proportion of vessels. *See e.g.*, PX80006 ¶ 21 (describing fleet-level negotiations for the entire [redacted] fleet); JX-0277 ¶ 23 (describing same for Teekay). These negotiations are customer specific, and result in customer-specific pricing at ports relevant to the particular customer. *See* JX-0248 at 014 ("In negotiations, customers often focus on specific ports that they consider to be key in light of their trading patterns. They then negotiate a customer specific net price for the ports relevant to them."). JX-0240 at 011–014 (showing course of negotiation between [redacted] and Drew Marine). While there are general pricing trends—for instance, low volume ports tend to have higher pricing than high volume ports—ultimate prices are determined on a customer-by-customer basis. PX70000 (Cassaras (Drew) IH Tr. at 84:8–85:3, 87:7–10). While customers retain the freedom to purchase outside of framework agreements, they typically choose not to do so with products for which consistency is valued. Sarro Hrg. Tr. at 106:9–107:11 (noting that he prefers not to purchase outside contract when "it's really important that you have that product on board from that supplier," including BWT). This individualization makes the pricing for each Global Fleet opaque to the next, which in turn facilitates differential pricing.

Moreover, WSS internal documents expressly contemplate market segmentation for the purpose of price discrimination. An internal pricing presentation dated November 2014 notes the benefits of "value-based pricing," which allows WSS to "segment customer[s] based upon preferences." PX20381 at 003. The presentation also distinguishes local and global customers by their preference for suppliers with global reach, and then considers a price discrimination exemplar that distinguishes local and global customers, noting that global customers are willing to pay more for global reach and describing how "[v]alue based pricing identifies differences in customers' preferences and valuation of attributes, then identifies ways to make them pay different prices for virtually the same product/service." PX20381 at 003. The presentation also describes how "[a]greement discount levels will be built bottom up by applying indexes to multiple price discrimination levels," which include "segment" and "trading pattern" indexes, among other factors. PX20381 at 011.

In sum, based on (a) the lack of pricing transparency in a marketplace characterized by individualized negotiations, combined with (b) evidence that Global Fleets constitute a distinct segment of the market with distinct preferences, (c) evidence that WSS recognizes the potential benefits of price discrimination, and (d) the lack of ***57** any evidence suggesting arbitrage, the court concludes that price discrimination is possible post-merger.

iii. Hypothetical Monopolist Test

Having determined in the foregoing discussion the validity of the cluster market and targeted customer approaches in defining the relevant product market in this case, the court also finds that the *Brown Shoe* practical indicia support the FTC's candidate market, with regard to (1) a product's peculiar characteristics and uses, for which there are no reasonable substitutes; (2) industry recognition of the product market as a separate entity, as shown by ordinary course documents demonstrating a business focus on globally trading vessels; and (3) distinct customers with distinct needs who require (4) specialized vendors who provide both the products and value-added services. *Whole Foods*, 548 F.3d at 1037–38 (Brown, J.); *Brown Shoe*, 370 U.S. at 325, 82 S.Ct. 1502. The court now turns to an examination of expert evidence concerning the Hypothetical Monopolist Test ("HMT").

To model the course of a hypothetical monopolist, Dr. Nevo—the only economist to have performed the HMT in this case—conducted a critical loss analysis, which essentially calculates "the largest amount of sales that a monopolist can lose before a price increase becomes unprofitable." *FTC v. Swedish Match*, 131 F.Supp.2d 151, 160 (D.D.C. 2000). The test has three steps. First, Dr. Nevo calculated the critical loss threshold—that is, the point at which a hypothetical monopolist would lose too many customers for a SSNIP to be profitable. This step is purely mathematical—the critical loss threshold is the point at which increased profit margins resulting from an increase in price are offset by increased costs resulting from lost sales. Second, Dr. Nevo estimated the *actual* aggregate diversion ratio, which "represents the proportion of lost sales that are recaptured by all other firms in the proposed market as the result of a price increase ... [s]ince these lost sales are recaptured within the proposed market, they are not lost to the hypothetical monopolist." *H & R Block*, 833 F.Supp.2d at 63. The aggregate diversion is calculated with reference to suppliers to whom lost customers would potentially take their business. *Sysco*, 113 F.Supp.3d at 34. Third, Dr. Nevo compared aggregate diversion to critical loss, and if aggregate diversion exceeds critical loss, then a SSNIP would be profitable for a hypothetical monopolist. *Id.* (citing *Swedish Match*, 131 F.Supp.2d at 160).

Dr. Nevo used four kinds of data to calculate margins for different trials—estimates of gross margin for all water treatment products sold to all customers, WSS and Drew invoice data specific to BWT/CWT and Global Fleets, lowest gross margins by quarter, and variable cost margins based on accounting data specific to BWT/CWT and Global Fleets. For aggregate diversion, Dr. Nevo used three kinds of data —revenue information provided by marine suppliers, WSS salesforce data, and WSS and Drew win-loss data. PX61000 ¶ 227. After running multiple trials with varying inputs, including a SSNIP of 10% (in addition to the typical 5%), Dr. Nevo found that across all cases, the highest critical loss estimate was 17.5%, and the lowest aggregate diversion ratio estimate was 90%. PX61000 ¶¶ 232, 237; Nevo Hrg. Tr. at 903:14–904:4. In cross-examining Dr. Nevo and in closing arguments, Defendants challenged the basis for his estimates of margins and aggregate diversion, correctly noting that his BWT/CWT-specific estimates are drawn from broader data sets that include all water treatment products. Nevo Hrg. Tr. at 812:1–17. Nevertheless, Defendants' expert, Dr. Israel, presented nothing to suggest that the methodology Dr. Nevo employed in arriving ***58** at his estimates was flawed (apart from contesting the appropriateness of a cluster market analysis), and did not present any alternative calculations or HMT results. *See generally* DX-0060. Moreover, the gap between critical loss and aggregate diversion in every trial was so large as to ensure the stability of the HMT's qualitative result against any but the gravest of statistical errors. *See* PX61000 ¶¶ 232, 237. Further, that large gap is consistent with other, qualitative evidence regarding the role of ship chandlers and industrial suppliers in the product market.[6]

In sum, the court concludes that "the supply of MWT products and services"—including BWT chemicals, CWT chemicals, and associated products and services—to Global Fleets constitutes a relevant antitrust market.

a. Market Concentration, Probable Effects on Competition, and Prima Facie Case

1. LEGAL STANDARD

Having defined a relevant antitrust market, the court must "consider the likely effects of the proposed acquisition on competition within that market." *Swedish Match*, 131 F.Supp.2d at 166. At this juncture, the government must complete its prima facie case by showing that "the merger would produce 'a firm controlling an undue percentage share of the relevant market, and [would] result[ ] in a significant increase in the concentration of firms in that market.' " *Heinz*, 246 F.3d at 715 (quoting *Philadelphia Nat'l Bank*, 374 U.S. at 363, 83 S.Ct. 1715); *see also Baker Hughes*, 908 F.2d at 982. "Market concentration ... is often measured using the Herfindahl-Hirschmann Index ("HHI")." *Heinz*, 246 F.3d at 716; *Swedish Match*, 131 F.Supp.2d at 167 n.11. As the court explained in *Swedish Match*:

> "The HHI calculates market power [by] summing the squares of the individual market shares of all the firms in the market. The HHI takes into account the relative size and distribution of the firms in a market, increasing both as the number of firms in the market decreases and ***59** as the disparity in size among those firms increases."

Id. Sufficiently high HHI figures establish a *prima facie* case of anticompetitiveness. *H & R Block*, 833 F.Supp.2d at 71 (citing *Heinz*, 246 F.3d at 715 n.9). The merger guidelines consider markets with an HHI above 2500 to be "highly concentrated," and state that "[m]ergers resulting in highly concentrated markets that involve an increase in the HHI of more than 200 points will be presumed to be likely to enhance market power." Merger Guidelines § 5.3; *Heinz*, 246 F.3d at 715 (citing *Baker Hughes*, 908 F.2d at 982) (noting that significant increase in market concentration "establishes a ‘presumption’ that the merger will substantially lessen competition.”).

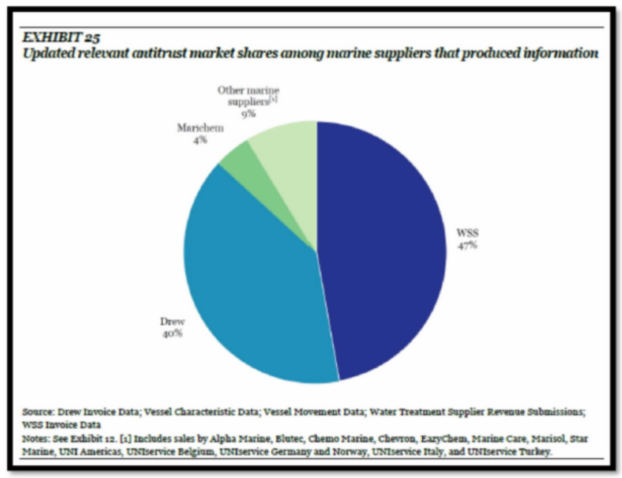
The FTC may also bolster its *prima facie* case by offering additional evidence. Relevant to this case, courts generally recognize that “a merger that eliminates head-to-head competition between close competitors can result in a substantial lessening of competition.” *Sysco*, 113 F.Supp.3d at 61. Where head-to-head competition between close competitors is an important feature of the relevant market, “[a] merger is likely to have unilateral anticompetitive effect if the acquiring firm will have the incentive to raise prices or reduce quality after the acquisition, independent of competitive responses from other firms.” *H & R Block*, 833 F.Supp.2d at 81; *see also* *Whole Foods*, 548 F.3d at 1043 (Tatel, J.) (citation omitted) (internal quotation marks omitted) (“[T]here can be little doubt that the acquisition of the second largest firm in the market by the largest firm in the market will tend to harm competition in that market.”).

2. ANALYSIS

i. Defendants Have High Market Shares and HHIs Predict High Concentration

Dr. Nevo calculated HHIs based on market share information from two sources—revenue information reported by Defendants and in sworn declarations of third-party suppliers, and information provided by WSS's Potential Sales Model (“PSM”).[7] PX61000 ¶¶ 250–51. Dr. Nevo claims that market shares based on revenue information are preferred because such information “actually reflect[s] the actual choices made by customers when choosing products.” Nevo Hrg. Tr. at 627:17–628:3. He calculated market size by (a) aggregating the revenues of all suppliers who provided information, and (b) assigning each supplier a share based on their revenue as a proportion of overall revenue. *See* PX61000 ¶¶ 252–56. The market share calculations indicated that Defendants are the two largest MWT suppliers by revenue. The following graph depicts the size of all marine water treatment suppliers who submitted revenue data.

[redacted] PX61002 ¶ 120, Ex. 12. Acknowledging that at least one supplier failed to submit revenue data, and to account for the possibility that other unknown suppliers exist. Dr. Nevo ran trials including revenue entries for five and ten unknown suppliers by assigning them revenue totals equal to the median for all non-party MWT suppliers. Nevo Hrg. Tr. at 628:8-17 (noting inclusion of all suppliers mentioned by Dr. Israel with exception of one, and including “dummy” suppliers). ***60** Dr. Nevo also ran trials assigning the “dummy” suppliers revenues equal to the *average* of all non-party MWT suppliers. PX61002 ¶ 271. Assuming five missing suppliers, and using the median value for “dummy” suppliers. Dr. Nevo calculated market shares at 46.1% for WSS and 38.7% for Drew (84.7% combined). PX61002 ¶ 271. Additional trials with different inputs produced combined shares between 78.7% and 82.8%. PX610021271 Ex. 26. The following graph depicts the result of Dr. Nevo's market share calculations, which correspond to his revenue calculations.[8]



PX61002 ¶ 270, Ex. 25. Based on these market shares, the post-merger HHI is 7,214, with an increase of 3,563, indicating extremely high market concentration and a very large increase in concentration. PX61002 ¶ 272, Ex. 27. Alternative trials based on the different formulations of the revenue and market share calculations revealed HHIs between 6,235 and 6,883, along with changes in HHIs between 3,075 and 3,399. PX61002 ¶ 272, Ex. 27.

Defendants' expert Dr. Israel challenged Dr. Nevo's analysis on a number of grounds. First, Dr. Israel questioned the appropriateness of applying the cluster market doctrine and focusing on Global Fleets, contending that BWT and CWT should be broken out separately and that the relevant market should include sales to all vessels. DX-0060 ¶¶ 109–10. Dr. Israel also suggested that Dr. Nevo's use of revenues as a metric to compute shares is ***61** problematic because it (a) relies on several estimates and assumptions to fill gaps in revenue data, (b) places more weight on larger vessels with more engines and boilers, rather than treating every vessel as an equal business opportunity, and (c) ignores the utility of treating sales of MWT chemicals as unit sales—corresponding to vessels—where one vessel makes one lower or higher-priced product choice and so constitutes one unit share. DX-0060 ¶¶ 112–114. Dr. Israel calculated market share based on sales to all vessels weighing 1,000 gross tons or more. DX-0060 ¶¶ 108, 111, 112, 115. He also employed a "single invoice" rule, whereby he assumed that any vessel with less than two invoices from the merging parties in 2017 was making a "one-off" purchase, which Dr. Israel took to mean that that vessel purchased most of its BWT or CWT products from other suppliers. DX-0060 ¶ 116. Dr. Israel separated BWT and CWT into individual market categories, and, applying the single invoice rule, computed Defendants' combined market share as 31% and 33%, resulting in HHIs that are substantially lower and below the Guidelines cutoff of 2500. DX-0060 ¶ 117.

The court credits Dr. Nevo's analysis. While it has already determined that both the cluster market approach and the focus on Global Fleets are appropriate, the court also disagrees with Dr. Israel for other reasons. For one, the court sees no justification for treating all vessels as constituting equal shares of the overall market for MWT. The core of the FTC's argument in this case—as borne out by the evidence—is that all vessels are *not* created equal. *See* Nevo Hrg. Tr. at 640:18–19 (noting that "not all vessels are created equal"). Where a vessel has more boilers and engines, it has greater MWT needs that comprise a correspondingly larger part of the market, making such vessels more valuable to suppliers. Conducting the analysis by using just the number of vessels obscures this fact, while using revenue data acknowledges that capturing the market for larger ships means capturing a larger part of the market for MWT. The court views this increased sensitivity to market reality as a strength of Dr. Nevo's revenue-based analysis, not a flaw. Moreover, while there is some imprecision inherent in estimating revenue shares for suppliers that did not produce revenue information, there appears to be only one known supplier—Vecom—that failed to produce such data. *See* PX61002 ¶ 271 Ex. 26. Dr. Nevo ran trials accounting for up to ten additional hypothetical suppliers with revenues matching the median and average of all non-party suppliers. *See* PX61002 ¶ 271 Ex. 26; PX61000 ¶ 263 Ex. 32. Defendants have pointed to no evidence suggesting that the absence of specific information about one missing supplier would change the data more substantially than ten additional suppliers with median or average revenues.[9] *See Sysco*, 113 F.Supp.3d at 54 ("The FTC need not present market shares and HHI estimates with the precision of a NASA scientist. The 'closest available approximation' often will do.") ***62** (quoting *FTC v. PPG Industries, Inc.*, 798 F.2d 1500, 1505 (1986)).

Moreover, Dr. Nevo explained in his reply report that, notwithstanding his conceptual misgivings, he did compute market shares and HHI using Dr. Israel's methodology. PX61002 ¶ 142. Disregarding the single-invoice rule and clustering BWT and CWT, Dr. Nevo's analysis yielded a combined market share across all vessels of 49.2% and lower bound HHI of 2,546 with change in HHI of 945. *See* PX61002 ¶¶ 141–42, Ex. 15 & 16. Dr. Nevo further explained at the evidentiary hearing and in his reply report that he performed multiple alternative HHI calculations using several of Defendants' preferred candidate markets. Nevo Hrg. Tr. at 637:24–640:6. These markets include supply of marine water treatment as a whole, BWT separately, CWT separately, and one market including all chemicals, gases, and refrigerants—all at the vessel level, regardless of trading pattern, and including only vessels weighing at least 1,000 gross tons. Nevo Hrg. Tr. at 637:24–640:6; PX61002 ¶¶ 104–12. The results in each case satisfied the Guidelines threshold for a structural presumption.[10] PX61002 ¶ 104 Ex. 8. In other words, here, as in *PPG* and *Sysco*, the FTC has presented "share calculations for 'every market the evidence suggests is remotely possible,' which yield[ed] results of similar magnitudes in market concentration." *Sysco*, 113 F.Supp.3d at 54 (quoting *PPG Industries*, 798 F.2d at 1506).

In sum, the court finds that based on Dr. Nevo's testimony and other evidence, the FTC has demonstrated that the proposed merger will significantly increase concentration in the market for supply of MWT products to Global Fleets. Thus, the FTC has made out a *prima facie* case and established a rebuttable presumption that the merger will substantially lessen competition in the aforementioned market.

ii. Ordinary Course Documentation and Customer Testimony Confirm Market Position and Suggest Competitive Effects From Elimination of Head-to-Head Competition

The notion that WSS and Drew are each other's primary competition in the relevant market is supported by a number of Defendants' own documents. For instance, in a January 2015 internal presentation on the strategic rationale for the merger, WSS acknowledged that "[t]he combined entity will be the unrivalled leader in maritime services in general and marine chemicals in particular." PX20329 at 48. Another WSS internal presentation titled "Global Strategy 2013-2017" described WSS as having "relatively high market shares within Marine Chemicals"—listing WSS as possessing slightly more than 50% market share in marine chemicals and describing Drew as having 25%. JX-0192 at 005. Furthermore, internal Drew documents acknowledge that ***63** "Drew Marine essentially has one global competitor —Wilh. Wilhemsen Holding ASA." JX-0055 at 027; *see also* JX-0053 at 024 (noting that "VPP segment is dominated by Drew Marine and the market's largest participant, Wilh. Wilhelmsen Holding ASA" and that "[r]emaining market [is] characterized by small regional/local suppliers, specializing in product sub-categories with limited product offerings, execution capabilities, and geographic reach."); JX-0048 at 006 (suggesting in strategic planning email that if Drew were to "[a]cquire WSS chemical business, take away [its] main competitor and win back this space fully for [Drew Marine], this could increase our ability to charge far better prices and win across all segments."); JX-0182 at 067 (noting that "WSS and DM hold majority of contract business for marine chemicals (in particular water treatment) due to long-term market participation and global presence."); JX-0096 at 054 (describing Drew Marine as "one of two global players in the performance chemicals market"). Moreover, the record includes multiple instances of serious competition between WSS and Drew, specifically on issues such as price and other non-price incentives.[11] *See Sysco*, 113 F.Supp.3d at 64–65.[12]

Customer testimony from Global Fleets further supports the notion that Defendants occupy the number one and number two market positions and that competition between them plays a key role in providing consumer benefits at the fleet level. *See, e.g.*, [redacted] (describing WSS and Drew as only viable options, describing how merger would leave fleet without alternatives, describing how negotiation with Vecom broke down over capability concerns); Sarro Hrg. Tr. at 93:24–99:9, 157:6–25 (describing WSS and Drew as only realistic options, and explaining how review process that originally included multiple suppliers was necessarily narrowed to WSS and Drew based on capability considerations); [redacted] (describing WSS and Drew as only credible options, explaining how other suppliers would be unable to meet fleet-level needs, and explaining that merger would leave fleet without options); *see also* PX400013 (same). The court agrees with Defendants that such testimony is not without its flaws—while many customers testified that they consider Drew and WSS to be the only proven suppliers capable of meeting their needs on a global basis, some also admitted that they have not undertaken any detailed investigation of other suppliers. ***64** *See, e.g.*, PX70028 106:14–18. It is also true that customer testimony alone is often considered a less reliable form of evidence in this context. *Arch Coal*, 329 F.Supp.2d at 145 (noting that "[i]n many contexts ... antitrust authorities do not accord great weight to the subjective views of customers in the market."). Nevertheless, in light of the extensive documentary and statistical evidence the FTC has presented in this case, it does not appear that the FTC is over-relying on customer input, and the fact that the documentary and statistical evidence aligns with customer testimony bolsters the reliability of the testimony.

iii. Quantitative Evidence Suggests Competitive Effects Based on High Market Shares and Elimination of Head-to-Head Competition

Dr. Nevo performed two additional studies to confirm that Defendants will have the incentive and ability to raise post-merger prices—the Gross Upward Pricing Pressure Index methodology ("GUPPI") and a merger simulation model.

A GUPPI analysis is essentially a bargaining framework that quantifies a firm's change in incentive to raise prices following a merger—i.e., the "upward pricing pressure." PX61000 ¶¶ 318–19. The model takes as a premise that, when WSS (or Drew) bids for business in the current market, higher prices increase the chance that customers will choose another supplier, and that given the closeness of competition between WSS and Drew, Drew (or WSS) will usually be the alternative supplier. PX61000 ¶ 317. In this model, the firm that chooses to raise or lower prices must balance the potential for increased profits at a higher price against the potential to lose profits but gain business at a lower price. PX61000 ¶ 317. The optimal price lies somewhere between these points. PX61000 ¶ 317. The model hypothesizes that without Drew or WSS as a check, the need for balancing disappears. PX61000 ¶ 317. The incentive to raise prices depends on the size of the fraction of diverting WSS customers that go to Drew (or vice versa) and the size of the margin that Drew or WSS earns. PX61000 ¶ 320. To estimate these variables, Dr. Nevo used a number of values drawn from market share estimates based on revenue data, market share estimates based on WSS's PSM tool, WSS salesforce data, and WSS win-loss data. PX61000 ¶ 321. For margins, Dr. Nevo used invoice data and variable cost margins. PX61000 ¶ 323. Dr. Nevo's results across multiple trials, accounting for variations of these inputs and calculated from the perspective of both Drew and WSS, produced percentages consistently over 20%, indicating strong incentives for post-merger price increase. Nevo Hrg. Tr. at 658:20–660:23.[13]

Dr. Nevo's merger simulation model aimed to quantify the effect that combining the first and second choice MWT suppliers would have on bargaining and prices in the relevant antitrust market. The model hypothesized that since customers needing supply are likely to solicit more than one bid and play the second-best supplier alternative off the first-best in order to secure better offers, a situation in which (a) the first and second-best merge, and (b) the third-best supplier (which will become second-best post-merger) represents a weak alternative relative to the merging parties, will tend to produce higher prices. Indeed, the weaker an option the third supplier represents relative to the merging parties, the more likely it is that customers will face higher prices. PX61000 ¶¶ 332–23; ***65** Nevo Hrg. Tr. at 663:22–665:5, 670:16–671:18. Using the same market share and margin estimates as in the GUPPI analysis, Dr. Nevo calculated estimated percentage price increases post-merger using eight scenarios involving all input combinations. Percentage increases across all sensitivities ranged from 13.6% to 53.1% ($6.7 million to $26 million in dollar increases), with ranges based on Dr. Nevo's preferred data of 29% to 46.6% (14.4 million to 23 million in dollar increases). PX61000 ¶ 339. Notably, the model did not predict the timing of price increases. As Dr. Nevo testified at the evidentiary hearing, such high price increases can be implemented over time, and in a market where it is typical for parties negotiating framework agreements to bargain over substantial discounts off list prices, price increases could simply involve reducing the amount of the discount in proportion to reduced negotiating leverage. Nevo Hrg. Tr. at 675:12–677:5.

Defendants argue that Dr. Nevo's models are flawed because they depend on unreliable data, specifically incomplete win-loss data and overbroad salesforce data. *See* Nevo Hrg. Tr. at 581:23–582:3 ("THE COURT: Dr. Nevo ... for this win-loss data ... what kind of numbers are we talking about in reaching these percentages? THE WITNESS: So these are very small numbers. I forget exactly.... But I think this is—it is very sparsely populated."), 722:11–723:8 (noting that salesforce and win-loss datasets are not specific to the market alleged). While the court agrees that there are some reliability issues with both the win-loss and salesforce data, the court disagrees that this flaw dooms the studies' significance, especially when, with respect to the merger simulation model in particular, the difference in market share between the merging parties and the third-best alternative so closely tracks the model's basic assumptions. Win-loss and salesforce data were the basis for market share estimates in only two of the scenarios in each analytical category (GUPPI and merger simulation), and did not form the basis of Dr. Nevo's preferred calculations. In all other trials, market shares were estimated using other data, and the results were stable across these variations. Moreover, even acknowledging the limited usefulness of certain data, calculations using that data can be considered as confirmatory, insofar as the results match the results of calculations that use more reliable data and accord with the inferences suggested by a larger body of evidence. *See Sysco*, 113 F.Supp.3d at 67 (finding merger simulation strengthened *prima facie* case despite imperfections in underlying data where result was qualitatively robust to other variations using more reliable data). Thus, the court concludes that Dr. Nevo's GUPPI analysis and merger simulation model strengthen the FTC's *prima facie* case that the proposed merger will substantially lessen competition in the relevant antitrust market.[14]

***66** *iv. Summary*

The FTC has made out a strong *prima facie* case of anticompetitive effects based on high market concentration and has bolstered that case with additional evidence that the merger would substantially lessen competition in the market for supply of MWT chemicals and services to Global Fleets.

2. Rebuttal

Given the court's conclusion that the FTC has met its burden to show a *prima facie* case, the burden now shifts to Defendants "to show that traditional economic theories of the competitive effects of market concentration are not an accurate indicator of the merger's probable effect on competition in [this] market or that the procompetitive effects of the merger are likely to outweigh any potential anticompetitive effects." *CCC Holdings*, 605 F.Supp.2d at 46. Typically, "the more 'compelling the [FTC's] prima facie case, the more evidence the defendant must present to rebut [the presumption] successfully." *Sysco*, 113 F.Supp.3d at 72 (quoting *Baker Hughes*, 908 F.2d at 991). Given that the FTC has made out a strong prima facie case, Defendants must make out a correspondingly strong rebuttal showing.

a. Barriers to Entry or Expansion

1. LEGAL STANDARD

A prima facie showing of anticompetitive effects associated with a merger can be rebutted by—among other factors—evidence that there are no significant entry barriers in the relevant market. *CCC Holdings*, 605 F.Supp.2d at 47. Indeed, the D.C. Circuit has recognized that "[t]he existence and significance of barriers to entry are frequently ... crucial considerations in a rebuttal analysis," given that "[i]n the absence of significant barriers, a company probably cannot maintain supracompetitive pricing for any length of time." *Baker Hughes*, 908 F.2d at 987. Accordingly, analysis of ease of entry—"the ability of other firms to respond to collusive pricing practices by entering to compete in the market," *Cardinal Health*, 12 F.Supp.2d at 54–55—is key to "evaluating whether market concentration statistics accurately reflect the pre- and likely post-merger competitive picture." *Heinz*, 246 F.3d at 717 n.13. "Low barriers to entry enable a potential competitor to deter anticompetitive behavior by firms within the market simply by its ability to enter the market." *Id.* (citing *FTC v. Procter & Gamble Co.*, 386 U.S. 568, 581, 87 S.Ct. 1224, 18 L.Ed.2d 303 (1967)). "In other words, entry is one way in which post-merger pricing practices can be forced back down to competitive levels." *CCC Holdings*, 605 F.Supp.2d at 47.

Nevertheless, "[t]he prospect of entry into the relevant market will alleviate concerns about adverse competitive effects only if such entry will deter or counteract any competitive effects of concern so the merger will not substantially harm customers." Merger Guidelines § 9. Thus, entry must be "timely, likely, and ***67** sufficient in its magnitude, character, and scope to deter or counteract the competitive effects of concern." *Id.*; *Cardinal Health*, 12 F.Supp.2d at 55. According to the Merger Guidelines, entry is timely when it is "rapid enough to make unprofitable overall the actions causing [competitive] effects and thus leading to entry," likely where it is profitable even "accounting for the assets, capabilities, and capital needed and the risks involved"—including sunk costs—and sufficient where the entering competitors provide products that "are ... close enough substitutes to the products offered by the merged firm to render a price increase ... unprofitable" and there are limited constraints on entrants' "competitive effectiveness," such that one firm can replicate the scale and strength of a merging firm, or one or more firms can operate without competitive disadvantage. Merger Guidelines § 9.1–9.3. In general, "[t]he relevant time frame for consideration ... is two to three years." *Staples II*, 190 F.Supp.3d at 133. The expansion of current competitors is regarded as "essentially equivalent to new entry," and is therefore evaluated according to the same criteria. *CCC Holdings*, 605 F.Supp.2d at 57; *Cardinal Health*, 12 F.Supp.2d at 55.

2. ANALYSIS

Defendants contend that there are no significant barriers to expansion by other firms already in the market as defined by the FTC, and that one or more of those firms will expand to provide a competitive counterbalance that will maintain prices at pre-merger levels. Defendants note that they are required only to show that "another competitor or group of competitors could fill Drew's current position in the market," DFF ¶ 280, examine a number of potential barriers, and argue that none of them prevent expansion in this case.

First, Defendants argue that "there is no meaningful limit on the supply of BWTC and CWTC," meaning that the FTC cannot argue that "current suppliers are capacity constrained." ECF No. 50-2 at 39. In particular, Defendants assert that the chemistry that guides formulation of MWT products is well known, and toll blenders—chemical companies that blend MWT chemicals for suppliers, including Drew—are not bound by exclusive agreements and could find another outlet for their products among other market participants. ECF No. 50-2 at 34; DFF ¶¶ 287–91. Second, Defendants argue that the need for a global distribution network does not constitute a significant barrier to entry because "there is nothing that prevents ... competitors from easily expanding their [distribution] networks in response to customer demand." ECF No. 50-2 at 40; DFF ¶¶ 298–300. Defendants emphasize that Drew outsources about two-thirds of its MWT business, [redacted] and engaging others such as Wrist—a large ship chandler—to make last-mile deliveries to vessels at distant ports, often far from warehouses (which are leased, rather than owned). DFF ¶¶ 301–03. Defendants also argue that the FTC has failed to identify any ports "where entry would be needed and would purportedly not occur." ECF No. 50-2 at 37; DFF ¶¶ 298, 301–14. Third, Defendants argue that the ability to offer technical services in conjunction with the delivery of chemical products poses no barrier. They point out that Drew offers only three kinds of technical services: (1) log sheet reporting, which involves periodically recording boiler and cooling testing results in proprietary software and collating data in a central location to ensure consistency over time; (2) initial training sessions, which involve providing new customers with written materials describing dosing and testing methods for Drew's products and conducting a presentation for onboard ***68** engineers; (3) on-board visits to customer vessels, during which Drew representatives answer shipboard engineers' questions, review the testing history, and make recommendations. Defendants note that Drew had 40–53 service engineers between January 2015 and June 2017, and contend that procuring engineers is not a sustainable entry barrier because an entrant can start with a smaller number and scale up over time. ECF No. 50-2 at 40–41; DFF ¶¶ 316–21. Fourth, Defendants argue that reputation and brand are not significant barriers to entry because Global Fleet customers are highly sophisticated, and are therefore unlikely to be influenced by branding. DFF ¶ 322. Defendants note that to the extent that some Global Fleet customers believe other suppliers are incapable of serving their needs, they are uninformed. DFF ¶ 326.

The court concludes that Defendants have not carried their burden to establish that entry will be appropriately timely, likely, and sufficient to deter or counteract the competitive effects of the merger. *See Cardinal Health*, 12 F.Supp.2d at 55. Defendants' contention that Drew's business—including its products, services, reputation, customer relationships, and distribution model—is simple and capable of replication in a short period of time is at odds with inferences drawn from the state of the current market and with documentary and testimonial evidence from customers and suppliers. It defies basic economic principles for a profitable market to be simultaneously characterized by (a) markedly high concentration and head-to-head competition between two dominant firms over a significant period of time, and (b) low barriers to entry and easily replicable business models. Where the latter is true, economic incentives to compete should ensure that the former is not. Low barriers signify economic opportunities, and as Defendants' own expert acknowledges, "[e]conomics teaches that firms will enter markets where there are opportunities to earn economic profits (profits above the competitive level) until those economic profits are pushed to zero." DX-0060 ¶ 224; Israel Hrg. Tr. at 1567:4–10, 1568:11–24. The FTC has presented strong evidence that the current market is highly concentrated and dominated by head-to-head competition between Drew and WSS, notwithstanding that a number of other suppliers have been present in the market for years. In other words, "the fact that the merging parties have been able to maintain high margins and market shares without witnessing notable entry and expansion" suggests that, contrary to Defendants' contentions, the market for supply of MWT products is characterized by significant barriers to entry. PX61002 at ¶ 244.

This perspective is borne out in documentary and testimonial evidence, which suggests that barriers to entry—especially global distribution networks, customer relationships and reputation, and customer retention rates—play a significant role in the merging parties' respective business models. Global presence in particular is consistently considered a distinguishing feature of Defendants' business that is capital intensive and difficult to replicate. *See* JX-0279 at 022 (Drew presentation describing one of its features as an "Established Global Presence with Significant Barriers to Entry," and further explaining that its "Expansive Global Logistics and Distribution Network Enables Swift Order Fulfillment and is Difficult and Costly to Replicate"); *see also* PX60008 (Drew) at 006 ("Q. Rough order, how long would it take and how much would it cost to replicate your global fulfillment network? A. It would take a vast investment to enter our market from a distribution perspective and even if they did that they would inevitably ***69** fail to gain any traction [because]: [(i)] brand reputation (quality, consistency and reliability); [(ii)] High cost of failure means customers are not going to swap supplier from a product they trust for essential compliance or maintenance products and services"); JX-0231 at 157 (consultant's internal presentation to WSS describes barriers to entry as "logistics, channel, market knowledge, and customer base"); PX20184 at 003 (internal assessment explaining that "[t]he business idea and the strategic role played by the company is to supply these products to vessels around the world ... through a truly global and seamless operation, meticulously designed for the global shipping community ... [t]he complexity of this operation is the major barrier to entry for competing manufacturers and suppliers, focusing their efforts towards larger, land based markets."). Indeed, other market participants have confirmed that expanding a distribution network to the size of Drew's would require significant capital investment. *See* Franzo Hrg. Tr. at 357: 13–358:4 ("Q. What would it take for UNI Americas to expand its distribution network to the size of Drew Marine's? A.... I mean, we would need financial backing to make that move ... Drew has built a tremendous company over 50 years ... they didn't do it overnight.... [I]t would take a financial influx of capital to do such a thing.").

Similarly, evidence indicates that prior customer relationships and reputation function as barriers in the MWT industry because customers are highly risk averse, leading them to favor known providers and avoid switching suppliers. *See* JX-0250 at 009 (consultant presentation of MWT analysis to WSS indicates that "[c]ustomer relationships are important to maintain sales and contract extensions," because "[w]ater treatment products has a lock-in effect, as the vessels cannot change water treatment supplier continuously, as it would defeat its purpose"); [redacted] (describing elimination of Marine Care from bidding process because "[t]he evaluation of the team was that the Marine Care bid had more risk to it. They didn't cover as many ports as we were seeking. They were an unknown supplier to us, so a lot more testing would be required to consider their chemicals."); Fry Hrg. Tr. at 962:11–23 (explaining that Military Sealift Command single sources its chemicals worldwide because "[c]ommonality of chemicals, commonality of training, commonality of test equipment" helps "prevent[ ] ... mistakes and ... minimize the risk to the ship itself.");[15] PX80000 (MSC Decl.) at ¶¶ 51–52 (noting that "[r]eputation cannot be understated given that even small discrepancies in the quality, availability, or service of marine chemicals could shorten the lifecycle of equipment or cause immediate failure," and that "if another company decided to make a concerted effort to replace Drew, it would take additional time for that company to earn the reputation for quality, service, and reliability that Drew and Wilhelmsen have developed over decades in the marine industry").

In sum, evidence relating to the foregoing barriers alone shows that here, as in *Sysco*, new entry and/or expansion are "capital intensive and demand[ ] a long time horizon"—capital to fund expansion of distribution network, and time to build relationships with customers and develop a high reputation for quality and reliability. 113 F.Supp.3d at 81. The evidence does not reveal any specific competitor or potential ***70** competitor with any plan to enter, and in fact suggests the opposite—that expansion is costly, and no smaller competitor or potential competitor intends to expand or reposition in order to make a bid for Global Fleet customers. *See, e.g.*, [redacted] ¶ 10 (noting that expansion is costly, on the order of $20,000–$30,000 in shipping per container of product on top of third-party fees, and that [redacted] has not expanded for water treatment chemicals in five years); [redacted] ¶ 8 (noting that [redacted] has no intention of entering the MWT business); [redacted] ¶ 6 (noting absence of expansion plans); *cf. Sysco*, 113 F.Supp.3d at 81 ("Based on their assessment that expansion would not be an economically viable strategy, regional distributors have said that they have no plans to expand or reposition in order to serve national customers."). Defendants may be correct that at some point in the future one or more smaller competitors will be in a position to replicate the competitive benefits that Drew's presence currently provides. Nevertheless, the record does not support the notion that any entry or credible threat thereof will be timely, likely, and sufficient to counteract the likely anticompetitive effects of this merger.

b. Power Buyers

1. LEGAL STANDARD

Courts have also noted that the existence of power buyers—sophisticated customers who retain strategies post-merger that "may constrain the ability of the merging parties to raise prices," Merger Guidelines § 8—is a factor that can serve to "rebut a prima facie case of anti-competitiveness." *Cardinal Health*, 12 F.Supp.2d at 59. However, "[t]he ability of large buyers to keep prices down ... depends on the alternatives these large buyers have available to them." *Sysco*, 113 F.Supp.3d at 48. Where mergers reduce alternatives—i.e., prevent the use of certain competitive strategies—"the power buyers' ability to constrain price and avoid price discrimination can be correspondingly diminished." *Id.* (citing Merger Guidelines § 8). Thus, the mere presence of power buyers "does not necessarily mean that a merger will not result in anti-competitive effects." *Cardinal Health*, 12 F.Supp.2d at 59. In assessing a power buyer argument, the court should "examine the choices available to powerful buyers and how those choices likely would change due to the merger," keeping in mind that "[n]ormally, a merger that eliminates a supplier whose presence contributed significantly to a buyer's negotiating leverage will harm that buyer." Merger Guidelines § 8. Finally, although the consideration of non-entry factors—including the existence of power buyers—is "relevant, and can even be dispositive, in a section 7 rebuttal analysis," *Baker Hughes*, 908 F.2d at 987, courts have not typically held "that power buyers alone enable a defendant to overcome the government's presumption of anticompetitiveness." *Cardinal Health*, 12 F.Supp.2d at 58; *Chicago Bridge & Iron Co. N.V. v. FTC*, 534 F.3d 410, 440 (5th Cir. 2008) ("[C]ourts have not considered the 'sophisticated customer' defense as itself independently adequate to rebut a *prima facie* case.").

2. ANALYSIS

Defendants argue that the FTC's Global Fleets construct focuses on the largest shipping companies—those most likely to have the power to constrain the merger's anticompetitive effects. In support of this contention, Defendants point out that customers tend to purchase other goods from suppliers, which permits them to discipline attempted BWT and CWT price increases by switching or credibly threatening to switch purchases of these other products to other suppliers or by negotiating price decreases on other products. ***71** ECF No. 50-2 at 45; DFF ¶¶ 246–249. Defendants further argue that customers could adapt purchases to another supplier's distribution network or shift part of their fleet to another competitor, since many vessels in Global Fleets do not avail themselves of all of Defendants' networks—instead visiting a subset of available ports and picking up MWT from an even smaller subset. DFF ¶¶ 250–253. Defendants also contend that Global Fleets could stockpile larger quantities of MWT products in order to shift purchases to major ports with lower costs, DFF ¶¶ 254–258; ECF No. 50-2 at 45–46, and that customers can partner with suppliers to sponsor entry or expansion to new ports.

The court is unpersuaded by Defendants' power buyer argument. The evidence is mixed—at best—regarding the effectiveness of each of the Defendants' suggested strategies. Although at least one witness suggested that customers could shift purchases of other products in more competitive markets to other suppliers, *see* Kelleher Hrg. Tr. at 536:6–20, there is, as Dr. Nevo noted, little empirical basis for the notion that this strategy—already available to large customers—would yield any additional benefits beyond those customers currently enjoy. PX61002 ¶¶ 223, 232. Similarly, while testimony suggested that customers may be able to stockpile product and concentrate purchases in ports where products are cheaper, that same testimony suggests that storage space is often limited and that customers already do so. *See e.g.*, [redacted] (describing size of storage facilities onboard and efforts to ensure that product sourcing occurs efficiently); *see also* Fry Hrg. Tr. at 963:13–964:22 (describing space constraints due to safety regulations, number of different consumable products, and need to maximize revenue-generating space). Defendants have not identified any *new* strategy or alternative likely to emerge post-merger—instead, they have focused on strategies that are already part of the competitive landscape and which show no promise of becoming more effective. On the other hand, the FTC has shown that the merger will result in the loss of a proven strategy—the ability to leverage one large, global supplier against another—that appears to be the most effective price constraint in the consolidated MWT market. In other words, the FTC has established a reasonable probability that as a result of the merger, sophisticated buyers will have one less alternative strategy through which they can exercise power, and Defendants have not identified any equally or more effective buyer options to counteract that loss. Thus, the reduction of buyer alternatives means that "power buyers' ability to constrain price and avoid price discrimination can be correspondingly diminished," *Sysco*, 113 F.Supp.3d at 48, and evidence of buyer power is insufficient to rebut the FTC's prima facie case.

c. Efficiencies

1. LEGAL STANDARD

As the Merger Guidelines explain, "a primary benefit of mergers to the economy is their potential to generate significant efficiencies and thus enhance the merged firm's ability and incentive to compete, which may result in lower prices, improved quality, enhanced services, or new products." Merger Guidelines § 10. Though the Supreme Court has never recognized the so-called "efficiencies" defense in a Section 7 case, other courts and the Horizontal Merger Guidelines acknowledge that evidence of efficiencies may prove "relevant to the competitive effects analysis of the market required to determine whether the proposed transaction will substantially lessen competition," *Arch Coal*, 329 F.Supp.2d at 151, and accordingly that efficiencies produced by a merger can form part of a defendant's rebuttal of ***72** the FTC's prima facie case. *Sysco*, 113 F.Supp.3d at 81; *Heinz*, 246 F.3d at 720. This is true even though "[c]ourts have rarely, if ever, denied a preliminary injunction solely based on the likely efficiencies." *CCC Holdings*, 605 F.Supp.2d at 72.

Potential efficiencies require close judicial scrutiny—"the court must undertake a rigorous analysis of the kinds of efficiencies being urged by the parties in order to ensure that those 'efficiencies' represent more than mere speculation and promises about post-merger behavior," *Heinz*, 246 F.3d at 721, and a defendant must prove "extraordinary efficiencies" where market concentration levels are high. *Id.* at 720–21. An efficiencies analysis must demonstrate that the claimed efficiencies are (1) merger-specific, and (2) verifiable—meaning that efficiency claims "must represent a type of cost saving that could not be achieved without the merger and the estimate of the predicted saving must be reasonably verifiable by an independent party." *United States v. H & R Block, Inc.*, 833 F.Supp.2d 36, 89 (D.D.C. 2011); *see also Sysco*, 113 F.Supp.3d at 82. Moreover, "it is incumbent upon the merging firms to substantiate efficiency claims," as "much of the information relating to efficiencies is uniquely in the possession of the merging firms." Merger Guidelines § 10.

2. ANALYSIS

Defendants claim that the proposed merger will result in significant merger-specific efficiencies in the form of cost savings of [redacted] and that these efficiencies will be realized in four ways: (1) production cost reductions from eliminating duplicative product lines, (2) customer-facing cost reductions from eliminating duplicative account managers and customer service operations, (3) reductions from eliminating duplicative back-office and administrative costs, and (4) price reductions as part of a plan to address expected revenue dis-synergies, in order to compensate for the possibility of lost customers who oppose the merger.

The FTC engaged an expert, Dr. Dov Rothman, to evaluate whether Defendants had substantiated their estimated cost efficiencies, and whether such efficiencies were merger-specific. Dr. Rothman reviewed data and documentation from the merging parties, and the parties' consultants provided him with spreadsheets relevant to their claimed cost savings. Dr. Rothman concluded in his report and his testimony at the evidentiary hearing that the merging parties had failed to provide sufficient information for him to verify the likelihood and magnitude of the claimed cost savings. PX61001 at ¶ 10. In particular, Dr. Rothman found that the alleged cost savings in each of the categories were based on a series of significant assumptions—percentage reductions in cost, percentage increases in productivity, or assumed cost/product equivalencies—that were "doing all the work" in calculation of the estimates. Rothman Hrg. Tr. at 1035:5–6. Dr. Rothman further pointed out that Wilhelmsen failed to provide any information that would have allowed him to confirm whether those assumptions are reasonable. *See, e.g.*, Rothman Hrg. Tr. at 1039:19–1040:5 ("So what Wilhelmsen has provided here, it's provided a description of the process by which these cost savings were estimated. So it's explained that it had functional teams and Cardo Partners go around and identify and assess areas of duplicative overlap. And Wilhelmsen has ... provided information that describes the output of the analysis. What Wilhelmsen hasn't provided is information about the analysis itself. And I think there's an important distinction between describing the process of estimating cost savings and ***73** describing the actual analysis, the assumptions that go into that analysis.").

In response to these criticisms, Defendants note that WSS has a history of acquiring companies that produce MWT chemicals—specifically Unitor and Nalfleet—that demonstrates that WSS has previously achieved the cost savings it projected. Defendants also note that the efficiency estimates went through many rounds of internal vetting, DFF ¶¶ 352, 354, 357, 358, and rely on the testimony and report of Dr. Israel, who contended that the estimates are verifiable insofar as WSS identified the potential bases for cost savings, performed its own vetting and due diligence, and has a track record of realizing projected cost savings. DX-0060 ¶¶ 287, 290, 298.

The court finds that Defendants have failed to carry their burden to demonstrate the verifiability of their claimed efficiencies. In reaching this decision, the court stresses that the determinative issue is neither the presence of assumptions nor the absence of completely precise estimates. Instead, the critical issue is that because the bases for the assumptions Dr. Rothman identified and their role in the efficiencies analysis is unclear, the reasonableness of those assumptions, along with the ultimate determinations of likelihood and magnitude, cannot be verified with any degree of rigor. *Heinz*, 246 F.3d at 721 ("[G]iven the high concentration levels, the court must undertake a *rigorous* analysis of the kinds of efficiencies being urged by the parties in order to ensure that those 'efficiencies' represent more than mere speculation and promises about post-merger behavior.") (emphasis added); *see also id.* (scrutinizing quantitative basis for claimed efficiencies). Nor can reference to the merging parties' past practices, managerial expertise and incentives, or internal verification processes serve to substantiate any efficiencies. The court cannot substitute Defendants' assessments and projections for independent verification. *H & R Block*, 833 F.Supp.2d at 91 ("While reliance on the estimation and judgment of experienced executives about costs may be perfectly sensible as a business matter, the lack of a verifiable method of factual analysis resulting in the cost estimates renders them not cognizable by the Court. If this were not so, then the efficiencies defense might well swallow the whole of Section 7 of the Clayton Act because management would be able to present large efficiencies based on its own judgment and the Court would be hard pressed to find otherwise."). The court concludes that Defendants have failed to provide enough information about their estimated efficiencies to render them "reasonably verifiable by an independent party." *Id.* at 89. Given this conclusion, the court need not address the question of merger-specificity.

B. Weighing the Equities

Notwithstanding the court's determination on the likelihood of success on the merits, the court must still "weigh the equities in order to decide whether enjoining the merger would be in the public interest." *Heinz*, 246 F.3d at 726. The interests at issue are "(i) the public interest in effectively enforcing antitrust law and (ii) the public interest in ensuring that the FTC has the ability to order effective relief if it succeeds at the merits trial." *Sysco*, 113 F.Supp.3d at 86; *see also* *Heinz*, 246 F.3d at 726 ("The principal public equity weighing in favor of issuance of preliminary injunctive relief is the public interest in effective enforcement of the antitrust laws."). The FTC notes that absent a preliminary injunction, Defendants can combine assets and operations such that it is administratively difficult to restore competition to its pre-merger state. *Heinz*, 246 F.3d at 726 ("Section 13(b) ***74** itself embodies congressional recognition of the fact that divestiture is an inadequate and unsatisfactory remedy in a merger case."). On the other hand, Defendants note that if this court issues a preliminary injunction, they will abandon the transaction rather than continue with the administrative proceeding—meaning that the efficiencies that they have identified will be lost, along with their potential benefits to consumers. *See* *Arch Coal*, 329 F.Supp.2d at 160 (taking abandonment of the transaction into account in weighing the equities).

Given the court's finding that Defendants' claimed efficiencies cannot be independently verified, the court cannot conclude on this record that those efficiencies outweigh the potential harm to the public resulting from further consolidation in the MWT industry. Moreover, although the court recognizes the time, resources, and effort that Defendants have put into planning this transaction, the parties' stated intention to abandon the transaction prior to the merits proceeding is a private equity, and cannot on its own overcome the public equities that favor the FTC. *Heinz*, 246 F.3d at 727; *Sysco*, 113 F.Supp.3d at 87.

IV. CONCLUSION

The court finds on the basis of the entire record that the FTC has carried its burden to show a "reasonable probability" that the proposed merger between Drew and WSS would harm competition in the market for supply of MWT products and services to Global Fleets. The FTC has "raised questions going to the merits so serious, substantial, difficult and doubtful as to make them fair ground for thorough investigation, study, deliberation and determination by the FTC in the first instance and ultimately by the Court of Appeals," *Heinz*, 246 F.3d at 714–15 (quoting *FTC v. Beatrice Foods Co.*, 587 F.2d 1225, 1229 (D.C. Cir. 1978)), and Defendants have offered insufficient evidence to rebut the FTC's showing of likely harm. Moreover, the equities favor issuance of a preliminary injunction. Accordingly, the FTC's Motion for Preliminary Injunction will be GRANTED. An appropriate order accompanies this memorandum opinion.

Footnotes

1 Defendants essentially concede this narrow point in their Memorandum in Opposition to Plaintiff's Motion for Preliminary Injunction, which acknowledges that "a market could be the Kmarket for the sale of boiler water treatment chemicals." ECF No. 50-2 at 2; *see also* ECF No. 50-2 at 28 (describing the appropriateness of separate BWT and CWT product markets).

2 Defendants' argument regarding the lack of interchangeability between BWT and CWT—i.e., the alleged product market's "overinclusiveness"—is at odds with the concept of a cluster market as a doctrine that "allow[s] items that are not substitutes for each other to be clustered together in one antitrust market for analytical convenience." *Staples II*, 190 F.Supp.3d at 117.

3 The FTC also notes that for both BWT and CWT, "Defendants have similar market shares, earn similar margins, and face a nearly identical set of competitors," PFF ¶ 12, and the margins and revenue shares are higher than for other marine products. PX-61002 ¶¶ 84, 85. To be sure, competitive conditions for BWT and CWT are not identical. Defendants have noted that while engine manufacturers approve specific brands of CWT chemicals for use in their engines, DX-2599 at 0007, boiler manufacturers do not maintain any such list. DX-0060 ¶ 67. Moreover, there is at least one supplier of CWT chemicals that does not supply BWT chemicals. DX-0060 ¶ 67. Nevertheless, the law on cluster markets requires only *similarity* in competitive conditions—not indistinguishability. *See* *Staples II*, 190 F.Supp.3d at 117.

4

Table 2:
The Parties' Sales of Water Treatment Products by Type
2017

	WSS		Drew	
Product	**Sales**	**Shares**	**Sales**	**Shares**
Boiler water treatment chemicals	[redacted]			
Cooling water treatment chemicals				
Boiler and cooling water treatment equipment				
Water production treatment chemicals				
Pool & spa treatment chemicals				
Other water testing and dosing equipment				
Other water treatment chemicals				
Total				

Source: Parties' invoice data

Notes: Sales to all vessels and sales to non-vessels are included. Drew's fixed fee revenues are excluded. For additional methodology details, please refer to Appendix 1.

The table above, taken from DX-0060 at 0018, indicates that BWT and CWT products account for [redacted] and [redacted] of WSS and Drew's “water treatment products” revenue, respectively, All other chemicals in the category together account for only [redacted] and [redacted] of water treatment products revenue.

5 Although WSS President and CEO Bjoerge Grimholt testified that trading pattern was not used internally for sales purposes, Grimholt Hrg. Tr. at 1224:24–25, this assertion is at odds with internal WSS documents explicitly using trading patterns to track sales and define market segments for sales purposes, *see, e.g.*, JX-0188 at 044–45, and with Grimholt's deposition testimony explaining the relationship between the two. PX70006 (Grimholt IH Vol. 1 Tr.) at 164:23–167:15.

6 Defendants argue that industrial suppliers and ship chandlers should be included as sellers in the relevant market, insofar as they sell some MWT chemicals to marine customers. The court disagrees. The evidence establishes that industrial suppliers focus most of their business on providing water treatment for industrial use on land, and have very limited involvement in the marine market. *See, e.g.*, Lange Hrg. Tr. at 1141:1–9 (noting that Nalco (owned by Ecolab) does not promote itself to the marine business), 1143:2–17 (describing total of [redacted] in annual sales to marine industry, [redacted] of which is to WSS); JX-0283 at 001 (explaining that [redacted] “deals with water treatment chemicals for manufacturing industry sector on ‘land,’ ” that only [redacted] deals with water treatment for the marine sector, and that it only sells to a distributor in Japan). Additionally, Defendants have not shown that the small number of marine sales attributable to industrial suppliers includes the range of additional services that comprise the “total solution” that WSS and Drew provide. *Cf. Sysco*, 113 F.Supp.3d at 26 (“[F]or example, fruit can be bought from both a grocery store and a fruit stand, but no one would reasonably assert that buying all of one's groceries from a fruit stand is a reasonable substitute for buying from a grocery store.”). Defendants have also produced no evidence to suggest that ship chandlers —marine retailers that stock a wide range of consumable goods in warehouses near ports—provide that solution. The same is true of testing equipment manufacturers. These observations are consistent with the HMT results, which suggest that neither industrial suppliers nor ship chandlers would be considered viable substitutes by any significant group of customers in the event of a price increase. To the extent that Defendants suggest that ship chandlers or other companies could easily reorganize to supply a total MWT solution that argument relates to ease of entry into the market, not to current market conditions.

7 Though Dr. Nevo believes that the PSM tends to overestimate the size of the market and accordingly understate market concentration, he found that the results of his calculations using the PSM do not qualitatively differ from those obtained using revenue information from MWT suppliers. PX61000 ¶ 251.

8 Defendants contend that the revenue information upon which Dr. Nevo relied is “unverified” because he made no effort to verify the accuracy of the information with the submitting parties. Hrg. Tr. at 1877:10-12. The court notes however that much of the revenue information was included in declarations given under penalty of perjury, and although some was provided in email communications with the FTC, Defendants have not proffered any specific reason to doubt the information's accuracy.

9 The court does however have concerns about Dr. Israel's “single invoice” rule. In an effort to exclude “one-off” purchasers, that rule excludes any vessel with only a single invoice in 2017, regardless of how much was purchased in that invoice and regardless of the timing of purchases from year to year. Thus, if a vessel were to purchase multiple times from Defendants in 2015 and 2016, but only once in 2017, the single invoice rule would treat that vessel as a non-loyal customer that bought its total supply of MWT elsewhere—ignoring the quantity it did buy from Defendants during 2017, and discounting

the possibility that the vessel stocked up on supplies for the relevant time period, or experienced downtime, or did not need to purchase again during that year for some other reason.

10 The complete results of these trials are presented in Dr. Nevo's reply report at PX61002 ¶ 104 Ex. 8. The relevant HHI statistics are summarized in the chart below:

Alternative Market Definition	Post-merger HHI	Change in HHI	Presumptively Unlawful?
Supply of marine water treatment to all vessels	6,991	3,399	Yes
Supply of boiler water treatment to all vessels	5,899	2,861	Yes
Supply of cooling system water treatment to all vessels	4,779	2,189	Yes
Supply of marine chemicals, gases, and refrigerants to all vessels	6,274	2,630	Yes

PFF ¶ 65.

11 *See, e.g.*, [redacted] (describing process of pitting WSS and Drew against one another, resulting in lower prices); Knowles Hrg. Tr. at 1426:23–1427:6 (describing how Drew won [redacted] business through competitive pricing against WSS); PX20063 (internal WSS email describing “aggressive offer from Drew” leading to increase in cost savings for Global Fleet customer); PX10346 at 002 (describing multiple non-price benefits afforded by Drew to Global Fleet customer in an effort to win business from WSS).

12 Defendants argue that current market pricing is inconsistent with the notion that they exercise market power. This is because the generally low cost of MWT (as a function of vessel operating cost) relative to the importance of the products should incentivize suppliers to charge higher prices to realize maximum value. Defendants argue that the fact that suppliers have not done so indicates that the products must exist in a competitive environment—not a highly concentrated (and therefore noncompetitive) one. Israel Hrg. Tr. at 1500:8–1501:17. However, the court does not understand the FTC to contend that the current market is noncompetitive—rather, the FTC contends that the market *is* competitive, and that the continued competitiveness of the market depends on aggressive competition between the two existing global suppliers with high market shares. A head-to-head competition theory is not inconsistent with the presence of lower prices in the current market.

13 Dr. Nevo's calculations did not rely on the salesforce data for the Drew GUPPI because that data was unavailable. Nevo Hrg. Tr. at 660:15–16.

14 The court also acknowledges the vessel-level “switching” study performed by Dr. Israel, which investigated head-to-head competition by examining what happens when vessels stop buying MWT from one of the merging parties, in order to find out whether the vessels “switch” to the other merging party or go elsewhere. Essentially, Dr. Israel used sales data to focus on vessels weighing 1,000 gross tons or more that purchase from one of the merging parties in one year but not the next year (or years, in some formulations). If that vessel disappeared from the invoice data for one party, and did not show up in the invoice data for the other within the relevant time period, Dr. Israel counted it as a “loss.” Dr. Israel's results indicated that most vessels that switch from one merging party do not typically switch to the other. DX-0060 at ¶ 124 & Appendix 3.

Dr. Israel's study does not factor heavily in the court's calculus for several reasons: (1) the study does not appear to address the effect of the transaction on fleet-level bargaining over framework agreements, unlike Dr. Nevo's studies; (2) it employs the single-invoice rule, which this court has already found to be problematic in note 9, *supra*; (3) it assumes that vessel absences from sales data for a given period mean that another supplier is serving its needs, but provides no data to support that assumption (while the FTC has come forward with some evidence to show that the assumption is false or true in only a small number of cases that do not relate to competitive considerations, *see, e.g.*, PX70025 (Sarro Dep. Tr. at 116:12–23); PX40031 at 001)).

15 Defendants' contention that customers who believe that there are no other MWT suppliers capable of serving their needs are uninformed is itself indicative of the importance of reputation in the industry—if reputation were less important, it is unlikely that a sophisticated customer would fail to investigate potentially cheaper alternatives.

R. v. Abbey

1982 CarswellBC 230, 1982 CarswellBC 740, 1982 J.E. 762, [1982] 2 S.C.R. 24, [1982] B.C.W.L.D. 2107, [1982] S.C.J. No. 59, [1983] 1 W.W.R. 251, 138 D.L.R. (3d) 202, 29 C.R. (3d) 193, 39 B.C.L.R. 201, 43 N.R. 30, 68 C.C.C. (2d) 394, 8 W.C.B. 81, J.E. 82-762

R. v. ABBEY

Laskin C.J.C., Martland, Ritchie, Dickson, Beetz, Estey, McIntyre, Chouinard and Lamer JJ.

Heard: December 16, 1981
Judgment: July 22, 1982
Docket: 16589

Counsel: *E. G. Ewaschuk, Q.C.*, and *S. D. Frankel*, for the Crown.
J. Wood, for respondent.

The judgment of the court was delivered by *Dickson J.*:

1 Robert Mark Abbey was tried by a judge sitting alone on two charges: (i) importing cocaine into Canada; and (ii) unlawful possession of cocaine for the purpose of trafficking. His sole defence was that he was insane at the material time. The trial judge gave effect to that defence. He found Abbey not guilty on account of insanity, and the Court of Appeal of British Columbia dismissed a Crown appeal [21 C.R. (3d) 63, 29 B.C.L.R. 212, 60 C.C.C. (2d) 49]. The matter has now, by leave, reached this court.

I

The Facts and History of the Case

2 The facts surrounding the commission of the offence are not in dispute. Pursuant to s. 582 of the Criminal Code, R.S.C. 1970, c. C-34, Abbey admitted, amongst others, the following facts alleged against him, for the purpose of dispensing with proof. On Sunday, 13th May 1979, Abbey arrived at the Vancouver International Airport on C.P. Air flight 421 from Lima, Peru. He entered Canada carrying a brown shoulder bag containing two clear plastic bags, the contents of which weighed 5.5 ounces and were analyzed to be approximately 50 per cent pure cocaine. After disembarkation, Abbey proceeded directly to the Canada Customs primary counter, where he presented his passport and a signed customs declaration. He then obtained his suitcase from a baggage carousel and proceeded to the customs secondary counter. Abbey placed the suitcase and shoulder bag on the counter. The customs inspector looked into the shoulder bag and observed a camera case and underneath it two plastic bags of white powder, the cocaine. The following conversation ensued between the customs inspector, Jung, and Abbey:

> JUNG [holding the two plastic bags of white powder]: What is it?
>
> ABBEY: You got me.
>
> JUNG: What is it?
>
> ABBEY: It's coke.

R.C.M.P. Constable Giesbrecht arrived on the scene:

CONSTABLE GIESBRECHT [indicating the brown shoulder bag]: What's in here?

ABBEY: Naturally, cocaine.

CONSTABLE GIESBRECHT: How much?

ABBEY: 130 to 150 grams.

CONSTABLE GIESBRECHT: You need not say anything, however, anything you do say may be given in evidence. You understand this? ... What's the white powder?

ABBEY: Cocaine.

CONSTABLE GIESBRECHT: You brought the cocaine into the country?

ABBEY: Yes.

CONSTABLE GIESBRECHT [indicating the brown shoulder bag]: Did you bring this suitcase into the country?

ABBEY: Yes.

Later in the day Abbey gave the police a signed statement in which he said that in the last two weeks of April 1979, while still in Canada, he had received $900 from three individuals on the express understanding that he would purchase 13 grams of cocaine for them in Peru. The two plastic bags contained 158.7 grams of cocaine, the "street value" of which was $76,320 if cut to 13 per cent purity, or $18,150 if sold uncut, by the ounce. It was a profit venture. In his statement to police, which was submitted in evidence, Abbey was asked if there was anything he would like to say with respect to the importation of cocaine. He replied:

It was just there. I've been down there many times, and when you see it for five dollars — I was going to school and the Philippines, and it was the perfect way to have a perfect year. I can't believe I did it.

3 As I have said, the only defence raised was s. 16(2) of the Criminal Code: insanity. Section 16 of the Code reads:

16.(1) No person shall be convicted of an offence in respect of an act or omission on his part while he was insane.

(2) For the purposes of this section a person is insane when he is in a state of natural imbecility or has disease of the mind to an extent that renders him incapable of appreciating the nature and quality of an act or omission or of knowing that an act or omission is wrong.

(3) A person who has specific delusions, but is in other respects sane, shall not be acquitted on the ground of insanity unless the delusions caused him to believe in the existence of a state of things that, if it existed, would have justified or excused his act or omission.

(4) Every one shall, until the contrary is proved, be presumed to be and to have been sane.

4 As witnesses, the Crown called the customs inspectors and R.C.M.P. officers who searched and questioned Abbey at the airport. They said that Abbey appeared "normal" in their dealings with him. Abbey did not testify. The defence called only one witness, Dr. Vallance, a psychiatrist. In rebuttal the Crown called another psychiatrist, Dr. Eaves. No other witnesses gave testimony.

5 Dr. Vallance testified that he first saw Abbey approximately ten weeks after the commission of the offence. Dr. Vallance's testimony was based on his interviews with Abbey, his interviews with Abbey's mother, his review of a medical report prepared by another pyschiatrist, and his discussions with other doctors who were involved in treating Abbey. In particular, Dr. Vallance relied on Abbey's description of the events surrounding his trip to South America as indicative of his mental state at the material

time. Dr. Vallance's opinion was that Abbey, at all material times, was suffering from a disease of the mind, a manic illness, known as "hypomania". While Abbey appreciated that he was bringing cocaine into Canada and knew that what he was doing was wrong, he believed that, if caught, he would not be punished. Dr. Vallance said:

> He had a considerable disturbance of mood. He had delusional ideas. He had hallucinatory experiences. It's difficult under circumstances like that to fully appreciate what you are doing, particularly when the feelings and delusional ideas are tangled up with what you are doing. If you feel that you are, for some delusional idea, inordinately powerful or safe, then that impairs good judgment. I am sure he had some appreciation of what he was doing.

6 Dr. Vallance further testified that, while Abbey was not rendered totally incapable of appreciating the nature and quality of his acts by reason of the disease of mind from which he suffered, there was a degree of impairment of judgment. He had the feeling that he was being looked after by some outside force that was feeding him strength, and that no harm would come to him, and even if he did get caught it did not matter, because somehow he would be looked after. Dr. Vallance made reference to Abbey's delusional belief that he was committed to a particular path of action which he could not change, and his further delusional idea, while in Lima, Peru, that he had "astro-travelled" back to Vancouver already, and that in getting on the plane in Lima to fly home he was simply having the body follow where the "rest" had already gone.

7 Dr. Eaves, in rebuttal, was of the opinion that the disease of the mind experienced by Abbey, hypomania, would "not be substantially enough to render him incapable of appreciating the nature and quality of his actions or of knowing that his actions were wrong".

8 The trial judge found that Abbey suffered from a disease of the mind. This was common ground. Both doctors agreed, however, that Abbey knew what was doing and he knew that it was wrong. They disagreed on their assessment of the degree of Abbey's capability as of 13th May 1979. The judge found that disease of the mind incapacitated his ability to appreciate the nature and quality of his acts to the degree required to meet the test of s. 16(2). More particularly, Abbey did not "appreciate" the consequences of punishment associated with the commission of the offence. After referring to the decision of this court in *Cooper v. R.*, [1980] 1 S.C.R. 1149, 13 C.R. (3d) 97, 18 C.R. (3d) 138, 51 C.C.C. (2d) 129, 110 D.L.R. (3d) 46, 31 N.R. 234, the trial judge did find that Abbey "had the capacity to appreciate the nature of his acts of importing and possessing the cocaine". He continued:

> As I understand the evidence and the submissions of counsel, the accused had the capacity to appreciate the nature of the act of importing and of possessing the cocaine. He also had the capacity to appreciate the immediate consequences of those acts, that is to say, that they were illegal, that he should not commit them overtly, that if he succeeded he must then deliver some of the cocaine to his friends who gave him the money for it and find someone through another friend who would buy the rest at a large profit to himself. He had the capability, in that sense, of analyzing the knowledge of what he was about, and he — in using the word "analyzing" I adopt the definition given by Estey J. in the Supreme Court of Canada decision *R. v. Barnier*, [1980] 1 S.C.R. 1124, 13 C.R. (3d) 129, 19 C.R. (3d) 371, [1980] 2 W.W.R. 659, 51 C.C.C. (2d) 193, 109 D.L.R. (3d) 257, 31 N.R. 273.

9 The trial judge, however, did not stop there. He went on to consider:

> ... whether the law requires that an accused also be able to appreciate, in the sense of which I have read from Estey J.'s decision, the consequences that may be personal to him, that is to say, the consequence of punishment.

10 In finding Abbey not guilty by reason of insanity, the judge concluded that:

> ... one who, like Abbey, suffers from the delusion that he is protected from punishment by some mysterious external force which comes to him as described in the evidence of Dr. Vallance has his ability to appreciate the nature and quality of his acts incapacitated to the degree required to meet the test of s. 16(2). He is, by disease of the mind, deprived of the ability to assess an important consequence of his act. He is deprived of the effect of the penal sanctions ...

11 The Crown appealed, contending that the trial judge had erred in law in directing himself to the law applicable to the defence of insanity. The appeal was dismissed.

12 The Crown has now appealed to this court, on the grounds raised in the British Columbia Court of Appeal:

13 (1) The trial judge erred in holding that a person who, by reason of a disease of the mind, does not "appreciate" the personal penal consequences of his actions is insane within the meaning of s. 16(2) of the Criminal Code.

14 (2) The trial judge erred in giving effect to a defence of "irresistible impulse".

15 (3) The trial judge misdirected himself with respect to the use which could be made of "hearsay" evidence introduced during the testimony of the psychiatrists who were called as witnesses.

II

Consequences

The first arm of s. 16(2)

16 The question raised in the first ground of appeal is therefore whether "appreciation of the nature and quality of an act" is limited to appreciation of the physical consequences of the act or also includes appreciation of the penal consequences to the accused, Taggart J.A., speaking for the Court of Appeal, said that *Cooper v. R.*, supra, and *R. v. Barnier*, supra, made it clear that there is a distinction between "know" and "appreciate" and that the words "appreciate the nature and quality of his acts" connote more than a mere knowledge of the physical nature of the acts being committed. With respect, I agree. The British Columbia court failed, however, to deal with the question of what it is that an accused must fail to "appreciate" before he can be found to be legally insane. The court simply accepted the trial judge's conclusion that somebody who, because of a disease of the mind, has the delusion that he is protected from punishment by some mysterious external force is incapacitated from appreciating the nature and quality of his acts.

17 The defence of insanity in s. 16(2) of the Criminal Code has received lengthy consideration by this court in several recent judgments: *Cooper v. R.*, supra; *R. v. Barnier*, supra; and, most recently, *Kjeldsen v. R.*, 24 C.R. (3d) 289, 28 C.R. (3d) 81, [1982] 1 W.W.R. 577, 17 Alta. L.R. (2d) 97, 64 C.C.C. (2d) 161, 131 D.L.R. (3d) 121, 34 A.R. 576, 39 N.R. 376. As stated in *Cooper v. R.*, s. 16(2) of the Criminal Code "does not set out a test of insanity but, rather the criteria to be taken into account in determining criminal responsibility" (at p. 1152). With some hesitation, the trial judge came to the conclusion that:

> ... one who, like Abbey, suffers from the delusion that he is protected from punishment by some mysterious external force which comes to him as described in the evidence of Dr. Vallance has his ability to appreciate the nature and quality of his acts incapacitated to the degree required to meet the test of s. 16(2). He is, by disease of the mind, deprived of the ability to assess an important consequence of his act. He is deprived of the effect of the penal sanctions in restraining him from the commission of a crime, its it should restrain us all.

18 With respect, the trial judge has confused the "ability to perceive the consequences, impact and results of a physical act" (*Cooper v. R.*, at p. 1162) with a belief, however unjustified, that the legal sanction imposed for the commission of the prohibited act, the "legal consequences", was somehow inapplicable to him. The delusion under which Abbey was supposedly labouring was that he would not get caught, or, if caught, would benefit from some undefined immunity to prosecution. Such a delusion by no means brings him under the first arm of the insanity test in s. 16(2) of the Criminal Code, as developed in the recent cases.

19 According to s. 16(2), a person is insane when he has a disease of the mind to an extent that renders him incapable of: (i) appreciating the nature and quality of an act; or (ii) knowing that an act is wrong. As the recent decisions dealing with s. 16(2) have noted, the wording in the Criminal Code is slightly different than in the English *M'Naghten* rules [*M'Naghten's Case* (1843), 10 Cl. & Fin. 200, 8 E.R. 718 (H.L.)], which are the inspiration for the section. The concern of the recent cases has

been to set the limits for the defence, limits which are broader than those in the *M'Naghten* rules. The *M'Naghten* rules, under what is termed the "first arm" of the test, require the accused to be incapable of *knowing* the nature and quality of his act. As has been pointed out by the commentators, a narrow literal interpretation of this test is such that "nobody is hardly ever really mad enough to be within it" (Bramwell B., quoted by G. A. Martin in "Insanity as a Defence" (1966), 8 Cr. L.Q. 240, at p. 243).

20 As the court said in *Cooper v. R.*, at p. 1161:

> To "know" the nature and quality of an act may mean merely to be aware of the physical act, while to "appreciate" may involve estimation and understanding of the consequences of that act. In the case of the appellant, as an example, in using his hands to choke the deceased, he may well have known the nature and quality of that physical act of choking. It is entirely different to suggest, however, that in performing the physical act of choking, he was able to appreciate its nature and quality in the sense of being aware that it could lead to or result in her death.

It is the use of the word "consequences" in this context which, unfortunately, led the trial judge astray. "Consequences" in *Cooper v. R., R. v. Barnier*, and *Kjeldsen* v. R., all supra, refer to the physical consequences of the act. All three cases were murder cases, violent crimes in which there was a victim who suffered the "consequences" of the accused's actions: *Cooper v. R.* at pp. 1162-63:

> The requirement, unique to Canada, is that of perception, an ability to perceive the consequences, impact, and results of a physical act. An accused may be aware of the physical character of his action (i.e., in choking) without necessarily having the capacity to appreciate that, in nature and quality, that act will result in the death of a human being. *This is simply a restatement, specific to the defence of insanity, of the principle that mens rea, or intention as to the consequences of an act, is a requisite element in the commission of a crime*. (The italics are mine.)

21 In *Schwartz v. R.*, [1977] 1 S.C.R. 673 at 700, 34 C.R.N.S. 138, 29 C.C.C. (2d) 1, 67 D.L.R. (3d) 716, 8 N.R. 585, Martland J. said:

> The *Codere* case [*R. v. Codere* (1916), 12 Cr. App. R. 21], in my opinion correctly, decided that "nature and quality" dealt with the physical character of the act. If, therefore, a person who has committed a crime did not, by reason of disease of the mind, know what he was doing, he is not to be convicted, because it really was not his act.

22 In *R. v. Codere*, Reading L.C.J. considered the application of the M'Naghten rules, and in particular the expression "nature and quality of the act" (pp. 26-27):

> It is said that "quality" is to be regarded as characterising the moral, as contrasted with the physical, aspect of the deed. The Court cannot agree with that view of the meaning of the words "nature and quality". The Court is of opinion that in using the language "nature and quality" the judges were only dealing with the physical character of the act, and were not intending to distinguish between the physical and moral aspects of the act. That is the law as it has been laid down by judges in many directions to juries, and as the Court understands it to be at the present time.

See also *R. v. Harrop*, 48 Man. R. 113, [1940] 3 W.W.R. 77, 74 C.C.C. 228 at 230, [1940] 4 D.L.R. 80 (C.A.); *R. v. Crook* (1979), 1 Sask. R. 273 at 303, leave to appeal to S.C.C. refused 5 Sask. R. 360n, 32 N.R. 444n.

23 Although there is some controversy in academic circles, I adopt the more traditional view espoused by Glanville Williams (Criminal Law, The General Part, 2nd ed. (1961), para. 166, at p. 525) that a delusion falling under the "first arm" of the insanity defence negatives an element of the crime, the mens rea. It may also, as Martin J.A. pointed out in *R. v. Rabey* (1977), 17 O.R. (2d) 1, 40 C.R.N.S. 46, 1 L.M.Q. 280, 37 C.C.C. (2d) 461, 79 D.L.R. (3d) 414 (C.A.), notwithstanding the existence of mens rea in the formal sense of intention, foresight, or knowledge with respect to the actus reus, exempt from liability if the criteria of insanity are met. As the court observed in *Cooper*, supra, the requirement that the accused be able to perceive the consequences of a physical act is a restatement, specific to the defence of insanity, of the principle of mens rea, or intention as to the consequences of an act, as a requisite element in the commission of a crime. The mental element must be proved with respect to all circumstances, and consequences, that form part of the actus reus. As the Crown in this case correctly points out,

"while punishment may be a *result* of the commission of a criminal act it is not an *element* of the crime ifself". A delusion which renders an accused "incapable of appreciating the nature and quality of his act" goes to the mens rea of the offence and brings into operation the "first arm" of s. 16(2): he is not guilty by reason of insanity. A delusion which renders an accused incapable of appreciating that the penal sanctions attaching to the commission of the crime are applicable to him does not go to the mens rea of the offence, does not render him incapable of appreciating the nature and quality of the act, and does not bring into operation the "first arm" of the insanity defence.

24 Abbey was charged with importing and trafficking in cocaine. There is no dispute as to the fact that he carried cocaine into the country. In his statement to police, it was his admitted intention to import cocaine for the purposes of trafficking. In other words, Abbey appreciated that the actus reus of each of the offences charged was being committed. Both the psychiatrist called for the defence and the psychiatrist who testified on behalf of the Crown stated that Abbey appreciated the nature and quality of his act. The judge erred, in my view, in going on to say that a failure to appreciate the penal sanctions ("consequences of punishment") brought the accused within the ambit of the "first arm" of the insanity defence of s. 16(2).

The second arm of s. 16(2)

25 Should the question of "personal penal consequences" be relevant at all, it is more appropriately discussed within the context of the second arm of s. 16(2), i.e., "knowing that an act is wrong". Glanville Williams in his Criminal Law, the General Part, at p. 478 says:

> It has been determined that this phrase ["nature and quality"] refers to the physical character of the act, not its legal quality; legal right and wrong are cared for by the second question [citing *R. v. Codere*, supra, at p. 27].

This court having decided in *Schwartz v. R.*, supra, that "wrong" means wrong according to law, and it being established that Abbey knew his act was "wrong", his inability to "appreciate" the penal consequences is really irrelevant to the question of legal insanity. There seems to be no doubt on the evidence, and on the judge's findings, that Abbey knew that he was doing an act forbidden by law.

26 With respect, the trial judge homogenized the first and second arms of s. 16(2), collapsing the one into the other in, for example, the following passage from his judgment:

> As I understand the evidence and the submissions of counsel, the accused had the capacity to appreciate the nature of the act of importing and of possessing the cocaine. He also had the capacity to appreciate the immediate consequences of those acts, that is to say, that they were illegal, that he should not commit them overtly ...

27 The second arm of s. 16(2) is concerned with cognitive capabilities, with knowledge, and not with appreciation of consequences. Section 16(2) speaks in terms of knowledge of wrongness, not appreciation of wrongness. One must, I think, draw a distinction between what might be termed "result" crimes and what might be termed "knowledge" crimes. In respect of the former it is correct to speak of appreciation of consequences. The capacity to appreciate the nature and quality of his act refers to the physical character of the act. It requires both an appreciation of the factors involved and sufficient mental capacity to measure and foresee the consequences of the conduct.

28 With respect, however, to the second arm of s. 16(2), knowledge that it is wrong, Martland J. set out the test in the *Schwartz* case, supra, at p. 701:

> In brief, it is my opinion that the effect of s. 16(2) is to provide protection to a person suffering from disease of the mind who has committed a crime if, in committing the crime, he did not appreciate what he was doing, or, if he did have that appreciation, he did not know that he was committing a crime.

29 In a note on *Schwartz v. R.*, "Section 16 and 'Wrong' "(1976), 18 Cr. L.Q. 413, Professor Mewett submits at p. 415 that the question that ought to be asked is "whether the accused, because of a disease of the mind (first hurdle) was rendered incapable (second hurdle) of knowing that his act was something that he ought not to do (third hurdle)" If he was capable of knowing

that an act was contrary to law, and that he ought not to do an act contrary to law, then, in the opinion of Professor Mewett, the defence should not apply.

30 When one is considering the legal aspects of a crime such as the importation of a narcotic the principal inquiry should be directed, not to appreciation of physical consequences, but to knowledge of wrongness. The trial judge said: "This man knew it was a crime, knew there was a penalty, but by delusion believed himself protected." Counsel for Abbey said in argument that he had to accept the fact that he could not bring Abbey's state of mind into the second half of s. 16(2). On these findings, in my opinion, the defence of insanity was not open to Abbey.

31 I agree with the submission of counsel for the Crown that s. 16(3) of the Code can be of no assistance to Abbey as his delusion could not in any way "justify" or "excuse" his actions. In any event, any defence which could be raised under subs. (3) could also be raised under subs. (2): see the McRuer Report [Report of the Royal Commission on the Law of Insanity as a Defence in Criminal Cases (1956)], p. 36.

32 I am of the view that the trial judge erred in law in holding that a person who, by reason of disease of the mind, does not "appreciate" the penal consequences of his actions is insane within the meaning of s. 16(2) of the Criminal Code.

III

Irresistible Impulse

33 The second ground of appeal is the submission that the trial judge erred in giving effect to a defence of "irresistible impulse". The submission rests upon the following passage from the judgment at trial, and in particular the words "he believed himself irrevocably committed":

> I must also note a second question, closely connected with the delusion I have already discussed. It involves the delusion which I find existed with Abbey and which also satisfies the test of s. 16(2) that while he was in Peru he thought he should not go through with the importing and possession of cocaine, but he believed himself irrevocably committed to it. That was not in the sense that, having arranged with his friends, he was bound to honour the arrangement, but in the sense that he was committed to a path of action which he was, by reason of a force acting upon him, powerless to change.

34 The Crown maintains that the trial judge found that this "second delusion", independently of any other delusions, rendered Abbey legally insane. Such a finding, the Crown contends, gives effect to a defence not recognized in Canadian law, that of irresistible impulse. What was said by Cartwright C.J.C. in *R. v. Borg*, [1969] S.C.R. 551, 7 C.R.N.S. 85, 68 W.W.R. 203, [1969] 4 C.C.C. 262, 6 D.L.R. (3d) 1, is cited in support of this proposition.

35 There is no issue here at all. Both the majority and minority opinions in *R. v. Borg* deny the existence of a defence, as such, of irresistible impulse. Both the majority and minority opinions in *Borg*, however, recognize that irresistible impulse may be a symptom or manifestation of a disease of the mind which may give rise to defence of insanity: Hall J. at p. 570:

> When an accused pleads insanity there is a sense in which it is true to say that irresistible impulse of itself is not a defence. However, there are two senses in which it is not true to say that irresistible impulse of itself is not a defence.
>
> There is no legal presumption of insanity merely from the existence of an irresistible impulse. If an accused presents no medical evidence of disease of the mind but merely pleads that he was acting under an irresistible impulse, a jury is not entitled to infer that the man was insane. In that sense irresistible impulse is not of itself a defence. However, if there is medical evidence of disease of the mind as there was here and yet the only symptoms of that disease of the mind are irresistible impulses, the jury may conclude that the accused is insane.

There is no error in the trial judgment in this respect. The trial judge did not give effect to an independent defence of irresistible impulse. His comments with respect to the "second delusion" were made in the context of his consideration of the insanity defence. He specifically rejected the existence of a defence of diminished responsibility in Canada.

36 I agree with the British Columbia Court of Appeal that the reasons of the trial judge should be understood in the sense that Abbey suffered from a disease of the mind which resulted in two delusions — the first was that some mysterious external force would protect him from punishment, the second was that he believed himself irrevocably committed to the course of action of importing cocaine — and that these delusions, taken together, rendered him incapable of appreciating the nature and quality of his acts. The trial judge did not equate the "delusion" with a defence of irresistible impulse and, that being the case, such authorities as *R. v. Borg*, supra, and *R. v. Creighton* (1908), 14 C.C.C. 349 (Ont. H.C.), and other authorities to a similar effect cited by Crown counsel have no application to the case at bar.

IV

Hearsay evidence

37 As a third ground of appeal, the Crown contends that the trial judge misdirected himself with respect to the use which could be made of hearsay evidence introduced during the testimony of the psychiatrists who were called as witnesses.

38 Dr. Vallance testified that during the course of his interviews Abbey told him of various delusions, visions, hallucinations and sensations which he had experienced in the six months preceding his arrest. Dr. Vallance also testified that Abbey had described certain symptoms of the disease to his mother several months prior to the commission of the offence. In his testimony, Dr. Vallance recounted several incidents of bizarre and unstable conduct by Abbey, both before his departure for Peru and during his stay. Abbey had told him, Dr. Vallance testified, that four days prior to his actual departure for Peru he had missed a flight and, in a rage, kicked in a window at Vancouver airport. Dr. Vallance was also told by Abbey of certain experiences in Peru:

> ... he could see lights and follow the lights and would interpret those phenomenon with ideas that there was some power outside of him that was communicating with him. he would do strange things, like run out into the fields. He was licking the wetness from trees.

The Crown submits that the trial judge accepted and treated as factual much of his hearsay evidence related by Dr. Vallance in the course of giving his opinion. The point is well taken.

39 A general principle of evidence is that all relevant evidence is admissible. The law of evidence, however, reposes on a few general principles, riddled by innumerable exceptions. Two major exceptions to this general principle are hearsay evidence and opinion evidence. There are also exceptions to the exceptions. "Expert witnesses may testify to their opinion on matters involving their expertise" (Cross on Evidence, 5th ed. (1979), at p. 20), and may also, incidentally, base their opinions upon hearsay.

40 A major difficulty encountered by counsel and the courts alike has been identifying hearsay. There exists a "superstitious awe ... about having any truck with evidence which involves A's telling the court what B said to him": Cross, "What should be done about the Rule Against Hearsay?", [1965] Crim. L. Rev. 68, at p. 82. Phipson on Evidence, 12th ed. (1976), 1980 supplement, para. 625, pp. 263-64, suggests three reasons for this:

> 1) Failure to appreciate that the hallmark of a hearsay statement is not only the nature and the source of the statement but also the purpose for which it is tendered.
>
> 2) The absence of any comprehensive judicial formulation of the rule — no doubt because "it is difficult to make any general statement about the law of hearsay which is entirely accurate".
>
> 3) The multiplicity of formulations found in textbooks upon the subject.

41 The main concern of the hearsay rule is the veracity of the statements made. The principal justification for the exclusion of hearsay evidence is the abhorrence to the common law of proof which is unsworn and has not been subjected to the trial by fire of cross-examination. Testimony under oath, and cross-examination, have been considered to be the best assurances of the truth of the statements of facts presented. Not all statements by a witness of that which he heard someone else say are, however,

necessarily hearsay. A felicitous formulation of the distinction between hearsay and non-hearsay evidence is found in the Privy Council decision in *Subramanian v. Pub. Prosecutor*, [1956] 1 W.L.R. 965 at 970:

> Evidence of a statement made to a witness by a person who is not himself called as a witness may or may not be hearsay. It is hearsay and inadmissible when the object of the evidence is to establish the truth of what is contained in the statement. It is not hearsay and is admissible when it is proposed to establish by the evidence, not the truth of the statement, but the fact that it was made.

42 What is sometimes loosely and erroneously referred to as "hearsay evidence" may in fact be "original evidence", as Cross terms it at p. 8:

> When a witness is asked to narrate another's statement for some purpose *other than that of inducing the court to accept it as true*, his evidence is said to be "original". Original evidence may therefore be defined as evidence of the fact that a statement was made, tendered without reference to the truth of anything alleged in the statement. (The italics are mine.)

Opinion evidence

43 Witnesses testify as to facts. The judge or jury draws inferences from the facts. "In the law of evidence 'opinion' means any inference from observed fact, and the law on the subject derives from the general rule that witnesses must speak only to that which was directly observed by them.": Cross on Evidence at p. 442. Where it is possible to separate fact from inference, the witness may testify only as to fact. It is not always possible, however, to do so, and the "law makes allowances for these borderline cases by permitting witnesses to state their opinion with regard to matters not calling for special knowledge whenever it would be virtually impossible for them to separate their inferences from the facts on which those inferences are based.": Cross at p. 442.

44 With respect to matters calling for special knowledge, an expert in the field may draw inferences and state his opinion. An expert's function is precisely this: to provide the judge and jury with a ready-made inference which the judge and jury, due to the technical nature of the facts, are unable to formulate. "An expert's opinion is admissible to furnish the Court with scientific information which is likely to be outside the experience and knowledge of a judge or jury. If on the proven facts a judge or jury can form their own conclusions without help, then the opinion of the expert is unnecessary.": *R. v. Turner*, [1975] Q.B. 834, 60 Cr. App. R. 80 at 83, [1975] 1 All E.R. 70, per Lawton L.J.

45 An expert witness, like any other witness, may testify as to the veracity of facts of which he has first-hand experience, but this is not the main purpose of his or her testimony. An expert is there to give an opinion. And the opinion more often than not will be based on second-hand evidence. This is especially true of the opinions of psychiatrists.

46 As stated by Fauteux J. in *Wilband v. R.*, [1967] S.C.R. 14 at 21, 2 C.R.N.S. 29, 60 W.W.R. 292, [1967] 2 C.C.C. 6:

> The value of a psychiatrist's opinion may be affected to the extent to which it may rest on second-hand source material; but that goes to the weight and not to the receivability in evidence of the opinion, which opinion is no evidence of the truth of the information but evidence of the opinion formed on the basis of that information.

47 In the *Wilband* case counsel for Wilband had attempted to have declared inadmissible as hearsay opinion evidence because it was based in part on prison records, material not proved in open court. Fauteux J. found that in fact the prison records were not relied upon to any significant extent by the psychiatrists in the formation of their opinion, but the decision does stand for the proposition that the second-hand nature of the basis of the opinion does not "contaminate" the opinion. This is consistent with the acceptance of expert evidence based, as it often is, upon hypothetical questions. For the judge or jury, the expert's opinion is a question of fact which may be accepted or rejected as seen fit. The opinion, even if uncontradicted, is not determinative of an issue.

48 Thus an expert opinion based on second-hand evidence is admissible, if relevant. The problem arose in *R. v. Dietrich*, [1970] 3 O.R. 725, 11 C.R.N.S. 22, 1 C.C.C. (2d) 49, leave to appeal to S.C.C. refused [1970] 3 O.R. 744n, 1 C.C.C. (2d) 68n, as to second-hand evidence which itself formed the basis of the opinion. Gale C.J.O. at p. 65 reached the conclusion that:

> Put shortly, if an expert is permitted to give his opinion, he ought to be permitted to give the circumstances upon which that opinion is based.

Testimony as to circumstances upon which the opinion is based is not introduced, and cannot be introduced, in order to establish the veracity of the second-hand evidence. It is thus not hearsay evidence. Jessup J.A. correctly stated the law in *R. v. Rosik*, [1971] 2 O.R. 47 at 84, 13 C.R.N.S. 129, 13 Cr. L.Q. 224, 2 C.C.C. (2d) 351, affirmed [1971] 2 O.R. 89n, 14 C.R.N.S. 400, 2 C.C.C. (2d) 393n (S.C.C.):

> In my view, a psychiatrist expressing an opinion as to a mental or emotional condition of an accused can relate in evidence, as Dr. Gray did, what he has been told by the accused *when such information is a basis of his opinion*. (The italics are mine.)

And at p. 85:

> The hearsay rule does not operate to exclude such evidence because it is not admitted to prove the fact of what the expert has been told: see *Wigmore on Evidence*, 3rd ed. [1940], vol. VI, s. 1720, p. 70, approved by Gale C.J.O. in the *Dietrich* case [supra]. The trial judge should have so instructed the jury and it would have been proper for him also to point out that there was no sworn evidence that the accused ingested drugs or consumed the quantity of alcohol integral to Dr. Gray's opinion ...

Jessup J.A.'s view was recently confirmed by this court in *Phillion v. R.*, [1978] 1 S.C.R. 18, 37 C.R.N.S. 363, 33 C.C.C. (2d) 535, 74 D.L.R. (3d) 136, 14 N.R. 371. After citing the excerpt from *Subramanian v. Pub. Prosecutor*, supra, which is quoted above with respect to hearsay evidence, Ritchie J. went on to say (p. 24):

> Statements made to psychiatrists and psychologists are sometimes admitted in criminal cases and when this is so it is because they have qualified as experts in diagnosing the behavioural symptoms of individuals and have formed an opinion which the trial judge deems to be relevant to the case, but the statements on which such opinions, are based are not admissible in proof of their truth but rather as indicating the basis upon which the medical opinion was formed in accordance with recognized professional procedures.

49 The danger, of course, in admitting such testimony is the ever-present possibility, here exemplified, that the judge or jury, without more, will accept the evidence as going to the truth of the facts stated in it. The danger is real, and lies at the heart of this case. Once such testimony is admitted, a careful charge to the jury or direction to himself by the judge is essential. The problem, however, as pointed out by Fauteux J. in *Wilband*, supra, resides not in the admissibility of the testimony but rather in the weight to be accorded to the opinion. Although admissible in the context of his opinion, to the extent that it is second-hand his testimony is not proof of the facts stated. Lawton L.J. in *Turner*, supra, spoke of this "elementary principle" which is "frequently overlooked" (p. 82):

> Thereupon the judge commented that the report contained "hearsay character evidence" which was inadmissible. He could have said that all the facts upon which the pyschiatrist based his opinion were hearsay save for those which he observed for himself during his examination of the appellant such as his appearance of depression and his becoming emotional when discussing the deceased girl and his own family. It is not for this Court to instruct psychiatrists how to draft their reports, but *those who call psychiatrists as witnesses should remember that the facts upon which they base their opinions must be proved by admissible evidence. This elementary principle is frequently overlooked*. (The italics are mine.)

50 In the present case Abbey did not testify. Dr. Vallance testified, in the course of his opinion, as to many events and experiences related to him during several interviews. This testimony, while admissible in the context of the opinion, was not in any way evidence of the factual basis of these events and experiences. The trial judge in his decision fell into the error of accepting, as evidence of these facts, testimony which, if taken to be evidence of their existence, would violate the hearsay

rule. There was no admissible evidence properly before the court with respect to: the delusions experienced by the accused; the accused having described the symptoms of his disease to his mother some six months prior to the commission of the offence; the accused having seen a psychiatrist before leaving for Peru; the accused's unstable conduct at the airport some days prior to leaving for Peru; or his bizarre behaviour in Peru.

51 In my view, the trial judge erred in law in treating as factual the hearsay evidence upon which the opinions of the psychiatrist were based.

52 Counsel for Abbey said that the passages in which the trial judge seemed to take symptoms as findings of fact were merely "unfortunate language". But it goes further than that. As Woods J.A. said in *R. v. Perras*, 20 C.R.N.S. 90, [1972] 5 W.W.R. 183, 8 C.C.C. (2d) 209 at 213, affirmed [1974] S.C.R. 659, 22 C.R.N.S. 160, [1973] 5 W.W.R. 275, 11 C.C.C. (2d) 449, 35 D.L.R. (3d) 596:

> The evidence of a physician stating what a patient told him about his symptoms is not evidence as to the existence of the symptoms. To accept it as such would be to infringe the rule against hearsay.

It was appropriate for the doctors to state the basis for their opinions and, in the course of doing so, to refer to what they were told not only by Abbey but by others, but it was error for the judge to accept as having been proved the facts upon which the doctors had relied in forming their opinions. While it is not questioned that medical experts are entitled to take into consideration all possible information in forming their opinions, this in no w ay removes from the party tendering such evidence the obligation of establishing, through properly admissible evidence, the factual basis on which such opinions are based. Before any weight can be given to an expert's opinion, the facts upon which the opinion is based must be found to exist.

V

Conclusion

53 Thus the trial judge erred in two respects. There was no admissible evidence of important facts regarding Abbey's conduct upon which the medical opinions were based. And the judge misconstrued the recent cases dealing with the interpretation of the insanity defence in s. 16(2). A failure to "appreciate" the penal sanctions attaching to an offence does not render the accused "incapable of appreciating the nature and quality" of his act so as to bring the insanity defence into play.

54 The appeal should be allowed. The judgments at trial and on appeal should be set aside, and a new trial ordered on both counts.

Appeal allowed; new trial ordered.

1990 CarswellMan 198
Supreme Court of Canada

R. v. Lavallee

1990 CarswellMan 198, 1990 CarswellMan 377, [1990] 1 S.C.R. 852, [1990] 4 W.W.R. 1, [1990] S.C.J. No. 36, 108 N.R. 321, 10 W.C.B. (2d) 101, 132 W.A.C. 243, 55 C.C.C. (3d) 97, 67 Man. R. (2d) 1, 76 C.R. (3d) 329, J.E. 90-735, EYB 1990-67181

LAVALLEE v. R.

Dickson C.J.C., Lamer, Wilson, L'Heureux-Dubé, Sopinka, Gonthier and McLachlin JJ.

Heard: October 31, 1989
Judgment: May 3, 1990
Docket: No. 21022

Counsel: *G.G. Brodsky, Q.C.*, and *S. Hoeppner*, for appellant.
J.G.B. Dangerfield, Q.C., for respondent.

***Wilson J. (Dickson C.J.C. Lamer, L'Heureux-Dubé, Gonthier* and *McLachlin JJ.* concurring):**

1 The narrow issue raised on this appeal [from 65 C.R. (3d) 387, 44 C.C.C. (3d) 113, 52 Man. R. (2d) 274] is the adequacy of a trial judge's instructions to the jury regarding expert evidence. The broader issue concerns the utility of expert evidence in assisting a jury confronted by a plea of self-defence to a murder charge by a common law wife who had been battered by the deceased.

1. The Facts

2 The appellant, who was 22 years old at the time, had been living with Kevin Rust for some three to four years. Their residence was the scene of a boisterous party on 30th August 1986. In the early hours of 31st August after most of the guests had departed the appellant and Rust had an argument in the upstairs bedroom which was used by the appellant. Rust was killed by a single shot in the back of the head from a .303 calibre rifle fired by the appellant as he was leaving the room.

3 The appellant did not testify but her statement made to police on the night of the shooting was put in evidence. Portions of it read as follows:

> Me and Wendy argued as usual and I ran in the house after Kevin pushed me. I was scared, I was really scared. I locked the door. Herb was downstairs with Joanne and I called for Herb but I was crying when I called him. I said, "Herb come up here please." Herb came up to the top of the stairs and I told him that Kevin was going to hit me actually beat on me again. Herb said he knew and that if I was his old lady things would be different, he gave me a hug. OK, we're friends, there's nothing between us. He said "Yeah, I know" and he went outside to talk to Kevin leaving the door unlocked. I went upstairs and hid in my closet from Kevin. I was so scared ... My window was open and I could hear Kevin asking questions about what I was doing and what I was saying. Next thing I know he was coming up the stairs for me. He came into my bedroom and said "Wench, where are you?" And he turned on my light and he said "Your purse is on the floor" and he kicked it. OK then he turned and he saw me in the closet. He wanted me to come out but I didn't want to come out because I was scared. I was so scared. [The officer who took the statement then testified that the appellant started to cry at this point and stopped after a minute or two.] He grabbed me by the arm right there. There's a bruise on my face also where he slapped me. He didn't slap me right then, first he yelled at me then he pushed me and I pushed him back and he hit me twice on the right hand side of my head. I was scared. All I thought about was all the other times he used to beat me, I was

scared, I was shaking as usual. The rest is a blank, all I remember is he gave me the gun and a shot was fired through my screen. This is all so fast. And then the guns were in another room and he loaded it the second shot and gave it to me. And I was going to shoot myself. I pointed it to myself, I was so upset. OK and then he went and I was sitting on the bed and he started going like this with his finger [the appellant made a shaking motion with an index finger] and said something like "You're my old lady and you do as you're told" or something like that. He said "wait till everybody leaves, you'll get it then" and he said something to the effect of "either you kill me or I'll get you" that was what it was. He kind of smiled and then he turned around. I shot him but I aimed out. I thought I aimed above him and a piece of his head went that way.

4 The relationship between the appellant and Rust was volatile and punctuated by frequent arguments and violence. They would apparently fight for two or three days at a time or several times a week. Considerable evidence was led at trial indicating that the appellant was frequently a victim of physical abuse at the hands of Rust. Between 1983 and 1986 the appellant made several trips to hospital for injuries including severe bruises, a fractured nose, multiple contusions and a black eye. One of the attending physicians, Dr. Dirks, testified that he disbelieved the appellant's explanation on one such occasion that she had sustained her injuries by falling from a horse.

5 A friend of the deceased, Robert Ezako, testified that he had witnessed several fights between the appellant and the deceased and that he had seen the appellant point a gun at the deceased twice and threaten to kill him if he ever touched her again. Under cross-examination Ezako admitted to seeing or hearing the deceased beat up the appellant on several occasions and, during the preliminary inquiry, described her screaming during one such incident like "a pig being butchered". He also saw the appellant with a black eye on one occasion and doubted that it was the result of an accident as she and the deceased stated at the time. Another acquaintance of the couple recalled seeing the appellant with a split lip.

6 At one point on the night of his death Rust chased the appellant outside the house and a mutual friend, Norman Kolish, testified that the appellant pleaded with Rust to "leave me alone" and sought Kolish's protection by trying to hide behind him. A neighbour overheard Rust and the appellant arguing and described the tone of the former as "argumentative" and the latter as"scared". Later, between the first and second gunshot, he testified that he could hear that "somebody was beating up somebody" and the screams were female. Another neighbour testified to hearing noises like gunshots and then a woman's voice sounding upset saying, "Fuck. He punched me in the face. He punched me in the face". He looked out the window and saw a woman matching the description of the appellant.

7 Three witnesses who attended the party testified to hearing sounds of yelling, pushing, shoving and thumping coming from upstairs prior to the gunshots. It is not disputed that two shots were fired by the appellant. The first one went through a window screen. It is not clear where Rust was at the time. The appellant in her statement says that he was upstairs, while another witness places him in the basement. The second shot was the fatal one. After the second shot was fired, the appellant was seen visibly shaken and upset and was heard to say, "Rooster [the deceased] was beating me so I shot him", and "You know how he treated me, you've got to help me". The arresting officer testified that en route to the police station the appellant made various comments in the police car, including "He said if I didn't kill him first he would kill me. I hope he lives. I really love him" and "He told me he was gonna kill me when everyone left".

8 The police officer who took the appellant's statement testified to seeing a red mark on her arm where she said the deceased had grabbed her. When the coroner who performed an autopsy on the deceased was shown pictures of the appellant (who had various bruises), he testified that it was "entirely possible" that bruises on the deceased's left hand were occasioned by an assault on the appellant. Another doctor noted an injury to the appellant's pinkie finger consistent with those sustained by the adoption of a defensive stance.

9 The expert evidence which forms the subject matter of the appeal came from Dr. Fred Shane, a psychiatrist with extensive professional experience in the treatment of battered wives. At the request of defence counsel Dr. Shane prepared a psychiatric assessment of the appellant. The substance of Dr. Shane's opinion was that the appellant had been terrorized by Rust to the point of feeling trapped, vulnerable, worthless and unable to escape the relationship despite the violence. At the same time, the continuing pattern of abuse put her life in danger. In Dr. Shane's opinion the appellant's shooting of the deceased was a final desperate act by a woman who sincerely believed that she would be killed that night:

> ... I think she felt, she felt in the final tragic moment that her life was on the line, that unless she defended herself, unless she reacted in a violent way that she would die. I mean he made it very explicit to her, from what she told me and from the information I have from the material that you forwarded to me, that she had, I think, to defend herself against his violence.

10 Dr. Shane stated that his opinion was based on four hours of formal interviews with the appellant, a police report of the incident (including the appellant's statement), hospital reports documenting eight of her visits to emergency departments between 1983 and 1985, and an interview with the appellant's mother. In the course of his testimony Dr. Shane related many things told to him by the appellant for which there was no admissible evidence. They were not in the appellant's statement to the police and she did not testify at trial. For example, Dr. Shane mentioned several episodes of abuse described by the appellant for which there were no hospital reports. He also related the appellant's disclosure to him that she had lied to doctors about the cause of her injuries. Dr. Shane testified that such fabrication was typical of battered women. The appellant also recounted to Dr. Shane occasions on which Rust would allegedly beat her, then beg her forgiveness and ply her with flowers and temporary displays of kindness. Dr. Shane was aware of the incidents described by Ezako about the appellant's pointing a gun at Rust on two occasions and explained it as "an issue for trying to defend herself. She was afraid that she would be assaulted". The appellant denied to Dr. Shane that she had homicidal fantasies about Rust and mentioned that she had smoked some marijuana on the night in question. These facts were related by Dr. Shane in the course of his testimony.

11 The appellant was acquitted by a jury but the verdict was overturned by a majority of the Manitoba Court of Appeal and the case sent back for retrial.

2. Lower Court Judgements

12

Manitoba Queen's Bench (Scott A.C.J.Q.B.)

13 After Dr. Shane testified and was cross-examined, Crown counsel brought an application to have the evidence of Dr. Shane withdrawn from the jury. The first reason he gave was that the jury was perfectly capable of deciding the issue on the admissible evidence and that expert evidence was therefore "unnecessary and superfluous". The second reason was that Dr. Shane's comment that he found the accused credible was "wholly improper" in light of her failure to testify as to the facts upon which Dr. Shane based his opinion. The trial judge denied the application stating that the Crown's concerns could be met through an appropriate charge to the jury:

> But I understand fully the concern that the Crown has at this time because a substantial chunk of the factual evidence that Dr. Shane relied on is simply not evidence in these proceedings and is not before the jury and my task, even with a very attentive jury such as this one, is going to be very difficult because of that fact.
>
> But I think, under the circumstances, that the better course of action and the more realistic one to follow is to deal with the fact that it is in evidence and to attempt to explain to the jury as adequately and as fully as I can the difference between what is evidence and what is not in evidence and the impact that that ought to have on the weight that they choose to attach to the opinion of Dr. Shane.

14 With respect to the appellant's out-of-court statements, the trial judge cautioned the jury that "as with the verbal testimony, you may accept all, part or none of the statements attributed to Lyn Lavallee and as with all evidence, the real question is whether the things reported to have been said are true". Later he introduced Dr. Shane's testimony as follows:

> As counsel put it yesterday, you cannot decide this case on things you didn't hear. You cannot decide this case on things the witnesses didn't see or hear.
>
> A somewhat different, though related, evidentiary caution has to be noted with respect to the expert opinion evidence of Dr. Shane. There were two matters in his evidence, two facts, two sources of information that he had reference to which are not

evidence in this case and that is the suggestion that people had been smoking marijuana at the party and the confirmatory evidence, as he called it, received from the mother of Lyn Lavallee. These are not matters in evidence before you.

For example, there is absolutely no evidence that anyone was smoking marijuana at this party and you must not consider that it took place. There is no evidence from the mother of the accused before you.

The extent to which this impacts on the weight of the opinion of Dr. Shane is a matter for you to decide. You must appraise the value of the resulting opinion in light of the fact that there is no evidence about these matters before you. In terms of the matters considered by Dr. Shane he is left, therefore, with the deceased's statement, some supplementary information from the police report and his interpretation of the hospital records.

If the premises upon which the information is substantially based has [sic] not been proven in evidence, it is up to you to conclude that it is not safe to attach a great deal of weight to the opinion. An opinion of an expert depends, to a large extent, on the validity of the facts assumed by the evidence by the expert.

If there are some errors and the factual assumptions aren't too important to the eventual opinion, that's one thing. If there are errors or matters not in evidence and those matters are substantial, in you [sic] view, in terms of the impact on the expert's opinion, then you will want to look at the value and weight of that opinion very carefully. It depends on how important you think the matters were that Dr. Shane relied on that are not in evidence. [emphasis added]

15 The trial judge then reviewed the evidence given by Dr. Shane regarding the appellant's emotional and mental state at the time of the killing. He reiterated Dr. Shane's opinion that the appellant's act was "a reflection of her catastrophic fear that she had to defend herself". He also drew attention to Dr. Shane's awareness that the appellant would occasionally be the aggressor despite her denial to him that she had homicidal fantasies:

[Dr. Shane] noted that at times Lyn Lavallee would be the aggressor from all of the underlying hostility. She couldn't leave psychologically because there were steel fences in her mind and she was tyrannized psychologically. She said she loved him and he felt that she did.

She denied to him thinking at any time of killing Kevin Rust. That is to say she did not entertain any homicidal fantasies and he felt that what she told him was reasonable.

It is the position of the Crown that Dr. Shane's opinion stands or falls on the veracity of Lyn Lavallee because he relied so heavily and extensively on what she told him and the evidence contained in the statement, Exhibit 16. That's for you to decide.

Undoubtably [sic] she was a very important source, if not the major source, of his information. Dr. Shane agreed that if what she told him was erroneous, he would have to reassess his position.

On cross-examination he reiterated that in his opinion her action was spontaneous to the moment to try to defend herself. The straw that broke the camel's back was the threat, "when the others leave you're going to get it", even though similar statements had been made to her on other occasions. According to what she told him, the accused felt compelled to shoot.

Based on the information he had in his interview, it was his opinion that the acts of the accused were impulsive and not premeditated. He disagreed with the Crown's suggestion that Lyn Lavallee took the opportunity when it presented itself.

He conceded that patients had, on occasion, lied and misled him in the past.

Manitoba Court of Appeal (Monnin C.J.M., Philp and Huband JJ.) (1988), 52 Man. R. (2d) 274

16 Writing for himself and Monnin C.J.M., Philp J.A. begins by observing, at p. 275, that there was "ample evidence for the jury to conclude that Rust abused the accused". He adds that it "was a reasonable inference for the jury to draw that the injuries resulted from Rust's violent and abusive behaviour, notwithstanding her explanations at the time to the contrary".

17 Turning to Dr. Shane's evidence, the majority comments that in the course of stating the factual basis of his opinions and conclusions, Dr. Shane referred to many facts, incidents and events which were not before the court in the form of admissible evidence. These included: the smoking of marijuana on the night of the shooting; the deterioration of the intimate relationship between the appellant and Rust (the appellant had told Shane that they were sleeping in separate bedrooms); a reference to an abortion the appellant had obtained, after which Rust allegedly threatened to tell her parents that she was a "baby killer"; incidents where Rust would allegedly beg forgiveness from the appellant after beating her up; the appellant's "incredible remorse" after killing Rust, and the appellant's denial to Dr. Shane that she harboured homicidal fantasies about Rust.

18 Philp J.A. then refers to the appellant's written statement to the police in which she professed her love for Rust and her hope that he would not die. At p. 277, he pointed out "discrepancies and conflicts in the narrative of events in the accused's statement, and the evidence of witnesses who testified at her trial", particularly with respect to the location of Rust when the first shot was fired. With respect to the accused's unsworn statement, he concludes at p. 278:

> ... in the circumstances of this case, where much of the factual basis for the plea of self-defence lay in the statement of the accused, the jury ought not to have been told to "give this evidence no more nor less weight than any other evidence heard by you"; that the frailties of such assertions should have been pointed out.
>
> The instructions of the trial judge to the jury with respect to the evidence of Dr. Shane are a more troubling matter. The problem presented by the accused's out of court statement and comments, in my view, comes to a head in that context.

19 Philp J.A. then turns to the judgment of Dickson J. (as he then was) in *R. v. Abbey*, [1982] 2 S.C.R. 24, [1983] 1 W.W.R. 251, 39 B.C.L.R. 201, 29 C.R. (3d) 193, 68 C.C.C. (2d) 394, 138 D.L.R. (3d) 202, 43 N.R. 30, a case from this court dealing with the admissibility of expert evidence and the use to which it can be put. After quoting from the judgment, Philp J.A. states at p. 279:

> Canadian authorities support the view that an expert can state to the court the basis for his opinion, and that it is desirable that he do so. In *Abbey*, Dickson, J., confirmed this approach and referred to the "obligation" of the party tendering evidence of the factual basis for the opinions of experts, to establish, "through properly admissible evidence, the factual basis on which such opinions are based". He cautioned: "Before any weight can be given to an expert's opinion, the facts upon which the opinion is based must be found to exist."

Referring back to the case at bar, Philp J.A. comments, at p. 279, that the record did not disclose "the full extent of these secondhand facts, or their importance in the formation of Dr. Shane's opinion; nor can one speculate what his opinion might have been had his inquiries been limited to the admissible evidence properly before the court".

20 In his assessment of the trial judge's charge to the jury, Philp J.A. remarks that the trial judge properly pointed out that there was no evidence about marijuana smoking on the night in question, nor was there any evidence before them from the mother of the appellant. Philp J.A. found this latter warning insufficient. While he considered the trial judge's general instructions regarding the weight that should be placed on expert evidence to be proper, he felt that they "did not go far enough in the circumstances of this case". He gives three reasons (at p. 280):

> Firstly, the comments, placed in juxtaposition to the trial judge's reference to the "two facts, two sources of information that (Dr. Shane) had reference to which are not evidence in this case ...", lose their impact. The jury may well have concluded that the trial judge's warning related only to Dr. Shane's reference to the marijuana, and to the "confirmatory evidence" of the accused's mother.
>
> Secondly, I think the trial judge was in error in telling the jury that the police report (presumably, the document referred to by Dr. Shane as the "police summary of the incident") was a matter left for Dr. Shane to consider. That document was not evidence before the court, nor do we know what facts it contained.
>
> Finally, although the trial judge did not refer to Dr. Shane's interviews with the accused (and her mother) when he told the jury what matters were left for Dr. Shane to consider, the conclusion that the jury was to ignore facts related in these

> interviews unless they were otherwise established by admissible evidence (and to weigh Dr. Shane's opinion accordingly) is dispelled by the trial judge's later references to these interviews.

Philp J.A. then quotes the passages from the trial judge's charge in which he reviewed Dr. Shane's admission that he would have to reassess his position if what the appellant had told him was not true. Philp J.A. also draws attention to the remark by the trial judge that the Crown emphasized that Shane's opinion would stand or fall on the appellant's veracity. In Philp J.A.'s views, these aspects of the trial judge's instructions were also deficient (at p. 281):

> With respect, those comments of the trial judge, so crucial to the plea of self-defence, amounted to a misdirection. The issue was not just the veracity of the accused (and at this point, a careful charge with respect to the accused's unsworn self-serving evidence would have been appropriate). The pivotal questions the jury had to decide were the extent to which Dr. Shane's opinion was based on facts not established by admissible evidence; and the weight to be accorded to his opinion.

Finally, Philp J.A. finds, at p. 281, that the trial judge's charge fell so short of the standard required in *Abbey* that a new trial was warranted:

> This was an unusual case. The accused shot Rust in the back of the head when he was leaving the bedroom. The accused says Rust loaded the rifle and handed it to her. Friends of the accused and Rust, including the couple who had planned to stay overnight, were present in another part of the residence. In these circumstances, absent the evidence of Dr. Shane, it is unlikely that the jury, properly instructed, would have accepted the accused's plea of self-defence. The accused did not testify, and the foundation for her plea of self-defence was, in the main, her unsworn exculpatory evidence and the hearsay evidence related by Dr. Shane. Because Dr. Shane relied upon facts not in evidence, including those related to him in his lengthy interviews with the accused, the factual basis for his opinion should have been detailed in his evidence.

Philp J.A. concludes by suggesting to the Crown that they proceed with a charge of manslaughter rather than second degree murder since a properly instructed jury would, in his opinion, be unlikely to convict the appellant of the latter offence.

21 Writing in dissent, Huband J.A. summarizes the basis of Dr. Shane's opinion that the appellant acted out of a genuine fear for her life. He acknowledges, at p. 282, that "self-defence in this context finds some support in the evidence presented to the jury".

22 Huband J.A. points out the conflict in the evidence about how the appellant obtained the gun and where Rust was when the first shot was fired. Noting the appellant's statement to the police about how frightened of the deceased she was, he states, at p. 282, that "the significance of the statement is that, if believed, it establishes some foundation for a psychiatric opinion that she acted out of fear for her own safety as a person who had been subjected to continuous abuse". Ezako's evidence confirms that Rust beat the appellant and that, although the appellant may have "often provoked" the arguments, she "invariably got the worst of it".

23 With respect to Dr. Shane's evidence, Huband J.A. remarks, at p. 283, that in addition to hospital records and the accused's statement to the police, Dr. Shane "had the advantage of speaking at length with the accused herself, and also with the mother of the accused, in formulating his opinion". In Huband J.A.'s view (at p. 283), the "learned trial judge was well aware of the need to give adequate warning to the jury as to the weight to be placed upon the testimony of Dr. Shane. It was quite obvious that Dr. Shane relied upon statements by the accused and her mother which were unsworn hearsay comments and not part of the evidence in the case".

24 Turning to this court's judgment in *Abbey*, Huband J.A. expresses the view, at p. 283, that the "learned trial judge followed the advice of the Supreme Court of Canada to the letter":

> The learned trial judge begins by making it clear to the jury that they could not rely on the opinion of Dr. Shane on matters where there was no supporting evidence. He chose a good example. In relating what the accused had told him Dr. Shane said that marijuana had been smoked at the party that evening. None of the witnesses who testified as to what occurred during the evening mentioned any involvement with marijuana. Nor is such an involvement indicated in the accused's

statement to the police. Dr. Shane's testimony constitutes no proof that marijuana was smoked, and to the extent that it became a factor in formulating his opinion, then his opinion must be discounted.

The learned trial judge also noted that while Dr. Shane referred to conversations with the accused's mother, no such evidence had been presented to the jury.

But the learned trial judge could not tell the jury to disregard Dr. Shane's report in its entirety. He was required to tell the jury, as he did, that there was some evidentiary support for Dr. Shane's opinion, — the accused's own statement and the hospital records. Indeed, if anything, I think the learned trial judge was unfair to the accused in not also mentioning the evidence of Mr. Ezako as constituting evidentiary foundation supporting Dr. Shane's opinion.

25 Huband J.A. finds that the trial judge specifically warned the jury that Dr. Shane's conversations with the accused and her mother extended beyond the evidence before the court when he told them that "it is not safe to attach a great deal of weight" to the opinion of an expert when the information on which it is predicated has not been proven in evidence. After quoting the relevant passage, Huband J.A. comments at p. 284:

I suppose one could argue that the learned trial judge should have said it is not safe to attach "any" weight to the opinion rather than it is not safe to attach "a great deal" of weight to the opinion. He could have said that an expert's opinion depends "totally" instead of "to a large extent" on the validity of the factual foundation upon which he has proceeded. In my view, however, the jury would fully comprehend the import of the learned trial judge's remarks. After the jury received its instruction and retired, counsel was invited to comment on the charge ... Crown counsel voiced no complaints ...

This accused was acquitted by a jury of her peers on the basis of self-defence, which might strike one as being somewhat fanciful. We should not, however, search out semantic excuses to order a new trial, at high public cost, in the belief that the jury should have been more skeptical and arrived at a different verdict.

3. Relevant Legislation

26 Criminal Code, R.S.C. 1985, c. C-46:

34. ...

(2) Everyone one who is unlawfully assaulted and who causes death or grievous bodily harm in repelling the assault is justified if

(*a*) he causes it under reasonable apprehension of death or grievous bodily harm from the violence with which the assault was originally made or with which the assailant pursues his purposes; and

(*b*) he believes, on reasonable grounds, that he cannot otherwise preserve himself from death or grievous bodily harm.

4. Issues on Appeal

27 It should be noted that two bases for ordering a new trial are implicit in the reasons of the majority of the Court of Appeal. In finding that "absent the evidence of Dr. Shane, it is unlikely that the jury, properly instructed, would have accepted the accused's plea of self-defence", the Court of Appeal suggests that the evidence of Dr. Shane ought to have been excluded entirely. The alternative ground for allowing the Crown's appeal was that Dr. Shane's testimony was properly admitted but the trial judge's instructions with respect to it were deficient. Thus, the issues before this court are as follows:

28 1. Did the majority of the Manitoba Court of Appeal err in concluding that the jury should have considered the plea of self-defence absent the expert evidence of Dr. Shane?

29 2. Did the majority of the Manitoba Court of Appeal err in holding that the trial judge's charge to the jury with respect to Dr. Shane's expert evidence did not meet the requirements set out by this court in*Abbey*, thus warranting a new trial?

5. Analysis

30

(i) Admissibility of Expert Evidence

31 In *Kelliher v. Smith*, [1931] S.C.R. 672 at 684, [1931] 4 D.L.R. 102 [Sask.], this court adopted the principle that in order for expert evidence to be admissible "the subject-matter of the inquiry must be such that or dinary people are unlikely to form a correct judgment about it, if unassisted by persons with special knowledge". More recently, this court addressed the admissibility of expert psychiatric evidence in criminal cases in *R. v. Abbey*, supra. At p. 42 of the unanimous judgment, Dickson J. (as he then was) stated the rule as follows:

> With respect to matters calling for special knowledge, an expert in the field may draw inferences and state his opinion. An expert's function is precisely this: to provide the judge and jury with a ready-made inference which the judge and jury, due to the technical nature of the facts, are unable to formulate. "An expert's opinion is admissible to furnish the Court with scientific information which is likely to be outside the experience and knowledge of a judge or jury. If on the proven facts a judge or jury can form their own conclusions without help, then the opinion of the expert is unnecessary" (*Turner* (1974), 60 Crim. App. R. 80, at p. 83, *per* Lawton L.J.).

See also *R. v. Béland*, [1987] 2 S.C.R. 398 at 415, 60 C.R. (3d) 1, 36 C.C.C. (3d) 481, 43 D.L.R. (4th) 641, 9 Q.A.C. 293, 79 N.R. 263, in which McIntyre J. speaks of an expert witness possessing "special knowledge and experience going beyond that of the trier of fact".

32 Where expert evidence is tendered in such fields as engineering or pathology, the paucity of the layperson's knowledge is uncontentious. The longstanding recognition that psychiatric or psychological testimony also falls within the realm of expert evidence is predicated on the realization that in some circumstances the average person may not have sufficient knowledge of or experience with human behaviour to draw an appropriate inference from the facts before him or her. An example may be found in *R. v. Lyons*, [1987] 2 S.C.R. 309, 61 C.R. (3d) 1, (sub nom. *L. v. R.)* 37 C.C.C. (3d) 1, 44 D.L.R. (4th) 193, 32 C.R.R. 41, 82 N.S.R. (2d) 271, 207 A.P.R. 271, 80 N.R. 161, in which this court approved the use of psychiatric testimony in dangerous offender applications. At p. 366, La Forest J. remarks that "psychiatric evidence is clearly relevant to the issue whether a person is likely to behave in a certain way and, indeed, is probably relatively superior in this regard to the evidence of other clinicians and lay persons".

33 The need for expert evidence in these areas can, however, be obfuscated by the belief that judges and juries are thoroughly knowledgeable about "human nature" and that no more is needed. They are, so to speak, their own experts on human behaviour. This, in effect, was the primary submission of the Crown to this court.

34 The bare facts of this case, which I think are amply supported by the evidence, are that the appellant was repeatedly abused by the deceased but did not leave him (although she twice pointed a gun at him), and ultimately shot him in the back of the head as he was leaving her room. The Crown submits that these facts disclose all the information a jury needs in order to decide whether or not the appellant acted in self-defence. I have no hesitation in rejecting the Crown's submission.

35 Expert evidence on the psychological effect of battering on wives and common law partners must, it seems to me, be both relevant and necessary in the context of the present case. How can the mental state of the appellant be appreciated without it? The average member of the public (or of the jury) can be forgiven for asking: Why would a woman put up with this kind of treatment? Why should she continue to live with such a man? How could she love a partner who beat her to the point of requiring hospitalization? We would expect the woman to pack her bags and go. Where is her self-respect? Why does she not cut loose and make a new life for herself? Such is the reaction of the average person confronted with the so-called "battered wife syndrome". We need help to understand it and help is available from trained professionals.

36 The gravity, indeed, the tragedy, of domestic violence can hardly be overstated. Greater media attention to this phenomenon in recent years has revealed both its prevalence and its horrific impact on women from all walks of life. Far from protecting women from it, the law historically sanctioned the abuse of women within marriage as an aspect of the husband's ownership of his wife and his "right" to chastise her. One need only recall the centuries old law that a man is entitled to beat his wife with a stick "no thicker than his thumb".

37 Laws do not spring out of a social vacuum. The notion that a man has a right to "discipline" his wife is deeply rooted in the history of our society. The woman's duty was to serve her husband and to stay in the marriage at all costs "till death do us part" and to accept as her due any "punishment" that was meted out for failing to please her husband. One consequence of this attitude was that "wife battering" was rarely spoken of, rarely reported, rarely prosecuted, and even more rarely punished. Long after society abandoned its formal approval of spousal abuse, tolerance of it continued and continues in some circles to this day.

38 Fortunately, there has been a growing awareness in recent years that no man has a right to abuse any woman under any circumstances. Legislative initiatives designed to educate police, judicial officers and the public, as well as more aggressive investigation and charging policies, all signal a concerted effort by the criminal justice system to take spouse abuse seriously. However, a woman who comes before a judge or jury with the claim that she has been battered and suggests that this may be a relevant factor in evaluating her subsequent actions still faces the prospect of being condemned by popular mythology about domestic violence. Either she was not as badly beaten as she claims or she would have left the man long ago. Or, if she was battered that severely, she must have stayed out of some masochistic enjoyment of it.

39 Expert testimony on the psychological effects of battering have been admitted in American courts in recent years. In *New Jersey v. Kelly*, 478 A. 2d 364 at 378 (1984), the New Jersey Supreme Court commended the value of expert testimony in these terms:

> It is aimed at an area where the purported common knowledge of the jury may be very much mistaken, an area where jurors' logic, drawn from their own experience, may lead to a wholly incorrect conclusion, an area where expert knowledge would enable the jurors to disregard their prior conclusions as being common myths rather than common knowledge.

40 The court concludes at p. 379 that the battering relationship is "subject to a large group of myths and stereotypes". As such, it is "beyond the ken of the average juror and thus is suitable for explanation through expert testimony". I share that view.

(ii) The Relevance of Expert Testimony to the Elements of Self-Defence

41 In my view, there are two elements of the defence under s. 34(2) of the Code which merit scrutiny for present purposes. The first is the temporal connection in s. 34(2)(*a*) between the apprehension of death or grievous bodily harm and the act allegedly taken in self-defence. Was the appellant "under reasonable apprehension of death or grievous bodily harm" from Rust as he was walking out of the room? The second is the assessment in s. 34(2)(*b*) of the magnitude of the force used by the accused. Was the accused's belief that she could not "otherwise preserve herself from death or grievous bodily harm" except by shooting the deceased based "on reasonable grounds"?

42 The feature common to both s. 34(2)(*a*) and s. 34(2)(*b*) is the imposition of an objective standard of reasonableness on the apprehension of death and the need to repel the assault with deadly force. In *Reilly v. R.*, [1984] 2 S.C.R. 396, 42 C.R. (3d) 154, 15 C.C.C. (3d) 1, 13 D.L.R. (4th) 161, 6 O.A.C. 88, 55 N.R. 274, this court considered the interaction of the objective and subjective components of s. 34(2) at p. 404:

> Subsection (2) of s. 34 places in issue the accused's state of mind at the time he caused death. The subsection can only afford protection to the accused if he apprehended death or grievous bodily harm from the assault he was repelling and if he believed he could not preserve himself from death or grievous bodily harm otherwise than by the force he used. Nonetheless, his apprehension must be a *reasonable* one and his belief must *be based upon reasonable and probable grounds*. The subsection requires that the jury consider, and be guided by, what they decide on the evidence was the

> accused's appreciation of the situation and his belief as to the reaction it required, so long as there exists an objectively verifiable basis for his perception.
>
> Since s. 34(2) places in issue the accused's perception of the attack upon him and the response required to meet it, the accused may still be found to have acted in self-defence even if he was mistaken in his perception. Reasonable and probable grounds must still exist for this mistaken perception in the sense that the mistake must have been one which an ordinary man using ordinary care could have made in the same circumstances.

43 If it strains credulity to imagine what the "ordinary man" would do in the position of a battered spouse, it is probably because men do not typically find themselves in that situation. Some women do, however. The definition of what is reasonable must be adapted to circumstances which are, by and large, foreign to the world inhabited by the hypothetical "reasonable man".

44 I find the case of *Washington v. Wanrow*, 559 P. 2d 548, 88 Wash. 2d 221 (1977), helpful in illustrating how the factor of gender can be germane to the assessment of what is reasonable. In *Wanrow* the Washington Supreme Court addressed the standard by which a jury ought to assess the reasonableness of the female appellant's use of a gun against an unarmed intruder. The court pointed out that the appellant had reason to believe that the intruder had molested her daughter in the past and was coming back for her son. The appellant was a 5 foot 4 inch woman with a broken leg. The assailant was 6 feet 2 inches and intoxicated. The court first observed, at p. 558, that "in our society women suffer from a conspicuous lack of access to training in and the means of developing those skills necessary to effectively repel a male assailant without resorting to the use of deadly weapons". Later it found that the trial judge erred in his instructions to the jury by creating the impression that the objective standard of reasonableness to be applied to the accused was that of an altercation between two men. At p. 559, the court makes the following remarks which I find apposite to the case before us:

> The respondent was entitled to have the jury consider her actions in the light of her own perceptions of the situation, including those perceptions which were the product of our nation's "long and unfortunate history of sex discrimination"... Until such time as the effects of that history are eradicated, care must be taken to assure that our self-defense instructions afford women the right to have their conduct judged in light of the individual physical handicaps which are the product of sex discrimination. To fail to do so is to deny the right of the individual woman involved to trial by the same rules which are applicable to male defendants.

I turn now to a consideration of the specific components of self-defence under s. 34(2) of the Criminal Code.

A. Reasonable apprehension of death

45 Section 34(2)(*a*) requires that an accused who intentionally causes death or grievous bodily harm in repelling an assault is justified if he or she does so "under reasonable apprehension of death or grievous bodily harm". In the present case, the assault precipitating the appellant's alleged defensive act was Rust's threat to kill her when everyone else had gone.

46 It will be observed that subsection 34(2)(*a*) does not actually stipulate that the accused apprehend *imminent* danger when he or she acts. Case law has, however, read that requirement into the defence: see *Reilly v. R.*, supra; *R. v. Baxter* (1975), 33 C.R.N.S. 22, 27 C.C.C. (2d) 96 (Ont. C.A.); *R. v. Bogue* (1976), 13 O.R. (2d) 272, 30 C.C.C. (2d) 403, 70 D.L.R. (3d) 603 (C.A.). The sense in which "imminent" is used conjures up the image of "an uplifted knife" or a pointed gun. The rationale for the imminence rule seems obvious. The law of self-defence is designed to ensure that the use of defensive force is really necessary. It justifies the act because the defender reasonably believed that he or she had no alternative but to take the attacker's life. If there is a significant time interval between the original unlawful assault and the accused's response, one tends to suspect that the accused was motivated by revenge rather than self-defence. In the paradigmatic case of a one-time bar room brawl between two men of equal size and strength, this interference makes sense. How can one feel endangered to the point of firing a gun at an unarmed man who utters a death threat, then turns his back and walks out of the room? One cannot be certain of the gravity of the threat or his capacity to carry it out. Besides, one can always take the opportunity to flee or to call the police. If he comes back and raises his fist, one can respond in kind if need be. These are the tacit assumptions that underlie the imminence rule.

47 All of these assumptions were brought to bear on the respondent in *R. v. Whynot* (1983), 37 C.R. (3d) 198, 9 C.C.C. (3d) 449, 61 N.S.R. (2d) 33, 133 A.P.R. 33 (C.A.) . The respondent Jane Stafford shot her sleeping common law husband as he lay passed out in his truck. The evidence at trial indicated that the deceased "dominated the household and exerted his authority by striking and slapping the various members and from time to time administering beatings to Jane Stafford and the others" (at p. 452). The respondent testified that the deceased threatened to kill all of the members of her family, one by one, if she tried to leave him. On the night in question he threatened to kill her son. After he passed out, the respondent got one of the many shotguns kept by her husband and shot him. The Nova Scotia Court of Appeal held that the trial judge erred in leaving s. 37 (preventing assault against oneself or anyone under one's protection) with the jury. The court stated at p. 464:

> I do not believe that the trial judge was justified in placing s. 37 of the *Code* before the jury any more than he would have been justified in giving them s. 34. Under s. 34 the assault must have been underway and unprovoked, and under s. 37 the assault must be such that it is necessary to defend the person assaulted by the use of force. No more force may be used than necessary to prevent the assault or the repetition of it. In my opinion, no person has the right in anticipation of an assault that may or may not happen, to apply force to prevent the imaginary assault.

48 The implication of the court's reasoning is that it is inherently unreasonable to apprehend death or grievous bodily harm unless and until the physical assault is actually in progress, at which point the victim can presumably gauge the requisite amount of force needed to repel the attack and act accordingly. In my view, expert testimony can cast doubt on these assumptions as they are applied in the context of a battered wife's efforts to repel an assault.

49 The situation of the appellant was not unlike that of Jane Stafford in the sense that she too was routinely beaten over the course of her relationship with the man she ultimately killed. According to the testimony of Dr. Shane, these assaults were not entirely random in their occurrence. The following exchange during direct examination elicited a discernible pattern to the abuse:

> Q. How did they react during the tension that preceded the beatings? How would her ...
>
> A. Well, typically before a beating there's usually some verbal interchange and there are threats and typically she would feel, you know, very threatened by him and for various reasons.
>
> He didn't like the way she dressed or if she — didn't like the way she handled money or she wasn't paying him enough attention or she was looking at other men, all sorts of reasons, and she would be defending herself, trying to placate him, which was typical, saying, you know, trying to calm him down, trying to soothe him, you know, so nothing violent would happen and sometimes it would work. You know, as people's experiences indicated or as people who write about this process, if you will, have indicated.
>
> But often, as reflected by what she has told me, and the information I have from other people, such as her mother, often it would fail and she would end up being beaten and assaulted.
>
> Q. And that would be followed by this forgiveness state?
>
> A. It typically would be followed by, you know, this make-up period.

Earlier in his testimony Dr. Shane explained how this "make-up" period would be characterized by contrite and affectionate behaviour by Rust:

> In this particular case she documented many times, after he would beat her, he would send her flowers and he would beg her for forgiveness and he would love her and then the relationship would come back to a sense of equilibrium, if you will ... But then, because of the nature of the personalities, it would occur again.

50 The cycle described by Dr. Shane conforms to the Walker Cycle Theory of Violence named for clinical psychologist, Dr. Lenore Walker, the pioneer researcher in the field of the battered wife syndrome. Dr. Shane acknowledged his debt to Dr. Walker in the course of establishing his credentials as an expert at trial. Dr. Walker first describes the cycle in the book The

Battered Woman (1979). In her 1984 book, The Battered Woman Syndrome, Dr. Walker reports the results of a study involving 400 battered women. Her research was designed to test empirically the theories expounded in her earlier book. At pp. 95-96 of The Battered Woman Syndrome she summarizes the Cycle Theory as follows:

> A second major theory that was tested in this project is the Walker Cycle Theory of Violence (Walker, 1979). This tension reduction theory states that there are three distinct phases associated in a recurring battering cycle: (1) tension building, (2) the acute battering incident, and (3) loving contrition. During the first phrase, there is a gradual escalation of tension displayed by discrete acts causing increased friction such as name-calling, other mean intentional behaviors, and/or physical abuse. The batterer expresses dissatisfaction and hostility but not in an extreme or maximally explosive form. The woman attempts to placate the batterer, doing what she thinks might please him, calm him down, or at least, what will not further aggravate him. She tries not to respond to his hostile actions and uses general anger reduction techniques. Often she succeeds for a little while which reinforces her unrealistic belief that she can control this man ...
>
> The tension continues to escalate and eventually she is unable to continue controlling his angry response pattern. "Exhausted from the constant stress, she usually withdraws from the batterer, fearing she will inadvertently set off an explosion. He begins to move more oppressively toward her as he observes her withdrawal. ... Tension between the two becomes unbearable" (Walker, 1979, p. 59). The second phase, the acute battering incident, becomes inevitable without intervention. Sometimes, she precipitates the inevitable explosion so as to control where and when it occurs, allowing her to take better precautions to minimize her injuries and pain.
>
> "Phase two is characterized by the uncontrollable discharge of the tensions that have built up during phase one" (p. 59). The batterer typically unleashes a barrage of verbal and physical aggression that can leave the woman severely shaken and injured. In fact, when injuries do occur it usually happens during this second phase. It is also the time police become involved, if they are called at all. The acute battering phase is concluded when the batterer stops, usually bringing with its cessation a sharp physiological reduction in tension. This in itself is naturally reinforcing. Violence often succeeds because it does work.
>
> In phase three which follows, the batterer may apologize profusely, try to assist his victim, show kindness and remorse, and shower her with gifts and/or promises. The batterer himself may believe at this point that he will never allow himself to be violent again. The woman wants to believe the batterer and, early in the relationship at least, may renew her hope in his ability to change. This third phase provides the positive reinforcement for remaining in the relationship, for the woman. In fact, our results showed that phase three could also be characterized by an absence of tension or violence, and no observable loving-contrition behaviour, and still be reinforcing for the woman.

51 Dr. Walker defines a battered woman as a woman who has gone through the battering cycle at least twice. As she explains in her introduction to The Battered Woman at p. xv, "Any woman may find herself in an abusive relationship with a man once. If it occurs a second time, and she remains in the situation, she is defined as a battered woman".

52 Given the relational context in which the violence occurs, the mental state of an accused at the critical moment she pulls the trigger cannot be understood except in terms of the cumulative effect of months or years of brutality. As Dr. Shane explained in his testimony, the deterioration of the relationship between the appellant and Rust in the period immediately preceding the killing led to feelings of escalating terror on the part of the appellant:

> But their relationship some weeks to months before was definitely escalating in terms of tension and in terms of the discordant quality about it. They were sleeping in separate bedrooms. Their intimate relationship was lacking and things were building and building and to a point, I think, where it built to that particular point where she couldn't — she felt so threatened and so overwhelmed that she had to — that she reacted in a violent way because of her fear of survival and also because, I think because of her, I guess, final sense that she was — that she had to defend herself and her own sense of violence towards this man who had really desecrated her and damaged her for so long.

53 Another aspect of the cyclical nature of the abuse is that it begets a degree of predictability to the violence that is absent in an isolated violent encounter between two strangers. This also means that it may in fact be possible for a battered spouse to accurately predict the onset of violence before the first blow is struck, even if an outsider to the relationship cannot. Indeed, it has been suggested that a battered woman's knowledge of her partner's violence is so heightened that she is able to anticipate the nature and extent (though not the onset) of the violence by his conduct beforehand. In her article "Potential Uses for Expert Testimony: Ideas Toward the Representation of Battered Women Who Kill" (1986), 9 Women's Rights Law Reporter 227, psychologist Julie Blackman describes this characteristic at p. 229:

> Repeated instances of violence enable battered women to develop a continuum along which they can "rate" the tolerability or survivability of episodes of their partner's violence. Thus, signs of unusual violence are detected. For battered women, this response to the ongoing violence of their situations is a survival skill. Research shows that battered women who kill experience remarkably severe and frequent violence relative to battered women who do not kill. They know what sorts of danger are familiar and which are novel. They have had myriad opportunities to develop and hone their perceptions of their partner's violence. And, importantly, they can say what made the final episode of violence different from the others: they can name the features of the last battering that enabled them to know that this episode would result in life-threatening action by the abuser.

At p. 236 Dr. Blackman relates the role of expert testimony in cases where a battered woman kills her batterer while he is sleeping (or not actively posing a threat to her) and pleads self-defence:

> Perhaps the single most important idea conveyed by expert testimony in such a case pertains to the notion that a battered woman, because of her extensive experience with her abuser's violence, can detect changes or signs of novelty in the pattern of normal violence that connote increased danger. Support for this assertion must come from the woman herself, in her spontaneous, self-initiated description of the events that precede her action against the abuser. Only then can testimony from an expert offer scientific support for the idea that such a danger detection process can occur and can be expected to be as accurate as the "reasonable man" standard would imply.

54 Of course, as Dr. Blackman points out, it is up to the jury to decide whether the distinction drawn between "typical" violence and the particular events the accused perceived as "life threatening" is compelling. According to the appellant's statement to police, Rust actually handed her a shotgun and warned her that if she did not kill him, he would kill her. I note in passing a remarkable observation made by Dr. Walker in her 1984 study, The Battered Woman Syndrome. Writing about 50 battered women she interviewed who had killed their partners, she comments at p. 40:

> Most of the time the women killed the men with a gun; usually one of several that belonged to him. *Many of the men actually dared or demanded the woman use the gun on him first, or else he said he'd kill her with it*. [emphasis added]

55 Where evidence exists that an accused is in a battering relationship, expert testimony can assist the jury in determining whether the accused had a "reasonable" apprehension of death when she acted by explaining the heightened sensitivity of a battered woman to her partner's acts. Without such testimony I am skeptical that the average fact-finder would be capable of appreciating why her subjective fear may have been reasonable in the context of the relationship. After all, the hypothetical "reasonable man" observing only the final incident may have been unlikely to recognize the batter's threat as potentially lethal. Using the case at bar as an example, the "reasonable man" might have thought, as the majority of the Court of Appeal seemed to, that it was unlikely that Rust would make good on his threat to kill the appellant that night because they had guests staying overnight.

56 The issue is not, however, what an outsider would have reasonably perceived but what the accused reasonably perceived, given her situation and her experience.

57 Even accepting that a battered woman may be uniquely sensitized to danger from her batterer, it may yet be contended that the law ought to require her to wait until the knife is uplifted, the gun pointed or the fist clenched before her apprehension is deemed reasonable. This would allegedly reduce the risk that the woman is mistaken in her fear, although the law does not

require her fear to be correct, only reasonable. In response to this contention, I need only point to the observation made by Huband J.A. that the evidence showed that when the appellant and Rust physically fought the appellant "invariably got the worst of it". I do not think it is an unwarranted generalization to say that due to their size, strength, socialization and lack of training, women are typically no match for men in hand-to-hand combat. The requirement imposed in *Whynot* that a battered woman wait until the physical assault is "underway" before her apprehensions can be validated in law would, in the words of an American court, be tantamount to sentencing her to "murder by installment": *New Mexico v. Gallegos*, 719 P. 2d 1268 at 1271, 104 N.M. 247 (C.A., 1986). I share the view expressed by M.J. Willoughby in "Rendering Each Woman Her Due: Can a Battered Woman Claim Self-Defense When She Kills Her Sleeping Batterer" (1989), 38 Kan. L. Rev. 169, at p. 184, that "society gains nothing, except perhaps the additional risk that the battered woman will herself be killed, because she must wait until her abusive husband instigates another battering episode before she can justifiably act".

B. Lack of alternatives to self-help

58 Subsection 34(2) requires an accused who pleads self-defence to believe "on reasonable grounds" that it is not possible to otherwise preserve him or herself from death or grievous bodily harm. The obvious question is if the violence was so intolerable, why did the appellant not leave her abuser long ago? This question does not really go to whether she had an alternative to killing the deceased at the critical moment. Rather, it plays on the popular myth already referred to that a woman who says she was battered yet stayed with her batterer was either not as badly beaten as she claimed or else she liked it. Nevertheless, to the extent that her failure to leave the abusive relationship earlier may be used in support of the proposition that she was free to leave at the final moment, expert testimony can provide useful insights. Dr. Shane attempted to explain in his testimony how and why, in the case at bar, the appellant remained with Rust:

> She had stayed in this relationship, I think, because of the strange, almost unbelievable, but yet it happens, relationship that sometimes develops between people who develop this very disturbed, I think, very disturbed quality of a relationship. Trying to understand it, I think, isn't always easy and there's been a lot written about it recently, in the recent years, in psychiatric literature. But basically it involves two people who are involved in what appears to be an attachment which may have sexual or romantic or affectionate overtones.
>
> And the one individual, and it's usually the women in our society, but there have been occasions where it's been reversed, but what happens is the spouse who becomes battered, if you will, stays in the relationship probably because of a number of reasons.
>
> One is that the spouse gets beaten so badly — so badly — that he or she loses the motivation to react and becomes helpless and becomes powerless. And it's also been shown sometimes, you know, in — not that you can compare animals to human beings, but in laboratories, what you do if you shock an animal, after a while it can't respond to a threat of its life. It becomes just helpless and lies there in an amotivational state, if you will, where it feels there's no power and there's no energy to do anything.
>
> So in a sense it happens in human beings as well. It's almost like a concentration camp, if you will. You get paralyzed with fear.
>
> The other thing that happens often in these types of relationships with human beings is that the person who beats or assaults, who batters, often tries — he makes up and begs for forgiveness. And this individual, who basically has a very disturbed or damaged self-esteem, all of a sudden feels that he or she — we'll use women in this case because it's so much more common — the spouse feels that she again can do the spouse a favour and it can make her feel needed and boost her self-esteem for a while and make her feel worthwhile and the spouse says he'll forgive her and whatnot.

59 Apparently, another manifestation of this victimization is a reluctance to disclose to others the fact or extent of the beatings. For example, the hospital records indicate that on each occasion the appellant attended the emergency department to be treated for various injuries she explained the cause of those injuries as accidental. Both in its address to the jury and in its written submissions before this court the Crown insisted that the appellant's injuries were as consistent with her explanations as with

being battered and, therefore, in the words of Crown counsel at trial, "the myth is, in this particular case, that Miss Lavallee was a battered spouse". In his testimony Dr. Shane testified that the appellant admitted to him that she lied to hospital staff and others about the cause of her injuries. In Dr. Shane's opinion this was consistent with her overall feeling of being trapped and helpless:

> ... she would never say that she'd been abused by the man with whom she was living and that usually happened because of this whole process. He would beg her. I mean she would tell me that on occasions he would beat her and then the police would be called by, I think, on one occasion a neighbour and he got down on his knees and he begged forgiveness and he loved her and he felt so terrible about it. And so this would be a typical scenario. Whenever she would go to the hospital, that he would attempt to, I think, attempt to have her forgive him and he would love her so much more.
>
> Again she would feel so needed and this would start the whole cycle over again.
>
> And he would also blackmail her on occasions. She had an abortion when she was in the early part of their relationship and he would blackmail her saying, "You know, I will tell your parents that you were a baby killer", et cetera.
>
> But basically the manner in which, I think, she would be prevented from telling the doctors or other people about the beatings was related to the fact that this whole process would repeat itself. He would want forgiveness and tell her he would love her and it would never happen again and she would feel grateful. She would feel a little loved. It would help her self-esteem again and she would feel a little safer for a while too. It would allow her to have a sense, a window of security for a period because she felt so trapped in this relationship.

60 The account given by Dr. Shane comports with that documented in the literature. Reference is often made to it as a condition of "learned helplessness", a phrase coined by Dr. Charles Seligman, the psychologist who first developed the theory by experimenting on animals in the manner described by Dr. Shane in his testimony. A related theory used to explain the failure of women to leave battering relationships is described by psychologist and lawyer Charles Patrick Ewing in his book, Battered Women Who Kill (1987). Ewing describes a phenomenon labelled "traumatic bonding" that has been observed between hostages and captors, battered children and their parents, concentration camp prisoners and guards, and batterers and their spouses. According to the research cited by Ewing, there are two features common to the social structure in each of these apparently diverse relationships. At pp. 19-20, he states:

> The first of these common features is an imbalance of power "wherein the maltreated person perceives himself or herself to be subjugated or dominated by the other". The less powerful person in the relationship — whether battered woman, hostage, abused child, cult follower, or prisoner — becomes extremely dependent upon, and may even come to identify with, the more powerful person. In many cases, the result of such dependency and identification is that the less powerful, subjugated persons become "more negative in their self-appraisal, more incapable of fending for themselves, and thus more in need of the high power person." As this "cycle of dependency and lowered self-esteem" is repeated over time, the less powerful person develops a "strong affective bond" to the more powerful person in the abusive relationship.
>
> The second feature common to the relationships between battered woman and batterer, hostage and captor, battered child and abusive parent, cult follower and leader, and prisoner and guard is the periodic nature of the abuse. In each relationship, the less powerful person is subjected to intermittent periods of abuse, which alternate with periods during which the more powerful, abusive person treats the less powerful person in a "more normal and acceptable fashion." ...
>
> Given the clear power differential between battered women and their batterers and the intermittent nature of physical and psychological abuse common to battering relationships, it seems fair to conclude ... that many battered women are psychologically unable to leave their batterers because they have developed a traumatic bond with them. [citations omitted]

This strong "affective bond" may be helpful in explaining not only why some battered women remain with their abusers but why they even profess to love them. Of course, as Dr. Ewing adds, environmental factors may also impair the woman's ability to leave — lack of job skills, the presence of children to care for, fear of retaliation by the man, etc., may each have a role to play in some cases.

61 This is not to say that in the course of a battering relationship a woman may never attempt to leave her partner or try to defend herself from assault. In The Battered Woman Syndrome Dr. Walker notes at p. 30 that women may sometimes "react to men's violence against them by striking back, but their actions are generally ineffective at hurting or stopping the men. They may be effective in controlling the level of the man's violence against them". In the case at bar Dr. Shane was aware that the appellant had pointed a gun at Rust in the past. In direct examination he stated:

> And what would also happen from time to time is that there would be moments where she would attempt to hit back to defend herself or she may take a weapon to defend herself in order to prevent herself from being harmed or even, when the underlying rage may accumulate, if you will, the feeling that she had to do something to him in order to survive, in order to defend herself.

62 The same psychological factors that account for a woman's inability to leave a battering relationship may also help to explain why she did not attempt to escape at the moment she perceived her life to be in danger. The following extract from Dr. Shane's testimony on direct examination elucidates this point:

> Q. Now, we understand from the evidence that on this night she went — I think you've already described it in your evidence — and hid in the closet?
>
> A. Yes.
>
> Q. Can you tell the jury why she, for instance, would stay in that house if she had this fear? Why wouldn't she so [sic] someplace else? Why would she have to hide in the closet in the same house?
>
> A. Well, I think this is a reflection of what I've been talking about, this ongoing psychological process, her own psychology and the relationship, that she felt trapped. There was no out for her, this learned helplessness, if you will, the fact that she felt paralyzed, she felt tyrannized. She felt, although there were obviously no steel fences around, keeping her in, there were steel fences in her mind which created for her an incredible barrier psychologically that prevented her from moving out. Although she had attempted on occasion, she came back in a magnetic sort of a way. And she felt also that she couldn't expect anything more. Not only this learned helplessness about being beaten, beaten, where her motivation is taken away, but her whole sense of herself. She felt this victim mentality, this concentration camp mentality if you will, where she could not see herself be in any other situation except being tyrannized, punished and crucified physically and psychologically.

63 I emphasize at this juncture that it is not for the jury to pass judgment on the fact that an accused battered woman stayed in the relationship. Still less is it entitled to conclude that she forfeited her right to self-defence for having done so. I would also point out that traditional self-defence doctrine does not require a person to retreat from her home instead of defending herself: *R. v. Antley*, [1964] 1 O.R. 545, 42 C.R. 384, [1964] 2 C.C.C. 142 (C.A.). A man's home may be his castle but it is also the woman's home even if it seems to her more like a prison in the circumstances.

64 If, after hearing the evidence (including the expert testimony), the jury is satisfied that the accused had a reasonable apprehension of death or grievous bodily harm and felt incapable of escape, it must ask itself what the "reasonable person" would do in such a situation. The situation of the battered woman as described by Dr. Shane strikes me as somewhat analogous to that of a hostage. If the captor tells her that he will kill her in three days time, is it potentially reasonable for her to seize an opportunity presented on the first day to kill the captor or must she wait until he makes the attempt on the third day? I think the question the jury must ask itself is whether, given the history, circumstances and perceptions of the appellant, her belief that she could not preserve herself from being killed by Rust that night except by killing him first was reasonable. To the extent that expert evidence can assist the jury in making that determination, I would find such testimony to be both relevant and necessary.

65 In light of the foregoing discussion, I would summarize as follows the principles upon which expert testimony is properly admitted in cases such as this:

66 1. Expert testimony is admissible to assist the fact-finder in drawing inferences in areas where the expert has relevant knowledge or experience beyond that of the layperson.

67 2. It is difficult for the layperson to comprehend the battered wife syndrome. It is commonly thought that battered women are not really beaten as badly as they claim, otherwise they would have left the relationship. Alternatively, some believe that women enjoy being beaten, that they have a masochist strain in them. Each of these stereotypes may adversely affect consideration of a battered woman's claim to have acted in self-defence in killing her mate.

68 3. Expert evidence can assist the jury in dispelling these myths.

69 4. Expert testimony relating to the ability of an accused to perceive danger from her mate may go to the issue of whether she "reasonably apprehended" death or grievous bodily harm on a particular occasion.

70 5. Expert testimony pertaining to why an accused remained in the battering relationship may be relevant in assessing the nature and extent of the alleged abuse.

71 6. By providing an explanation as to why an accused did not flee when she perceived her life to be in danger, expert testimony may also assist the jury in assessing the reasonableness of her belief that killing her batterer was the only way to save her own life.

72 Quite apart from Dr. Shane's testimony, there was ample evidence on which the trial judge could conclude that the appellant was battered repeatedly and brutally by Kevin Rust over the course of their relationship. The fact that she may have exhibited aggressive behaviour on occasion or tried (unsuccessfully) to leave does not detract from a finding of systematic and relentless abuse. In my view, the trial judge did not err in admitting Dr. Shane's expert testimony in order to assist the jury in determining whether the appellant had a reasonable apprehension of death or grievous bodily harm and believed on reasonable grounds that she had no alternative but to shoot Kevin Rust on the night in question.

73 Obviously the fact that the appellant was a battered woman does not entitle her to an acquittal. Battered women may well kill their partners other than in self-defence. The focus is not on who the woman is, but on what she did. In "The Meaning of Equality for Battered Women Who Kill Men in Self-Defense" (1985), 8 Harvard Women's L.J. 121, at p. 159, Phyllis Crocker makes the point succinctly:

> The issue in a self-defence trial is not whether the defendant is a battered woman, but whether she justifiably killed her husband. The defendant introduces testimony to offer the jury an explanation of reasonableness that is an alternative to the prosecution's stereotypic explanations. It is not intended to earn her the status of a battered woman, as if that would make her not guilty.

The trial judge, to his credit, articulated the same principle when introducing Dr. Shane's testimony in the course of his instructions to the jury. After referring to "the so-called battered spouse syndrome", he cautions:

> Let me say at the outset that I think it is better that we try not to attach labels to this. It doesn't matter what we call it. What is important is the evidence itself and how it impacts on the critical areas of the intent of the accused and the issue of self-defence.

74 Ultimately, it is up to the jury to decide whether, *in fact*, the accused's perceptions and actions were reasonable. Expert evidence does not and cannot usurp that function of the jury. The jury is not compelled to accept the opinions proffered by the expert about the effects of batter ing on the mental state of victims generally or on the mental state of the accused in particular. But fairness and the integrity of the trial process demand that the jury have the opportunity to hear them.

(iii) Adequacy of Trial Judge's Charge to the Jury

75 The second issue raised in this case is the adequacy of the trial judge's charge to the jury with respect to the expert evidence furnished by Dr. Shane. It appears that Dr. Shane relied on various sources in formulating his opinion — his series of interviews with the appellant, an interview with her mother, a police report of the incident (including information regarding her statement to the police), the hospital records documenting eight of her visits to emergency departments between 1983 and 1986. Neither the appellant nor her mother testified at trial. The contents of their statements to Dr. Shane were hearsay.

76 In *Abbey*, supra, this court addressed the bases upon which expert evidence that relies on hearsay is admissible. The accused in that case was charged with importing cocaine and his defence was insanity. The accused did not testify. A psychiatrist gave his opinion as to the sanity of the accused and, in the course of giving the basis for his conclusions, referred to incidents and hallucinations related to him by the accused for which there was no admissible evidence. The Crown submitted before this court that the trial judge "accepted and treated as factual much of this hearsay evidence" related to the psychiatrist. Dickson J. found that the point was "well taken". This was the preliminary finding on which the case was based and I think it is fair to say that the trial judge in the case at bar clearly did not make the same mistake as did the trial judge in*Abbey*. At pp. 44-46 of his judgment, Dickson J. articulated the hazards inherent in admitting expert testimony based on hearsay:

> The danger, of course, in admitting such testimony is the ever present possibility, here exemplified, that the judge or jury, without more, will accept that evidence as going to the truth of the facts stated in it. The danger is real and lies at the heart of this case. Once such testimony is admitted, a careful charge to the jury by the judge or direction to himself is essential. The problem, however, as pointed out by Fauteux J. in *Wilband* resides not in the admissibility of the testimony but rather the weight to be accorded to the opinion. Although admissible in the context of his opinion, to the extent that it is second-hand his testimony is not proof of the facts stated ... It was appropriate for the doctors to state the basis for their opinions and in the course of doing so, to refer to what they were told not only by Abbey but by others, but it was error for the judge to accept as having been proved the facts upon which the doctors had relied in forming their opinions. While it is not questioned that medical experts are entitled to take into consideration all possible information in forming their opinions, this in no way removes from the party tendering such evidence the obligation of establishing, through properly admissible evidence, the factual basis on which such opinions are based. Before any weight can be given to an expert's opinion, the facts upon which the opinion is based must be found to exist.

77 For present purposes I think the ratio of *Abbey* can be distilled into the following propositions:

78 1. An expert opinion is admissible if relevant, even if it is based on secondhand evidence.

79 2. This secondhand evidence (hearsay) is admissible to show the information on which the expert opinion is based, not as evidence going to the existence of the facts on which the opinion is based.

80 3. Where the psychiatric evidence is composed of hearsay evidence, the problem is the weight to be attributed to the opinion.

81 4. Before any weight can be given to an expert's opinion, the facts upon which the opinion is based must be found to exist.

82 In the case at bar the trial judge was clearly of the view that Dr. Shane's evidence was relevant. He would not have admitted it otherwise. As I stated above, in light of the evidence of the battering relationship which subsisted between the appellant and the deceased, the trial judge was correct in so doing.

83 With respect to the second point, the trial judge warned the jury generally that they could not "decide the case on the basis of things the witnesses did not see or hear", which would seem to include those matters which Dr. Shane neither saw nor heard. He then gave the marijuana smoking and the confirmatory evidence of the appellant's mother as two sources of information which were not evidence in the case. In my opinion, it would have been preferable if the trial judge had described the interview with the appellant as a source of inadmissible evidence, the marijuana smoking being an example of inadmissible evidence from that source. Nevertheless, I think the trial judge makes his meaning clear to the jury in the subsequent passage:

> In terms of the matters considered by Dr. Shane he is left, therefore, with the deceased's [sic — he means accused's] statement, some supplementary information from the police report and his interpretation of the hospital records.

The trial judge thus eliminates the interview with the appellant and his conversation with her mother as sources of admissible evidence. Elsewhere he reinforces the rule that the jury can only consider the admissible evidence. He refers to the hospital visits made by the appellant:

> Another evidentiary caution is necessary here. Mr. Brodsky, in his remarks, said, as he did in calling some of the evidence respecting hospital attendances that this is only a representative sample. He ought not to have said that. It is not evidence and must be completely disregarded by you. The only evidence before you are the eight attendances that you heard about and nothing else — eight attendances and nothing else.

84 The trial judge's instructions regarding the weight attributable to Dr. Shane's opinion also emphasize his distinction between admissible evidence and hearsay:

> *If the premises upon which the information is substantially based has not been proven in evidence, it is up to you to conclude that it is not safe to attach a great deal of weight to the opinion. An opinion of an expert depends, to a large extent, on the validity of the facts assumed by the evidence of the expert*.
>
> If there are some errors and the factual assumptions aren't too important to the eventual opinion, that's one thing. *If there are errors or matters not in evidence and those matters are substantial, in you [sic] view, in terms of the impact on the expert's opinion, then you will want to look at the value and weight of that expert's opinion very carefully*. It depends on how important you think the matters were that Dr. Shane relied on that are not in evidence. [emphasis added]

85 I agree with Huband J.A. that these instructions with respect to weight conform to this court's judgment in *Abbey*. The only complaint can be with the trial judge's attempt to distinguish admissible from inadmissible evidence. The trial judge was certainly not as clear as he might have been but I have no hesitation in finding that a retrial is not warranted on this account.

86 Given that Dr. Shane relied extensively on his interview with the appellant, the trial judge drew particular attention to the additional element of credibility that could affect the quality of Dr. Shane's opinion:

> It is the position of the Crown that Dr. Shane's opinion stands or falls on the veracity of Lyn Lavallee because he relied so heavily and extensively on what she told him and the evidence contained in the statement, Exhibit 16. That's for you to decide.

Later in the charge, he elaborates:

> Undoubtably [sic] she was a very important source, if not the major source, of his information. Dr. Shane agreed that if what she told him was erroneous, he would have to reassess his position.
>
> On cross-examination he reiterated that in his opinion her action was spontaneous to the moment to try to defend herself. The straw that broke the camel's back was the threat, "When the others leave you're going to get it", even though similar statements had been made to her on other occasions. According to what she told him, the accused felt compelled to shoot.
>
> Based on the information he had in the interview, it was his opinion that the acts of the accused were impulsive and not premeditated. He disagreed with the Crown's suggestion that Lyn Lavallee took the opportunity when it presented itself.
>
> He conceded that patients had, on occasion, lied and misled him in the past.

87 The fourth proposition I have extracted from *Abbey* is that there must be admissible evidence to support the facts on which the expert relies before any weight can be attributed to the opinion. The majority of the Manitoba Court of Appeal appears to

interpret this as a requirement that each and every fact relied upon by the expert must be independently proven and admitted into evidence before the entire opinion can be given any weight.

88 Dr. Shane referred in his testimony to various facts for which there was no admissible evidence. The information was elicited from his interviews with the appellant. It included the smoking of marijuana prior to the killing, the deterioration of the intimate relationship between the appellant and Rust, past episodes of physical and psychological abuse followed by intervals of contrition, the apparent denial of homicidal fantasies on the appellant's part, and her remorse after killing Rust.

89 If the majority of the Court of Appeal is suggesting that each of these specific facts must be proven in evidence before any weight could be given to Dr. Shane's opinion about the accused's mental state, I must respectfully disagree. *Abbey* does not, in my view, provide any authority for that proposition. The court's conclusion in that case was that the trial judge erred in treating as proven the facts upon which the psychiatrist relied in formulating his opinion. The solution was an appropriate charge to the jury, not an effective withdrawal of the evidence. In my view, as long as there is some admissible evidence to establish the foundation for the expert's opinion, the trial judge cannot subsequently instruct the jury to completely ignore the testimony. The judge must, of course, warn the jury that the more the expert relies on facts not proved in evidence the less weight the jury may attribute to the opinion.

90 On my reading of the record Dr. Shane had before him admissible evidence about the nature of the relationship between the appellant and Rust in the form of the appellant's statement to the police and the hospital records. In addition, there was substantial corroborative evidence provided at trial by Ezako, the emergency room doctor who testified to doubting the appellant's explanation of her injuries. There was also the evidence of the witnesses on the night of the shooting who testified to the appellant's frightened appearance, tone of voice, and conduct in dealing with Rust. The evidence pointed to the image of a woman who was brutally abused, who lied about the cause of her injuries, and who was incapable of leaving her abuser. As Huband J.A. comments in dissent, if the trial judge erred at all, he was probably remiss in not mentioning the corroborative evidence of Ezako as buttressing the evidentiary foundation on which Dr. Shane premised his opinion.

91 The majority of the Court of Appeal attached particular significance to the absence of admissible evidence on the question whether the appellant had homicidal fantasies about Rust. As I read the evidence the appellant's alleged denial of homicidal fantasies appeared to add little to Dr. Shane's overall opinion about her mental state on the night in question. Moreover, the evidence given by Ezako about her being an aggressor in the past and even pointing a gun at Rust were far more incriminating in terms of evincing a prior intent to kill than the presence or absence of homicidal fantasies. The gun pointing incidents were explained by Dr. Shane as not inconsistent with her victimized condition and not necessarily indicative of premeditation. Clearly, Dr. Shane's explanation was something the jury could evaluate in the context of all the evidence.

92 Where the factual basis of an expert's opinion is a melange of admissible and inadmissible evidence, the duty of the trial judge is to caution the jury that the weight attributable to the expert testimony is directly related to the amount and quality of admissible evidence on which it relies. The trial judge openly acknowledged to counsel the inherent difficulty in discharging such a duty in the case at bar. In my view, the trial judge performed his task adequately in this regard. A new trial is not warranted on the basis of the trial judge's charge to the jury.

93 I would accordingly allow the appeal, set aside the order of the Court of Appeal, and restore the acquittal.

***Sopinka J.*:**

94 I have read the reasons of my colleague, Justice Wilson, and I agree in the result that this appeal must be allowed. I find it necessary, however, to add a few words concerning the interpretation of this court's decision in *R. v. Abbey*, [1982] 2 S.C.R. 24, [1983] 1 W.W.R. 251, 39 B.C.L.R. 201, 29 C.R. (3d) 193, 68 C.C.C. (2d) 394, 138 D.L.R. (3d) 202, 43 N.R. 30.

95 *Abbey* has been roundly criticized: see, e.g., Schiff, Evidence in the Litigation Process, 3rd ed. (1988), vol. 1, at pp. 473-76; and Delisle, Evidence: Principles and Problems, 2nd ed. (1989), at pp. 477-79. The essence of the criticism is that *Abbey* sets out more restrictive conditions for the use of expert evidence than did previous decisions of this court (i.e., *St. John v. Irving Oil Co.*, [1966] S.C.R. 581, 52 M.P.R. 126, 58 D.L.R. (2d) 404; *Wilband v. R.*, [1967] S.C.R. 14, 60 W.W.R. 292, 2

C.R.N.S. 29, [1967] 2 C.C.C. 6; and *R. v. Lupien*, [1970] S.C.R. 263, 9 C.R.N.S. 165, 71 W.W.R. 110, 655, [1970] 2 C.C.C. 193, 9 D.L.R. (3d) 1). Upon reflection, it seems to me that the very special facts in *Abbey*, and the decision required on those facts, have contributed to the development of a principle concerning the admissibility and weight of expert opinion evidence that is self-contradictory. The contradiction is apparent in the four principles set out by Wilson J. in the present case, at p. 33, which I reproduce here for the sake of convenience:

> 1. An expert opinion is admissible if relevant, even if it is based on secondhand evidence.
>
> 2. This secondhand evidence (hearsay) is admissible to show the information on which the expert opinion is based, not as evidence going to the existence of the facts on which the opinion is based.
>
> 3. Where the psychiatric evidence is composed of hearsay evidence, the problem is the weight to be attributed to the opinion.
>
> 4. Before any weight can be given to an expert's opinion, the facts upon which the opinion is based must be found to exist.

96 The combined effect of Nos. 1, 3 and 4 is that an expert opinion relevant in the abstract to a material issue in a trial but based entirely on unproven hearsay (e.g., from the mouth of the accused, as in *Abbey*) is admissible but entitled to no weight whatsoever. The question that arises is how any evidence can be admissible and yet entitled to no weight. As one commentator has pointed out, an expert opinion based *entirely* on unproven hearsay must, if anything, be inadmissible by reason of irrelevance, since the facts underlying the expert opinion are the only connection between the opinion and the case: see Wardle, "*R. v. Abbey* and Psychiatric Opinion Evidence: Requiring the Accused to Testify" (1984), 17 Ottawa L. Rev. 116, at pp. 122-23.

97 The resolution of the contradiction inherent in *Abbey*, and the answer to the criticism *Abbey* has drawn, is to be found in the practical distinction between evidence that an expert obtains and acts upon within the scope of his or her expertise (as in *St. John*), and evidence that an expert obtains from a party to litigation touching a matter directly in issue (as in *Abbey*).

98 In the former instance, an expert arrives at an opinion on the basis of forms of inquiry and practice that are accepted means of decision within that expertise. A physician, for example, daily determines questions of immense importance on the basis of the observations of colleagues, often in the form of second or third hand hearsay. For a court to accord no weight to, or to exclude, this sort of professional judgment, arrived at in accordance with sound medical practices, would be to ignore the strong circumstantial guarantees of trustworthiness that surround it, and would be, in my view, contrary to the approach this court has taken to the analysis of hearsay evidence in general, exemplified in *Ares v. Venner*, [1970] S.C.R. 608, 73 W.W.R. 347, 12 C.R.N.S. 349, 14 D.L.R. (3d) 4. In *R. v. Jordan* (1984), 39 C.R. (3d) 50, 11 C.C.C. (3d) 565 (B.C.C.A.), a case concerning an expert's evaluation of the chemical composition of an alleged heroin specimen, Anderson J.A. held, and I respectfully agree, that *Abbey* does not apply in such circumstances. (See also *R. v. Zundel* (1987), 58 O.R. (2d) 129, 56 C.R. (3d) 1 at 52, 31 C.C.C. (3d) 97, 29 C.R.R. 349, 35 D.L.R. (4th) 338, 18 O.A.C. 161 (C.A.), where the court recognized an expert opinion based upon evidence "of a general nature which is widely used and acknowledged as reliable by experts in that field.")

99 Where, however, the information upon which an expert forms his or her opinion comes from the mouth of a party to the litigation, or from any other source that is inherently suspect, a court ought to require independent proof of that information. The lack of such proof will, consistent with *Abbey*, have a direct effect on the weight to be given to the opinion, perhaps to the vanishing point. But it must be recognized that it will only be very rarely that an expert's opinion is entirely based upon such information, with no independent proof of any of it. Where an expert's opinion is based in part upon suspect information and in part upon either admitted facts or facts sought to be proved, the matter is purely one of weight. In this respect, I agree with the statement of Wilson J. at p. 35, as applied to circumstances such as those in the present case:

> ... as long as there is some admissible evidence to establish the foundation for the expert's opinion, the trial judge cannot subsequently instruct the jury to completely ignore the testimony. The judge must, of course, warn the jury that the more the expert relies on facts not proved in evidence the less weight the jury may attribute to the opinion.

100 As Wilson J. holds, the trial judge's charge to the jury was adequate, and the appeal ought therefore to be allowed.

Appeal allowed.

(3d) 163, 247 Nfld. & P.E.I.R. 286, 254 D.L.R. (4th) 1, 25 C.C.L.I. (4th) 1, 32 C.C.L.T. (3d) 1, 334 N.R. 355, 735 A.P.R. 286, J.E. 2005-1188, EYB 2005-91679

Cabot Insurance Company Limited and Rex Gilbert Moore, deceased, by his Administratix, Muriel Smith, Appellants v. Peter Ryan, Respondent

McLachlin C.J.C., Major, Bastarache, LeBel, Deschamps, Abella, Charron JJ.

Heard: December 7, 2004

Judgment: June 16, 2005 *

Docket: 29849

Proceedings: reversing in part *Ryan v. Moore* (2003), 2003 NLCA 19, 2003 CarswellNfld 109, 50 E.T.R. (2d) 8, 224 Nfld. & P.E.I.R. 181, 669 A.P.R. 181 (N.L. C.A.); reversing in part *Ryan v. Moore* (2001), 2001 CarswellNfld 277, 205 Nfld. & P.E.I.R. 211, 615 A.P.R. 211, 41 E.T.R. (2d) 287, 19 M.V.R. (4th) 120, 18 C.P.C. (5th) 95 (Nfld. T.D.)

Counsel: Sandra Chaytor, Jorge Segovia, for Appellants
Ian F. Kelly, Q.C., Gregory A. French, for Respondent

***Bastarache J.*:**

1 We are asked to decide whether or not a shortened limitation period under s. 5 of the *Survival of Actions Act*, R.S.N.L. 1990, c. S-32 (see Appendix A), applicable upon the death of one of the parties to an action, can be enforced against a party who had no knowledge of the death until after the limitation period had expired. The respondent, Peter Ryan ("Ryan"), argues that the answer should be no; he invoked in front of our Court and in the courts below a number of legal principles which I shall address: discoverability, confirmation, estoppel by convention and estoppel by representation. The issue of estoppel was raised for the first time by the Court of Appeal itself.

2 The discoverability rule dictates that a cause of action arises for purposes of a limitation period when the material facts on which it is based have been discovered or ought to have been discovered by the plaintiff by the exercise of reasonable diligence (*Central & Eastern Trust Co. v. Rafuse*, [1986] 2 S.C.R. 147 (S.C.C.), at p. 224).

3 Section 16(1) of the *Limitations Act*, S.N.L. 1995, c. L-16.1 (see Appendix A), prescribes that confirmation of a cause of action occurs when a person acknowledges the cause of action of another person or makes a payment in respect of that cause of action. Thus, at that moment, the limitation clock is restarted, and the time before the date of the confirmation will not be counted.

4 Estoppel by convention operates where the parties have agreed that certain facts are deemed to be true and to form the basis of the transaction into which they are about to enter (G. H. L. Fridman, *The Law of Contract in Canada* (4th ed. 1999), at p. 140, note 302). If they have acted upon the agreed assumption , then, as regards that transaction, each is estopped against the other from questioning the truth of the statement of facts so assumed if it would be unjust to allow one to go back on it (S. Bower, *The Law Relating to Estoppel by Representation* (4th ed. 2004), at pp. 7-8).

5 Estoppel by representation requires a positive representation made by the party whom it is sought to bind, with the intention that it shall be acted on by the party with whom he or she is dealing, the latter having so acted upon it as to make it inequitable

that the party making the representation should be permitted to dispute its truth, or do anything inconsistent with it (*Page v. Austin* (1884), 10 S.C.R. 132 (S.C.C.), at p. 164).

6 None of these doctrines can find application in the present case. I will address each of these doctrines and in most cases adopt the reasons of the Court of Appeal with mere comment. One legal concept requires more attention from this Court, given that it is being asked to develop a legal test with regard to its application: estoppel by convention.

I. Background

A. Facts

7 On November 27, 1997, three vehicles were involved in an accident. They were operated by the respondent, Ryan, the appellant, Rex Gilbert Moore, and a third party (not involved in this matter), David Crummey. Ryan decided to pursue a personal injury claim against Moore. He was unaware that, on December 26, 1998, Moore had died of causes unrelated to the accident. On February 16, 1999, Letters of Administration were granted to Moore's administratrix, Muriel Smith. On October 28, 1999, Ryan issued his statement of claim; it was within the two-year limitation period prescribed by the *Limitations Act*, but outside the applicable six-month limitation period from the granting of the letters of administration under the *Survival of Actions Act*. Ryan argues that the appellant is estopped from relying upon the shorter limitation period. Alternatively, he argues that the discoverability principle or the confirmation rule apply to extend this shorter limitation period.

8 As this case is centred on issues related to limitation periods, it is important to recollect the important events leading up to this litigation:

<u>November 27, 1997</u>	<u>The accident</u>
November 28, 1997	Cabot Insurance Co. ("Cabot Insurance") appoints adjuster Brian Lacey to look after the claim against its insured Moore. Ryan retains counsel who contacts the adjuster advising of his retainer and that Ryan, while his injuries are being assessed, will pursue his property damage claim directly with the adjuster.
December 1997 - December 1998	Cabot Insurance pays Ryan's property damage claim directly to him. Correspondence is exchanged between Ryan's counsel and the adjuster concerning Ryan's medical condition, the adjuster seeking documentation and updates on Ryan's condition, and the counsel providing the information requested. The counsel forwards Ryan's hospital chart to the adjuster, for which Cabot Insurance reimburses counsel the $40 fee.
<u>December 26, 1998</u>	<u>Moore dies at age 75 from causes unrelated to the accident</u>.
January 25, 1999	The adjuster writes to Ryan's counsel seeking medical information and reiterating that the insurer would pay a reasonable fee for a medical report. He refers to Moore as "Our Insured".
<u>February 16, 1999</u>	<u>Letters of Administration of the Estate of Rex Moore are granted to Muriel Smith</u>.
April 5, 1999	Ryan's counsel forwards to the adjuster an invoice for a medical report of Ryan's examination by an orthopaedic surgeon.
July 29, 1999	The adjuster forwards to Ryan's counsel a cheque for payment of the medical report. The cheque is payable to Dr. Landells. He refers to Moore as "Our Insured".
<u>August 16, 1999</u>	<u>Six months have passed since the grant of letters of administration of Moore's estate</u>.

October 28, 1999	The statement of claim is issued naming Rex Moore as defendant.
February 10, 2000	Ryan's counsel writes to the adjuster seeking payment for the cost of obtaining the chart from Ryan's family physician. He refers to Moore as "Your Insured"
March 2, 2000	Ryan's counsel writes to the adjuster requesting payment for the chart of another physician. He refers to Moore as "Your Insured".
May 18, 2000	The adjuster learns of Moore's death.
September 22, 2000	Ryan's counsel learns of Moore's death after attempting to serve the statement of claim.
October 24, 2000	Ryan's counsel suggests to Cabot Insurance's claims examiner, Valerie Moore, in a meeting (to discuss claims unrelated to this case) that there might be a problem with the limitation period.
November 9, 2000	Cabot Insurance refuses to settle Ryan's claim because the action is outside the limitation period.

9 Cabot Insurance applied to intervene in the proceedings and sought an order striking out the statement of claim for being out of time. It further claimed that the statement of claim naming a dead person as defendant was a nullity and was not capable of being amended. Ryan also filed an application to amend the statement of claim to describe the defendant as "Rex Moore, Deceased, by his administratrix, Muriel Smith".

B. Supreme Court of Newfoundland and Labrador ((2001), 205 Nfld. & P.E.I.R. 211 (Nfld. T.D.))

10 At the Supreme Court of Newfoundland and Labrador, Orsborn J. denied Cabot Insurance's application to have the action dismissed. First, he held that the discoverability rule did not apply to postpone the running of the *Survival of Actions Act* limitation period, since the fact of death was not an element of the cause of action and was not required to complete the cause of action (paras. 50-51). Second, Orsborn J. held that the confirmation provisions of s. 16 of the *Limitations Act* are not expressly confined to the limitation periods fixed by the *Limitations Act*. He saw no reason in principle why a cause of action continued under the *Survival of Actions Act* could not be confirmed and the limitation period fixed by that Act thus continued. He concluded that Cabot Insurance's payment for the medical report on July 29, 1999 constituted a confirmation of Ryan's cause of action. Since the action was commenced within six months of this payment, the proceeding was still within the short *Survival of Actions Act* limitation period and was not statute barred (paras. 52-63). Third, Orsborn J. concluded that in any event, on the facts of this case, the cause of action against Moore was not a cause of action to which the *Survival of Actions Act* applies. The *Survival of Actions Act* permits a cause of action to survive "for the benefit of or against" an estate (s. 2(b)). The *Survival of Actions Act* deals with the potential acquisition or dissipation of estate assets. However, in this case, Ryan's claim poses no risk to the assets of the estate. Instead, the risk lies on the insurer. Moore was a defendant in name only, and the real party to the action was the insurer. Thus, Ryan's cause of action was not extinguished on Moore's death (paras. 66-76). Fourth, Orsborn J. held that if Ryan's cause of action had not been confirmed and if the *Survival of Actions Act* was indeed applicable (which he held it was not), then the action would have been a nullity for being commenced outside the limitation period. However, as this was not the case, the plaintiff was not statute barred.

C. Court of Appeal of Newfoundland and Labrador ((2003), 224 Nfld. & P.E.I.R. 181, 2003 NLCA 19 (N.L. C.A.))

(1) Wells C.J. (for the majority)

11 The majority of the Court of Appeal allowed, in part, both the appeal and cross-appeal. The applications judge's order to permit the intervention of Cabot Insurance and the amendment of the statement of claim was affirmed. Wells C.J. held that the applications judge made no error in considering the existence of insurance in determining whether or not the action posed a financial risk to the estate. He nevertheless held that the applications judge erred in holding that the cause of action against Moore is a cause of action to which the *Survival of Actions Act* did not apply. The court explained that unless the *Survival of*

Actions Act applies, the action will be a nullity. The right to institute a tort action after death, or continue an action after death, derives from the statute. Without such a statute, this right does not otherwise exist.

12 The majority agreed with the applications judge that the discoverability rule does *not* apply to postpone the running of the limitation period under the *Survival of Actions Act*. Concluding that the limitation period in the statute runs from an event that occurs without regard to the injured party's knowledge, the majority deemed that allowing the application of the discoverability rule would disrupt the exception to the common law rule, the courts thereby intruding into the legislature's jurisdiction.

13 The majority disagreed with Orsborn J.'s holding that the confirmation provisions of the *Limitations Act* also apply to the limitation period under the *Survival of Actions Act*. Wells C.J. held that s. 16 of the *Limitations Act* provides confirmation of a cause of action and not of the right to commence it. The majority pointed out that the nature of the cause of action, or whether it is confirmed, is not relevant to the date of death or of grant of probate which triggers the limitation period created by the *Survival of Actions Act*. Confirmation did not arise in relation to the limitation period stemming from the *Limitations Act* because the statement of claim was issued within two years of the collision, i.e. within the prescribed delay.

14 Turning to the last issue, the majority held that Moore's estate and Cabot Insurance were barred by the principle of estoppel from relying on the fact of Moore's death and the granting of letters of administration. The particular form of estoppel invoked was estoppel by convention. Wells C.J., having reviewed Canadian and foreign authorities and decisions, concluded that estoppel by convention was established (para. 79). The majority held that detrimental reliance was not required. Consequently, Cabot Insurance and Moore were estopped from pleading that Moore died or that letters of administration were granted prior to May 2000 in order to invoke the shorter *Survival of Actions Act* limitation period. As a result, nullity could not be established and the statement of claim was amended to name the administratrix of Moore as defendant in the action.

(2) Cameron J.A. (dissenting)

15 In dissenting reasons, concurred in by Welsh J.A., Cameron J.A. disagreed with the estoppel analysis and held that it did not apply to the case at bar. After analysing case law and doctrine, she concluded that mutual misunderstanding (both parties assuming that Moore was alive) did not amount to a common assumption. The dissenting judges did not find that the letters sent by Cabot Insurance to Ryan's counsel referring to "Our Insured — Rex Moore" formed the basis on which the parties governed their conduct. The failure to commence the action within the *Survival of Actions Act*'s limitation period was *not* due to any arrangement between the parties, and consequently, there was no reliance on any convention. Therefore, this principle did not apply. Ryan's action was therefore time barred. The dissenting judges would have allowed the appeal.

II. Analysis

A. Discoverability

(1) Statutory Limitation Periods

16 The situation here is governed by two limitation periods: s. 5 of the *Limitations Act* (see Appendix A) and s. 5 of the *Survival of Actions Act*. The limitation period in s. 5 of the *Limitations Act* applies initially. Section 5 of the *Survival of Actions Act* superimposes itself on s. 5 at a later point of time, but does not eliminate it. This follows from the fact that the *Survival of Actions Act* does not create a new cause of action, as will be explained later.

17 Pursuant to s. 5 of the *Limitations Act*, a person can bring an action for damages in respect of injury based on contract or tort within two years of the date on which the right to do so arose. Ryan, by issuing a statement of claim on October 28, 1999, naming Rex Moore as the defendant, therefore, met the prescribed limitation period in the *Limitations Act*. Nevertheless, unknown to the parties, Rex Moore had died on December 26, 1998, altering the fact scenario.

18 As stated by the Court of Appeal, it is well known that at common law a personal action in tort is extinguished on the death of the victim or the wrongdoer: *actio personalis moritur cum persona* (see G. Mew, *The Law of Limitations* (2nd ed. 2004), at p. 253). Being unable to sue the estate of a deceased tortfeasor was particularly severe as it left injured survivors of motor

vehicle accidents without any means of recovery. This led legislatures to enact statutes to diminish the hardship of the common law rule. The *Fatal Accidents Act*, R.S.N.L. 1990, c. F-6, and the *Survival of Actions Act* were such statutes. Under the *Fatal Accident Act*, the estate of a person who died as a result of the accident, or the survivors of that person, are accorded the right to maintain an action for death by wrongful act. Also, pursuant to s. 2 of the *Survival of Actions Act*, (see Appendix A) an action vested in or existing against a person who has died can be maintained by or against the deceased person's estate. However, s. 5 of the *Survival of Actions Act* prohibits an action brought six months after letters of probate or administration of the estate of the deceased have been granted, and after the expiration of one year from the date of death. Hence, the provision is meant to keep the action "alive" for a specific period of time. The *Survival of Actions Act* imposes an additional limitation period. As eloquently affirmed by Orsborn J., the *Survival of Actions Act* does not create a cause of action. It grafts its provision onto an existing cause of action, one which is complete in all of its elements before the operation of the *Survival of Actions Act* (para. 45).

19 In the case at bar, the *Survival of Actions Act* has the effect of shortening the time period within which the action could be taken because "an action founded in tort may only be taken by or against the estate of a deceased person if it is commenced within that period of time that is common to both limitations periods": Wells C.J., at para. 37.

20 Ryan argues that the *Survival of Actions Act* contemplates that a cause of action can arise under the *Survival of Actions Act*. I fail to see how the expression "[c]auses of action under this Act" or "an action ... under this Act" found in ss. 8(1) and 5 respectively can be seen to indicate the *creation* of a new cause of action. The *Survival of Actions Act* expressly contemplates the *survival* of causes of action *existing* against a person who has died (s. 2). I take that to mean that the cause of action existed prior to the application of the *Survival of Actions Act*. The survival of a cause of action for a time and its creation are two different things.

(2) Discoverability: The Judge-Made Rule

21 The debate concerning the use of the discoverability principle in tort actions has been settled by this Court in *Nielsen v. Kamloops (City)*, [1984] 2 S.C.R. 2 (S.C.C.), *Central Trust* and *M. (K.) v. M. (H.)*, [1992] 3 S.C.R. 6 (S.C.C.).

22 The discoverability principle provides that "a cause of action arises for purposes of a limitation period when the material facts on which it is based have been discovered or ought to have been discovered by the plaintiff by the exercise of reasonable diligence": *Central Trust*, at p. 224. In some provinces, the discoverability rule has been codified by statute; in others, it has been deemed redundant because of other remedial provisions.

23 While discoverability has been qualified in the past as a "general rule" (*Central Trust*, at p. 224; *Peixeiro v. Haberman*, [1997] 3 S.C.R. 549 (S.C.C.), at para. 36), it must not be applied systematically without a thorough balancing of competing interests (*Peixeiro*, at para. 34). The rule is an interpretative tool for construing limitation statutes. I agree with the Manitoba Court of Appeal when it writes:

> In my opinion, the judge-made discoverability rule is nothing more than a rule of construction. Whenever a statute requires an action to be commenced within a specified time from the happening of a specific event, the statutory language must be construed. When time runs from "the accrual of the cause of action" or from some other event which can be construed as occurring only when the injured party has knowledge of the injury sustained, the judge-made discoverability rule applies. <u>But, when time runs from an event which clearly occurs without regard to the injured party's knowledge, the judge-made discoverability rule may not extend the period the legislature has prescribed</u>. [Emphasis added.]

(*Fehr v. Jacob* (1993), 14 C.C.L.T. (2d) 200 (Man. C.A.), at p. 206). See also *Peixeiro*, at para. 37; *Snow (Guardian ad litem of) v. Kashyap* (1995), 125 Nfld. & P.E.I.R. 182 (Nfld. C.A.).

24 Thus, the Court of Appeal of Newfoundland and Labrador is correct in stating that the rule is "generally" applicable where the commencement of the limitation period is related by the legislation to the arising or accrual of the cause of action. The law does not permit resort to the judge-made discoverability rule when the limitation period is explicitly linked by the governing legislation to a fixed event unrelated to the injured party's knowledge or the basis of the cause of action (see Mew, at p. 55).

(3) Discoverability Principle Does Not Apply to the Survival of Actions Act

25 Ryan submits that the discoverability rule applies to the limitation period contained in s. 5 of the *Survival of Actions Act*. He argues that the limitation period should not begin to run until he knew, or ought reasonably to have known, the material facts which determine (i) his cause of action under the *Survival of Actions Act* and (ii) the limitation period. In sum, Ryan claims that the death of Moore is integral to the cause of action and that the limitation period should not start to run until he knew that he had a cause of action against the estate of Rex Moore. The appellants submit that the discoverability rule does not apply to the *Survival of Actions Act* as it would transcend the logic of statutory interpretation and the scheme enacted by the legislature. In addition, they say that the rule does not apply where time runs from a fixed event.

26 Like the Court of Appeal, I am of the view that the appellants' position is correct. For ease of reference, I reproduce s. 5 of the *Survival of Actions Act*:

> **5.** An action shall not be brought under this Act unless proceedings are started within 6 months after letters of probate or administration of the estate of the deceased have been granted and proceedings shall not be started in an action under this Act after the expiration of 1 year after the date of death of the deceased.

27 Pursuant to the *Survival of Actions Act*, the limitation period is triggered by the death of the defendant or the granting by a court of the letters of administration or probate. The section is clear and explicit: time begins to run from one of these two specific events. The Act does not establish a relationship between these events and the injured party's knowledge. I agree with the appellants that knowledge is not a factor: the death or granting of the letters occurs regardless of the state of mind of the plaintiff. We face here a situation in respect of which, as recognized by this Court in *Peixeiro*, the judge-made discoverability rule does not apply to extend the period the legislature has prescribed. Thus, I agree with the Court of Appeal that by using a specific event as the starting point of the "limitation clock", the legislature was displacing the discoverability rule in all the situations to which the *Survival of Actions Act* applies.

28 A number of the appellate courts have dealt with the question of discoverability in the context of actions by or against estates of deceased persons. The appellants rely extensively on *Payne v. Brady* (1996), 140 D.L.R. (4th) 88 (Nfld. C.A.), leave to appeal refused, [1997] 2 S.C.R. xiii (S.C.C.). While the facts of that case are very similar to the present, it is not clear whether the Court of Appeal of Newfoundland and Labrador decided that the rule of discoverability did not apply because death is always a possibility or because the appellant Payne had ample time after she became aware of the death of Brady to commence her action. What is clear is the point advanced by O'Neill J.A.: the death of a prospective defendant and the possibility of a shortened period to commence an action is a reality that claimants and their counsel have to guard against: *Payne*, at p. 94.

29 The Nova Scotia Court of Appeal decision in *Burt v. LeLacheur* (2000), 189 D.L.R. (4th) 193 (N.S. C.A.), is invoked by the respondent. However, the reasoning of that case cannot be applied in the case at bar. In *Burt*, the Court of Appeal held that the discoverability rule applied to s. 10 of the *Fatal Injuries Act*, R.S.N.S. 1989, c. 163. The Nova Scotia Court of Appeal stated its position in the following manner (at p. 208):

> If the discoverability rule applies to a limitation period running from "when the damages were sustained" (*Peixeiro*) and from "the final determination of the action against the insured" (*Grenier*), I think it is not unreasonable to apply it to the period one year after the death so as to start time running only when the claimant knows or ought to know that the death might be a <u>wrongful</u> one. This, having in mind the statutory scheme of the *Fatal Injuries Act*, is no greater a stretch of the language than was made by the courts in *Peixeiro, Grenier* and other cases, all for the purpose of preventing a potential injustice.
>
> <u>We must avoid the accusation of usurping the role of the Legislature</u>, but in my opinion to apply the discoverability rule here is consistent with what has already been done before. <u>On the true consideration of s. 10 of the *Fatal Injuries Act*, time does not run simply from a fixed event, but from constituent elements of the cause of action created by the statute.</u> [Emphasis added.]

30 In *Burt*, the death of a person for which an action can be brought under the *Fatal Injuries Act* does not merely refer to the time of death as provided in the *Survival of Actions Act*, but to a "wrongful death". It is not an event totally unrelated to the accrual of the cause of action. Hence, the death of the person there is in fact a "constituent elemen[t] of the cause of action", contrary to the present case.

31 In my view, the case that best assists this Court in the present matter is the one giving rise to the Ontario Court of Appeal's decision in *Waschkowski v. Hopkinson Estate* (2000), 47 O.R. (3d) 370 (Ont. C.A.). The court had to determine the possible application of the discoverability rule to s. 38(3) of the *Trustee Act*, R.S.O. 1990, c. T.23, the statutory provision in Ontario permitting an action in tort by or against the estate of a deceased person and limiting the period during which such actions may be commenced. Abella J.A., as she then was, concluded, at para. 16, that the discoverability rule did not apply to the section since the state of actual or attributed knowledge of an injured person in a tort claim is not germane when a death has occurred. She explained at paras. 8-9:

> In s. 38(3) of the *Trustee Act*, the limitation period runs from a death. Unlike cases where the wording of the limitation period permits the time to run, for example, from "when the damage was sustained" (*Peixeiro*) or when the cause of action arose (*Kamloops*), there is no temporal elasticity possible when the pivotal event is the date of a death. Regardless of when the injuries occurred or matured into an actionable wrong, s. 38(3) of the *Trustee Act* prevents their transformation into a legal claim unless that claim is brought within two years of the death of the wrongdoer or the person wronged.
>
> The underlying policy considerations of this clear time limit are not difficult to understand. The draconian legal impact of the common law was that death terminated any possible redress for negligent conduct. On the other hand, there was a benefit to disposing of estate matters with finality. The legislative compromise in s. 38 of the *Trustee Act* was to open a two-year window, making access to a remedy available for a limited time without creating indefinite fiscal vulnerability for an estate. [Emphasis added.]

See also *Canadian Red Cross Society / Société Canadienne de la Croix-Rouge, Re*, [2003] O.J. No. 5669 (Ont. C.A.), and *Edwards v. Law Society of Upper Canada* (2000), 48 O.R. (3d) 321 (Ont. C.A.).

32 Ryan's cause of action arose prior to Moore's death and Ryan was well aware of his cause of action both before Moore's death and before the expiration of the *Survival of Actions Act* limitation period. In fact, the day following the accident, Ryan retained a solicitor to pursue a claim for damages against Moore for injuries alleged to have resulted from the accident. At that point, Ryan could have sued Moore as all the elements of his cause of action were known. He did not need to have knowledge of the death in question to prove his claim or issue and serve the statement of claim. Moore's subsequent death had no impact whatsoever on the accrual of Ryan's cause of action. Consequently, I agree with the conclusion of the applications judge, at para. 50:

> The fact of death is of no relevance to the cause of action in question. It is not an element of the cause of action and is not required to complete the cause of action. Whatever the nature of the cause of action, it is existing and complete before the *Survival of Actions Act* operates, in the case of a death, to maintain it and provide a limited time window within which it must be pursued. The fact of the death is irrelevant to the cause of action and serves only to provide a time from which the time within which to bring the action is to be calculated.

33 A further reason for the non-application of the discoverability rule is the evident impact such a rule would have on the distribution of assets to the beneficiaries. Without a time limit, an executor or an administrator would not feel free to distribute the assets of an estate until all reasonable possibilities of claim had been addressed. This would be cumbersome and unrealistic. "An estate should not be held to ransom interminably by the advancement of claims which are not proceeded with in a timely manner": *MacKenzie v. MacKenzie* (1992), 84 Man. R. (2d) 149 (Man. Q.B.), para. 18, cited in *J. (A.) v. Cairnie Estate* (1993), 105 D.L.R. (4th) 501 (Man. C.A.), p. 510.

34 The *Survival of Actions Act* is itself a legislative exception to a common law rule. Thus, it would displace the intention of the legislature to "stretch" the limitation period. Borrowing the words of Marshall J.A. in *Snow (Guardian ad litem of)*, at

para. 43, to apply the rule of construction of reasonable discoverability to such a provision would be tantamount to mounting a fiction transcending the limits of logical statutory interpretation. Hence, it would constitute an impermissible incursion into the legislative process.

(4) Special Circumstances

35 Ryan submits, as an alternative, that if the discoverability rule does not apply, the limitation period should be extended because of the "special circumstances" principle. He claims that, pursuant to this principle, fairness and justice require that an innocent plaintiff should not be deprived of compensation through no fault of his own. This argument was not invoked in front of the applications judge or the Court of Appeal, and is not supported by any evidence; under these circumstances, it is, in my view, without merit.

B. Confirmation

36 Ryan claims that the confirmation of the cause of action pursued under s. 16 of the *Limitations Act* applies to extend the limitation period contained in s. 5 of the *Survival of Actions Act*. He argues that the correspondence exchanged between Cabot Insurance's adjuster and his previous counsel, the payment made by Cabot Insurance for his property damage claim, as well as a payment of $500 to his previous counsel for a medical report, prove acknowledgment (as contemplated by the *Limitations Act*) and therefore confirmation.

37 The appellants submit that s. 16 of the *Limitations Act* does not apply to the *Survival of Actions Act*. They claim that any confirmation of the cause of action would have no effect on the *Survival of Actions Act* limitation period because the *Survival of Actions Act* does not create a cause of action but simply confers a right to pursue a claim notwithstanding the fact that one of the parties has died. Finally, they argue that there was no confirmation of the cause of action in this case as there was no admission of liability through the letters nor the payments made.

38 I agree with the appellants' position as accepted by the Court of Appeal.

39 The relevant portions of s.16 of the *Limitations Act* provide:

> **16.** (1) A confirmation of a cause of action occurs where a person
>
> (a) acknowledges that cause of action, right or title of another person; or
>
> (b) makes a payment in respect of that cause of action, right or title of another.
>
> (2) Where a person against whom an action lies confirms that cause of action, the time before the date of that confirmation shall not count when determining the limitation period for a person having the benefit of the confirmation against the person bound by that confirmation.
>
> (3) Subsection (2) applies only to a right of action where the confirmation is given before the expiration of the limitation period for that right of action.
>
> . . . . .
>
> (5) In order to be effective a confirmation must be in writing and signed by
>
> (a) the person against whom that cause of action lies; or
>
> (b) his or her agent
>
> and given to the person or agent of the person having the benefit of that cause of action.

40 When a person acknowledges the cause of action of another person or makes a payment in respect of that cause of action, a confirmation of that cause of action occurs. Consequently, the time accrued before the date of that confirmation shall not be

considered when determining the limitation period (s. 16(2)). Confirmation must, of course, be made prior to the expiration of the limitation period (s. 16(3)).

41 Section 16 can only apply to a limitation period which limits the time during which an action may be taken. Since the limitation period which arises under the *Survival of Actions Act* supersedes the first limitation period of the *Limitations Act*, and does not create or revive an action, but merely permits it to continue, s. 16 cannot apply to it as found by the Court of Appeal (para. 67).

42 Even if this were not the case, the facts here do not support a finding of confirmation on the part of the appellants. I will address this issue briefly as a matter of principle.

43 In order to establish confirmation, one of two events must be proven: 1) that the party acknowledged the cause of action; or 2) that there was a payment made in respect of the cause of action (see Mew, at p. 115).

44 The term "acknowledges" as used in s. 16(1)(a) of the *Limitations Act* has been described by Lord Denning in *Good v. Parry*, [1963] 2 All E.R. 59 (Eng. C.A.), at p. 61, as requiring an "admission". While care must be shown when applying English case law, as the English *Limitation Act*, 1939, 2 & 3 Geo. 6, c. 21, does not provide for the acknowledgment of the "cause of action" but the acknowledgment of the "claim", it is still persuasive authority for the present interpretation.

45 Thus, a party can only be held to have acknowledged the claim if that party has in effect admitted his or her liability to pay that which the claimant seeks to recover (see *Surrendra Overseas Ltd. v. Sri Lanka* (1976), [1977] 2 All E.R. 481 (Eng. Q.B.)). As the British Columbia Court of Appeal concluded in *Podovinikoff v. Montgomery* (1984), 14 D.L.R. (4th) 716 (B.C. C.A.), at p. 721, a person can acknowledge as a bare fact that someone has asserted (by making a claim) a cause of action against him, without acknowledging any liability. Simple acknowledgment of the "existence" of a cause of action is insufficient to meet the requirements of s. 16(1)(a). Acknowledgment must involve acknowledgment of some liability.

46 Consequently, the letters from the adjuster to Ryan's counsel (i.e., letters of November 18, 1998 and January 25, 1999) do not restart the clock as they do not constitute an admission of liability on the part of Cabot Insurance. These were obviously only requests for information and part of the normal investigation process. As submitted by the appellants, if mere investigation of claims were to constitute confirmation, then potential defendants, in order to protect limitation defence, would have no choice but to refuse to investigate until a statement of claim is issued. This would destroy the possibility of early settlements and lead to increased litigation and costs.

47 The same conclusion applies to the second way that confirmation can occur, through payment. Of importance is the fact that both payments mentioned by Ryan, payments for Ryan's medical chart and Dr. Landells' medical report, were not evidence of liability by Cabot Insurance; nor did they indemnify Ryan, at least in part, for damages caused by the accident. Thus, they cannot be payments in respect of the "cause of action". Ryan relies on the Newfoundland and Labrador Court of Appeal decision in *Wheaton v. Palmer* (2001), 205 Nfld. & P.E.I.R. 304 (Nfld. C.A.), for the proposition that a payment made to a physician, but sent to the plaintiff's solicitor will constitute confirmation. With respect, I am of the view that the Court of Appeal erred in this determination. I prefer the contrary position of the British Columbia Court of Appeal in *MacKay v. Lemley* (1997), 44 B.C.L.R. (3d) 382 (B.C. C.A.), at para. 21. Payment for a medical report with a cheque payable to a physician, but sent to the plaintiff's solicitor, does not constitute confirmation of the plaintiff's cause of action:

> The mere fact that the payment, although made payable to the doctor, was directed through the lawyer's office for forwarding does not, in my view, bring the payment into the express wording of the section. The payment here, as in *Germyn*, was intended to pay to the doctor. The doctor was not a person through whom the appellant could claim. This was not a reimbursement to anyone for having paid for the medical report but a direct payment to the doctor by [the Insurance Corporation of British Columbia].

48 The purpose for which these types of payments and correspondence are made is critical. In this case, they were not intended as admissions of liability, but only to promote investigation and early resolution of certain aspects of the claim.

C. Estoppel

49 Moore's estate and Cabot Insurance submit that the majority of the Court of Appeal erred when it concluded that they were estopped from relying on the fact of Moore's death and the granting of letters of administration, thus preventing them from arguing that Ryan's action was outside the *Survival of Actions Act* limitation period. They claim that neither estoppel by convention nor estoppel by representation applies to the facts of the present case. Ryan argues that the appellants are precluded or estopped from relying on the limitation period in the *Survival of Actions Act* because of the application of either of these two types of estoppel.

50 While the principle of estoppel is often referred to in connection with cases of waiver, election, abandonment, acquiescence and laches, in the context of commercial and contractual relationships, the case law in Canada on this subject is not as abundant as that in the United Kingdom. It is therefore useful for this Court to address the issue in some detail, especially where it has long been accepted that estoppels are to be received with caution and applied with care (see *Harper v. Cameron* (1893), 2 B.C.R. 365 (B.C. C.A.), at p. 383).

51 The state of the law of estoppel was articulated by Lord Denning in *Amalgamated Investment & Property Co. (In Liquidation) v. Texas Commerce International Bank Ltd.* (1981), [1982] Q.B. 84 (Eng. C.A.), at p. 122, as follows:

> The doctrine of estoppel is one of the most flexible and useful in the armoury of the law. But it has become overloaded with cases. That is why I have not gone through them all in this judgment. It has evolved during the last 150 years in a sequence of separate developments: proprietary estoppel, estoppel by representation of fact, estoppel by acquiescence, and promissory estoppel. At the same time it has been sought to be limited by a series of maxims: estoppel is only a rule of evidence, estoppel cannot give rise to a cause of action, estoppel cannot do away with the need for consideration, and so forth. All these can now be seen to merge into one general principle shorn of limitations. When the parties to a transaction proceed on the basis of an underlying assumption — either of fact or of law — whether due to misrepresentation or mistake makes no difference — on which they have conducted the dealings between them — neither of them will be allowed to go back on that assumption when it would be unfair or unjust to allow him to do so. If one of them does seek to go back on it, the courts will give the other such remedy as the equity of the case demands.

52 The jurisprudence discloses six types of estoppel: estoppel by representation of fact, proprietary estoppel, promissory estoppel, estoppel by convention, estoppel by deed and estoppel by negligence (see Bower, at pp. 3-9). I will examine here the ones at the centre of this dispute, estoppel by convention and estoppel by representation.

(1) Estoppel by Convention

(a) Definition and Principles

53 The origin of the doctrine of estoppel by convention can be traced to estoppel by deed for which sealing and delivery were essential, and for which the foundation of duty lay not in the agreement itself, or any reliance thereon, but in the formal solemnity of the deed, reflecting the concern of ancient jurisprudence with form as opposed to substance. The modern rule has evolved enormously (see Bower, at pp. 179-80; T. B. Dawson, "Estoppel and obligation: the modern role of estoppel by convention" (1989), 9 *L.S.* 16)

54 Spencer Bower defines the modern concept of estoppel by convention as follows (p. 180):

> An estoppel by convention, it is submitted, is an estoppel by representation of fact, a promissory estoppel or a proprietary estoppel, in which the relevant proposition is established, not by representation or promise by one party to another, but by mutual, express or implicit, assent. This form of estoppel is founded, not on a representation made by a representor and believed by a representee, but on an agreed statement of facts or law, the truth of which has been assumed, by convention of the parties, as a basis of their relationship. When the parties have so acted in their relationship upon the agreed assumption that the given state of facts or law is to be accepted between them as true, that it would be unfair on one for the other to

resile from the agreed assumption, then he will be entitled to relief against the other according to whether the estoppel is as to a matter of fact, or promissory, and/or proprietary.

55 S. Wilken, *Wilken and Villiers: The Law of Waiver, Variation and Estoppel* (2nd ed. 2002), at p. 223, affirms that estoppel by convention will occur where:

> (i) the parties have established, by their construction of their agreement or a common apprehension as to its legal effect, a convention basis;
>
> (ii) on that basis the parties have regulated their subsequent dealings;
>
> (iii) one party would suffer detriment if the other were to be permitted to resile from that convention.

See also *Chitty on Contracts* (29th ed. 2004), vol. 1, at p. 283.

56 The Court of Appeal of Newfoundland and Labrador, after a review of the case law in the United Kingdom and in Canada, formulated the following four elements which need to be proven (para. 79):

> (i) The evidence establishes an assumption in common between the parties as to a state of facts;
>
> (ii) The parties have adopted the common assumption as the conventional basis for a transaction into which they have entered;
>
> (iii) The dispute in respect of which the estoppel by convention is asserted arises out of that transaction; and,
>
> (iv) A detriment would flow to the party asserting the estoppel if the other party is permitted to resile from the assumed stated facts.

These requirements were accepted by the respondent.

57 The appellants submit that there are six requirements for the estoppel by convention. They cite as support the New Zealand Court of Appeal decision in *National Westminster Finance NZ Ltd. v. National Bank of NZ Ltd.*, [1996] 1 N.Z.L.R. 548 (New Zealand C.A.), at p. 550. In fact, they simply advocate a more detailed description of the requirements also found in other foreign cases.

58 The jurisprudence in the United Kingdom is indeed abundant in contrast to that in Canada (see, e.g., *India v. India Steamship Co. Ltd.*, [1998] 1 Lloyd's Rep. 1 (U.K. H.L.), at p. 10; *K. Lokumal & Sons (London) Ltd. v. Lotte Shipping Co. Pte. Ltd.*, [1985] 2 Lloyd's Rep. 28 (Eng. C.A.), at pp. 34-35; *Norwegian American Cruises A/S v. Paul Mundy Ltd.*, [1988] 2 Lloyd's Rep. 343 (Eng. C.A.), at pp. 349-53).

59 This Court is not bound by any of the above analytical frameworks. After having reviewed the jurisprudence in the United Kingdom and Canada as well as academic comments on the subject, I am of the view that the following criteria form the basis of the doctrine of estoppel by convention:

> 1) The parties' dealings must have been based on a shared assumption of fact or law: estoppel requires manifest representation by statement or conduct creating a mutual assumption. Nevertheless, estoppel can arise out of <u>silence</u> (impliedly).
>
> 2) A party must have conducted itself, i.e. acted, in reliance on such shared assumption, its actions resulting in a change of its legal position.
>
> 3) It must also be unjust or unfair to allow one of the parties to resile or depart from the common assumption. The party seeking to establish estoppel therefore has to prove that detriment will be suffered if the other party is allowed to resile from the assumption since there has been a change from the presumed position.

See Wilken, at pp. 227-28; *Canacemal Investment Inc. v. PCI Realty Corp.*, [1999] B.C.J. No. 2029 (B.C. S.C.), at para. 35; *Capro Investments Ltd. v. Tartan Development Corp.*, [1998] O.J. No. 1763 (Ont. Gen. Div.), at para. 31.

(b) Application of the Law

60 The majority of the Court of Appeal held that estoppel by convention applied in the circumstances of this case. It concluded that there was an assumption between the parties as to a state of facts, namely: that Moore was alive; that the parties adopted this assumption as the basis upon which their transactions relating to Ryan's claim were to be conducted; that the dispute in respect of which the estoppel was asserted arose out of the transactions between the parties in dealing with Ryan's claim; and that detriment would flow to Ryan if Moore's estate or the insurer were permitted to resile from the common assumption. As will be evidenced from the analysis below, I cannot agree with this conclusion.

(i) Assumption Shared and Communicated

61 The crucial requirement for estoppel by convention, which distinguishes it from the other types of estoppel, is that at the material time both parties must be of "a like mind" (*Troop v. Gibson*, [1986] 1 E.G.L.R. 1 (Eng. C.A.), at p. 5; *London Borough of Hillingdon v. Arc Ltd.*, [2000] E.W.J. No. 3278 (Eng. C.A.), at para. 49). The court must determine what state of affairs the parties have accepted, and decide whether there is sufficient certainty and clarity in the terms of the convention to give rise to any enforceable equity: *Troop*, at p. 6; see also *Baird Textile Holdings Ltd v. Marks & Spencer Plc*, [2002] 1 All E.R. (Comm) 737 (Eng. C.A.), at para. 84.

62 While it may not be necessary that the assumption by the party raising estoppel be created or encouraged by the estopped party, it must be shared in the sense that each is aware of the assumption of the other (*John v. George*, [1995] E.W.J. No. 4375 (Eng. C.A.), at para. 37). Mutual assent is what distinguishes the estoppel by convention from other types of estoppel (Bower, at p. 184). The courts have described communications complying with this requirement as "crossing the line". In *K. Lokumal & Sons (London) Ltd.*, at pp. 34-35, Kerr L.J. held that

> [a]ll estoppels must involve some statement or conduct by the party alleged to be estopped on which the alleged representee was entitled to rely and did rely. In this sense <u>all estoppels may be regarded as requiring some manifest representation which crosses the line between representor and representee, either by statement or conduct</u>. It may be an express statement or it may be implied from conduct, e.g. a failure by the alleged representor to react to something said or done by the alleged representee so as to imply a manifestation of assent which leads to an estoppel by silence or acquiescence. Similarly, in cases of so-called estoppels by convention, there must be some mutually manifest conduct by the parties which is based on a common but mistaken assumption....
>
> There cannot be any estoppel unless the alleged representor has said or done something, or failed to do something, with the result that — across the line between the parties — his action or inaction has produced some belief or expectation in the mind of the alleged representee, so that, depending on the circumstances, it would thereafter no longer be right to allow the alleged representor to resile by challenging the belief or expectation which he has engendered. To that extent at least, therefore, the alleged representor must be open to criticism. [Emphasis added.]

See also *Norwegian American Cruises A/S*, at p. 350. Thus, it is not enough that each of the two parties acts on an assumption not communicated to the other (*India*, at p. 10). Further, the estopped party must have, at the very least, communicated to the other that he or she is indeed sharing the other party's (ex *hypothesi*) mistaken assumption (*John*, at para. 81; Bower at p. 184).

63 In the present case, the record discloses fourteen letters exchanged by Ryan's counsel and the adjuster with respect to the respondent's personal injury claim (A.R., Vol. II, at pp. 150-70). However, none of these prove the existence of a common assumption. The letters lack clarity and certainty. The mere fact that communications occurred between the parties does not establish that they both assumed that Moore was alive. It is unlikely the question of whether Moore was alive or dead crossed the minds of either the appellants or the respondent. The fact that Ryan's counsel had originally diarized the claim as having a two-

year limitation period under the *Limitations Act* shows that he had not turned his mind to the possibility of a shorter limitation period under the *Survival of Actions Act*. Effectively, this Court is in the presence of mutual ignorance, not mutual assumption.

64 Ryan submits, and it was agreed by the Court of Appeal, that the subject line in the letters exchanged between his counsel and the adjuster which read "Your Insured: Rex Moore" or "Our Insured: Rex Moore" is self-explanatory and indicates an assumption by both parties, that Moore was alive. I strongly disagree. This is an unrealistic interpretation of the subject line in the letters. Such an expression can mean one thing only: the named insured under the automobile insurance policy was Rex Moore. The words are a mere identification of the file the undersigned is dealing with. The Court of Appeal erred by giving weight to the subject line of these letters, which, properly interpreted, provide no evidence of a mutual assumption that Moore was alive.

65 Nor did the fact that the parties were conferring without regard to the limitation period establish a shared assumption that the limitation defence would not be relied on. The letters contain limited and simple requests for details of the claim, and do not establish a convention between the parties (see *Hillingdon London Borough*, at paras. 57 and 60; *Seechurn v. Ace Insurance SA NV*, [2002] 2 Lloyd's Rep. 390 (Eng. C.A.), at p. 396). In fact, the matter did not proceed beyond the preliminary stage of investigating the merits of the personal injury claim. There were no negotiations or settlement discussions, no admission of liability, and no agreement to forego a possible limitation defence.

66 Even if one could conclude that there was a mutual assumption between the parties, I am of the view that it cannot realistically be asserted that the respondent communicated to the appellants that he indeed shared the mistaken assumption. In this regard, I agree with the dissenting members of the Court of Appeal when they affirm (at para. 108):

> It is true that both parties assumed Mr. Moore was alive. That, as noted above, is not sufficient to establish estoppel by convention. Prior to Mr. Moore's death, any reference to him implying he was alive was a reflection of the truth at that time. That cannot be said to be a communication which becomes the basis of a convention that they will proceed on the assumption that Mr. Moore is alive, even beyond his death. There is no direct or circumstantial evidence which would lead to such a conclusion. The question becomes: could any agreement have arisen after Mr. Moore's death? The two letters written by the adjuster after Mr. Moore's death were in error when they said "Our insured — Rex Moore" but there is no communication to the other party and acceptance that they are to govern their future conduct on that basis.

(ii) Detrimental Reliance

67 The appellants submit that detrimental reliance is a requirement that must be proven in order to find convention estoppel. I agree. The Court of Appeal erred in finding this condition fulfilled by simple proof that a detriment would flow to the party asserting the estoppel if the other party were permitted to resile from the assumed stated facts, without a finding of reliance.

68 The jurisprudence and academic comments support the requirement of detrimental reliance as lying at the heart of true estoppel (see Bower, at pp. 6 and 184; *John*, at para. 86; *Hillingdon London Borough; K. Lokumal & Sons (London) Ltd.*, at p. 35; *Litwin Construction (1973) Ltd. v. Kiss* (1988), 52 D.L.R. (4th) 459 (B.C. C.A.), at pp. 469-70; *Canacemal*, at paras. 33-35; *Vancouver City Savings Credit Union v. Norenger Development (Canada) Inc.*, [2002] B.C.J. No. 1417, 2002 BCSC 934 (B.C. S.C.), at para. 74; 32262 *32262 B.C. Ltd. v. Companions Restaurant Inc.* (1995), 17 B.L.R. (2d) 227 (B.C. S.C.), at pp. 235-36.

69 Detrimental reliance encompasses two distinct, but interrelated, concepts: reliance and detriment. The former requires a finding that the party seeking to establish the estoppel changed his or her course of conduct by acting or abstaining from acting in reliance upon the assumption, thereby altering his or her legal position. If the first step is met, the second requires a finding that, should the other party be allowed to abandon the assumption, detriment will be suffered by the estoppel raiser because of the change from his or her assumed position (see Wilken, at p. 228; *Grundt v. Great Boulder Property Gold Mines Ltd.* (1937), 59 C.L.R. 641 (Australia H.C.), at p. 674).

70 Returning to the case at bar, even if one were to assume the existence of a communicated common assumption between the parties, there is no evidence that the respondent relied on this assumption. The evidence suggests that the respondent never put his mind to the shorter *Survival of Actions Act* limitation period. First, Ryan's counsel diarized the matter as a two-year limitation period. Second, the issue of estoppel by convention was raised for the first time by the Court of Appeal itself and

was never discussed before the applications judge. Moreover, in the affidavit of Ryan's counsel, nowhere does he state that he believed that the adjuster intended him to act or refrain from acting in reliance on any agreement (A.R., Vol. II, at pp. 137-46). From the date of the accident, November 27, 1997, to the expiry of the *Survival of Actions Act* limitation period, August 16, 1999, there was never any discussion by the respondent of the limitation period. On October 24, 2000, when Ryan's counsel indicated for the first time to Cabot Insurance's claim examiner that there might be a problem with the limitation period, he did not refer to a mutual understanding that Moore was to be treated as being alive for the purposes of Ryan's claim, nor did he raise the existence of an agreement.

71 It was not open to Ryan's counsel to refrain from bringing an action against Rex Gilbert Moore based solely on the limited communications between counsel. The letters relied upon were limited to the collection of medical information and documentation about Ryan's alleged injuries — nothing more. I have already spoken about the subject line; one cannot disregard the fact that all negotiations/communications were also done on a "without prejudice" basis.

72 Consequently, I agree with the dissenting members of the Court of Appeal that the respondent not only did not rely on this alleged assumption, but his conduct does not show an intention to affect the legal relations between the parties. The record does not disclose that the respondent changed in any way his position on the basis of this alleged mutual assumption.

(iii) Detriment

73 Once the party seeking to establish estoppel shows that he acted on a shared assumption, he must prove detriment. For the plea to succeed, it must be unjust or unfair to allow a party to resile from the common assumption (Wilken, at p. 228). It is often said that the fact that there will have been a change from the presumed legal position will facilitate the establishment of detriment: "This is because there is an element of injustice inherent within the concept of the shared assumption — one party has acted unjustly in allowing the belief or expectation to 'cross the line' and arise in the other's mind": Wilken, at p. 228.

74 This final requirement of estoppel has been described as proving that it would be "unjust", "unconscionable" or "unfair" to permit a party to resile from the mutual assumption (see, e.g., Bower, at p. 181; *John; India; Norwegian American Cruises A/S*). However, it may be preferable to refrain from using "unconscionable", in order to avoid confusion with this last concept which has developed a special meaning in relation to inequality of bargaining power in the law of contracts (where we speak of unconscionable transactions, for instance) (see *Litwin Construction*, at p. 468).

75 In the case at bar, given that there was no shared assumption or reliance, the detriment criterion does not need to be addressed. I would note, however, that a detriment is not established by a reduced limitation period, as suggested by the respondent. Limitation periods and prescriptions, in the diverse areas of the law, have the similar effect and impact. The *Survival of Actions Act* has provided a benefit not available at common law; this benefit cannot legitimately be characterized as unfair and unjust.

(2) Estoppel by Representation

76 Where there is no shared assumption, as in the present case, there can be no estoppel by convention, no matter how unjust the other party's conduct may appear to be. However, in some circumstances, the party seeking to establish estoppel may be able to rely on estoppel by representation, an alternative here advocated by the respondent. The added difficulty in such a case is that an estoppel by representation cannot arise from silence unless a party is under a duty to speak. Silence or inaction will be considered a representation if a legal duty is owed by the representor to the representee to make a disclosure, or take steps, the omission of which is relied upon as creating an estoppel: see Wilken, at p. 227; Bower, at pp. 46-47.

77 Ryan submits that in the present case silence constituted a representation grounding estoppel because there was a duty to disclose relevant information as it would be unfair for the appellants to benefit from non-disclosure. I disagree. In the present case, there was no duty on the appellants, who were at the time only potential defendants, to advise Ryan of a limitation period, to assist him in the prosecution of the claim, or to advise him of the consequences of the death of one of the parties. There is no fiduciary or contractual relationship here (contrast with *Queen v. Cognos Inc.*, [1993] 1 S.C.R. 87 (S.C.C.)). The appellants had no duty to exercise reasonable care, nor to divulge any information.

78 Hence, there was no representation, no duty to speak, no intention to affect legal relations and no reliance in this case.

III. Conclusion

79 The legislature created an exception to the common law rule by enacting the *Survival of Actions Act*. It extended the rights of the parties to permit them to continue an action against a deceased. The relevant provision modifies the common law. It is not this Court's role to interfere with the scheme established by the legislature.

80 There are no reasons based on estoppel, or any other legal doctrine, to preclude Moore's estate or Cabot Insurance from relying on the *Survival of Actions Act* limitation period. Accordingly, I would allow the appeal on the issue of estoppel, affirm the decision of the Court of Appeal on the other issues, and strike the statement of claim, with costs throughout, at all levels of court.

Appeal allowed.

Pourvoi accueilli.

Appendix A

Limitations Act, S.N.L. 1995, c. L-16.1

[Limitation period 2 years]

5. Following the expiration of 2 years after the date on which the right to do so arose, a person shall not bring an action

(a) for damages in respect of injury to a person or property, including economic loss arising from the injury whether based on contract, tort or statutory duty;

. . . . .

[Confirmation]

16. (1) A confirmation of a cause of action occurs where a person

(a) acknowledges that cause of action, right or title of another person; or

(b) makes a payment in respect of that cause of action, right or title of another.

(2) Where a person against whom an action lies confirms that cause of action, the time before the date of that confirmation shall not count when determining the limitation period for a person having the benefit of the confirmation against the person bound by that confirmation.

(3) Subsection (2) applies only to a right of action where the confirmation is given before the expiration of the limitation period for that right of action.

. . . . .

(5) In order to be effective a confirmation must be in writing and signed by

(a) the person against whom that cause of action lies; or

(b) his or her agent

and given to the person or agent of the person having the benefit of that cause of action.

Survival of Actions Act, R.S.N.L. 1990, c. S-32

[Causes of action to survive]

2. Actions and causes of action

(a) vested in a person who has died; or

(b) existing against a person who has died,

shall survive for the benefit of or against his or her estate.

[Limitation of action]

5. An action shall not be brought under this Act unless proceedings are started within 6 months after letters of probate or administration of the estate of the deceased have been granted and proceedings shall not be started in an action under this Act after the expiration of 1 year after the date of death of the deceased.

Russel W. Zinn J.

Judgment: October 11, 2016
Docket: T-2579-91

Counsel: William J. Major, Yana R. Sobiski, David G. Leitch, Ben Hiemstra, Kevin Scullion, for Plaintiffs
Michael Roach, Jennifer Francis, Sarah Sherhols, for Defendant, Canada
Leonard Marsello, Donna Salmon, Vanessa Glasser, Nikita Rathwell, for Third Party, Ontario
W. Glen McFetridge, Kirsten Wright, for Third Party, Manitoba

***Russel W. Zinn J.*:**

1 I have before me two objections relating to the proposed evidence of Ms. P.M. (Patt) Larcombe whom the Plaintiff seeks to have qualified as an expert witness.

2 Ontario filed an objection on July 13, 2016, to the proposed expert witness regarding her qualifications to give opinion evidence, pursuant to Rule 52.5 of the *Federal Courts Rules*. Ontario has been joined and supported in its motion by both Canada and Manitoba. Prior to the *voir dire* with respect to the qualifications of Ms. Larcombe, Canada advised that it was objecting to the admissibility of a set of evidence called the Focus Group Transcripts. Canada indicated that if Ms. Larcombe is qualified to testify to some extent as an expert, then her evidence, in so far as it relies upon the Focus Group Transcripts, ought not to be received because the transcripts are not admissible evidence. Canada was supported in its motion by Ontario. Manitoba took no position with respect to this objection.

Ontario's Objection

3 The *voir dire* was held over two days last week during which Ms. Larcombe's qualifications and expertise were explored in some detail by both the Plaintiff and Ontario. Despite the objection of Plaintiff's counsel, the Court permitted Ontario wide latitude in its cross-examination of Ms. Larcombe's report and her expertise. As noted in the Court's ruling at that time, this was permitted in large part because Ms. Larcombe's professed area of expertise, cultural geography, is not an area of expertise previously recognized by this Court or, based on my research, by any other court in this country. Moreover, as the Ontario Court of Appeal stated in *R. v. Abbey*, 2009 ONCA 624 (Ont. C.A.) at paragraph 62: "Before deciding admissibility, a trial judge must determine the nature and scope of the proposed expert evidence."

4 Ms. Larcombe testified that there are two streams of study in geography: physical geography and cultural geography. Physical geography deals with the study of processes and patterns in the natural environment like the atmosphere, hydrosphere, biosphere, and geosphere. Cultural geography was described by Ms. Larcombe as "looking at human community relationships to the landscape; how people relate; how they use the land; other patterns of land use."

5 In opposing Ontario's motion, the Plaintiff submitted that Ontario had failed to comply in a timely manner with Rule 52.5, which provides, that "a party to a proceeding shall, as early as possible in the proceeding, raise any objection to an opposing party's proposed expert witness that could disqualify the witness from testifying." In this case, the objection to Ms. Larcombe as an expert was raised more than two years after her report was presented to the opposing parties.

6 Rule 52.5 says nothing about any consequence of a failure to make a timely objection. It was suggested that the lateness of the objection prejudiced the Plaintiff as it would have to retain other experts and seek an adjournment of the trial if the evidence of Ms. Larcombe was not accepted. It was suggested that the conduct of Ontario in making this late objection was tactical and ought not to be rewarded.

7 Ultimately, the qualification of an expert is a decision for the trial judge, whether or not there has been any objection to that proposed expert. While it would have been preferable if Ontario had raised its concerns with the Plaintiff long ago to avoid any possible disruption of what is scheduled to be a 100-day trial, I cannot let that stand in the way of what I find, in part, to be a valid objection to the expertise of this proposed witness.

8 In calling Ms. Larcombe, counsel stated that the Plaintiff was looking to have her "qualified as an expert to give evaluation on loss of use." It was more specifically stated that the Plaintiff is seeking to have Ms. Larcombe qualified as an expert witness in "cultural geography with specialty in aboriginal traditional livelihood loss of use valuation; evaluating impacts on First Nations' livelihood and living conditions resulting from industrial and hydroelectric development projects; and evaluating mitigation measures aimed at reducing impacts on First Nations' livelihood and living conditions resulting from these projects."

9 In *White Burgess Langille Inman v. Abbott and Haliburton Co.*, 2015 SCC 23 (S.C.C.) at paragraph 22, the Supreme Court of Canada adopted, with minor adjustments, the two-step inquiry for admitting expert opinion evidence as stated by the Ontario Court of Appeal in *R. v. Abbey*, 2009 ONCA 624 (Ont. C.A.).

10 At the first step of the inquiry, the proponent of the evidence must establish the threshold requirements of admissibility. The threshold requirements of admissibility consist of the criteria set out by the Supreme Court of Canada in *R. v. Mohan*, [1994] 2 S.C.R. 9 (S.C.C.). Evidence that does not meet these criteria should be excluded. The criteria are:

(a) Relevance;

(b) Necessity in assisting the trier of fact;

(c) The absence of any exclusionary rule; and

(d) A properly qualified expert.

11 The logical relevance of expert evidence is determined by asking whether it relates to a fact in issue and whether it tends to prove the fact in issue. I agree with the Plaintiff, that the proposed evidence is relevant to the claim as framed by the Plaintiff. Indeed, this was not challenged in the memorandum submitted by Ontario or in its oral submissions.

12 Similarly, there was no suggestion that the proposed opinion evidence ought to be excluded because it offends another rule of evidence.

13 Ontario's challenge was that the proposed witness is not a properly qualified expert and her evidence is not necessary to assist the trier of fact.

14 Let me first address whether the proposed evidence meets the test of necessity in assisting the trier of fact.

15 The Supreme Court of Canada at paragraph 14 of *Mohan* emphasized that the necessity requirement is not met where the proposed evidence is merely "helpful" to the trier of fact. The necessity of the opinion in this case requires that it provides information which is likely to be outside the experience and knowledge of the trial judge.

16 I am satisfied that this condition is also met. The losses to which the expert speaks that resulted from the flooding of Lac Seul and the valuation of those losses are not matters within my knowledge or experience.

17 This brings me to the final question: Is Ms. Larcombe a properly qualified expert?

18 The Supreme Court of Canada at paragraph 17 of *Mohan* observed that an expert witness must possess "special or peculiar knowledge through study or experience in respect of the matters on which he or she undertakes to testify."

19 The Supreme Court of Canada in *R. v. Marquard*, [1993] 4 S.C.R. 223 (S.C.C.), quoted with approval the following passage from Sopinka, Lederman and Bryant, *The Law of Evidence in Canada* (Markham: Butterworths, 1992), at 536-37:

> The admissibility of [expert] evidence does not depend upon the means by which that skill was acquired. As long as the court is satisfied that the witness is sufficiently experienced in the subject-matter at issue, the court will not be concerned with whether his or her skill was derived from specific studies or by practical training, although that may affect the weight to be given to the evidence.

20 Ms. Larcombe has an undergraduate degree, a bachelor of science in geography and a graduate degree, a master of science in geography. It was during her graduate studies that she began to focus on the area of cultural geography. She has had some very limited experience teaching courses which generally can be said to fall within the rubric of cultural geography. She has no publications that have been peer reviewed on the area of cultural geography. She has, however, as part of her work over the past 29 years, prepared a number of reports some of which have been accepted for publication by her clients on their websites. It would appear from her evidence that none of these published documents contain an assessment of economic or financial loss such as that contained in her report in this litigation.

21 Ms. Larcombe has never been qualified by a court as an expert witness. She has limited experience testifying as a witness before one arbitrator and two tribunals. Although she describes herself as having been called as an expert witness for one of the parties, her qualifications were not challenged and there is no evidence that her testimony was accepted by the arbitrator or tribunal, or even found to be of use.

22 During her 29 years as a consultant, Ms. Larcombe has performed a number of studies and authored a number of reports for her clients some of which are described in her curriculum vitae which was entered as Exhibit 7152. She has performed retrospective loss of use evaluation studies. As she explained, these are studies where she has looked backwards to determine the impact a past event had from a contemporary point of view. She described these as typically being situations where First Nation communities have been impacted by hydroelectric projects, loss of reserve lands, and impacts from other industries. She described her work as "after the fact, looking backwards to evaluate and put a monetary value on what the effects were from past experiences." The other aspect of her work was described as predictive impact assessments. This is where she is called upon to provide an assessment of the future impact of an event which is planned or proposed to take place.

23 Specifically, Ms. Larcombe's report in this action provides a loss of use analysis with respect to six items under Tabs A1-A6 of her report: Hay for livestock, food from gardens, trapping income, food from wildlife, food and income from manomin (wild rice), and food from fishing.

24 She described her methodology in estimating the quantity of each of these that was lost from the Lac Seul First Nation economy. She looked for information with respect to these goods prior to the flooding in 1929 and thereafter. Where there was no such information she looked to what she described as "credible literature" which may have been studies done for other First Nations in the same or different decades in history. The difference between the pre-flooding number and the post flooding number, she explains, gives you the loss realized as a result of the flooding. She then attaches a value to each animal or kilogram based on either an imputed or replacement cost and she explained the process she uses in determining that. Lastly when she was looking at the current value she would adjust that value to its 1929 value using cost-of-living information. That, as she described it is the accepted approach in her field of expertise.

25 Based on her years of work in this field, I accept that Ms. Larcombe is an expert in the field of cultural geography and is qualified to provide expert opinion evidence on the specific loss of use by the Lac Seul First Nation as specified in Tabs A1-A6 of her report.

26 The second section of Ms. Larcombe's report, Tabs B1 to 4, describe "avoidable losses" to houses, cabins and campsites, community and agricultural property and access infrastructure, and interment sites. Ms. Larcombe testified that in assessing avoidable costs, she was "looking at what would it have cost in 1929 to avoid the flooding of houses, to avoid the flooding of cabins — or not to avoid it, to address the loss of those by reconstructing new ones in locations that would not be flooded or in the case of, for example fencing, what was the value of those fences that were flooded and in the case of docks what would it cost to construct docks in the year 1929" and evidence regarding interment sites and costs. She testified that in determining avoidable costs she relied on data where it was available that was specific to Lac Seul, but where no such data was available she relied on her "own analysis and interpretation of other data sources that provided an indication of the cost of building or replacing things circa 1929."

27 The Plaintiff submits that Ms. Larcombe is not "being proposed to give appraisal evidence respecting the reasonable cost of housing in 1929 [rather] she is being proposed as an expert qualified to give an opinion on the reasonableness of the mitigation measures, adopted or not by Canada, with respect to the First Nation's housing loss."

28 Her "reasonableness" evaluation is based on her opinion of the cost of replacing houses and other structures. I do not accept that Ms. Larcombe is qualified to provide an opinion as to the value of any of these avoidable losses in 1929 as set out at Tabs B1 to B4. Ms. Larcombe has no expertise in this area whatsoever. Specifically, she has no expertise permitting her to offer an opinion as to the valuation of comparable housing, cabins, other structures, fencing and docks, and interments in 1929. There are experts in this area who can offer evidence of assistance to the Court.

29 Although Ontario was prepared to accept her evidence with respect to interment on the basis that there were no experts on this, the Court is not prepared to accept all of her evidence in this regard. The Court will accept her evidence of *historical facts*, including, for what it may be worth, the views of the Lac Seul First Nations from the transcripts discussed below, in Tab B4 sections 1 to 4 of her report, but not the opinion she expresses in section 5 as in the Court's view this is not retrospective loss of use evaluation. The Court is in as good a position as Ms. Larcombe to make an assessment of the costs of relocating graves set out in section 5 of her report. She has no expertise in this area that assists the Court and her estimate is made on personal, rather than her expert opinion.

30 Finally, with respect to those areas of the proposed evidence that meet the first step of the inquiry enunciated in *Abbey*, I turn to the second step of inquiry. At the second step, the judge performs a "gatekeeping" function by balancing "the potential risks and benefits of admitting the evidence in order to decide whether the potential benefits justify the risks."

31 In *Masterpiece Inc. v. Alavida Lifestyles Inc.*, 2011 SCC 27 (S.C.C.) at para 76, Justice Rothstein stated that "Courts must fulfill their gatekeeper role to ensure that unnecessary, irrelevant and potentially distracting expert and survey evidence is not allowed to extend and complicate court proceedings." The balancing exercise has been described in many ways by the Courts. In *R. c. J. (J.)*, 2000 SCC 51 (S.C.C.) at para 47, Justice Binnie outlined the criteria for reception to be relevance, reliability, and necessity and the counterweights to be consumption of time, prejudice, and confusion.

32 The assessment of reliability within the second step of the inquiry utilizes a flexible approach. In *Abbey* at para 117, the Ontario Court of Appeal stated that the proper question to be answered when addressing the reliability of non-scientific theories is whether an expert's research and experiences has permitted the expert to develop a specialized knowledge that is sufficiently reliable to justify placing the opinion before a judge or jury.

33 Mr. Marsello for Ontario, in his cross-examination of Ms. Larcombe pointed out a number of potential weaknesses or deficiencies or concerns with respect to her evaluation including the reasonableness of the assumptions that she makes in reaching her estimated loss. The Plaintiff submits that these go to the weight to be given to her evidence, not to the reliability of her evidence.

34 If I was able to say with certainty at this stage that her opinion evidence on the value of these losses was of no or very little weight, then it would be appropriate to exclude it as being unreliable and of little or no value to the trial judge. However, although Mr. Marsello has raised significant concerns in that regard, I find that I cannot reach any conclusion in the absence of a full examination of Ms. Larcombe's and other witnesses' testimony. Accordingly, at this point I cannot say that Ms. Larombe's evidence is unnecessary, irrelevant and potentially distracting such that it should not be allowed.

35 For these reasons, I find that Ms. Larcombe is qualified as an expert witness in cultural geography with specialty in:

1. aboriginal traditional livelihood loss of use valuation; and

2. evaluating impacts on First Nations' livelihood and living conditions resulting from industrial and hydro development projects.

36 She is permitted to provide the Court with an expert opinion on loss of use of the Lac Seul First Nation's traditional economy, in relation to losses it experienced on reserve lands and traditional territory as a result of the construction of the Ear Falls Dam and flooding of Lac Seul, specifically with respect to:

a. decreased opportunity and success in Lac Seul First Nation's traditional harvesting practices;

b. lost opportunity to harvest wild rice for human nutritional needs and income;

c. decreased opportunity and success in trapping aquatic furbearer species;

d. lost opportunity to grow vegetable products for human nutritional needs; and

e. lost opportunity to feed cattle that were maintained for human nutritional needs.

37 She is also permitted to provide factual historical evidence relating to interment sites of the Lac Seul First Nation that were lost or damaged.

38 In sum, the Court accepts that Ms. Larcombe is an expert and may offer the opinions she advances in Tabs A1 to A6 inclusive, as well as the facts from historical records set out in Tab B4 sections 1 to 4, and her opinion on interment sites of the Lac Seul First Nation that were lost or damaged based on the historical record.

Canada's Objection

39 Canada is seeking a ruling on the admissibility of the Focus Group Transcripts. It submits that Ms. Larcombe in parts of her report relied "fairly extensively" on them. Canada acknowledges that its expert, Dr. Reimer also relied, in part, on these transcripts.

40 The Focus Group Transcripts are a series of seven transcripts of focus group discussions held between 1994 and 1997.

41 Canada submits that this evidence is compromised as a consequence of the way it was collected. It was collected by the Lac Seul First Nation specifically for statements made by those interviewed about the losses occasioned by the flooding. This is a central issue in the litigation and the statements made by those interviewed appears to have been used by Ms. Larcombe (I cannot speak to Ms. Reimer as I have not yet read her report) as statements of fact as to the losses experienced by members of the Lac Seul First Nation.

42 Canada submits that this evidence is compromised because of the manner in which it was collected — having been collected from members of the Lac Seul First Nation, by the Lac Seul First Nation specifically for the purposes of providing evidence to be used in this action. It is not disputed that the evidence was not given under oath, and that there has been no cross-examination or testing of that evidence. Moreover, where the evidence was provided in the first language of the member, it was translated by a member of the Lac Seul First Nation.

43 It is unknown to the Court whether there are living potential witnesses who can speak to the matters addressed in these transcripts, but that is not relevant in assessing Canada's objection.

44 The Plaintiff submits, and I agree, that Canadian jurisprudence holds that experts are entitled to rely on hearsay or out-of-court evidence or statements when forming their opinions. It is a question of the weight to be accorded to the opinion when it relies on such hearsay evidence.

45 An expert may have formed his or her opinion on the basis of information that is not in evidence before the Court. For example, the expert may have relied on interviews, reports of others, or results from tests administered by others. What is essential is that the trier of fact knows on what basis the expert formed his or her opinion. The evidence used in this way is inadmissible as hearsay in proof of the facts asserted, but is admissible as the basis upon which the opinion was formed.

46 The Plaintiff submits that the transcripts are admissible as the basis on which Ms. Larcombe formed her opinion. It appears to accept that the weight to be given to her opinion evidence may consider the fact that it was based, in whole or part, on evidence collected in the manner objected to by Canada.

47 Where, as here, an expert bases her opinion on hearsay statements made by persons who are members of one of the litigants, Justice Sopinka in *R. v. Lavallee*, [1990] 1 S.C.R. 852 (S.C.C.) at page 898, cautioned that it ought not to be accepted without independent support:

> Where, however, the information upon which an expert forms his or her opinion comes from the mouth of a party to the litigation, or from any other source that is inherently suspect, a court ought to require independent proof of that information. The lack of such proof will, consistent with Abbey, have a direct effect on the weight to be given to the opinion, perhaps to the vanishing point. But it must be recognized that it will only be very rarely that an expert's opinion is entirely based upon such information, with no independent proof of any of it. Where an expert's opinion is based in part upon suspect information and in part upon either admitted facts or facts sought to be proved, the matter is purely one of weight.

48 In the matter before the Court it is unclear whether in all cases where Ms. Larcombe relies on the transcripts there is other independent proof of the "facts" asserted by the First Nation's members. Absent such support, it is likely that the weight given to her opinion will be close to the "vanishing point" noted by Justice Sopinka.

49 Accordingly, while I agree with Canada that the Focus Group Transcripts are not admissible for the truth of their contents, the experts are permitted to provide an opinion based on them, provided that opinion is otherwise within the scope of their expertise. In the case of Ms. Larcombe, that is restricted to the retrospective loss evaluation set out in her opinion at Tabs A1 to A6. The weight accorded that opinion will depend, in part, on the existence of other corroborative evidence.

ORDER

THIS COURT ORDERS that:

1. Ms. Larcombe is qualified as an expert witness in cultural geography with specialty in:

    a. aboriginal traditional livelihood loss of use valuation; and

    b. evaluating impacts on First Nations' livelihood and living conditions resulting from industrial and hydro development projects.

2. Ms. Larcombe is permitted to provide the Court with an expert opinion on loss of use of the Lac Seul First Nation's traditional economy, in relation to losses it experienced on reserve lands and traditional territory as a result of the construction of the Ear Falls Dam and flooding of Lac Seul, specifically with respect to:

    a. decreased opportunity and success in Lac Seul First Nation's traditional harvesting practices;

b. lost opportunity to harvest wild rice for human nutritional needs and income;

c. decreased opportunity and success in trapping aquatic furbearer species;

d. lost opportunity to grow vegetable products for human nutritional needs; and

e. lost opportunity to feed cattle that were maintained for human nutritional needs.

3. Ms. Larcombe is also permitted to provide factual historical evidence and her opinion relating to interment sites of the Lac Seul First Nation that were lost or damaged.

4. In sum, the Court accepts that Ms. Larcombe is an expert and may offer the opinions she advances in Tabs A1 to A6 inclusive, as well as the facts from historical records set out in Tab B4 sections 1 to 4, and her opinion on interment sites of the Lac Seul First Nation that were lost or damaged based on the historical record.

Order accordingly.

2015 SCC 3, 2015 CSC 3
Supreme Court of Canada

Tervita Corp. v. Canada (Commissioner of Competition)

2015 CarswellNat 32, 2015 CarswellNat 33, 2015 SCC 3, 2015 CSC 3, [2015] 1 S.C.R. 161, [2015] S.C.J. No. 3, 248 A.C.W.S. (3d) 811, 380 D.L.R. (4th) 381, 467 N.R. 97, 79 Admin. L.R. (5th) 1, J.E. 2015-140

Tervita Corporation, Complete Environmental Inc. and Babkirk Land Services Inc., Appellants and Commissioner of Competition, Respondent

McLachlin C.J.C., Abella, Rothstein, Cromwell, Moldaver, Karakatsanis, Wagner JJ.

Heard: March 27, 2014
Judgment: January 22, 2015
Docket: 35314

Proceedings: reversing *Commissioner of Competition v. CCS Corp.* (2013), (sub nom. *Tervita Corp. v. Canada (Commissioner of Competition))* [2014] 2 F.C.R. 352, (sub nom. *Tervita Corp. v. Counsel: John B. Laskin, Linda M. Plumpton, Dany H. Assaf, Crawford G. Smith, for Appellants
Christopher Rupar, John Tyhurst, Jonathan Hood, for Respondent

Rothstein J. **(McLachlin C.J.C., Cromwell, Moldaver and Wagner JJ. concurring):**

I. Overview

1 The appellant in this case, Tervita Corp., operates two hazardous waste secure landfills in British Columbia. In February 2010, Tervita Corp. acquired a company which held a permit for another secure landfill site. This transaction attracted the attention of the Commissioner of Competition, who initiated the merger review process under the Competition Act, R.S.C. 1985, c. C-34 (“Act”).

2 The purpose of the Act is in part "to maintain and encourage competition in Canada in order to promote the efficiency and adaptability of the Canadian economy" (s. 1.1). It is within this context that merger reviews are conducted. This appeal provides this Court the opportunity to address two issues in merger review: the "prevention" branch of s. 92 and the s. 96 efficiencies defence.

II. Facts

3 Four permits for the operation of secure landfills for the disposal of hazardous waste generated by oil and gas operations have been issued in Northeastern British Columbia. The appellant Tervita Corp. holds two of the permits and operates two hazardous waste landfills pursuant to them: the Silverberry (capacity for 6,000,000 tonnes of waste) and Northern Rockies (3,344,000 tonnes) landfills. A third permit was issued for the Peejay site, a site developed by an Aboriginal community, but the landfill has not yet been constructed.

4 The fourth permit, Babkirk site, is held by the appellant Babkirk Land Services Inc. ("Babkirk"), a wholly owned subsidiary of the appellant Complete Environmental Inc. ("Complete"). The previous Babkirk owners operated a hazardous waste landfill

on the site from 1998 to 2004. In 2009, they sold Babkirk to Complete, which is owned and controlled by five investors (the "Vendors").

5 The Vendors intended to begin operating the Babkirk site mainly as a bioremediation facility which would treat contaminated soil using micro-organisms, and to complement the bioremediation site with a secure landfill facility to store hazardous waste not amenable to bioremediation. In February 2010, the Vendors received a permit for this secure landfill with a capacity of 750,000 tonnes.

6 Soon afterwards, a company called Integrated Resources Technologies Ltd. ("IRTL") offered to purchase Complete. The Vendors then explored the possibility of selling to other third parties. Secure Energy Services ("SES") showed some interest, but at a lower price. The Vendors decided to accept IRTL's offer, but it was withdrawn in June 2010 due to lack of financing. In one last attempt to sell, the Vendors pursued various discussions with SES and Tervita Corp., then known as CCS Corp. (hereinafter "Tervita Corp."). In July 2010, the Vendors reached an understanding with Tervita Corp. and a letter of intent was signed.

7 The sale of the Vendors' shares in Complete (including Babkirk and the Babkirk site) closed on January 7, 2011. However, prior to closing, the Commissioner of Competition informed the parties that she opposed the transaction on the ground that it was likely to substantially prevent competition in secure landfill services in Northeastern British Columbia. After closing, the Commissioner asked the Competition Tribunal to order, pursuant to s. 92 of the Competition Act, that the transaction be dissolved, or in the alternative, that Tervita Corp. divest itself of Complete or Babkirk.

8 The three appellants in this appeal, Tervita Corp., Complete and Babkirk, are hereinafter referred to collectively as "Tervita".

III. Statutory Provisions

9 The relevant statutory provisions in this case are included in the Appendix. The statutory provisions most directly at issue in this appeal are ss. 92, 93 and 96 of the Act.

IV. Decisions Below

A. Competition Tribunal, [2012] C.C.T.D. No. 14 (Competition Trib.) (QL)

10 Pursuant to s. 92, the Tribunal found that the merger was likely to prevent competition substantially in the relevant market. The Tribunal further found that Tervita had not brought itself within the efficiencies exception contained in s. 96 that would have permitted the merger notwithstanding s. 92. It found that the efficiencies gained by the merger were not greater than the effects of the likely prevention of competition resulting from the merger, and would not offset those effects. It ordered Tervita to divest itself of Babkirk.

(1) Section 92

11 The Tribunal assessed whether "effective competition in the relevant market likely [would] have emerged 'but for' the [m]erger" (para. 129). The parties "essentially agreed" that the commencement of the timeframe for considering the "but for" market condition, i.e. a market condition where the merger did not occur, was the end of July 2010 (para. 131). This was the point in time a letter of intent between Tervita and the Vendors was signed. The Tribunal agreed that this timeframe commenced at the end of July 2010.

12 As of the end of July 2010, the Tribunal saw only two realistic scenarios for the Babkirk site:

1. The Vendors would have sold to a waste company called [SES], which would have operated a Secure Landfill; or

2. The Vendors would have operated a bioremediation facility together with a half cell of Secure Landfill. [para. 132]

13 The Tribunal found that, on a balance of probabilities, SES would not have made an acceptable offer for the Complete site at any time during the summer of 2010. Thus, according to the Tribunal, the Vendors would have moved forward with the second option: operate the Babkirk site as a bioremediation facility.

14 Bioremediation is a "method of treating soil by using micro-organisms to reduce contamination" (para. 42). The Tribunal concluded that the Vendors would have had the bioremediation facility fully operational by October 2011, but that it would have been unprofitable. The Tribunal concluded that it was "unreasonable to suppose that [the Vendors] would have been prepared to operate unprofitably beyond the fall of 2012" (para. 206). Accordingly, the Tribunal found that the Vendors would have either begun operating the Babkirk site as a secure landfill themselves or would have sold the site to a purchaser who would have operated the site as a secure landfill. Either way, the Babkirk site full-service secure landfill would have been a "direct and substantial" competitor with Tervita no later than the spring of 2013 (para. 215).

15 The Tribunal found that a likely effect of the merger would have been to allow Tervita to maintain its ability to exercise materially greater market power than it would in the absence of the merger. It found that in the absence of the merger, disposal fees, called "tipping fees" in the industry, would have been 10 percent lower in the "Contestable Area" (the relevant geographic market) (para. 229(iii)).

16 The Tribunal concluded that the merger was likely to prevent competition substantially.

(2) Section 96

17 The s. 96 efficiencies defence is an exception to the application of s. 92. The defence prohibits the Tribunal from making an order precluding a merger when it finds that the merger is likely to bring about gains in efficiency that would be greater than and would offset the anti-competitive effects of the merger.

18 The Tribunal found that the Commissioner had failed to meet her burden to demonstrate the extent of the quantifiable anti-competitive effects. The Commissioner's expert had only estimated that a price decrease of 10 percent would be precluded by the merger but provided no estimate of the volume having regard to the elasticity of demand. The Tribunal found that this meant that Tervita could not take a position about whether the number it calculated as its total efficiencies was greater than the adverse effects of the merger (para. 246). However, the Tribunal concluded that, "in the unusual circumstances of this case", Tervita was not prejudiced by the Commissioner's failure to quantify the anti-competitive effects of the merger. Tervita was still able to effectively attack the Commissioner's expert's findings and assert the s. 96 defence (para. 246). The Tribunal accepted, on a balance of probabilities, the Commissioner's expert's estimate of a minimum annual deadweight loss (paras. 301-3).

19 The Tribunal also accepted what it found to be qualitative anti-competitive effects — namely environmental effects related to price reduction on-site clean-up and "value propositions", or offers Tervita would have made in a competitive environment to certain customers resulting in lower total cost for overall waste services used by such customers (paras. 306-7).

20 The Tribunal rejected most of Tervita's claimed efficiencies gains because they would likely be achieved even if the divestiture order were made (para. 265). The Tribunal also rejected the claimed "order implementation efficiencies" ("OIEs") — those transportation and market expansion efficiencies resulting from delays associated with the implementation of a divestiture order. The Tribunal held that OIEs are not cognizable under s. 96, because to give merging parties the benefit of these efficiencies would be contrary to the purposes of the Act (para. 270). The Tribunal did accept "overhead" efficiencies claimed by Tervita (para. 275).

21 The Tribunal weighed the proven quantifiable efficiency gains against the quantifiable anti-competitive effects it accepted and found that the combined quantitative and qualitative efficiency gains were not likely to be "greater than" the combined quantitative and qualitative anti-competitive effects (paras. 313-14). The Tribunal further supported this conclusion on the basis that, in the absence of a s. 92 order, the merger would maintain a monopolistic structure in the relevant market, thus precluding "benefits of competition that will arise in ways that will defy prediction" (para. 317).

22 In his concurring reasons, Chief Justice Crampton [1], held that for non-quantified effects, where there is not sufficient evidence to provide even a rough quantification of an effect that is ordinarily quantifiable, the Tribunal is still able to accord this factor some qualitative weight (para. 408).

B. Federal Court of Appeal, 2013 FCA 28, 446 N.R. 261 (F.C.A.)

23 Tervita appealed to the Federal Court of Appeal, challenging the divestiture order made by the Tribunal.

24 The Federal Court of Appeal first determined that the Tribunal's findings on questions of law should be reviewed on a standard of correctness, while its findings on questions of fact or of mixed law and fact should be reviewed on a standard of reasonableness (paras. 52-68).

(1) Section 92

25 The Federal Court of Appeal confirmed the Tribunal's approach that the analysis required under s. 92 of the Act is "necessarily forward-looking" (para. 87) and therefore the Tribunal was correct in "look[ing] into the future to ascertain whether the [Babkirk site entering] the market would have occurred within a reasonable period of time" (para. 88). While recognizing that what constitutes a reasonable period of time will "necessarily vary from case to case and will depend on the business under consideration" (para. 89), the court set out two guidelines for determining what constitutes a "reasonable period of time":

(1) "the time frame must be discernible" (para. 90), and

(2) "the timeframe for market entry should normally fall within the temporal dimension of the barriers to entry into the market at issue" (para. 91).

26 Applying those guidelines, the Federal Court of Appeal held that the Tribunal "discerned a clear time frame under which the Babkirk site would enter the market for secure landfills" (para. 92) and that this discernible timeframe "was also well within the temporal framework of the barriers to market entry" (para. 94).

27 The Federal Court of Appeal upheld the Tribunal's conclusion that the proposed merger would likely substantially prevent competition.

(2) Section 96

28 The Federal Court of Appeal found that the Tribunal had erred in allowing the Commissioner to discharge her burden of proving the quantifiable anti-competitive effects through a reply expert report setting out a "rough estimate" of the deadweight loss arising from the merger (para. 128). Tervita had suffered prejudice because the Tribunal had accepted the methodology of the Commissioner's expert which was "clearly deficient" (para. 124) as the methodology used was not capable of calculating the deadweight loss (paras. 123-25). Although Tervita has the ultimate burden of establishing that the efficiency gains are greater than and offset the anti-competitive effects, this "does not relieve the Commissioner of her burden to prove the anti-competitive effects and to quantify those effects where possible" (para. 127).

29 The Federal Court of Appeal agreed with the Tribunal that to recognize the OIEs would be contrary to the overall scheme of the Act (para. 135). Further, because Tervita had still not started to build or operate at the Babkirk site, those gains had not been and never would be realized (para. 138).

30 Respecting the final balancing under s. 96, the Federal Court of Appeal found that the Tribunal had generally set out the right test (para. 146), except that its methodology was overly subjective. Efficiencies and anti-competitive effects should be quantified wherever reasonably possible, and the weight given to unquantifiable qualitative effects must be reasonable (para. 148). The court held that the Tribunal erred in a number of respects, including considering qualitative environmental effects that were not cognizable under s. 96 (paras. 155-56), double-counting the reduced site clean-up as both a qualitative effect

and as part of the deficient deadweight loss analysis (para. 157) and considering Tervita Corp.'s monopoly as a distinct anti-competitive effect (paras. 159-61).

31 In the Federal Court of Appeal's fresh assessment of the matter, it concluded that the quantitative anti-competitive effects of the merger which were not quantified by the Commissioner should be afforded an "undetermined" weight (paras. 167-68), as opposed to a weight of zero. In this case, the merger only provided marginal gains in efficiency while at the same time strengthening the market monopoly in the area (para. 169). The court held that an anti-competitive merger cannot be approved under s. 96 if only marginal or insignificant gains in efficiency result from it (paras. 170-72). In this case, the conclusion was strengthened because "a pre-existing monopoly, such as is the case here, will usually magnify the anti-competitive effects of a merger" (para. 173).

32 The Federal Court of Appeal dismissed Tervita's appeal.

V. Issues

33 This appeal raises three issues:

1. What is the appropriate standard of review?

2. What is the proper legal test to determine when a merger gives rise to a substantial prevention of competition under s. 92(1) of the Act?

3. What is the proper approach to the efficiencies defence under s. 96 of the Act and, in this respect:

   a. Can order implementation efficiencies be included as efficiency gains in the balancing analysis?

   b. What is the proper approach to the requirement that efficiency gains be greater than and offset the anti-competitive effects?

VI. Analysis

A. Standard of Review

34 The parties agree that the Federal Court of Appeal properly applied a correctness standard of review to the Tribunal's determinations of questions of law. I agree that correctness is the applicable standard in this case.

35 The questions at issue are questions of law arising under the Tribunal's home statute and therefore a standard of reasonableness presumptively applies (*New Brunswick (Board of Management) v. Dunsmuir*, 2008 SCC 9, [2008] 1 S.C.R. 190 (S.C.C.), at para. 54; *Alliance Pipeline Ltd. v. Smith*, 2011 SCC 7, [2011] 1 S.C.R. 160 (S.C.C.), at para. 28, *per* Fish J.; *A.T.A. v. Alberta (Information & Privacy Commissioner)*, 2011 SCC 61, [2011] 3 S.C.R. 654 (S.C.C.), at para. 30). However, the presumption of reasonableness is rebutted in this case.

36 A decision or order of the Tribunal on a question of law is appealable as of right as if "it were a judgment of the Federal Court" with the proviso that leave is required for appeals on questions of fact (Competition Tribunal Act, R.S.C. 1985, c. 19 (2nd Supp.), s. 13(1)). The Federal Court of Appeal has consistently held that questions of law arising from decisions of the Tribunal should be reviewed on a correctness standard (see *Canada (Commissioner of Competition) v. Superior Propane Inc.*, 2001 FCA 104, [2001] 3 F.C. 185 (Fed. C.A.) ("*Superior Propane II*"), at paras. 59-91; see also *Air Canada v. Canada (Commissioner of Competition)*, 2002 FCA 121, [2002] 4 F.C. 598 (Fed. C.A.), at para. 43; *Canada (Commissioner of Competition) v. Canada Pipe Co.*, 2006 FCA 233, [2007] 2 F.C.R. 3 (F.C.A.), at para. 34; *Canada (Commissioner of Competition) v. Labatt Brewing Co.*, 2008 FCA 22, 64 C.P.R. (4th) 181 (F.C.A.), at para. 5).

37 In finding that the presumption of reasonableness is not rebutted, Justice Abella acknowledges that the statutory language in the appeal provisions in *Pezim v. British Columbia (Superintendent of Brokers)*, [1994] 2 S.C.R. 557 (S.C.C.), *British Columbia*

(Securities Commission) v. McLean, 2013 SCC 67, [2013] 3 S.C.R. 895 (S.C.C.), and *Smith* differs from the language at issue here, but is of the opinion that "it is not sufficiently different to undermine the established principle of deference to tribunal expertise in the interpretation of the tribunal's own statute" (para. 179).

38 With respect, the difference in statutory language between the *Competition Tribunal Act* and the legislation relied upon by Justice Abella is significant. The appeal provision at issue in *Pezim* and *McLean* provided that individuals affected by decisions of the B.C. Securities Commission "may appeal to the Court of Appeal with leave of a justice of that court" (Securities Act, S.B.C. 1985, a. 83, s. 149(1), which later became Securities Act, S.B.C. 1996, c. 418, s. 167 (1)). The appeal provision in *Smith* provided that, under the National Energy Board Act, R.S.C. 1985, c. N-7, "[a] decision, order or direction of an Arbitration Committee may, on a question of law or a question of jurisdiction, be appealed to the Federal Court" (s. 101). By contrast, the *Competition Tribunal Act* provides that "an appeal lies to the Federal Court of Appeal from any decision or order ... of the Tribunal *as if it were a judgment of the Federal Court*" (s. 13(1)).

39 The statutes at issue in *Pezim*, *McLean*, and *Smith* did not contain statutory language directing that appeals of tribunal decisions were to be considered as though originating from a court and not an administrative source. The appeal provision in the *Competition Tribunal Act* evidences a clear Parliamentary intention that decisions of the Tribunal be reviewed on a less than deferential standard, supporting the view that questions of law should be reviewed for correctness and questions of fact and mixed law and fact for reasonableness. The presumption that questions of law arising under the home statute should be reviewed for reasonableness is rebutted here.

40 I also agree with the Federal Court of Appeal that the standard of review for mixed questions of fact and law and questions of fact is reasonableness. Reasonableness is normally the "governing standard" for questions of fact or mixed fact and law (*Smith*, at para. 26). In this case, there is nothing to indicate that this presumption should be rebutted.

B. Merger Review Analysis Under Section 92 of Act

41 At the outset, it will be helpful to provide a brief overview of the merger review process under the Act.

(1) Merger Review: An Overview

42 Merger review is conducted under s. 92 of the Act. A merger is "an acquisition of control or a significant interest in all or part of the business of another" (B. A. Facey and D. H. Assaf, *Competition and Antitrust Law: Canada and the United States*. (4th ed. 2014), at p. 205). Section 91 of the Act defines merger as follows:

> **91.** [Definition of "merger"] In sections 92 to 100, "merger" means the acquisition or establishment, direct or indirect, by one or more persons, whether by purchase or lease of shares or assets, by amalgamation or by combination or otherwise, of control over or significant interest in the whole or a part of a business of a competitor, supplier, customer or other person.

43 A merger review is designed to identify those mergers that will have anti-competitive effects (Facey and Assaf, at p. 209). Section 92 identifies these anti-competitive effects as either substantially lessening competition or substantially preventing competition. Section 92(1) provides for remedial orders to be made when a merger is found to either lessen or prevent competition substantially.

44 Generally, a merger will only be found to meet the "lessen or prevent substantially" standard where it is "likely to create, maintain or enhance the ability of the merged entity to exercise market power, unilaterally or in coordination with other firms" (O. Wakil, The 2014 Annotated Competition Act (2013), at p. 246). Market power is the ability to "profitably influence price, quality, variety, service, advertising, innovation or other dimensions of competition" (*Canada (Commissioner of Competition) v. Canadian Waste Services Holdings Inc.* (2001), 11 C.P.R. (4th) 425 (Competition Trib.), at para. 7, aff'd 2003 FCA 131, 24 C.P.R. (4th) 178 (Fed. C.A.) leave to appeal dismissed, [2004] 1 S.C.R. vii (note) (S.C.C.)). Or, in other words, market power is "the ability to maintain prices above the competitive level for a considerable period of time without such action being unprofitable" (*Canada (Director of Investigation & Research) v. Hillsdown Holdings (Canada) Ltd.* (1992), 41 C.P.R. (3d) 289Competition Trib., at p. 314); where "price" is "generally used as shorthand for all aspects of a firm's actions that have

an impact on buyers" (J. B. Musgrove, J. MacNeil and M. Osborne, eds., *Fundamentals of Canadian Competition Law* (2nd ed. 2010), at p. 29). If a merger does not have or likely have market power effects, s. 92 will not generally be engaged (B. A. Facey and C. Brown, *Competition and Antitrust Laws in Canada: Mergers, Joint Ventures and Competitor Collaborations* (2013), at p. 141).

45 The merger's likely effect on market power is what determines whether its effect on competition is likely to be "substantial". Two key components in assessing substantiality under the "lessening" branch are the degree and duration of the exercise of market power (Hillsdownat pp. 328-29). There is no reason why degree and duration should not also be considered under the "prevention" branch.

46 What constitutes "substantial" will vary from case to case. The Tribunal has not found it useful to apply rigid numerical criteria:

> What will constitute a likely "substantial" lessening will depend on the circumstances of each case. ... Various tests have been proposed: a likely 5% price rise sustainable for one year; a 5% price rise sustainable over two years; a small but significant and non-transitory price rise. The Tribunal does not find it useful to apply rigid numerical criteria although these may be useful for enforcement purposes.
>
> (*Hillsdown*, at pp. 328-29)

47 If the Tribunal concludes that the merger substantially lessens or prevents or is likely to substantially lessen or prevent competition, the Tribunal is empowered to make a remedial order pursuant to s. 92(1)(e) and *(f)*. The Tribunal "may prohibit the parties from proceeding with all or part of the merger, or it may order the dissolution of a completed merger or divestiture of assets or shares" (Musgrove, MacNeil and Osborne, at p. 185).

48 The ability to make a remedial order is subject to exceptions (see ss. 94 to 96 of the Act). For the purposes of this appeal, only s. 96, the so-called efficiencies defence, is relevant. After a finding that a merger engages s. 92(1), s. 96 may be invoked by the parties to the merger to preclude a s. 92 remedial order. Section 96 will preclude such an order if it is found that the merger is likely to bring about efficiencies that are greater than and will offset the anti-competitive effects resulting from the merger.

(2) Determining Whether a Substantial Lessening or Prevention Will Likely Occur

(a) "But For" Analysis Should Be Used

49 The Tribunal, relying on *Canada Pipe*, used the "but for" test to assess the merger in this case.

50 *Canada Pipe* was a case involving abuse of dominance under s. 79(1)(c) of the Act. The words of s. 79(1)(c) — "is having or is likely to have the effect of preventing or lessening competition substantially in a market" — are very close to the words of s. 92(1) — "likely to prevent or lessen" — and convey the same ideas. In *Canada Pipe*, the Federal Court of Appeal employed a "but for" test to conduct the inquiry:

> ... the Tribunal must compare the level of competitiveness in the presence of the impugned practice with that which would exist in the absence of the practice, and then determine whether the preventing or lessening of competition, if any, is "substantial"....
>
> The comparative interpretation described above is in my view equivalent to the "but for" test proposed by the appellant. [paras. 37-38]

51 A similar comparative analysis is conducted under s. 92(1). A merger review, by its nature, requires examining a counterfactual scenario: "... whether the merger will give the merged entity the ability to prevent or lessen competition substantially compared to the pre-merger benchmark or 'but for' world" (Facey and Brown, at p. 205). The "but for" test is the appropriate analytical framework under s. 92.

(b) The "But For" Analysis Under Section 92(1) Is Forward-Looking

52 The words of the Act and the nature of the "but for" merger review analysis that must be conducted under s. 92 of the Act require that this analysis be forward-looking.

53 The Tribunal must determine whether "a merger or proposed merger prevents or lessens, *or is likely to prevent or lessen*, competition substantially". While the tense of the words "prevents or lessens" indicates existing circumstances, the ordinary meaning of "is likely to prevent or lessen" points to events in the future. To the same effect, the French text of s. 92(1) states "*qu'un fusionnement réalisé ou proposé empêche ou diminue sensiblement la concurrence, <u>ou aura vraisemblablement cet effet</u>*". Both the English and French text allow for a forward-looking analysis. This proposition is not controversial. Both parties to this appeal agree that a forward-looking analysis is appropriate.

(c) Similarities and Differences Between the "Lessening" and "Prevention" Branches of Section 92

54 In his concurring reasons at the Tribunal, Crampton C.J. found that the assessment of a merger review under either the "prevention" or "lessening" branch is "essentially the same" (para. 367). Both focus on "whether the merged entity is likely to be able to exercise materially greater market power than in the absence of the merger" (*ibid.*). Under both branches, the lessening or prevention in question must be "substantial" (*Canada (Commissioner of Competition) v. Superior Propane Inc.* (2000), 7 C.P.R. (4th) 385 ("*Superior Propane I*"), at paras. 246 and 313). And the analysis under both the "lessening" and "prevention" branches is forward-looking.

55 However, there are some differences between the two branches. In determining whether competition is substantially lessened, the focus is on whether the merged entity would increase its market power. Under the "prevention" branch, the focus is on whether the merged entity would retain its existing market power. As explained by Chief Justice Crampton in his concurring reasons:

> In determining whether competition is likely to be *lessened*, the more particular focus of the assessment is upon whether the merger is likely to facilitate the exercise of new or increased market power by the merged entity, acting alone or interdependently with one or more rivals. In determining whether competition is likely to be *prevented*, that more particular focus is upon whether the merger is likely to preserve the existing market power of one or both of the merging parties, by preventing the erosion of such market power that otherwise likely would have taken place if the merger did not occur. [Emphasis in original.]
>
> (Tribunal decision, at para. 368)

C. The "Prevention" Branch of Section 92(1)

56 While this Court has had occasion to consider the "lessening" branch of s. 92(1) in *Canada (Director of Investigation & Research) v. Southam Inc.*, [1997] 1 S.C.R. 748(S.C.C.), this is the first case, in which we have had the opportunity to focus on the "prevention" branch of s. 92(1).

57 Tervita seeks clarity as to the appropriate legal test under the "prevention" branch. In Tervita's view, the "Tribunal erred in its application of the legal test for a substantial prevention of competition" (A.F., at para. 59). Tervita argues that "the Act requires that the Tribunal focus its analysis on the merger under review" (*ibid.*). Tervita acknowledges that s. 92 does involve a forward-looking approach, but submits that what should be projected into the future is the merging parties as they are, with their assets, plans and businesses at the time of the merger. Tervita argues that the Act does not permit the Tribunal to speculate, as it says it did in this case and that its "fundamental error" is that it focused "not on the merger between Tervita and [the Vendors], but rather on how competition might have developed looking years into the future" (A.F., at para. 71).

58 My understanding of Tervita's argument is that the wording of s. 92 essentially limits the inquiry to whether the Babkirk site was a viable competitive entrant into the secure landfill market at the time it was acquired by Tervita. That is, in order to

establish that the merger is likely to substantially prevent competition, a party to the merger must be a potential competitor based on the assets, plans and businesses of the party at the time of the merger.

59 For the reasons that follow, I am unable to agree with Tervita. Rather, I agree with the Commissioner that the wording of s. 92 generally supports the analysis and conclusions of the Tribunal and the Federal Court of Appeal with respect to s. 92.

(1) The Law

60 The concern under the "prevention" branch of s. 92 is that a firm with market power will use a merger to prevent competition that could otherwise arise in a contestable market. The analysis under this branch requires looking to the "but for" market condition to assess the competitive landscape that would likely exist if there was no merger. It is necessary to identify the potential competitor, assess whether but for the merger that potential competitor is likely to enter the market and determine whether its effect on the market would likely be substantial.

(a) Identify the Potential Competitor

61 The first step is to identify the firm or firms the merger would prevent from independently entering the market, i.e. identifying the potential competitor. In the competition law jurisprudence "entry" is considered "either the establishment of a new firm in the market whether entirely new to the industry or new to the geographic area ..., or local firms which previously did not offer the product in question commencing to do so" (Hillsdown, at p. 325).

62 Typically, the potential competitor will be one of the merged parties: the acquired firm or the acquiring firm. The potential entry of the acquired firm will be the focus of the analysis when, but for the merger, the acquired firm would likely have entered the relevant market. The potential entry of the acquiring firm will be the focus of the analysis when, but for the merger, the acquiring firm would have entered the relevant market independently or through the acquisition and expansion of a smaller firm, a so-called "toehold" entry.

63 I would also not rule out the possibility that, as suggested by Chief Justice Crampton in his concurring reasons, a likely substantial prevention of competition could stem from the merger preventing "another type of future competition" (para. 386). I interpret this to mean that it is possible that a third party entrant, one not involved in the merger, may be prevented from entering the market as a result of the merger.

(b) Examine the "But For" Market Condition

64 The second step in determining whether a merger engages the "prevention" branch is to examine the "but for" market condition to see if, absent the merger, the potential competitor (usually one of the merging parties) would have likely entered the market and if so whether that entry would have decreased the market power of the acquiring firm. If the independent entry has no effect on the market power of the acquiring firm then the merger cannot be said to prevent competition substantially.

65 Tervita argues that the intention of s. 92 is "to establish a merger test that provides certainty to Canadian businesses" (A.F., at para. 66). However, the term "likely" in s. 92 does not require certainty. "Likely" reflects the reality that merger review is an inherently predictive exercise, but it does not give the Tribunal licence to speculate; its findings must be based on evidence.

66 There is only one civil standard of proof: proof on a balance of probabilities (*C. (R.) v. McDougall*, 2008 SCC 53, [2008] 3 S.C.R. 41 (S.C.C.), at paras. 40 and 49). This means that in order for s. 92 of the Act to be engaged, the Tribunal must be of the view that it is more likely than not that the merger will result in a substantial prevention of competition. Mere possibilities are insufficient to meet this standard. And, as will be discussed, as events are projected further into the future, the risk of unreliability increases such that at some point the evidence will only be considered speculative.

(i) Likelihood of Entry by One of the Merging Parties

67 In determining whether one of the merging parties would, in the absence of the merger, be likely to enter the market independently, any factor that in the opinion of the Tribunal could influence entry upon which evidence has been adduced should

be considered. This will include the plans and assets of that merging party, current and expected market conditions, and other factors listed in s. 93 of the Act.

68 Where the evidence does not support the conclusion that one of the merging parties or a third party would enter the market independently, there cannot be a finding of likely prevention of competition by reason of the merger. To the same effect, where the evidence is only that there is a possibility of the merging party entering the market at some time in the future, a finding of likely prevention cannot be made. In this respect, I agree with Justice Mainville that the time frame for entry must be discernible (F.C.A. decision, at para. 90). While timing does not need to be a "precisely calibrated determination" (*ibid.*), there must be evidence of when the merging party is realistically expected to enter the market in absence of the merger. Otherwise the timing of entry is simply speculative and the test of likelihood of prevention of competition is not met. Even where there is evidence of a timeframe for independent entry, the farther into the future predictions are made, the less reliable they will be. The Tribunal must be cautious in declaring a lengthy timeframe to be discernible, especially when entry depends on a number of contingencies.

69 My understanding of Tervita's argument is that it seeks to limit the Tribunal's ability to look into the future to what can be discerned from the merging parties' assets, plans and business at the time of the merger. However, in my view, there is no legal basis to restrict the evidence the Tribunal can look at in this way.

70 Justice Mainville held that how far into the future the Tribunal can look when assessing whether, but for the merger, the merging party would have entered the market should normally be determined by the lead time required to enter a market due to barriers to entry, which he referred to as the "temporal dimension" of the barriers to entry: "... the timeframe for market entry should normally fall within the temporal dimension of the barriers to entry into the market at issue" (F.C.A. decision, at para. 91).

71 Barriers to entry relate to how easily a firm can commence business in the relevant market and establish itself as a viable competitor (*Canada (Director of Investigation & Research) v. Laidlaw Waste Systems Ltd.* (1992), 40 C.P.R. (3d) 289Competition Trib., at p. 330). The lead time required to enter a market due to barriers to entry ("lead time") refers to the inherent time delay that a new entrant, facing certain barriers and acting diligently to overcome them, could be expected to experience when trying to enter the market.

72 In setting lead time as the appropriate length of time to consider, Justice Mainville relied on the American case BOC International Ltd. v. Federal Trade Commission1977557 F.2d 24(2d Cir. 1977), which considered whether a merger violated s. 7 of theClayton Act, 15 U.S.C. § 18, under the "actual potential competition" doctrine, the U.S. equivalent of the "prevention" branch of s. 92 of the Act. *BOC International* turned on whether the evidence was sufficient to meet the requirements under the "actual potential competition" doctrine. The U.S. Federal Trade Commission found that there was a "reasonable probability" that the acquiring firm would have "eventually entered" the U.S. market but for its acquisition of the acquired company (BOC International, at p. 28).

73 The Second Circuit Court of Appeals held that the language "eventual entry" made the overall test based largely on "ephemeral possibilities" (BOC International, at pp. 28-29). An actual potential entrant should be expected to enter in the 'near' future, with "near" being defined in relation to the barriers to entry relevant in that particular industry:

> ... it seems necessary under Section 7 that the finding of probable entry at least contain some reasonable temporal estimate related to the near future, with 'near' defined in terms of the entry barriers and lead time necessary for entry in the particular industry, and that the finding be supported by substantial evidence in the record.
>
> (*BOC International*, at p. 29)

74 Neither Justice Mainville nor *BOC International* expressly explain why the lead time should establish the length of time the Tribunal can look into the future when assessing whether, absent the merger, there would have been likely independent entry of one of the merging parties. Though Justice Mainville notes that lead time should be treated "as a guidepost and not as a fixed temporal rule" (para. 91), it is important to emphasize that lead time should not be used to justify predictions about the distant future. In some contexts, relevant lead time may be short, and thus a determination of whether market entry is likely within that timeframe may be sufficiently definite to meet the "likely" test. However, in other contexts — for example, those where

product development or regulatory approval processes may extend for some years — the lead time may be so lengthy that a determination of the probability of market entry at the far end of that timeframe would be influenced by so many unknown and unknowable contingencies as to render such a prediction largely speculative.

75 The timeframe that can be considered must of course be determined by the evidence in any given case. The evidence must be sufficient to meet the "likely" test on a balance of probabilities, keeping in mind that the further into the future the Tribunal looks the more difficult it will be to meet this test. Lead time is an important consideration, though this factor should not support an effort to look farther into the future than the evidence supports.

76 Business can be unpredictable and business decisions are not always based on objective facts and dispassionate logic; market conditions may change. In assessing whether a merger will likely prevent competition substantially, neither the Tribunal nor courts should claim to make future business decisions for companies. Factual findings about what a company may or may not do must be based on evidence of the decision the company itself would make; not the decision the Tribunal would make in the company's circumstances.

77 If the Tribunal determines that the identified merging party would, absent the merger, be likely to enter within a discernible timeframe, the next question is whether this entry would likely result in a substantial effect on competition in the market.

(ii) Likely to Have a Substantial Effect on the Market

78 It is not enough that a potential competitor must be likely to enter the market; this entry must be likely to have a substantial effect on the market. As discussed above, assessing substantiality requires assessing a variety of dimensions of competition including price and output. It also involves assessing the degree and duration of any effect it would have on the market.

79 Section 93 provides a non-exhaustive list of factors that may be considered when assessing whether a merger substantially lessens or prevents competition or is likely to do so, including whether a party is a failing business, the availability of acceptable substitutes, barriers to entry into the relevant market, the extent to which effective competition remains or would remain after a merger, and whether the merger would result in the removal of a vigorous and effective competitor.

(2) Application to the Present Case

80 The Tribunal's analytical framework and conclusion that the merger will likely substantially prevent competition are, in my view, correct. The Tribunal correctly applied the analytical framework set out above. It used a forward-looking "but for" analysis to determine whether the merger was likely to substantially prevent competition. The Tribunal identified the acquired party, the Vendors, as the focus of the analysis. The Tribunal then assessed whether, but for the merger, the Vendors would have likely entered the relevant product market in a manner sufficient to compete with Tervita.

81 The Tribunal concluded that the merger "is more likely than not to maintain the ability of [Tervita] to exercise materially greater market power than in the absence of the [m]erger, and that the [m]erger is likely to prevent competition substantially" (para. 229(iv)). In coming to this conclusion the Tribunal assessed a number of the s. 93 factors including the following:

- barriers to entry were "at least 30 months" and there was "no evidence of any proposed entry in the Contestable Area" (para. 222; see s. 93(d));

- there is an absence of acceptable substitutes and effective remaining competition (para. 223; see s. 93(c));

- there would be sufficient demand for secure landfill services to make transforming the Babkirk site to a secure landfill profitable as demand has "been projected to increase as new drilling is undertaken in the area north and west of Babkirk" (para. 207; see s. 93(f));

- the permitted capacity of the Babkirk site was sufficient to allow it to "compete effectively" with Tervita (para. 208; see s. 93(f)); and

• "the [m]erger preserves a monopolistic market structure, and thereby prevents the emergence of potentially important competition" (para. 297; see s. 93(e)).

82 I agree with the Commissioner that "the Tribunal did not speculate on what would happen to the Babkirk site .... It made findings of fact based on the abundant evidence before it" (R.F., at para. 61). The reasonableness of the factual findings were reviewed by the Federal Court of Appeal and found to be supported by sufficient evidence. While, as will be discussed, I question the Tribunal's treatment of the asserted 10 percent reduction in prices that would allegedly have been realized in the absence of a merger (para. 229(iii)), it is evident that there was sufficient other evidence upon which the Tribunal could find a substantial prevention of competition as a result of the merger.

83 Accordingly, the Tribunal's conclusion that the merger is likely to substantially prevent competition was correct. As s. 92 is engaged, it is necessary to determine whether the s. 96 defence applies to prevent the making of an order under s. 92.

D. The Efficiencies Defence

84 Tervita raises two issues with respect to the Tribunal's assessment of the s. 96 efficiencies defence. First, should OIEs, or efficiencies that would arise because of the time necessary to implement the Tribunal's divestiture order under s. 92, be taken into account in the balancing test under s. 96? Second, what is the proper approach to the balancing analysis under s. 96? Before addressing the issues raised on appeal, it will be useful to review the history of the statutory efficiencies defence and the adjudicative treatment of the defence prior to this case.

(1) History of the Efficiencies Defence

85 Section 96 was included as part of the new *Competition Act*, proclaimed into force on June 19, 1986. The process of reforming Canada's competition laws began in 1966 when the federal government requested a study from the Economic Council of Canada. The Council's 1969 report "identified economic efficiency as the overriding policy objective" of legislative reform (A. N. Campbell, Mergers Law and Practice: The Regulation *of* Mergers Under the Competition Act (1997), at p. 21). After a number of attempts to amend the legislation and following a lengthy and extensive consultative process, the new *Competition Act* was introduced. This amendment process reflected concerns raised about the number of significant mergers taking place in Canada (Facey and Assaf, at p. 9; see also W. T. Stanbury and G. B. Reschenthaler, "Reforming Canadian Competition Policy: Once More Unto the Breach" (1981), 5 Can. Bus. L.J. 381, at p. 388). In early 1981, the federal Minister of Consumer and Corporate Affairs solicited the views of his provincial counterparts, trade associations, consumer groups and academics with respect to proposals for amending the Combines Investigation Act, R.S.C. 1970, c. C-23 (ibid., p. 381). This process "yielded valuable experience laying the groundwork for what was to become the *Competition Act*" (Facey and Assaf, at p. 10).

86 Bill C-91, *An Act to establish the Competition Tribunal and to amend the Combines Investigation Act and the Bank Act and other Acts in consequence thereof*, was introduced in the House of Commons in 1985 (1st Sess., 33rd Parl., first reading Dec. 17, 1985, assented to June 17, 1986, s.c. 1986, c. 26). This bill included comprehensive amendments to the *Combines Investigation Act*, including the creation of a new expert adjudicative body, the Competition Tribunal, and the inclusion of the efficiencies defence (Facey and Assaf, at pp. 9-10).

87 A stand-alone statutory efficiencies defence was considered "particularly appropriate for Canada because a small domestic market often precludes more than a few firms from operating at efficient levels of production and because Canadian firms need to be able to exploit scale economies to remain competitive internationally" (Campbell, at p. 152; see also *House of Commons Debates*, vol. VIII, 1st Sess., 33rd Parl., April 7, 1986, at p. 11962; and Minister of Consumer and Corporate Affairs, *Competition Law Amendments: A Guide* (1985), at p. 4). In the context of the relatively small Canadian economy, to which international trade is important, the efficiencies defence is Parliamentary recognition that, in some cases, consolidation is more beneficial than competition (ibid., at pp. 15-17).

(2) Jurisprudential History of Section 96

88 The leading case law on the interpretation of the efficiencies defence remains the *Superior Propane* series of cases, which began when the Commissioner applied to the Tribunal seeking an order to prevent a merger between the two largest national distributors of propane (*Superior Propane I*, rev'd on other grounds in *Superior Propane II*, leave to appeal dismissed, [2001] 2 S.C.R. xiii(S.C.C.); redetermination in *Canada (Commissioner of Competition) v. Superior Propane Inc.* (2002), 18 C.P.R. (4th) 417Competition Trib. (“Superior Propane III”), aff'd2003 FCA 53[2003] 3 F.C. 529 ("*Superior Propane IV*"). Although this Court is not bound by these decisions, the *Superior Propane* cases considered a number of factors relevant to the efficiencies defence and its application.

89 The *Superior Propane I* case confirmed that s. 96 is a defence to the application of s. 92 (paras. 398-99). As such, the onus of alleging and proving that efficiency gains from the merger will be greater than and will offset the effects of any prevention or lessening of competition resulting from the merger falls upon the merging parties (*Superior Propane I*, at para. 399; *Superior Propane II*, at para. 154; *Superior Propane IV*, at para. 64).

90 The s. 96 efficiencies defence requires an analysis of whether the efficiency gains of the merger, which result from the integration of resources, outweigh the anti-competitive effects, which result from the decrease in or absence of competition in the relevant geographic and product market. As the Federal Court of Appeal explained in *Superior Propane II*, "This is, in substance, a balancing test that weighs efficiencies on one hand, against anti-competitive effects on the other" (para. 95).

(3) Methodological Approaches to Section 96

91 There are different possible methodologies for the comparative exercise under s. 96 (Facey and Brown, at pp. 256-57). In Canada, two main standards have been the subject of judicial consideration: the "total surplus standard" and the "balancing weights standard". For both standards, two types of economic surplus are relevant: producer surplus and consumer surplus.

92 Producer surplus "measures how much more producers are able to collect in revenue for a product than their cost of producing it" (p. 256). Producer surplus therefore represents the wealth that accrues to producers. Consumer surplus is "a measure of how much more the consumers of a product would have been willing to pay to purchase the product compared to the prevailing market price" (ibid.). Consumer surplus therefore represents the savings that accrue to consumers from what they would have been willing to pay.

93 The term "total surplus" refers to the sum of producer and consumer surplus (see Facey and Brown, at p. 256). If a producer covers its costs, including its cost of capital, by selling a unit of a product at $20 and a consumer is willing to buy the unit for $40, then the total surplus created by the unit is $20. If the eventual sale price is $30, for example, then each of producer and consumer surplus is increased by $10 as a result of the transaction. The total surplus in the economy represents the aggregate of the total surplus created by each unit produced.

94 The total surplus standard involves quantifying the deadweight loss which will result from a merger — "the amount by which total surplus is reduced under certain market conditions that reduce the quantity of a good that is supplied" (Facey and Brown, at pp. 256-57). Deadweight loss "results from the fall in demand for the merged entities' products following a post-merger increase in price, and the inefficient allocation of resources that occurs when, as prices rise, consumers purchase a less suitable substitute" (*Superior Propane IV*, at para. 13). Estimates of the elasticity of demand — or the degree to which demand for a product varies with its price — are necessary to calculate the deadweight loss (Tribunal decision, at para. 244).

95 Under the total surplus standard, equal weight is given from a welfare perspective to changes in producer and consumer surplus (Facey and Brown, at p. 257). The decrease in total surplus resulting from decreased competition is balanced against any offsetting increase in total surplus resulting from more efficient production. The focus of this method is purely on the magnitude of the total surplus: the degree to which total surplus is allocated between producers and consumers is not considered. In other words, the total surplus standard measures only the total benefit flowing to the economy and is not concerned with to whom the benefits flow; the analysis of the relevant effects is limited to the deadweight loss (*Superior Propane IV*, at para. 16). Therefore, the total surplus standard "does not consider the effect of the wealth likely to be transferred from consumers to the shareholders of the merged entity as a result of the anti-competitive merger and the consequent increase of prices. This 'wealth transfer' or

'redistributive effect' is considered to be neutral" (*Superior Propane IV*, at para. 14). As such, under the total surplus standard approach, an anti-competitive merger will proceed when efficiency gains to producer surplus are greater than the decrease in consumer surplus.

96 In the *Superior Propane* cases, the Tribunal and the Federal Court of Appeal recognized another methodology called the "balancing weights" approach. This approach enables Tribunal members to "use their individual judgment and discretion to evaluate whether the gains to shareholders are more or less important to society than the losses of surplus imposed on consumers by the exercise of market power" (*Superior Propane I*, at para. 431).

97 As explained in *Superior Propane IV*, under the balancing weights approach, the Tribunal weighs the effects of the merger on consumers against the effects of the merger on the shareholders of the merged entity. The Tribunal first determines the relative weights to be assigned to producer gains and consumer losses, to equate them, or to make the wealth transfer neutral in effect. Then, the Tribunal engages in a value judgment process to conclude whether the assigned weights are reasonable in light of any disparity between the incomes of the relevant consumers and shareholders of the merged entity (*Superior Propane IV*, at para. 20).

98 The Tribunal may also adopt a modified version of the balancing weights approach (see *Superior Propane IV*, at paras. 21 and 26). Under this modified approach, socially adverse redistribution effects, or the portion of the wealth transfer that is attributable to higher prices paid by low-income households, may be taken into account as an anti-competitive effect, while components of the wealth transfer that are not socially adverse may be treated as neutral (*Superior Propane III*, at para. 333).

99 However, there is no mandated "correct" methodology for the s. 96 analysis (*Superior Propane II*, at paras. 139-42). The statute does not set out which standard should be used. From an economic perspective, there are arguments in favour of the total surplus standard (see M. Trebilcock et al., *The Law and Economics of Canadian Competition Policy* (2002). at pp. 146-51). However, that is not the issue before this Court and, for the purpose of this case, it suffices to say that *Superior Propane II* established that the Tribunal has the flexibility to make the ultimate choice of methodology in view of the particular circumstances of each merger.

100 The Tribunal should consider all available quantitative and qualitative evidence (*Superior Propane I*, at para. 461; *Superior Propane III*, at para. 335). While quantitative aspects of a merger are those which can be measured and reduced to dollar amounts, qualitative elements of a merger, including in some cases such things as better or worse service or lower or higher quality, may not be measurable as they are dependent on individual preferences in the market (see *Superior Propane I*, at paras. 459-60). Effects that can be quantified should be quantified, even as estimates. If effects are realistically measurable, failure to at least estimate the quantification of those effects will not result in the effects being assessed on a qualitative basis (*Superior Propane III*, at para. 233; *Superior Propane IV*, at para. 35).

101 The above principles developed in the *Superior Propane* series of cases provide the foundation for the analysis of the s. 96 efficiencies defence. These principles serve as the backdrop to the legal issues in the present case: consideration of whether specific efficiencies are valid efficiencies for the purposes of the defence and the proper approach to the balancing exercise under s. 96.

(4) Order Implementation Efficiencies Are Not Valid Efficiencies Under Section 96

102 In the context of a merger, efficiencies are pro-competitive benefits. As Brian A. Facey and Cassandra Brown explain, "Economists' conception of efficiency revolves around the benefit, value or satisfaction that accrues to society due to the actions and choices of its members" (p. 253). There are three components: (1) production efficiency, which "is achieved when output is produced using the most cost-effective combination of productive resources available under existing technology"; (2) innovation or dynamic efficiency, which "is achieved through the invention, development and diffusion of new products and production processes"; and (3) allocative efficiency, which "is achieved when the existing stock of goods and productive output is allocated throughout the price system to those buyers who value them most in terms of willingness to pay, such that 'resources available

to society are allocated to their most valuable use'" (Facey and Brown, at pp. 253-55, quoting Competition Bureau, Merger Enforcement Guidelines (2011), at para. 12.4).

103 Tervita argues that the Tribunal erred in rejecting valid efficiencies from its consideration of the efficiency gains, namely those referred to by the Tribunal as OIEs. Tervita submits that all economic efficiencies, however arising, should be considered.

104 Tervita claimed certain transportation and market expansion efficiencies which Tervita could have attained more quickly than a third party purchaser of the Babkirk site (A.F., at para. 100). As the Federal Court of Appeal explained, the *transportation* gains in efficiency are "productive gains in efficiency realized by the customers who are closer to the Babkirk site, allegedly than to Tervita's Silverberry secure landfill. Since Tervita acquired the allegedly to open a full-service secure landfill operation there, customers located closer to that site would achieve transportation cost savings" (para. 131). Tervita asserted before the Tribunal that, had the Commissioner not intervened, it would have already been operating a secure landfill at the Babkirk site by the spring of 2012 (Tribunal decision, at para. 269). However, a third party purchaser would have been unlikely to have a secure landfill in operation before the spring of 2013. Only Tervita therefore could have enabled customers to achieve these additional transportation efficiencies for that one-year period.

105 The *market* gains in efficiency are the result of additional hazardous waste which would be disposed at the Babkirk site secure landfill: "Since there are significant costs and risks associated with transporting such waste over long distances to the Silverberry secure landfill, a site requiring a shorter transportation route (such as the Babkirk site) would attract more hazardous waste than would otherwise have been disposed of at Silverberry ..." (F.C.A. decision, at para. 132). As with the transportation gains in efficiency, Tervita would have been able to achieve the market gains one year earlier than a third party purchaser — from the spring of 2012 to the spring of 2013.

106 The Tribunal held that these one-year transportation and market efficiency gains were a result of the time associated with the implementation of its divestiture order, including the time required to effect the actual sale of the shares or assets of Babkirk (estimated to take at least six months including the due diligence process), to modify or prepare an operations plan for the landfill, for the B.C. Ministry of the Environment ("MOE") to approve the operations plan, and for the purchaser to construct the landfill, which can only be undertaken between June and September (para. 269). As such, the Tribunal held that the OIEs were not cognizable efficiencies under the Act (paras. 269-70).

107 A distinction should be drawn between efficiencies claimed because a merging party would be able to bring those efficiencies into being faster than would be the case but for the merger (what could be called "early-mover" efficiencies), and efficiencies that a merging party could realize sooner than a competitor only because the competitor would be delayed in implementing those efficiencies because of legal proceedings associated with a divestiture order (what the Tribunal identified as OIEs). While, as will be discussed, OIEs are not cognizable efficiencies under s. 96, early-mover efficiencies are real economic efficiencies that are caused by the merger, and not by delays associated with legal proceedings; were it not for the merger, the economy would not gain the benefit of those efficiencies that would have accrued in the time period between the merger and the actions of a future competitor.

108 Though the Tribunal held that the one-year efficiencies claimed by Tervita were OIEs, the Tribunal's reasons also appear to suggest that those efficiencies could have been classified as early-mover efficiencies. The Tribunal noted that Tervita would have been prepared to operate the Babkirk site as a secure landfill by the summer of 2012 (para. 269), and also found that, under its "but for" analysis in which the merger would not have occurred, the site would not have been operated as a secure landfill accepting significant quantities of waste until the spring of 2013 (para. 207). Thus, it would appear that any transportation and market expansion efficiencies arising from the operation of the Babkirk site as a secure landfill from 2012 to 2013 under Tervita's plans could have arisen not due to delays caused by legal proceedings, but by Tervita's ability to bring the site into operation sooner than a potential competitor.

109 The Tribunal's reasons appear inconsistent on whether the facts as found by the Tribunal would properly support the classification of the one-year efficiencies at issue as early-mover efficiencies or as OIEs. However, as will be discussed below, the classification of these efficiencies in this case would not be dispositive because the efficiencies were not ultimately realized

by Tervita. Nevertheless, in light of the importance of the issue of whether OIEs should be cognizable in future cases, I turn now to an examination of that issue.

110 In Tervita's submission, OIEs must be considered because s. 96 affords paramountcy to the statutory objective of economic efficiency such that all efficiencies, however arising, must be considered. I am unable to agree with Tervita on this point.

111 Section 96 does give primacy to economic efficiency. However, s. 96 is not without limitation.

112 For ease of reference, I produce s. 96 here:

> **96. (1)** The Tribunal shall not make an order under section 92 if it finds that the merger or proposed merger in respect of which the application is made has brought about or is likely to bring about gains in efficiency that will be greater than, and will offset, the effects of any prevention or lessening of competition that will result or is likely to result from the merger or proposed merger and that the gains in efficiency would not likely be attained if the order were made.

113 In order for a party to gain the benefit of the s. 96 defence, the Tribunal must be satisfied that the merger or proposed merger has brought about or is likely to bring about gains in efficiency. The Tribunal must also find that the gains in efficiency would not likely be attained if a s. 92 order were made. In addition, and despite the paramountcy given to economic efficiencies in s. 96, s. 96(3) prohibits the Tribunal from considering a "redistribution of income between two or more persons" as an offsetting efficiency gain. The limitation in s. 96(3) demonstrates that Parliament does not intend for all efficiency gains, however arising, to be taken into account under s. 96.

114 The transportation and market efficiencies at issue in this case are efficiency gains resulting from the operation of a secure landfill facility at a location closer to some customers. However, subject to the above discussion as to the proper classification of these efficiencies in this case, the OIEs specifically are efficiency gains resulting not from the merger itself, but from the implementation time associated with a divestiture order (F.C.A. decision, at para. 135). Put simply, if these efficiencies are properly classified as OIEs, they would be achieved by Tervita, and not by a third party, only by virtue of Tervita being in operation one year earlier than a third party purchaser following a divestiture order, and only because of the time that it would take for the Tribunal's order to be implemented.

115 Efficiencies that are the result of the regulatory processes of the Act are not cognizable efficiencies under s. 96. The OIEs result from the operation and application of the legal framework regulating competition law in Canada. The provision states that the *merger* or *proposed merger* must bring about or be likely to bring about gains in efficiency. The OIEs are efficiencies which are not attributable to the merger. They are attributable to the time associated with the implementation of the divestiture order.

116 Finally, regardless of whether the efficiencies are classified as early-mover efficiencies or OIEs, and as the Federal Court of Appeal explained, the efficiencies were nevertheless not realized in this case because Tervita did not actually construct and operate a landfill at the Babkirk site before the merger review, or indeed before the date of the Tribunal's order. Tervita argues that this reasoning does not withstand scrutiny. In this case, Tervita undertook to preserve and maintain all provincial MOE approvals, permits and authorizations for the establishment and operation of a proposed secure landfill at the Babkirk site pending the proceedings before the Tribunal. Tervita argues that, as a result of this "hold separate undertaking", it could not have constructed its planned secure landfill. Again, I cannot agree.

117 "Hold separate" orders are typically issued to prevent the intermingling of assets or businesses that would otherwise occur through the merger (B. A. Facey, G. Hilton-Sullivan and M. Graham, "The Reinvigoration of Canadian Antitrust Law — Canada's New Approach to Merger Review" (2010), 6 *C.L.I.* 28, at p. 33). These orders aim at avoiding the difficulties that would arise in attempting to "unscramble the egg" if an order was issued after a merger proceeded in full. In this case, the hold separate undertaking was not the typical "unscramble the egg" undertaking concerned with the intermingling of assets.

118 The evidence in this case does not support Tervita's claim that the undertaking prevented it from operating the landfill. The undertaking merely required Tervita to preserve and maintain the necessary provincial environmental approvals for establishing and operating the proposed secure landfill at the Babkirk site. The evidence before the Tribunal was that Tervita wanted to

increase the capacity of the secure landfill and doing so would require an amendment to the approval for the site — a process Tervita understood to be contrary to the undertaking. However, nothing prevented Tervita from establishing and operating the landfill at the capacity allowed for under the existing approval.

119 The evidence is that Tervita had not taken the steps to commence operating the landfill. Even assuming no divestiture order were made, Tervita would not have been in a position to begin operating the secure landfill at the conclusion of the proceedings.

120 For these reasons, both the Tribunal and the Federal Court of Appeal were correct that the OIEs are not cognizable efficiencies under s. 96 (see Tribunal decision, at para. 270; F.C.A. decision, at para. 135).

(5) The Balancing Test Under Section 96

121 Tervita argues that the Federal Court of Appeal took an overly subjective approach to the offset analysis under s. 96. This argument is based on the Commissioner's failure to quantify the quantifiable anti-competitive effects — specifically, the failure to quantify the deadweight loss. This raises the specific questions of what content there is to the Commissioner's burden under s. 96 and what consequences flow from a failure to meet the burden. More generally, Tervita's argument requires consideration of the overall balancing approach under s. 96.

(a) The Commissioner's Burden

122 As explained above, the *Superior Propane* series established that the Commissioner has the burden under s. 96 to prove the anti-competitive effects. The merging parties bear the onus of establishing all other elements of the defence, including the extent of the efficiency gains and whether the gains are greater than and offset the anti-competitive effects (see *Superior Propane I*, at paras. 399 and 403; *Superior Propane II*, at para. 154; and *Superior Propane IV*, at para. 64). The parties do not take issue with this allocation of onus.

(i) The Content of the Commissioner's Burden

123 Tervita argues that the Commissioner's onus is to quantify all anti-competitive effects which can be quantified. In this case, the Commissioner did not do so.

124 The Commissioner argues that quantification is not a legal prerequisite to considering anti-competitive effects (R.F., at paras. 84 and 88). On the contrary, the Commissioner's legal burden is to quantify the quantifiable anti-competitive effects upon which reliance is placed. Where effects are measurable, they must be estimated. Effects will only be considered qualitatively if they cannot be quantitatively estimated. A failure to quantify quantifiable effects will not result in such effects being considered qualitatively (*Superior Propane IV*, at para. 35). This approach minimizes the degree of subjective judgment necessary in the analysis and enables the Tribunal to make the most objective assessment possible in the circumstances (*Superior Propane IV*, at para. 38). An approach that would permit the Commissioner to meet her burden without at least establishing estimates of the quantifiable anti-competitive effects fails to provide the merging parties with the information they need to know the case they have to meet.

125 The Commissioner's burden is to quantify by estimation all quantifiable anti-competitive effects. Estimates are acceptable as the analysis is forward-looking and looks to anti-competitive effects that will or are likely to result from the merger. The Tribunal accepts estimates because calculations of anti-competitive effects for the purposes of s. 96 do not have the precision of history. However, to meet her burden, the Commissioner must ground the estimates in evidence that can be challenged and weighed. Qualitative anti-competitive effects, including lessening of service or quality reduction, are only assessed on a subjective basis because this analysis involves a weighing of considerations that cannot be quantified because they have no common unit of measure (that is, they are "incommensurable"). Due to the uncertainty inherent in economic prediction, the analysis must be as analytically rigorous as possible in order to enable the Tribunal to rely on a forward-looking approach to make a finding on a balance of probabilities.

126 In this case, the Commissioner did not quantify quantifiable anti-competitive effects and therefore failed to meet her burden under s. 96.

(ii) What Consequences Flow From a Failure to Meet the Burden?

127 The question concerns the legal implications of a failure by the Commissioner to quantify quantifiable anti-competitive effects. The Federal Court of Appeal recognized that "[a] quantitative effect which has not in fact been quantified should not be considered as a qualitative effect" (para. 158) but went on to hold that the non-quantified deadweight loss should be assigned a weight of "undetermined" (paras. 130 and 167).

128 With respect, I cannot agree. As explained above, the Commissioner's burden is to quantify all quantifiable anti-competitive effects. The failure to do so is a failure to meet this legal burden and, as a result, the quantifiable anti-competitive effects should be fixed at zero. Quite simply, where the burden is not met, there are no proven quantifiable anti-competitive effects.

129 As Tervita submits, this approach is consistent with that in civil proceedings where a party has failed to discharge its burden of proof with respect to loss (see S. M. Waddams, *The Law of Damages* (5th ed. 2012), at paras. 10.10 to 10.30). In addition, setting the effects at zero where the Commissioner has failed to meet her legal burden is consistent with taking an approach to the balancing analysis that is objectively reasonable. In setting the weight at undetermined, the Federal Court of Appeal allowed for subjective judgment to overtake the analysis. Undetermined effects were weighed against the proven overhead gains in efficiency, which were described by the court as "marginal" and "insignificant" (para. 174). Nonetheless, it is not clear how the Federal Court of Appeal — or any court — could weigh undetermined effects.

130 The jurisprudence has consistently recognized the importance of an objective approach to the balancing analysis (see *Superior Propane IV*, at para. 38). As the Federal Court of Appeal recognized in this case:

> Objective determinations are better suited for ensuring predictability in the application of the *Competition Act* and avoiding arbitrary decisions. Predictability is particularly important in merger reviews since most merger transactions are reviewed only by the Commissioner and rarely reach the Tribunal. A methodology which favours objective determinations whenever possible allows the parties to merger transactions and the Commissioner to more readily predict the impacts of a merger, discourages the use of arbitrary judgment in the process, and reduces overall uncertainty in the Canadian business community. [para. 152]

I agree with these reasons for favouring an objective approach. Although the Federal Court of Appeal recognized the importance of an objective analysis, in assigning the quantifiable but non-quantified effects a weight of "undetermined", its analysis did not meet the necessary objective standard.

131 The Federal Court of Appeal's "undetermined" approach also raises concerns of fairness to the merging parties. The court recognized that a "proper interpretation of s. 96 of the Competition Act requires that the [merging parties] must still demonstrate on a balance of probabilities that the gains in efficiency offset the anti-competitive effects" (para. 167). The difficulty with assigning non-quantified quantifiable effects a weight of "undetermined" is that it places the merging parties in the impossible position of having to demonstrate that the efficiency gains exceed and offset an amount that is undetermined. Under this approach, to prove the remaining elements of the defence on a balance of probabilities becomes an unfair exercise as the merging parties do not know the case they have to meet.

132 The Commissioner argues that, although the anti-competitive effects in this case were not quantified, they could be inferred as a result of the Tribunal's finding that competition from the Babkirk site would have led to an average price decrease of at least 10 percent (Tribunal decision, at para. 297; R.F., at paras. 89-91). However, the 10 percent amount is not enough to calculate the deadweight loss as the Commissioner did not establish the price elasticity of demand. The proven facts demonstrated the size of the Contestable Area and the potential tonnes of waste per year. Without a calculation of the actual loss,

all that is known is that there was a certain amount of potential waste subject to the effect of the elasticity. In other words, the 10 percent calculation is not enough to determine the extent of any anti-competitive effect. As the Federal Court of Appeal noted:

> In this case, the Tribunal itself found that estimates of market elasticity [the change over the market as a whole] and the merged entity's own-price elasticity of demand [the degree to which demand is effected by a change in price by the merged entity] are necessary in order to calculate the "deadweight loss". The Tribunal also recognized that a range of plausible elasticities are required in order to understand the sensitivity of the Commissioner's estimates. Without those estimates, the "deadweight loss" could not be properly calculated by the Commissioner, and Tervita could not adequately challenge the calculations. [Emphasis deleted; para. 124.]

133 In his reply expert report, the Commissioner's expert did submit estimates of potential market expansion. However, these estimates were based on Tervita's expert's calculations of Tervita's claimed market expansion efficiencies, which were themselves based on unsupported assumptions. As Tervita's expert testified before the Tribunal, these calculations could not be used to calculate the deadweight loss in the absence of an adequate market demand elasticity study. In response to questioning from the Tribunal, Tervita's expert testified that it is not possible to calculate the deadweight loss without customer-specific elasticity or market elasticity numbers: "You need the shape of the demand curve to figure out dead weight loss" (testimony of Dr. Kahwaty, F.C.A. decision, at para. 125).

134 Without estimates of elasticity, the "deadweight loss" could not be properly calculated by the Commissioner, and Tervita could not adequately challenge the calculations (F.C.A. decision, at para. 124). Indeed, the proven facts serve to demonstrate that the anti-competitive effects might well have been estimated, but were not estimated due to the absence of the critical component of elasticity measure. An inference based on the 10 percent finding and the unknown potential elasticity is not a substitution for quantification.

135 The Commissioner submits in the alternative that the Tribunal did not breach procedural fairness in relying upon the rough estimate of the Commissioner's expert of the deadweight loss flowing from the 10 percent price reduction (R.F., at para. 107). I cannot agree. As the Federal Court of Appeal found, the Commissioner's failure to quantify the quantifiable anti-competitive effects combined with the Tribunal's decision to allow the Commissioner to discharge her burden through a reply expert report setting out the rough estimate resulted in prejudice to Tervita. Tervita was unable to adequately challenge the Commissioner's calculations due to the failure to quantify the anti-competitive effects and as a result of the insufficient time for Tervita to formally respond to the reply expert report (see F.C.A. decision, at paras. 121-30).

136 While the Commissioner has the burden to prove the anti-competitive effects, the merging parties bear the onus of proving the remaining elements of the defence. To allow for these kinds of procedural deficiencies would be to leave the merging parties in an untenable position where they are expected to prove that efficiencies are greater than and offset the anti-competitive effects, despite not knowing what those effects are. I cannot accept the Commissioner's arguments that there was no unfairness in this case because the calculation was "not complex" or because Tervita's expert had the opportunity to respond "briefly in direct examination", in cross-examination and on questioning from the Tribunal (R.F., at para. 108). The reply expert report was only made available to Tervita two weeks before the Tribunal's hearing (Tribunal decision, at para. 235). As the Tribunal noted: "By then, the Tribunal's Scheduling Order did not permit [Tervita] to bring a motion or file a further expert report. In addition ... there was insufficient time before the hearing to permit [Tervita] to move to strike [the Commissioner's expert] report or to seek leave to file a further report in response ..." (ibid.). The Tribunal found that the procedural deficiencies meant that Tervita could not prepare a proper response to the case presented by the Commissioner and that Tervita could not effectively challenge the Commissioner's evidence.

137 In this case, the Commissioner failed to meet her burden to quantify the quantifiable anti-competitive effects. As a result, the Tribunal should have assigned zero weight to the quantifiable anti-competitive effects.

138 Justice Karakatsanis would permit quantitative but unquantified effects to be considered with "undetermined" weight, on the argument that such information is nonetheless probative on the question of efficiency (para. 194). I cannot agree. As discussed above, there are sound reasons to require that the s. 96 analysis be as objective as possible. This argument concerns

evidence for which quantification is entirely possible, but has not been done. To consider such evidence is to conduct an analysis that is less objective than is possible with more complete estimation. The Tribunal should not sacrifice the objectivity of its analysis because a party has failed to conduct a complete quantitative estimate of the magnitude of an effect.

139 In this case, the absence of price elasticity information means that the possible range of deadweight loss resulting from the merger is unknown. All else being equal, high price elasticity would likely result in significant deadweight loss, while low price elasticity could result in minimal deadweight loss. To permit the Tribunal to consider the price decrease evidence without the rest of the information necessary to quantify deadweight loss admits far too much subjectivity into the analysis, with no guarantee that the Tribunal will have enough information to ensure that a subjective assessment would align with what would actually be observed if the effect were properly quantified. Holding parties to account for the quantification of the quantitative effects they wish to adduce by assigning zero weight to undetermined quantitative effects acts to ensure that the Tribunal will be presented with information on all of the parameters necessary to estimate the magnitude of quantitative effects. To do otherwise invites speculation into the analysis.

140 Justice Karakatsanis agrees that "[o]bviously, the Tribunal must apply the test in s. 96 to the evidence before it in a way that is fair to the parties" (para. 196), but she does not explain how the party opposed to such incomplete evidence may fairly determine the quantitative case they must meet, or challenge the methodological details related to the undetermined quantitative effects. These concerns reinforce the appropriateness of assigning "undetermined" quantitative effects a weight of zero in the s. 96 analysis.

(b) The Approach to the Section 96 Balancing

141 The Federal Court of Appeal found that the Tribunal erred in law in its s. 96 analysis by "accepting a defective 'deadweight' loss calculation, by using an overly subjective offset methodology, by treating as qualitative effects certain quantitative effects which the Commissioner had failed to quantify, and by referring to qualitative environmental effects that are not cognizable under the *Competition Act*" (para. 163). Rather than remitting the matter to the Tribunal for a new determination, the court, satisfied that there was a complete record on which to carry out a new determination, engaged in a fresh assessment of the offset analysis. The court found that the efficiencies defence did not apply for two primary reasons. First, "marginal and insignificant gains in efficiency cannot offset known anti-competitive effects even where the weight to be afforded to such effects is undetermined" (para. 174). Second, the present case was one of a pre-existing monopoly, which the Federal Court of Appeal held magnified the anti-competitive effects of the merger (para. 173).

(i) The Requirement That the Efficiency Gains Be "Greater Than" and "Offset" the Anti-competitive Effects

142 The Federal Court of Appeal held that the efficiency gains did not meet the "greater than" and "offset" requirement under s. 96. The gains were "marginal" (paras. 34, 169-71 and 174), "negligible" (para. 169) and "insignificant" (paras. 170 and 174) and therefore were not enough to outweigh the anti-competitive effects. In addition, the Tribunal found that "*even if a zero weighting is given to the quantifiable Effects*, as [Tervita] submitted should be done, [Tervita] has not satisfied the 'offset' element of section 96" (para. 314 (emphasis added; emphasis in original deleted)). Although I have determined that the anti-competitive effects should be assigned zero weight, I nonetheless consider the interpretation of the "greater than and offset" requirement due to the importance of this question in the overall s. 96 assessment.

143 The issue to be determined is whether the statutory standard of "greater than, and will offset" requires that the merging parties demonstrate that the efficiencies not only merely exceed the anti-competitive effects, but in addition offset them. As I understand it, the Commissioner's argument in this regard is that the statutory language mandates a threshold level of "more than marginal" efficiency gains in order for the efficiencies defence to succeed (transcript, at p. 60). With respect, I cannot agree.

144 The statutory requirement that the efficiency gains be "greater than" and "offset" the anti-competitive effects imports a weighing of both quantitative and qualitative aspects. The term "greater than" suggests a numerical comparison of the magnitude of the efficiencies versus the extent of the anti-competitive effects. The use of the term "offset" implies a subjective analysis related to the "balancing of incommensurables (e.g., apples and oranges)" (Tribunal decision, at para. 309) — considerations

that cannot be quantitatively compared because they have no common measure. The statutory use of the language of "offset" suggests that there is a more judgmental component to the analysis (see *Superior Propane II*, at para. 100). As indicated by the use of the term "*neutraliseront*" in the French version of s. 96, this requires a subjective assessment of whether the efficiency gains neutralize or counterbalance the anti-competitive effects.

145 Together, the terms "greater than" and "offset" mandate that the Tribunal determine both quantitative and qualitative aspects of the merger, and then weigh and balance these aspects. This approach is supported by the common understanding of the word "offset". *The Oxford English Dictionary* (2nd ed. 1989) defines the verb "offset" to mean "[t]o set off as an equivalent against something else ...; to balance by something on the other side or of contrary nature" (p. 738). Similarly, the *Merriam-Webster's Collegiate Dictionary* (11th ed. 2003) entry defines it to mean "to serve as a counterbalance for" (p. 862). This understanding supports the interpretation of the "offset" requirement in s. 96 as imposing a consideration of the qualitative aspects of the merger and a balancing of those qualitative aspects against the quantitative effects of the merger.

146 This is a flexible balancing approach, but the Tribunal's conclusions must be objectively reasonable. As the Federal Court of Appeal held, the overall analysis "must be as *objective* as is reasonably possible, and where an objective determination cannot be made, it must be *reasonable*" (para. 147 (emphasis in original)). As such, in most cases the qualitative effects will be of lesser importance. In addition, the statutory requirement that efficiencies be greater than *and* offset the anti-competitive effects would in most cases require a showing that the quantitative efficiencies exceed the quantitative anti-competitive effects as a necessary element of the defence.

147 In light of this recognition, the balancing test under s. 96 may be framed as a two-step inquiry. First, the quantitative efficiencies of the merger at issue should be compared against the quantitative anti-competitive effects (the "greater than" prong of the s. 96 inquiry). Where the quantitative anti-competitive effects outweigh the quantitative efficiencies, this step will in most cases be dispositive, and the defence will not apply. There may be unusual situations in which there are relatively few quantified efficiencies, yet where truly significant qualitative efficiencies would support the application of the defence. However, such cases would likely be rare in view of the emphasis of the analysis on objectivity and the impermissibility of asserting unquantified-but-quantifiable efficiencies as qualitative efficiencies. Qualitative considerations must next be weighed. Under the second step, the qualitative efficiencies should be balanced against the qualitative anti-competitive effects, and a final determination must be made as to whether the total efficiencies offset the total anti-competitive effects of the merger at issue (the "offset" prong of the inquiry). For the Tribunal to give qualitative elements weight in the analysis, they must be supported by the evidence, and the reasoning for the reliance on the qualitative aspects must be clearly articulated.

148 It should be noted that this two-step analysis does not seek to define the methodological details of how quantitative efficiencies and anti-competitive effects are to be identified and compared. Instead, the two-step analysis preserves the ability of the Tribunal to select the quantitative methodology to be employed, provided this quantitative comparison is conducted within step one of the framework described above.

149 Justice Karakatsanis raises concerns that this framework unnaturally separates quantitative and qualitative considerations, and that doing so is "superfluous" in light of the final offset determination which considers both quantitative and qualitative factors (para. 189). Instead, she would instruct the Tribunal to weigh whether the quantitative and qualitative efficiencies, taken as a whole, outweigh the quantitative and qualitative anti-competitive effects, taken as a whole. I would emphasize that the above framework does not require the Tribunal to isolate quantitative and qualitative considerations such that they are never compared. The ultimate offset analysis does allow for consideration of both quantitative and qualitative effects. However, I would think that the Tribunal, even proceeding under Justice Karakatsanis's proposed single-step weighing, would at some point in that consideration ask how the quantitative factors lined up relative to each other, and would also examine how the qualitative factors compared to each other, before attempting to reconcile the whole universe of factors into an ultimate determination. The above framework merely guides the structure of that inquiry to ensure that the Tribunal's reasoning is as explicit and transparent as possible.

150 Respectfully, the assertion in the dissenting reasons that "simply tallying up 'mathematical quantifications', while important, cannot provide a complete answer" (para. 190) misreads these reasons. They do not say that quantitative

considerations are in all cases a sufficient and "complete answer". Rather, they emphasize that the nature of economic efficiencies, the language of s. 96, and the Federal Court of Appeal's apt observation that the s. 96 analysis "must be as *objective* as is reasonably possible" support the notion that quantitative considerations will, in most cases, be of greater importance than qualitative considerations.

151 However, and despite the flexibility the Tribunal has in applying this balancing approach, I cannot accept that more than marginal efficiency gains are required for the defence to apply. Had Parliament intended for there to be a threshold level of efficiencies, qualifying language could have been used to express this intention. The Commissioner's argument essentially asks this Court to read into the statute a threshold significance requirement where the statute does not provide a basis for doing so. In addition, it is not clear to me when efficiency gains become more than marginal. Determining when proven efficiency gains meet a more than marginal threshold would require overly subjective analysis. Although there is some subjectivity in the ultimate weighing of the efficiency gains and anti-competitive effects, in a case such as this where the Commissioner has not established either quantitative or qualitative anti-competitive effects, the weight given to those effects is zero. Proven efficiency gains of any magnitude will therefore outweigh the anti-competitive effects. Moreover, and as discussed above, because of the importance of employing an objective approach, the qualitative effects will assume a lesser role in the analysis in most cases. As such, it is possible that, where proven quantitative efficiency gains exceed the proven quantitative anti-competitive effects to only a small degree, the Tribunal may still find that the s. 96 defence applies.

152 Nor does the statutory context of s. 96(1) indicate that it should be read to include a threshold significance requirement. While s. 96(2) prompts the Tribunal to consider whether the merger will generate "a significant increase in the real value of exports" or "a significant substitution of domestic products for imported products", this significance requirement should not be read back into s. 96(1). Given that the issue of significance was contemplated in s. 96(2), Parliament could just as easily have drafted s. 96(1) to require that efficiencies be "significantly greater than and offset" the anti-competitive effects. Instead, "significance" language appears only in s. 96(2), which is logically subservient to s. 96(1): by its terms, the text of s. 96(2) does not apply the significance threshold to the entire s. 96(1) analysis.

153 With respect, the Federal Court of Appeal's conclusion that marginal efficiency gains cannot meet the requirements for the s. 96 defence to apply does not take into account the fact that the analysis under s. 96 is a balancing exercise. Proven efficiency gains must be assessed relative to any proven anti-competitive effects. Efficiency gains of a smaller scale may not be "marginal" when compared to and weighed against anti-competitive effects of an even smaller degree.

154 Though it is necessary to re-emphasize that there is no requirement that efficiencies cross some formal "significance" threshold, this is not to ignore the truth that economic models are inherently probabilistic and will always carry some associated margin of uncertainty. Where the outcome of quantitative balancing under the first step of the s. 96 analysis shows positive but small net efficiencies relative to the uncertainty of the associated estimates, the Tribunal should be cognizant of this uncertainty in weighing the relevant considerations. This is not to suggest that quantitative efficiencies should be discounted in these situations, but merely to highlight that close cases will require careful consideration of the assumptions underlying the quantitative analysis. In such cases, the Tribunal retains the discretion to reject the efficiencies defence, but must clearly explain the reasons for its decision. The reasons must be seen to be rational even though they reject what the quantitative analysis would otherwise strictly indicate.

155 For these reasons, the Federal Court of Appeal erred in holding that an anti-competitive merger cannot be approved under s. 96 if only marginal or insignificant gains in efficiency result from that merger.

(ii) Pre-existing Monopoly

156 The Federal Court of Appeal held that the Tribunal erred in "taking into account the monopoly position of Tervita resulting from the merger without any evidence from the Commissioner of additional anti-competitive effects resulting from that monopoly" (para. 161), but concluded that a "pre-existing monopoly, such as is the case here, will usually magnify the anti-competitive effects of a merger" (para. 173). The Commissioner submits that the court did not rely on the presence of monopoly

as an effect *per se*, but rather simply concluded that this was a factor likely to *magnify* the merger's anti-competitive effect. There are two problems with this argument.

157 First, to accept that the existence of a monopoly was likely to magnify the anti-competitive effect requires accepting that there are proven anti-competitive effects. In this case, the Commissioner did not establish the impact of Tervita's superior market power and as a result of the Commissioner's failure to quantify the quantifiable anti-competitive effects, zero weight has been assigned to those effects. It is not possible to "magnify" a factor which has zero weight. This equation still results in zero.

158 Second, in my respectful view, the Federal Court of Appeal considered the existence of a monopoly *per se* as opposed to its effects. As the court held in *Superior Propane IV*:

> Monopoly, however it might be defined (e.g. 95 percent market share, 100 percent market share, high barriers to entry), is a description of a market condition, not the effect of that market condition. If monopoly is to be taken into account for purposes of subsection 96(1), it is the effects of the monopoly that must be considered, not the existence of the monopoly *per se*. [para. 49]

Here, where no effects have been proven, it is not possible to say that such effects have been magnified. Inevitably, that approach reverts to relying on the existence of a monopoly *per se*.

(iii) Application to This Case

159 In this case, the Commissioner did not meet her burden to prove the anti-competitive effects. As such, the weight given to the quantifiable effects is zero. The Tribunal did not accept any of Tervita's claimed qualitative efficiencies and Tervita does not challenge this on appeal. Tervita established "overhead" efficiency gains resulting from Babkirk obtaining access to Tervita's administrative and operating functions. These gains meet the "greater than" requirement in this case.

160 Turning to qualitative considerations, the Federal Court of Appeal rejected the qualitative effects accepted by the Tribunal — environmental effects with respect to the price reduction on-site clean-up. This issue is raised by the Commissioner as an alternative to rejecting the efficiencies defence on the basis of quantitative factors. As I have found that the court's rejection of the efficiencies defence was in error, I now turn to whether the evidence of environmental effects was cognizable for the purposes of s. 96.

(c) The Commissioner's Alternative Argument

161 The Commissioner argues that the Federal Court of Appeal erred in rejecting price reduction on potential customers' site clean-up and the resulting environmental benefits which the Tribunal had accepted as qualitative effects of the merger. In rejecting these effects, the court first questioned whether "the environmental effects of a merger, where no economic effect is ascribed to them, can be taken into account in a merger review under the *Competition Act*" (para. 155). The court then went on to hold that, nonetheless, the Tribunal had double-counted this effect as it had already addressed the 10 percent drop in tipping fees which would be brought about by competition and which would result in the disposal of additional tonnes of hazardous waste as part of the "deadweight loss" analysis. The court held that this effect should only have been considered once "as a quantitative anti-competitive effect that had not been appropriately quantified by the Commissioner" (para. 157).

162 The Commissioner's arguments centre on her position that the environmental impacts did have an economic effect. However, while the Federal Court of Appeal questioned whether non-economic environmental effects could be considered under the s. 96 analysis, the effects in this case had an economic aspect. The court ultimately rejected these effects on the basis that the environmental effects had been double-counted by the Tribunal.

163 I agree with the Commissioner that where environmental effects have economic dimensions, these effects may properly be considered under the s. 96 analysis. Indeed, I do not read the Federal Court of Appeal as saying otherwise. The issue raised by the Commissioner is whether the environmental effects put into evidence by the Commissioner did have an economic dimension. I agree that an effect such as a contingent liability on the books of a company which has to remediate a site is an economic

aspect of an environmental effect. However, while there was evidence before the Tribunal with respect to this kind of contingent liability, this evidence cannot be considered in this case.

164 First, there is no evidence as to whether the waste covered by the contingent liability in question fell within the Contestable Area. Second, there is no evidence as to the price elasticity of demand of the customer in question. Finally, and as the Federal Court of Appeal found, if this effect did fall within the Contestable Area, it was quantifiable and therefore should have been quantified by the Commissioner. As explained above, anti-competitive effects which are quantifiable will not be treated qualitatively as a result of a failure to quantify. Therefore, and although the environmental effects in this case had an economic dimension, the Tribunal erred in assessing these effects qualitatively.

(d) Conclusion on the Balancing Under Section 96

165 The Commissioner failed to meet her burden, resulting in the quantifiable anti-competitive effects being assigned a weight of zero. The Federal Court of Appeal properly rejected the environmental effects. There are therefore no proven qualitative anti-competitive effects. Tervita successfully proved quantifiable "overhead" efficiency gains resulting from Babkirk obtaining access to Tervita's administrative and operating functions. In this case, these proven gains met the "greater than and offset" requirement. As there were no quantifiable or qualitative anti-competitive effects proven by the Commissioner, the efficiencies defence applies, and the Federal Court of Appeal was incorrect to conclude otherwise.

166 It may seem paradoxical to hold that the Tribunal was correct in finding a likely substantial prevention of competition, only to then conduct the s. 96 balancing test and find zero anti-competitive effects. However, this result merely appears paradoxical in view of the particular facts of this case. Here, as discussed above, the Tribunal was able to consider evidence as to the effect on the market of the emergence of likely competitors, whether acceptable substitutes existed, and so on. Section 93 expressly permits the consideration of these factors in and of themselves. Ordinarily, the Commissioner would also use the evidence bearing on those factors to quantify the net effect of those factors on the economy in the form of deadweight loss. However, the statutory scheme does not bar a finding of likely substantial prevention where there has been a failure to quantify deadweight loss, and thus the Commissioner's failure to do so in this case was not fatal to the s. 92 determination. By contrast, the balancing test under s. 96 does require that quantifiable anti-competitive effects be quantified in order to be considered. As such, the failure to quantify deadweight loss in this case barred consideration, under s. 96, of the quantifiable effects that supported a finding of likely substantial prevention under s. 92. In circumstances where quantifiable effects were in fact quantified, a finding of likely substantial prevention under s. 92 would be accompanied by the consideration of quantified anti-competitive effects under the s. 96 analysis.

(6) Postscript

167 While the efficiencies defence applies in this case under the terms of s. 96 as written, this case does not appear to me to reflect the policy considerations that Parliament likely had in mind in creating an exception to the general ban on anti-competitive mergers. As discussed above at para. 84 in the historical examination of s. 96, the evidence suggests that the efficiencies defence was created in recognition of the size of Canada's domestic market and with an eye toward supporting operation at efficient levels of production and the realization of economies of scale, particularly with reference to international competition. By contrast, this case deals with competition on a local scale and where the operational efficiencies obtained do not appear to have been central to the acquiring party's ability to realize economies of scale to compete in the relevant market. Although I tend to think that this case may not represent one that Parliament had in mind in creating the efficiencies defence, I nonetheless find that the statute as currently drafted supports a finding that the defence is available in this case.

VII. Conclusion

168 I would allow the appeal. I would set aside the divestiture order of the Tribunal and dismiss the Commissioner's s. 92 application. The appellants are entitled to costs in this Court and in the Federal Court of Appeal.

***Abella J.*:**

169 In *Pezim v. British Columbia (Superintendent of Brokers)*, [1994] 2 S.C.R. 557S.C.C., which predates New Brunswick (Board of Management) v. Dunsmuir[2008] 1 S.C.R. 190(S.C.C.), the Court deferred to the British Columbia Securities Commission's specialized expertise in the interpretation of provisions of the Securities Act, S.B.C. 1985, c. 83, and applied a reasonableness standard despite the presence of a right of appeal and the absence of a privative clause. In other words, the specialized nature of the tribunal was seen to be more determinative of the legislature's true intent to make the tribunal master of its mandate. More recently, notwithstanding the same right of appeal in *British Columbia (Securities Commission) v. McLean*, [2013] 3 S.C.R. 895(S.C.C.), this Court once again applied a reasonableness standard based on the British Columbia Securities Commission's specialized expertise: see Securities Act, R.S.B.C. 1996, c. 418, s. 167.

170 The cornerstone laid in *Pezim* introduced a new edifice for the review of specialized tribunals. Through cases like *McLean*, *Alliance Pipeline Ltd. v. Smith*, [2011] 1 S.C.R. 160 (S.C.C.), and *A.T.A. v. Alberta (Information & Privacy Commissioner)*, [2011] 3 S.C.R. 654 (S.C.C.), judges and lawyers engaging in judicial review proceedings came to believe, rightly and reasonably, that the jurisprudence of this Court had developed into a presumption that regardless of the presence or absence of either a right of appeal or a privative clause — that is notwithstanding legislative wording — when a tribunal is interpreting its home statute, reasonableness applies. I am at a loss to see why we would chip away — again [2] — at this precedential certainty. It seems to me that what we should be doing instead is confirming, not undermining, the reasonableness presumption and our jurisprudence that statutory language alone is not determinative of the applicable standard of review.

171 That is why, with respect, although I otherwise agree with the reasons of the majority, I think the applicable standard is reasonableness, not correctness. I am aware that it is increasingly difficult to discern the demarcations between a reasonableness and correctness analysis, but until those lines are completely erased, I think it is worth protecting the existing principles as much as possible. To apply correctness in this case represents a reversion to the pre-*Pezim* era. Creating yet another exception by relying on the statutory language in this case which sets out a right of appeal, undermines the expertise the statute recognizes. This new exception is also, in my respectful view, an inexplicable variation from our jurisprudence that is certain to engender the very "standard of review" confusion that inspired this Court to try to weave the strands together in the first place.

172 The building blocks in our jurisprudence were carefully constructed. Binnie J. explained in *Khosa v. Canada (Minister of Citizenship & Immigration)*, [2009] 1 S.C.R. 339 (S.C.C.), at para. 25, that

> *Dunsmuir* recognized that *with or without a privative clause*, a measure of deference has come to be accepted as appropriate where a particular decision had been allocated to an administrative decision-maker rather than to the courts. This deference extended not only to facts and policy but to a tribunal's interpretation of its constitutive statute and related enactments because "there might be multiple valid interpretations of a statutory provision or answers to a legal dispute and that courts ought not to interfere where the tribunal's decision is rationally supported" (*Dunsmuir*, at para. 41). A policy of deference "recognizes the reality that, in many instances, those working day to day in the implementation of frequently complex administrative schemes have or will develop a considerable degree of expertise or field sensitivity to the imperatives and nuances of the legislative regime" (*Dunsmuir*, at para. 49, quoting Professor David J. Mullan, "Establishing the Standard of Review: The Struggle for Complexity?" (2004), 17 *C.J.A.L.P.* 59, at p. 93). Moreover, "[d]eference may also be warranted where an administrative tribunal has developed particular expertise in the application of a general common law or civil law rule in relation to a specific statutory context" (*Dunsmuir*, at para. 54).
>
> [Emphasis added.]

173 This was further explained in *Alberta Teachers' Association* in its first paragraph: "Through the creation of administrative tribunals, legislatures confer decision-making authority on certain matters to decision makers who are assumed to have specialized expertise with the assigned subject matter. Courts owe deference to administrative decisions within the area of decision-making authority conferred to such tribunals."

174 In *Smith*, this Court applied a reasonableness standard of review to an arbitration committee's interpretation of its home statute, even though that statute provided that decisions of the arbitration committee on questions of law or jurisdiction *could be*

appealed to the Federal Court (para. 40; see National Energy Board Act, R.S.C. 1985, c. N-7, s. 101). And, as previously noted, in *McLean* the Court held that a reasonableness standard applied to the British Columbia Securities Commission's interpretation of its home statute despite the fact that the statute contained a statutory right of appeal with leave to the British Columbia Court of Appeal: paras. 23-24; Securities Act, s. 167.

175 In *Canada (Attorney General) v. Mowat*, [2011] 3 S.C.R. 471 (S.C.C.), the Court recognized that the fact that little deference had traditionally been extended to human rights tribunals in respect of their decisions on legal questions, was in tension with the deferential approach to judicial review espoused in *Dunsmuir*. The Court ultimately held that because the question of costs was located within the Canadian Human Rights Tribunal's core function and expertise relating to its interpretation and application of its enabling statute, a reasonableness standard of review applied. As LeBel and Cromwell JJ. noted, "[i]n the context of judicial review, deference can shield administrative decision makers from excessive judicial intervention even on certain questions of law as long as these questions are located within the decision makers' core function and expertise": para. 30.

176 The presumption of reasonableness to an administrative decision maker's interpretation of its home statute or closely related legislation, even on questions of law, is therefore well established in this Court's jurisprudence: see also *Canadian National Railway Co. v. Canada (Attorney General)*, [2014] 2 S.C.R. 135, *Agraira v. Canada (Minister of Public Safety and Emergency Preparedness)*, [2013] 2 S.C.R. 559 (S.C.C.); *M.A.H.C.P. v. Nor-Man Regional Health Authority Inc.*, [2011] 3 S.C.R. 616 (S.C.C.); *Celgene Corp. v. Canada (Attorney General)*, [2011] 1 S.C.R. 3 (S.C.C.); *Kerry (Canada) Inc. v. Ontario (Superintendent of Financial Services)*, [2009] 2 S.C.R. 678 (S.C.C.).

177 It is true that this Court has recognized that certain categories of questions warrant a correctness review. Rothstein J. set them out in *Alberta Teachers' Association*, at para. 30:

> There is authority that "[d]eference will usually result where a tribunal is interpreting its own statute or statutes closely connected to its function, with which it will have particular familiarity" (*Dunsmuir*, at para. 54; *Smith v. Alliance Pipeline Ltd.*, 2011 SCC 7, [2011] 1 S.C.R. 160, at para. 28, *per* Fish J.). This principle applies unless the interpretation of the home statute falls into one of the categories of questions to which the correctness standard continues to apply, i.e., "constitutional questions, questions of law that are of central importance to the legal system as a whole and that are outside the adjudicator's expertise, ... '[q]uestions regarding the jurisdictional lines between two or more competing specialized tribunals' [and] true questions of jurisdiction or *vires*" (*Canada (Canadian Human Rights Commission) v. Canada (Attorney General)*, 2011 SCC 53, [2011] 3 S.C.R. 471, at para. 18, *per* LeBel and Cromwell JJ., citing *Dunsmuir*, at paras. 58, 60-61).

178 Notably, a statutory right of appeal is not one of them.

179 While the statutory language granting the right of appeal in this case may be different from the language in *Pezim*, *McLean* and *Smith*, it is not sufficiently different to undermine the established principle of deference to tribunal expertise in the interpretation of the tribunal's own statute. Using such language to trump the deference owed to tribunal expertise, elevates the factor of statutory language to a pre-eminent and determinative status we have long denied it. I see nothing, in other words, that warrants departing from what the legal profession has come to see as our governing template for reviewing the decisions of specialized expert tribunals on a reasonableness standard, most recently on muscular display in Creston Moly Corp. v. Sattva Capital Corp. [2014 CarswellBC 2267S.C.C.] [2014] 2 S.C.R. 633.

180 In this case, applying that template leads to the conclusion that the Competition Tribunal's interpretation of s. 96 of the Competition Act, R.S.C. 1985, c. C-34, was unreasonable. I would allow the appeal.

Karakatsanis J. **(dissenting):**

181 I agree with the reasons of my colleague Justice Rothstein as they concern the proper analytical approach to s. 92(1) of the Competition Act, R.S.C. 1985, c. C-34. I further agree with his conclusion that it was open to the Competition Tribunal to find that the merger in this case was likely to substantially prevent competition contrary to s. 92(1).

182 However, I cannot agree with my colleague's approach to the s. 96 efficiencies defence and his conclusion that Tervita was entitled to the benefit of that defence in this case. I would affirm the decision and the analysis of the Federal Court of Appeal, 2013 FCA 28, 446 N.R. 261 (F.C.A.), in that regard.

183 The efficiencies defence set out in s. 96(1) of the Competition Act requires the Tribunal to balance the efficiencies of the merger against its anti-competitive effects:

> **96.** (1) The Tribunal shall not make an order under section 92 if it finds that the merger or proposed merger in respect of which the application is made has brought about or is likely to bring about gains in efficiency that will be greater than, and will offset, the effects of any prevention or lessening of competition that will result or is likely to result from the merger or proposed merger and that the gains in efficiency would not likely be attained if the order were made.

184 The Federal Court of Appeal and Justice Rothstein concluded, rightly in my view, that the statutory requirement that efficiency gains be "greater than" and "offset" the anti-competitive effects imports a weighing of quantitative and qualitative aspects. The Tribunal has the discretion to decide what methodology to apply on a case-by-case basis, so long as the various objectives of the Act are taken into account. Section 96 provides for flexible trade-off analysis, in order to meet the various objectives of the Act. Efficiencies and effects should be quantified wherever reasonably possible; rough estimates should be provided where precise quantification is not possible; and the assessment of qualitative effects should be objectively reasonable, supported by evidence and clear reasoning. (See Rothstein J.'s reasons, at paras. 144-45 and 148; F.C.A. reasons, at paras. 146 and 148.)

185 However, I do not agree that the need for "reasonable objectivity" justifies Justice Rothstein's hierarchical approach to quantitative and qualitative aspects under the efficiencies defence. Nor do I accept his assessment that "qualitative effects will be of lesser importance" (para. 146; see also paras. 147-48). I see no value in prioritizing quantitative over qualitative efficiencies. Both are relevant to the statutory test, and their significance depends on the circumstances of the case.

186 The statutory language makes no such distinction. Moreover, many of the purposes set out in s. 1.1 of the Act may not be quantifiable. These purposes include not only providing consumers with competitive prices and products, but also promoting adaptability of the Canadian economy, expanding opportunities for Canadian businesses abroad, recognizing the value of foreign competition in Canada, and ensuring that businesses of all sizes are able to participate fully in the Canadian economy.

187 These wide-ranging purposes illustrate that important anti-competitive effects of a merger may be qualitative in nature. In some cases, such qualitative effects may be determinative in the s. 96 analysis. Thus, the flexible analytical approach mandated by this provision reflects the wide range of objectives the Act serves. Where the legislation mandates such a purposive analysis, the relative significance of qualitative and quantitative gains or effects can only be determined in the circumstances of each case. It is neither helpful nor necessary to predetermine their relative role and importance in the s. 96 defence.

188 Justice Rothstein, however, frames the balancing test in s. 96 as a two-step inquiry. First, he says, the quantitative efficiencies of the merger at issue should be compared against the quantitative anti-competitive effects (the "greater than" prong of the s. 96 inquiry). Second, qualitative efficiencies should be balanced against the qualitative anti-competitive effects, and a final determination must be made as to whether the total efficiencies offset the total anti-competitive effects of the merger at issue (the "offset" prong of the inquiry) (paras. 147-48).

189 I do not read s. 96 as mandating a two-step framework that separates quantitative and qualitative efficiencies and anti-competitive effects. Such an approach is unnecessarily artificial and not required by the statutory language or context. Presumably Justice Rothstein's "final determination" assesses whether the (quantitative and qualitative) gains in efficiencies will be *greater than*, and will *offset*, the (quantitative and qualitative) anti-competitive effects of the merger. This is precisely what is required by the language of s. 96. The first two steps are superfluous. In any event, the expert Tribunal is best positioned to identify instances where like factors should be compared, as well as circumstances where this would not be as effective.

190 The Federal Court of Appeal agreed with the Tribunal's articulation of this aspect of the efficiencies defence test. Writing for the court, Mainville J.A. found that "the offset called for under section 96 ... requires the Tribunal to balance both quantitative and non-quantitative (*i.e.* qualitative) gains in efficiency against both the quantitative and non-quantitative (*i.e.* qualitative) effects of any prevention or lessening of competition" flowing from the merger (para. 146). In the court's view, the analysis is at heart about balancing overall efficiency gains against overall anti-competitive effects, and simply tallying up "mathematical quantifications", while important, cannot provide a complete answer (*ibid.*). Of course, quantification is very important in order to ensure, whenever possible, that proper weight is attributed to any given efficiency or anti-competitive effect.

191 The Federal Court of Appeal's approach to the s. 96 analysis provides an appropriate level of flexibility, given that efficiencies and anti-competitive effects will not always be easy to measure. For instance, there may be circumstances where a given quantitative factor is closely linked to a qualitative factor. The s. 96 framework enables the expert Tribunal to holistically assess the entirety of the evidence before it, rather than artificially bifurcating the analysis of qualitative and quantitative effects that may, in some cases, more helpfully be analyzed together. Such a test allows the Tribunal to reach an objective and reasonable determination regarding the s. 96 defence by minimizing subjective considerations, but without limiting itself to solely mathematical considerations. This approach provides more flexibility to achieve the purposes of the Act.

192 Further, I disagree with my colleague that the Tribunal (and in this case the Federal Court of Appeal) is precluded from considering any evidence of a quantifiable anti-competitive effect because the Commissioner of Competition failed to fully quantify it. I agree with the Federal Court of Appeal that while the Commissioner should quantify when possible, the failure to do so does not invalidate the evidence that established there was a known anti-competitive effect of undetermined extent.

193 The Commissioner bears the onus to prove "that a merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially" under s. 92. She met that onus in this case. Section 96 is a defence. It is the appellants who must demonstrate on a balance of probabilities that the gains in efficiency offset the anti-competitive effects in order for the s. 96 defence to apply. The Commissioner bears the evidentiary burden to lead evidence of the anti-competitive effects of a merger, and bears the risk that the failure to fully quantify such effects where possible may render the evidence insufficient to counter the evidence of efficiency gains.

194 However, where the expert evidence does not fully provide a quantification of the anti-competitive effects, I do not agree with my colleague that the evidence has no probative value whatsoever and must be ignored. Relevant evidence is generally admissible, and the failure to lead the best evidence available goes to weight, not admissibility. Clearly, the evidence will have less probative value without an estimate or quantification. No doubt it would be more difficult for an undetermined anti-competitive effect to outweigh any significant efficiency gains. However, it does not become irrelevant or inadmissible. The statutory language does not require such a result. Nor does the purpose or context of the legislation.

195 Although Justice Rothstein recognizes that this exclusionary rule may lead to a "paradoxical" result in this case, he justifies his restrictive approach on the basis that it promotes objective assessment and discourages subjectivity and speculation (paras. 151 and 166). In my view, such an approach unduly limits the ability of the Tribunal to fulfill its statutory mandate. Section 96 gives the Tribunal the flexibility to meet all the purposes of the Act, including the primary purpose "to maintain and encourage competition in Canada" (s. 1.1). The balancing exercise under s. 96 necessarily requires the Tribunal to use its expert assessment and judgment. It must also provide explicit and transparent reasons for its conclusions.

196 Obviously, the Tribunal must apply the test in s. 96 to the evidence before it in a way that is fair to the parties. Expert decision makers routinely assess evidence that is not the best evidence available, and they are attuned to when the particular circumstances of the case could result in procedural unfairness.

197 Here, the Federal Court of Appeal determined that there was some value to the Tribunal's finding that prices would have been 10 percent lower in the Contestable Area in the absence of a merger. While the evidence did not permit a calculation of the deadweight loss in the absence of estimates of market elasticity and the merged entity's own price elasticity of demand,

in my view the court was entitled to conclude that this amounted to evidence of a known anti-competitive effect, although its extent was undetermined.

198 Since it was open to the Federal Court of Appeal to consider the anti-competitive effects in its analysis, it follows that the court was also in a position to accept that Tervita's pre-existing monopoly was likely to magnify the anti-competitive effects of the merger (F.C.A. reasons, at para. 173). Ultimately, the court was entitled to find that the proven efficiency gains were "marginal to the point of being negligible" and did not likely exceed the known (but undetermined) anti-competitive effects (para. 169).

199 As noted above, the overall analysis under s. 96 must be as objective and reasonable as possible. Effects that can be quantified should be quantified. However, within this framework, negligible gains in efficiency will not necessarily outweigh and offset known anti-competitive effects, even if they are assigned an "undetermined" weight. This approach is in keeping with past jurisprudence of the Tribunal: *Canada (Commissioner of Competition) v. Superior Propane Inc.* (2002), 18 C.P.R. (4th) 417 (Competition Trib.), at paras. 171-72. Such an approach also accurately reflects the primary purpose of the Act, which is "to maintain and encourage competition in Canada" (s. 1.1).

200 The Federal Court of Appeal was accordingly entitled to conclude that the s. 96 efficiencies defence was not available. I would dismiss the appeal, and award costs to the respondent.

Appeal allowed.

Pourvoi accueilli.

Appendix

Competition Act, R.S.C. 1985, c. C-34

1.1 The purpose of this Act is to maintain and encourage competition in Canada in order to promote the efficiency and adaptability of the Canadian economy, in order to expand opportunities for Canadian participation in world markets while at the same time recognizing the role of foreign competition in Canada, in order to ensure that small and medium-sized enterprises have an equitable opportunity to participate in the Canadian economy and in order to provide consumers with competitive prices and product choices.

79. (1) Where, on application by the Commissioner, the Tribunal finds that

(a) one or more persons substantially or completely control, throughout Canada or any area thereof, a class or species of business,

(b) that person or those persons have engaged in or are engaging in a practice of anti-competitive acts, and

(c) the practice has had, is having or is likely to have the effect of preventing or lessening competition substantially in a market,

the Tribunal may make an order prohibiting all or any of those persons from engaging in that practice.

. . . . .

92. (1) Where, on application by the Commissioner, the Tribunal finds that a merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially

(a) in a trade, industry or profession,

(b) among the sources from which a trade, industry or profession obtains a product,

(c) among the outlets through which a trade, industry or profession disposes of a product, or

(d) otherwise than as described in paragraphs (*a*) to (*c*),

the Tribunal may, subject to sections 94 to 96,

(e) in the case of a completed merger, order any party to the merger or any other person

(i) to dissolve the merger in such manner as the Tribunal directs,

(ii) to dispose of assets or shares designated by the Tribunal in such manner as the Tribunal directs, or

(iii) in addition to or in lieu of the action referred to in subparagraph (i) or (ii), with the consent of the person against whom the order is directed and the Commissioner, to take any other action, or

(f) in the case of a proposed merger, make an order directed against any party to the proposed merger or any other person

(i) ordering the person against whom the order is directed not to proceed with the merger,

(ii) ordering the person against whom the order is directed not to proceed with a part of the merger, or

(iii) in addition to or in lieu of the order referred to in subparagraph (ii), either or both

(A) prohibiting the person against whom the order is directed, should the merger or part thereof be completed, from doing any act or thing the prohibition of which the Tribunal determines to be necessary to ensure that the merger or part thereof does not prevent or lessen competition substantially, or

(B) with the consent of the person against whom the order is directed and the Commissioner, ordering the person to take any other action.

(2) For the purpose of this section, the Tribunal shall not find that a merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially solely on the basis of evidence of concentration or market share.

93. In determining, for the purpose of section 92, whether or not a merger or proposed merger prevents or lessens, or is likely to prevent or lessen, competition substantially, the Tribunal may have regard to the following factors:

(a) the extent to which foreign products or foreign competitors provide or are likely to provide effective competition to the businesses of the parties to the merger or proposed merger;

(b) whether the business, or a part of the business, of a party to the merger or proposed merger has failed or is likely to fail;

(c) the extent to which acceptable substitutes for products supplied by the parties to the merger or proposed merger are or are likely to be available;

(d) any barriers to entry into a market, including

(i) tariff and non-tariff barriers to international trade,

(ii) interprovincial barriers to trade, and

(iii) regulatory control over entry,

and any effect of the merger or proposed merger on such barriers;

(e) the extent to which effective competition remains or would remain in a market that is or would be affected by the merger or proposed merger;

(f) any likelihood that the merger or proposed merger will or would result in the removal of a vigorous and effective competitor;

(g) the nature and extent of change and innovation in a relevant market; and

(h) any other factor that is relevant to competition in a market that is or would be affected by the merger or proposed merger.

96. (1) The Tribunal shall not make an order under section 92 if it finds that the merger or proposed merger in respect of which the application is made has brought about or is likely to bring about gains in efficiency that will be greater than, and will offset, the effects of any prevention or lessening of competition that will result or is likely to result from the merger or proposed merger and that the gains in efficiency would not likely be attained if the order were made.

(2) In considering whether a merger or proposed merger is likely to bring about gains in efficiency described in subsection (1), the Tribunal shall consider whether such gains will result in

(a) a significant increase in the real value of exports; or

(b) a significant substitution of domestic products for imported products.

(3) For the purposes of this section, the Tribunal shall not find that a merger or proposed merger has brought about or is likely to bring about gains in efficiency by reason only of a redistribution of income between two or more persons.

***Paul Crampton Member*:**

A. Executive Summary

1 The Tribunal has decided on a balance of probabilities that the Merger is likely to prevent competition substantially in the market for the supply of secure landfill services for solid hazardous waste from oil and gas producers in a geographic market which, at a minimum, is the area identified by CCS' expert, Dr. Kahwaty, as the "Potentially Contestable Area".

2 The Tribunal has concluded that CCS is a monopolist in the geographic market and that it exercises significant market power which is being maintained as a result of the Merger.

3 Although Dr. Baye, the Commissioner's expert, suggested a wide range of likely price decreases in the absence of the Merger, the Tribunal has found that a decrease in average tipping fees of at least 10% was prevented by the Merger.

4 There is significant time and uncertainty associated with entry. The Tribunal has concluded that effective entry would likely take a minimum of 30 months from site selection to the completed construction and operation of a secure landfill in the relevant market.

5 The Tribunal has also decided that, in the absence of the Merger, the Vendors would likely not have sold the Babkirk Facility in the summer of 2010 but would have operated it themselves and would have constructed a new secure landfill with

a capacity of 125,000 tonnes by October of 2011. This landfill would likely have operated as a complement to the Vendors' bioremediation business until no later than October 2012.

6 The Tribunal has also concluded that the Vendors' bioremediation business would likely have been unprofitable and that by October 2012, the Vendors would likely have changed their business plan to significantly focus on the secure landfill part of their business or would have sold the Babkirk Facility to a secure landfill operator. In either case, no later than the spring of 2013, the Babkirk Facility would have operated in meaningful competition with CCS' Silverberry secure landfill. It is the prevention of this competition by the Merger which constitutes a likely substantial prevention of competition.

7 The efficiencies claimed by CCS do not meet the requirements of section 96 of the Act.

8 Divestiture is an effective remedy and is the least intrusive option.

9 The application has been allowed. The Tribunal has ordered CCS to divest the shares or assets of BLS.

10 In dealing with the facts of this case, the Tribunal's conclusions were all based on an analysis of whether the events at issue were likely to occur.

B. Introduction

11 The Commissioner of Competition (the "Commissioner") has applied for an order under section 92 of the *Competition Act*, R.S.C. 1985, c. C-34, as amended (the "Act"), dissolving a transaction in which CCS Corporation ("CCS") acquired the shares of Complete Environmental Inc. ("Complete") and ownership of its wholly-owned subsidiary Babkirk Land Services Inc. ("BLS") on January 7, 2011 (the "Merger"). In the alternative, the Commissioner requests a divestiture order requiring CCS to dispose of the shares or assets of BLS in a manner to be directed by the Tribunal.

12 In her application (the "Application"), the Commissioner alleges that the Merger is likely to prevent competition substantially in the market for hazardous waste disposal services in North-Eastern British Columbia ("NEBC") because, at the date of the Merger, Complete was a poised entrant by reason of having obtained the regulatory approvals needed to operate a secure landfill for hazardous solid waste on a site at Mile 115, Alaska Highway, Wonowon, B.C. (the "Babkirk Site").

13 Pending the Tribunal's decision on this application, CCS undertook to maintain all approvals, registrations, consents, licenses, permits, certificates and other authorizations necessary for the operation of a hazardous waste disposal facility (the "Babkirk Facility" or "Babkirk") on the Babkirk Site. Complete's other assets and businesses were not subject to this undertaking.

C. The Parties

14 The Commissioner is the public official who is responsible for the enforcement of the Act.

15 CCS is a private energy and environmental waste management company. Its customers are mainly oil and gas producers in Western Canada. CCS owns the only two operating secure landfills in NEBC that are permitted to accept solid hazardous waste. One is the Silverberry secure landfill ("Silverberry"). It opened in 2002. It is located approximately 50 km north-west of Fort St. John. The other is called Northern Rockies secure landfill ("Northern Rockies"). It opened in 2009 and is situated about 340 km northwest of Silverberry, about 260 km from the Babkirk Site and approximately 20 km south of Ft. Nelson. CCS also operates a variety of different types of secure landfills in Alberta and Saskatchewan and owns a separate waste management business called Hazco Waste Management ("Hazco"). Schedule "A" hereto is a map showing the locations of the landfills which are relevant to this Application.

16 BLS was founded in 1996 by Murray and Kathy Babkirk (the "Babkirks"). BLS operated a facility which was not a secure landfill. It had a permit for the treatment and short-term storage of hazardous waste on the 150 acre (approx.) Babkirk Site. It is located approximately 81 km or 1 $^1/_2$ hours by car, northwest of Silverberry. The Babkirks operated their facility for approximately six years under a permit from the British Columbia Ministry of the Environment ("MOE") which was issued

in 1998. However, in 2004, they stopped accepting waste. Two years later, the Babkirks retained SNC Lavalin ("SNCL") to prepare the documents BLS needed to apply for permits for the construction of a secure landfill capable of accepting solid, hazardous waste at the Babkirk Site.

17 The individual Respondents are the former shareholders of Complete who sold their shares to CCS in the Merger. Karen and Ron Baker are married and Ken Watson is their son-in-law. Tom Wolsey is Randy Wolsey's father. The former shareholders will be referred collectively as the "Vendors". All the Vendors, except Tom Wolsey, gave evidence in this proceeding.

18 In November of 2006, Randy Wolsey, acting on his own behalf and on behalf of other individual Respondents, negotiated a "handshake agreement" with the Babkirks to purchase the shares of BLS. The deal was conditional on BLS obtaining approval for the secure landfill from the Environmental Assessment Office ("EAO"). In April 2007, the Vendors incorporated Complete (initially called Newco) to be the company that would eventually purchase the shares of BLS. After an extensive process of consultation and review, the EAO issued a certificate (the "EA Certificate") to BLS on December 3, 2008. Four months later, in April 2009, Complete acquired all the outstanding shares of BLS and it became a wholly-owned subsidiary of Complete. Thereafter, on February 26, 2010, BLS received a permit from the MOE authorizing the construction of a secure landfill, with a maximum storage capacity of 750,000 tonnes, and a storage and treatment facility with a maximum capacity of 90,000 tonnes (the "MOE Permit").

19 At the time of the Merger, Complete had other business interests. It operated municipal solid waste landfills for the Peace River Regional District as well as a solid waste transfer station. In addition, it owned a roll-off container rental business (the "Roll-off Bin Business"). Since the Merger, those businesses have been operated by Hazco.

20 CCS, Complete and BLS will be described collectively as the "Corporate Respondents".

D. The Parties' Positions

The Commissioner

21 The Commissioner alleges that because CCS owns the only two operational secure landfills for solid hazardous waste in NEBC, it has a monopoly and associated market power which allows it to price discriminate between different customers and set the prices for hazardous waste disposal above a competitive level. These prices are known as "Tipping Fees".

22 The Commissioner alleges that Complete was ready to enter the market for secure landfill services in NEBC and that it was likely that competition between Complete and CCS would have caused a decline in average Tipping Fees in NEBC of at least 10%. Alternatively, the Commissioner alleges that the Vendors would have sold Complete to a purchaser which would have operated a secure landfill in competition with CCS. Finally, the Commissioner maintains that any efficiencies associated with the Merger are likely to be *de minimis*.

The Respondents

23 The Vendors submit that their sale of Complete was not a Merger under the Act because there was no business in operation at the Babkirk Site. They also deny (i) that Complete was poised to enter the market for the direct disposal of hazardous waste into a secure landfill and (ii) that, in the absence of the Merger, an alternative buyer would have purchased Complete and operated a secure landfill. The Respondents maintain that if the Vendors had not sold Complete to CCS, they would likely have processed hazardous waste at the Babkirk Facility using a treatment technique called bioremediation. This type of treatment would have been complemented by a half cell (125,000 tonnes) of secure landfill. The secure landfill would only have been used to store the small amount of hazardous waste that could not be successfully treated, and would not have been used to engage in meaningful competition with CCS in respect of the supply of secure landfill services.

24 The Corporate Respondents challenge both the Commissioner's interpretation of CCS' pricing behaviour and her prediction of the anti-competitive effects she has alleged would likely result from the Merger. Among other things, they allege that the Commissioner's approach to market definition is fundamentally flawed and that the area in which there is scope for competition

between the Babkirk and Silverberry facilities is, at best, limited to the very small "Potentially Contestable Area" identified by CCS' expert, Dr. Kahwaty (the "Contestable Area").

25 The Corporate Respondents also submit that the efficiencies resulting from the Merger are likely to be greater than, and will offset, the effects of any prevention of competition brought about by the Merger. They further argue that the Commissioner failed to meet her burden of quantifying the deadweight loss as part of her case in chief. As a result, they say that the Tribunal should conclude that the Merger is not likely to result in any quantifiable effects.

26 Finally, all the Respondents submit that if there is to be remedy, it should be divestiture, rather than dissolution.

E. The Evidence

27 Attached as Schedule "B" is a list of the witnesses who testified for each party and a description of the documentary evidence.

F. Industry Background

28 The management of solid hazardous waste generated by oil and gas operators is regulated in British Columbia by the *Environmental Management Act*, SBC 2003, c 53 (the "EMA") and regulations. If the waste produced meets the definition of "hazardous waste" found in the *Hazardous Waste Regulation*, (B.C. Reg. 63/88) (the "HW Regulation"), oil and gas operators wishing to dispose of hazardous waste must do so within the confines of the legislative framework. The MOE is responsible for administering the EMA and HW Regulation. Hereinafter, hazardous waste as defined in the HW Regulation which is solid will be described as "Hazardous Waste".

29 Under the HW Regulation, a person must receive a permit from the MOE to operate a facility called a secure landfill that can accept Hazardous Waste for disposal. A "secure landfill" is defined in the HW Regulation as a disposal facility where Hazardous Waste is placed in or on land that is designed, constructed and operated to prevent any pollution from being caused by the facility outside of the area of the facility ("Secure Landfill").

Disposal at Secure Landfills

30 Oil and gas drilling operators (also called waste generators) produce two major types of Hazardous Waste that can be disposed of at a Secure Landfill: contaminated soil and drill cuttings. The contaminants are typically hydrocarbons, salts, and metals.

31 Hydrocarbons are categorized as light-end hydrocarbons and heavy-end hydrocarbons. The evidence shows that Hazardous Waste often includes hydrocarbons of both types.

32 Oil and gas generators can contaminate soil with salt when, among other things, they inadvertently spill produced water or brine. Produced water is water that has been trapped in underground formations and is brought to the surface along with the oil or gas. Metals can be found in Hazardous Waste because they occur naturally or because they have been included in additives used in drilling.

33 The HW Regulation states that a Secure Landfill cannot be used to dispose of liquid hazardous waste.

34 Hazardous Waste from "legacy sites" can also be disposed of at Secure Landfills. Dr. Baye defined legacy waste as "accumulated waste from decades of drilling activity that has been left at the drilling site" ("Legacy Waste").

35 Operators pay third-party trucking companies to transport Hazardous Waste to Secure Landfills. Transportation costs are typically a substantial portion of waste generators' overall costs of disposal. Dr. Baye estimated that a generator would pay $4 to $6 per tonne for every hour spent transporting waste from, and returning to a generator's site.

36 At the hearing, Mr. *[CONFIDENTIAL]* and Mr. *[CONFIDENTIAL]*, indicated that no ongoing liability is shown on their books once Hazardous Waste is sent to Secure Landfills, even though generators could be liable if a Secure Landfill operator goes bankrupt or if the landfill fails and Hazardous Waste leaches out of the facility.

37 The MOE has issued five permits for Secure Landfills. Four of them are in NEBC and are currently valid: Silverberry, Northern Rockies, Babkirk and Peejay.

38 Silverberry has a permitted capacity which allows it to accept 6,000,000 tonnes of waste. At 1.52 tonnes per cubic meter, which is the same figure used to calculate tonnes at Silverberry, Northern Rockies' permitted capacity is 3,344,000 tonnes. In 2010, *[CONFIDENTIAL]* tonnes of Hazardous Waste was tipped at Silverberry and, in that year, Northern Rockies accepted *[CONFIDENTIAL]* tonnes.

39 Tipping Fees vary depending on the type of waste. According to the evidence given by Dr. Baye, the average Tipping Fee for all substances at Silverberry was *[CONFIDENTIAL]* per tonne in 2010 and the average Tipping Fee for all waste tipped at Northern Rockies in the same year was *[CONFIDENTIAL]* per tonne.

40 Peejay is located in a relatively inaccessible area near the Alberta border. It was developed by a First Nations community to serve nearby drilling operators such as Canadian Natural Resources Limited ("CNRL"). Construction specifications and an operational plan for Peejay were approved by the MOE on March 11, 2009. However, the Secure Landfill has not yet been constructed and there may be financial difficulties at the project.

41 There are presently no Secure Landfills in operation in NEBC which are owned by oil and gas generators.

Bioremediation - Methodology

42 Bioremediation is a method of treating soil by using micro-organisms to reduce contamination. The microbes can be naturally occurring or they can be deliberately added to facilitate bioremediation. In NEBC, bioremediation usually takes place on an oil and gas producing site where the waste is generated. Bioremediation can also be undertaken offsite but the evidence indicates that there are no offsite bioremediation facilities currently operating in NEBC.

43 A common bioremediation technique is landfarming. In landfarming, contaminated waste is placed on impermeable liners and is periodically aerated by being turned over or tilled. The landfarming technique the Vendors planned to use involves turning soil to create windrows which are *[CONFIDENTIAL]* triangular-shaped piles of soil *[CONFIDENTIAL]*.

44 The preponderance of the evidence showed that, given sufficient time, light-end hydrocarbons can be successfully bioremediated in NEBC despite the cold if the clay soil is broken up. However, the Tribunal has concluded that soil contaminated with heavy-end hydrocarbons is not amenable to cost effective bioremediation because it is difficult, unpredictable, and very time consuming. Further, waste contaminated with metals and salts cannot be effectively bioremediated with technologies currently approved for use in Canada.

45 Once bioremediation is complete, an operator will normally hire a consultant to determine whether the Hazardous Waste can be certified as "delisted" in accordance with a delisting protocol. If so, there is no further liability associated with that particular waste.

46 Mr. Watson testified that his company, Integrated Resource Technologies Ltd. ("IRTL"), had successfully bioremediated hydrocarbon-contaminated soil throughout the winter in NEBC and Northern Alberta. Since about 2002, he has been using a specially designed machine from Finland, the "ALLU AS-38H". This machine *[CONFIDENTIAL]* is capable of breaking up heavy clay so that bacteria can enter the windrow and consume the hydrocarbon contaminants.

G. The Issues

47 The following broad issues are raised in this proceeding:

1. Is CCS' acquisition of Complete a "merger"?

2. What is the product dimension of the relevant market?

3. What is the geographic dimension of the relevant market?

4. Is the Merger Pro-Competitive?

5. What is the analytical framework in a "prevent" case?

6. Is the Merger likely to prevent competition substantially?

7. What is the burden of proof on the Commissioner and on a Respondent when the efficiencies defence is pleaded pursuant to section 96 of the Act?

8. Has CCS successfully established an efficiencies defence?

9. Is the appropriate remedy dissolution or divestiture?

Issue 1 Is CCS' Acquisition of Complete a Merger?

48 As a threshold matter, the Vendors submit that the Application should be dismissed because, at the date of the Merger, Complete was not a "business" within the meaning of section 91 of the Act, given that it was not actively accepting and treating Hazardous Waste, and was not otherwise operational in relation to the supply of Secure Landfill services. Instead, they maintain that Complete was simply an entity which held the assets of BLS, i.e. permits and property. Accordingly, the Vendors' position is that, because CCS acquired assets which had not yet been deployed, it did not acquire a "business", as contemplated by section 91 of the Act. The Vendors also submit that the other businesses owned by Complete and acquired in the Merger are not relevant for the purposes of this Application because the Commissioner does not allege that they caused or contributed to a substantial prevention of competition.

49 A merger is defined in section 91 as the acquisition of a "business". The section reads as follows:

> In sections 92 to 100, "merger" means the acquisition or establishment, direct or indirect, by one or more persons, whether by purchase or lease of shares or assets, by amalgamation or by combination or otherwise, of control over or significant interest in the whole or a part of a business of a competitor, supplier, customer or other person.
>
> Pour l'application des articles 92 à 100, « fusionnement » désigne l'acquisition ou l'établissement, par une ou plusieurs personnes, directement ou indirectement, soit par achat ou location d'actions ou d'éléments d'actif, soit par fusion, association d'intérêts ou autrement, du contrôle sur la totalité ou quelque partie d'une entreprise d'un concurrent, d'un fournisseur, d'un client, ou d'une autre personne, ou encore d'un intérêt relativement important dans la totalité ou quelque partie d'une telle entreprise.

50 Business is defined as follows in subsection 2(1) of the Act (the "Definition"):

> "business" includes the business of
>
> (a) manufacturing, producing, transporting, acquiring, supplying, storing and otherwise dealing in articles, and
>
> (b) acquiring, supplying and otherwise dealing in services.
>
> It also includes the raising of funds for charitable or other non-profit purposes.
>
> « entreprise » Sont comprises parmi les entreprises les entreprises:

a) de fabrication, de production, de transport, d'acquisition, de fourniture, d'emmagasinage et de tout autre commerce portant sur des articles;

b) d'acquisition, de prestation de services et de tout autre commerce portant sur des services.

Est également comprise parmi les entreprises la collecte de fonds à des fins de charité ou à d'autres fins non lucratives.

51 The Tribunal notes two features of the Definition. First, it uses the word "includes", which means that it is not exhaustive. Second, unlike the definitions of the term "business" found in statutes such as the *Investment Canada Act*, R.S.C. 1985, c. 28 (1 st Supp.), the Definition makes no reference to generating profits or revenues.

52 Turning to the facts, it is the Tribunal's view that, for the reasons described below, Complete was actively engaged in the development of the Babkirk Site as a hazardous waste treatment facility.

53 Before the Merger, Complete had taken the following steps:

• It had purchased the shares of BLS, thereby acquiring the EA Certificate and the Babkirk Site;

• It had continued the application process and had secured the MOE Permit;

• It had held numerous shareholders' meetings to plan how the Babkirk Site would be developed as a bioremediation facility and how that facility would operate in conjunction with other businesses owned by the Vendors;

• Its shareholders had discussed bioremediation with Petro-Canada and had solicited its interest in becoming a customer for both bioremediation and Secure Landfill services;

• It had hired IRTL and had paid it *[CONFIDENTIAL]* to bioremediate the soil in cell #1 at the Babkirk Facility. This work was undertaken because it was a condition precedent to the construction of the half cell of Secure Landfill;

• It was developing an operations plan for the Babkirk Facility.

54 In the Tribunal's view, these activities demonstrate that Complete was engaged in the business of developing the Babkirk Site as a Hazardous Waste treatment service that included a Secure Landfill. Since the Definition is not exhaustive, the Tribunal has concluded that it encompasses the activities in which Complete and its shareholders had been engaged at the time of its purchase by CCS. Further, the absence of a requirement for revenue in the Definition suggests to the Tribunal that it covers a business in its developmental stage.

55 For all these reasons, the Tribunal has concluded that Complete was a business under section 91 of the Act at the date of the Merger.

56 In view of this conclusion, it is not necessary to decide whether Complete's Roll-off Bin Business or its management of municipal dumps could be businesses for the purposes of section 91 of the Act.

57 However, in the Chairperson's view, a business being acquired in a merger must have some relevance to a Commissioner's application. In other words, it must have the potential to impact competition in the markets at issue. This observation means that, in this case, Complete's Roll-off Bin Business and its management of municipal dumps would not have been caught by the definition in section 91 because they are not involved in any way in the disposal or treatment of Hazardous Waste. In his separate reasons, Crampton C.J. has taken a different position on this point.

Issue 2 What is the Product Dimension of the Relevant Market?

The Analysis

58 In defining relevant markets, the Tribunal generally follows the hypothetical monopolist approach. As noted in *Canada (Commissioner of Competition) v. Superior Propane Inc.*, 2000 Comp. Trib. 15, 7 C.P.R. (4th) 385 (Comp. Trib.) ("*Propane 1*"), at para. 57, the Tribunal embraces the description of that approach set forth at paragraph 4.3 in the Commissioner's Merger Enforcement Guidelines ("MEGs"), which state:

> Conceptually, a relevant market is defined as the smallest group of products, including at least one product of the merging parties, and the smallest geographic area, in which a sole profit-maximizing seller (a "hypothetical monopolist") would impose and sustain a small but significant and non-transitory increase in price ("SSNIP") above levels that would likely exist in the absence of the merger.

59 The price that would likely have existed in the absence of or "but for" the merger in a "prevent case" is the Base Price. The burden is on the Commissioner to demonstrate the "Base Price". In this case, Dr. Baye has predicted a decrease in Tipping Fees in the absence of the Merger of at least 10% and in some of his economic modelling the price decrease is as large as 21%. In *Canada (Commissioner of Competition) v. Canadian Waste Services Holdings Inc.*, 2001 Comp. Trib. 3, 11 C.P.R. (4th) 425 (Competition Trib.); aff'd 2003 FCA 131 (Fed. C.A.), at para. 92, the Tribunal observed that, when a price change can be predicted with confidence, it is appropriate to delineate markets based on the likely future price even if the future level of that price cannot be predicted precisely. In such cases, it may be sufficient for the Commissioner to demonstrate a range in which the likely future price would have fallen.

60 However, if a reasonable approximation of the likely future price cannot be demonstrated, it may be difficult for the Tribunal to clearly define the boundaries of the relevant market. In such cases, it will nevertheless be helpful for the Tribunal to be provided with sufficient evidence to demonstrate why substitutes that appear to be acceptable at the prevailing price level would or would not remain acceptable at price levels that would likely exist "but for" the merger or anti-competitive practice in question. In any event, evidence about various practical indicia is typically required to apply the hypothetical monopolist approach. The Tribunal recognizes that, like other approaches to market definition, the hypothetical monopolist approach is susceptible to being somewhat subjective in its practical application, in the absence of some indication of what constitutes a "small but significant and non-transitory increase in price" (SSNIP). For this reason, objective benchmarks such as a five percent price increase lasting one year, can be helpful in circumscribing and focusing the inquiry.

61 In the Application at paragraph 11, the Commissioner alleged that "[t]he anti-competitive effects of the Merger "primarily" affect oil and gas companies disposing of Hazardous Waste produced at oil and gas fields within NEBC." [our emphasis]. However, in his initial report Dr. Baye did not limit the product market to Hazardous Waste produced at oil and gas fields. Nevertheless, during the hearing, Dr. Baye and Dr. Kahwaty essentially agreed that the amount of solid hazardous waste generated by non-oil and gas sources and tipped at Secure Landfills in British Columbia is so small that it does not warrant consideration in these proceedings. Accordingly, in the Tribunal's view, the Commissioner's product market definition is "solid hazardous waste generated by oil and gas producers and tipped into secure landfills in NEBC".

62 However, the Respondents deny that the product market is as narrow as the Commissioner suggests. They say that it also includes bioremediation and the storage or risk management of waste on the sites where the waste was generated. They assert that these options constrain any market power that CCS may have. We will deal with these positions in turn.

Evidence about the Use of Bioremediation

63 Bioremediation has been described above and the evidence is clear that it is not an acceptable substitute for generators of Hazardous Waste if soil is contaminated with salts or metals. The Tribunal also accepts that, if heavy-end hydrocarbons are present, bioremediation is not cost effective or successful in a reasonable timeframe.

64 Mr. Andrews gave evidence about the use of bioremediation. He joined the MOE in January 2011. At that time, he was asked to review the E-Licensing Database, which keeps track of the progress made by operators who are bioremediating Hazardous Waste. He found that approximately 50% of the operators who had entries in the Database had reported no annual

activity. He said that this indicated that many operators "had stopped actively treating H[azardous] W[aste] at these sites, or at least had stopped reporting any activities to the MOE."

65 He therefore contacted Conoco Philips Canada, Suncor Energy Inc. ("Suncor"), Progress, Devon Canada Corporation ("Devon") and Apache Canada Ltd. ("Apache"). They accounted for 80% of the registered sites with no reported activity. Among other things, he asked these operators to update their operations plans and submit annual reports.

66 According to Mr. Andrews' witness statement, three of the operators reported that they had dealt with the Hazardous Waste they were bioremediating by sending it to a Secure Landfill and he anticipated that the remaining operators would do the same because bioremediation had failed. Mr. Andrews also said that Suncor filed an operations plan for its registered bioremediation sites which stated that, in the future, it would be sending all its Hazardous Waste to a Secure Landfill.

67 Mr. Andrews also described his experience with onsite treatment before he joined the MOE. He stated the following in his witness statement [paragraphs 23-26]:

> I managed the HW at seven sites that CNRL had registered. These sites were allocated north of Fort St John and on existing oil and gas lease sites or on abandoned sites. There were approximately 50,000 tonnes of HW at these sites.
>
> Initially, we tried treating the HW onsite. At each of these sites we put the HW into windrows and used a turner to turn the HW three times per year at each site. Hazco Environmental Services was the contractor that provided the windrow turner. We also added fertilizers and nutrients in the soil to assist in the bioremediation process. The fertilizer is meant to add additional nutrients to aid the bacteria to process the hydrocarbons.
>
> CNRL pursued this treatment process for two years. While CNRL was able to reduce the contaminants in the HW at these sites, it failed to reduce the contaminants enough to "delist" the HW. Delisting HW means reducing the presence of contaminants low enough so that the soil is no longer considered to be HW. CNRL spent significant amounts of money on treatment because the sites required constant monitoring. The sites would get wet and require dewatering out to prevent berm overflow and enable equipment access.
>
> Ultimately, after two years of treatment, it was clear that bioremediation would not work to address the contamination issues. CNRL decided to send the remaining HW to a Secure Landfill, specifically Silverberry, which was the landfill closest to the sites. I was also responsible for this process. It took CNRL approximately 2-3 years and several million dollars to send all the waste to Silverberry.

68 *[CONFIDENTIAL]*, who works as a Contracting and Procurement Analysist for *[CONFIDENTIAL]*, testified that its current operations in NEBC are in two fields called *[CONFIDENTIAL]*. He indicated that *[CONFIDENTIAL]* uses Secure Landfills to dispose of its Hazardous Waste and that it does not bioremediate because of the associated costs, the time necessary to bioremediate, and the manpower required to undertake bioremediation. He stated that liability has the potential to remain if the Hazardous Waste is not effectively bioremediated and that additional costs might be incurred if the Hazardous Waste, which is not effectively treated, must be tipped into a Secure Landfill. He added that there is ongoing uncertainty about whether bioremediation is effective or not.

69 *[CONFIDENTIAL]*, the Vice-President of Operations at *[CONFIDENTIAL]*, testified that *[CONFIDENTIAL]* uses an oil-based mud system to reduce friction on horizontal wells and that the oil-based mud cuttings are typically tipped into Secure Landfills. He also stated that *[CONFIDENTIAL]* sees disposal at a Secure Landfill as the most economic alternative for dealing with the Hazardous Waste from drilling, as disposal eliminates the increased environmental risk and cost of long term storage and/or site remediation. He explained that "[c]ontainment, transport and disposal of hazardous waste generated from drilling operations is currently the only option used by *[CONFIDENTIAL]* for managing hazardous waste generated from drilling." Accordingly, it is clear that, at its current drilling sites, only Secure Landfills are used for disposal.

70 However, with respect to the Legacy Waste in NEBC on drilling sites which *[CONFIDENTIAL]*, Mr. *[CONFIDENTIAL]* testified that *[CONFIDENTIAL]* will bioremediate some of the waste on these sites. He explained that bioremediation of the

Legacy Waste had already been started by *[CONFIDENTIAL]*. He stated that the decision to dispose of Hazardous Waste instead of treating it is taken on a case-by-case basis, and depends on the type and amount of Hazardous Waste present on the legacy site, the likelihood of successful remediation, and the cost of excavation, transport and disposal.

71 During a review of the HW Regulation undertaken by the MOE, the MOE retained Conestoga-Rovers & Associates to conduct a report on Secure Landfill disposal. The report is entitled "Secure Landfill Disposal Policy Review" and dated March 2011. It states:

> Based on equal weighting of cost, cost variability, timeline, and treatment certainty landfilling [Secure Landfill] is the preferred option under all scenarios. Landfarming [bioremediation] can be an appropriate method for treating hydrocarbon contaminated soils given appropriate concentrations and a multi-year timeline.

72 Devin Scheck, the Director of Waste Management and Reclamation at the British Columbia Oil and Gas Commission, testified that many operators still choose to dispose of their contaminated soils in Secure Landfills, even in situations where bioremediation is feasible, because of the associated costs and timeframe. He said the following in his witness statement [paragraphs 25-27]:

> In my experience, a significant number of the sites that Operators seek to remediate are remediated by the Operator disposing of the contaminated soils at a landfill. With sites that are only contaminated with light end hydrocarbons, Operators may seek to bioremediate the soil on site, but heavy end hydrocarbons tend to have a poor response to bioremediation. As well, tight clay (which is prevalent in North Eastern B.C. where the oil and gas activity is most prevalent) makes bioremediation difficult, as does the relatively cold weather in the region. The presence of other contaminants, such as salts or metals that exceed CSR standards, prevent bioremediation from being an appropriate option, as salts and metals cannot be bioremediated.
>
> Accordingly, when dealing with anything other than light end hydrocarbons, my experience is that Operators will usually dig up the soil, and dispose of it at a Secure Landfill like Silverberry in B.C. or a closer landfill across the Alberta border, such as the CCS Class II Alberta Landfill at LaGlace.
>
> In my experience, even where bioremediation may be feasible, many Operators will still choose to landfill their contaminated soils. With bioremediation there is much uncertainty about costs, and the timeframe required for treatment is also uncertain. Weather conditions, site access issues, amount/type of treatment, future equipment and labour costs, as well as the costs of ongoing access for treatment and sampling to determine if the soils are remediated contribute to this uncertainty.

73 Mark Polet, an expert environmental biologist with specialized knowledge in environmental assessment, remediation and reclamation, as well as waste facility management development, stated as follows in paragraph 17 of his expert report:

> Once an Operator in NEBC decides to clean up its waste, the two most practical options available are: 1) the disposal of the waste at an appropriate landfill; or 2) the treatment of the waste onsite through a process known as bioremediation. Operators do not have a uniform preference for either option but, in my experience, will choose an option based on cost, risk, efficacy and other reasons such as environmental stewardship.

74 At the hearing, Mr. Polet testified that the costs of bioremediation and secure landfilling can be comparable. He stated:

> Once you define the types [of contaminants], you can decide on the most prudent response. And so, for instance, if I found on a site just the light end hydrocarbons with no other types of contamination mixed with it, I would look at bioremediation as an alternative. If it had salts and metals associated with the contamination, as well, then I would lean very strongly to landfill. If it had heavier end hydrocarbons, I would lean strongly to landfill, as well.

> In terms of cost, there — can be quite comparable in price, but of course bioremediation is very limited in what it can be applied to. And the one thing that we've noticed in working in the field is that when bioremediation is not managed properly, then much material actually lands back up in the landfill, anyway. So it has to be well managed to work properly.

75 There is also evidence about bioremediation in the Statement of Agreed Facts (the "Agreed Facts"). However, at the hearing it became clear that, contrary to the way in which they are presented, some of the facts were not actually agreed. The problematic evidence concerns bioremediation and was gathered in two ways. The evidence in paragraphs 63-67 of the Agreed Facts was given directly to the Commissioner's staff. This evidence will be called "Evidence A".

76 Evidence A has two significant characteristics. The sources are not named and the Agreed Facts state in paragraph 63 that "...the Bureau has not confirmed the truth of the facts communicated to it by the operators..." Evidence A is in the Agreed Facts because CCS insisted that it be included and CCS asks the Tribunal to give it weight and assume it is true.

77 Evidence A reflects that operator "F" bioremediates at least 70% of its waste in BC because it considers bioremediation to be better for the environment. Operators "H" and "J" bioremediate about 50% their waste. These operators appear to be bioremediating on their drilling sites to avoid the transportation charges and Tipping Fees associated with Secure Landfills.

78 Although the Commissioner cannot confirm its truth, the Tribunal is nevertheless prepared to give Evidence A some weight because it can see no reason why industry participants would lie to the Commissioner about their use of onsite bioremediation. However, without knowing the volume of waste produced by "F", "H" and "J", it is impossible to determine whether bioremediation is being undertaken on a significant scale. In any event, it is clear that, even for these waste generators, there is a substantial portion of Hazardous Waste in respect of which bioremediation is not used.

79 The second category of evidence is found in paragraphs 69-74 of the Agreed Facts. It was gathered in July 2011 by representatives of National Economic Research Associates ("NERA"). Dr. Baye works at NERA and it appears that NERA was retained by the Commissioner to interview industry participants. The Commissioner's staff attended these interviews and the six sources are named (*[CONFIDENTIAL]*). No concern is expressed about the reliability of this evidence. This evidence will be called "Evidence B".

80 The Commissioner only called witnesses from *[CONFIDENTIAL]* and *[CONFIDENTIAL]* who, as discussed above, indicated that they do not bioremediate as a matter of policy *[CONFIDENTIAL]*.

81 CCS states the evidence of the other four operators, described in Evidence B, shows that they are active bioremediators and CCS asks the Tribunal to draw an adverse inference from the fact that they were not called by the Commissioner. However, in the Tribunal's view, no such inference should be drawn because the Commissioner had no obligation to adduce the evidence and it was open to CCS to do so.

82 Evidence B shows that *[CONFIDENTIAL]* bioremediates 10-15% of its waste. *[CONFIDENTIAL]* engages in some bioremediation at about 70% of its sites and *[CONFIDENTIAL]* bioremediates about 75% of its treatable material onsite. (It also appears to treat the balance of treatable material offsite but this is not explained. Since there are no offsite bioremediation facilities in NEBC, the Tribunal has concluded that this statement must refer to offsite treatment elsewhere.) *[CONFIDENTIAL]* bioremediates onsite and sometimes moves waste between its sites for bioremediation. In the last 3-4 years, it has bioremediated 60-70% of its abandoned well waste.

83 It is noteworthy that this evidence gives no volumes for treatable and Legacy Hazardous Waste. In these circumstances, and given that the Respondent did not call witnesses from these four operators or other operators, the Tribunal is not persuaded that bioremediation is being undertaken on a significant scale in NEBC.

Evidence about Storage and Risk Management

84 Storage means that Hazardous Waste is left untreated on a drilling site which is still under lease. As long as the MOE does not order a cleanup, this option is available even though drilling has finished, as long as the operator continues to make

the lease/tenure payments for the site. Since such payments are low compared to the cost of cleaning up the site, doing nothing may be an attractive option in some cases and the evidence from Trevor Mackay's examination for discovery is that "many" operators have waste stored on their sites. However, Mr. *[CONFIDENTIAL]* testified that *[CONFIDENTIAL]* does not store the Hazardous Waste generated from drilling operations for long periods of time, due to the cost and potential liability issues. He explained that the typical well site storage costs during drilling operations are *[CONFIDENTIAL]* per well.

85 Risk Management is a process undertaken when drilling is finished and an operator wishes to terminate a lease. The operator must restore the site's surface as nearly as possible to the condition it was in before drilling. Once this has been accomplished, a Certificate of Restoration (also referred to as a Certificate of Compliance) is issued and the operator's lease is terminated. However, the operator remains liable for any issues arising from the Hazardous Waste that is left behind and is obliged to comply with conditions such as monitoring even after the certificate is issued.

86 On this topic, Mark Polet said the following in his reply report:

> Based on my experience, Operators use risk management as a last resort if treatment or disposal are not practical. I rarely recommend it because even if approval is obtained, which in my experience is very difficult, the Operator retains liability and there is a recognition that the site may need to be revisited if issues arise.

87 Pete Marshal, an expert in Hazardous Waste management, testified that, although disposal in a Secure Landfill, bioremediation and risk management are each potentially available methods for dealing with Hazardous Waste, he did not know how many operators choose risk management.

88 This evidence leads the Tribunal to conclude that risk management is seldom used and is not considered to be an acceptable substitute for disposing of Hazardous Waste in a Secure Landfill.

Conclusions about the Product Market

89 Although some operators with Hazardous Waste which is contaminated with light-end hydrocarbons consider bioremediation to be an acceptable substitute for disposal in a Secure Landfill, there is no evidence about the volumes of waste which are successfully bioremediated. More importantly, there is no evidence that the availability of bioremediation has any constraining impact on Tipping Fees in NEBC. In addition, the Tribunal finds that bioremediation is not considered by at least some waste generators to be an acceptable substitute for disposal in a Secure Landfill, particularly in respect of soil that is contaminated with heavy-end hydro-carbons, salts or metals.

90 With regard to storage and risk management, there was no evidence about the volumes stored in NEBC and no evidence to suggest that the tenure payments or the cost to obtain a certificate of restoration have any impact on Tipping Fees at Silverberry.

91 Because bioremediation is not cost effective and is slow for a substantial volume of contaminated soil in NEBC and because it does not work at all on salts and metals, the Tribunal is satisfied that a substantial number of generators do not consider bioremediation to be a good substitute for the disposal of such Hazardous Waste in a Secure Landfill and would not likely switch to bioremediation in response to a SSNIP. Accordingly, the Tribunal is satisfied that the relevant product is "solid hazardous waste generated by oil and gas producers and tipped into secure landfills in NEBC".

Issue 3 What is the Geographic Dimension of the Relevant Market?

92 The Tribunal and the courts have traditionally considered it necessary to define a relevant market before proceeding to assess the competitive effects of mergers under the Act. (See, for example, *Canada (Director of Investigation & Research) v. Hillsdown Holdings (Canada) Ltd.* (1992), 41 C.P.R. (3d) 289 (Competition Trib.), at 297 ; *Canada (Director of Investigation & Research) v. Southam Inc.*, [1997] 1 S.C.R. 748 (S.C.C.), at para. 79). However, they have cautioned against losing sight of the ultimate inquiry, which is whether the merger being assessed prevents or lessens, or is likely to prevent or lessen, competition substantially. (*Southam*, above; "*Propane*", above, at para. 48). With this admonition in mind, it is the Tribunal's view that, in this case, the Tribunal may evaluate the competitive effects of the Merger without precisely defining the relevant geographic market.

93 This conclusion is important because, as will be discussed below, the evidence that has been adduced does not permit the Tribunal to delineate the exact boundaries of the geographic market.

94 The Tribunal agrees with the approach taken in the MEGs. The process begins with a small area around one of the merging parties' locations (in this case, a Secure Landfill site) and then asks whether all rivals operating at locations in that area, if acting as a hypothetical monopolist, would have the ability and incentive to impose a small but significant price increase (typically 5%) and sustain that increase for a non-transitory period of time (typically one year). If the postulated price increase would likely cause purchasers of the relevant product in that area to switch sufficient quantities of their purchases to suppliers located outside that area to render the price increase unprofitable, then the geographic dimension of the relevant market would be progressively expanded until the point at which a seller of the relevant product, if acting as a hypothetical monopolist, would have the ability and incentive to impose a SSNIP.

95 In the case at bar, the evidence dealt with three geographic regions:

I. *The Contestable Area* - this was identified by Dr. Kahwaty on behalf of CCS.

II. *All of NEBC* - the Commissioner, supported by her expert Dr. Baye, submitted this definition of the geographic market.

III. *The Babkirk Polygon* - this area was identified in internal CCS documents dealing with the potential impact of the Babkirk Facility on CCS.

I. The Contestable Area

96 In broad terms, the Contestable Area identified by Dr. Kahwaty encompasses an hourglass shaped area of 11,000 square kilometres which lies between the Babkirk Site and Silverberry. In his analysis, the road network in this area is such that there are some areas in which both Silverberry and a potential landfill at the Babkirk Site may be viable disposal options for customers with well sites in those areas. Dr. Kahwaty acknowledges that the transportation costs required to reach Silverberry or the Babkirk Site are such that both may be economic alternatives for these customers. In Dr. Kahwaty's view, the geographic scope of the relevant market should be limited to this area.

97 Dr. Kahwaty used Dr. Baye's 10% predicted decline in Tipping Fees as his benchmark for defining the geographic scope of the relevant market. In short, he assessed every well site and calculated whether, if given a 10% reduction off the Tipping Fees paid at Silverberry, the customer would be indifferent as between tipping at Babkirk and Silverberry, having regard for the fact that their total disposal cost (transportation plus Tipping Fee) would be the same for each Secure Landfill. Twelve such customers were identified, accounting for approximately 41,900 tonnes in the Contestable Area. Dr. Kahwaty acknowledged that a larger critical price discount would produce a larger contestable area.

98 The Tribunal is satisfied that a hypothetical monopolist supplying Secure Landfill services to these twelve customers in respect of the Hazardous Waste generated in the Contestable Area would have the ability and incentive to impose and sustain a SSNIP above levels that would likely exist in the absence of the Merger.

99 Indeed, the Tribunal considers that the Contestable Area is likely understated and, in fact, smaller than the minimum area in which a hypothetical monopolist would have the ability and incentive to impose and sustain a SSNIP. The Tribunal has reached this view for several reasons. First, the Tribunal accepts Dr. Baye's position that "Babkirk need not have a location advantage for a customer — and the customer need not switch from Silverberry to Babkirk — for that customer to significantly benefit from the lower Tipping Fees stemming from competition". Second, the evidence suggests that new wells are likely to be drilled in the area between Babkirk and Northern Rockies, and that there is Legacy Waste sitting on abandoned well-sites in that region. Meaningful price and non-price competition between Babkirk and Northern Rockies for at least some of that waste likely would have developed in the absence of the Merger. Third, the geographic extent of the Contestable Area is necessarily limited by Dr. Kahwaty's assumption of a base price that is only 10% below prevailing levels. If that figure is too low Dr. Kahwaty admitted that the geographic market would be larger than the Contestable Area.

100 In addition, the Tribunal notes that the volume of Hazardous Waste generated in the Contestable Area likely is greater than reported by Dr. Kahwaty because he only used data for 2010. Moreover, Dr. Kahwaty excluded CCS' national customers from his analysis and this may also have resulted in an understated geographic market.

101 With respect to the possibility that Secure Landfills in Alberta might be economically accessible for generators of waste in the Contested Area, Dr. Kahwaty stated that "transportation costs are too great for [customers located to the south and east of Silverberry, who currently tip their waste in Alberta] to opt to dispose at a potential landfill at the Babkirk site (even with a significant discount) as compared to disposing at Silverberry at current prices." The Tribunal extrapolates from this and concludes that customers generating Hazardous Waste in the Contestable Area are unlikely to transport their waste to secure landfill sites in Alberta due to the significant transportation costs and potential liability that would be associated with hauling waste over such a long distance.

102 For all these reasons, the Tribunal concludes that the geographic market is at least as large as the Contestable Area. We now turn to whether it could be as large as all of NEBC.

II. All of NEBC

103 NEBC covers approximately 118,800 square kilometres and is vast in comparison to Dr. Kahwaty's Contestable Area. NEBC and the much smaller Contestable Area are compared on the map attached hereto as Schedule "C", which is taken from Tab 29 of Dr. Kahwaty's report of October 21, 2011.

104 Dr. Baye concludes that the relevant geographic market is NEBC on the basis that this is the region where targeted customers are located, including current customers at both Silverberry and Northern Rockies Secure Landfills.

105 In reaching this conclusion, Dr. Baye relies on an economic theory of market equilibrium which predicts that CCS would have an incentive to compete with an independently operated Babkirk Facility for customers located outside of Dr. Kahwaty's Contested Area. This theory is based on his understanding that CCS' average 2010 Tipping Fees at Silverberry were approximately *[CONFIDENTIAL]* per tonne and its average landfill costs were approximately *[CONFIDENTIAL]* per tonne, yielding a margin in excess of 60%. Using these figures, Dr. Baye assumes that CCS would be prepared to reduce its Tipping Fees by 25% or greater in some areas to retain business in the face of competition from an independent Babkirk Facility.

106 However, among other problems, Dr. Baye's theory fails to take into account the opportunity cost to CCS that would be associated with substantially reducing its Tipping Fees to sell landfill capacity today, which could be sold in the future at higher Tipping Fees to customers located closer to Silverberry. In the absence of any analysis of how this opportunity cost would factor into CCS' current decision-making process, the Tribunal finds that the economic theory relied on by Dr. Baye is not particularly helpful in defining the geographic scope of the relevant market.

107 In his initial report, Dr. Baye also provides estimates based on econometric regression models which he asserts are consistent with this theory and his definition of the geographic market as extending throughout all of NEBC. The first set of models, found at Exhibits 19 and 20 of Dr. Baye's initial report, test his hypothesis that the distance between a Secure Landfill and its closest competitor is a significant predictor of the average Tipping Fees at that landfill.

108 Exhibit 20 predicts that the opening of an independent landfill at the Babkirk Site will result in a large decline in average Tipping Fees at Northern Rockies, because it would reduce the distance to Northern Rockies' nearest competitor to three hours and 49 minutes. However, this ignores (i) the substantial transportation costs that the vast majority of customers who tip at Northern Rockies would have to incur to transport their waste to Babkirk, (ii) the very small number of well-sites located between those two facilities, and (iii) the apparent absence of any incentive for CCS to alter its Tipping Fees at Northern Rockies in response to entry at Babkirk.

109 The second set of regression models are estimates offered by Dr. Baye which relate to a "natural experiment" involving SES' entry at Willesden Green, Alberta, in December 2008. That facility became the closest competitor to CCS' Rocky Mountain

House landfill ("Rocky"), located approximately one hour away. In his analysis of CCS' 2010 transactions data, Dr. Baye discovered that CCS substantially reduced the Tipping Fees it charged to several customers subsequent to the opening of SES' facility at Willesden Green.

110 To address the possibility that these substantial price reductions were purely coincidental, Dr. Baye developed "difference in difference" ("DiD") regression models, reported at Exhibit 26 of his initial report. The DiD approach controls for unobserved events, other than SES' entry at Willesden Green, which might have led to the observed decline in Tipping Fees at Rocky. In short, the DiD models include a "treatment" setting in which the event (in this case, entry) occurred and a "control" setting in which the event did not occur. Dr. Baye took the change in Tipping Fees that occurred in the treatment setting and subtracted any change that occurred in the control setting. He interpreted the difference in the change (or the "difference in difference") as the effect of entry at Willesden Green on Tipping Fees at Rocky.

111 It is significant that, in selecting a control landfill, Dr. Baye considered it important to pick a site that "is unlikely to be affected by the treatment event — in this case entry at Willesden Green." One of the principal criteria that he employed in making that selection was that the control landfill had to be "at least 300 km away" from Willesden Green. The same logic would imply that entry at Babkirk would not likely affect Tipping Fees at Northern Rockies, which is situated 260 km away from the Babkirk Site. A key assumption underlying Dr. Baye's DiD models is therefore inconsistent with his definition of the geographic market as all of NEBC. This, together with the fact that Northern Rockies is almost four times further away from Babkirk than SES' Willesden Green facility is away from CCS' Rocky facility, lead the Tribunal to conclude that Dr. Baye's DiD analysis is not particularly helpful in defining the geographic scope of the relevant market. That said, as discussed in detail below, the transactions data which reveals substantial price reductions by CCS to seven of its customers following SES' entry at Willesden Green is relevant to the Tribunal's assessment of the likely competitive effects of the Merger.

112 Finally, the Tribunal notes that Dr. Baye also points to internal documents of CCS which he says are consistent with his definition of the relevant geographic market. However, those documents simply: (i) make projections of the overall annual operating margin (*[CONFIDENTIAL]*) that CCS stood to lose at Silverberry and Northern Rockies were an independent landfill to open at the Babkirk Site; (ii) predict a pricing war if the Babkirk Facility was operated independently or acquired by a third party; (iii) discuss the likelihood of having to compete through "value propositions"; and (iv) reflect that CCS likely takes into account its customers' transportation costs to the next closest competing landfill in setting its Tipping Fees. While these types of statements assist in assessing whether the Merger is likely to prevent competition substantially, they are not particularly helpful to the Tribunal in defining the geographic scope of the relevant market.

III. The Babkirk Polygon

113 The Babkirk Polygon is the third area that was discussed at the hearing. That area was identified by a member of CCS' business development team who was asked to project Babkirk's market capture area. The Tribunal has added a rough depiction of that area on Schedule "C" hereto.

114 The Babkirk Polygon was apparently intended to identify the locations of existing Silverberry customers who would be likely to tip at Babkirk rather than at Silverberry, if Babkirk was operated as a Secure Landfill. In other words, the Babkirk Polygon was CCS' representation of the geographic locations of business it risked losing if Babkirk opened as a Secure Landfill. It includes territory north and west of Babkirk and is a larger area than Dr. Kahwaty's Contestable Area.

115 The Tribunal is satisfied that the locational advantage that the Babkirk Facility would enjoy for customers with drilling operations situated to its north and west is such that those customers would not likely tip at Silverberry in the absence of a very substantial reduction in its Tipping Fees. Given the opportunity cost that CCS would incur by offering such a substantial reduction in its Tipping Fees, and given the absence of any analysis by the Commissioner or Dr. Baye of the impact of that opportunity cost on CCS's decision-making, the Tribunal is not persuaded that CCS would have an incentive to compete for those customers in the absence of the Merger.

116 Likewise, the Tribunal has not been persuaded on a balance of probabilities that such customers who operate to the north and west of the Babkirk Facility would tip at Silverberry, in response to a SSNIP above the maximum average tipping fee level that it believes is likely to exist in the absence of the Merger. For the reasons discussed below, the Tribunal has concluded that such price level will be at least 10% below existing levels. However, transportation costs and the liability associated with transporting Hazardous Waste over the long distance to Silverberry are such that it would require more than a SSNIP to induce waste generators located in those regions to tip their Hazardous Waste at Silverberry.

117 The Tribunal has concluded that the geographic scope of the relevant market is at least as large as the Contestable Area identified by Dr. Kahwaty, and likely falls between the limits of that area and the bounds of the Babkirk Polygon, which includes some of the Contestable Area, but adds significant territory north and west of Babkirk.

118 The Tribunal is satisfied that it would not matter if the geographic scope of the relevant market actually includes additional customer locations in the Babkirk Polygon, beyond the Contestable Area, because CCS would remain the sole supplier of Secure Landfill services to any reasonably defined broader group of customers.

Issue 4 Is the Merger Pro-Competitive?

119 CCS has suggested that the Merger is pro-competitive because it brings to the market a new Secure Landfill at the Babkirk Site. CCS further asserts that the Merger will most quickly transform the Babkirk Site into a Secure Landfill to complement CCS' existing business and serve the growing oil and gas industry in NEBC. CCS says that these facts explain its customers' failure to complain about the Merger.

120 The Tribunal disagrees. In its view, a merger which prevents all actual or likely rivalry in a relevant market cannot be "pro-competitive," even if it expands market demand more quickly than might otherwise be the case. Such a merger might be efficiency-enhancing, as contemplated by the efficiency defence in section 96 of the Act. However, it has adverse consequences for the dynamic process of competition and the benefits that such process typically yields. In the absence of actual rivalry, or a very real and credible threat of future rivalry, meaningful competition does not exist.

Issue 5 What is the Analytical Framework in a "Prevent Case?

121 The "prevention" branch of section 92 was raised in three previous Tribunal cases: *Canada (Director of Investigation & Research) v. Southam Inc.* (1992), 43 C.P.R. (3d) 161 (Competition Trib.), rev'd on other grounds (1995), 63 C.P.R. (3d) 1 (Fed. C.A.), rev'd, [1997] 1 S.C.R. 748 (S.C.C.), *Propane* and *Canadian Waste Services*. However, since those cases were primarily concerned with allegations involving a substantial lessening of competition, the Tribunal did not address in any detail the analytical framework applicable to the assessment of an alleged substantial prevention of competition.

122 In determining whether competition is likely to be prevented, the Tribunal will assess whether a merger is more likely than not to maintain the ability of the merged entity to exercise greater market power than in the absence of the merger, acting alone or interdependently with one or more rivals. For the purposes of this case, this requires comparing a world in which CCS owns the relevant Secure Landfills in NEBC (i.e. Northern Rockies, Silverberry and Babkirk) with a world in which Babkirk is independently operated as a Secure Landfill.

123 In assessing cases under the "prevent" branch of section 92, the Tribunal focuses on the new entry, or the increased competition from within the relevant market, that the Commissioner alleges was, or would be, prevented by the merger in question. In the case of a proposed merger, the Tribunal assesses whether it is likely that new entry or expansion would be sufficiently timely, and occur on a sufficient scale, to result in: (i) a material reduction of prices, or in a material increase in non-price competition, relative to prevailing price and non-price levels of competition, (ii) in a significant (i.e., non-trivial) part of the relevant market, and (iii) for a period of approximately two years. If so and if the entry or expansion likely would occur within a reasonable period of time, the Tribunal will conclude that the prevention of competition is likely to be substantial.

124 The Tribunal also considers whether other firms would be likely to enter or expand on a scale similar to that which was prevented or forestalled by the merger, and in a similar timeframe. Where the Tribunal finds that such entry or expansion would probably occur, it is unlikely to conclude that the merger is likely to prevent competition substantially.

125 As noted earlier and as recognized by all parties, the price against which the prevailing prices will be compared will be the price that would likely have existed in the absence of the merger. The burden will be on the Commissioner to demonstrate that price level, or the range of prices, that likely would have existed "but for" the merger.

126 In final argument, the Commissioner and CCS suggested that helpful guidance on the approach that should be taken to prevention of competition cases can be provided by the U.S. jurisprudence pertaining to mergers that have been alleged to reduce potential competition. In the Tribunal's view, that jurisprudence is not particularly helpful to merger assessment under the Act, because it was developed in respect of a different statutory test and, for the most part, many years ago. (It appears that the US Supreme Court and the federal appellate courts have not had an opportunity to revisit that jurisprudence since the 1980s. See M. Sean Royall and Adam J. Di Vincenzo, "Evaluating Mergers between Potential Competitors under the New Horizontal Merger Guidelines", *Antitrust* (Fall 2010) 33, at 35.)

Issue 6 is there a Substantial Prevention of Competition?

A. The "But For" analysis

Introduction

127 In *Canada (Commissioner of Competition) v. Canada Pipe Co.*, 2006 FCA 233 (F.C.A.), the Federal Court of Appeal decided that a "but for" analysis was the appropriate approach to take when considering whether, under paragraph 79(1)(c) of the Act, "...the practice has had, is having or is likely to have the effect of preventing or lessening competition substantially." The specific question to be asked is stated, as follows, at paragraph 38 of the decision "...would the relevant markets — in the past, present or future — be substantially more competitive but for the impugned practice of anti-competitive acts?"

128 Language similar to that found in section 79 appears in section 92 of the Act. Section 92 says that an order may be made where "...the Tribunal finds that a merger or proposed merger prevents or lessens, or is likely to prevent or lessen competition substantially." For this reason, the parties and the Tribunal have determined that the "but for" approach is also appropriate for use in cases under section 92 of the Act. The parties recognize that the findings will be forward looking in nature and CCS has cautioned the Tribunal against unfounded speculation. With this background, we turn to the "but for" analysis.

129 The discussion below will address the threshold issue of whether effective competition in the supply of Secure Landfill services in the Contestable Area identified by Dr. Kahwaty likely would have materialized in the absence of the Merger. Stated alternatively, would effective competition in the relevant market likely have emerged "but for" the Merger? After addressing this issue, the Tribunal will turn to the section 93 factors that are relevant in this case, as well as the issue of countervailing power.

130 In undertaking the "but for" analysis, the Tribunal will consider the following questions:

(i) If the Merger had not occurred, what new competition, if any, would likely have emerged in the Contestable Area?

(ii) If the Merger had not occurred, what would have been the likely scale of that new competition?

(iii) If the Merger had not occurred, when would the new competition likely have entered the market?

131 The Commissioner suggested that either June or July, 2010 be used as the timeframe for considering the "but for" world. CCS, on the other hand, was more precise and suggested that the relevant time for this purpose should be the end of July 2010, when CCS and Complete signed the letter of intent which led to the Merger. Since the parties have essentially agreed, the Tribunal will focus on the end of July.

132 The Tribunal's view is that, as of the end of July 2010, there were only two realistic scenarios for the Babkirk Site absent the Merger. They were:

1. The Vendors would have sold to a waste company called Secure Energy Services Inc. ("SES"), which would have operated a Secure Landfill; or

2. The Vendors would have operated a bioremediation facility together with a half cell of Secure Landfill.

133 Extensive evidence was adduced on these topics. The discussion below summarizes the most important aspects of that evidence.

Scenario #1 — A sale of Complete to SES

134 In February of 2007 when the Vendors first met to organize Complete, they decided that their exit strategy would be to sell the company to Newalta Corporation or to CCS. Newalta is a waste company which operates Secure Landfills in Alberta. However, it was always the Vendors' intention to sell only when they could achieve an acceptable return on their investment.

135 In November 2007, Canaccord Capital sent a four-person investment team to Fort St. John to investigate the purchase of a number of the Vendors' companies, including Complete. At that time, the Vendors' intentions about a sale of Complete were recorded in the company's minutes, which, among other things, stated:

> ...consensus at Complete's meeting was to carry on the way we are going unless we are presented with a very attractive proposal from outside. We don't want to do all the work for the benefit of others — better to take a longer time, but to have higher rewards for ourselves...

136 Subsequently, a Vision Statement, dated June 22, 2008, was prepared by Karen Baker. That document stated that they wanted to make a "good return on sale of company". The Statement also observed:

> The VISION of Complete Environmental Inc. is to become a diversified, highly efficient, environmental corporation in NEBC generating a high profit margin thus, presenting itself as an attractive acquisition to multiple potential purchasers.

137 After Complete received its MOE Permit on February 26, 2010, Ken Watson's company, IRTL, offered to purchase Complete for *[CONFIDENTIAL]*. Before that offer was made, the Vendors had not been actively considering a sale. However, IRTL's offer spurred them to seriously consider the matter and, before they responded to IRTL's, they authorized Randy Wolsey to contact CCS and SES for expressions of interest.

138 On March 23, 2010, Randy Wolsey spoke to SES but was told that it had no interest in making an offer because it was busy with its initial public share offering. However, SES did indicate a possible future interest and stated that it valued BLS at approximately *[CONFIDENTIAL]* in either mixed cash and shares or *[CONFIDENTIAL]* plus a share offering. In contrast, CCS expressed immediate interest and Dan Wallace of CCS verbally offered *[CONFIDENTIAL]* for BLS.

139 The Vendors eventually decided to sell Complete to IRTL. However, IRTL's offer was withdrawn in early June 2010 after Ken Watson learned that, contrary to his expectations, Canaccord Capital would not finance IRTL's acquisition of Complete. After Cannacord declined, he did not have time to arrange alternative financing.

140 According to Karen Baker, after IRTL's offer was withdrawn, the Vendors decided to try to sell Complete one last time. They concluded that, if they did not receive an interesting offer, they would operate the Babkirk Facility themselves. This would involve moving forward with an operating plan and constructing a half cell of Secure Landfill. To ascertain if a sale was possible, Randy Wolsey was again asked to contact CCS and SES. In addition, he was asked to contact Newalta. He did so, but Newalta did not respond to his email.

141 At about that time, Dan Wallace of CCS apparently heard that IRTL's offer had fallen through and sent Randy Wolsey an email asking if CCS could renew its earlier offer. Mr. Wolsey responded by offering to sell BLS for *[CONFIDENTIAL]*. On June 22, 2010, CCS agreed to purchase the shares of BLS for that amount.

142 Inexplicably, Randy Wolsey did not tell the other Vendors about his deal with CCS. Instead, he arranged a meeting with SES (the "Meeting"). It was held on June 29, 2010 and was attended by Rene Amirault, President and CEO of SES, Dan Steinke, SES' Vice-President of Business Development, and Corey Higham, SES' Business Development Representative (the "SES Group").

143 According to the Vendors, the SES Group spent much of the Meeting giving a presentation to show that SES was an attractive investment. An SES brochure prepared for potential investors was used for this purpose. However, the Vendors were not interested in acquiring shares of SES and they testified that no price for BLS or Complete was ever suggested and no offer was discussed.

144 According to Mr. Amirault, he indicated during the Meeting that an all cash offer could be made. The Vendors denied this. Since this evidence is significant and was not included in Mr. Amirault's witness statement, the Tribunal has concluded an all cash offer was not mentioned and that the Vendors understood that SES would only purchase Complete if it could use its shares to finance part of the purchase price.

145 During the Meeting, the SES Group had questions about how to secure the necessary regulatory approvals to allow SES to expand the permitted capacity of the Babkirk Facility and to upgrade the design of the Secure Landfill cells (the "Questions"). The Vendors could not answer the Questions and Mr. Amirault testified that he asked for and was refused permission to speak to Del Reinheimer about the Questions. However, some Vendors could not remember anyone from the SES Group asking for permission to speak to Del Reinheimer about the Questions and other Vendors denied that anyone asked for such permission at that time. Mr. Reinheimer was the Section Head, Environmental Management in the Environmental Protection Division of the MOE.

146 Mr. Amirault stated that following the Meeting, SES was actively interested in purchasing Complete and gave the following reasons to explain its failure to make an offer or submit a letter of intent in July 2010:

- The Questions had to be answered before a price could be established.

- There was no particular urgency about making an offer because there were no other buyers. Mr. Amirault testified that the Vendors had indicated at the Meeting that Complete had promised a First Nation that it would not sell to CCS and the SES Group knew that Newalta was not interested.

147 Mr. Amirault acknowledged that the Questions were about process i.e. "how to" go about getting approvals for increased permitted capacity and enhanced cell design. He also stated that he had no doubt that the approvals would be forthcoming. In these circumstances and because, as described below, SES was actively engaged in the development of another Secure Landfill, it is the Tribunal's view that SES would have known what it needed to spend to increase the permitted capacity and upgrade the landfill cells at the Babkirk Site. Accordingly, the Tribunal does not accept Mr. Amirault's evidence that SES could not establish a purchase price without the answers to the Questions.

148 There is a dispute about whether, on July 6, 2010, Corey Higham sent Ron Baker an email setting out the Questions which had been discussed at the Meeting. Mr. Amirault stated in hearsay evidence in his witness statement that Corey Higham had told him that the email had been sent. A photocopy of that alleged email was appended to Mr. Amirault's witness statement. However, after Ron Baker made a witness statement stating that he did not recall having received the email, no reply evidence was filed by Corey Higham to say that it had, in fact, been sent. The email is an important document to the extent that it evidences an ongoing interest by SES in receiving answers to the Questions. However, given that it was not properly adduced, the Tribunal gives it no weight.

149 As mentioned above, Mr. Amirault testified that Ron Baker told the SES Group during the Meeting that he had promised a First Nation that the Vendors would not sell the Babkirk Facility to CCS. This meant that SES understood that the Vendors were not likely to receive a competing offer. However, this apparently significant detail did not appear in Mr. Amirault's witness statement and was not referred to in his examination-in-chief. It was mentioned for the first time in answer to a question posed by the Tribunal. For this reason, this evidence is not accepted as an explanation for SES' failure to show a more active interest in purchasing Complete.

150 Mr. Amirault acknowledged that the window for undertaking construction in 2010 "...was closing, closing fast" and that SES wanted to begin construction at Babkirk at the end of August or by mid-September at the latest. This meant that, if SES had been actively interested in acquiring Complete, it would have moved quickly to present the Vendors with a letter of intent. Mr. Amirault also testified that, apart from updating its earlier market study of the Babkirk Facility, no further due diligence was required. In addition, he testified that he did not need the approval of his Board of Directors to deliver a letter of intent. In these circumstances, the Tribunal has concluded that SES' failure to follow up more quickly on its meeting with the Vendors and its failure to demonstrate any interest in making an offer at that time are attributable to a lack of active interest in acquiring BLS in July 2010.

151 Ron Baker recalls that he was called by Corey Higham on July 28, 2010. However, Mr. Baker does not remember what Mr. Higham said during that telephone call. Since Corey Higham did not give evidence, the Tribunal considers it fair to assume that he did not make an offer to purchase Complete or propose a letter of intent. Although Mr. Baker does not recall much of his own side of the conversation, he does remember telling Mr. Higham that Complete had just signed a letter of intent with CCS.

152 The Tribunal considers it noteworthy that, since 2007, SES had been developing a new Secure Landfill called Heritage. It was located approximately 153 km south of the Babkirk Site. However, it was not favourably received during public consultations because it was to be located near a populated area and on a site where a landslide had occurred. Corey Higham of SES was told on July 26, 2010 that the EA's review of the Heritage Project had been "suspended" pending further evidence from SES about the suitability of the site. SES eventually abandoned the project in December of 2010.

153 Based on this evidence, the Tribunal has concluded that SES had an ongoing general interest in the Babkirk Facility. It had spoken to Murray Babkirk when he owned BLS and it had indicated possible future interest when Randy Wolsey contacted it in March of 2010. SES also sent its most senior executive to the Meeting in June 2010. However, the Tribunal has also concluded that SES was not actively interested in a purchase in July 2010. It never discussed a potential price, and, although it asked the Questions, the answers were not crucial to setting the price and SES already knew that it would be granted the additional approvals it sought. Finally, although Mr. Amirault testified that there was no due diligence of any consequence to be undertaken, SES did not send a letter of intent and there are no internal SES documents showing that it was preparing to make an offer. The Tribunal has concluded that SES' failure to take a more active interest in purchasing Babkirk is explained by the fact that it was still giving priority to its project at the Heritage site. This is understandable, since it had already invested three years and approximately $1.3 million in developing the project.

154 In all these circumstances, the Tribunal has concluded, on a balance of probabilities, that SES likely would not have made an acceptable offer for Complete by the end of July 2010 or at any time in the summer of 2010 and that the Vendors would have moved forward with their own plans to develop the Babkirk Facility.

Scenario #2 — The Vendors Operate Babkirk

155 The Vendors' position is that Complete was created to purchase BLS and to operate a bioremediation facility on the Babkirk Site. They assert that their plan was to accept only Hazardous Waste contaminated with light-end hydrocarbons which could be treated using bioremediation.

156 However, the Vendors recognized that bioremediation might sometimes fail and that they might be left with clumps of contaminated soil ("Hot Spots") after the surrounding waste had been successfully treated. The Vendors understood that the

contaminated soil would have to be placed in a Secure Landfill before the remaining soil could be tested and de-listed as non-hazardous waste.

157 To enable BLS to permanently dispose of the contaminated soil from the Hot Spots and to attract customers to the Babkirk Facility, the Vendors proposed to construct a Secure Landfill on the Babkirk Site, which they described as "incidental" to their treatment operation. This meant that only soil that was not successfully treated using bioremediation would be moved into the Secure Landfill. The Tribunal will give this meaning to the term "Incidental" in the context of the Vendors' Secure Landfill in the balance of this decision.

158 The Commissioner denies that the Vendors' Secure Landfill was only to be used on an Incidental basis. She maintains that the Vendors always intended to accept and directly and permanently dispose of all types of Hazardous Waste in their Secure Landfill. We will refer to this business model as a "Full Service" Secure Landfill. To support her position, the Commissioner relies, in part, on the documents used to obtain the EA Certificate and the MOE Permit. These documents will be described collectively as the Regulatory Approval Documents ("RADs"). As discussed below, the RADs clearly indicate that a Secure Landfill was to be opened on the Babkirk Site. The Commissioner also relies on the Draft Operations Plans (the "Operations Plan") for the Babkirk Site, which show that a Full Service Secure Landfill was planned.

159 Finally, the Commissioner relies on statements in a variety of documents which she asserts reflect that the Vendors intended to compete with CCS. She submits that references in those documents to competing with CCS meant operating the Babkirk Facility as a Full Service Secure Landfill.

The Vendors' Documents

160 The Vendors explained that they needed an EA Certificate and an MOE Permit for a Secure Landfill in order to accept Hazardous Waste of any kind for any type of treatment at the Babkirk Facility. However, they also stated that neither document required them to operate on a Full Service basis. In other words, although they were entitled to do so, they were not required to accept all types of Hazardous Waste for direct disposal. Instead, they were free to operate an "Incidental" Secure Landfill.

161 The Vendors ask the Tribunal to focus on the documents which were prepared when Complete was being incorporated and when the MOE Permit was finally granted, as the best evidence of their intention, which they say was to use the Secure Landfill on the Babkirk Site only as Incidental to their bioremediation. The five documents in this category will be described as the "Vendors' Documents". We will deal with them in turn below.

162 *Minutes of a meeting that Randy Wolsey and Ken Watson attended with Del Reinheimer and other MOE and EAO officials on January 24, 2007.* The minutes state:

> <u>Ken [Watson] discussed the remediation side of the facility's operations, which will continue even after (if) the landfill is constructed.</u> He stated that he has had interest expressed from companies who wish to pursue remediation as well as landfilling. Ken outlined some of the practices and equipment currently used in other operations with which he is involved, and showed some pictures and videos of the equipment (e.g. ALLU AS 38 composting machine) in action.
>
> Ken and Randy stated that their intention would be to have an ALLU AS 38 kept at the facility full-time. They cited that it would be capable of processing up to about 25,000m per day of Peace River region clay.
>
> [our emphasis]

163 In his testimony, Mr. Reinheimer agreed that his understanding was that the Vendors were going to operate a bioremediation facility and that it was an open question whether or not the Secure Landfill, for which application had been made, would ever be built. In the Tribunal's view, this evidence supports the Incidental nature of the Secure Landfill.

164 *Minutes of a Newco meeting dated in February 2007*. These minutes record the Vendors' vision for their new business, which was to become Complete. The minutes make no mention of a Secure Landfill at the Babkirk Site. They speak only of processing waste. The document also describes CNRL and Petro-Canada as customers for treatment and indicates that Petro-

Canada has been interested for years. In context, it is clear that Petro-Canada's interest was in bioremediation. The fact that a Secure Landfill is not mentioned even though the application for its approval was already underway, strongly suggests that it was to play an Incidental role in Complete's business at the Babkirk Site.

165 The minutes read as follows:

> **Newco name** should be "**Environmental Services Co**." not "Waste Management (Facility) Co." **Services** to be offered by Newco were suggested to include drilling for sites in the 115 area, remediation on clients' sites, excavation at client sites, and processing at 115 landfill. We could also coordinate the trucking to haul clients' contaminated dirt that we would excavate at client sites to Mile 115 for processing, although we would not own such trucks.
>
> The **Target Market** would be environmental engineering companies and end-user oil and gas companies such as PetroCanada and CNRL. It would be good if we could get a letter from PetroCan/Matrix regarding the potential amount of work. Our services are needed — PetroCan has been interested for years now. This should be a "Market Pull" rather than "Product Push" situation.
>
> There would considerable **landfill preparation** at Mile 115 [the Babkirk Site]. Randy suggested Tom would probably like to be involved here with heavy equipment operation. We expect to have the permit by Nov 1/07. It would probably take 1 year for money to come in from sales for the landfill itself since we have to build the cells.
>
> [the emphasis is in the original]

166 The Tribunal has studied the final passage quoted above and has concluded that, although the term "landfill" is used, the topic under discussion was actually bioremediation and the Vendors' plan to sell the successfully treated soil.

167 *A diagram outlining Newco's operation*. This document shows how Complete's treatment facility on the Babkirk Site would complement other businesses operated by the Vendors. The diagram does not refer to the existence of a Secure Landfill. This omission also suggests that a Secure Landfill was not a significant part of Complete's business or of the Vendors' plan to integrate a number of their businesses.

168 *Minutes of January 20, 2010*. This document describes a meeting that Ken Watson and Ron Baker attended with Del Reinheimer and other officials from the MOE to discuss the Vendors' plans for the Babkirk Site. By this time, Complete owned Babkirk and had received the EA Certificate. The issuance of the MOE Permit for the Secure Landfill was the next step. The relevant portions of the minutes read as follows:

> Ken [Watson] and Ron [Baker] both stressed that although they would rather not use Babkirk as a Landfill but as a treatment facility, industry demands that Babkirk is Permitted as a Secure Landfill prior to transporting materials to or using Babkirk in any way. The term "Secure" appears to be of utmost importance to all major oil and gas companies.
>
> • Although Del [Reinheimer of the MOE] didn't understand why industry perceives as such, he realized the concern.
>
> • He stated that even though the Permit may be approved, operation of a Secure Landfill may not begin until the Operating Plan is also approved and the landfill has been constructed.
>
> • <u>Ken and Ron agreed it is rather the perception of the word "Secure" that is required at this time to entice clients, than the use of an actual operating landfill.</u>
>
> • <u>Ken suggested that prior to approved Secure Landfill operations, unacceptable material could be sent to CCS (small amount around contamination source) and the remainder could be accepted at Babkirk.</u>
>
> All agreed construction of the landfill is to commence within 2 years of Permit issuance; and that the Landfill Operating Plan must be completed prior to construction but the issuance of the Permit itself is not affected by the existence or not of the Operating Plan.

> Ron [Baker] suggested that the Permit read that the construction phase of the landfill be completed in small segments of a $^1/_2$ cell over a period of time rather than the construction of a full $^1/_2$ cell at one time (as suggested by Reg).
>
> [our emphasis]

169 In the Tribunal's view, there are several reasons why this document indicates that the Secure Landfill at the Babkirk Site was to be Incidental. First, Ron Baker was suggesting that even a half cell was not needed and proposed that smaller segments be constructed. This approach makes sense only if the Secure Landfill was to be Incidental. No one intending to compete with CCS' Full Service Secure Landfill at Silverberry would contemplate the construction of a small segment of a half cell.

170 Second, the Incidental nature of the Secure Landfill is disclosed when Ken Watson suggested that, before the Secure Landfill was operational at Babkirk, unacceptable material could be moved to CCS. The interesting point is that the unacceptable material is not material delivered by waste generators for direct disposal into the Secure Landfill at the Babkirk Site. Rather, it is only the "small amount around [the] contamination source" or, in other words, the material around Hot Spots. Once again, this confirms that the Vendors' intention was that their Secure Landfill would only be used on an Incidental basis.

171 *Minutes dated March 20, 2010*. These minutes reflect the Vendors' thinking in response to the offer to purchase that they received from IRTL. The minutes indicate that, at that time, they believed they had the following three options:

> 1. Operate start first secure cell and bioremediate [inc salt];
>
> 2. Bioremediate without cell;
>
> 3. Sell???

The Minutes also stated:

> Need 12 month season to see how well bioremediation works.

172 The Vendors ask the Tribunal to note that this evidence all predates CCS' purchase of Complete and the Commissioner's interest in the Merger. The Vendors also submit that their evidence at the hearing was consistent with their intention to operate only an Incidental Secure Landfill. Both the proposed manager of the Babkirk Facility (Randy Wolsey) and the man who would be in charge of daily operations (Ken Watson) testified that the only waste they intended to accept at Babkirk was waste which could be bioremediated.

The RADs

173 There are numerous RADs, however, those which are particularly relevant are: the "Terms of Reference" dated August 29, 2007; the "Application for an Environmental Assessment Certificate" dated February 11, 2008; the "Babkirk Secure Landfill Project Assessment Report" dated November 12, 2008; and a "BC Information Bulletin" dated December 9, 2008.

174 The first significant RAD is the Terms of Reference for the Babkirk Secure Landfill Project. It was approved by the EAO on August 29, 2007.

175 Section 3.1 reads as follows:

> The Proponent [Murray Babkirk] has experienced a considerable decline in the amount of waste brought to the existing facility for storage and treatment since the approval of the Silverberry Secure Landfill Facility application (north of Fort St. John, B.C.) as understandably, direct disposal forms a more cost effective option for clients than treatment and disposal. The conversion of the existing facility from a purely Short-term Storage and Treatment Facility to a Secure Landfill and Short-term Storage and Treatment Facility will allow fair competition between the Proponent and Silverberry facilities in providing responsible waste management solutions for local industry.

[...]

This section will provide:

[...]

• a list of the materials to be accepted at the Project for disposal;

• a general description of the criteria that will be used to determine whether contaminated soil will be disposed of directly into the secure landfill or treated by bioremediation;

[...]

[our emphasis]

176 This document suggests that the proposed facility on the Babkirk Site would accept Hazardous Waste for direct disposal into the Secure Landfill and that the Secure Landfill was being developed so that the Babkirk Site could compete with CCS at Silverberry. This document was first drafted by SNCL on the instructions of Murray Babkirk, who was effectively the proponent, since, with his wife, he owned BLS. However, as discussed below, some of the Vendors later reviewed it and they did not suggest changes to reflect their intention to operate only an Incidental Secure Landfill. Since the further RADs contain similar language, it is not necessary to describe them in detail. The Tribunal is satisfied that they all indicate that there would be a Full Service Secure Landfill on the Babkirk Site.

177 It is clear that some of the Vendors were, in Karen Baker's words, "integrally involved" during the regulatory process leading to the EA Certificate. Some attended and assisted with information sessions, consultation meetings, and presentations to First Nations; some were included in correspondence regarding the EA Certificate; some participated directly in drafting or reviewing some of the RADs; and some assisted the Babkirks with technical matters. The Vendors also advanced funds which the Babkirks were able to use to finance the environmental assessment process and pay the fees charged by SNCL. This financial support totalled approximately $300,000 and was deducted from the purchase price that Complete eventually paid the Babkirks for the BLS shares. In all these circumstances, the Commissioner submits that the RADs reflect the Vendors' true intentions.

178 However, the Vendors state that while the RADs authorized the construction of a Full Service Secure Landfill, they say nothing about the Vendors' intentions. Mr. Baker explained that, as far as the Vendors were concerned, as long as they had an approval for a Secure Landfill, no one would complain if they chose to operate it on an Incidental basis. He also stated that, if they had asked to amend the Terms of Reference, which is clearly the document on which the later RADs were based, it would have slowed down the approval process for changes that, in the Vendors' opinion, were unnecessary.

179 The Tribunal has concluded that this explanation is reasonable and that it underpins Mr. Baker's response when he was asked why the Vendors didn't correct the Terms of Reference to reflect their intention to operate an Incidental Secure Landfill. He testified:

[...] There was nothing in it that was that onerous to us or important to us to warrant changing.

180 In view of this explanation and in view of the Vendors' Documents which, starting in January 2007, consistently show that their plan was to operate an Incidental Secure Landfill, the Tribunal concludes that, although the RADs accurately described what could be offered at the Babkirk Facility, they did not accurately reflect the Vendors' intentions.

The Operations Plan

181 The Vendors never completed an Operations Plan for the Secure Landfill on the Babkirk Site.

182 The first Operations Plan was prepared by SNCL. An early and incomplete draft of that document is dated January 9, 2008. The evidence showed that a revision was prepared in December 2008. The Tribunal is satisfied that both versions provided in several places that the Secure Landfill could be operated on a Full Service basis. For example:

> [...] <u>The addition of secure landfill capabilities to this facility would allow for direct disposal</u> in addition to treatment and remediation of contaminated soil. This addition would allow the Babkirk facility to compete with the nearby Silverberry Secure Landfill facilities. The proposed facilities would be contained entirely within the footprint of the former facilities.
>
> [our emphasis]

183 Mr. Baker's evidence was that the Vendors worked directly with SNCL on the Operations Plan and that they had worked "quite a little bit" on revisions to the first draft. However, he testified that when the Vendors reviewed the revised version they were not satisfied and decided to prepare their own plan. He added that writing a new plan would have taken "months" of work.

184 However, other evidence makes it clear that the Vendors did not pursue the idea of rewriting the Operations Plan. Minutes of Complete's meeting, which Ron Baker attended in March 2010, show that the Vendors then thought that it was "mostly in order" and that only a couple of weeks were needed to put it in final form for the MOE. Minutes of a later meeting in May 2010 suggest that the Operations Plan needed "4-5 days work".

185 Mr. Baker acknowledged that he understood the Operations Plan to be saying that waste generators could directly and finally dispose of untreatable Hazardous Waste into the Secure Landfill at the Babkirk Site. In this regard, the transcript of his cross-examination at p. 1212 reads:

> Mr. Iatrou: So you would accept waste. Some of it might be highly contaminated, not really treatable. That would stay in [the secure landfill], but the stuff that could be treated would come out of that cell as capacity and the bioremediation cell was freed up?
>
> Mr. Baker: That's correct.

186 However, a review of Mr. Baker's entire cross-examination on the Operations Plan reveals, in the Tribunal's view, that when he gave that answer, he was not saying that the Vendors intended to operate a Full Service Secure Landfill. Rather, he was describing what was possible under the plan. This difference becomes clear in the following exchange:

> Mr. Iatrou: You would accept the same sort of material that you could take to Silverberry?
>
> Mr. Baker: Yes, correct. We <u>could</u> accept it. <u>Our plan was not to accept the type of soil that can only go to Silverberry,</u> if you get my drift here. I suppose I have to explain that slightly.
>
> [our emphasis]

187 Towards the end of his cross-examination, Mr. Baker began to answer questions from the Vendors' perspective. For example, when asked about the section of the Operations Plan that spoke about closing secure cells once they were filled, he stated "This was the concept, that *if we ever got around to using the Secure Landfill section of our facility*..." [our emphasis].

188 And at the end of his examination, when asked whether or not all three secure cells had to be built at once, Mr. Baker said "No, no, no. This whole idea of graded construction was that we — our intention half of one cell and never have to do anything further. That was our intention. *We would store so little of this landfillable material in that portion of a cell that it would last us the lifetime of our interest in this operation*." [our emphasis].

189 In the Tribunal's view, it is clear that the Vendors' approach to the Operations Plan was the same as it had been to the RADs. A plan that permitted the direct disposal of Hazardous Waste did not oblige the Vendors to accept it. It is obvious to the Tribunal that, from the early days of Newco in 2007, the Vendors wanted to make the Babkirk Facility as attractive as

possible for sale and this meant that it had to be capable of being operated as a Full Service Secure Landfill. However, this does not mean that the Vendors intended to operate the Babkirk Facility in that manner given their long expressed preference for a bioremediation facility with an Incidental Secure Landfill.

Was Babkirk Going to Compete with CCS?

190 The Commissioner also relies on what she describes as the Vendors' expressed intention to compete with CCS to support her allegation that Complete was poised to operate a Full Service Secure Landfill at the Babkirk Site. The statements on which she relies are found in the RADs, the Operations Plan and in Complete's minutes.

191 There is no doubt that, in 2006 when the Babkirks approached SNCL to work on documents for the EA Certificate, they intended to operate a Full Service Secure Landfill on the Babkirk Site once the approvals were in place. As noted earlier, the original project description prepared by SNCL makes this clear when it says:

> The Proponent [BLS owned by the Babkirks] has reportedly experienced a considerable decline in his soil storage and treatment business since the approval of the Silverberry Secure Landfill Facility application (north of Fort St. John, BC) as understandably, direct disposal forms a more cost effective option for clients than treatment and disposal. <u>The conversion of the existing facility from a purely Short-term Storage and Treatment Facility to a Secure Landfill and Short-term Storage and Treatment Facility will allow fair competition between the Proponent and Silverberry facilities in providing responsible waste management solutions for local industry.</u>
>
> [our emphasis]

192 This language is repeated in the Terms of Reference and the point is made even more clearly in the application for the EA Certificate. It states that the proposed facility would allow the proponent to provide "market competition for direct disposal of waste soil" and speaks of the Babkirk Facility being in "direct competition" with CCS at Silverberry.

193 The Vendors' Operations Plan also mentions that the Secure Landfill has been added to the Babkirk Site to allow it to compete with Silverberry and, in the Vision Statement she wrote for Newco, which is attached to minutes dated June 22, 2008, Karen Baker stated that the Vendors wanted Complete "...to become the Number One Competitor to the industry leader [CCS/Newalta]".

194 In his cross-examination at the hearing, Randy Wolsey acknowledged an intention to compete with CCS. However, he testified that while landfilling and competing with Silverberry was "going to happen", it would be on a "very different scale" because the Vendors were going to supply a "brand new service".

195 Mr. Baker also acknowledged in his testimony that the Vendors did intend to compete with CCS and others, but not on price. He stated that they were going to compete by offering a service that was different from anything offered by CCS or Newalta.

196 The Tribunal has concluded that Complete intended to "compete" with Silverberry by offering a new bioremediation service, and that its statements about competition were not intended to mean that the Vendors planned to operate a Full Service Secure Landfill on the Babkirk Site.

Conclusions

197 If the Merger had not occurred, it is the Tribunal's view that, at the end of July 2010, in the absence of a letter of intent from SES, the Vendors would have proceeded to develop the Babkirk Facility. This would have involved:

- Completing the Operations Plan;
- Securing the MOE's approval for the Operations Plan;

• Constructing a half cell of Secure Landfill capacity i.e. 125,000 tonnes; and

• Accepting Hazardous Waste for bioremediation and moving waste that could not be successfully bioremediated into the Incidental Secure Landfill.

198 Although there was evidence to suggest that the Vendors might have decided to start accepting waste for bioremediation without any Secure Landfill capacity, the Tribunal has concluded that the Vendors would likely have built their half cell of Secure Landfill as soon as possible for two reasons. First, the Vendors told Del Reinheimer of the MOE on January 20, 2010 about the importance customers placed on having Secure Landfill capacity available. Indeed, Petro-Canada had refused to deliver waste for bioremediation until the Vendors opened a Secure Landfill. Second, Ken Watson testified that the plan was to store in the Secure Landfill all waste that was awaiting treatment. Presumably, this storage capacity would have been needed as soon as the business started in earnest.

199 The Tribunal has also concluded that it is more likely than not that the Vendors would have had an approved operations plan by the end of October 2010 and that the three months of preparatory work, which Ken Watson testified was needed before the Babkirk Facility could accept waste, would have been substantially completed by the end of October 2010.

200 This means that in the spring of 2011, the Vendors would have been able to accept waste for bioremediation. However, since generators had advised that they would not tip until a Secure Landfill was available, it is unlikely that any meaningful quantity of waste would have been delivered. Construction of the half cell of Incidental Secure Landfill would have begun as soon as the construction season opened in June 2011. Accordingly, given that the evidence showed that the construction would take three or four months, the Tribunal has concluded that the Babkirk Facility would have been fully operational by October 2011.

201 The evidence establishes that the Vendors felt that a twelve month period was needed to see how well bioremediation would work. The Tribunal therefore considers it reasonable to project that the Vendors would have carried on with bioremediation as their principal focus through the fall of 2012. However, the Tribunal has also concluded that, notwithstanding Ken Watson's contacts and his experience with bioremediation, the Vendors' bioremediation business would have been unprofitable for the reasons discussed below.

202 There would have been few if any customers for two reasons. First, while the evidence showed that there is a significant amount of treatable soil on drilling sites in the area around the Babkirk Facility, the bioremediation that presently occurs is done by generators on their own sites. There was no evidence that any companies are paying to transport waste to offsite bioremediation facilities in NEBC. Although Ken Watson testified that he expected that CNRL, Encana, and Bonavista would be interested in disposing of their waste in this fashion and, although Petro-Canada had been interested, the Vendors did not call evidence from any prospective customers to say that they would be prepared to truck their waste to the Babkirk Facility for bioremediation. Further, the Vendors provided the Commissioner with a list of potential customers and *[CONFIDENTIAL]* was first on that list. However, Mr. *[CONFIDENTIAL]*, Vice-President, Operations at *[CONFIDENTIAL]*, testified for the Commissioner that *[CONFIDENTIAL]* philosophy is "going to landfill". In other words, his company was not a significant potential customer for the Vendors' bioremediation facility.

203 Second, the Vendors testified that the Tipping Fees they would charge for bioremediation would be significantly higher than Silverberry's Tipping Fees for Secure Landfill services. It is difficult to imagine that generators with waste that could be bioremediated on their own sites would pay large sums to transport their Hazardous Waste to Babkirk and tip there at rates higher than those at Silverberry, given that they could continue to bioremediate on their own sites or tip for less at Silverberry.

204 Further, there was no evidence from any potential purchasers who might have bought treated waste from Complete for use as cover for municipal dumps or as backfill for excavations. It does not appear that any such sales would have been available to generate revenue for Complete.
